REPORT.

DEPARTMENT OF THE INTERIOR, BUREAU OF EDUCATION,
Washington, D. C., November 15, 1872.

SIR: I have the honor to submit my third annual report:

The work of this Bureau during the year has been of extreme interest. However clearly its duties were defined in the minds of the eminent educators and statesmen who coöperated in its establishment, there were many teachers, and even school-officers, as well as citizens of the country, who waited to see an illustration of its work before giving it their approval, or making use of its facilities. The increased interest in the office, in the past year's experience, has been largely due to the increase in the number who have come to understand the place which the Bureau of Education seeks to occupy among the educational forces of the country; and to understand how it can and should do just what can be done nowhere else, and this, too, without interfering with, but greatly aiding, the other efficient educational forces.

Rigorously limiting all that it undertakes to do by the law under which it is established, it is found that, according as its duties are faithfully and efficiently administered, they touch every spring in the welfare of the public, every interest of each individual in the nation.*

The inquiries coming here this year are specially gratifying. They give greater assurance than ever that the thought of the country is turning more and more to those subjects most essential to the preservation of our liberties and the elevation of our individual and national character.

CHANGES IN NATIONAL INQUIRIES.

The supremacy of nations has long been determined by their power to win in the shock of battle. All efforts to ascertain national statistics were, therefore, formerly determined by this view. They counted only the material of war. Our fathers even, as will be seen by the censuses taken by the Colonies, only report (as for instance in the Massachusetts census of 1765) the number of dwelling-houses and families, number and sex of white persons, negroes, and Indians, distinguishing in the case

* The general and special work of the office, as defined in the law, is: *First*, "To collect such statistics and facts as shall show the condition and progress of education in the several States and Territories:" *Secondly*, "To diffuse such information respecting the organization and management of schools and school-systems, and methods of teaching, as shall aid the people of the United States in the establishment and maintenance of efficient school-systems, and otherwise promote the cause of education throughout the country."

of the whites the number of each sex, and the number above and below sixteen years of age.

But if the supremacy of nations is to be determined by any other test, the inquiry in regard to statistics must be turned in that direction; and in proportion as nations have advanced in civilization, it will be seen that they have been taking into the account of their strength those facts and conditions which test intellectual power, moral power, commercial and industrial power.

Figures, however dry, are now called for in every department of inquiry relating to the material indications of human progress. No statesman can exclude them from his consideration.

In 1840 the United States, for the first time, in taking the census, recognized facts bearing upon the intelligence of the people. The progress toward this step is well deserving careful study. Going back to the passage of that colonial law in New England which required the selectmen of the town to know the facts in regard to the instruction of children, and to enforce attention to them, it will be noted how, in addition to the care of the town-officers over the subject, it became necessary to call in the coöperation of the chief authority of the colony.

As the Colonies became States, and States multiplied, it will be noticed that the mere passage of a law by the State, providing the manner in which the local communities could act for the education of their children, proved insufficient; that it was found necessary for the State to take some observation of the manner in which the communities administered the law; in other words, that school statistics should be gathered. This action, increasing and extending itself from 1825, received a special impulse from the revival of education between that date and 1840, when it culminated in demanding that the nation should in its census take some cognizance of these facts, so primary and essential in every adequate account of its forces.

But however much could be made out of the census in this particular, it was taken only once in ten years; and the conviction grew on the part of educators that more frequent observations, and a summary of this class of facts, as occurring throughout the country, were absolutely necessary to a proper knowledge of their duties as educators, and the establishment of this Bureau naturally followed.

Few things, if any, in the census are more perplexing to its Superintendent than educational statistics. Indeed, nothing can describe either the confusion in which these statistics were found when the work of their annual generalization was undertaken in this office, or the perplexity connected with any statement of them which should be useful in guiding the educational affairs of the country.

It will be seen by those who take up this report for the purpose of studying its statistics that we have endeavored to use all the trustworthy sources of information within our reach. First, we have drawn upon the census; secondly, we have masses of statistics reported directly to this office from

institutions of learning, and State and city systems of instruction. But as any one undertakes this labor, he is at once met with the inquiries: What shall I aim to ascertain? What principles of subdivision and arrangement shall I adopt to secure my object? Looking over the entire field, he finds apparently little to aid and guide him; he observes that the educational statistics in few countries are satisfactory, and that, with all their differences, as compared with the United States, he has to exercise the most careful discrimination in adopting methods and principles for application in this country. He reflects that if the statesman takes up the figures thus presented, he will inquire chiefly for the great generalizations of the facts in regard to intelligence, which show its relation to the questions in political economy, which establish its power to increase the production of wealth—generalizations which show how culture of mind and character affects all the elements of progress that a nation can bring to its aid in overcoming the obstacles in the way of its advancement, whether within itself or thrown in its path by nations around. He reflects, too, that while the educator, the teacher, or school officer, may find the same generalizations of great value in enforcing the obligations of the community to education, and in determining the amount which each shall do in this direction, there must be included for their purposes all those details which go to determine the fitness of methods, the construction of buildings, the choice of furniture, the sources of taxation, and the minutiæ of organization, instruction, and discipline.

EDUCATIONAL STATISTICS.

It should be observed also that those who are interested in this examnation of the entire relations of the questions of education to the public welfare can not be limited to those classes of persons who are chosen to make laws, either in the national, State, or municipal councils, or who are selected to administer the laws or to adjudicate cases under them. These questions have a direct interest for every citizen, whatever his rank or position or occupation, and he has a direct responsibility in reference to their solution. Every dollar of property in a city or State, or in the nation, is interested in the burdens to be imposed upon it by way of taxation for the support of pauperism, for the punishment of crime, and for the correction of the manifold evils which are the sources of these burdens. Every dollar of value, therefore, is interested in the education of the people, as the great and almost the only process of prevention in the power of civil government to employ, to reduce the expenses resulting from crime and pauperism, as well as other and numerous evils, which are avoided or diminished by the universal application of intelligence and virtue on the part of our citizens. It should be recognized as a fact, therefore, that every citizen, whether as an owner of property, or solely on account of his rights and immunities as a citizen, is deeply concerned in striking the balance between the benefits

of education and the evils of ignorance and vice in his city, in his State, in the nation.

And when we have a record of these considerations, which should command the profoundest attention of the statesman and the patriot, we are dealing with the same principles of political economy which must be apprehended by the humblest citizen as the guide of his conduct.

Each is alike interested in the question whether the nation is growing better or worse, whether property is increasing or diminishing, whether life is shorter or longer, and whether he himself is contributing to the one result or the other. And when this circle of inquiries has been traversed, should it be found that all questions of method and forms of government, of expediency in political economy, and all solutions of problems of civil government, come together and are determined by the methods adopted in the instruction and training of the young, and the extent and faithfulness of their application, of what supreme and primary importance will the universal voice of mankind pronounce all inquiries into educational statistics?

Moreover, as the American citizen contemplates the movements among the nations of the earth, and recognizes the changes that are entering into the conditions which determine national progress, he cannot fail to rejoice in seeing the greater and greater extent to which the fundamental ideas of his own Government are having weight among the peoples of the earth. He sees all the oppressions of tyranny and caste yielding to the alembic of enlightened reason; he sees imperial, royal, and aristocratic councils stooping to consider the quality of men as a factor in the problems of political economy; he observes in all civilized countries mere physical force going down before brain-power and moral power; that reason and truth and right are showing their influence in proportion as light is shed among communities and nations; that changes in science and intelligence are followed by corresponding changes, even in the appeal to arms. The warrior, in measuring his foe, the merchant in trusting his correspondent, the mechanic or artist in looking at his competitor, and the capitalist in considering the value of the laborer, must estimate the other's intelligence and training.

Unfortunately, we have no tests entirely satisfactory; those of reading, writing, or both, only having so far been generally applied. But all facts showing the opportunities for education, and the extent to which they are improved, have their value; and for the United States, year by year, the reports of this office are reaching more nearly to satisfactory results. Slowly, according to the inadequate means furnished us, and impeded by the chaotic condition of statistics and reports out of which correct conclusions are to be reached, we are coming into possession of that knowledge which may be a fair test of our capacity as a nation, and the methods by which our excellence and greatness may be increased and the welfare of our people promoted.

By the courtesy of General Francis A. Walker, Superintendent of the Ninth Census, and his assistants, it was made possible to include in the report of this office for the year 1871 some of the lessons of the census of 1870 most important to educators. By the delay of the present report we are able to use the completed results of that census, the elimination of the educational items having required a great amount of labor. The main facts thus brought out in relation to the entire country will be found in ten tables among the accompanying documents.

LESSONS OF THE CENSUS.

From the census we ascertain for each State and Territory the number of its square miles; its population; their nativity, race, sex, and parentage; its total valuation of property and the average of individual wealth; the number of illiterates between certain ages, and the percentage of illiterates to the population of corresponding ages; the number of universities, colleges, schools of theology, law, medicine, science, art, agriculture, and music; schools for the blind, the deaf and dumb, and idiots; schools of mining and of technology; private schools, normal schools, and public schools of all classes, with the number of professors and instructors, and the amount and sources of income for each class; the libraries and number of volumes; the number of periodicals of all classes, illustrated, political, religious, &c.; the number of persons pursuing some one of the various learned professions; the number of paupers and the number of criminals. And still further, to aid in the use of the materials of the census, a summary of the leading items bearing on education is given in the abstract of material from each State, hoping thus to add something, if possible, to the effect of its educational lessons, which it is difficult for the different State educational officers to work out for their own use.

In Table A, from the census of 1870, in the appendix to this report, we have the area, the number, nativity, race, and sex of the population, and the number of inhabitants to the square mile. The following are the numbers for the whole country:

Area in square miles	3,603,884
Total population	38,558,371
Population to the square mile	10.70
Number of native males	16,486,622
Number of native females	16,504,520
Total number of native inhabitants	32,991,142
Number of foreign males	3,006,943
Number of foreign females	2,560,286
Total number of foreign inhabitants	5,567,229
Number of white males	17,029,088
Number of white females	16,560,289
Total number of white inhabitants	33,589,377
Number of colored (unmixed) males	2,115,380
Number of colored (unmixed) females	2,180,580
Total number of unmixed colored inhabitants	4,295,960
Number of mulatto males	277,896

tain the number who are able, through reading and writing, to exchange information with others for the guidance of their conduct. How many of the remaining 68.53 per cent. of our entire population who can read and write have any instruction in reckoning, or know anything of the grammar of our language, or the history or geography of our country, or how many have completed the course in our high schools and academies, or how many have received a collegiate or professional education, we can not tell as yet.*

The relation of ignorance to poverty, or of intelligence to wealth, is so impressively set forth by two colored maps published in the census, that I have obtained permission from General Walker to include them in the appendix of this report, for the benefit of the educators of the country.

TABLE I FROM THE CENSUS.

The total number of persons in the United States pursuing various

* J. C. Welling, LL. D., president of Columbian College, D. C., in attempting to ascertain the number of college graduates in the Congress of the United States, presents the following interesting results, (Proceedings National Baptist Educational Convention 1872, p. 194.)

It is proposed to take the last three Congresses of the United States, and to estimate the degree in which even a nominally educated mind may be said to have pervaded their deliberations.

The following statistics are consolidated from Dr. Welling's text:

	40th Congress.			41st Congress.			42d Congress.		
	Senate.	H. Rep.	Both.	Senate.	H. Rep.	Both.	Senate.	H. Rep.	Both.
Total number of members	53	188	241	72	239	311	74	243	317
Number of college graduates	25	61	86	33	75	108	34	77	111
Per cent. of college graduates	47	32	31	46	31	34	46	31	35
Number of Harvard graduates	1	0	1	2	2	4	2	1	3
Number of Yale graduates	1	6	7	1	5	6	1	8	9
Number of Princeton graduates	0	4	4	2	5	7	3	1	4
Total of these three colleges	2	10	12	5	12	17	6	10	16

According to her triennial catalogue of the year 1868, Yale College had at that time 3,645 living alumni. According to her triennial catalogue of 1869, Harvard College then had 2,977 living alumni. According to her triennial catalogue of 1869, Princeton College then had 2,446 living alumni. The average ratios of Harvard, Yale, and Princeton graduates in Congress to the total number of living graduates belonging respectively to those colleges at the dates of 1866, 1868, and 1870, when elections were held for members of the popular branch of Congress, are as follows: Yale, 1.508; Harvard 1.145; Princeton, 1.506.

President Welling does not enter into a discussion of the relation of the educated classes to our civil service except in Congress. In reference to the naval and military service, it will be noted that the officers of the Army and Navy, respectively, are expected to be drawn from the graduates of the Military and Naval Academies.

learned, professional, or artistic occupations, according to the census of 1870, is 316,638, there being in—

Alabama	5,403	Missouri	14,662
Arkansas	2,999	Nebraska	1,142
California	6,342	Nevada	475
Connecticut	5,740	New Hampshire	3,939
Delaware	842	New Jersey	7,642
Florida	899	New York	46,322
Georgia	5,952	North Carolina	4,630
Illinois	22,671	Ohio	25,742
Indiana	13,439	Oregon	1,086
Iowa	12,022	Pennsylvania	27,082
Kansas	3,951	Rhode Island	2,025
Kentucky	8,845	South Carolina	3,005
Louisiana	4,108	Tennessee	7,325
Maine	7,079	Texas	5,787
Maryland	5,841	Vermont	3,444
Massachusetts	15,945	Virginia	7,389
Michigan	10,507	West Virginia	2,554
Minnesota	3,625	Wisconsin	7,915
Mississippi	4,662	The Territories	3,600

TABLE F FROM THE CENSUS.

Educational institutions and schools, as such, including all grades from the elementary to the superior and special, professional and technical, must do their work exclusively upon the population from 5 to 24 years of age, inclusive. How much these institutions are doing, and at what expense; for how many students, male and female; by how many instructors, male and female, will appear in the following summary of Census Table F:

Classes of institutions.	Number of institutions.	Income.			
		From endowment.	From taxation and public funds.	From other sources, including tuition.	Total.
Colleges	507	$2,275,967	$582,265	$4,248,143	$7,106,375
Academies	1,518	206,885	211,589	4,800,132	5,218,606
Schools of law	26	11,127	8,957	108,164	128,248
Schools of medicine	65	44,672	42,870	693,126	780,668
Schools of theology	92	558,900	1,477	469,489	1,059,866
Schools of agriculture and science	16	93,177	199,722	99,988	392,887
Commercial schools	134	23,575	1,192	783,216	807,983
Schools of art and music	100	.....	3,000	408,331	411,331
Blind asylums	21	9,192	400,779	33,154	443,125
Deaf and dumb asylums	33	51,091	708,023	113,151	872,265
Asylums for idiots	7	.....	151,139	31,915	183,054
Schools of dentistry	3	.....	.....	23,600	23,600
Schools of mining	3	2,600	2,000	43,290	47,890
Other technical schools	20	48,817	7,237	143,955	200,009
Other private schools	14,025	163,249	570,282	12,962,615	13,696,146
Normal schools	120	15,306	300,980	231,108	547,394
Other public schools	124,939	129,227	58,554,527	4,799,525	63,483,279
Schools of all classes	141,629	3,663,785	61,746,039	29,992,902	95,402,726

Classes of institutions.	Instructors.			Students.		
	Male.	Female.	Total.	Male.	Female.	Total.
Colleges	2,973	929	3,902	49,692	24,152	73,844
Academies	2,598	3,592	6,190	59,741	69,663	129,404
Schools of law	78	.....	78	1,667	6	1,673
Schools of medicine	590	9	599	6,609	137	6,746
Schools of theology	357	.....	357	4,045	50	4,095
Schools of agriculture	140	9	149	1,573	217	1,790
Commercial schools	453	25	478	17,472	1,691	19,163
Schools of art and music	202	238	440	2,743	7,755	10,498
Blind asylums	66	81	147	710	693	1,403
Deaf and dumb asylums	141	91	232	1,989	1,563	3,552
Asylums for idiots	2	26	28	374	312	686
Schools of dentistry	22	.....	22	170	.....	170
Schools of mining	30	.....	30	114	.....	114
Other technical schools	114	1	115	1,911	141	2,052
Other private schools	11,389	13,688	25,077	353,134	373,554	726,688
Normal schools	245	337	582	7,533	11,059	18,592
Other public schools	73,929	108,687	182,616	112,519	3,096,949	6,209,468
Schools of all classes	93,329	127,713	221,042	3,621,996	3,587,942	7,209,938

It will be seen that out of the 17,389,784 persons between 5 and 24, inclusive, there were under instruction for that year, according to the census, 7,209,838, or over one-third. But the number over 21 who were under instruction must be very limited, perhaps not enough to affect the general result by any appreciable percentage. The population between 5 and 20, inclusive, numbers 14,507,658, or a little more than double the entire number reported in all the institutions of learning.

The total wealth of the country was $30,068,518,507; the total income of, and we may safely say the total expenditure for, schools was $95,402,726.

TABLE G FROM THE CENSUS.

What is accomplished through the various activities of the country, outside of the schools, to promote the increase of individual and general intelligence we can not ascertain. But the census gives us interesting information in regard to the aid extended to culture through the newspaper press and libraries. From the seventh of the accompanying tables, drawn from the census, we learn the following particulars in regard to libraries:

Total number of libraries, public and private	164,815
Total number of volumes in same	45,528,938
Number of private libraries	108,800
Number of volumes in private libraries	26,072,420
Number of libraries other than private	56,015
Number of volumes in same	19,456,518

Of these libraries "other than private" there belonged—

To the General Government	15—with	305,185 volumes.
To State and territorial governments	53—with	653,915 volumes.

To cities, towns, &c	1,101—with	1,237,430 volumes.
To courts, &c	1,073—with	425,782 volumes.
To colleges, academies, &c	14,375—with	3,598,537 volumes.
To churches and Sabbath-schools	38,058—with	9,981,068 volumes.
To historical, literary, and scientific societies	47—with	590,002 volumes.
To charitable and penal institutions	9—with	13,890 volumes.
To benevolent and secret associations	43—with	114,581 volumes.
To circulating libraries	1,241—with	2,536,128 volumes.

TABLE H FROM THE CENSUS.

From the eighth of the same tables we learn the following facts in relation to newspapers and periodicals:

Number of all classes		5,871
Number of daily	574	
Number of tri-weekly	107	
Number of semi-weekly	115	
Number of weekly	4,295	
Number of bi-weekly	96	
Number of monthly	622	
Number of bi-monthly	13	
Number of quarterly	49	
Technical and professional		207
Daily	3	
Weekly	40	
Semi-monthly	11	
Monthly	130	
Bi-monthly	7	
Quarterly	16	
Illustrated, literary, and miscellaneous		503
Weekly	303	
Monthly	158	
Other	42	
Political		4,333
Daily	553	
Tri-weekly	101	
Semi-weekly	100	
Weekly	3,565	
Other	14	
Religious		407
Weekly	208	
Semi-weekly	40	
Monthly	141	
Other	18	
Advertising, 79; agricultural and horticultural, 93; benevolent and secret societies, 81; commercial and financial, 142; nationality, 20; sporting, 6		421

TABLE J FROM THE CENSUS.

Table J from the census shows that the whole number of paupers supported during the year ended May 31, 1870, was 116,102, at a cost of $10,930,429. The actual numbers supported at the date of taking the census were 22,798 foreign, 44,539 white natives, and 9,400 colored natives, or 76,737 in all.

The number of criminals reported in prison June 1, 1870, was, of foreign nativity, 8,728; native white, 16,117; native colored, 8,056, making a total of 32,901, while the whole number convicted during the year ending on the same date was 36,562.

FACTS FROM STATISTICS COLLECTED BY THIS BUREAU.

It should be kept in mind, in any comparison made on the basis of this report, that the material in it drawn from the census relates to the year 1870, and that the facts in the tables prepared from the material collected by this office are brought down to the latest date possible, and inserted in the report as it goes through the hands of the printer. As a rule, these facts are furnished to us by the officers in charge of institutions or systems, and reported in answer to inquiries sent out from this office. They are, therefore, at least two years later than those of the census, and, as a rule, more recent than the material presented under abstracts of information from States; and, as a whole, they afford a more complete summary of facts for the investigation of education in the United States than any previous collection of this character.

So far the office has sought to come into an acquaintance with all the different classes of educational institutions, and to bring these institutions into an acquaintance with each other, and to present with regard to each as many important items as might be necessary for the basis of a correct judgment, and possible in generalizations comprehending so many details. Holding up steadily the three great subdivisions of instruction, as respects grade—elementary, secondary, and superior—the office has left the respective institutions to place themselves. The endeavor has been to make the tables as flexible as possible, and to seek on a few most essential points a nomenclature under which the largest number of facts possible could be generalized; and, wherever necessary, by notes and otherwise, to allow special statements and explanations. Yet, with all this capacity for variable statement, many institutions will find it difficult to bring themselves into any direct comparison with others. I can not doubt, however, the utility of these investigations; and I am happy to observe the unanimity of feeling upon this point among those interested in giving a more solid foundation to our educational theories.

Probably there is no one, whether an officer of a college, or the administrator of a school system, who attempts to study these subjects, who is not surprised at the lack of records.*

---

* For instance: The president of a new college is called upon to decide whether the college shall erect and control dormitories, or leave them to private enterprise; and on looking around he can find only three or four recorded opinions to assist him, notwithstanding there are behind us in this country nearly two and a half centuries of experience on this point.

It is worth while to note what some of the college presidents have just now to say upon the subject, in answer to a letter of inquiry from this office.

President Eliot, of Harvard University, says: "Dormitories are a simple necessity for us; without them our students could not get rooms at reasonable prices. We have built four new ones within three years."

TABLE I.

A glance at Table I will show the condition of the account which the respective States are able to give of the children of school age. It reveals the points of superiority and the deficiencies in the different State systems of instruction.

The total school population of the 34 States reporting was 12,740,751; that of the 7 Territories being 88,097; and the grand total 12,828,847. The enrollment in the 34 States reporting was 7,327,415; in the 7 Territories, 52,241; total, 7,379,656. The average attendance in the 28 States reporting was 4,081,569; in 4 Territories, 28,956; total, 4,110,525. The number not registered in the 34 States reporting was 4,569,127; in 6 Territories, 39,676; total, 4,608,803.

The number attending private elementary shools in the 18 States reporting in full was 356,691; in 5 Territories, 7,592; total, 364,283. The number of teachers reported in 33 States was 216,062; in 7 Territories, 1,177; total, 217,239.

In the column of school ages it appears that from 6 to 21 is the legal school age in Illinois, Indiana, Louisiana, North Carolina, Pennsylva-

---

President Barnard, of Columbia College, New York, says: "I wrote strongly, nearly twenty years ago, against the 'dormitory system,' as it is called, for colleges. Having tried the other system since, I am not now so strong as I was then in the views I put forth."

Dartmouth College provides dormitories as far as possible for her students, and President Smith favors this course for the following reasons: "1. Students are not subject to the exorbitant rents demanded by private individuals. 2. Rooming in college-buildings facilitates a proper supervision of the students. 3. It favors a proper *esprit de corps* and tends to the creation of a literary atmosphere. 4. The *college life*, properly so called, becomes more distinctive and more intense."

Bowdoin College, Maine, has three such buildings, and the erection of a fourth is contemplated. President Chamberlain is decidedly in favor of the system.

President Chadbourne, of Williams College, Massachusetts, thus states the change in his views upon the subject: "I formerly held to the opinion that it would be better for the students to be distributed among the people of the town; but careful observation for some years in this college, and in the University of Wisconsin, has convinced me that the students rooming in the college-buildings do better in all respects than those who room in town in buildings over which the college can have no control."

President Brown, of Hamilton College, New York, thinks that "though dormitories are in some respects an evil, and an expensive addition to the apparatus of a college, yet for a *college in the country* they are a necessity."

President Anderson, of Rochester University, New York, as the result of twenty years' experience, expresses the opinion that "dormitories are on the whole not desirable."

Repeated inquiries have failed to discover any books or documents containing a thorough discussion of this question to the present date. The late Dr. Bethune, in an address delivered at Yale College, criticised very severely the dormitory system, denouncing it as barbarous. Dr. Wayland, some years ago, published a little book on colleges, in which he declared against the dormitory system. President Porter, of Yale College, briefly touches upon the subject in his book on American Colleges; and President Barnard, of Columbia College, in his "Letters on College Government," discusses the question. This appears to be the sum of the literature relating to this subject.

nia, West Virginia, and Arizona; from 6 to 20 in Kentucky; 6 to 18 in Nevada and Texas; 6 to 17 in the District of Columbia; 6 to 16 in South Carolina; 5 to 21 in 13 States and 3 Territories, namely, Alabama, Arkansas, Delaware, Georgia, Iowa, Kansas, Minnesota, Mississippi, Missouri, Nebraska, New York, Ohio, Virginia, Colorado, Dakota, and Idaho; from 5 to 20 in Maryland, Michigan, and Vermont; 5 to 18 in New Jersey; 5 to 15 in California and Massachusetts; 4 to 21 in Florida, Maine, New Hampshire, and Washington Territory; 4 to 20 in Oregon and Wisconsin; and 4 to 16 in Connecticut and Utah; Rhode Island admits all children below 15 years of age.

It will be seen that Alabama, Connecticut, Florida, Georgia, Illinois, Kentucky, Maine, Maryland, Massachusetts, Michigan, Mississippi, Missouri, Nebraska, New Jersey, New York, Pennsylvania, Rhode Island, Tennessee, Texas, Vermont, West Virginia, Arizona, Montana, New Mexico, Washington, Wyoming, and Indian Territory did not give the sex of the school population. Kentucky, Oregon, Tennessee, Arizona, Montana, New Mexico, and Wyoming can not tell the number of children enrolled in schools.

Arkansas, Delaware, Florida, Nebraska, North Carolina, Tennessee, Vermont, Wisconsin, Dakota, Idaho, Montana, New Mexico, Washington, Wyoming, and Indian Territory can not give the average attendance; and the number registered, the average absence of the enrolled, and the average total absence in these States can not be given.

The number of schools and school districts is not reported in California, Tennessee, Arizona, New Mexico, and Wyoming. The number of pupils in private elementary schools is not reported in Alabama, Arkansas, Delaware, Florida, Indiana, Kansas, Kentucky, Louisiana, Maine, Maryland, Missouri, New Hampshire, North Carolina, Oregon, South Carolina, Tennessee, Texas, Vermont, Virginia, Montana, New Mexico, Utah, Washington, Wyoming, and Indian Territory.

The period of duration of schools is not given in Arkansas, Kentucky, Tennessee, Texas, Montana, New Mexico, Wyoming, and Indian Territory.

The number of children in public schools is not given in Delaware, Kentucky, Oregon, Tennessee, Montana, New Mexico, Wyoming, and Indian Territory. The average salary of teachers is not given in Arkansas, Delaware, Indiana, Illinois, New York, Tennessee, Texas, Vermont, Wisconsin, Montana, New Mexico, Utah, Wyoming, and Indian Territory.

TABLE II.

On looking at Table II, which is intended to be the balance-sheet of educational receipts and expenditures on the part of the States and Territories, it will be seen how few can give a full and fair account of themselves. What statesmanship is safe in legislating with so imperfect material as a basis of action as is furnished in these respective commonwealths?

Neither Alabama, Delaware, Nebraska, Tennessee, Montana, New Mexico, Utah, Wyoming, nor Indian Territory can tell the amount derived from taxation for school purposes; while Delaware, Tennessee, Montana, New Mexico, Utah, Wyoming, and Indian Territory show no total of income for school purposes from any source. And as regards expenditure, neither Alabama, Delaware, Florida, Georgia, Kentucky, New Hampshire, Tennessee, Montana, New Mexico, Wyoming, nor Indian Territory can give any details; and Delaware, Florida, Georgia, North Carolina, Oregon, Tennessee, Montana, New Mexico, Utah, Washington, and Wyoming Territory can not give the total amount expended.

The total income from taxation in all the States and Territories, from which it is reported, is $55,889,790.31; and the total income from all sources is $72,630,269.83. The total expenditure for all educational objects is $70,891,981.83. Assuming that the States reporting the total aid expend the amount raised for school purposes, the total expenditure would be $71,810,304.27.

In the 31 States, having a permanent school-fund, the total amount is reported at $65,850,572.93.

As a deduction from the material in Tables I and II, it appears that the public-school expenditure in the several States and Territories *per capita* of population of legal school age is as follows:

Public-school expenditure in the several States and Territories per capita of population of legal school age.

State or Territory.	Amount.	Year.	State or Territory.	Amount.	Year.
Massachusetts	$20.050	1872	Oregon	$3.832	1872
Nevada	19.893	1872	Maine	3.745	1872
California	12.133	1872	West Virginia	3.464	1871
Connecticut	11.652	1872	Mississippi	2.854	1871
Nebraska	10.447	1872	Missouri	2.757	1871
New Jersey	8.932	1871	Kentucky	2.258	1872
Pennsylvania	8.540	1872	Virginia	2.245	1872
Iowa	8.528	1872	Arkansas	2.223	1871
Illinois	8.521	1872	Louisiana	2.159	1871
Michigan	7.355	1871	Florida	2.059	1871
Rhode Island*	7.160	1872	Alabama	1.447	1871
Vermont	6.772	1872	South Carolina	1.349	1872
Texas	6.398	1872	Georgia	687	1871
New York	6.393	1871	North Carolina	654	1872
Ohio	6.352	1872			
New Hampshire	6.056	1872	Colorado Territory	15.603	1872
Indiana	5.636	1872	District of Columbia	15.155	1872
Minnesota	5.504	1872	Idaho Territory	9.174	1872
Wisconsin	4.588	1871	Dakota Territory	8.667	1872
Maryland	4.399	1871	Arizona Territory	4.346	1872
Kansas	4.303	1872	Washington Territory	3.381	1871

* The expenditure in Rhode Island is assumed to be for a school population from 5 to 15 years old.

The average monthly wages of public-school teachers in the United States are as follows:

State or Territory.	Male.	Female.	State or Territory.	Male.	Female.
Alabama	$42 50	$42 50	New Jersey	$57 34	$32 43
Arkansas	.....	.....	New York	.....	.....

RÉSUMÉ OF FACTS RESPECTING STATE SYSTEMS.

In connection with these statistics of State school-systems, reference is also made to the abstract of State and city reports on education in the first part of the appendix to this report.

Only the briefest notice can be given here of the progress upward or downward of the systems of public instruction in the various parts of the Union.

Maine has abolished county supervision, but increased the tax-levy for schools. Massachusetts has not yet effected a levy of a tax by the State, nor is there any school supervision, save that in the cities and larger towns, subordinate to that of the secretary and other agents of the State board of education. In Connecticut a compulsory school-law has been enacted, and this is believed to be producing a favorable effect upon school attendance. The abolition of tuition fees in New Jersey has continued to add greatly to the efficiency of public instruction. In Delaware there has been increased agitation upon the subject of education; but this State has not yet effected any change in legislation, and has no State supervision, nor as yet any legal provision for the education of colored children. Maryland appropriated, by her last legisla-

ture, $50,000 for the education of colored children in the State, outside of Baltimore, leaving Delaware and Kentucky the only States that have no provision for the education of this class of children. The progress in Virginia* has been great in the majority of counties, and deserves careful study by all the States in the South still laboring under similar difficulties. In North Carolina,† South Carolina, Georgia, and Tennessee the inaction in country districts is deplorable. In the towns and centers of population some important progress has been made; that in Atlanta, Georgia, Knoxville, Tennessee, and Jacksonville, Florida, being especially noteworthy.

Correspondence with this office indicates a very considerable increase of individual interest upon the whole subject of education, especially in regard to those features looking toward universal elementary instruction. In Tennessee‡ it is hoped that the agitation of this subject will produce more satisfactory legislation, probably restoring the State system, and the means of State and county supervision, and some measure of State aid to county effort. In Kentucky§ the increase in educational interest has been very great. Special acts have been passed by the legislature providing for the education of colored children in Louisville and some of the other cities. Alabama has remained in about the same condition as for several previous years; but, as there is no authority for sufficient local taxation, there seems to be no adequate provision even for elementary instruction. In Arkansas‖ the school-system has not maintained the encouraging auspices with which it was inaugurated. Mississippi has made good progress.

---

* The State superintendent stimulates to still greater effort, informing the people that they spend about twenty millions a year for whisky and dogs, while only one million is asked for education.

† Rev. N. B. Cobb, in an address at an educational convention in Raleigh, North Carolina, February 12, quoting from a report of the State superintendent, Hon. Mr. McIver, gave the amount of $155,393.96 as expended for public instruction in that State during the year ended September 30, 1872; and stated that the estimated number of dogs in the State was 200,000, or, as some thought, 153,000, whose average cost was fifty cents per month, or $6 per year, making a total expense of $918,000, or about six times the entire expenditure for education in the public schools of the State.

‡ Education in Tennessee has met with a great loss in the departure from the State of Rev. C. F. P. Bancroft, principal, and Mr. C. C. Carpenter, superintendent, of the Lookout Mountain institution.

The "Jubilee Singers," a company of colored students of the Fisk University, led by Mr. White, treasurer of the institution, have cleared by their concerts in the past two years $40,000, which is for the erection of college buildings; they go to Europe to prosecute their labors.

As this report goes through the press, information is received that the legislature has passed a new school-law, containing the provisions above referred to, and that Hon. J. M. Fleming has been appointed State superintendent of public instruction.

§ A bill has been under consideration in the legislature providing for the education of the colored children throughout the State, but its passage is considered doubtful.

‖ Hon. A. P. Searle, Arkadelphia, Arkansas, superintendent of the eighth judicial district (comprising seven counties) of the State of Arkansas, writes: "There is a marked

In Louisiana, for a considerable portion of the year, progress was favorable. Texas, the last of the Southern States to act, in spite of appalling obstacles, has made great advancement; but the opponents of universal education threaten to overthrow all that has been done. In Florida, while nothing has been accomplished in some sections of the State, in several localities excellent schools have been sustained, and considerable progress has been made in educational sentiment. The revised school-law is successfully going into effect in Illinois, and the State school superintendent has advised a check upon the tendency to large investments in school-buildings, counseling moderation.

It is surprising that the school-system in Missouri should still remain in peril after all it has already accomplished for the State; but its friends are hopeful that none of the efforts to secure legislation which shall destroy its efficiency can finally prevail.

A lack of means is an obstacle universally encountered by the friends of education in the South, and some of the most successful enterprises there, like that at Wilmington, North Carolina, and the various institutions aided by the American Missionary Association and other benevolent organizations, are due to outside, northern liberality.

Among the effective coöperative instrumentalities is the Peabody fund, disbursed under the wise supervision of that eminent educator, Rev. B. Sears, D. D., LL. D.

It is gratifying to observe, on the far-off Pacific coast, the signs of excellent progress. The course of education in California is steadily forward. Oregon has put its school-fund in better shape, and created a State board of education, and provided for a State superintendent of public instruction. Hon. S. C. Simpson has been appointed to this office. This leaves Delaware the only State in the Union without any provision for State supervision of education.*

---

change in the people of these mountain-counties during the last two or three years in regard to schools. Until 1868 free schools were almost unknown. They are now established in every county of the district, and the interest manifested by the people is far beyond my most sanguine expectations. They have raised funds to carry on schools; and, in some of the more remote portions of the district, where the population is not sufficient to maintain a school, children travel several miles, carrying provisions with them, and return at the end of the week. The scholastic population of the district is 17,639. Of this number about 15,000 attend schools. The attendance of 1872 is double that of 1871. The number of teachers is 323. One of the greatest difficulties encountered in the organization of schools is the distinction that is made between white and colored children.

"Owing to the prejudice on the part of the whites, separate schools have to be maintained in some districts, doubling the expense; while, if this distinction were not made, one teacher would be sufficient for the whole number of pupils. The prejudice of the people against free schools is fast dying out. Where, a year ago, it was almost impossible to find teachers willing to take charge of them, the best teachers are now offering their services. This has had a marked effect upon the people. Public examinations of teachers are held twice a year, and teachers' institutes have been held with success."

* While this report is going through the press, this office is notified of the passage of a compulsory school-law in the State of Nevada.

THE TERRITORIES.

In the District of Columbia there has been no change in the form of school organization. The same inconvenient and illogical division of authority between four independent boards of trustees (having jurisdiction respectively over the white schools of Washington and the white schools of Georgetown, the colored schools of both cities, and all the schools for the rest of the District) yet remains. It is true that some of the evils of administration as regards the white schools in the two cities have been obviated by the wise appointment of one superintendent for both systems. By this arrangement, for which Hon. Henry D. Cooke, governor of the District, should receive credit, the schools of Georgetown have for the past year received the able supervision of Hon. J. Ormond Wilson, superintendent of the Washington schools.

But the benefits of efficient supervision should be guaranteed by law to this compactly-settled, small territory, and should not depend on the good-will of independent authorities.

The second biennial report of the superintendent of public instruction for the State of Nevada was received too late for insertion in its proper place.

The report states that during the biennial term just closed there has been a notable increase in the permanent fund, an addition of nearly 1,000 to the school population, and in several respects a proportionate improvement in school accommodations. In several counties there has been unusual activity in educational matters, resulting in the building of new school-houses, the purchase of new furniture, and the employment of better qualified teachers. The great defect of the present school system is presented in these words: "Not one-half of our schools approximate excellence in either the extent or quality of instruction furnished." This is ascribed not to a lack of qualified applicants, but to the fact that school trustees are entirely irresponsible in the matter of making appointments. "With a maximum of taxable property and a minimum of school population; with less than 5,000 children of school age and a distributive fund amounting during the past year to nearly $100,000, the ability of Nevada to provide for her schools exceeds that of all other States; and there ought to be more tuition, and of a better quality, than is enjoyed elsewhere on the continent."

The State school fund amounted December 31, 1872, to $104,000. The apportionment from this fund was, for 1871, $17,823.70; for 1872, $22,613.74. The total expenditure for school purposes for the school year ending August 31, 1872, amounted to $98,468.82; leaving a balance on hand of $12,493.86. The number of children in the State between 6 and 18 years of age is 4,950. The whole number enrolled in public schools is 3,372, of whom 135 are under 6 years of age. The number attending private schools is 439. Number between 6 and 18 reported as not attending any school, 1,410. Average duration of schools, 8 months and 10 days. Twenty-six schools were maintained over 9 months. Number of male teachers employed, 29; female teachers, 59; total, 88. The highest monthly compensation paid to any male teacher is $175; to female teachers, $150; lowest monthly compensation of male teachers, $75; of female teachers, $40. Number of school districts, 58; number of school-houses, 50; number of schools 76, including 1 high school, 8 grammar, 6 intermediate, 9 primary, and 52 unclassified. Value of school property, $69,413.

Only two counties maintained schools for a full school year, (10 months;) three counties gave 8 months and less than 10; six counties 6 months and less than 8; and two counties less than 6. Short terms are invariably occasioned by want of funds. This occurs only in thinly-settled districts, and is the necessary result of the *pro-rata*

During the past year, commodious and beautiful school buildings have added to the attractions of the Washington schools, white and colored, and have contributed to their increased success.

This has been done without any assistance from Congress. Indeed, the District schools have not been favored by any grant of public lands, or other national aid, though subjected to peculiar demands from the large floating population drawn from other places, paying no taxes here, and not even claiming the District as their legal residence.*

In New Mexico, although the agitation upon educational subjects has increased, very little, practically, has been accomplished. In Arizona important improvements have been made.†

---

plan of the distribution of public moneys. It is recommended that either the districts be consolidated, or that a different plan of distribution be adopted.

Practically the children of all citizens are now free to attend the public schools. The statute yet discriminates against the children of colored citizens, but by decision of the supreme court, rendered in January last, the section excluding negroes was declared unconstitutional.

The superintendent urges immediate and careful attention to the interests of the university and agricultural and mechanical college. The small number in the State likely to seek an advanced education does not seem to justify the immediate establishment of the institution under the provisions of the national grant of lands.

An academy, or preparatory department, is, however, a desideratum, and would doubtless achieve immediate success, and largely advance educational interests in the State. It is recommended that it be open to pupils of both sexes. It is a gratifying fact that generous offers of sites and buildings for the university, from different parts of the State, have already been received by the board of regents.

It is considered of the highest importance to make some provision for the normal instruction of those desiring to prepare themselves for teachers. On account of the smallness of the population, the immediate establishment of a State normal school is deemed impracticable. An appropriation is asked to support a certain number of pupils in the normal school at San José, California.

The superintendent recommends that the powers of county superintendents be enlarged, that a State board of examiners be provided for, and that first-class State certificates and normal-school diplomas be recognized as valid testimonials of fitness for the profession of teaching, and that the issuance of county certificates to the holders of such be authorized.

* The statistics of private institutions in the District have been compiled by T. C. Grey, esq.

A most wise movement has been set on foot in Georgetown, by the superintendent, to harmonize the use of certain private benefactions with the action of the public-school authorities. This will, it is hoped, result in the erection of a much needed school building, in the establishment of a high-school department, and the opening of a library and laboratory for the use of the young.

A considerable increase in the number of trustees in charge of the colored schools of Washington and Georgetown has been authorized by act of Congress, in response to a recent expression of public opinion.

† The following interesting extract from a letter from the governor of the Territory, to whom great credit is due for his educational labors, contains the latest information:

* * * * * * * *

"You will observe by the amended law, that the tax for schools has been fixed. I found, when left optional with boards of supervisors, that there was constant danger that the money would not be raised, and consequently the schools would have to stop.

Alaska lies entirely outside of all organized efforts for education, and presents the singular fact of being an integral part of the boasted most progressive nation in the world, and yet without the least possible provision to save its children from growing up in the grossest ignorance and barbarism. No report has been received by the office from the two schools which the Fur-Seal Company is bound by its contract to support among the Aleutians.

In different parts of Washington, Wyoming, and Idaho Territories, very commendable advancement is reported. In studying the difficulties existing in the Indian Territory and Utah, it is very surprising that profound statesmanship has paid so little attention to education as the most efficient means for their solution.*

The legislature, in addition to the revenue provided for in this law, appropriated $6,500 out of the general fund, and divided it equally among the counties of the Territory, for school purposes. I anticipate that, with the money on hand, and what we shall realize from the taxation provided for in this law, we shall raise for school purposes in the next two years about $40,000, and with this sum we can support a few schools for at least six months each year in every school district in the Territory.

"Very respectfully, yours,

"A. P. K. SAFFORD, *Governor.*"

* By the courtesy of Hon. J. P. C. Shanks, chairman of the Committee on Indian Affairs of the House of Representatives, I have received, in advance of publication, some interesting facts in reference to the education of the Indians in the Indian Territory.

Among the Choctaws it is stated that schools have been in operation more than fifty years. Manual-labor schools were instituted among them by the missionaries long before their removal from Mississippi. Their educational system at the present time, as stated by their superintendent, provides for neighborhood schools, in which the elementary branches are taught, and for academies and seminaries for more advanced pupils. There is also a law providing for sending certain more advanced pupils from these higher schools to finish their education in the States.

A school superintendent and a district superintendent are elected by the national council, and each neighborhood elects a local trustee.

The higher schools are under the immediate supervision of the council.

There has been no enumeration of children of school age since about four years ago, at which time there were 2,220, of whom only about three-fourths were attending any school. The superintendent states that when he entered upon his duties there were a good many primary schools but no academies. He observed that the great need was more money for school purposes; that the establishment of two large schools had reduced the number of primary schools; that the schools were formerly kept ten months annually, but now, on the average, only about five months.

There is no tax levied for school purposes, all expenditures for education being from the income of school funds.

The schools among the Chickasaws were also introduced by the early missionaries, when they met with great opposition from the Indians, though education is now much favored by them. The great want now is sufficient money to support the schools. They teach chiefly the primary branches in what are called neighborhood schools, which are kept open for ten months of the year.

The legal school age is from 6 to 25, but the usual age of attendance is from 6 to 18. From ten to fifteen of these schools are reported as in operation, in which the English is the language of instruction. The teachers are paid so much *per capita* for the pupils in attendance. The available funds for educational purposes amount annually to

A FREE-SCHOOL POLICY FOR UNITED STATES LAND GRANTEES.

A letter received by this office from Rev. George H. Atkinson, D.D., of Portland, Oregon, containing suggestions for a free-school policy for United States land grantees, and afterward printed in circular form by order of the Secretary of the Interior, has been forwarded to the different railroad corporations in the country possessing land-grants from Government, with a letter requesting their opinion of the policy suggested. Mr. Atkinson's letter sets forth the importance of the early establishment of free graded schools in the growing cities and towns of the West, and strongly urges upon railroad corporations owning lands granted by Government, the policy, both upon patriotic and pecuniary grounds, of setting apart school lands in all new cities and towns laid out by them.

Replies to this circular and letter received from United States land grantees and others to whom it was sent, all express a cordial sympathy with the plan proposed, and state that their practice has heretofore been in accordance with it. The president of the Iron Mountain and Cairo and Fulton Railroads says that these corporations "not only give lots for school-houses and churches, but also aid the people in erecting the buildings by furnishing transportation for material at reduced rates or entirely free." The Saint Paul and Pacific Railroad Company "has uniformly granted the application of school districts as well as of all religious denominations for sites for school-houses and churches." This company "will be pleased to harmonize its action in this direction with any suggestions which would improve the course it has pursued." This company, it is stated, also permits the free use of their emigrant receiving-houses (which they have established in all the principal towns) as public school-houses during the winter months when they are not needed for the use of emigrants. A response from Jay Cooke & Co. states that the Northern Pacific Railroad pursues the policy of making ample provision for sites for churches, schools, and seminaries, as fast as towns and cities are laid out by them, and adds that "there will be no difficulty in carrying out, under certain restrictions, all and more than all you hint at in your publication."

The president of the Mobile and Ohio Railroad Company approves the policy suggested, and adds: "It will afford us pleasure to coöperate with some organized plan for its accomplishment."

EDUCATION IN CITIES.—TABLE III.

The tendency to concentration of population in cities adds special interest to all investigations into facts connected with their educational

---

$40,000 or $50,000. Some 60 pupils are receiving instruction in the States, at an annual cost of $21,000.

The children of the freedmen in this nation are entirely without any provision for education, save as made at the expense of their parents. The testimony shows a similarly deplorable condition of facts among the children of the colored people in the Choctaw Nation.

progress. It will be noticed that there are in this country 326 of these centers of population that may be classed as cities. Their total population, according to the census of 1870, was 8,036,937, or more than one-fifth of the entire number of inhabitants in the United States. Of these only 295 reported the number of their school population, these having a total of 2,121,889 persons of school age.

Only 318 of these cities reported their enrollment in the schools, giving 1,215,897 as under instruction.

In looking at the question of enrollment it should be noted that 102 cities admit pupils between the ages of 6 and 21; 8 between 6 and 20; 10 between 6 and 18; 2 between 6 and 17; 2 between 6 and 16; 1 between 6 and 15; 100 between 5 and 21; 27 between 5 and 20; 12 between 5 and 18; 3 between 5 and 16; 19 between 5 and 15; 17 between 4 and 21; 12 between 4 and 20; 1 between 4 and 18; 6 between 4 and 16, and 4 do not report the school age. It appears that 125 of these cities do not admit pupils under 6 years of age, and from the foregoing summary it will be noted that 121 report 41,445 children enrolled under 6, so that practically we have the number of children under 6 years of age in the public schools of 246 of these cities.

The school age in 31 cities terminates at 16, and 205 give the number enrolled over 16 at 29,750; so that practically we have the age at which school attendance ends in 236 cities.

The average attendance is given in 298 cities as 787,860; 292 report the number of schools as 7,917, and 315 report the number of teachers as 21,194; and the number of scholars in 306 is 1,026,634.

Special attention is invited to the following summary, drawn from the tables of cities, found in the appendix:

	Number of cities in table.	Population of 1870.	Population of school age, 1872.	Enrollment in schools, 1872.	Number enrolled under 6 years old.
Number of cities reporting	326	326	295	318	121
Alabama	4	45,114	23,344	6,749	40

By looking carefully at the tables of cities in detail it will be found that Wilmington, Delaware; Savannah, Georgia; Centralia, Dixon, Galena, Sterling, Springfield, and Quincy, Illinois; Columbia, Kendallville, and Wabash City, Indiana; Cedar Rapids and McGregor, Iowa; Rochester, Minnesota; Concord and Manchester, New Hampshire; Utica, New York; Mansfield, Newark, and Toledo, Ohio; Allentown, Erie, Harrisburgh, Meadville, Philadelphia, Pittsburgh, and Williamsport, Pennsylvania; Providence, Rhode Island; Jefferson and San Antonio, Texas; and Milwaukee, Wisconsin, do not report population of school age in 1872; that Hartford, Connecticut; Dixon and Sterling, Illinois; Madison and Wabash City, Indiana; Paris, Kentucky; Nebraska City, Nebraska; and Houston, Texas, do not give the enrollment in schools for 1872; that Marysville, California; Hartford, Connecticut; Bushnell, Galena, and Watseka, Illinois; Wabash City, Indiana; Iowa City and Oskaloosa, Iowa; Emporia, Kansas; Biddeford and Hallowell, Maine; Flint and Lapeer, Michigan; Nebraska City, Nebraska; Orange, New Jersey; Cohoes, Elmira, New York City, Ogdensburgh, and Utica, New York; Fremont, Mansfield, and Sandusky, Ohio; Charleston, South Carolina; Houston and San Antonio, Texas; Kenosha and La Crosse, Wisconsin, do not report the average attendance for 1872; that Huntsville and Selma, Alabama; Little Rock, Arkansas; Stockton, California; New Haven and Stonington, Connecticut; Galesburgh, Macomb, Peoria, and Rock Island, Illinois; Madison, Indiana; Clinton

and Council Bluffs, Iowa; Lawrence and Topeka, Kansas; Auburn, Maine; Flint, Michigan; Hastings and Saint Anthony, Minnesota; Dover, New Hampshire; Atlantic City and Camden, New Jersey; Binghamton and Elmira, New York; Dayton, Springfield, and Mansfield, Ohio; Allegheny City and Pittsburgh, Pennsylvania; Providence and Woonsocket, Rhode Island; Petersburgh, Virginia; Green Bay and Milwaukee, Wisconsin, do not report the number of schools in 1872; that Selma, Alabama; Stonington, Connecticut; Lawrence and Topeka, Kansas; Paris, Kentucky; Auburn, Maine; Saint Anthony, Minnesota; Dover, New Hampshire; Atlantic City, New Jersey; Mansfield, Ohio; Allegheny City, Pennsylvania, do not report the number of teachers; and that Selma, Alabama; Hartford and Stonington, Connecticut; Galena and Macomb, Illinois; Madison, Iowa; Emporia, Lawrence, and Topeka, Kansas; Covington, Kentucky; Auburn, Maine; Lapeer, Michigan; Saint Anthony, Minnesota; Dover, New Hampshire; Atlantic City and Orange, New Jersey; Mansfield, Ohio; Allegheny City, Pennsylvania; and La Crosse, Wisconsin, do not report the number of pupils.*

Before passing from Tables I, II, and III, it is important to observe the necessity, here suggested and enforced, of having some standard of school age as a basis of comparison. It is not necessary, of course, that the legal school age in any two States or cities should be the same for this purpose. If it should be agreed by city or State officers to report all persons between the ages of 6 and 16 inclusive, and then by years whatever number there might be below 6 to the lowest limit of school age, and the number by years of those above 16 to the upper limit of school age, and following the same principle in regard to enrollment and average, all of the conditions necessary for purposes of comparison would be secured.

---

*The necessity and desirableness of more attention to industrial education in connection with our city systems are receiving more consideration. Capital invested in manufactures can hardly find for itself a more appropriate investment than in the direction of furnishing those aids to the young which shall make all our cities the producers of skilled industry in all departments of the arts and trades.

In Toledo, Ohio, Mr. J. W. Scott, a pioneer settler, has given one hundred and sixty acres of valuable land, one mile west of the city, as a site and for the use of a university of arts and trades; and Mr. Raymond, an old resident of that city, has pledged $20,000 to endow a department of mines and mining. As a beginning, a building has been bought and is being fitted up in the city, for library, lecture-rooms, and apparatus, until buildings can be erected on the grounds given by Mr. Scott, and ample arrangements made for a school for scientific and technical education, and the practical application of science to the useful arts.

NORMAL SCHOOLS.—TABLE IV.

States.	Total— Number of schools in each State.	Total— Number of instructors.	Total— Number of students.	Number of schools in which drawing is taught.	Number having collections of models, casts, apparatus, &c., for free-hand drawing.	Number in which vocal music is taught.	Number in which instrumental music is taught.	Number possessing a chemical laboratory.	Number possessing a philosophical cabinet and apparatus.	Number possessing a cabinet of natural history.	Number having model schools.	Number in which students receive diplomas or certificates on completion of course.

Total	48	454	7,157	2	9	182	7	72	816	44	248	3,623

From the above it will be seen that there are reported this year 101 normal schools in the United States, with 773 instructors and 11,778 students. Of these, 48 schools, with 454 instructors and 7,157 students, are supported or aided by States; 2, with 9 instructors and 182 students, by counties; 7 schools, with 72 instructors and 816 students, by cities; 44, with 248 instructors and 3,623 students, are connected with other educational institutions. In 66 of these schools drawing is taught, and

16 have collections of models, casts, apparatus and examples for free-hand drawing; vocal music is reported as taught in 74, and instrumental music in 51; 45 possess chemical laboratories; 52 philosophical cabinets and apparatus; and 32 have cabinets of natural history; 57 normal schools have model schools connected with them, and 70 confer normal-school diplomas and certificates upon students completing the course.

Ten States, namely, Alabama, Arkansas, Delaware, Iowa, Kentucky, Louisiana, Ohio, Oregon, South Carolina, and Virginia, report no State normal institution. While these figures are more complete than it has been possible to secure before, it is still a matter to be regretted that they are not absolutely so. The study of Table IV, in which these details may be found, will furnish many important inferences which it is impossible to note here. While they show the steady growth of normal instruction as an element in our educational system, they reveal most strikingly the entire inadequacy of all the instrumentalities now provided for the training of teachers for the instruction of the young in the country.

It will be remembered that we have already given the number of children between five and twenty, inclusive, in the United States, as 14,507,658. Some children under five years of age, and some persons over twenty, are receiving instruction; and it would not be far out of the way, therefore, if this number be considered as due at school.

If we take forty as the average number of pupils to a teacher, we find there were only teachers enough to instruct 8,841,680 of the 14,507,658 persons of school age, or, in other words, there were of these persons 5,665,978 for whom no teachers were employed. But the inadequacy of the normal training in the country, according to this, the fullest statement we have yet been able to make, is further seen if we suppose the course of instruction in the normal schools reported embraces three years, and that the whole number enrolled do actually go through the entire curriculum. There then would be graduated annually, it may be said, in round numbers, 4,000 trained teachers.

The inquiry here naturally arises, How many new teachers are required each year? If the number of pupils allowed to each teacher should be fixed at forty, it would require 362,691 to instruct the entire 14,507,658.

It has been estimated, by able educators, on the records of certain localities, that teachers do not continue in service, on the average, more than three years. There would be, therefore, 120,897 new teachers demanded each year, against which the normal schools reported can furnish only 4,000.

I can not, at this point, pause to enforce the desirableness and necessity of having well, instead of poorly qualified, or, rather, unqualified teachers. Nor can I delay here to consider the circumstances which might be introduced to modify these figures, such as the number who

instruct two sets of pupils. The truth of the utter and appalling inadequacy of normal training remains.

True, educational journals, works on teaching, teachers' conventions, teachers' institutes, lectures by able educators, and the efforts of many able supervising school officers in the country, are accomplishing much good in extending a knowledge of the art and science of education; it is true, also, that all good schools are so far promotive of the preparation of good teachers for the profession; and yet when all these aids and others have been brought into requisition, the fact remains that a great body of our children have no teachers employed for their instruction, and that a large proportion of those who are employed as teachers are entirely without the special and proper and necessary preparation for their responsibilities.

Nor is there yet provided any adequate remedy for these evils. Nor should it be forgotten that so far there is provided no special training in the methods of teaching for those who become professors in our colleges, schools of science, of law, theology, or medicine, and as a result many professors in our colleges indulge in the most unfortunate methods of instruction, methods that would not be tolerated in any elementary school under the charge of any intelligent board of school officers.

Much, however, is done to remedy these evils in connection with some institutions by discussions among the faculty or by the supervisory care of the presidents or the chief professor in the respective subjects of instruction.

In spite of the inadequacy of all provision for normal training, there remains in many quarters great opposition to normal schools. This is having a good effect so far as it arouses educators to record, collect, and publish the facts which enforce the necessity for these institutions, and the best methods of imparting normal training.

The following table, taken from the report of Professor William F. Phelps, principal of the State Normal School at Winona, Minnesota, shows the *per capita* allowance of the several States named therein to their respective State normal schools. These have no reference to the cost of buildings, since investments of this kind are permanent, and yield a return to the State in all respects as real and valuable as though they were loaned at a paying rate in dollars and cents. All the States named have buildings for normal schools.

The *per capita* accounts are stated in round numbers, fractions being omitted, as follows:

Locality.	Enrollment, 1872.	Appropriation, 1872.	Per capita amount.	Locality.	Enrollment, 1872.	Appropriation, 1872.	Per capita amount.
Fredonia, New York	141	$24,000	$170	Framingham, Massachus'ts.	100	$10,296	$102
Toronto, Ontario	172	23,645	137	Oshkosh, Wisconsin	158	15,910	100
Buffalo, New York	164	18,000	110	Plattville, Wisconsin	125	12,240	98

Locality.	Enrollment, 1872.	Appropriation, 1872.	Per capita amount.	Locality.	Enrollment, 1872.	Appropriation, 1872.	Per capita amount.
New Britain, Connecticut	133	$12,000	$90	Emporia, Kansas	171	$11,500	$67
Westfield, Massachusetts	140	12,548	89	Potsdam, New York	(*)	18,000	.....
Peru, Nebraska	90	7,500	83	Cortland, † New York	370	23,712	64
Englewood, Illinois	147	12,000	82	Terre Haute, Indiana	158	10,000	63
Bridgewater, Massachus'ts.	150	12,091	80	Trenton, New Jersey	204	12,000	60

Normal, Illinois	460	31,369	68	Mankato, Minnesota	204	9,000	44

* Unknown.

† Including an extra appropriation of $5,424.24.

‡ This is a county normal school, and its support is reported as not yet adequate to its needs.

As illustrating the growth of a normal school when supported by the State, the following statement concerning the First State Normal School at Winona, Minnesota, for which we are indebted to Professor Phelps, will be found interesting. The table shows the total enrollment and appropriation for each year since its re-organization, together with the *per capita* amount of these appropriations from 1864 to 1872, inclusive. As in the foregoing table, fractions of the dollar are disregarded:

Date.	Enrollment.	Appropriation.	Per capita amount.	Date.	Enrollment.	Appropriation.	Per capita amount.
1864	32	$3,000	$94	1869	185	$5,000	.....
1865	50	4,000	80	1870	216	5,000	.....
1866	80	5,000	62	1871	250	8,000	.....
1867	87	5,000	57	1872	301	10,000	.....
1868	122	5,000	41				

Average amount *per capita* appropriation, $38 annually. The enrollment for 1871 and 1872 includes 62 soldiers' orphans, who have been instructed entirely gratuitously during these two years. "It is assumed that the only just basis upon which such an institution is entitled to claim support, other things being equal, is that of the number properly instructed and benefited therein. As these numbers increase, therefore, its financial resources should increase so that it shall not be forced to do its work for less than cost."

Hon. J. P. Wickersham, State superintendent of Pennsylvania, in his report for 1871, suggests the "wisdom of including in the schools of practice attached to normal schools a kindergarten, in order to secure teachers well trained in object-teaching; and, also, that the standard for admission be greatly elevated, so that the instruction of the gram-

mar school need not be repeated after entering the normal school." In his report for 1872, he observes in regard to the effort to increase the number of normal schools: "If unduly multiplied, they will be likely to fail for want of support, and the State be compelled to pay dearly for the folly of encouraging their establishment in greater number than its educational interests require. A few strong schools will accomplish more good than many weak ones. It is important that the State should adopt and adhere to some broad, general principles in making appropriations to the schools; favoritism, if persisted in, will in the end cripple the whole system." He calls attention to the "danger of making the administration of these schools narrow, and more disposed to seek private than public ends. This is the weakness of the system, and from this it has suffered."

Hon. Thomas W. Harvey, common-school commissioner of Ohio, says: "A commendable feature in some of our private schools is the attention given to normal instruction. In the absence of other efficient means and facilities for progressive training, their efforts to supply a manifest want merit encouragement and reward." He also says: "The normal school should be a purely professional school. Academic instruction, except such as may be incidentally given in the illustration of methods, should be dispensed with, that the science of education and the art of teaching may receive exclusive attention."

In this connection may be noted a remark of Professor Phelps upon the existing necessity of academic teaching in normal schools. He says: "The quality of work done in our common schools is very poor, and a large majority of the students entering the normal school come very poorly prepared. So much loose, vague, and inaccurate teaching is still done in elementary schools that at least nineteen-twentieths of those who enter the normal school must go back to first principles. Not only are they ignorant of the very beginning of common-school studies, but they have no power of expressing what they know."

Professor George P. Beard, principal of the South Missouri State Normal School, observes: "Something is evidently wrong in our common-school system of education. The majority of students entering our school we find know more of arithmetic than they know of all the other sciences taken together, and it is with great effort that they are induced to take any interest in other subjects. The design of the normal school, therefore, should be to remedy these irregularities in the common schools."

A letter from John D. Pierce, in the Michigan Teacher of January, 1873, in correcting a misstatement respecting the graduates of the Michigan State Normal School, gives the names and present occupation of about ninety graduates of that institution, who now are, or have been since their graduation, engaged in important and responsible positions in the educational field in that and other States. Of the fifty-four gentlemen included in this number, one has been president of a university, eleven have been county and city superintendents, and thirty-four have

been principals of high schools. Of the lady graduates, thirty-two have been teachers or principals in colleges and in high and normal schools.

An important feature connected with normal training in the country has been the establishment of normal schools in cities, under the auspices of school-boards. The great ability and eminent efficiency of many of the city superintendents of instruction are steadily improving the quality of instruction in a large number of our cities. Normal schools in such cases enjoy special advantages, gathering and centering in themselves all the excellences that are around them.

BUSINESS COLLEGES.—TABLE V.

There is a manifest and increasing demand upon public-school systems for instruction in trades, and for an opportunity to be taught at other times than the regular six hours of school. School officers have too often yielded to these demands with reluctance, if at all. The business colleges of the country have come forward and measurably furnished a supply.

Mr. S. S. Packard, president of Packard's Business College, New York City, informs me that, in his opinion, not less than twenty thousand young men enter the business colleges of the country annually, and that he believes there is a constantly growing tendency toward the education which they propose to impart. A summary of these institutions contained in the annual report of this office is the only one yet published.

On consulting Table V, Appendix, it will be seen that this year sixty-six of these schools have made returns to this office, having 263 teachers and an enrollment of 8,451 pupils, as follows:

State.	No. of schools.	No. of instructors.	No. of students.	State.	No. of schools.	No. of instructors.	No. of students.

SECONDARY INSTRUCTION.—TABLE VI.

The examination of city and State reports will reveal a very inadequate subdivision of the instruction reported in respect to different grades. The line of demarkation between elementary and secondary, and between secondary and superior instruction is not very distinct, if drawn at all. Yet, in judging whether the amount of instruction furnished is sufficient to afford the opportunity for the cultivation of the intelligence and virtue adequate to conduct the affairs of individuals, communities, and States, the aid of this factor is absolutely essential. Indeed, it is undoubtedly true that our only universally applied test of intelligence, the ability to read or write, or to do both, has unconsciously, but nevertheless actually, served to give prevalence to a judgment of the intelligence of our people more favorable than the facts will warrant.

This office, endeavoring to aid educators in drawing these lines of discrimination in instruction as respects grade, has continued its attempt to report institutions of secondary instruction. The result of inquiries in this direction will be found in the appropriate table, of which the following is a summary:

State.	Number of academies.	Instructors.			Students.			Volumes in library.
		Total.	Male.	Female.	Total.	Male.	Female.

Total	33,624	8,517	7,277	3,444	992	856	316	5,772

By a comparison of the corresponding table in my report for 1871 with that in the present report, it will be seen that gratifying progress has been made in the value of these statistics. Instead of 638 academies and high schools, as given in the previous report, we now have 811, employing 4,501 teachers, of whom, so far as the sex is given, 1,589 are males and 1,968 are females, having under instruction 98,929 pupils, of whom, so far as specified, 37,957 are males and 43,794 are females, with 3,444 preparing for a classical course in college, and 992 for a scientific course. Of the whole number, 33,624 are reported as studying the English branches, 8,517 are pursuing a classical course, and 7,277 are studying modern languages.

These institutions report in their libraries 378,809 volumes. From their classical departments 5,772 have entered college since their organization; while since the close of the previous year 1,172 have entered college, 856 in classical courses, and 316 in scientific courses.

To complete the representation of this grade of instruction, contained in this report, there should be added here the work done in the high schools, as given in the city tables, so far as it is not included in the above summary. There may be fitly included in this grade of instruction, the work done in the preparatory departments connected with colleges, and the instruction in the normal schools; indeed, very much of

that given in what are termed female colleges, is not above what is appropriate to this grade.

The census of 1870 gives 1,518 institutions as academies, or 707 more than have as yet reported to this office to be included in this table. The whole number of pupils of this grade in the census is 129,404, against 98,929 reporting here.

It is impossible to include here the course of study pursued in these institutions. Indeed, I can not enter now upon the question of the work done by them, nor can I attempt as yet to answer the question so often asked, "What ought they to do?"

I must confess my surprise, however, that so many are either hesitating in supporting this grade of instruction in our public systems of education, or opposing it outright. Apparently they know little of what is done by it, and reflect less upon what it ought to do.

Omitting all the facts not yet ascertained in regard to studies pursued, years occupied, or results secured, let them in their doubt or opposition suppose that this grade of instruction is for the benefit of those fifteen, sixteen, and seventeen years old. According to the last census there were, of these ages, in round numbers, 2,455,000 persons, of whom 1,214,000 were males and 1,241,000 were females. Of course there are those younger and older receiving this instruction, and some of these ages are in the elementary schools and some in the superior schools. But they have reported by the census enrolled in institutions of this grade only 129,404 persons, and, undoubtedly, 200,000 would be a large estimate of the whole number in any way receiving this instruction. Here are then only 200,000 youth thus benefited, against 2,455,000 that ought to have at least so much aid in their start upon the race of life in a land where each man is a sovereign citizen.

What excuse, therefore, can be offered by any one with any claim to patriotism for opposition to a work which is not reaching one person in twelve of those who need its benefits?

Here is a fact which, if used by the teachers and school officers especially interested in this grade of instruction, may aid them in informing public opinion and creating a sentiment which will result in keeping their pupils longer under instruction.

As a rule, we are a people whose opinions and actions are subject to modification by the facts within our knowledge. If it is true that our youth are prone to rush into the responsibilities of affairs too early in life, or with too little preparation, this collection of the facts will at once indicate the tendency and furnish the best means for its correction.

In the absence of all records upon the subject, and as indicating that I have not overestimated the number due to secondary institutions, I should add that in a Circular of Information, published by your order,* there were statistics collected by this Bureau in regard to 5,306 alumni of four prominent colleges, between the years 1836 and 1860, and that

* The Circular of March, 1872.

their average age on graduation was a little more than twenty-two years, making their age at entrance upon college life a little over eighteen. This would indicate that I should have been justified in adding to the number above included, as due to secondary institutions, all those persons eighteen years of age, which would greatly increase the exhibit of the work they ought to do and do not do.*

EXAMINATIONS FOR ADMISSION TO COLLEGE.

No attempt has been made this year to collect statistics upon the subject of examination for admission to academies or colleges; the only table of this character is that showing the examination for admission to the Naval and Military Academies. Special attention is invited to

---

* In an address before the Teachers' Association of Minnesota, Professor Horace Goodhue, jr., of Carleton College, gave some interesting opinions from college presidents in regard to the work done in preparing persons for college by academies and high schools. He quotes President Kitchell, of Middlebury College, as saying:

"One-half of our in-coming class this year are from the sehigh schools." President Chamberlain, of Bowdoin, says: "In 100 of our latest admissions 38 fitted at the high schools, 59 at the academies, and 4 private." The secretary of Harvard University says: "Of the class that was admitted a year ago, 38 per cent. were from public high schools and the remainder from academies and private tutors." President Buckham, of the University of Vermont, says: "I should say that about 30 per cent. of our students come from the high school and 70 per cent. from the academy." President Smith, of Dartmouth, says: "Out of those who are already examined 33 are from academies and 14 from high schools." President Chadbourne, of Williams, says: "We think that not more than one-sixth of our students come from our public high schools. I think it would be more correct to say that not more than one in ten comes from the public high schools."

Professor Goodhue continues: "The total in all the colleges reporting who have fitted at the high school is 584; at the academy, 1,355; or 30 per cent. at the high school and 70 per cent. at the academy.

"The widely extended reputation of the late Dr. Taylor, of Andover, is no surer proof of his commanding ability than is the remarkable history and present prosperity of Phillips Academy. This year it has graduated sixty-one students, fifty-one from the classical course and ten from the English, and sends upwards of forty to college. In the past ten years it has graduated over 500, 400 of whom have entered college. Single-handed and alone it is able to feed an average college. I know of no high school, under whatever favoring circumstances, which has any such record for one year, or for ten, in the amount or the quality of the work done; and if any friend of the high school has knowledge of such an instance, we hope to learn it.

"This institution for twenty-eight years, ending with 1861, sent over 1,000 to college, while it took the Boston Latin School forty-six years, ending with the same date, to send 600; nearly twice as long to send a little more than half as many.

"Consider also the result accomplished by Williston Seminary, which has been incorporated only about thirty years. During the last ten years it has graduated about 300 and sent 200 to college.

"Again, Kimball Union Academy, now nearly sixty years old, yet never having had more than one-fifth of the endowment of Williston, has a record worthy of our attention. Its graduates number 1,200. In the last ten years it has sent out 350, one-half of whom have entered college."

* * * * * * * *

this, as showing the condition of instruction in the elementary English branches in different parts of the country.

SUPERIOR INSTRUCTION—TABLE VIII.

Passing to superior instruction, attention is invited to the following summary from the table of colleges:

Total	3,040	6,694	19,476	19,249	4,261	1,419	198	1,963	746	341

It will be seen that of the 298 institutions reported, 225 report the date of their charter, and 73 do not thus report; 30 report only preparatory students; 217 report collegiate students; 121 do not report students by classes; 124 do not report the degrees conferred in course; 69 do not report their libraries.

It should be noticed that there are reported 3,040 instructors; that there are 6,694 unclassified students; that 19,476 students are in preparatory courses; that there are 19,260 in collegiate courses, and that 198 are reported as resident, or post-graduate students.

There were conferred at the last commencement day the degree of A. B. in course upon 1,963 individuals, the degree of A. M. in course upon 746, and various honorary degrees upon 341.

Connected with these institutions there are reported 4,261 female preparatory students; and in the collegiate departments, 1,419. Of these, 10 only are in New England colleges.

With reference to the number of years in the courses of study, 48 do not make any report; 209 report 4 years; 9 report 3 years; 7 report 2 years, and 25 report over 4 years. These last evidently include both the preparatory and collegiate courses.

In Arkansas, Delaware, Florida, Louisiana, Minnesota, Nebraska, Nevada, Oregon, Texas, Colorado, New Mexico, Utah, and Washington Territory, no institutions are reported to have conferred the degree of A. B.

Tracing the difference of work done in various States, it will be observed that in California the 132 persons reported as embraced in college faculties had under instruction 127 unclassified students, 1,129 preparatory students, and 504 collegiate, and that only six persons received the degree of A. B., while in Connecticut 87 college professors

had under instruction 795 collegiate students, and graduated 173 with the degree of A. B.

If the whole number—19,249—reported as in the collegiate courses of instruction completed that course, there should be conferred annually about 4,800 degrees of A. B., instead of 1,963, as now reported.

The summary here attempted, of the results of this grade of instruction, it is hoped, can be repeated until completeness is secured. What a commentary do these figures furnish upon the disposition of American youth to terminate their course of study! How they emphasize the necessity of elevating our conceptions and standards of culture, and increasing and multiplying the motives to induce the young to extend the period of their study.

In the midst of the ignorant boasting of the intelligence of the American people, (and we all have sufficient inclination to boast of our country's merits,) the best informed have felt deeply the inadequacy of instrumentalities and results in the direction alike of elementary and higher education. It will be seen by a careful examination of the data already given how well-founded are these apprehensions. Shall light increase or diminish? Shall we as a people go forward or backward?

An able and very suggestive writer observes: "A large part, a very large part, of the world seems to be ready to advance to something good—to have prepared all the means to advance to something good—and then to have stopped and not advanced. India, Japan, China, almost every sort of oriental civilization, though differing in nearly all other things, are in this alike. They look as if they had paused when there was no reason for pausing; when a mere observer from without would say they were likely not to pause."

Shall a similar record be made of the United States? Whether there shall or not turns upon the consideration given this subject of education. Shall elementary, secondary, and superior instruction be made enough in quality and amount to assure the stability and progress of this great people? The opportunity is before us as a nation. We have the extent of territory, the variety and richness of soil, and the diversity and salubrity of climate, and intermediate oceans to save us from interference by others. The expectation and the coming of all other nations are toward us.

The nature of our institutions and the incentives to personal and associated effort afford conditions of success not possible elsewhere under other forms of government; but, if the result is to be attained, this one purpose must penetrate every grade of mind.

The multiplied forces that may contribute to this end must be harmonized and rendered active. The citizen must never expect to escape from this responsibility in reference to education, and his appropriate contribution to that of others must go on till the day of his death. The higher he rises in position and trust, the greater (not the less, as some seem to think) is his responsibility.

The advanced student in our colleges must be so instructed as to encourage him to thoroughly complete the collegiate curriculum, and the curriculum itself must, as time goes on, assume the form, include the studies, and become prepared to furnish the culture which our institutions and modern times unite in demanding. Original investigation in science, in history, and in political and social economy must be fostered, and the devoted and self-sacrificing investigators of these subjects must be encouraged by sympathy, respect, and substantial support. It is by these means alone that our political institutions can be improved; that our seats of learning can continue to flourish; that our vast material prosperity can hereafter gain proportionate advances.

Our distinguished and venerated citizen, Professor Louis Agassiz, of Cambridge, Massachusetts, expressed opinions, in the course of a conversation in this office, which I have his permission to publish, and to which I would call attention in connection with these statistics:

The question is how to manage education so as to elevate the character of the nation.

There are three elements in which you are equally interested. One is to bring out this class of States, where there is a practically ignorant population; though I am not as much interested in that class of efforts, I see that no effort in the higher walks of knowledge can be really sustained unless we can remove entirely this dead load by dragging the low stratum to a higher level. We must not allow such a distinction to become permanent—of States where schools are nothing, and those where they are well provided for.

Another element is to take care of the public schools. I am telling my friends in Massachusetts a very bitter thing, and I have become bolder and bolder in saying that I am under the impression that the whole system of popular education is superannuated; that what is taught is no longer the food which the rising generation really wants most; and that the very knowledge that is taught is not the best. So that I would change both the substance and the methods of our popular schools.

And then, thirdly, our higher institutions of learning are utterly inadequate to give our young men that kind of instruction which will place them on the highest level of culture, and enable those that have not the means to go abroad to get an equally good education at home. We should never be satisfied until our institutions have attained such a superiority that European students shall find it necessary to come here.

* * * * * * * * * *

I grant that the lowest strata from Europe are at once raised by coming to the United States, but our colleges are of an inferior character. It is a mistake to suppose that this is a necessity of slow growth. Our institutions of learning can be called into existence very rapidly. * * * * * * *

The very fact that there is no university in the United States, the intellectual interests of which are managed by professors, but always by a corporation outside, shows that we do not understand what a university is. The men who are in it must know better what are the wants of an institution of learning than outsiders. I believe there is no scientific man who will concede that there can be a university managed to the best advantage by anybody but those interested in its pursuits, and no body of trustees can be so interested.

Not only do material restrictions hamper the instructors, but who is the man who knows what is best to teach? And you see every organization, every college which is got up by outsiders, has to prosecute a curriculum and the professors have to teach that. That is all wrong for a university, but not for a high school. And that is why we have no university and no students of a higher order coming to us from the Old

World. That is as plain as daylight. Those are the essential conditions of a university.

Again, among teachers there are two classes of men, those who know what they are teaching just as well as anybody else, but who have not the natural disposition or qualification to increase the knowledge of mankind, and those who devote their lives to the production of new knowledge, and who are at the same time able to teach.

But many of the most productive thinkers are not teachers at all; they are a class of men whom the country does not recognize; they are men of original research who are not born teachers, but find they must assume the duties of instruction in order to obtain recognition. We should learn the conditions of success; and a condition of success in this matter is not to put a man with one power to do that which requires another power. * * * * * * * * *

Professor Henry says the resources of the Smithsonian Institution are too small for the work to be done. Some gentlemen think the income of the institution ample. I thoroughly agree with Professor Henry, that its resources are entirely inadequate. For one solitary department at our museum of zoölogy we spend annually more than the sum total of the income of the Smithsonian Institution, which is to cover publications, the scientific, archæological, and zoölogical department, and which is to provide for the museum, the preservation of the collection, and the printing of the investigations as submitted.

We deal with one solitary subject, zoölogy, and for that department, for the last five years, we have spent annually sixty-five thousand dollars.

And the sum total of the income of the Smithsonian Institution is forty-five thousand dollars.

We have only $10,500 annually derived from the income, the rest is the result of my begging from private individuals, and the legislature, and all around. * * *

Improve the character of the teachers, and let the teachers have a little more to do with teaching than simply hearing recitations, so that the teacher shall be a teacher, and not a mere machine to hear recitations.

The following opinions of Professor John Tyndall, furnished by himself at my request, are quite harmonious with those expressed by Professor Agassiz:

This is the core of the whole matter, as regards science. It must be cultivated for its own sake, for the pure love of truth, rather than for the applause or profit that it brings. And now, though my occupation is gone, still I will bespeak your tolerance for a few concluding remarks in reference to the men who have bequeathed to us the vast body of knowledge of which I have sought to give you some faint idea in these lectures. What was the motive that spurred them on? What the prize of their high calling for which they struggled so assiduously? What urged them to those battles and those victories over reticent nature, which have become the heritage of the human race? It is never to be forgotten that not one of those great investigators, from Aristotle down to Stokes and Kirchoff, had any practical end in view, according to the ordinary definition of the word "practical." They did not propose to themselves money as the end, and knowledge as a means of obtaining it. For the most part they nobly reversed this process—made knowledge their end, and such money as they possessed the means of obtaining it. * * * * * *

To many of their contemporaries it would have appeared simply ridiculous to see men, whose names are now stars in the firmament of science, straining their attention to observe an effect of an experiment almost too minute for detection. * * *

That scientific discovery *may* put not only dollars into the pockets of individuals, but millions into the exchequers of nations, the history of science amply proves, but the hope of its doing so is not the motive-power of the investigator. It never can be his motive-power. I know that I run some risk in speaking thus before practical men. I know what De Tocqueville says of you. "The man of the North," he says, "has not

only experience but knowledge. He, however, does not care for science as a pleasure, and only embraces it with avidity when it leads to useful applications." * * *

Surely no two terms were ever so much distorted and misapplied with reference to man in his higher relations than these terms useful and practical. * * *

People sometimes speak as if steam had not been studied before James Watt, or electricity before Wheatstone and Morse; whereas, in point of fact, Watt and Wheatstone and Morse, with all their practicality, were the mere outcomes of antecedent forces, which acted without reference to practical ends. * * * *

Strip a strong arm and regard the knotted muscles when the hand is clinched and the arm bent. Is this exhibition of energy the work of the muscles alone? By no means; the muscle is the channel of an influence without which it would be as powerless as a lump of plastic dough. At the present time there is a cry in England for technical education, and it is the expression of a true national want, but there is no outcry for original investigation. Still, without this, as surely as the stream dwindles when the spring dries, so surely will their technical education lose all force of growth, all power of reproduction.

To keep society as regards science in healthy play, three classes of workers are necessary: First, the investigators of natural truth, whose vocation is to pursue that truth, and extend the field of discovery for the truth's own sake, and without any reference to practical ends; secondly, the teacher of natural truth, whose vocation is to give public diffusion to the knowledge already won by the discoverer; thirdly, the applier of natural truth, whose vocation is to make scientific knowledge available for the needs, comforts, and luxuries of life. These three classes ought to co-exist and interact. Now, the popular notion of science, both in this country and in England, often relates, not to science strictly so called, but to the application of science. Such applications, especially on this continent, are so astounding—they spread themselves so largely and umbrageously before the public eye—as to shut out from view those workers who are engaged in the profounder business of discovery.

Take the electric telegraph as an example, which has been repeatedly forced upon my attention of late. I am not here to attennate in the slightest degree the services of those who, in England and America, have given the telegraph a form so wonderfully fitted for public use. Assuredly they earned a great reward, and assuredly they have received it. But I should be untrue to you and to myself if I failed to tell you that, however high in particular respects their claims and qualities may be, practical men did not discover the electric telegraph. The discovery of the electric telegraph implies the discovery of electricity itself, and the development of its laws and phenomena. Such discoveries were not made by practical men, and they never will be made by them, because their minds are beset by ideas which, though of the highest value from one point of view, are not those which stimulate the original discoverer. The ancients discovered the electricity of amber; and Gilbert in the year 1600 extended the force to other bodies. Then followed other inquirers, your own Franklin among the number. But this form of electricity, though tried, did not come into use for telegraphic purposes. Then appeared the great Italian, Volta, who discovered the source of electricity, which bears his name, and applied the most profound insight and the most delicate experimental skill to its development. Then arose the man who added to the powers of his intellect all the graces of the human heart, Michael Faraday, the discoverer of the great domain of magneto-electricity. Oersted discovered the deflection of the magnetic needle, and Arago and Sturgeon the magnetization of iron by the electric current. The voltaic circuit finally found its theoretic Newton in Ohm; while, at Princeton, Henry pushed forward the course of experimental inquiry. Here you have all the materials employed at this hour in all the forms of the electric telegraph. Nay, more, Gauss, the celebrated astronomer, and Weber, the celebrated natural philosopher, both professors in the University of Göttingen, wishing to establish a rapid mode of communication between the observatory and the physical cabinet of the university, did this by means of an electric telegraph. The force, in short, had been dis-

covered, its laws investigated and made sure, the most complete mastery of its phenomena had been attained, nay, its applicability to telegraphic purposes demonstrated, by men whose sole reward for their labors was the noble joy of discovery, and before your practical men appeared at all upon the scene.

Are we to ignore all this? We do so at our peril. For I say again, behind all your practical applications there is a region of intellectual action to which practical men have rarely contributed, but from which they draw all their supplies. Cut them off from this region and they become eventually helpless. * * * * *

You are familiar with the writings of De Tocqueville, and must be aware of the intense sympathy which he felt for your institutions; and this sympathy is all the more valuable from the philosophical candor with which he points out not only your merits but your dangers.

He wrote some three and twenty years ago, and perhaps would not write the same to-day; but it will do nobody any harm to have his words repeated, and, if necessary, laid to heart. In a work published in 1850 he says: "It must be confessed that, among the civilized peoples of our age, there are few in which the highest sciences have made so little progress as in the United States."

De Tocqueville evidently doubts the capacity of a democracy to foster genius as it was fostered in the ancient aristocracies. "The future," he says, "will prove whether the passion for profound knowledge, so rare and so fruitful, can be born and developed so readily in democratic societies as in aristocracies." * * * * *

It rests with you to prove whether these things are necessarily so; whether the highest scientific genius cannot find in the midst of you a tranquil home. I should be loath to gainsay so keen an observer, and so profound a political writer, but since my arrival in this country I have been unable to see anything in the constitution of society to prevent any student, with the root of the matter in him, from bestowing the most steadfast devotion on pure science. If great scientific results are not achieved in America, it is not to the small agitations of society that I should be disposed to ascribe the defect, but to the fact that the men among you who possess the genius for scientific inquiry are laden with duties of administration or tuition so heavy as to be utterly incompatible with the continuous and tranquil meditation which original investigation demands. I do not think this state of things likely to last. I have seen in America a willingness on the part of individuals to devote their fortunes, in the matter of education, to the service of the commonwealth, for which I can not find a parallel elsewhere.

This willingness of men to devote private fortunes to public purposes requires but wise direction to enable you to render null and void the prediction of De Tocqueville. Your most difficult problem will be not to build institutions, but to make men; not to form the body, but to find the spiritual embers which shall kindle within that body a living soul. You have scientific genius among you; not sown broadcast, believe me, but still scattered here and there. Take all unnecessary impediments out of its way.*

CULTURE, AND ITS PRACTICAL USE IN INSTRUCTION.

But while it is true that original investigation may not be sufficiently encouraged, we have to confess many other deficiencies in respect to superior instruction in our country.

The genius which leads in unfolding the secrets of material nature for the use of mankind must indeed be fostered, but no less that genius which leads the activities of men in right directions; that common sense

* Professor Tyndall sought practically to carry out his own suggestion, and set apart the net proceeds of his lectures in this country, delivered at Boston, Philadelphia, Baltimore, Washington, Brooklyn, New Haven, and New York, amounting to $13,000, and conveyed the same in trust to a committee, composed of Professor Joseph Henry, General Hector Tyndall, and Professor E. L. Youmans, who may expend the income in aid of students who devote themselves to original research.

and personal integrity essential to the highest results in the multifarious affairs in which the American citizen is called to act.

Undoubtedly students must, for the years of instruction, withdraw themselves from all active pursuits to secure the full advantage of concentrated attention, so as to put all the elements of mind in the healthiest condition of growth—of acquisition and discipline—yet there may be a seclusion which will totally unfit them for active affairs. Whatever there is of hot-house life, which renders growth in the sunshine and air that nature provides injurious or fatal, should be avoided in the school.

The student, as he penetrates the depths of science and literature in the author or text-book which is furnished, or to which reference is made, can, with tact on the part of the teacher, be brought to apply his thoughts with equal disciplinary effect to the characters and events of to-day, to the current developments of science, history, and literature, with advantage to his enthusiasm and the appropriate application of his discriminations and principles of judgment to questions of duty when he assumes the responsibilities of active life.

There are here and there in our colleges excellent illustrations of what I believe could be easily made universal, to the advantage alike of our country and of our superior instruction.

An eminent illustration is presented in the chapel-talks of M. B. Anderson, LL. D., president of Rochester University.

I have obtained from Professor J. H. Gilmore a description of these "talks."

It would be impossible to give an adequate idea of the nature of those "talks" or of the influence which they have in educating, restraining, and ennobling our "boys." They *are*, emphatically, "talks"—not lectures, sermons, or orations. Very rarely, I think, does the doctor make the slightest preparation for them. Oftenest—and always when at their best—they are impromptu. Some passage in the Scripture which he is reading flashes a new light upon his soul; or some paragraph in the morning's paper comes back to him with an application to the young men before him which he had not thought of when he read it; or his intense desire for the welfare of his charge reminds him of tendencies which he may have detected in a wrong direction—and he finds himself talking before he is aware of it.

The theme may be anything you please, almost. Some movement in European politics, the significance of which is likely to be overlooked, or misconstrued, by those who forget that history in making is as interesting as history made; the death of some great man, or the discomfiture of some little one; a question of practical morality or personal religion; the claims of the age on its educated men, and the way in which those claims may be met; incipient tendencies in college to indolence and insubordination—all is fish that comes to the doctor's net. Two or three days ago he defended the thesis that the reason why some men of splendid endowments and substantial attainments failed of the very highest success, was that they lacked the faculty of adaptation to the demands of their fellows. When Henry J. Raymond died, he gave us an estimate of the value of education to the editor, and the kind of education which the editor ought to have. The assassination of James Fisk suggested the thought that roguery always comes to grief in the long run. "Disestablishment" in Ireland, communism in France, railway monopolies in our own country, are all themes which were discussed when at their freshest, and with such reference to fundamental princi-

ples, with illustrations so apt and so various, that I am not certain that the doctor's colleagues were not the most interested of his hearers.

The doctor's manner in the chapel is, of course, familiar and unpretending, as a man's manner is likely to be who hardly knows that he is talking at all—much less thinks that he is talking *well*. He rarely speaks over ten or fifteen minutes.

His English is of that terse, vigorous, idiomatic kind which gives his hearers faith in their mother-tongue. His illustrations are frequent and thoroughly effective. Often, in his chapel-talks, he rises to a degree of eloquence which I have never heard him attain on the rostrum or in the pulpit; but it is the eloquence of downright scorn for all that is mean, and hearty sympathy with all that is pure and manly.

Sometimes he is learned—always he is characterized by that practical good sense which has made him, to my mind, the first of American educators. With less of refined culture than some, and less of minute scholarship than others, he has a breadth of information, a grasp of intellect, and a depth of sympathy, which make him just the man to help college-students, by his chapel-talks, to refer current events to scientific categories.

That confidence in his mental affluence which leads him to scatter his gifts with such a lavish hand—never holding himself in reserve for "a suitable occasion"—is, after eight years of intimate acquaintance, what, perhaps, impresses me most in President Anderson. *His* suitable occasion is when he can get face to face with even a single man whom he can help in any way; and nowhere is that fact more apparent than in his chapel-talks.

Of course, after what I have said, you will see that any formal statement with reference to this feature in our course at Rochester is out of the question. It would, doubtless, be as effective an agency for good in every college as here.

SUPERIOR INSTRUCTION OF FEMALES.—TABLE IX.

The number of these institutions reported is 175, with 1,617 instructors, of whom 449 are male and 1,168 female, and a total of 11,288 students.

The number of institutions in each State is—

In Alabama	8	In Massachusetts	6	In Oregon	1
In California	3	In Michigan	3	In Pennsylvania	14
In Connecticut	4	In Minnesota	1	In South Carolina	1
In Delaware	1	In Mississippi	5	In Tennessee	8
In Georgia	16	In Missouri	5	In Texas	3
In Illinois	10	In New Hampshire	3	In Vermont	1
In Indiana	3	In New Jersey	3	In Virginia	13
In Kansas	1	In New York	25	In West Virginia	2
In Kentucky	7	In North Carolina	9	In Wisconsin	3
In Maryland	3	In Ohio	13		

The institutions are distributed denominationally as follows:

Presbyterian	17	Protestant Episcopal	11	Christian	2
Baptist	20	Congregational	5	U. Baptist	1
Roman Catholic	18	Lutheran	3	Reformed	1
Methodist Episcopal	14	Moravian	2	Undetermined	67
Methodist	12	Union	2		

Attention is directed to the remarks in connection with secondary instruction.

Those who are desirous of consolidating the statistics of superior

instruction for males and females, will observe that the 473 institutions reported of both classes have 4,657 instructors, and 56,905 scholars.

SCHOOLS OF SCIENCE.—TABLE X.

Schools of this character present a gratifying gain, as will be seen by bringing the following summaries, drawn from the tables of these institutions, into comparison with the similar summaries for the previous year. Opening in some measure a new field of instruction in this country, they are helping in the solution of all questions of special education.

The cost of their apparatus must be much greater than that so far used in aid of classical training.

The practice essential to their success is expensive, and it may be that the interests of culture will require that further aid be judiciously bestowed by the General Government. The promotion of any department of learning is likely to work advantage in the end to all culture.

It is gratifying to observe the rallying of private wealth to the support of scientific and industrial education.

It should be remarked that while, for the present, these institutions are necessarily classed together in the tables from which the following facts are drawn, that there is among them great diversity of aim and method.

I regret that any States have yet to be reported as without organization under the grant of land by Congress for this purpose.

In some States, however, where no students are reported, the organization is now rapidly approaching completion, and by another year no doubt a considerable attendance can be reported.

Statistical summary of schools of science endowed by the national grant of lands.

THEOLOGICAL SCHOOLS.—TABLE XI.

The whole number of theological schools reported is 108, with 435 instructors and 3,351 students. The schools are distributed among the different denominations as indicated by the following table:

Denomination.	No. of seminaries.	No. of professors.	No. of students.	Denomination.	No. of seminaries.	No. of professors.	No. of students.
Presbyterian	15	69	608	Free Baptist	2	10	32
Baptist	17	58	552	Evangelical Lutheran	2	7	28
Roman Catholic	15	84	501	Union Evangelical	1	8	27
Congregational	7	47	324	Moravian	1	3	25
Lutheran	11	28	316	Unitarian	1	7	22
Methodist Episcopal	8	26	272	United Bretheren	1	1	11
Protestant Episcopal	9	39	239	African Methodist Episcopal	1	.....	8
Christian	2	5	136	New Jerusalem	1	4	.....
Reformed	5	12	105	Unknown	3	5	19
United Presbyterian	4	13	81				
Universalist	2	9	45	Total	108	435	3,351

Of these seminaries there are—

In Alabama	1	In New Jersey	4
In California	2	In New York	12
In Connecticut	3	In North Carolina	1
In Georgia	1	In Ohio	12
In Illinois	10	In Pennsylvania	14
In Indiana	1	In South Carolina	2
In Iowa	4	In Tennessee	2
In Kentucky	6	In Texas	1
In Louisiana	1	In Vermont	1
In Maine	2	In Virginia	5
In Maryland	3	In West Virginia	1
In Massachusetts	7	In Wisconsin	4
In Michigan	2	In District of Columbia	2
In Missouri	4		

LAW SCHOOLS.—TABLE XII.

There are forty-two law schools in the United States, with one hundred and fifty-one instructors, and 1,976 students.

The number of schools in each State is as follows:

In Connecticut	1	In New York	5
In Georgia	1	In North Carolina	1
In Illinois	2	In Ohio	3
In Indiana	3	In Pennsylvania	4
In Iowa	2	In South Carolina	1
In Kentucky	1	In Tennessee	2
In Louisiana	1	In Texas	1
In Massachusetts	2	In Virginia	3
In Michigan	1	In Wisconsin	1
In Mississippi	1	In District of Columbia	4
In Missouri	2		

MEDICAL, DENTAL, AND PHARMACEUTICAL INSTITUTIONS.—TABLE XIII.

The table of medical and kindred schools gives a total of ninety-two institutions. Of these 61 are known as regular, with 607 instructors and 4,887 students; 3 as eclectic, with 25 instructors and 259 students; there are 9 dental schools with 58 instructors and 199 students; and 13 pharmaceutical schools with 36 instructors and 650 students. Of those denominated regular, Alabama, Connecticut, Indiana, Louisiana, Maine, New Hampshire, North Carolina, Oregon, Texas, and Vermont have each one; California, Iowa, Kentucky, Maryland, Massachusetts, Michigan, South Carolina, Tennessee and Virginia, two; Georgia, Illinois, and West Virginia, three; Pennsylvania, four; Missouri, five; Ohio, six; and New York, nine. Of the eclectic, Illinois, New York, and Ohio have one each. Of the homœopathic, Louisiana, Maryland, Missouri, New York, and Ohio have each one; Pennsylvania and Massachusetts, two. Of the pharmaceutical, Illinois, Iowa, Kentucky, Maryland, Massachusetts, Michigan, Mississippi, Missouri, New York, Pennsylvania, and the District of Columbia have each one, and North Carolina, two.

ACTION OF THE NEW YORK LEGISLATURE RESPECTING MEDICAL EXAMINATIONS.

In observing the indications of progress during the past year, the action of the legislature of New York with regard to medical diplomas should not be omitted. The act was passed May 16, 1872, providing that "the regents of the University of the State of New York shall appoint one or more boards of examiners in medicine," of seven members each, "who shall have been licensed to practice physic and surgery in the State." The examiners are required to examine faithfully all candidates referred to them for that purpose by the chancellor of the university, according to each of the systems of practice represented by the several medical societies of the State, and report to him in writing the questions and answers of each examination, which reports, and the opinions of the examiners, are to be forever a part of the public records of the university.

"Any person over twenty-one years of age, of good moral character," on applying to the chancellor for an examination, and paying thirty-five dollars into the treasury of the university, can receive an order to that effect, if he shows that he has a competent knowledge of the branches taught in the common-schools of the State and of the Latin language; that he has studied medicine diligently under the direction of one or more physicians, duly qualified, for three years, and that he has been licensed, on examination, by certain specified authority.

The regents of the university, on examining the reports of the examiners, and finding that not less than five members of the board of examiners have voted in favor of a candidate, shall issue a diploma to him or her, conferring the degree of M. D. of the university of the State of New York, to practice physic and surgery.

Attention is respectfully invited to an opinion expressed in an article on "Medical Education in the United States," among the papers accompanying the report of this Bureau for 1870, in which it was strongly urged that, in the matter of conferring degrees, the ruling power of the State should have enough interest to insure the proper action by medical colleges, not in order to discriminate between the different systems of practice, but to such an extent as "to insist that every person, regular, eclectic, or homœopathic, who practices medicine or surgery, shall have studied a specified time in a specified way, and passed a specified examination before boards selected by the executive."

LIBRARIES.—TABLE XIV.

In the reports of this Bureau for 1870 and 1871, in recognition of the educational importance of libraries, attempts were made to include information of the principal ones as far as possible. During the past year a much more extended inquiry has been made upon this subject, and

the results are correspondingly more satisfactory. The following is a summary of these, upon the leading points of inquiry:

States.	No. of libraries.				Volumes.	Pamphlets.	Manuscripts.	No. reporting their weekly circulation.	Weekly circulation.
	Total.	Circulating & reference.	Reference.	Circulating.					
Alabama									
Arkansas	1			1	1,800	20		1	50
California	8	6	2		119,860	2,208	2	5	4,350

I have included in the appendix to this annual report a full list of the institutions referred to as far as reported to date; it is hoped that it can soon be given to the public in a separate and improved form.

Thus far it has been impossible for this office to take any cognizance of, and much less to include in its publications, the name and location of the numerous libraries in the country having less than a thousand volumes each. The great good they are accomplishing, however, is thoroughly appreciated. A reference to the library statistics from the census of 1870, to be found in the appendix to this report, will show how numerous and how important the smaller libraries of the country must be in the culture of the people. The following extracts are from a suggestive letter of the Rev. S. Ketchum, of Bristol, N. H., dated December 10, 1872:

I can not suppose you have overlooked the fact that by much the larger part of all the books in libraries to which the people have free access are in the possession of churches and Sunday-schools. They are, to be sure, in small collections, comparatively insignificant in themselves; but when taken in the aggregate, doubtless surpass all the other libraries put together, and are used by vastly more persons. Take this town for an example, containing 1,500 inhabitants, having three churches. In the libraries of these churches are probably not less than 1,000 or 1,200 volumes, consisting largely of standard works on history, biography, travels, theology, homiletics and exegesis. Nor is this an exceptional town for the population. When, therefore, you take into the consideration the thousand or more churches in the State, you will perceive that they present library facilities that exceed all the other library facilities in the State.

* * * * * * *

Then, again, the number of small, local, free or circulating libraries is large. In this State of New Hampshire—which is, perhaps, behind all the other New England States—there are probably a hundred or more of these, ranging from two hundred to two thousand volumes each, small collections, but which, taken together, would exceed the library of almost any college in the country, save Harvard or Yale, and used by numbers exceeding from five to ten times the numbers who use the libraries of such great institutions.

In fact, hardly any short statement can include even a bare enumeration of the benefits which even very small collections of judiciously selected books can confer on their readers.

As an instance of what practical use such libraries may be in numberless directions, I would respectfully call attention to the following statement of the library enterprise of the American Seamans Friend Society of New York City:

The American Seaman's Friend Society has been engaged for several years in supplying sea-going vessels with libraries for the special use of the men in the forecastle.

These libraries are made up of between forty and fifty volumes, in a neat case, with lock and key, and are loaned to the ship, (a receipt being taken for the same from the person having the library in charge, usually the captain,) to be returned after six, nine, or twelve months, according to the voyage, when they are refitted and reshipped upon similar conditions.

The books in these libraries are carefully selected, and of such as promise to interest, educate, and improve seamen, and to excite within them a love for reading, being to this end largely of adventure, history, natural science, with an arithmetic, geography and atlas, &c. Something on the subject of temperance, always a Bible, and sundry attractive works of a moralizing and evangelical character; and all adapted to the ascertained capacity and known nationality of the crew.

Over four thousand of these libraries have been sent to sea (nearly eight hundred of them on United States naval vessels) containing at least 185,000 volumes, which in their frequent reshipment have been accessible to probably 180,000 readers; and this at a cost to the society of about $6,000. Of new and refitted libraries the society is now sending to sea an average of *fifty* per month; *i. e.*, about 2,000 volumes are in this way circulated monthly for the use of seamen abroad upon the oceans of the world.

The amount of good accomplished through these libraries is beyond computation. Sea-captains pronounce them indispensable help in administering the ship discipline, while seamen acknowledge their personal obligation for what this work has done to ameliorate and elevate their condition. It has wrought in some instances the reformation of the entire crew, and everywhere abroad under its influence intemperance, profanity, and ignorance give way to intelligence and morality, foreshadowing for our sailors a brighter future through a better informed and a more hopeful life.*

MUSEUMS.—TABLE XV.

The educational influences of museums have been recognized in some form from time immemorial. Their value as aids to education, however, has of late greatly increased in appreciation in this country. During the past year an attempt has been made to bring into view the facilities furnished by the different museums in our country. The result, though imperfect, is more satisfactory than was anticipated.

The Academy of Natural Sciences in Philadelphia, founded in 1812, and occupying a high position in public and scientific estimation, has the oldest reported museum.

But all other collections in this country are surpassed in comparative zoölogy by Professor Agassiz's great museum at Cambridge, Massachusetts. Indeed the hope is confidently cherished that it will excel all competitors in this department in the world. Embodying, as it does, the ideas of that eminent scientist, it already commands the admiration of scientific men among all civilized nations, and is having a most salutary effect upon all attempts to collect representations of the material universe, or to comprehend the organization and development of animal life. This museum has hitherto been well supported by the public and private munificence of Massachusetts, but the income of the present endowment is so inadequate to the expenses of the collection that measures should be taken to put it on a permanent foundation, commensurate with its services to science.

The collections of Professor Henry A. Ward, of Rochester University,

---

A. R. Spofford, esq., Librarian of Congress, to whose charge has been confided the sole authority to grant copy-rights for the United States, reports that in compliance with the new copy-right law there were during the year 3,175 volumes of books, and 2,728 pamphlets and periodicals deposited in the Library.

Alluding to the prospective growth of the Library he gives some figures of its recent increase, which it is well worth while to bear in mind. He says: "The Library of Congress has twice doubled within twelve years. In 1860 there were 63,000 volumes in the Library; in 1866 there were 100,000 volumes; and in 1872 there are 246,000.

"Without calculating upon any specially large accessions, it is reasonable to assume that by the ordinary additions to its stores from copy-right and from all other sources it will reach 700,000 by the year 1900; one million and a quarter by 1925; 1,750,000 by 1950; and 2,500,000 by the year 1975, or about a century hence."

New York, are also notable as containing important series of specimens for scientific culture, and have been most successfully applied in assisting other individuals and institutions in perfecting their collections.

The following extract is taken from a letter written to this office by Professor Ward. It succinctly states one of the difficulties encountered by us in the prosecution of this inquiry:

There is one question in your circular which, more than any other, will bring you most unreliable and erroneous answers. This is the "total number of specimens in natural-history museum." Very few persons know this, even approximately, and their guesses and estimates will be wild in the extreme. Nothing is more common than to hear cabinets in our second-rate colleges cited as containing "20,000 specimens," "50,000 specimens," "100,000 specimens." Sometimes they state that they have more species of minerals or shells or birds than the entire number known to science.

Their statements may be literally true when they speak of individual specimens although these are always *estimated*, never counted.

Certainly no man can tell within 100,000 specimens how many specimens our Rochester (University) cabinet contains unless he takes hold and counts the contents of each box of small corals or brachiopod shells, each vial of foraminifera, each package of sharks' teeth. Nothing in the way of enumeration gives a practical idea of the size of a cabinet save a statement of the number of labels, or, if not labeled, (which is the case in about three-fourths of our cabinets,) the number of specimens large enough to be labeled separately. To this should be added the number of species present, and then (more important than the size) we might learn the range and scope of the cabinet, its availability in an educative and scientific direction.

The following summary of the table in the appendix exhibits the class of facts collected by the office. It will be observed that from twenty-three States no collections of any kind have been reported:

States.	No. of museums.	No. connected with colleges.	Endowment.		Annual income.		Annual expenditure.	
			No. reporting.	Amount.	No. reporting.	Amount.	No. reporting.	Amount.

EDUCATIONAL BENEFACTIONS.—TABLE XVI.

Among the educational benefactions which have become known to the public during the year, some have been specially noteworthy in view of the objects they seek to promote.

Hon. George Bancroft, the well-known historian and present American minister plenipotentiary at Berlin, in a communication dated July 4, 1871, addresses President Eliot, of Harvard University, as follows:

It has long been my wish to raise a memorial to one of your predecessors, John Thornton Kirkland, to requite benefits received through him, and most emphatically to acknowledge my indebtedness to that eminent college officer.

A little more than fifty-three years ago, Edward Everett, then Eliot professor of Greek literature, in one of his letters to President Kirkland, developed the idea that it would be well to send some young graduate of Harvard to study for a while at a German university, with a view to his being called to a place on the college board. The president approved the suggestion, and the choice for this traveling scholarship fell upon me.

Accordingly, in the early summer of 1818, being then in my eighteenth year, I proceeded to Göttingen. After remaining more than three years in Europe I returned to Cambridge, where I held the office of tutor for one year.

I wish, therefore, to found a scholarship on the idea of President Kirkland, that the incumbent should have leave to repair to a foreign country for instruction. Merit must be the condition of election to the scholarship; no one is to be elected who has not shown uncommon ability and uncommon disposition to learn. Of course, the choice should fall on some one who needs the subsidy.

The scholarship should be held by no one for more than three years, and during that time should be renewed from year to year, but only on evidence that the scholar is

fulfilling the purpose of the endowment. I leave to you and to the corporation to circumscribe, if, from the considerations already referred to, you think best, the objects of study to which the incumbent should devote himself. But for my own part, I am willing the scholarship should be given to any young person likely to distinguish himself in either of the learned professions, or in any branch of science, or in architecture, sculpture, painting, music, or letters.

For this purpose he devotes the sum of $10,000, to be safely invested, the income to be given for the benefit of the scholar. The scholarship is to bear the name of John Thornton Kirkland.

With a view to inspire the incumbents of this scholarship to grateful services, he concludes: "I thus, in advance, charge them to imitate my example in rendering aid, through Harvard College, to the cause of arts and letters, of science and learning."

Dr. Joseph M. Toner, of Washington City, an able and scholarly physician, active in promoting the advancement of his profession, on the 13th of April, 1872, conveyed to five trustees—himself, the chief officer of the Smithsonian Institution, the Surgeon-General of the United States Army, the Surgeon-General of the United States Navy, and the president of the Medical Society of the District of Columbia—real and personal property amounting in value to $3,000, ninety per cent. of the interest of which is to be applied for at least two annual memoirs or essays by different individuals; and, as the fund increases, as many more as the judgment of the trustees justify, relating to some branch of medical science, to be read in the city of Washington at such time and place as the trustees may designate, under the name of "The Toner Lectures."

Each of these lectures must contain some new truth, fully established by experiment or observation, and must be critically examined and approved by persons selected for that purpose by the trustees. Such memoirs or lectures as may be approved shall be published in such manner and through such channels as the trustees may determine. The lecturers are not to be confined to any section of the country.

New directions for charities and new devices for their management are doubtless necessary to meet the varying educational wants of a great and growing people. But it may be seriously questioned whether some of the donations made in our country are not greatly limited in their useful effects by the unfortunate conditions attached to them by their donors—conditions, too, which doubtless would not have been attached had their donors been better acquainted with the administration of charities.

For a nation so young it is apparent, from the record we are able to present, that we already excel in the benefactions of individuals for educational purposes.*

* The following extracts from a letter from Judge R. Hawes, of the Bourbon County court, dated Paris, Kentucky, December 19, 1872, are worthy of attention:

THE GARTH FUND OF BOURBON COUNTY, KENTUCKY.

Some years ago William Garth, a most estimable and intelligent gentleman of this county, devised a fund of about $45,000, which he directed to be used to endow a pro-

Any one who has sought to collect the statistics in these cases must be familiar with the difficulties that beset the effort.

On consulting the table of educational benefactions, it will be seen that the sum total reported to this office was $9,957,494.28. For colleges and universities the whole amount was $6,282,461.63, distributed among the several States as follows: California, $90,000; Connecticut, $44,600; Delaware, $700; Illinois, $112,000; Indiana, $224,000; Iowa, $86,840; Kansas, $31,736; Kentucky, $36,136; Maine, $10,125; Massachusetts, $1,916,995.48; Michigan, $43,594; Minnesota, $22,796; Mississippi, $35,000; Missouri, $60,000; New Hampshire, $96,500; New Jersey, $532,000; New York, $1,450,944.15; North Carolina, $15,000; Ohio, $159,000; Oregon, $20,000; Pennsylvania, $464,450; Rhode Island, $60,450; South Carolina, $20,000; Texas, $22,000; Tennessee, $159,050; Vermont, $1,500; Virginia, $220,025; West Virginia, $41,300; Wisconsin, $45,360; Colorado Territory, $10,150; District of Columbia, $250,000.

The educational benefactions for theological institutions amounted to $1,155,856.53 among the States, as follows: California, $18,000; Illinois, $135,950; Kentucky, $1,500; Maine, $23,900; Massachusetts, $113,750; New Jersey, $75,000; New York, $657,689.53; Ohio, $12,145; Pennsylvania, $78,200; South Carolina, $29,722; Vermont, $10,000.

The benefactions of law schools were $10,000 in Connecticut. For schools of medicine, $1,000 in Kentucky, $1,422.13 in Massachusetts, and $8,000 in New York; making a total of $10,422.13.

For agricultural and scientific schools the benefactions were $482,000: In Georgia, $3,000; Indiana, $75,000; Maine, $18,500; Massachusetts, $143,000; Missouri, $100,500; Pennsylvania, $100,000; Virginia, $41,420.99.

---

fessorship in a college in this county, on condition that the county would provide $100,000 for the college; and if the county failed in raising the $100,000, that the fund devised by him should be safely invested by the county court of Bourbon County, a majority of the justices concurring, and said court should expend the annual interest of the fund in education of such poor, worthy, and energetic young men of said county as in their judgment might be selected as beneficiaries. The county failed to appropriate the $100,000, and the charity devolved on the county court. About four years ago the fund was invested in bank stocks of this State, which, after paying expenses, &c., pay about $3,300 interest. This has been applied to the education of from ten to fifteen young men, who are chosen by a committee selected by the court, which examines all applicants and recommends to the court such as are considered the most worthy and energetic among the poor applicants of the county. Some of the young men are provided with the means of boarding, clothing, books, and tuition, while others are allowed tuition alone.

The court does not confine the locality of the school or college, except to require that the young man shall not go out of the State.

The charity has worked well so far, and several very prominent young men have been prepared for active and valuable positions in life. The greatest difficulty in the matter is in a proper selection; and there is a tendency in a court of sixteen men to indulge in a diffusiveness in the application of the fund to the largest number in different sections of the county. This latter difficulty will probably prevent the training of thorough scholars. Upon the whole, however, the result has been quite beneficent.

For the superior instruction of females the benefactions amounted to $689,993: In Alabama, $1,500; Georgia, $2,000; Illinois, $30,000; Indiana, $42,250; Kansas, $15,000; Massachusetts, $425,000; Michigan, $9,000; Missouri, $20,000; New York, $85,000; Ohio, $6,000; Pennsylvania, $26,000; Tennessee, $5,000; Texas, $11,243; Virginia, $1,000; Wisconsin, $9,000.

The benefactions for libraries and normal schools were, in Massachusetts, $10,000; Pennsylvania, $1,000,000; Kansas, $10,000; making a total of $1,020,000.

To academies the benefactions were $306,040: In Connecticut, $21,500; Maine, $2,380; Massachusetts, $93,000; New Hampshire, $89,160; Rhode Island, $100,000.

Beyond all these there are doubtless numerous and, in some cases, large benefactions to education, individual and denominational, of which this office has no specific information.

EDUCATION OF THE BLIND.—TABLE XVII.

This subject has been continued in the charge of Samuel G. Howe, LL. D., president of the Perkins Institute for the Blind, at Boston, Massachusetts; and reference is made to his article and to the statistics in the appendix.

Particularly interesting is the tendency shown of late to concurrence of opinion respecting the importance of mental culture in the training of the blind, even when the scholar is destined for mechanical pursuits, and as to the advantages of conforming the methods of teaching the blind as nearly as possible to those used with ordinary children.*

The number of blind at present under instruction in institutions in the United States is 1,856. The total valuation of property owned by such institutions is $3,986,678.71. The aggregate of appropriations by the several State legislatures for last year was $444,985.64, against $403,412.46 in the preceding year. The amount of money paid in wages to blind persons was $35,247.67, against $26,542.11 in 1870. The institutions are distributed among the different States as indicated by the table on the following page:

---

* Professor William Chapin, superintendent of the Pennsylvania Institution for the Instruction of the Blind, at Philadelphia, in answering certain inquiries from this Bureau, takes occasion to state that the demand for books for the library is confined to so few persons that only small editions have been printed; but the prospect is becoming more and more favorable; and what is still most needed is the necessary means to furnish a supply of text-books in the raised print, and a liberal number for the indigent who can not buy them.

State.	No. of institutions in each State.	No. of instructors and employés.	No. of inmates.	State.	No. of institutions in each State.	No. of instructors and employés.	No. of inmates.
Alabama	1	1	17	Mississippi	1	8	25
Arkansas	1	15	40	Missouri	1	11	96

Minnesota	1	3	16				

DEAF-MUTES.—TABLE XVIII.

Professor Edward A. Fay, acting president of the National Deaf-Mute College, has prepared the article and revised the table relating to this interesting class in the United States. The following is a summary by States of the statistics in the appendix:

State.	Number of institutions in each State.	Number of instructors.	Number under instruction during the year.	State.	Number of institutions in each State.	Number of instructors.	Number under instruction during the year.
Alabama	1	4	56	Missouri	2	9	211
Arkansas	1	4	69	Nebraska	1	2	29
California	1	4	64	New York	3	42	721
Connecticut	2	19	294	North Carolina	1	8	132
Georgia	1	5	61	Ohio	1	20	397
Illinois	1	15	306	Oregon	1	2	24
Indiana	1	14	304	Pennsylvania	2	16	319
Iowa	1	6	119	South Carolina	1	3	22

Michigan	1	11	159	Wisconsin	2	19	182
Minnesota	1	4	60	United States	36	267	4,337
Mississippi	1	3	41				

YOUTH WITHOUT HOME CARE.

It is, so far, impossible to obtain accurate data in regard to all youth without home care; yet, no doubt, all preventive and remedial agencies, whether under State or private control, must more and more direct their attention and efforts to those children who are without proper home care, either on account of orphanage or parental neglect or abuse. It is impossible to summarize what there is in regard to these classes, scattered through the accompanying papers. The evils connected with these unfortunate youth find their way, in some form, into every community, but are most recognized in our cities.* They may be set down as constant and universal, and the theories and agencies of our communities should be shaped accordingly.

Yet as evils, they are only touched here and there; only inadequately met at best; nor can they be better encountered until better understood.

The information of the office in regard to these classes is steadily increasing. Year by year it is hoped to gather such facts from the worthy workers in this field throughout the country as will aid in the solution of the questions involved.

Of those gathered into orphan homes and reform schools some definite note can be taken.

REFORM SCHOOLS.—TABLE XX.

State.	No. of schools in each State.	No. of superintendents and assistants.	No. of inmates.	State.	No. of schools in each State.	No. of superintendents and assistants.	No. of inmates.
Connecticut	2	26	376	New Jersey	1	7	120
Illinois	1	14	212	New York	4	88	1,192
Iowa	2	11	104	Ohio	4	39	494
Louisiana	1	11	126	Pennsylvania	2	23	403
Maine	1	17	134	Rhode Island	1	16	211
Massachusetts	4	31	426	Vermont	1	16	118
Michigan	1	17	217	United States	26	331	4,230
New Hampshire	1	15	97				

* Any one, however familiar with the facts connected with orphanage or neglected children, should not consider his reading on the subject complete until he has examined a recent and valuable book by Mr. C. L. Brace, entitled "The Dangerous Classes of New York."

ORPHAN ASYLUMS.—TABLE XXI.

State.	No. of asylums in each State.	No. of superintendents and assistants.	No. of inmates.	State.	No. of asylums in each State.	No. of superintendents and assistants.	No. of inmates.
California	1	30	340	New York	30	402	5,444
Connecticut	1	6	120	Ohio	2	25	275
Illinois	4	28	114	Pennsylvania	4	61	669
Indiana	1	8	40	Rhode Island	3	26	278
Kentucky	1	4	22	South Carolina	1	28	246

New Jersey	4	26	361	United States	77	852	10,324

PATENTS FOR SCHOOL-FURNITURE, ETC.—TABLE XXII.

The United States Patent-Office contains a record, year by year, of an interesting measure of educational progress. I am indebted to General M. D. Leggett, Commissioner of Patents, for the list issued under this division during the past year. The total number reached 143, of which number there were, from California, 2; Connecticut, 1; Georgia, 3; Illinois, 5; Indiana, 7; Kentucky, 3; Louisiana, 1; Maine, 1; Maryland, 1; Massachusetts, 18; Michigan, 3; Minnesota, 4; Missouri, 3; New Hampshire, 1; New Jersey, 6; New York, 49; Ohio, 14; Pennsylvania, 11; Texas, 1; District of Columbia, 6; Canada, 2.

Of these patents there were, respecting desks and seats, 21; pens, pencils, and cases, 24; paper fasteners, files, and holders, 12; ink and inkstands, 12; ventilation and construction of buildings, 9; hand-stamps, &c., 6; slates, &c., 6; book-cases, stands, and holders, 6; black-boards, &c., 5; chart-holders, 4; copying-presses, 4; erasers, &c., 4; and 21 are for improvements in miscellaneous articles.

EDUCATIONAL PUBLICATIONS.—TABLE XXIII.

It would be useful, in noting the annual progress of education in the country, if an exact statement could be made of the new or revised text-books published in the year. This can not yet be done. But this report has a more complete list of these publications up to date than ever before made, as will be seen by the following summary of Table XXIII:

Number of firms reporting	66
Number of books in table	447
Number of readers	22
Number of spelling-books	7

Number of geographies 13
Number of histories 50
Number of arithmetics, algebras, &c 28
Number of drawing-books 17
Number of books in ancient languages 18
Number of books in modern languages 12
Number of books on science 36
Number of books on theology 31
Number of books on law 9
Number of books on medicine 15
Number of dictionaries, books of reference, &c 189

LIBRARY OF THE BUREAU.

The library of this Bureau has continued to increase in size and value, both by purchase and donations, and now numbers about 1,700 bound volumes and 5,500 pamphlets.

CIRCULARS OF INFORMATION.

During the year the demand for elaborate treatment of special subjects has greatly increased. In view of this large demand, and the value of the material coming into our hands, with which we are enabled in a measure to answer the public inquiries, I have deemed it important to recommend for publication, by your order, several Circulars of Information, and three thousand copies of each of the following have been issued since the date of the last report:

(1.) Methods of School Discipline, pp. 14, November, 1871.
(2.) Compulsory Education, pp. 17, December, 1871.
(3.) German and other Foreign Universities, pp. 43, January, 1872.
(4.) Reports on the Systems of Public Instruction in Greece, the Argentine Republic, Chili, and Ecuador, with statistics of Portugal, and an official report on technical education in Italy, pp. 77, February, 1872.
(5.) I. An Inquiry concerning the Vital Statistics of College Graduates. II. Distribution of College Students in 1870–'71. III. Facts of Vital Statistics in the United States, with tables and diagrams, pp. 86, March, 1872.
(6.) The Relation of Education to Labor, pp. 125, April, 1872.
(7.) Education in the British West Indies, pp. 22, June, 1872.
(8.) The Kindergarten, pp. 62, July, 1872.
Also a pamphlet of six pages, "Suggestions for a Free-School Policy for United States Land Grantees."

The view of the public, and especially of the educators of the country, upon these points, may be seen by the action of the National Teachers' Association in the adoption of resolutions "congratulating the country on the great usefulness of the National Bureau of Education, and recommending to Congress the furnishing of increased facilities for the publication of Circulars of Information, and the issue of a much larger edition of the annual report for distribution among the teachers and school-officers of the country."

DISTRIBUTION OF DOCUMENTS.

Publications of the office to the amount of 5,000 volumes and 23,000 pamphlets have been distributed during the year, and nearly 6,500 publications of States and cities have been distributed to libraries, associations, and prominent educators.

OFFICE CORRESPONDENCE.

From November 15, 1871, till November 15, 1872, about 2,300 letters have been received at, and 3,500 have been written by, this office, *an increase of more than one hundred and fifty per cent.* in this branch of the office business. The permanent records of correspondence, &c., alluded to in my last report, have been kept up and improved during the year.

An extensive correspondence has been carried on with presidents of universities and colleges, scientific and professional schools, State, city, and county superintendents of schools, as well as with mayors of cities and chiefs of police of cities, wardens and chaplains of penitentiaries and jails, superintendents of alms-houses, reformatories, and others. Six thousand schedules of inquiries and 6,000 printed letters have been sent to the various educational, reformatory, and other institutions and persons interested. The results of the labor will be found in the papers and tables accompanying this report.

As illustrative of the character of the inquiries and communications coming to this office, I can instance only the following from letters received:

A professor who wishes to aid his students in obtaining an insight into the objects and efficiency of the various school systems, writes as follows:

* * * * * I am about to print a work in which I shall desire to compare the efficiency of the several systems of popular education, viz:

1. Where every parent is left to provide for his children such instruction as he can, without governmental interposition.
2. Where the Government undertakes to assist the *indigent alone*, leaving the rest of the community to shift for themselves.
3. Where the Government gives *partial aid* to all, leaving each some additional expense to bear in the shape of a tuition fee or otherwise.
4. Where the Government provides, at the common charge, for the *elementary instruction* of all classes.

Can you assist me?

An influential member of the public press desires aid from this office in collecting facts relative to—

1. Youthful vagrancy.
2. Compulsory State school laws.
3. Truancy ordinances.
4. Penal reformatory institutions for the young in cities.
5. Industrial schools, not governed by trades-union principles.

From John E. Toole, county school commissioner, La Grange, Georgia:

From your report of 1870 I have gathered much valuable and important information, which would have been otherwise unattainable. That volume alone, generally circulated, would do much, in my judgment, to arouse a spirit of confidence in the public mind as to the success of a well-regulated common-school system; especially would it have such an effect here in the South, where so comparatively little is even known of the great system of popular education.

Our people are becoming alive to the necessity of schools for all, but entertain misgivings as to the ways and means of their support.

The information contained in your report establishes the fact most clearly that, while a public-school system is a plant of slow growth, it nevertheless is certain to yield an abundant crop of pure, ripe, and healthful fruit, the beneficial effects of which will continue to increase with every passing decade.

From Feodor Thurm, secretary of the central committee of the German-American Teachers' Association:

HOBOKEN, NEW JERSEY.

There is in this country a wide-spread tendency toward the improvement of schools, and the liberality of our people in endowing schools, and especially normal and professional schools, is worthy of all praise. There are also many native teachers who are theoretically acquainted with the excellences of the Pestalozzian system and with Froebel's "kindergarten" idea, and who are desirous of becoming thoroughly versed in its practical application in normal and model schools.

* * * * * There is among your fellow-citizens of German birth quite a number of "rational teachers" of the best epoch, who feel they could exemplify their science and art, and thereby raise the standard of general education in this their chosen country, and thus help to confer a benefit and lasting token of gratitude to the same. Their hope in this respect rests in you and your noble efforts to improve our schools.

From J. E. L. Smith, curator of Berkshire Athenæum:

Should your circular of inquiries be repeated another year, I hope to be able to reply by full detail. It must furnish aid, instruction, and encouragement to officers of institutions like ours. Their recognition by a Government Bureau gives both to the library and the museum a dignity which they would not otherwise have in many eyes.

From Count de Broel-Plater, of Russia:

The immense development of public instruction, (in the United States,) this basis of the wealth and peace of nations, makes us follow all the movements of the Republic with the closest attention. We wish to become better acquainted with those admirable institutions which have been founded by the most generous patriotism of those citizens who, with so much courage and perseverance, work for the power and glory of their country. * * * * * *

The Republic perhaps possesses a complete history of all the donations made by generous citizens. If there is such a work, which can tell future generations of the services rendered to their country by Peabody, Vassar, Cornell, Bussey, Walker, S. Van Rensselaer, Thayer, Bowman, Adams, Gray, Hooper, and many others, I would be delighted to get it. If no such work exists, these few words might possibly be the cause of producing a book of this kind. Nothing would be more honorable for America, more instructive for Europe and for the future civilization of all nations.

From J. M. Muñoz, consul-general of Bolivia:

The government of Bolivia, desirous of re-organizing the general educational system of the republic on the most perfect basis, especially the rural and primary schools, has instructed this consulate to obtain all possible information respecting the organization,

management, and methods of teaching which have brought the school system of the United States to its present state of efficiency.

I therefore take the liberty of requesting from you a copy of your valuable "Report to the Secretary of the Interior" for the year 1871, as well as the synopsis on school legislation referred to in said report.

From João Antonio Coqueiro and others to W. H. Evans, esq., United States consul at Maranham, Brazil:

The committee of the society "Onze d'Agosto" in acknowledging the receipt through you, sir, of the report written by the Commissioner of the Bureau of Education in the United States of America, in answer to their letter of inquiry about modes of teaching, and of your accompanying dispatch, cannot but express themselves gratefully thankful for the masterly manner in which the entire "school machinery" is there so beautifully developed and explained. * * * * *

They, therefore, would feel obliged by your conveying to the Hon. John Eaton, esq., Commissioner of Education, the expression of their most sincere thanks for the attention and care with which he acceded to their wishes.

From Émile de Laveleye, professor of the University of Liège:

I take the liberty to send you a volume on popular instruction, as a token of my sincere admiration for your interesting report on education. I would ask you to send me in future, through the Belgian legation at Washington, all the reports you publish.

From Jugoi Arinori Mori, chargé d'affaires of Japan:

The article on education which has been sent to me from your office I have read with great pleasure, and I propose to print it without delay for circulation in Japan. * *

Taken as a whole the article will be read with great interest, and will do much good, and I thank you very cordially for the labor you have bestowed upon it.

From Count D. Tolstoi, imperial minister of public instruction, St. Petersburg:

It has given me a real pleasure to receive the reports of the United States Bureau of Education for the years 1870 and 1871, for which I beg you to accept my best thanks as well as the assurance of my highest esteem.

The imperial ministry of public instruction will willingly institute an exchange of its publications with those of the Bureau of Education of the United States. I regret only that I can offer but a very limited collection of the publications of preceding years, which will be sent to you at once.

From Hon. James R. Partridge, United States minister, Rio de Janeiro, Brazil:

I return you my thanks for having sent me these very interesting and valuable reports, &c., which I will at once transmit to the "Sociedade Auxiliadora da Industria Nacional," and to Professor José Manoel Garcia, who will be delighted with them and take the greatest pleasure in securing for them the most available use.

The society above mentioned has established free night schools for adults in this city with great success, and it will be by their example, and, as I do not doubt, through the influence of these volumes that a new impulse will be given to the cause of general and common-school education in Brazil.

It is very agreeable to know that they look to the United States to find the model and examples for their success.

INTERESTING INCIDENTS.

In the history of the work of the year many incidents of great interest have occurred. I must not omit to record one or two of these.

Some months since his excellency Senhor Borges, minister to the

United States from Brazil, called at the office and stated that the people of a Brazilian city had proposed to build a monument indicative of their respect for the Emperor, and that he, on being informed of their purpose, replied that the most agreeable form of this expression of regard would be the erection of a school-house for the education of their children.

Senhor Borges showed me the ground plan of the proposed building, as well as a communication from his government instructing him to secure plans for the interior of the building and furniture, according to the most approved ideas prevalent in the United States.

His excellency, having obtained here the necessary information, was able to carry out the commands of his government.

At the time of the visit of the Japanese embassy to our Government, a commissioner from their department of education was duly accredited to this office, at the requst of the chief embassador, Iwakura, by the following letter:

DEPARTMENT OF STATE,
Washington, March 9, 1872.

SIR: At the instance of the embassador extraordinary, permit me to introduce to you Mr. Fourzinear Tanaka, chief clerk of the educational department of Japan.

He is desirous of obtaining, by personal observation, full and reliable information in regard to the internal organization of the Bureau under your charge, and I shall be obliged if you will afford him proper facilities for the accomplishment of his object.

I am, sir, very respectfully, your obedient servant,

HAMILTON FISH.

JOHN EATON, Jr., Esq.,
Commissioner of Education.

Mr. Tanaka's visits here, accompanied by an interpreter, and other gentlemen of prominence in the empire, were repeated day after day for two weeks, during which time as full a statement as possible of the origin and development of education in this country was made in answer to his inquiries. Visits were also paid to the different educational institutions in this District.

Afterward, at his solicitation, a plan for a tour of inspection in this country was furnished.*

CHINA SEEKING MODERN EDUCATION.

An account of the plan of the Chinese government to educate certain youths in this country is furnished by the following notes and extracts from communications of members of the imperial commission.†

*As this report is in the course of preparation, the Japanese minister resident here calls upon me with a copy of the official bulletin of his government, establishing a system of schools, compelling the attendance of all children, male and female, of all classes, between certain ages.

David Murray, Ph. D., late professor of mathematics in Rutgers College, New Brunswick, N. J., has been employed by the Japanese educational department to assist in the organization of schools and colleges under this decree.

†Commissioner Chan Laisun was educated at Hamilton College, New York, and Commissioner Yung Wing at Yale College, Connecticut.

Commissioner Chan Laisun, after alluding to the earlier intercourse of China with other nations—Hindustan and Japan at least 1000 B. C., the Roman Empire in the second and third centuries of our era, the papal court and France in the thirteenth, Persia in the fourteenth, and Russia in the eighteenth centuries—thus remarks on the later vicissitudes of his country:

In 1840 England declared war; this is commonly called the "opium war." A treaty of commerce was subsequently concluded, in which opium was made a contraband article. In this treaty the English plighted their word, faith, and honor, that opium should be excluded; but we know very well how they carried out that clause of the treaty. In 1860 another war was declared by Great Britain, in which the capital of the empire was threatened with capture. Another treaty of commerce was concluded in which, after twenty years of obstinate resistance to the legal introduction of opium, the imperial government was obliged to reverse the Vermillion pen, and to sanction the diabolical traffic.

After alluding to the wide-spread injury inflicted on his country by the opium trade, Chan Laisun continues:

Self-defense is the first principle of life. Our country has been laboring under very great disadvantages since the introduction of opium. In order to prevent war, we must be prepared for it. In order that we may not be imposed on by other nations we must learn their arts and sciences, their tactics, military and naval, and the international laws which bind nations in their intercourse.

Commissioner Yung Wing writes as follows:

The plan taken up by the Chinese government for the education of a limited number of young students in this country was determined upon by the late Viceroy Tsang Kwoh Fan, Li Hung Cheong, the present viceroy of Chihli province, and ex-Governor Ting Jih Tsheong, in the latter part of the summer of 1870. It was approved of by the Peking government, and sanctioned by imperial decree in September, 1871.

It contemplates the thorough education of one hundred and twenty boys, who are to come in four successive installments, of thirty every year, the first of which arrived here in September, 1872; these, through the energetic and prompt efforts of the Hon. B. G. Northrop, were distributed, two by two, in the most cultured families in Connecticut and Massachusetts, where they have been cordially received and are being cared for and judiciously instructed.

For the better execution of the plan, the Chinese government had established a preparatory school in the port of Shanghai, to which the young candidates, both Tartars and Chinese, from all parts of the empire might go to be examined for admittance.

The conditions of admittance required are, that the candidates must have gone through the analects of Confucius and the works of Mencius; that they must be of respectable parentage; their constitutions strong and free from disease; that they are apt to learn; and their age, for the youngest, must not be below ten, and for the oldest not above sixteen years.

Their parents or guardians are to sign an agreement, by which they are virtually and voluntarily to yield up their sons to the government to be sent abroad to be educated for future usefulness in China. While in this preparatory school the successful candidates are taught English in the forenoon, and Chinese in the afternoon, for the period of a year before leaving China for this country.

Their education in this country is intended to cover a period of fifteen years, during which each student is expected to study for a profession—the ministry alone being excepted. Those who can finish their education sooner are at liberty to return to China before the expiration of the fifteen years. But during their educational course they are not allowed either to become citizens of the United States, or to remain here permanently; they are expected not only to retain their national costume, but also their knowledge of

the Chinese language, both spoken and written; and, above all, they are to keep up their faith in Confucius. No students are allowed to stop short in the middle of their studies to follow their own private ends, either here or in China. The persons appointed by the Peking government to supervise the education of these young students are two commissioners, two Chinese tutors, and one translator.

It is gratifying to observe with what cordiality this mission has been received by our citizens, and the favor it has won from all with whom the members of the mission have come in contact.

It is also interesting to know that the imperial government has established a university at Peking for the instruction of selected students in modern languages and science. The following extracts from a letter of the president, W. A. P. Martin, D. D., contain a detailed account of the enterprise:

The importance of our nascent university is not to be estimated by the number of its students or faculty. It occupies a strategic position of great moment at the chief seat of one of the oldest civilizations in the world, a civilization which must be quickened by the infusion of new elements or perish. It has the disadvantage of being in advance of public opinion, but it represents the intentions and policy of the imperial government, or, to speak more strictly, of the more enlightened party in that government.

Organized about five years ago, it came very near being stifled in its cradle by the opposition of the old conservatives, who, in memorials to the throne, charged earthquakes, famine, and other calamities which visited the empire, to the sin of introducing such an innovation as the science of the West. I was at that time on a visit to the United States.

Returning to China in the fall of 1869, I was appointed to the presidency, Prince Kung and the ministers for foreign affairs assuring me of their sympathy and aid in my efforts to revive and develop the institution.

At that time it contained but forty students, and no instruction was given in any science except a little in mathematics by a native professor. We now have an attendance of eighty-two students, who are under the instruction of ten professors, four native and six foreign.

The institution is divided into two departments, viz, of languages and of science. In the former are taught English, French, German, Russian, and Chinese; in the latter, mathematics, physics, chemistry, and medical science.

This last chair is newly established and involves a daring innovation on the prejudice of the people. We regard it but as one step toward the formation of a medical department, which shall send forth a body of well-trained physicians to supersede the empirics who now impose on the credulity of the public. In the course of the present year we expect to add to our faculty a professor of astronomy and a professor of civil and military engineering.

The duty of giving instruction in international law and political economy devolves on the president; but our students are not yet prepared to take up those subjects; they come in course for the next year. The number of our students is limited by the circumstance that they all receive a government stipend, and are supposed to be in training for the government service. The present limit is one hundred, which will be filled up next spring by the admission of a fresh levy. They are selected by competitive examination; and after matriculation compete for increase of pay as well as academical honors; the monthly allowance ranging from $6 to $16 beside their boarding, which is provided by the college.

It is not proposed to restrict the number permanently to this limit, but it can not advance much beyond it until both government and people become more fully awake to the importance of the "new education."

Of this there are not wanting premonitory symptoms. Not to speak of others, the facts that the demand for scientific publications is on the increase, and that leading men in the government are beginning to take an intelligent interest in the affairs of the college, are certainly hopeful indications.

The influence of the college on its pupils is scarcely more important than that which it exerts on its illustrious patrons.

In conclusion, I may say that it seems to be established on a permanent basis, and its prospects for the future are better than at any previous time in its brief history, but everything like a rapid growth for such an institution in such a soil is not to be anticipated.

Something in the way of professorships, cadetships, or buildings, is added from year to year, the latest addition being a government printing-office now in process of erection on the university grounds, and intended to answer the purposes of a university press.

UNPUBLISHED WORK OF OFFICE.

Among the important objects occupying a considerable portion of the time of the office during the year, and not appearing in its publications, may be mentioned—

First. A comparison of the wealth, population, and industrial resources of the different States of the Union, with the illiteracy of their people, never before published.

Secondly. An elaborate presentation, as the basis of comparison, of schools, teachers, pupils, legal school-age, school-houses, amount of school revenues, and expenses of maintaining schools.

Thirdly. The manner of assessing school taxes, and the amount collected, in the different States of the Union for school purposes.

Fourthly. The supervision and control exercised over education by the respective States.

Fifthly. Showing the election or appointment of the respective school officers, with their duties and salaries.

Sixthly. An extended statement of methods of instruction in the United States furnished to a corps of teachers in South America.

OFFICE FORCE AND ROOMS.

The provision by Congress for a chief clerk and statistician, taking effect July 1, last, has considerably relieved the embarrassment of the work in the office.

It gives me great satisfaction to have occasion to commend the ability and meritorious efforts of all my assistants. In some degree I have been able to assign them integral parts of the work and hold them responsible as never before. In every such case, as in that of statistics, great improvement in results has been manifest.

Only partially yet, however, can I subdivide the work of the office, and hold individuals responsible for specific divisions of labor, and the work can never be done satisfactorily till the force is sufficient to allow its business to be thus conducted.

The several removals of the office have been impediments to its success. Time has been lost and confusion created. Besides, the rooms

occupied have been either inconvenient or inadequate. Your recent order for removal, however, has given us rooms sufficient in number, commodious, and fitted to make work agreeable.

THE WORLD'S FAIR AT VIENNA.

The Austro-Hungarian government, two years ago, officially announced that a general exhibition, of very great extent and completeness, would be opened in Vienna in May, 1873, under the auspices of the Emperor, to which all nations were cordially invited to send whatever in their progress or culture was most remarkable, for the mutual benefit and improvement of all.

One of the twenty-six permanent groups in the Exposition is entitled "Education, Teaching, and Instruction."

General T. B. Van Buren, United States commissioner-general to the Exposition, the Hon. John Jay, United States minister at Vienna, the Secretary of State, and Baron de Schwarz-Senborn, have written earnest letters, requesting the coöperation of this Bureau in fully representing American education at the Exposition.

Deeming the hearty coöperation of all persons interested in the subject throughout the land essential to the success of this undertaking, I invited the superintendents of public instruction of the States and larger cities of the Union to meet at this office for consultation, on the 13th of the present month.

A meeting of educators was accordingly held on that day; letters were received from some who could not be present. The convention unanimously recommended that the effort be made to represent American education at Vienna, and passed resolutions calling upon the various State and city superintendents, and collegiate and academic officers, to coöperate to that end by forwarding their reports, statistics, &c., to this Bureau for examination, assortment, and consolidation. The convention further proposed that the annual report of this office should be furnished as representing the present condition of American education. Copies of the report for 1872 will accordingly be sent to the Exposition.

This Bureau can undertake no responsibility in the premises save that which is imposed upon it as a national agency or medium to facilitate or stimulate the efforts which institutions or systems may see fit to make.

In accordance with the urgent requests and favorable action of the educators of the country, it will cheerfully coöperate with the distinguished gentlemen superintending our State and city systems, and our colleges and other institutions of learning, to make the educational exhibit of our country as successful as possible.*

---

* A brief note of the progress of this work is here inserted, as this report goes through the press.

An advisory committee, to assist the Commissioner of this Bureau, was appointed by

APPROACHING CENTENNIAL EXPOSITION.

In my last report I called attention to the International Exposition to be held in Philadelphia during the year 1876, in commemoration of the one hundredth anniversary of our national independence. I would respectfully renew the suggestions therein made.

My efforts to aid the Exposition at Vienna are made with the hope that the plans devised and tried may furnish educators in different parts of the country some practical views of what can be done at Philadelphia to show progress in American education. The stimulative effect upon every State, county, city, and town, school, academy, college, or university, to gather its history and record its present condition, can not fail to produce most excellent results. In the correspondence with this office of the commission in charge of the Exposition, there is evidence of an earnest purpose to give all educational interests their appropriate place. It is not too early for each system of education and each institution of learning to begin its preparation. If the Centennial serves as the occasion for putting into permanent shape for preservation the abundant educational history in this country, much of which is now unwritten, a great service will be rendered to mankind.*

General T. B. Van Buren, United States commissioner to the Exposition, consisting of the following gentlemen: Hon. J. P. Wickersham, Harrisburgh, Pennsylvania; Hon. M. A. Newell, Baltimore, Maryland; Hon. T. W. Harvey, Columbus, Ohio; Hon. Newton Bateman, Springfield, Illinois; Hon. W. H. Ruffner, Richmond, Virginia; Hon. J. D. Philbrick, Boston, Massachusetts; Hon. J. O. Wilson, Washington, D. C.; Hon. Duane Doty, Detroit, Michigan; Hon. W. T. Harris, Saint Louis, Missouri; and Hon. Henry Kiddle, New York City.

A Circular of Information, containing the progress of, and other information respecting, the Exposition, was issued and widely distributed.

The gentlemen of the committee just mentioned, who were able to be present, spent a day in considering the best plan for the representation of an American school-house or school-room, and agreed on the following conclusions, as best under the circumstances:

1. A school-room with single desks and single seats for forty-eight pupils, the room to be 33 feet long and 27 feet wide by 14 feet high.

2. The room to be arranged as a room for co-education, to include two entrances and two cloak-rooms, with all the usual appliances of a school-room.

3. The committee *approve*, if General Van Buren is able to secure it, a building upon the plan proposed by Mr. Philbrick, suggesting that it would be better to have a ground-plan of the whole building. If this can not be done, the plan upon the foregoing principles is recommended; or any harmony of the two plans or medium between them.

These opinions were conveyed to General Van Buren.

This Bureau has sent out 12,000 mail packets, composed of 17,000 pamphlets and letters, respecting the Exposition. The result has been more extensive than was at first anticipated, and furnishes a gratifying suggestion of what is possible to do at our Centennial Exhibition in 1876.

* In view of the fact that woman has derived such great benefit from the freedom of conscience and individual act, directly traceable to the spirit of the immortal Declaration of Independence, and believing that she should properly give expression

A census by the United States, with special reference to the preparation for the Centennial, would be exceedingly useful to the interests of education.

THE GREAT FIRES IN THE WEST AND IN BOSTON.

It is gratifying to observe, as described elsewhere, to what an extent the educational interests in those western localities which were visited last year by terrible conflagrations have already recovered from the effects of them. In Chicago, where were destroyed fifteen school-buildings, accommodating 10,000 children, nearly one-third of the total enrollment, as Superintendent Pickard's report informs us, there scarcely remains to-day a trace of the fire upon the schools, and the school year closes with only about two per cent. less attendance than at its beginning. This result, it should not be forgotten, is due largely to the earnestness and self-sacrificing devotion of superintendent and teachers, who, amidst the desolation of those few first days, decided that, with or without money, the schools should be continued.

Mr. Philbrick writes that the recent great fire in Boston destroyed no public-school buildings, and will not disturb the pay of the teachers, or interrupt, for any length of time, the even tenor of the schools.

The effect of the calamity upon the university at Cambridge is more severe. It sustains a loss of property worth $560,000, the annual income from which was $38,000. This is the heaviest blow from which the college has ever suffered. Her appeal for aid in this crisis is responded to by graduates and friends in all portions of the country. "We have received," writes President Eliot, "$85,000 during the past week toward repairing our losses, and the prospect is good that the whole loss will be covered by subscription. How many sacrifices, and how much devotion and hard work, simply to regain lost ground! But I do not forget that a defeat redeemed is sometimes better than a victory." It is to be hoped that the receipts may soon equal the losses sustained.

The Massachusetts Institute of Technology, though losing comparatively little directly, suffers from the fact that many of its friends have been crippled by the fire and are compelled to devote all their energies and means to retrieve losses.

The Boston University loses all but one of the fine buildings of the estate devised to it by its lamented founder, Isaac Rich, esq., the loss, over and above all insurance, being estimated by the trustees of the estate at $200,000. A granite block of stores, which cost $250,000 to build, being an investment of a portion of the funds of the theological school, was also entirely destroyed. By a circular letter issued by the corporation of the university, an appeal is made to all who appreciate

---

to her appreciation by directly identifying herself with work preparatory to, and so with the Exposition itself, the women of Philadelphia, lead by Mrs. M. E. Bronson Clark, propose an organization for this purpose, with which all the women of the land are to be invited to coöperate.

the highest education, and have means to assist in promoting it, for aid. Not less than $50,000 a year, for the next ten years, it is stated will be required in order that the university may continue in operation upon a scale worthy of its name and birthright.*

THE HEALTH OF THE SCHOOL POPULATION.

The effects of healthy training on the growing mind and body of the youth, and the influence of school-life in preventing, correcting, or producing disease, are subjects so vital to the public welfare, that every teacher should be awake to the importance of understanding them.

The census of 1870 reported the following number as dead at the ages mentioned:

Between 1 and 4 years old	203,213
Between 5 and 9 years old	26,329
Between 10 and 14 years old	15,979
Between 15 and 19 years old	20,262
Between 20 and 24 years old	25,981

So that the total mortality of the population below 25 years of age was 291,764, and the mortality of those who are fit subjects for elementary, secondary, and superior instruction, between 5 and 24 years of age, was 88,551.† But the mortality is only an indication of the amount of disease prevalent; and the diseases incurred during school-life, or aggravated by it, prepare many victims for lingering illness in later life, and contribute largely to the mortality of the adult population. Beside this, many troublesome complaints, not of perceptibly fatal character, are often contracted in school. It has been discovered, for instance, that cases of myopea, or short-sight, increase in frequency and in degree as the course of instruction carries children from elementary up to secondary schools, and youth from academies to colleges and professional studies.

Headache, bleeding at the nose, diseases of the eye and the spine, dyspepsia, affection of the bronchial tubes and lungs, exanthematous fevers, diphtheria, and many other complaints, have been undoubtedly induced or aggravated by the collection of numerous children in school under unfavorable conditions as to ventilation, light, heat, cleanliness, exercise, and habits of study. School-furniture is responsible for much curvature of the spine. Bad print, bad light, and bad position of the

* But a few days after the great calamity at Boston, information was received of the total destruction by fire of the Illinois Female College, at Jacksonville. No less than three times, during the last ten years, has a similar misfortune befallen this institution; and since upon each of the two previous occasions the college arose from its ashes to a new and more efficient life, it is not doubted that the present sad event will be attended with a like result, arrangements having been already made for the rebuilding of the institution.

† The mortality statistics of the Eighth and Ninth Censuses, with illustrative diagrams, by J. M. Toner, M.D., of Washington, D. C., were published in the Circular of Information of this Bureau for March, 1872.

head while studying, continually cause distortion of the eye, and resultant trouble. But neither time nor space will permit of further detail here. The material collected on this subject will be published at an early date.*

NECESSITY OF PUBLIC SANITARY MEASURES.

School management, proper in kind and degree, good buildings, scientifically constructed furniture, and clearly printed text-books, will obviate much of this trouble. The enlightened interest and coöperation of the medical profession are also much needed, and their advice should be sought and followed by all interested in the health of schools. But we must finally go behind all schools, and, prior to the entrance of children upon instruction, see that the infant offspring of the poor in all crowded centers of population is put in proper conditions of health, and is supplied with pure air, wholesome food, sufficient clothing and lodging. The awful mortality of children *before* school-age points to the still more dreadful amount of disease. Beside the 203,000 children which the census reports as dead between one and four years of age, countless thousands of little sufferers pined in dark rooms, wasted their young life in exhausting diseases, and lived on innutritious food. Of these no account can possibly be taken by the decennial census; nor is there any instrumentality for their record.

PUBLIC PARKS AS SANITARIUMS.

While many important measures for the preservation of public health will be found imperatively necessary hereafter, I can not avoid pointing out here the great and immediate importance of sanitary appliances for the children of our cities. The following suggestions from the pen of Joseph M. Toner, M. D., late president of the Medical Association of the District of Columbia, are taken from a letter to this office, dated June 3, 1872:

An examination of the published annual reports of the boards of health of our different cities for many years, reveals the fact that more than one-half of all the deaths occurring in them are of children under five years of age; and a study of the reports with reference to the causes of death, shows that a large percentage of them occur during the months of June, July, August, and September, and are attributed to cholera-infantum and kindred diseases, produced by the heats of summer.

Whenever the thermometer rises and remains for any considerable number of days above 80° Fahrenheit, unless the greatest care is taken, deterioration in the quality of all fresh animal food takes place, even where it is kept on ice; and when such has to be used by infants already weakened by meager diet, and by such protracted and exhaustive heats, their delicate digestion is sure to be damaged, and a class of diseases set up destructive to young children compelled to live in narrow courts and crowded and badly ventilated rooms. The poor, with the most active parental solicitude, can not

* Valuable suggestions on this subject, contained in an article by the celebrated Dr. Virchow, of Berlin, were published by this Bureau in the Circular of Information for August, 1870.

overcome these evils and inconveniences in cities, or provide from their limited incomes the best quality of food, even in times of sickness, for their families.

It has long been the habit of physicians to send children under three years of age to the country during the summer when their digestion becomes seriously deranged, (if their parents can afford the expense,) with the confident expectation that they will recover, and without medicine.

It is said the poor have no friends; at all events, so far no health-restoring springs, rural boarding-houses, or cool summer resorts have been established for the special accommodation of the needy poor. The impecunious condition of vast numbers of heads of families in large cities renders them utterly unable to remove their children to the country during the summer months, no matter how urgent might be the necessity for such a change to save their lives. Children in this sphere of life, in vast numbers, in spite of all the physicians can do for them in the city, gradually waste away and die. To counteract this waste of life, I conceived the project, and have to some extent promulgated the idea, that the founding by cities of one or more large free parks or camping grounds, as a resort for school children and their mothers and nurses during the summer months, might save the lives of many children who would otherwise perish.

Such parks or sanitariums ought to be located on elevated wooded lands, above the line of malaria, where there is good drainage and an abundance of spring water.

The site ought to be selected with special reference to its accessibility, on a line of railroad or a steamboat route, and within a couple of hours' run from the city, and where provisions and the necessaries of life are cheap.

In the United States every 300 feet of altitude above sea-level secures a temperature of about the equivalent of one degree of north latitude.

The grounds should be improved by the removal of all underbrush, the planting of shade, fruit, and ornamental trees, the laying out of walks and drives, and by the erection of cheap summer cottages and boarding-houses every way comfortable and suitable for the purposes of the institution. Those who could not obtain cottages should be permitted to erect canvas tents on particular parts of the grounds, and all be permitted to live in such style as might be suited to their means, provided they did not violate propriety, and observed a proper regard for the rights of others.

Play-grounds, gymnasiums, school-houses, and chapels ought to be provided, so as to secure as much healthy and refined home influence as possible for all.

The whole institution should be governed by liberal rules, so as to obtain the greatest amount of health and comfort to the greatest number, with the least constraint, but with due regard to the rights of all. A medical and civil police should have the immediate supervision of the establishment, to insure order and preserve a proper regard for the laws of health and the salubrity of the park.

In my report for 1870 I called attention to the value of parks in an educational point of view. I am happy to state that the legislature of New York passed, May 23, 1872, an act appointing seven commissioners of parks.

THE "TIMES" FUND FOR POOR CHILDREN.

One of the interesting reliefs undertaken for the young of the city of New York, and of the most salutary character, was carried forward by the managers of the New York Times newspaper. Mr. George F. Williams, who was especially active in managing the fund from first to last, furnishes the statements from which the following facts are drawn for the information of those in other cities who are studying methods for ameliorating the sufferings of the poor and young:

During the nine weeks of the pic-nic movement, eighteen excursions were given, with the following attendance:

Number of excursion.	Number attending.		
	Adults.	Children.	Total.
1st	45	560	605
2d	64	860	924
3d	122	1,103	1,225
4th	65	722	787
5th	65	862	927
6th	85	862	947
7th	200	587	787
8th	45	602	647
9th	103	904	1,007
10th	61	1,323	1,384
11th	161	1,439	1,600
12th	91	838	929
13th	72	609	681
14th	103	1,245	1,348
15th	227	1,652	1,879
16th	43	1,407	1,450
17th	27	1,507	1,534
18th	174	1,489	1,663
Total	1,753	18,571	20,324

The amount of money subscribed from July 4th to September 11th, inclusive, was nearly $19,400, of which about $15,920 were expended, and a balance of about $3,480 remains deposited with the National Insurance Company of New York City, subject to the order of the trustees of the fund, Messrs. George Jones, Charles H. Marshall, and Edward King.

The expenses of the eighteen excursions amounted to about $10,714, or about 52 cents for every person entertained. The following supplies were consumed: 6,840 loaves of bread, 22,828 large sponge-cakes, 185 hams, 192 tongues, 1,445 pounds of beef, 635 pounds of butter, 2,914 quarts of ice-cream, 2,585 quarts of milk, 35,000 pounds of ice, 19 boxes of lemons, 2,225 pounds of sugar, and 550 pounds of candy.

One special railway train was offered free of expense, and two special railway trains, fourteen barges and tugs, and one large steamer were chartered for the purpose of carrying the children out of town. It required the paid services of from 10 to 14 persons to serve the food to the children. A band of music accompanied every excursion, its services being twice gratuitous. Many hundred plates, mugs, saucers, spoons &c., were also purchased.

A relief movement was also organized and carried out simultaneously. Under its operation 63,139 domiciliary visits were made by 176 volunteer visitors under the direction of the district superintendent.

There were 2,217 medical visits to sick children; the lives of sixty-three infants were thus saved, and in addition, a very marked reduction of the average mortality of those weeks was observed; 3,715 families, comprising 8,970 individuals, were relieved. The expenses of the relief branch were about $5,216.

Edward Jarvis, M. D., in a communication to the Massachusetts State

Board of Health, brings out statistics showing an important relation of education to health:

The infant's life is in the care of the mother, and its safety depends upon the intelligence and discretion that she can give to this responsibility. There is no record that discriminates between the intelligent and ignorant of the mothers, showing the number of each class. Nor is there any record of the deaths of the infants of these educated and uneducated parents. But there is an approximation to these facts on a large scale in the registration reports of England.

In England, every person when married is recorded, and required to sign the register; and if unable to write, the bride and groom must make their mark.

The reports show the numbers and proportions of both grooms and brides in each district who wrote their names or made their marks.

The same records show the births and deaths at each age. For the purpose of showing the connection between the education of the parents and the life of their children, the records of twenty-five years, including 3,362,742 marriages, have been analyzed and divided into several classes, according to the proportions of the brides who wrote their names in the register.

In the most intelligent class, there were 648,260 marriages, and 20 to 30 per cent. of the women made their mark. In the least intelligent class, there were 661,929 marriages, and 60 to 70 per cent. of the brides made their mark. In the first class there were 2,231,959 children born, and 327,040, or 14.65 per cent., died under one year old. In the last class 1,776,547 children were born, and 439,359, or 24.87 per cent., died before they passed their first year. As often as 1,000 died in their first year, in the more intelligent class, 1,698 died in the least intelligent class among the same number born in each.

These classes are both large; each include city and country, commercial, mining, manufacturing, and agricultural districts. The only difference apparent is the diverse proportion of the mothers who could write their names.

It is not to be supposed here that the simple fact of inability to write caused the death of the infants. But the inability to write is a representative fact. It represents a want of education and intelligence, a lower degree of discipline and thrift. With these mental and moral conditions are associated more poverty, and even destitution, the more frequent want of means of support and the comforts of infant life, a more careless and indiscreet management, more intemperance, and neglect of children. In the best class 20 to 30 per cent. could not write, and in the worst class 30 to 40 per cent. had this accomplishment, but if these could be excluded, and none but the educated be in the first, and none but the ignorant in the last class, the difference in the chances of infant life would be found to be much greater.

VETERINARY INSTRUCTION.

The epidemic which lately visited the horses of the country has awakened the public mind to the necessity of a class of well-educated veterinary surgeons. In this respect we are far behind the countries of Europe. Indeed, what is there connected with the rural economy of the Old World, from which we may so profitably learn a lesson, as in securing skillful medical and surgical treatment for domestic animals? The twenty-five veterinary colleges in Europe of which we have information are measurably due to the lessons enforced by the prevalence of destructive diseases among animals. In this country the business of a "horse doctor" is almost universally spoken of in a tone of contempt. The late epidemic has given an unusual value to the services of persons skilled in treating the diseases of those animals. If this appreciation of

veterinary skill shall prove in any degree permanent, the epidemic, with all its evils, will not be unproductive of benefit.

The whole number of horses in the United States is estimated at nearly 9,000,000; representing the value of $700,000,000 or $800,000,000. It is within bounds to say that the portion of this amount annually lost by want of skillful medical treatment is not less than $15,000,000. The opinion has been expressed that for want of proper knowledge the country, in the purchase and losses of horses during the late war, incurred expenses to an amount greater than would have been required to maintain a national veterinary school or college for half a century. These considerations alone might be sufficient, but when added to these is the danger of such disaster as has lately fallen upon the country, entailing incalculable injury, not only in the actual loss of horses but in the hinderance to travel, delivery of mails, &c., and the almost total stagnation of many kinds of business, involving heavy losses, the necessity of some measures to prevent a recurrence of such a calamity is apparent. The only remedy lies in the establishment of veterinary schools, or of departments of veterinary science, in connection with existing institutions. The formation of a veterinary medical association in each State will do much to enhance the dignity of the profession. Educated veterinary surgeons, thoroughly scientific men, will occupy a position very different from that of the ordinary farrier or charlatan. Hospitals for clinical instruction should also be established, managed like similar institutions at the veterinary colleges in Europe. Very much the same kind of knowledge is acquired by the student of veterinary as of human medicine; the difference lies in the field of practical application. It were as reasonable to look with contempt upon the scientific man who inquires into the causes of the potato-rot, or the blighting of a wheat crop, as of the one who studies the diseases of domestic animals upon whom depends so large a portion of our wealth and comfort. Besides this the study of the best means for preserving the health of animals often develops facts and principles of no slight value in reference to the health of the human system. Some of the most serious diseases to which man is subject are found in amazingly near the same form in horses, and need essentially the same treatment. If anything will warrant the expenditure of public money for educational purposes, surely a sufficient warrant will be found in a case which involves the protection of so vast an amount of property, in the preservation of which the whole country has, if not an equal, at least a very great direct or indirect pecuniary interest. Let men be educated for the business, as in Europe, at the expense of the state.

It is gratifying to notice already indications of progress in some quarters. The Massachusetts Agricultural College has a professor of veterinary science, Professor Clark, for seven years assistant professor with Agassiz. A laboratory has been established, and the lectures are given with abundant illustrations. The Veterinary College of New York, which, its members claim, is the only regular college of this kind in the

United States, was chartered in 1857, and its importance and usefulness are recognized by the leading members of the profession in that city. Last year it had thirteen students. A free scholarship in this college is placed at the disposal of each State agricultural society. The college is maintained entirely by private subscription. Concerning the Pennsylvania Veterinary College, at Phildelphia, the statements are so conflicting that it is difficult to determine its status.

Mr. James Law, professor of veterinary science in Cornell University, writes me of the effort already made there to furnish this instruction. He also sends specimens of papers prepared by the students in their examinations upon the subject, showing commendable interest and effort.

A recent convention of agriculturists in Indianapolis, in view of the growing importance of the live-stock interests of the country, passed a resolution urging the establishment of an efficient professorship of veterinary practice in each agricultural college.

These special objects, it should not be forgotten, will be greatly promoted by the increase of intelligence among the farmers.

ART TRAINING.

There appeared in London, in 1869, a book entitled "Hiatus—the Void in Modern Education; its Cause and Antidote," in which the author says: "It is sufficiently evident that the prevailing deficiencies in our present plan of education are deficiencies in point of fine art and emotional susceptibilities to certain unfailing influences, derivable, though not always derived, from the survey of natural phenomena; beauty being the chief of these influences."

The deficiencies in American education in this particular are widely felt and acknowledged. The increased attention given to drawing in our schools is tending to multiply the means by which the better understanding of the language of art is possible. The knowledge of drawing may be said to bear the relations to art in certain aspects that the knowledge of A B C does to poetry; but more, much more, than instruction in drawing is alike possible and necessary. Whatever susceptibility to the enjoyment of the beautiful is possessed by any soul should be developed. How essential this to the most beautiful individual or national life! It is much to produce names great in art, and instruction that will accomplish this is not in vain. While American education should be consistent with this result, nay, productive of it, it should also seek to make universal the discovery, appreciation, and enjoyment of the beautiful. With a view to aiding whatever impulses there may be here and there toward this result, I have secured, and publish among the accompanying papers, a short article adapted to meet, if possible, the present condition of things, prepared by Martin B. Anderson, LL. D, the eminent president of Rochester University, New York, whose personal labors for himself and his university are illustrative of what is possible under our present disadvantages.

For statistics of museums of art reference is made to the table of museums in the appendix to this report. It is a matter of deep regret that it has been found impracticable to make these statistics more complete.*

THE SUPERVISION OF EDUCATION.

The history of the development of educational supervision by each State in the Union is a study full of interest and instruction. It indicates conclusively that the American people have almost universally come to the conviction that no State can expect an efficient system of education for its children which has not a competent officer devoted to the supervision of this important interest.

The following table will show—

The title and salary of State executive school officers.

States.	Title.	Am't.
Alabama	Superintendent of public instruction	$3,000
Arkansas	do	3,500
California	do	3,000
Connecticut	Secretary of the State board of education	3,500
Florida	Superintendent of public instruction	2,000
Georgia	State school commissioner	2,500
Illinois	Superintendent of public instruction	2,500
Indiana	do	1,500
Iowa	do	2,200
Kansas	do	1,200
Kentucky	do	2,000
Louisiana	do	5,000
Maine	Superintendent of common schools	1,800
Maryland	President of the board of State school commissioners	.....
Massachusetts	Secretary of the State board of education	3,000
Michigan	Superintendent of public instruction	1,000
Minnesota	do	2,500
Mississippi	Superintendent of public education	3,000
Missouri	Superintendent of public instruction	3,000
Nebraska	do	2,000
Nevada	do	2,000
New Hampshire	do	1,200
New Jersey	do	2,000
New York	do	5,000
North Carolina	do	1,500
Ohio	State school commissioner	2,000
Oregon	The governor *ex officio*	.....

* It is proper to record in this place the recent acquisition, by the New York Museum of Fine Arts, of the unique and priceless collection of statuary gathered by General di Cesnola, United States consul at Cyprus.

Title and salary of State executive school officers—Continued.

States.	Title.	Am't.
Pennsylvania	Superintendent of common schools	$3,500
Rhode Island	State school commissioner	2,500
South Carolina	Superintendent of public instruction	2,500
Tennessee	The treasurer *ex officio*	.....
Texas	Superintendent of public instruction	2,500
Vermont	Secretary of the State board of education	1,200
Virginia	Superintendent of public instruction	2,000
West Virginia	General superintendent of free schools	1,500
Wisconsin	Superintendent of public instruction	.....

Since the laws from which the above information was drawn were examined, Oregon has passed an act providing for the State supervision of public instruction, and Tennessee is expected to do the same by its present legislature.

It will be observed that two States, New York and Louisiana, pay their chief executive school officers $5,000 each; three States, Arkansas,* Connecticut, and Pennsylvania, $3,500 each; five States, Alabama, California, Massachusetts, Mississippi, Missouri, $3,000 each; six States, Georgia, Illinois, Minnesota, Rhode Island, South Carolina, and Texas, $2,500 each; one, Iowa, $2,200; seven States, Florida,* Kentucky, Nebraska, Nevada, New Jersey, Ohio, and Virginia, $2,000 each; one, Maine, $1,800; three, Indiana, North Carolina, and West Virginia, $1,500 each; four, Kansas, New Hampshire, Vermont, and Wisconsin, $1,200 each; and one, Michigan, $1,000. Tennessee and Oregon pay no salaries for services as superintendent.† In Maryland the expenses of the board of edueation are paid.

The quality of service demanded of these officers is the very highest. They must be men of ability and attainments, of high character, up with the times in their profession, and successful in the administration of affairs. The discharge of their duties touches every child in the State. No other class of officers has equal direct responsibility in molding the character of future generations; yet it will be seen that, in a considerable portion of the States, their pay does not equal that expected by a clerk of fair ability, whose only duty is to sell groceries or calico by retail. What can be more scandalous than that the State of Michigan should pay to the superintendent of public instruction only $1,000, or Wisconsin only $1,200, or Ohio, in which the disbursement for education approaches $8,000,000, only $2,000?

* Payable in State scrip, which is variable in value.

† Since the above was written Tennessee has passed a law giving her superintendent $3,000, and Oregon pays $1,500.

It will be interesting to extend this examination and include the facts connected with the compensation for the services of the presidents and professors of our colleges, and superintendents of our cities, and a large share of the best literary labor in the country.

In addition to the administrative work of a school superintendent of State or city, or the president of a college, it will be found, by looking through this report, what a vast amount of other labor is performed by them of a literary character, particularly in the production of text-books and the delivery of addresses.

Many of these men are expected to do all that can be required of a scholar, or scientist, or orator, and at the same time all that could be expected of the administrator of most multiplied and important affairs. Very often they have no one to assist them with head or hand. Great relief would be afforded, and efficiency added, by giving a superintendent or college president appropriate clerical aid. The limited extent to which these overtasked and underpaid men avail themselves of the aid of short-hand writers is surprising.

CONCLUSION.

No one can be more sensible of the omissions rendered necessary by the great size of this volume, than I am. Many subjects of great interest are hardly alluded to, and many others not noticed at all.*

---

* A short note respecting a few of these topics is here inserted.

The article on kindergarten progress is necessarily omitted. Miss Elizabeth P. Peabody, of Cambridge, Massachusetts, still devotes herself enthusiastically to kindergarten culture. Mr. John Kraus, so long connected with this office, will, in New York, do his utmost in the same direction. The benefits of this training for children between the nursery and the school are becoming better appreciated. In Boston, Saint Louis, Detroit, Cleveland, and other cities, considerable effort has been made to use something of Froebel's methods in connection with the public systems. Great good, no doubt, is to arise from the modifications of home training which it is fittest to promote.

Miss Matilda H. Kriege's kindergarten training class in Boston is temporarily discontinued.

The Poppenhusen Institute, at College Point, Long Island, was established by Mr. Conrad Poppenhusen for the benefit of his employés. Miss Jahn, a graduate of the normal school at Berlin, is the present teacher.

Dr. Adolf Douai, author of works upon kindergarten training, is now at the head of a kindergarten school in Newark, New Jersey.

Miss Marie Fritsche is principal of an excellent kindergarten connected with the normal school at Des Moines, Iowa.

Miss Maria Boelte, a pupil of Frederick Froebel's widow, is principal of the kindergarten of New York City. This lady has also a "class for mothers."

A kindergarten has just been established at Montclair, New Jersey, with Miss Maedawiel as principal.

Miss Emma Marwedel has opened a kindergarten in connection with her school for physical culture in Washington, District of Columbia.

Mrs. John Ogden is to open a kindergarten at Columbus, Ohio.

All special treatment of female education must be omitted; all facts gathered in regard to co-education, as well as a large amount of information collected by Mrs.

I have the honor to make the following recommendations:

First. An increase of the permanent force of this office commensurate with the increasing amount of work to be done.

Secondly. An appropriation sufficient to pay for suitable cases for the books and records of the office, and for preserving the models of school-apparatus, &c., presented to it.

Thirdly. Additional funds for the publication of Circulars of Information to meet the increasing demand for the same.

Fourthly. The enactment of a law requiring that all facts in regard to national aid to education, and all facts in regard to education in the Territories and the District of Columbia, necessary for the information of Congress, be presented through this office. For the purpose of enabling the Government to meet its responsibilities with respect to the education of the people in the Territories, I recommend that the office of superintendent of public instruction for each Territory be created, to be filled by the appointment of the President, and his compensation to be fixed and paid as in the case of other Federal appointees for the Territories.

Fifthly. In view of the appalling number of children growing up in ignorance on account of the impoverished condition of portions of the country in which slavery has been lately abolished, and in view of the special difficulties in the way of establishing and maintaining therein schools for universal education, and in consideration of the imperative need of immediate action in this regard, I recommend that the whole or a portion of the net proceeds arising from the sale of public lands shall be set aside as a special fund, and its interest be divided annually, *pro rata*, between the people of the several States and Territories and the District of Columbia, under such provisions, in regard to amount, allotment, expenditure, and supervision, as Congress in its wisdom may deem fit and proper.*

Julia H. Holmes in New York City, for the Bureau, showing the relation of woman's education to her industries; also, an interesting account of the training of women as nurses in Europe, and of the efforts of Julia F. Gould and others to introduce similar measures in connection with the hospitals in New York.

Moreover, there must also be omitted any special treatment of the evils of the sub-district system, or of the advantage of instruction in music and in drawing in public schools.

*The Committee on Education and Labor in the House of Representatives, of which Hon. L. W. Perce is chairman, during the late session of Congress reported a bill with essentially this purpose of aid in view. After careful debate it passed that body and was sent to the Senate last February.

The National Teachers' Association, at their late annual meeting in Boston, with representatives present from all quarters of the country, and of all differences of opinion on other than educational subjects, adopted a resolution "approving the bill now pending in Congress, for the appropriation of the proceeds of the sales of the public lands to educational purposes."

In a letter recently received from Rev. Barnas Sears, D. D., agent of the trustees of the Peabody educational fund, he says: "Nothing more important, nothing more con-

Sixthly. I need not more than allude to the fact that the extra work and extra expense for stationery and clerical assistance, &c., entailed on this Bureau by the endeavor to show thoroughly the methods, progress, and advantages of our public-school system at Vienna, will need an additional appropriation *available this winter.*

Seventhly. It is strongly urged by many educators in the country that the General Government should make adequate appropriations for the expenses to be incurred in representing American education at the Vienna Exposition, including the cost of preparing a common-school house, and its transportation, with other material—books, apparatus, &c.—necessary to illustrate the conduct of American common schools; and also the preparation of a report upon the educational lessons of the great Exposition for the benefit of American educators, and I earnestly recommend that this item of expense be included in whatever general appropriation Congress may see fit to make in aid of American representation at this Exposition.

Eighthly. I respectfully recommend that such provision as may be seen best in the wisdom of Congress, be made for the publication of ten thousand copies of the annual report of this Bureau, immediately on its completion, to be put at the control of the Bureau for distribution among its correspondents and the educators of the country, however many may be ordered for distribution by members of the Senate and House.

My thanks are due to the thousands of educators in different parts, who have cordially coöperated in aiding the work of the office, and also to the Commissioner of Patents, the Superintendent and Acting Superintendent of the Ninth Census, the Commissioner of the General Land-Office, the Congressional-Printer, the Chief of the Bureau of Statistics, and the Commissioner of Agriculture, for valuable information.

It is very agreeable, at the close of another year, to have so abundant occasion to renew the expressions of my obligations to the Assistant Secretary and yourself, and to the President, for wise direction and hearty coöperation in the performance of the duties of this office.

I am, sir, very respectfully, your obedient servant,

JOHN EATON, JR.,
Commissioner.

HON. C. DELANO,
Secretary of the Interior.

---

ciliating could be done by Congress for the Southern States, than to make a liberal appropriation for the public free schools. The white population generally feel the necessity of educating the colored race as well as their own children; but almost the whole burden falls upon themselves, as the colored people ordinarily have but a slight poll-tax. Mr. Hoar's educational fund bill meets the case substantially, and would undoubtedly be acceptable to the people, with the exception of a limited number of party men."

Similar testimony comes from the remote Territories as well as from many sections of the different States.

ANNUAL STATEMENT

OF THE

PROGRESS OF EDUCATION IN THE UNITED STATES.

*APPENDIX.

ABSTRACTS FROM THE OFFICIAL REPORTS OF THE SCHOOL OFFICERS OF STATES, TERRITORIES, AND CITIES, WITH ADDITIONAL INFORMATION FROM VARIOUS SOURCES.

ALABAMA.

[From report of Hon. Joseph Hodgson, State superintendent of instruction, for the scholastic year commencing January 1 and ending September 30, 1871.]

SCHOOL-FUND.

The school-fund for the scholastic year, as certified to this department by the State auditor, was derived as follows:

Interest on sixteenth-section fund, from December 1, 1869, to October 1, 1870	$115,268 85
Interest on valueless sixteenth-section fund, from December 1, 1869, to October 1, 1870	6,472 75
Interest on surplus revenue	44,605 78
One-fifth aggregate revenue	232,462 25
Poll-tax	82,579 66
From revenues derived under section 957 of the revised code	100,000 00
Total	581,389 29

The school-fund for the scholastic year commencing October 1, 1871, and ending September 30, 1872, as certified to this department by the State auditor, amounts to $604,978.50.

Financial statement.

Public-school fund for 1851	$237,515 39
Public-school fund for 1856	267,690 41
Public-school fund for 1857	281,874 41
Public-school fund for 1869	524,621 68
Public-school fund for 1870	500,409 18
Public-school fund for 1871	581,389 29
The increase of school-fund for 1871 over that of 1870 amounts to	80,980 11
Cost of administration in 1870	$86,123 82
Cost of administration in 1871	44,588 21
Decrease	41,535 61
Total available fund for 1871–'72	$640,627 83
Already apportioned to schools	560,000 00
Balance unapportioned	80,627 83

* The statistics of city schools, tabulated from the figures given by the city superintendents, as well as the names of the presidents and the statistics of the higher educational institutions of each State, will be found in their appropriate place among the statistical tables at the end of this volume. These tables of the schools and colleges embody the information given, in response to the circulars of inquiry sent out from this Bureau, by those in charge of the institutions. Owing to want of space, reference will be made in the text only to institutions from which the Bureau possesses printed or written information relating to matters of special interest.

The above apportionment is at the rate of $1.33\frac{1}{3}$ to each child, which is the same as last year. A large amount has been reserved in order that the necessary appropriations may be made for the improvement of the State university, the establishment of normal schools, and the correction of previous errors, by which several towns have been deprived of interest upon their sixteenth-section funds. Whatever balance may then remain will be apportioned thereafter.

NEW SCHOOL CODE.

At their last session, the members of the board of education did much to reform the public-school system, but the code of laws which they then enacted has been proved by the experience of the last year to be faulty in several important respects.

TEACHERS' INSTITUTES.

The law provides for teachers' institutes, but makes no provision for their encouragement. During the past year institutes have been held in nearly all the counties, for the first time in the history of public instruction in Alabama. The result has been most satisfactory.

The superintendent thus writes: "The board of education should designate certain central points and convenient times at which several counties may unite in institutes, and that a competent teacher, trained in a normal school, be employed to give instruction to the teachers on such occasions. I am satisfied that in this way our teachers of public schools would become far more efficient at a very small cost to the State.

STATE TEACHERS' ASSOCIATION.

"As an auxiliary to the teachers' institutes, I organized in July a State association of teachers. It was largely attended by leading educators from all parts of the State, and for three days the addresses and debates elicited unflagging attention.

"I would suggest, inasmuch as it is expedient for county superintendents to visit the capital at least once in each year to adjust accounts, that they be empowered to attend the annual educational convention, and that a small appropriation be made to pay their expenses. Nothing would go further to advance the cause of public instruction than a convention of county superintendents once a year.

THE STATE UNIVERSITY.

"The State university was re-organized by the board of education, sitting as a board of regents. It had fallen into bad repute, and was without students. The board selected an able faculty, equal in ability to any who had preceded them. Notwithstanding the difficulties with which the university has been obliged to contend for several years, its present session opened with most flattering prospects, and the corps of cadets numbers nearly as many as before the war. It is unnecessary for me to call the attention of the people to the importance of sending their sons to an institution of their own.

NORMAL DEPARTMENT OF THE UNIVERSITY.

"In this department, which is designed for the preparation of teachers, instruction is given by each professor as to the best manner of imparting a knowledge of the subjects taught, and at stated times the pupils are required to practice the principles taught by teaching a class, under the immediate direction of the professor. The president of the university will deliver a course of lectures on the art of teaching and conducting schools, with special reference to discipline. Certificates of proficiency, setting forth their qualifications, will be given to those who leave the university for the purpose of teaching, which certificates will at once admit them, without further examination, into the public schools as teachers.

SCHOOL OF AGRICULTURE AND MECHANICS.

"It will devolve upon the general assembly to appropriate to some institution of learning the annual interest of the fund now being realized from the congressional land-grant. Two hundred and forty thousand acres have been given to the State for an endowment to agricultural and scientific schools. This land has been sold by the State commissioners for $218,000, and will realize us an annual revenue of about $17,000. Here, then, we have for our own State the means of setting on foot a system of instruction which will extend to our laboring population the great benefits which have been derived from similar institutions in Europe. If such polytechnic schools for training in the practical arts are encouraged by the State government, I confidently expect to see the most important results at no distant day."

SCHOOL ATTENDANCE.

	White.	Colored.
Number of pupils enrolled, male	45,396	27,512
Number of pupils enrolled, female	41,580	26,824
Total number of pupils enrolled	86,976	54,336
Average number of male pupils in attendance	34,180	21,059
Average number of female pupils in attendance	32,178	20,249
Total average attendance	66,358	41,308
Increase in attendance since last year	30,395	25,211

NUMBER OF SCHOOLS.

	White.	Colored.
Number of primary schools	544	754
Number of intermediate schools	792	143
Number of grammar schools	812	26
Number of high schools	251	2
Total	2,399	922

NUMBER OF PUPILS IN DIFFERENT BRANCHES.

	White.	Colored.
Pupils studying orthography	76,015	46,823
Pupils studying reading	52,572	23,786
Pupils studying writing	38,931	13,162

Total average attendance	107,666
Total increase in attendance since last year	55,606
Total number of schools	3,321
Total number of teachers	3,470

At the conclusion of his report, the superintendent says: "In submitting this report I would call the attention of your excellency to the fact that a large proportion of the public schools during the past year did not cease operation as soon as the public fund was exhausted, but were continued by private contribution. Thus the public fund has been made a most valuable auxiliary to the educational interests of the State. It has paid more than half the tuition of nearly all the children of the State, and all the tuition of, by far, the greatest number."

THE PEABODY FUND.

From the report of Dr. Sears, superintendent of this fund, we make several extracts to show the aid that has been extended to the educational interests of the State.

To an inquiry respecting local taxation, the superintendent replied, March 28, 1872: "No local taxes are levied in this State for school purposes, except in the counties and cities (two of each) mentioned in my report; but such taxes may be levied, as you will see from the law. Thus, while the State is unable to raise money enough by a general tax to support the schools for a period much beyond three months, the people are so averse to local taxation that they will not, in this way, supplement the State funds. An attempt is made to meet this difficulty by requiring, as far as practicable, the school funds to

be supplemented to an amount sufficient to continue the public schools in operation for at least five months. It would seem that the additional money is to be raised by voluntary contribution, and that an agreement must be entered into by the contributors to make the schools free, and to place them under the supervision and control of the public-school authorities. This may be the best that can be done; but, as light dawns upon the people, they will see that they are paying dear for their prejudice against a school-tax. The plan can be viewed only in the light of a transition to a better state of things.

GREENSBOROUGH.

"It was hoped that the schools of Greensborough would have become this year self-supporting; but the superintendent wrote, March 12, 1872: 'The prospects of receiving State aid are so gloomy that I feel constrained to request the continuance of the same assistance that you have so kindly given for the past two years. Our schools are fuller than ever before.' The donation, $1,000, was renewed.

SELMA.

"The president of the board of education of Selma wrote, August 5, 1871: 'When I last saw you I thought we should be able by this time to keep our free school without further assistance from the Peabody fund; but we have been disappointed. There is a provision in our city charter which limits the amount of our school-fund from the city tax to 10 per cent. of the gross revenue of the city. We endeavored, at the last session of the legislature, to remove this restriction, but met with opposition, which defeated the measure.' The former donation of $2,000 was continued.

MONTGOMERY.

"The superintendent of Montgomery wrote: 'Your generous gift assisted us so much last year that we had hoped to carry our schools through the year without any assistance from outside; but the State treasurer is unable to pay the State apportionment, about $2,500, and we must close at once, unless we can obtain help.' We promised $1,500, on condition that the schools be continued through the year.

"Altogether there has been expended from this fund in the State $9,200."

ALABAMA TEACHERS' ASSOCIATION.

The second annual meeting of this association was held at Montgomery, July 9th, 10th, and 11th.

Addresses were delivered by Hon. Joseph Hodgson, president and State superintendent of public instruction; by Professor Kennedy on the "best incentive to study;" by Hon. E. R. Dickson on the "best method of diffusing education;" by Colonel Menifee, county superintendent of Pike County, in behalf of popular education. He was followed by Rev. Dr. Andrews, president Southern University, Greensborough; Mr. Goodwin and Dr. Stout, of Atlanta; Major Davis, of Louisville; Mr. Calvin, of Augusta. Rev. Mr. Cook, Professor Hale, Professor Hogg, and Rev. D. C. B. Connerly and others also made addresses upon practical subjects, and all earnestly in sympathy with the movement for sustaining a system of public schools.

Professor Lupton, president of the State university, expressed himself as in full accord with the public-school movement. Though he saw difficulties in the way, he thought they would be overcome. It was only necessary to show the people the good to be derived from the results of the system.

All the discussions during the meetings of the association demonstrated that Alabama has many able workers in the cause of public schools who are striving to lay the foundations of a progressive system of public education in the State.

INSTITUTIONS.

MEDICAL COLLEGE OF ALABAMA.

The circular of this institution for the session of 1872–'73 contains the following record of its progress and present condition:

At the session of the college for 1868–'69 there were 22 students, 4 of whom graduated at the close of the session. The next year, or the session of 1869–'70, there were 25 students, of whom 7 graduated. The next session 54 students attended the lectures, 15 of whom graduated. At the last session, that of 1871–'72, there were 91 students and 37 graduates. Thus the institution has had a steady and uniform growth.

The system of free lectures still continues.

REASONS FOR MAKING THE LECTURE COURSE FREE.

The building was erected by the State, and presented to the trustees as a free gift. The city of Mobile presented a museum and complete chemical apparatus, at a cost of $80,000.

At the close of the war it became apparent that many of the students were unable to pay the customary charges for tuition. The faculty, therefore, decided to make the lectures free, and charge fees only sufficient to meet the ordinary running expenses of the institution. In the opinion of the faculty, the plan accomplishes all that was desired. They do not object to the endowment of the various chairs, but claim to have adopted the present system as the plainly indicated want of the times.

The faculty also urge their friends to foster the institution, and to contribute their moral support to its sustenance upon the plan adopted.

TALLADEGA COLLEGE.

This institution is the outgrowth of the work carried on by the American Missionary Association, and is still under its supervision, and partially maintained by it. It is intended by the founders to build up an institution complete in all its departments, commencing with preparatory and normal departments, and developing into a college. A building, sixty by one hundred feet, erected before the war, surrounded by forty acres of land, was, with the assistance of the Government, purchased in 1867. In honor of one who contributed largely, it is called Swayne Hall. In the summer of 1870 a second building was completed, at a cost of $20,000. This building, in testimony of the liberality of Rev. L. Foster, of Blue Island, Illinois, is named Foster Hall. The advantages of the school are extended to both sexes, and to all without distinction of sect, race, or color.

In addition to the preparatory and normal departments, now in operation, collegiate, ladies' higher, and professional schools are to be organized as soon as there shall be a demand for them. A theological department was opened at the commencement of the session of 1872–'73. The college also sets forth its pressing need of funds to expand its work.

ALABAMA INSANE HOSPITAL.

The eleventh annual report of the officers of the Alabama Insane Hospital, Dr. Peter Bryce, superintendent, contains some facts interesting to educators.

The number of recoveries in proportion to the admissions is greater than last year, and the deaths have correspondingly diminished. These facts are, in the opinion of the superintendent, the more remarkable from the fact that an unusually large number of incurable and feeble patients were admitted. In the appendix to the report, among others, are the tables given below:

Social relations of patients received during past ten years.

	Men.	Women.	Total.
Married	210	114	324
Single	169	106	266
Widowed	30	59	89
Unknown	9	14	23

Education of patients received during past ten years.

	Men.	Women.	Total.
Received a liberal education	19	13	32
Received a good education	98	47	*145
Received a limited education	198	115	313
Received no education	83	98	181
Unknown	11	20	31

*From this it appears that out of the 702 patients under treatment for the ten years from 1861 to 1871, only 177 had received a good education.

SPRING HILL COLLEGE.

This college was incorporated in 1836 by the State of Alabama, with all the rights and privileges of a university, and empowered to confer academic honors. The college building was burned in 1869, but has been rebuilt on an improved plan. The course is divided into classical and commercial departments. These are preceded by a preparatory course.

HOWARD COLLEGE.

The organization of this college is said to be similar to that of Washington and Lee University. There are ten different departments, and each student may choose which of these he will attend, but he is required to attend at least fifteen recitations per week. The departments are: 1. School of Latin. 2. School of Greek. 3. School of modern languages. 4. School of English. 5. School of moral science and theology. 6. School of mathematics. 7. School of chemistry, geology, and mineralogy. 8. School of natural philosophy and applied mathematics. 9. School of civil engineering. 10. Business school.

The degrees conferred are those of Bachelor of Philosophy, Bachelor of Science Bachelor of Arts, Master of Arts, and Civil Engineer, for the attainment of which, certificates of proficiency in varying combinations of the different schools are prerequisites.

MARION FEMALE SEMINARY.

This seminary is claimed to be one of the oldest schools of a high grade, for the education of females, in the State.

The scholastic year embraces nine months.

TUSCALOOSA FEMALE COLLEGE.

Large additional buildings have been erected recently for study-halls, recitation-room, music and art departments. The school embraces primary, intermediate, academic, and collegiate departments. A normal department is also announced.

FLORENCE SYNODICAL FEMALE COLLEGE.

This institution embraces a primary and a collegiate department. The collegiate course extends over four years.

DEATH OF REV. WILLIAM H. MITCHELL.

Rev. William H. Mitchell, D. D., president of the Florence Synodical College, died October 3, 1872.

He was born at Monoghan, Ireland, September 7, 1812. He received a classical education, and afterward studied law with his father. In his twenty-sixth year he married, and shortly after came to Montgomery, Alabama, where he taught school for several years, and was licensed to preach by the presbytery of East Alabama in 1843. He was settled as pastor at Wetumpka for seven years. He removed to Florence in 1850, where he was settled as pastor till 1871. In 1856 he became president of the college.

He was possessed of great executive powers as presiding officer and as teacher. His influence for good over his pupils was most marked. In all the relations of life he bore himself in such a manner as to win the confidence and respect of the entire community, and his death is deplored as a public calamity.

FACTS FROM THE UNITED STATES CENSUS

Area and population.—In 1870, Alabama was the sixteenth State in population, having 996,992 inhabitants, in an area of 50,722 square miles, an average of 19.66 persons to the square mile. This population consisted of 521,384 whites, 475,510 negroes, and 98 Indians; 987,030 were natives of the United States, 9,962 were foreign-born; of the native residents of the State, 369,635 whites, 374,418 blacks, and 93 Indians, were born within its borders; of the foreign residents, 2,482 were born in Germany, 3,893 in Ireland, and 1,041 in England.

School attendance.—According to Table IX, vol. 1, of Census Report, 77,139 persons of all ages attended school in the State in 1870; of these only 48 were foreign-born. The white male scholars numbered 31,098, and the white female scholars 30,226; the colored male scholars 7,502, and the colored female scholars 8,313.

Illiterates.—The number of persons of all races, 10 years old and over, unable to write was 383,012, of whom only 870 were foreign-born.

Age, sex, and race of illiterates.—Of the white illiterates, 10 to 15 years old, 13,214 were males and 11,016 were females; of those from 15 to 21 years old, 9,642 were males and 9,757 were females; of those 21 years old and over, 17,429 were males and 31,001 were females. Of the colored illiterates, 10 to 15 years old, 24,391 were males and 22,615 were females; of those 15 to 21 years old, 25,616 were males and 28,915 were females; of those 21 years old and over, 91,017 were males and 98,344 were females; 55 illiterates were Indians.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions is 2,969; these had 2,372 male and 992 female teachers. The public institutions numbered 2,812, with 2,173 male and 835 female teachers, 33,390 male and 33,873 female scholars.

Amount and source of educational income.—The total income of all the educational institutions was $976,351, of which $39,500 were derived from endowments, $471,161 from taxation and public funds, and $465,690 from tuition and other sources.

Public schools.—The income appertaining to the public (normal, high, grammar, graded and ungraded common) schools for educating these 67,263 pupils, was $629,626, of which sum $8,000 were derived from endowments, $447,156 from taxation and public funds, and $174,470 from other sources, including tuition.

Colleges.—The 8 colleges reported, with 42 male and 21 female teachers, contained 1,026 pupils, and had a total income of $108,800.

Academies.—The 46 academies had 132 teachers, 3,086 pupils, and an income from tuition, &c., of $142,750.

Private schools.—The 83 (private) day and boarding schools had 97 teachers, 3,129 pupils, and an income of $70,870, of which $2,000 were derived from taxation or public funds.

Libraries.—The libraries of the State were: Public, 298, with 86,577 volumes; private, 1,132, with 490,305 volumes; making a total of 1,430 libraries, with 576,882 volumes.

The press.—Eighty-nine periodicals, with an aggregate circulation of 91,165 copies, and an aggregate annual issue of 9,198,980 copies, were reported.

Churches.—Of the 2,095 church organizations in the State, 1,958 had edifices, with 510,810 sittings; the church property was valued at $2,414,515.

Pauperism.—The paupers reported numbered 687, of whom 354 were native whites, 327 native blacks, and 6 foreigners.

Criminals.—Of the 593 prisoners, 149 were native whites, 436 native blacks, and 8 foreigners.

Age and sex of population.—Of the total population of Alabama, 342,976 persons were from 5 to 18 years old, of which number 173,273 were males and 169,703 were females. The number 10 years old and over was 706,802, of whom 340,984 were males and 365,818 females.

Occupations.—Two hundred and seventy-five thousand six hundred and forty males and 89,618 females of these ages were engaged in various occupations; of these 365,258 employed persons 291,628 were engaged in agricultural pursuits, 42,125 in professional and personal services, 14,435 in trade and transportation, and 17,070 in manufactures, mechanical and mining industries.

Age and sex of working population.—Of the 365,258 reported as employed, 34,059 males and 14,068 females (a total of 48,127 persons) were between 10 and 15 years old; 220,699 males and 72,858 females (equal to 293,557 persons) were between 16 and 59 years of age; and 20,882 males and 2,692 females (or 23,574 persons) were 60 years old and over.

LIST OF SCHOOL OFFICIALS IN ALABAMA.

Hon. JOSEPH H. SPEED, *superintendent of public instruction, Montgomery.*

ARKANSAS.

In the absence of any official report, the following letter of the State superintendent of public instruction to the United States Commissioner of Education is given, as furnishing the only official information of the condition of education in this State now in the possession of this Bureau:

"OFFICE OF SUPERINTENDENT OF PUBLIC INSTRUCTION, STATE OF ARKANSAS,
"*Little Rock, Arkansas, December* 11, 1872.

"DEAR SIR: Your communication of the 22d ultimo, with respect to furnishing school statistics in our State, to be embodied in your forthcoming report, has been received, and I have delayed answering until now, hoping that reports might come in which would enable me to comply, at least to some extent, with your request; but in this I have been disappointed. I have long been waiting for the circuit superintendents to furnish me with the necessary data to enable me to make out my biennial report to the governor and general assembly, but as yet nothing of consequence has been received.

"In consequence of the action had at the last session of the legislature in making State scrip receivable for school taxes, and the restrictions laid upon local taxation in school districts, our school system has been very much crippled in its operations during the past two years.

"Owing to the depreciation of the scrip, the funds were not sufficient in a majority of the school districts to defray the expenses of a three months' school. The teachers were disheartened, and a large number of the best qualified have left the State. In some of the cities and towns where they have been able to realize a considerable amount from local tax we have had good schools, and the system is working well.

"The people, who had become quite favorable to the free-school system, are now totally discouraged, and demand a radical change in the system. Unless better counsels shall prevail in the coming legislature than in the past, our free-school system will exist only in name.

"The industrial university, which is intimately connected with our free-school system, is in successful operation, with about two hundred students, and is having an apparently healthy growth.

"I have thus given you a few points, which will indicate somewhat our condition educationally in this State, and show why the excellent progress made during the first two years has not been continued.

"I exceedingly regret what I have had no power to remedy.

"Very respectfully,

"THOS. SMITH,
"*Superintendent.*

"Hon. JOHN EATON, Jr.,
"*Commissioner of Education, Washington, D. C.*"

PEABODY FUND.

Dr. Sears, the agent, says of Arkansas: "There has been a retrograde movement in this State, the nature of which is thus indicated in a letter of the superintendent: 'The last general assembly passed an act authorizing the issue of treasurer's certificates and making them receivable for school taxes, and the result was that little else than these certificates was paid into the school-fund, and they ranged at a discount of from fifty to twenty-five cents on the dollar, and in country places were difficult to convert into money at any price. The legislature also passed an act limiting the amount of local school taxes in the several school districts in country places to one-half of one per cent., and three-fourths of one per cent. in cities and towns. Under these provisions not more than one in ten of the school districts throughout the State could support a school for a term of three months during the year.' The cities seem to have suffered less from these derangements than the country towns.

"The aid furnished has been—to Little Rock, $2,000; Helena, $1,000; Camden, $1,000; Fort Smith, $1,500; to seven other places, sums varying from $800 to $300; and for the Journal of Education, $200; a total of $8,950.

"The superintendent of Helena writes: 'There is a much better feeling in the community in regard to public schools. More interest is taken in the subject by the citizens generally.' The superintendent of Little Rock says of the schools, 'All classes of citizens now patronize them freely.'"

CONDITION OF SCHOOLS IN LITTLE ROCK.

The whole number of sittings in all the school-buildings is 1,316, while there are 1,650 pupils enrolled, which has been the cause of much dissatisfaction during the year.

German and French have been introduced into the high-school course on an equality with the other branches. The examination showed the schools to be in a highly satisfactory condition.

SAINT JOHN'S COLLEGE.

This institution, founded by the masonic fraternity of Arkansas, was chartered as a military college, and such it will continue to be, for the military discipline produces the happiest effect upon the general conduct of the students. This institution was re-opened October 1, 1867, (it having been closed during the war,) and has since then been in successful operation.

ARKANSAS DEAF-MUTE INSTITUTE.

For nearly two years this school was conducted on the slender means that the city was able to appropriate. In 1868 it was incorporated as a State institution. Since this incorporation there has been appropriated the sum of $26,000 for its annual expenses, and the sum of $300 per annum for the expenses of each pupil. For building purposes no appropriation was made; but the board of directors erected a large frame house at less expense than one year's rent. This, after a time, proved inadequate, and the substantial brick edifice now occupied was erected. The capacity of this building is about exhausted, and the legislature has been petitioned to make an appropriation for building purposes.

The limit prescribed by law for admission is between the ages of nine and thirty. It is estimated that there are at least two hundred and fifty deaf-mutes in this State under thirty years of age. There is also a large number of colored deaf-mutes in the State, entitled to the same privileges of education as the white, for whom no provision has been made, and with the present accommodations of the institute, it is impossible to receive them. There are no hospital accommodations, and should an epidemic break out, there is no place to which the sick can be removed.

ARKANSAS INSTITUTE FOR THE EDUCATION OF THE BLIND.

In 1868 this institution was removed from Arkadelphia to Little Rock, and thoroughly re-organized. The trustees recommend an appropriation of $30,000 for the support of the institution for the next two years. The workshop has profited greatly by the change of location, and during the last two years has been self-supporting.

ARKANSAS INDUSTRIAL UNIVERSITY.

This institution is established in accordance with an act of Congress making a grant of land as an endowment for its benefit, and in accordance with an act of the general assembly of the State carrying out the object of the grant. Besides the grant of land made by Congress, amounting to 150,000 acres, the State legislature has appropriated $50,000 for the benefit of the institution. The donation of $130,000 proposed by the county of Washington and town of Fayetteville, upon condition of the location of the institution in the latter place, has been secured by its location. Several hundred acres of land have been donated by private individuals. An experimental farm has been provided for agricultural and horticultural purposes.

According to the act of the general assembly, a normal department has been established in connection with the university. Those who desire to enter this department, and will enter into a written obligation to teach in the public schools of the State for two years after completing their course, will be admitted without payment of tuition.

A preparatory department has been established as auxiliary to the higher departments. There will be provision made for 219 beneficiaries, entitled to four years free tuition, and apportioned among the several counties according to their respective populations. Provision will be made for instruction in military science and tactics. An unexpected difficulty in procuring the agricultural-college scrip to which the university is entitled has caused delay in the establishment of a full agricultural course.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Arkansas was the twenty-sixth State in population, having 484,471 inhabitants in an area of 52,198 square miles, an average of 9.30 persons to the square mile. This population consists of 362,115 whites, 122,169 negroes, 89 Indians, and 98 Chinese; 479,445 were natives of the United States, 5,026 were foreign-born; of the native residents of the State, 170,398 whites, 62,463 blacks, and 21 Indians were born within its borders; of the foreign residents, 1,563 were born in Germany, 1,428 in Ireland, and 526 in England.

School attendance.—According to Table IX, vol. 1, of Census Report, 62,572 persons of all ages attended school in the State in 1870; of these only 26 were foreign-born. The

white male scholars numbered 30,138, and the white female scholars 26,650; the colored male scholars numbered 2,930, and the colored female scholars 2,854.

Illiterates.—The number of persons of all races, 10 years old and over, unable to write was 133,339, of whom only 296 were foreign-born, 4 Chinese, and 18 Indians.

Age, sex, and race of illiterates.—Of the white illiterates 10 to 15 years old, 7,985 were males and 6,814 were females; of those 15 to 21 years old 6,703 were males and 7,213 females; of those 21 years old and over, 13,610 were males and 21,770 were females. Of the colored illiterates 10 to 15 years old, 5,352 were males, 4,982 were females; of those 15 to 21 years old, 5,863 were males and 6,655 were females; of those 21 years old and over, 23,681 were males and 22,689 were females.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 1,978; these had 1,653 male and 644 female teachers, and 41,939 male and 39,587 female pupils. The public institutions numbered 1,744, with 1,458 male and 508 female teachers, 37,103 male and 34,942 female scholars.

Amount and source of educational income.—The total income of all the educational institutions was $681,962, of which $7,300 were derived from endowments, $555,331 from taxation and public funds, and $119,331 from tuition and other sources.

Public schools.—The income appertaining to the public (normal, high, grammar, graded and ungraded common) schools for educating these 72,045 pupils was $552,461; of which sum $7,300 were derived from endowments, $529,881 from taxation and public funds, and $15,280 from tuition and other sources.

Colleges.—The 3 colleges reported, with 8 male and 2 female teachers, contained 235 pupils, and had a total income of $7,700.

Academies.—The 30 academics had 61 teachers, 2,144 pupils, and an income from tuition, &c., of $21,837, and from taxation and public funds of $3,550, making a total income of $25,387.

Private schools.—The 187 (private) day and boarding schools had 241 teachers, 6,818 pupils, and an income of $67,214, which was derived from tuition and other sources.

Libraries.—The libraries of the State were: Public, 293, with 54,332 volumes; private, 888, with 81,232 volumes; making a total of 1,181 libraries, with 135,564 volumes.

The press.—The 56 periodicals issued in the State had an aggregate circulation of 29,830 copies, and an aggregate annual issue of 1,824,860 copies.

Churches.—Of the 1,371 church organizations in the State, 1,141 had edifices with 264,225 sittings, and the church property was valued at $854,975.

Pauperism.—The paupers numbered 538, of whom 288 were native whites and 202 native colored, also 48 foreigners.

Criminals.—Of the 362 prisoners reported 137 were native whites, 184 native colored, 40 foreigners, and 1 Indian.

Age and sex of population.—Of the total population of Arkansas 165,492 persons were from 5 to 18 years old, of which number 84,645 were males and 80,847 were females. The number of persons 10 years old and over was 341,737, of whom 175,194 were males and 166,543 were females.

Occupations.—One hundred and twenty thousand one hundred and fifty-three males and 15,796 females of these ages were engaged in various occupations; of these 135,949 employed persons 109,310 were engaged in agricultural pursuits, 14,877 in professional and personal services, 5,491 in trade and transportation, and 6,271 in manufactures, mechanical and mining interests.

Age and sex of working population.—Of the 135,949 reported as employed 7,335 males and 1,979 females (a total of 9,314 persons) were between 10 and 15 years old; 107,540 males and 13,402 females (a total of 120,942 persons) were between 16 and 59 years old; and 5,278 males and 415 females (5,693 persons) were 60 years old and over.

LIST OF SCHOOL SUPERINTENDENTS.

Hon. THOMAS SMITH, *State superintendent of public instruction, Little Rock.*

CIRCUIT SUPERINTENDENTS.

Judicial district.	Name.	Post-office.
First	Hon. M. H. Wygant	Helena.
Second	Hon. M. A. Cohn	Augusta.
Third	Hon. W. H. Gillam	Batesville.
Fourth	Hon. A. S. Prather	Huntsville.
Fifth	Hon. E. E. Henderson	Fayetteville.
Sixth	Hon. W. A. Stuart	Russellville.
Seventh	Hon. F. M. Chrisman	Little Rock.
Eighth	Hon. A. P. Searle	Arkadelphia.
Ninth	Hon. M. D. Kent	Washington.
Tenth	Hon. Herbert Marr	Monticello.
City superintendent	J. R. Rightsell	Little Rock.

Annual salary of State superintendent	$3,500
Annual salary of circuit superintendents, to be paid from the State treasury	3,000

CALIFORNIA.

[From report of Hon. O. P. Fitzgerald, State superintendent of public instruction, for the scholastic year ended June 30, 1871, and from other sources—prepared by Mrs. S. B. Cooper.]

FINANCIAL STATEMENT.

Total receipts from all sources for school year, 1871	$1,884,586 84
Total expenditures for school year ended June 30, 1871	1,713,430 97
Total valuation of school property	3,362,580 18

ATTENDANCE.

Population, United States census of 1870	560,247
Scholastic population, (between 5 and 15)	130,116
Number of pupils enrolled in school	91,332
Average attendance	72,031
Number of children in private schools	510
Number of children in Chinese schools	1,800
Number of children in Indian schools	221

TEACHERS.

Number of male teachers	820
Number of female teachers	1,232
Number of teachers who attended county institutes	918
Number of volumes in teachers' libraries	10,570
Number of visits made by county superintendents	1,645

SCHOOL DISTRICTS AND SCHOOLS.

Number of counties in the State	50
Number of school districts	1,326
Number of public schools	1,550
Number of schools maintained nine months and over	388
Average number of months of all schools in the State	615

GENERAL PROGRESS OF EDUCATION.

The educational development of the State keeps pace with its growth in wealth and population. The increase in the number of children attending school is more than 20 per cent. in two years. The increase in the value of school property is about 20 per cent. for the same period. The enormous amount added to the value of school property is the result of voluntary taxation voted directly by the people themselves. But while, in the centers of wealth and population, the children have the advantage of a full school-year's instruction, with the best facilities for learning, the present system is totally inadequate to meet the wants of the more remote and sparsely-settled districts. Many districts can maintain schools only from three to six months of the year. The remedy for this great evil and injustice lies in taxing all the property of the State to educate all the children of the State. "Let not the hardy pioneers who lead the march of American civilization, extend the area of freedom, subdue the wilderness, and incur the hardships and dangers of frontier life, pay the penalty of seeing their children grow up in ignorance as the reward of their enterprise, energy, and courage. The chief recommendation of the public-school system is, that it secures the advantages of education to those who can be reached in no other way. If it fails in this, it fails essentially to accomplish its highest end."

FEATURES OF THE AMENDED SCHOOL LAW.

The school law, as amended by the last legislature, provides that "in all counties containing 20,000 inhabitants or upward, the superintendent shall devote his whole time to the supervision of schools in his county;" that "certificates of the first grade shall be granted to those only who have passed a satisfactory examination in indus-

trial drawing, in addition to the studies before designated;" that "all examinations shall be conducted partly in writing and in part orally; the standing in each study to be indorsed upon the diploma or certificate, otherwise it is not valid;" also, that all the school-grounds shall be adorned, as far as practicable, with ornamental and fruit trees and shrubbery.

"THE CALIFORNIA TEACHER."

The California Teacher continues to be the official organ of the department of public instruction. Under the present efficient editorial management it is in a flourishing condition, and contains much valuable educational matter, both original and selected. It is sustained mainly by the State subscription of $4,000.

TEACHERS' INSTITUTES.

Since the year 1861, a State teachers' institute has been held annually in the city of San Francisco. The special feature of the session of 1871 was a debate on the true theory of a public-school system. This debate, while it developed a great variety of opinions as to the best method of giving to all the children of the State the advantages of a full term of public-school instruction, showed that all were agreed that these advantages should be more equally distributed, and that the time for action had arrived.

Of county institutes, Superintendent Fitzgerald says: "In some counties the first real impulse to the cause of education dates from the first institutes held in them. They have done incalculable good, not only in enlarging the ideas and exciting the enthusiasm of teachers, but in awakening the interest of the public generally in the cause of popular education." The number of county institutes held during the last two years is largely in excess of the number ever held during any like period previously. We regret to learn that an act has been recently passed abolishing these important agencies for improvement in the work of teaching.

COMPULSORY EDUCATION.

At the last State teachers' institute the subject of compulsory education was considered, and resolutions were passed requesting the next legislature to provide for the maintenance of a free school for ten months, in each district in the State; and declaring the members of the institute in favor of a law "compelling the education of all children in those branches taught in the public schools."

SALARIES.

Superintendent Swett calls attention to the low salaries paid to principals and vice-principals of grammar schools, and recommends that the salaries of the former be raised to $2,400, and of the latter to $1,800. He also says: "The salaries of experienced and capable women, teaching the various grammar grades, should be increased. Good schools cannot be kept up without good teachers, and the best teachers cannot be retained unless they are paid a fair compensation for their labor."

EDUCATIONAL WORK AMONG THE CHINESE.

The main difficulty in the beginning of the educational work among the Chinese was to find teachers who were able to use both the English and Chinese languages with sufficient facility to give instruction. It was finally determined to connect with the regular religious service of the churches a school for the instruction of the Chinese in our language, as well as our religion. Nearly every Protestant denomination now has at least one Chinese mission-school in successful operation. There are twelve in good working order. The number of students enrolled is between 1,500 and 1,800. The average attendance is about 1,000. In addition to the regular exercises on Sunday afternoon, each church has one night in the week set apart for extra instruction in English.

CHINESE CHARACTER AND EDUCATIONAL ATTRIBUTES.

The Chinese attending these schools are generally docile, tractable, bright of apprehension, and eager and zealous in their efforts to learn. But they are set and determined as regards the manner in which they shall be instructed, and each one demands the exclusive attention of a teacher. If any attempt is made to form a class of several members, there is immediate discontent and audibly expressed disapprobation. This necessitates a very large number of teachers, and the mission-schools find it their greatest obstacle. Chinese pupils are given to wandering from one school to another, thus retarding their own progress. This inclination is being gradually overcome, and each year shows a more steady average attendance. There are many and conclusive evidences that they are willing to learn and follow our ideas in the religious, moral, and social order. But the work must necessarily be gradual. Its surest agency lies in the Chinese mission-schools.

MISSIONS AMONG THE CHINESE.

Presbyterian mission.—This is the pioneer mission, established in 1852, under the care of the Presbyterian Board of Foreign Missions. It is under the superintendence of Rev. A. W. Loomis. Rev. J. M. Condit is his associate. There are three other associate teachers, one Chinese assistant, and three native colporteurs. As most of the Chinese who avail themselves of educational privileges are occupied during the day, schools are held for their accommodation in the evening. A day-school was kept open for four months, but the attendance being small, it was discontinued. The average attendance at night is 73, though the enrollment is much larger. A school for Chinese girls and women is in successful operation under the care of Mrs. Cole.

The nineteenth anniversary of this mission was held during the past year. One of the local papers spoke of it as follows: "The singing of the school was remarkably good. The performances upon the organ evinced much genuine talent as well as careful study. Computations in mental arithmetic were performed with much accuracy and rapidity. In grammar the pupils displayed great proficiency, parsing with ease both simple and compound sentences. In geography they showed familiarity not only with different countries, but also with the peculiarities of governments, peoples, customs, and arts. The most remarkable feature of the occasion was the examination of Fong Noy, a very intelligent Chinese, not only in the branches above named, but also in natural philosophy, chemistry, astronomy, and algebra. The most abstruse questions were answered with an evident comprehension of the subject and an originality of expression that indicated something far higher than a mere technical knowledge of the subjects. This was the more remarkable from the fact that Fong Noy is employed all day, devoting his evenings only to study, and a portion of these is devoted to learning telegraphy."

A branch school of the Presbyterian mission is now in successful operation at San José; and much work has been done besides in Chinese Camp, Stockton, Sacramento, and Ione City.

Methodist Episcopal mission.—This school occupies three rooms in San Francisco. It is in charge of Rev. Otis Gibson, and is supported by the Missionary Society of the Methodist Episcopal church. A nominal charge of $1 per month is made, but the payment is entirely optional with the scholars. About three-fourths of the average number in attendance pay promptly. The enrollment is about 100; the average attendance, 42. The progress of the scholars is remarkable, when it is remembered that all are employed during the day, and can only study at night. This school has steadily increased in interest since its first opening, in January, 1871, to the present time.

Baptist mission.—This mission has schools in San Francisco, Oakland, Brooklyn, and Sacramento, with 300 pupils and about 100 teachers. A house, valued at $3,500, has recently been purchased for the school in San Francisco. There is an evening class of 40 scholars: and an afternoon class is to be formed for the instruction of Chinese females. The superintendent is Rev. John Francis, recently of Brooklyn, New York. The most encouraging feature of this work is, that all the converts at once become teachers, and their influence on others of their race is greater than that brought to bear directly by the mission.

INDIAN SCHOOLS.

Colonel B. C. Whiting, superintendent of Indian affairs in California, furnishes the following statistics of schools at the reservations:

At the Tule River agency the population is 374. The school, when in operation, had an attendance of 37. It is now discontinued for want of a suitable building, which is in process of erection. The teacher reports satisfactory progress.

At Hoopa, the population is 725. There is one school in operation, with 74 pupils. Fair progress is reported.

At Round Valley there are many tribes; the total population is 1,700. There is but one school, with 110 pupils. The teacher reports satisfactory progress.

The total number of male pupils in these three schools is 110; total number of female pupils, 111; total in all the schools, 221. The schools are under the auspices of the Methodist denomination, and all supplied with female teachers.

EDUCATION OF THE SOLDIERS OF THE UNITED STATES ARMY.

The report from headquarters Military Division of the Pacific, General Schofield, commander, is substantially the same as that embodied in the report of 1871. Affairs in the Indian country have rendered it almost impossible to carry out any definite system of instruction. The garrisons are so small that the services of all are in constant demand for stated duties, and for the suppression of difficulties which are of frequent occurrence, especially in the valley of the Colorado. There is at each post a small library and a supply of newspapers, and such as have leisure may avail themselves of

these; but the perpetual fatigue and exposure incident to the life of a soldier in such a country in no small degree unfit and incapacitate him for anything like a regular course of study.

UNIVERSITY OF CALIFORNIA.

At the close of the academic year the president of the university, Henry Durant, A. M., resigned that position, and Professor D. C. Gilman, of Yale College, was elected president, to date from September 1, 1872.

During the session of 1871–'72 the legislature passed an act appropriating $6,000 per month for the pay of professors and tutors, and $200,000 for the building-fund. The original endowments of the university were valued at $420,000—not including 150,000 acres of land, but a small part of which has been located. A contract has been let for $126,000 for the completion of the university building commenced at Berkeley in 1870. From December, 1869, to January, 1872, the receipts were $283,720.33, and the disbursements $270,304.58, leaving a balance on hand, at that time, of $13,415.75.

By an act of legislature five scholarships have been established, each of the value of $300 a year, for four years, to be competed for by candidates for the fourth class. They will be again open to competition in 1874, at the beginning of the university year.

PREPARATORY CLASSES.

In order to extend the benefits of the fifth class, or preparatory department, and provide feeders in all the most populous localities, the regents have empowered the faculty to grant licenses to such instructors as may be found qualified, authorizing them, without charge upon the funds of the university, to organize fifth classes in any of the counties of the State, to be conducted under such general rules and regulations as the faculty may prescribe, for the purpose of preparing students to enter the university. Five branches of the fifth class have already been established in different parts of the State, and the number will soon be largely increased. The conditions of admittance to the college of letters have been so modified as to permit pupils to enter without any knowledge of Greek.

MILITARY DISCIPLINE.

Measures have been taken to carry out the provisions of the act creating the university in respect to military instruction and discipline. Professor Walker and Professor Soulé, graduates of the West Point Academy, have organized a battalion of the university cadets. All able-bodied male students are required to attend the military exercises. The State asks this alone in return for the privileges afforded by the university—that the students shall qualify themselves to serve the State and the nation in the hour of their peril.

LECTURES.

Arrangements have been made for the delivery of special courses of lectures by resident and non-resident professors. These lectures will not be restricted to any classes, but the students will be expected to attend so far as may be prescribed by the faculty.

During the winter season a course of lectures is given in connection with the Mechanics' Institute of San Francisco, in behalf of the mechanic arts college of the university.

LITERARY AND ART DONATIONS.

During the past year large and valuable donations have been made to the library, which now numbers over 3,000 volumes, including choice sets of foreign and scientific works. Mr. Pioche, a resident of San Francisco, left, by will, to the university an extensive collection of paintings, sketches, engravings, and many rare objects of art, a library, and a mineralogical, geological, and conchological cabinet. The bequest also provided $5,000 to cover the first cost of arranging them. Hon. Edward Tompkins has also presented the university with a gift of land valued at $50,000, to found a professorship of Oriental languages and literature. In view of the growing business relations between California and Asia, he considers it of the utmost consequence that young men preparing for lives of business activity shall be instructed in the languages and literature of Eastern Asia. The professorship is to be known as the "Agassiz professorship of Oriental languages and literature," as a recognition of the debt of humanity to the great and good man who bears that name. Mr. Tompkins also desires that this department may be utilized for the education of such young men as may come for that purpose from Asia. He says: "As a Californian, I feel deeply the humiliation of seeing them pass by us in almost daily procession to the other side of the continent, in search of that intellectual hospitality that we are not yet enlightened enough to extend to them."

AGRICULTURAL COLLEGE.

The corner-stone of the agricultural-college building at Berkeley was laid with appropriate ceremonies October 9, 1871. The building committee was authorized to build

a greenhouse at an expense not to exceed $500, and employ a competent gardener at an expense not exceeding $100 per month.

The university, now in the fourth year of its existence, promises to fulfill the most ardent expectations of its friends and supporters. Its instruction is without charge; women share its advantages on equal terms with men; its facilities for thorough education are complete, and its faithful and competent faculty pledge their best energies to its successful working and development.

INAUGURATION OF PRESIDENT GILMAN.

Daniel C. Gilman, A. M., was inaugurated president of the University of California November 7, 1872. The exercises were held in the Congregational Church of Oakland, opening with prayer by Rev. George Mooar, D. D., followed by an address of welcome by Nathan Newmark, of the senior class; address on behalf of the academic senate of the university, by the retiring president, H. Durant, A. M.; address on part of the regents, with the delivery of the charter and keys of the university to the new president, by Hon. Edward Tompkins; President Gilman's inaugural address.

President Gilman was born in Norwich, Connecticut, 1831; graduated at Yale College 1852; studied a year at New Haven and Cambridge, then spent two or three years in Europe; was librarian of Yale College 1856–'65; professor in the Sheffield Scientific School 1863–'72. He was also several years superintendent of the city schools of New Haven, and afterward secretary of the Connecticut State Board of Education.

President Gilman took for the theme of his inaugural address "The building of the university."

After a brief review of the changes in regard to the purpose and scope of the university course, and of the rapid strides of scientific training as an integral part of university culture within the past quarter of a century, he asks the design and purpose of the State of California in establishing this State university:

WHAT IS TO BE BUILT?

"Two things are settled by the charter of this institution, and are embodied in the very name it bears:

"First. It is a 'university,' and not a high school, nor a college, nor an academy of sciences, nor an industrial school, which we are charged to build. Some of these features may, indeed, be included in or developed with the university; but the university means more than any or all of them. The university is the most comprehensive term which can be employed to indicate a foundation for the promotion and diffusion of knowledge—a group of agencies organized to advance the arts and sciences of every sort, and to train young men as scholars for all the intellectual callings of life. Universities differ widely in their internal structure. The older institutions are mostly complex, including a great variety of faculties, colleges, chairs, halls, scholarships, and collections, more or less closely bound together as one establishment, endowed with investments, privileges, and immunities, and regarded as indispensable both to the moral and material progress of the community, or, in other words, as essential both to church and state. In this country, the name is often misapplied to a simple college, probably with that faith which is 'the substance of things hoped for, and the evidence of things not seen.' We must beware lest we, too, have the name without the reality. Around the nucleus of the traditional college, which has been well maintained since the earliest days of this State, we must build the schools of advanced and liberal culture in all the great departments of learning, just as fast as may be possible, and we must at least begin to recognize the various sciences by chairs which may each be the nucleus of a school or department.

"Second. The charter and the name declare that this is the 'University of California.' It is not the University of Berlin nor of New Haven which we are to copy; it is not the University of Oakland nor of San Francisco which we are to create; but it is the University of this State. It must be adapted to this people, to their public and private schools, to their peculiar geographical position, to the requirements of their new society and their undeveloped resources. It is not the foundation of an ecclesiastical body nor of private individuals. It is 'of the people and for the people'—not in any low or unworthy sense, but in the highest and noblest relations to their intellectual and moral well-being.

"Bearing, then, in mind that this is to be a university, and that it is to be the University of California, our next inquiry is this, 'What have we to build upon?'

* * * * * * * *

"Among those things which are required to make a university, an ancient writer places first, 'a good and pleasant site, where there is a wholesome and temperate constitution of the air; composed with waters, springs or wells, woods and pleasant fields; which being obtained, those commodities are enough to invite students to stay and abide there.' All this, and much more, is included in your site. You have a good

system of popular instruction, of which the university is to be the crown; you dwell in a community largely composed of educated men, and are under a State government which, like a generous parent, has made to the university a generous commencement gift.

"Besides, we must not fail to note that a vast amount of scientific and literary work, of a very high order, has been performed in California—good, not only in itself, but as the seed-corn of future harvests. The work of the United States Coast Survey on the Pacific, for example, in its careful study of the hydrography, its accurate delineations of the harbors, its investigation of the tides and currents, its solution of astronomical and geodetic problems, has gained renown for California science, not in our own country only, but in Europe, and has helped prepare the way for a complete triangulation of the national territory. Kindred services have been rendered by the engineers of the Army. There is the geological survey of the State, which surpasses in thoroughness and completeness any like undertaking in the country, and is the delight and pride of all men of science who take an interest in the accurate and careful investigation of the natural characteristics of the land, either for its own sake, or regarded as a basis for social and political growth. Growing out of this work, though beyond the limits of the State, and under the national authority, are the surveys of the fortieth parallel, by a party of civilians attached to the corps of Army engineers. Binding all the men of science together, as a brotherhood of scholars, is the Academy of Sciences, whose publications and collections are already of great value. A young society which has done so well will be an important supporter of the young university.

WHO ARE TO BE THE BUILDERS?

"Can we now, like master-workmen, distribute the parts of the building among all the orders of the craft, so that the various toilers will recognize their tasks? Let us, at any rate, make the attempt.

"It is on the faculty more than on any other body that the building of a university depends. They give their lives to the work. It is not the site, nor the apparatus, nor the halls, nor the library, nor the board of regents, which draws the scholars—it is a body of living teachers, skilled in their specialties, eminent in their calling, loving to teach. Such a body of teachers will make a university anywhere. Agassiz, wherever he goes, is surrounded by a company of disciples; Whitney would have his class in language at Berlin or Benares. Such men will draw not pupils only, but the books and the collections they require, as naturally as of old Orpheus drew the rocks and beasts. The *genius loci*, the spirit of the place, will be the spirit of the faculty. If truth and culture are their aim, truth and culture will flourish in the college where they toil. If sordid motives or unworthy jealousies spring up among them, the trust they bear will be in peril. A university requires more than anything else a large and vigorous staff, so that the various sciences and languages may have their devotees, young men of different tastes and characters may find fit guides, and the idiosyncrasies of one school or chair may be modified and counterbalanced by the qualities of another. It is now difficult, both in Europe and this country, to secure enough teachers of eminence, for other callings are better paid and are held in equal honor; let, then, no opportunity be lost to enlist strong men of attainment or of promise.

"The regents or trustees of a college have the great responsibility of appointing the body of teachers and of providing the funds. They are the power behind the throne, unseen in the daily work of the college, but never for a moment unfelt. Upon their wise choice of instructors, their careful guardianship of moneys, their construction of buildings, their development of new departments and schools, their mode of presenting the university to the public, will depend the confidence and liberality of the community. On them the shafts of criticism may be often inconsiderately hurled, but in the long run they will add the gratitude of the State to their own consciousness of fidelity and self-sacrifice in behalf of learning and the country.

"The State authorities, executive and legislative, have also a great part to perform in the support of this university, not by overmuch legislation, nor by hasty action in respect to its development, but by steady, munificent, and confiding support. 'Quick to help and slow to interfere,' should be their watchword. * * *

METHODS OF INSTRUCTION.

"The recognition of Divinity, humanities, and science—God, man, and nature—gives great comprehensiveness to a modern university; indeed, there is nothing left which could be included. But practical difficulties are not avoided by such general statements. Regarding each individual scholar, regarding each programme of studies, the perplexity arises, not what branches *may* be, but what branches *must* be included in a certain course. The perplexity will never be avoided, but the practical question will always be put in some such forms as these: What is the relative importance of different branches, and what studies most deserve encouragement? Shall literature and

language, the traditional classical course of our colleges, be made first in rank? or shall the place it has held be given up to science in its theoretical and practical aspects? Are the modern languages to be chosen rather than the ancient? Shall history and political science, with the study of the Roman law and the theory of the states, be preferred? or shall mathematics be the dominant theme? Is the acquisition of knowledge, or the acquisition of discipline, as it is called, the end of instruction? Shall general studies which may be presumed to have an equal value in all the varied callings of life, or special studies which have decided reference to a professional or technical career, be commended to the youthful student? Shall lectures, or shall recitations, or shall literary and scientific research, be the method of education? Shall universal freedom of choice and of work be permitted, or shall collegiate restrictions and control be insisted on? These and a score of kindred questions are now under discussion in the various colleges of this country, and will long require our most serious attention.

"A part of the difficulty disappears when we distinguish the requirements of young scholars, like those who have just left the high school and the academy, from those of advanced students, whose tastes, talents, and wants are specialized. Give the former prescription, give the latter freedom; but let prescription vary with the varying peculiarities of individuals, and let the freedom allowed be the freedom which is governed and protected by law. College work for college boys implies daily guidance under prescribed rules; professional work implies voluntary, self-impelled enthusiasm in the acquisition of knowledge.

"Another difficulty arises from the vast expansion of science, so vast that it is impossible for any one, were he gifted as Leibnitz or long-lived as Humboldt, to master the details of modern researches.

THE PLACE OF THE NATURAL SCIENCES IN THE UNIVERSITY.

"I take it for granted that in the State of California there is no occasion to make a plea for the study of modern sciences. The need of civil, mining, and mechanical engineers, of expert geologists and mineralogists, of devoted naturalists and physicists, of chemists and metallurgists, of geologists, topographers, and map-makers, of agriculturists, mechanics, manufacturers, and merchants, well trained for their various callings, is now so obvious that I need not advocate the importance of science in education. Its place is acknowledged. The question is, how to secure the best sort of instruction, the fittest sequence and relation of studies, the most eminent teachers, the most complete laboratories, and the best apparatus; and, likewise, how to encourage that special proficiency which is indispensable to success in modern scientific professions with that literary culture which makes a scholar and befits a gentleman. Health, wealth, popular intelligence, and the spread of Christian civilization are so dependent upon the discoveries of science, and the applications of these discoveries to a thousand useful arts, that a young and still undeveloped State may well afford to be liberal in the encouragement of this class of studies. * * * * *

"At an early day I hope to have an opportunity of discussing more fully the recent progress of scientific and technical instruction with reference to the wants of this State. We shall find it worth while to note the experience of the Lawrence and Sheffield Scientific Schools, of the Rensselaer Institute, and the Massachusetts Institute of Technology, of West Point and Annapolis, and of the various colleges of agriculture and the mechanic arts which the congressional grant has created. We may learn, in some respects, even more from the experience of France, Switzerland, and Germany. * *

THE PLACE OF HISTORY AND SOCIAL SCIENCE.

"But while nature and its laws, in all their various aspects and applications, are thus engrossing, Man and all his experience and achievements are likewise of transcendent importance. Above all matter is man; above both matter and man is the 'Divinity that shapes our ends, rough hew them as we will.' So that the individual or the institution that regards only the natural forces of this globe, without observing likewise the intellectual and spiritual forces which are also at work, sees only half the world.

"Give us more and not less science; encourage the most thorough and prolonged search for the truth which is to be found in the rocks, the sea, the soil, the air, the sun, and the stars; in light and heat, and magnetic forces; in plants and animals, and in the human frame; but let us also learn the lessons which are embodied in language and literature, in laws and institutions, in doctrines and opinions, in historical progress and international relations. Let language, history, and literature, oratory, poetry, and art, still form a chief part of liberal culture, while mathematical, physical, and natural sciences are admitted to the rank from which they have long been excluded.

* * * * * * *

"But California is not only the central of a group of young States; it is the State through which distant nations are becoming acquainted with American institutions.

Its influence in the organization and regeneration of lands beyond the sea is unquestionably but just begun.

"Therefore, I say that the study of history—not as dry annals, but as the record of living forces and human experience—the study of political economy, of social science, of civil liberty, and of public law, should be made attractive by the voices of original and profound teachers, who know how to gather up the wisdom of the old and apply it to the requirements of the new generations.

THE PLACE OF LANGUAGE.

"In the study of humanity and history, language is the master-key which unlocks all doors. Time is wasted in questioning whether ancient or modern languages are most important. In the university, both groups must be taught; the more any individual has, the richer will be his life. Certainly, the study of English, which every one of us employs as the instrument by which we think, and by which we communicate our thoughts to others, should be carefully promoted. In these days, when so much that is new and important first appears in German and French, no system of education can be called liberal, as it has well been said, which does not include those tongues. Greek and Latin are not only of value for the literature and history they embody, but for their important relations to more modern tongues. On this coast, there are special linguistic requirements. Spanish certainly should be taught in the university. It is a praiseworthy forethought on the part of one of the regents which has led him to provide among us for the study of Chinese and Japanese. His presence here can not restrain me from now rendering a public tribute of gratitude for this wise and timely munificence. Let us hope that his generous purposes will, ere long, be realized. To complete the instructions in Oriental tongues, at least two other chairs will be needed—one to be for Hebrew and the Semitic languages, which, perhaps, some other citizen will be glad to establish; and one for Sanskrit and the comparative philology of Indo-European tongues, the group to which the chief languages of Europe belong. The world of letters would also rejoice, if, ere the last of the Indian races disappears before the progress of civilization, encouragement could here be given to some scholar to gather up and perpetuate the knowledge of their speech. In all our linguistic study we need to get beyond and above mere grammatical drill, and to think of speech as one of the chief endowments of human nature, and 'of every language as a concrete result of the working-out of that capacity, an institution of gradual historic growth, a part of the culture of the race to which it belongs, and handed down by tradition from teacher to learner, like every other part of culture; and hence, that the study of language is a historical science, to be pursued by historical methods.'

"In the teaching of both history and language, as well as of science, the university may well be guided by 'the comparative method,' which has yielded already such good results. It is thus characterized by an able historian: 'The comparative method in philology and mythology—let me add, in politics and history, and the whole range of human thought—marks a stage in the progress of the human mind at least as great and memorable as the revival of Greek and Latin learning. It has put the language and the history of the so-called "classical" world into their true position in the general history of the world. By making them no longer the objects of an exclusive idolatry, it has made them the objects of a worthier because a more reasonable worship. It has broken down the middle wall of partition between kindred races and kindred studies; it has swept away barriers which fenced off certain times and languages as "dead" and "ancient;" it has taught us that there is no such thing as "dead" and "living" languages, or "ancient" and "modern" history; it has taught us that the study of language is one study, that the study of history is one study. As man is the same in all ages, the history of man is one in all ages.'

THE PLACE OF RELIGION IN THE UNIVERSITY.

"The State, as a body-politic, protects the assemblies and the worship of all religious bodies; it favors none. How shall it be with the university and the public school, which perform the service of the State in the education of the young? Shall religious teaching be excluded from the university, or shall it have a covert and an apologetic place; shall it be an organized force, or a silent and all-pervading influence? Shall its spirit be narrow and sectarian, or shall it be catholic and free? The difficulty is not felt in California alone. It is involved in the toleration of the modern Christian state toward all forms of religious belief, and in its generous provisions for the promotion of education.

"In meeting the difficulty it may be well to bear in mind that religion includes four different elements—worship, doctrines, precepts, and spirit. A religious spirit no one objects to; it is the spirit which looks 'outward and not inward, upward and not downward, forward and not backward, and which lends a hand;' it is the spirit which 'loves justice, shows mercy, and walks humbly before the Lord;' it is the spirit of

truth, of faith, of hope, and of charity; it is the spirit of 'peace on earth, good will to men.' We may say, as we say of science, the more we have of the genuine the better for mankind. Whatever precepts will tend to cherish this inward spirit and the outward uprightness and unselfishness which proceed from it, all good men will indorse. When we begin to formulate doctrines into creeds and symbols, then come controversy and difference; the right wing against the left wing, the conservative against the liberal, so that an attempt to enforce the doctrines of this or that ecclesiastical body will be sure to come grief. The university is no place for sectarian controversy or denominational zeal. It is a school of learning. But as a school of learning it must teach the history of opinion and belief, it must teach the rise and growth and decay of institutions, it must show how Christian civilization has overcome pagan practices and belief, and has purified the home, the State, and the relations of nations, modifying laws, usages, manners, and language, establishing charities, reforming prisons, securing honesty, virtue, and justice. All this should be taught by scholars, and not by partisans. If the body of teachers and students, imbued by this spirit of truth and charity, will daily assemble of their own accord to acknowledge their dependence upon divine wisdom, to chant the Psalms of David, and to join in the prayer which the Master taught his disciples, who can doubt that such communion of worship will elevate the character of all who engage in it, and of the institution to which they belong? So far as this I would have our university go, forcing none to attend upon such religious worship, drawing all to it by their own consciousness of its value.

"But many would go further than this. Many parents, many religious teachers, many churches, desire and insist that youth at the critical period of college life shall be surrounded by positive, outspoken, and persuasive religious influences. They are afraid of a State university, and long for an ecclesiastical college. Hence come the many attempts to promote the higher education, when one united effort would hardly be adequate. But it seems to me that the end in view might be secured by better methods. Why may not any religious body or association, or private individual, desirous of protecting the young men from temptation, and encouraging them in the higher life, establish, in connection with the university, a home, or hall, or college, which should be controlled according to the founder's views, which should be a privileged residence, should be endowed perhaps with prizes and purses? I can imagine on the slopes at Berkeley a group of students' houses, bearing honorable names, and made attractive by the convenience of their arrangements, the good-fellowship within their walls, the privileges of the foundation. I should hope they would not be barracks, or dormitories; but homes, with rooms of common assembly and private study. I should hope the bath-room and the dining-hall would be included in the structure; and if any would go so far as to have a place for light amusement and recreation, I for one should not object. Within such college halls the love of learning would reign, bad morals and ill-manners would be excluded, and priceless associations would be cherished like those of Harvard and Yale, Cambridge and Oxford. Here, under right guidance, the best of moral and religious influences might be promoted. What church, what association, or what generous individual will be the first to establish such a hall?

"In these convictions, which are the result of anxious thought and familiar conference with many of the most liberal and the most conservative leaders of education and opinion, I am strengthened by the utterances of the president of Princeton College, (the Rev. Dr. McCosh,) who has studied, in Great Britain and Ireland, a kindred difficulty. He suggests in his inaugural the question, 'How is religion to be grafted on State colleges, open to all, whatever their religious profession?' and he answers it by the clear declaration, confirmed by examples: 'Let the State provide the secular instruction, and the churches provide the religious training in the homes in which the students reside.'

THE REAL VALUE OF THE UNIVERSITY.

"The State, before renewing its endowments, the national Government, before repeating its grant, the men of wealth, before founding new professorships, and the fathers, before sending us their boys, will often ask, 'What for?' Let us have our answer ready. Let us trace the influences which have proceeded from Athens, where Socrates and Plato taught—teachers whose words still nurture our statesmen and theologians; from Bologna and Paris, where students dwelt by thousands; from Oxford and Cambridge, where so many of the foremost leaders of Anglican literature, politics, and science were fitted for their career; from the seats of learning in Germany, now surpassing in number of teachers and students the universities of every other state; from the colleges of New England and the Atlantic sea-board; let us study such examples, and say with courage and hope that the University of California shall be a place where all the experience of past generations, so far as it is of record, and all that is known of the laws of nature, shall be at command for the benefit of this generation and those who come after us; that here shall be heard the voice of the wisest thinkers, and here

shall be seen the examples of the most diligent students in every department of science. Let us say that here high-minded youth, while they train their powers as in a gymnasium, may also fit themselves with armor for the battle of life, and may study examples of noble activity. Let us see to it that here are brought together the books of every nation, and those who can read them; the collections from all the kingdoms of nature, and those who can interpret them; the instruments of research and analysis, and those who can employ them; and let us be sure that the larger the capital we thus invest, the greater will be the dividend.

"What is the university for? It is to fit young men for high and noble careers, satisfactory to themselves and useful to mankind; it is to bring before the society of to-day the failures and the successes of societies in the past; it is to discover and make known how the forces of nature may be subservient to mankind; it is to hand down to the generations which come after us the torch of experience by which we have been enlightened.

"It is wisdom that the university promotes; wisdom for individuals and nations, for this life and the future; a power to distinguish the useless, the false, and the fragile, from the good, the true, and the lasting. There was a wise man of olden time who figured its value as well as any of the writers of to-day, when he said: 'Happy is the man that findeth wisdom, and the man that getteth understanding, for the merchandise of it is better than the merchandise of silver, and the gain thereof than fine gold;' and his estimate of post-graduate instruction deserves our assent: 'Give instruction to a wise man and he will get wiser; teach a just man and he will increase in learning.'"

STATE NORMAL SCHOOL.

A magnificent square of nearly 20 acres, in the heart of the city of San José, was donated to the State as a site for the normal school. The building, when completed, will compare favorably with the best school edifices of other States. The arrangements for heating and ventilation are nearly perfect. The number of graduates for the past year was 21; whole number of graduates since organization, 253.

The legislature has appropriated $3,000 for the purchase of additional apparatus, and $1,000 for the purchase of reference-books, maps, and diagrams. Tuition is free, but pupils furnish their own text-books. Books for reference are supplied by the school.

PRIVATE EDUCATIONAL INSTITUTIONS.

The total number of colleges and private schools in San Francisco is 71, of which 15 are under the control of the Catholic denomination. Total number of children between the ages of 6 and 15 who have attended private schools during the year, 4,824; number under 6 who have attended in infant schools, 950; number attending higher private schools and colleges, 1,100.

It must, however, be noted that many of the institutions classed under the head of colleges are but preparatory schools, but they do a good work in fitting pupils for the university, or other high institutions of learning.

CALIFORNIA MILITARY ACADEMY.

This was the first military institution on the Pacific coast. The course of study embraces the English branches, the classics, the modern languages, and a commercial course. The military system has been adopted as the best means of securing physical culture and mental discipline, and it is obligatory upon every student to attend the daily drill and perform the duties of a cadet.

MILLS SEMINARY.

The associate principal of this seminary is Mrs. S. L. Mills. This was the first young ladies' seminary in California. The past year has been one of unexampled prosperity. An art room is being added to the building, and a chapel, a short distance from the school, will soon be completed.

UNIVERSITY COLLEGE.

This college, in its plan and government and relation to the Presbyterian Church, closely resembles Princeton College, New Jersey. Candidates for the ministry receive instruction in the academic department without charge, and have free access to the medical lectures. Those who have the foreign missionary work in view, whether as preachers or physicians, are received into the medical department without tuition fees. The institution during the past year has been in a very flourishing condition.

PACIFIC METHODIST COLLEGE.

Since the last report this institution has been removed from Vacaville to its present location, Santa Rosa, Sonoma County. It is under the guardianship of the Pacific annual conference of the Methodist Episcopal Church South. The college is open to both sexes, and about an equal number of each attend. A thorough preparatory training is a feature of this institution; students leaving it are ready to enter the State university or eastern colleges.

UNIVERSITY OF THE PACIFIC.

The number of graduates from this university during the past year was 4. During the year the university has occupied its new and commodious building on the university grounds. The two schools known as the college and the female institute have been consolidated, and equal advantages are now offered to males and females. Rates of tuition have been considerably reduced. Ladies are accommodated with homes in the family of the president.

WASHINGTON COLLEGE.

This college was opened July, 1872. The building is large and capable of accommodating 100 pupils. The college is open to both sexes. The course of study is so arranged as to accord in its main features with that of the State university.

CALIFORNIA COLLEGE.

This college was incorporated in 1871. The value of the buildings and grounds is $25,000. Students preparing for the ministry are received free of charge. The college is open to both sexes. A theological department is to be connected with this institution.

SAINT JOSEPH'S ACADEMY.

This institution, conducted by the Christian Brothers, is a prosperous and well-managed school for boys.

HESPERIAN COLLEGE.

This college was incorporated in 1869. The average attendance is 193. Cost of college building, $20,000. This is a female college, under the control of the Christians or Disciples, but conducted on the broadest principles of religious toleration.

SACRAMENTO SEMINARY.

The average attendance at this seminary is 125. The seminary embraces three departments—juvenile, academic, and collegiate.

OAKLAND SEMINARY.

In addition to the regular course of study at this seminary, there will be one adapted to that of the State university. The plan for this course has been prepared by the president of the university. With the consent of the faculty and regents, the young ladies are privileged to attend the regular course of lectures in all the natural sciences.

NAPA LADIES' SEMINARY.

The entire history of this institution has been one of progress. A new and commodious edifice is in process of erection. Public examinations are held semi-annually.

SAINT MARY'S COLLEGE.

This college is under the care of the Christian Brothers. Besides the preparatory classes, there are three departments—classical, scientific, and commercial—fully organized and in excellent working order.

COLLEGE OF SAINT AUGUSTINE.

This college has just closed its fourth year under encouraging auspices.

SANTA CLARA COLLEGE.

This college is under the management of the Fathers of the Society of Jesus. It is reported in a very flourishing condition. The course of study in both the classical and commercial departments is complete. Instruction is given in chemical analysis and assaying; also in telegraphy and phonography.

SAINT VINCENT'S COLLEGE.

Incorporated, 1869. Average attendance, 50. In fair working order.

SAINT CATHARINE'S ACADEMY.

This institution, conducted by the Sisters of Saint Dominic is one of the most successful educational enterprises in the State.

SACRED HEART PRESENTATION CONVENT.

The building will accommodate 900 pupils. The free school connected with this convent was organized in 1869. These schools are exclusively for girls. No charge is made except for music. The schools rely entirely on voluntary offerings for their support.

SAINT IGNATIUS COLLEGE.

The scientific department of this college is furnished with a very extensive and choice collection of apparatus, manufactured to order in Paris. It has also a museum of mineralogy and natural philosophy.

SAINT MARY OF THE PACIFIC.

This is a boarding-school for young ladies. It is designed that it shall ultimately be cared for by a board of trustees, having for its president the bishop of the diocese. It occupies a whole block of land in the central portion of the village, and the grounds are in a high state of cultivation.

SAN FRANCISCO THEOLOGICAL SEMINARY.

This seminary is under the management of a board of directors elected by the synod of the Pacific, and under the care of the general assembly of the Presbyterian Church. Rev. W. A. Scott, D. D., LL. D., is president of the board of directors, and professor of mental and moral science and theology. The prospects of the seminary are in every way encouraging.

PACIFIC THEOLOGICAL SEMINARY.

The seminary is under the care of the Congregational Church. Its property is valued at $50,000. It has two endowed professorships, and a commodious building with eight acres of ground, for which it is still in debt $25,000. Tuition is free. The American Education Society will render aid to needy pupils who take the full course. The amount bestowed will be $80 or $100 a year, in currency.

The Golden Gate Academy is a school for boys, located at the seminary. Young men desiring to prepare themselves for the ministry, but not able to take a full college course, can receive special preparation for the seminary in this school.

MEDICAL COLLEGES.

There are two medical colleges in San Francisco, the Toland Medical College and the Medical College of the Pacific. The latter was, until 1872, the medical department of the University of the Pacific. It is now the medical department of University College. Both institutions have a very able corps of professors. The attendance is not large, yet both are continued with good assurance of success.

CHARITABLE INSTITUTIONS.

The oldest institution of this kind in the State is the Protestant Orphan Asylum of San Francisco. During the year it has given a home to 256 children. Of this number 54 have been removed by their friends, 32 have been placed in families, 11 have been adopted, leaving the present number of inmates 159. Of this number 138 attend school. The common English branches are taught, and no child is allowed to leave the asylum until capable of reading, and writing a legible hand, unless removed by friends or adopted.

PACIFIC HEBREW ORPHAN ASYLUM AND HOME.

This institution was organized in 1871, for the protection of orphan children and for the care of aged Israelites without adequate means of support. During the past year 24 orphan children have been under its care. An active movement is on foot for the erection of a fine building for the use of the society.

LADIES' PROTECTIVE AND RELIEF SOCIETY.

At the close of last year 175 children remained in this home at San Francisco. During the year 128 have been received and 143 dismissed. There are now remaining 160.

The children receive a good common-school education, and are taught to work. At the recent nineteenth annual meeting of the society an examination of the children showed the thoroughness of the instruction given. The secretary, in a late report, suggests the ingrafting upon the public schools some features of the polytechnic system, so that apprenticeship shall be recognized as part of the system of public instruction; so far, at least, as to teach boys the rudiments of a trade and the use of tools, that they may be prepared to enter the workshop on small wages, by an arrangement mutually profitable to master and apprentice.

ROMAN CATHOLIC ORPHAN ASYLUM.

Location, San Francisco. Organized, 1851. Under the care of the Sisters of Charity. Value of property, $45,000. Number of inmates, 320. A building, erected in 1859, accommodates 550 day scholars. A farm at Hunter's Point, for the accommodation of very young children, is a branch department of the asylum.

SAN FRANCISCO INDUSTRIAL SCHOOL.

An earnest effort is being made to secure State aid to pay off a debt of $38,000 which hangs over this institution. The appropriation called for is $100,000. The State superintendent, in his last biennial report, says: "Very properly, the State makes liberal provision for the wants of those who inherit physical disabilities—the deaf, dumb, and blind. Is not a still stronger claim presented by those doubly unfortunate children who inherit moral disabilities and conditions?" The secretary of the prison commission, in his last annual report, speaks very highly of the improvement in the school during the last two years. A new branch of industry has recently been introduced—that of trunk and valise making. About 15 boys are employed in this. Whole number of inmates, 243. With the present superintendent, Mr. Pelton, the jail idea is subordinate to the home and school idea, and the institution has more of an industrial than of a penal character.

INSTITUTION FOR THE DEAF, DUMB, AND BLIND.

This institution was organized in 1860, by an association of ladies, and opened with four pupils. It received State aid in 1865, and is now entirely under State auspices. The cost of building and grounds is about $180,000. The institution will accommodate about 150 persons. The benefits of the institution are free to all resident deaf, dumb, or blind persons of sound mind between the ages of 6 and 25. The exercises of these pupils before the State Teachers' Institute on several occasions were fully equal to those of the best grammar and high schools.

CALIFORNIA PRISON COMMISSION.

From the annual report of the secretary, Rev. James Woodworth, we gather the following information concerning educational efforts in the State prison. Divine service is held in the chapel every Sabbath morning, about 200 attending, of their own free choice. After the service about 200 of the prisoners remain for school. They are instructed by the more intelligent of the convicts in reading, writing, and arithmetic. Some also study the higher branches, and a few attempt mathematics and languages, ancient and modern. The school exercises are occasionally followed by compositions and essays written by the pupils. The library contains over 3,000 volumes. About 1,600 are loaned every month, the more solid works being generally preferred. Of the 400 who have attended the school since its organization, a year and a half ago, 180 have learned to read and write. A significant fact in this connection is that, though many of those who have attended the school have been discharged, only two or three have been returned as prisoners. The secretary suggests that the board of managers be, in part, composed of women.

MECHANICS' INSTITUTE.

Organized March 29, 1855. The objects of this institute are the establishment of a library and reading-room, the collection of a cabinet, scientific apparatus, and works of art, and other literary and scientific purposes. The library contains 19,000 volumes, including many rare scientific works. Within the past fourteen years this institute has presented to the State seven exhibitions, all of which were attended with the most complete success. The property of the institute is estimated at $150,000.

PUBLIC LIBRARIES.

The statistics of the public libraries of the State will be found in the appropriate table at the end of this volume. Several of the hotels of San Francisco are provided with large and interesting collections of books for the use of the guests. One of these libraries contains 7,000 volumes.

SAN FRANCISCO.

ESTIMATED EXPENDITURES AND BUILDING-FUND.

The estimated cost of school-buildings to accommodate the children now seeking admission to the schools is $357,000, for which purpose there will remain a balance of $180,721.82. Superintendent Widber remarks: "The board of education has, therefore, at its disposal only about one-half of the funds required for the erection of school-buildings. But if for a few years in continuance it can have a like amount for a building fund, a sufficient number of school-houses can be erected to at least save the department from paying rent for rooms and buildings, and provide all children attending the schools with capacious and well-ventilated class-rooms. The legislature has relieved the school fund of the amount annually transferred to the sinking and interest fund of school bonds, now amounting to about $80,000, by providing that such transfers shall be made from the general fund of the city and county, instead of from the school fund. It has been owing almost entirely to this heavy draft upon the school fund that a deficit has occurred each year, and the legislature has performed a very essential act."

CONSOLIDATION OF PRIMARY SCHOOLS.

Until recently the primary system included six grades, each occupying six months, while the grammar course consisted of four grades, each requiring a year. The highest primary grade, therefore, graduated pupils into the lowest grammar grade twice as often as the latter was ready to receive them. By reducing the number of primary grades, and extending the time of each through one year, the examinations and promotions are made coincident with those of the grammar grade.

COURSE OF STUDY.

Upon the recommendation of principals of the primary schools, French's First Lessons in Numbers, as a text-book in mental arithmetic, was added to the primary course. The principals also indorsed the recommendations of the deputy superintendent to teach decimals in connection with whole numbers in the lowest grade.

In the grammar grades some of the less essential studies have been dropped, and a material reduction made of the amount required in those retained. The new course cumbers pupils with fewer tasks, but secures far greater thoroughness and a higher quality of education.

CONDITION OF SCHOOLS.

Deputy Superintendent Swett, in his last annual report, says: "The educational condition of the schools will best be shown by the results of the thorough and critical examinations at the end of the school year. The expectation that the cutting down of the course of study to something like sensible limits would be productive of good results has been fully realized. The class of 254 graduates from the grammar schools is the largest and, without doubt, the best fitted class ever sent up to the high schools. In most of the lower grades at least four-fifths of the pupils were regularly promoted. But the new course of study, though an improvement, still has some serious defects. In fact, so long as teachers depend mainly on text-books, and so long as some of the inferior school books forced on the city by the State board are continued in use, it is utterly impossible to adopt a practical and rational course of instruction. It is to be hoped, now that the State uniformity law is repealed, that during the next two years some gradual changes may be effected, and that the course of study may be revised and improved."

The examinations in French and German were satisfactory; but Mr. Swett remarks: "It is evidently too heavy a burden for a pupil to learn two languages and carry the English course at the same time."

TEXT-BOOKS.

The law compelling cities to adopt the State series of text-books has been repealed. The deputy superintendent, while favoring the repeal, advocates local uniformity as indispensable.

EXAMINATIONS OF TEACHERS.

The quarterly competitive examinations of teachers have proved conclusively the utter incompetence of some candidates claiming, and supposed to be thoroughly qualified, and the imperative need of thorough examinations by competent and impartial persons.

In an address delivered before the National Education Association, held in Boston in August of the present year, Deputy Superintendent Swett said that he considered the

present system of examining teachers, in most cases, a mere farce. "Of the 300,000 school-teachers in this country only one-tenth are professional; a fact which will remain unchanged so long as communities fail to retain their teachers longer than a single year and refuse to give them proper remuneration."

NEED OF EDUCATIONAL REFORM.

Mr. Swett deprecated the election of school boards by political parties and the frequent changes caused thereby among school officers and teachers. "Gradually, but surely, the schools are coming to be considered as legitimate party spoils of the victors." * * "There has been a great deal of talk about reform in civil-service appointments, but the country stands in greater need of reform in the manner of making educational appointments." * * "There are only a few States that have any system of professional examinations by means of which a public-school teacher can secure a professional life-diploma, and thereafter be exempted from the humiliation of periodic examinations by petty school officials. And even if a life-certificate can be secured, as in a few States, such as Illinois, Ohio, Iowa, or California, it is of no legal value outside of the State in which it is granted. California is the only State that recognizes by law the State diplomas and certificates of other States, by placing them on an equal footing with her own. No State, except California, recognizes by law the normal-school diplomas of other States; in fact, many of the States fail to recognize by law the diplomas given to graduates of their own normal schools."

LIFE-DIPLOMAS.

"There ought to be, in every State, a State board of examination, made up exclusively of professional teachers, including the State superintendent of public instruction, having power to issue life-diplomas to experienced teachers of the highest rank, and certificates of lower grades to younger teachers; these diplomas and certificates to be issued only upon actual examination in writing, and the record of examination to be indorsed upon the certificates. There ought, then, to be a system of broad and liberal legislation, in all the States, by means of which a professional teacher, holding a diploma or certificate in one State, should be guaranteed a legal recognition in all the other States. In addition to a State system of examinations, an efficient system of city, county, or township examinations is indispensable. The examining boards should be made up of each city, county, or township superintendent, together with from three to five professional teachers, themselves holders of high certificates. They should have power to issue, on actual written examinations, certificates of different grades, valid for periods of time ranging from two to ten years. These boards should be paid for their work; otherwise it will not be well done; and they should be composed exclusively of practical teachers, for the same reason that only lawyers can legally examine legal students, only physicians examine medical students, and only clergymen decide the fitness of theological students to enter the ministry. Until there is a reform in this defective point of our school system, there can be no marked and permanent improvement in the public schools as a whole. That so little has been done in this direction, can only be accounted for from the fact that nine-tenths of the men and women engaged in 'keeping school' are intending to get out of the business as soon as they can, otherwise they would never submit to the humiliations imposed upon them."

Mr. Swett concludes his remarks by presenting a series of propositions relating to the examination and appointment of teachers, for the consideration of teachers, educators, and legislators.

He was made chairman of a committee appointed to consider the matter of teachers' examinations, and report at the next annual meeting of the association.

EVENING NORMAL SCHOOL FOR TEACHERS.

This school, which was discontinued for two years, has been recently revived. It meets one evening each school-week, continues two hours, is conducted by competent teachers, under the direction of the deputy superintendent as principal, is numerously attended, and promises well.

INCREASED PAY OF TEACHERS.

The pay of grammar assistants has been raised from $810 to $840 a year, gold coin; and the salaries of female head assistants in grammar schools have been raised from $1,000 to $1,200 a year; and their title changed to vice-principal.

EVENING-SCHOOLS.

The board has recently adopted these schools as a permanent feature of the public-school system. They are free to all persons over ten years of age, and are continued

the same number of months as the day-schools, with the same vacations. Pupils attending day-school are not admitted except for instruction in drawing. The classes in architectural and mechanical drawing have been very successful. The schools are graded.

COSMOPOLITAN SCHOOLS.

In these schools—in which the French and German languages are taught in addition to the regular English course—there are 5,396 pupils. In the primary department the pupils are required to study one language from one to one and one-half hours per day. In the grammar department both languages are pursued, and the time given is two hours per day. The demand for instruction in these languages, particularly German, was so great, that when special teachers were appointed in two schools, more than four-fifths of the pupils immediately began the study of one or both languages.

DRAWING.

When the study of drawing was introduced into the public schools, instruction was limited to the first and second grades. In the primary schools, though there was a little drawing on slates for amusement, there was no systematic training. A skillful teacher has now been assigned to teach drawing in the primary schools. All grades below the fifth are to use Bartholomew's cards. Drawing is now regularly taught by specially qualified teachers in all the grades.

CO-EDUCATION OF THE SEXES.

Of the thirteen grammar schools of San Francisco, three are for girls alone, three for boys alone, and seven mixed. The preference of parents can thus be gratified in the selection of a school. Public opinion obviously favors the natural order. Deputy Superintendent Swett, in his last annual report, makes copious extracts from prominent educators, all favoring the co-education of the sexes, on the ground that economy is thus secured, discipline and instruction are improved, and individual development is far more sound and healthy.

OAKLAND.

GROWTH OF PUBLIC SCHOOLS.

The first public school in this city was organized in July, 1853, with 16 pupils. The first grammar school was organized in November, 1867. In twenty years the department has increased from one building, with 16 pupils, to buildings containing 36 rooms and 1,500 pupils. Two additional buildings are to be erected. The board of education estimates the expenses for the fiscal-year of 1872–'73 at $50,000, exclusive of building fund. The course of study is the same as in the San Francisco schools. Vocal music and drawing are taught in all the classes. Annual cost per pupil for tuition, $23.23.

SAN JOSÉ.

PUBLIC SCHOOLS.

In San José, the course of study requires eight years below the high school. The high-school course occupies two years. The course of study is so arranged as to compel semi-annual examinations and promotions. The city superintendent recommends the erection of a spacious building, to be devoted to a high and cosmopolitan school, in which there shall be a practical business and commercial department, where telegraphy and phonography shall be taught; also the principal modern languages, and where a sufficient knowledge of Latin and Greek can be acquired to enter the college of letters in the State university. He recommends the support of the public schools, on the ground of economy. "It costs, on an average, $1,200 to convict and punish each criminal, while the schools can be maintained at a cost of not more than $200 for each child. School-houses are cheaper than jails or penitentiaries." Value of school property, $86,450; cost of tuition per pupil, $21.80.

DEATH OF HON. EDWARD TOMPKINS.

Hon. Edward Tompkins, of Oakland, California, who gave $50,000 for the endowment of the professorship of Oriental languages and literature in the University of California, died at his residence on the 19th of November, 1872. He was a lawyer by profession, and a scholar, and had been for some time a member of the State senate, and was always a devoted friend of learning.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 California was the twenty-fourth State in population, having 560,247 inhabitants within an area of 188,981 square miles; an average of 2.29 persons to the square mile. This population consisted of 449,424 whites, 4,272 colored, 7,241 Indians, and 49,310 Chinese. Of these numbers 350,416 were natives of the United States, and 209,831 were foreign-born. Of the native residents of the State, 162,093 whites, 1,074 colored, 6,251 Indians, and 486 Chinese were born within its borders, while of the foreign residents 29,701 were born in Germany, 54,421 in Ireland, and 17,699 in England.

School attendance.—According to Table IX, vol. 1, Census Report, 91,176 persons attended school, and of these 3,578 were foreign-born. The white male scholars numbered 46,539, and the white female scholars 44,091, (an aggregate of 90,630 white scholars.) The colored male scholars numbered 203, and the colored female scholars 170, (an aggregate colored attendance of 373;) 25 Indian males, and 32 females, (an aggregate of 57,) attended school; also 114 male and 2 female Chinese, (an aggregate of 116.)

Illiterates.—The number of inhabitants of all races, 10 years old and over, unable to write was 31,716, including 2,853 Chinese and 1,789 Indians. Of these 22,196 were foreign-born.

Age, sex, and race of illiterates.—Of 1,941 white illiterates from 10 to 15 years of age, 1,092 were males and 849 were females; there were 2,018 white illiterates between the ages of 15 and 21, of whom 1,179 were males and 839 females, while of 22,199 white illiterates 21 years old and over, 12,362 were males and 9,837 females, making an aggregate of 26,158 white illiterates for the State. Of 45 colored illiterates reported between the ages of 10 and 15, 24 were males and 21 females. Of 64 colored illiterates from 15 to 21 years old, 30 were males and 34 females; while of 807 colored illiterates of 21 years old and over, 468 were males and 339 females.

Educational institutions.—According to Table XII, vol. 1, Census Report, the total number of educational institutions was 1,548, having 1,054 male and 1,390 female teachers, with 45,217 male and 40,290 female pupils.

Amount and source of educational income.—The total income of all the educational institutions was $2,946,308, of which $59,057 were derived from endowments, $1,669,464 from taxation and public funds, and $1,217,787 from tuition and other sources.

Public schools.—The income appertaining to the public (normal, high, grammar, graded and ungraded common) schools for educating their 75,527 pupils, was $1,627,733, of which sum $357 were derived from endowments, $1,519,348 from taxation and public funds, and $108,028 from tuition and other sources.

Colleges.—The 17 colleges reported, with their 156 teachers and 3,046 pupils, had a total income of $595,886.

Academies.—The 5 academies reported, with 21 teachers and 198 pupils, had a total income of $24,000, derived from tuition and other sources.

Private schools.—The 154 (private) day and boarding schools, with 267 teachers and 4,601 pupils, possessed a total income of $243,589 from tuition and other sources.

Libraries.—The libraries of the State were: Public, 744, containing 159,625 volumes; private, 873, containing 314,674 volumes, making a total of 1,617 libraries, with 474,299 volumes.

The press.—The 201 periodicals issued in the State had an aggregate circulation of 491,903 copies, and an aggregate annual issue of 47,472,756.

Churches.—Of the 643 church organizations, 532 had edifices, with 195,558 sittings, and the church property was valued at $7,404,235.

Pauperism.—The paupers numbered 991, of whom 351 were native whites, 3 native colored, and 637 foreigners.

Criminals.—Of the 1,574 prisoners 662 were native whites, 6 native colored, and 906 were foreigners.

Age and sex of population.—Of the total population of California, 137,129 persons were from 5 to 18 years of age; of these, 71,086 were males and 66,043 were females. The number of persons 10 years old and over was 430,444, of whom 283,740 were males and 146,704 were females.

Occupations.—Two hundred and twenty-four thousand eight hundred and sixty-eight males and 13,780 females of these ages were engaged in various occupations; of these 238,648 occupied persons, 47,863 were engaged in agricultural pursuits, 76,112 in professional and personal services, 33,165 in trade and transportation, and 81,508 in manufactures and mechanical and mining industries.

Age and sex of working population.—Of the 238,648 employed persons 1,585 males and 629 females (a total of 2,214 persons) were between the ages of 10 and 15; 219,777 males and 12,972 females (a total of 232,749 persons) between the ages of 16 and 59, and 3,506 males and 179 females (a total of 3,685 persons) were 60 years old and over.

LIST OF SCHOOL SUPERINTENDENTS.

Hon. H. N. Bolander, *State superintendent of public instruction, Sacramento.*

COUNTY SUPERINTENDENTS.

Counties.	Name.	Post-office.
Alameda	W. F. B. Lynch	San Leandro.
Alpine	John Bagnall	Silver Mountain.
Amador	Rev. S. G. Briggs	Jackson.
Butte	H. T. Batchelder	Oroville.
Colusa	E. J. Edwards	Colusa.
Contra Costa	H. S. Raven	Walnut Creek.
El Dorado	Whitman H. Hill	Placerville.
Fresno	T. O. Ellis	King's River.
Humboldt	James B. Brown	Eureka.
Inyo	John W. Symmes	Independence.
Kern	J. H. Cromwell	Linn's Valley.
Klamath	A. Hartz	Sawyer's Bar.
Lake	Mark Mathews	Lower Lake.
Lassen	Z. N. Spaulding	Susanville.
Los Angeles	W. M. McFadden	Anaheim.
Marin	Samuel Saunders	San Rafael.
Mariposa	David Egenhoff	Mariposa.
Mendocino	J. W. Covington	Ukiah City.
Mereed	S. W. P. Ross	Snelling.
Mono	J. S. Kikendale	Coleville.
Monterey	S. M. Sheaver	San Juan.
Napa	G. W. Ford	Napa.
Nevada	—. Watson	Nevada City.
Placer	John T. Kinkade	Auburn.
Plumas	J. A. Edman	Meadow Valley.
Saeramento	S. H. Jaekman	Saeramento City.
San Bernardino	John Brown, jr	San Bernardino.
San Diego	B. S. McLafferty	San Diego.
San Francisco	J. H. Widber	San Franeisco.
San Joaquin	W. R. Leadbetter	Stoekton.
San Luis Obispo	P. A. Forrester	Cambria.
San Mateo	H. E. Jewett	Redwood City.
Santa Barbara	J. C. Hamer	Santa Barbara.
Santa Clara	G. F. Baker	San José.
Santa Cruz	H. E. Makinney	Santa Cruz.
Shasta	W. L. Carter	Shasta.
Sierra	A. M. Phalin	Port Wine.
Siskiyou	G. K. Godfrey	Yreka.
Solano	William H. Fry	Vaca Station.
Sonoma	George W. Jones	Santa Rosa.
Stanislaus	James Burney	Modesto.
Sutter	M. C. Clark	Yuba City.
Tehama	F. A. Vestal	Deer Creek.
Trinity	William C. Lovett	Weaverville.
Tulare	S. G. Creighton	Visalia.
Tuolumne	R. De Haven	Sonora.
Yolo	G. N. Freeman	Woodland.
Yuba	Thomas H. Steele	Marysville.

CONNECTICUT.

[From report of Hon. B. G. Northrop, secretary of State board of education.]

SCHOOL FUND.

Capital of school fund	$2,048,375 62
Revenue of school fund distributed February 28, 1871	128,468 00
Dividend per child from school fund	1 00

FINANCIAL STATEMENT.

Received from school fund	$128,468 00
Received from town deposit fund	45,167 37
Received from town tax	641,837 76
Received from district tax	410,708 11
Received from local funds	9,627 23
Received from voluntary contributions	11,012 47
Received from other sources	256,796 68
Total receipts for public schools from all sources	1,503,617 62
Increase over last year	19,601 27
Amount for each child	11 70
Amount expended for teachers' wages	833,759 96
Increase over last year	48,079 92
Amount expended for fuel and incidentals	98,238 44
Amount expended for new school-houses	370,369 73
Amount expended for repairs	70,005 64
Amount expended for libraries and apparatus	7,458 97
Amount expended for other school purposes	117,148 21
Total expenditures for public schools	1,493,980 95
Decrease for the year	124,406 81

ATTENDANCE.

Scholastic population	128,468
Number of pupils registered in winter schools	94,408
Number of pupils registered in summer schools	83,095
Whole number of different scholars registered for the year	113,588
Increase over last year	2,948
Number registered over 16 years of age	3,541
Number in other than public schools	8,754
Number between 4 and 16 not attending school	11,947
Whole number in schools of all kinds	122,342
Average attendance in winter schools	67,018
Average attendance in summer schools	58,349
Percentage of scholastic population registered	88.50
Percentage of children in schools of all kinds	95.23
Percentage of scholastic population registered in winter	73.49
Percentage of scholastic population registered in summer	64.68

TEACHERS AND TEACHERS' PAY.

Number of teachers in winter: males, 699; females, 1,721	2,420
Decrease of males for the year, 3; increase of females for the year, 51; total increase	48
Number of teachers in summer: males, 186; females, 2,194	2,380
Increase for the year: males, 1; females, 53	54
Number of teachers continued in the same school	1,434
Number of teachers who never taught before	595
Average wages per month of male teachers	$66 56
Average wages per month of females	32 69

SCHOOL DISTRICTS AND SCHOOLS.

Number of towns in the State	166
Number which have made returns	*164

* Two new towns, Beacon Falls and Newington, formed in 1871, have no separate school report till the following year.

Number of school districts in the State	1,535
Decrease for the year	20
Number public schools	1,630
Decrease for the year	14
Number departments in public schools	2,290
Number schools of two departments	109
Number schools of more than two departments	116
Whole number of graded schools	225
Increase for the year	8
Average length of winter schools in days	100.78
Average length of summer schools in days	71.63
Average length of schools for the year	8 mos. 12½ days
Increase for the year	4 days

SCHOOL-HOUSES.

Number new school-houses erected in the year	33
Number school-houses reported in good condition	893
Decrease for the year	12
Number school-houses reported in fair condition	502
Increase for the year	23
Number school-houses reported in bad condition	256
Decrease for the year	14

SIGNS OF PROGRESS.

During the last ten years the increase in the number of children enumerated was 19,426; in the amount raised by town tax, $563,297.56; in the amount raised by district tax, $306,765.11; in the amount from all sources, $1,101,430.22. Ten years ago the amount raised per child was $3.61; now it is $11.70. The amount paid for teachers' services has advanced very rapidly within the past six years. During the past year the amount raised by town taxes has largely increased, while the amount raised by district taxes has proportionally diminished. The taxes which are now levied by districts are principally for the building or repairing of school-houses. The amount expended for these purposes for the year now reported was about $440,000, a sum greater by over $70,000 than in any other year, except the one next previous, when the amount expended was about $558,000. In consequence of this diminished expenditure for school-buildings, the total expenditure is considerably less than it was the previous year, though greater by $218,000 than in any other year.

LENGTH OF THE SCHOOL YEAR.

The increase of four days in the average length of the schools for the last year is a movement in the right direction. The school year now averages 8 months 12½ days, which is longer that that of any other New England State, and, with one exception, the longest in the country. But while many of the towns maintain their schools as long as is desirable, in others the terms are still too short. Some only meet the demands of the law. The majority of the children in the public schools are under 12 years of age. This is the best period for school drills, and the one least fitted for farms or factory labor. While as yet they can do least at work and most at school, their terms ought to be extended more than thirty weeks, the longest period required by law.

ATTENDANCE.

During the last three years the number of children enumerated in the State increased by 4,818, or 3.9 per cent. The gain in attendance over that in enumeration was 9,380.

"With an increase of over 3,000 in the enumeration of the past year, it is a matter of congratulation to find an increase of only 60 in the number 'in no school.' Relatively this is a marked decrease. With an increase of over 6,000 in the enumeration during the last two years, there has been a decrease of over 1,500 in the number 'in no school.' The majority of these non-attendants are either under 6 years or over 14 years of age. Our new laws in regard to truants, and to the employment and schooling of children, have helped increase attendance at school. The enhanced interest of parents, the quickened educational spirit of the whole people, and the improvement of the schools have all contributed to this result."

TRUANCY AND ABSENTEEISM.

Indifference, neglect, and truancy still remain. The report shows that there are 11,947 children between 4 and 16 not attending school. After making due allowance for invalid children, and for those between 4 and 6 whom many wise parents deem too

young for school, and for those between 14 and 16 who are at work in factories or at trades, there remain far too many who are growing up in ignorance. "The truant laws should be more generally enforced. Truancy should be regarded as incipient crime. Facts too numerous and familiar prove it to be a fruitful source of juvenile immorality. It is highly contagious. One bad case makes many more." "Absenteeism from school may usually be traced to parental indifference, intemperance, or some other evil home influences."

The report of the board of education comments upon the very great irregularity of attendance in many towns; the average attendance being only about 70 per cent. of the enrollment. The rate of attendance is shown to range in the different towns from 88.5 to less than 56 per cent. No sufficient cause for so wide a diversity among the towns can be discovered.

COMPULSORY EDUCATION.

The secretary frankly remarks that his former objections to obligatory attendance were fully removed by observations recently made in Europe; and with growing faith in moral suasion as our main reliance in preventing absenteeism or reclaiming truants, he still contends for the authority of the law, to fall back upon in extreme cases. "Where parental pride, interest, or authority fail, and juvenile perverseness is otherwise incorrigible, legal coercion should be employed."

The principal objections to compulsory law in Connecticut are that it interferes with the liberty of parents, arrogates new power by the government, is un-American and unadapted to our free institutions; and that it is monarchical in its origin and history. Common as this impression is, it is erroneous. Connecticut may justly claim to be one of the first States in the world which established the principle of compulsory education. The code of laws adopted in May, 1650, contained stringent provisions for compulsory attendance. These provisions remained, with some modifications, chiefly designed to give them greater efficacy, until the revision of 1801. Public opinion so heartily indorsed this principle, or rather so thoroughly believed in the necessity of universal education, that attendance lost its involuntary character. "Our past history illustrates the advantages and working of the principle. Its re-enactment here, with the modifications suited to present exigencies, will impress the legislation of the country. This is the most important school question of modern times. It is now up for discussion in many American States. In establishing this principle for herself, Connecticut will help settle it for the country."

The agent of the board of education, who has mingled familiarly with both the manufacturers and workmen in all parts of the State, nowhere encountered any opposition to the new compulsory law.

VACCINATION.

At the request of the superintendent the attention of the members of the New Haven Medical Association was called to this subject and their opinion asked. The report of the committee appointed to investigate the question contains a recommendation that vaccination be made by law the prerequisite for admission to the public schools.

SCHOOL-HOUSES.

The greater attendance consequent on the organization of free schools, and the growing interest of the people in education, have prompted the building or enlargement of many school-houses. During the last four years $1,683,563.46 have been expended for building and repairing school-houses, while the amount for the fifteen previous years was $1,074,352.82.

Among the superior houses erected last year may be named one at South Manchester, (built solely at the expense of the Cheney Brothers,) the high school at Danielsonville, and the Charter Oak school, in Hartford. Nowhere in the world can there be found a school-house for the children of operatives surpassing the Charter Oak. The new Morgan school-edifice at Clinton was dedicated in December last. The building and ground cost $60,000. There is an endowment fund of $50,000. The whole is the gift of Charles Morgan, of New York, who also provided a liberal supply of maps, charts, apparatus, and reference-books. No town of its size in Connecticut can show a school so well provided in this respect.

TEACHERS' INSTITUTES.

In consequence of the absence of the secretary in Europe, the number of institutes has been fewer than usual, and only $1,600 were drawn from the State treasury for that purpose. The regular sessions were held during the months of March and April in four towns, with an aggregate attendance of 696, or an average of 174. This is a larger average than in any former year. The interest and attendance of the citizens were

equally remarkable. The largest halls and churches available were well filled. In Middletown, when more room was needed, the president of Wesleyan University welcomed the institute to the Wesleyan chapel, where the remaining sessions were held. The interest taken in the proceedings, both by the president and professors of this institution, was a pleasant recognition of the mutual inter-dependence of the college and the school. The presidents and some professors in each of our colleges have assisted at our educational meetings.

STATE TEACHERS' ASSOCIATION.

The twenty-sixth annual meeting of this association was held at Bridgeport on the 17th and 18th of October, 1872. The president, Henry E. Sawyer, in the chair.

Professor N. T. Brown, of Boston, gave a lecture on "Charles Dickens as a reader," after which Professor R. G. Hibbard, of Middletown, read several selections, to the great satisfaction of the audience.

A paper, entitled "Practical *versus* Theoretical grammar," was read by Mr. Mark Pitman, of New Haven. This subject was discussed at length by Messrs. Ralph Park, W. B. Dwight, and others.

The next topic was the question, "What proportion of teachers should be ladies, and how ought their salaries to compare with those of gentlemen?" Mrs. Olympia Brown, the first speaker, said, in answer to the question, that committees should get the best, without reference as to sex. To get a good article is always the best economy. Money will buy good things, even good teachers. Teachers to-day teach for money, and they need money in order to teach well.

If ladies teach as well as gentlemen they certainly should be paid as well. Her advice to committees in closing her remarks was, "Get the best teachers and pay the best prices, and make no distinction of sex."

To lady teachers she advised the best preparation for teaching, and then the demand for the best pay.

Hon. Porter B. Peck thought if ladies were paid less than gentlemen, it was probably because the results were less; if they wished equal pay, they must secure equal results. The audience expressed disapprobation of this sentiment. Mr. Randall Spaulding, of Rockville, Mr. F. F. Barrows, of Hartford, Mr. Ariel Parish, superintendent of schools, New Haven, and others, discussed this question at length; the general expression being that public sentiment needed educating on the subject of salaries for female teachers. Mrs. Brown joined in the discussion, and in response to the suggestion that results determine the matter, (which was as much as to say that the work of the ladies was not so good,) she asked, "Why do committees cheat the community, then, by employing them? If, when ladies have properly prepared themselves for teaching, they cannot obtain suitable wages, let them wash, become milliners, or raise small fruits, or do any honorable thing, rather than teach for small pay."

The next question discussed was "Is it unwise for teachers to make a practice of detaining pupils after school-hours for study, as a punishment?" Mr. Carlton objected to the practice because it was annoying and exasperating to parents; it is unhygienic to both teachers and children, tending to make the mind stupid for want of proper change of scene; often creates a party spirit, which is very injurious to the school. Although not prepared to offer a substitute, he believed that the true remedy lies in the teacher's creating an interest in study, and in having personal enthusiasm enough to render this kind of punishment unnecessary.

Mr. D. P. Corbin and Mr. A. Morse, of Hartford, expressed views in opposition to those of Mr. Carlton, the former claiming that the practice is philosophical, and that parents had often requested him to detain their children until their work was done. Mr. Morse also read a paper on the "Promotion of pupils from grade to grade," after which the discussion of the question of detention of pupils after school was resumed, and, among others who gave their views upon it, Hon. B. G. Northrop said he concurred most heartily in the views of Mr. Carlton, who opened the debate. Success in teaching depends upon preoccupying the children by interesting them. In no case is long detention after school to be allowed. In such cases the spunk of the teacher has quite as much to do with it as the spunk of the child. But he liked that kind of detention which was simply for the purpose of aiding the pupils and the explanation of a difficulty; but even this should not be frequent nor long. The discussion was protracted to a great length, and on taking a vote on the question a large majority pronounced in favor of detention.

An address was then given by Mr. Ariel Parish on "The relations and mutual duties of parents and teachers." In this matter, he said, the community is in such a condition that parents will not take the lead in bringing about a wholesome intercourse between themselves and the teachers. If teachers will endeavor to bring about a mutual understanding there will be gratifying results; there will be fuller school-meetings, better funds, better apparatus, and teachers will be better sustained in their labors.

The last session was held in the North Congregational Church, in the evening, at

which there were several addresses by Hon. Mr. Northrop, Mr. W. B. Dwight, Mr. J. D. Ferguson, Rev. Mr. Brooks, and others.

Among the resolutions adopted was one that an effort should be made to secure an increase of the salaries of the lady teachers.

The officers elected were, president, Henry C. Davis, New Haven; secretary, Ralph H. Park, New Haven; treasurer, D. P. Corbin, Hartford.

About five hundred teachers were in attendance, and the exercises were regarded as highly profitable.

STATISTICS.

The statistics of our reports furnish an effective argument in favor of free schools. Aside from this, they exert an important local influence. More than one town has been reminded that it is not creditable to its liberality and public spirit to be last in the county and the lowest in the whole State in every point of comparison. The town which, for some years, held that bad pre-eminence has lately been thoroughly aroused and started on a better career.

REVISION OF SCHOOL LAWS.

The school laws were revised by the legislature of 1872. The educational committee embodied more than usual culture and school and legislative experience, which increased their efficiency and influence. This revision should favor great permanency in our school laws. The practice of rotation in the membership of the general assembly has been the leading cause of change in school legislation. New members are most forward to urge new laws. The board of education has favored permanency, and advised few changes, except those connected with free-school law.

THE AMERICAN SYSTEM OF PUBLIC INSTRUCTION.

The report of the board of education for the year 1868 contained a brief statement of educational principles, termed "The Connecticut common-school platform." This summary was proposed by Professor Daniel C. Gilman. It occasioned much discussion, and, though unanimously adopted by the State Teachers' Association, encountered earnest opposition from some then unfriendly to the State board of education. But these questions seem now to be settled. The very principles most opposed have been approved by the people, and ratified in the platforms of both political parties. This platform, with some modifications by its author and others suggested by prominent educators in different States, has been indorsed by the presidents of more than twenty of our leading colleges, by the school superintendents of a still larger number of States, and by many other distinguished educators. Out of over one hundred of the prominent gentlemen addressed, but one dissented and refused his signature. This paper, thus sanctioned by the most eminent thinkers in the land, may properly be called the American system of public instruction. Though in its present form, prepared at the request of Mr. Arinori Mori, for circulation in Japan, it has both a present and historic value for Connecticut.

EDUCATION AND INVENTION.

It is plainly due to the former excellence of the schools, and the universality of education among the people, that Connecticut has always taken the lead in the number, variety, and value of its inventions. Manufactories are relatively more numerous and more diversified in their processes and products than those of any other State. The ingenuity and inventive talent of the people have ever been remarkable, as is shown by the statistics of the Patent-Office. During 1871 the number of patents granted to citizens of Connecticut was one to each 806. The nearest approach to this was in the District of Columbia, where there was one to each 770. The pre-eminence of Connecticut in this matter has continued for many years past.

NORMAL SCHOOL.

The people now recognize the value of the normal school, and each year multiplies its friends. Its results have turned many honest opponents to warm supporters. The members of the institute class and many others remain but one term. Most of them had been previously engaged more or less in teaching. It is recommended that the salaries of the normal-school teachers be increased.

INDUSTRIAL SCHOOL FOR GIRLS.

The last has been the most successful year in the history of this important institution. The number of girls now in the school is nearly 80. In most of them a marked

improvement is noticed, both in conduct and study. Sixty per cent. are orphans. In nine cases out of ten their parents had been criminals or intemperate. Their early associations and surroundings were vicious and corrupting. The results prove the necessity of such an institution.

STATE REFORM SCHOOL.

The whole number of boys who have been in this school since its opening is 1,811. Results show the necessity of the recent enlargement of the buildings. The school work of the year, with improved rooms and additional teachers, has been unusually satisfactory. Financially, the school is very successful. The net earnings of the boys in the chair-shop and on the farm were about $12,000 for the last year. This does not include the large amount of work done in the shoe and tailor shops and the various departments of domestic work. While some of the boys after leaving this school have returned to evil ways, the majority have been reformed, and the success of the school is all that could reasonably be expected.

THE CONNECTICUT SOLDIERS' ORPHAN HOME.

There have been 68 children in the Home during the year. The branches of study are the same as are taught in the public schools, and, like those schools, it is under the supervision of the school visitors, receiving its share of the public money.

SCHOOL FOR IMBECILES.

Twenty of the pupils of this institution are beneficiaries of the State to the amount of $3 per week. There are now on hand 63 applications for admission. The school has been prosperous and the work of instruction very successful. It is estimated that there are over 1,000 imbeciles in Connecticut, and it is urged upon the State to make further provision for the wants of this class.

THE AMERICAN ASYLUM FOR THE DEAF AND DUMB.

This was long the only institution of the kind in this country. It is now not only the oldest, but the most truly national. It is supported in part by each of the New England States, and during the year has had private pupils from New York, New Jersey, Pennsylvania, and California. Of the pupils of the last year, the State of Maine supported 59; New Hampshire, 22; Vermont, 19; Massachusetts, 109; Rhode Island, 10; Connecticut, 60. Nearly two thousand pupils have been trained in this institution during the last fifty-six years. Instruction in articulation and lip-reading has been regularly given during the last year to a class of twenty-five semi-mutes.

SHEFFIELD SCIENTIFIC SCHOOL OF YALE COLLEGE.

This school has never had so large a number of scholars as during the present year. Its funds are gradually increasing; there has also been an increase in the number of professors, and the library and various collections have been enlarged. A gift of £5,000 has been received from an English lady, for the chair of dynamic or mechanical engineering. Mr. Joseph Sheffield has added largely to his previous gifts in money, and has begun the erection of a second building for the use of the school. Its estimated cost, aside from the land on which it stands, is not far from $100,000. A generous gift has been made by Hon. O. F. Winchester, by which an observatory for astronomical and physical researches will be established in connection with Yale College, the advantages of which will be shared by the Sheffield Scientific School.

CONNECTICUT COLLEGES.

In the colleges and professional seminaries of Connecticut there are 1,137 students, coming from thirty different American States and Territories and six foreign countries. There are in colleges 791, in theological schools 130, and in other professional schools 196. Only 125 sons of Connecticut are reported in colleges out of the State. In proportion to its population, no other State is educating so large a number of college students.

NEW HAVEN.

SCHOOL ACCOMMODATIONS.

The territorial enlargement of the school district, by the annexation of Fair Haven, is an important event in our school history, and increases largely the number of pupils. Twenty rooms have been completed during the year, eighteen of which have been occupied. The increase of seats, however, is hardly equal to the increased number of scholars.

SUPERVISION.

The change made during the year in the system of supervision marks a new era in the administration of the schools. The instruction of the grammar schools has been left chiefly to a female teacher, thus leaving the principal at liberty to devote himself to the duties which he alone can perform, not only in his own school, but in all the schools in his district. The new vigor infused into many of the schools fully warrants a continuance of this arrangement.

DRAWING.

The system of drawing, commenced several years since, has been steadily pursued with most satisfactory results.

The upper classes in the grammar school have reached the higher numbers of Bail's charts. Steadiness of hand and accuracy of eye have been generally noteworthy, and in many cases quite remarkable. Professor Bail has prepared a manual for teachers which makes the method of teaching so plain that one with the least experience will be able to direct a class.

EVENING-SCHOOL.

The character of the members of this school for stability, earnestness, and application to their studies appears to improve each year. Some remarkable cases of proficiency have occurred. One man over thirty years of age, who did not know a letter of the alphabet when he began, was able to read with considerable fluency by the end of the term. During the last half of the winter session, Professor Bail gave (without charge) a course of lessons in drawing to the young men engaged in mechanical pursuits. This is the fourth series he has given.

UNGRADED SCHOOL.

A little more than a year has elapsed since this school was opened, and the results have been such as to leave no doubt of its usefulness.

The number of cases which, under former regulations, would have resulted in "suspension" has been reduced to about half the number of the previous year. The number of cases of truancy has been less than the previous year, though the daily attendance was one thousand greater. The number of "subordinate" pupils has diminished. A considerable number of boys out of employment have voluntarily come into the school and improved their time, and many who, but for fear of arrest, would never have been seen in school, have attended quite regularly.

HARTFORD.

CONDITION OF SCHOOLS.

The schools are, on the whole, in a very satisfactory condition. The truant law is doing a vast amount of good in the central schools, and in several instances officers have been sent into the rural districts with most beneficial effect.

GERMAN.

A very earnest wish exists among the German citizens to have the German language made one of the regular studies in the larger schools. In the Brown School, German has been taught for the past three and a half years, with very gratifying results. During the year 240 children, 92 of whom were American and the rest German children born in this country, have studied German in this school.

EVENING-SCHOOLS.

An appropriation of $2,000 was made by the town for the expenses of an evening-school. A second school is entirely supported by Messrs. Cheney Brothers. The statistics of these schools show that they are no longer an experiment. The number in attendance has been much larger, the average attendance much higher, and the progress greater than ever before. A valuable addition to the studies of the evening-schools would be a class in mechanical drawing.

MERIDEN.

TRUANCY AND ABSENTEEISM.

The school visitors say our schools continue to suffer from irregular attendance. Hardly a day passes in which children may not be seen patrolling the streets in school hours, wasting their time and preparing their minds for the growth of those crimes which are the offspring of idleness and evil companionship. Excuses, frivolous and self-contradictory, are offered in endless profusion and apparent variety, but most of them indicating the same feeling, that the least important of all duties that may devolve upon childhood is regular attendance at school.

DRAWING.

This branch has had a place in our programme of studies nearly two years, but its progress has been unsteady and unsatisfactory. The inequality of teachers, in imparting instruction in this department, is probably greater than in most other studies, because less time has been given to drawing, inasmuch as this has not, till recently, been regarded as one of the required branches of school study. Miss Loring came here last year and visited all our schools, and gave a course of practical introductory lessons in drawing, creating considerable enthusiasm among the scholars. In February of this year, Miss Mary J. Dyer, an excellent teacher of drawing, visited our schools and explained the Bartholomew system of teaching drawing. In order to make drawing a successful study, it is necessary that we should have a competent drawing-teacher to give instruction to teachers and scholars.

SINGING.

Singing is taught successfully in some schools; in others there are great deficiencies and a corresponding want of interest. It is so because many of our teachers are ignorant of singing and insensible to the advantages of music. We are convinced beyond a doubt of the satisfactory influence of music, and strongly recommend its further culture in every school.

EVENING-SCHOOLS.

The evening-school in the town-hall met sixty evenings, from 7 to 9 o'clock. The aggregate attendance was 75; the average, 50; the average age of pupils was twenty years. The branches taught were reading, spelling, writing, and arithmetic, to all pupils; book-keeping to 25, English grammar to 5, and algebra to 1. Perfect order characterized the school. The average attendance at the Prattsville evening-school was 25.

MIDDLETOWN.

SCHOOL ATTENDANCE.

The board say in regard to this that the idea should constantly be kept before the child that attendance on the school is not to cease until the prescribed course shall be finished, and that this is just as important as to remain through a whole term, or to be faithful in attendance during a single day. In this expectation the pupil will be less uneasy, more studious and obedient, and will come to regard education as the proper business of youth.

The example, once set, will have a powerful influence upon others. Our schools would thus be increased in dignity and excellence, and the money and labor expended in this field would produce a more bountiful harvest.

VOCAL MUSIC AND DRAWING.

The board renew their expressions of confidence in the study of vocal music and drawing, not merely as accomplishments, but as furnishing a part of education that can be turned to great profit in after life. It is to be regretted that the past year has not been marked with much success in the study of music, and that no systematic instruction has been given in drawing, but the arrangements now made for the ensuing year promise to give greater opportunities than any before offered for the prosecution of these studies. The board urge parents to give their children all the facilities and encouragement possible for their improvement in these branches, with the belief that the results will afford them the highest gratification, and prove to be of great value.

NEW LONDON.

ATTENDANCE.

The average attendance in the schools has been continually improving. An opportunity will be afforded during the present year to note the effect of a compulsory system of education, since the new law provides a penalty for parents and guardians of children between the ages of 8 and 14 years who neglect or refuse to cause such children to attend school at least three months in the year.

ORAL INSTRUCTION.

In regard to this subject the school visitor says: "In a former report I suggested the giving of oral instruction upon subjects other than those of the text-books. Some quite successful attempts have been made by some of the teachers. The objects to be aimed at by the teacher in any such course of instruction are to awaken the perceptive and observing faculties of the children and to put them in possession of valuable information to make them observant and intelligent.

"The teacher must be fully prepared to explain the topics discussed with the scholars, so that they will be completely understood. Visible objects brought in by the scholars, or pictures of objects, should be made use of as much as possible. Compositions may be written upon the subjects by the older scholars. There should be some regular system adopted by all the teachers.

"I would suggest the use of Hooker's Child's Book of Nature, a work that has during the year been put into nearly all the school libraries. A half-hour each week may be thus employed more profitably and more pleasantly than any half-hour now given to the regular studies."

INSTITUTIONS.

YALE COLLEGE.

The statistics of the college and its various departments will be found in their appropriate tables at the end of the volume.

The departments of instruction are comprehended under four divisions, as follows: the faculty of theology, of law, of medicine, of philosophy and the arts. Under the last-named faculty are included the courses for graduate instruction, the under-graduate academical department, the under-graduate section of the Sheffield Scientific School, and the school of the fine arts, each having a distinct organization.

The instruction of graduate and special students having become a marked feature of Yale College, the following summary of these courses of instruction is taken from the last catalogue:

College graduates, and other persons of liberal education, are received for longer or shorter periods, with or without reference to the attainment of a degree. An executive committee, designated by the faculty, has a general oversight of the students in this department. Instruction is given partly by lectures, partly by recitations and by oral and written discussions, partly by directing courses of reading, and partly by work in the laboratories and with instruments.

The fees for instruction in the scientific school are $150 per annum; in the other sections of the department, $100 per annum.

The degree of Doctor of Philosophy is given to those who, having already taken a Bachelor's degree, engage as students in this department for not less than two years. A satisfactory examination must be passed, and a thesis presented which must give evidence of high attainment in the studies pursued. A good knowledge of Latin, German, and French must be acquired.

The courses of instruction given in the department may be grouped as follows:

I.—*Political science, history, philosophy, and English literature.*

President Porter will instruct in psychology and philosophy, in the history of philosophy, and in ethics.

Ex-President Woolsey will instruct in special cases in international law.

Professor Hadley will give a course of lectures on Roman law.

Professor Wheeler will instruct in the constitutional history of England and the United States, and in the general history of Europe in the sixteenth, seventeenth, and eighteenth centuries.

Professor Sumner will instruct in political economy.

Mr. H. A. Beers will instruct in Anglo-Saxon and the history of English literature.

Courses of lectures will be given this year by Mr. David A. Wells, on special topics in political economy, and by Mr. E. L. Godkin, on social science.

II.—*Philology.*

Professor Thacher will give instruction in Latin authors not usually read in college; and, in particular, will go over selected plays of Plautus and Terence, with special reference to early Latin forms, constructions, and meters.

Professor Hadley will teach the structure of the Greek language, as viewed in the light of comparative philology. He will instruct in special Greek authors, as Pindar, Aristophanes, Theocritus, Plato, and Aristotle; also, in Gothic grammar and the Bible version of Ulfilas.

Professor Whitney will instruct in the first year in the general principles of linguistic science, and in the second year in the comparative philology of the Indo-European languages. He will also teach the Sanskrit language, in a course of study extending through both years.

Professor Packard will instruct in the Greek tragic poets and in the history of Greek literature.

Mr. Van Name will teach the elements of the Chinese and Japanese languages.

Professor Lounsbury will give instruction in the Anglo-Saxon language, and in the early forms and literature of English.

Professor Coe will teach the relations of the modern Romanic languages, especially the French to the Latin, and will give assistance to students of the old French language and literature.

The Hebrew and other Semitic languages may be pursued under Professor Day, of the theological department, either in connection with his regular classes or otherwise.

III.—*Mathematical and physical science.*

For the instruction given to graduates and special students in the Sheffield Scientific School, (see college catalogue, pp. 61, 62.) The courses there specified may be variously combined with those here announced, or the student may occupy himself in either section exclusively, according to his circumstances and plans.

Professor Loomis will teach meteorology, with especial reference to the making and redueing of meteorological observations.

Professor Dana will instruct in crystallography.

Professor Newton will instruct, the first year, in the calculus, in analytic statics, and in the dynamics of a particle; the second year in the lunar and planetary theories and in the higher geometry.

Professor Gibbs will instruct in the laws of vibratory and undulatory motion, with especial reference to light and sound; in the combination of observations by the method of least squares; in the potential function, with its application to the theories of electricity and magnetism; and in capillarity.

Professor A. W. Wright will instruct in heat, light, and electricity, with practical instruction in the management of apparatus.

IV.—*Fine arts.*

In drawing, painting, and modeling, the school offers a systematic course of instruction. It affords the special art student a thorough acquaintance with the theory and practice of art, and combines with this a knowledge of its history and philosophy.

Its museum contains a large and increasing collection of casts and paintings, and the collections are open to art students, for purposes of art study, at all hours. In connection with the practical instruction of the school, lectures on the theory, practice, and history of art will be delivered in regular course by its professors. The noble art building is in every way well adapted to its purpose.

The statement made by the executive committee of the society of the alumni, dated June 1, 1872, shows that in every department there had been progress during the year, and also that in addition to the special and so far successful effort making by the alumni to raise the "Woolsey fund," so named in honor of ex-president Theodore D. Woolsey, D. D., LL. D., for which the sum of five hundred thousand dollars is sought, and which is to be applied to the general uses of the college in all its departments, there have been many generous special gifts to the various departments.

To the academical department, Mr. Buchanan Winthrop, of New York, of the class of 1860, gave $5,000 as a fund, the income of which is to be given in two prizes to the members of the junior class who, at the annual examination to be held in the third term of the collegiate year, shall exhibit the most thorough acquaintance with the Greek and Latin poets, six months' previous notice being given of the authors required, which shall be chiefly selected from those not used in the college course, and particular attention being paid to elegance of scholarship and appreciation of the spirit of the poetry. Mr. Morris W. Lyon, of New York, has made a fourth gift of $1,000, the income to be used for paying tuition of indigent students. Mr. Samuel Holmes, of Montclair, New Jersey, has given a scholarship fund, the income to be paid to students from certain specified towns in Connecticut.

The chapel fund has been increased by several generous gifts to $80,000.

The Sheffield Scientific School has received toward its endowment fund $151,800. In addition to this, certain gifts to meet current expenses, and in the way of certain specified annual income for from one to five years, have been received, amounting to $12,113.82, and also, for special purposes, $5,765.10.

The Higgin professorship, included in the endowment fund, was endowed with $28,000 by Mrs. Susan K. Higgin, widow of the late Robert Higgin, esq., of Liverpool.

Mr. Thomas R. Lounsbury, of Ovid, New York, (Yale, 1859,) has been appointed professor of English, and Mr. Oscar D. Allen, Ph. D., of Hebron, Maine, (Sheffield Scientific School, 1861,) professor of metallurgy.

Mr. Joseph E. Sheffield has begun the erection of an additional building for the use of the school, at an estimated cost of $100,000.

The theological department has celebrated the fiftieth anniversary of its establishment as a separate department of Yale College. Steps have been taken to procure the erection of an additional building similar to the elegant one erected two years since.

A small but beautiful chapel has been erected and finished, at an expense of $27,234, the whole sum contributed by Frederick Marquand, of Southport, Connecticut.

Mrs. Mary A. Goodman, a colored woman, left her entire property, from four to five thousand dollars, to the scholarship fund of the school, to aid young men of color to prepare for the ministry, if any such desired; if no colored students are in the school, the income may be used for other students.

Valuable donations of books have been made to the library, and also portraits of three deceased professors, Rev. Drs. Taylor, Fitch, and Goodrich.

In the law department the faculty has been increased by the appointment of Hon. Francis Wayland. New courses of lectures have also been delivered by Ex-President Woolsey, Hon. Charles McCurdy, LL. D., Professors Hoppin, Hadley, Bacon, and Bailey, which courses are to form hereafter a part of the regular scheme of instruction in the department. Sixteen thousand dollars have been contributed to the library fund for the purchase of new reports and the completion of sets, which will make it an excellent law library.

The college library has received additions by gift of 1,234 volumes and 4,860 pamphlets, and by purchase of 1,224 volumes, the latter mostly from the sums specially donated for particular purchases by Professor Salisbury, (the Salisbury oriental collection, 350 volumes,) and by Mr. Charles Astor Bristed, (340 volumes to the department of classical philology.)

The class of 1872 contributed $2,000 as a class fund to the library, and two young deceased graduates bequeathed, one $5,000, the other $2,500.

The two society libraries were transferred a year ago to the control of the college library. A new catalogue is being prepared and printed of the united libraries.

The museum of natural history has received most important gifts, especially from the Yale exploring expedition, undertaken in the summer of 1871 under charge of Professor Marsh, and, like that of the previous year, composed of ten recent Yale graduates. They visited Kansas, Wyoming, Idaho, Oregon, and California. Not less than 15,000 specimens of fossil vertebrate remains were secured, including some seventy-five undescribed species. Large collections of recent animals and very valuable ethnographical specimens were also obtained. The results of this expedition may fairly be considered as representing a gift to the museum of not less than $40,000, and the same may be said of that of the previous year. These two collections of extinct vertebrates place the Yale museum in this respect far in advance of any in this country.

The collection in osteology has been enriched by more than 200 skeletons of recent animals.

A valuable series of fossil animals from Greece has been received in exchange from the University of Athens through Mr. Robert B. Keep, (Yale, 1865,) late United States consul at the Piræus, Greece. A valuable series of vertebrate fossils from the State of Oregon has been presented by Rev. Thomas Condon, of Dalles City, Oregon. Thirty thousand five hundred and ninety-nine specimens have been added, of which only 2,275 were by purchase.

In archæology the museum has been enriched by important acquisitions. A large collection of very perfect stone implements of prehistoric age from Scandinavia; 1,200 Indian stone implements from Ohio; vases, statues, images, pottery, and stoneware from Central America; pottery from Peru, and Indian implements and weapons from Oregon and Alaska comprise some of the articles. In all, 1,483 specimens have been added.

In zoology the Yale museum will receive a complete series of the collections in the Atlantic waters, made in connection with Professor Baird and his party during the summer vacation, amounting, it is estimated, to some 15,000 specimens. Many specimens of birds, animals, insects, and reptiles have been received from California, New Zealand and South Africa.

In the school of fine arts the chair of the professorship of drawing has been endowed, and Professor Joh H Niemeyer has been elected to the position. The

"Jarves collection" of old Italian paintings has been purchased for the school. Many desirable casts have been obtained. An art library and a collection of "autotypes" are very much wanted for this school.

Since the publication of the statement from which the above facts have been compiled, professorships of political and social science, of German, of molecular physics, of political economy, have been founded and appointed. A fellowship of $10,000 has also been added.

Finances of the college.

[From the abstract of the treasurer's report for the financial year ended May 31, 1872.]

I.—Funds of the academical department:

1. Six endowed professorships, the lowest endowment being $6,500 and the highest $50,000	$133,376 72
2. Funds, the income of which is payable as prizes or scholarships	102,932 44
3. Funds for the increase of the library	31,942 33
4. Miscellaneous funds	10,500 00
5. Accumulating funds, interest of which is not available at present, but is added to the principal	70,626 38
6. General fund, income available for any purpose	371,275 38
Deduct unproductive real estate	102,352 31
Productive portion of general fund	268,923 07

II.—Funds of Sheffield Scientific School:

General and special funds	$267,225 00

III.—Other funds of philosophical department:

Professorships of Sanskrit and comparative philology	50,000 00
Professorship of botany	24,000 00

IV.—Funds of theological department:

Five endowed professorships, lowest endowment $10,000, highest $27,049.45	97,775 49
General fund	126,576 55
Other funds	82,099 47

V.—Funds of medical department:

General fund	21,332 57
In the academical department alone, the income from all sources for the year ending May 13, 1872, was	113,196 98
The expenditure was	131,444 97
Leaving a deficit of	18,247 99

The savings, which at one time amounted to $25,853.55, have been gradually drawn upon, so that there is no further surplus left in the treasury.

WESLEYAN UNIVERSITY.

This institution permits students not desiring to enter the regular departments of the college to take select courses of study, reciting with such classes as their qualifications permit. They thus have an opportunity of pursuing an extended course of English study, in connection with Hebrew or the modern languages. They are subject to the general rules of discipline. The statistics of the university will be found in their appropriate tables. The geological cabinet has been recently enriched by the addition of Professor Ward's casts of fossils.

TRINITY COLLEGE.

It has been proposed to take the beautiful grounds of the college for a public park for the city of Hartford, enabling the college to build larger buildings on a new site.

The libraries of the literary societies have been recently added to the college library. The reading-room is well supplied with American and English newspapers and periodicals.

An announcement is made that, in addition to the studies of the regular course, the professors in the several departments assign more advanced work to such of the students in each class as prove themselves competent therefor.

BERKELEY DIVINITY SCHOOL.

This institution is located at Middletown. All candidates for priests' orders with full qualifications, according to the canons of the Protestant Episcopal Church, are admitted.

Tuition is free; so also are the rooms in the school-building, where provision is made for about thirty students. Aid is extended to persons who need it, on terms made known by applying to the dean.

The alumni of the institution, from 1850 to 1871, number 148.

FITCH'S HOME FOR SOLDIERS' ORPHANS.

This institution, located at Darien, was founded by the liberality of Benjamin Fitch, esq. It supports and instructs thoroughly in the fundamental English branches, Latin, French, and algebra, some fifty children. The Home is in charge of a lady principal. A few day-scholars are received from families in the town, who pay a small tuition.

A gallery of fine paintings, many of them by the best European artists of the modern school, collected by the founder when in Europe, is attached to this institution.

WHIPPLE HOME SCHOOL FOR DEAF-MUTES.

In regard to this institution, the secretary of the board of education says: "The family school of the Whipples, in Ledyard, has attained great success in teaching deaf-mutes by articulation. Jonathan Whipple, the grandfather of the present principal, deserves the credit of being the first successful teacher of this method in America. His son, a deaf-mute, is a remarkable illustration of his father's drill and the value of the system. The grandson, either by inheritance or culture, seems to have rare adaptation for this work. The legislature, at its last session, authorized the governor to contract with this school for the education of deaf-mutes who had been five years residents of the State, under the same general conditions as were already required for the education of indigent deaf-mutes."

DEATH OF REV. H. M. COLTON.

Rev. Henry Martyn Colton, A. M., died of brain-fever at his home in Middletown, June 2, 1872.

He was born at Royalton, New York, November 5, 1826; graduated at Yale College, 1848; studied a year in the school of philosophy and the arts, then entered the theological seminary, and graduated 1852; ordained pastor Congregational Church, Woodstock, near the close of 1852; established a classical school in Middletown, May, 1857, where he taught eleven years; opened the "Yale School for Boys" in New York City, September, 1868, where he labored with great success until prostrated by the fatal disease.

He belonged to a family distinguished for intellectual ability and scholarly culture, four generations of which were clergymen and graduates of Yale. He and his five brothers were directly connected with the college for twenty-eight consecutive years. An enthusiastic, receptive, persevering student through his whole life; acute, thorough, and logical in his investigations; fearless and conscientious in the pursuit of truth, a man of positive convictions and independent character; he sought by constant training and drill to induce in his pupils right habits of mental action, and lay the foundation for high culture. By devoting himself to the personal training of a comparatively small number for a series of years, he hoped to contribute his share toward elevating the scholarship of the country.

He was fond of social intercourse, and delighted in athletic sports. If his pupils found him in the school-room stimulating, exacting, impatient of idleness and deception, and intolerant of meanness, they knew that in the gymnasium, on the river, or the play-ground, he was the enthusiastic yet wise leader, the genial and instructive companion. The beauty of his life in the home circle, his tender sympathy for the suffering, and his labors for the ignorant and the unfortunate, were such as might be expected, when one naturally amiable and generous is controlled and animated by Christian faith and love.

DEATH OF MR. JOHN P. BRACE.

John Pierce Brace, A. M., died in Litchfield, October 18, 1872. He graduated at Williams College in 1812, with high honors; was fitted thoroughly in the studies of the three professions, law, medicine, and theology, and could have entered any one with honor; was learned in ancient and modern history; in mineralogy, botany, entomology, and various other branches; was for several years editor of the Hartford Daily Courant. He never wrote any scientific or scholastic work, such as he easily might, but left his record and work in the minds of thousands whom he educated, and who still love his memory.

As teacher in the famous Litchfield Academy, and afterward (1832) as principal of the Hartford Female Seminary, which, under his guidance, became equally celebrated, he trained many young ladies who have since become leading women in society, charities, or literature throughout the land. One of them, Mrs. H. B. Stowe, says: "Mr. Brace was one of the most stimulating and inspiring instructors I ever knew."

The last nine years he spent on the old homestead, in Litchfield, enjoying the treasures of his ample library and the society of friends.

DEATH OF PROFESSOR JAMES HADLEY.

In the comparatively early death of this great scholar and teacher, not only Yale College, but American scholarship, suffers loss.

This summary of his life and works is taken from the appreciative notices of President Noah Porter, D. D., and Professor William D. Whitney, Ph. D., LL. D.:

"James Hadley was born in Fairfield, Herkimer County, New York, March 30, 1821. His father was at the time professor of chemistry in the flourishing medical college at that place. At seven years of age, young Hadley entered the academy at Fairfield, under the charge of Rev. David Chassel, D. D., and continued until he entered Yale College. When he was nine years old he was afflicted with a white swelling upon his knee, the result of a casual injury, which was followed by a year and a half of severe suffering, and disabled him for life.

"From that time his life was that of a systematic and energetic scholar. He did not abandon play. Nothing could repress the exuberance of his spirits or the force of his bodily activity. He soon learned, with or without his crutch, to perform feats of surprising agility. But his papers show that as early as fourteen he began to map out the work of his days and weeks, and that his scheme of study was most liberal and involved severe effort. He edited a literary newspaper, furnishing the matter for entire numbers himself, and writing these out in the fair chirography which he acquired by self-schooling. These papers are still preserved, and abound in various and sprightly *jeux d'esprit* in prose and verse, on topics humorous and grave, such as all boys delight in. At the age of fifteen he picked up a Hebrew chrestomathy, and, with some help, taught himself the elements of the Hebrew language. At about this age he occasionally heard the recitations of his own class, and the scene is well remembered when this slender and delicate boy sat upon the knee of one of his classmates and heard the lesson through. None of us can doubt that he heard it thoroughly and keenly, and boldly scrutinized the work of his stalwart associates. A little later Dr. Chassel made him his assistant in hearing some of the classes. The next three years he served acceptably as a regularly elected assistant in the school. At the age of nineteen and a half he entered Yale College. * * * He applied for admission to the junior class. President Woolsey examined him in Greek, and after hearing him read a little and asking him a few questions, expressed his entire satisfaction. When the examination was finished he told him that he could take any position in the class which he might desire. Little did he think at that hour what a blessing had come to the college in this modest stranger who knocked at her door at the sixth hour; how this youth should be stimulated and refreshed by his own example and scholarship, and take the torch of Greek and other learning from his own hand to transmit it new-trimmed and replenished to another generation, so that when he should die he himself should say of him, "He was a great scholar, great for any part of the world." While in college, he pursued special studies in almost every term; in one term German, in another Spanish, in another the calculus, in another Hebrew, but was foremost in his class, which graduated in 1842. He remained a year as resident graduate, devoting himself especially to mathematical studies. During this year his attention was drawn to certain difficult problems in the mathematical journal then conducted by Professor Peirce, of Cambridge. These problems he solved with such ingenuity as to attract the attention of the distinguished professor, who has repeated the remark more than once, that he could not forgive Yale College for making the man professor of Greek who should have been the first mathematician of the country. The year following he entered the theological seminary, and remained two years, except that from September, 1844, to April, 1845, he acted as tutor in Middlebury College. In September, 1845, he became tutor in this college, and held that office till August, 1848, when he was appointed assistant pro-

fessor of Greek. In July, 1851, when President Woolsey resigned the professorship of Greek, he was elected his successor, and was married the 13th of August. In 1864 he was called to a severe affliction in the death of his brother, Professor Henry H. Hadley, a man of kindred genius, whom he greatly loved. In February, 1865, he was prostrated by an insidious disease which required release from all active service. In September, 1866, a surgical operation became necessary, which was followed by long-continued debility. In January, 1868, he began his college work again, perfectly restored as he thought, but with somewhat lighter labors. Early in the last college year he suffered from a cold, inducing a partial relaxation of the vocal organs. Early in the present year he suffered from a similar attack; but he regarded it as temporary, and still insisted that his constitutional force and capacity for work were unabated. A few weeks since a more active disease assailed him, to the repeated onsets of which he at last yielded, and on Thursday morning, November 14, he gently breathed away his life. These are the brief records of a most honored and useful career, in which has been matured and manifested a character of marked eminence and peculiarities.

"As a *scholar*, Professor Hadley was remarkable for the extent of his acquisitions. The enumeration of the many languages which he completely mastered, and the many others with which he was more or less familiar, is decisive of this. In the Greek and the Hebrew he was an adept. He was familiar with the Latin, and the principal modern languagues, including the Swedish; with Arabic and Armenian; with several Celtic languages, as Welch, Gaelic, and Irish; with the Sanskrit, and the different forms of the Gothic. Of late years he has given special and continuous attention to the sources and early forms of the English. It was no uncommon thing with him to devote a few weeks to the special study of the grammar and vocabulary of a language before unknown, and thus appropriate valuable material for his general studies in comparative philology. To most scholars the complete mastery of a single language is the work of many years and distinguishes the life. To it every other study is auxiliary at least, if not secondary. But for Professor Hadley to acquire a language was so easy, and the ends for which he studied language were so broad and comprehensive, that he seemed to be equally at home in many tongues, and to appropriate from many others all that was required for his purposes. In respect to every language which he commenced, he was inclined, however, not to stop with the amount of knowledge which would suffice for any immediate object, but to proceed to the mastery of whatever could be known. We hardly need add that in this extent of linguistic study he was uniformly exact.

"The variety of his knowledge was as remarkable as its extent. He was not only equally at home in several languages, each of a different family and type, which in itself is uncommon, but he was equally master of other branches of knowledge, some of them remote from language and philology. In the pure mathematics he had a special delight—being as a learner and teacher singularly rapid in his insight, clear in his discriminations, and ingenious in invention. At an early period of his public life, as we have seen, it was almost a matter of question whether he was not as well fitted for this science as for philology. In the multitude of his linguistic studies, he never abated his interest in the mathematics, and never forgot any problem which he had mastered. He watched with close and interested attention the progress of mathematical physics, and kept himself familiar with the decisive movements which have marked the progress of each of the sciences of nature. In chronology and history he was singularly pre-eminent. This was not surprising in view of his prevailing tastes and activities. * * * * * * *

"Of the American Oriental Society he was an acknowledged pillar from the first, and for the last two years has been its president. In the Philological Association the variety of his acquisitions and the reach and sagacity of his reflections in diverse spheres were most conspicuous. Whatever paper might be read, whether on the Semitic tongues or any of the Indo-European languages, ancient or modern, whether on Anglo-Saxon or the later English, whether the paper concerned matters of fact or attempted ambitious and fanciful speculation, whether the subject was known to have been familiar to him for years, or seemed remote from the range of his special studies, whenever Professor Hadley spoke, he spoke with authority, and was listened to with deference, because he spoke from certain knowledge and mature thought. * * *

"Variety of knowledge does not always indicate breadth of mind. Not a few men have extensive, exact, and various knowledge, who are narrow-minded men, inasmuch as their well-grounded positiveness within certain spheres seems to disqualify them from appreciating the facts or truths which lie beyond. Men of erudition and men of science are equally liable to this consequence of special studies, even when such studies cover a wide range. That Professor Hadley was in every sense a wide-minded man is evident from his equally sagacious comprehension of scientific truth, and sympathetic appreciation of literary perfection and beauty. His mind responded as readily to the splendid achievements of Faraday as to the refined sentiment and the finished diction of Tennyson. His knowledge of English literature in its most recent phases and productions, including the best works of fiction, was exhaustive. In critical judgment, exact memory, and appreciative enjoyment of modern English writers, he was surpassed by

few to whom literature is a specialty. His powers of poetic composition were of no mean order. His judgment on questions of common life, and his sympathies with men of humble acquisitions, both illustrated the same breadth of character. His knowledge of the many-sided and many-shaded tendencies of modern speculation, as well as of the grave questions of theological truth and practical duty, and his wise and well-considered conclusions in regard to these topics, were all significant of the same. His capacity to decide upon the proprieties of controversial discussion and his selection of felicitous diction were equally conspicuous. * * * * *

"Had Professor Hadley been brought in contact or comparison with European philologists he would have taken rank among the foremost scholars of his generation. We infer this from what we know of the acquisitions and works of philologists, living and dead, from his unquestioned competency to appreciate and criticise these works, and from the honor which he received from those American scholars who have achieved a European reputation. * * * * * * * *

"Professor Hadley, moreover, did not follow the German method of introducing himself to the world of scholars. He wrote no book for many years, and his grammar is avowedly based upon that of Professor George Curtius. Brief essays and papers, however able, do not readily attract the attention of foreign readers. Professor Hadley, like many of the scholars of England, preferred to acquire the knowledge which he desired to possess, rather than to recast it for the few English-speaking readers who were scarcely advanced enough to receive it. Moreover, he was so pressed with his duties in training his classes in elementary Greek, and now and then directing the researches of a more advanced pupil, that for years he had not the leisure to write a treatise. * * * * * * * * *

"Much was expected from him in the work of revising the New Testament, to which he applied his hand in a few pencilings as the last work of his life. Great importance was attached to his comprehensive knowledge of Hebrew and Greek, his scholarly insight, his candid and comprehensive judgment, and his mastery of compact and lucid diction. The suggestions which he would have made in the progress of this work would have testified to the scholars of the Old World that at least one great scholar and critic had been furnished by the New.

"The special field of his usefulness and of his fame has been as an *instructor*. In this field he has expended his best energies for others, and impressed himself strongly and permanently upon many thousands of young men. This was his chosen field, not merely because he was distinctly called to it as the appointed work of his life which he accepted as laid upon himself by his great task-master, but because he embraced it as the noblest calling to which he might aspire. The remark has often been made—what a pity and what a waste that a man like Professor Hadley, one of the foremost scholars of the country, should be doomed to teach elementary Greek to successive freshmen classes, when, if things were as they should be, he might have expended the treasures of his wisdom upon a few appreciative students, and the rest of his time in making fresh acquisitions. Not so judged Professor Hadley, dearly as he would have prized the leisure, and heartily as he would have enjoyed the appreciative sympathy and the forward zeal of maturer scholars. He knew the needs of young students and the defects of their elementary training too well; he estimated the power of his own personal faithfulness and influence too justly to be willing to forego this opportunity of usefulness as long as his strength would allow him to do elementary work. It was a great thing for this college that year after year, so long as he was the only professor of Greek, so many young men in the first term of their college life were brought in contact with a teacher of such splendid gifts and such exemplary thoroughness; a teacher who, though he might seem hard and exacting at first, was soon seen to be no more rigid than the truth of the science which he taught, and in whom the most exemplary fairness was always conspicuous; a teacher who was himself a copious fountain of exact knowledge, and whose dealings with his pupils exemplified the imperial attractions of impartial justice. As these pupils knew him better from week to week, their impressions of his wholesome rigor faded away, and love and honor took their place. When they came a second and a third term under his instructions, those whose esteem was worth possessing honored him as all ingenuous and earnest souls honor gentle wisdom. The few who, from time to time, enjoyed his special intimacy by reason of their advanced studies, sat at his feet with admiration and delight. Among these were some of our most eminent philologists, who weep with tears which they would not restrain, that he who was to them both brother and friend is snatched from their sight.

"Not only have his fidelity and patience been most useful to his pupils, but they have been wholesome in their indirect bearing upon his fellow-instructors, who could not but be reproved by his exemplary thoroughness, if they were not inspired by his unselfishness. Directly and indirectly they have taught the graduates of this college one of the most important lessons for this generation, that in the institutions of learning, patiently and skillfully to teach the elements of knowledge is a service to which distinguished genius and learning may be wisely and honorably devoted, and that to

disdain such service, or to seek to escape it, may indicate a spirit which is as superficial as it is selfish. Professor Hadley gave the sanction of his example most fully to the precept, 'He that is greatest among you, let him be your servant.' In this he showed both his greatness and his goodness. * * * *

"He was a practiced student of history; he was a consummate philologist. He was familiar with all that had been written by the most learned and the most acute of the modern antagonists of Christianity. He had been a student of theology, and was at home among the speculative objections of those who would assert or insinuate that no sensible man, who is abreast with modern thinking, can accept the supernatural Christ of the Christian history. I shall never forget, on an occasion when there was submitted to him an argument for his revisal, how emphatically and positively he assented to the position taken, that modern criticism must force the historic student to say: The Christian history is genuine or, at least, enough of it to oblige the critic to accept the alternative that the Christ of history, if not supernaturally commissioned, was either a conscious deceiver or romantically self-deceived. * * *

"The loss is indeed irreparable. None can feel this more sensitively and bitterly than myself, in the manifold responsibilities to which I have been called. I speak for my colleagues as well, who feel as keenly that one of the wisest and kindest of our circle has been taken from the sphere of activity which we had hoped he might fill for a score of years. It will be long before we forget him, or cease to remember him with tender and reverent affection. He has been with us for more than thirty years as a student and instructor. His is one of the brightest names among all those which this college has enrolled upon its annals. May his example and spirit remain with us for another generation! * * * * * *

"Such a loss is not one to be passed with a brief word of notice. Professor Hadley was one of the very foremost men in this community, of whom it had most occasion to be proud, and whom it has most reason to mourn; indeed, he was one of the foremost intellectual men of the time. In the departments where his strength lay he has not left his equal in the whole land, or anywhere among people of English speech. In every branch of mental labor to which he had turned his attention he excelled. In mathematics, which was the first subject of his college teaching, (at Middlebury,) he showed abilities which would have put him in the front rank of mathematicians; his studies in Roman law bore fruit in a series of lectures which were given with the high approval of educators here and at Harvard, and had been made part of the regular course in our law school; and he was under engagement to discuss the foundations of jurisprudence in one of the other schools of post-graduate study. But upon philology he had concentrated most of his labor, and here he was without a rival among Americans. His range of study was of the widest. Outside the ordinary circle of the classical and modern languages, Hebrew, Arabic, Sanskrit, Celtic, and Armenian were among those which he had acquired; in Hebrew, especially, he was a profound scholar. And these were with him no merely nominal and barren acquisitions. He was master of the methods and the main results of comparative philology, and he brought all his varied learning to bear upon any point in language that he would discuss, with a facility and philosophic power peculiarly his own. He had a most capacious, retentive, and ready memory, in both great and small; nothing he had once put away seemed ever to become lost or mislaid. Nor were his critical sagacity and his coolness and soundness of judgment less conspicuous; no man's opinion on a doubtful or controverted matter could carry greater weight with those who knew him. All this richness of learning and power of mind he brought to the aid of his specialty, the teaching of Greek. It is no disparagement to the many other excellent works of its class to say that his Greek grammar was the best and greatest ever produced in this country, if not in the world. As an instructor, he won the deep respect and affection, often the reverence, of those who came under his care; and not more for his extraordinary scholarship than for his kindness of heart and real interest in the improvement of his pupils. * * *

"The loss to the public of such a teacher and thinker, cut off in the very fullness of his manhood, is great indeed; to the college it is immense and irreparable. He was a main support and ornament of the institution to which his labors had been given for more than a quarter of a century. * * * * *

"In connection with the schools of post-graduate study, to which he was more and more devoting himself, he seemed to be entering upon a new and higher sphere of work, which would give his ability and acquirements a scope worthy of them; and there was not a university in the world that might not have envied Yale its Greek professor. He will be hardly less missed in the Philological Association, of which he was a vice-president, and at whose meetings his voice was heard among the oftenest and listened to with the most respect; and in the Oriental Society, of which he had been for two years the president."

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Connecticut was the twenty-fifth State in population, having 537,454 inhabitants within an area of 4,750 square miles, an average of 113.15 persons to the square mile. This population consisted of 527,549 whites, 9,668 colored, 235 Indians, and 2 Chinese. Of these 423,815 were natives of the United States, and 113,639 were foreign-born. Of the native residents of the State, 344,254 whites, 6,091 colored, and 153 Indians were born within its limits, while of the foreign residents, 12,443 were born in Germany, 70,630 in Ireland, and 13,001 in England.

School attendance.—According to Table IX, vol. 1, of Census Report, 99,663 persons attended school throughout the State, and of these 4,282 were foreign-born. The white male scholars numbered 50,696, and the white female scholars 47,792, an aggregate of 98,488 white scholars. The colored male scholars numbered 580, and the colored female scholars 564, an aggregate colored attendance of 1,144; 14 Indian males and 17 females (an aggregate of 31) also attended school.

Illiterates.—The number of inhabitants of all raees, 10 years old and over, unable to write was 29,616, (including 28 Indians,) and of these 23,933 were foreign-born.

Age, sex, and race of illiterates.—Of 2,530 white illiterates reported, from 10 to 15 years of age, 1,339 were males and 1,191 females; there were 2,710 white illiterates, between the ages of 15 and 21, and of these 1,266 were males and 1,444 were females; of 22,673 white illiterates, 21 years old and over, 8,990 were males and 13,683 were females, making an aggregate of 27,313 white illiterates for the State. Of 131 colored illiterates reported, between the ages of 10 and 15, 69 were males and 62 were females; of 213 colored illiterates reported, between the ages of 15 and 21, 83 were males and 130 were females; of 1,331 colored illiterates, 21 years of age and over, 627 were males and 704 were females; giving an aggregate of 1,675 colored illiterates for the State. Of the 28 Indian illiterates, 2 females were between the ages of 10 and 15, 2 males and 2 females between 15 and 21, 7 males and 15 females, 21 years old and over.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 1,917, having 695 male and 2,231 female teachers to instruct their 51,307 male and 47,314 female pupils.

Amount and source of educational income.—The total income of all the educational institutions was $1,856,279, of which $140,887 were derived from endowment, $1,227,889 from taxation and public funds, and $487,503 from tuition and other sources.

Public schools.—The income appertaining to the public (normal, high, grammar, graded and ungraded common) schools, for educating their 88,449 pupils, was $1,426,846, of which sum $409 were derived from endowment, $1,216,789 from taxation and public funds, and $209,648 from tuition and other sources.

Colleges.—The three colleges reported, with their 46 teachers and 765 pupils, had a total income of $134,643.

Private schools.—The 265 (private) day and boarding schools, with 430 teachers, 7,292 pupils, possessed a total income of $164,220, from endowment, tuition, and other sources.

Libraries.—The libraries of the State were, public 63, containing 285,937 volumes; no return of the private libraries was made.

The press.—The 71 periodicals issued in the State had an aggregate circulation of 203,725 copies, and an aggregate annual issue of 17,454,740 copies.

Churches.—The 826 church organizations reported in the State possessed 902 edifices with 338,735 sittings, and the church property was valued at $13,428,109.

Pauperism.—The paupers reported numbered 1,705, of whom 1,123 were native whites, 114 native colored, and 468 foreigners.

Criminals.—Two hundred and fifty persons were convicted during the year ended June 1, 1870, and 430 persons were in prison, June 1, of whom 278 were native and 152 foreign.

Age and sex of population.—Of the total population of Connecticut, 69,807 males and 69,155 females (138,962 aggregate) were from 5 to 17 years of age, (inclusive.) The number of persons 10 years old and over was 425,896, of whom 209,120 were males and 216,776 were females.

Occupations.—Of these ages, 159,460 males and 33,961 females (193,421 in all) were engaged in various occupations. Of these 193,421 occupied persons, 43,653 were engaged in agricultural pursuits, 38,704 in professional and personal services, 24,720 in trade and transportation, and 86,344 in manufactures and mechanical and mining industries.

Age and sex of working population.—Of the 193,421 employed persons, 3,657 males and 1,993 females (5,650 in all) were between the ages of 10 and 15; 144,239 males and 31,014 females (175,253 in all) were between the ages of 16 and 59; and 11,564 males and 954 females (a total of 12,518 persons) were 60 years old and upward.

MEMBERS OF THE STATE BOARD OF EDUCATION.

Ex officio.

His excellency Marshall Jewell, Hartford. His honor Morris Tyler, New Haven.

By appointment of general assembly.

George M. Woodruff, Litchfield.
Elisha Carpenter, Hartford.
Thomas A. Thatcher, New Haven.
William H. Potter, Mystic River.

Secretary of board.

Birdsey Grant Northrop, New Haven.

CITY SCHOOL OFFICERS.

City.	Name.	Title.
Hartford	Rev. C. R. Fisher	Acting visitor.
New Haven	Ariel Parrish	City superintendent.
Waterbury	C. B. Merrill and C. F. Elliott	Acting visitors.
Norwich	J. W. Crary	Acting visitor.
Middletown	Rev. C. H. Fay	Acting visitor.

SMITHSONIAN CONTINUATION LIBRARY

DELAWARE.

This State still remains without a superintendent of education, and there is no State official report of any matters connected with education, except the auditor's statement, printed in the journal of the house, which gives the details of the distribution of the school-funds to the several school districts. This distribution is still made upon the basis of the census of 1830. The legislature meeting but once in two years, the latest published statement is for the year 1870; but as there is little variation in the number of school districts, or the income arising from the fund, the statements are substantially the same from year to year.

The auditor, in his report of the distribution for 1870, evidently did not regard his account as being of any general interest, as he refrains from giving any totals, so that, whoever wishes to ascertain the facts, must laboriously add up the columns of figures extending over many pages of the report.

The school laws of the State, an abstract of which was given in the Report of the United States Commissioner of Education for 1871, leaves to each school district full and entire control of the educating of the children of the district; the only limitation being that a minimum amount of school tax, or contribution, as it is called, must be voted by the district, in order to entitle it to receive its quota of the State school-fund. All other matters relating to the schools are left absolutely with the inhabitants of the district, who have a school or do without one, as they choose, the effect being, as it is claimed by the progressive friends of public-school education in the State, that in those districts where the standard of education is low and the interest in schools small, there is no possibility of improvement, as there is no way of increasing the interest of the inhabitants in having better schools; so that, while Wilmington, a growing city, is making rapid advances in all matters that relate to free public schools, and while the same is true of other towns and communities, still many of the rural school districts in other parts of the State show little or no improvement during the past thirty years. The ratio of representation being also based upon the census of 1830, and being equally divided among the three counties of the State, affords little opportunity for the direct influence upon the general legislation of the State by the citizens of any one county, so that, notwithstanding the great increase in the population of New Castle County, which includes the city of Wilmington, its representation in the State legislature remains as established forty years ago. Any immediate improvement in the general State laws or system of education seems, therefore, improbable. The city of Wilmington, having procured a charter for a board of education two years ago, has been rapidly developing and perfecting its system of public schools.

THE SCHOOL-FUND.

The school-fund of the State is derived from the income arising from the investment of Delaware's share of the "surplus revenue" distributed by the United States to the several States, together with a portion of the proceeds arising from certain State fees and licenses.

The auditor's report in 1871 gives the following statistics for 1870:

In New Castle County there were raised, by contribution	$84,639 78
Received from State school-fund	$10,142 15
Number of districts	91
Number of schools in operation	150
Number of scholars	7,522
In Kent County there were raised, by contribution	$19,987 25
Received from State school-fund	$8,499 57
Number of districts	115
Number of schools in operation	96
Number of months in operation	800 months and 27 days.
Number of scholars	5,044
In Sussex County there were raised, by contribution	$9,740 13
Received from State school-fund	$11,500 20
Number of districts	177
Number of schools in operation	156
Number of months in operation	648 months and 22 days.
Number of scholars	6,452

WILMINGTON.

EXTRACTS FROM REPORT OF PRESIDENT OF BOARD OF EDUCATION.

The following extracts are from the report of Dr. William R. Bullock, president of the board of education, presented to the board March 25, 1872:

"GENTLEMEN: With the termination of my appointment as presiding officer recurs the duty of presenting a brief statement of the condition of the schools and of the operations of the present board.

SCHOOL STATISTICS.

"The number of school-houses is fourteen, the same as at the last report.

"The number of seats in all the buildings is 4,268, being an increase of 418; of these, the number of seats in the grammar schools is 862, and in the primary schools 3,406. The increased number of seats is due to the greater accommodation afforded by the new building No. 1. The room in the old building, formerly occupied by school No. 1, has remained vacant since the removal of the school.

"The average number of pupils belonging to all the schools is 3,503; of these, 566 are in the grammar schools and 2,937 in the primary schools.

"The following statement will afford an idea of the ages of the children attending school—correct for the time at which the inquiry was made:

"From six to twelve years of age, (inclusive,) 2,813; from thirteen to fifteen years, (inclusive,) 550; from sixteen to eighteen years, (inclusive,) 72.

"The largest monthly average of pupils belonging to all the schools (October) was 3,678, and the smallest monthly average for all the schools (June) was 3,305.

"The average percentage of attendance in all the schools was 90. For the grammar schools the average percentage of attendance was 94, and for the primary schools 89.

"The need of more ample school accommodation in the southern and southwestern parts of the city continues as at the last report. The board has not, however, been unmindful of these requirements, and has purchased a lot in the Second ward, south of the Christiana, for the sum of one thousand dollars. A building committee is charged with the provision of a plan for a building to be erected thereon. A suitable location in the southwestern part of the city has been carefully sought for, but as yet without definite result. This subject will remain an important one in charge of the succeeding board.

"The new school-house No. 1, on French street, was occupied on the 9th of October, 1871. The total cost of the building was $28,208.10, and the cost of furniture and apparatus $2,409.20; all of which was defrayed from the proceeds of a loan authorized by the legislature at its last session. This building, as the most recent and largest of our school edifices, has attracted general interest. It was sought to combine in it as many of the advantages which experience has suggested as conducive to the health of its occupants and the convenience and facility of conducting the exercises as a due regard to economy would allow. The furniture has been carefully selected with a view to durability, comfort, and sightliness. The number of seats provided is 546. The lower floor is occupied by a primary school for girls, the second by a grammar school for girls, and the third by a grammar school for boys. Apartments in the front of the building afford a repository for the books and stationery belonging to the board and a convenient office for the superintendent of the schools.

GRADING OF SCHOOLS.

"That the board might be informed at all times of the literary status of the children under its charge, the grading of the schools was a matter of primary importance. This could not be effected without establishing a definite system of instruction for all the schools. A programme of study was to be made out, demanding careful thought and experience, that no time should be lost while carrying forward the instruction in accordance with the best known methods and the requirements of the pupils. This schedule of study is now in the hands of all the teachers.

"Uniformity of studies involves, of course, uniformity in the books and apparatus of teaching used in the schools.

"A knowledge of the attendance of both teachers and scholars, of time lost by lateness, or absence from sickness or other causes, can be had only by a detailed and systematic record, made up from reports furnished by all the schools. The forms for these reports, and the school records to correspond, were to be made out and put in operation. The monthly reports of the superintendent to the board are the evidence of the successful working of this arrangement.

"Besides the attendance report, statements are rendered quarterly of the property under the care of the teacher of each school, and of its condition.

TEACHERS' INSTITUTE AND NORMAL SCHOOL.

"As the success of the school must depend upon the teacher, the improvement of teachers in scholarship and in the art of instruction has also received especial attention. A teachers' institute and a normal school were early established and have continued in successful operation.

"In the former, methods of teaching are discussed in a familiar manner; questions in great variety are proposed and answered, and essays are read on educational subjects.

"In the normal school, opportunity is given for the further prosecution of study in whatever branches may be desired by those who attend it.

"The institute is attended by all of the teachers, and the normal school by a considerable number.

"The advantages to be derived from the institute and normal school are already apparent in the school-rooms of those who attend them: better order, greater interest and attention on the part of the pupils, greater vivacity and efficiency on the part of the teacher.

"I think it may be truly said that at no time in the history of our schools has there been so great a desire and effort for improvement on the part of a considerable proportion of the teachers.

METHOD OF APPOINTING TEACHERS.

"That the schools, and the community through them, should not suffer from the slackness of teachers, the board very wisely determined to effect a radical change in the mode of appointing them. It is plain that, apart from moral fitness, scholarship and aptness in teaching and discipline are the proper criteria in the selection of teachers. It is accordingly ordered that re-appointments shall be made only after examination in the manner prescribed by the rules. Thus the studious and energetic may have the opportunity of obtaining the position to which honest effort and merit entitle them.

"The number of candidates examined for the position of teachers during the past year is seventy-seven. Of these thirty-one passed and eighteen were appointed. Of those appointed twelve were from our own city and six from other places.

"When teaching is looked to as a profession, it is the most mistaken economy to enter upon it without a broad and solid foundation upon which to build in the future. This premature action may cause many to remain in the primary departments and leave few to rise to honorable and useful positions in the more advanced grades. It is hoped that the competitive examinations, co-operating with the institute and normal school, will elevate the character of instruction in all our schools.

BOYS' GRAMMAR-SCHOOL.

"The new grammar-school for boys in school-house No. 1, under the charge of a gentleman (Mr. Barnum) as principal, is another new feature in the proceedings of the present board. This school, which is progressing favorably, is expected to afford, and does afford, an opportunity for study in departments beyond the scope of instruction in the other schools for boys. In it may now be pursued a course equal to that followed in most private academies, while it is capable of meeting any requirements likely to be made upon it hereafter.

GIRLS' GRAMMAR-SCHOOL.

"The excellent condition of the girls' grammar-school in school-house No. 4, under the direction of Miss Miller, also calls for a moment's attention. The studies of the first division of this school are of a grade equal to that adopted in many girls' high schools and normal schools in our country. I would mention, as worthy of the attention of the next board, the fact that the number of the pupils under a single teacher in this division is greater than in any of the other schools.

"I feel that we ought also to bear in mind the responsibility laid upon our superintendent in arranging the details of the changes desired by the board, and the labor and attention required to execute them, and desire that the hands of the superintendent may be upheld by the sympathy and assistance of the board in the proper execution of all the duties imposed upon him.

NIGHT-SCHOOLS.

"On the 28th of November, 1854, a permanent organization of citizens was formed for the purpose of carrying on a night-school, which had for some time previous been in operation. From the above date until last fall the association had continued in operation, quietly but usefully conducting through every winter a school which has been

numerously attended by young men whose daily pursuits debarred them from the advantages of the public schools. The expenses of the night-school were defrayed from voluntary contributions of benevolent citizens, aided by a small charge made to each pupil, and by a yearly contribution from the board of public education.

"The teachers had at all times been mainly derived from the corps of teachers of the public schools, aided by the personal attendance and assistance of members of the association. The ranks of the generous contributors have, however, been thinned by death, while age, infirmity, and pressing occupations have lessened the number of active participants from among the members. It was, therefore, highly opportune that during the past winter a proposition should have originated in the board to establish night-schools in different sections of the city, and to assume the control of the one which had been so long in operation.

"With the growth of the city, and especially its manufacturing interests, increases rapidly the number of those to whom the night-school would prove a blessing, and it is eminently proper that the board of public education should extend to them the advantages of its means and its organization.

"Of the night-school association the board has always been the generous ally, and will, I doubt not, prove more powerful and efficient as its successor in its field of labor. Four night-schools, under the charge of a special committee, have been conducted for varying periods during the past winter. They were held respectively in the basement of the Wilmington Institute, Pusey & Scott's building, (corner of Third and Tatnall streets,) Phœnix engine-house, (corner of Twelfth and King streets,) and Madley Chapel, (south of the Christiana.) It is proper also to recognize in this place the generosity which placed all of these buildings free of expense at the service of the committee.

"The committee report the number of pupils registered in all the night-schools as 275.

Total estimated expense	$685 40
Cash received for use of books	259 25
Cost per pupil, (approximative)	2 49

"The pupils manifested much interest in all efforts to improve their minds, and the teachers deserve commendation for the manner in which they performed their duties.

"The cost of tuition for each pupil, calculated upon the actual number of pupils in our schools at the present time, and including cost of books, fuel, repairs, interest, &c., has been for the past year $12.77. The cost of tuition simply, including books, $9.80; cost to each pupil for miscellaneous expenses, $2.97. Total value of city school property, as estimated by the treasurer, $173,395.20."

Dr. Bullock, from pressure of private business, declined a re-election to the board.

ORGANIZATION OF THE NEW BOARD OF PUBLIC EDUCATION.

The new board of public education elected Colonel Arthur H. Grimshaw president, and Joseph L. Kilgore, esq., secretary.

SUPERINTENDENT OF PUBLIC SCHOOLS.

When Mr. David W. Harlan was first appointed superintendent of schools he was required, in addition to his duties as superintendent, to act as principal of school No. 1, and as secretary of the board of education. As the members of the board gradually realized the importance and amount of the work devolving upon the superintendent, they have relieved him from all other cares, leaving him at liberty to devoté his whole time to the duties incident to his position.

NEW PRIMARY SCHOOL-BUILDING.

During the year the new school-building south of the Christiana, referred to in Dr. Bullock's report, has been completed, and will be opened for use January 30, 1873. This is a primary school, and will accommodate 300 pupils. This increases the number of public schools to 15.

INCREASE OF TEACHERS' SALARIES.

On December 9, 1872, the board voted to increase the salaries of the lower grade of teachers, the salary of 22 being raised from $300 per annum to $360, and that of 9 from $330 to $360. The question of increasing other salaries was postponed for future consideration.

The Saturday normal school has had an average weekly attendance during the year of 33 teachers, the whole number enrolled being 63. The interest and attendance are increasing.

SCHOOL NO. 1.—SCIENTIFIC LECTURES.

When the girls' school No. 1 was moved to the new building in French street, in October, 1871, a boys' department was added, and the number of teachers increased from 2 to 9. The school possesses new and well-selected apparatus for illustrating physiology, natural philosophy, and chemistry.

A series of lectures upon natural philosophy and chemistry was delivered during the winter by Colonel A. H. Grimshaw, president of the board of education, and a series of lectures upon botany was given in the spring by William Canby, esq.

FREE-HAND DRAWING TAUGHT IN PUBLIC SCHOOLS.

During the past year Bartholomew's system of free-hand drawing has been taught in all the public schools of Wilmington.

MUSIC.

Lessons in vocal music have also been given on one day in the week at each school, by Mr. J. N. Clemmer, who has received from each scholar one cent a week as compensation. The board have not yet decided to place vocal music upon the list of regular studies, and have made no provision for it other than having permitted Mr. Clemmer to teach in this way the past few months.

PRIZES OFFERED TO GRAMMAR-SCHOOL PUPILS.

Three prizes in each school, for excellence in scholarship, were offered to the scholars in the girls' grammar school and in the boys' grammar school. The value of these are $20, $18, and $12. They are awarded at the end of the summer term, and are to be given, for three years, by Mr. J. T. Heald and Mr. H. B. Seidel, citizens of Wilmington.

The improvement of the schools of the city has been most gratifying during the past year.

DOVER.

The academy which the Methodist Episcopal conference decided last year to build at Dover, upon land given by some of the citizens, has not yet been built, but the purpose is still held, and $35,000 of the proposed $100,000 have already been subscribed. A meeting in regard to it is now to be held, and a charter is to be asked from the legislature this winter; the trustees expect to be able to commence building during the coming year.

NEW CASTLE.

A brief account of the common lands left by William Penn and his heirs to the town of New Castle, for the purpose of the education of its inhabitants, was given in the report for 1871.

The statement of the trustees of the New Castle common lands, from March 25, 1871, to March 25, 1872, shows an annual income of about $10,000, with direct expenditures for school purposes during the year ended March 25, 1872, of $3,175.

EDUCATIONAL INSTITUTIONS.

The statistics of the Delaware College at Newark will be found in the table of college statistics at the end of this volume.

There are quite a number of chartered academies, and of private, select, and classical schools in the State; indeed, except in the grammar schools of Wilmington, there is little other opportunity for the children of the State to obtain any training above that of the district schools.

The list of such of these academies and private schools as have been obtained will be found in the statistical tables of institutions of secondary instruction.

EDUCATION OF COLORED CHILDREN IN DELAWARE.

No provision is made for the education of colored children by either the State or town authorities.

A benevolent society, called "the Delaware Association for the Moral Improvement and Education of the Colored People," whose headquarters are at Wilmington, has been for the past few years aiding the efforts of the blacks to obtain schools for their children. The following account of the work of the society during 1872 has been prepared for this report by the efficient actuary of the society, Miss Abbie Peckham, of Wilmington.

STATEMENT.

The withdrawal of assistance by the Freedmen's Bureau at Washington, as well as by the friends of general education, (including a donation, continued for some years, from the patrons of the cause in England,) has been felt seriously in carrying on our work for the past two years. Almost entirely cut off from all the sources from which our income had hitherto been drawn, we have been obliged to depend, in a great measure, upon localities where schools already existed, or have since been established, for their pecuniary support. We have, however, received an appropriation from the city of Wilmington, through the board of public education, to the amount of $1,000, during 1872.

NUMBER OF SCHOOLS IN CHARGE OF THE ASSOCIATION.

The past year, eighteen schools, including the Howard School at Wilmington, have been under the supervision of this association. They were located as follows: Wilmington, Seaford, Smyrna, Christiana, Odessa, Milford, Laurel, New Castle, Milton, Newark, Summit Bridge, Mount Pleasant, Dutch Neck, Slaughter Neck, Frederica, Fieldsborough, Middleton, and Concord.

The length of the school term varied in different localities from two to nine and one-half months, according to the pecuniary ability of the people and their interest in education.

Twenty-one teachers were employed, all females except one, and all colored except the principal of the Howard School in Wilmington.

WORK OF THE ASSOCIATION.

This association has aided in the selection of teachers, provided a supply of suitable school-books at cost prices, and paid toward the salaries of teachers, outside of Wilmington, sums varying from $3 to $8 per month, according to the need of schools at different localities. In Wilmington, salaries of the teachers of the Howard School have been paid entirely by the association.

NUMBER OF SCHOLARS

In the month of January, 1872, the total enrollment in all our schools was 984, and the average attendance 858.

Of the total enrollment, 824 were reading and spelling, 756 writing, 445 studying arithmetic, 445 geography, 63 grammar, and only 160 were in the alphabet and primer.

Estimating the changes which have occurred on our rolls, we find that about 1,500 different pupils have been taught in our schools the past year.

Of this number, about two-thirds were males, and nearly one-half were over sixteen years of age.

Except in a single case, the actuary has visited each school at least once during the term. Those most convenient have been seen more frequently.

The amount collected and expended by the association for teachers' and actuary's salaries, rent of office, purchase of school-books, &c., has been about $2,500.

The amount collected and expended by the colored people for the board and salaries of teachers, and the purchase of school-books, has been about $2,400, which does not include incidental expenses of fuel, repairs on school-houses, &c.; the total expenditure for the year in the prosecution of the work being over $5,000.

INCREASED INTEREST IN SCHOOLS SHOWN BY COLORED PEOPLE.

The colored people have manifested an increased willingness and ability to assist in the support of their schools, the amounts voluntarily contributed by them toward the salaries of teachers having shown a gradual increase. At the commencement of the association's labors in 1867, they paid nothing toward salaries, and in some cases not the teachers' board. They now, in all cases, pay the board and part of the salary, their contributions having risen from a range of $6 to $9 per school per month in 1870–'71, to a present range of $6 to $15.

Throughout the State there is a marked decrease of unfriendliness toward our work exhibited by the white people. This is evident from the more friendly feeling manifested toward our teachers, and by an increased disposition to assist the colored people in securing their portion of the funds necessary.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Delaware was the thirty-fourth State in population, having 125,015 inhabitants within an area of 2,120 square miles, an average of

58.97 persons to the square mile. This population consisted of 102,221 whites and 22,794 colored. Of these 115,879 were natives of the United States, and 9,136 were foreign-born. Of the native residents of the State 74,540 white and 20,214 colored persons were born within its borders, while of the foreign residents 1,142 were born in Germany, 1,421 in England, and 5,907 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 19,965 persons attended school, and of these 205 were foreign-born. The white male scholars numbered 9,862 and the females 8,908, (an aggregate of 18,770 white scholars.) The colored male scholars were 663, and the female 532, (an aggregate of 1,195.)

Illiteracy.—The number of inhabitants of all races, 10 years old and over, unable to write, was 23,100; of these 2,469 were foreign-born.

Age, sex, and race of illiterates.—Of 1,878 white illiterates reported, from 10 to 15 years old, 1,045 were males and 833 were females; 1,370 illiterate whites between the ages of 15 to 21 (inclusive) were reported, and of these 718 were males and 652 were females; of 8,032 illiterate whites reported, 21 years old and over, 3,466 were males and 4,566 were females. Of 1,785 colored illiterates, from 10 to 15 years old, 925 were males and 860 were females; of 2,065 colored illiterates, 15 to 21 years old, 1,054 were females and 1,011 were females; and of 7,970 colored adult illiterates, 3,765 were males and 4,205 were females.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 375, having 147 male and 363 female teachers, (total, 510 teachers,) and a total of 19,575 pupils, 9,093 males and 10,482 females.

Amount and source of educational income.—The total income of all the educational institutions was $212,712, of which $120,429 were derived from taxation and public funds, and $92,283 from tuition and other sources.

Public schools.—The 326 public schools, with 388 teachers, (107 male and 281 female,) possessed an income of $127,729 for the education of their 16,835 pupils, (7,694 male and 9,141 female,) of which income $120,429 were derived from taxation and public funds, and $7,300 from tuition and other sources.

Colleges.—The two colleges reported, with their 15 teachers (7 male and 8 female) and 137 scholars, (17 male and 120 female,) had a total income of $18,350, derived from tuition and other sources.

Academies.—The 9 academics, with 48 teachers (25 male and 23 female) and 722 pupils, (463 male and 259 female,) had a total income of $35,200, derived from tuition and other sources.

Private schools.—The 14 private (day and boarding) schools, with 24 teachers (4 male and 20 female) and 482 scholars, (223 male and 259 female,) had a total income of $11,572, derived from tuition and other sources.

Libraries.—There were 252 public libraries, containing 92,275 volumes, and 221 private libraries containing 91,148 volumes, making a total of 473 libraries, containing 183,423 volumes.

The press.—The 17 periodicals issued had an aggregate circulation of 20,860 copies, and an aggregate annual issue of 1,607,840 copies.

Churches.—Of the 267 church organizations reported, 252 had edifices with 87,899 sittings, and the church property was valued at $1,823,950.

Pauperism.—Four hundred and fifty-three paupers were reported, of whom 223 were native whites, 180 colored, (native,) and 50 foreigners.

Crime.—Of 66 persons in prison June 1, 1870, 13 were native whites, 44 colored natives, and 9 were foreigners; 145 criminals were convicted during the year.

Age and sex of population.—Of the total population of Delaware, 39,807 persons were from 5 to 17 years old, (inclusive;) of these 20,185 were males and 19,622 females; 92,586 persons were 10 years old and over, and of these 46,274 were males, and 46,312 females.

Occupations.—Forty thousand three hundred and thirteen persons of these ages (34,306 males and 6,007 females) were engaged in various occupations; 15,907 males and 66 females (15,973 persons) were engaged in agricultural pursuits; 11,389 persons (6,615 males and 4,774 females) in professional and personal services; 3,347 males and 90 females in trade and transportation; and 9,514 persons (8,437 males and 1,077 females) in manufactures and mechanical and mining industries.

Age and sex of working population.—Of these 40,313 employed persons (2,181 males and 1,231 females) a total of 3,412 were between the ages of 16 and 59, inclusive, and 2,575 persons (2,323 males and 252 females) were 60 years old and over.

FLORIDA.

[From report of Hon. Charles Beecher, State superintendent of public instruction, for the year ended September 30, 1871.]

PROGRESS OF FREE SCHOOLS.

The year between September 30, 1870, and October 1, 1871, may be described as, on the whole, a year of progress, in spite of checks and hinderances. The system of free schools on its adoption the previous year appeared, in the language of Mr. Chase, then superintendent, "to have reconciled, for the first time in the history of the educational legislation of the South, the extreme views of conflicting parties and interests."

PRESENT OUTLOOK OF THE SYSTEM.

Instead of fifteen counties that failed the year previous to levy a school tax, we have to report but four. Instead of thirteen counties wanting organized boards of public instruction, we have only one. Instead of eleven counties wanting superintendents, all but two are now supplied. Instead of 250 schools, with 7,500 pupils, we report 331 schools, with 14,000 pupils. Such an advance would be creditable in a year when circumstances were favorable; much more, occurring in a year when such serious causes of hinderance existed.

The conduct of the people of the State in regard to taxation for schools has been praiseworthy. Although the law limited the rate of taxation to one mill, several counties assessed a tax of one and a half mills, and the people paid cheerfully. Although the subject of taxation has been misunderstood, though financial embarrassment, losses, and impoverishment have weighed heavily upon the community, yet there appears to have been a willingness on the part of the people, with comparatively few exceptions, to be taxed for the support of schools. The returns from the several counties are incomplete.

SCHOOL TAXATION AND REVENUE.

The amount collected is shown to be about 82½ per cent. of the amount assessed. Allowing the same rate of loss in collecting the State tax of one mill, or 17½ per cent., we have $28,516.43 as the approximate amount. Adding this to the amount raised by the counties, we have a total of $70,284.07 raised by taxation for the support of schools. In addition to this, much has been done to aid the work by private contributions among the patrons, of which our reports are very meager. In eight counties the sum of $8,777 has been thus given, over and above the taxation—either in land, rents, board of teachers, or money.

SCHOOL POPULATION AND ATTENDANCE.

The whole number of youth in the State between the ages of 4 and 21 is 62,869. The number enrolled in schools is 14,000. Four-fifths, nearly, of those between 4 and 21 remain as yet unreached by the system. In a State like Florida, however, the proper school age would be between 5 and 17. On this basis the proportion enrolled in schools would probably be much greater, and considering the newness of the system, the sparseness of the population, and the limited means at our disposal, it is encouraging to have already reached with the benefits of education one-fifth of the children of the State. At the same time the spectacle of four-fifths of the youth of the State growing up in ignorance should spur us on to greater efforts, and demonstrate to all the absolute necessity of providing for the payment by the State of the interest on the school-fund.

LENGTH OF SCHOOL—TEACHERS' SALARIES.

The average duration of schools has been four and two-thirds months. The average salary of teachers, $30 per month.

SEMINARIES.

It would be pleasant to speak of the prosperous condition of the schools now in operation, especially of the East and West Florida seminaries, now so ably conducted by experienced instructors, and numerously attended. We are compelled, however, to

defer these until our next report. The attention of the legislature is called to the fact that the seminary at Tallahassee is now under the care of the Leon County board of public instruction, while the other, at Gainesville, is independent of the State system.

It is also to be stated that when the West Florida seminary closed, previous to placing itself under the county board of public instruction, the trustees were unable, from causes beyond their control, to pay the instructors' salaries. Much inconvenience and suffering have been the result, to a corps of teachers of high character, who had faithfully discharged the duties assigned them. It is recommended that an appropriation be made to pay these claims in full.

SCHOOL LAW, WITH PROPOSED AMENDMENTS.

The school law, as a whole, has worked well, and has commended itself increasingly to the confidence of the people. A few slight amendments have been suggested as desirable to obviate defects and perfect the system.

1. It is recommended that county boards of public instruction be limited to three members. Thus their efficiency will be increased and expense diminished. 2. It is recommended that the census of youth be taken by the superintendent of schools once in five years. This will fall in with the regular duties of the superintendent, leading him to a more thorough visitation of the county, and will diminish the expense, while giving more reliable results. 3. It is recommended that the clerk of the court be required to report quarterly all fines to the superintendent of schools, and in case of neglect or refusal, be made to pay a fine equal to the whole amount.

TEXT-BOOKS.

Great difficulty has arisen from the want of a uniformity in the text-books used. The regulations provided for the use of a graded series of text-books, but the trouble has been that many families were too poor to provide their children with suitable books. The consequence has been that the pupils bring to school a most miscellaneous collection. There is no uniformity observable in the use of any work, except perhaps Webster's Elementary Spelling-Book. The question arises whether, in this condition of affairs, it is not incumbent upon the State to furnish the text-books for the use of pupils in need of such aid, leaving those who desire to do so to furnish their own books.

The following additional facts are from the report of the Hon. Charles Beecher, superintendent of public instruction, for the year ended September 30, 1872:

INCREASING INTEREST IN SCHOOLS.

"During the past year many circumstances have existed unfavorable to the progress of education. The failure of the crops, the imperfect collection of revenue, the inadequacy of legislative appropriations, the excitement of the presidential and State elections, with other causes which need not be mentioned, have tended in some degree to embarrass the efforts of the friends of common schools.

"It is an evidence of the inherent vitality of the system, and of the increasing hold it is gaining upon the popular mind, that, in spite of these obstacles, a manifest advance has been made, both in the number of schools, the aggregate of pupils, and in the number and qualifications of the teachers employed.

SCHOOLS AND ATTENDANCE.

"In my last report, the whole number of schools in the State was given at 331. The establishment of 113 additional schools raises this number to 444, an increase of more than one-third. The aggregate of pupils has also increased from 14,000 to 16,258. The ratio of pupils enrolled in the common schools last year was about one-fifth of the youth between 4 and 21. This year it is over one-fourth. If it is saddening to reflect that three-fourths of the youth of the State are yet unreached by the educational system, it is surely encouraging to know that the ratio is so rapidly changing. A similar rate of increase, could it be secured, would in less than twenty years enroll every child in the State in the public schools.

SCHOOL-FUNDS.

"The interest on the common-school fund apportioned among the several counties the past year amounted to $15,784.53. It is impossible to say what the warrants for this amount have realized. If 60 cents on the dollar be taken as the probable average value, the amount would be $9,470.80. From the extremely defective character of the returns, it is impossible to state with precision the amount raised by taxation in the

several counties. Including the one mill constitutional tax the amount may be estimated at about $75,000 00
Add to this private contributions, about 10,000 00
Received from the Peabody fund 7,350 00
Interest on school-fund 9,470 80

And the total amount is 101,820 80

"This divided among all the children of the State is at the rate of $1.64 per head.

AID FROM THE PEABODY FUND.

"The aid derived from the Peabody fund is of peculiar value, because it is so distributed as to sustain schools for about ten months in places where they become models of what good schools ought to be. The following is a list of places so benefited:

Saint Augustine	$1,300
Tallahassee	1,000
Gainesville	1,000
Key West	1,000
Monticello	700
Pensacola	600
Lake City	500
Tampa	450
Quincy	300
Ocala	300
Appalachicola	200
	7,350

STATE AGRICULTURAL COLLEGE.

"On the 20th day of March, 1872, in accordance with the law establishing the Florida State Agricultural College, approved February 17, 1872, Hon. Charles Beecher, Hon. J. T. Walls, Hon. W. D. Bloxham, Hon. Robert Meacham, Hon. John Varnum, and J. S. Adams, of the corporators named in said act and constituting a majority thereof, assembled in the office of the superintendent of public instruction, in the capitol, at Tallahassee, and perfected the organization of said corporation by electing officers as follows:

"Hon. Charles Beecher was chosen president, Hon. W. D. Bloxham was chosen vice-president, J. S. Adams was chosen secretary and treasurer, and J. S. Adams, John Varnum, Robert Meacham, J. T. Walls, and Peter Knowles were chosen to serve as an executive committee."

EAST FLORIDA STATE SEMINARY.

This seminary comprises three departments—primary, preparatory, and collegiate. Tuition in all the departments is free. The male department is arranged with a view of giving young men a practical education, and preparing them to enter the freshman, sophomore, or junior class in any college or university.

PEABODY FUND.

The sixth report of the agent of the fund contains the following with regard to Florida: "The public-school system of this State, during the three years of its history, has had unusual difficulties to contend with. The simple fact that it survives these hinderances, and even makes steady advances, is in itself a proof of its excellence as well as vitality. The number of pupils is nearly twice as many as it was the previous year. The number of counties which failed to levy a school tax is only four, whereas it was fifteen the year before. Some counties taxed themselves two or three times as much as the law required, yet there was no complaint. The total amount of taxes actually collected was a little over $70,000. Besides this, about $60,000 interest on the school-fund have been nominally distributed to the counties, but it was in the State bonds, which are worth only 33 cents on the dollar.

"*Attendance.*—The number of children of school age is 67,869, of whom a little more than one-fifth are enrolled in the public schools. The average length of these schools, 331 in number, is 4⅔ months.

"*Expenditures.*—During the past year something over $7,000 was expended from the fund in aiding the schools of twelve cities and towns."

The superintendent of Key West writes: "The schools have done much toward eradicating the prejudice formerly existing among the better classes against the system of free schools."

WASHINGTON COUNTY.

A letter from W. Lumpkin Raly, of Vernon, Washington County, contains the following statements in regard to education in that county:

"The board of public instruction for this county was organized in July, 1869, and a county superintendent was appointed by the governor. This officer traveled over the county and reported sixteen sites where schools could be located. The board then attempted to start schools under the direction of Mr. C. T. Chase, then State superintendent. It however proved impracticable, until the board of county commissioners announced that they would raise money to pay one-half the tuition for the first three months, leaving the patrons to pay the other half. The next impediment was a want of teachers, (something yet needed.) About half the schools in the county started under these auspices.

"No public money was received for distribution during the next year—1870—and the course of the schools dragged heavily on. Mr. Chase died, and public schools began to be spoken of as a farce. Only two or three schools were kept up in this county, and they by the patrons alone.

"In the spring of 1871, after the Rev. Charles Beecher entered upon the duties of his office as State superintendent, the board again met, new inducements and reasons for encouragement were held out, and the educational interests of the county assumed a new aspect.

"Up to the time at which this account commences, there had never been anything meriting the name of academy or normal school. The schools were kept in small cabins, out-houses, and sometimes in dwellings, by itinerant teachers, who scarcely ever professed to teach anything higher than Webster's spelling-book, and arithmetic as far as compound numbers. In 1869 the first frame school-house in Washington County was built, near Vernon, the county seat, and another at the village of Orange Hill. In these schools arithmetic, geography, and kindred branches are taught. Two academies are now in process of erection. Several young men, natives of the county, who have obtained an education in neighboring counties, expect to teach in the schools of our county."

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Florida was the thirty-third State in population, having 187,748 inhabitants within an area of 59,268 square miles, an average of 3.17 persons to the square mile. This population consisted of 96,057 whites, 91,689 colored, and 2 Indians. Of these, 182,781 were natives and 4,967 were foreign-born. Of the native residents of the State, 52,594 whites, 56,960 colored and Indians were born within its borders; while of the foreign residents 597 were born in Germany, 399 in England, and 737 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 12,778 persons attended school, and of these 21 were foreign-born. The white male scholars numbered 4,195, and the females 4,059—total, 8,254. The colored male scholars numbered 2,241, and the females 2,283—total, 4,524.

Illiteracy.—The number of inhabitants of all races, 10 years old and over, unable to write, was 71,803, of whom 568 were foreign-born.

Age, sex, and race of illiterates.—Of the 18,904 white illiterates reported, 5,083 (2,691 males and 2,392 females) were from 10 to 15 years old; 4,345 (2,146 males and 2,199 females) were from 15 to 21 years of age; and 9,476 (3,876 males and 5,600 females) were 21 years old and over. Of the 52,894 colored illiterates reported, 7,703 (4,190 males and 3,513 females) were from 10 to 15 years old; 10,333 (4,957 males and 5,376 females) were from 15 to 21 years of age; and 34,858 (16,806 males and 18,052 females) were 21 years old and over. Five male Indian illiterates, 21 years old and over, were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 377, having 482 teachers, (254 males and 228 females,) and a total of 14,670 pupils, 6,788 being males and 7,882 females.

Amount and source of educational income.—The total income of all the educational institutions was $154,569, of which $6,750 were derived from endowment, $73,642 from taxation and public funds, and $74,177 from tuition and other sources.

Public schools.—The 226 public schools throughout the State, with 265 teachers, (169 males and 96 females,) possessed an income of $76,389, for the education of their 10,132 pupils, (4,674 males and 5,458 females,) and of this income $4,000 were derived from endowment, $61,552 from taxation and public funds, and $10,837 from tuition and other sources.

Academies.—The 10 academies reported, with 32 teachers (16 male and 16 female) and 580 pupils, (318 males and 262 females,) had a total income of $11,005, of which $2,100 were derived from endowment, $4,870 from taxation and public funds, and $4,035 from tuition and other sources.

Private schools.—The 135 private day and boarding-schools, with 167 teachers (67 males and 100 females) and 3,493 pupils, (1,633 males and 1,860 females,) had a total income of $61,015, of which $7,220 were derived from taxation and public funds, and $53,795 from tuition and other sources.

Libraries.—There were reported 75 public libraries, with 25,374 volumes; also 178 private libraries, with 87,554 volumes, making a total of 253 libraries, containing 112,928 volumes.

The press.—The 23 periodicals issued had an aggregate circulation of 10,545 copies, with an aggregate annual issue of 649,220 copies.

Churches.—Of the 420 church organizations, 390 had edifices, with 78,920 sittings, and the church property was valued at $426,520.

Pauperism.—One hundred and forty-seven paupers were reported, of whom 80 were native whites, 62 native colored, and 5 foreigners.

Crime.—Of 179 persons in prison June 1, 1870, 20 were native whites, 156 native colored, and 3 foreigners; 335 persons were convicted during the year.

Age and sex of population.—Of the total population of the State, 63,897 persons were from 15 to 18 years of age, and of these 32,873 were males and 31,024 females; 131,119 were 10 years old and upward, and of these 65,673 were males and 65,446 were females.

Occupations.—There were 60,703 persons of these ages engaged in various occupations, and of these 50,877 were males and 9,826 females; 42,492 persons were engaged in agricultural pursuits, and of this number 36,944 were males and 5,548 females; 10,897 were engaged in professional and personal services, 6,892 males and 4,005 females; 3,023 were engaged in trade and transportation, 3,016 male and 7 females; 4,291 were engaged in manufactures and mechanical and mining industries, of whom 4,025 were males and 266 females.

Age and sex of working population.—Of these 60,703 employed persons, 4,107 males and 1,100 females (5,207 in all) were from 10 to 15 years old; 44,262 males and 8,450 females (52,712 in all) were from 16 to 59 years old; and 2,508 males and 276 females (2,784 in all) were 60 years old and over.

GEORGIA.

[From the report of the State school commissioner, Hon. Gustavus J. Orr, made July 17, 1872.]

CONDITION OF EDUCATION.

The commissioner says: "The utter lack of school-funds and that provision of the school law, passed at the last session, which postpones the decision of the question of local taxation till the fall term of the respective superior courts, have prevented the inauguration of schools very generally throughout the entire State."

SCHOOL LAW.

The commissioner, after a statement of the condition of the school finances of the State, proceeds to consider the defects of the present school law. Some of the changes in the school-law recommended by the commissioner are as follows: "Let a new section be prepared, giving to the county board of each county the power to authorize the levy of a tax upon the property of the county, for the support of primary schools, that is schools in which there shall be taught the following branches of learning: spelling, reading, writing, English grammar, arithmetic, and geography, and making it their duty to authorize the levy of said tax, whenever they are satisfied, by having submitted the question to a popular vote, or in any other way, that the people of the county desire the tax to be levied.

"For supporting a system of graded schools ranging from the primary to the classical and mathematical high school in any sub-district of a county, let the same board have the right of authorizing the levy of a tax upon the property of the sub-districts, to be exercised when satisfied, by the same means as has already been suggested in the case of the primary schools, that it is the wish of the people of the sub-districts. And when pupils residing without the limits of the sub-district may attend such a school let them be required to pay such rates of tuition as may be fixed by the county board.

"This provision will fully meet the wants of the villages and larger towns, and render special legislation unnecessary, except in the case of the large cities.

"Let the same section provide also for the building of school-houses, giving the county board authority to have them built, either by the voluntary labor of the citizens of the sub-district to be served, or by a tax on the property of the sub-district.

"And when the latter method is adopted, let the law provide that any tax-payer may work out the amount of his tax, if he desires to do so, at such rates of compensation for his labor and under such supervision as the county board may prescribe.

"As indicated in the foregoing recommendation, I am firmly persuaded that to make our public-school system successful, it must be mainly sustained by local taxation, levied by the voluntary action of the people.

A GENERAL PUBLIC-SCHOOL SYSTEM.

"I think it our true policy to make the public-school system as general as possible throughout the State, and am not inclined to recommend anything that would militate against that policy. If the general assembly should think that there are localities in the State where it is altogether impracticable to establish public schools, it would perhaps be advisable to give the county board the power to levy a tax in such counties for the education of the indigent; to decide, from the best sources at their command, who shall be the beneficiaries of this fund, and to fix the compensation which the teachers shall receive for their services. It would also be well to require private teachers in such cases to stand the same examination and have their accounts accredited in the same manner as the law prescribes in the case of the teachers of the public schools before they shall be entitled to receive compensation for their services.

PREJUDICES TO BE REMOVED.

"I know that there are prejudices in the minds of many of the people of our State against the public-school system. Yet I feel confident, if the general assembly will frame and adopt a new law, retaining whatever is good in the old, and incorporating the improvements herein suggested, that we shall be able gradually to introduce and establish a system which will be found practicable and adapted to the condition of our people. Organization, supervision, and the advantage arising from grading pupils, will make the public schools so much better and cheaper than any system of private schools can be, that they will assuredly, by their intrinsic merits, work their own way to successful establishment, if we can only have the patience to give them a fair trial.

Objections have been made, and will still be made, on the ground of the taxation necessary to sustain the system; but when men are brought to understand that in the great increase in the value of property in all communities where good schools are established; in the diminution of crime, and the consequent lessening of the cost of providing the appliances for its punishment and suppression; in the increased security of the rights of property wherever intelligence is generally diffused; in the vastly increased productiveness of every kind of labor, resulting from educated skill in the laborer, and in the stability and perpetuity of political institutions resting upon the basis of virtue and intelligence in the people, the property-holder is interested, and in exact proportion to the amount of property owned, these objections will cease to be raised."

PEABODY FUND.

Of this State the agent of the fund writes as follows: "The school laws have been modified the present year, but they are still imperfect. A competent judge said in a letter written soon after the change was made: 'Our legislators were much behind the general sentiment of our people on the subject. But we shall have a good law and good schools soon.' The commissioner, in an official paper issued April 17, 1872, represents the school fund as in a very unsatisfactory state. Of the $327,000 which had been paid into the treasury October 1, 1871, $242,000 were diverted from the legitimate object. The policy of incurring a debt of more than $300,000 to establish schools was adopted. 'The counties,' he says, 'may rest assured that there is no hope of aid in school operations the present year from the State.'

"We reported last year that the public schools of Savannah had become self-supporting. We can now say the same of Columbus. Such examples show that the Peabody fund does not tend to perpetuate the want which it seeks to relieve. The schools of Atlanta, Augusta, and Brunswick have been assisted with $5,600; the sum of $800 has been given to the colored normal school at Atlanta; and two districts have received $300 each; making $7,000 in all."

PUBLIC SCHOOLS OF LINCOLN COUNTY.

The first impression of public opinion in this county was decidedly favorable to the cause of public education. But when it was discovered that the State only proposed to maintain the schools three months in the year, with the probability of not being able to do even that, many were disposed to deprecate the meager allowance and to treat the whole system with contempt. A change, favorable to the system, is taking place among the people in reference to taxation by the county, and the county board has recently levied a tax of 50 per cent. on the State tax.

The first and most important reform needed is good and comfortable school-houses, which are wanted in nearly all the districts. The difficulty of procuring sufficient competent teachers will be for some time an impediment to the success of the system, and this fact should urge the legislature to establish one or more normal schools in the State. The necessity and obligation of extending the means of education to the black race are beginning to be very generally appreciated, and in most of the districts the trustees are preparing to open schools for their benefit.

WESLEYAN FEMALE COLLEGE.

This institution was formerly known as the Georgia Female College. In 1844, under a reorganization, the name was changed to Wesleyan Female College. The whole number of graduates since organization is 912.

GREENESBOROUGH FEMALE COLLEGE.

The course of instruction includes four departments—primary, preparatory, academic, and collegiate. Young ladies not desiring to graduate may pursue an eclectic course.

LE VERT COLLEGE.

Le Vert Female College has been in successful operation since 1856. It is endowed with authority to confer degrees, and possesses all the rights and privileges of the most favored female institutions.

SOUTHERN FEMALE COLLEGE.

This is one of the oldest institutions of its class in the South. There have been 250 graduates since the first organization. The college buildings were destroyed by fire in 1863, but the organization of the college was kept up, notwithstanding serious embarrassments, till 1871, when the present college edifice was erected. This institution is conducted as a private enterprise.

MOORE'S ATLANTA ACTUAL BUSINESS COLLEGE.

The object of this institution is to qualify young men for the duties of actual business life. The time required for the complete business course is from eight to sixteen weeks.

GEORGIA INSTITUTION FOR THE DEAF AND DUMB.

The progress of the pupils is highly satisfactory, and the institution is in a flourishing condition. Limit of age of pupils, 7 to 27. Time allowed for course of instruction, six years. It is recommended that where pupils display special ability, they be allowed an additional course of four years.

ATLANTA MEDICAL COLLEGE.

The trustees and faculty announce that this institution enters upon its fourteenth annual session under the most flattering auspices, and its success and permanency are now assured. Under the provision of a law of the State, by which a donation was made toward the building and apparatus of the college, one student from each congressional district of the State is admitted free of charge for professors' tickets. The faculty has determined to extend this gratuity to one additional young man from each congressional district of Georgia, and to one from each congressional district of other States.

SAVANNAH MEDICAL COLLEGE.

The charter of this college is most ample in its provisions, and will confer on its graduates every privilege which any institution is capable of granting.

MEDICAL COLLEGE OF GEORGIA.

The trustees and faculty, in announcing the commencement of the forty-first session of the college, refer with pride to the high status attained by the class of last session. There has been a large annual increase in the number of students since the war. The college museum is one of the most extensive and valuable in the United States.

EMORY COLLEGE.

Emory College is the joint property of the North Georgia, South Georgia, and Florida conferences of the Methodist Episcopal Church South. While it is Methodist in its organization, it is not exclusive or sectarian. The interest of the Williams fund of $5,000 will be used in paying the tuition of young men of limited means who are preparing for the Christian ministry.

UNIVERSITY OF GEORGIA.

This university has four departments—preparatory, academic, State college department, (embracing agriculture, engineering, and chemistry,) and the law department. The preparatory department, organized as the university high school, is designed for the purpose of training the younger pupils for the academic department of the university. A professorship in the school of agriculture has been endowed by Dr. Terrell, of Georgia. Feeling that the great interest now pervading the public mind on the subject of an improved agriculture calls for special efforts in this department of the university, the trustees have adopted such measures as seem calculated to meet the public wants. Agreeably to the terms of the Terrell endowment, these lectures will be free to the public. It is proposed to establish, in connection with the State college of agriculture and the mechanic arts, which constitutes a part of the University of Georgia, an industrial museum, representing as far as possible all industrial interests. Young men of limited means, to the number of 50 annually, are admitted without payment of tuition fees. As a remuneration to the State they will be expected to engage in teaching in some school in the State for a term of years equal to the time they may have enjoyed the advantages of the university.

ADDRESS BEFORE THE UNIVERSITY OF GEORGIA.

The annual address before the Demosthenian and Phi-Kappa literary societies of the University of Georgia was delivered by Emory Speer, esq., who presented in a most able and convincing manner "The duty of the State to educate the People."

To the inquiry, "Should the State educate the people?" he replies: "To deny this is to mistake the very object for which government was designed. What is the object of

the social bond? Protection to life, liberty, and property; organized encouragement to morality and virtue. Does ignorance further these objects? If not, then surely government, the constituted guardian of society, should wage an eternal warfare with ignorance.

EDUCATION VERSUS CRIME.

"The State should educate the people as a preventive of crime. The statistics of all countries show that the majority of criminals are entirely uneducated. Those countries where there is the least education among the masses show the greatest degree of crime; and in proportion as the people are educated they are free from crime. Sin invariably follows ignorance, while thrift and morality are the inseparable companions of intelligence.

INTELLIGENT PRODUCTIVE POWER.

"The State should educate the people, to increase its agricultural and mechanical productive power. The increase of productive power is a problem of the most gigantic importance. An intelligent man can do more work than an ignorant man. Intelligent minds are more inventive than ignorant minds. Increase intelligence and you multiply inventions. Almost every industrial pursuit is now dependent upon science. If government will diffuse knowledge among the people, it pours into their laps a cornucopia of substantial blessings.

EDUCATION THE PRESERVATIVE OF LIBERTY.

"The State should educate the people, that they may preserve inviolate the holy rights of civil liberty. The necessity of popular education to destroy the despotism of ignorance is nowhere so manifest as in that State where the people enjoy what are called free institutions, based upon the right of universal suffrage. Intelligence and virtue are, of all things, the most indispensable to the success of republican forms of government, and since education is the only universal means of imparting these, the necessity of general education will be admitted. The admission is very well, but it amounts to nothing if it gives birth to no action in the cause of education.

INTELLIGENT JURIES.

"The State should educate the people, to preserve that ancient bulwark of personal right and freedom—trial by jury. Lord Brougham tells us government itself depends upon twelve good men in a box. It is an inherent right of the citizen to be tried by his peers. Let the law, then, make all men peers in the noble aristocracy of intellect, and we will hear no more of ignorant juries and unfair trials.

EDUCATION IN GEORGIA.

"What has Georgia done for the cause of education? The State has attempted great things, but has accomplished very little. Systems of public instruction have incumbered our statute-books. They have been abandoned and forgotten. Appropriations have been made for educational purposes, and county officials have not thought enough of the cause to apply to the treasury for the county funds. In 1849, a law existed giving $20,000 to be divided among the several counties of the State, to establish schools for poor children. Thirty-two counties failed to make any return of their poor children, thereby voluntarily relinquishing their claims on the State.

COMPARATIVE ILLITERACY.

"The Bureau of Education has published a map showing the comparative degrees of illiteracy in the States of the American Union. On this map the State of Georgia presents a very somber appearance. In 1850, 20 per cent. of the white adult population were unable to read and write. In 1860 the population had increased, and the illiterates were reduced to about 18 per cent. The State has, at times, appropriated sums of money to this cause; but the smallness of the appropriations and the indifference of the people have hitherto confounded the designs and abashed the hopes of the friends of education, and we have had no systems of common schools. The school law is now in the hands of the legislature for revision, and we, with justice, may hope that the time will soon come when every child in Georgia will enjoy the priceless boon of free education.

THE RULE OF IGNORANCE.

"The University of Georgia furnishes an example of the disastrous results of the government of ignorance. In the year 1784, the revolutionary statesmen and soldiers of Georgia set apart 40,000 acres of land as a permanent endowment to this university, and declared that these lands should never be appropriated to any other purpose whatever. In 1795, the college was chartered. In 1798, the constitution of the State made it the imperative duty of the legislature to provide for the permanent endowment of the university and for the permanent security of its funds. These duties have never been performed, and the university to-day only receives from the State the interest on certain funds loaned to the State by the college. In 1815, the legislature sold the college lands for $150,000. They took $50,000 of this to reimburse themselves for their advances to the college. The remaining $100,000 were invested in bank stock, which the legislature took and bound themselves to pay the interest to the university. This has been done. Had the lands remained in possession of the university, the chances are that she now would have rejoiced in an endowment of $1,000,000. Is this the liberality toward the cause of education which our fathers intended? Yet this is the 'Empire State' of the South.

THE POWER OF EDUCATION.

"Listen to the words of an illustrious son of Georgia, the Hon. Herschel V. Johnson: 'Education is the friend of the State. It will elevate the people. It will diminish crime and the expense of executing the law. It will dignify and open new channels for capital. It will disinter the mineral wealth of the State, and add millions to the productions of agriculture. Away, then, with that narrow stinginess which begrudges a dollar to such a cause, while it is often wasteful of thousands upon objects that possess little or no merit.'"

ATLANTA.

INAUGURATION OF THE PUBLIC-SCHOOL SYSTEM.

An act passed the legislature of Georgia September 30, 1870, empowering the mayor and council of the city of Atlanta to establish and maintain a system of public schools within said city, and to impose and collect the requisite taxes, and to issue and negotiate the requisite bonds, or otherwise employ the resources of the city to raise revenue for the establishment of the system of public schools.

In accordance with this act, an ordinance passed the council of the city of Atlanta November, 1870, by which the entire control of the whole system of public schools within the city was placed in charge of the board of education.

For providing the requisite school-houses, furniture, and apparatus, the sum of $100,000 in 7 per cent. bonds of the city was appropriated. Said bonds were made payable twenty years after the 1st of January, 1871, with interest payable semi-annually in January and July. Under the provisions of these acts, the board appointed B. Mallon, esq., superintendent, and on the 15th of November, 1871, he entered upon the duties of the office.

THE CHANGE TO THE PUBLIC-SCHOOL SYSTEM.

At this time there were in operation in the city thirty-five or forty private schools for white children, in which were taught, as nearly as can be ascertained, 1,200 scholars. These schools were all more or less ungraded, and wanting in proper buildings, and appliances, and supervision, and permanency of character. These continued till January, 1871, when, after an interval of one month, they were superseded by the public schools. The suddenness and completeness of the change from the voluntary schools of the past year to the public schools of the present are unprecedented in the history of the public-school movement in this country.

EXAMINATION OF TEACHERS.

The examination of applicants for the position of teacher in the public schools was held on the 6th and 7th of December. Eighty-three applicants—sixty-six ladies and seventeen gentlemen—were examined, and of these, twenty-three ladies and six gentlemen were elected. The applicants for the place of assistant teacher in the grammar schools were examined in grammar, arithmetic, geography, reading, spelling, writing, and the theory and practice of teaching. In addition to these subjects, applicants for the high schools and principals of grammar schools were examined in Latin, algebra, and geometry.

ESTABLISHMENT OF SCHOOLS.

Between January 31 and February 29 seven public schools were opened, viz, two high schools and five grammar schools for white children. On the 1st of February the board assumed charge of two colored schools, hitherto supported chiefly by, and under the control of, northern missionary societies. This made a total of nine schools under the control of the board. The schools were continuously in session, with the exception of a vacation of one week in May, until the last Friday in June.

NORMAL INSTITUTE.

A teachers' institute was held in the rooms since occupied by the girls' high school, commencing Monday, January 8, and continuing every day during the week. The morning sessions were devoted chiefly to the methods and principles of education and to direct instruction. During the evenings lectures and addresses were delivered by distinguished gentlemen.

This was the first teachers' institute ever held in Georgia. About fifty teachers were in regular attendance, besides many visitors.

NORMAL CLASS.

The weekly meetings of the teachers on Saturday mornings in the normal class, as it is called, have been kept up without interruption since the opening of the schools. All the subjects taught in the schools are discussed here, with special reference to the best method of teaching them. The influence of these meetings has been felt throughout the schools.

COURSE OF STUDY.

The course of study for every grade of school is clearly defined. The course in the grammar schools embraces reading, writing, spelling, arithmetic, grammar, geography, elementary physics, history of the United States and England, elementary drawing, and the reading of simple music.

In the boys' high school the course is: In mathematics, algebra, geometry, and arithmetic reviewed; in language, Latin, (usual preparatory course,) Greek, (optional,) and German; in science, physical geography, natural philosophy, chemistry, and astronomy; in English, rhetoric, composition, and English grammar reviewed.

In the girls' high school the course is similar to that in the boys' school, except that Greek is wholly omitted and French added—a choice being given to the scholars between French and German. The course is also considerably extended in the direction of English literature and literary criticism.

FUND.

The city council agree to furnish to the board of education $75,000 in cash, in place of the $100,000 of bonds which the legislature had authorized the city council to issue, for the purpose of building school-houses and inaugurating the public-school system. This amount has been expended, but has been insufficient to provide the school-houses immediately needed. A new grammar school and an additional school for colored children are wanted at once.

EFFECT OF PUBLIC SCHOOLS.

The establishment of the public schools has directly affected the interests of all classes of citizens, and it cannot be expected that all should be at once satisfied. It is essential to the highest success of the public schools that the entire community should be united in their support. Divided as the people are in social life, in politics, and in religion, we need just such a bond of union as the public schools will form and perpetuate. It is almost the only ground that can be made common to all classes.

SAVANNAH.

EDUCATIONAL LEGISLATION.

An act "to establish a permanent board of education for the city of Savannah, and to incorporate the same, and for other purposes," passed the legislature of Georgia, and was approved by the governor March 21, 1866. An amendment, extending all the rights and powers vested in this board to the county of Chatham, was assented to, December 18, 1866. The purpose for which the board is created is stated to be "to devise, establish, and modify from time to time a plan and system of education for white children between the ages of six and eighteen years."

The Catholic schools were also placed under the supervision and charge of this board

COURSE OF STUDY.

The course of study or the city schools is liberal, embracing (for the common schools) geography, reading, spelling, writing, arithmetic, English grammar, and history; to which are added in the high schools, Latin, Greek, physical geography, rhetoric, English literature, natural philosophy, chemistry, algebra, geometry, French, and German.

GROWTH.

At the inception of the school system, the board was fortunate in being able to avoid the great expense of erecting school-buildings. In the infancy of the work in Savannah, two buildings, constructed for educational purposes, were placed at the disposal of the board; subsequently, Chatham Academy, affording fourteen large rooms for schools, office for the meeting of the board, and comfortable quarters for the janitor, was again transferred to the board. When the Catholic schools were consolidated with the public, two large and well-appointed buildings came into the possession of the city. In the original construction of these buildings little attention was paid to ventilation, and this defect is now exciting the attention of the proper authorities.

HOME TEACHERS.

The board also congratulate themselves that they are independent of any foreign aid both as to modes and means of teaching. This is chiefly attributed to the fact that the changed condition of the southern people at the close of the war led many well-educated ladies in their midst to seek positions in the schools. A normal class has been sustained through the year, which has had the effect of increasing the efficiency of the teachers and inspiring them with zeal in their work.

WRITTEN EXAMINATIONS.

The experience of these schools has demonstrated the great importance of written examinations as a test of the true attainments of scholars. Such written examinations are made the basis upon which the diploma of graduation is awarded.

The annual public examinations afford parents an opportunity for showing their interest in the schools. The examinations for 1872 were largely attended; indeed, so great was the pressure at the closing exercises of the girls' high school that it was found necessary to adjourn to the theater.

OBSTACLES TO SUCCESS.

Irregularity in attendance, too frequent recurrence of holidays, and the want of that elevating influence which comes from excellence and elegance in the appurtenances of the school-room, are the chief hinderances to the perfection of the schools of Savannah.

COUNTRY SCHOOLS.

The schools in the country do not compare favorably with those of the city. They are retarded by the sparseness of the population and the distance of many children from the school-houses, the impossibility of gradation, the bad condition of the school-rooms, and the fact that the meager compensation of the teachers is made to depend upon the number of their scholars.

It is a matter of congratulation that for the last two years no aid has been needed from the Peabody fund.

COLORED CHILDREN.

The subject of schools for colored children in the city has long excited the interest of the board, but as the State has as yet contributed no funds to the county for educational purposes, the board has been utterly unable to accomplish anything in this direction.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Georgia was the twelfth State in population, having 1,184,109 inhabitants within an area of 58,000 square miles, an average of 20.42 to the square mile. This population consisted of 638,926 whites, 545,142 colored, 1 Chinese, and 40 Indian persons. Of these 1,172,982 were natives, and 11,127 were foreign-born. Of the native residents of the State, 539,577 whites, 494,364 colored, and 21 Indians were born within its limits, while, of the foreign residents, 2,761 were born in Germany, 1,088 in England, 5,093 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 77,493 persons attended school, and of those 143 were foreign-born. The white scholars numbered 67,142, of whom 33,796 were males, and 33,346 females. The colored scholars numbered 10,351, of whom 4,898 were males and 5,453 females.

Illiteracy.—The number of inhabitants of all races 10 years old and over unable to write, was 468,593, of whom 1,090 were foreign-born.

Age, sex, and race of illiterates.—Of the 124,939 white illiterates reported, 36,497 were from 10 to 15 years old, and of these 19,843 were males, and 16,654 were females; 26,012 were from 15 to 21 years of age, of whom 13,101 were males and 12,911 were females; 62,430 were 21 years old and upward, and of these 21,899 were males, and 40,531 were females. Of 343,637 colored illiterates reported, 64,617 were from 10 to 15 years old, and of these 33,364 were males, and 31,253 were females; 66,108 were from 15 to 21 years old, and of these 31,295 were males and 34,813 were females; 212,912 colored illiterates were 21 years old and over, and of these 100,551 were males and 112,361 females; 7 male and 10 female Indian illiterates were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 1,880, having 2,432 teachers, of whom 1,517 were males, 915 were females, and a total of 66,150 pupils, of whom 32,775 were males, and 33,375 were females.

Amount and source of educational income.—The total income of all the educational institutions was $1,253,299, of which sum $66,560 were derived from endowments, $114,626 from taxation and public funds, and $1,072,113 from tuition and other sources.

Public schools.—The 24 6 public schools throughout the State, with their 327 teachers, 180 of whom were males and 147 were females, were attended by 11,150 pupils, 5,700 of whom were males, and 5,450 females. To educate these they possessed a total income of $175,844, of which sum $7,128 came from endowments, $59,293 from taxation and public funds, and $109,423 from tuition and other sources.

Colleges.—The 28 colleges reported, with their 133 teachers, of whom 77 were males and 56 were females, were attended by 2,593 students, of whom 973 were males and 1,620 were females. For the education of these students they possessed a total income of $148,866, of which sum $36,350 were came from endowment, $75 from taxation and public funds, and $112,441 from tuition and other sources.

Academies.—One hundred and twenty-three academies were reported, having 226 teachers, of whom 152 were males and 74 females; they were attended by 6,558 scholars, of whom 3,384 were males and 3,174 females. They possessed a total income of $161,301, of which $3,950 were derived from endowments, $14,648 from taxation and public funds, and $142,703 from tuition and other sources.

Private schools.—The 1,452 day and boarding schools had 1,670 teachers, of whom 1,060 were males, and 610 females; and 44,548 scholars, 21,965 being males and 22,583 females. They possessed a total income of $662,933, of which $9,630 were derived from endowment, $21,610 from taxation and public funds, and $631,639 from tuition and other sources.

Libraries.—There were 545 public libraries, containing 162,851 volumes; also, 1,190 private libraries, having 304,381 volumes; making a total of 1,735 libraries, containing 467,232 volumes.

The press.—The 110 periodicals issued had an aggregate circulation of 150,987 copies, with an aggregate annual issue of 15,539,724 copies.

Churches.—Of the 2,873 church organizations 2,698 had edifices with 801,148 sittings, and the church property was valued at $3,561,955.

Pauperism.—One thousand eight hundred and sixteen paupers were reported, of whom 1,270 were native whites, 507 native colored, and 39 foreigners.

Crime.—Of 737 persons in prison June 1, 1870, 126 were native whites, 597 native colored, and 14 foreigners; 1,775 persons having been convicted during the year.

Age and sex of population.—Of the total population of the State, 407,516 persons were from 5 to 18 years old, 206,026 being males and 201,490 females; 835,929 were 10 years old and upward, and of these 401,547 were males, and 434,382 females.

Occupations.—There were 444,678 persons of these ages engaged in various occupations, of whom 329,185 were males and 115,493 females; 336,145 persons were engaged in agricultural pursuits, of whom 262,152 were males and 73,993 females; 64,083 in professional and personal services, of whom 27,435 were males and 36,648 females; 17,410 in trade and transportation, of whom 17,336 were males, and 74 females; 27,040 in manufactures and mechanical and mining industries, of whom 22,262 were males and 4,778 females.

Age and sex of working population.—Of these 444,678 employed persons, 79,365 persons (53,524 males and 25,841 females) were from 10 to 15 years old; 339,182 were from 16 to 59 years old, of whom 253,458 were males and 85,724 females; 26,131 were 60 years old and over, of whom 22,203 were males and 3,928 females.

LIST OF SCHOOL OFFICIALS.

Hon. GUSTAVUS I. ORR, *State school commissioner.*

COUNTY SCHOOL COMMISSIONERS.

County.	Name.	Post-office.
Appling	E. M. Kennedy	Holmesville.
Baker	T. W. Fleming	Newton.
Baldwin	John Hammond	Milledgeville.
Banks	T. C. Chandler	Homer.
Bartow	R. C. Saxon	Cartersville.

ILLINOIS.

[From the ninth biennial report of Hon. Newton Bateman, State superintendent of public instruction—comprising the years 1871 and 1872.]

COMMON-SCHOOL FUNDS.

School fund proper, being 3 per cent. upon the net proceeds of the sales of the public lands in the State, one-sixth part excepted	$613,362 96
Surplus revenue, being a portion of the money received by the State from the General Government, under an act of Congress providing for the distribution of the surplus revenue of the United States, and, by act of legislature, made a part of the common-school fund	335,592 32
College fund, being one-sixth part of the 3 per cent. fund, devoted to the establishment and maintenance of a State college or university	156,613 32
Seminary fund, being the proceeds of the sales of the "seminary lands," originally donated to the State by the General Government for the founding and support of a State seminary	59,838 72
County funds, created by an act of the legislature, February 7, 1835, which provided that teachers should not receive from the public fund more than half the amount due them for services rendered the preceding year, and that the surplus should constitute the principal of a new fund, to be called the county school fund	348,285 75
Township funds, being the net proceeds of the sale of the sixteenth section in each congressional township of the State, the same having been donated to the State for common-school purposes, by act of Congress, in 1818	4,868,555 01
Total common-school funds of the State, September 30, 1872	6,382,248 08
Increase on total since 1870	225,185 68

FINANCIAL STATEMENT.

Receipts.

	1871.	1872.
Received from two-mill tax	$900,000 00	$900,000 00
Received from interest on school, college, and seminary funds	54,564 93	54,564 93
Received from *ad valorem* tax	4,895,396 92	5,292,942 65
Received from interest on township funds	420,218 36	528,811 47
Received from district bonds	917,541 29	294,332 90
Received from rents	58,602 14	.....
Received from sales of school property	16,131 17	11,207 86
Received from fines and forfeitures	10,733 02	12,946 06
Received from interest on district funds loaned	.....	82,352 37
Received from other sources	197,493 72	322,964 52
Total receipts	7,470,681 55	7,500,122 76

Expenditures.

	1871.	1872.
Salaries of male teachers	$2,073,666 94	$2,182,641 75
Salaries of female teachers	1,995,946 94	2,156,614 56
Total paid teachers	4,069,613 88	4,339,256 31
Sites, buildings, furniture, apparatus, &c	1,536,998 54	1,521,343 81
Fuel and incidental expenses	509,827 10	613,244 61
Miscellaneous expenses	1,036,847 89	1,007,044 51
Total expenses for school purposes	7,153,287 41	7,480,889 24

SCHOOL STATISTICS.

Attendance, &c.

Population, according to United States census of 1870	2,539,891
Estimated present population	3,000,000

Legal school age, 6–21.

	1871.	1872.
Number of white persons of school age	870,703	874,526
Number of colored persons of school age	7,714	8,167
Total scholastic population	878,417	882,693
Total in 1870		862,624
Increase		20,069
Number of male pupils enrolled	353,643	345,623
Number of female pupils enrolled	319,144	316,426
Total enrollment	672,787	662,049
Total enrollment in 1870		652,715
Increase		9,334
Average daily attendance	341,686	329,799
Average daily attendance in 1870		339,540
Decrease		9,741
Ratio of total enrollment to scholastic population	.766	.75
Ratio of average daily attendance to scholastic population	.388	.374
Ratio of average daily attendance to total enrollment	.508	.498
Average number of days' attendance for each pupil enrolled	74.5	75.3
Average number of pupils enrolled in each school	60	58

Cost per scholar.

	1871.	1872.
On school census	$5 21	$5 61
On enrollment	6 81	7 48
On average daily attendance	13 40	15 02

Teachers and teachers' pay.

	1871.	1872.
Number of male teachers	8,826	9,094
Number of female teachers	11,459	11,830
Whole number of teachers	20,285	20,924
Whole number of teachers in 1870		20,081
Increase		843

	1871.	1872.
Highest monthly pay of male teachers	$250 00	$250 00
Highest monthly pay of female teachers	120 00	120 00
Lowest monthly pay of male teachers	15 00	12 00
Lowest monthly pay of female teachers	8 50	9 50
Average monthly pay of male teachers	49 00	50 00
Average monthly pay of female teachers	37 00	39 00

Examination of teachers.

	1871.	1872.
Number of places where held	435	400
Number of examinations held during the year	3,663	3,681
Number of examinations held in 1870		2,729
Increase		952
Number of male applicants	8,548	10,045
Number of female applicants	10,875	12,202
Total number of applicants examined	19,423	22,247
Total number of applicants in 1870		17,233
Increase		5,014

Number of male applicants rejected	2,141	1,997
Number of female applicants rejected	2,974	2,869
Total number rejected	5,115	4,866

Certificates issued.

In 1871.	1st grade.	2d grade.	Total.
To gentlemen	1,414	5,164	6,578
To ladies	1,024	6,936	7,960
Total	2,438	12,100	14,538
In 1872.			
To gentlemen	1,810	6,361	8,171
To ladies	1,349	8,231	9,580
Total	3,159	14,592	17,751
Total for the two years	5,597	26,692	32,289

Examinations in the natural sciences up to October 1, 1872.

Number of teachers examined:	
Males	1,989
Females	1,984
	3,973
Number successful:	
Males	1,557
Females	1,557
	3,114
Number unsuccessful:	
Males	432
Females	427
	859
Number of provisional certificates issued:	
To males	1,018
To females	566
	1,584

The number of teachers who have successfully passed the examination in the elements of natural science since the preceding table was made up is very large. At the present rate of progress, 90 per cent. of all the teachers in the State will hold full certificates under the new law, by the opening of the schools in the autumn of the present year, 1873.

State teachers' certificates.

School-houses.

	1871.	1872.
Number of school-houses built during the year	470	528
Total cost of the same	$758,564 69	$761,622 39
Average cost	1,613 97	1,442 46
Average cost in 1870	----------	1,517 65
Total number of school-houses	10,979	11,289
Total number in 1870	----------	10,773
Increase	----------	516
Total approximate value of school property	$18,373,882	$19,876,708
Total reported value in 1870	----------	16,859,300
Increase	----------	3,017,408

THE NEW SCHOOL LAW.

The twenty-seventh general assembly made more and greater changes in the school law than had been made by all preceding legislatures since the free-school system of the State was first established. One fact is worthy of notice—the changes were not made in a separate amendatory act, as had always previously been done, but incorporated with the respective sections of the old law, thus bringing the whole into one act. The convenience of this will be appreciated. The number of supplementary and amendatory acts had so increased as to make it difficult to keep them all in mind, and give to each its proper modifying effect, while reading the body of the law. Considerable perplexity and frequent errors of construction resulted. The new law is a codification of the common-school legislation of the State, complete and entire in itself. The changes in the law may be considered under two general heads: Modifications, or changes made in the provisions of the old law, and new provisions. The new law went into effect July 1, 1872.

MODIFICATIONS.

Apportionment of funds.—All the school funds are now distributed in proportion to the number of children under 21 years of age, and all children are included without distinction of race or color. Formerly, one-third of the school funds was apportioned on territorial area, and white children only were included in the basis of distribution.

Visitation of schools.—County superintendents, instead of being required to visit every school in their respective counties at least once a year, as heretofore, are to make such visitation only when so directed by the county board.

School elections.—The special requirements of voters on questions of raising money are removed, and any person having the qualifications of a voter at a general election may vote on all school questions. Elections of trustees and directors are to be held on Saturday instead of Monday. The object of this was to utilize the Western custom of making Saturday a sort of holiday, or half-holiday. It is believed that the change will, upon the whole, very much subserve the public convenience, and insure a larger attendance and a fuller vote at school-district elections, especially in the agricultural districts.

Tenure and residence of township treasurers.—These now hold their office for one year instead of two, and are required to be residents of their respective townships, which was not required by the old law.

Altering district boundaries.—Boards of trustees are deprived of all discretionary power in this matter, and obliged to make only such changes as a majority of the voters may desire.

Use of school-houses.—Boards of directors are authorized to grant the temporary use of school-houses for religious meetings and Sunday-schools, for evening-schools and literary societies, and for such other meetings as they may deem proper.

Custody of district funds.—The township treasurer is declared to be the only lawful depositary and custodian of all district school funds, as well as of all township funds, a point upon which the old law was not explicit.

District school tax.—Directors are not allowed to levy an annual tax of more than 2 per cent. for the support of schools during the period fixed by statute. The old law imposed no restriction, but authorized directors to levy whatever tax was found to be necessary.

District bonds.—The amount that may be borrowed on district bonds is limited to 5 per cent. of the taxable property of the district, including previous indebtedness.

Duration of schools.—As a condition of receiving a share of the public funds, every district must support a free school for at least five months in the year. The old law required six months. Heretofore directors could not extend schools by taxation beyond six months, without a vote of the district; the present law allows them to tax for a nine months' school, provided the rate does not exceed 2 per cent.

Payment of schedules.—The new law declares teachers' schedules to be payable monthly; and when not so paid, after having been duly certified and filed with the township treasurer, interest accrues at the rate of 10 per cent. per annum from date of filing till paid.

The school month.—This, it is provided, "shall comprise twenty-two school days, actually taught." This provision has caused great confusion throughout the State, with no apparent compensating advantages. Four weeks, of five days each, or twenty school days, should constitute the common-school month. A change in this provision of the law is urged on the general assembly.

Compensation of school-officers.—Under the old law county superintendents received 3 per cent. upon the amount of sales of school-lands, 2 per cent. upon the amount of all sums distributed, paid, or loaned out by them, and $5 a day for other official services actually rendered. Township treasurers received 2 per cent. upon all sums distributed, paid, or loaned out by them. The new law provides that county superintendents shall hereafter receive, in full for all services performed by them, such compensation as may be fixed by law; and that township treasurers shall receive, in full for their services, a compensation to be fixed, prior to their appointment, by the board of trustees.

There are several other modifications of minor details.

NEW PROVISIONS.

In addition to the foregoing modifications of the old law, the law now in force contains the following new provisions:

Consolidation of fractional townships.—This provides for the consolidation, for school purposes, of fractional townships with any adjacent township.

Township high schools.—Such a school may be established in any township desiring it, by a majority of the votes at an election called for the purpose, upon petition of fifty voters of the township.

Statistics of illiteracy.—School directors are required to collect and report the number and names of persons between the ages of 12 and 21, residing in their respective districts, who are unable to read and write, and the cause of the neglect to educate them.

Special powers and duties of school directors.—It is made the imperative duty of boards of directors to prescribe what branches of study shall be taught, and what text-books and apparatus shall be used, in their respective schools, and strictly to enforce uniformity of text-books; but text-books are not to be changed oftener than once in four years. They may suspend or expel pupils for bad conduct, and no action shall lie against them for such expulsion or suspension. They are also authorized to provide that children under twelve years of age shall not be confined in school more than four hours daily.

New branches.—Teachers are required to be examined in the elements of the natural sciences, physiology, and the laws of health, in addition to the branches previously prescribed. But, on the request of directors, certificates may be granted to teachers who are not able to pass an examination in the additional branches. Vocal music and drawing may also be taught in the public schools, when deemed expedient by the directors or requested by the voters of the district.

Removal of delinquent directors.—Any director failing to perform his duties according to law may be removed by the county superintendent, and an election ordered for a new director.

Perversion of school-funds.—The appropriation of any part of any school-fund for any sectarian or denominational purpose is forbidden in most emphatic language.

Traffic in school-books.—No teacher or school-officer shall be interested in the sale or profits of any book, apparatus, or furniture used in any school in the State with which he may be connected. A fine of from $25 to $100 and imprisonment for a period of from one to twelve months is the penalty attached.

Election of boards of education.—In all districts having a population of not less than 2,000, boards of education with special powers shall be substituted for the ordinary boards of school directors.

Re-organization under the general school law.—This provides the manner in which schools now managed under special acts may be re-organized under the free-school law of the State.

Schools in the city of Chicago.—A new provision of special importance is that prescribing the powers, rights, and duties of boards of education in cities of over 100,000 inhabitants, or, in other words, in the city of Chicago, since no other city in the State con-

tains even one-half that number of inhabitants. The provision is general in form, though specially designed for Chicago, in compliance with the requirements of the constitution which forbid special legislation on the subject of common schools. It provides that in such cities the board of education shall have control of the public schools, and shall have power, *with the concurrence of the city council*, to erect or purchase buildings suitable for school-houses, and keep the same in repair, to buy or lease sites for school-houses, to issue bonds for the purpose of building school-houses and purchasing sites, and to provide for their payment, and to borrow money for school purposes upon the credit of the city. In all other matters connected with the schools, the board of education shall have full control, *independently of the city council.*

THE NATURAL SCIENCES.

It is yet too soon to speak of the practical results of the measure requiring that the elements of natural science be made a part of the common-school course, as the plan has but just been entered upon, but there are good reasons for anticipating from it large and substantial advantages. It is believed that the measure will prove beneficial to teachers; to the schools, as such; to the pupils; to the public at large, and to the general cause of popular education and free schools.

EFFECT ON TEACHERS.

Public-school teachers—particularly the teachers of common district schools, who comprise more than three-fourths of the whole number—need the spur and inspiration of these new studies. The tendencies of the system under which they teach are toward mental enervation. All the famous seven branches of the old Illinois law may be taught in a mechanical, text-book manner, and there is almost no necessity for effort on the part of the teacher. The law making the study of natural science a condition of licensure produced a great awakening in the host of torpid and lethargic teachers. The common-school elements of society, so to speak, were profoundly stirred everywhere, and a free-school revival, of extraordinary extent and power, was inaugurated. From the time the new law was fairly promulgated in April last till the schools opened in the autumn the whole State became, as it were, one great camp of instruction. Special institutes were convened for the purpose, and the annual session of the State Teachers' Institute was chiefly devoted to the same work. Up to October 1, 1872, the number of teachers examined in the elements of the natural sciences was 3,975, of whom 3,114 were successful; so that, in three months from the day the new law went into effect, nearly one-sixth of the whole number of teachers in the State had been examined and duly licensed to teach the new branches. If those be added who were previously qualified to teach the rudiments of science, the whole number capable of teaching the new branches the first day of the present school year would be about one-fifth of the entire teaching force of the State. The number is rapidly increasing, as old certificates expire, so that by the close of the school year the elements of natural science will be taught in nearly all the common schools of the State. Nearly every county in the State has already taken some part in the movement. It is the testimony of the superintendent of public schools of Saint Louis, Missouri, that the effect, in a single year, of preparing and giving one exercise of an hour per week in natural science had been to increase the general efficiency and power of the teachers in that city at least 50 per cent. This is believed to be no exaggeration. Something of the same effect has already been noticed in many of the Illinois schools.

EFFECT UPON PUPILS.

Nearly all the causes that have operated to depress and paralyse the energies and aspirations of teachers are equally effective in the same direction upon scholars. These new studies are in harmony with the instincts and tastes of children, and awaken their interest. In declaring that the elements of the natural sciences shall be taught in the public schools, the legislature has recognized, and sought to utilize, the fact that the senses are the pioneers of all knowledge, and that their cultivation and training should be made, for several years, the chief work of education. The value of a habit of quick, sharp observation; the extent and certainty of its development by proper training in early youth; the impossibility of fully securing it in after life, and the manifold benefits and pleasures accruing all through life from its exercise, are among the forcible arguments in favor of the method of primary training which, it is hoped and believed, will be introduced into our schools in connection with the natural sciences.

WIDER INFLUENCES.

The country, with all its interests and industries, is deeply concerned in whatsoever tends to increase the efficiency and power of the public schools. The statistics of Europe and America demonstrate the superior value of educated or skilled labor. It

has been proved that in this country the educated laborer is worth one-fourth more than the uneducated laborer, and that in most of the States this increase amounts to many times the entire cost of the support of the public schools. Every wise measure of education, every incentive to mental activity, is, therefore, a direct contribution to the productive resources, and so to the wealth, property, and aggrandizement of mankind.

COMPLAINTS AGAINST PUBLIC SCHOOLS.

It is considered an undeniable fact that the confidence of the people in the public-school system is in danger of being disturbed. Questionings and murmurs of discontent, direct opposition, or appeals for reconstruction, are coming from every quarter of the Union, and these not alone from theorists, abstractionists, misers, and chronic fault-finders, but from men who are actuated by none but the worthiest motives, and who have no personal or selfish ends to subserve. There are allegations of inefficiency and failure which, if true, affect not merely the form but the substance of the school system. A fact worthy of notice is that while there is the greatest variety of opinions among the representatives of different classes, there is, nevertheless, a substantial and surprising agreement in a few important particulars. Among the points which a comparison of statements shows to be held in common are the following: (1.) That the course of study in the common ungraded schools of the country needs revision, both as to the branches of study embraced therein, and as to the relative amount of time devoted to each one. (2.) That many of these schools are not doing their elementary work well; that the pupils rarely become good and sure spellers, or easy and fluent readers, and are deficient in penmanship, and especially in a knowledge of the primary rules pertaining to punctuation, the use of capitals, and the common proprieties of letter-writing and English composition. (3.) That the teaching is too bookish, narrow, and technical, being largely defective in method, dull in manner, and therefore devoid of attractiveness, inspiration, and zest. (4.) That there is too much isolation in schools and school-work; too little sympathy between the world within and the world without the school-house; too little apprehension of the fact that schools are places of apprenticeship, wherein to learn the use of a few necessary tools and implements, wherewith to fight the battles of life and duty in the world. (5.) Finally, that the attention paid to the morals and manners of the pupils is unsatisfactory.

THREE IMPORTANT INQUIRIES.

The foregoing facts and strictures seem to start three inquiries, viz: What should the public schools accomplish? What are they accomplishing? How may they accomplish more?

WHAT SHOULD BE ACCOMPLISHED?

In giving a standard of acquirements, reference is had chiefly to the ordinary district school. Proficiency, not simply mechanical, but intelligent, in the elementary branches is insisted on, and, in addition, that pupils should be able, in conversation and writing, to express their own thoughts in good English; that they should understand the rudimentary principles of drawing and perspective, of vocal music and of natural history, and should know enough of their own physical and mental organization to enable them to take proper care of both their bodies and brains. The influence, example, and precepts of the school-room should all tend to the formation of good manners and the encouragement of a high tone of morals.

WHAT IS ACCOMPLISHED?

Testimony from various sources renders it painfully evident that the practical results, in some instances, at least, come short of the moderate and reasonable standard that has been indicated. It is true the instances cited are exceptional, but it is also true that such facts ought not to be possible in any case; and it must be admitted that the tendencies have been and are too much in that direction.

HOW CAN MORE BE ACCOMPLISHED?

Four suggestions are made in reply to this important inquiry: There must be a large increase of well-qualified teachers, a closer and more intelligent supervision, improved methods of instruction, and improved text-books.

HOW ARE QUALIFIED TEACHERS OBTAINED?

The superintendent says, "first, by simply demanding them." A teacher of at least fair abilities and qualifications can be had for every school in the State, if only he is

wanted. But the fact is, such teachers are not wanted, because a slight additional salary must be paid to secure them. A demand for good teachers, with suitable salaries, would at once bring into service the large number of such teachers who are now unemployed, inferior and lower-priced teachers being engaged in their stead; and it would induce large numbers of capable young men and women to enter upon a course of preparation and training for common-school work.

FACILITIES FOR TRAINING TEACHERS INSUFFICIENT.

The normal schools are doing much to qualify teachers for the public schools, and they are doing their work well. Normal departments and classes in the universities, colleges, and high schools, are helping all they can. But not 10 per cent. of the teachers of the State have had the benefit of any of these facilities, even for the shortest time; and not 5 per cent. have taken the full course in those institutions. To reach the mass of teachers with the means of improvement, the main reliance has been, and still is, upon the local institute. The value of this instrumentality has been very great. But all the available means of professional instruction combined are wholly insufficient to supply the urgent needs of the common schools. While the number of persons qualified to fill positions in the high and graded schools of cities is still insufficient, the most pressing need is in the ordinary ungraded district schools of the country. Information at hand warrants the statement that not more than one in three of the teachers in these schools is fit for the place he occupies.

THE STATE MUST AID.

To the work of qualifying teachers for these elementary schools the State should reach forth a helping hand. It can do this by undertaking, to a limited extent, the management and control of local institutes of instruction through the agency of competent and suitable persons appointed or commissioned in such manner as may be prescribed by law, who shall be directly responsible to the State for their acts and be paid by the State for their services. It should be the duty of these men to organize and conduct a series of institutes for the instruction of teachers, and to instruct the people, by public addresses and otherwise, in respect to the nature and necessity of free schools. The sum of $10,000 per annum would secure the services of four or five picked men for this work, men of ability and culture, thoroughly acquainted with systems of public education, and experienced in the supervision, management, and instruction of common schools who would give to it their whole time. This plan would remove the elements of weakness and inefficiency from our present scheme of institute operations. In what other way can the district schools be so soon and so effectually supplied with qualified teachers or with teachers of improved qualifications? How otherwise can the body of the people be so well instructed in regard to the claims of public education, the principles of teaching, the evils of miseducation, the elements and conditions of successful instruction, and the general economy of schools and school management? Is it seen in what other manner the comparatively trifling sum named could better be made to subserve the purposes for which the State, in compliance with the requirements of the constitution, has established the system of free schools?

HORACE MANN IN MASSACHUSETTS.

It seems to me that the plan should be adopted and fairly tried. It is not new. If one commonwealth more than another has laid the American people under obligations for valuable lessons in the theory and art, the means and methods, of public education, that commonwealth is Massachusetts. And long before there was a free-school system in Illinois, the hills and valleys of that State were traversed, year after year, by strong, gifted, and eloquent men, engaged in the very work that has here been described—instructing the teachers, addressing the people, organizing and conducting institutes, holding educational conventions, and mightily awakening and stirring the inhabitants everywhere. The voice of Horace Mann was heard, from Cape Cod to the Berkshire Mountains, warning, entreating, expostulating, beseeching the people, with the vehemence and power of one of the old prophets, to look to the education of their children. Hear him:

"We all bear witness that there is but one salvation for the State—the knowledge of duty, and the will to do it, among the people. But what measures are we taking to cause that knowledge to spring up, like a new intellectual creation, in every mind; and to cause that will to be quickened into life in every breast? We all agree—the universal experience and history of mankind being our authority—that, in nineteen cases out of every twenty, if the human mind is ever to be expanded by knowledge, and imbued with virtuous principles, it must be done during the susceptible years of childhood and youth. But when we come to the *sine qua non*—to the *work*—to the

point where volition must issue forth into action, or it is valueless; when we come to the taxing, to the building, to the books, to the apparatus, to the whole system of preparatory and contemporaneous measures for carrying on and perfecting the work of education, where wishes, and sympathy, and verbal encouragement are nothing without the effective co-operation of those muscles which perform labor and transfer money; when we come to this point, then excuses teem, and the well-wishers retire from the stage, like actors at the close of a drama. I gladly acknowledge that there are honorable exceptions, in all ranks and classes of men; and in no State in the Union are there so many of these exceptions as in Massachusetts; and yet even here, is it not most extensively true, that when we appeal to the different classes and occupations of men, we meet with indifference, if not with repulse? * * * *

"Will the great political and financial problems which now agitate the Union ever be rightly solved and permanently adjusted, while they are submitted, year after year, to voters who cannot even read and write? Can any additional intelligence and integrity be expected in our rulers, without additional intelligence and integrity in the constituency that elects them? Complain of President or Congress as much as we will, they are the very men whom we, the people, have chosen. If the country is an active volcano of ignorance and guilt, why should not Congress be a crater for the outgushing of its lava? Will Providence interfere to rescue us by a miracle, while we are voluntarily pursuing a course which would make a speedier interference, and a more stupendous miracle, necessary for our subsequent rescue? How much of time, of talent, and of wealth, we are annually expending—in legislatures, in political conventions, through newspapers—to gain adherents to one system of policy, or its opposite, to an old party or to a new one; but how little to rear a people with minds capable of understanding systems of policy, when developed, and of discerning between the right and the wrong in the parties which beset and would inveigle them. What honors and emoluments are showered upon successful politicians! What penury and obscurity are the portion of those who are molding the character of a rising generation of sovereigns! And here let not the truth be forgotten, that the weightiest obligation to foster and perfect the work of education lies upon those States which enjoy the most; for to whomsoever much is given, of them shall much be required."

With such words of truth, eloquence, and power, that mighty apostle of common schools spoke to the people of Massachusetts, making of every village-crowned eminence in the State a very Mars Hill to echo his grand appeals, onward through vale and hamlet, till every ear should hear and every heart be moved; while a select corps of accomplished men followed up the march of the orator, utilizing the profound impressions left by his addresses upon the minds of the people, by gathering the teachers into institutes and conventions, unfolding to them the principles of education, and instructing them in the true science and art of teaching. The voice of the orator died away among the hills of New England—his noble presence vanished forever from the shores of time, long ago; but the results abide—the common schools of Massachusetts, taken all in all, are the best in the Union and in the world. That the men and the agencies mentioned were among the most potential factors of this noble consummation, none can deny, and distant will be the day when the school-children of that good old commonwealth will cease to honor the name and revere the memory of their good and gifted friend.

Several other States have pursued the same course, with like beneficial results. Indeed, ours is the only leading State making, practically, no provision for the systematic prosecution of institute work. The public sentiment of the State needs to be stirred to a more earnest and intelligent appreciation of the wants of common schools; of their faulty local management, and especially the very serious effects of the low standard of scholastic and professional qualifications required of the teachers in ungraded district schools. It is believed that the plan proposed will do for Illinois what it has done for other States.

INSTRUCTION IN THE NATURAL SCIENCES.

The time has come when the experiment of introducing the study of natural science into the common schools of the State must be entered upon. It is assumed that school directors and teachers are acquainted with the requirements of the new law in this respect, and that they intend, in good faith, to endeavor to comply with those requirements to the best of their ability. * * * What were the chief ends contemplated, the main results hoped for, by these changes in the school law? If I correctly interpret these new provisions of the statute, and rightly understand the sentiments of those members of the legislature who were chiefly interested in securing their enactment, the great end sought was to lift the schools of the State out of the grooves of a bookish routine; to redeem them from barrenness and leanness; to pour into them and through them the fresh breezes of life and nature; to enrich and fertilize them by the infusion of new ideas derived from the study of the protean forms and marvelous phenomena of the material world; to vitalize and strengthen them by

exercises requiring more intelligent observation and less mere memory; to turn them more from words to things, from books to nature, from the unintelligent iteration of dead forms and phrases to a wide-awake observation and keen-sighted scrutiny of the multitudinous objects of living interest, grace, and beauty with which the outer world is filled. In this way it was hoped that the schools would be quickened and vivified, the boundaries of useful knowledge enlarged, and the youth of the State be familiarized with the elements, at least, of those sciences which are in themselves so ennobling and which are so closely related to the great industries of this commonwealth.

What is the best method of teaching the elements of natural science in the public schools? No doubt is entertained that it was the intention to put the elements of the natural sciences into all the public schools of the State, of every kind and grade, to make the study of them as common, as universal, as the study of the seven elementary branches previously required. It was assumed, correctly, I think, that any child of suitable age, and of sufficient mental and physical health and strength to attend a public school, might as well be set to learning about plants and animals, about the things on the ground beneath its feet, in the air above and around its head, in the waters of familiar streams and brooks, and in forests, orchards, meadows, and gardens, as about the inanimate letters of the alphabet, the dry processes of word-making and spelling, the mysteries of pronunciation, accent, and emphasis, and the abstractions of the multiplication table.

In the light of what has been said, it must be very obvious to all that the benefits of these new studies will be best secured by the method of *oral lessons* instead of recitations from text-books. Indeed, if the teaching of the natural sciences is to fall into the old ways, merely so many lines or pages of a book to be memorized and recited daily, the law might as well be repealed, for it will only enhance the very evils which have so long benumbed and stupefied the schools.

Then with these new and living themes, let there be also new and living methods. Leaving and forgetting the beaten paths of book-answers to book-questions on bookish abstractions, enter the new path that leads out amid the manifold works of God and there gather treasures of knowledge *at first hands*. If the subject of the lesson is a particular flower, do not have the pupil read or recite what somebody else has said *about* that flower, but make the flower itself your text-book. It was written by the finger of God himself, and is without blemish or mistake. Its lines are more perfect than were ever drawn by human hands; its colors have a richer and warmer flush than brush of artist can impart. Take the beautiful thing in your hand, inspect its wonderful structure, note its component parts, point out the rare delicacy and grace of its form and finish, tell its attributes and qualities, show wherein it is like and wherein it is different from other flowers of its class. Do all this in the presence of your pupils—before their eyes; do it with the gentle enthusiasm and loving inspiration that ever touch the heart and pervade the soul of him who with honest purpose puts himself in communion with nature. Do this, and dull, indeed, must the little ones be if they do not respond with joyful interest to such instruction.

Pursue the same course with each of the other sciences, so far as practicable. Teach orally; discard text-books almost wholly in all the earlier stages of the pupil's course. Above all, *don't attempt too much at a time*. This is the danger to be specially avoided. Teach systematically and methodically, but go little by little, step by step. Lay out the work beforehand for each week or month, and be sure to complete what is thus prescribed, but don't lay out too much. Let each lesson be short, very short, but give it with all the spirit and force you possess. Illustrate with natural objects in all possible cases. Test the pupil's knowledge by frequent reviews, not by asking them to repeat what you have *said*, but by requiring them to exhibit and illustrate objectively what they have *learned*. Keep them close to visible, tangible, appreciable, material *things* all the time. Make it impossible for them to advance a step without using their own senses and powers of observation. Cause it to be understood that mere words are of no value in themselves any more than the figures or letters on a bank-note or on the face of a watch or on the scale of a thermometer; that it is, in each case, what is *represented* or *signified* by the word or letter that constitutes its value; that as a parrot or an automaton may be made to utter words of grandest import and be but a senseless parrot or automaton still, so a child may memorize and give trippingly on the tongue the whole nomenclature of a science and yet be utterly ignorant of its simplest facts and principles; and that, on the other hand, the little boy or girl who works up to the exact meaning and import of a few words and terms, through the study and comprehension of the things, ideas, or relations of which those words and terms are but the symbols, is in the straight path to true knowledge and learning.

Standing at the bar of Nature, the children, in this respect, are all equals. Her richest treasures are for those of closest inspection, keenest insight, and most patient and intelligent study, not for those who are merely the quickest to memorize words. Every observant teacher knows how disproportioned is the nominal standing of many a pupil to his actual industry and vigor of intellect, owing to the possession of this power of rapid and easy memorizing, and all such will appreciate the value of a truer and juster test of scholarship and rank.

A good and suitable text-book, in the hands of a teacher who knows how to use it, and how to direct its use by pupils, is always a help—one never to be undervalued. And for *advanced* classes in the natural sciences, text-books are almost indispensable, even with the best teachers. But it cannot be denied that too close and servile an adherence to what is put down in the book, no more and no less; mere text-book teaching, if teaching it can be called, is a prevalent and enormous evil in our common schools. It both begets and fosters indolence and dullness in the teacher, and eliminates all life and interest from the recitation, reducing the work of the pupil to a mere exercise of memory. The effects of this practice in primary classes are particularly deplorable, repressing the child's inquisitive nature at the very outset; giving its faculties of observation and perception nothing to do, at the period of their greatest activity and alertness, and when the exercise of them is most attractive and beneficial.

To break up this lamentable practice, and to bring a new life, a healthful and inspiring element into our primary schools, if possible, I make this plea for oral instruction in the natural sciences. If earnestly and wisely pursued, it will not only awaken and animate the little school-children, redeeming the weary hours from dullness and apathy, but it will quicken and vitalize the teachers as well, infusing fresh power and vigor into all their work. Force is also added to this plea from the fact, elsewhere adverted to, that there is, as yet, a conspicuous lack of text-books adapted to these elementary stages of the work to be done, except perhaps in botany.

The oral method will impose additional labor upon the teacher. No greater mistake could be made than to suppose it an easy thing to prepare and present an oral lesson in natural science; that is, if it is done as it ought to be, and as it must be to be of any worth. The loose, immethodical, aimless, and desultory school-room twaddle that too frequently passes for oral instruction, cannot be too strongly condemned. It is the refuge of indolence, ignorance, and presumption, and has done much to bring the whole system of object-teaching into contempt. The most abject servility to text-book routine is better than such vapid, incoherent swash, for even the poorest books are constructed with some regard to order and method.

I repeat, then, that if teachers hope to succeed in oral instruction, they must mark out for themselves a clear and definite plan, in accordance with which each science, and every part of each science, shall be worked up and presented; and they must understand that nothing whatever can take the place of hard study and unflinching determination on their own part. Anything short of this will inevitably result in confusion, discouragement, and failure.

TIME WASTED.

From eight to ten years are devoted to spelling and reading, in school. That is, the pupil is expected and required to prepare and recite one or more daily lessons in each of those things during nearly or quite the whole period of his common-school pupilage. About one-tenth of the extreme allotted span of human life, to learn to read, pronounce, and spell a few hundred words of the English tongue, in which he was born! Does it not seem absurd? The treasure is indeed precious—every child must possess it, cost what it may. But is it necessary to pay such a price? No; not the half of it. It is confidently affirmed that, with proper instruction, every child of good health and fair natural abilities can and should, in four years or less, of six school months each, beginning in utter ignorance of the alphabet, acquire such a practical knowledge of reading and spelling in his native English, that he may thereafter lay aside and dispense with both of those studies, so far as formal lesson-getting and recitation therein is concerned, and devote his time to other things. This opinion is expressed with deliberate confidence, as the result of experience and observation, both of which abundantly confirm the conclusions previously derived from a careful study of the nature and elements of the problem itself. Indeed, I could conscientiously put the case in still stronger terms.

A COMMON ERROR NOTED.

It is a mistake to suppose that improvement in reading is to be measured only by lessons in the text-books, and that progress must cease with the class exercises. Those are not the only, nor even the chief, means of advancement, except at the outset. Every text-book in school, arithmetic, geography, history, or grammar, as portions of each may be read by the pupil from day to day, should be utilized for his improvement in reading; that is, every sentence that he has occasion to read aloud in school, from whatsoever book or paper, he should be required to read *correctly*, and assisted in doing so when necessary. Thus, practice in reading, which is all the child needs after having made the supposed proficiency, is kept up and carried along incidentally, in and through all the other exercises and text-books of the school, on to the end of the course—while, meantime, he is not *studying* reading at all, but giving his whole time to other things.

THE CASE OF ARITHMETIC BRIEFLY EXAMINED.

Much precious time is also wasted upon arithmetic. It is believed that the average common-school text-book in that science contains double the amount of matter necessary or advisable, and hence that half of the time spent thereon, if not wasted, could be much more profitably devoted to other studies.

There lies before me a popular school arithmetic, of about four hundred pages. It is *deservedly* popular, one of the best of which I have any knowledge—in some important particulars, the very best. It is in use in hundreds of our common district schools—probably in thousands. It was made for common schools, the title-page so declares. Turning the leaves of this book, I note, at random, among the topics discussed at considerable length, the following *useful and practical* matters: Least common multiple of complex fractions; duodecimals; repeating decimals; average of accounts; conjoined proportion; alligation, medial and alternate; square root and cube root; arithmetical and geometrical progression; casting out the 9's in multiplication and division; the metric system; commutation of radix, &c., &c.

Now, no fault is found with these topics, *per se*. Some of them are necessary to a knowledge of higher mathematical studies; others may be of use once or twice in a lifetime, perhaps, to one business man in ten thousand; others are mere arithmetical curiosities; while of two or three, it may be said, that their being put into a *practical* arithmetic at all, (or any other, indeed,) cannot be accounted for upon any rational principles. But the marvel is that such an extraordinary list of arithmetical abstractions and wonders should pass unchallenged in this *practical* age—that they should have and hold an honored place in thousands of common ungraded district schools, from which Latin or logic, and everything of that nature, would be peremptorily excluded, and properly, as unsuited to the needs of the masses, and useless. How many boys and girls, whose pupilage terminates with the common-school course, ever make the smallest practical use of one of those formidable things—ever care for them, or think of them again, except with utter indifference or unavailing regret, in view of the time so foolishly and irreparably wasted?

The list given of topics which are of no actual, if imaginable, benefit to one common-school pupil in ten thousand—viewed from the utilitarian stand-point—might be more than doubled. They abound in all the *practical* arithmetics of the country. They have come down to us, some of them, by a kind of inevitable literary descent, from a period I know not how remote. And these are the very subjects that require the most time. Among those enumerated, there are several the mastery of any one of which demands more time and effort than all the fundamental principles and operations of arithmetic put together; and, for any practical use, ninety-nine district school children out of every hundred might as well be set to guessing conundrums. I knew a boy who spent all the spare time he could command for an entire term—more than an hour each day—upon circulating decimals and alligation; and when he had mastered them, the poor child thought he knew something! and so he did, but *what?* He completed the district-school course, shouldered his implements of toil, and went bravely out to earn his bread by the sweat of his face. Of Nature and her works, her protean changes, her laws and forces, her glories and harmonies, he was ignorant: the

> "Primrose by the river's brim
> A *yellow* primrose was to *him*,
> And it was nothing more."

But then, he knew all about repeating decimals, and alligation, medial and alternate!

EFFECTS OF ELIMINATION AND REVISION.

How shall these schools find time for the natural sciences?

By a careful revision, reconstruction, and abbreviation of their courses of study; * * thus bringing together and compressing into a brief, rational space, those things, and those things only, which are indispensably necessary to be known and understood. Applied to the arithmetic before me, this process would reduce its pages from 400 to not more than 150, and, for district-school purposes, enhance its practical value in the same proportion, inversely. Applied to most of the geographies in common use, it would brush away the rubbish of petty details, which cumber and disfigure them, leaving those things only which district-school children have time to learn, really need at this stage of their education, and may reasonably hope to remember. Applied to the leading text-books in English grammar, it would so winnow them of chaff, surplusage, amplification, and inconsequentialities, that their authors and makers would scarcely know them, while teachers and pupils would rejoice.

With equal or similar advantages, the eliminating process might be applied to nearly every other branch of the common-school course, and the result would be a set of books adapted to the great body of the ungraded district schools of the State, books free from useless redundancies, every page of which would contain relevant matter proper to be learned, and susceptible of being learned within a reasonable time—books, in short,

adapted to the first stages of instruction, the object of which is to secure to all the youth of the State the *elements* of a good common-school education. With such books, and teachers competent to use them, there would be time enough, and to spare, for the elements of the natural sciences, and the rudiments of vocal music and drawing, without neglecting any of the old branches, but, on the contrary, with a clearer and more enduring general knowledge of each one of them. The need of such a revised and eliminated set of handbooks for the use of this great body of elementary schools, is so apparent that it will doubtless soon receive the attention of educators and authors. In the mean time, teachers in these schools must eliminate and revise for themselves.

SPHERE OF THE STATE IN EDUCATION.

How far should a State undertake to provide for the education of its children at public cost? Is the high school a proper and legitimate part of a general free-school system? To these questions I answer, *yes;* my judgment approving, and my whole soul most joyously assenting thereto. I believe that the very best and grandest thing a commonwealth can do for its children is to educate them—that no other expenditures of the public revenue yield such rich and sure returns—that the question for enlightened statesmanship to ask is, not how little, but how much can be done for universal education. I would see every American State add to the elementary school the grammar-school; to the grammar-school the high school; to the high school the State university; and to the State university, I would see the American Congress add a grand national university, as the fitting top-stone to the whole magnificent edifice. And I would have the whole *free*—every door flung wide open, and the invitation repeated along the whole line, from one end of it to the other: "Whosoever will, let him come." For every dollar given by the State or the nation to railroads, a hundred should be given to common schools; for every acre of land bestowed in subsidy upon gigantic corporations, square miles should be granted to universities for the people. A fraction of the public domain surrendered during the last ten years to the insatiable rapacity of monster monopolies, whose formidable power already enables them to plunder the people with impunity, and even to defy the Government itself, would have reared in every State of the Union a free university, with princely endowments, to bless the people, honor the Government, and ennoble the nation forever. These remorseless oligarchies have filched from the nation its richest domain, and from the people and posterity their just inheritance—and yet they clamor for more. Meantime the little that was saved in better days, and consecrated to the education of the people, is often grudgingly allowed; the free universities and colleges are crippled for means, and a determined effort is made to force the States to call in their advanced free-school outposts, close their high schools and colleges, and retire within the elementary lines of fifty years ago. Against all this I protest in the name of the people, and of the millions of youth whom these men would remand to the beggarly rudiments of knowledge.

How can the laws of a State be known or understood by all unless they can be read by all its citizens?

Here, then, begin the duty and, of course, the right and power of the State in the matter of public education; upon this broad foundation abides, and will ever abide, the initial prerogatives of a commonwealth in respect to the instruction of its people. It must teach its children to read. It must see that this key to almost all acquisition (ability to read) is in the hands of all its youth. It is a primal necessity of its organic life, viewed from the stand-point of political philosophy and of history. And as the achievement of this object is vital to the State, and therefore cannot be left to the caprices and contingencies of individuals, or even of associated effort or enterprise, the State itself must undertake and carry on the work. It is too gigantic for private capital, too momentous for the mischances of private judgment. The commonwealth, in its strong and benign sovereignty, must stretch forth its arm and do this thing.

Hence, the common district school, wherein a knowledge of the orthography and of the reading and writing of the vernacular language of the country is the principal thing, to which are added the science and art of calculation and the few other rudimentary branches properly related to the central study, and usually included in the common district schools of our country. Up to this point there is no essential difference of opinion that I know of among those who believe in public education at all. This much, it is conceded, the State can and should do for the education of her children at public cost.

The State provides for all, at public cost, the rudiments of an English education, because it is to her interest to do so; because so much, at least, of knowledge is essential to the welfare, if not to the existence, in the long run, of a popular form of government; and because experience proves that such provision cannot safely be left to the voluntary action of the individual citizen. By parity of reasoning, the claims of public high schools to a settled place in the educational provisions of the State are also established.

BENEFITS TO THE STATE.

The commonwealth needs, through all her manifold industries and enterprises, many thousands of persons who have more than the rudiments of knowledge. The supply of persons of such advanced culture, through the private institutions of the country, is not equal to the public need, and hence the State should interpose to supplement the work. The same may be said, with even greater truth and emphasis, of that profounder learning, that higher and wider culture, which it is the province of the university to bestow. The loss which nearly or quite all the commonwealths in this republic sustain, because so few of their young men are qualified to act as leaders in the discovery, development, and utilization of their wonderful natural resources, and in lamping the people onward and upward toward a worthier and grander civilization, is, I believe, simply incalculable.

To do this on the grand scale of the whole body-politic, by providing common schools for all, and high schools and universities for as many as desire to enter them, were sound policy for the State.

But, in addition to the argument derived from the nature and functions of the State as a supreme political corporation, the view that public education should not stop with the common district school is supported by other considerations.

EFFECT UPON THE COMMON SCHOOLS.

The common schools themselves are the better for the public high schools, and the high schools for the university. The high school is to the elementary what the upper classes of a graded school are to the lower—a sharp and perpetual incentive to assiduity and effort. I will not say that without the spur of the high school the common schools could not be kept up to a paying standard of excellence, but it is very safe to say that they would deteriorate in spirit and efficiency, even with greatly increased energy and vigilance on the part of the teachers. As quickeners of the common schools, down through all their various gradations, high schools are of very great value.

THE RIGHTS INVOLVED.

As to the rights involved, I do not see how the State can logically or equitably limit its provisions to the rudimentary schools. To do so is to stop at precisely the point where, to the poor man, the question of expense obliges him to arrest the further progress of his children. The cost of tuition and accessaries, in good private institutions, corresponding in grade to public high schools, is, to the masses of persons in indigent circumstances, simply prohibitive; so that to them the public high school is the only means of bestowing upon their children anything more than a mere elementary education. And when we come to the college and university courses, the doors are still more closely barred against them.

And, then, the poor who have a little property pay their share of the taxes. The amount may be small; but, in proportion to their means, it is equal to that paid by the wealthiest. But there the analogy ceases. To the rich, the public high school is a matter of comparative indifference; the best private institutions are within their reach. But to the poor, the boon which comes with that pittance of tax is treasure indeed. Close the public high school, and they are almost wholly without recourse. There is practically no danger that the number of high schools demanded will increase so rapidly as to alarm the economist and the tax-payers. It is remarkable how steady the ratio remains between the number of high-school pupils and the whole number of scholars in a given city or State. Despite the exhaustless attractions of the higher walks of learning, and the increased opportunities of pursuing them, the percentage of those who choose to enter them does not materially vary from year to year, taking as a basis the entire enrollment. But the point is that a very large proportion of high-school attendance is clear gain to the cause of learning, and to the country. That is, without the public high school, at least one-half (I believe three-fourths) of those attending would have stopped with the rudiments; some from indifference, the most from inability to enter private institutions.

OTHER BENEFICIAL EFFECTS.

There is another consideration bearing upon this question: The effect of public high schools upon the cost of tuition in private schools of like grade, and more especially upon their character and standard of excellence. This influence is very great, in both of those directions; much greater than is generally imagined. In fact, I am not sure that the retention of the public high school might not be successfully argued as a measure of public economy and utility, on those two grounds alone.

The cost, *per capita*, of education in the public schools is often criticised, and the smallness of the difference in cost between public and private schools is remarked upon to the disparagement of the former. But abolish the public schools, and note the effect. An immediate and enormous advance of tuition and other expenses would certainly follow. Take away the ubiquitous and gigantic competition of the public schools, and the old monopoly prices would be restored as sure as that human nature will remain unchanged.

But even more potent and imperative has been the effect of public schools, especially public high schools, upon the literary character of private schools of like nominal grade. It has swept through them like a hurricane, blowing the chaff and pretense to the four winds. Every good public high school takes the breath clean out of half the sham academies and select private schools for miles around, and forces the rest of them to "new departures" in scholarship and thoroughness, with all speed. This is a great and positive public benefit—one with which we are all familiar, and which can not be questioned.

VALUE AND NEED OF SCHOOL SUPERVISION.

I am persuaded that county supervision can not be dispensed with without serious detriment to the free-school interests of the State. I believe that its benefits are so obvious and manifold, that it ought to have and will have a permanent place in the final adjustment of the working forces in every State school law—that experience has abundantly demonstrated its claim to be regarded as an indispensable part of the true American system of school supervision. As stated by Mr. Wells, the late national educational convention, in which the Government itself was represented by its able and efficient Commissioner of Education, and three-fourths of the States of the Union by their most intelligent and experienced educators, distinctly affirmed its concurrence in this view, by its approval of the report on school supervision, presented by an eminent teacher of Massachusetts, in which the place and value of the county superintendency in every well-devised scheme of State education were clearly shown and forcibly argued. The tendency of the best thought and ripest judgment of educational men in this country is unmistakably in the same direction. It can hardly be doubted that the model system of school supervision, the ultimate system of the future, will embrace, as its essential parts, the State, the county, and the town.

NORMAL SCHOOLS.

In view of the recent enlargement of the sphere of common-school studies, and the consequent extraordinary demand for more teachers of improved qualifications, the steady growth and prosperity of professional training-schools are noted with satisfaction.

The school first established for the specific purpose of fitting teachers for the common schools rests firmly upon assured foundations, and from its past ever-brightening history of fifteen years looks forward to a long and useful future. Another institution, devoted to the same objects, has been provided for by act of the general assembly, and the substantial and beautiful edifice designed for its use is rapidly advancing toward completion. Its early opening is demanded by the educational needs of Southern Illinois.

The training-schools in Cook and Peoria Counties are doing their appropriate work with enlarged facilities and increasing success. No additional organizations, under the county normal-school act, are reported, but the conviction of the need and value of such schools remains unchanged, and it is expected that they will gradually be established in other counties.

STATE NORMAL UNIVERSITY.

The condition and results of this institution are presented in an address by President Edwards, delivered June 27, 1872. After mentioning with praise the various persons who have been employed as instructors in the university, also the members of the board of education, he speaks cheerfully of the evidences of the permanence of the institution, and of its aims and purposes in the culture of teachers, both in the knowledge of the subjects to be taught and in the science or art of imparting instruction.

TEACHERS' INSTITUTES.

President Edwards, in this address, gives an account of what has been done in promoting and conducting educational institutes. Most of the counties in the State have been visited by some of the normal faculty for the purpose of lecturing upon educational topics and giving instruction at institutes. The aggregate of this work is 349 institutes and 503 addresses.

There have been several sessions of the Illinois State teachers' institute, at which instruction has been given by the normal faculty and others. The example has been

followed by many of the counties, and brief "normal schools" have been held in various places, to the great improvement of the profession. The last State institute numbered about 300, and was chiefly devoted to the natural sciences.

THE UNIVERSITY DIPLOMA.

This has no legal force, and any graduate who has received it is liable to be examined and rejected by a county superintendent. In this way the power of the university certificate is made to depend upon real worth, and not upon the compulsory provision of a legal enactment.

COST OF THE INSTITUTION.

There have been received from the State $279,740.63. But the property now belonging to the institution, and owned by the State, is worth $312,000. Therefore, the enterprise may be considered a profitable one. The amount of current expenses since 1857 has been $203,591.32. On this basis the average cost per pupil has been only $45.81 to the State.

THE MODEL SCHOOL.

In addition to the foregoing facts, as submitted in President Edwards's address, his semi-annual report, in December, 1872, shows especially the amount of practice-teaching done by the pupils of the university, and the strict methods of its inspection, in order to determine the progress and improvement. Each pupil-teacher is required to keep a diary, detailing each day's work, the subject of recitation, the difficulties encountered, and the methods employed in surmounting them. The writer is liable to be called on to read this record at any of the weekly meetings of the teachers, and the plan is found to be useful in many ways.

SOUTHERN ILLINOIS NORMAL UNIVERSITY.

The act to establish and maintain this institution was approved March 9, 1869, and funds are now asked from the general assembly to finish and furnish the new building. The amount required is estimated at $85,088.23, and if this is granted, the school can be opened for the fall term of 1873.

COOK COUNTY NORMAL SCHOOL.

The prosperity of the Cook County Normal School is very marked. The success of its graduates in teaching is indicated by the fact that the demand exceeds the supply.

The school has a complete and thoroughly organized training department. The pupils are required to spend the first term receiving instruction in methods of presenting the elements of common-school studies. The second term they enter the training department, and each is required to teach from five to twenty days, having entire charge of a room of about fifty pupils. In the evening the pupil-teacher is required to give to the training-teacher a full account of the day's work done and a rehearsal of that of the next day. In this way all the pupil-teachers keep up the same course of instruction.

A preparatory department is connected with the school, where pupils are admitted by declaring their intention to enter the normal school when qualified.

The public schools of the district are organized in connection with the normal school, and are graded into high and grammar schools, with a model department.

A club boarding-house is connected with the school, where pupils may board at cost.

The whole number of pupils since organization is 376; of graduates, 95.

PEORIA COUNTY NORMAL SCHOOL.

The whole number of pupils of this school for the four years since established has been 300. In January, 1872, it took possession of its new building, in which both the normal and training departments are accommodated. The pupils of the latter belong to the primary department of the public schools of the city, and receive instruction from the normal-school pupils, under the direction of the training-teacher.

The course of study embraces both common-school and higher branches, also methods of instruction and school management, and practice in the training department.

The beneficial results of the school are seen in the greater desire of teachers to fit themselves for their work; in the enlarged proportion of normal-school teachers; in the permanency of teachers, and in the better acquaintance among teachers.

EDUCATIONAL RIGHTS OF CHILDREN.

The superintendent treats of the subject of compulsory education at length, ably advocating its adoption. In support of his views he quotes fully from the argument of Hon. B. G. Northrop, secretary of the board of education for the State of Connecticut. Want of space compels the briefest abstract of Commissioner Bateman's arguments.

In answer to the question how the youth of the State shall be brought into the schools, the ground is taken that the fault of absenteeism and, hence, the evil of illiteracy lie at the doors of parents and guardians, and that a reformatory statute should be "not an act to compel the attendance of children at school, but an act to secure to children their right to a good common-school education." This right is not only natural, but constitutional and legal. It is "enumerated in the divine bill of rights in God's own gracious *magna charta*—the moral constitution and conscience of the race." The right of all children to the panoply of knowledge rests upon the high law of love and humanity, for they are all defenseless and impotent. "To send them forth without this preparation is cruelty; to neglect this duty is inexcusable; to refuse to perform it is a crime."

In Illinois these rights are guaranteed by constitution and law, and in conformity with these provisions there is a free-school system in successful operation. The machinery is complete. If those who have the custody of children neglect to avail themselves of these provisions, let them be required by law to discharge their duty. It is competent for the general assembly to pass such laws, and it is also necessary and expedient.

The admitted right of the State and of the community to tax all citizens for the support of schools for the free education of all children, is held to be liable to the charge of unjustness unless it carries with it the duty of the State, after taxing its citizens for the education of the children, to see to it that the children *are* educated. That when the property of the citizen is taken for this purpose of education, on the plea that in this way the State best provides for the protection of the citizen's property, the citizen has the right to claim that this pretended protection shall be made real. That to educate but a part of the children, leaving the children of the most dangerous classes to grow up in ignorance, is to fail utterly. The right to tax for free common schools carries with it the duty of compelling all parents to send their children to some school. He argues that this right is not tyrannical or anti-republican, but that it is based on the American idea of the best good of all.

POPULAR MISAPPREHENSIONS OF THE SUBJECT.

It is not proposed to drag children to school *vi et armis*, as some seem to imagine. That is but a goblin of the fancy, and, like all other phantoms of the brain, vanishes into thin air when closely confronted and interrogated. The proposed legal incentives to attendance, unfortunately *called* compulsion, belong to the simplest and most familiar category of legislative provisions. They are mildness itself compared with the penalties affixed to each of a hundred other statutes, to which the people have been accustomed all their lives, and which, though really so, they do not think of as compulsory at all. To illustrate, I quote the material sections of a bill, on this subject, introduced into our legislature last winter:

SECTION 1. *Be it enacted by the people of the State of Illinois, represented in the general assembly*, That every person having under his control a child between the ages of eight and fourteen years, shall annually, during the continuance of his control, send such child to some public school in the school district in which he resides, at least twelve weeks, if the public school of such district so long continues, six weeks of which time shall be consecutive; and for every neglect of such duty the party offending shall forfeit to the use of such school district a sum not exceeding twenty dollars.

SEC. 2. The penalty provided for in section one shall not be imposed in cases where it appears, upon the inquiry of the directors of any school district, or upon the trial of any prosecution, that the party so neglecting was not able, by reason of poverty, to send such child to school, or to furnish him or her with the necessary clothing and books, or that such child has been kept in any other school for said period of time, or has already acquired the branches of learning taught in the public schools, or that his or her bodily or mental condition has been such as to prevent his or her attendance at school, or application to study for the period required.

I cite these portions of that bill merely to show the utter—almost ludicrous—groundlessness of the popular notions about the nature and extent of the proposed compulsion.

AN OBJECTION EXAMINED.

It is said that such laws can not be enforced; that public sentiment is against them; that for a legislature to take a position a thousand moral leagues in advance of public opinion, and attempt to pull the people forward by a legal tow-line, is as chimerical as for a man-of-war to essay to take one of the islands of the sea into port with cable

and hawser—that in the one case as surely as in the other, the lines will be snapped asunder by the strain, leaving the mass unmoved. That is partly a truism, and partly a begging of the question. So much of it as affirms that laws (admitting there may be such) to which a majority of the people are actively opposed can not be executed, is a truism; like saying that a pyramid can not stand upon its apex. So much as assumes that public sentiment is hostile to such legislation, begs the question.

But when a great public issue, intrinsically vital, far-reaching, and aggressive, inviting criticism and assault, is separately and distinctly set before the people for examination and discussion—when that issue *is* discussed, thoroughly and exhaustively, and the whole body of electors are made familiar with it, and choose their delegates to the legislature with reference to it—and when a clear majority of the known friends of that measure are elected, and the contest is transferred from the hustings to legislative halls, and is again fought triumphantly through, and promulgated as the law of the land—*that* law *is* the will of the people; intrenched in their convictions, representing their moral sentiments, and challenging their respect and support—*and it will be enforced.*

PERTINENT QUERIES.

Now, has this great question of securing to all children the rights of education ever been *thus* canvassed before the people? Has it ever been discussed in all its bearings, in conventions and mass meetings, in the press and on the "stump," from city to city, town to town, and school-house to school-house, as other exciting public questions have been? If so, when and where? If not, how can it be said that public sentiment is opposed to it, or is not ready for it?

Mere politicians, as a class, know little and care less about public education, or its place down among the profoundest elements of national life. The utterance of a few graceful platitudes, now and then, where personal thrift may be served thereby, is about all that the average professional politician attempts, or is equal to, indeed. There are conspicuous and even illustrious exceptions, but they are exceptions. The indifference, apathy, and downright ignorance of the great body of partisan politicians, in respect to the nature, needs, operations, and possibilities of our systems of popular instruction, and of the paramount claims of the problem of universal education to the most thoughtful study of every one who would know even the rudiments of true statesmanship, are facts as conspicuous as they are lamentable—facts that astonish and bewilder the publicists of enlightened nations in Europe, and which are a just opprobrium to us in the eyes of the world. In confirmation I might here mention instances occurring in high places, in the States and in the nation, that are simply astounding. Hence, when it is considered how largely American public opinion receives its impulse and trend from political leaders, it is no marvel that the people are so slow to grasp these higher ideas of education, and so ready to doubt and disparage them.

HOW TO TEST THE MATTER.

Let the claims of public education be set before the country as they really are in the clear, honest, white light of history, of reason, and of facts; let it be affirmed, as it ought to be affirmed, that all other political questions are dwarfed in the presence of the supreme inquiry: How shall the youth of the nation be educated—fitted to be the depositaries of the jewel of civil and religious liberty; the custodians of the national honor in arts and in arms? Let the fact be everywhere proclaimed that the Government of these United States, with all the delicate equipoises of its Constitution and laws—the momentous questions of peace and war, of finance and commerce, of the myriad industries of the people—that this Government and nation, with its splendid history and traditions, and its garnered hopes and prophecies for the political future of the nations of the earth, is, in very truth, in the hands and at the mercy of electors unable to read one word of its great Constitution, one word of its laws and their judicial expositions, one word of its illustrious history, one word even of the fateful ballots in their hands—by whom, at any general election, it may be hurled from the paths of national rectitude and honor, or precipitated into the gulf of anarchy; let it be shown to what enormous dimensions the evils of non-attendance and truancy have grown, the incredible waste of money and other educational resources thereby entailed, and the alarming fact that even in States where the schools are the best, and where the powers of the voluntary principle have been most nearly exhausted, the ratio of absenteeism has not been materially reduced; let the eyes of the people be turned toward the constantly augmenting hosts of ignorant young men annually crossing, in ceaseless procession, the line of manhood and assuming the ballot, and the superadded multitudes of equally ignorant electors recruited by naturalization from the teeming myriads pouring into the country from the Old World from every quarter of the globe; let the inevitable consequences of the exposure of this unintelligent and heterogeneous mass of voters to the arts and wiles of unprincipled demagogues be portrayed; let these facts and impending perils be made the themes of powerful leaders in the great news-

papers of the country, day after day, week after week, and month after month, as the comparatively paltry and ephemeral issues of partisan politics are; let them find earnest thinkers and eloquent tongues in conventions, mass-meetings, lyceums, lecture-halls, and pulpits, and be thundered forth with vehement earnestness, pungent appeal, and fiery rhetoric from every "stump" in the land, *then* see which way the tide of public sentiment will set! In less than twelve months the people would be thundering at the doors of general assemblies *demanding* compulsory laws, and opposition to their enforcement would be as chaff before the storm.

Unless we look more to the education of the people, to their intellectual and moral elevation, the time will come when we shall not have a country of which any good man would care to be President. With an educated and upright people, we may defy the worst man whom God will suffer to be elected President—he cannot do much misehief; while, with an ignorant and depraved people, the best President that ever sat in the seat of Washington would be powerless.

It is to be said, too, that the class that would be chiefly reached by compulsory laws are the very ones most in need of the rescue—the children of the avaricious and depraved, and of the teeming thousands from foreign lands.

THE VERDICT OF STATISTICS.

Finally, the expediency and present necessity of legislative interposition to shield the children of the State from the dangers and the wrong of ignorance may be urged with unanswerable force from the statistics of absenteeism, truancy, and illiteracy in this country. It is an incontrovertible fact that the voluntary plan is but partially successful. The proof is as overwhelming as it is alarming. The evidence is comprehensive and cumulative. It pours in from every State and Territory, and from all the chief cities of the republic. The reports of State and city superintendents, and of the national Commissioner of Education, are burdened with the sad details. The number of absentees and truants in our chief commercial metropolis was reported, eight years ago, as a mighty army, 100,000 strong, and subsequent reports show little comparative improvement. Taking all the States from which reports are at hand, and the number who are even enrolled, in any given year, averages less than half the total school-going population, while the average daily attendance is less than one-fifth of that population.

But the fact that has most to do with the present inquiry is, that a comparison of the statistics of the last decade shows but slight *improvement* in the ratio of attendants to non-attendants, taking all the States, Territories, and cities into the account; while in many the change has even been for the worse—disproving the view that the evil is steadily abating, and that, with better teachers, better methods, and better schools, it will continue to decrease till the minimum is practically reached, without the intervention of law. For in no preceding ten years of our common-school history has progress in the science and methods of teaching, and in whatsoever makes school inviting and effective, been so marked and rapid.

No; we are not "doing well enough" in this matter, as some affirm and try to believe. We must do a great deal better, and make haste about it, too. With the best school *systems*, and, upon the whole, the best schools in the world, as I verily believe—certainly the best *for us*—yet lack we this one thing. And while we palter about imaginary infractions of personal liberty, and fancied assumptions of power by the State, and refuse to invoke the only arm that seems to have power to save, increasing myriads of native-born youth are growing up in illiteracy and vice, and the number is constantly augmented by still more ignorant masses from foreign shores. How long can the country endure this accumulating weight and strain without parting asunder, or settling down into the furrows of the sea? The laws of cause and effect are inexorable and sure. The means of safety are at hand; if we do not use them, no miracle will be wrought to avert our destruction.

CONCLUSION.

Attention has now been invited to the general condition of the school-system as shown by statistics; to the leading provisions of the new school-law, and the changes effected thereby; to the changes believed to be beneficial, and to those from which unfavorable results are apprehended; to the large and excellent results anticipated, and in part already realized, from making the rudiments of natural science a part of the common-school course; to the condition and prospects of the State and county normal schools; and to the facts and arguments in favor of legal measures to secure the educational rights of children, and thereby to arrest the growing evil of non-attendance. It only remains to gather up, in a few brief sentences, the general results for the period covered by the report, and to restate the suggestions and recommendations that have been made with a view to the improvement and increased efficiency of the system.

The schools.—There are in the State three hundred and eighty-five more public schools than there were two years ago, and, by the reports of county superintendents, 9,334 more pupils in the schools. The increase in the number of scholars is in fact considerably greater than the above, probably 10,000 or 15,000 more. For some unknown reason, no reports of attendance were furnished, for 1872, from one of the largest cities in the State, outside of Chicago, and from three or four large villages. The actual increase of pupils in the two years is about 25,000. The figures show a decrease of 9,741 in the average daily attendance in 1872, as compared with 1870. This also, for the reasons just given, is, in part, apparent only, not real. The missing reports would considerably increase the exhibit of daily attendance, and possibly show a small increase over that of 1870 and 1871. But a decrease in this decisive test of school-work—average daily attendance—may be looked for in the future, under the combined influence of the provision requiring the distribution of funds to districts without regard to attendance, and the absence of all legal obligations touching the matter of attendance. The former provision was in effect but one month—September—of the school year, 1872, and its existence had not probably become generally known at that time. Facts recently brought to notice render it certain that, if not repealed or modified, it will hereafter have a very depressing effect upon the element of attendance. The other cause of the lamentably small average daily attendance—absence of legislation in regard to absenteeism—will of course continue to operate, and it is believed with increasing effect, until the proper correctives are applied. Is it not a very grave fact that of the 882,693 persons of lawful school age, only 662,049 were in the schools at all, in 1872; and that less than one-half even of that number were in daily attendance? It is noteworthy that the number of private schools is shown by the reports to have decreased 94, and the number of pupils in such schools 6,217, during the last two years. The whole number of private-school scholars reported in 1872 is 34,784, an element of inconsiderable importance in the matter of absenteeism just referred to, when the entire school census of the State is taken into view. The number of districts sustaining schools for the full legal term of six months is 588 greater than in 1870, while the number failing to have any school at all is 87 less than it was two years ago. The increase in the number of teachers has been, ladies, 510; gentlemen, 333; total, 843. There has also been a slight increase in the average monthly wages paid.

There has been no falling off in the average qualifications of teachers, nor in the amount or quality of the instruction imparted. On the contrary, the period covered by this report has witnessed a marked general advance in the average fitness and attainments of teachers, in their methods of instruction, and in the average net results of their labors. Improvement in all these particulars has been especially noticeable during the last school year, in which, as the figures show, the number of county institutes held, the average length of their sessions, and the number of teachers attending them, have been much greater than in any preceding year since the free-school system was established. The report exhibits the very significant facts that 160 of these temporary county normal schools were held in 1872, each one of nearly 5½ days' average duration, or an aggregate of 866 working-days, equivalent to the continuous session of one institute for more than three years; and that nearly 8,000 different teachers were in attendance. These facts point significantly in the direction indicated—improvement in qualifications and teaching-force—because attendance upon institutes is not obligatory, is always attended with more or less expense to the teacher, and, under the present law, with loss of the time also. Hence the chief motive to attendance can only be a desire for professional improvement. It is asked how these facts and statements consist with the criticisms and strictures given in the former part of the report. It is replied that they are both true and entirely compatible. The allegation of grave defects and short-comings is surely not negatived by the admission of improvement and progress. While re-affirming in the most emphatic manner the belief that the common schools of the State are not accomplishing what they should, either in the amount, kind, or quality of the instruction imparted, and that they never will or can approach the full measure of their beneficent powers and possibilities until the means that have been suggested for their greater efficiency are substantially adopted and carried into effect, it is at the same time affirmed, on the basis of known facts and figures, that more and better school work was done by the teachers of this State during the last school year than in any preceding one. It is not that we are retrograding, nor yet that we are not advancing, but that we are not advancing fast enough, that the present exposition of defects and complaints, with the plea for immediate and radical measures of improvement, has been made. The schools are not feebler and poorer than they were fifteen years ago; they are stronger and better every way; but a different people sits in judgment upon them. In that decade and a half the State has passed into a new era of public opinion and intelligence on the subject of education and schools. Much that once passed unchallenged in school philosophy and practice is now confronted and interrogated by citizens who, having given some thought to the subject, have opinions of their own, and decline any longer to take everything of that nature on trust.

THE SCHOOL LAW—AMENDMENTS.

County superintendents of schools.—In accordance with the views advanced in the preceding pages of this report, I respectfully advise and recommend the adoption and pursuance hereafter of the following course in respect to county superintendents of schools:

1. That they be considered and treated as officers or agents of the State, in connection with the free-school system, and not as county officers, in the ordinary sense; and that they continue to be elected by the people, as now, or appointed by the governor, with the advice and consent of the senate, as may, upon due reflection, be regarded as most conducive to the efficient administration of the school system and to the best interests of public education.

2. That, whether elected or appointed, suitable conditions be imposed, compliance with which shall be necessary in order to render a person eligible to the office of county superintendent of schools; that the conditions and qualifications so imposed and required shall be just and reasonable; so prescribed and adjusted as, on the one hand, to insure the services of competent, faithful, and upright men, while, on the other hand, no really capable and suitable person shall be excluded from the office by reason of any unwisely arbitrary or inflexible rules. It is believed that such an adjustment of conditions and qualifications is practicable.

3. That all county superintendents of schools, whether appointed or elected, be required to devote their entire time to the educational and general duties of the office in such manner as, in their judgment, the interests of the common schools in their respective counties, and the general good of the system of public education, may seem to require.

4. That the proper authorities of each county be required to provide and suitably furnish an office for the use of the county superintendent of schools.

5. That authority to examine and license teachers of common schools, under the general school law, in each county, and to renew or revoke certificates, be vested in the county superintendent exclusively; all examinations to be conducted by him in person, or through examiners by him appointed, and no county certificate to be valid without his official signature.

6. That all commissions, percentages, and per diem, now allowed county superintendents of schools, by law, be repealed and abolished, and, in lieu thereof, that each and all of said county superintendents be paid a fixed and definite annual salary, the amount thereof to be designated and prescribed in the school law; which salary shall be in full for all official services rendered and all official duties performed by them, of whatsoever kind, and sufficient in amount to properly remunerate and support, in each county of the State, a superintendent of schools possessing the before-mentioned qualifications.

7. That with reference to the salaries of county superintendents of schools, the counties of the State be divided into five or more classes, according to population, as shown by the Federal census of 1870, the superintendents in the several counties comprising any given class to receive each the same salary, provided that the lowest salary allowed the several superintendents of any class shall not be less than one thousand dollars, nor the highest more than three thousand dollars.

8. That the salaries of each and all of said county superintendents of schools, after the same shall have been fixed and determined by law as aforesaid, be paid out of the State treasury quarter-yearly, on the warrant of the auditor of public accounts, from the school fund; and that the amount so paid to the county superintendent of each county be annually deducted by the auditor from the distributive share of the State school funds accruing to such county.

The two-mill State school-tax.—I respectfully advise and recommend that the designation of a particular rate of school tax, to be levied by the auditor for the support of common schools, be discontinued and dispensed with, and that, in lieu thereof, a specific annual sum be appropriated by the general assembly for the support of common schools, leaving the auditor to determine, from time to time, according to the aggregate assessed valuation of property in the State returned to him, the rate necessary to produce the amount so appropriated. There are believed to be many good and sufficient reasons for this change in the mode of raising the funds necessary for the support of common schools, and that the effect would be in all respects favorable to the educational interests of the State. I also recommend that the amount of common-school revenue raised directly by the State be largely increased, so that the local district school taxes may be proportionally diminished, and the burdens and benefits of the school system, financially considered, more nearly equalized. I do not think it would be advisable to entirely relieve the inhabitants of the several school districts from the necessity of a supplementary local tax, but there is little probability of that, as it would require the State appropriation to be increased more than five times the present amount. I am of the opinion, however, that if the sum now appropriated by the State were doubled, it would prove a wise and beneficial measure.

Apportionment of funds to school districts.—I further advise and recommend that the

former rule for the apportionment of funds by boards of township trustees to school districts be restored; that is, that one-half of said funds be distributed to districts in proportion to the number of children under twenty-one years of age in each respective district, and the other half in proportion to the attendance certified in the schedules, as heretofore.

The school month.—For the reasons mentioned in the preceding part of the report, I recommend that twenty school days be established as the legal common-school month in this State; that the phrase "school days" be held to mean all the days of the week except Saturday, Sunday, and the legal school holidays; that by "legal school holidays" shall be understood the following, and no others: The first day of January, the fourth day of July, the twenty-fifth day of December, and any day or days appointed or recommended by the governor of this State, or by the President of the United States, as a day of fast or thanksgiving; that teachers shall not be required to teach on any of such legal school holidays, and that when any such holiday occurs during a term of school, it shall be counted in and as a part of such term of school, whether school be actually holden on said day or not. It is considered important, to prevent misapprehension and confusion, that these several points be explicitly determined and settled by law.

Unlawful exclusion of pupils.—I recommend that more adequate penalties, and surer and speedier modes of redress, be provided in cases where boards of school directors, or boards of education, unlawfully neglect or refuse to furnish and secure to all children justly and legally entitled thereto, the right and opportunity to an equal education in the free schools under the control of such boards.

Institutes for special and general instruction.—I advise and recommend that a system of institutes of instruction be organized, established, and put in operation during the ensuing two years, under State control, in such form as may be considered wise and expedient, the objects of which shall be to improve the qualifications of teachers and those about to teach, and to enlighten the people in regard to education, and arouse in their minds a proper interest in the subject; that, in furtherance of these ends, it be provided that instruction shall be given in such institutes, to the teachers, in the art and methods of teaching; special attention being given to the branches of study usually taught in the elementary free schools, and more particularly to the rudiments of the natural sciences recently added to the common-school course of studies; and that addresses shall be delivered to the people on matters of education, science, the relations of the common schools to the arts, industries, prosperity, and happiness of the commonwealth, and any other subjects, the discussion of which will tend to increase the intelligence of the people, and attach them more closely and wisely to our grand system of public education; and that, to meet the expenses of such institutes, the sum of ten thousand dollars per annum be appropriated, for the next two years, from the State treasury, to be drawn therefrom in such manner, and upon such orders and vouchers, as may be prescribed by law. Some of the considerations upon which this recommendation is based may be found in the preceding part of the report. I cannot adequately express my sense of the importance of this measure at this time, nor my estimate of the good results that would follow its adoption. It is again most earnestly commended to the favorable notice and enlightened action of the general assembly.

Educational rights of children.—And finally, it is respectfully advised and recommended that those who have the control of children be required, by appropriate legislation, to see that such children have the opportunity to acquire a good common-school education, either by sending them to the public schools for the necessary period, or by providing for them, and securing to them, some other equal educational facilities. Some of the reasons for believing that such legislation is constitutional, necessary, and expedient, have already been given.

With these few amendments and additions to the school law, and to the working educational forces of the State, it may reasonably be anticipated that the free schools of Illinois will enter upon a period of greatly increased prosperity, efficiency, and usefulness.

CHICAGO.

THE FIRE.

The latest history of the schools of this city includes the record of the great fire, a calamity to the educational as well as business interests of the community. Before this misfortune, both private and public institutions of learning were in excellent condition. The fire destroyed fifteen fine school-buildings, of which ten were owned by the city. The loss of these last amounted to $249,780, and left 10,000 children without school accommodations and 100 teachers out of employment. These were promised places as soon as vacancies occurred, and hence no examinations have since taken place, as no teachers have been needed beyond those already employed.

PUBLIC SPIRIT OF THE TEACHERS.

While yet in doubt as to the extent of loss by the fire and whether the schools could be sustained, the teachers of the city unitedly offered to continue their work till the close of the year, regardless of compensation. The offer was accepted, and all the children, on application, were, as soon as possible, re-installed in some school.

EFFECTS OF THE FIRE.

The examinations for the year, and especially for admission to the high school, have shown no appreciable difference; and, although the progress of pupils has been affected by the frequent changes, the instruction has been as thorough as before.

The year closed with only 2 per cent. less pupils than it began, though the teaching force had been reduced 20 per cent.

The schools have suffered most from irregular attendance, and also in the necessary withdrawal of many of the older pupils; yet this last is compensated for by the examples of heroism manifested in the struggles of some to complete their course.

The evening schools have not been resumed since the fire.

Generous relief, both in money and clothing, was forwarded to the teachers and pupils from various sources, and carefully distributed among them.

BOARD OF EDUCATION.

An entire new board, consisting of fifteen members, was nominated by the mayor on the 1st of July.

SCHOOL-BUILDINGS.

Four of the burned school-buildings have been re-erected in the north division, and another, in place of two which were destroyed, was expected to be completed by the 1st of January. Four new buildings have also been erected at a cost of $188,454.16 for buildings and lots, and $7,958.85 for furniture. Additional accommodations are needed, especially on account of the increase of the mechanic and laboring population to rebuild the city.

INCREASE OF SCHOLARS.

There has been an increase of over 100 per cent. in the last seven years, and it was believed that the fall term would open with not far from 35,000 pupils.

BRANCHES OF STUDY.

Particular attention is paid to music, and at the close of the last year all the grammar grades were examined for the first time in reading music at sight. German is very generally taught, and over 4,500 pupils of the public schools are studying that language. Greek, Latin, and French, in addition, are taught in the high school.

THE HIGH SCHOOL.

Notwithstanding the disadvantages occasioned by the fire, the closing examinations of this school compare favorably with those of former years. There were fifty-four graduates at the last anniversary.

THE NORMAL SCHOOL.

The normal department of the high school became an independent school in 1871. The first graduating class of the department consisted of one member; the school now contributes about twenty-five teachers annually to the service of the city, and these have been almost uniformly successful in their work. All but three of the alumni of the normal school have taught in the public schools.

A school of practice, consisting of divisions from one of the district schools, is located in the normal building, and the pupils of the normal school are required to teach in this at least two consecutive weeks before graduation, in order to acquire, under proper supervision, correct modes of discipline and instruction. They are also frequently called into practice to supply temporary absences of teachers in the city schools.

All applicants for positions in the public schools, whose qualifications are approved by the board of education, but who are without experience in teaching, are required

to spend some time in the departments of the normal school, there to demonstrate their ability for practical work.

A higher standard of scholarship is now required for admission than formerly, which is responded to by enlarged preparation on the part of candidates, and no falling off of numbers.

Hereafter two classes will be graduated annually.

JACKSONVILLE.

THE PORTUGUESE ELEMENT.

The few following facts are offered in answer to the many inquiries that have been made in regard to the Portuguese element in the city and schools of Jacksonville:

It is about twenty years since a number of Portuguese, driven from their homes in the island of Madeira by religious persecution, fled to the United States. The peculiar advantages offered by Illinois induced them to settle in that State, dividing their numbers about equally between Jacksonville and Springfield. The first colony numbered about 300. Since then many more have arrived, so that there are now about 1,200 Portuguese in Jacksonville. They were very destitute when they arrived, but through their industry and frugality nearly every family has secured a comfortable home. They have established two Protestant churches, in which service is conducted in their native language. The number of Portuguese children in the public schools is 230.

STATE NORMAL UNIVERSITY.

This institution closed its fifteenth year in June, 1872. At the closing exercises of the term, the president, in his address, stated that, since the founding of the institution, there have been in the normal school 2,617 pupils, making the admissions on an average 174¼ per year. But for the last two years the admissions have averaged 266⅔ per year. In the model school the total attendance has been 2,626. Over 700 pupils of the university are engaged in teaching, and of these 75 are acting as principals or superintendents. The cost of education per pupil is $91.61. The number of graduates has been 200 in the normal and 17 in the high school.

FUNDS DERIVED FROM UNITED STATES GRANTS.

The institution has been mainly supported by the interest of the college and seminary fund. This has usually been spoken of as a State appropriation. But it does not come as a gift from the State. It is the interest on a fund donated by Congress for the maintenance of a State institution of learning. The State is only a trustee of the fund.

MODEL DEPARTMENT.

The model department is divided into three grades—high, grammar, and primary. The permanent teachers are assisted by the pupil-teachers from the normal school. The classical course is very thorough. Young men who have taken this course enter Harvard or Yale without conditions.

An additional course of study has been arranged to meet the demands of the new "school law." All the students have an opportunity to take this course.

MUSEUM AND LIBRARY.

The museum and library formerly belonging to the Illinois Natural History Society are in the university building, and to these the students of the university have access under suitable restrictions. The museum has an exceedingly valuable collection, and the contents are nearly all catalogued in a manner most convenient for reference.

PUBLIC EDUCATIONAL LECTURES BY THE FACULTY.

President Edwards stated in his address that most of the counties in the State had been visited by some of the normal faculty, for the purpose of lecturing upon educational topics and giving instruction at institutes. Altogether, 349 institutes have been attended and 503 addresses delivered.

The condition of the university in every way leaves nothing to be desired.

COOK COUNTY NORMAL AND TRAINING SCHOOL.

The number of different pupils who have belonged to this school since its organization is 316. Of these, 86 have completed the course of study and received diplomas. Normal students are required to practice in the model-school from five to twenty days each year of their attendance at the school.

GERMAN-ENGLISH NORMAL SCHOOL.

In this institution students are prepared to teach in either German or English schools. Its departments are normal, preparatory, academic, and a model-school. A class in horticulture receives theoretical and practical instruction. There are two libraries—one German and one English.

ILLINOIS INDUSTRIAL UNIVERSITY.

The grounds occupied by the university embrace about 623 acres. The new university building is one of the most spacious and convenient on this continent. It is 214 feet in length, with a depth on the wings of 122 feet. This building is designed wholly for public use. The library wing is fire-proof, and contains five large halls devoted to the library and various cabinets and museums. The new mechanical building and drill-hall is of brick, 128 feet in length by 88 feet in width. The barns and greenhouses are extensive and valuable.

Besides these lands and buildings, which are, with furniture, library, &c., valued at $300,000, the university owns 25,000 acres of well-selected lands in Minnesota and Nebraska. Its endowment funds amount to $364,000; other property is valued at $33,000. The State has appropriated $25,000 to the agricultural department; $20,000 to the historical department; $25,000 for mechanical building and drill-room; $75,000 for the erection of the main building; $10,500 to furnish the chemical laboratory; and $20,000 for library and apparatus.

The university embraces the following colleges and schools: 1. The college of agriculture, subdivided into two schools—one of agriculture proper, the other of horticulture and fruit-growing. 2. The college of engineering, subdivided into four schools—mechanical science, civil engineering, mining engineering, and architecture. 3. The college of natural science, subdivided into two schools—chemistry and natural history. 4. The college of literature and science, subdivided into two schools—English and modern literature and ancient languages and literature. There is also a school of commerce, a school of military science, and a school of domestic science and arts.

The studies are elective, but the completion of one of these courses, or of the equivalents allowed in it, will be required to entitle the student to graduate.

CO-EDUCATION OF THE SEXES.

The purpose of the school of domestic science and arts is to provide a full course of instruction in the arts of the household and the sciences relating thereto. The instruction in this school was to begin with the college year, September, 1872, and to be developed as fast as practicable. Other schools, especially adapted to the wants of women, will be opened as fast as the means in the possession of the university will permit. Young ladies have free access to all the departments of the university, and several are already pursuing studies in the schools of chemistry, horticulture, architecture, and commerce.

It is expected that the old university building will be thoroughly refitted and devoted to the use of lady students and to the schools of domestic science and other schools for women, when the new building is fully prepared and occupied. But a year must elapse before the transfer can be effected. To meet the present want, arrangements are in progress to open near the university a boarding hall for ladies.

Labor is not compulsory, but is furnished, as far as possible, to all who desire it. Students, however, can not count upon paying more than one-half their expenses by working.

UNIVERSITY OF CHICAGO.

The small attendance at the law school of this university during the past year is owing to the fact of the law-school building having been destroyed in the fire of October, 1871, and the students scattered among the other schools.

LIBRARY AND MUSEUM.

Large additions have recently been made to the library, museum, and apparatus. The Hengstenburg library, containing about 13,000 volumes, and including one of the most valuable theological libraries in the country, is now put up in the university. A collection of 3,500 coins has been presented to the university by Rev. Miles Sanford, D. D., of Philadelphia.

SCIENTIFIC APPARATUS.

Among late donations of apparatus, are a Ruhmkorff's induction coil, one of the largest ever imported, and a full set of the famous Geissler's tubes. The Dearborn ob-

servatory, which forms the astronomical department of the university, contains the largest telescope in the country. During the year arrangements were completed for the organization of a course in practical chemistry. The laboratory is quite new, and one of the best equipped in the West.

To meet the wants of the different classes of students, arrangements have been made for instruction in the branches necessary to a commercial education.

Students may reside at the university and pursue studies for a longer or shorter time, in any of the classes, at their own election, subject to the regulations of the faculty.

The site of the university was a gift of the late Senator Douglas. The accommodations have lately been increased by the completion of the main building, 136 by 72 feet. The cost of this building was over $117,000.

The institution hitherto known as Wayland University, located at Beaver Dam, Wisconsin, has passed under the control of the university, and will hereafter be conducted as a preparatory department of that institution. The university has also leased the building recently erected at Winnetka, Illinois, 16 miles north of Chicago, for the purpose of maintaining a preparatory department at that place. These schools are open to both sexes. It is intended gradually to develop, in connection with the first named of these schools, a complete collegiate course of studies for young ladies, graduates of which shall receive the diploma of the University of Chicago.

SHURTLEFF COLLEGE.

The departments of study are theological, collegiate, academic, and preparatory. By a late act of the board of trustees, the preparatory and collegiate departments are open to both sexes. The wisdom of this action has been successfully tested during the current year. Students who do not propose to pursue a regular course of studies can recite in any of the classes of the preparatory and collegiate departments in which they can maintain an honorable standing. A phonographic department has been established, under the care of a practical phonographic reporter.

WHEATON COLLEGE.

This institution offers a ladies' course in each of its departments. A normal class and a commercial department are conducted in connection with the college.

As at Mount Holyoke and other like institutions, all the young ladies residing in the building, in addition to the care of their rooms, will work one hour each day in the household.

The new college buildings, erected at a cost of $50,000, have been completed, and were opened for students in September, 1872.

SAINT IGNATIUS COLLEGE.

This institution, conducted by members of the Society of Jesus, is regularly chartered and empowered to confer all the degrees usual in colleges and universities. There are two courses of study, classical and commercial. There is also a preparatory department.

ILLINOIS WESLEYAN UNIVERSITY.

This institution is under the joint patronage of the Illinois and Central Illinois annual conferences of the Methodist Episcopal Church, which annually appoint committees to supervise the examinations and general management of the institution. Ladies and gentlemen are admitted on equal terms.

A scientific course has been arranged for those who do not desire the regular college course. There is also a preparatory department, offering the advantage of a first-class academy.

The endowment fund of the college is nearly $200,000. A new building, costing over $100,000, has lately been completed.

LOMBARD UNIVERSITY.

This is open to both sexes. There are two departments of instruction, collegiate and preparatory. The collegiate includes three courses of study, classical, scientific, and literary. Each of these courses occupies four years.

EUREKA COLLEGE.

Five courses of study are offered: collegiate, biblical, normal, commercial, and musical. The collegiate department comprises four courses: preparatory, baccalaureate, scientific, and academic. Ladies are admitted to all the departments on the same footing as gentlemen. The number of students has averaged over 200 annually since the organization of the college.

MONMOUTH COLLEGE.

This institution comprises four departments: a collegiate department, (including a classical and a scientific course,) an academical department, a musical department, and an art department. Ladies are admitted to all the courses of study. Instruction is given in Hebrew sufficient to enable the student to enter an advanced theological class. Students completing the normal course will be entitled to a teacher's diploma. The geological cabinet of the college is one of the finest in the State.

WESTFIELD COLLEGE.

This institution is under the control of the Illinois, Central Illinois, and Lower Wabash conferences of the United Brethren in Christ. In addition to the classical and scientific courses, there is a teachers' or normal course, so organized as to meet the requirements of the new school law. Teachers' certificates will be issued to students completing this course. Ladies and gentlemen are admitted on equal terms.

EVANSTON COLLEGE FOR WOMEN.

The report of this college contains the remark, that "while it is true that many institutions are now nominally open to women, it is equally true that, without special provision for convenient and economical residence, and for such studies as they may wish to undertake, not found in the university curriculum, the advantage is often more nominal than real." This institution, under the direction and control of a board of lady trustees, seeks to make these special provisions, and to aid the Northwestern University to accomplish the task it has undertaken—the higher education of women.

CONSOLIDATION WITH THE NORTHWESTERN FEMALE COLLEGE.

The history of the Northwestern Female College, established at Evanston seventeen years ago, is inherited by the new college, which adopts as its own the alumni of the old college, and will use its building until next year, when its own will be completed.

The students of the college receive the greater part of their instruction from the faculty of the Northwestern University. While the classical and scientific courses of the university are open to ladies, who upon completing either will receive the corresponding diploma, another course has been arranged for those who prefer to give to the modern languages and history greater prominence than to the classics and higher mathematics. This course is shorter by one year than the courses of the university, and gives more scope to the choice of the student. The departments of music and the fine arts offer extraordinary facilities. The library of the Northwestern University, its reading-room and cabinet, are open to the students of the ladies' college.

Evanston is the most important suburb of Chicago, and the location of the college is in every way desirable and advantageous.

ILLINOIS FEMALE COLLEGE.

In addition to the course pursued in first-class academies, there are three departments: music, art, and business. The college library is large and valuable.

ALMIRA COLLEGE.

This institution is for young ladies. The collegiate course occupies four years, but pupils are encouraged to add another year to their course, that they may attain a higher culture in the languages, fine arts, and literature. A preparatory department is connected with the college.

ROCKFORD SEMINARY.

This institution has four departments: collegiate, (including a classical and scientific course,) preparatory, musical, and the department of drawing and painting. A normal class is formed when desired. The seminary originated in connection with Beloit College, and its founders designed to make liberal provisions for the thorough collegiate education of young ladies. Its charter gives full college powers.

JENNINGS SEMINARY.

The name was changed from Clark Seminary in 1869. There are five courses of study: classical, scientific, preparatory, commercial, and musical. Equal advantages are offered to ladies and gentlemen.

FERRY HALL.

This institution was organized as the "Ladies' collegiate and preparatory department of the Lake Forest University." Since its inauguration, three years ago, it has met with the most gratifying success.

The plan provides for a preparatory course, a collegiate course of four years, and thorough instruction in music, drawing, and painting. A university course, for the further pursuit of classics and the arts, will be provided for those who desire it.

RUSH MEDICAL COLLEGE.

This college announces its thirtieth annual course of lectures. The buildings of the college were destroyed in the fire of October, 1871. Temporary lecture and dissecting rooms are erected on the Cook County Hospital grounds. The Cook County commissioners having decided to erect permanent buildings, the trustees of the medical college have concluded to erect a new building in connection with the county hospital. The proximity to the county hospital, which is the largest in Chicago, offers superior advantages for clinical instruction. This is considered as more than a compensation for the great loss sustained by the destruction of the splendid college building.

BENNETT COLLEGE OF ECLECTIC MEDICINE AND SURGERY.

Among the advantages of this institution is a capital of $50,000, free from all taxation. The old college building was destroyed in the fire of October, 1871. A new and commodious building has since been purchased. The course of instruction is complete and thorough in every department. The system of practice taught is genuinely eclectic. A free dispensary is established at the college, which affords opportunity for practice to students, and they have access to Cook County Hospital, one of the largest and best arranged in the country.

THEOLOGICAL SEMINARY OF THE NORTHWEST.

This seminary is conducted under the auspices and in the interests of the Presbyterian Church. The course of study occupies three years. The requisites for admission are, a connection with some evangelical church, and a regular course of collegiate study.

GARRETT BIBLICAL INSTITUTE.

This institution was first established for the benefit of young men of the Methodist Episcopal Church, but is now open to all evangelical denominations. It is aided in the instruction of its students by the Northwestern University and its preparatory school. These institutions and the biblical institute are located together on the same grounds. For those students who can study only a limited time, a partial preparatory and theological course has been arranged. Both the institute library and the university library are open to students of the institute. Tuition is free.

ILLINOIS INSTITUTION FOR THE EDUCATION OF THE BLIND.

The biennial report for 1869–70 states that the number of pupils had increased to 80, and the building was crowded to its utmost capacity. In April, 1869, the building was destroyed by fire. Another one was erected on the same site, but with only about half the capacity of the former one. The school is continued in all its departments, with as much advantage to the pupils as the limited room permits. Many applicants have to be refused for want of accommodation. On this ground a strong appeal is made to the legislature for funds to enlarge the building.

HOME FOR THE FRIENDLESS.

This benevolent institution, located in Chicago, makes its thirteenth annual report: The number of inmates at the beginning of the year was 77. The number admitted during the year was 1,582, of whom 1,008 were adults and 574 children; the number left 1,440. Of the children, 58 have gone to permanent homes and 31 have died. The average attendance in the school-room has been about 48. In the industrial department twenty-five girls between the ages of 13 and 17 have received instruction. Three-fourths of the income of the Home was cut off by the ravages of the fire of October, 1871. Enough is left to pay the running expenses of the school and mission, and this is largely increased by donations.

CHICAGO REFORM SCHOOL.

The guardians of this institution make their last report: While regarding with satisfaction the good that has been accomplished and expressing profound regret at the combined circumstances which necessitated the discontinuance of the institution, they fully indorse the action of the legislature in passing the "transfer bill," relieving the city of Chicago from the expense of maintaining "convicted" juvenile offenders when the State has provided a school for that purpose. As the law now stands, the school, since the beginning of 1871, has been used as a prison, the commitments and discharges being in accordance with prison rules, and though the reformatory measures were not relaxed, the guardians could not consistently carry out all the duties imposed on them by the law.

The total number in school during the year was 212; number discharged, 42; granted tickets of leave, 127; returned to care of parents, 12; escaped, 14; died, 1; transferred, 15; whole number sent out, 212; the whole number of inmates received into the institution since its opening, November, 1855, is 1,284; number sent out, 1,254; died, 30. Of the whole number received only 217 were of American parentage; the average age of admission was 12 to 13. Since the change in the law, during 1872, the average age of commitment has been 14 to 15.

As a reformatory institution the Chicago Reform School has been a grand success. It well repayed the outlay of time and money until the adverse decision of the supreme court, by which the law giving the power to care in this way for the ignorant and destitute was declared null and void, and the institution was restrained from continuing to perform the work for which it was called into existence. In other words, the ignorant, idle, and destitute had to become criminals before they could legally be placed in the reform school. This left the board of guardians almost powerless to carry on the work of reformation to a successful issue, for on the very day that a boy's sentence expired, then guardianship over him ceased.

In 1871 the city agreed to remove the institution and deliver the grounds and improvements to the county for the sum of $50,000, and a bill was passed in the legislature providing for the transfer of the sentenced inmates to the reform school at Pontiac.

ILLINOIS INSTITUTION FOR THE EDUCATION OF FEEBLE-MINDED CHILDREN.

This institution, which was inaugurated as an experimental school for the education of feeble-minded children, has been so successful in training this unfortunate class that at the last session of the general assembly it was organized upon an independent basis, and was incorporated as one of the permanent charitable institutions of the State. The education furnished by the institution will include not only the simpler elements of instruction usually taught in the common schools, when that is practicable, but will embrace a course of training in the more practical matters of every-day life. The improvement and progress of the pupils have been very encouraging. This is a State institution; board and tuition are free during the school year of ten months.

CHICAGO ACADEMY OF SCIENCES.

The board of trustees has determined to rebuild the academy on the old lot on Wabash avenue. Work has been commenced upon the building, and it is progressing rapidly. It is expected that the library-room of the academy will be ready for use very soon, and it will be promptly occupied.

The officers of the board for the present year are, Colonel J. W. Foster, president; Dr. Norman Bride, recorder.

DEATH OF REV. S. FOSTER.

Rev. Samuel Foster died at Washington Heights April 1, 1872.

He was born at Hartland, Connecticut, 1799; graduated at Yale College, 1828; studied theology at New Haven, and was licensed to preach 1830; commissioned by the American Home Missionary Society, and started for Illinois in a buggy September 5, 1832; arrived at Springfield, over 1,200 miles, in just thirty traveling days; labored in different places in the State, forming churches and establishing schools, with great devotion and success till death.

DEATH OF F. A. LORD, M. D.

Frederick Augustus Lord, M. D., Professor Physiological and Medical Chemistry, in Hahnemann Medical College, Chicago, died of fever, September 13, 1872.

He was born at Lyme, Connecticut, 1837; graduated at Beloit College, Wisconsin, 1857; studied medicine with Dr. George E. Shipman, of Chicago, and attended the usual course of medical instruction at Ann Arbor, Michigan; graduated with high honors, and

returned another year to take a special course in chemistry; practiced four years successfully at Sycamore, Illinois; elected professor at Hahnemann Medical College, where he again distinguished himself by his industry, zeal, and thoroughness; also conducting an extensive and growing practice. His attainments as a scholar, his careful and thorough culture, his skill as a physician, his accomplishments as a gentleman, and his perfect integrity as a man, all combined to render him one of the brightest ornaments of the profession.

ILLINOIS STATE TEACHERS' ASSOCIATION.

The eighteenth annual meeting of this association was held at Dixon, December 26, 27, and 29, 1871.

President J. H. Blodgett, of Rockford, gave a general account of school matters in his portion of the State; J. Wilkinson, of Lincoln, Jephtha Hobbs, of Shelbyville, and Matthew Andrews, of Macomb, gave statements of progress in educational work in their respective neighborhoods, after which the president gave his annual address. He spoke of the free public-school system as unknown in Illinois twenty-five years ago, and, after reviewing the progress in this and various other directions during that period, he urged that personal consecration to his work on the part of the teacher was the most important preparation for his duties. The times demand the multiplication of men and women devoted to exalted principles, with faith enough to work on in consciousness of right, without impatience to see the results which are sure to come. Colonel L. H. Potter, of Soldiers' College, Fulton, spoke on "Religion in the public schools."

On the second day the association was divided into sections—high-school, intermediate, and primary. In the high-school section a paper was read by Edwin P. Frost on "Natural sciences; to what extent shall they be taught?" A discussion of the subject followed, which was generally participated in.

In the intermediate and primary sections "Analysis in reading," "Course of study in geography," "Oral instruction," and "Method in reading," were among the topics presented and discussed.

"The school law of Illinois" was the subject of an address by Hon. Newton Bateman; and the "New departure in education" was presented in an address by D. L. Leonard, of Normal.

Officers elected: President, J. B. Roberts, Galesburgh; secretary, William Jenkins, Ottawa; treasurer, P. R. Walker, Creston.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Illinois was the fourth State in population, having 2,539,891 inhabitants, within an area of 55,410 square miles—an average of 45.84 persons to the square mile. This population consisted of 2,511,096 whites, 28,762 colored, 1 Chinese, and 32 Indians. Of these 2,024,693 were native, and 515,198 foreign-born. Of the native residents of the State 1,181,106 whites, 8,387 colored, and 10 Indians were born within its borders; of the foreign-born inhabitants, 203,766 were born in Germany, 5,387 were born in England, and 120,162 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 548,225 persons attended school, of whom 25,286 were foreign-born. The white scholars numbered 545,897, of whom 284,084 were males and 261,813 females. The colored scholars numbered 2,324, of whom 1,169 were males and 1,155 females. One female and 3 male Indians were also reported.

Illiteracy.—The number of inhabitants of all races, 10 years old and over, unable to write, was 133,584, of whom 42,989 were foreign-born.

Age, sex, and race of illiterates.—Of the 123,624 white illiterates, 11,865 were from 10 to 15 years old, of whom 6,562 were males and 5,303 females; 14,101 were from 15 to 21 years of age, of whom 7,208 were males and 6,893 females; 97,658 were 21 years old and over, of whom 40,801 were males and 56,857 females. Of the 9,950 colored illiterates, 660 were from 10 to 15 years old, of whom 335 were males and 325 females; 1,239 were from 15 to 21 years old, of whom 620 were males and 619 females; 8,051 were 21 years old and upward, of whom 3,969 were males and 4,082 females. Five male and 5 female Indians were also reported, 21 years old and over.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 11,835, having 24,056 teachers, of whom 10,411 were males and 13,645 females; and 767,775 pupils, of whom 389,955 were males and 377,820 females.

Amount and source of educational income.—The total income of all the educational institutions was $9,970,009, of which $252,569 were derived from endowments, $6,027,510 from taxation and public funds, and $3,689,930 from other sources, including tuition.

Public schools.—The 11,050 public schools had 20,097 teachers—8,971 males and 11,306 females, with 677,623 pupils, of whom 343,445 were males and 334,178 females. They possessed a total income of $7,810,265, of which $5,858,249 were derived from taxation and public funds, and $1,952,016 from tuition and other sources.

Colleges.—The 26 colleges had 223 teachers, 190 males and 33 females, and 4,657 students, of whom 3,930 were males and 727 females. They had a total income of $271,065, of which $109,210 were derived from endowment, $25,000 from taxation and public funds, and $136,855 from tuition and other sources.

Academies.—The 32 academies had 225 teachers, 64 males and 161 females, with 4,690 pupils—1,394 males and 3,296 females. They possessed an income of $257,643, of which $20,421 were derived from endowment and $237,222 from tuition and other sources.

Private schools.—The 531 private day and boarding schools had 1,526 teachers, 491 males and 1,035 females, with 41,456 pupils, of whom 21,414 were males and 20,044 females. They possessed a total income of $966,262, of which $5,000 were derived from endowment and $961,262 from tuition and other sources.

Libraries.—There were 3,705 public libraries, with 924,545 volumes, and 9,865 private libraries, with 2,399,369 volumes; making 13,570 libraries, containing 3,324,914 volumes.

The press.—The 505 periodicals had an aggregate circulation of 1,722,541 copies, and an aggregate annual issue of 113,140,492 copies.

Churches.—Of the 4,298 church organizations, 3,459 possessed edifices with 1,201,403 sittings, and the church property was valued at $22,664,283.

Pauperism.—Of the 2,363 paupers, 1,213 were native whites, 41 native colored, and 1,109 foreigners.

Crime.—Of 1,795 persons in prison June 1, 1870, 1,229 were native whites, 143 native colored, and 423 foreigners; 1,552 persons were convicted during the year.

Age and sex of population.—Of the total population, 818,766 persons were from 5 to 18 years old, of whom 414,547 were males and 404,219 females; 1,809,606 persons were ten years old and over, of whom 946,717 were males and 862,889 females.

Occupations.—There were 742,015 persons of these ages engaged in various occupations, of whom 678,732 were males and 63,283 females; 376,441 persons were engaged in agricultural pursuits, of whom 375,407 were males and 1,034 females; 151,931 in personal and professional services, of whom 99,337 were males and 52,594 females; 80,422 in trade and transportation, of whom 79,876 were males and 546 females; 133,221 in manufactures and mechanical and mining industries, of whom 124,112 were males and 9,109 females.

Age and sex of working population.—Of the 742,015 employed persons, 25,551 were from 10 to 15 years old, of whom 21,742 were males and 3,809 females; 687,303 were from 16 to 59 years old, of whom 628,593 were males and 58,710 females; 29,161 were 60 years old and over, of whom 28,397 were males and 764 females.

SCHOOL OFFICIALS.

Hon. NEWTON BATEMAN, *State superintendent of public instruction, Springfield.*

COUNTY SUPERINTENDENTS.

Counties.	Superintendent.	Post office address.
Adams	John H. Black	Quincy.
Alexander	John C. White	Cairo.
Bond	Rev. Thomas W. Hynes	Greenville.
Boone	William H. Durham	Belvidere.
Brown	Hon. John P. Richmond	Mount Sterling.
Bureau	Rev. Albert Ethridge	Princeton.
Calhoun	Solomon Lammy	Hardin.
Carroll	James E. Millard	Lanark.
Cass	Harvey Tate	Virginia.

Winnebago	Archibald Andrew	Rockford.
Woodford	William H. Gardner	Panola.

INDIANA.

[From report of Hon. Milton B. Hopkins, State superintendent, for the scholastic years ending August 31,1871, and August 31, 1872.]

SCHOOL FUNDS.

These are of three classes—productive, contingent, and non-productive. The productive or interest-bearing fund comprises—

The congressional-township fund	$2,281,076 69
The saline fund	85,000 00
The surplus-revenue fund	573,502 96
The bank-tax fund	80,000 00
The sinking-fund	4,767,805 89
Total	7,787,385 54

These are classified as productive funds, because the entire amount of each fund, or nearly so, is now bearing interest in favor of the schools.

The contingent fund comprises the proceeds of fines, forfeitures, escheats, swamp-lands, and taxes on corporations.

The non-productive fund is composed of the sixteenth sections (17,882 acres) that remain unsold.

These different funds form the principal of the

COMMON-SCHOOL FUND.

Non-negotiable bonds	$3,591,316 15
Common-school fund	1,666,824 50
Sinking-fund, (distributed,) at 8 per cent	569,139 94
Congressional-township fund	2,281,076 69
Value of unsold congressional-township lands	94,245 00
Saline fund	5,727 66
Bank-tax fund	1,744 94
Escheated estates	17,866 55
Sinking-fund, (last distribution)	67,067 72
Sinking-fund undistributed	100,165 92
Swamp-land fund	42,418 40
Total	8,437,593 47

The total gives a school fund larger by two millions of dollars than that of any other State in the Union. The fund was increased during 1872 by the distribution of $569,139.94, sinking-fund. There was a delay of about twelve months in the distribution of this money, caused by an application to the courts for an injunction restraining the distribution. The loss to the schools by the attempt is not less than $53,000.

SCHOOL REVENUE.

	1871.	1872.
Taxes	$1,051,438 57	$1,070,301 69
Interest on common fund	112,650 23	160,840 10
Liquor licenses	99,809 17	108,280 00
Unclaimed fees	985 46	500 38
Interest paid by State on bonds	223,740 96	223,740 96
Interest on congressional fund	144,781 06	146,980 21
Amount of delinquencies	35,750 00	*6,800 00
Total receipts for schools	1,669,155 45	1,717,443 34

* This does not include the amount of delinquency for October, 1872.

ATTENDANCE.

Legal school age	6–21
White males of school age	321,289
White females of school age	301,141
Colored males of school age	4,670
Colored females of school age	4,449
Total scholastic population	631,549
Number enrolled in primary schools	445,993
Number enrolled in high schools	13,458
Total enrollment	459,451
Average attendance in white primary schools	286,301
Average attendance in colored primary schools	2,931
Average attendance in high schools	8,824

SCHOOL DISTRICTS AND SCHOOLS.

Number of districts in which schools were taught	9,030
Number of districts in which no schools were taught	70
Total number of districts	9,100
Number of districts in which colored schools were taught	89
Number of district graded schools	64
Number of township graded schools	81
Average length of schools in days	116

TEACHERS AND TEACHERS' PAY.

White male teachers in primary schools, 1872	7,188
White female teachers in primary schools, 1872	4,675
Colored male teachers in primary schools, 1872	42
Colored female teachers in primary schools, 1872	28
Male teachers in high schools, 1872	200
Female teachers in high schools, 1872	115
Whole number of teachers, 1872	12,246
Whole number of teachers for 1871	11,833
Pay of male teachers in primary schools per day	$1 95
Pay of female teachers in primary schools per day	$1 47
Pay of male teachers in high schools per day	$3 77
Pay of female teachers in high schools per day	$2 46
Number of teachers attending institutes, (32 counties)	4,038

SCHOOL-HOUSES AND SCHOOL PROPERTY.

Number of new school-houses built in 1871	415
Cost of new school-houses built in 1871	$609,105 67
Whole number of school-houses in 1871: stone, 125; brick, 834; frame, 7,517; log, 513	8,989
Total valuation of school property for 1871	$7,381,839 73
Number of new school-houses built in 1872	393
Cost of new school-houses built in 1872	$561,813 55
Whole number of school-houses in 1872: stone, 88; brick, 877; frame, 7,568; log, 547	9,080
Total valuation of school property for 1872	$9,199,480 15

MEANS OF INCREASING SCHOOL REVENUE.

There is now in the custody of the different counties, as loaning agents, $4,519,041.13. Of this a portion is loaned at 7 per cent. and the remainder at 8 per cent. It is recommended that the entire fund held in trust by the counties be placed at 8 per cent. This would give an annual increase of $39,479.01.

It is also recommended that the legislature pass a law providing for the payment, in installments, of the entire debt, $3,719,016.10, due the school fund by the State. The interest ($226,140.96 per annum) of this debt is paid out of the taxes. "It leaves the people as taxes, it returns as school revenue. What is this but prepayment of tuition by the people?" It is recommended that the money applied to the purpose of paying this debt be distributed to the counties as other funds, and loaned by them at 8 per cent. This will increase the school revenue $74,380.32. In support of this recommendation is quoted the opinion of the State auditor, who "does not believe it wise

for the State to adopt a policy looking to a permanent indebtedness; and recommends legislation looking to the early payment of this debt and other investments of the proceeds." The auditor presents a plan of payment, an important and valuable feature of which is that "not one dollar will be withdrawn from any county in the State for even a single day."

Summed up, the whole matter presents itself in the simple question as to whether the people of the State shall pay about 10 cents per $100, or $620,409.66 per year for six years, and thus entirely free the State from debt, or pay nearly half that amount, $301,521.24 yearly, for interest, and leave the debt as a perpetual burden of $301,521.24 per annum.

UNCHANGED PER CAPITA.

It is considered a cheering fact that, while the scholastic population has increased 8,821 in numbers, such has been the corresponding increase in the revenue that the *per capita* remains unchanged; and the average duration of the schools has increased 17½ days.

SCHOOL-HOUSES, ETC.

Two provisions have been made by the legislature for the erection of these. The first authorizes the school trustees of the townships, incorporated towns, and cities to levy a special tax in their respective corporations, not exceeding 25 cents on each $100 of taxable property, and 50 cents on each poll, in any one year. The second authorizes the trustees of incorporated towns and the city councils of incorporated cities to issue bonds to the extent of $30,000.

Under the operations of these two provisions of the law, school-houses have sprung up in all parts of the State. The stone, brick, and frame houses are gradually increasing both in number and value. Within eight years the rate of increase of the number of brick houses has been 99 per cent.; of frames, 31 per cent.; of stone, 35 per cent.; while log houses have decreased 51 per cent. The whole number of school-houses has increased 23 per cent. in eight years, and the value of school property has increased 140 per cent. in the same time. The average cost of the school-houses built in 1872 was $1,429; but in some of the larger cities buildings were erected at a cost of from $30,000 to $60,000 each. The superintendent feels compelled to notice the fact that, "in the location, construction, furnishing, warming, lighting, and ventilating of many of the school-buildings little attention has been paid to the comfort, convenience, or even health of the pupils." In particular, the importance of thorough ventilation is strongly urged.

Under the present limit of taxation there are many townships that are not able to provide themselves with good school-buildings. The same evil is experienced in the largest cities. There is a demand for more room, but since the law limits the issuing of bonds to $30,000, it is impossible to provide the necessary accommodation. There is also an increasing demand for the erection of township school-houses for the use of graded schools, where a higher and better order of education may be obtained than is usually furnished in district schools. As a remedy for these evils, it is recommended that the present limit of issuing bonds be extended to $60,000, and that a law be passed authorizing township trustees to issue bonds to the amount of $20,000, subject to the approval of the county commissioner.

SCHOOL TRUSTEES.

In the townships, school trustees are elected by the people, at the biennial elections, and are trustees for civil as well as school purposes. In incorporated towns and cities they are appointed by town boards and city councils, and take charge of the educational affairs exclusively. It is recommended that the office be made elective throughout the State, that it shall be for school purposes only, that it shall be held for a term of three years, and that there shall be no compensation beyond the payment of actual and necessary expenditures incurred in the discharge of a trustee duty.

The tenth section of the school law, defining the duties of trustees, requires them to provide "a sufficient number of schools for white children."

It is recommended that the word "white" be stricken out. Also that the section be so amended as to give the trustees power, "at their discretion, to employ competent superintendents for the thorough organization and efficient management of their schools."

COUNTY EXAMINERS.

These are appointed triennially by the county commissioners. The compensation is $3 per diem for the time actually employed, and $1 from each applicant for license. The result of their work has been most satisfactory. They have demonstrated conclusively that the "one thing needful" in our school system is to expand the powers, duties, compensation, and even name of school examiner to that of county superintendent. This conclusion has been reached by the educators of the State with remark-

able unanimity. There is a deep-felt necessity for this change. Labor is misdirected, and much money is squandered for want of it. From every part of the State comes a request that this change be made at once.

EXAMINATION OF TEACHERS.

In these examinations heretofore there has been great diversity. Each of the ninety-two examiners fixed the standard of examination for his own county. Consequently there was no common standard. At the session of the State board of education, in June, 1871, steps were taken for unifying these examinations, and it was ordered that a series of twelve sets of examination papers be printed and sent monthly to the examiners of the several counties, with instructions to use them in the examination of teachers for public schools. This has been done, and examiners have very generally accepted the questions, and acted upon the instructions. The effect has been the elevation of the general average of these examinations, and the influence has been felt throughout the schools. The number of teachers licensed since the last report is 8,293.

COUNTY INSTITUTES.

These are growing in popularity, efficiency, and usefulness, and are better attended every year. They cost the people about $4,000 per annum; but they are amply repaid in the improved work of the teachers. Teachers who attend institutes regularly command a premium. Some trustees refuse altogether to employ teachers who do not attend. The law does not require reports of these institutes, and they have been sent from only thirty-two counties. Those report sessions varying in length from 3 to 30 days, and a total attendace of 4,038. It is recommended that attendance upon an institute five days in the year be made a condition of license to teach.

EVANSVILLE.

SCHOOL ACCOMMODATIONS.

The superintendent states that the school accommodations are entirely insufficient. Two new school-buildings, one with ten and the other with four rooms, have been completed, but it is feared that these will not supply all the room that is needed.

BRANCHES OF STUDY.

German has been taught in the schools with most satisfactory results. The chief difficulty lay in the organization of the classes. The pupils consist of two classes, American children who either speak or read German, and German children who already speak the language and desire to read and write it also. It is evident that these two classes cannot be taught profitably together, and that any classification which combines the two must be very faulty. The difficulty in the case is the want of separate rooms. The introduction of drawing into the schools is strongly recommended.

COLORED SCHOOLS.

The colored schools exhibit a marked improvement, not only in scholarship, but in neatness, cleanliness, and self-respect of the pupils.

SHELBYVILLE.

CONDITION OF SCHOOLS.

All the statistics show an improvement over last year. The graded course, adopted last year, has been thoroughly tested and gives universal satisfaction. In the high school, especially, its beneficial effects have been noticed. For the first time in ten years there was a graduating class from the school. German is taught in the schools with satisfactory results.

ELKHART.

SCHOOL PROGRESS.

At the beginning of the year the schools were thoroughly re-organized and graded, and the year has been one of uninterrupted progress. The greatest hinderance to the prosperity of the schools has been irregular attendance. Increased accommodations are needed, and the erection of a new building is recommended.

STATE NORMAL SCHOOL.

This school is achieving the very best results for the State. There has been a regular and healthy increase in the number of its students each year. It sent forth its first class of graduates at the close of last year, and a large class will graduate the present year. By an omission of the legislature, the board of normal trustees was unable to confer professional degrees upon the late graduating class. It is recommended that this power be conferred.

In compliance with the law, $5,000 have been deducted semi-annually from the school revenue of the State for the payment of tuition in the normal school. The labor has so increased that it has become necessary to procure additional teachers. This will require a corresponding increase in expenditure for tuition in the institution. It is recommended that it be made the duty of the superintendent to deduct $7,500 semi-annually from the State's school revenue for this purpose. The usefulness of the institution would be greatly enhanced by a library, apparatus, and the completion of the building. The institution is commended in these respects to the earnest attention of the legislature.

During the period from September 7, 1870, to December 17, 1872, the number of students enrolled was 238, of whom 103 were males and 135 females. The average age was twenty years and two and a half months; youngest, 16 years; oldest, 35 years. Of these there were educated in common schools, 173; in high school or academy, 47; in college, 18. Of the whole number, 68 per cent. held teachers' certificates on entering. The number of graduates, including the present class, is 19.

The superintendent of schools of Saint Louis, in a letter to the State superintendent of Indiana, speaks in the highest terms of the quality of the work and of the discipline of this school.

INDIANA UNIVERSITY.

This institution was opened in 1824 and created a university in 1839. Number of alumni, 600.

The university comprises a collegiate department, a medical department, a law department. Tuition is free in all the departments of the university.

Ladies are admitted to the collegiate course on the same terms as gentlemen, and are entitled to the same rights and privileges. A department of military science and civil engineering is connected with the collegiate department. Special attention is given to modern languages.

Extensive additions have recently been made to the apparatus and cabinet. The latter has been increased by the collection of the late Dr. David Dale Owen, containing over 85,000 specimens. Additional room is needed for the display of this collection, and for the accommodation of the law department.

The university is in a most flourishing condition. The last year has been the most successful in its history. The largest number of students has been in attendance, and the greatest progress has been achieved. This is the result of the liberal policy recently inaugurated by the State toward this institution, and that the same policy should be continued is of the highest importance.

WABASH COLLEGE.

This college comprises an academic department, a collegiate department, and a scientific department. A mercantile course is connected with the academic department. Several scholarships have been established for young men intending to enter the ministry; also several intended to aid young men, without respect to their choice of profession. Several soldiers' scholarships have been established, by which returned soldiers, their sons, and the sons of such as may have died in the Army, can have free tuition to the extent of these scholarships.

Additions have recently been made to the buildings. In one of the new buildings provision is made for military instruction and gymnastic exercises of all kinds, and for instruction in topography, architecture, bridge-building, and the advanced branches of applied mechanics. Donations have also been received of valuable drawings, books, and models.

HANOVER COLLEGE.

This is, with the exception of the State University, the oldest college in Indiana, and it is the first denominational college. It is the immediate outgrowth of the necessities and action of the Presbyterian Church in 1825. The "little grammar school" then established under the name of Hanover Academy was the nucleus of both Hanover College and Indiana Theological Seminary, now the Northwestern Theological Seminary, at Chicago, Illinois. In 1833 the academy was chartered as Hanover College.

It has had over 3,500 students, over 800 of whom have entered the ministry; and 373 graduates, about one-half of whom became ministers, and 50 others teachers.

The college property is worth $110,000. Its funds and endowment amount to $140,000. The debt of the college is being rapidly paid, and its income meets its current expenses. It is desired to increase the number of the faculty, and to make additions to the buildings. For this there is needed an addition of $100,000 to the endowment fund.

The tuition is free to all, without denominational distinctions. The courses of study offered are preparatory, classical, and scientific. The classical course is in substance the same as the undergraduate course of the best colleges.

The students comprise representatives of nine States and Canada.

UNIVERSITY OF NOTRE DAME.

This university was founded in 1842 by the congregation of the Holy Cross, and chartered by the State legislature in 1844, with power to confer all usual degrees. The courses of study are collegiate, scientific, and commercial. Preparatory departments are attached to the collegiate and scientific courses, making the full term of study in each course six years. The commercial course occupies two years. There is also a law department; also, a minim department, to which are admitted boys under ten years of age. Special advantages are offered for the study of the modern languages, music, painting, and drawing. An astronomical observatory has been erected, in which is placed the fine instrument presented by the Emperor Napoleon.

NORTHWESTERN CHRISTIAN UNIVERSITY.

This institution includes four colleges: the college of literature, embracing classical, scientific, and academic departments; the college of law; the college of business; and the musical department. Ladies are admitted to all the privileges of the institution. The law department has been re-organized during the past year, and has gained an enviable reputation for the thoroughness of its lectures. An appeal is made to friends of the university for funds to complete the buildings and to finish the general endowment.

HOWARD COLLEGE.

This institution makes its third annual report. The courses of study are classical and scientific; and there is also a normal department. The college is open to both sexes. A female boarding-house is conducted for young ladies. The whole number of students the past year is a gain on the previous year of nearly 50 per cent. The president being State superintendent for public instruction, his duties will be performed by the vice-president, John O. Hopkins, A. B., during his term of office.

DE PAUW COLLEGE.

This college for young ladies is the property of the Indiana conference of the Methodist Episcopal Church. It is free from debt and is self-supporting. The buildings have within a few years past been enlarged and remodeled, at an expense of $20,000.

EARLHAM COLLEGE.

This institution was established by the Society of Friends of Indiana yearly meeting, and is managed by that body. Ladies and gentlemen are admitted on equal terms, and receive similar testimonials or degrees. The course of study is arranged in three departments—classical, scientific, and preparatory. Special attention is given to modern languages. The funds for the purchase of the ground and the erection and furnishing of the college building were raised by the Society of Friends. The interest of the amount thus invested is applied to lessen the price of board and tuition of Friends' children, who, consequently, are charged less than those not members of the Society of Friends.

UNION CHRISTIAN COLLEGE.

Ladies are admitted to this college on the same terms, and receive the same honors, as gentlemen. Soldiers who were disabled in the Union Army during the rebellion receive tuition free. There are four departments, academic, classical, scientific, and music. The latter department is in a very flourishing condition. A prominent feature of the institution is vocal music, which is taught gratis.

INDIANAPOLIS FEMALE INSTITUTE.

This institution, most advantageously located in the center of the city, has lately been re-organized. The course of study now comprises three departments, primary, preparatory, and collegiate. The collegiate course occupies four years. Ample facili-

ties are offered for instructions in music and painting. The internal management of the school is intrusted entirely to ladies.

INDIANA INSTITUTE FOR THE EDUCATION OF THE BLIND.

The superintendent reports both literary and musical branches of the school department in the most satisfactory condition. The only drawback to progress in the musical department is the deficiency in facilities for piano-forte practice. The school is classified under six divisions or grades. Each of these divisions has its appropriate teacher, who not only teaches all the branches assigned to it, but likewise performs for its several members any needful extra service in the way of reading, letter-writing, &c. In addition to the regular school exercises, the entire school, in two divisions, attends evening readings by the teachers. The pupils also receive daily drill in Dio Lewis's system of light gymnastics during the more inclement portion of the year. The musical department is under the charge of two graduates of the institution. The industrial department continues to yield the most satisfactory results. The trustees call the attention of the legislature to the necessity of enlarging the buildings. The number of pupils who can be accommodated is not probably half of those in the State entitled to the benefits of the institute. It is urged that while liberal provision is made for the general education of children, the State should not be less generous to its blind wards.

THE CONVENTION OF INSTRUCTORS OF THE BLIND.

This convention, held in Indianapolis August 8, 9, and 10, 1871, was the result of a circular-letter, addressed by the superintendent of the Indiana Institute to the heads of the other institutions for the blind. Seventeen years had elapsed since the holding of the first and only previous convention of the kind in this country, if not in the world, and during that time many questions had arisen of great moment, as connected with the education and general welfare of the blind. Thirty-three officers of blind institutions attended the convention.

One of the leading problems presented to the convention for solution was that of simplifying and cheapening the production of books and school apparatus for the use of the blind. The convention recommended books printed in type known as the Boston letter, and also those printed in the combined system of the capital and angular lower-case letter; also that the New York horizontal point alphabet, as managed by Mr. Wait, should be taught in all institutions for the education of the blind.

Resolutions were passed declaring "it is not expedient to instruct the blind in the same institutions with deaf mutes;" that "blind deaf-mutes should be provided for in blind institutions;" "that for the proper organization of institutions for the blind three departments are co-essential, viz: literary, musical, and mechanical;" that "the aggregate results warrant the great attention bestowed on the musical education of the blind."

Resolutions were also passed disapproving of the plans for the establishment of a university and printing-house for the blind in Washington, District of Columbia; the convention regarding it as unnecessary, and recommending that "the efforts and contributions of persons who desire to benefit the blind be turned in some direction more likely to promote their welfare." A committee of five was appointed to confer with S. P. Ruggles, esq., of Boston, Massachusetts, who proposed, conditionally, to devote a portion of his time and capital to the benefit of the blind by furnishing books and school apparatus for their use.

As the concluding measure of the convention, a permanent association of American instructors of the blind was formed and officers for the same were elected.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Indiana was the sixth State in population, having 1,680,637 inhabitants, within an area of 33,809 square miles—an average of 45.84 persons to the square mile. This population consisted of 1,655,837 whites, 24,560 colored, and 240 Indians. Of these 1,539,163 were natives and 141,474 foreign-born. Of the native residents of the State, 1,038,542 whites, 9,811 colored, and 222 Indians were born within its limits. Of the foreign-born inhabitants, 78,060 were born in Germany, 9,945 in England, and 28,698 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 395,263 persons attended school, of whom 3,739 were foreign-born. The white scholars numbered 392,140, of whom 206,363 were males and 185,777 females. The colored scholars numbered 3,089, of whom 1,620 were males and 1,469 females. Thirteen male and 21 female Indians also attended school.

Illiteracy.—The number of inhabitants 10 years old and over unable to write was 127,124, of which 13,939 were foreign-born.

Age, sex, and race of illiterates.—Of the white illiterates 10,361 were from 10 to 15 years of age, of whom 5,582 were males and 4,779 females; 14,418 persons were from 15 to 21 years old, of whom 7,325 were males and 7,093 females; 93,932 were 21 years old and over, of whom 36,331 were males and 57,651 females. Of the colored illiterates 695 were from 10 to 15 years old, of whom 347 were males and 348 females; 1,200 were

from 15 to 21 years old, of whom 550 were males and 650 females; 6,363 colored illiterates were 21 years old and over, of whom 3,182 were males and 3,181 females. There were also 42 male and 73 female Indian illiterates.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 9,073, with 11,652 teachers, (6,678 males and 4,974 females,) and 464,477 pupils, (237,664 males and 226,813 females.)

Amount and source of educational income.—The total income of all the educational institutions was $2,499,511, of which $50,620 were derived from endowment, $2,126,502 from taxation and public funds, and $322,389 from tuition and other sources.

Public schools.—The 8,871 public schools had 11,042 teachers, of whom 6,402 were males and 4,640 females. They had 446,076 pupils, of whom 228,189 were males and 217,887 females. To educate these pupils they possessed a total income of $2,063,599, of which sum $2,002,052 were derived from taxation and public funds, and $61,547 from tuition and other sources.

Colleges.—Sixteen colleges were reported, with 143 teachers, of whom 115 were males and 28 females, and having 3,102 pupils, of whom 2,431 were males and 671 females. They possessed a total income of $162,250, of which $48,520 were derived from endowment, $17,700 from taxation and public funds, and $96,030 from tuition and other sources.

Academies.—The 16 academies reported had 125 teachers, of whom 26 were males and 99 females. They had an attendance of 3,580 pupils, of whom 1,305 were males and 2,275 females. They possessed a total income of $73,990, of which $1,000 were derived from endowment, $8,050 from taxation and public funds, and $64,940 from tuition and other sources.

Private schools.—The 124 day and boarding schools had 201 teachers, of whom 58 were males and 143 females. They were attended by 6,296 pupils, 2,802 of whom were males and 3,494 females. To educate these, the schools possessed a total income of $47,427, derived from tuition and other sources.

Libraries.—There were reported 2,333 public libraries, containing 627,894 volumes; also, 2,968 private libraries, having 497,659 volumes; a total of 5,301 libraries, containing 1,125,553 volumes.

The press.—The 293 periodicals issued had an aggregate circulation of 363,542 copies, with an aggregate annual issue of 26,964,984.

Churches.—Of the 3,698 church organizations, 3,106 had edifices with 1,008,380 sittings, and the church property was valued at $11,942,227.

Pauperism.—Three thousand six hundred and fifty-two paupers were reported, of whom 2,583 were native whites, 207 were native colored, and 862 were foreigners.

Crime.—Of 907 persons in prison June 1, 1870, 691 were native whites, 64 were native colored, and 152 were foreigners; 1,374 persons were convicted during the year.

Age and sex of population.—Of the total population, 567,175 persons were from 5 to 18 years old; 287,357 males and 279,818 females; 1,197,936 were 10 years old and upward, of whom 612,832 were males and 585,104 females.

Occupations.—Four hundred and fifty-nine thousand three hundred and sixty-nine persons of these ages were engaged in various occupations, of whom 428,259 were males and 31,110 females; 266,777 were engaged in agricultural pursuits, of whom 266,349 were males and 428 females; 80,018 in personal and professional services, of whom 53,466 were males and 26,552 females; 36,517 in trade and transportation, of whom 36,371 were males, and 146 females; 76,057 in manufacture and mechanical and mining industries, of whom 72,073 were males and 3,984 females.

Age and sex of working population.—Of these 459,369 employed persons, 13,966 were from 10 to 15 years old, of whom 12,399 were males and 1,567 females; 422,603 persons were from 16 to 59 years old, of whom 393,455 were males and 29,148 females; 22,800 persons were 60 years old and over, of whom 22,405 were males and 395 females.

SCHOOL OFFICIALS.

Hon. MILTON B. HOPKINS, *State superintendent.*

Whitley	Alexander J. Douglass	Columbia City.

IOWA.

An abstract of the biennial report of the superintendent of public instruction for 1870-'71 was given in the last Annual Report of the United States Commissioner of Education.

The following account of various educational institutions in the State is taken from the catalogues and reports furnished to this Bureau:

IOWA STATE UNIVERSITY.

This university comprises four separate departments—the academic, (or collegiate,) the normal, and the departments of law and medicine. Ladies are admitted to all. The full course of instruction in the academic department occupies 5 years. The studies of the last two years are elective, and arranged under the heads of literary and scientific, constituting two courses of equal grade. The course of study in the law department is so arranged as to be completed within a single year. The normal department has an advanced, an intermediate, and a shorter course. The two last named will be continued until their necessity is removed by the establishment of normal schools throughout the State; thereafter only such instruction will be given as is appropriate to an institution of the highest grade.

CENTRAL UNIVERSITY OF IOWA.

The courses of study are academic, scientific, collegiate, and theological. It is intended to form a normal class and give especial attention to the fitting of teachers for common schools.

UPPER IOWA UNIVERSITY.

Two regular courses of study, classical and scientific, are offered to gentlemen and ladies. Particular advantages are afforded for the study of the modern languages. A preparatory department and business college are connected with the institution.

IOWA WESLEYAN UNIVERSITY.

This was organized in 1850 by the Iowa annual conference of the Methodist Episcopal Church, which body gave it its present name. The design of the university is: first, to provide a thorough collegiate course for both ladies and gentlemen; secondly, by means of other departments, to provide a thorough scientific basis for the professions, and also for the general industrial pursuits of the country. The departments already organized are those of science, literature, theology, law, and pharmacy. Others will be added as demands and means may justify. The department of literature includes a commercial course and a course of modern languages.

GRISWOLD COLLEGE.

This college comprises four departments—preparatory, collegiate, scientific, and theological. In the latter department tuition is free.

IOWA COLLEGE.

This college comprises a normal and English department, an academic course of two years, a ladies' course of three years, and a college course of four years; the latter including a classical and a scientific course. The course of study is arranged with special reference to the thorough education of ladies and their preparation for the work of teaching. Twenty-six scholarships have been established. Extensive apparatus has been manufactured in Germany especially for the college. The chemical apparatus is the donation of Henry Lee, esq., of Manchester, England; the philosophical that of citizens of Iowa.

CORNELL COLLEGE.

Founded in 1857, and located at Mount Vernon, Iowa. The departments of the college are collegiate, scientific, and preparatory. Commercial and normal courses are

also provided. Ladies are admitted to all the departments. Free tuition is given to soldiers and soldiers' orphans. This institution possesses one of the largest and best collections of minerals and fossils in the West. Five scholarships have been endowed with $500 each for the benefit of students preparing for the ministry. The institution occupies two fine brick buildings, one of which is devoted to the music department and boarding-hall for ladies.

TABOR COLLEGE.

This comprises a collegiate, preparatory, and ladies' department. The increasing demand for well-qualified teachers in public schools has led the trustees to provide a "teachers' course" of two years. From 40 to 60 graduates of this course engage in teaching each year. Special facilities are offered in the department of music. Students desiring to lessen their expenses are furnished with remunerative labor.

IOWA INSTITUTION FOR THE EDUCATION OF THE DEAF AND DUMB.

An addition to the teaching force allows a better classification than has ever before been attained. An experiment in the teaching of articulation has not been entirely satisfactory, though a few of the pupils have made marked improvement in the use of their vocal organs. The efficiency of the institution would be greatly increased by additional accommodations and an appropriation for apparatus, of which there has been heretofore a very insufficient supply. The age of admission is from 10 to 25.

IOWA REFORM SCHOOL.

The second biennial report states that the whole number received since the opening of the school has been 137—boys 133, girls 4. The average number for the past two years has been 63¾. The average age of admission is 14 to 15. Most of those who have been discharged are doing well, and in many cases evidence is afforded of complete reformation. The great want of the school is proper accommodations for girls. The law provides for the reception of girls as well as boys, but for the want of suitable accommodations they have to be sent away when brought to the institution. The present building will accommodate about 50 boys comfortably, and there are now 85. Another want of the school is a library. An urgent appeal is made to the legislature for increased appropriations.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Iowa was the eleventh State in population, having 1,194,020 inhabitants within an area of 55,045 square miles, an average of 21.69 persons to the square mile. This population consisted of 1,188,207 whites, 5,762 colored, 3 Chinese, and 48 Indians. Of these, 989,328 were natives of the United States and 204,692 foreign-born. Of the native residents of the State, 427,224 whites, 1,383 colored, and 13 Indians were born within its borders, while of the foreign residents, 66,162 were born in Germany, 16,660 in England, and 40,124 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 306,353 persons attended school, and of these 13,000 were foreign-born. The white male scholars numbered 160,269, and the white female scholars 145,421, an aggregate of 305,690 whites. The colored pupils numbered 661, of whom 346 were males and 315 females. Two Indians were also attending school.

Illiteracy.—The number of inhabitants of all races, 10 years old and over, unable to write, was 45,671, of whom 20,692 were foreign-born.

Age, sex, and race of illiterates.—Of the 44,145 white illiterates, 5,858 were from 10 to 15 years of age, and of these 3,401 were males and 2,457 females; 3,680 were from 15 to 21 years old, of whom 2,044 were males and 1,636 females; 34,607 were 21 years old and over, of whom 14,782 were males and 19,825 females. Of the 1,524 colored illiterates, 70 were from 10 to 15 years old, of whom 32 were males and 38 females; 146 were from 15 to 21 years old, of whom 71 were males and 75 females; 1,308 were 21 years old and over, of whom 635 were males and 673 females. Two female Indian illiterates were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 7,496, having 9,319 teachers, of whom 3,656 were males and 5,663 females. They had 217,654 pupils, of whom 105,665 were males and 111,989 females.

Amount and source of educational income.—The total income of all the educational institutions was $3,570,093, of which $63,150 were derived from endowment, $3,347,629 from taxation and public funds, and $159,314 from tuition and other sources.

Public schools.—The 7,322 public schools, with their 8,866 teachers, of whom 3,381

were males and 5,485 females, were attended by 205,923 pupils, of whom 100,308 were males and 105,615 females. To educate these they possessed a total income of $3,245,352, of which $3,100 were derived from endowment, $3,241,752 from taxation and public funds, and $500 from tuition and other sources.

Colleges.—The 21 colleges, with their 139 teachers—109 male and 30 female—were attended by 3,061 students, of whom 1,685 were males and 1,376 females. To educate these they possessed a total income of $101,950, of which $54,000 were derived from endowment, $10,000 from taxation and public funds, and $37,950 from tuition and other sources.

Academies.—The 34 academies, with their 103 teachers—46 male and 57 female—had an attendance of 2,333 pupils—1,019 males and 1,314 females—for the education of whom they possessed an income of $55,880, derived from tuition and other sources.

Private schools.—The 100 day and boarding schools had 136 teachers, of whom 64 were males and 72 females. They were attended by 4,872 pupils, 1,741 of whom were males and 3,131 females. These schools possessed an income of $38,550, derived from tuition and other sources.

Libraries.—There were 1,153 public libraries, containing 377,831 volumes; also 2,387 private libraries, having 295,749 volumes, making a total of 3,540 libraries, containing 673,580 volumes.

The press.—The 233 periodicals issued had an aggregate circulation of 219,090 copies, with an aggregate annual issue of 16,403,380.

Churches.—Of the 2,763 church organizations, 1,446 had edifices, with 431,709 sittings, and the church property was valued at $5,730,352.

Pauperism.—Eight hundred and fifty-three paupers were reported, of whom 486 were native whites, 56 native colored, and 311 foreigners.

Crime.—Of 397 persons imprisoned June 1, 1870, 273 were native whites, 14 were native colored, and 110 were foreigners. Six hundred and fifteen persons were convicted during the year.

Age and sex of population.—Of the total population 394,696 persons were from 5 to 18 years old—201,531 males and 193,165 females; 837,959 were 10 years old and upward, and of these 445,064 were males and 392,895 females.

Occupations.—Three hundred and forty-four thousand two hundred and seventy-six persons of these ages were engaged in various occupations, of whom 321,150 were males and 23,126 females; 210,263 were engaged in agricultural pursuits, of whom 209,907 were males, and 356 females; 58,484 in personal and professional services, of whom 38,531 were males and 19,953 females; 28,210 in trade and transportation, of whom 28,151 were males and 59 females; 47,319 in manufactures and mechanical and mining industries, of whom 44,561 were males and 2,758 females.

Age and sex of working population.—Of these 344,276 employed persons, 13,232 were from 10 to 15 years old, of whom 12,188 were males and 1,044 females; 316,627 were from 16 to 59 years old, of whom 294,739 were males and 21,888 females; 14,417 were 60 years old and over, of whom 14,223 were males and 194 females.

KANSAS

[From the eleventh annual report of the department of public instruction.—H. D. McCarty, superintendent.]

SCHOOL PROSPERITY.

It is a source of very great pleasure and gratification to be able to state that the past year has been one of unusual activity and greatly increased prosperity in the public-school work throughout the State. The teachers have been more faithful, their work in the school-room more successful, and better results have been achieved. The number of teachers' institutes, both county and judicial district, held, and the attendance on the same, both by teachers and patrons, have been much larger than during any other year in the history of the State. A large number of costly and commodious school-edifices has been erected and furnished with all the means and appliances of heating, ventilation, and seating, that modern art can devise.

SUMMARY OF STATISTICS.

Number of school districts	2,647
Increase for the year	579
Number of reports from district clerks	2,438
Number of persons of school age	142,358
Number of persons enrolled in public schools of the State	89,777
Average daily attendance	52,891
Average duration of schools	5.8 months
Number male teachers employed	1,453
Number female teachers employed	1,625
Average monthly wages paid male teachers	$41.54
Average monthly wages paid female teachers	$31.75
Number of log school-houses	266
Number of frame school-houses	1,197
Number of brick school-houses	61
Number of stone school-houses	263
Total number of school-houses	1,787
Total value of school-houses	$2,024,594.33
Total amount of interest-bearing securities of permanent school fund deposited with the State treasurer	$550,575.00

COURSE OF STUDY AND CLASSIFICATION FOR DISTRICT SCHOOLS.

The difficulties encountered in the classification and management of our district schools are exceedingly annoying and perplexing. But though these and many more difficulties are in the way, we must grapple with them manfully, and, under existing circumstances, make the best of them.

LACK OF UNIFORMITY IN TEXT-BOOKS.

One of the most embarrassing and perplexing things a teacher has to encounter in the school-room is the multifarious and endless variety of text-books found in the hands of the children. The time of the teacher is so much divided among such a multiplicity of classes that his best efforts are little else than time wasted. No evil connected with our public-school system calls more imperatively for immediate correction than the great variety and frequent changes of text-books.

The superintendent urges stringent measures for the suppression of this evil.

COMPULSORY EDUCATION.

Upon this subject the superintendent, in the course of a long argument, quotes largely from the most eminent friends of education both in the Old World and the New.

He urges strongly upon the State the counteraction of truancy and absenteeism, and the promotion by all possible methods of an increase in attendance.

CONGRESSIONAL TOWNSHIP SYSTEM OF DISTRICTING.

This is one of the great reforms essentially necessary to secure a harmonious and uniform operation of the public-school system in Kansas. No State which has once tried it is willing to go back to the old independent district system. Various considerations in its favor are presented.

PERMANENT SCHOOL FUND.

At the last session of the legislature a law was passed making it the duty of the school-fund commissioners to consolidate all State bonds now belonging to, or hereafter coming into the possession of, the permanent fund. These consolidated bonds are made payable to the permanent school fund of the State of Kansas, and have imprinted on their face the words "not transferable."

KANSAS STATE TEACHERS' ASSOCIATION.

Not being able to give an abstract of the doings at the annual meeting of this association this year, we place on record the officers elected, as follows: President, General John Fraser, State University, Lawrence; vice-presidents, county superintendents; corresponding secretary, President John Denison, agricultural college, Manhattan; recording secretary, C. P. Isham, Council Grove; treasurer, Miss P. D. Bullock; executive committee, John A. Bonfield, Topeka; J. N. Lee, principal ladies' seminary, Topeka; J. A. Barrows, superintendent Osage County, and Professor James B. Smith, of Humboldt.

KANSAS EDUCATIONAL JOURNAL.

Since the first issue of this periodical it has been doing an excellent work in inciting teachers to greater efforts in their chosen profession, in disseminating a spirit of true devotion to the cause of education, and in diffusing among the people that educational enterprise and energy found cropping out all over the State in the form of so many good schools and school-buildings. It is fully believed that no other instrumentality has been more influential in developing our educational institutions.

ATCHISON.

PUBLIC-SCHOOL IMPROVEMENTS.

The rapid growth of this city has greatly increased the demand for school accommodations. Grading has occupied the last year. This work is still far from completion, yet all feel that very much has been accomplished, and that the year has been a successful one for our schools. The city voted bonds to the amount of $10,000 to be expended in the erection of two new school-houses, one to be located in West Atchison, and one for the colored children of the city; and also in the enlargement of the South Atchison building. These improvements will all be made during the coming year. Taking everything into consideration, the outlook of our schools betokens a prosperous future.

LAWRENCE.

CONDITION OF SCHOOLS.

The superintendent reports an increase of seven per cent. in the daily attendance, which speaks well for the popularity of the schools. It shows that the people are interested, and unwilling to deprive their children of educational advantages.

The superintendent made, during the year, four hundred and sixty-two school visits.

This year there were no changes of teachers, except those caused by death, resignation, or transfer. The results, as compared with those of last year, when six or seven changes were made, prove that permanency is a desirable object to be attained.

Additions have been made to the school-buildings, rendering them comfortable, pleasant, and complete in their accommodations.

EXAMINATIONS FOR GRADATION.

The system of gradation lately adopted has improved the condition of the schools and stimulated the teachers to a just emulation. There are ten grades, and the school year has been changed from thirty-six to forty weeks. The grading includes an exam-

ination at the close of the school and all passing the fixed standard of proficiency are promoted, while those falling below it are retained in the former grade, or, if failing entirely, are sent to still lower grades. Cards of standing are issued which entitle the pupil to enter the grade indicated at the opening of the school. "This examination has been an awakening, and aroused many from a state of lethargy, causing them to realize that to advance means work, and to build a noble superstructure the foundations must be laid broad and deep."

ELEMENTARY LESSONS.

The superintendent recommends for primary schools a definite system of object lessons. This course of teaching has been carried out to a great extent during the year, and thus both teachers and pupils obtained not only a broader culture but a broader idea of culture, resulting in better teachers and more thorough scholars.

GERMAN.

This language has been successfully taught during the past year, and all doubt of the expediency of introducing that study into the public schools has been removed by the results of the experiment. At the examinations held it was demonstrated that, though the pupils of German parentage excelled the others in conversational powers, the Anglo-Americans had learned the action and grammatical construction as well as the children of German parents.

THE HIGH SCHOOL.

This professes to be a first-class school, with thoroughness for its aim and motto. The courses of study are classical and scientific, each comprising three years. Lessons in drawing, music, composition, and elocution are given throughout the entire course. Greek and German are optional. It is recommended that pupils who graduate with honor should have the preference for positions as teachers in the primary schools. It is said that some of the schools of the city are as good models as those connected with the best normal schools, and those of the graduating class desiring to teach can obtain a training there in methods of instruction, under the supervision of those having the matter in charge.

Philosophical and chemical apparatus, cabinets of specimens illustrating geology and natural history, and better furniture and conveniences, are needed to increase the usefulness of the high school.

STATE NORMAL SCHOOLS.

The report of the normal school at Emporia states that 80 per cent. of the students enrolled during the year are preparing for the work of teaching. Under a late regulation, no one is admitted to the normal class under 14 years of age, except on the payment of tuition at the rate of $30 per annum. This has had a most salutary effect upon both the normal and public schools of Emporia. The rapid growth of the school has made additional buildings a necessity. The lack of room has compelled complete suspension of the model school. It is recommended that the legislature make an appropriation for an additional building. The faculty unite in recommending a double course of study—one of two years and one of four—and the conferring of degrees in accordance with the same. A two years' course can be made to include all the branches taught in the rural districts and smaller towns, while a four years' course will satisfy the demand from the larger cities for attainments of a higher grade than can be given in a three years' course. Under the head of wants, the president names additional teaching force, additional apparatus, and a library.

In the Leavenworth normal school, the last graduating class numbered twelve. The course of study embraces an elementary English course of two years and an advanced course of three years. The pressing want of the school is an appropriation sufficiently great to secure first-class teachers. Appropriations are also needed for text-books and a library. The report of the board of visitors speaks in unqualified commendation of the conduct of the school.

UNIVERSITY OF KANSAS.

Of the several departments contemplated in the act of incorporation, only one has been as yet organized, viz, the department of science, literature, and the arts. This department at present comprises three courses of instruction: A classical course, a scientific course, and a course in civil and topographical engineering. Other courses of instruction will be added as the growth of the State and of the university may render advisable. A preparatory department has been organized to supply the existing want of suitable preparatory schools in the State, but will not be made a permanent feature of the university.

During the year, more than 200 volumes have been added to the library. To the collection of apparatus the following additions have been made, viz, a self-registering barometer, a self-registering anemometer, and a self-registering rain-gauge for the department of meteorology; a prismatic comet-seeker, with a six-inch object-glass, and a reflecting telescope—mirror 12 inches in diameter, focal length 5½ feet—for the use of students in astronomy; a large number of instruments for the use of students in laboratory practice; and 250 graduated models for the use of students in free hand and mechanical drawing. The university is open to both sexes. The number of acres of land owned by the institution is 46,130. The estimated value of the property, including buildings, library, and apparatus, is $164,024.63.

STATE AGRICULTURAL COLLEGE.

The aggregate of pupils, by terms, for 1871 was 293, a gain of 9 over the aggregate of 1870. The number of different pupils was 183, a gain of 28 over the number of 1870. These students represent 27 counties of the State, and seven other States and Territories. During the year a class of five has gradnated—four young ladies in the literary course and one gentleman in the agricultural and scientific course.

The difficulty complained of by institutions in the older States is specially felt here, viz, that of keeping students regularly through their full course. The larger number of students at present is in the preparatory department, and in selected studies of the agricultural course.

While the institute, by its present method of loaning its funds, is greatly aiding in the formation of new school districts and the building of school-houses, thus preparing the way for graded schools that may in time do the work now done by its preparatory department, it can not for the present, nor perhaps for some time to come—if it does the greatest amount of good to the State—abolish this department, or raise the standard of admission to it.

During the year the people of Manhattan voted $12,000 in bonds for the purchase of additional lands for the college farm. This gift has enabled the board to purchase 315 acres of land, making the farm 415 acres; 315 acres of which are under cultivation. The farm includes the three varieties of land common to the State, viz, high rolling prairie, creek bottom, and second bottom.

The addition to the farm has caused some changes, not only in the curriculum of study but in the titles of the several chairs. It necessitated, also, several additions to the faculty.

The regents ask for State aid to the amount of $70,000. The present value of the endowment is $378,542.

WASHBURN COLLEGE.

This institution is under the general auspices of the Congregational churches of Kansas. The course of study embraces a collegiate department, a preparatory department, and a scientific department.

During the year $25,000 have been added to the permanent endowment, and $30,000 of a building fund secured. The permanent endowment now amounts to $55,000. The property of the institution, including buildings, library, &c., is valued at $132,000.

Tuition is free to the following classes of students: Children of home missionaries of all denominations; persons who served two years in the Union Army; children of Union soldiers who were killed or died in the service; students fitting themselves for the ministry; students of limited means desirous of obtaining an education.

HIGHLAND UNIVERSITY.

This institution belongs by charter to the General Assembly of the Presbyterian Church. It is an outgrowth of foreign missionary work, and begun in 1846, with the first settlement of the country. It remained an academy until 1870, but now offers the usual college course. Ladies are admitted to all the privileges of the institution.

SAINT BENEDICT'S COLLEGE.

This institution was founded in 1859, incorporated in 1868, and is under the superintendence of the Fathers of the Order of Saint Benedict. The plan of instruction embraces two courses, classical and commercial. There is also a preparatory department.

COLLEGE OF THE SISTERS OF BETHANY.

This was formerly known as the Episcopal Female Seminary. The college is the property of the Protestant Episcopal Church, and is designed for the exclusive instruction of girls. Full college powers are granted by the charter.

BLIND ASYLUM OF KANSAS.

The trustees, in their fourth annual report, state that the number of pupils at present in school is 20. There is room but for two additional pupils. The progress during the past year is entirely satisfactory. The boys are instructed in broom-making. The New York two-line point system of writing, recommended by the convention at Indianapolis, has been adopted. The trustees call the attention of the legislature to the wants and necessities of the institution and ask for an increased appropriation. The hope is expressed that, should the institution be removed from Wyandotte to the State capital, the error of locating it in the suburbs of the city will not be repeated.

KANSAS ACADEMY OF SCIENCE.

This society aims at a thorough scientific exploration of the State, and hopes in time to build up a museum, cabinet, and library, where may be found all the necessary material for a complete scientific knowledge of the State of Kansas. The society was organized in 1867, and held its first annual meeting in September, 1868. At the different annual meetings fourteen papers have been read, mainly based on original investigation. Collections have been made for the museum, but these remain in the hands of the collectors for want of room to arrange them properly.

W. E. RUBLE—OBITUARY.

W. E. Ruble, teacher in Fairmount, died of typhoid-pneumonia at Topeka, while attending the State teachers' association, January, 1872. He removed from Indiana in the summer of 1871, and is spoken of by the Indiana School Journal as "one of our most earnest teachers."

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Kansas was the twenty-ninth State in population, having 364,399 inhabitants, within an area of 81,318 square miles, an average of 4.48 persons to the square mile. This population consisted of 346,367 whites, 17,108 colored, and 914 Indians. Of these, 316,007 were natives of the United States, and 48,392 foreign-born. Of the native residents of the State, 59,062 whites, 3,797 colored, and 462 Indians were born within its borders; while of the foreign residents, 12,775 were born in Germany, 6,161 in England, and 10,940 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 63,183 persons attended school, and of these 1,752 were foreign-born. The white male scholars numbered 31,568, and the white female scholars 29,223, (an aggregate of 60,791 whites.) The colored pupils numbered 2,127, of whom 1,011 were males and 1,116 females; 265 Indians also attended school.

Illiteracy.—The number of inhabitants of all races, 10 years old and over, unable to write, was 24,550, of whom 4,101 were foreign-born.

Age, sex, and race of illiterates.—Of the 16,978 white illiterates, 2,590 were from 10 to 15 years of age, and of these 1,491 were males and 1,099 females; 2,219 were from 15 to 21 years old, of whom 1,311 were males and 908 females; 12,169 were 21 years old and over, of whom 5,994 were males and 6,175 females. Of the 7,213 colored illiterates, 656 were from 10 to 15 years old, of whom 342 were males and 314 females; 946 were from 15 to 21 years old, of whom 449 were males and 497 females; 5,611 were 21 years old and over, of whom 2,772 were males and 2,839 females.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 1,689, having 1,955 teachers (of whom 872 were males and 1,083 females) to educate their 59,882 pupils, of whom 30,493 were males and 29,389 females.

Amount and source of educational income.—The total income of all the educational institutions was $787,226, of which $19,604 were derived from endowment, $678,185 from taxation and public funds, and $89,437 from tuition and other sources.

Public schools.—The 1,663 public schools throughout the State with their 1,864 teachers, of whom 829 were males and 1,035 females, were attended by 58,030 pupils, of whom 29,632 were males and 28,398 females. To educate these they possessed a total income of $660,635, of which $645,532 were derived from taxation and public funds, and $15,103 from tuition and other sources.

Colleges.—The 5 colleges reported, with their 27 teachers, 24 males, and 3 females, were attended by 489 students, of whom 260 were males and 229 females. To educate these they possessed a total income of $61,731, of which $2,604 were derived from endowment, $11,670 from taxation and public funds, and $47,457 from tuition and other sources.

Academies.—The 6 academies, with their 36 teachers, 6 male and 30 female, had an attendance of 415 pupils, 159 males and 256 females, for the education of whom they pos-

sessed a total income of $14,900, of which $2,000 were derived from endowment, and $12,900 from tuition and other sources.

Private schools.—The 4 day and boarding schools had 4 female teachers. They were attended by 115 pupils, 44 of whom were males and 71 females. These schools possessed an income of $225, derived from tuition and other sources.

Libraries.—There were 190 public libraries, containing 92,425 volumes; also 384 private libraries, having 126,251 volumes; a total of 574 libraries, containing 218,676 volumes.

The press.—The 97 periodicals issued had an aggregate circulation of 96,803 copies, with an aggregate annual issue of 9,518,576.

Churches.—Of the 530 church organizations, 301 had edifices, with 102,135 sittings, and the church property was valued at $1,722,700.

Pauperism.—Three hundred and thirty-six paupers were reported, of whom 105 were native whites, 85 native colored, and 146 foreigners.

Crime.—Of 329 persons imprisoned June 1, 1870, 202 were native whites, 60 native colored, and 67 were foreigners. One hundred and fifty-one persons were convicted during the year.

Age and sex of population.—Of the total population, 109,710 persons were from 5 to 18 years old—55,669 males and 53,041 females; 258,051 were ten years old and upward, and of these 148,152 were males and 109,899 females.

Occupations.—One hundred and twenty-three thousand eight hundred and fifty-two persons of these ages were engaged in various occupations, of whom 117,343 were males and 6,509 females; 73,228 were engaged in agricultural pursuits, of whom 72,918 were males and 310 females; 20,736 in personal and professional services, of whom 15,286 were males and 5,450 females; 11,762 in trade and transportation, of whom 11,736 were males and 26 females; 18,126 in manufactures and mechanical and mining industries, of whom 17,403 were males and 723 females.

Age and sex of working population.—Of these 123,852 employed persons 3,216 were from 10 to 15 years old, of whom 2,830 were males and 386 females; 117,235 were from 16 to 59 years old, of whom 111,227 were males and 6,008 females; 3,401 were 60 years old and over, of whom 3,286 were males and 115 females.

KENTUCKY.

[From report of Hon. H. A. M. Henderson, State superintendent of public instruction, for the scholastic year ended June 30, 1872.]

GENERAL CONDITION OF SCHOOLS.

There has been an evident increase of educational activity during the year, and the schools generally have made good progress. Of the 5,381 schools in the commonwealth, 5,308 have been taught. The whole number of children of school age reported is 416,763, an increase of 10,923. The fact that the number of children reported exceeds that of any preceding year, taken in connection with the unprecedented number of schools taught, is sufficient to demonstrate that the system is growing in the regards of the people.

SCHOOL REVENUE.

The total amount of estimated receipts for the year ended June 30, 1872, was $968,-176.80. At the beginning of the present school year there was a balance on hand of $26,872.77. The available fund for this year, including the balance on hand, is $912,-425.82. The appropriation for each child last year was $2.30. For the present year, ending June 30, 1873, it is $2.20.

SUSPENSION OF PAYMENT.

A large proportion of the schools this year were half or entirely "taught out" by the 10th of January. This created such a run upon the treasury that the school exchequer became exhausted, and numbers of matured claims had to lie over. The law for the collection of taxes allows the sheriffs until the first day of April to pay the revenue, while the school laws make the 10th of January the day for disbursing the larger amount for school purposes. The lack of harmony in these two provisions is the cause of infinite trouble and discontent.

PAYMENT OF TEACHERS.

As at present provided, no teacher can get any portion of his pay before the 10th of January. This provision makes it difficult in many districts, where it would be most convenient to have the school taught in the fall, to secure the services of a teacher. The bill now before the legislature provides a remedy for this. It contains also an amendment, providing for the direct payment of teachers by the commissioners. The existing law provides that the money due the teachers shall be paid to the trustees of the several districts. Numbers of cases have been reported where trustees have held back the school money from the teachers or bought their claims at a discount. To make the commissioner the disbursing officer to the teachers would remedy these evils, and would greatly increase the confidence of teachers in promptly receiving their pay.

DISTRICT TAXATION.

The opinion is expressed that "the common-school system cannot be enlarged except by granting to the people of the several districts the right of taxing themselves to extend the time and improve the character of the public schools." The endowment of the State and the general school-tax are, perhaps, sufficiently large. What is now needed is, that a law should be passed permitting the people, without the necessity of securing special legislation, to supplement it by local enterprise and direct taxation. "Counties that would probably vote against any increase of the general tax, because more than two-thirds of it would be disbursed outside the county, would be willing to submit to a tax in their several districts of twenty cents more, if the money was to be used within their own boundaries. All the States that have a well-developed common-school system have this provision. Our system can not develop the highest results until it is given room for growth."

THE RATE AMENDMENT.

Of this the superintendent says: "A wider observation and more thorough information of its workings make me more firm in my opinion that it works damage, abridges the freedom of the system to the very class that most need the aid of a public school, and that it ought to be repealed."

TRUSTEES.

The chief difficulty experienced by the commissioners is in securing the reports required by law from the trustees. Where there are three to a district, the responsibility is shifted from one to the other. The existing law provides for three; but the superintendent is strongly of the opinion that the work would be better done by one.

TEACHERS' INSTITUTES.

Many more teachers' institutes have been held during the year than ever before. General institutes were held in each of the congressional districts, and several of these were largely attended. The school law now before the legislature makes forfeiture of certificate the penalty for non-attendance on the part of teachers, unless satisfactory excuse is rendered. The superintendent considers this the only means of securing a full attendance at the institutes, and expresses the hope that it may become a law.

STATE TEACHERS' ASSOCIATION.

The State teachers' association was held in Frankfort, August 12 to 16, inclusive, and was attended by many of the most accomplished educators in the State. The exercises were of a higher character than formerly. The contingent expenses of the association had to be defrayed by the superintendent. The State formerly appropriated $300 to publish the proceedings of the association and pay its incidental expenses. This has been withdrawn, in the exercise of undiscriminating economy toward every agency for good connected with the school system.

SCHOOL-HOUSES.

The superintendent speaks strongly of the necessity existing throughout the State for better school-houses. He has seen many school-houses without a single window-glass; numbers of them are unchinked log-houses, and in very many the seats are without backs. The comfort and health of the children demand better buildings, and if they are to be properly taught there must be improved facilities. The suggestion is made that good school-houses be immediately built, upon a uniform plan furnished by the State board of education, under compulsory legislation, in every district in the State. The tax necessary to accomplish this would be small and temporary, and the result incalculably good.

NORMAL SCHOOLS.

The superintendent calls attention to a scheme for the establishment of a State normal school, which he considers indispensably necessary to the success of the common-school system. It is estimated that, the buildings once furnished, the annual cost of such an institution would not exceed $12,000. This would support a faculty of eight professors, who could teach 400 pupils, and gradually provide a corps of trained instructors adequate to the wants of the schools. It is urged that such a school be immediately organized, or that a normal professorship, sustained by the State, be established in each of the congressional districts.

EDUCATION OF THE COLORED PEOPLE.

The superintendent declares himself uncompromisingly opposed to mixed schools, or to any invasion of the school-fund raised by the taxation of the whites; but he favors the inauguration of a separate system, supported by taxes, *ad valorem* and poll, imposed upon the colored people themselves.

NATIONAL EDUCATION BILL.

This bill is considered entirely free from objection. "There is nothing in it which looks like concentration of power. It yields to the Federal Government no control over the free schools in any State or Territory." "The only feature which conditions the benefit of the funds is that any State or Territory must provide for the free education of all its children between the ages of six and sixteen and make an annual report to the Commissioner of Education in order to entitle itself to its portion of the national bounty." * * * * * * * * *

"Of course if Kentucky persists in making no provision for the education of the colored people she can not hope to receive any of the benefit of this fund." A letter from the Commissioner of Education states that "the distribution of $1,000,000 annually, as now

provided, will give Kentucky $58,695." It is suggested that if this amount be devoted to the education of the colored people, two things will be accomplished, viz, the funds for the support of such a system will be provided, and "the white system will be kept so thoroughly independent of obligation to the National Government that upon no pretense can Congress interfere therewith." Attention is called to the fact that "the distribution of this fund for the first ten years is upon the basis of illiteracy; and, on account of the large ignorant colored population, Kentucky's share is greater than that of any State north of the Ohio River."

CHANGES IN THE SCHOOL LAW.

The principal changes proposed in the bill now before the legislature are briefly as follows:

It provides for the disbursement of what is known as "the bonded surplus of the counties," and for the prevention of its future accumulation.

It makes four payments to teachers instead of three, as now, and changes the time thereof.

It gives the privilege to any common-school district desiring to improve the character or extend the time of the common schools in the State, upon the clearly-ascertained will of the people, to levy a tax not to exceed twenty cents on the $100 worth of taxable property in the district.

It gives cities and towns the privilege of levying a tax, not exceeding forty cents in any one year, on the $100 worth of taxable property, for the purpose of establishing a system of graded free schools.

It introduces two professional educators to the State board of education in addition to the secretary of state, attorney-general, and superintendent of public instruction, as now constituted, and makes these experts, in conjunction with the superintendent, a standing committee to prepare rules, by-laws, and regulations for the government of the common-schools of the State.

It provides for the building of school-houses; it provides for the superintendent's holding congressional institutes; and attendance of teachers upon the county institutes is made compulsory.

Various minor points are touched upon in the bill, but the efficient reconstruction of the school-system is embraced in those already mentioned.

OWENSBOROUGH.

PUBLIC SCHOOLS.

The public-school system has only been in operation one year in Owensborough. The report of the superintendent is very satisfactory. The study of German has already been introduced into the schools. Before the organization of these schools, a strong prejudice was entertained on the part of the citizens against the co-education of the sexes. This has now been entirely destroyed, and the practice has become exceedingly popular. Objections have been made to the high rate of taxation for the support of schools—30 cents on the $100—and a disposition is manifested on the part of many citizens to vote it down, and thereby manifest a refusal to sustain a system of public education.

INSTITUTION FOR THE BLIND.

This institution not only receives those who are totally blind, but those whose eyesight is so defective that they can not see to read are, when of suitable age, received and educated at the expense of the State.

In cases of extreme poverty, inmates of the institution are clothed by the State. They are instructed in the branches usually taught in public schools, and in music. The boys are also taught mechanical trades, and the girls to use sewing-machines and to do various kinds of fancy work.

INSTITUTION FOR DEAF-MUTES.

The age of admission to this institution is from 10 to 30. Pupils supported by the State are considered under obligation to remain five years; if they display talent and industry, they may remain seven. Applicants must be in good health, of sound mind, and good moral character.

INSTITUTE FOR FEEBLE-MINDED CHILDREN.

This is a school for the intellectual training of imbecile children, and not an asylum for the hopelessly idiotic. The State pays all expenses for the indigent children received, except transportation. The course of physical training unremittingly em-

ployed is one of the chief instrumentalities for strengthening the mental faculties, and is productive of most beneficial results. This institution has fully demonstrated the possibility of improving the minds of imbeciles, and of making them competent for self-provision.

KENTUCKY UNIVERSITY.

The plan of the Kentucky University presents some peculiar features. It embraces several colleges, each under the immediate government of its own faculty and presiding officer. The general supervision of the university is committed to the regent, who is elected from among the curators, is *ex-officio* chairman of the executive committee, and is the representative of the institution before the public.

The colleges of the university are the college of arts, with 9 professors and 173 students; the agricultural and mechanical college, with 10 professors and 217 students; college of the Bible, with 3 professors and 104 students; commercial college, with 5 professors and 67 students; college of law, with 3 professors and 26 students. The number of graduates for 1872 was 52. It is in contemplation to organize a normal college and a college of medicine.

In 1865 the agricultural and mechanical college, established upon the grant by Congress of 330,000 acres of land, was made a part of the university, and the citizens of Lexington having raised $100,000 for the purchase of an experimental and model farm and the erection of buildings for the agricultural college, the university was removed to that place. The tract of land occupied by the agricultural college contains 433 acres, and embraces "Ashland," the homestead of Henry Clay. The endowment and real estate of the university now amount to about $800,000.

Students wishing to reduce their expenses can labor at a reasonable compensation on the farm or in the shops. During the year about 75 students have availed themselves of the "compensated labor system," working four to five hours a day, and have received compensation at a rate exceeding that paid by any other industrial institution in the United States.

UNIVERSITY OF LOUISVILLE.

The medical department of the University of Louisville announces its thirty-sixth annual session. The university dispensary, which is upon the university grounds, and under the exclusive control of the faculty, affords desirable facilities to students.

The law department of the university makes its twenty-sixth annual announcement. The number of graduates for 1872 was 19. Students in this department are entitled to attend, without charge, the lectures in the medical department on medical jurisprudence.

LOUISVILLE MEDICAL COLLEGE.

The most gratifying success has attended the management of this college. The graduates have the privilege of becoming candidates for the position of resident graduate at the Louisville marine hospital. These positions are secured by competitive examinations. The number of graduates last year was 59.

KENTUCKY MILITARY INSTITUTE.

This institute is under the direction of a board of visitors appointed by the governor. The report of the board shows the institution to be in a most flourishing condition. The number of graduates for 1872 was 8.

BETHEL COLLEGE.

This institution was organized by the Bethel Baptist Association of Southwestern Kentucky as a high school, and was incorporated as a college in 1856. The endowment fund is $85,000, the beneficiary fund about $6,000, and the real estate, exclusive of the college grounds and buildings, is valued at $85,000. The institution is free from debt. A theological department is connected with the college.

EMINENCE COLLEGE.

This college is open to both sexes. The number of graduates for 1872 was 13.

HOCKER FEMALE COLLEGE.

The course of study is that usually pursued in colleges for young men.

CECILIAN COLLEGE.

This college was chartered in 1867, and is conducted under the auspices of the Catholic Church. It is for the instruction of boys, and includes a scientific and a commercial department.

SAINT MARY'S COLLEGE.

This institution is exclusively for the education of boys, and is under the care of the Roman Catholic Church. It is divided into two departments, classical and commercial.

KENTUCKY STATE TEACHERS' ASSOCIATION.

This association met at Frankfort, Monday, August 12, and the sessions continued through the week.

Dr. Henderson, State superintendent, was elected president, and B. N. Greham, secretary. Besides the regular address of Dr. Henderson, an essay on "Natural punishments" was read by G. E. Roberts; "Technical education in our schools," was treated of by J. A. Brown; "Great men who do nothing," by B. N. Greham; "Philosophy of composition," by Noble Burter; "Primary schools," by Hiram Roberts; "Professions and professors," by E. M. Murch; "Jacob Brown," a poem, by H. S. Stanton; "Natural science in public schools," by W. H. Lockhart; "Mental science," by Mrs. N. S. Roberts; "Sunlight and starlight," by W. J. Davis; "Sphere of the educated woman," by the State superintendent, Hon. H. A. M. Henderson; "Liberal education," by Noah K. Davis; "Malaria and ozone," by John Darby; "Geology of Kentucky," by J. B. Reynolds. W. H. Bartholomew gave lectures on penmanship. "How to win and retain the confidence of children," was a topic by T. J. Fish; Professor Jones demonstrated the law of falling bodies; Daniel Hough gave a practical exercise in reading.

About seventy-five teachers were present, representing all parts of the State.

TEACHERS' INSTITUTES IN KENTUCKY.

During the past summer twelve institutes were held in the State of Kentucky under the general direction of the State superintendent of public instruction, Hon. H. A. M. Henderson. In the work of each institute, Dr. Henderson was assisted by Professor P. A. Towne, of Paris, Kentucky, and by such local force as was available. At each institute, except two, Dr. Henderson gave lectures on "Popular education" and on "The sphere of the educated American woman."

The object of these institutes was to secure the permanent establishment of a strong organization for each county in the State. The superintendent reviewed the present school law of the State and indicated amendments that he hoped to see enacted. He advocated the establishment of at least one great normal school for the State. These institutes were called congressional institutes, because they, theoretically, at least, were supposed to represent the congressional districts in the State.

At Mayfield, June 3, Dr. Thompson, commissioner of McCracken County, presided. Five counties were represented by their commissioners and by forty-five teachers.

At Henderson the first institute for the second district was held June 10; R. P. Thornberry, commissioner of Webster County, presided.

The second institute for this district was held at Hopkinsville, June 17; G. A. Champlin, commissioner of Christian County, presided.

At Glasgow, June 24, the institute for the third district was held; Richard P. Collins, commissioner for Barren County, presiding, with over fifty teachers in attendance from five counties. The institute for the fourth district was at Elizabethtown, July 1; Judge Bush, of Larue County, presiding, with more than seventy teachers in attendance from six counties. Professor Heagan, of Hamilton College, took an active part in the meetings of the institute.

The institute for the eighth district was at Stanford, July 8; R. C. McBeatte, commissioner for Wayne County, in the chair. D. W. Coleman, commissioner of Casey County; J. K. West, of Garrard County; and R. F. Coldwell, of Boyle, represented those counties. S. S. McRoberts, commissioner of Lincoln County, was present. L. G. Barbour, of Danville; Professor J. B. Meyers, of Stanford; and B. N. Greham, commissioner of Fayette County, rendered valuable service.

The institute for the ninth district was held at Manchester, July 15; J. E. White, commissioner of Clay County, presiding; twenty-five teachers were present, and several commissioners from adjoining counties.

The institute for the seventh district was held at Carlisle, July 22; J. M. Chism, commissioner of Nicholas County, presiding. All the sessions of the week were attended by the citizens *en masse*, and there were more than four hundred persons present at the adjournment. Besides the addresses of Dr. Henderson, President Argobast, of the Wesleyan College at Millersburg, read an essay on "What and how to read;" Dr. Reynolds, of Louisville, read one on "The mission of the teacher." The institute was regarded as a very profitable one.

The institute for the tenth district was held at Maysville, July 29 to August 2, inclusive; Judge E. Whitaker presided. Professor H. R. Blaisdell and Professor Smith, of Maysville, took an active part in the work of the week. Professor Yancy, of Augusta College, gave his method of teaching history.

At Cynthiana, August 5, the institute for the sixth district was presided over by J.

F. Lebus, commissioner of Harrison County. More than a hundred teachers were in attendance, being numerically the largest institute of the summer except that at Louisville, and the work accomplished was very satisfactory.

The first institute for the fifth district was at Eminence, August 20; Hon. Z. F. Smith, late State superintendent, presiding. The second institute for the district was at Louisville, W. H. Bartholomew presiding. This was a very important meeting.

REV. ROBERT JEFFERSON BRECKINRIDGE.—OBITUARY.

Rev. Robert Jefferson Breckinridge, D. D., LL. D., died at his home, in Danville, December 27, 1871.

He was a son of Hon. John Breckinridge, author of the Kentucky resolutions of 1798, and United States Attorney-General under President Jefferson; born at Cabell's Dale, March 8, 1800; studied at Princeton and Yale; graduated at Union College, New York, 1819; admitted to the bar 1823; practiced law in Kentucky until 1831; member of the State legislature in 1825, 1826, 1827, and 1828; united with the Presbyterian Church in 1829, and was soon after elected ruling elder; studied a few months at Princeton, and was ordained pastor Second Presbyterian Church, Baltimore, Maryland, 1832; president or principal of Jefferson College, Cannonsburgh, Pennsylvania, and pastor of the church, 1845; pastor First Presbyterian Church, Lexington, Kentucky, and State superintendent of public instruction, 1847; professor of exegetic, didactic, and polemic theology in the Presbyterian Theological Seminary at Danville, 1853.

Dr. Breckinridge was a man of commanding influence in both church and state. His intellect was quick, piercing, powerful, with a grasp of thought, a closeness of reasoning, and a fertility of illustration which few could rival, rendering him equal to any emergency, whether to fill a theological chair, to address a promiscuous audience, to join in an extemporaneous debate, to preside over a literary institution, or sway the councils of a political convention. From his first public appearance in ecclesiastical matters in the Cincinnati convention, 1830, he was one of the leading minds in the Presbyterian Church, and in his later as well as earlier years took an active part in civil affairs.

As a preacher, he was scriptural, doctrinal, and closely argumentative; he was great (and greatly) in controversy, but it was in deliberative bodies that his powers appeared to the greatest advantage. His acquaintance with judicial proceedings, his self-reliance, his peculiarly gentle but penetrating voice, his unsurpassed command of appropriate language, and his ability to bring his full strength to bear upon the question at issue, made him a most powerful advocate or a most formidable opponent.

He was a voluminous writer; published Papism in the Nineteenth Century in the United States, 1841; Travels in France, Germany, &c., 1841; Memoranda of Foreign Travel, 1845; Internal Evidence of Christianity, 1852; two large volumes of theology, 1857 and 1859, and innumerable pamphlets on slavery, temperance, Popery, Universalism, Presbyterianism, education, agriculture, politics, besides editing several periodicals.

The value of his six years' service as superintendent of public instruction is gratefully acknowledged by his successors in that office. One of them, in his annual report for 1859, says that "to Dr. Breckinridge, above all others, the people of Kentucky owe the establishment of our system of common schools. He found that system a ruin; he left it a majestic fabric; he found it a prey to the timidity of legislation and the plunders of party; he left it beyond legislation and beyond party, fixed immovably among the powers of government in the organic law of a great commonwealth."

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Kentucky was the eighth State in population, having 1,321,011 inhabitants, within an area of 37,680 square miles, an average of 35.33 persons to the square mile. This population consisted of 1,098,692 whites, 222,210 colored, 1 Chinese, and 108 Indians. Of these 1,257,613 were natives of the United States and 63,398 were foreign-born. Of the native residents of the State 875,415 whites, 205,583 colored, and 83 Indians were born within its borders, while of the foreign residents 30,318 were born in Germany, 4,173 in England, and 21,642 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 181,225 persons attended school, and of these 1,162 were foreign-born. The white male scholars numbered 91,225, and the white female scholars 82,278, an aggregate of 173,503 whites. The colored pupils numbered 7,702, of whom 3,520 were males and 4,182 females. There were also 20 Indians—7 males and 13 females.

Illiteracy.—The number of inhabitants of all races, ten years old and over, unable to write, was 332,176, of whom 7,231 were foreign-born.

Age, sex, and race of illiterates.—Of the 201,077 white illiterates, 57,766 were from ten to fifteen years of age, and of these 31,752 were males and 26,014 females; 36,760 were

from fifteen to twenty-one years old, of whom 18,724 were males and 18,036 females; 106,551 were twenty-one years old and over, of whom 43,826 were males and 62,725 females. Of the 131,050 colored illiterates, 24,958 were from ten to fifteen years old, of whom 12,891 were males and 12,067 females; 24,926 were from fifteen to twenty-one years old, of whom 12,157 were males and 12,769 females; 81,166 were twenty-one years old and over, of whom 37,889 were males and 43,277 females; 12 male and 37 female Indian illiterates were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 5,149, having 6,346 teachers, of whom 3,972 were males and 2,374 females, to educate the 245,139 pupils, of whom 125,734 were males and 119,405 females.

Amount and source of educational income.—The total income of all the educational institutions was $2,538,429, of which $393,015 were derived from endowment, $674,992 from taxation and public funds, and $1,470,422 from tuition and other sources.

Public schools.—The 4,727 public schools throughout the State, with their 5,351 teachers, of whom 3,468 were males and 1,883 females, were attended by 218,240 pupils, of whom 111,802 were males and 106,438 females. To educate these they possessed a total income of $1,150,451, of which $24,885 were derived from endowment, $604,905 from taxation and public funds, and $520,661 from tuition and other sources.

Colleges.—The 42 colleges, with their 223 teachers, 119 male and 104 female, were attended by 5,864 students, of whom 3,395 were males and 2,469 females. To educate these they possessed a total income of $431,437, of which $180,831 were derived from endowment, $3,999 from taxation and public lands, and $246,607 from tuition and other sources.

Academies.—The 95 academies, with their 286 teachers, 146 males and 140 females, had an attendance of 6,224 pupils, 3,049 males and 3,175 females, for the education of whom they possessed a total income of $254,498, of which $4,000 were derived from endowment, $9,148 from taxation and public funds, and $241,350 from tuition and other sources.

Private schools.—The 195 day and boarding schools had 302 teachers, of whom 128 were males and 174 females. They were attended by 7,948 pupils, 3,170 of whom were males and 4,778 females. These schools possessed a total income of $335,865, of which $730 were derived from endowment and $335,135 from tuition and other sources.

Libraries.—There were 1,172 public libraries, containing 318,985 volumes; also 4,374 private libraries, having 1,590,245 volumes—a total of 5,546 libraries, containing 1,909,330 volumes.

The press.—The 89 periodicals had an aggregate circulation of 197,130 copies, with an aggregate annual issue of 18,270,160.

Churches.—Of the 2,969 church organizations, 2,696 had edifices with 878,039 sittings, and the church property was valued at $9,824,465.

Pauperism.—One thousand seven hundred and eighty-four paupers were reported, of whom 963 were native whites, 704 native colored, and 117 foreigners.

Crime.—Of 1,067 persons in prison June 1, 1870, 525 were native whites, 443 native colored, and 99 foreigners; 603 persons were convicted during the year.

Age and sex of population.—Of the total population, 454,539 persons were from 5 to 18 years old, 230,491 males and 224,048 females; 930,136 were ten years old and upward, and of these, 466,762 were males and 463,374 females.

Occupations.—Four hundred and fourteen thousand five hundred and ninety-three persons of these ages were engaged in various occupations, of whom 364,300 were males and 50,293 females; 261,080 were engaged in agricultural pursuits, of whom 257,426 were males and 3,654 females; 84,024 in personal and professional services, of whom 41,974 were males and 42,050 females; 25,292 in trade and transportation, of whom 24,961 were males and 331 females; 44,197 in manufactures and mechanical and mining industries, of whom 39,939 were males and 4,258 females.

Age and sex of working population.—Of these 414,593 employed persons, 42,985 were from 10 to 15 years old, of whom 34,283 were males and 7,802 females; 348,190 were from 16 to 59 years old, of whom 307,718 were males and 40,472 females; 24,318 were 60 years old and over, of whom 22,299 were males and 2,019 females.

LOUISIANA.

[From report of Hon. Thomas W. Conway, State superintendent of instruction, for the year 1871.]

SCHOOL FUND.

The school fund for the scholastic year 1871, (from January 1 to December 31,) as far as can be determined from data received, was as follows:

Balance due from former school board	$35,173 13
Balance due from parish treasurers	23,266 08
Amount from State apportionments	420,574 74
From corporate authorities	51,572 47
From interest on sale of school-lands	24,387 28
Total	554,973 70

DISBURSEMENTS.

Previous indebtedness	$9,502 27
Teachers' wages	448,023 78
Rent of school-houses	35,653 20
Repairs	2,940 47
School furniture	2,733 65
Fuel and incidentals	18,597 33
School apparatus	1,356 53
School-house sites	690 00
Building school-houses	12,337 02
Total	531,834 25

NUMBER OF PUPILS.

The State is divided into six school divisions. The number of pupils enrolled is as follows:

First division	3,591
Second division	6,200
Third division	10,107
Fourth division	5,845
Fifth division	No report.
Sixth division	19,091
Total	44,834

AVERAGE DAILY ATTENDANCE.

First division	2,856
Second division	4,396
Third division	No report.
Fourth division	No report.
Fifth division	No report.
Sixth division	13,335
Total	20,587

NUMBER OF TEACHERS EMPLOYED.

First division	104
Second division	121
Third division	221
Fourth division	130
Fifth division	No report.
Sixth division	381
Total	957

Average rated pay of teachers per month, $60.60; average duration of schools, 6 months 10 days.

NEW SCHOOL LAW.

The school act of 1870 was not open to serious objections in its general features, but the agencies for carrying out its provisions were so cumbrous and complicated that amendments were necessary.

In January, 1870, the State board of education, at its annual meeting, proposed such modifications of the school act as would remove the most formidable of the difficulties. These views were submitted to the standing committee on public schools, and by them in the main approved and formally reported. The proposed amendments were adopted by both houses of the legislature, and on the 16th of March the act was approved by the governor and became a law. By these amendments the former ward boards of school directors were abolished and the places of the old directors of parish school boards were vacated. The State board of education was called together and, as promptly as possible, new parish boards were appointed, together with boards of directors for the various incorporated towns and cities of the State. The re-organization of the school work absorbed time, but the delay was amply compensated for by the increased efficiency of the amended law.

TEACHERS' INSTITUTES.

Under section 10 of the act approved March 16, 1870, the division superintendents are required to hold once in each year a teachers' institute in their respective divisions.

In conformity with this regulation, and under the direction of the State superintendent of public education, four institutes were held during the year—at Amite in June, at Carrollton June 8, 9, and 10, at Franklin June 16 and 17, and at New Orleans May 31 and June 1 and 2.

These first teachers' institutes ever convened in the State excited the deepest interest. In every case there was a full attendance of teachers and members of the school board, and the exercises were varied and instructive. Papers on methods of teaching and discipline were read, and Miss Hattie M. Morris, from the Oswego training-school, gave in all the institutes lectures on the best methods of instructing in arithmetic, geography, grammar, and botany, and in the course practically illustrated the benefit to be derived from the proper use of the blackboard.

The institute in the city of New Orleans was perhaps the most interesting. Three hundred and fifty-one teachers answered to the roll, and the addresses of Mr. Conway, the State superintendent, and of Mr. Carter, the division superintendent, were listened to with marked attention.

The harmony of the meeting was somewhat disturbed by a few persons in evident sympathy with that portion of the community hostile to the school system; but in the face of these ill-timed and senseless exhibitions, Mr. Carter testified to the increasing confidence felt in the schools, instancing several gentlemen who had fought against the Government during the late war, and who might at least be expected to be lukewarm toward the school system, but who are ready to declare that the "closing of the public schools would be one of the greatest calamities that could happen to the State."

STATE TEACHERS' ASSOCIATION.

The first germ of this valuable auxiliary to teachers' institutes is found in the second division, where the teachers of two parishes formed a society for mutual improvement.

THE STATE UNIVERSITY.

A communication received by the State superintendent from Colonel Boyd, superintendent of the university, gives a concise and comprehensive view of the wants and prospects of the institution.

The wants as enumerated are: First, plenty of money to pay our debts; second, more room for academic and other purposes, or an immediate reduction of the number of cadets; third, more apparatus, a larger library, and five new professors, viz, of moral and mental philosophy, Greek, agricultural chemistry, and natural history; fourth, for purposes of discipline and better order, muskets for the corps of cadets.

In connection with these wants, Colonel Boyd remarks that "the university must not depend on warrants; that if the State cannot pay its quota of university expenses in United States Treasury notes, then the university must either give up the State or beneficiary cadets, or stop altogether; and that the tuition should be made absolutely free." He also heartily indorses the action of the Tennessee State legislature, asking Congress to pass the land-grant scheme for the benefit of one, and only one, college or university in each State.

Accompanying the communication was a form of scheme for donation, or raising an endowment for the university: For $100 the university pledges itself, through attached

coupons, to give four years' tuition. As the regular tuition fee is $80 per annum, the advantages of the offer are manifest.

The total number of matriculates since September 1 is one hundred and fifty-one; ten applicants were refused admission for inability to pass the entrance examination; and the total number of cadets now, present and absent, is one hundred and thirty-two.

AGRICULTURAL AND INDUSTRIAL SCHOOLS.

The report calls attention to the fact that the scrip issued by the General Government for the establishment of an agricultural college has been secured, and urges immediate action in this direction; and further hopes that the legislature may not adjourn without making provision for the establishment of industrial and evening schools.

PEABODY FUND.

The agent, Dr. Sears, in his sixth annual report, says: "Our mode of distribution in this State is the same as it was last year. We still have the valuable services of Hon. R. M. Lusher, as local agent, without salary. On his recommendation donations have been made to schools as follows: $7,550 distributed among twelve towns, in sums varying from $900 to $300; for 50 pupils in New Orleans normal school, $1,600; for model school attached to it, $300; for pupils in other normal schools, $300; in all, $9,750. Of this amount $750 belong to the appropriation made for last year."

PECULIAR CONDITION OF CERTAIN RURAL DISTRICTS.

In the parish of Livingston, in the first district, there are reported 18 male and 3 female teachers. This disparity arises from the wilderness nature of the country, a great portion being covered with dense undergrowth, through which run bayous, creeks, and swamps; in many instances teachers and pupils have to traverse several miles through marshes and brush to reach the school-house; the school-buildings are generally log-huts, with the rudest furniture and apparatus.

Within seventy-five miles of the Queen City of the South, you find a population chiefly of French extraction, mostly descendants from the exiles of Acadia, with an admixture of Spanish, Portuguese, and Italian elements. Their language is a corruption of French, hardly intelligible to an educated Frenchman, and their manner of living is that of a hundred years ago. If they build a house to-day, though in a land abounding in cypress lumber, it is invariably the "adobe" cabin, mud walls thatched with palmetto leaves.

The district inspector states that he visited a community of over 1,200 inhabitants, where a Christian minister had never been, except a Catholic priest, and he but once a year. He further asserts: "I do not believe six persons could be found (excepting three persons who had been sent in charge of schools) who could read or write in any language, or that a particle of printed matter, even a Bible, could be found in one of their houses, except the school-books that had been recently sent for the use of pupils. Bear in mind that this people understand not a word of English, and that their children never hear it save from their teachers, and it will be understood how the colored children have so much the advantage over them."

MIXED SCHOOLS.

Mixed schools exist in every division in the State. In the first division 1,510 white children attend public schools to 4,690 colored. This disproportion arises from the fact that the poor whites will not apply for the admission of their children into schools attended by colored children; the few white children found in the schools of this division are universally the children of intelligent parents. Among the Acadians, in the second division, very few colored people reside, and these, with generous toleration, prefer to send a great distance, often from four to six miles, rather than apply where they know they would be unwelcome. The schools, then, in these localities become by the nature of things white schools.

In the third division the subject of mixed schools has caused no embarrassment whatever. The majority of the schools are separate, from the choice of parents of all classes; but in some localities children of both races are found in the same school.

In the city of New Orleans, as a general thing, pupils have preferred schools where their associates are of their own race; but in the instances where the schools have become to some extent mixed schools, no difficulty has been experienced.

In the Bienville school, under the passionate impulse of the moment, the whole number of white children was withdrawn upon the admission of colored pupils. All, however, subsequently returned, and the school proceeded harmoniously.

NEW ORLEANS.

THE BOARD OF EDUCATION.

Under the amended law the power of appointing school directors for the city of New Orleans was vested in the State board of education. It was hoped that the amended law, by bringing the board into harmony with the State authorities, would enable those who succeeded to the control of the schools to remedy the evils resulting from the neglect of the former authorities, and end the dissensions with regard to the control of the schools which had existed for the two years previous.

The work of the board was distributed among the following standing committees: On teachers, on school-houses, on finance, on high and normal schools, on text-books and apparatus, on library, on rules and regulations.

An estimate of the amount of money needed for the current year was made, as follows: For pay-roll of teachers proper and for ordinary expenses, $360,000; for school-books and stationery, $25,000; for buildings and necessary repairs, $95,000; total, $480,000. Of this, the State fund was expected to furnish $130,000, leaving $350,000 to be provided by the city. This estimate was reported to the city administrators, who, in pursuance of law, were directed to have a tax for the above-named sum levied and collected. Legal difficulties, which appeared to them insurmountable, led to a refusal on the part of the administrators; which refusal, being subsequently sustained by a decision of the supreme court, cut off from the board this legitimate source of revenue. More than half the State apportionment was already due for services rendered prior to the creation of the present board, so that a balance of less than $70,000 was the only reliance of the board in the face of expenses estimated at $480,000. At this juncture the State superintendent of education generously advanced the probable amount of the next apportionment of the State school-fund, thus placing $30,000 in the hands of the board for immediate use.

SCHOOL-BUILDINGS.

There are seventy-four buildings occupied by the public schools, of which thirty-six are the property of the city, and are estimated at a total value of $653,000. Some of the leased buildings are really unfit for school purposes, and both economy and an intelligent regard for the prosperity of the public schools demand the erection of suitable school-buildings. The estimated value of the school-furniture belonging to the city is $42,000, and of school apparatus $8,000, which, added to the value of the buildings owned, gives a total of $703,000 invested in school property. The schools are still very deficient in the apparatus necessary to the highest success of the teacher.

MODEL SCHOOLS.

In response to a request from the State superintendent of education, two of the public-school buildings of the city, viz, the Washington girls' school and the Fisk boys' school, were placed at his disposal for the purpose of establishing model schools.

NORMAL SCHOOL AND COLLEGE.

In conclusion, the report earnestly urges the establishing, in the city, of a normal school for the training of teachers, and a free college in which graduates from the high schools may complete their education.

LOUISIANA STATE UNIVERSITY.

This institution is very unfortunate in its pecuniary embarrassments and incomplete means of instruction. "The financial condition," says the superintendent, "is as bad as it can be when fifty cents must do the work of a dollar." Notwithstanding these drawbacks, the past year has been in many respects a successful one. The standard of scholarship, both for admission and graduation, has been raised; important additions have been made to the apparatus, cabinets, and library, and the number of graduates was unusually large.

The course of study embraces a preparatory and an academic department, a special school of civil engineering, and a commercial course. The academic department comprises a literary, scientific, and optional course. The preparatory department is designed to be temporary, and will be dispensed with as soon as the public and private schools throughout the State are sufficiently organized to become constant feeders to the university. The discipline is military.

By act of the legislature, the professors of engineering, chemistry, mineralogy, geology, and botany are required to make, jointly, a topographical, geological, and botanical survey of Louisiana. To this duty they devote not less than four months of every

year. The third annual report of these professors has been published, and has attracted considerable attention in the scientific world. The survey is now nearly completed.

Until the rebuilding of the college edifice near Alexandria, (destroyed by fire October, 1869,) the institution is temporarily located at Baton Rouge. Of the 175 cadets, 131 are State beneficiaries.

POLYTECHNIC AND INDUSTRIAL INSTITUTE OF LOUISIANA.

This movement received its initial impulse in the New Orleans Academy of Sciences, on the 12th day of February, 1872. Resolutions were unanimously adopted recognizing the necessity for technical training in the physical sciences, and instruction in the mechanical arts, recommending the founding of a polytechnic school in the city of New Orleans, and inviting the New Orleans Mechanics' Society to co-operate with the academy for the promotion of the enterprise.

A convention was subsequently held at which about fifty delegates, representing the diversified interests of the State, were present. A committee appointed to prepare a plan for a polytechnic and industrial school submitted their report in the ensuing May. A charter has been obtained, and steps will soon be taken by the board of managers for carrying out the plan adopted.

SAINT CHARLES COLLEGE.

This institution, incorporated in 1852, is conducted by the members of the Society of Jesus. The plan of instruction is the same as that of first-class academies, with the addition of a commercial course.

NEW ORLEANS DENTAL COLLEGE.

This college announces its sixth regular course of lectures. The projectors sought in its establishment to meet the great necessity, made more urgent by the impoverishing result of the late war, for such an educational institution in the South; and its success has fully answered their expectations. The aim of the college is to give the highest order of instruction, not only in the dental art, but in its collateral sciences. The curriculum is so arranged as to compel each student to spend a large proportion of every day in actual practice in the infirmary and laboratory. Twenty-two lectures are delivered each week, occupying about an average of four hours a day.

REV. CHARLES S. DOD—OBITUARY.

Rev. Charles S. Dod, born in Elizabeth, New Jersey, 1814, graduated at Princeton, 1833, died in the Presbytery of New Orleans, November 23, 1872. His father, Daniel Dod, was a master-builder of steam-engines, and, being distinguished for mathematical learning, was offered, but declined, a professorship in Rutgers College in 1811. In 1834 his son became classical tutor in the University of Georgia, and afterward principal of the Darien (Georgia) Male Academy; from 1838 to 1840, professor of mathematics in Jefferson College, Cannonsburgh, Pennsylvania; 1840 to 1844, principal again of Darien Academy, when he entered the ministry, in which he labored at periods as pastor of Presbyterian churches at Augusta, Georgia; Holly Springs, Mississippi; Plaquemine, Louisiana; chaplain in the confederate army, with superintendence of the Macon, Georgia, hospital, and finally as an evangelist in the Teche (Louisiana) country. Between these intervals he was principal of the Roswell High School, Cobb County, Georgia, 1847 to 1849; president West Tennessee College, 1854 to 1861; principal of Plaquemine Presbyterian Seminary, 1869 to summer of 1872. The continual demand for his services as an educator is the best testimony to his eminent worth and usefulness in that field.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Louisiana was the twenty-first State in population, having 726,915 inhabitants within an area of 41,346 square miles, an average of 17.58 persons to the square mile. This population consisted of 362,065 whites, 364,210 colored, 71 Chinese, and 569 Indians. Of these 665,008 were natives of the United States and 61,827 were foreign-born. Of the native residents of the State 237,453 whites, 263,956 colored, 453 Indians, and 2 Chinese were born within its borders; of the foreign residents 18,933 were born in Germany, 2,811 in England, and 17,068 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 51,259 persons attended school, and of these 571 were foreign-born. Of the 40,183 white scholars, 20,542 were males and 19,641 females. Of the 11,076 colored scholars, 5,467 were males and 5,609 females.

Illiteracy.—The number of inhabitants of all races, 10 years old and over, unable to write, was 276,158, of whom 7,285 were foreign-born.

Age, sex, and race of illiterates.—Of the 50,749 white illiterates, 13,525 were from 10 to 15 years of age, and of these 7,130 were males and 6,395 females; 9,636 were from 15 to 21 years old, of whom 4,710 were males and 4,926 females; 27,588 were 21 years old and over, of whom 12,048 were males and 15,540 females. Of the 224,993 colored illiterates 33,353 were from 10 to 15 years old, of whom 16,978 were males and 16,375 females; 35,591 were from 15 to 21 years old, of whom 15,873 were males and 19,718 females; 156,049 were 21 years old and over, of whom 76,612 were males and 79,437 females.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 592, having 1,902 teachers, of whom 926 were males and 976 females, to educate their 60,171 pupils, of whom 29,854 were males and 30,317 females.

Amount and source of educational income.—The total income of all the educational institutions was $1,199,684, of which $34,625 were derived from endowment, $564,988 from taxation and public funds, and $600,071 from tuition and other sources.

Public schools.—The 178 public schools, with their 459 teachers, of whom 122 were males and 337 females, were attended by 25,832 pupils, of whom 12,095 were males and 13,737 females. To educate these they possessed a total income of $473,707, of which $445,683 were derived from taxation and public funds and $28,024 from tuition and other sources.

Colleges.—The 8 colleges, with their 100 teachers, 84 male and 16 female, were attended by 1,567 students, of whom 1,139 were males and 428 females. To educate these they possessed a total income of $150,194, of which $31,750 were derived from endowment, $82,300 from taxation and public funds, and $36,144 from tuition and other sources.

Academies.—The 28 academies, with 276 teachers, 33 male and 243 female, had an attendance of 2,690 pupils, 852 male and 1,838 female, for the education of whom they possessed a total income of $198,525, of which $2,525 were derived from endowment, $2,300 from taxation and public funds, and $193,700 from tuition and other sources.

Private schools.—The 293 day and boarding schools had 548 teachers, of whom 297 were males and 251 females. They were attended by 16,332 pupils, 7,324 of whom were males and 9,008 females. These schools possessed a total income of $193,692, of which $350 were derived from endowment, $2,905 from taxation and public funds, and $190,437 from tuition and other sources.

Libraries.—There were reported in the State 480 public libraries, containing 263,266 volumes; also 1,852 private libraries, having 584,140 volumes—making a total of 2,332 libraries, containing 847,406 volumes.

The press.—The 92 periodicals had an aggregate circulation of 84,165 copies, with an aggregate annual issue of 13,755,690.

Churches.—Of the 638 church organizations, 599 had edifices, with 213,955 sittings, and the church property was valued at $4,048,525.

Pauperism.—Five hundred and seven paupers were reported, of whom 279 were native whites, 130 were native colored, and 98 were foreigners.

Crime.—Of 845 persons imprisoned June 1, 1870, 460 were native whites, 358 native colored, and 27 foreigners; 1,559 persons were convicted during the year.

Age and sex of population.—Of the total population, 226,114 persons were from 5 to 18 years old—112,520 males, 113,594 females; 526,392 were 10 years old and upward, and of these 261,170 were males and 265,222 were females.

Occupations.—Two hundred and fifty-six thousand four hundred and fifty-two persons of these ages were engaged in various occupations, of whom 198,168 were males and 58,284 females; 141,467 were engaged in agricultural pursuits, of whom 114,530 were males and 26,937 females; 65,347 in personal and professional services, of whom 36,883 were males and 28,464 females; 23,831 in trade and transportation, of whom 23,496 were males and 335 females; 25,807 in manufactures and mechanical and mining industries, of whom 23,259 were males and 2,548 females.

Age and sex of working population.—Of these 256,452 employed persons, 18,632 were from 10 to 15 years old, of whom 11,600 were males and 7,032 females; 222,890 were from 16 to 59 years old, of whom 174,150 were males and 48,740 females; 14,930 persons were 60 years old and over, of whom 12,418 were males and 2,512 females.

MAINE.

[From report of Warren Johnson, State superintendent of instruction, for the scholastic year ended October 31, 1871.]

FINANCIAL STATEMENT.

Raised by direct taxation	$743,326
New school-houses	117,364
Private tuition in and out of the State	60,326
To prolong schools	12,966
To pay superintending school committees	23,623
Appropriation for county supervision	16,000
Appropriation for teachers' institutes	8,000
Appropriation for normal schools	25,000
Expense of annual report, (7,000 copies)	3,500
Superintendent's salary, clerk, traveling expenses, &c	3,800
Interest of permanent school fund	15,444
Derived from local funds	14,639
Aggregate expended for educational purposes	1,043,988

Total valuation of State property	$224,585,325.
Rate of aggregate school expenditure to valuation	43.5 mills.
Rate of direct taxation	3.3 mills
Excess of taxation above amount required by law	$132,213 00
Amount raised per scholar by direct taxation	3 29
Expenditure for each census scholar	4 62
Expenditure for each registered scholar	8 89
Expenditure for each average attendance	11 07

Maine takes high rank among those States that tax themselves lowest in aid of public instruction. If a saving could be effected in other departments, and the same diverted into the common-school channel, a vast change for the better would ensue.

ATTENDANCE.

Whole number of scholars between 4 and 21 years of age	225,508
Number registered in summer schools	120,295
Average attendance	193,066
Number registered in winter schools	134,065
Average attendance	07,717
Per cent. of average attendance to whole number	50
Per cent. of average attendance to scholars registered	79
Per cent. of average attendance to summer schools registered	78
Per cent. of average attendance to winter schools registered	80
Probable number of truants or absentees	18,989

Average length of summer schools, 5½ days per week, 9 weeks, 3 days.
Average length of winter schools, 5½ days per week, 10 weeks.
Average length of schools for the year, 19 weeks, 3 days.

DISTRICTS AND SCHOOL-HOUSES.

Number of districts	4,003
Number of parts of districts	350
Number of districts with graded schools	420
Number of school-houses	3,917
Number of school-houses in good condition	2,234
Number of school-houses built last year	119
Cost of the same	$117,364
Estimated value of all school-property	$2,488,560

TEACHERS AND TEACHERS' PAY.

Number of male teachers employed in summer	119
Number of male teachers employed in winter	1,801
Number of female teachers employed in summer	3,790

Number of female teachers employed in winter	2,180
Number of teachers graduates of normal schools	264
Average pay of male teachers per month, excluding board	$32 44
Average pay of female teachers per week, excluding board	3 43
Average cost of teachers' board per week	2 30

MODIFICATION IN SCHOOL LAW.

Since January, 1871, the following acts have been passed, modifying the educational legislation of previous years: Any city or town may annually make provision for giving free instruction in industrial or mechanical drawing, to persons over fifteen years of age, either in day or evening schools. Towns may empower the school district agents to employ the teachers, instead of the superintending school committee. A tax of one mill per dollar is to be annually assessed upon all property in the State according to valuation, to be known as the mill tax for the support of common schools. The first distribution of this fund shall be made January 1, 1873. All of this fund not distributed or expended during the financial year shall, at the close of such year, be added to the permanent school fund. The amount to be raised by towns and plantations for the support of schools is changed from one dollar to eighty cents for each inhabitant, according to the State census. Savings-banks shall be required to pay to the State one-quarter of one per cent. on all deposits, to be appropriated for the use of common schools. The act creating the office of county supervisor of schools has been repealed.

SCHOOL REVENUE.

The "school mill tax" will amount to $224,530. This will be disbursed to the several towns according to the number of scholars, in the same manner as the interest of the permanent school fund. Apart from the school moneys raised by the town, the above sources of revenue will give about $1.60 for each person in the State between the ages of 4 and 21. In her school expenditure *per capita* of school population, Maine ranks the lowest of the Northern States. In this respect she holds the twenty-first position, while in wealth *per capita* of total population her rank is the thirteenth. The gross expenditure is now about $1,000,000. It should be increased to $1,500,000 at least.

Although not yet quite up to the full measure of duty and ability, the long stride made by the last legislature toward an even rank with sister communities is an encouraging fact to the friends of education. The school revenue has been in a measure equalized, and increased more than one-third. In 1871, the school income required by law was about $625,000. In 1872, this sum has been increased by legislation to $840,000. This affords an average of $3.75 (nearly) to each person in the State between 4 and 21 years.

SCHOOL CENSUS AND ATTENDANCE.

During the past ten years there appears to have been a gradual decrease in the number of youth between the ages of 4 and 21. The school population of 1861 was 243,171. For 1871 it is 225,508. The school age begins too early and ends too late, and this presents our average attendance in an unfavorable and unjust light. The profitable limit of school age would be between six and eighteen, inclusive. If this term were adopted by a majority of the States, the comparative school statistics would present a nearer approximation to the truth than they do at present.

The total school attendance has been less this year than last, while the average attendance has nearly equaled that of last year. The average city attendance, .42, is much below the average in the State, .50. While we can not expect to gather into the public school over 65 or 70 per cent. of the total number of youth, with the school age as at present established, we ought to secure a better attendance than at present, both in the total registered and in constant presence. A loss of 15 per cent. in attendance is equivalent to a waste of $150,000 annually. The almost 20,000 truants reported should be brought into the school-room by the compelling power of the State. School committees throughout the State are almost unanimous in urging the importance of some legislative enactment to secure the education of all the youth in our State.

LENGTH OF SCHOOL TERMS.

The summer schools for 1871 were the same as 1870; the winter schools one day shorter. With two exceptions (New Hampshire and Nebraska) Maine has the shortest schools of any of the Northern States. The school terms are of unequal length in different communities, the cities and villages enjoying much larger school privileges than the rural districts and remote towns. This can not be perfectly balanced, but a grand approximation to it may be made by the abolition of the district system, by an equable school revenue, and by the free high-school system.

GRADED SCHOOLS.

The number of graded schools reported in 1870 was 230. The number reported this year is 420, showing a large advance in the efforts of committees and supervisors to evolve order from the chaos of the "mixed schools" and to classify school-work. The general result has been far above the possibilities of the old ungraded schools. The principal weak point now is the course of study. This problem is, however, receiving so much attention that we may hope soon to have a fixed order of instruction from the primary upward. The graded system exhibits better results where the single superintendent holds positive sway than where the various schools are intrusted to the divided rule of sub-committees.

Next to a school system and to graded schools comes system in the school. The reports of county supervisors show a promising advance in this respect. The returns from some teachers, however, still show an excessive number of daily recitations, running in some instances as high as thirty-five. This, while occasionally due to a lack of executive ability on the part of the teacher, is more largely owing to the variety of text-books in use.

TEXT-BOOKS.

Our people are greatly burdened with the variety of text-books and the frequent changes made, and many, in consequence, are entirely deprived of school privileges. The school-officers very generally suggest uniformity of text-books by legislative enactment, and in this the superintendent fully concurs.

DRAWING IN SCHOOL.

The privilege granted towns to provide for industrial drawing is an omen of good promise. It behooves school officers to anticipate this branch of the work lying back of all our mechanical industries, by introducing elementary and free-hand drawing into all our primary and mixed schools, both in the country and in villages. The importance of this branch can not be too strongly urged.

TEACHERS.

The comparative ratio of male to female teachers remains nearly the same as last year. The number of male teachers employed in summer-schools is larger than last year, due to the fact that the principalships of high and grammar schools are sought for by young men who propose to continue in the business of teaching.

The number of normal-school graduates reported as employed last year in our schools was 193; this year the number is 264. In 1869 the number was only 136. Supervisors and committees speak in the highest terms of the labors of our normal graduates. The salaries of teachers have steadily increased in the State the last three years, particularly in the high-school division of the graded schools and in the superior schools of the larger villages. The law of school economics is simply this: As is the teacher so will the school be; as the wages, so the teacher; as the community, so the wages. In the light of this principle the advance—small but steady—in teachers' wages is a significant fact and an encouraging promise, though Maine still pays the lowest wages for teachers' services of any State. Our teachers, under the stimulating and suggestive influences of the normal school and the institute, are making rapid advances in the art and science of teaching. The tendency in this direction augurs well for the future of teaching as a profession, and for the high rank which Maine teachers will undoubtedly take.

TEACHERS' INSTITUTES.

The same division of institute work has been made this year as last, namely, town institutes of one and two days' duration, and county institutes of five days each. The town institutes have been of great value, reaching not only teachers but parents and scholars. More than forty county institutes have been held during the year, with an attendance of nearly 4,000 teachers. These institutes have been conducted entirely by our county supervisors. The county institute work commenced August 1, and continued without interruption until November 24. Each week of this period, one to three institutes were held in various parts of the State. The written examination on the closing day of the institute has constituted one of the chief features in the institute work of the past two years. There can be no doubt about the value of this examination and the accompanying issue of graded certificates. More than 1,500 graded certificates have been issued during the year. School agents and committees are now beginning to ask teachers to exhibit their record at the institute examination.

The amount appropriated for institutes by the last legislature was $8,000. Less than half this sum has been expended. A re-appropriation of the unexpended sum is recommended.

EDUCATIONAL ASSOCIATION.

The State teachers' association held its annual meeting this year in Portland, in the month of November. Over 200 teachers were present, representing nearly every part of the State. The session was one of the most interesting ever held in the State. It was voted to hold the next session in July or August, in the eastern part of the State. The association has no funds. An appropriation of $500 for this purpose is recommended.

NEW SCHOOL-HOUSES.

One hundred and nineteen new school-houses are reported as having been built last year, at an average cost of about $1,000 each. The city of Auburn erected eight for rural districts and primary schools, at a cost of $6,000. Gardiner completed a very neat and convenient high-school edifice, costing $20,000. Skowhegan, consolidating four village districts into one, still further harmonized school interests by erecting on a lot donated for the purpose an elegant high-school building, at a cost of about $17,500.

SCHOOL DISTRICTS.

The number of districts and parts of districts remains the same as last year. The better judgment of the "reasoning" portion of our people is decidedly favorable to the reduction of the present multiplicity of school districts, and even to the abolition of the system. The excitement kindled a year ago, by an apprehension of loss of "ancient rights" in the restriction of school-district privileges, has largely given place to consideration of the superior value of the town plan. Lewiston, Auburn, Lisbon, Orono, and a few other towns, have abolished the district system and adopted the municipal form, with the happiest results, and with especial advantage to the outlying rural districts. Such has been the consequence wherever the change has been made—better school-houses, superior teaching, longer schools.

DISTRICT AGENTS.

The district agents are generally co-operating with committees and supervisors in the selection of teachers, in advancing the salaries of the best instructors, in endeavors to secure good rather than long schools, and in promoting the general school interests. The apprehension of "loss of rights," the dread of "autocracy," &c., have yielded to the fact that in this country the people are always masters of the position. It is to be regretted that agents can not all agree that teachers shall be examined by proper authorities prior to an engagement for school service.

TOWN SUPERVISION.

The town committees and supervisors have generally discharged their duties the past year with more discrimination than heretofore. The plan of fixing responsibility upon one set of officials recommends itself to the common sense of educators and to the approbation of the public. There is a tendency to simplify this responsibility still further, by intrusting the inspectory duties entirely to one member of the board, the committee holding within itself the full authority delegated by the people. This tends to unity of purpose and action, and to harmonize results.

CITY SUPERVISION.

In Maine, city supervision has not yet received the attention, consideration, or remuneration that it deserves. Of the fourteen cities, Calais, Bangor, and Lewiston are the only ones with recognized city superintendents. Calais pays a salary of $500; Bangor $1,000; and Lewiston $2,000, and $150 for horse and carriage. In a few cities one of the committee is empowered to act as superintendent, but with a very small salary. In general it may be said that the inspection of schools in the cities of Maine lacks thoroughness, unity of plan, definite purpose, and comprehensive grasp. These deficiencies are the necessary attendants of poorly-paid services.

COUNTY SUPERVISION.

Among the benefits that have resulted from this agency, new in our State, but well established in other States, are the following: First. An increased interest among the people in regard to public education. Second. Systematic efforts on the part of educators and school-officers. Third. An improvement in the scholarship of teachers and in the quality of their instruction. The institute examinations of the past two years present an advance in scholarship ranging from 10 to 25 per cent. Fourth. More intelligent supervision on the part of town committees. Fifth. A quick appreciation and promotion

of those who are likely to prove our best teachers. Sixth. Increasing indirectly the average attendance of scholars. Three years ago it was 42 per cent. of the census number; the past year it was 50 per cent. Seventh. Raising the compensation of teachers. Eighth. Furnishing the State with a number of competent institute instructors. Three years ago there was not a man in the State who had sufficient experience and confidence to take the conductorship and instruction of a five days' institute. During the past year the institutes have been managed chiefly by the county supervisors. Ninth. The whole board of supervisors, from their close contact with the schools, constitute a practical and efficient board of education to confer with the legislative "committee on education," to suggest modifications of the school-laws, and to aid in the understanding of the same by the people, and in their acceptance. Tenth. In elevating and sustaining public sentiment, in a higher educational tone, and, in general, quickening the whole body-politic to the mighty necessity of universal intelligence in a republican form of government. The repeal of the act by which county supervision was established is greatly to be regretted. The results desired and anticipated from this agency were in a fair way to be reached; were already largely attained, and would have been more widely appreciated if the agency had been longer continued with such modifications as time and experience might dictate. The annual cost of county supervision was $16,000. This was assessed upon the entire valuation of the State—$225,000,000. If but a tithe of the benefits claimed above as accruing from county supervision was realized, the investment was richly remunerative. It is to be hoped that this agency will be revived in some form acceptable both to educators and to the community.

FREE HIGH SCHOOLS.

In the report of last year the fact was presented that the academy system in this State, as in others, was in its decadence; that towns were asking for aid to establish high schools in place of academies; and that it was desirable to meet these applications on the basis of some general rule or principle. The plan then recommended has been presented to a number of towns during the past year, and it seems to be generally acceptable. This affords superior education at the expense of the town and of the State.

ACADEMIES.

In accordance with act of legislature (1871) inquiries have been addressed from the superintendent's office to the several chartered literary institutions in the State, in order to ascertain their present condition and prospects for educational work, and consequent claims on the State for substantial aid. Returns have been received from 37 institutions. The total number of such institutions is 67. An examination of these returns discloses the fact that, while a few of the highest seminaries, fostered by denominational sympathy and aid, have developed to a vigorous and healthy existence, the great majority are in a feeble and precarious condition. Their resources are insufficient for the support of the schools, and their constant application to the State legislature for aid is a confession that they are unable to stand alone. The discontinuance of any further appropriation for these institutions is advised, and it is recommended that the academy system be absorbed or displaced by a general system of free town high schools.

MADAWASKA SCHOOLS.

The moneys appropriated to this territory seem to have been properly distributed by the agent, the towns and plantations have generally complied with the terms required, the number of schools has been more than doubled, two flourishing high schools for the education of teachers and for advanced pupils have been well sustained, while the people are not only grateful for the gratuities of the State, but express themselves as determined to do all in their power to reap the highest educational advantage from them. An appropriation of $1,300 is recommended for this district; $1,000 as a proper appropriation, and $300 to reimburse the people for an equal sum of which they were unjustly deprived last year.

PORTLAND.

CONDITION OF SCHOOLS.

The school committee of this city announce that the condition of the public schools is, in the main, prosperous, and not inferior to that of any past period of their history. They acknowledge the earnest efforts which many of the teachers have made to elevate the standard of scholarship, and to render their instruction more efficient and practical. The teachers, as a body, take high rank in intelligence and culture, and many of them manifest an enthusiasm for their work which is an earnest of future success.

METHODS OF PRIMARY TEACHING.

The primary schools have always been the refuge of incompetent teachers. In no department of public instruction has there been such an advance in the theory and practice of teaching within the last twenty years as in the lower primary grades.

Object-teaching has been introduced into the primary departments. Reading is taught by the word-method, resulting, according to the principal of what is considered the best school, in a gain in time of at least 40 per cent. Spelling is taught by the sounds instead of the names of the letters. Oral instruction is followed to a great extent, and text-books are postponed till a later period. All these improvements in methods of teaching mark a new era in popular education, and demand a higher grade of talent in primary-school teachers.

SCHOOL ACCOMMODATIONS.

Prominent among the questions deserving attention is the necessity of improved school accommodations. The condition of many of the school-houses is unfavorable to the health of pupils, and their internal arrangement is ill-adapted to the wants of the schools. The means of heating and ventilation are radically defective, and some remedy for these and other evils is imperatively demanded. A new school-house is also needed in the upper portion of the city.

SUPERVISION.

A great want of the schools is more constant and intelligent supervision, which would be best secured by the employment of a competent city superintendent; but as this meets with disapprobation, an approximate result might be attained by uniting several schools in one building, under the control of a head-master and as many assistant teachers as are necessary.

POPULARITY OF PUBLIC SCHOOLS.

The liberal policy pursued toward the public schools of the city has been justified by the high esteem in which they are held by all classes of citizens. They have not been regarded as schools for the poor alone, but as schools for the education of all the youth, which should be maintained at any sacrifice. It is believed that whatever money is needed for their proper sustenance will be freely given.

BRANCHES OF STUDY.

Drawing has been taught the past year in the primary and grammar schools by the regular teachers. The progress thus far made is encouraging, and the committee have given it a place among the required school exercises.

A special writing-master is employed to give lessons in each grade of schools twice a week. Marked improvement has attended such instruction.

Vocal music has been neglected, but the employment of a competent teacher in this branch is recommended.

TRUANCY.

Among the symptoms of prosperity is the marked decrease of truancy within the last two years, which is mainly due to the efficiency of the truant officer, whose judicious course has yielded the most gratifying results.

THE HIGH SCHOOL.

The per cent. of graduates of the high school is very large, averaging more than 43 per cent. of those who have entered for the last four years. The course of study is practical and liberal, making ample provision for those who are preparing for college courses, and yet not neglecting to furnish a thorough education to those who will enter directly upon active duty. A special teacher of recognized ability gives lessons in French four times a week to the first class. It is hoped that this will pave the way for special instruction in Spanish and German at no distant day.

NORMAL CLASS TRAINING.

Public opinion demands that the graduates of the high school should receive employment in the schools, and the interests of the latter require that proper facilities should be afforded these graduates to prepare themselves for their duties. The estab-

lishment of a training class for teachers should no longer be delayed. The plan suggested is that a graduate of a normal school, who is acquainted with the most approved methods of primary education and school-work, should be employed at a salary of $800 to $1,000. The first year she shall devote two-thirds of her time to work in the different primary schools, with the regular teacher and pupils, taking charge of the classes so far as necessary to illustrate her methods. She would also meet once or twice a week a class of such graduates of the high school as contemplate teaching, with any of the regular teachers who might attend, for purposes of practical instruction in school work. Members of the class should have the privilege of accompanying her to the public schools to observe her methods, and teach classes under her direction. They would also fill vacancies in the schools, to test their capacity. It is believed that this plan, with the details properly arranged, would secure to graduates the advantages of a normal school.

NORMAL SCHOOLS.

Maine has two normal schools; one at Farmington, the other at Castine. In these the State has invested $14,325 only. In Castine, after June, 1872, the normal school will have no shelter unless the town offers its high-school building. The legislature of 1870 did indeed appropriate $15,000 "for the purchase or erection of a suitable school building for the Eastern Normal School," but not a dollar has yet been expended toward either purchase or erection. The school-grounds at Farmington never have been inclosed. No apparatus of any kind has ever been placed in either school by the State. The teachers receive moderate salaries, and often the number is insufficient to perform the necessary duties. At least $50,000 are needed for each school.

FARMINGTON NORMAL SCHOOL.

At the close of the year a class of 19 was graduated, all of whom, with two exceptions, have taught or are now teaching in the State. The model school, as now organized, includes within its range the work of the first three years of school-life. The organization of such a model school as is found in connection with the normal schools of the West would add greatly to the efficiency of our work. We are obliged at present to restrict the privileges of the model school mainly to the graduating class. And yet of the 700 pupils who have been connected with the school, not more than one in six has graduated.

The demand upon us for teachers is far in advance of our ability to supply. The result of the most careful inquiry shows that in the history of our graduates success is the rule, failure the rare exception. One superintendent writes: "Your teachers have revolutionized our primary schools." The Farmington Normal School loses nothing when judged by the work of its pupils.

EASTERN STATE NORMAL SCHOOL.

The number of different pupils who have attended the school during the four years that it has been in operation is 400, an average of 100 a year. Three classes have been graduated, numbering in all 54 members. Nearly all belonging to these classes have since taught, and, with but few exceptions, their success has been excellent. The attendance during the past year was 324. From the proceeds of a course of lyceum lectures given last winter, fifty dollars' worth of books have been added to the library. The past year has been one of healthy growth and prosperity. During the spring term our accommodations were taxed to the utmost to make room for the large number of pupils. As soon as the new building is completed, it is proposed to have a model school, though the excellent schools of Castine have answered, to some extent, the need. The governor and council have manifested a deep interest in the success of this school, and their presence, support, and advice have added greatly to its interest and prosperity.

COLBY UNIVERSITY.

At the close of the anniversary exercises of the university, the president, Rev. Dr. Champlin, tendered his resignation, to take effect in six months. Dr. Champlin has been connected with the university 31 years; 16 years as professor and 15 years as president. In his closing address he said that when he became president, 15 years ago, there were $10,000 or $15,000 in the treasury; now there is a permanent fund of over $200,000, besides property given by the State, valued at $50,000. Fifteen years ago, the buildings were worth about $17,000; to-day they are valued at over $100,000, and they are all paid for.

The university announces its intention of opening all its courses of study to ladies on the same terms as to young men.

MAINE STATE COLLEGE OF AGRICULTURE AND THE MECHANIC ARTS.

The college has a pleasant and healthful location, intermediate between the villages of Orono and Upper Stillwater, and about nine miles from the city of Bangor. The college farm contains 370 acres of land, of great diversity of soil, and therefore well adapted for the experimental purposes of the institution. White Hall, the building first erected, contains 18 rooms, and the new hall 48. The boarding-house connected with the college is now open to students. In the new building desirable accommodations are furnished for 125 students.

Four full courses of study are provided, viz: agriculture, civil engineering, mechanical engineering, and an elective course. The studies of the several courses are essentially the same for the first two years. Thorough instruction is given in military science. Students are required to labor a certain portion of each day, not exceeding three hours, for five days in the week. Compensation is at the rate of 30 cents for three hours' labor. The collection of minerals has recently been greatly enriched by a donation from the Smithsonian Institution. Contributions to the library and cabinet are solicited.

BATES COLLEGE.

This college has been in existence nine years, and is named after Benjamin Edward Bates, esq., of Boston, Massachusetts. In 1870 a theological department was established. This is in charge of a special faculty appointed by the college corporation. There are ten State scholarships in the hands of the governor. In bestowing them preference will be given to the children of deceased Union soldiers.

Nine schools and academies in different States act as preparatory schools for this college. The principal of these, the Nichols Latin School, is located at Lewiston, in the immediate neighborhood of Bates College, and its students have the privilege of attending the lectures and other college exercises. Fourteen graduates of the Latin school have been admitted to the freshman class of the college.

THEOLOGICAL SEMINARY.

This is open to all denominations. Indigent students are aided to the extent of $100 a year. The number of alumni is 500.

WATERVILLE CLASSICAL INSTITUTE.

This institution is under the general direction of the trustees and faculty of Colby University. Its object is to furnish a college preparatory course, of great thoroughness and completeness, for young men, and a collegiate course of four years for young ladies. There is also an introductory course, preparatory for these courses. Ladies completing the course receive all the honors and degrees granted by female colleges.

STATE REFORM SCHOOL.

The eighteenth annual report states that the number of inmates is smaller than usual, the commitments for the year not having been sufficient to make good the places of those who have been discharged or allowed to go out on trial. The new commitments were 59, a falling off from the preceding year of 6, but quite up to the average of previous years. Nearly half of the whole number of commitments for the year were from Portland. There are reasons for believing that the statutory provision, requiring cities and towns, in certain specified cases, to contribute $1 per week toward the support of boys committed to the school, has had the effect of diminishing the number of commitments, especially from the country. Efforts to procure the discharge of boys drawing the weekly dollar are often made and persistently pressed, and the revenue from this source is annually diminishing. In the early days of the school there was no such provision, and its wisdom and propriety have always been doubted by the friends of reformatory institutions.

Much has been accomplished in the school during the year; the discipline in each department was unexceptionable, and a most excellent work has been done. No complaint of insubordination has been made against the boys from any quarter. The whole number of inmates during the year 1871 was 223, all of whom were under instruction in the schools. The number remaining December 1, 1871, was 134. Of the 59 committed during the year, 44 were natives of Maine. Average age on commitment, 13 to 14. Boys are now sentenced during the term of minority. The whole number received since the opening of the institution is 1,281.

The superintendent calls the attention of the trustees to the grade or family plan, which has been so successfully adopted in some of the reform schools in other States, and suggests its adoption in the Maine school.

MAINE EDUCATIONAL ASSOCIATION.

The sixth annual meeting of the Maine Educational Association was held at Bangor, October 22, 23, and 24; president, Thomas Tash, esq., superintendent of schools of Lewiston. The welcoming address was made by Mayor Wheelwright. Hon. Theo. S. Rand, chief superintendent of schools in New Brunswick, spoke on the "Systematic elevation of teaching;" Rev. Dr. Allen, president of the State college at Orono, on "Claims of industrial education," and Rev. H. F. Harrington, of New Bedford, Massachusetts, on "The principles which should inspire the teacher."

Mr. Rand advocated the application of thorough tests for ascertaining the qualifications of teachers; that sufficient salaries should be paid to induce those who are well qualified to make teaching a life-work; the furnishing of a fund by the State to provide for those worn out in the service.

Mr. Rand also gave an account of the method of supporting schools in New Brunswick. Money is raised from three sources—the province, the counties, and districts, the latter being for current expenses. That raised by counties is compulsory, and raised by an equal rate *per capita*. The school year begins the 1st of November, and is divided into two terms, suited to the climate of the province. There is a vacation during the first term of eight days in towns and ten in cities; the vacation of the second term is from three to five weeks. The board of education examine, license, and classify teachers. In each county there is a grammar or classical school, free to all who can pass the examination.

Rev. Samuel Dike, of Bath, read a paper on "Teaching illustrated by language or grammar," and Mrs. Abba G. Woolson, of Boston, read one on "Departmental instruction in graded schools," both of which were the subjects of discussion.

Discussions were had upon a variety of practical topics, in which there was a very lively interest manifested. The question of "Town system *vs.* district system," was opened by Mr. C. B. Stetson, of Lewiston, and participated in by Messrs. Dike, of Bath, Lambert, of Lewiston, Stone, of Portland, Woodbury, of Farmington, and others, almost all of whom advocated strongly the town system.

"The educational needs of Maine" was a subject that was also fully discussed by Mr. C. H. Ferrald, of Orono, Mr. Dingly, of Lewiston, Mr. Fletcher, of Castine, Mr. Barrell, of Lewiston, and others. "Free text-books for free schools" and the "Principles which should determine the character of text-books" were subjects that called out quite a discussion, and the results of the use of free text-books in Lewiston were stated by Mr. Tash, the president. Mr. Dike explained the method of their use, the books being in the care of the teachers, and the property of the town or city. The teacher is held responsible for their careful use, and he in turn holds the pupil responsible, and if a book is lost or destroyed he must replace it. The books throughout the schools where this practice has been adopted look far better than when furnished by the scholars.

"The demand for free high schools" was introduced by Mr. A. P. Stone, of the Portland high school, who said that the testimony of towns where such schools are maintained is invariably to the effect that the results are above those arising from academies and private schools.

Officers elected: President, C. B. Stetson, of Lewiston; vice-president, G. T. Fletcher, of Castine; secretary and treasurer, R. Woodbury, of Farmington. The attendance upon the meetings was good and the influence excellent, the exercises being interesting and profitable. The forenoon of Wednesday was spent in an excursion to the State college at Orono, on the invitation of President Allen.

REV. T. C. UPHAM.—OBITUARY.

Rev. Thomas Coggswell Upham, D. D., LL. D., forty-three years professor in Bowdoin College, died of paralysis in New York City, April 2, 1872. He was born in Deerfield, New Hampshire, January 20, 1799; a pupil of Jared Sparks; graduated at Dartmouth College in 1818; at theological seminary at Andover, Massachusetts, 1821; remained two years at the seminary as assistant instructor in sacred literature; ordained pastor Congregational church, Rochester, New Hampshire, 1823; elected professor of moral philosophy and metaphysics in Bowdoin College, 1824; resigned, 1867; resided at Kennebunkport, continuing the use of his pen; spent the last winter in New York City, publishing his last work, "Christ in the Soul;" stricken with paralysis March 10, after which his only distinct utterance was, "My soul is with God."

Dr. Upham published, in the course of his life, not less than twenty volumes; and from first to last wrote for the periodical press articles of great interest and value. His translation of John's Biblical Archæology was published in 1823; Mental Philosophy, 2 vols., 1831, and soon after a third volume on the will; then followed in rapid succession, Ratio Disciplinæ, Manual of Peace, and several works on religious experience and life.

Though, for reasons more satisfactory to himself than to others, he felt constrained

to avoid public speaking, he had great influence with individuals, great energy and persistence in private efforts for the welfare of the college, the church, and the community. In one crisis, if not more, the chartered rights of the college were secured by his sole intervention; and when in town-meeting the question was decided against liquor license, the result was spoken of as "Upham's victory."

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Maine was the twenty-third State in population, having 626,915 inhabitants within an area of 35,000 square miles—an average of 17.91 persons to the square mile. This population consisted of 624,809 white, 1,606 colored, 1 Chinese, and 499 Indians. Of these 578,034 were natives of the United States, and 48,881 foreign-born. Of the native residents of the State 549,650 whites, 951 colored, and 28 Indians were born within its borders; while of the foreign residents, 508 were born in Germany, 3,650 in England, and 15,745 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 155,140 persons attended school, and of these 3,034 were foreign-born. The white male scholars numbered 80,630, and the white female scholars 74,314—an aggregate of 154,944 whites. The colored pupils numbered 186, of whom 109 were males and 77 females. Ten Indian pupils were reported.

Illiteracy.—The number of inhabitants of all races, 10 years old and over, unable to write, was 19,052, of whom 11,066 were foreign-born.

Age, sex, and race of illiterates.—Of the 18,874 white illiterates, 3,150 were from 10 to 15 years of age, and of these 1,782 were males and 1,368 females; 2,433 were from 15 to 21 years old, of whom 1,247 were males and 1,186 females; 13,291 were 21 years old and over, of whom 6,516 were males and 6,775 females. Of the 173 colored illiterates, 16 were from 10 to 15 years old, of whom 13 were males and 3 females; 31 were from 15 to 21 years old, of whom 17 were males and 14 females; 126 were 21 years old and over, of whom 69 were males and 57 females. Two male and 3 female Indians were reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 4,723, having 6,986 teachers, of whom 2,430 were males and 4,556 females, to educate their 162,636 pupils, of whom 77,992 were males and 84,644 females.

Amount and source of educational income.—The total income of all the educational institutions was $1,106,203, of which $98,626 were derived from endowment, $841,524 from taxation and public funds, and $166,053 from tuition and other sources.

Public schools.—The 4,565 public schools, with their 6,625 teachers, of whom 2,261 were males and 4,364 females, were attended by 152,765 pupils, of whom 73,393 were males and 79,372 females. To educate these they possessed a total income of $843,435, of which $4,116 were derived from endowment, $809,941 from taxation and public funds, and $29,378 from tuition and other sources.

Colleges.—The 4 colleges, with their 27 teachers, (26 male and 1 female,) were attended by 296 students, of whom 295 were males and 1 female. To educate these they possessed a total income of $58,865, of which $23,226 were derived from endowment, $24,000 from taxation and public funds, and $11,639 from tuition and other sources.

Academies.—The 44 academies, with their 158 teachers, (76 male and 82 female,) had an attendance of 4,621 pupils, 2,445 males and 2,176 females, for the education of whom they possessed a total income of $89,659, of which $41,784 were derived from endowment, $7,033 from taxation and public funds, and $40,842 from tuition and other sources.

Private schools.—The 87 day and boarding schools had 117 teachers, of whom 34 were males and 83 females. They were attended by 3,245 pupils, 1,310 of whom were males and 1,935 females. These schools possessed an income of $35,594, derived from tuition and other sources.

Libraries.—There were reported 1,462 public libraries, containing 533,547 volumes; also 1,872 private libraries, having 450,963 volumes—a total of 3,334 libraries, containing 984,510 volumes.

The press.—The 65 periodicals issued had an aggregate circulation of 170,690 copies, with an annual aggregate issue of 9,867,680.

Churches.—Of the 1,328 church organizations, 1,104 had edifices, with 376,738 sittings, and the church property was valued at $5,200,853.

Pauperism.—Three thousand six hundred and thirty-one paupers were reported, of whom 3,143 were native whites, 39 native colored, and 443 foreigners.

Crime.—Of 371 persons imprisoned June 1, 1870, 255 were native whites, 6 native colored, and 110 foreigners; 431 persons were convicted during the year.

Age and sex of population.—Of the total population, 175,588 persons were from 5 to 18 years old—89,233 males and 86,355 females; 493,847 were 10 years old and upward, and of these 245,704 were males and 248,143 females.

Occupations.—Two hundred and eight thousand two hundred and twenty-five persons of these ages were engaged in various occupations, of whom 179,784 were males and

28,441 females; 82,011 were engaged in agricultural pursuits, of whom 81,956 were males and 55 females; 36,092 in personal and professional services, of whom 20,683 were males and 15,409 females; 28,115 in trade and transportation, of whom 27,880 were males and 235 females; 62,007 in manufactures and mechanical and mining industries, of whom 49,265 were males and 12,742 females.

Age and sex of working population.—Of these 208,225 employed persons, 6,354 were from 10 to 15 years old, of whom 4,319 were males and 2,035 females; 182,320 were from 16 to 59 years old, of whom 156,714 were males and 25,606 females; 19,551 were 60 years old and over, of whom 18,751 were males and 800 females.

MARYLAND.

[From report of M. A. Newell, president of the board of State school commissioners, for the scholastic year ended September 30, 1871.]

SCHOOL FUND.

Received from State school tax	$290,575 05
Received from free-school fund	49,805 74
Received from county tax	302,640 80
Received from State donations	11,800 00
Received from books	42,925 68
Received from loans	42,454 78
Received from other sources	22,993 22
Balance on hand	19,725 22
Total receipts for 1871	782,920 49

FINANCIAL STATEMENT.*

Paid for teachers' salaries	$510,155 06
Paid for building, repairing, &c	75,015 32
Paid for books and stationery	55,719 42
Paid for supervision and office expenses	34,219 60
Paid for incidental expenses of schools	33,695 10
Paid for interest	6,322 50
Paid for miscellaneous expenses	7,373 29
Paid for colored schools	4,611 40
Total expenditure	727,111 69

DECREASE OF EXPENSES.

A decrease is shown in the items of building, repairs and furniture, books and stationery, supervision and office expenses, incidentals, and miscellaneous, amounting in all to $40,402.59; and an increase in the items of teachers' salaries, interest, and colored schools, amounting to $39,445,73, showing a net decrease in the running expenses of $946.86.

The decrease in building expenses is no evidence that the counties are now nearly all supplied with good school-houses; it merely indicates that the available funds are exhausted. It would be more satisfactory if the money that was actually needed could be had regularly year by year. The increased expenditure for interest is an unfavorable symptom. In part it is the result of bad financiering; in part it is in consequence of the circumstances in which the school commissioners are placed, being obliged by law to keep the schools open for a certain number of months in the year, and not being able to control sufficient funds for the purpose without the consent of the county commissioners.

SCHOOL STATISTICS.

Scholastic population between 5 and 20 years	276,120
Total enrollment for 1871	80,829
Increase over last year	3,375
Highest number enrolled in one term of 1871	64,169
Increase over last year	1,389
Average number enrolled in 1871	57,588
Increase over last year	1,273
Average attendance	36,949
Increase over last year	154
Number of schools	1,390
Increase over last year	30
Number of months schools were open	9 2/11
Number of teachers—male, 967; females, 724	1,691
Increase over last year	27

* Not including Baltimore City.

The slight apparent increase in average daily attendance shows an actual decrease for the year in proportion to the numbers enrolled. In order to keep up the same rate as last year the increase should have been over 1,000. Eight counties report a diminished daily attendance. We have one suggestion to make on this head, namely, that a part, say one-half, of the salary of the teachers should be made to depend on the average daily attendance of the scholars. This has been suggested by the fact that where a fixed salary has been substituted for the "sliding scale" in the payment of teachers the attendance has fallen off.

NUMBER OF PUPILS IN DIFFERENT BRANCHES.

Spelling	59,541
Reading	53,368
Writing	46,323
Arithmetic	41,621
Geography	25,832
English grammar	15,260
History	8,959
Book-keeping	825
Algebra	1,181
Natural philosophy	1,717

SCHOOL LAW.

At the annual meeting of the association of school commissioners, eighteen counties were represented. Great unanimity of sentiment prevailed, and the general opinion was that the present school law, with a very few amendments, could be made entirely adequate to the present wants of the people. The changes asked for are as follows: A county tax of 15 cents on the hundred dollars, instead of 10 cents as at present allowed; the appointment of teachers to be given to the county boards of school commissioners, instead of the local boards as at present; some further provision for the education of colored children; the building of a suitable house for the State normal school; the transfer of the academic donations to the several boards of county school commissioners, for the purpose of establishing and maintaining a high school in each county.

TEACHERS' INSTITUTES.

The principal of the State normal school has held during the year teachers' institutes in nine counties, all well attended but one.

COLORED SCHOOLS.

The law requires that all the taxes paid for school purposes by the colored people of any county shall be used for maintaining schools for colored children. But this amount is so small as to be practically worthless. The law also authorizes the boards of county school commissioners to appropriate such additional sums as they may deem proper for this purpose. But the boards have no surplus revenue. All their funds are needed (and more are urgently demanded) for the support of the white schools. Consequently the "additional appropriations" have been very small. The total amount reported for the year is only $4,611.40. This amounts to but little more than nine cents a head for the colored school population. Baltimore City is excluded from this calculation, having fully organized a system of colored schools, and having appropriated for their support during the year $30,000. The State school tax is distributed to the several counties in proportion to the population, white and colored, between the ages of 5 and 20; thus all the counties receive from this source $1.52 a year for every colored person between the specified ages, a sum which, if it could be spared, would be sufficient for the current expenses of such elementary schools as would be necessary at first.

BALTIMORE.

CONDITION OF PUBLIC SCHOOLS.

The board of commissioners state that the schools under their charge have never presented a more prosperous condition. Throughout the whole system, from the lowest grade to the highest, the most marked improvement has been observable. The general attendance of pupils has been most excellent, and the increase in their number will compare favorably with that of previous years.

SCHOOL ACCOMMODATIONS.

New school-houses have been erected and occupied, old ones have been remodeled, and desirable improvements have been effected. There remains, however, much to be done in this direction. Many of the school-buildings are so overcrowded as to interfere with the proper instruction of the teachers, and to operate most perniciously upon the health of the children. This is a serious evil, and should be remedied as speedily as possible.

SCHOOL COMMISSIONERS.

The frequent changes in the representation of the board of commissioners is a matter of serious moment. To secure and retain the services of the ablest friends of the school system, for the longest time they may be willing to serve, should be the object most desired.

COMPULSORY EDUCATION.

The subject of compulsory education is one which should receive profound attention in the very near future. As a matter of wise economy, aside from the moral effects secured, it would be better to incur the expense of educating all the children of the community, with the hope of making them useful citizens, rather than subsequently to be taxed for their maintenance in almshouses and punitive institutions, whither ignorance will lead them.

PHYSICAL EDUCATION.

This subject is of deep importance, as affecting the future welfare of the children. While engaged in developing the intellectual faculties and cultivating the mind, the training of the body is neglected. Some simple system of exercise during recess, in which all could participate, would be a great improvement upon the present method.

DRAWING AND MUSIC.

Drawing has been taught in the public schools, but very irregularly. It is suggested that the young ladies of the high school who have shown real proficiency in the art be employed as teachers.

The progress of classes in music has been very satisfactory. Even in the primary schools, singing by note is entirely successful, proving that it is better to commence with the elementary part of music in this department than to defer it until a later period.

FEMALE HIGH SCHOOLS.

The results these schools have attained have been most gratifying to all who have an interest in the cause of public instruction. It is asserted that the graduates will compare favorably, in thoroughness of knowledge of the subjects taught, with those of any similar schools in the country. At the last commencements the largest classes in the history of these institutions were graduated.

COLORED SCHOOLS.

In this department the desired success has not been attained, though there has been a small comparative increase of attendance. It is urged that suitable buildings be erected, in different parts of the city, where the course of instruction may be extended so as to include all studies of the grammar school for the more advanced pupils. The erection of six buildings would secure all the benefits of education to this class of citizens.

SUPERINTENDENT OF INSTRUCTION.

The duties of this office have increased so greatly that it is impossible for him to perform the multiplied tasks imposed upon him, though devoting his whole time to the service of schools. The appointment of an assistant is imperatively required.

BALTIMORE CITY COLLEGE.

The college building still remains, "as a crumbling monument of withered hopes and blasted expectations." In connection with the subject of establishing the college in a suitable building, which is urgently needed, there arises the consideration of enlarging the sphere of its usefulness and elevating the course of studies, so that it shall be placed upon an equal footing with a first-class collegiate institution.

HOWARD NORMAL SCHOOL.

In any systematic effort that may be made for the general education of the colored population, the Howard Normal School must play an important part. It seems necessary that the teachers of the colored people, in the rural districts of Maryland, should be of the same race. It is therefore fortunate that an institution like this is in existence. The building is spacious and comfortable. Each of the pupils pays from ten to fifteen dollars per year for tuition. The school is arranged in three departments: normal, grammar, and model. This institution is mainly supported by private subscription, the fees received from pupils being quite inadequate to sustain it.

STATE NORMAL SCHOOL.

This institution has kept up its numbers and its reputation during the year. Eleven students graduated in May, and are teaching with great success. The number of graduates and under-graduates at present teaching in the State is not less than 200. Two model-schools, one for boys and the other for girls, are connected with the normal school.

INSTITUTION FOR THE DEAF AND DUMB.

The pupils of this school are divided into six classes, properly graded, each under the charge of a separate teacher. Articulation and lip-reading are taught to about twenty-five pupils, selected from the different classes. It is proposed to extend the course of study so as to include the higher mathematics, book-keeping, and languages.

MARYLAND INSTITUTION FOR THE INSTRUCTION OF THE BLIND.

Blind persons of good moral character, between the ages of 9 and 18, are admitted to this institution on the payment of $300 per annum, which pays all expenses except clothing. If parents can not pay this amount the child may be educated at the expense of the State, by consent of the governor. Of the entire number of pupils under instruction for the year 1869, (the date of the latest accessible information,) all but two were free pupils.

MANUAL-LABOR SCHOOL.

This school has been established for 28 years. It is situated between the Washington and Frederick turnpikes, and has attached to it a farm of 140 acres. It is supported by annual subscriptions from regular patrons of the institution, aided by State and city appropriations. There were in attendance during the year 60 boys, from 8 to 19 years of age, most of them orphans. The annual cost *per capita* is about $105. When the pupils have received a respectable rudimentary education, they are apprenticed either to farmers or mechanics within the State of Maryland.

HOUSE OF REFUGE.

This is at once a benevolent, a reformatory, and an educational institution. It gives employment and instruction to 310 boys and 16 girls, most of whom, but for this "refuge," would have been either outcasts or criminals. It is to be hoped that the movement now on foot for the establishment of a similar "refuge" for colored youth will meet with success.

COLLEGES.

The reports from the several colleges are abundantly satisfactory. Saint John's and the Agricultural College, owing to the large preponderance of students on State scholarships, may almost be considered as free colleges. The continuance of State support to these institutions is claimed not as a boon to higher education, but distinctly on the ground that it is necessary for the solution of the problem of primary education. Collegiate education, under the auspices and at the expense of the State, is the surest guarantee of ample facilities for the elementary education of every child in the State.

MARYLAND AGRICULTURAL COLLEGE.

There are three vacant professorships, which, when filled, will make the number of the faculty twelve. A well-stocked and well-worked farm of 300 acres affords opportunity for instruction in the theory and practice of agriculture. Sixty students—twelve from each congressional district—are received free of charge for tuition and use of books. The military course consists of stated drills and of lectures on tactics. The trustees have in contemplation the establishment of telegraphic communication between the college and the cities of Baltimore and Washington, as a convenience for the dispatch of business, as well as an important educational agency.

ROCK HILL COLLEGE.

This institution, conducted by the Brothers of the Christian Schools, was incorporated as a college in 1865. In the collegiate department there are three courses—the commercial, the scientific, and the classical. A preparatory department is provided for those students not sufficiently qualified to pursue any of the collegiate courses.

SAINT JOSEPH'S CLASSICAL AND COMMERCIAL ACADEMY.

This a preparatory school for Rock Hill College; and is also conducted by the Christian Brothers. Connected with it is a commercial department, in which the German language is made a specialty.

WESTERN MARYLAND COLLEGE.

This institution, for ladies and gentlemen, is under the special patronage of the Maryland conference of the Methodist Protestant Church, but nothing sectarian is introduced into the course of study. A preparatory department is connected with the college.

BALTIMORE FEMALE COLLEGE.

This college was endowed by the legislature in 1360. The painting gallery contains 130 fine copies for those taking lessons in painting and drawing. By the terms of the endowment, free scholarships are established, upon which one pupil from each county in the State is educated without charge for tuition or books. For such as desire to qualify themselves for the work of teaching, a normal class is established. Of 210 college graduates, 82 have become teachers. Resident pupils receive instruction in housekeeping and sewing.

BROOKVILLE ACADEMY.

The object of this school is not only to prepare pupils for college, but also for business life. With this view, particular attention is paid to practical arithmetic and book-keeping.

FREDERICK FEMALE COLLEGE.

When the State legislature granted the charter to this college, it also gave authority to raise $50,000 to purchase grounds and erect buildings. This money has been raised and appropriated in accordance with the provisions of the charter.

UNIVERSITY OF MARYLAND—SCHOOL OF MEDICINE.

The school of medicine in the University of Maryland completed its sixty-fourth session in March, 1872. The university is a southern institution, dependent for patronage chiefly upon the South. All the members of the faculty belong to Maryland, Virginia, North and South Carolina; and during the last session there were students from every State, with a single exception, from Delaware to Texas. In the plan of instruction adopted by this institution, clinical teaching constitutes a most important feature. The contiguity of the general hospital to the college buildings affords great facilities.

WASHINGTON UNIVERSITY—SCHOOL OF MEDICINE.

This institution has been organized since the war. Its great prosperity is due, in part, to the liberal policy and generous support of the State legislature. A limited number of beneficiary students is received.

MARYLAND COLLEGE OF PHARMACY.

The officers of the college are authorized and empowered to confer, in the name of the college and under such regulations as may be established, the degree of doctor in pharmacy, and such other degrees and orders of merit as may conduce to the advancement of the science of pharmacy. The by-laws provide that an educational standard shall be established, applicable to all persons proposing to qualify themselves as pharmacists by becoming students in this college; also, that no diploma shall be recognized that is not based upon four years' practical service with some reputable pharmacist.

COLLEGE OF DENTAL SURGERY.

This is the oldest dental college in the world. Since its organization 664 students have received the degree of "doctor of dental surgery." The majority of the eminent

practitioners of dentistry in Europe are graduates of this college, and its diploma is recognized in all civilized countries as a testimonial of proficiency in the science of dentistry. A new chair of "clinical denistry" has recently been added. All available means are used to secure a complete course of instruction in the practice as well as in the theory of dentistry.

BALTIMORE ORPHAN ASYLUM.

This institution makes its seventy-fourth annual report. During the year 18 children have been received, and 14 have left the asylum. The number at present is 93. The asylum is not supported by any denomination, and its doors are open to all. The object in binding children out is to find them good homes in the country, where they may have religious training while being instructed in domestic economy. Cost of supporting the asylum for the year, $6,418.97.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Maryland was the twentieth State in population, having 780,894 inhabitants within an area of 11,124 square miles, an average of 70.20 persons to the square mile. This population consisted of 605,497 whites, 175,391 colored, 2 Chinese, and 4 Indians. Of these 697,482 were natives of the United States and 83,412 were foreign-born. Of the native residents of the State, 462,458 whites, 167,420 colored, and 4 Indians were born within its borders. Of the foreign residents, 47,045 were born in Germany, 4,855 in England, and 23,630 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 105,435 persons attended school, and of these 1,505 were foreign-born. The white male scholars numbered 51,668, and the white female scholars, 46,093, (an aggregate of 97,761 whites.) The colored pupils numbered 7,674, of whom 3,808 were males and 3,866 females.

Illiteracy.—The number of inhabitants of all races, 10 years old and over, unable to write, was 135,499, of whom 8,592 were foreign-born.

Age, sex, and race of illiterates.—Of the 46,792 white illiterates, 7,927 were from 10 to 15 years of age, and of these 4,274 were males and 3,653 females; 6,099 were from 15 to 21 years old, of whom 3,022 were males and 3,077 females; 32,766 were 21 years old and over, of whom 13,344 were males and 19,422 females. Of the 88,703 colored illiterates, 13,645 were from 10 to 15 years old, of whom 7,143 were males and 6,502 females; 15,353 were from 15 to 21 years old, of whom 7,075 were males and 8,278 females; 59,705 were 21 years old and over, of whom 27,123 were males and 32,582 females; 1 Chinese and 3 Indian illiterates were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 1,779, having 3,287 teachers, of whom 1,498 were males and 1,789 females, to educate their 107,384 pupils, of whom 55,800 were males and 51,584 females.

Amount and source of educational income.—The total income of all the educational institutions was $1,998,215, of which $21,697 were derived from endowment, $1,134,347 from taxation and public funds, and $842,171 from tuition and other sources.

Public schools.—The 1,487 public schools, with their 2,150 teachers, of whom 933 were males and 1,217 females, were attended by 83,226 pupils, of whom 42,927 were males and 40,299 females. To educate these they possessed a total income of $1,146,057, of which $4,507 were derived from endowment, $1,039,135 from taxation and public funds, and $102,415 from tuition and other sources.

Colleges.—The 19 colleges, with their 123 teachers—121 males and 2 females—were attended by 2,154 students, of whom 1,782 were males, and 372 females. To educate these, they possessed a total income of $260,427, of which $3,800 were derived from endowment, $20,200 from taxation and public funds, and $233,427 from tuition and other sources.

Academies.—The 34 academies, with their 189 teachers—57 male and 132 female—had an attendance of 2,205 pupils—1,009 male and 1,196 female—for the education of whom they possessed a total income of $246,605, of which $1,500 were derived from endowment, $6,105 from taxation and public funds, and $239,000 from tuition and other sources.

Private schools.—The 153 day and boarding schools had 332 teachers—of whom 106 were males and 226 females. They were attended by 6,072 pupils, 2,600 of whom were males and 3,472 females. These schools possessed a total income of $172,333, of which $2,640 were derived from endowment, $500 from taxation and public funds, and $169,193 from tuition and other sources.

Libraries.—There were 1,316 public libraries, containing 570,945 volumes; also, 2,037 private libraries, having 1,142,538 volumes; a total of 3,353 libraries, containing 1,713,483 volumes.

The press.—The 88 periodicals issued had an aggregate circulation of 235,450 copies, with an aggregate annual issue of 33,497,778.

Churches.—Of the 1,420 church organizations 1,389 had edifices, with 499,770 sittings, and the church property was valued at $12,038,650.

Pauperism.—Of the 1,612 paupers, 781 were native whites, 566 native colored, and 265 foreigners.

Crime.—Of 1,035 persons imprisoned June 1, 1870, 304 were native whites, 663 native colored, and 68 foreigners; 868 persons were convicted during the year.

Age and sex of population.—Of the total population, 244,454 persons were from 5 to 18 years old, 122,932 males and 121,522 females; 575,439 were 10 years old and upward, and of these, 281,294 were males and 294,145 females.

Occupations.—Two hundred and fifty-eight thousand five hundred and forty-three persons of these ages were engaged in various occupations, of whom 213,691 were males and 44,852 females; 80,449 were engaged in agricultural pursuits, of whom 79,197 were males and 1,252 females; 79,226 in personal and professional services, of whom 43,278 were males and 35,948 females; 35,542 in trade and transportation, of whom 34,567 were males and 975 females; 63,326 in manufactures, mechanical and mining industries, of whom 56,649 were males and 6,677 females.

Age and sex of working population.—Of these 258,543 employed persons, 15,910 were from 10 to 15 years old, of whom 10,013 were males and 5,897 females; 228,428 were from 16 to 59 years old, of whom 191,169 were males and 37,259 females; 14,205 were 60 years old and over, of whom 12,509 were males and 1,696 females.

Total expended for school-houses, 1870	$2,058,853 30

SCHOOL FUND.

The income of the fund applicable to educational purposes is absorbed by the present wants of the school system, to which must be added the expenses of the new normal

* All have made returns except Chelsea, and three towns newly incorporated, viz, Ayer, Gay Head, and Maynard.

school at Worcester. The principal of the fund has reached its maximum. The income, which was for the past year $177,496.46, will not be greater in future years. The moiety to be divided among the towns is sufficient to give to each child between 5 and 15 years only 32 cents, while the sum raised for educational purposes by taxation averages $11.78 per child. These 32 cents are now inadequate to afford any substantial relief to the towns, or benefit to the schools, and will, from the present year, be annually diminished as population increases.

Public opinion is unmistakably looking toward the adoption of a far more comprehensive system of means for the better education of teachers and more thorough supervision of the schools. It is seen that in these respects Massachusetts is drifting behind the younger and more vigorous States, and the demand for larger means and a more perfect organization must soon be met. It is therefore recommended by the board of education that a State tax of one-half of one mill be levied with the general State tax, and the net proceeds of said tax, together with the income of the school fund, be expended, three-fourths for the support of public schools, and the remaining one-fourth for other educational purposes. This will give about $650,000 a year to be distributed among the towns, and $217,000 a year for other educational purposes.

TEACHERS' INSTITUTES.

Seven institutes have been held during the year; six of them for five days. The one at West Newbury, occurring during the week of the annual election, was continued only three days. In each, twenty-seven teaching exercises were given by day, and five evening lectures. Most of the institutes were marked by an unusually large attendance of earnest, intelligent teachers, and the evening lectures were listened to by crowded audiences. In making preliminary arrangements for the institutes the agents not only visited the towns where they were to be held, but also, when practicable, visited several of the adjoining towns, with especial reference to awakening an interest in the subject, and so secure a better attendance. There were also prepared and sent to the school committees in towns near the place where each institute was to be held circular-letters explaining the object of the institute, and requesting that where the schools were in session, the teachers might be allowed to close them so as to attend the institute. Posters were also prepared to be sent to many towns; each institute was advertised in several papers, and arrangements made with railroad officials, and for the printing of free return tickets. All these preliminary arrangements are in the highest degree essential to the success of the institute.

The total number of teachers and members of school committees present at the different institutes was 908. Some of these were present only for a day or two of the session. The school committees in many towns are unwilling to allow their teachers to close the schools to attend the institute for the whole period of five days, unless they make up the time. It thus not infrequently happens that those teachers who most need the instructions which the institutes give, and who are most desirous of availing themselves of them, are cut off from the privilege. To meet this difficulty, it is recommended that the legislature be requested to pass an act which shall give to school committees the authority to allow the teachers in their employ to close their schools and attend upon any institute held in term time, and in their returns to the board to count the time so spent as actual school time.

All the institutes held during the year were highly satisfactory, judging from the opinions of those in attendance, which, in every instance, were expressed either in resolutions or in some less formal way, accompanied by an invitation to hold another institute as soon and as often as was deemed expedient.

SUPERVISION OF SCHOOLS.

Each system of supervision has its peculiar advantages; but practically that will be the best which most nearly conforms to the habits of the people. Hence the system of supervision by a committee will not very soon be changed in Massachusetts. Moreover the laws of 1854 and 1856, which authorized any city or town to require its school committees to appoint a superintendent, furnish the means of securing the advantages of both systems, that of a larger body for counsel and of a single person for details. The necessity of a thorough supervision has been so far recognized that most of the cities and several of the large towns of the commonwealth employ a superintendent of schools. This agency is "now exerting a more powerful influence than any other instrumentality in perfecting the character and giving efficiency to the schools."

While the benefits of the system are enjoyed by over forty cities and towns, the remaining number do not employ a superintendent. Most of them can not afford the expense, but these very towns are the ones that most need such supervision, for the small towns can not obtain as able and experienced teachers as the wealthier places, and they have fewer persons of literary attainments able to devote their time to these duties.

To such towns is commended the consideration of a recent law which provides that in the case of contiguous towns, where the proper remuneration of a superintendent would be a serious burden on a single town, the towns may unite in the employment of such an officer.

In most cases where a superintendent is employed, the office has become a permanent one, with a respectable salary, and commands the services of men of large experience and eminent ability. In many cases, one member of the school committee who has aptitude for the work and leisure, is intrusted with the entire active duties of the committee, often performing them for small compensation.

WOMEN AS MEMBERS OF SCHOOL COMMITTEES.

A few years since a bill was reported in the house of representatives authorizing the election of women on school committees. It was defeated on the ground that the law was unnecessary, inasmuch as the towns had full power under existing laws. Since then the number of such elections has rapidly increased, and in two towns the schools are entirely under the supervision of women. Their superior tact and sympathy, and the necessary leisure enjoyed by many, are among the reasons sufficient for this movement, which, doubtless, will continue till, "both as members of committees and as superintendents, women will exert an influence alike powerful and beneficent."

SPECIAL AGENTS.

At the last session, the legislature, at the request of the board of education, made an appropriation from the income of the school-fund of a sum not exceeding $10,000 to be expended for the salaries and expenses of such special agents as the board might employ. The object of this appropriation was twofold: First, to enable the board to secure the services of some competent agent to give aid and direction in the teaching of drawing. The second object was the employment of persons to act as visiting agents within certain districts to be designated, who should perform the services in their respective districts which are performed by the general agents, with the intent that all the towns in the commonwealth should be visited by an authorized agent of the board at least once annually. If this plan meets with the success which is confidently anticipated, it will gradually lead to the establishment of a system of local, county, or district agents. The fact appearing, however, that other appropriations would nearly absorb that portion of the school-fund to which all were charged, only one visiting agent has been employed. The results of his work in the western counties are most encouraging.

With regard to the first-mentioned object for which the appropriation was asked, more has been accomplished. A special agent was appointed by the board in July last, as the director of art-education, and is now engaged in the work of aiding the cities and towns in carrying out the requirements of the law of 1870, relating to the teaching of drawing in the public schools and the establishment of evening schools for the instruction of adult persons in mechanical drawing. His labors thus far have met with gratifying success.

SCHOOL-AGE.

The number of children between 5 and 15 years of age is made the basis for the apportionment of the school-fund, and hence is supposed to define the age for which the people are bound to provide means of education; and there is a disposition in some places to exclude from school all over 15 years of age. The same statute, however, that makes this limitation of age for the apportionment of the school-fund, provides that nothing in the act shall be considered as excluding from the schools persons under 5 or over 15 years of age. The fact that more than one-tenth of the whole number in average attendance upon our schools during the year were over 15 years of age shows that this interpretation of the statute is accepted by the great body of the people.

It is to be regretted that the statute does not prohibit the admission of children under 5 years of age into our public schools, and even make it a penal offense for parents to send them at an earlier age. The fact that nearly 3,000 children under 5 years of age were in attendance upon the public schools of Massachusetts during the year, compelled to breathe the vitiated air of school-rooms and to sit quietly on hard benches for five and often six hours a day, for five days in the week, suggests the necessity of some legal prohibition to remedy an evil so deplorable in its consequences.

COMMON-SCHOOL STUDIES.

How to educate our children and secure the best results, with the greatest economy of time and expense, is the great problem of the day, and demands the best thoughts of all our educators. There is an opinion very prevalent among them that while our

schools are doing a great and noble work, they are not accomplishing all that might reasonably be expected of them.

If a portion of the time wasted, and worse than wasted, in the attempt to memorize the endless and senseless details of geography and of history, the technicalities of grammar, at an age when they can not be understood, and long examples in mental arithmetic, which, with their complicated solutions, must be given with closed book, and in precise, logical terms, could be given to some studies that would really interest the children, develop their perceptive powers, accustom them to the correct use of language, and be of real practical value to them in after life, more satisfactory results than are now attained would be exhibited at the close of the child's school-life.

The recent introduction of Hooker's admirable "Child's Book of Nature" into the grammar schools of Boston, Cambridge, Worcester, and several other cities and towns, is a step in the right direction toward a "consummation devoutly to be wished" in respect to an improved course of studies for our common schools.

HIGH SCHOOLS.

During the past year 179 high schools have been maintained in 165 cities and towns. Only three towns required by law failed to maintain a high school. Many of these schools are not what might be expected from the name; still, even in the poorest of them, greater advantages are presented than could be offered by the other schools in the same town; and in many of the large cities and towns an education is afforded, without expense to the pupil, more extensive and complete than can be acquired in many colleges. "Their influence, when they are wisely and liberally supported, is incalculable. From them our colleges receive their largest, and often their best, supplies." From the high school at Woburn, a town having a population of less than 9,000, twenty graduated last June, five of whom were going to college. Including these five, there were twenty-eight members of the school studying with reference to a collegiate education. Nine others who were fitted in this school were at that time in different colleges.

THE HALF-DAY SYSTEM.

There is one peculiarity in the management of this school which, for several reasons, is worthy of special consideration. The "half-day system," which has been in operation there for several years, requires the attendance of the pupil but one-half of each day, provided he has faithfully performed his duties. It is thought that this system has a good influence upon the character of the pupil, (as it cultivates a feeling of responsibility,) upon his health, and also upon his mind, as, undisturbed by the distracting influences of a school, he can accomplish much more in the same time. It is an economical arrangement also. The present high-school house was intended to accommodate ninety pupils. With this system it will accommodate just twice the number, one-half attending in the morning, the other half in the afternoon. "Hence it is to-day saving an expenditure of from twenty to thirty thousand dollars in the erection of a new high-school building.

"The results of this system are so entirely satisfactory, and its advantages so obvious, that I would commend it for adoption in those towns whose citizens are not prepared to incur the expense of erecting new high-school buildings, or of enlarging existing ones, to accommodate the increasing number of pupils."

NORMAL SCHOOLS.

"These most important institutions have been conducted during the past year with all their accustomed faithfulness and success. In each of the schools a goodly number have entered upon the advanced course of study, for which provision has been made by the board. In two of the schools, many during the first year have determined to pursue the full course of four years, and their studies are arranged with reference to that; while in the others the advanced class is made up of those who have graduated, and in many instances have been engaged in teaching. Experience only will prove which of these methods will secure the most satisfactory results."

ADMISSION TO NORMAL SCHOOLS.

The superintendent further states: "I have attended the examination of applicants for the normal schools, and have at such times generally made a very careful and critical examination and analysis of the results presented in the papers of the applicants. An analysis made at one of these examinations is, I think, a fair specimen of all of them. The average age of the forty-eight examined was 18 years and 9 months. Twenty-one of the 37 ladies examined were graduates, or had been members for some time, of high schools, 5 of academies, and 11 of grammar schools. Nine of these had taught schools

for a period varying from 12 to 143 weeks. The questions were not above the average of those proposed to candidates for admission to our high schools. There should have been an average of at least 80 per cent. of correct answers. Only 4, however, had this average, and only 11 had 70 and upward. Eighteen had less than 60 per cent. To attain even this result, their reading had to be taken into account, for which they were marked much higher than for their written papers. With this, the general average of correctness for all who were examined was 62 per cent.; without it, 59. Yet only 4 of the 48 were rejected.

"An examination of the papers of these applicants shows that in too many cases the writers were allowed to take up the higher branches of study in high schools and academies before they had thoroughly mastered the simple elementary branches, which are the corner-stone of a good education. The papers of many were very faulty in respect to the correct use of language, the construction of sentences, the use of capital letters, and spelling.

"I have presented this topic thus prominently, to give emphasis to the recommendation that I would make, that a more thorough and exact knowledge of the common English studies should be required as indispensably necessary for admission to our normal schools than has heretofore been. I am decidedly of the opinion, too, that it would be wiser to add a year to the minimum age required for admission, at least for ladies, and not admit any under seventeen years of age. With a higher standard of scholarship for admission, and with greater maturity, physical and mental, of those admitted, I think we should secure a superior class of teachers for graduation, and thus elevate the character of our normal schools.

TRAINING OF TEACHERS.

"While the normal schools are performing a most valuable service in raising the standard of teaching throughout the whole commonwealth, their capacity to educate trained teachers has hardly kept pace with the increase of population, and is rapidly falling short of meeting the great increase in the demand for such teachers. Some other system must be devised.

"Two plans have been suggested. One contemplates the establishment of several normal schools, with a course of three or six months, devoted to a strictly professional course of instruction in the art of organizing, governing, and instructing schools. From four to six hundred teachers could be trained yearly in each of these, at an expense not much greater than is now required at the normal schools, and they would be much better fitted for their work than is the present large number of teachers who lack special training. This plan has been fully elaborated by one of the best educators in our country, and his recommendation is sufficient to entitle it to the most careful consideration.

"There are some decided advantages in introducing normal instruction into the high schools and academies. These schools are in successful operation in locations where the pupils live and the teachers are needed. No additional expense would be required for the construction and maintenance of the schools, and a department for this branch of education can be as well maintained there as in separate schools. Several cities and towns have established training schools, auxiliary to the high schools, and it is believed that many of the academies would employ competent instructors and establish such a course, provided reasonable encouragement should be proffered by the commonwealth."

TEACHING OF DRAWING.

It is now admitted by all who have examined the subject that every one who can learn to write can learn to draw, and that drawing is simpler in its elements and more easily acquired than writing. Special instructors are no more required for drawing than for writing or arithmetic. Teachers must learn and teach elementary drawing as they learn and teach other branches.

In order to obtain the advantages of the best methods of instruction, the sub-committee to whom the school committee of Boston had committed the subject of art education, early in the year opened a correspondence with gentlemen in England, with the object of procuring a gentleman having the requisite qualifications to organize classes and conduct the department of drawing in the Boston schools, on the same general plan that music is so successfully taught in them. The correspondence resulted in an invitation to Walter Smith, esq., the head-master of the school of art in Leeds, to accept the position. Before deciding the question of acceptance, Mr. Smith visited this country, and after a full conference with the executive committee of the board, the latter were satisfied of the expediency of procuring the services of Mr. Smith for the commonwealth, for such portion of his time as should be agreed upon with the Boston committee. Returning to England, Mr. Smith was authorized to expend $500, appropriated by the board from the income of the Todd fund, in procuring such models of art, drawings, casts, &c., as would be needed. Having procured by purchase, and by the gift of generous friends of art culture in England, a valuable collection of models, &c.,

suited to his purpose, Mr. Smith returned to Massachusetts early in the autumn and commenced his work.

In the city of Boston Mr. Smith is head-master and professor of art education in the normal art school, and director of the night classes for drawing, established in compliance with the law of 1870. The course of instruction, arranged by Mr. Smith for these free evening classes, comprises what is usually included under the term "mechanical or industrial drawing." By the State Mr. Smith is employed as "professional adviser and lecturer in the matter of art education." In this capacity he has given lectures and teaching exercises in the teachers' institutes, and has visited and given instruction in those cities and towns required to maintain adult classes in mechanical drawing. The lectures have been everywhere received with marked approbation. New interest is awakened, and large numbers are flocking to the classes wherever they are established. Flourishing classes have been formed in all but two or three of the towns and cities required by law to maintain them.

It will be the duty of Mr. Smith, as soon as he can be released from the more immediate calls of the towns, to spend as much effort as possible in the normal schools, with the view of giving the utmost efficiency to the instruction in drawing given in them, to the end that competent teachers may, as rapidly as possible, be prepared both for the public schools and for special classes.

Mr. Smith has been greatly aided in his lectures and teaching by the collection of models before named, which comprises models, casts, and apparatus in use in the schools of art in Great Britain, together with a set of the works of students in those schools, illustrating a complete course of instruction in all the stages of art study. These are placed under the charge of a curator, who attends to their transportation and arrangement, and who is also a competent teacher of drawing, and does good service in supplementing the labors of Mr. Smith. This collection of models is to be deposited at the State-house in Boston. It will be lent for exhibition to any city or town engaged in forming free evening classes, and the director of art education will, on request, attend personally any conference of the school committee in the locality, and give, if desired, a public address on the subject.

At the annual meeting of the Massachusetts Teachers' Association in October last, Mr. Smith delivered a very interesting and valuable address on "Art education and the teaching of drawing in the public schools." This address was listened to with profound interest by a large body of the leading teachers from every part of the State, and was published in the Massachusetts Teacher for November. It has also been printed in pamphlet form by the board, and with it two valuable papers by Professor Thompson.

In the address, Mr. Smith makes this declaration, which proves him to be pre-eminently fitted for the work intrusted to him: "Though acquainted with the national system of my own country, and of other European states, I am not committed to, nor do I wholly approve of, any of them, but I believe in the construction of a system in a country where the subject is new. We can adapt the good parts of all the old methods to the requirements of this country, and omit all the bad parts." He also says: "While England is appropriating all the features of the Massachusetts system of general education that are worth anything, in Mr. Forster's scheme, we are borrowing from Great Britain, as well as from other countries, the most valuable portions of their experience in technical education, and I venture to prophesy that upon a better general basis we shall erect an infinitely better superstructure, so soon as the development of public opinion in this country will furnish us with the means for its accomplishment."

SPECIAL NORMAL DRAWING-CLASSES.

The chief obstacle in the way of teaching drawing at present lies in the difficulty of procuring competent teachers. So fast as this obstacle can be removed, there is no good reason why the law should not be extended in its scope so as to embrace all towns having more than 5,000 inhabitants. Something can be done, as heretofore, in the teachers' institutes. Still more, however, might be expected from special normal classes, to be opened at central points, at such periods of the year as would best accommodate the teachers of the vicinity. A special appropriation, to be used by the board in maintaining such classes to a limited extent, would be of signal advantage.

The secretary takes pleasure in pointing to an experiment in proof of the feasibility of establishing such special classes. In July, in response to a circular issued by the superintendent of public instruction in Worcester, a normal class of twenty-three was opened in the rooms of the Worcester Free Institute, and taught by the professors of the institute, for three weeks, two lessons each day. The pupils paid a fee of $10 each for tuition, the use of the rooms being granted by the trustees free of charge. Professor Thompson, of the Worcester Free Institute, says of this experiment: "The class was not as large as it would have been at any time except just at the close of the (school) year, in hot weather, when most people rest or travel. That the class was as large as it was argues the need of it."

TECHNICAL EDUCATION.

A resolution "relating to technical instruction in schools" was passed by the last general court, by which the board of education was directed to report "a feasible plan for giving in the common schools of the cities and large towns of this commonwealth additional instruction, especially adapted to young persons who are acquiring practical skill in mechanical or technical arts, or are preparing for such pursuits." The State has generously endowed the institute of technology in Boston and the museum of zoölogy in Cambridge; but though these two institutions and the scientific school in the latter place afford great advantages to those who intend following the higher walks of industrial pursuits, they do not give the practical instruction required to fit the mechanic for his daily work. They bear the same relation to schools for the technical education of mechanics that the college does to the high school; each is indispensable in its place, but neither fulfills the functions of the other.

The only school in the State where a technical education in mechanics combined with practice can be obtained is the Worcester County Free Institute of Industrial Science, in Worcester. It was incorporated in 1865, and is a model institution, which has no superior in this country. The corps of instructors embraces professors of chemistry, mechanics and physics, drawing, mathematics, civil engineering, French and German. There are 89 pupils, mostly from Worcester County. There are also 20 free State scholarships for the benefit of pupils from other counties than Worcester, to be selected by the board of education.

The value and importance of schools of this character are not understood or appreciated in this country. One who has devoted much time and thought to the subject says that "provision for the prompt, speedy, and ample, or the better education of the manufacturing or mechanic operatives of Massachusetts, is not only an investment promising a vast pecuniary return, but is to-day a necessity of self-preservation for the State." Four-fifths of all the industry of the State is dependent upon occupations for which the training of these schools would be a preparation.

In this branch of education, as in many others, Germany, Switzerland, Austria, and Belgium have taken the lead, leaving England and America far behind. In the great exhibition in London in 1851, English workmen excelled in nine-tenths of the one hundred departments, but in the Paris Exposition of 1867 they excelled in only one-tenth. During those sixteen years, artists, mechanics, engineers, and chemists, trained in technical schools, had entered the workshops of Europe, and by means of their skill and knowledge had transferred to the continent the supremacy England had so long enjoyed. England, alarmed at the report of her jurors at the Exposition, at once established technical schools in many of her largest cities, and has determined that hereafter her citizens shall at least be as well educated as those of continental Europe.

The question for Massachusetts to consider is, what position she will take in the strife for the world's prizes. The broader development which our free institutions give to the individual man enables him to accomplish a greater amount of work; and if we only furnish a better technical education than is given abroad, we can contend on an equal footing, and compete successfully with the markets of the world.

While the board do not think it feasible or advisable to give technical instruction in the common schools, other than drawing, they would suggest that the State authorize all cities and towns having a population of 5,000 and over to establish free technical schools for instruction in such branches of knowledge common to the leading industries of the entire State as may from time to time be prescribed by the board of education.

BOSTON.

SCHOOL ACCOMMODATIONS AND EXPENDITURES.

The school accommodations of this city comprise 105 school-houses, most of which are substantial and commodious edifices, with all the modern improvements in school architecture. The whole number of sittings is 44,192; and 1,000 teachers are employed, at the annual expense for salaries of more than $800,000. The annual expenditure for school purposes, exclusive of the cost of school-houses and lots, exceeds $1,000,000. The aggregate value of the school property amounts to $5,891,747.15. Concerning this statement, the superintendent remarks: "It is evident there has been no lack of means in this city for the establishment and support of public schools. Cheap schools are usually poor schools. The great cost of our schools is not proof positive that they are good, but the liberal scale on which they are conducted affords the best presumptive evidence in their favor, for an intelligent community would not be likely to pay so high a price for a poor article."

ATTENDANCE.

The superintendent says: "Two things are necessary to make the education of the people complete—good schools and good attendance. Neither will suffice without the

other. To secure both is the problem of education." The whole number of pupils belonging to public and private schools is 46,813, a number larger by nearly 1,000 than that of the children in the city of school age; but this number includes about 4,343 over 15 years of age, which, taken from the whole number, leaves the number under 15 belonging to the schools, 42,470. This number deducted from 45.970, the whole number of the school population, leaves 3,500 still to be accounted for. The whole number of children 5 years of age is about one-tenth of the number between 5 and 15, and it is ascertained that 25 per cent. of the children of this age do not attend school at all. Add to this the large number who leave school at from 12 to 14, (half the number certainly of pupils of that age,) and it leaves less than 500 children growing up in ignoraunce in the city. It appears, then, from this statement, that the number of pupils between 5 and 15 years of age, in public and private schools, is 92 per cent. of the whole number in the city; that of the 7 per cent. not attending school, six-sevenths are pretty well accounted for, making 99 per cent. in school or accounted for, while 1 per cent. only remains unaccounted for.

In this connection the superintendent says: "During the past ten years, I do not remember to have met with the case of a child who had resided in the city until the age of 14 without learning to read and write." He is also convinced that "among the forces to be relied on to secure the general attendance of children at school, the character of the schools is the most important."

CLASSIFICATION.

As an element in determining the success of the school system, it is necessary to know not only how many children are in school, but also to what grades and classes they belong. Taking the average whole number belonging to the day-schools (36,560) during the half year ended January 31, 1872, as the basis of calculation, the percentage belonging to each grade is as follows:

Classes.	Number.	Per cent.	
		1872.	1862.
High schools	1,723	4.7	2.9
Grammar schools	19,605	53.6	47.4
Primary schools	15,232	41.6	49.6

This table shows a very considerable gain in the percentage of the upper grades. For every 1,000 pupils in all the day-schools there are 47 in the high schools, or a little less than 5 per cent.; but this is not the true per cent. of the pupils that enter the high school. To get this, the *time* in the high schools as compared with the time in the lower schools should come into the calculation. The number that entered the high schools this year was 19 per cent. of the number that entered the grammar schools from the primary. The following table shows the condition of the high schools for the half year ended January 31, 1872:

Schools.	Number of teachers.	Average number of pupils.	Average number of pupils to a teacher.
Latin	11	222	20.1

Fourth class	2,363	16	15
Fifth class	2,361	15	17
Sixth class	3,125	20	25

The relative gain in the upper classes of the primary schools during the past years has been very gratifying. In 1863 the first class was only three-fifths of the sixth class; now it is *four-fifths*. It used to be said that in the graded system of primary schools the sixth class must always be quite disproportionate in number to the other classes. Experience has disproved this assertion. The aggregate percentage of the three upper classes is almost exactly the same as that of the three lower classes. This is a most satisfactory showing. The average number of pupils to a teacher in the primary schools is 45.6; in the grammar schools it is 46.3.

NORMAL SCHOOL.

Twenty years ago the school board established a normal school for the professional training of female teachers. This institution was not merely a normal school in name; it was one in reality. It did not aim or pretend to be anything else, and it commenced its career with the most flattering prospects of success. But before it had been in operation three years, the public sentiment demanded provision for the higher education of girls who were not intending to become teachers. This demand was met by changing the character of the normal school so as to make it a high school for girls

as well. True, it has never entirely lost its normal characteristics, but it has been more of a high than a normal school. It has rendered great service to the city, especially since the establishment of the training department eight years ago.

But the superintendent believes that far better results would have been accomplished by two separate organizations as a temporary expedient. It has been too long delayed. But the degree of unanimity with which the board has just now, after long deliberation, voted to have a separate high-school training of female teachers, leaves no room to doubt that the vexed question is at length settled. The normal school should have, as an indispensable part of its organization, a model and practicing school connected with it, embracing all the classes of the primary and grammar school grades.

TEACHERS.

The superintendent thinks that better regulations are needed in respect to the examination of teachers. "In this respect, instead of making progress, we have lost ground. Latterly, teachers have in most cases been appointed without any examination. I am fully persuaded that the best interests of the schools demand a reform in this respect. Why should we not grant certificates of qualification of different grades? Why should teachers receive the maximum salary before they have received a first-class certificate? The present practice of ignoring the examination of candidates is not giving us the best teachers we might get for the salaries paid. What is needed, especially, is a fair chance for competition.

"In selecting teachers, the choice should not be between tact and scholarship. All candidates should be excluded who have not very good scholarship, and from the good scholars, those should be selected who show the most tact. Teachers who are not good scholars do not wear well, become more and more mechanical, and if they remain long in the service, become incorrigible routinists.

"It is equally desirable to have men of good education to fill the office of master; and as nearly all masters must come from the ranks of sub-masters and ushers, it is of the greatest importance that these should be good scholars.

DR. LEIGH'S METHOD.

"The last report stated that this method was in successful use in the primary schools of eleven districts. During the last year it has been introduced into some other districts. Its success, wherever it has been used, has been so decided, that it seems desirable that it should be made obligatory in all the districts.

EXPENDITURES FOR SCHOOLS.

"For ten years, ending 1851, the average rates of the school expenses, as compared with the total city tax, were 27.6, while for the last ten years the rates averaged only 16.6. So that if the school expenses should be increased 50 per cent. and more, we should only stand relatively where we stood 20 or 25 years ago." This statement is not made as a reason for any special increase of outlay for schools, but as an answer to charges frequently made against the management of the school committee with reference to economy in financial matters.

WOBURN.

SCHOOL BUILDINGS.

Woburn, with a school population of only 1,875, owns 14 school-houses, and in this particular is an honorable exception to the number of cities of whose limited school accommodations complaint is justly made.

CONDITION OF SCHOOLS.

The year ended March 1, 1872, has been one of great prosperity. The schools generally display a high degree of excellence, and the high school is in advance of most of its class. Its condition is so exceedingly satisfactory that it was thought worthy of special notice by the agent of the Massachusetts State board of education. More than 8 per cent. of all the pupils in town attend the high school. Six per cent. is a fair average for most other towns. Twenty pupils graduated at the close of the term. The training school fully supplies the place of a normal school. The success and popularity of its graduates in other towns are sufficient proofs of its efficiency. At present but one graduate is unemployed.

CHANGE IN COURSE OF STUDY.

The grammar-school course has been extended from three to four years. This will afford pupils a better opportunity for preparing for the high school, and will adapt the course to the needs of that large class of pupils whose education does not extend beyond the grammar school.

DRAWING.

By vote of the board, drawing is to become a regular branch of instruction in every school. It has already been taught in some of the lower grades during the past term, with good success.

TEXT-BOOKS.

In very few schools are so few text-books required as in those of Woburn. No text-book in written arithmetic even has been in use—a custom nowhere else in practice—but instruction has been given entirely by means of the blackboard.

SPRINGFIELD.

SALARIES.

This is a subject deserving more than a passing notice. The strife now taking place throughout the country, to improve and perfect the public schools, has added greatly to the labor and responsibility of teachers. School-teaching has become more of a profession, requiring talent, study, and preparation, and less of a temporary employment. Education is now regarded as the true safeguard of our liberties, and the best and strongest intellects are sought to improve the character of our public schools, and, in proportion as we invest in intellectual capital, must we increase compensation, or it soon seeks other channels for better remuneration. If we do not wish to place our most sacred interests in the care of second or third rate teachers, we must employ the best talent, and pay for it.

SCHOOLS AT INDIAN ORCHARD.

The half-time school at the Orchard was suspended during the summer term, but was opened again in September. It numbers about thirty pupils, who are in school three hours each afternoon for five days in the week. The progress of many of them is very rapid. If the population of the village were sufficient to furnish another school of equal size for a forenoon session, it would leave nothing more to be desired for such a school. An evening school, held at Indian Orchard during the winter, numbers about eighty pupils, and is open three evenings a week. The expense of this school is considerable, as it is necessary to send a teacher out from town, but it is of great advantage to the operatives in the mills, of whom it is largely composed.

INDUSTRIAL OR MECHANICAL DRAWING.

The school for "industrial or mechanical drawing" commenced in December, 1870, and continued fifteen weeks. The number attending was 104, of whom 37 were under 20 years of age, and 10 over 40. The school was an experiment, and a successful one. A room capable of accommodating from forty to fifty persons has been permanently rented and thoroughly furnished, and this year the school was opened the middle of November. It will hereafter be opened the first of October. The number this year is over 140. The school is so arranged that an advanced class has two lessons a week, and, as vacancies occur in it, promotions are made, and new members are admitted to the lower classes once a month. This school is no longer an experiment; the wisdom of those who provided it is manifest; the appreciation of those who enjoy its benefits is outspoken, and the remark is added, "We wish it had been done before we were so old."

DRAWING IN SCHOOLS.

Free-hand drawing has now been taught rather more than a year and a half. "I am more and more convinced of its utility and practicability in our common schools."

WORCESTER.

SCHOOL ACCOMMODATIONS.

The necessity for increased school accommodations is seriously felt. Even with the relief afforded by the occupation of the high-school building, the other school-houses will be insufficient suitably to accommodate the present numbers. Some of the rooms

now occupied for school purposes are pronounced by physicians to be unsuitable and unhealthy. Many rooms are greatly overcrowded, and the numbers requiring school accommodations are steadily increasing. Sixteen houses have been built and occupied during the last six or seven years, and the need for further room becomes daily more apparent. The board has been criticised for opening schools in new houses too soon, and it is better to have them thoroughly completed in every part before they are used; but 639 pupils, the increase last year, must have room. Five or six hundred additional pupils are as sure to come this year as the flood-tide. While the city grows she must build.

GRADING SCHOOLS.

That our system of grading the schools was not perfect is seen from the attempts to improve it. The single-class plan encounters the difficulty that pupils who enter at the beginning of the year have not all the same attainments, nor the same capacity. Some are capable of advancing more rapidly than the majority; others not so fast; others are irregular in attendance, and, from this and other causes, fall behind. To the plan of two or three grades in the same room, under one teacher, there are serious objections, not the least being its effect upon the teacher, who can not resist the inclination to spend the most effort upon the best pupils, who really need it least. Careful observers have noticed in these schools a strong tendency to the "cramming" process, which is the great evil of our school system.

To find a perfect remedy is not easy. In seeking to improve the organization of the schools the end sought to be obtained by them must not be lost sight of. This end is discipline, development, mental growth, and culture, and can not be reached by any mere system, however perfect. It may even be retarded by too rapid progress. No amount of stretching will produce healthy growth in a twig. The gradation of schools is only an aid.

Nor should a system be constructed in the interest of scholars irregular and frequently absent. Their number ought to be reduced by a law which will express the public sentiment on the subject; and for the unavoidable cases, provision might be made by a special school.

TRUANT SCHOOL.

The observations upon the reformatory character of this school and its reflex influence upon boys inclined to truancy are confirmed by yearly experience. A system of rewards for meritorious conduct, by which a boy is able to reduce his sentence, has been put in practice to a limited extent, with the best results. One boy has been pardoned as a reward for good conduct.

By the influence of this school, and the excellent discipline of the ungraded school, which is for one class of pupils antecedent to this, the discipline of all the public schools, it is believed, has been greatly benefited. There are records years back of wild insubordination and resistance to teachers. Scarcely a complaint of this kind has been made for a year. It has come to be understood that the whole influence of the school committee, the city government, the police, and the court, and, better still, of the public sentiment, will sustain the teachers in the judicious exercise of all needed authority. Hence, that authority is rarely questioned.

But there is an evil growing more insidious, and, if unchecked, more dangerous. Truants may be cared for; unruly pupils may be subdued. The children most sinned against, and therefore most to be feared hereafter, are such as are not sent to school at all. To look after these and their more guilty parents and employers, and attend to the truants also, is more work than a single officer can perform.

During the period covered by this report the truant officer has attended to 2,400 cases of reported truancy. He has returned to school 1,397 pupils. Forty-five persistent truants have been arrested and brought before the municipal courts. Twenty-two have been sentenced to the truant school. The total expenditure for the year was $2,045.50.

MANUFACTURERS AND EMPLOYERS.

At the opening of the evening schools in October, many children were discovered who were detained from school and employed contrary to law. The co-operation of manufacturers and others was sought in enforcing the law, by means of a circular addressed to all who were known to employ children. In almost every instance they responded cheerfully and without delay. About 100 children were forthwith sent to school in consequence of this circular, and the number now reaches 150. Many of these desired of the superintendent permission to work till spring and then attend school; but there seemed to be no authority for thus setting aside a State law.

COMPULSORY EDUCATION.

There are many persons even in the city of Worcester who look upon the enforcement of the law compelling the education of children as an infringement of the natural rights of parents. While most will admit that children should be educated, yet they are entirely opposed to having a truant officer to execute the law. "They are in favor of the law on general principles, but are opposed to its execution." The idea of compelling a child to read, write, and cipher is, to their minds, tyrannical. They shut their eyes to the fact that the country swarms with vast hordes of children, heirs of penury, ignorance, and crime, whose parents refuse to give them a chance of education which the public schools offer, but who, nevertheless, in a few years demand and obtain as full rights of citizenship as the oldest and wisest men among us.

The State, in justice to itself, should demand of every person claiming the right of citizenship at least an elementary knowledge of his duties; and as this knowledge must come from the volition of the parent and not of the child, the State should enforce the rights of the child from the parent. As for the child, his whole training has been compulsory. He came into the world without his choice; his parents have forced upon him starvation, vice, and misery. The State power, with its mysterious machinery of law and punishments, stands ready to grind him to pieces if he infringe on them. All along it is compulsion. Yet it is tyranny to use compulsory measures by which he shall be made able, at least, to read the laws which at the penalty of his life he must obey.

The question is one which now touches nearly our national life. This country is the receptacle for the ignorant and degraded from every land. It is for us to decide whether they shall be compelled to accept for their children the help the State offers, to lift them to the level of intelligent beings, or be suffered to leave, like breeding barnacles, a weight and a mass of corruption upon us which may sink us at last.

EVENING SCHOOLS.

Two new evening schools have been organized this year. There is an increasing demand for these schools and the attendance is larger than ever before. The majority of pupils need instruction in the most elementary studies. Many are children scarcely fifteen years old, who work by day. These schools must soon receive much greater attention. Stricter laws for school attendance will soon be enacted. Then the question of evening schools and half-time schools will become prominent. A better classification and more teachers are necessary for the highest success of these schools.

FREE EVENING SCHOOL FOR INDUSTRIAL AND MECHANICAL DRAWING.

This school was the first established under the law authorizing such schools. It opened under the most favorable auspices, both because the Institute of Industrial Science, located here, furnished able instructors, the necessary apparatus, and rooms fitted for the use of the school; and also because here, to a remarkable extent, the citizens, workmen and others, appreciated such a school. It was therefore a model which other cities copied largely. The number of persons who entered at the beginning of the present year was 254, of whom 201 were males and 53 females. There ages were: 76 from 15 to 20; 135 from 20 to 30; 36 from 30 to 40; 6 from 40 to 60; and 1 over 60. Of machinists there were 46; carpenters 33; teachers 33; and the balance is distributed among 41 different trades and professions. Fifty-two were members of last year's classes. The average number present is more than 200. Four classes were organized; one advanced class in mechanical drawing and two classes of beginners. These classes were visited in December by Walter Smith, esq., art director for the State. He commended the interest and progress of the class, and spoke of an exhibition of the work done in this school and others in the State, to take place at some central point at the close of the season. He also addressed the whole body of teachers assembled for the purpose, and imparted a new impetus and a new interest to this study.

DRAWING IN THE SCHOOLS.

The attention bestowed upon drawing has brought to light many pupils who have decided talent in this direction, and all have made commendable progress.

TEACHERS' DRAWING CLASS.

During the summer vacation, applications were made by several teachers from this city and neighboring cities and towns for instruction in drawing. Professor Gladwin, of the technical school, consented to teach a class, and notice to that effect was given

through the papers. A number of teachers joined the class, which was maintained at their expense. In the autumn, a class was formed of thirty-four teachers. Including those in the evening classes, which still continue, about half the whole corps of teachers are now perfecting themselves to teach this study intelligently. Mere copying will soon be abandoned in the schools. Each master has already been furnished with a set of models for object-drawing, which will now become general.

THE NORMAL AND TRAINING SCHOOL.

In organization, purpose, and number in attendance, this school continues as last year. "Like all similar schools, it has still to contend against the almost universal objection that young ladies have to seeking a thorough preparation before engaging in the work of teaching. Too often they prefer the crowded ranks of mediocrity and small pay to the almost vacant eminences in the profession, more difficult of access, indeed, but rich in salaries, honor, and extensive usefulness. This school is a constant protest against the round of dull drill and humdrum routine into which teachers are so tempted to fall, and against the idea that inexperience and incompetency are tolerable in primary schools." All but five of the graduates of this school are employed in the city.

HIGH SCHOOL.

The number of pupils during the year has been 379, a larger number than has ever before been enrolled. The graduating class was larger than any within ten years. By the new arrangements of the grammar schools, access to this school is simple and easy. Admission is governed by the pupil's record as well as his examination.

The new building for the high school, dedicated December 30, 1871, is perhaps the best and most expensive school-house in Massachusetts. When completely furnished and equipped, it will cost not far from $200,000. It is designed to accommodate 500 pupils, and contains nine school-rooms, each about 30 feet square. Connected with the lecture-room on one side is a room for philosophical apparatus, and on the other a chemical laboratory, where 30 pupils can work at one time. The audience-hall will seat 700 people; and by opening the sliding doors to the ante-rooms, there are seats for 1,000. A fine-toned bell, costing $1,000, a tower-clock and twelve electric clocks, also costing $1,000, and a grand piano, valued at $1,200, have been presented to the school. At the dedication of the building, addresses were made by Hon. John Eaton, United States Commissioner of Education, Hon. Henry Barnard, ex-United States Commissioner of Education, the mayor of Worcester, the principal of the high school, the superintendent of public schools, and others.

TAUNTON.

CONDITION OF SCHOOLS.

The progress of the schools during the past year has been more than usually satisfactory. Several important changes have been made; the most prominent of which is a regular and uniform series of promotions, thereby making the high school a department of the graded system. The practice of marking the merits of daily recitations has been discontinued, and monthly written examinations substituted, as a test of scholarship. This change has been attended with the happiest results.

DRAWING.

The introduction of instruction in and study of drawing in the schools is regarded favorably by teachers, children, and people. There is no doubt of its success if teachers can acquire the attainments requisite for systematic instruction.

The school of industrial and mechanical drawing was a success from the first, and has been found the most beneficial and most popular of any educational enterprise established by the board, excepting only the regular free day schools.

EVENING FACTORY SCHOOLS.

There were fewer pupils in these schools than last year, but the attendance was far more regular, and the proficiency in scholarship and good behavior more satisfactory. No corporal punishment was allowed, but a police guard was stationed near the schools.

FALL RIVER.

SCHOOL ACCOMMODATIONS.

During the year three buildings have been completed and occupied with schools, but the accommodations are still insufficient. While 5,786 pupils are registered, there are only 4,686 sittings. Owing to this want of room, most of the schools have been too crowded to produce the best results.

DRAWING SCHOOLS.

The free drawing school was opened in December, and continued 15 weeks. It was organized in three classes; one in mechanical, one in architectural, and one in free-hand drawing. The school has been very successful. The class in mechanical drawing numbered 69; that in architectural drawing 96; these classes were made up chiefly of mechanics. The class in free-hand numbered 256, and was composed largely of teachers.

FACTORY SCHOOL.

The working of this school continues to demonstrate the value of the system. The plan of three months of consecutive daily attendance is considered to work better than half-time schools for six months. The success of this pioneer school is attributed in great measure to the hearty co-operation of the owners and agents of the mills, who, though it may interfere with their business, have been ready to make the sacrifice.

WORCESTER COUNTY FREE INSTITUTE OF INDUSTRIAL SCIENCE.

This school was established by the joint donations of John Boynton, a tinsmith, late of Templeton, Massachusetts, and Ichabod Washburn, a wire manufacturer, late of Worcester, Massachusetts. It has been thoroughly equipped, mainly through the liberality of Hon. Stephen Salisbury, of Worcester. It is free to all citizens of the county of Worcester, and to twenty residents in the State outside the county. The twelve trustees are among the most substantial citizens of the county. The eight professors are all young men, selected mainly with reference to their known excellence as teachers.

ORIGIN.

"It arose," says Hon. George F. Hoar, "from the perception by its founders of two facts: First, that the occupation of the people of Massachusetts is hereafter chiefly to be the mechanic arts; secondly, that whatever is to be the occupation of this people must hereafter chiefly be the work of their brains."

RESOURCES.

The endowment of this school, including grounds and buildings, amounts to about $530,000. Of this fund a portion is devoted exclusively to the shop. Mr. Washburn gave the buildings and equipment, the sum of $5,000 for stock, and a fund of $50,000, the interest of which can be used for working capital. The earnings of the shop, added to the income from its funds, just equal the cost of running it, under the present arrangement. It is found that the value to the shop of the unpaid labor of the apprentices is not quite equal to the loss incurred on their account, so that the shop barely pays its way. It is estimated that the general education of each student costs the institution about $200 a year, while his shop training costs $150 a year in addition.

The institute occupies two buildings, Boynton Hall, of granite, 145 feet by 40, and the Washburn machine shop, 100 by 40, with a wing 60 by 40 for boiler and engine rooms. These buildings are fully equipped, and are surrounded by an ample domain of about seven acres of land.

GENERAL PLAN.

In its scope and purposes this school is essentially like the technical schools of Europe, but gives special prominence to the element of practice. That is, it proposes that manual labor shall accompany brain-work, so far as the two can be made to be mutually helpful. For example, the mechanic shall learn theoretical and applied mechanics in the school-room, and shall also learn the use of tools and the construction and management of machinery in the shop. The civil engineer shall in the same way carry into the field whatever knowledge of topography, road-building, and bridge-building he has acquired in school. Further, the art element in technical training is

made prominent. All students draw at least eight hours a week throughout the course. All possible knowledge of the modern languages, mathematics, and the physical sciences is also imparted. The plan of the school may be briefly stated thus: Every graduate shall have a good English education, and shall have enough practical acquaintance with some form of applied science to enable him to support himself after his graduation. To guard against failure from certain sources, practice is subjected to these three conditions: 1. That it shall be a necessary part of every week's work. 2. That it shall be judiciously distributed. 3. That the student shall not receive any pecuniary compensation for it.

PLAN OF ORGANIZATION AND INSTRUCTION.

The terms and time of admission are identical with those of kindred institutions. Instruction is given by recitations, lectures, and practice. The first two methods are identical for all the students, and present no novelty. The practice differs widely, according to the department chosen by each student, but is strictly adapted to prepare the student for professional life. It occupies ten hours each week, and the whole of the month of July.

The practice of the mechanics presents the only difficulty. It is provided for in the following manner: In February of each year an apprentice class is received, on precisely the same terms as those in September. These students spend their whole time, ten hours a day, in the shop, except ten hours a week, which are devoted to free-hand drawing. They enter the regular junior class in September without further examination. At the end of the course they are expected to be as good journeymen as the boys who have spent the whole time in other shops, with the immense advantage of educated faculties.

The grounds on which the expectation is based are these: 1. The development of the sense of form and proportion in the drawing-room is a powerful auxiliary in the training of an artisan. 2. The time each week is distributed in two periods of four hours and one of two. The weariness of protracted work and the worthlessness of hasty work are thus avoided. 3. Apprentices are not kept doing the drudgery of the shop for the benefit of their employers, though no part of their training is omitted or neglected. They advance as fast as their knowledge warrants. 4. Boys whose minds are quickened by daily school drill can learn more at any kind of handicraft in any given time than those who have no such advantage. 5. The shop is organized like any shop, and carried on strictly as a manufacturing concern. It employs the best journeymen, contains the best machinery, and is occupied in doing the best of work. Its business amounts to about $12,000 annually. The speed-lathe, designed and built there, took the gold medal at the Baltimore fair of 1869, and both the engine-lathe and speed-lathe took first premiums at the fair of the American Institute, at New York, 1871. In short, the students receive the full advantage of unlimited means in the shape of tools, and instruction of the soundest and most practical character.

The mechanics in the graduating classes of 1871 and 1872 are all employed as journeymen or as draughtsmen, with a single exception, in leading manufacturing establishments.

COMMENCEMENT.

The annual commencement of the institute occurs the last Wednesday of July. Two full classes have graduated. Addresses have been given by Prof. William P. Trowbridge, of New Haven, Dr. A. P. Peabody, of Cambridge, Hon. G. F. Hoar, M. C., of Worcester, and the president of the board of trustees, Hon. S. Salisbury.

Each graduate presents a thesis, accompanied with drawings. These papers are carefully read and criticised by a committee invited from the community. The names of prominent professors and manufacturers appear on the list of the committees.

HARVARD UNIVERSITY.

STATISTICAL SUMMARY.

Amount of general investments	$1,712,464 64
Income from general investments	123,320 33
Amount of special investments	713,246 67
Income from special investments	61,492 48
Total amount of university funds	2,425,711 31

NEW PROFESSORSHIPS.

The following new professorships have been established: A professorship of agricultural chemistry, a professorship of modern languages, a professorship of political economy, a professorship of horticulture, a professorship of applied zoölogy, a professorship of topographical engineering.

The new appointments of the last two years have increased the number of the faculty. The present number of professors in the different departments is as follows: College proper, 35 professors; divinity school, 4 professors and 2 instructors; law school, 3 professors and 5 lecturers; Lawrence scientific, 15 professors and 2 instructors; school of mining, 10 professors; medical school, 23 professors and 5 lecturers; dental school, 10 professors and 5 instructors; school of agriculture, 8 professors and 6 instructors; Episcopal theological school, 4 professors.

NEW SCHOLARSHIPS.

The following new scholarships have been established: In the law-school, 8 scholarships, of the yearly value of $100; in the college, 5 scholarships; and in the university, the John Thornton Kirkland fellowship, founded by the Hon. George Bancroft. This important gift is the first of its kind made to the university, and is what is called in England a traveling fellowship. It is to be held by no one for more than three years. Merit is the condition of election; $10,000 constitute the fund, the income of which is to be given to the student.

CHANGE IN THE STATUTES.

The only change in the statutes during the year was the repeal of the statutes for the medical school, which were adopted March 28, 1868. A clause in these statutes provides that, "to secure a recommendation to a degree, the candidate must pass a satisfactory examination in at least five of the nine departments." The repeal of this clause left the faculty free to require of every candidate a satisfactory examination in all the nine departments, which they immediately did.

CHANGES IN THE SCHOOLS.

The year 1870–'71 saw great changes made, or planned for execution in 1871–'72, in several of the professional schools, with a view of raising the standard and increasing their efficiency. The standard of admission to the divinity school has been gradually lowered, and in 1869 it was announced that a knowledge of Latin and Greek would not be insisted on as a requisite for admission. "There is reason to hope that in that year the school touched bottom. From there it took a fresh start, and will speedily resume its proper position as regards thoroughness of work."

The regular period of residence in the law school has been lengthened from eighteen months to two years. Degrees will hereafter be conferred only upon those who have remained through the two years' course and passed satisfactory examinations at the end of each year. Instruction is now given every year in all the prescribed studies of the two years' course. This is a change greatly for the better.

In the medical school a complete revolution has been made in the system of education. This system makes much greater demands than the old, both upon students and teachers; and it throws the school out of a long-established connection with the other medical schools of the country. The course of instruction will fill three years, and every candidate for a degree must hereafter pass a satisfactory examination in every one of the main subjects of medical instruction. The faculty, in making these changes, feel confident of the support of the medical profession, which has for a long time demanded some change for the better in the established system of medical education.

The Lawrence Scientific School has been re-organized. Under the new organization the school offers: 1. A four years' course in civil and topographical engineering. 2. A three years' course in practical and theoretical chemistry. 3. A one year's course in the elements of natural history, chemistry, and physics, intended especially for teachers. 4. Thorough instruction for advanced students in physics, chemistry, zoölogy, geology, botany, and mathematics.

The organization of the Bussey Institution, begun in the year 1869–'70, was brought to a provisional completeness in 1870–'71. The regular course of study will fill three years. The single object of the school is to promote and diffuse a thorough knowledge of agriculture and horticulture. Women may be admitted to the courses on horticulture, agricultural chemistry, and entomology.

LANDS ADDED.

The principal purchase of land during the year 1870–'71 was that of the "Holmes estate," a tract of 5.3 acres, which lay between three parcels of land already owned by the university. This estate was bought for $55,000. Three small lots of land, adjoining the grounds of the observatory, have been bought during the year; also a small piece of marsh, adjoining the large tract given to the university last year by Mr. Longfellow and other friends. The present territory of the university within the city limits is about 60 acres.

IMPROVEMENT IN BUILDINGS.

During the year a house has been bought for the use of the dental school, a growing department of the university, which had previously no proper or permanent habitation. Several new buildings have been erected on the university grounds, and extensive alterations and repairs made in those already in use.

REMISSION OF FEES.

In March, 1871, the corporation voted to abolish fees for advanced standing. It is no longer the interest of the university to throw obstacles in the way of students who are well prepared to enter any department of the university in advance of the usual stage of admission.

LIBRARY FUND.

The library funds, for the purchase of books, have largely increased during the last few years. The total yearly income, which must be used to increase the library, is now $7,000. The number of volumes in all the libraries of the university is 192,000.

MUSEUM OF COMPARATIVE ZOÖLOGY.

The museum, under the direction of Professor Agassiz, and enriched by his private collection, claims to rank among the foremost institutions of its kind. In the new building now going up, it is intended, in the arrangement, to make the museum illustrate the history of creation, as far as the present state of scientific knowledge reveals that history. In one part of the building will be exhibited all the animals peculiar to the different parts of the world, in such a manner as to show their actual association in nature. While in the other part of the building will be shown the geographical distribution of animals upon the whole surface of the earth, and their various combinations and associations in different continents. Such twofold arrangement of collections has never yet been attempted in any museum, not even in the largest and most prominent institutions of the kind in Europe.

SMITH COLLEGE.

The following in regard to this institution is gained from a prospectus issued by the college and various items in the press :

Smith College is the result of a bequest by Miss Sophia Smith, of Hatfield, who appointed the trustees of the future college, defined its scope, and determined its general features.

The funds of this college now amount to three hundred and fifty-eight thousand dollars. As a site for the college buildings, the trustees have purchased thirteen acres in the town of Northampton. By the terms of the bequest, not more than half of the sum can be absorbed by grounds and buildings. It is designed that this institution shall be for women what Yale and Harvard are for the other sex, and the requirements for admission are to be similar to those of the highest institutions in the land. The course of study is not yet definitely settled, but will comprise a Latin and Greek course, as advanced as that of our best colleges, and a scientific course, which shall give prominence to chemistry, botany, and physiology. It is understood that these are to be combined in the same curriculum. It is probable that relatively less attention will be paid to the higher mathematics and more to mental science and ethics. The central idea is to make the institution a *woman's college*, giving women the same kind of training that colleges give men. Although this is its specific object, it is expected that, so far as may be required, opportunities will be offered to its students to fit themselves for all the higher professions and employments sought by women.

The officers of the trustees are: Rev. W. S. Tyler, D. D., LL. D., president; Hon. Edward B. Gillett, vice-president; Hon. George W. Hubbard, secretary; Rev. John M. Greene, treasurer.

AMHERST COLLEGE.

This college has a fund of $65,000, the income of which is appropriated to aid young men who are preparing for the Christian ministry and need assistance. Fifty scholarships have been established, varying in their annual income from $40 to $140; nine of these are class-scholarships. Several other class-scholarships have been established in part, but the endowments are not yet placed in the college treasury.

The libraries of the college and the literary societies contain about 36,000 volumes; and the cabinets of natural history contain over 100,000 specimens.

WILLIAMS COLLEGE.

President Chadbourne was inaugurated July 29, 1872, having been chosen to fill the place left vacant by the resignation of President Hopkins, who for 36 years has been the executive head of the college, and has been connected with it for 41 years.

President Hopkins delivered his farewell address, and very briefly reviewed the history of the college during his connection with it. "Thirty-six years ago its charity funds amounted to about $14,000, and its whole productive funds did not exceed $30,000. Now its charity funds amount to more than $70,000, and its whole productive funds to more than $300,000. Then there were but 3 full professorships; now there are 9, and there are no tutors. To have professors only was a great step, involving the essential thing in a college. A college is like a light-house; the structure may be vast, but if the light at its top be dim it is good for nothing. The college has graduated during these years 1,471 men, nearly one-third of whom either have entered or will enter the gospel ministry. In the future of the college, under the management of the president-elect, he felt perfect confidence."

President Chadbourne, in his inaugural address, declared that in his judgment the instruction in Williams College has, upon the whole, afforded as true a type of high education as that in any college in the land. There would be no change, no reform. The college makes no claim to being a technical or professional school, and the popular movement by which colleges are being transformed into semi-technical schools was considered matter for regret.

ANDOVER THEOLOGICAL SEMINARY.

The seminary is open to Protestants of all denominations. The full course occupies three years. The yearly term is nine months. Aid is given from the seminary funds to students who need it.

NEWTON THEOLOGICAL INSTITUTION.

The proximity of this institution to Boston secures great advantages to students. Indigent students are assisted by the Northern Baptist Education Society.

SCHOOL OF THEOLOGY OF BOSTON UNIVERSITY.

The scholastic year of 1871–'72 closed the first quarter of a century of the life of this institution. Its location has several times been changed. In 1869 it was transferred to Boston, and during the last year has become a department of the Boston University. The school of theology is conducted under the auspices of the Methodist Episcopal Church.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY.

The president, in his report, remarks that "the past year's work in all departments has been of the most satisfactory character." The faculty of the institute has been increased by the appointment of three new professors.

About 280 students have attended the school of industrial science during the year. At a meeting of the corporation in June, 1872, it was voted to confer hereafter the degree of "Bachelor of Science" instead of "Graduate of the Massachusetts Institute of Technology." Also to establish advanced courses of study, and to confer the degree of "Doctor of Science," subject to certain conditions.

Changes have recently been made in the department of geology, mining, and metallurgy, and considerable additions made to the means of instruction in these studies. The president is authorized by Hon. John Amory Lowell to announce that it is his intention to establish in the institute courses of instruction in designing, as applied to the industrial arts.

WORCESTER ACADEMY.

The courses of study are, first, a college preparatory course for young men; second, a ladies' collegiate course; third, a commercial course; fourth, a common-school course.

LAWRENCE ACADEMY.

This academy is open to both sexes. Twelve scholarships have been established in three colleges by the late Amos Lawrence, for the benefit of students prepared at this academy. The library, containing 2,500 volumes, was a gift of Mr. Lawrence.

HIGHLAND MILITARY ACADEMY.

The full routine of a military post is here observed. The academy includes a scientific and a commercial department.

MONSON ACADEMY.

When founded this academy received an endowment of half a township in Maine lands. It embraces three departments of instruction.

WILLISTON SEMINARY.

Hon. Samuel Williston, the founder of this seminary, has given $250,000 to the institution. There are three courses of study—English, scientific, and classical.

COLLEGE OF THE HOLY CROSS.

This college was incorporated in 1865. It is conducted by the Fathers of the Society of Jesus. The course of study embraces a period of seven years, three of which are devoted to the preparatory and junior classes. The last year is devoted exclusively to the study of rational philosophy and natural sciences.

MOUNT HOLYOKE FEMALE SEMINARY.

The course of instruction occupies four years. A peculiar feature of this institution is the domestic department, in which all the members of the school aid to some extent.

MAPLEWOOD YOUNG LADIES' INSTITUTE.

An extended course of instruction in music is a feature of this institution.

OREAD INSTITUTE.

The course of study embraces a preparatory and collegiate department. Special facilities are offered for instruction in drawing, painting, and music.

ESSEX INSTITUTE.

This institute was formed in 1848, by the union of the Essex Historical and the Essex County Natural History Societies, and located at Salem. As now organized, the institute consists of three departments: the historical, having for its object the collection and preservation of whatever relates to the geography, antiquities, and history of Essex County; the natural history, for the formation of a cabinet of natural productions in general, and more particularly of those of the county, and for a library of standard works on the natural sciences; the horticultural, for promoting a taste for the cultivation of choice fruits and flowers, and also for collecting works on horticulture and agriculture in connection with the general library.

The library contains about 22,000 volumes, and also 50,000 pamphlets. The collections of the museum in some classes of the animal kingdom are inferior to but few others in the country.

The meetings of the institute are as follows: stated quarterly meetings, regular monthly meetings, and field meetings during the summer months, at such times and places as may be agreed upon. These field meetings are a peculiar and interesting feature of the institute. Usually six are held each season in different localities in the county. The forenoon is devoted to rambling in the woods and fields or on the beach in quest of nature's treasures, or visiting some old historic or antiquarian relic. In the afternoon the attendants assemble in some church, town-hall, or school-house and discuss the subjects presented to notice during the day. The public are invited to be present, and to participate on these occasions; and these meetings are popular and largely attended. Evening meetings are also fully attended during the winter months.

The president of the institute is Hon. Henry Wheatland.

CLARKE INSTITUTION FOR DEAF-MUTES.

This institution is specially adapted for the education of semi-deaf and semi-mute pupils, but others may be received. Pupils are admitted at 5 years of age. The report of the principal states that the classes have made very satisfactory progress. Many of the pupils have improved greatly in speaking and in their use of language. "In the matter of articulation, Mr. Bell's system has been pursued with the class of 1871. With only such elements of the system as could be communicated to the teachers in a few hours, better results have been attained in three months than ever before in the same period of time; and in the matter of tone, compass, modulation, and inflection of the voice, results never before attained at all. It is hoped and expected that the thorough instruction of the teachers by Mr. Bell will add greatly increased facilities to

this department of instruction." The school committee "believe that the results of the years 1870–'71, particularly in the matter of mental culture and development, were highly encouraging."

PRIVATE INSTITUTION FOR THE EDUCATION OF FEEBLE-MINDED YOUTH.

Since the last biennial report 20 new inmates have been received into the institution, of whom 13 were entered as pupils. The number of inmates averages 60. Pupils are received from the age of 6 upward; but the superintendent suggests that an earlier age is preferable. The report states that "the schools have never been more prosperous, as indicated by interest and progress, and have never been filled with a class of pupils averaging so high intellectually." The greatest attention is paid to physical development, and gymnastic exercises are considered of the highest importance. Constant, active employment is the great remedy for that listless vacuity natural to the feeble-minded.

MASSACHUSETTS NAUTICAL SCHOOL.

The trustees, in their twelfth annual report, state that the frequent changes in the officers of the ships during the year ended September 30, 1871, have made it one of unusual trial to the institution. The number of boys in the school-ships, October 1, 1870, was 216; committed during the year, 107; returned from probation and escape, 9; received from State reform school, 2; total, 334. Number discharged on probation during the year, 101; shipped in the revenue or merchant service, 29; deserted, 8; transferred to State reform school and other institutions, 51; remaining October 1, 1871, 144. The average age of boys committed during the year is 15.6 years. Of the number admitted, 70 were of American parentage. Of the number discharged, the average time on board the ships was 18.71 months. "The great depression of our commerce and the consequent large supply of adult seamen have made it difficult to ship boys on voyages at sea during the year. The sale of one of the school-ships made it necessary to concentrate most of the boys on the remaining ship; the ill-effects of this have been felt more or less through the year. Nevertheless the year's work has been rewarded by good results." "The school-room is recognized as a powerful auxiliary in the work of reformation, and the work here has not been less satisfactory than heretofore."

MASSACHUSETTS STATE TEACHERS' ASSOCIATION.

This association held its twenty-eighth annual meeting at Worcester, on Friday and Saturday, December 27 and 28, 1872; the number in attendance being much less than usual, on account of the snow-blockade, which prevented traveling to a great extent. The meeting was called to order by the president, Charles Hammond, of Monson, and opened with prayer by Rev. Mr. Stebbins, of Springfield. Mr. A. P. Marble, superintendent of the city schools of Worcester, welcomed the association, and, in his response, President Hammond took occasion to give a sketch of the organization of the association, and of some of the more prominent of the 85 teachers who first banded themselves together in 1845. He also referred to the organization of the American Institute of Instruction in Boston, in 1830, giving much credit to that and kindred associations for the educational work accomplished during the period of their existence.

Mr. A. H. Davis read a paper on "English literature in our schools," in which he claimed that the study of the best authors should have a place in them, suggesting as the best method for their use, to give at least two hours a week in each school to a reading lesson from standard authors, interspersed with familiar conversation by the teacher and pupils; this plan being considered much better than the reading of extracts from reading-books. Professor D. B. Hagar briefly spoke on the same subject. This was followed by the discussion of the topic, "Latin as a branch of popular education," introduced by F. A. Hill, of Chelsea, who advocated a more thorough and careful study of the English language, and less Latin. He disposed of the plea that the study of Latin is necessary for the proper understanding of English grammar and as an aid in English composition, by saying that grammar was only an afterthought, and that the idioms and beauties of the language can best be learned by a study of the English authors. In conclusion, he thought there should be a better blending of classical and scientific education. The classics can be learned by the many from the English language, by the few, if they choose, from the Latin.

W. C. Collar, principal of the Roxbury high school, differed totally from the author of the paper. He considered the knowledge of Latin essential for an intelligent study of the languages of southern Europe, and also very useful to a proper understanding of the English language. In his opinion, the chief value of a knowledge of the Latin language was the inculcation of what he called a mental conscience, the qualities of patience and veracity.

Mr. D. C. Brown, of the Bowdoin school, Boston, spoke on both of the morning

topics, commending portions of both essays as containing valuable suggestions, but without agreeing fully with either paper.

The discussion was continued by Professor Harris R. Greene, of Worcester; Superintendent B. F. Tweed, of Charlestown; and Messrs. Hill, of Chelsea, and Collar, of Boston. At half past twelve the association adjourned until two o'clock.

Afternoon session.—After the appointment of several committees, Professor A. B. Miller, of Pittsfield, introduced a paper on the "Proper length of the school day." He began by making the rather startling proposition, that when pupils have breathde over the air in the school-room three times it was time to close the session. The speaker devoted a large portion of his essay to the evil effects upon children of a defective system of ventilation, proving by mathematical demonstration that the average school-room is illy-fitted for the healthy accommodation of a large number of scholars. The capacity of a child's mind for protracted effort was also considered as an argument against long sessions. In summing up his position, Professor Miller said that, in his opinion, three hours a day are enough to confine young children in school—or, at most, four hours—divided into two sessions of two hours each. For older pupils five hours might be considered the proper limit.

Mr. D. B. Hagar followed on the necessity of proper ventilation, giving a scientific explanation of the reasons why a school-room should be ventilated at the top instead of near the floor. He also opposed the time-honored custom of securing a change of air by opening the windows at recess, contending that the practice is dangerous to the health of pupils, especially in cold weather. In regard to the length of school hours Mr. Hagar argued that, given a suitable room and a teacher that could keep small children happily and profitably employed, they might as well be in school as anywhere else. The discussion was continued, mainly as to different modes of ventilation, by Dr. Miller and Rev. Mr. Stebbins, of Springfield.

The next paper was read by Superintendent Emerson, of Newton, on the "Limits of school education." After alluding to the importance of the educational work of the public schools, he urged, without favoring any particular curriculum, that no studies should be pursued in the schools merely for the sake of mental discipline, or as an ornamental branch of knowledge. Superintendent Hale, of Cambridge, Messrs. Hubbard, of Springfield, Bunker, of Boston, and Stetson, of Auburn, Maine, followed in brief discussions of the subject.

Evening session.—In the evening, Paul A. Chadbourne, LL.D., President of Williams College, delivered a lecture before an audience numbering over two hundred.

President Chadbourne said that all who sought to teach needed a broad common sense. The intricate workings of theories of education should have a wider scope than the narrow world of the school-room. The character of the teacher is of importance as a molding as well as a moral power. There should be no misjudgments arising from peculiar physical states; all effects of ill states of health must be "discounted," and the instructor must go to his work with a perfect equilibrium of spirit.

In dealing with material things success often depends on a narrowness of education which makes an expert, but that power needed for the development of human character is far different from what is wanted in the mastery of a specialty. When we speak of an educated teacher we must mean something broader than an education for any business. The teacher must grow faster in the knowledge of the world than any other, and should be measured by his power to do *all things*.

If the teacher is to take so fully, as under the present system, the place of the parent, he should have more pay for his work. Still the profession is above pay. The teacher may refuse to accept the conditions of labor offered him, but once entered on the work, to slight it because of little salary is a heavy sin.

The speaker dwelt at some length upon the idea that the profession tended too much to draw its members from the average society of life, and lead them to give too much importance to things simply because they were important, dangers growing with each year of experience. The teacher must have a common-sense knowledge of the world of men, as well as the world of books; he is to fit the pupil for the active, busy world. With this acquaintance with life as it is in parlor, street, and mart, and an earnest zeal, he comes into the clear light of a perfect work.

The lecture was a brief one, occupying less than an hour, and at its close the association adjourned until morning.

Saturday forenoon.—The discussions of the day were opened by J. G. Scott, of Westfield, who read a paper on "What shall be included in the study of English grammar?" The word grammar, said the speaker, originally included every thing pertaining to language, but has been narrowed in signification until it now embraces only a knowledge of the construction of propositions in a language.

Mr. Stebbins, of Springfield, Mr. Tweed, of Charlestown, and Professor Harris Greene, of Worcester, discussed the subject at some length.

Mr. Dickinson, principal of the normal school at Westfield, read a paper on the same subject, which gave rise to further discussion, participated in by President Hammond, T. H. Kimpton, of Chicopee, and some of the previous speakers.

The question was then laid upon the table, and the next topic of discussion, "The proper use of text-books," was introduced by L. F. Warren, of West Newton. The speaker contended that the use of text-books was, in most cases, especially in the lower grades of schools, unnecessary and unprofitable. In history, no books except a blank-book, in which should be written the topics prepared by the teacher, were needed, and in arithmetic none except those containing simple examples and tables. The teacher should supply the rest.

Remarks followed from S. H. Kimpton, of Chicopee; John P. Payson, of Chelsea; Superintendent Hale, of Cambridge; the president; and Messrs. Dunton, principal of the Boston normal school, and Stetson, of Auburn, Maine.

The meeting of the association was hardly a success in point of numbers. The intense cold weather, the snow-blockade, and the Christmas holidays, all combined to prevent out-of-town teachers from attending to any great extent. The discussions, however, were very interesting for the most part, and conducted with spirit and courtesy.

Two or three unimportant amendments to the constitution were proposed for action next year. The treasurer's report for the last year showed receipts to the amount of $3,643.73, expenses $3,748.89, leaving a balance of $105.16 due the treasurer. A letter from Rev. J. P. Coles, of Ipswich, one of the original members of the association, containing words of greeting to the teachers assembled, was read by the president. Officers elected: President, A. G. Boyden, of Bridgewater; corresponding secretary, E. Bently Young, of Boston.

HIGH AND CLASSICAL SCHOOL TEACHERS' ASSOCIATION.

The annual meeting of the Massachusetts High and Classical School Teachers' Association was held in Boston, April 1 and 2, 1872. President, W. C. Collar.

The first topic discussed was "Book-keeping and commercial arithmetic." Mr. Anderson, of Boston, thought too much time was given to teaching the logic of the matter and not enough to practice, and that the time spent on Colburn's Arithmetic was wasted. Mr. Woolson, of the English high school, Boston, agreed that arithmetic should be taught as an art rather than as a science; at least taught first, and the science later. Mr. Hogan, principal of the normal school at Salem, thought that there was too much mental arithmetic in primary schools; but children should not reach the age of eleven before being called on to give reasons for arithmetical operations.

Mr. A. C. Perkins, of the Lawrence high school, read a paper on "History in high schools." This paper advocated the acquisition of a good deal of knowledge of one period and one nation rather than the gaining a slight acquaintance with many nations in every period. Thoroughness in one thing brings one into sympathy with all thorough men; and a habit of investigation gives one aptness that will apply to all pursuits. Mr. Howe, of Jamaica Plain; Mr. Anderson, of Boston; Mr. Williston, of Cambridge, and others, discussed this paper at considerable length, with a general agreement in its main features.

Mr. Charles Hammond, of Monson, presented a paper upon the "Utility of grammar, in its relations to higher education," which was a clear, historical view of grammar and of philological study. In the discussion of this very able paper, Professor Crosby, of Salem, gave some account of his own early training in grammar, which came the first thing after the spelling-book. He said that the old-fashioned method of parsing, by looking out words in the dictionary, led to a book called "Leavitt's method of finding out the parts of speech a word is when it is set down in the dictionary as being in several parts." But seriously, when properly taught, he thought no study so well adapted to cultivate discipline and develop the mind. Professor Atkinson thought the same course in grammar was not good for practical men and for learned men; it is generally introduced too early, and is spoiled in its usefulness by endeavoring to reduce it to the comprehension of small minds.

Mr. W. C. Collar, of Boston, read a paper on the question, "Should Greek be required for admission to college?" Quite an animated discussion followed the reading of this paper, in which Professor Goodwin, of Cambridge; Professor Crosby, of Salem; and Professor Atkinson, of Boston, participated, and which was closed by President Eliot, of Harvard College, who said that whatever colleges require, the schools set themselves to teach; therefore college requisites determine the organization of our schools. "What is the character of secondary education?" is a question of importance to professional schools as well as colleges. The secondary schools should train men for the professional schools as well as for colleges. For these, Latin, French, and German are necessary.

On Tuesday the first paper read was on "The pronunciation of Latin," by Mr. S. Thurber, of Hyde Park, which was discussed by Mr. Hammond, of Monson, who ventured the assertion that the English language is to be the predominating language of the world, and we are under no obligation to say that the ancient sounds must rule. Good usage is not a constant quantity; and language were useless if it did not change.

We are taught Latin pronunciation by Germany now; by and by we shall be the teachers. Mr. Williston, of Cambridge; Mr. Daniels, of Boston; and Mr. Hills, of Lynn, continued the discussion.

A paper was read by Mrs. A. G. Woolson, of Boston, on the "Departmental system of instruction," by which she explained that she meant any of the variations in the system which assigns to each teacher one or more special topics to be taught. This paper called out Mr. Stebbins, of Springfield, who thought the departmental system impracticable in the great majority of high schools. If teachers can teach many branches they are less likely to exercise a distorting influence upon pupils.

Mr. Philbrick, of Boston, claimed that Boston is perfectly unparalleled in the variety of her high schools; the line of progress is by separation rather than by combination.

Mrs. Woolson thought that the subdivision which excludes girls is carried too far. Girls ought to have an opportunity to fit for college, if they wish to. Besides, if they desire positions as assistants in high schools, Boston can not fit them for it. Professor Charles D. Morris, of Peekskill, New York, read a paper on "The crude form system," as applied to the "ancient languages," for which a unanimous vote of thanks was tendered him.

Officers elected: President, W. C. Collar, of Boston; vice-presidents, C. Hammond, M. C. Stebbins, A. C. Perkins, and E. Smith. Recording secretary, W. F. Bradbury, of Cambridge. Corresponding secretary, N. E. Willis, of Boston.

REV. CHARLES BROOKS.—OBITUARY.

Among the eminent persons who have died during the year, whose public services in promoting education have been long continued, earnest, and valuable, the name of Rev. Charles Brooks is prominent.

Mr. Brooks was born October 30, 1795, in Medford, Massachusetts, where he spent the last years of his life, and where he died July 7, 1872, aged 76 years, 8 months, and 7 days. He entered Harvard College in 1812, and was graduated, delivering a poem in Latin, in 1816. He pursued his professional studies in the theological school of Harvard College, terminating them in 1819, and soon entered the ministry at Hingham, Massachusetts.

Mr. Brooks first introduced the use of anthracite coal in Hingham, and was the first to suggest the establishment of a savings-bank in the town. He was president of a peace society, vice-president of the American Colonization Society, and an ardent friend of the temperance cause.

Mr. Brooks was, as is well known, an early and earnest advocate of popular education. As a member of the school committee of his town, and as one of the trustees of Derby Academy, he manifested a strong desire to do all that could be done to elevate the standard of education and extend the usefulness of our institutions of learning.

In November, 1833, he went to Europe, remaining nearly a year. He visited England, Scotland, Ireland, France, Switzerland, and Italy. He was fortunate in making the acquaintance of many distinguished persons in Europe, among them, Rogers, Campbell, Wordsworth, Jeffrey, Cousin, Arago, Schlegel, Mrs. Hemans, Miss Martineau, and many others of note.

It was during this visit to Europe he became interested in the Prussian system of education. His room-mate, on the home passage, was Dr. Julius, of Hamburg, who was sent to this country by the King of Prussia, to collect information respecting our prisons, hospitals, and schools, so that Mr. Brooks, in a passage of 41 days, learned much about the Prussian system, and he lost no opportunity of enlarging his information by European correspondence. He addressed his people on the subject of normal schools on Thanksgiving day, 1835. From that day forward he lectured before conventions, on every opportunity, to advance the cause into which he had entered with so much enthusiasm.

"He lectured in nearly one hundred different towns and cities; in every place where he was invited. By invitation of the legislatures of Massachusetts, New Hampshire, Vermont, Rhode Island, Connecticut, New Jersey, and Pennsylvania, he delivered to crowded assemblies in each two or three lectures, besides speaking in most of the capitals between Boston and Washington." The establishment of the board of education and normal schools in Massachusetts was greatly due to his labors.

A distinguished educator, who is entirely competent to judge in this matter, states that Mr. Brooks, "for his long, disinterested, and unpaid labors in the cause of education, especially for his efforts to secure the establishment of normal schools and a board of education, is entitled to be considered, more than any other individual, what he has been called, the 'Father of Normal Schools.'"

He was most influential in establishing the normal school at Bridgewater. It was in 1838 that the celebrated meeting of the "Plymouth County association for the improvement of common schools" was held at Hanover, where brilliant speeches were made by Horace Mann, Robert Rantoul, George Putnam, John Quincy Adams, and Daniel Webster.

A powerful impression was made upon the public mind. It was on this occasion that Mr. Adams, after speaking of what monarchs had done to establish normal schools through their realms, exclaimed, "Shall we be outdone by kings?" and closed a very eloquent speech amid the acclamations of the assembly. Mr. Webster spoke, also, with his accustomed simplicity, directness, and power. "If," said he, "I had as many sons as old Priam, I would send them all to public schools."

Mr. Brooks was present at this meeting, took the lead in the measures proposed, and much deference was shown him.

In 1838 he was elected professor of natural history in the university of the city of New York. This he accepted, with the concurrence of his parish, which adopted resolutions on the dissolution of his connection, expressive of gratitude for his past labors and hearty wishes for his future success. His pastorate ceased January 1, 1839.

In November, 1839, he departed for Europe, where he remained upward of four years, and attended lectures on natural history in Paris, Versailles, Rome, Naples, and Geneva. He devoted his time to scientific studies, and collected such information as he deemed of importance to him in the professorship. On his return to this country, however, a failure of sight compelled him to resign that office. He retired to private life in Boston, and devoted his time and talents to the promotion of science, literature, and various philanthropic objects. He was always busy, and always seeking to do some good work. It is largely owing to his efforts that the society for the relief of aged and destitute clergymen was founded, and put in successful operation, still continuing in its good work. He was greatly interested in, and was an efficient officer of, the Sunday-school society.

He was elected a member of the Massachusetts Historical Society, the State Historical Society of Wisconsin, and the Chicago Historical Society. He was also a member of the Boston Society of Natural History, and of many other scientific and philanthropic societies. He was for nearly forty years a member of the school committee in the places of his residence.

Many of his sermons, essays, and tracts were published; he also contributed frequently to the periodical press. He was the author of a prayer-book, and of the Daily Monitor, an octavo volume of three hundred and sixty-five sections, intended for use in connection with his prayer-book. He published also a volume on ornithology, and a good history of the town of Medford.

He passed the last years of his life in the old homestead at Medford, and died there, respected and beloved by the community.

WILLIAM SEAVER.—OBITUARY.

William Seaver was born in Northborough, Massachusetts, May 4, 1791. After thoroughly acquiring all the education furnished by the schools of his native town, which, even at that time, were excellent, he spent one year at Leicester Academy, and then, at the age of nineteen, commenced his professional life as a teacher. He taught twenty-eight years in Quincy, four in Cambridge, and about fifteen in his native town, making, in all, nearly fifty years of teaching. He was accounted, everywhere, a good disciplinarian and a competent and successful teacher, and was proud in his old age of showing the tokens of regard received from his former pupils.

He was present at the first meeting of the American Institute of Instruction in 1830, as well as many subsequent ones; but regarding himself as a "country teacher," and, withal, not given to speech-making or debate, he seems never to have taken a very active part in its proceedings, though always an attentive listener. He spent the evening of his life in agricultural pursuits on his own farm in Northborough, and died February 19, 1872, in the eighty-first year of his age.

ALBERT HOPKINS.—OBITUARY.

Albert Hopkins, A. M., LL. D., memorial professor of astronomy in Williams College, died May 25, 1872. He was born at Stockbridge, July 14, 1807; graduated at Williams College, 1826; elected tutor in the same, 1828; professor of mathematics and natural philosophy, 1829; natural philosophy and astronomy, 1838; memorial astronomy, 1869.

Professor Hopkins was one of the first in this country to apprehend the value of object-teaching. This led him, with Dr. Emmons, to originate those scientific expeditions which have been continued, at intervals, since 1832; to visit Europe in 1834, and purchase apparatus for the college, though he was without means, except his salary of $700, and went chiefly at his own expense; to commence, in 1835, the first astronomical observatory in the country, and build it mainly himself, having solicited funds in Boston and elsewhere without success. He was active in promoting the study of natural history in all its branches; had fine taste and great interest in every thing connected with natural scenery; and these he sought to foster among the students. But for him the college grounds would not have been enlarged and beautified as they have been. As a teacher and lecturer Professor Hopkins was interesting and successful, but his

great power lay in his moral and religious influence. This arose from the steady, even supremacy in him of the spiritual nature, from his manifest unselfishness, and the evident reality of his communion with God. For nearly forty years he was seldom absent from the noon prayer-meeting, which he established in 1832, and for a large part of that period he sustained a weekly religious meeting at his own house.

He was quiet and courteous in his bearing, and interested himself in all classes of people, especially in the poor. His philanthropy was thoroughly Christian and democratic. There was also an element of poetry and romance in his composition, which added much to the pleasure of personal intercourse, and gave him a powerful hold of some persons, especially the young.

His presence was always an element of peace; no cause of disorder or of discipline among students ever originated from their relation to him.

CALVIN CUTTER.—OBITUARY.

Calvin Cutter, M. D., died in Warren, Massachusetts, June 20, 1872. He was born in Jaffrey, New Hampshire, May 1, 1807, and until his majority lived with his parents, under the shadow of Monadnock. His early advantages for education were limited; but such books as he could obtain in that sparse settlement were read at night by the light of the pine-knot, or secretly taken to the field to be read behind a fallen tree during his noonday rest. In 1829 he began to study medicine; attended lectures at Bowdoin and Harvard, graduating M. D. at Dartmouth; afterward studied privately with Valentine Mott, of New York, and George B. McClellan, of Philadelphia. From 1834 to 1841 he was a successful practitioner of medicine and surgery. In the late war he rendered efficient service as regimental and brigade surgeon, and surgeon-in-chief of the Ninth Corps.

But his special life-work was in the line of popular education. While a student of medicine, a youth died of hemorrhage, because his fellow-laborers on the farm did not know how to compress the severed artery till a surgeon could be obtained. This suggested the idea of educating the people in minor surgery and the laws of health; and to this work his life was devoted. In 1842 he commenced lecturing in anatomy, physiology, and hygiene, with the aid of manikins and other apparatus, before popular audiences, teachers' institutes, schools, and colleges. This he continued for fifteen years, visiting twenty-nine States, lecturing daily, and directing two or three students in similar labors. In 1847 he wrote, and in 1870 rewrote, the pioneer text-book in that department, his well-known and widely-used "Anatomy, physiology, and hygiene."

SYLVANUS THAYER.—OBITUARY.

General Sylvanus Thayer, LL. D., died at his residence in South Braintree, Massachusetts, September 7, 1872, in the eighty-eighth year of his age. General Thayer was born in Braintree, Massachusetts, June 19, 1785. He graduated with the highest honors, at Dartmouth College, in 1807. The same year he entered the United States Military Academy at West Point, from which, owing to his previous acquirements, he graduated in 1808. He at once received the appointment of second lieutenant in the Corps of Engineers, and was engaged for several years in planning, constructing, and inspecting important military works.

In the war of 1812 he was chief engineer of the Northern army, under General Dearborn. For distinguished and meritorious services he was raised to the rank of brevet major. After the war he spent two years in studying military affairs in Europe. From 1817 to 1833 he was superintendent of the Military Academy at West Point, where he rendered most efficient services. Under him the academy was completely re-organized, and its present efficiency is in a great degree due to his efforts. After resigning his position at New York he was for many years engaged in directing works of defense and harbor improvements—particularly on the coast of Massachusetts. In 1863 he was placed on the retired list, having been at that time "more than forty-five years in service." At the time of his death he held the rank of brevet brigadier-general. By a gift of $70,000 he founded the Thayer School of Civil Engineering of Dartmouth College. He also gave large sums for the establishment of an academy and library in Braintree.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Massachusetts was the seventh State in population, having 1,457,351 inhabitants within an area of 7,800 square miles—an average of 186.84 persons to the square mile. This population consisted of 1,443,156 whites, 13,947 colored, 97 Chinese, and 151 Indians. Of these, 1,104,032 were natives of the United States and 353,319 foreign-born. Of the native residents of the State 896,372 whites, 6,819 colored, and 106 Indians were born within its borders, while of the foreign residents 130,702 were born in Germany, 34,099 in England, and 216,120 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 287,405 persons

attended school, and of these 17,086 were foreign-born. The white male scholars numbered 143,779, and the white female scholars 141,755, (an aggregate of 285,534 whites.) The colored pupils numbered 1,848, of whom 941 were males and 907 females.

Illiteracy.—The number of inhabitants of all races, 10 years old and over, unable to write, was 97,742, of whom 89,830 were foreign-born.

Age, sex, and race of illiterates.—Of the 95,576 white illiterates, 4,359 were from 10 to 15 years of age, and of these, 2,215 were males and 2,144 females; 7,407 were from 15 to 21 years old, of whom 3,013 were males and 4,394 females; 83,810 were 21 years old and over, of whom 30,920 were males and 52,890 females. Of the 2,148 colored illiterates, 59 were from 10 to 15 years old, of whom 29 were males and 30 females; 223 were from 15 to 21 years old, of whom 76 were males and 147 females; 1,866 were 21 years old and over, of whom 822 were males and 1,044 females. Eight male and 8 female Indian illiterates were also reported, with 2 male Chinese illiterates.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 5,726, having 7,561 teachers, of whom 1,428 were males and 6,133 females, to educate 269,337 pupils, of whom 134,777 were males and 134,560 females.

Amount and source of educational income.—The total income of all the educational institutions was $4,817,939, of which $383,146 were derived from endowment, $3,183,794 from taxation and public funds, and $1,250,999 from tuition and other sources.

Public schools.—The 5,160 public schools, with their 6,140 teachers, of whom 753 were males and 5,387 females, were attended by 242,145 pupils, of whom 121,572 were males and 120,573 females. To educate these they possessed a total income of $3,207,826, of which $27,315 were derived from endowment, $3,069,085 from taxation and public funds, and $111,426 from tuition and other sources.

Colleges.—The 6 colleges, with their 137 male teachers, were attended by 1,290 male students. To educate these they possessed a total income of $408,126, of which $231,065 were derived from endowment and $177,061 from tuition and other sources.

Academies.—The 50 academies, with 183 teachers—83 male and 100 female—had an attendance of 3,543 pupils, 1,754 male and 1,789 female, for the education of whom they possessed a total income of $285,325, of which $28,776 were derived from endowment, $4,544 from taxation and public funds, and $252,015 from tuition and other sources.

Private schools.—The 468 day and boarding schools had 783 teachers, of whom 255 were males and 528 females. They were attended by 13,315 pupils, 6,711 of whom were males and 6,604 females. These schools possessed an income of $533,690, derived from tuition and other sources.

Libraries.—There were 1,544 public libraries, containing 2,010,609 volumes; also 1,625 private libraries, having 1,007,204 volumes—a total of 3,169 libraries, containing 3,017,813 volumes.

The press.—The 259 periodicals issued had an aggregate circulation of 1,692,124 copies, with an aggregate annual issue of 129,691,266 copies.

Churches.—Of the 1,848 church organizations, 1,764 had edifices with 882,317 sittings, and the church property was valued at $24,488,285.

Pauperism.—Of the 5,777 paupers, 5,323 were native whites, 73 native colored, and 381 foreigners.

Crime.—Of 2,526 persons imprisoned June 1, 1870, 1,152 were native whites, 139 native colored, and 1,235 foreigners; 1,593 persons were convicted during the year.

Age and sex of population.—Of the total population, 371,820 persons were from 5 to 18 years old—184,640 males and 187,180 females; 1,160,666 were 10 years old and upward, and of these 554,886 were males and 605,780 females.

Occupations.—Five hundred and seventy-nine thousand eight hundred and forty-four persons of these ages were engaged in various occupations, of whom 451,543 were males and 128,301 females; 72,810 were engaged in agricultural pursuits, of whom 72,756 were males and 54 females; 131,291 in personal and professional services, of whom 75,917 were males and 55,374 females; 83,078 in trade and transportation, of whom 81,077 were males and 2,001 females; 292,665 in manufactures and mining and mechanical industries, of whom 221,793 were males and 70,872 females.

Age and sex of working population.—Of these 579,844 employed persons, 18,479 were from 10 to 15 years old, of whom 12,180 were males and 16,299 females; 528,889 were from 16 to 59 years old, of whom 409,180 were males and 119,709 females; 32,476 were 60 years old and over, of whom 30,183 were males and 2,293 females.

MICHIGAN.

[From report of Hon. Oramel Hosford, superintendent of public instruction, for the year 1871.]

SCHOOL FUND.

The past fiscal year, by a change in the time of making the annual reports of the State finances, embraces but ten months.

On hand at commencement of the year	$437,939 23
Two-mill tax	409,541 20
Primary school fund	182,922 25
Tuition of non-resident scholars	26,047 40
District taxes to pay teachers	1,157,549 43
Other district taxes	591,858 46
Tax on dogs	25,608 46
From all other sources	499,506 05
Total	3,330,972 48
Total receipts for 1870	3,151,763 78
Increase for 1871	179,208 70
Cost of administration for 1870	3,259,843 24
Cost of administration for 1871	3,356,635 28
Increase in cost of administration	96,792 04
Total interest from all educational funds, including primary school, university, normal school, and agricultural college, for 1872	245,009 11
Total appropriations by legislature for 1871 and 1872	344,200 00

The cost of tuition for each child in the State at large was an average of 56 cents per month; for each child in the districts was 58 cents per month, an increase of 10 cents.

SCHOOL ATTENDANCE.

Number of children in the State between 5 and 20 years of age	394,195
Number of children subject to the law compelling attendance at school between 8 and 14 years of age	175,092
Number of children reported attending school	292,476
Estimated number unreported	14,729
Total	307,205
Increase in attendance over 1870	8,000
Attendance in proportion to whole number of children, 1871	76½
Attendance in proportion to whole number of children, 1870	72½
Number of graded schools reported	266
Number of districts which had no school	62
Number with no school less than last year	11

BRANCHES OF STUDY.

Number of districts in which spelling is taught	5,174
Number of districts in which reading is taught	5,175
Number of districts in which writing is taught	5,131
Number of districts in which arithmetic is taught	5,072
Number of districts in which mental arithmetic is taught	4,995
Number of districts in which geography is taught	4,888
Number of districts in which grammar is taught	4,616
Number of districts in which algebra is taught	1,195
Number of districts in which book-keeping is taught	572
Number of districts in which geometry is taught	187
Number of districts in which natural philosophy is taught	464
Number of districts in which physiology is taught	367
Number of districts in which chemistry is taught	103

TEACHERS AND THEIR SALARIES.

Number of teachers, male	2,971
Number of teachers, female	8,303
Total	11,274

Average pay per month, males	$49 92
Average pay per month, females	$27 21
Average number of months school	7

SCHOOL LAWS.

During the year several amendments have been made to the school laws, principally to provide more effectually for raising the school-tax, and to facilitate operations in the district boards.

TEACHERS' INSTITUTES AND ASSOCIATIONS.

The spring and autumn series of teachers' institutes were held at 16 different towns, with an attendance of 1,432. From their number it was impossible to appoint all the autumn institutes at the most favorable times, and the attendance was not as large as it would have been otherwise. The county superintendents continue to hold their institutes, several having connected with them classes which they teach from four to six weeks. The testimony to the practical value of these institutes is universal. So great is their effect in enlarging the teachers' views of their own work, and opening the eyes of those who have had few advantages to their deficiencies, that several have left the school-room as teachers to enter another as pupils.

Teachers' associations have been held with advantage in several of the counties.

COUNTY SUPERINTENDENTS.

The unprecedented success of the schools during the year is greatly owing to the efforts of the county superintendents, especially to their endeavors in advancing the scholarship of teachers. Six thousand six hundred and twenty-one visits have been made by the superintendents, and 14,385 by directors.

THE KINDERGARTEN.

At Detroit is a kindergarten school, conducted on Frœbel's system. Another at Lansing is formed on the same general plan, but the training is somewhat varied to suit the necessities of the children. So far the experiment has proved a complete success.

STATE UNIVERSITY.

The present prosperous condition of the university is most gratifying. A grant of $75,000 having been made by the legislature for the erection of an edifice to be called "University Hall," the corner-stone was laid in June. The building is now completed, furnishing a commodious audience-room and recitation-rooms. During the year all the departments were opened to female students, and 34 were registered. No discrimination was made except in the medical department, where the ladies formed a separate class, receiving the same course of lectures as the male students. Ladies who applied were fully prepared to enter whatever classes they wished, and at once took a position among the best of the class. One has already graduated in law, one in medicine, and two in pharmacy. There is every reason to believe that the action of the university, with regard to co-education, will be attended with satisfactory results.

Closer relations have been established between the university and the State high schools, and thus with the State system of education.

The whole number of diplomas conferred during the year is 302. The total receipts for the year were $104,096.44; total expenditures, $79,447.36.

The library has been enriched by the addition of the large private library belonging to the late Professor Rau, of Heidelberg, presented by Philo Parsons, esq., of Detroit.

J. B. Steere, a graduate of the literary and law departments of the university, has forwarded a valuable collection of zoölogical and geological specimens from Brazil. Botanical and archæological specimens have also been added to the museum.

AGRICULTURAL COLLEGE.

An appropriation was made by the last legislature for building a laboratory. This is now completed, with accommodations for students in analytical, elementary, and higher chemistry. Additional buildings have been erected for the farm, and facilities for testing the worth of the science of agriculture, as applied to actual field-work, have been increased. It is believed that the college will at no distant day be rendered self-supporting by the income derived from sales of land.

ALBION COLLEGE.

The financial condition of this college has greatly improved. The buildings and grounds have been put in better order, and an endowment of not less than $110,000 has been secured.

KALAMAZOO COLLEGE.

No special changes have occurred in this college during the year. The endowment fund is $70,000.

HILLSDALE COLLEGE.

The general condition of this college is satisfactory. A larger number of students has been in attendance than for several years past. The present endowment is about $70,000. At the last meeting of the board of trustees, Rev. D. M. Graham was appointed president.

ADRIAN COLLEGE.

Three years ago the south hall, occupied by ladies, was burned, and the college has not entirely recovered from the blow. It has, however, been attended with marked success during the year. In addition to the classical and scientific course, a department of theology and biblical literature has been organized.

OLIVET COLLEGE.

The number of students attending this college has been larger than in previous years. Canvassing for an additional endowment fund is to be vigorously prosecuted, conditional pledges to the amount of $20,000 having already been made.

STATE NORMAL SCHOOL.

Steps have been taken to separate the academic work from the more strictly professional training of the school by reorganizing the model school, and making its high-school department a regular academic or high school; and, in order to afford the normal scholars additional facilities for observation and practice, an arrangement has been made with the Ypsilanti school board, by which their union school is used for these purposes.

STATE REFORM SCHOOL.

Though the past year has been, on the whole, a prosperous one, the necessity of separating boys committed for slight offenses from those who are depraved and incorrigible, becomes more and more pressing.

Lack of work has seriously affected the income of the school; and on this account a number of the boys were employed in cutting wood for a portion of the year. During the summer, and at the present time, the boys have been occupied in the shops, farm, &c., without loss of time. The band continues to fill a very essential place in the school work, the concerts being sufficiently remunerative to furnish means for additions to the boys' library and to make a beginning of an art gallery and museum.

MICHIGAN STATE TEACHERS' ASSOCIATION.

This association met in Detroit, December 27–29, 1871, with a good attendance; Duane Doty, president. Addresses were given by A. A. Griffith, of Ypsilanti, on "Practical elocution;" by J. M. Wellington, on "The teacher's ideal."

An essay upon "Our work" was read by Miss D. E. Henry, of Grand Rapids. H. D. Harrower read a paper upon "Our union schools;" D. C. Scoville read an elaborate essay upon "The manhood of strength and gentleness;" William B. Sibler gave an address upon "Education inseparable from civilization." The officers elected were: president, J. F. Nichols; recording secretary, Miss M. Rose; corresponding secretary, Miss E. F. Thompson.

MICHIGAN ASSOCIATION OF COUNTY SUPERINTENDENTS.

The tenth semi-annual meeting of this association was held in Port Huron, February 20 and 21, 1872. The first session was occupied with reports from the counties, and in the evening a public address was given by Superintendent Duane Doty, of Detroit.

A variety of subjects appropriate to the work of the superintendents was discussed. Officers elected: president, Superintendent Botsford; secretaries, Messrs. Willard, of Monroe, and Curtis, of Isabella. The next meeting was fixed for the 10th of September, at Lansing.

ALLEN J. CURTIS.—OBITUARY.

Allen J. Curtis, A. M., formerly instructor in Kalamazoo College, and more recently assistant professor of rhetoric and English literature in the State university, died of consumption, at Shelby, Macomb County, December 28, 1871. He was graduated at Kalamazoo College, 1860; pursued post-graduate studies at the university; was obliged to resign his professorship in 1866 on account of failing health. He was only 33 years old, but had already accomplished much in literature and education.

HENRY W. THOMPSON.—OBITUARY.

Henry W. Thompson, principal of the Union school in Cambria, Hillsdale County, died at that place of quick consumption, January 7, 1872. The Michigan Teacher says: "We know nothing of his professional characteristics or career; but his life derived peculiar interest from the fact that he had been rescued from the 'little wanderers' in the streets of New York and brought to the West by the Howard Mission."

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Michigan was the thirteenth State in population, having 1,184,059 inhabitants within an area of 56,451 square miles, an average of 20.97 persons to the square mile. This population consisted of 1,167,282 whites, 11,849 colored, 2 Chinese, and 4,926 Indians. Of these 916,049 were natives of the United States, and 268,010 were foreign-born. Of the native residents of the State, 498,746 whites, 3,860 colored, and 4,662 Indians were born within its borders, while of the foreign residents, 64,143 were born in Germany, 35,051 in England, and 42,013 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 264,217 persons attended school, and of these 24,352 were foreign born. The white male scholars numbered 136,607, and the white female scholars 125,754, (an aggregate of 262,361 whites.) The colored pupils numbered 1,483, of whom 769 were males and 714 females; 207 male and 166 female Indians are also reported as attending school.

Illiteracy.—The number of inhabitants, of all races, 10 years old and over, unable to write, was 53,127, of whom 30,580 were foreign-born.

Age, sex, and race of illiterates.—Of the 48,649 white illiterates 8,022 were from 10 to 15 years of age, and of these 4,728 were males and 3,294 females; 5,098 were from 15 to 21 years old, of whom 2,973 were males and 2,125 females; 35,529 were 21 years old and over, of whom 17,543 were males and 17,986 females. Of the 2,655 colored illiterates 369 were from 10 to 15 years old, of whom 170 were males and 199 females; 330 were from 15 to 21 years old, of whom 169 were males and 161 females; 1,956 were 21 years old and over, of whom 1,015 were males and 941 females; 791 males and 1,032 female Indian illiterates were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 5,595, having 9,559 teachers, of whom 2,999 were males and 6,560 females, to educate their 266,627 pupils, of whom 128,949 were males and 137,678 females.

Amount and source of educational income.—The total income of all the educational institutions was $2,550,018, of which $81,775 were derived from endowment, $2,097,122 from taxation and public funds, and $371,121 from tuition and other sources.

Public schools.—The 5,414 public schools, with their 8,977 teachers, of whom 2,796 were males and 6,181 females, were attended by 254,828 pupils, of whom 123,984 were males and 130,844 females. To educate these they possessed a total income of $2,164,489, of which $2,019,622 were derived from taxation and public funds and $144,867 from tuition and other sources.

Colleges.—The 9 colleges, with their 88 teachers, (66 males and 22 females,) were attended by 1,704 students, of whom 1,122 were males and 582 females. To educate these they possessed a total income of $98,905, of which $55,442 were derived from endowment, $6,464 from taxation and public funds, and $36,999 from tuition and other sources.

Academies.—The 3 academies, with their 13 teachers, (4 male and 9 female,) were attended by 195 pupils, of whom 45 were males and 140 females. They possessed an income of $9,722, derived from tuition and other sources.

Private schools.—The 119 day and boarding schools had 218 teachers, of whom 58 were males and 160 females. They were attended by 4,577 pupils, 1,737 of whom were males and 2,840 females. These schools possessed a total income of $75,445, of which $1,000 were derived from endowment and $74,445 from tuition and other sources.

Libraries.—There were 3,002 public libraries, containing 578,631 volumes; also 23,761 private libraries, having 1,596,113 volumes—making a total of 26,763 libraries, containing 2,174,744 volumes.

The press.—The 211 periodicals issued had an aggregate circulation of 253,774 copies, with an aggregate annual issue of 19,686,978.

Churches.—Of the 2,239 church organizations 1,415 had edifices with 456,226 sittings, and the church property was valued at $9,133,816.

Pauperism.—Of the 2,042 paupers 768 were native whites, 85 native colored, and 1,189 foreigners.

Crime.—Of 1,095 persons imprisoned June 1, 1870, 617 were native whites, 62 native colored, and 416 foreigners. Eight hundred and thirty-five persons were convicted during the year.

Age and sex of population.—Of the total population, 358,530 persons were from 5 to 18 years old—181,806 males and 176,724 females; 873,763 were 10 years old and upward, and of these 460,408 were males and 413,355 females.

Occupations.—Four hundred and four thousand one hundred and sixty-four persons of these ages were engaged in various occupations, of whom 346,717 were males and 57,447 females; 187,211 were engaged in agricultural pursuits, of whom 187,036 were males and 175 females; 104,728 in personal and professional services, of whom 52,754 were males and 51,974 females; 29,588 in trade and transportation, of whom 29,493 were males and 95 females; 82,637 in manufactures and mechanical and mining industries, of whom 77,434 were males and 5,203 females.

Age and sex of working population.—Of these 404,164 employed persons 9,341 were from 10 to 15 years old, of whom 7,045 were males and 2,296 females; 374,216 were from 16 to 59 years old, of whom 319,569 were males and 54,647 females; 20,607 were 60 years old and over, of whom 20,103 were males and 504 females.

MINNESOTA.

From report of Hon. H. B. Wilson, superintendent of public instruction, for the year ended September 30, 1871.]

SCHOOL FUND.

This fund is derived from the proceeds of the sale of school lands. The receipts are invested in State and national securities. Permits to cut timber on these lands are also sold at public sale.

Total amount invested	$827,606 25
Total amount in treasury	58,962 75
Total amount due on lands sold, and bearing 7 per cent. interest	1,657,507 12
Total amount of permanent school fund, November 30, 1871	2,544,076 12
Whole amount received from school fund, 1870	$289,480 09
Whole amount received from school fund, 1871	302,995 68
Increase	13,515 59
Amount apportioned from permament school fund, 1870	$176,806 35
Amount apportioned from permanent school fund, 1871	163,555 35
Decrease	13,251 00
Whole amount received from taxes voted by districts in 1870	$500,928 43
Whole amount received from taxes voted by districts in 1871	665,967 08
Increase	165,038 65
Whole amount expended for school purposes, 1870	$792,852 91
Whole amount expended for school purposes, 1871	1,011,656 73
Increase	218,803 82
Whole amount in district treasuries, September 30, 1871	$137,048 82
Orders or bonds unpaid at the close of the year	466,801 75

SCHOOL ATTENDANCE.

Whole number of children in the State between 5 and 21 years of age, 1870	155,767
Whole number of children in the State between 5 and 21 years of age, 1871	167,463
Increase for the year	11,696
Whole number of persons attending school in 1870	110,590
Whole number of persons attending school in 1871	113,983
Increase for the year	3,393
Per cent. of attendance in 1870	71
Per cent. of attendance in 1871	68
Whole number of winter schools, 1870	1,955
Whole number of winter schools, 1871	2,221
Increase for the year	266
Whole number of summer schools, 1870	2,155
Whole number of summer schools, 1871	2,164
Increase for the year	9

TEACHERS AND SALARIES.

Number of male teachers, 1870	1,336
Number of female teachers, 1870	2,775
Number of male teachers, 1871	1,482
Number of female teachers, 1871	2,903
Average wages per month for male teachers, 1870	$37 14
Average wages per month for female teachers, 1870	$23 36
Average wages of male teachers per month, 1871	$37 68
Average wages of female teachers per month, 1871	$25 51
Average number of months school per year	6.5

SCHOOL LAWS.

At the convention of county and city superintendents, it was recommended that the legislature authorize the superintendent of public instruction to divide the State into 5 institute districts, and provide a suitable instructor to hold 5 training schools for teachers in each, these schools to be in session not less than 4 weeks.

TEACHERS' INSTITUTES.

During the past year 19 institutes were held in the State, with an attendance of 1,289 teachers. Instruction in methods of teaching was given by able and experienced persons, both male and female, and the interest as manifested by the attendance was greater than in any preceding year.

TEACHERS' ASSOCIATION.

The State teachers' association held its eleventh annual meeting in Normal Hall, at Winona, August 29, 30, and 31. Though the attendance was not as large as in former years, the proceedings were most important. Among the addresses made was one by C. H. Berry, esq., calling attention to the fact that in 1851, when the territorial government was about three years old, there were in Minnesota but 13 school districts and four school-houses, and the whole appropriation by the State was $1,721.73; in 1869 the number of school districts was 2,521, the number of school-houses, 1,929; and the amount paid teachers, $360,697.50. He stated that this rapid growth was owing in great measure to the land appropriation, 363,100 acres of which have been sold, making an accumulated fund of $2,371,199.

The resolutions passed by the association evinced a spirit of progress in all educational matters.

COUNTY SUPERINTENDENTS.

In some localities objections are raised against this office, but they are such as by their very existence prove its usefulness. Though there are circumstances which in many cases make it impossible to secure men properly fitted for the position, yet the benefits to the school-system as shown by the improvement in teachers, school-buildings, &c., are incalculable. The report recommends that an adequate salary be affixed to this office by law.

CONVENTION OF COUNTY AND CITY SUPERINTENDENTS.

The convention of county and city superintendents held its annual meeting in the normal-school building at Winona the last week in August, and was in session two days. About half the counties in the State were represented. Many important questions concerning the educational interests of the city graded schools, as well as the common district schools, were discussed. It was recommended that examinations should be held as often as once a month in the public schools.

PRIVATE SCHOOLS.

There has been a considerable decrease in the number of these schools during the past year. The high schools connected with the graded school system do the work of preparing young men and women to enter classes in colleges and the State university, and render private schools in a measure unnecessary.

CARLTON COLLEGE.

This college is reported to be in a very flourishing condition. Their new building, erected within the year, is nearly ready for occupancy.

RED WING COLLEGIATE INSTITUTE.

This institution has a commodious building, costing about $25,000. It is open to both sexes, and is intended to take a position between the public schools and university, preparing pupils for the latter.

THE COLLEGE OF SAINT JOHN.

This college was organized last September, and has only the preparatory department in operation. The Roman Catholic bishop of the diocese is *ex-officio* president.

FIRST NORMAL SCHOOL.

This institution is in Winona. Its new building is not yet entirely finished or fitted for occupation. The cost as it now stands has been $134,162.63. The school has had under instruction in its normal department since 1864 more than 600 young men and women; 114 have graduated, nearly all of whom are now engaged in teaching. During the year 34 pupils have graduated. The increase of attendance for the year has been 25 per cent. In the institution are 70 orphans of fallen soldiers, provided for partly by the State and partly by individuals. The number of counties represented is 22. The cost of maintaining the school from September, 1870, to September, 1871, was $12,000. It has been only by the strictest economy that the expenses have been kept within this limit.

SECOND NORMAL SCHOOL.

The second normal school, at Mankato, has graduated 20 young men and women, all of whom are teaching in the public schools of the State. The number of counties represented the past year was 21. The average age of pupils training to become teachers is 19.7 years. Twenty-three pupils will graduate in June next. The educational advantages of nearly all the pupils have heretofore been very limited. In many cases, however, what is lacked in this respect is made up in earnestness and studious behavior. The current expenses for the year have been $7,993.02.

THIRD NORMAL SCHOOL.

This school is in Saint Cloud. The basement story of a permanent building for the school was completed summer before last, at an expense of $9,495.55. The old building has been crowded from the first, and there is call for three times the room now afforded. It has in two years had under instruction 115 normal students. It gradnated its first class last June, consisting of 15 young men and women; 13 of these are now teaching. The other 2 expect to begin work with the new year. A class of about 20 will graduate in June next. The current expenses for the year are $6,433.32. These schools are all greatly in need of an additional appropriation, and that at Mankato was obliged to incur a debt of $2,000 in its current expenses during the past year.

UNIVERSITY OF MINNESOTA.

The past year has been the first under the new or modified organization. The two courses offered in the Latin or preparatory school have been consolidated, Latin being made obligatory upon all who enter the school. The first three departments of the university—the department of elementary instruction, the college of science, literature, and the arts, and the college of agriculture and the mechanic arts—have been organized, and the first two are in operation. The third is organized in two divisions, that of agriculture and that of the mechanic arts. The latter will be in operation from the beginning of the academic year 1872–'73, the former as soon as the vacant professorship of agriculture can be filled. The other departments, a college of medicine and a college of law, will be put in operation as fast as the means of the university will permit. The number of transient and local scholars has much diminished, and the number of those intending to pursue a full course is largely increased.

BENEVOLENT INSTITUTIONS.

These are the State reform school, soldiers orphans' home, and institution for educating the deaf and dumb and blind. All have had a prosperous and successful year. Professor Noyes, principal of the last-named institution, reports the numbers in attendance: Deaf and dumb, 60; blind, 17; applications, 28. Besides these the census shows 55 deaf and dumb and blind children in the State of an age to attend school.

PROFESSOR WILLIAM O. HISKEY.—OBITUARY.

Professor William O. Hiskey, city superintendent of schools, Minneapolis, died of apoplexy, October 3, 1871.

He was born at Lexington, Ohio, May, 1838; graduated at Otterville College, 1861; after preaching about a year adopted the profession of teacher; was employed both as teacher and superintendent at Davenport, Iowa; came to Minneapolis in 1866; was two years principal of high school; was superintendent of schools till his death; president Young Men's Christian Association, and at the time of his death superintendent Methodist Episcopal Sabbath-school; closely identified with the missionary work on the line of the Northern Pacific Railroad, and ever ready to assume any duty, no matter how laborious, for the advancement of religion. The cause of his death may probably be traced to excessive labors imposed upon a constitution naturally weak. On his last Sabbath he preached in the forenoon at Saint Anthony's, superintended Sabbath-school at 2 p. m., held open-air services at 5 p. m., and addressed the Sabbath-school concert at the Centenary church in the evening. Arriving at home, he complained of feeling tired, and his wife suggested that he was trying to do too much; but he replied that he was never so happy as when attending to the work his hands found to do. That night he died, in the midst of what should have been his most useful years—died as many have died before, and as many will hereafter, for want of that self-control, that true temperance, which does not suffer the mind to overwork the body. "No citizen of Minneapolis was more universally respected, or more truly honored and beloved, than Professor Hiskey.

MINNESOTA ASSOCIATION OF SUPERINTENDENTS.

The sixth annual meeting of this association was held at Minneapolis in August. President Folwell presented a communication from a committee of the board of regents of the State university in regard to the preparation of a course of study for the high schools of the State that shall have a proper relation to the university courses.

Superintendent Burt read a paper on the topic, "Can parents and guardians generally be induced to give their children the advantages for education afforded in our public schools without laws compelling attendance?"

Superintendent J. W. Hancock read a paper on "Some of the benefits of county superintendency." Superintendent Thurston presented a paper on "The best time to commence summer schools," preferring the 15th of May as the commencement and the 25th of July as the close. Superintendent Thompson read a paper on the question, "How can the great evil resulting from the appointment of unqualified men to the office of county superintendent be remedied?" Superintendent Whiteman read a paper on the subject, "Should the rate of compensation of teachers in graded schools be determined by the age and advancement of their pupils?" Superintendent O. V. Tonsly read a paper on "School examinations," and this and the other topics presented were fully discussed.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Minnesota was the twenty-eighth State in population, having 439,706 inhabitants within an area of 83,531 square miles, an average of 5.26 persons to the square mile. This population consisted of 438,257 whites, 759 colored, and 690 Indians. Of these 279,009 were natives of the United States and 160,697 were foreign-born. Of the native residents 125,759 whites, 115 colored, and 617 Indians were born within its borders, while of the foreign residents 41,364 were born in Germany, 5,670 in England, and 21,746 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 96,793 persons attended school in 1870, and of these 13,061 were foreign-born. Of the white scholars 50,158 were males and 46,528 females, a total of 96,686. Of the 75 colored pupils 35 were males and 40 females. Sixteen male and 16 female Indians were also reported.

Illiteracy.—Twenty-four thousand four hundred and thirteen inhabitants of all races, 10 years old and over, were reported as unable to write, of whom 18,855 were foreign-born.

Age, sex, and race of illiterates.—Of the 23,941 white illiterates 3,802 were from 10 to 15 years old, and of these 2,122 were males and 1,680 females; 1,989 were from 15 to 21 years old, of whom 1,014 were males and 975 females; 18,150 were 21 years old and over, of whom 8,041 were males and 10,109 females. Of the 102 colored illiterates 6 were from 10 to 15 years of age, of whom 2 were males and 4 females; 15 were from 15 to 21 years old, of whom 11 were males and 4 females; 81 were 21 years old and over, of whom 44 were males and 37 females; 178 male and 192 female Indians were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 2,479, having 2,886 teachers, of whom 979 were males and 1,907 females, to educate 107,266 pupils, 55,166 of whom were males and 52,100 females.

Amount and source of educational income.—The total income of all the educational institutions was $1,011,769, of which sum $2,000 were derived from endowment, $903,101 from taxation and public funds, and $106,668 from tuition and other sources.

Public schools.—The 2,424 public schools, with 2,758 teachers, 919 male and 1,839 female, were attended by 103,408 pupils, of whom 53,171 were males and 50,237 females. To educate these they possessed a total income of $895,204, of which $870,476 were derived from taxation and public funds and $24,728 from tuition and other sources.

Colleges.—The 4 colleges, with their 31 teachers, 27 male and 4 female, were attended by 524 students, of whom 376 were males and 148 females. To educate these they possessed a total income of $52,600, of which $16,000 were derived from taxation and public funds and $36,600 from tuition and other sources.

Academies.—The 3 academies, with 10 teachers, of whom 5 were males and 5 females, had an attendance of 133 pupils, 82 of whom were males and 51 females. They possessed an income of $3,145 from tuition and other sources.

Private schools.—The 23 day and boarding schools had 28 teachers, of whom 8 were male and 20 female, and were attended by 959 pupils—488 male and 471 female—to educate whom they possessed an income of $18,414, derived from tuition and other sources.

Libraries.—Five hundred and eighty-seven public libraries were reported with 160,790 volumes, and 825 private libraries with 200,020 volumes, in all 1,412 libraries, containing 360,810 volumes.

The press.—The 95 periodicals issued in the State had an aggregate circulation of 110,178 copies, and an aggregate annual issue of 9,543,656 copies.

Churches.—Of the 877 church organizations 582 had edifices, with 158,266 sittings, and the church property was valued at $2,401,750.

Pauperism.—Of the 392 paupers 120 were native whites, 6 native colored, and 266 foreigners.

Crime.—Of 129 persons in prison June 1, 1870, 65 were native whites, 8 native colored, and 56 foreigners. Two hundred and fourteen persons were convicted during the year.

Age and sex of population.—Of the total population 142,665 were from 5 to 18 years old, of whom 72,657 were males and 70,008 females; 305,568 were 10 years old and upward, of whom 167,456 were males and 138,112 females.

Occupations.—One hundred and thirty-two thousand six hundred and fifty-seven persons of these ages were engaged in various occupations, of whom 121,797 were males and 10,860 females. Of these 75,157 were engaged in agricultural pursuits, of whom 74,663 were males and 494 females; 28,330 in personal and professional services, of whom 18,920 were males and 9,410 females; 10,582 in trade and transportation, of whom 10,559 were males and 23 females; 18,588 in manufactures and mechanical and mining industries, of whom 17,655 were males and 933 females.

Age and sex of working population.—Of the 132,657 employed persons 3,116 were from 10 to 15 years old, of whom 2,218 were males and 898 females; 124,961 were from 16 to 59 years old, and of these 115,195 were males and 9,766 females; 5,580 were 60 years old and over, of whom 4,384 were males and 196 females.

MISSISSIPPI.

[From report of Hon. H. R. Pease, State superintendent of public instruction, for the scholastic year ended December 3, 1871.]

SCHOOL FUND.

Amount of the common-school fund, (including fund appropriated under the act of 1859, Chickasaw and sixteenth-section fund, regarded as available.)	$1,950,000 00
Amount of revenue received and paid into the treasury from the various sources provided by the constitution, and laws enacted since its adoption, accruing to the common-school fund	529,464 29
Amount of revenue by special county tax collected and paid into the county treasury, reported	683,784 19
Amount of the common-school income-fund apportioned to the several counties	172,550 35

FINANCIAL STATEMENT.

Amount expended for school sites	$33,921 88
Amount expended for building and repairs	157,374 22
Amount expended for school furniture and apparatus	40,271 07
Amount expended for rent of rooms and buildings	25,601 18
Amount expended for school-books	14,481 16
Amount expended for teachers' salaries	624,233 44
Amount expended for superintendents' salaries	35,072 70
Total expenditures for the year ending January 1, 1872, (including miscellaneous expenses)	869,766 07
Expenditures since inauguration of school-system, (eighteen months)	950,000 00

POPULATION AND ATTENDANCE.

White population	256,821
Colored population	285,687
Scholastic population, (white)	120,073
Scholastic population, (colored)	126,769
Total scholastic population	246,842
Number enrolled in public schools, (white)	66,257
Number enrolled in public schools, (colored)	45,429
Whole number enrolled in public schools	111,686
Number enrolled in private schools, (white)	5,249
Number enrolled in private schools, (colored)	1,154
Whole number enrolled in private schools	6,703
Grand total of pupils attending school	118,389
Average attendance in public and private schools	86,330

TEACHERS AND TEACHERS' PAY.

Number of white teachers, (males, 1,575; females, 681)	2,256
Number of colored teachers, (males, 253; females, 146)	399
Whole number of teachers	2,655
Average monthly pay of teachers	$58 90
Number of white teachers in private schools	391
Number of colored teachers in private schools	49
Total teachers in public and private schools	3,095
Number of certificates granted to white teachers	2,256
Number of certificates granted to colored teachers	399
Number of teachers' institutes held during the year	8
Number of teachers attending institutes during the year	188

SCHOOLS.

Number of public schools, (white, 1,739; colored, 862)	2,601

Whole number of schools, (in fifty-two counties)	3,035
Number of graded schools, (in the State)	100
Number of high schools, (in the State)	80
Number of evening schools, (in the State)	60
Number of normal or training schools, (in the State)	2

Average length of school term, 5 months and 10 days.

SCHOOL-SITES AND SCHOOL-HOUSES.

Number of sites purchased	128
Number of sites donated	177
Number of houses erected, (white, 230; colored, 252)	482
Number of buildings rented, (white, 355; colored, 264)	619
Number of school-houses built in the State since the inauguration of the school-system	600

SCHOOL FURNITURE AND APPARATUS.

Number of school-houses provided with modern school-furniture	265
Number of schools furnished with blackboards	976
Number of schools furnished with wall-maps	131
Number of schools furnished with globes	80

VALUE OF SCHOOL PROPERTY.

Value of public-school property in fifty-two counties reporting	$426,204 87
Value of private-school property in fifty-two counties reporting	436,700 00
Estimated value of public-school property in the State	800,000 00

SCHOOL LAW.

Of the school law adopted in 1870 the superintendent says: "From my experience in attempting to execute the law, I venture the assertion that in all the history of legislation there never was a statute enacted that was so difficult of construction, so ambiguous in its terms, and so conflicting in itself and with other laws in force."

At the last session of the legislature certain modifications were enacted in the school law, making it conform with other general laws. The law as it now stands contains many excellent features, but the system is too cumbersome and complicated. It fails in its scope, and lacks the essential conditions of a permanent success, viz: a well-regulated system of raising and managing the school revenues, and a comprehensive plan of supervision.

SCHOOL REVENUES.

The law provides for a common-school fund, consisting of the proceeds of all lands belonging to the State, fines, licenses, taxes, &c. Thus a foundation is laid for the accumulation of an immense school fund, which, if properly managed, will, in the course of time, afford revenue sufficient to support the schools without additional taxation. Under the existing policy the schools receive no benefit whatever from the fund, which already amounts to nearly $2,000,000; and the school revenue is raised chiefly by local taxation, "a system altogether impracticable, wrong in principle, and in violation of the spirit, if not the letter, of the constitution."

Some counties levy a tax sufficient to defray the school expenses, others levy none at all. In many cases the school tax levied has been absolutely burdensome upon the people. It is estimated that a two-mill tax levied upon the taxable property of the State would afford ample revenue to defray the expenses of the department and pay teachers. It is recommended that this tax be levied, to be collected in currency.

SCHOOL LANDS.

The Government of the United States has, from time to time, since 1802, donated lands to the State for educational purposes, amounting in the aggregate to nearly 1,000,000 acres.

Nearly all of this munificent endowment has been disposed of and the proceeds squandered. Investigations already made show that thousands of acres of these lands, some of them the most valuable in the State, are held and occupied without the shadow of title. It is the purpose of the board of education to thoroughly investigate this matter and recover all lands thus illegally held.

"There are no means of arriving at a correct estimate of the value of the unsold school lands, but it can not be doubted that a very moderate degree of honesty, economy, and skill in the administration of the lands donated by the General Government for school purposes would have produced a revenue sufficient to have furnished perpetual and efficient free schools for all the people of both races in the State to the full extent of their needs forever."

The following table exhibits the amount of the proceeds arising from the sale and rental of school lands:

Amount arising from the sale of Chickasaw lands	$826,432 78
Amount held by the State in trust	815,227 73
Amount of the proceeds arising from the sale and rental of sixteenth-section lands, about	1,500,000 00
Aggregate amount of the proceeds arising from the sale and rental of school lands, about	2,326,432 00

Of the proceeds of sale and rental of sixteenth-section lands, it is estimated that at least $1,000,000 are a total loss, on account of the want of proper management.

SUPERVISION.

"Our system of State and county supervision is very defective. The law imposes the grave responsibility of superintending the public schools and general educational interests upon the State superintendent, and requires a guarantee of $20,000 for the faithful discharge of these duties, while yet, as it now stands, it gives him no positive control. He is made president of the State board of education, but with no voice except in the case of a tie vote.

"The present system of county supervision is even more defective. Under the existing law, the office of county superintendent is practically a nullity." There are now three distinct agents—the board of supervisors, board of directors, and county superintendent—employed in supervising the schools of the county, and this too at an enormous outlay of time and money. The main source of complaint against the public-school system arises from the inefficiency and burdensome cost of conducting the present system of county supervision. The county superintendent is president of the board of directors, but has no power or voice in supervision. "As a measure of economy, to say nothing of efficiency, the abolition of the board of school directors is recommended."

The salary allowed county superintendents is entirely inadequate. Many of the best superintendents have already resigned, and others will resign unless the present system of supervision shall be changed, and a reasonable salary paid for their services. It is recommended that there be three grades of salaries established, based upon scholastic population: counties with a scholastic population not exceeding 3,000 to constitute the lowest grade, those containing not less than 3,000 nor more than 7,000 to constitute the second grade, and all with over 7,000 to constitute the first grade. It is also recommended that the office of county superintendent be made elective, and that the State board of education have the authority to remove any county superintendent for neglecting to perform the duties of his office, or for any other just cause shown.

TEACHERS.

"Our greatest present want is earnest, active teachers, skilled in the science and art of teaching. Of the whole number of teachers (upward of four thousand) employed in the public schools of the State, comparatively few are qualified for their work." To remedy this three things are considered necessary: First, to establish normal or training schools for teachers; secondly, to provide for the organization and maintenance of a vigorous system of teachers' institutes; thirdly, to offer inducements, by means of liberal salaries, to first-class teachers. The latter will do much to relieve the present pressure. The superintendent recommends the establishing of a minimum and maximum monthly salary for each grade of the common schools: For the third grade, a minimum of $30 a month and a maximum of $50; for the second grade, a minimum of $50 and a maximum of $75 per month; for the first grade, a minimum of $75 and a maximum of $125 per month.

It is believed that this plan will correct a wrong that has been practiced to a considerable extent in many counties—that of a very unjust discrimination between the white and colored teachers.

TEACHERS' INSTITUTES.

The superintendent says: "The establishment of teachers' institutes is the most practical measure to meet our immediate wants." County superintendents were instructed to organize institutes in their respective districts, and organizations were effected in eight counties. It is recommended that the State appropriate from the school fund the sum of $3,000 for the maintenance of teachers' institutes in each county employing twenty-five teachers, and consolidate two or more counties when they employ less than that number.

HIGH SCHOOLS.

It is recommended that in each county containing a scholastic population of 7,000 there shall be established one or more high schools, with a normal department for the training of teachers for the primary schools. It should be made obligatory upon the county to furnish suitable buildings and meet the incidental expenses, the State to pay the teachers, and the salaries of the principals of high schools to be regulated by the State board of education.

UNIFORMITY OF TEXT-BOOKS.

Under the existing law, a uniformity of school-books is required in each county. It is made the duty of the boards of school directors to prescribe the text-books to be used

in the schools. The law has been generally complied with, so far as the mere adoption of a schedule of text-books by the boards of directors is concerned; yet in a majority of the counties it is practically null; and, as the law now stands, school-officers are utterly powerless to enforce the uniform use of books. Another serious evil connected with the present system is the frequent change of text-books. Under the existing law, the boards of school directors may adopt a new series of books for every term, or as often as they choose. It is recommended that when once a series of standard text-books shall have been adopted and introduced into the schools, no change shall be made for at least three years.

SCHOLASTIC YEAR.

The superintendent recommends a change in the law regulating the school year. The scholastic year should commence September 1, and terminate August 31. This change is deemed essential to the systematic conducting of the business of the department. Under the present law the superintendent is virtually allowed only fifteen days to prepare his annual report.

PUBLIC SENTIMENT.

No feature of the new system of government met with more determined opposition at the outset than did the school system. "A majority of the wealthy and intelligent classes, unable to divest themselves of irrational prejudices, contested the introduction of the people's schools with a determination that seemed, at times, likely to overwhelm and destroy them." A class of idle politicians and an unscrupulous press encouraged this partisan hostility, which at length culminated in open violence, particularly in the eastern portion of the State. Many cases of incendiarism and of violence toward teachers and school officers were reported.

During the past year a most marvelous revolution has taken place in public sentiment. In many localities where, at the outset, the people were most indifferent and the greatest opposition prevailed, the free-school system has become popular, and those who were most prominent in their hostility are now earnest advocates of popular education.

THE PEABODY FUND.

Of this State Dr. Sears says: "Considering the great disadvantage under which public instruction has been introduced and thus far carried on in this State, we must regard the results as highly encouraging."

There has been a rapid increase of public schools, accompanied with corresponding indications of increasing popular favor.

The disadvantages are careless and defective legislation, indifference to education, and opposition to free schools. These evils, it is hoped, will be temporary. With a school fund of nearly $2,000,000, the State will not long let it be possible for the superintendent to report, as he does now, that "Under the existing policy the schools derive no benefit whatever from the fund." The school laws are incumbered with useless and heterogeneous enactments. The county organizations in particular are faulty, being at the same time expensive and inefficient.

The schools of Natchez and Vicksburg have become self-supporting. Jackson receives $1,500; Summit, $1,000; Hazlehurst, $1,000; Crystal Springs, $450; Kosciusko, $450; Yazoo City, $750; Harperville, $300; Hillsborough, $300.

The county superintendent says of Harperville: "This school was opened in January for 11 months. The result has exceeded my most sanguine expectations in the additional number of pupils. Persons from ten miles round have rented houses for the purpose of giving their children a more liberal education. A new school-house, having a capacity for 350 children, has been built by a voluntary subscription of the citizens, at a cost of $2,500, including a donation of $500 from the State."

For the ensuing year arrangements have been made for colored schools at Hazlehurst, Crystal Springs, and Wesson, allowing $200 to each. The county superintendent, in asking assistance for them, says: "We have three colored schools in this county, kept in operation five months by the free-school system and five by private subscription. They have a daily average attendance of over 100 each. These schools merit your aid. I should have made the request before, but I believed it would be better for them to be thrown for a time upon their own resources, that they might the more fully appreciate the benefit. One of these schools is at Hazlehurst, where there is a large school-house built by the colored people themselves, without the aid of the county or State board of education."

STATE NORMAL SCHOOL.

The number of pupils in attendance from the organization, November 15, 1870, to June 30, 1871, was 50. The school reopened in September with 35 pupils. Since the close of the first school-year 26 normal pupils have taught in the public schools of the State. Of these a number taught only two months, during the summer vacation, and returned to school at the opening of the fall term.

With insufficient room, and lacking necessary books, the normal school can not accomplish what it should. It is recommended that the legislature make an appropriation for a building. If there was a room suitable for a library, a large number of books could be procured without expense to the State.

County superintendents give encouraging reports of the thorough work done by the normal pupils. As the school has been in operation little more than a year, and the course of study embraces four years, no graduates have yet been sent out.

TOUGALOO UNIVERSITY.

The agricultural department is a marked feature of this institute. A plantation of some 500 acres affords facilities for instruction in practical farming, and at the same time gives those who desire it an opportunity to pay part or the whole of their expenses by manual labor. In the normal department there have been 47 students during the year. The institution is partly under the auspices of the American Missionary Association.

INSTITUTION FOR THE DEAF AND DUMB.

The report of this institution states that "in six months from the appointment of the board of trustees the institution has been placed in complete order and successful operation, and is now at the service of the State."

It was opened on the first day of December, and in a few days had a class of nine. An appropriation of $5,000 was made for the outfit of the institution, and it is recommended that an additional appropriation of $15,000 be made. It is estimated that there are 90 deaf-mutes of school-age in the State.

BLIND INSTITUTE.

There have been 29 pupils during the year, eight more than the previous year. It is recommended that the men's work-department be placed on a suitable footing, so as to render it efficient, enabling the pupils to earn an honorable livelihood. The building is in need of repairs, and is not well adapted for the purpose.

CENTRAL FEMALE INSTITUTE.

During the eighteen years of its existence, this institution has had an aggregate attendance of about 2,000, and, unlike most southern literary institutions, it did not suspend its regular exercises, even for a single day, during the entire war.

PEABODY PUBLIC SCHOOL.

This school was called into existence little more than a year and a half ago by a donation of $1,000 from the Peabody fund. The first session of the school closed with 142 pupils on its roll; the present closes with 229. Last year the average attendance was 93; this year it has been about 170. This increased demand for education, and the satisfactory progress made by the higher department of the grammar school, induced the directory to take the necessary steps for carrying out the original plan of organization, in attaching to the present grammar school a high school, where all the branches of an academic course should be taught. In the organization of this higher department, the board determined, as a reward of merit, to pass, each year, three girls and three boys, free of charge, from the grammar school to the high school. For the present year there has been received from the Peabody fund $1,500, and the town has appropriated $2,000. The total expenditure for two years is $5,000.

LAWRENCE BUSINESS COLLEGE.

The great necessity for the establishment of a first-class practical college at this point led to the organization of this college. It is connected with the great chain of Bryant and Stratton's International Business Colleges, but has at the same time a separate system and management of its own.

PASS CHRISTIAN COLLEGE.

This institution is in charge of the Christian Brothers, a society entirely devoted to the work of educating youth. Their system is founded upon the theory that education does not consist in a certain complement of facts stored in the memory, but in conducting the intellect to the discovery of truth by the pure efforts of its own innate activity. Therefore they regard the communication of knowledge as only of subordinate importance when compared to the intellectual exertion made in the

endeavor to acquire clear, distinct, and adequate notions of all facts submitted to the mind. To carry into effect these fundamental and crowning principles of an enlightened and practical education is the chief aim of the faculty and professors.

MISSISSIPPI COLLEGE.

In the general bankruptcy of the South consequent upon the war, this college lost a large endowment, but its buildings, though in a somewhat injured condition, together with its apparatus and libraries, were saved. A debt of several thousand dollars had been incurred, on account of which a judgment had been obtained, and the execution was about to be made upon the property. Such was the condition of the institution when, in the fall of 1867, the board of trustees resolved to resume the exercises, which for four years had been virtually suspended. Through the influence of the president, Rev. Walter Hillman, money was obtained from the North sufficient to repair in part the buildings and stay the threatened execution. Since that time the number of students has constantly increased. Measures have been taken, with every prospect of success, to raise money to pay off the indebtedness, and to re-endow the college and put it upon a more permanent basis.

UNIVERSITY OF MISSISSIPPI.

It is the purpose of the trustees to erect a building for the department of preparatory education. For the present, the preparatory class will be continued as a substitute for the university high school, and in this class candidates for the first year's study in the university will be carefully trained. The school of medicine will be organized upon the plan pursued in the University of Virginia, which has proved eminently successful. Students preparing for the ministry of any denomination of Christians will be admitted into each class without tuition fees. The sum of $5,000 has been appropriated to enlarge the library. A reading-room has been authorized by the board, to be furnished with the leading American and foreign journals.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Mississippi was the eighteenth State in population, having 827,922 inhabitants within an area of 47,156 square miles, an average of 17.56 persons to the square mile. This population consisted of 382,896 whites, 444,201 colored, 16 Chinese, and 809 Indians. Of these, 816,731 were natives of the United States and 11,191 were foreign-born. Of the native residents, 244,236 whites, 319,360 colored, and 546 Indians were born within its borders, while of the foreign residents 2,960 were born in Germany, 1,018 in England, and 3,359 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 39,141 persons attended school, and of these 56 were foreign-born. Of the white scholars 17,139 were males and 16,264 females—a total of 33,403. Of the 5,738 colored pupils, 2,768 were males and 2,970 females.

Illiteracy.—Three hundred and thirteen thousand three hundred and ten inhabitants of all races, 10 years old and over, were reported as unable to write, of whom 827 were foreign-born.

Age, sex, and race of illiterates.—Of the 48,028 white illiterates, 14,729 were from 10 to 15 years old, and of these 8,174 were males and 6,555 females; 10,196 were from 15 to 21 years old, of whom 5,447 were males and 4,749 females; 23,103 were 21 years old and over, of whom 9,357 were males and 13,746 females. Of the 264,902 colored illiterates, 46,682 were from 10 to 15 years of age, of whom 24,076 were males and 22,606 females; 50,083 were from 15 to 21 years old, of whom 23,216 were males and 26,867 females; 168,137 were 21 years old and over, of whom 80,810 were males and 87,327 females.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 1,564, having 1,728 teachers, of whom 1,054 were males and 674 females, to educate their 43,451 pupils, 22,793 of whom were males and 20,658 females.

Amount and source of educational income.—The total income of all the educational institutions was $780,339, of which $11,500 were derived from endowment, $167,414 from taxation and public funds, and $601,425 from tuition and other sources.

Colleges.—The 18 colleges, with 64 teachers, 32 males and 32 females, were attended by 1,292 students, of whom 500 were males and 792 females. To educate these they possessed a total income of $80,700, of which $11,500 were derived from endowment, $22,700 from taxation and public funds, and $46,500 from tuition and other sources.

Academy.—The one academy, with 8 teachers, of whom 3 were males and 5 females, had an attendance of 123 female pupils. It possessed a total income of $4,450, of which $450 were derived from taxation and public funds and $4,000 from tuition and other sources.

Private schools.—The 1,542 day and boarding schools had 1,649 teachers, of whom 1,018 were male and 631 female, and were attended by 41,965 pupils, 22,259 males and 19,706 females, to educate whom they possessed a total income of $683,000, of which $133,325 were derived from taxation and public funds and $549,675 from tuition and other sources.

Libraries.—Five hundred and thirty-seven public libraries were reported with 88,376 volumes, and 2,251 private libraries with 400,106 volumes; in all, 2,788 libraries containing 488,482 volumes.

The press.—The 111 periodicals issued had an aggregate circulation of 71,868 copies and an aggregate annual issue of 4,703,336 copies.

Churches.—Of the 1,829 church organizations, 1,800 had edifices with 485,398 sittings, and the church property was valued at $2,360,800.

Pauperism.—Of the 809 paupers 413 were native whites, 380 native colored, and 16 foreigners.

Crime.—Of 449 persons in prison, June 1, 1870, 128 were native whites, 293 native colored, and 28 foreigners. Four hundred and seventy-one persons were convicted during the year.

Age and sex of population.—Of the total population 278,999 were from 5 to 18 years old, of whom 141,412 were males and 137,587 females; 581,206 were 10 years old and upward, of whom 288,185 were males and 293,021 females.

Occupations.—Three hundred and eighteen thousand eight hundred and fifty persons of these ages were engaged in various occupations, of whom 232,349 were males and 86,501 females. Of these 259,199 were engaged in agricultural pursuits, of whom 193,725 were males and 65,474 females; 40,522 in personal and professional services, of whom 20,430 were males and 20,092 females; 9,148 in trade and transportation, of whom 9,076 were males and 72 females; 9,981 in manufactures and mechanical and mining industries, of whom 9,118 were males and 863 females.

Age and sex of working population.—Of the 318,850 employed persons 42,457 were from 10 to 15 years old, of whom 28,671 were males and 13,786 females; 258,913 were from 16 to 59 years old, and of these 188,832 were males and 70,081 females; 17,480 were 60 years old and over, of whom 14,846 were males and 2,634 females.

SCHOOL OFFICIALS.

Hon. H. R. Pease, *State superintendent of public education.*

LIST OF COUNTY SUPERINTENDENTS.

County.	Superintendent.	Post-office address.
Adams	C. C. Walden	Natchez.
Attala	I. H. Alexander	Kosciusko.
Alcorn	F. A. Beazley	Corinth.
Amite	W. B. Redmond	Liberty.
Benton	G. N. Diekerson	Salem.
Bolivar	B. K. Bruce	Thoreyville.
Calhoun	S. M. Roane	Sarepta.
Carroll	S. M. Sykes	Duck Hill.
Chickasaw	A. J. Jamison	Okolona.
Choctaw	R. B. Wooley	Greensborough.
Claiborne	W. D. Spott	Port Gibson.
Clark	Robert Seales	Enterprise.
Coahoma	John Cochrane	Friar's Point.
Colfax	James Williams	West Point.
Copiah	George J. Mortimer	Hazlehurst.
Covington	E W. Larkin	Mount Carmel.
De Soto	John Richardson	Hernando.
Franklin	I. Buckles	Meadville.
Green	John McGinnis	State Line.
Grenada	L. L. Williams	Grenada.
Hinds	I. C. Tucker	Jackson.
Holmes	I. Burnham	Lexington.
Hancock	B. Sones	Bay Saint Louis.
Harrison	Caleb Lindsey	Pass Christian.
Issaquena	I. F. Goodman	Gibson's Landing.
Itawamba	W. T. Elliott	Fulton.
Jackson	I. L. Osborne	East Pascagoula.
Jasper	L. J. Bingham	Garlandville.
Jefferson	Lemuel Long	Fayette.
Jones	K. M. Watkins	Ellisville.
Kemper	William Kellis	Kellis's Store.
Lincoln	W. S. Baggett	Brookhaven.
Lauderdale	Baylor Palmer	Meridian.
La Fayette	W. F. Elliott	Oxford.
Lowndes	I. N. Bishop	Columbus.

LIST OF COUNTY SUPERINTENDENTS—Continued.

Yazoo	P. P. Bailey	Yazoo City.
Yalabusha	S. B. Brown	Water Valley.

MISSOURI.

[From report of Hon. John Monteith, State superintendent of public instruction, for the year 1871.]

SCHOOL FUND.

Amount of public-school fund	$4,689,423
Income of school fund for the year	339,568

FINANCIAL STATEMENT.

Received from State fund	$339,568
Received from county fund	157,612
Received from township fund	188,644
Amount of school tax collected	1,001,750
Total receipts for school purposes	1,687,574
Expended for teachers' salaries	$887,019
Buildings and other expenses	862,030
Total disbursements	1,749,049
Cost per scholar, based on enumeration	$2 75
Cost per scholar, based on attendance	5 30

ATTENDANCE.

Population of the State	1,721,295
White scholastic population, (males, 309,035; females, 288,235)	597,270
Colored scholastic population, (males, 18,978; females, 18,195)	37,173
Total scholastic population	634,443
Number enrolled in public schools, (males, 174,171; females, 155,899)	330,070
Increase over last year	49,597
Daily average attendance	187,024
Number attending private schools	29,393
Number not attending any school, (males, 138,849; females, 136,126)	274,975

TEACHERS AND TEACHERS' PAY.

Number of teachers, (males, 5,755; females, 3,061)	8,816
Increase over last year	1,950
Number of white teachers	8,761
Number of colored teachers	55
Average monthly pay of teachers	$35 00

SCHOOLS AND SCHOOL-HOUSES.

Number of sub-districts reported	7,048
Number of schools reported, (white, 6,730; colored, 212)	6,942
Increase over last year	1,524
Average time schools were maintained, (exclusive of Saint Louis)	4½ months.
Number of new school-houses	703
Whole number of school-houses	6,387

THE COMMON SCHOOLS.

The reports of county superintendents show that the common schools have almost universally increased in the materials of strength, enlarged in size, and grown more and more in favor with the people. This prosperity is attributable in part to the improved temporal condition of the people, but mainly to a growing appreciation of the importance of education. The obligation of property to sustain education is coming to be better understood and acknowledged. The relation between property and general intelligence is more widely recognized. It is ascertained, too, that property must pay for police to protect its safety, or for criminal prosecutions to bring offenders to justice, if it does not pay for education.

"It may not be irrelevant to state, in this connection, that one county has drawn

upon the State treasury to the amount of over $3,000 for criminal prosecution, and during the same period paid its best teacher but $30 a month, supported but 1 private and 15 public schools, and returned an estimated value of school buildings and grounds amounting to $915, all told. The assessed valuation of the land in this county is but $1.04 per acre, lower than that of any other county in the State, with one exception. This is not a mere coincidence. It can be demonstrated that in those portions of the State where crime is most abundant, where fugitives from justice in other States have found the most welcome asylum, and where the power of the law is weakest, there is almost no organized system of public instruction; and here are found the most violent opponents of education."

SCHOOL LANDS.

The report of the board of education in regard to school lands states that in many of the counties the records, vouchers, and papers relating to the school funds, and to the disposal of the sixteenth-section and swamp and overflowed lands, have been swept away in the late war. The records that remain furnish the following:

Total county fund, (110 counties reported)	$2,040,646 18
Total township fund, (110 counties reported)	2,110,036 56
Grand total, (110 counties reported)	4,150,682 74
Deduct amount improperly secured or lost	180,202 72
Total available fund	3,970,480 02

The fund actually available is less than here reported, as all losses are not stated.

The number of acres of swamp-land given to the counties of the State was 4,300,900. The area remaining unsold is 1,932,157 acres. This is probably in excess of the true figures. Of the sixteenth-section lands about 536,263 acres remain.

The total number of acres of school lands now in possession of the counties does not exceed 2,468,420. Had the original 4,300,900 acres been preserved for the objects to which they were appropriated, and their sales been honestly conducted and accounted for, the State would now have a county-school endowment amounting to $12,000,000. This, added to the present State school fund, would give a total of $14,000,000.

The school endowment began to decay from the moment it was delivered into the hands of the county courts. The board asks that all past legislation respecting the custody of the school lands and the funds arising therefrom be corrected or repealed. They also recommend that the school endowment of each county be placed in the custody of a school officer, who shall give bonds for the proper use of this trust, and that this officer be the county superintendent in each county; that in counties where school funds have been used for county purposes, the courts be required to provide by special tax for the repayment of such sums; and that the attorneys of the State board of education have power to institute proceedings in the proper courts, to ascertain the amounts thus taken from the school fund, and also to collect by suit all overdue school bonds which are likely to be lost by reason of neglect on the part of those who now manage the collection of these funds.

"As the case stands at present, the political influences that gather about those whose duty it is to prosecute these matters often induce an inactivity that allows the opportunity to pass by, while the people remain ignorant of the manner in which their children's greatest and most precious patrimony is going to decay."

SCHOOL TAX.

The rate of tax has been 17 mills on the dollar, estimating the taxable property of the State at $575,000,000. The rate of tax for teachers' wages is a little less than 9 mills on the dollar. "It is evident that the attention of the State should be turned to the recovery and proper care and investment of the county and township school endowments, rather than to the diminishing of the present rate of taxation for school purposes. Another serious difficulty lies in the discrepancy between the assessment and collection of taxes. The complaint of heavy taxation for school purposes is largely caused by the constant accumulation of delinquent taxes. The present system of passing school moneys through so many different hands, with a commission deducted at each transfer, is another just cause of complaint. All things considered, however, the people are to be commended for their fidelity to the pecuniary interests of the schools."

SCHOOL LAW.

It has been the special effort of the department of education to aid the legislature in the construction of a school law which shall be consistent in all its parts and meet the wants of different parts of the State. The late superintendent, Mr. Divoll, made

the suggestion that there should be a suspension of all attempts at school legislation until the opinions and wants of the people could be consulted, and he proposed making a canvass of the State for this purpose. This plan has been carried out so far as was possible, and by this means the committees have been put in possession of such information as is necessary to guide them in the drafting of an equitable and improved law. It is believed that the bill reported by the house committee on education, while it is not, in many respects, what the friends of education could desire, is, on the whole, a fair representation of the average opinions of the people, and, in several essential particulars, a decided improvement over the present law, of which Mr. Divoll said, "The school law is a disgrace to the statute-book."

What is most needed is a simple, plain law, without amendments, which the unpracticed director can easily understand and apply. The following changes were recommended: that the feature of township boards be abandoned; the power of local directors to levy taxes for building purposes be curtailed; the number of school directors be reduced, and that measures be adopted to increase the efficiency of county supervision.

SCHOOL-HOUSES.

A striking contrast exists between the country and town school-houses of the State. "The school-house frequently indicates the measure of esteem in which education is held in the community. In the country sub-districts there exists in many instances the log building without windows, except a lid held open by a peg, making an aperture, which solves the problem both of light and ventilation; without a floor save the ground; and with a roof which, though it does not repel the rain, furnishes special advantages for the study of astronomy." The remedy for this lies in the fusion of sub-districts.

Several fine school edifices have been erected in the towns during the year. It is deemed necessary to give a caution against extravagance in the cost of town school-houses. The people are, in some instances, by erecting school-houses of extravagant cost, weakening their ability to maintain thorough systems of instruction for the schools. It is suggested that, for the present, the people shall content themselves with plain buildings, and apply their means to securing better teachers, larger schools, and the best facilities of instruction.

TEXT-BOOKS.

Uniformity of text-books is not considered either practicable or desirable. Different communities require a different adaptation of books. Uniformity in the same school should be secured; and when once secured the law should forbid frequent changes.

TEACHERS.

The superintendent remarks that "so large is the proportion of inferior teachers that the general average of competency is reduced to a humiliating point." A partial remedy would lie in a more stringent application of the law in the licensing of teachers; but there is frequently no choice between giving a certificate to an unqualified person and the deprivation of some district of a school altogether. In many cases the people fail to offer a remuneration sufficient to command the services of a competent teacher. Another difficulty is the tardiness with which teachers' wages are paid, they being often compelled to wait a year, and sometimes two years, for their salaries.

STATE CERTIFICATES.

The department has found it necessary to resort to a somewhat radical measure in regard to State certificates. The design of the law in establishing the State certificate was that it should stand above the normal-school diploma, or any certificate of qualification given in the State. A different impression, however, has been allowed to prevail, and a large number of State certificates are abroad that have been given upon no personal or written examination. As a measure deemed necessary to the very preservation of the certificate, and upon legal advice as to its legitimacy, a circular was issued revoking all State certificates issued prior to January 1, 1871, the same to take effect July 1, 1872.

TEACHERS' INSTITUTES.

Aside from the two normal schools, limited as yet in the reach of their influence, the county teachers' institute is the main dependence for the improvement of the great mass of teachers. The number of institutes held during the year was 84. In almost every instance encouraging results have been reported. The chief wants of the institute are, a small fund to meet current expenses, and an obligation requiring all teachers in the county faithfully to attend, with a corresponding privilege on the part of teachers to draw their wages for so much of the regular term as is spent in attendance upon the institutes.

DISTRICT PUBLIC-SCHOOL CONVENTIONS.

"Among the forces at work in our State, giving unity and strength to our public-school system, none is more directly and sensibly felt than that which is known as the district convention. In these conventions all the conflicting elements in the system are discussed and thrown off or harmonized, narrow tendencies become liberalized, and the bitter prejudices of ignorance are often blown away by the first breath of enlightened public sentiment."

COMPULSORY EDUCATION.

The constitution of the State provides that "The general assembly shall have power to require, by law, that every child of mental and physical ability shall attend the public schools during the period between the ages of 5 and 18 years, for a term equivalent to 16 weeks, (annually,) unless educated by other means." It is questioned "whether this last exercise of the law needs ever to be resorted to;" and it is believed that "the time has not yet come to enact forced attendance upon schools in Missouri." For the present it is considered better to "build school-houses, improve the system of instruction, and deepen and widen a healthy educational sentiment," as the means of securing attendance upon the schools.

METHODS OF TEACHING.

"Improved teaching machines are demanded by our country districts as much as improved agricultural implements." "It will be a prominent object of the department in future to look carefully to the interests of the country schools, with the excellence and economy of teaching in view." It is recommended that the study of geography be greatly modified, if not entirely changed; and it is suggested that the teaching of grammar should have a better substitute. The present system fails of any practical result. It would be better to occupy the first few years of grammar in committing to memory some of the best poetry (as is the custom in Swiss schools) and selections from English literature, which not only interest, but form a correct taste and habit of expression.

VOCAL MUSIC.

It has been objected against the introduction of vocal music into the schools that it is a mere superfluity. This idea is earnestly combated. Music "is an indispensable relief to the present starvation of the ordinary child-life." We need a new era in music. "Every where in rural Missouri, men, women, and children sing, but every song is in the minor key. Every country school should be cheered by the liveliest of song; and who can tell how soon, under the rapture of a new note from the voices of our children, we may forget the dissensions of the past?"

THE BIBLE IN THE SCHOOLS.

The hope that the controversy that has of late disturbed the peace of the schools in other States would not return to complicate the condition of education in Missouri has for the most part been realized. A few instances only have occurred during the year, and in every instance the contest has been between opposing prejudices. It is usually narrowed down to the question, "Who shall give up or back down?" The course of wisdom seems to be to recognize the distinctive character of the public schools. They are established solely for intellectual and moral training; not for religious purposes at all. There is no authority in the constitution of the schools for the reading of the Bible as a religious exercise. "But if the public school is not the place where the religious use of the Bible may be insisted upon, equally is it not the place where any instruction reflecting upon the Bible, or upon any sect, is to be tolerated."

PUBLIC-SCHOOL LIBRARIES.

The establishment of public libraries is looked to as a potent instrumentality in creating a demand for good schools, and in sustaining them when established. The quality of instruction in the schools will seldom rise higher than the general level of intelligence in the surrounding country. When public libraries are maintained as an integral part of the public-school system, the latter will be in a fair way to reach its greatest possible efficiency.

HIGH AND GRADED SCHOOLS.

No single agency tends more efficiently to assist the schools of the rural districts than the graded institution of the populous centers. Commonly they are the normal schools for a wide region of country about them. It is recommended that county superintendents secure, in addition to the statistical tables of these schools, such a narrative statement as shall show the general management adopted and the methods pursued.

COLORED SCHOOLS.

The schools for colored children, where they have been efficiently conducted, have evinced on the part of the children and youth an eagerness and ability to learn with rapidity. The colored people in some localities meet serious obstacles in the way of securing schools. It is recommended that when the local board fails to establish such schools, the duty be laid upon the county superintendent, and he be required to secure for them equal advantages with those furnished to white children. The maximum limit of school-age for the colored people should be removed, and any person be permitted to enjoy educational privileges who so desires.

INDUSTRIAL AND REFORM SCHOOLS.

The necessity of establishing schools specifically for the prevention and cure of crime in neglected and delinquent youth, has been brought to notice by the governor of the State, with well-chosen words and timely appeal. No subject lies more legitimately within the scope and duty of the public-school interest. A law under which reformatories and industrial schools may be established can not be too soon enacted.

SAINT LOUIS.

CONDITION OF SCHOOLS.

The per cent. of school attendance on the average number belonging is 93; on the whole number enrolled, 67. There have been 27,031 cases of tardiness; 1,420 pupils have not been absent during the term of enrollment, and 17,117 have not been tardy.

The public-school library has continued to flourish to a remarkable degree. It now numbers about 27,000 volumes, and has 3,500 members.

WARRENSBURGH.

NORMAL SCHOOL.

The location of the State Normal School at this point, offering facilities for instruction in the higher branches, has destroyed the necessity of a high school.

LOUISIANA.

PUBLIC-SCHOOL ATTENDANCE.

Three buildings are used for school purposes, two of which are owned by the board. Number of rooms, 13; number of sittings, 720; value of school lots, $3,000; value of building and furniture, $22,000. Of the number enrolled in school, 102 attended less than 20 days, and full 500 children attended no school during the year; about 100 of this number are between 5 and 15 years of age. The annual cost of instruction, estimated on the average number belonging, is $14.12 for each child; estimated on the total enrollment, the cost is $8.01 for each child. German is taught in the schools, and the progress is satisfactory.

KANSAS CITY.

CONDITION OF PUBLIC SCHOOLS.

Four years ago the city was utterly destitute of school accommodations. The board of education elected in July, 1867, came into possession of no school property whatever. It has required the unremitting diligence of the board to overtake the large and increasing demand for school accommodations; but, in spite of these and other disadvantages, a system of public schools has been built up, which may justly be regarded with pride.

The buildings now under the control of the board are capable of seating at least 50 per cent. of the scholastic population, and the value of the school property, including buildings, grounds, furniture, and apparatus, is not less than $190,000. During the past year the attendance has been more regular than in preceding years, and there has been a marked improvement in discipline.

MUSIC AND DRAWING.

Some progress has been made in the teaching of vocal music. The same can not be said of drawing, in which the instruction has been far from satisfactory. The teachers have manifested a willingness to do all in their power, but, unskilled themselves, they can give but feeble aid to pupils.

TEACHERS' INSTITUTES.

The attendance at teachers' institutes has been excellent, and the salutary effect upon the schools quite manifest.

The cost of tuition, taking the average number belonging as the basis, is $14.42 for each pupil.

SAINT JOSEPH.

COST OF SCHOOLS.

The cost of sustaining schools in Saint Joseph is less than in most of the western cities. The expense for the last year was only $12.26 per scholar on the number enrolled, and $18.25 per scholar on the number belonging.

TUITION FEES TO BE ABOLISHED.

It is greatly regretted that circumstances have rendered it necessary to impose a tuition fee for at least a portion of the current year. The board had resolved to abolish this fee, and make the schools entirely free to resident pupils. But the increased number of pupils rendered it necessary to open three additional schools, and the wind-storm which swept over the city in the month of August, 1870, damaged two of the schoolhouses to such an extent that nearly $2,000 were needed for repairs. There was a marked improvement in the schools during the months when they were entirely free. The fee has not been oppressive, and no one has been excluded from the schools on account of inability to pay; nevertheless the levying of this fee has furnished occasion for more complaints and dissatisfaction than any and all other causes combined.

DRAWING AND MUSIC.

The superintendent recommends that provision be made as soon as possible for regular and systematic instruction in drawing and music.

NORMAL SCHOOLS.

The North Missouri Normal School, at Kirksville, had been in successful operation for three and a half years before the establishment of the State normal schools. It was established and conducted with the expectation that it would eventually become one of a system of State normal schools, and opened as a State school, January 1, 1871, with 200 students. The second normal school, at Warrensburgh, has not yet completed the second year of its history. In view of the inability of these two schools to supply the demand for teachers, (at least 2,000 each year,) and of the great expense of establishing and sustaining other normal schools, it is suggested that boards of normal instructors be organized in the remaining congressional districts, to hold a session of three months' duration, at three different places within the limits of the district, each year. They could easily furnish 1,400 teachers yearly, from the seven districts, at an expense of $28,000; while the yearly cost of the same number of teachers under the permanent system would be $259,000. This plan is recommended to the consideration of the legislature, before any further expense is incurred for the establishment of permanent normal schools.

LINCOLN INSTITUTE.

This institution has been sustained almost wholly by contributions and subscriptions from the friends of the colored people. A year ago, the legislature made an annual appropriation of $5,000, and the institute has now become an integral part of the educational system of the State. The corps of teachers is an able one, and the instruction thorough.

The idea of Lincoln Institute originated with the Sixty-second Regiment United States Colored Infantry. The regiment contributed $5,000 to carry out their idea, and the soldiers of the Sixty-fifth Regiment added $1,379 to this sum. The work began in September, 1866, with two pupils. In 1870 the legislature passed a bill to endow Lincoln Institute as a State normal school for training colored teachers, and in 1871 the building now occupied was completed. It is a substantial brick building, constructed according to the most modern and approved plan. Cost of building, (including ground,) $33,500.

MISSOURI INSTITUTE FOR THE DEAF AND DUMB.

The report of this institution shows it to be in a prosperous condition. Every year a class of children is presented who can not be received, as the law contemplates only

the support of a school for intelligent deaf-mutes, and not of an asylum for imbecile and idiotic children. The importance of establishing an asylum for such children (of whom it is estimated there are not less than 600 in the State) is urged upon the legislature.

MISSOURI INSTITUTION FOR THE EDUCATION OF THE BLIND.

The twentieth annual report of this institution states that the number of pupils during the year (88) is larger than during any previous session; and 32 were refused admission for want of room. The age of admission is fixed by law from 5 to 25. The progress of the pupils in the various departments has been very gratifying. At the last meeting of the general assembly an appropriation of $50,000 was made for the purpose of remodeling and enlarging the building. When this is done, there will be accommodations for 200 pupils. The number of blind persons of school-age in the State is estimated at 288. The increase during the last decade has been more than 100 per cent.

UNIVERSITY OF MISSOURI.

The report of the board of curators speaks of the year ended June 26, 1872, as a year of uninterrupted prosperity and growth in the various departments of the university. Among the items enumerated as indicating progress are: 1. The increased number of students, now nearly 300; 2. The furnishing and equipment of the new scientific building, at a cost of about $50,000; 3. Enlarged instruction in different departments, as in drawing, in connection with engineering, in modern languages, and in the agricultural department; 4. The enlargement of the library, by the donation of many rare and most valuable books; 5. The beautifying of the university campus; 6. The organization of the department of military science; 7. The opening of the law college; 8. The cheapening of tuition, so that the whole expense for the entire year can not exceed the sum of $20.

The plan of the university includes: 1. The collegiate course; 2. The scientific course; 3. The college of agriculture and mechanic arts, embracing a school of engineering, a school of analytical chemistry, and a school of mining and metallurgy; 4. A normal school; 5. A law school; 6. A school of preparation for the other departments.

SCHOOL OF AGRICULTURE.

No time was lost in the establishment of the department of agriculture, after the location was made. The college had been in operation for more than a year before a single dollar from the agricultural fund, constituting its endowment, came into the hands of the board; and even yet, and that very recently, only $3,000 have been received. The president expresses a fear that, in the ardor to meet the expectations and wishes of the agricultural community, rather too much has been attempted. The number of students the first year was 26; in this, the second year, the number is 58. By the act locating the agricultural college in connection with the university, Boone County was required, as a condition of the location, to give $30,000 in cash and 640 acres of land for the use of the university.

THE SCHOOL OF MINES.

The school of mines, though forming an integral part of the university organization, was, by act of the legislature, to be located, under certain conditions, in the mineral district of Southeastern Missouri, and to receive for its support one-fourth part of the income from the agricultural-college land-grant. The school was required to be located in that county of the mineral district that should give the largest available amount of money and land for the purposes of the proposed school. Phelps County offered the value of $130,545, and the school of mines was fixed at Rolla, in that county, on the site known as Fort Wyman, one of the grandest situations in the State, and in the midst of one of the richest mining districts in the world. The site consists of 130 acres for college buildings and grounds, and of 40 acres for practical and experimental purposes.

CO-EDUCATION OF THE SEXES.

The admission of women students to the privileges of the university has been gradual. At first they were admitted only to the normal department, to qualify themselves as teachers. "By degrees, and carefully feeling our way, as though explosive material was all around us, we have come to admit them to all the classes in all the departments, just as young men are admitted." The special want of the university to-day is a college-home for young women who wish to pursue university studies.

The legislature has appropriated the sum of $166,000 for the university, and $35,000 for the school of mines. The former appropriation is simply the repayment, with interest, of the seminary fund held in trust by the State for the university. The county system of appointment has been abolished, and the payment of an annual entrance of

$10 admits all youth residents of the State, between 16 and 25, to the preparatory, practical, scientific, and literary departments. The board establishes the rate of charges for law students or those of other strictly professional schools.

The governor, in his annual message, recommended a winter course in agriculture and science; also, that scholarships in the university should be offered as a reward of excellence in high schools.

During the year the university has received several valuable donations of books, and 300 models of various kinds from the Patent-Office at Washington.

WASHINGTON UNIVERSITY.

This university is an endowed institution, chartered by the State. The terms of the charter forbid all sectarian or party tests and discriminations. It can not, therefore, have a theological department, but otherwise embraces the whole range of university studies. It comprises five distinct departments: the academy, the Mary institute, (for young ladies,) the college, the polytechnic department, and the law school. All the departments are open to women.

During the year a course of mining and metallurgy has been established in connection with the polytechnic department, and is now in full working order. The free evening schools of Saint Louis are the direct outgrowth of the polytechnic institute. Established at first for purely technological instruction, they were soon extended to meet the pressing demand for general education.

The course of study in the law school is designed to prepare young men to a degree far above the ordinary standards of admission to the bar for the practice of the profession. Moot courts are regularly held every week during the term by the professors, all of whom are engaged on the bench or at the bar, thus securing fresh and familiar acquaintance with the art and science of law. The law library contains upward of 2,500 volumes.

Twenty scholarships in the collegiate and scientific departments are open to students of the Saint Louis high school. A trust fund of $30,000 has been accepted by the university from the Western Sanitary Commission, for the establishment of twenty free scholarships, to be filled by descendants of Union soldiers in the late war. From the same source comes a sustentation fund of $10,000; the income to be expended for the aid of indigent students, giving preference always to the descendants of Union soldiers. In March, 1871, the university reeeived from Hon. Hudson E. Bridge a gift of $100,000 for the endowment of a chancellorship and for the library fund, and $30,000 toward the erection and furnishing of the polytechnic building. It was voted that the office of chancellor should receive the title of "the Bridge chancellorship." Hon. Thomas Allen has offered the interest for five years, at 7 per cent., of the sum of $40,000 for the endowment of a chair of mining and metallurgy. The present property and endowments of the university amount in value to $700,000, and it is free from debt.

SAINT LOUIS UNIVERSITY.

This university was founded by members of the Society of Jesus, incorporated in 1832, and empowered to confer degrees and academical honors in all the learned professions. It has experienced uninterrupted prosperity, and offers every facility for acquiring a liberal education.

SAINT VINCENT'S COLLEGE.

This institution, conducted by the priests of the mission of Saint Vincent of Paul, was chartered by the legislature in 1843, with university privileges. A theological department is connected with the college.

M'GEE COLLEGE.

A Presbyterian theological department is connected with this college; also a commercial department. The college is open to both sexes.

MISSOURI DENTAL COLLEGE.

This college is connected with the Saint Louis Medical College, one of the oldest and largest medical schools in the West. The dental college announces its seventh regular course of lectures. The requisites for receiving the degree of the college are that the candidate be 21 years of age, of good moral character, and engaged in the study of dentistry two years, and that he shall have attended two full courses in this institution. Attendance on a regular course in some other accredited dental school will be considered as equivalent to one of the courses. He must also treat thoroughly some patient requiring all the usual dental operations.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Missouri was the fifth State in population, having 1,721,295 inhabitants within an area of 65,350 square miles, an average of 26.34 persons to the square mile. This population consisted of 1,603,146 whites, 118,071 colored, 3 Chinese, and 75 Indians. Of these, 1,499,028 were natives of the United States and 222,267 were foreign-born. Of the native residents, 788,491 whites, 85,501 colored, and 14 Indians were born within its borders, while of the foreign residents, 113,618 were born in Germany, 14,314 in England, 54,983 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 324,348 persons attended school, and of these, 6,603 were foreign-born. Of the white scholars, 165,792 were males and 149,468 females, a total of 315,260. Of the 9,080 colored pupils 4,557 were males and 4,523 females. Thirteen male and 5 female Indians were also reported.

Illiteracy.—Two hundred and twenty-two thousand four hundred and forty-one inhabitants, of all races, 10 years old and over, were reported as unable to write, of whom 15,584 were foreign-born.

Age, sex, and race of illiterates.—Of the 161,763 white illiterates, 49,373 were from 10 to 15 years old, and of these, 27,509 were males and 21,864 females; 27,486 were from 15 to 21 years old, of whom 14,755 were males and 12,731 females; 84,904 were 21 years old and over, of whom 34,780 were males and 50,124 females. Of the 60,622 colored illiterates, 10,497 were from 10 to 15 years of age, of whom 5,364 were males and 5,133 females; 11,536 were from 15 to 21 years old, of whom 5,355 were males and 6,181 females; 38,589 were 21 years old and over, of whom 18,002 were males and 20,587 females. Ten male and 16 female Indian illiterates were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 6,750, having 9,028 teachers, of whom 5,157 were males and 3,871 females, to educate their 370,337 pupils, 186,641 of whom were males and 183,696 females.

Amount and source of educational income.—The total income of all the educational institutions was $4,340,805, of which $57,567 were derived from endowment, $3,067,449 from taxation and public funds, and $1,215,789 from tuition and other sources.

Public schools.—The 5,996 public schools, with 7,362 teachers, 4,414 male and 2,948 female, were attended by 320,313 pupils, of whom 163,582 were males and 156,731 females. To educate these they possessed a total income of $3,092,733, of which $5,300 were derived from endowment, $3,007,766 from taxation and public funds, and $79,667 from tuition and other sources.

Colleges.—The 37 colleges, with 261 teachers, 179 males and 82 females, were attended by 6,067 students, of whom 3,483 were males and 2,584 females. To educate these they possessed a total income of $323,855, of which $39,946 were derived from endowment, $8,120 from taxation and public funds, and $275,789 from tuition and other sources.

Academies.—The 45 academies, with 333 teachers, of whom 86 were males and 247 females, had an attendance of 5,031 pupils, 1,759 of whom were males and 3,272 females. They possessed a total income of $204,228, of which $521 were derived from endowment, $2,000 from taxation and public funds, and $201,707 from tuition and other sources.

Private schools.—The 586 day and boarding schools had 770 teachers, of whom 280 were males and 490 females, and were attended by 26,816 pupils—12,019 males and 14,797 females, to educate whom they possessed an income of $487,176, derived from tuition and other sources.

Libraries.—One thousand seven hundred and forty-two public libraries were reported, with 498,996 volumes, and 3,903 private libraries with 566,642 volumes; in all, 5,645 libraries, containing 1,065,638 volumes.

The press.—The 279 periodicals issued had an aggregate circulation of 522,866 copies, and an annual issue of 47,980,422 copies.

Churches.—Of the 3,229 church organizations, 2,082 had edifices with 691,520 sittings, and the church property was valued at $9,709,358.

Pauperism.—Of the 1,854 paupers, 1,090 were native whites, 325 native colored, and 439 foreigners.

Crime.—Of 1,623 persons in prison June 1, 1870, 893 were native whites, 324 native colored, and 406 foreigners. One thousand five hundred and three persons were convicted during the year.

Age and sex of population.—Of the total population, 577,803 were from 5 to 18 years old, of whom 294,316 were males and 283,487 females; 1,205,568 were 10 years old and upward, of whom 632,179 were males and 573,389 females.

Occupations.—Five hundred and five thousand five hundred and fifty-six persons of these ages were engaged in various occupations, of whom 466,845 were males and 38,711 females. Of these, 263,918 were engaged in agricultural pursuits, of whom 262,595 were males and 1,323 females; 106,903 in personal and professional services, of whom 75,079 were males and 31,824 females; 54,885 in trade and transportation,

of whom 54,583 were males and 302 females; 79,850 in manufactures and mechanical and mining industries, of whom 74,588 were males and 5,262 females.

Age and sex of working population.—Of the 505,556 employed persons, 24,439 were from 10 to 15 years old, of whom 19,812 were males and 4,627 females; 460,826 were from 16 to 59 years old, and of these 427,612 were males and 33,214 females; 20,291 were 60 years old and over, of whom 19,421 were males and 870 females.

NEBRASKA.

NEBRASKA STATE UNIVERSITY AND AGRICULTURAL COLLEGE.

This institution occupies a large and convenient building at Lincoln, Nebraska. It is under the management of a board of regents, of which the governor of the State is president.

Five courses of study are now open to students, viz: the classical, the scientific, the Latin scientific, the Greek scientific, and the agricultural. A Latin or preparatory school will be opened under the auspices of the university, to meet the wants of such persons as are not qualified to enter the freshman class of the university.

In the agricultural department two courses of study are provided: a four-year course, including, besides the studies exclusively agricultural, nearly all the English studies of an ordinary college course, and giving special attention to the natural sciences, and a year's course of practical agriculture. Two sections of land for an experimental farm have been secured, and instruction was to be commenced at the beginning of the fall term, (1872.) In addition to the faculty of the past year, two new professors have been appointed.

The university is supplied with extensive and entirely new apparatus in chemistry and physics.

Ladies are admitted to all the departments.

NEBRASKA COLLEGE AND GRAMMAR SCHOOL.

This institution is conducted under the auspices of the Episcopal Church, and the Episcopal bishop of Nebraska is president of the board of trustees. A thorough course of instruction is given in classics, mathematics, science, and business studies. The institution has entered upon its seventh year. It is designed only for the instruction of young men.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Nebraska was the thirty-fifth State in population, having 122,993 inhabitants within an area of 75,995 square miles, an average of 1.62 persons to the square mile. This population consisted of 122,117 whites, 789 colored, and 87 Indians. Of these 92,245 were natives of the United States and 30,748 were foreign-born. Of the native residents 18,425 whites, 53 colored, and 52 Indians were born within its borders, while of the foreign residents 10,954 were born in Germany, 3,603 in England, and 4,999 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 17,956 persons attended school, and of these 1,369 were foreign-born. Of the white scholars 9,437 were males and 8,463 females, a total of 17,900. Of the 48 colored pupils, 30 were males and 18 females. Three male and 5 female Indians were also reported.

Illiteracy.—Four thousand eight hundred and sixty-one inhabitants, of all races, 10 years old and over, were reported as unable to write, of whom 1,309 were foreign-born.

Age, sex, and race of illiterates.—Of the 4,630 white illiterates, 1,976 were from 10 to 15 years old, and of these 1,167 were males and 809 females; 529 were from 15 to 21 years old, of whom 317 were males and 212 females; 2,125 were 21 years old and over, of whom 956 were males and 1,169 females. Of the 205 colored illiterates, 26 were from 10 to 15 years of age, of whom 16 were males and 10 females; 36 were from 15 to 21 years old, of whom 15 were males and 21 females; and 143 were 21 years old and over, of whom 93 were males and 50 females. Ten male and 16 female illiterate Indians were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 796, having 840 teachers, of whom 450 were males and 390 females, to educate 17,614 pupils, 9,492 of whom were males and 8,122 females.

Amount and source of educational income.—The total income of all the educational institutions was $207,560, of which $186,435 were derived from taxation and public funds, and $21,125 from tuition and other sources.

Public schools.—The 781 public schools, with 813 teachers, (436 male and 377 female,) were attended by 17,052 pupils, of whom 9,227 were males and 7,825 females. To educate these they possessed a total income of $182,160, of which $181,435 were derived from taxation and public funds and $725 from tuition and other sources.

College.—The one college reported, with 5 teachers, (4 male and 1 female,) was attended by 26 male students. It possessed an income of $8,000, derived from tuition and other sources.

Academy.—The 1 academy, with 3 teachers, 1 male and 2 female, had an attendance of 60 pupils, 25 of whom were males and 35 females. It possessed an income of $1,900, derived from tuition and other sources.

Private schools.—The 9 day and boarding schools had 14 teachers, of whom 7 were males and 7 females, and were attended by 406 pupils, 188 male and 218 female. They possessed an income of $8,500, derived from tuition and other sources.

Libraries.—One hundred and seventy-one public libraries were reported, with 51,915 volumes, and 219 private libraries, with 95,125 volumes; in all, 390 libraries, containing 147,040 volumes.

The press.—The 42 periodicals issued had an aggregate circulation of 31,600 copies, and an aggregate annual issue of 3,388,500 copies.

Churches.—Of the 181 church organizations, 108 had edifices with 32,210 sittings, and the church property was valued at $386,000.

Pauperism.—Of the 92 paupers, 54 were native whites and 38 foreigners.

Crime.—Of 69 persons imprisoned June 1, 1870, 35 were native whites, 9 native colored, and 25 foreigners. Fifty-three persons were convicted during the year.

Age and sex of population.—Of the total population 34,523 were from 5 to 18 years old, of whom 17,779 were males and 16,744 females; 88,265 were 10 years old and upward, of whom 52,588 were males and 35,677 females.

Occupations.—Forty-three thousand eight hundred and thirty-seven persons of these ages were engaged in various occupations, of whom 41,943 were males and 1,894 females. Of these, 23,115 were engaged in agricultural pursuits, of whom 23,083 were males and 32 females; 10,331 in personal and professional services, of whom 8,667 were males and 1,664 females; 4,628 in trade and transportation, of whom 4,623 were males and 5 females; 5,763 in manufactures and mechanical and mining industries, of whom 5,570 were males and 193 females.

Age and sex of working population.—Of the 43,837 employed persons, 738 were from 10 to 15 years old, of whom 619 were males and 119 females; 42,359 were from 16 to 59 years old, and of these 40,607 were males and 1,752 females; 740 persons were 60 years old and over, of whom 717 were males and 23 females.

NEVADA.

COLORED CHILDREN IN THE PUBLIC SCHOOLS.

A very interesting case has lately been decided by the supreme court of Nevada touching the right of colored children to admission into the common schools of that State. The statute heretofore governing the subject says: "Negroes, Mongolians, and Indians shall not be admitted into the public schools, but the board of trustees may establish a separate school for their education, and use the public funds for the support of the same." No "separate school" having been provided in Ormsby County, a father of colored children asked for a mandamus to compel the school trustees to admit his children, which they had refused to do. The mandamus has been granted by the supreme court, upon the ground that the statute conflicts with the State constitution, which provides for a "uniform system of common schools," and that certain funds "shall be apportioned among the several counties in proportion to the number of persons between the ages of six and eighteen years." Colored children being manifestly "persons," the court considers them entitled to their share of benefits to be derived from the school revenues.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Nevada was the thirty-seventh State in population, having 42,491 inhabitants within an area of 104,125 square miles, an average of 0.41 person to the square mile. This population consisted of 38,959 whites, 375 colored, 3,152 Chinese, and 23 Indians. Of these, 23,690 were natives of the United States and 18,801 were foreign-born. Of the native residents, 3,313 whites, 31 colored, 7 Indians, and 5 Chinese were born within its borders, while of the foreign residents, 2,181 were born in Germany, 2,549 in England, and 5,035 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 2,893 persons attended school, and of these 97 were foreign-born. Of the white scholars, 1,451 were males and 1,433 females, a total of 2,884. Of the 8 colored pupils, 6 were males and 2 females. One female Indian was reported as attending school.

Illiteracy.—Eight hundred and seventy-two inhabitants, of all races, 10 years old and over, were reported as unable to write, of whom 774 were foreign-born.

Age, sex, and race of illiterates.—Of the 653 white illiterates, 23 were from 10 to 15 years old, 8 males and 15 females; 30 were from 15 to 21 years old, of whom 20 were males and 10 females; 600 were 21 years old and over, of whom 474 were males and 126 females. The 21 colored illiterates were 21 years old and over, of whom 15 were males and 6 females. One hundred and eighty-five male and 13 female Chinese illiterates were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 53, having 84 teachers, of whom 13 were males and 71 females, to educate 2,373 pupils, 1,279 of whom were males and 1,094 females.

Amount and source of educational income.—The total income of all the educational institutions was $110,493, of which $84,273 were derived from taxation and public funds, and $26,220 from tuition and other sources.

Public schools.—The 38 public schools, with their 56 teachers, (9 males and 47 females,) were attended by 1,856 pupils, of whom 1,065 were males and 791 females. To educate these they possessed an income of $81,273, derived from taxation and public funds.

Private schools.—The 14 day and boarding schools had 22 teachers, of whom 4 were males and 18 females, and were attended by 422 pupils, 214 males and 208 females, to educate whom they possessed an income of $26,220, derived from tuition and other sources.

Libraries.—Twenty-eight public libraries were reported, with 41,940 volumes, and 286 private libraries, with 116,100 volumes; in all, 314 libraries, containing 158,040 volumes.

The press.—The 12 periodicals issued had an aggregate circulation of 11,300 copies, and an aggregate annual issue of 2,572,000 copies.

Churches.—Of the 32 church organizations, 19 had edifices, with 8,000 sittings, and the church property was valued at $212,000.

Pauperism.—Of the 54 paupers, 27 were native whites, 2 native colored, and 25 foreigners.

Crime.—Of 99 persons in prison June 1, 1870, 37 were native whites, 3 native colored, and 59 foreigners. One hundred and thirty-two persons were convicted during the year.

Age and sex of population.—Of the total population, 5,337 were from 5 to 18 years old,

of whom 2,762 were males and 2,575 females; 36,655 were 10 years old and upward, of whom 29,430 were males and 7,225 females.

Occupations.—Twenty-six thousand nine hundred and eleven persons of these ages were engaged in various occupations, of whom 26,468 were males and 443 females. Of these 2,070 were engaged in agricultural pursuits, of whom 2,063 were males and 7 females; 7,431 in personal and professional services, of whom 7,152 were males and 279 females; 3,621 males were engaged in trade and transportation; 13,789 persons were engaged in manufactures and mechanical and mining industries, of whom 13,632 were males and 157 females.

Age and sex of working population.—Of the 26,911 employed persons, 49 were from 10 to 15 years old, of whom 41 were males and 8 females; 26,735 were from 16 to 59 years old, and of these 26,307 were males and 428 females; 127 were 60 years old and over, of whom 120 were males and 7 females.

Cost of the same, including land and furniture	$176,000

GRADED SCHOOLS.

A system of graded schools has been established in our cities and several larger towns. The actual working of this system can be seen in the public schools of the city of Manchester. We can now refer with pride and honor to this city as having a system of public free schools as well managed and as well taught as any in New England.

COMMON DISTRICT SCHOOLS.

It is believed that certain changes must be wrought in the management and instruction of these district schools before they can attain their object. It is further believed that most beneficial results would accrue to our district schools in a thorough recon-

struction of the district management and town supervision of the schools; in demanding and employing a better qualified class of teachers, and in the establishment of a judicious county supervision of schools. Many of the school districts contain only a few scholars. Their share of the school money is limited and insufficient to meet the ordinary expense of a good school more than a few weeks in the year. Many of the school-buildings are miserable; and the district and town supervision are wanting in that care and oversight which are necessary.

TOWN SUPERVISION.

A large majority of the towns in our State annually appoint one man to perform the important duties of superintending school committee. Frequently the largest school districts have a school committee of their own, independent of the town school committees. In some of our towns there are four independent school or superintending committees. These are changed every year or two years, thus creating confusion, breaking up all system in the direction of schools, and destroying, in great measure, the interest which school committees should take in schools under their charge. It is recommended that the towns adopt a by-law permitted by the general statutes, and choose a school committee, consisting of three, six, or nine persons, holding office for three years, and so arranged that a portion of them retire annually; let all the schools in town be under the management of this committee, and there is no doubt that our school system, as it exists to-day, would be rendered much more efficient.

PRUDENTIAL COMMITTEES.

Prudential committees are elected yearly, at the district meeting. The duties of such committees are limited to matters outside of the school-room. It is part of the duty of this office to employ the teacher, while the examination and dismission of the teacher, the inspection and control of the school, belong to an entirely separate office. The communications from town school committees, and the opinions of prominent educators, all coincide in the expression that this system is a great barrier to the success of our educational efforts.

TOWN SCHOOL COMMITTEES.

The entire control of our public schools is legally vested in the town school committees. But these committees generally do not sufficiently partake of the educational progress abroad in the world. It is a conclusion drawn from observation that when a class of good schools is found, well managed and well taught, it is directly traceable to the work of a good superintendent. The town committees, having the entire care of the schools, should be authorized to select and employ the teachers, and it is recommended to the legislative authority to transfer this power from prudential committees to the town school committees.

COUNTY SUPERVISION.

The testimony of all State superintendents where this system—untried in New Hampshire—has been adopted is strongly in its favor. Under it teachers are better qualified and schools more efficient. A school agency so generally approved and securing such results, deserves the candid attention of the legislators and educators of this State. It is submitted that the number of trustees of the State normal school be increased to one for each county, and that a suitable law be enacted, constituting that trustee the supervisor of public schools for his county.

TOWN AND DISTRICT SYSTEMS CONTRASTED.

The utility of the district system is now seriously and generally questioned. During the short terms of small district schools the pupils only get fairly started in their studies to be turned out the greater part of the year, forgetting what little they have learned, and coming back, after this long and ruinous interval, to commence again near the former starting-place. There are many of these schools revolving year after year on this defective system, making some motion, but scarcely any real progress. Multitudes are forsaking their rural homes for the sake of educating their children. Any available plan for improving the schools in our outlying districts would check this tendency. As the town is a unit for municipal purposes in making provision for the support of schools, it is reasonable that the advantages of its schools should be equalized.

In June, 1870, an act was passed "enabling towns to abolish school districts in certain cases." Under this act the town of Milford has adopted the town system with

marked success. "The number of pupils has increased considerably, and the advantages to the smaller districts, where the rule has been short and poor schools, are so marked that they could not fail to be appreciated by even the most careless and unobservant." The subject is receiving careful consideration in several of the larger towns. If they should adopt this system, it will render their schools more valuable, and in the smaller towns it would strengthen their educational power.

TEACHERS' INSTITUTES.

Within the school year, teachers' institutes have been held in all the counties of the State. The county institutes are under the management of the State superintendent. Instruction at the county sessions has been given by the best experience and talent of our State.

The twofold function of the normal school has been incorporated in the instructions of the institute. It has been deemed advisable to devote the larger portion of the day exercises to a thorough explanation and elucidation of the elements of the common branches. The evening sessions have been occupied with general discussions and lectures upon pertinent educational subjects. The attendance has been large, close attention has been given, and a deep and general interest awakened. It is believed that these schools of instruction, well conducted, will generate a strong impulse in advancing the educational power of our State. At each session, teachers were invited to present themselves for examination for certificates based upon the normal-school courses.

DOVER.

PUBLIC SCHOOLS.

The year has been fruitful of good results, abundantly demonstrating the wisdom of the change made in abolishing the several school districts, and throwing the entire city limits into one district. The high school was kept for a term of 50 weeks, the grammar schools 47, and the primaries 44. The city owns 18 school buildings, valued (including lots) at $125,150. The need of a truant officer for the city is strongly urged. The attention of the board is called to the importance of introducing the study of drawing into the schools.

STATE NORMAL SCHOOL.

The State Normal School at Plymouth has been in successful operation the past year. Superintendents are unanimous in the commendation of the excellent work done by normal-school students, wherever employed in the State.

The trustees' report says: "The practical benefits of the normal school are already apparent. Though only two years in existence it has raised the standard of qualifications for teachers. Two facts illustrate how very low was the standard for district-school teachers when the normal school was established. The first year much the larger number of the normal pupils had been employed as teachers and held certificates from town superintendents. Yet only fourteen were able to graduate, even from the first course, and one from the second course. At the June session of 1871, it was provided that teachers who were qualified to sustain an examination on the normal-school basis should receive institute certificates, authorizing them to teach from three to five years. Yet under this law only five have been approved, though an opportunity thus to test their qualifications has been given in every institute during the year."

The trustees recommend that 1½ per cent. of the money raised by the several towns for the support of public schools be set apart for the benefit of the normal school, with certain provisions.

DARTMOUTH COLLEGE.

The various departments of this institution, as they now exist, are as follows:

1. The academic department, which offers a four years' course, including the privilege of a partial course, and a number of particular options. 2. The Chandler scientific department, the course of which is chronologically parallel to that of the academic department, and has, with the option of a partial course through all the years, several elective lines of study in the last year. 3. The agricultural department, which has a three years' course, with an option after the first year between an agricultural and mechanical line of study. 4. The Thayer School of Civil Engineering. 5. The medical department, which was established in 1797, and ranks with the best medical institutions in the country.

The whole number of alumni, as given in the last triennial catalogue, is 3,673. "Of these over 900 have entered the ministry; there have been 31 judges of the United States and State supreme courts; 15 Senators in Congress, and 61 Representatives; 2 United States Cabinet ministers; 4 embassadors to foreign courts; 1 Postmaster-General; 14 governors of States and 1 of a Territory; 25 presidents of colleges; 104 pro-

fessors in academical, medical, or theological colleges." Among her graduates, Dartmouth numbers Daniel Webster and Rufus Choate.

During the past year the new building for the use of the agricultural department, called Culver Hall, has been completed. In the laboratory of this building special provision has been made for instruction in practical chemistry. A valuable tract of land of 165 acres, in the immediate vicinity of Culver Hall, has been secured for an experimental farm. A new building is soon to be erected, containing rooms for the farm superintendent and for students.

A State museum of general and applied science has been commenced. Several hundred valuable specimens have been purchased in Europe, and one-half of the specimens accruing from the State geological survey, now in progress, have been devoted to this department by the legislature.

A donation of $10,000 has been made to the medical department, to found a museum of pathological anatomy. This will be completed before the opening of the next session.

The philosophical apparatus has recently been greatly increased by large purchases, both in this country and Europe. In the department of acoustics, optics, and electricity it is especially rich, and hardly surpassed in the United States.

The equipment of the astronomical and meteorological observatory has recently been greatly improved. A new and very perfect telescope of 9.4 inches aperture and 12 feet focal length, from the celebrated establishment of Alvin Clark & Sons, replaces the old 6-inch Munich refractor. A spectroscope of the highest power and best construction accompanies the instrument.

The several libraries have been increased by appropriations and donations.

To accommodate those who design to enter the school of civil engineering, a department preparatory to the curriculum was formed September 1, 1872. This course will extend through two years.

Large additions have been made of late to the means of assisting indigent and worthy students. Aid is mainly given in the form of scholarships, varying in their annual income from $60 to $100.

Within the last seven years, more than $400,000 have been secured for the various departments. But with the restrictions imposed on some of the gifts, with the contemplated plans of enlargement and improvement, and with the increased number of students, there is a present need of as much more.

PHILLIPS EXETER ACADEMY.

All the pupils of this academy are preparing for college. The course of preparation occupies three years. About twenty students, selected annually from among the members of the academy, are admitted to the charity foundation. The income of the Bancroft scholarship, founded by Hon. George Bancroft, amounts to $140, and is given to a meritorious student selected by the trustees.

ATKINSON ACADEMY.

This institution has been in operation more than eighty years. In addition to the ordinary branches of an English education, the classics and the higher branches of mathematics are thoroughly taught.

KIMBALL UNION ACADEMY.

The net amount of the funds of this institution is about $45,000. A vigorous effort is making to increase the endowment fund by $100,000. For nearly sixty years it has occupied a foremost place among classical schools, and the earnest hope is expressed that it will not be allowed to lose its well-earned standing for want of funds. Indigent young men who have the ministry in view are aided from the funds of the institution.

FRANCESTOWN ACADEMY.

The course of study of this academy embraces a classical department, a ladies' course, and an English department. During the year 1871–'72 the permanent fund of the academy has been increased by subscriptions of over $7,000.

TILDEN LADIES' SEMINARY.

This institution has been in successful operation, under its present management, for six years, and has, within two years, doubled its capacity and number of boarders. The building, with recent improvements, cost about $40,000.

LITTLETON GRADED SCHOOL.

This consists of high, grammar, and primary schools. A normal department is attached to the high school.

REFORM SCHOOL.

Sixteen inmates of this institution have been discharged during the year for meritorious conduct; 6 have been sent to homes; 2 to the care of parents, and 1 to care of county commissioners. The average time of detention of children discharged was one year and eight months. Of the whole number of pupils (143) 76 were committed for stealing.

For the past year the institution has accomplished much good, though not so much as it might with greater facilities. In no case has any child remained any length of time in the school without showing improvement; in many cases very commendable, and in some most remarkable. The result of the superintendent's experience is expressed in this suggestion: "That all children should enter these institutions expecting to remain during their minority, unless they earn an honorable discharge by their confirmed good behavior and reformation" In schools where this is the rule the average term of detention is not so long as when short and irregular sentences are imposed. The "ticket-of-leave" system is strongly commended.

The boys have been employed in caning chair-seats. Other employments would be more profitable and useful, but their introduction would render necessary some outlay for tools, machinery, &c. The subject is commended to the legislature. The buildings are reported in need of repairs, and the furniture as extremely meager and insufficient. While the desire of the trustees is to make this a comfortable home for the children, it is really as bare as a prison. The expenditures for the year amounted to $18,143.77. Amount earned by boys caning chair-seats, $2,536.90.

NEW HAMPSHIRE STATE TEACHERS' ASSOCIATION.

The annual meeting of the New Hampshire State Teachers' Association was held at Plymouth, October 24 and 25.

Hon. J. W. Simonds, State superintendent, was appointed chairman, in the absence of the president; and the first exercise was a lecture by W. W. Colburn, of the Manchester high school, upon the physical geography of New Hampshire, in which the formation of the crust of the earth, and the mountains, streams, and valleys, the minerals, drainage, water-power, and physical resources of the State, were presented in an interesting manner, and secured the close attention of the audience.

On Friday, the second day, the necessity of shortening the daily sessions of the schools, especially those of the primary and intermediate schools, was discussed by Messrs. Pearl, Quimby, and Edgerly, none of whom thought the hours of school too many, but agreed that the work of the school-room was sometimes of such a character as to injure the health of children. Listless exercises and the want of pure air caused greater injury than lengthened sessions, if these are varied in their exercises, and there is a proper amount of recreation.

The "Marking system" was also discussed at some length; Messrs. Quimby, Austin, and Ruggles believing in its usefulness to a great extent; Mr. Henpey and Mr. Blakely to a limited extent; while Messrs. Brown, of Boston, and Edgerly, of Manchester, opposed the whole system as hitherto practiced.

The "Co-education of the sexes" was the main subject of the afternoon discussion, Mrs. Miller, of Concord, and Messrs. Pearl and Hadley, of Plymouth, advocating the idea of educating both sexes in the same schools and colleges, while Professor Orcutt opposed it.

Mr. Austin, of Meriden, gave an interesting lecture in the evening on the "Art of study."

Officers elected: president, Professor E. T. Quimby, of Hanover; vice-presidents, W. W. Colburn, of Manchester; S. H. Pearl, of Plymouth, and G. H. Genness, of Rye; secretaries, N. Barrows, Meriden, and H. Orcutt, West Lebanon; treasurer, T. W. H. Henpey, of Nashua.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 New Hampshire was the thirty-first State in population, having 318,300 inhabitants within an area of 9,280 square miles, an average of 34.30 persons to the square mile. This population consisted of 317,697 whites, 580 colored, and 23 Indians. Of these 288,689 were natives of the United States and 29,611 were foreign-born. Of the native residents 242,044 whites, 329 colored, and 1 Indian were born within its borders, while of the foreign residents 436 were born in Germany, 2,679 in England, and 12,190 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 65,824 persons

attended school, and of these 1,458 were foreign-born. Of the white scholars 34,353 were males and 31,423 females—a total of 65,776. Of the 48 colored pupils 25 were males and 23 females.

Illiteracy.—Nine thousand nine hundred and twenty-six inhabitants of all races, 10 years old and over, were unable to write, of whom 7,934 were foreign-born.

Age, sex, and race of illiterates.—Of the 9,831 white illiterates 833 were from 10 to 15 years old, and of these 456 were males and 377 females; 1,412 were from 15 to 21 years old, of whom 712 were males and 700 females; 7,586 were 21 years old and over, of whom 3,361 were males and 4,225 females. Of the 95 colored illiterates 7 were from 10 to 15 years of age, of whom 4 were males and 3 females; 18 were from 15 to 21 years old, of whom 10 were males and 8 females; 70 were 21 years old and over, of whom 38 were males and 32 females.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 2,542, having 3,355 teachers, of whom 653 were males and 2,702 females, to educate 64,677 pupils, 33,123 of whom were males and 31,554 females.

Amount and source of educational income.—The total income of all the educational institutions was $574,898, of which $59,289 were derived from endowment, $396,991 from taxation and public funds, and $118,618 from tuition and other sources.

Public schools.—The 2,464 public schools, with 3,110 teachers—510 male and 2,600 female—were attended by 59,408 pupils, of whom 30,275 were males and 29,133 females. To educate these they possessed a total income of $403,310, of which $1,643 were derived from endowment, $391,991 from taxation and public funds, and $9,676 from tuition and other sources.

College.—The one college, with 29 male teachers, was attended by 289 male students. It possessed a total income of $29,000, of which $9,000 were derived from endowment and $20,000 from tuition and other sources.

Academies.—The 36 academies, with 109 teachers, of whom 50 were males and 59 females, had an attendance of 2,896 pupils, 1,367 of whom were males and 1,529 females. They possessed a total income of $88,377, of which $35,346 were derived from endowment and 53,031 from tuition and other sources.

Private schools.—The 21 day and boarding schools had 48 teachers, of whom 22 were males and 26 females, and were attended by 885 pupils—420 males and 465 females. They possessed a total income of $21,222, of which $300 were derived from endowment and $20,922 from tuition and other sources.

Libraries.—Six hundred and seventy public libraries were reported with 324,393 volumes, and 856 private libraries with 379,876 volumes—in all, 1,526 libraries containing 704,269 volumes.

The press.—The 51 periodicals issued had an aggregate circulation of 173,919 copies, and an aggregate annual issue of 7,237,588 copies.

Churches.—Of the 633 church organizations 624 had edifices with 210,090 sittings, and the church property was valued at $3,303,780.

Pauperism.—Of the 2,129 paupers 1,739 were native whites, 15 native colored, and 375 foreigners.

Crime.—Of 267 persons in prison, June 1, 1870, 199 were native whites, 2 native colored, and 66 foreigners. One hundred and eighty-two persons were convicted during the year.

Age and sex of population.—Of the total population, 78,766 were from 5 to 18 years old, of whom 40,073 were males and 38,693 females; 260,426 were 10 years old and upward, of whom 126,353 were males and 134,073 females.

Occupations.—One hundred and twenty thousand one hundred and sixty-eight persons of these ages were engaged in various occupations, of whom 96,033 were males and 24,135 females. Of these 46,573 were engaged in agricultural pursuits, of whom 46,562 were males and 11 females; 18,528 in personal and professional services, of whom 8,821 were males and 9,707 females; 8,514 in trade and transportation, of whom 8,126 were males and 388 females; 46,553 in manufactures and mechanical and mining industries, of whom 32,524 were males and 14,029 females.

Age and sex of working population.—Of the 120,168 employed persons, 3,268 were from 10 to 15 years old, of whom 2,213 were males and 1,055 females; 104,850 were from 16 to 59 years old, and of these 82,460 were males and 22,390 females; 12,050 were 60 years old and over, of whom 11,360 were males and 690 females.

SCHOOL OFFICIALS.

The names of superintendents of city schools will be found in the table of city school statistics at the end of this volume.

NEW JERSEY.

[From report of Ellis A. Apgar, State superintendent of instruction, for the scholastic year ended August 31, 1871.]

SCHOOL FUND.

Two-mill tax	$1,097,481 72
State appropriation	100,000 00
Township school tax	49,779 17
District school tax	1,015,086 29
Surplus revenue	39,993 50
Tuition fees	62,100 90
Appropriation to normal and Farnum schools	11,200 00
Total	2,375,641 58

Total value of school property in the State	$4,246,998 00

FINANCIAL STATEMENT.

Value of school property, 1871	$4,246,998 00
Value of school property, 1870	3,677,442 00
Increase over last year	569,556 00
Total appropriation for 1871	$2,375,641 58
Total appropriation for 1870	1,664,659 03
Increase over last year	710,982 55
Increase in surplus revenue	$11,270 62
Increase in district tax for building school-houses	120,793 37
Decrease in township school-tax	413,176 07
Decrease in district tax for teachers' salaries	95,621 97
Decrease in tuition fees	9,765 12

SCHOOL STATISTICS.

Scholastic population	265,958
Number enrolled in public schools	169,430
Number attending private schools	30,106
Number not attending school	62,718
Number of children unaccounted for	3,704
Number of children the public schools will seat	141,589
Number attending public school 10 months	15,959
Number attending 8 months, but less than 10 months	23,227
Number attending 6 months, but less than 8 months	28,212
Number attending 4 months, but less than 6 months	35,824
Number attending less than 4 months	65,915
Average attendance	86,812
Increase in scholastic population during the year	7,731
Increase in number enrolled in public schools	7,747
Decrease in number attending private schools	2,341
Increase in number not attending school	7,708
Increase in average attendance	8,200

PERCENTAGE OF ATTENDANCE.

Percentage of pupils attending 10 months	9
Percentage of pupils attending between 8 and 10 months	14
Percentage of pupils attending between 6 and 8 months	17
Percentage of pupils attending between 4 and 6 months	21
Percentage of pupils attending less than 4 months	39
Percentage of average attendance	51

This attendance varies but little from that reported last year. The number attending the public schools has increased, but the increase has only kept pace with the increase in the census. Seventy-six per cent. of the total school census is represented as having attended either a public or a private school some portion of the year. This aggregate attendance is as great as we have reason to expect. Our school census includes all children between 5 and 18 years of age, but only those between 6 and 15, as a general thing, attend school. So that we may safely assume that about all the children of the State between the ordinary ages limiting school attendance do attend some school for a longer or a shorter period during the year. Although the total attendance is satisfactory, the irregularity of attendance must be considered a great and alarming evil. Our free-school law requires the schools to be kept open at least nine months during the year, but if 39 per cent., or more than one-third, of the total attendance is in school less than four months, it is evident that we are not securing all the good we should from our school system. It is due to those who are taxed to keep the schools open three-fourths of the year that a full attendance of the children should be secured during that time by law.

TEACHERS AND TEACHERS' SALARIES.

Number of male teachers employed	952
Number of female teachers employed	1,979
Total number of teachers	2,931
Increase in number of teachers over last year	111
Average salary per month of male teachers	$57 34
Average salary per month of female teachers	$32 43

The male teachers in New Jersey receive the highest salaries paid in any of the States, except California, Massachusetts, and Connecticut, and the female teachers the highest paid, except in California, Ohio, and Illinois.

TEACHERS' CERTIFICATES.

Certificates of first grade granted to males	49
Certificates of first grade granted to females	18
Certificates of second grade granted to males	57
Certificates of second grade granted to females	58
Certificates of third grade granted to males	463
Certificates of third grade granted to females	741
Total number granted to males	569
Total number granted to females	817
Total number of certificates granted	1,386
Number of applicants rejected	212
Per cent. rejected of number examined	15

The examinations are held quarterly. The questions used are uniform throughout the State, and the same rules govern all the examiners. This is not the case in any other State. By this important regulation we secure a uniform standard of gradation among the teachers. A certain grade of certificate means the same in all parts of the State, in whatever county it may have been issued.

SCHOOL DISTRICTS AND SCHOOL-HOUSES.

Number of townships and cities	247
Number of school districts	1,390
Average number of children in the districts	138
Number of school buildings	1,501
Number of school departments	2,462
Number of districts without school-houses	62
Number of new school-houses erected during the year	82
Number of school-houses repaired	84
Number of unsectarian private schools	357
Number of sectarian private schools	118
Number of visits made by county superintendents	2,876
Amount expended for building and repairing school-houses	$597,400 20
Increase over amount expended for same purpose last year	$120,793 37

Notwithstanding the fact that so large an amount of money has been expended for the improvement of our school accommodations, still their condition, in too many of our districts, is very far from what it should be. There are 62 districts entirely desti-

tute of school accommodations; 178 school buildings are absolutely disgraceful, and 255 others are so far gone as to be beyond repair. Out of the 1,390 districts in the State, 495, or more than one-third of the whole number, are without proper school accommodations.

SUMMARY OF STATISTICS.

Value of school property in the State	$4,246,998 00
Appropriation for 1871	$2,375,641 58
Increase of appropriation over last year	$710,982 55
Scholastic population	265,958
Number enrolled in public schools	169,430
Average attendance	86,812
Percentage of average attendance	51
Cost of education per pupil	$19.85
Duration of schools, (average)	8 months and 18 days.
Number of teachers	2,931
Teachers' certificates granted during the year	1,386
Number of school buildings	1,501
New school-houses erected during the year	82
Amount expended for building and repairing school-houses	$597,400 20

SCHOOL TERM.

The average length of time that the schools of the State have been kept open during the year is 8 months and 18 days, which is 4 days longer than the average time they were open last year, and longer than the schools of any other State are kept open. In 56 districts they were kept open less than 5 months; in 315 districts they were kept open between 5 and 8 months; and in 1,019 districts they were kept open more than 8 months.

COST OF EDUCATION.

The cost of education in the public schools for the past year averaged $6.40 for each child included in the school census, and $19.85 per child of average attendance.

SCHOOL LAW.

By the passage of the free-school act our whole school machinery is very much simplified, and the full benefit of a public-school system is accorded to all the children of the State. The bill, in its main features, is excellent, and puts the maintenance of the schools upon a perfectly sound basis. The most important feature of the law is that which substitutes for our township school tax a uniform State tax. Our schools will no longer depend for their support upon a fund which a mere majority at a town meeting may any year withhold. Fractional districts are also abolished, and the confusion and trouble arising from their management are now avoided. None of the results of the workings of the free-school law can be given in this report for the reason that it did not go into effect until the close of the year for which the report is made.

PUBLIC-SCHOOL LIBRARIES.

At the last session of the legislature was passed an "act to encourage the formation of libraries in the free public schools of New Jersey." The treasurer of the State, upon the order of the State superintendent of education, is directed to pay the sum of twenty dollars to every school district which shall raise by subscription a like sum for the same purpose, to establish within such district a school library, and to procure philosophical and chemical apparatus, and the further sum of ten dollars annually, upon a like order, to the said districts, upon condition that they shall have raised by subscription a like sum for such year, for the purpose aforesaid.

NEWARK.

SCHOOL ATTENDANCE.

It is estimated that over eight thousand children have attended no school during the year. Twenty more teachers are employed than last year, but there are only 618 more pupils. The average number to each teacher is, in primary schools, 66; in grammar schools, 48. The grammar schools do not make so good a report as they did last year. The aggregate of enrolled pupils is 185 less this year than last, and the average attendance 332 less. The daily attendance has been greatly interrupted by sickness, but the diminution in the number enrolled can not be satisfactorily accounted

for. In the primary schools there has been an increase in the number of registered pupils, but a satisfactory daily attendance is not secured in any grade of our day schools. In the evening schools the average attendance has been 10 per cent. greater than last year.

CONDITION OF SCHOOLS.

The schools are, on the whole, in a satisfactory condition; but greater progress seems to be made in the primary than in the grammar schools.

Bartholomew's system of drawing was introduced last year, and considerable interest was manifested, but the zeal of both teachers and pupils seems to have abated. An effort will be made to revive it. No advance has been made during the year in the provisions for teaching German, and the superintendent is convinced that if more can not be done in this direction it were better to do less. Instruction in singing has been given in the primary schools during the year, with gratifying results.

NEW BRUNSWICK.

ATTENDANCE.

At the closing exercises of the schools in June, the names of 118 pupils were read who had been present every day during the year. Of this number 19 had been present every day for two years, 13 for three years, and 3 had not missed a day for four years.

COLLEGE OF NEW JERSEY.

This college originated by royal charter in 1746. By a second more ample charter in 1748 it acquired such powers and privileges as were then enjoyed by the universities and colleges of Great Britain. After the revolutionary war the charter was renewed by the legislature of New Jersey. Nassau Hall, the north college building, was built in 1756, and at that time was the largest public edifice in the colonies. Extensive additions have been made to the college buildings within the last few years by the liberality of private individuals.

The college, after relying mainly upon tuition fees for its support during its early history, has of late years been acquiring more permanent sources of income through the liberality of its friends. The presidential endowment amounts to $98,000. Six professorships have an aggregate endowment of $125,000. No chair in the faculty, however, has as yet been sufficiently endowed to yield the entire salary of the professor. The deficiency in each of the endowed professorships amounts to more than $10,000. Several endowed fellowships have been founded, some of them only for a term of two or three years. A student obtaining a fellowship must pursue studies in the department for which it is provided for one year, under the superintendence of the faculty, and will be required to live in Princeton, or appear there from time to time as may be appointed; or, if he study at a foreign university, to furnish regular reports of what he is doing. A limited number of students is educated by means of endowed scholarships. The college also possesses a fund for the aid of indigent candidates for the ministry in the Presbyterian Church.

The donation of $120,000 for a library building fund and generous donations for the purchase of books have furnished the means for placing the library on a greatly extended foundation. The college library and the libraries of the two literary societies contain together 28,000 volumes. The collections of the different cabinets are extensive and valuable. The cabinet of geology includes upward of 5,000 specimens of Alpine rocks, presented by Professor Guyot. A collection of arms used in the Union and confederate armies during the late war has been deposited with the college by the Secretary of War.

The course of study requires four years, and embraces two classes of studies, required and elective. During the first two years the studies of both courses are essentially the same. Students can only be admitted by a vote of the faculty, taken after their examination, and are required to pledge themselves not to join any secret society.

RUTGERS COLLEGE.

The scientific department of this college, organized under the name of the Rutgers Scientific School, constitutes the State college of agriculture and the mechanic arts.

The course of study covers four years, and embraces two distinct courses, viz: Civil engineering and mechanics, and chemistry and agriculture. During the first two years the studies of the two courses are the same, and are so arranged as to form a course complete in itself. This is intended to meet the wants of those who can not take the entire four years' course, but who desire to fit themselves as land surveyors,

Students leaving at this period of the course receive a certificate of their attainments. Provision is made for students who wish to pursue special studies. Forty State students are educated in the scientific school free of expense for tuition. These students are admitted on the recommendation of the county superintendents of schools. The annual report for 1871–'72 shows both the college proper and the scientific school to be in a flourishing condition.

STEVENS INSTITUTE OF TECHNOLOGY.

This institution, established by the late Edwin A. Stevens, at Hoboken, is essentially a school of mechanical engineering, and will confer upon its regular graduates the degree of Mechanical Engineer. A very thorough training in the general principles of physical and chemical science is involved in the course laid out for the mechanical engineer, and it has therefore been thought advisable to give opportunity to those students who may find their inclination and capacity leading them in the direction of these sciences, to pursue a course of physics and chemistry as an alternative to that of mechanical engineering. Such students completing the course may graduate with the degree of Doctor of Philosophy.

The school has been in operation a little over a year. The departments already organized are those of mathematics, belles-lettres, modern languages, chemistry, physics, mechanical drawing, and mechanical engineering. The library is constantly receiving accessions, and the collections of minerals, &c., are rapidly increasing. The collection of "engineering relics" is becoming very interesting.

DREW THEOLOGICAL SEMINARY.

This was established in the interests of the Methodist Episcopal Church. The regular course of study requires three years. A partial course is permitted, and certificates given to those completing it.

SETON HALL COLLEGE.

This is under the care of the Roman Catholic Church, and is conducted by secular priests, who are assisted by experienced lay professors. The domestic arrangements are under the care of the Sisters of Charity. All the pupils are thoroughly instructed in the doctrines of the Catholic Church, and trained in its practices. The course of study is about the same as in high schools and academies, with the addition of a commercial course.

NEW JERSEY STATE REFORM SCHOOL.

The plan of management of this school has most of the features of the far-famed "Irish system." There is, however, no "cellular confinement on low diet," as in the "first stage" of that system, for the reason that the discipline here is meant to be reformatory and not penal. When, by good behavior, the pupil has reached the "fourth stage" he is entitled to a conditional discharge, and may return to his parents, or be indentured to a suitable employer to be taught a trade. But he is still the ward of the State, and under the supervision of the trustees, and so continues until he reaches the age of 21. The trustees are, also, constituted an agency for the care and employment of the discharged members. Each year proves more fully the wisdom of the plan of the institution and of its government.

The whole number of boys in the institution during the year ended October 31, 1871, was 148. Of 60 who were discharged, 41 returned to their parents and 12 were indentured to farmers. All the inmates have been under instruction in the school. The results of the year's work have been entirely satisfactory.

LOWELL MASON.—OBITUARY.

Lowell Mason, Mus. Doct., died at his residence in South Orange, New Jersey, on August 11, 1872. He was born in Medfield, Massachusetts, January 8, 1792; at the age of 20 engaged in business in Savannah, Georgia, where he devoted much attention to teaching music and conducting choirs and musical associations; became deeply interested in Sabbath-school teaching, and was, for many years, superintendent of a large school, the only one at that time in the city; published his first compilation of church music, the Boston Handel and Haydn Collection, in 1821; removed to Boston at the instance of the trustees of Mount Vernon school, and devoted his life to the work of musical instruction, 1827; received from the University of New York the well-earned degree of Doctor of Music, 1855, the first instance of such a degree being conferred in America.

Dr. Mason was a musician and a teacher of music from his youth. He held the

opinion, quite uncommon when he came to Boston, that substantially all children may be taught to sing; that, while few will ever become great singers or great mathematicians, it is wise to give all some degree of training in music as well as in mathematics. His experiment in the Mount Vernon school was completely successful. Here all the pupils, over a hundred in number, of various ages and degrees of culture, formed but one class in music, and, by the skill of the teacher, mere children and the most advanced were alike interested in the lessons.

Improving his method of teaching by the suggestions of Pestalozzi, Lowell Mason became the patriarch of musical instructors in New England and the United States. Large juvenile classes were formed, and for several years taught gratuitously.

The Boston Academy of Music was established, which from 1834 to 1852 held an annual teachers' institute for "instruction in the methods of teaching music." Similar classes for teachers were soon established in various places, an interest in the subject was awakened, and at length music was introduced as a regular branch of instruction in the public schools of Boston, then in other cities and towns throughout the country.

Dr. Mason found an important sphere of labor in the Massachusetts teachers' institutes, which he attended as instructor in music from the first. Horace Mann said it was worth any young teacher's while to walk ten miles to hear one of his lectures, for in it he would hear a most instructive exposition of the true principles of all teaching, as well as of teaching music. Dr. Mason felt "that, when introduced into schools, music should be made a study, not only in itself considered, but as correlative to all school pursuits and occupations. Unless the pupils are made more cheerful, happy, kind, and studious by the music lesson, it is not properly given, for these are some of the results which it was obviously designed to secure."

As a composer and publisher of church music, Dr. Mason has probably done more than any other man in the country to promote "the service of song in the house of the Lord."

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 New Jersey was the seventeenth State in population, having 906,096 inhabitants within an area of 8,320 square miles, an average of 108.91 persons to the square mile. This population consisted of 875,407 whites, 30,658 colored, 16 Indians, and 15 Chinese. Of these, 717,153 were natives of the United States, and 188,943 were foreign-born. Of the native residents 552,795 whites, 22,443 colored, and 7 Indians were born within its borders, while of the foreign residents 54,001 were born in Germany, 26,614 in England, and 86,784 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 158,099 persons attended school, and of these 6,090 were foreign-born. Of the 154,748 white scholars 79,320 were males and 75,428 females. Of the 3,337 colored pupils 1,784 were males and 1,553 females; 10 male Chinese, with 1 male and 3 female Indians, were also reported.

Illiteracy.—Fifty-four thousand six hundred and eighty-seven inhabitants, of all races, 10 years old and over, were unable to write, and of these 24,961 were foreign-born.

Age and sex of illiterates.—Of the 46,386 white illiterates 5,533 were from 10 to 15 years old, and of these 2,987 were males and 2,546 females; 4,422 were from 15 to 21 years old, of whom 2,113 were males and 2,309 females; 36,431 were 21 years old and over, of whom 14,515 were males and 21,916 females. Of the colored illiterates 875 were from 10 to 15 years old, and of these 432 were male and 443 female; 1,032 were from 15 to 21 years old, and of these 481 were males and 551 females; 6,390 were 21 years old and over, of whom 2,881 were males and 3,509 females; 2 male and 2 female Indians were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 1,893, having 3,889 teachers, of whom 1,455 were males and 2,434 females, to educate 129,800 pupils, of whom 67,751 were males and 62,049 females.

Amount and source of educational income.—The total income of all the educational institutions was $2,982,250, of which $49,000 were derived from endowment, $1,499,550 from taxation and public funds, and $1,433,700 from tuition and other sources.

Public schools.—The 1,531 public schools, with 3,016 teachers, 956 males and 2,060 females, were attended by 80,105 pupils, of whom 39,763 were males and 40,342 females. To educate these they had a total income of $1,562,573, of which $1,492,608 were derived from taxation and public funds and $69,965 from tuition and other sources.

Colleges.—The 4 colleges, with 58 male teachers, were attended by 647 pupils, of whom 553 were males and 94 females. To educate these they had a total income of $95,159, of which $12,000 were derived from endowment, and $83,159 from tuition and other sources.

Academy.—The one academy, with 10 female teachers, had an attendance of 60 female pupils, and an income of $6,000, derived from tuition and other sources.

Private schools.—The 278 day and boarding schools had 484 teachers, 315 male and 169 female, and were attended by 30,817 pupils, of whom 17,472 were males and 13,345 females. They had an income of $1,186,669 from tuition and other sources.

Libraries.—One thousand six hundred and thirty-six public libraries were reported, with 535,679 volumes; also 777 private libraries, with 359,612 volumes; in all, 2,413 libraries, containing 895,291 volumes.

The press.—The 122 periodicals issued had an aggregate circulation of 205,500 copies, and an aggregate annual issue of 18,625,740 copies.

Churches.—Of the 1,402 church organizations, 1,384 had edifices, with 573,303 sittings, and the church property was valued at $18,347,150.

Pauperism.—Of the 2,390 paupers, 1,368 were native whites, 301 native colored, and 721 foreigners.

Crime.—Of 1,079 persons in prison, June 1, 1870, 483 were native whites, 157 native colored, and 439 foreign-born. One thousand and forty persons were convicted during the year.

Age and sex of population.—Of the total population 262,862 were from 5 to 18 years old, of whom 132,049 were males and 130,813 females; 680,687 were 10 years old and over, of whom 335,819 were males and 344,868 females.

Occupations.—Two hundred and ninety-six thousand and thirty-six persons of these ages were engaged in various occupations, of whom 251,625 were males and 44,411 were females; 63,128 persons were engaged in agricultural pursuits, of whom 62,943 were males and 185 females; 83,380 in personal and professional services, of whom 54,275 were males and 29,105 females; 46,206 in trade and transportation, of whom 45,242 were males and 964 females; 103,322 in manufactures and mechanical and mining industries, of whom 89,165 were males and 14,157 females.

Age and sex of working population.—Of the 296,036 employed persons 10,969 were from 10 to 15 years old, of whom 7,483 were males and 3,486 females; 269,334 were from 16 to 59 years old, of whom 229,519 were males and 39,815 females; 15,733 were 60 years old and over, of whom 14,623 were males and 1,110 females.

SCHOOL OFFICIALS.

Hon. ELLIS A. APGAR, *State superintendent of public schools.*

COUNTY SUPERINTENDENTS.

County.	Name.	Post-office address.
Atlantic	Calvin Wright	Absecom.
Bergen	Alexander Cass	Englewood.
Burlington	Henry S. Haines	Burlington.

NEW YORK.

[From the report of Hon. Abram B. Weaver, State superintendent of instruction, for the scholastic year extending from September 30, 1870, to September 30, 1871.]

SCHOOL FUND.

The school moneys for the fiscal year ended September 30, 1871, were derived from the following sources:

From the common-school fund	$207,918 17
From the United States deposit fund	165,000 00
From the State school tax	2,472,341 60
Total	2,845,259 77

FINANCIAL STATEMENT.

The following table is a summary of the financial reports relating to common schools for the year ended September 30, 1871:

Receipts.

	Cities.	Rural districts.	Total.
Amount on hand October 1, 1870	$761,800 91	$201,799 35	$963,600 26
Apportionment of public moneys	893,158 11	1,673,727 30	2,566,885 41
Proceeds of gospel and school lands	1,381 97	30,203 56	31,585 53
Raised by tax	3,649,469 34	2,809,571 27	6,459,040 61
Estimated value of teachers' board	.....	274,948 49	274,948 49
From all other sources	175,656 85	199,849 22	375,506 07
Total	5,481,467 18	5,190,099 19	10,671,566 37

Payments.

	Cities.	Rural districts.	Total.
For teachers' wages	$3,066,787 94	$3,586,305 11	$6,653,093 05
For libraries	49,061 16	14,444 22	63,505 38
For school apparatus	160,426 38	34,610 25	195,036 63
For colored schools	66,724 85	6,507 74	72,232 59
For school-houses, sites, &c	692,862 79	901,198 14	1,594,060 93
For all other incidental expenses	626,734 97	402,053 50	1,028,788 47
Forfeited in hands of supervisors	.....	186 76	186 76
Amount on hand October 1, 1871	818,869 09	244,793 47	1,063,662 56
Total	5,481,467 18	5,190,099 19	10,671,566 37

The total cost of maintaining the common schools during the year was as follows:

In the cities	$4,662,598 09
In the rural districts	4,945,305 72
Total	9,607,903 81
Corresponding total for 1870	9,905,514 22
Decrease for 1871	297,610 41

SCHOOL DISTRICTS.

The reported number of school districts in the State, exclusive of cities which have no such division, was as follows:

In 1870	11,372
In 1871	11,350
Decrease	22

This diminution results from the consolidation of small districts.

SCHOOL BUILDINGS.

The number of school-houses and their classification, according to the material of which they are constructed, were as follows:

	Log.	Frame.	Brick.	Stone.	Total.
Cities	...	48	315	11	374
Rural districts	127	9,866	867	494	11,354
Total, 1871	127	9,914	1,182	505	11,728
Total, 1870	127	9,904	1,162	502	11,695

Their number and classification, as reported for the years 1861 and 1871, were as follows:

	Log.	Frame.	Brick.	Stone.	Total.
1861	246	9,918	971	562	11,697
1871	127	9,914	1,182	505	11,728
Increase	...	.....	211	.....	31
Decrease	119	4	.....	57	.....

VALUE OF SCHOOL PROPERTY.

The following was the reported value of school-houses and sites:

	Cities.	Rural districts.	Total.
1870	$11,981,302	$8,445,110	$20,426,412
1871	14,606.903	8,861,363	23,468,266

The following was the average value of school-houses and sites:

In the cities	$39,055 89
In the rural districts	780 46

EXPENSES.

The sums spent in each year, since 1861, for school-houses, sites, fences, furniture, repairs, &c., were as follows:

	Cities.	Rural districts.	Total.
In 1862	$389,316 56	$210,852 44	$600,169 00
In 1863	242,547 53	189,961 40	429,508 93
In 1864	370,815 34	276,485 89	647,301 23
In 1865	516,902 04	282,258 66	799,160 70
In 1866	489,348 67	480,875 92	970,224 59
In 1867	1,012,482 87	700,624 14	1,713,107 01
In 1868	1,166,076 28	1,017,988 67	2,184,064 95
In 1869	1,401,464 03	1,053,988 98	2,455,453 01
In 1870	1,079,160 61	891,418 27	1,970,578 88
In 1871	692,862 79	901,198 14	1,594,060 93
Totals	7,360,976 72	6,002,652 51	13,363,629 23

NUMBER OF PUPILS.

The whole number of children between the ages of 5 and 21 years, as reported, was as follows:

	Cities.	Rural districts.	State.
In 1870	623,201	857,560	1,480,761
In 1871	645,128	857,556	1,502,684

The apparent decrease in the rural districts arises from the fact that in 1871 Long Island City, with an attendance of 2,032, assumed its place in the enumeration of cities.

AGGREGATE ATTENDANCE.

The aggregate number of days of attendance for each of the last five years was as follows:

	Cities.	Rural districts.	Total.
1867	34,432,493	42,167,499	76,599,992
1868	36,047,805	47,349,445	83,397,250
1869	38,125,791	48,952,174	87,077,965
1870	40,907,063	49,396,980	90,304,043
1871	39,096,552	53,511,055	92,607,607

AVERAGE ATTENDANCE.

The average daily attendance for the same period was as follows:

	Cities.	Rural districts.	Total.
1867	164,565	255,392	419,857
1868	166,645	279,223	445,868
1869	178,607	289,814	468,421
1870	192,623	292,082	484,705
1871	195,230	298,418	493,648

LENGTH OF SCHOOL YEAR.

The average length of school terms in 1871 was:

Cities	41 weeks 4 days.
Rural districts	32 weeks 4 days.
State	35 weeks 1 day.

CLASSIFICATION OF PUPILS.

Number of pupils instructed in all schools for 1871:

In the common schools	1,028,110
In the normal schools	5,807
In the academies	30,370
In the colleges	3,194
In the private schools	135,433
Total	1,202,914

NUMBER OF TEACHERS.

The following number of teachers was employed in the common schools:

Males	6,481
Females	21,773
Total	28,254

SALARIES OF TEACHERS.

The amount expended for teachers' wages was as follows:

Cities	$3,066,787 94
Rural districts	3,586,305 11
Total	6,653,093 05

The average annual salary for each teacher was:

Cities	$645 37
Rural districts	273 38
State	372 86

STATISTICS OF NORMAL SCHOOLS.

Number of such schools, exclusive of New York City	8
Whole number of pupils	1,637
Average number in attendance	1,070
Average age of pupils: males	19.6
Average age of pupils: females	19.4
Number of graduates: males	33
Number of graduates: females	163
Total	196
Total receipts	$135,789 48
Total expenses	127,712 89
Balance	8,076 59

SCHOOL LAW.

No changes have taken place in the school law during the year ended September 30, 1871. Under the continued influence of the free-school act of 1869 the most advanced position yet reached by the schools has been fully sustained.

TEACHERS' INSTITUTES.

New York has maintained teachers' institutes for a quarter of a century. They are held annually in nearly all the counties for a period of two weeks; they have increased in favor with the teachers until the annual attendance amounts to 80 per cent. of all those employed in the counties in which the institutes are held. Within the last calendar year institutes were held in fifty-seven counties of the State, besides one for the teachers of Indian schools on the Allegany and Cattaraugus reservations. The attendance of teachers amounted in the aggregate to 10,413.

EDUCATIONAL ASSOCIATIONS.

The State association of school commissioners and city superintendents met at Utica the second Tuesday in May. The advantage of holding the meetings of this body separate from those of the State teachers' association was fully demonstrated, and the plan was continued by appointing the next convention at Rochester the 21st of May 1872.

The State teachers' association held its twenty-sixth anniversary in the city of Lockport during the last week of July. It was one of the most successful meetings in the history of the association. Teachers' associations are also maintained in many of the counties, and these various organizations impart spirit and energy to the school system.

NORMAL SCHOOLS.

Besides the flourishing normal school, which is used and supported exclusively by the city of New York, there are now eight State normal schools in full operation, two of which (viz: those at Buffalo and Geneseo) were opened during the year. The estimated value of the ground, buildings, furniture, and appliances used by these schools is $829,739. An annual expenditure of $150,000 will be required to maintain them.

In the circular of these schools it is stated that "the design of the schools is to furnish competent teachers for the public schools of the State."

Each county is entitled to twice as many pupils as it has representatives in the assembly.

To gain admission to the schools pupils must be at least 16 years of age, and must possess good health, good moral character, and average abilities. Tuition and the use of all text-books are free, and arrangements are made by which the necessary expenses of living are brought to a minimum for students.

Many of these schools afford students the advantage of well-selected libraries and special facilities for the pursuit of natural science. This is particularly true of the schools at Cortland and Oswego.

All of these schools have training schools connected with them, and in four of them the training school embraces an academic department. It is especially urged by the superintendent of public instruction that every effort should be made to preserve the original aim and legitimate purposes of the schools, namely, "the education and discipline of teachers for the common schools of the State."

INDIAN SCHOOLS.

Under the provisions of the laws of 1856, the superintendent of public instruction is "charged with providing the means of education for all the Indian children in the State," and is directed to establish schools in such places and of such character and description as he shall deem necessary. In accordance with the provisions of this act schools are maintained on seven reservations, and a petition received from David L. Pharaoh, signing himself "King of the Montauk Indians," praying for the establishment of a State school for his tribe, received favorable consideration.

Great obstacles are encountered in these schools from the indifference of the parents and consequent irregularity of the scholars, from the fact that the children are not familiar with the English language, from frequent changes of teachers, and from the necessary employment, in many instances, of inexperienced teachers, the small salaries offering no inducement to those of experience. The schools have, however, made important progress during the year, and many interesting and suggestive facts are presented in their reports.

OBJECT LESSONS.

The object method is found to be the best adapted for the development of thought on the part of these Indian children, who have not been accustomed to think, and where Indian teachers have been qualified for the position they have succeeded better than white teachers, for the obvious reason that, understanding both the English and Indian languages, they are better able to reach the understandings of these pupils. Their employment is also a great pecuniary advantage to the State. The most satisfactory report is from the schools on the Allegany and Cattaraugus reservations.

A QUAKER MISSION.

The Quaker mission, adjoining the Allegany reservation, of which Abner Woolman is superintendent, has kept a boarding-school in successful operation for years, in which some twenty-five Indian girls are instructed in the proper performance of household duties, as well as in the ordinary branches of school education. This mission has also erected a new school-house on the reservation, and generously donated it to the State.

INDIAN CITIZENSHIP.

J. Knecland, esq., superintendent of Indian schools on the Onondaga reservation, reaffirms the opinion, expressed by him in every annual report from 1864 to 1871, "that while the great State of New York can not withdraw her aid from Indian schools without doing herself and her dependent *protégés* a serious wrong, she should change her general Indian policy so as to make American citizens of the Indians who still remain within her limits, at the earliest possible day."

CONGRESSIONAL LEGISLATION CONCERNING SCHOOLS.

The superintendent, Abram B. Weaver, presents very fully his views upon the bill "to establish an educational fund, and to apply the proceeds of the public lands to the education of the people."

He approves of the professed object of the bill and the basis of distribution presented therein, but takes exception to two of the conditions, upon compliance with which a State is entitled to its share of the apportionment. The first is that which requires a report of specified statistics to be made for each year, ending the 30th day of June. The second is that which directs that the apportionment by the designated State officer to the several school districts which have maintained free schools for at least three months in the preceding year shall be made "immediately upon the receipt of the certificate" of apportionment to the State. It is feared that compliance with the first condition will greatly interfere with the established order of reports and the best time for collecting reliable statistics, and that the second condition is a possible entering-wedge for national interference in State systems.

ALBANY.

CONDITION OF SCHOOLS.

The attendance shows a gratifying increase over the preceding year, being 1,121 in the registered number and 812 in the average attendance. The percentage of attendance, 75, is not as large as in many other cities, but is gradually improving. The schools show a steady and healthy growth. The late examinations were unusually satisfactory. The great want of the schools is an increase of accommodations for primary pupils. The increase of school facilities has not been commensurate with the growth of the city.

THE FREE ACADEMY.

The academy makes its fourth annual report. In September, 1871, 121 pupils were admitted to the first-year class on the certificate of the examining committee. The percentage of attendance for the year is 96; and it is worthy of remark that since the establishment of the academy the percentage has never fallen below this. The graduating class of last year was composed of 27 young ladies, 23 of whom after examination received certificates of qualification as teachers, and 21 were almost immediately appointed to situations.

Under its present able management, the academy gives evidence of great efficiency and power as a means of mental culture. It is an acknowledged success, and is accomplishing all its friends have ever claimed for it.

AUBURN.

ATTENDANCE.

The number enrolled in school for the year is 2,763. The average attendance was 1,500. There are 46,310 days' absence and 13,116 cases of tardiness reported, with a loss of 2,290 hours, or nearly 400 school days. In a pecuniary point of view alone, the effect of so much absence and tardiness is startling. Nearly one-seventh of all the moneys expended by the board during the past year has been wasted by absent and tardy pupils. Only 4 pupils from all the schools have been neither absent nor tardy during the year. The superintendent is convinced that "the first duty of a secular education is to inculcate the necessity of punctuality and regularity." Also that "it is the province of the board of education to insist that the public schools shall not be made a convenience of which pupils may avail themselves at pleasure, nor subservient to the varied and not always reasonable demands of social life."

OSWEGO.

TEACHERS AND SALARIES.

Most of the teachers at present employed in the Oswego schools are graduates of the State normal school of that city, and it might reasonably be supposed that this source of supply would prove abundant; but it is possible to secure the services of only a limited number who have received the highest training of this institution, for the reason that they receive offers of more remunerative situations in other localities. The progress of the schools has also been affected unfavorably by the resignation of some of the most experienced teachers to accept better salaries abroad, and the appointment of teachers of little or no experience to fill the vacancies. Not less than ninety teachers have left the employ of the board during the past five years, a majority of the number to accept more lucrative situations.

The time and means expended in preparation for this most important avocation are too frequently overlooked, in making the estimate for the suitable compensation of the teacher. There is no doubt that the remuneration should be somewhat commensurate, not only with the labor to be performed, but also with the time and means expended in qualifying for a position of so great responsibility. From nearly two hundred graduates of our training school, for the years 1869, 1870, and 1871, forty-one were employed in the city schools, and eighteen of this number still remain in the employ of the board. Ten of these are residents, while of the twenty-three who have resigned, only one resided in the city, showing a decided advantage in the employment of resident graduates, whenever continued service is a desideratum.

ABSENCE AND TARDINESS.

Irregular attendance is one of the most fruitful sources of evil connected with our public schools, and any plan which may be adopted by the board with the expectation of diminishing this evil should receive the hearty co-operation of parents. But many parents consider the rules arbitrary, interfering with their prerogatives, and claim the right to detain their children from school when they please. The last year, however, shows considerable improvement in these respects. The number of days absence was 39,097, 16 per cent. less than the average for the last four years; while the number of pupils tardy, 17,587, was 11 per cent. less than the average for the last four years.

ROCHESTER.

ATTENDANCE.

In addition to the ordinary causes affecting the average attendance during the year past, in all the schools, two others have tended seriously to affect the general result. The extensive improvements in one of the school-buildings made it necessary for the school to seek accommodation elsewhere during several months.

It proved impossible to obtain room sufficient for all the regular attendants, and little more than half the number of pupils were in attendance during this time. The movement of the Roman Catholics in establishing parish schools, upon which they compel the attendance of their children, has also affected the general attendance upon the public schools.

An attempt has been made during the last few years to prevent truancy by the employment of two school policemen; but their work, under the limitations which public opinion prescribes for them, has thus far been confined mainly to the children whose names are on the school register and to the few whose parents or guardians have invoked their aid.

DRAWING.

About two years since Bartholomew's system of drawing was introduced into the schools, meeting with most decided opposition on the part of quite a number of the patrons. For the first year, the superintendent was compelled almost literally to fight his way against the hostility of parents and the indifference and neglect of many of the teachers. During the school year just closed, the teachers have received instruction in drawing on Saturday mornings. In order to stimulate the pupils, a prize of $5 was offered for the best set of drawings, in each of the first five grades. As the result of these combined efforts, drawing has been established as a regular exercise in all the grades.

GERMAN.

A German teacher has been engaged, and with the opening of the school year, in September, the study of the German language will be introduced into the schools.

SYRACUSE.

ATTENDANCE.

The time lost by absence during the year is equivalent to 373 pupils losing an entire year. "There seems," says the superintendent, "no remedy for this but a more stringent requirement from the board in respect to receiving excuses for absence; a rule that for all absences, except sickness, the pupil shall not be considered as belonging, or be permitted to attend school, for the remainder of the month in which such absence may occur. If this course should cause a pupil to fall behind his class, let him go into the next lower class until by extra study he may be able to regain his proper standing." During the year there have been 631 suspensions for irregularity of attendance, 209 of which were not reinstated. The superintendent is convinced that it will soon be found necessary to use police force to compel attendance at school.

NO NEED OF CORPORAL PUNISHMENT.

Suspension has proved more effectual than corporal punishment in governing schools. After five years of trial the schools are in better order than when corporal punishment was permitted.

DRAWING.

Regular instruction in drawing has been given in all the grades for two years, and, though without the advantage of experienced teachers, good progress has been made. Drawing is substituted for writing twice a week, and it has not been discovered that the writing has suffered in consequence.

UTICA.

SCHOOL ACCOMMODATIONS.

Utica owns seventeen school-houses, valued, together with the grounds, furniture, apparatus, &c., at $287,673.76. Still there is a lack of school accommodations. The total number of sittings is nearly one thousand less than the enrollment. The pressure has been relieved, as far as possible, by renting rooms, and teachers have received pupils in excess of the regular number, by providing temporary seats. Still many pupils have been excluded from the public schools, and obliged to attend private schools, or, as is too often the case, left to run in the streets.

DRAWING.

The Bartholomew system of drawing was introduced in the schools at the commencement of the year. Although the study has been conducted by the regular teachers without the aid of a special teacher, the results have been so satisfactory that the continuance of the present method is recommended.

EVENING SCHOOL.

The first evening school was established in December, 1868. Since that time it has been in efficient operation during the winter months. Last session 150 pupils were enrolled, of whom a large proportion were factory operatives. Taking into consideration the limited time of its sessions, this school is hardly inferior, in regard to regularity of attendance, maintenance of order, and proficiency in studies, to any of our ward schools. That its benefits are fully appreciated by the class for which it is intended may be inferred from its crowded condition. Indeed, the lack of accommodations will soon necessitate the opening of another evening school.

BUFFALO.

ORGANIZATION.

The annual increase of the expenses of the department has been disproportionate to the increase of the number of pupils. The relief which the tax-payers demand can not be obtained under the present system of maintaining a full graded school in each district. The consolidation of the higher grades and the union of contiguous districts will not only make the schools more efficient, but will also materially lessen the annual expenditures. The city maintains 23 grammar schools, with a full corps of teachers in each, when the same work could be more efficiently done in 10 schools, and at a much less expense. Under the present organization 24 male principals are employed, at a

salary entirely inadequate. The work could be as well done by 10 male teachers, to whom a liberal salary could be afforded. The work of class-instruction should be given to female teachers. Such a reorganization of the school system would lead to the correct division of the schools into grammar, intermediate, and primary.

SCHOOL ACCOMMODATIONS.

The want of sufficient school accommodations seriously interferes with the success of many of the schools. At least 2,000 pupils could be added to the number now attending the schools, if they could be accommodated.

The city is also behind many others in adopting modern ideas regarding the internal arrangement of school-houses. The buildings recently erected are arranged in accordance with modern plans, but no effort has yet been put forth to remodel the old-style buildings.

ATTENDANCE OF PUPILS.

The average term-registration of pupils has been 14,525, and the average daily attendance per term has been 10,660. The measures hitherto adopted to remedy the growing evil of irregular attendance have been ineffectual. The enactment of a truant law, giving to the police authorities power, under certain restrictions, to compel the attendance of pupils at school, on complaint of the teacher or parents, would be the simplest and most effectual method to overcome the difficulty.

ATTENDANCE OF TEACHERS.

The adoption during the year of stringent measures—the superintendent even having in some cases exercised the right of suspension granted by the charter—for the purpose of securing greater punctuality on the part of teachers, was found imperatively necessary, and the results have been most satisfactory. The number of absences per month was reduced nearly three-fourths, only 23 days' absence being reported for December, and the number of tardinesses one-half. This is a great improvement upon last year.

SALARIES OF TEACHERS.

The salaries of female teachers, with a few exceptions, compare favorably with those of other cities, but the salaries of male principals are fixed at so low a figure that they are driven elsewhere to seek proper remuneration for their services. This narrow policy has injured our school system more than any other influence. The salary of male principals should be at once raised to $2,000 or $2,500 per annum, and teachers not worth the increased compensation should be dismissed.

STUDY OF GERMAN.

The German language is now taught in twelve different schools as an elective study. The number of pupils pursuing the study during the year has been 633, and seven teachers have been employed. It is recommended that this study be incorporated into the graded course, especially in the German districts.

DRAWING.

The progress in drawing during the year has been very satisfactory, and demonstrates an increasing interest in this most important addition to the course of study. The opposition at first manifested is gradually dying out, and at present, with rare exceptions, a general appreciation of its value is exhibited. The facilities for giving instruction in drawing should be extended by establishing an evening school for mechanical and industrial drawing.

THE COLORED SCHOOL.

This school more fully meets the wants of the colored people at the present time than ever before in its history. The total registration is 87; the average attendance, 60. The colored people who are owners of taxable property in the city have made frequent application for permission to send their children to the schools of the district in which they reside, claiming this privilege on account of the assessment of taxes upon their property for the erection and repairs of school-buildings. The charter provides that the city shall maintain separate schools for white and colored children. The authority to comply with the request of the colored people is not vested either in the superintendent or the common council. It is regarded by competent legal authority

that the civil-rights bill invalidates all State legislation which deprives them of the equal rights granted by the Constitution to all citizens of the Republic. The practicability of admitting them into the graded schools has been demonstrated in other localities. Whether the sentiment of this community will sanction such an innovation upon the established customs and usages of the department is a subject for serious consideration.

ASSESSMENTS OF PUPILS.

Unlike the schools in several of the larger cities, pupils are here compelled by ordinance to purchase their own text-books, except when in indigent circumstances; and a term-tax is imposed for the use of ink and pens in the writing exercise, no provision being made for the supply of these articles to the schools. Subscriptions have to be resorted to to raise funds for the purchase or rental of musical instruments used in the schools. If we desire to popularize our educational system, it must be divested of all petty assessments tending to excite the opposition of the public, and whatever outlay may be necessary should be defrayed by taxation.

NEW YORK CITY.

ATTENDANCE OF PUPILS.

The whole number of pupils who received instruction during some portion of the year is reported as 234,686; the total average attendance, 103,243. The large decrease in the number of pupils taught this year—amounting in the aggregate to 5,078—taken in connection with the small diminution of the average attendance, shows, probably, a less degree of fluctuation in the population of the city, occasioning a diminished number of changes from school to school, or perhaps a more careful registration of pupils on the part of the teachers. The latter was certainly the case in the evening schools; and in these schools the decrease was greater in proportion than any of the others. The prevalence of small-pox has likewise had the effect to diminish the attendance considerably in many of the wards of the city.

COMPARATIVE NUMBER TAUGHT.

The recent census returns show that the whole number of children residing in this city, aged from five to nine years, inclusive, is 100,598. This, of course, includes nearly all the pupils in the primary departments and schools, and many in the lower classes of the grammar schools, the average attendance in the former of which was 53,344; while the whole number of pupils taught in these schools during the year is reported at 127,651—evidently greatly swelled beyond the actual number by the constant change from school to school, and the consequent recounting of pupils in several of the schools. The whole number of children, residents of the city, aged from five to fourteen, inclusive, is returned by the census as 197,363, which must include nearly all our school-attendance; while the number taught, exclusive of evening and normal schools, is reported as 211,110; evidently much larger than the actual number of different children attending the schools some portion of the year. After all the allowance made on that account, these numbers, taken in connection with the large number of pupils who attend the evening schools as well as the private and parochial schools, completely disprove the statement that any considerable portion of our school population is growing up without acquiring an elementary education at least.

REGULARITY OF ATTENDANCE.

The average number of pupils on register in all the day schools was 112,957, and the percentage of absentees 18¼. The pupils of the male grammar schools are the most regular in attendance, and those of the colored schools show the greatest degree of absenteeism; while the difference in regularity in the attendance of the primary department and the primary schools is considerably greater than existed during the previous year. This circumstance seems to show most conclusively that the arrangement of one grammar school and one primary department in a single building is the most convenient and the most popular; more especially as the primary departments are very often greatly overcrowded, while large, commodious, and comfortable buildings for separate primary schools are scarcely filled to one-half of their capacity; the schools therein being conducted with equal care and efficiency to those of the primary departments.

ACCOMMODATION AFFORDED BY THE SCHOOLS.

A comparison of the annual average attendance in each class of schools with the actual sitting accommodation afforded in each, including the number of seats in the class-rooms, and seats for one class in the main room, shows the excess of sitting ac-

commodations over the average attendance to be 23,872. This excess, when compared with other returns, proves that in the arrangement of the class-rooms there is an allowance of considerably less than 80 cubic feet of space for pupils; and brings up the question very forcibly, whether too many children are not crowded into the rooms, and thus proper ventilation rendered impossible. It is believed that such is the case, and it is suggested that the apparent excess should not be accepted as evidence that there is room for a corresponding increase of attendance. In very many schools the rooms are quite small, and by far too many seats are placed in them. The health of teachers and pupils is quite often irreparably injured from this circumstance.

EXAMINATIONS.

Examinations have been held in the several schools during the past year; most of them being visited twice for that purpose. The whole number of classes examined during the year is 2,025, besides which forty classes were inspected without being minutely examined.

MANAGEMENT OF SCHOOLS.

There is no doubt that this is the true standard of excellence in the management of a school: that the organization should be perfect, each part working in harmony with every other part, and all conducing to produce the effect designed. If this is the case, the principal alone is entitled to the credit of it, and, where it is wanting, the principal alone is answerable for the deficiency. It is very gratifying to know that, while so strict and just a standard has been applied, only seven schools out of 183 have been found greatly deficient.

It presents additional evidence that the schools are in the hands of faithful as well as skillful agents, and that they are using, to the best of their ability, the various instrumentalities with which they are supplied to attain successfully the object of the system.

COMPARATIVE PROGRESS OF THE DIFFERENT GRADES.

The male and female grammar schools have improved in discipline, spelling, writing, and highly in arithmetic, but have retrograded in reading. The primary schools and departments have improved in spelling, but in the other branches, as well as in discipline, they have retrograded, and the colored schools have retrograded somewhat in instruction, while in discipline the average is the same. The female grammar schools are considerably superior to any of the other classes of schools, and the colored schools are inferior to all the others. The discipline is superior to the instruction in all the schools.

COLORED SCHOOLS.

It is regretted that so unfavorable a report of the colored schools must be made. But while, in a comparative statement, they appear to great disadvantage, it must be borne in mind that, in the case of these schools, the basis of comparison is very small, being altogether only 45 classes out of a general aggregate of more than 2,000. Some of these classes are very well taught, and the greater part are quite commendable, being either excellent or good. Only 6 per cent. of the classes appeared to be below this standard in discipline. These schools labor under great disadvantages. They are scattered at very wide intervals over the city, and many of the children are obliged to walk miles to attend school. The circumstances of their parents are often such as to compel them to keep their children from school during a part of each week, and quite often during the entire summer months.

DISCIPLINE.

The schools, taken as a whole, present about the same condition, in respect to discipline, as in the report of last year; but it is very gratifying to find that the returns show a marked improvement in the male grammar schools, which appears to indicate that the teachers, becoming accustomed to the new modes of coercion, are meeting with less difficulty in keeping their pupils under proper control.

This, however, must always be a very trying part of the teacher's task, and should constantly receive the most judicious and effectual aid of the principal. When the class teachers are made to bear the entire burden of the labor and responsibility of this task, it can never be satisfactorily performed; and, on the other hand, those teachers who depend, to too great an extent, upon the principal's support, expecting an interposition of his authority even in minor cases of difficulty, must necessarily fail to acquire the requisite control of their pupils. The discipline of the female grammar

schools appears to be even better than last year, 92 per cent. of all the classes examined being reported as excellent in this respect.

The discipline of the grammar schools is, upon the whole, in a very creditable condition, and speaks well for the managing skill of the teachers, who can no longer avail themselves of the old method of coercion.

SUSPENSIONS AND EXPULSIONS.

The number of suspensions and expulsions from the schools during the year is as follows: From male grammar schools, 177; female grammar schools, 9; primary departments and schools, 139; colored schools, 2; in all, 327. Many of these pupils have been admitted into other schools and are enjoying the benefits of their instruction and discipline. A by-law, recently enacted, while it very properly forbids the permanent or final expulsion of any pupil from school, adds very greatly to the means of coercion at the disposal of the principal, since it prevents any pupil suspended from one school from obtaining admission into any other school without an exposure of the circumstances connected with his delinquency, and such evidence on his part as will justify such admission. Satisfactory results are anticipated from the working of this measure.

READING.

While the classes of the grammar schools, both male and female, can not justly be reported as decidedly deficient in reading, they have not in the examination of the past year come up to the standard of excellence adopted by the department.

Complaints are justly made that many of the lessons do not contain any information such as would arrest the attention of the pupils. Books are needed which contain lessons not only interesting but instructive. Selections from natural history could be presented, written in an entertaining style, which would charm the pupil, and the analysis and explanation of them would afford delight and profit. The objects referred to might be used as the material for lessons which would tend to develop the intelligence of the children to a far greater extent than very much of the object-teaching as now given.

Much of the time spent in reading exercises is to some extent thrown away. The pupils are listless while they are engaged in them, and the teacher conducts them in a merely perfunctory manner. They ought to be full of life and spirit. The teachers should bring to bear in the illustration of these lessons all the resources of their intelligence and information, and the pupils' mental activity should by means of them be stimulated to the highest degree. It is not enough that pupils should be interested, although many of the compilers of reading-books seem to think so. Their tastes must be improved and elevated, and their appetite for knowledge satisfied. Then they will learn to love books, and will know how to select and use them.

SPELLING.

There is a decided improvement in both the grammar and primary schools in this branch. The percentage of deficiency is, however, still too large, and it is hoped that it will, during the ensuing year, be considerably reduced. Besides the general test of writing extempore compositions on the slate, and brief lists of selected test-words in good and frequent use, special inquiry has been made into the spelling of ordinary personal names presenting any difficulty, and of those geographical names which are often employed in directing letters. No foreign names have been used in the examination, except such as are of commercial importance.

DEFINITIONS.

The teachers, with few exceptions, appear to be employing judicious means in order that their pupils should understand what they read, as well as the meanings and uses of all terms employed in connection with the other branches of study.

ARITHMETIC.

The aggregate of excellent and good results in this branch in the different classes of schools, as compared with last year's report, shows a slight improvement, except in the primary and colored schools. In the former of these, however, it is still, as during the preceding year, in advance of all the other subjects. In the female grammar schools it is far behind the other studies; although these schools still keep in advance of the male grammar schools in this respect.

Many of the teachers now realize the importance and benefit of varying the form or

style of giving out examples—especially practical—putting the pupils more upon their own resources, and compelling them to think and reason for themselves. This and other favorable indications, such as the more general tendency to brief and clear explanations, seem to promise more intelligent and decided progress than has yet been attained.

WRITING.

There is but little improvement to report in this branch. The classes, which were decidedly commendable, being either excellent or good, are, in the male grammar schools, 88 per cent. of the whole; in the female grammar schools, 96 per cent.; in the primary schools, 83 per cent.; in the colored schools, 81 per cent. Last year the returns showed 82 respectively. The variation is for the better.

Slate-writing is practiced universally, and generally with beneficial results. A free and legible handwriting is now quite common, even in the eighth grade or lowest classes. The extent of the practice in slate-writing and the creditable results attained have undoubtedly had a salutary effect upon the penmanship of the schools, the lower classes especially. The pupils in most of the schools now take great interest in their work with the pen, and improved results naturally follow.

DRAWING.

The instruction in drawing needs to be graded and methodized to be made perfectly effective. It is, however, carried on in most of the schools with a degree of success which, under the circumstances, is worthy of commendation. The special teachers employed for this purpose seem to be earnest and capable, and with a properly-arranged course of instruction for this branch, their services would prove a most valuable addition to the educational agencies of the system.

GEOGRAPHY.

This important and useful branch is intelligently and successfully taught. More practical instruction, however, in the geography of home and its surroundings would be interesting and profitable to the pupils. In connection with elementary geography, the pupils should be taught the cardinal points of the compass and how to find them. They should be able to distinguish and point to them from the position of the school or class-room.

OBJECT-TEACHING.

In the matter of object-teaching there is still a great lack of uniformity in the character and results of instruction; although general progress has been made during the past year. Most of the teachers knew nothing of the principle or practice of object-teaching when they entered the schools. Their own education had been obtained under a widely different plan, one where the prevailing modes of teaching led chiefly to an exercise of memory. A common mode of conducting lessons in the primary classes then consisted of asking questions and teaching answers to them, rather than a process of training pupils in habits of seeing, doing, and telling.

Under such conditions it is evident that improved methods could be introduced into the schools, if introduced at all, only by means of external influences. The visitation and annual examination by the superintendents, and the training given in the Saturday normal school, to such teachers as chose to attend, were the chief influences available for securing the general instruction of new methods of teaching.

In the establishment of the normal college and the model primary school there is now provided an important additional means for further improvement of the character of primary instruction in our public schools.

LICENSING OF TEACHERS.

During the past year licenses have been conferred upon 135 persons, 18 males and 117 females. It is desirable that the standard of requirement should be raised, and this will probably be effected as soon as the female normal college may be expected to realize the anticipations of its founders. As soon as the requirements are definitely fixed for a diploma of graduation from that institution, it would be unjust that a full certificate of license should be issued on any inferior standard of qualification. While those who are not graduated should not be excluded from employment as teachers, it would be unjust to license those of inferior qualifications to the graduates.

The present system of awarding unqualified licenses to those who have no experience, no assumed skill, and no mature scholarship, is of questionable expediency and at variance with the practice elsewhere.

ABSENCE OF TEACHERS.

Some of the schools suffer greatly from the absence or irregularity of invalid teachers. The whole number of days thus lost during the year was 18,794, averaging 9 days for each teacher, and 4 per cent. of all the days of service. The matter is one of importance, and should be kept under careful surveillance. While it is right that conscientious and faithful teachers should be treated with consideration when incapacitated by sickness from attending to their duties, some arrangement should be made by which their classes would not be neglected during their absence, as is now often the case.

NEED OF SCHOOL LIBRARIES.

The want of some kind of library for the use of pupils is plainly indicated by their lack of general information, and of a taste for profitably interesting books and subjects. A well-selected library of small volumes, such as might be easily chosen, and at little cost, is so great a necessity, that so long as the schools are without it, the system of public instruction is not only defective in a very important particular, but is really mutilated. In Boston and other large cities, there are school libraries and free public libraries, which boys and girls are permitted and encouraged to use. In the city of New York there is almost nothing.

EVENING SCHOOLS.

The evening schools, which closed their sessions in February last, were all visited, and the classes in each were carefully and minutely examined. The character of the instruction, as ascertained by these examinations, was, in 36 of these classes, excellent; in 119, good; in 51, fair; and in 10, indifferent or bad; that is to say, 28 per cent. of the classes examined were decidedly deficient; while in the day schools only 9½ per cent. of more than 2,000 classes were deficient to this extent. The number of pupils on the register of the schools, at the time of the examination, was 9,696, of whom 5,311 were examined. Of these pupils, only about 25 per cent. were below the grammar-school grade; and of these nearly all were above the third primary grade.

There is a very great difficulty in obtaining for these schools teachers of the requisite capability for the special and peculiar duties which must necessarily devolve upon them. Those who, in the ordinary way and with the ordinary agencies, are able to succeed in the day schools, are not always competent for the evening service. At the present time too many primary-school teachers are employed whose age and experience are inadequate for the performance of the task which they assume. Teachers of mature judgment and extensive general information, tact in management, and, above all, an earnest spirit, are especially needed.

LECTURES.

It would be desirable to make provision for the delivery of useful and interesting lectures in all the evening schools specially adapted to the wants of the pupils, and calculated to make a deep moral impression, enkindling or encouraging an ambition for excellence and a love of rectitude and truth.

AMERICAN MUSEUM OF NATURAL HISTORY.

The past year has been one of marked growth and increased prosperity for the museum. Twenty thousand dollars have been raised to pay off all obligations on the collections, including the rare and artistically mounted specimens selected from the extensive properties of Madame Verreaux and Madame Verdey, of Paris, and all these valuable collections have been safely received, and are now placed on public exhibition. More donations of specimens have been received during the past few months than in the three years previous.

In order to exhibit these additions, the department of public parks has provided several new cases in the two upper stories, filling up all the available room, and has also appropriated a part of the lower floor, which will soon be occupied. The plans for the new building to be erected have been completed, and the preparation of the ground is already far advanced.

Specimens and books are constantly offered to the museum at reasonable prices, and one of the largest collections of birds and works on ornithology in the world is soon to be offered for sale in Europe; hence, it is urged that the subscription list of the museum be increased from $80,000 to $200,000 at once.

Nearly every day the halls are thronged with visitors, numbering frequently from 5,000 to 10,000.

STATE NORMAL SCHOOL AT ALBANY.

The school year of 1871 was one of continued prosperity. The average time spent in teaching before entering the school was two terms. The number of graduates last year was 59. The course of instruction and practice occupies two years. Pupils are, at the proper stages of their progress, required to teach in the model and primary schools for a term of nine weeks, under the supervision of the president.

STATE NORMAL COLLEGE AT BUFFALO.

The school is organized in two departments, a normal and a training school. The trustees design to connect with it a scientific and collegiate department. Students desiring to pursue the courses must pass the entrance examination to the normal course.

STATE NORMAL SCHOOL AT FREDONIA.

The course of study occupies three years; but pupils may be admitted to any class on examination.

THOMAS ASYLUM FOR ORPHAN AND DESTITUTE INDIAN CHILDREN.

The number of children reported in this institution at the close of the year ended September 30, 1870, was 99. At the commencement of the present year 2 were received and 15 discharged, leaving 86, of whom 65 remained through the year. There were received during the year 26, making a total of 112, of whom 61 are boys and 51 girls. There was 1 death during the year, and 22 were discharged, leaving at the close of the year 89, of whom 50 are boys and 39 are girls.

The receipts for the year were as follows:

From the State of New York for the support of children	$7,112 46
Share of general appropriations to incorporated asylums	569 75
United States Indian Department	1,000 00
Donations and voluntary contributions	98 25
Annuities of Indian children	255 58
Labor, and sale of various articles	104 99
Total receipts	9,141 03

The total expenditures for the year amounted to $8,559.47, and certain bills not yet settled will increase this amount by $200, leaving in the hands of the treasurer $381.56. Improvements are in progress which, when completed, will facilitate such industrial operations as may be carried on by the children, and thus reduce the cost of sustaining the institution.

NEW YORK INSTITUTION FOR THE INSTRUCTION OF THE DEAF AND DUMB.

This institution is by far the largest of its kind in this country, and, probably, in the world. There are five classes of pupils under instruction, as follows:

1. Children of indigent parents, between 6 and 12 years of age, placed therein under the provisions of the laws of 1863 by the town overseers of the poor, or by supervisors. They are supported, at a cost of $230 each, by the counties respectively from which they are sent, and are called county pupils.
2. Children of indigent parents, between 12 and 25 years of age, appointed by the superintendent of public instruction, under the laws of 1864. These are State pupils, and an appropriation of $300 each per annum is made for their support. Their clothing, at the rate of $30 each per annum, is paid for by the several counties from which they are appointed.
3. Pupils paying for their tuition and maintenance.
4. Pupils, between 12 and 25 years of age, supported by the State of New Jersey.
5. Pupils supported by a scholarship created by the late Thomas Frizzell Thompson, and known as the Frizzell fund, and which yields an income of about $300 per annum.

It is required by this department that the certificate for establishing the indigence of parents in order to secure the appointment of their deaf-mute children as State pupils shall be signed by the overseers of the poor. This inquisition, which is often made to ascertain the fact of indigence, deters many worthy persons from any effort to secure the benefits of the institution for their unfortunate children.

It is almost universally the case that paying pupils are not continued as long under instruction as State pupils, and are thus deprived of opportunities of incalculable ad-

vantage to them. In the States of Ohio, Indiana, Illinois, Minnesota, and Iowa, education is free for the deaf-mute children of rich and poor, and, since the argument for their education is not founded on charity to the individual, but on the public welfare, it seems that the statute of this State should be at least so modified as to authorize the appointment of children as State pupils whose parents, though not indigent, are too poor to pay for their maintenance at this institution.

This school is free from debt, and possesses twenty-eight acres of land, worth, independent of the buildings upon it, not less than $700,000, a property permanently dedicated by law to the education of the deaf and dumb.

Of the 29 teachers, 12 gentlemen and 5 ladies are deaf-mutes, selected from the graduates on account of their familiarity with the English language and rare facility for teaching their fellows in misfortune. The basis of instruction is the sign language, but there is also a department of articulation, numbering about 50 pupils. The high class of the institution, for which an additional term of three years is allowed by law for special pupils, is developing the education of the deaf and dumb to a superior degree.

INDUSTRIAL INSTRUCTION.

Instruction is provided for the pupils in mechanical trades, that they may have a means of support when they leave the institution. The girls are trained to dress-making, tailoring, plain and fine needle-work, and the use of the sewing-machine. The boys learn carpentry, cabinet-making, house-painting, shoemaking, tailoring, and gardening. It is proposed to add printing to the list of trades.

EPIDEMIC FEVER IN SCHOOL.

During the year ended September 30, 1871, about two months of instruction were practically lost by a visitation of typhoid fever, of which there were fifty-nine cases. Eight pupils and one teacher died. Various causes were assigned for the endemic character of the disease, but those in charge of the institution are of the opinion that it was attributable to leakage in the pipes leading from the house to the sewer, subsequently discovered and repaired, and to sluggish drainage consequent upon a deprivation of Croton water for a period of two weeks, about the time of the breaking out of the disease. This circumstance led to the appointment of Dr. S. D. Brooks as resident physician and superintendent of the domestic department.

The accomplished principal, Professor Isaac Lewis Peet, retains his position as head of the educational department, and has charge of the admission and government of pupils, and assigns pupils to their trades, in which instruction is given a portion of each day.

INSTITUTION FOR THE IMPROVED INSTRUCTION OF DEAF-MUTES.

The primary design of this institution was to furnish instruction, according to the articulative method, to those who became deaf after having acquired speech. Yet a considerable number of congenital mutes has been received, and the testimony of the teachers is that, with few exceptions, they have made as rapid progress in their studies as those pupils who had not entirely lost the power of speech.

NEW YORK INSTITUTION FOR THE BLIND.

This institution is in a prosperous financial condition, and it is believed that in capacity for usefulness and efficiency it will compare favorably with any institution of its kind in the country.

UNION THEOLOGICAL SEMINARY.

This seminary is open to students of every denomination of Christians. Those whose circumstances require it may be aided by the Presbyterian board of education, or the American Education Society, or from the seminary scholarship fund, which amounts to $50,000. Seventeen thousand volumes of the library are from the library of Leander Van Ess, chiefly rare and valuable works.

AUBURN THEOLOGICAL SEMINARY.

This seminary is open to every denomination of evangelical Christians. Indigent students may receive aid from the seminary scholarship funds, from the Presbyterian board of education, or the American (Congregational) Educational Society, to an amount not to exceed $250. A number of permanent scholarships has been established. The new library building, the memorial offering of Hon. William E. Dodge and Hon. Edwin B. Morgan, will soon be ready for use.

UNION HOME FOR SOLDIERS' AND SAILORS' ORPHANS.

By a recent legislative enactment, this institution receives from the county of New York a *per capita* allowance according to the age of the children under its care. The number of children under the care of the institution, March 5, 1872, was 73 girls and 150 boys; total, 223. The expenditure for the year amounted to $39,093.67.

The boys are, as far as possible, instructed in trades. A shoe-shop has for some months been in successful operation. The boys employed in the shop make their own shoes, and the oldest boys have been appointed to positions in the money-order department of the post-office, and are filling them creditably. The report of the school department shows it to be in a very satisfactory condition. The school is continued through the year with no vacation.

HOME FOR THE FRIENDLESS.

The report shows 457 children in the home during the year. Number in home-school, 227. There are also connected with this institution 11 industrial schools. The home is now in its thirty-ninth year.

WARTBURG ORPHANS' FARM-SCHOOL.

This institution, located at Mount Vernon, Westchester County, New York, was organized in 1866, under the auspices of the Evangelical Lutheran Church. Sixty-three children have been received into the institution, and the expenditure for the year ended May 1, 1872, was $5,911.04. The children are of German and American parentage, and are all instructed in both languages.

NEW YORK JUVENILE ASYLUM.

The original design of this asylum was to reach the juvenile vagrancy of the city, and in this it has been most successful.

There have been in the asylum during the year 1,124 children, of whom 517 have been discharged or indentured, leaving at the close of the year 607. The daily average for the year is 618. Whole number since the opening, 15,908. A fact worthy of note is that while in the earlier history of the institution the great majority of the children were committed by magistrates, and but few placed there by parents or friends, for the last few years the reverse of this is true; the great majority having been surrendered by friends. The average age of admission is 14.

Truancy and disobedience are the usual causes of commitment. Two-fifths of the number received could not read; three-fifths were orphans or half-orphans. More than one-fifth were of foreign birth, and nearly one-third of the parents were intemperate. The number indentured has averaged over 170 a year. A school is constantly maintained, and an industrial department is in successful operation. Both girls and boys are employed and instructed in trades.

HALF-ORPHAN ASYLUM.

Established in 1835, in the city of New York. Since December 15, 1870, 98 children have been admitted and 108 dismissed; of these 88 were returned to their friends, 18 were placed in situations, and 2 transferred to the Catholic protectory. Expenditure for the year, about $24,000.

FIVE POINTS MISSION.

There have been in this school during the year 875 children; average daily attendance, 401. Both the school and industrial department are in a flourishing condition. This institution is under the care of the Ladies' Home Missionary Society of the Methodist Episcopal Church.

HOUSE OF REFUGE OF CITY OF NEW YORK.

Incorporated in 1824. The managers report that the whole number of children received since the opening, in 1825, is 14,275. The number of inmates during 1871 was 1,371. Of these 502 were indentured or discharged, leaving January 1, 1872, 869 inmates. Of these 47 were colored. Of 681 admitted during 1871, only 69 were of American parentage. The average of admission is 14 years, 5 months, 18 days. Nearly one-half of those admitted during 1871 were half-orphans, and 42 were orphans. Four classes have graduated from the industrial department during the year, and every member of these classes voluntarily signed the pledge before leaving the institution. The expenditure for the year was $106,175.91.

WESTERN HOUSE OF REFUGE.

Located at Rochester, New York. The number of boys in the house during the year was 544. Of these 108 have been discharged, 5 transferred, and 3 have died, leaving 428 remaining December 31, 1871. Of the 192 received during the year, 53 were of American parentage, 73 were half-orphans, and 19 orphans. Number in school during the year, 277. The labor department has been in an unsettled condition during the year, and the boys have been much of the time unemployed. On an average 65 have been employed in the shoe shop. A band of instrumental music has attained great proficiency, and at the fair of the agricultural association received the first premium of $50. The "badge system," which provides for the wearing of different grades of badges for good behavior, has worked very satisfactorily. It is urged upon the legislature to make provisions for the reception of girls.

BELLEVUE MEDICAL COLLEGE.

The success of this college is regarded by the faculty as an evidence of the importance of the plan of instruction which constitutes the distinctive feature of the college, namely, the union of clinical and didactic teaching. Bellevue and the charity hospital, admitting from 10,000 to 12,000 patients annually, afford every advantage to students. A session is held in summer with a view to make available the peculiar clinical resources afforded during the summer months. The number of graduates last year was 130.

ECLECTIC MEDICAL COLLEGE.

The principles of medicine inculcated in this college are denominated eclectic. The student is taught that the investigation of the science of medicine should be free and untrammeled; that independent thought and research are the right of every one, and that every educated physician should be treated with professional courtesy. From the first session of the college female students have been admitted upon the same conditions as males. Instruction in some branches is given to female students separately, when desired.

NEW YORK HOMEOPATHIC MEDICAL COLLEGE.

The completion of the new building and the prosperity which the college has attained since its reorganization mark an epoch in the history of the college and of homeopathy. It is proposed to introduce some innovations in the course and methods of instruction. To this feature the special attention of students and of the profession is called. The number of graduates last year was 36.

COLLEGE OF PHARMACY OF THE CITY OF NEW YORK.

This institution was chartered in 1831, and permanently extended in 1856. A more extended course of instruction than that heretofore pursued is offered for the coming year, and auxiliary summer classes have been organized, offering unusual inducements to students.

MEDICAL DEPARTMENT OF THE UNIVERSITY OF BUFFALO.

In the plan of instruction adopted, clinical teaching occupies an important and prominent position; the Buffalo hospital of the Sisters of Charity and the Buffalo general hospital furnishing ample material. Physiology is taught by vivisection and experimental illustrations—a method of instruction which was first successfully introduced in this country in the University of Buffalo. The number of graduates last year was 34.

NEW YORK COLLEGE OF DENTISTRY.

An infirmary is connected with this college as a public charity. The operations are performed by students of the college, under the supervision of the professors. The college is authorized to confer two diplomas, both of which are approved by the regents of the University of the State of New York.

REPORT OF THE REGENTS OF THE UNIVERSITY OF THE STATE OF NEW YORK.

The board of regents is composed of 23 members. The chancellor is Hon. John V. L. Pruyn; secretary, Hon. S. B. Woolworth. The institutions required to make annual reports to the regents, and subject to their visitation, are literary colleges, medical colleges, academies. Concerning colleges, the regents remark that most of

them have modified their systems in conformity with the evident demand of the age. The student is now permitted, to a certain extent, to exercise his own taste and judgment in the selection of his studies. College education has thus become more practical.

PRELIMINARY PROFICIENCY.

The report states that the preliminary academic examination has been continued with slight modifications. Its results from the beginning have clearly indicated serious defects in elementary education. While the requirements of preliminary proficiency have not been changed, the number of schools which have been found to have made such proficiency has been reduced to less than one-half of the number allowed before this system of examination was instituted. The steady decrease, since 1867, in the number of scholars in the academies, is mainly due to the operation of this system of preliminary examinations.

The regents refer with gratification to the number of academies in successful operation in the State.

COLLEGE OF THE CITY OF NEW YORK.

Established in 1848 as the Free Academy; endowed with collegiate powers and privileges in 1854; name changed to College of the City of New York in 1866. The full course occupies five years. Candidates for admission must have attended one of the common schools of the city for at least one year. Students may pursue either a collegiate or a commercial course. An introductory department affords preparation for the collegiate department.

UNION COLLEGE.

The academical department of this college embraces two courses of study, the classical and scientific. The latter course has recently been remodeled and extended to four years. There are also special courses of instruction in civil engineering and in analytical chemistry. The endowment of the college consists of funds granted by the State for specific purposes, and of a property placed in trust for the college by the late Dr. Eliphalet Nott, yielding at present an annual income of $16,000.

INAUGURATION OF PRESIDENT POTTER.

In June, 1872, the Rev. Eliphalet Nott Potter was inaugurated as president of the college. Addresses were made by Dr. Potter, Governor Hoffman, Hon. Ira Harris, (chairman of the board of trustees,) Chancellor Pruyn, and others. The president, in his inaugural address, said that "at this epoch, when, the world round, the cry goes forth for liberty in things non-essential, Union College may well glory in her title, and stand true to the fundamental religious principle of her charter: 'In essentials, unity; in non-essentials, diversity; in all things, charity.'"

An increase of the endowment fund is much needed. The president's report says, "Union stands almost alone in lacking, until lately, evidences of that liberal regard manifested elsewhere during recent years, in the foundation or endowment of educational institutions."

CORNELL UNIVERSITY.

The report of the president states that the last year has been the most satisfactory since the organization of the university. The institution has been greatly strengthened by the additions to the faculty, the increase in buildings, apparatus, and books, and the steady amendment and extension of the system. Faculty and students have worked through this year far more smoothly than through any year before, and not less energetically.

The number of students registered, considering the fact that the standard of entrance examinations has been constantly raised, is most encouraging. There are, besides the elective and special courses, the scientific course, the arts or classical course, and the philosophical course. The president thinks that "the time must soon arrive for the establishment of a fourth general course, to be called the course in history, literature, and political and social science, requiring four years of study leading to the degree of B. L., (Bachelor of Literature.")

The condition of the various colleges is reviewed, and considered in the highest degree satisfactory. During the year a college of architecture has been established, and has received a gift of probably the largest and most complete architectural library in the country.

The financial condition of the university, as shown by the treasurer's report, is highly satisfactory.

The printing establishment affords work and the means of maintenance to upward of twenty students. From it have been issued the University Register, various text-books for the institution, a weekly journal published by the students, and a large number of pamphlets in various languages.

The president recommends that as soon as the financial condition of the university permits, there be established five or six fellowships, with an income of $400 to $500 each, the incumbents to be elected to the faculty from the graduating classes. These gentlemen should be required to reside in the university buildings and to teach or rendender some service equivalent. This would give the university aid just where it is needed.

The library is arranged upon a system based upon that of Brunet.

HOBART COLLEGE.

There are two courses, a collegiate and a scientific course. Ten schools are in correspondence with the college, and prepare students for admission.

RENSSELAER POLYTECHNIC INSTITUTE.

Founded in 1824 at Troy, New York, as a school of theoretical and practical science. In 1826 it received its charter from the legislature, and in 1849 was reorganized on the basis of a general polytechnic institute. In 1870 a committee was appointed to consider the propriety of a change in the course of study. They recommended that the standard of admission be raised, that there be less of mathematics and more of technics in the mining-engineering course, and that a department of mechanical engineering be established. Hitherto the Rensselaer has been at the head of technical schools, but now it is unable, for want of funds, to compete successfully with the schools of this character established by Harvard and Yale. The number of graduates in 1872 was 17.

BROOKLYN COLLEGIATE AND POLYTECHNIC INSTITUTE.

Students are distributed in eight grades, the four lower constituting the academic department, and the higher grades the collegiate department. Besides these there are four special courses, classical, liberal, scientific, and commercial. Each grade occupies one year. At the end of the sixth grade students are prepared for the freshman year in any college.

SYRACUSE UNIVERSITY.

The establishment of this university was the result of the action of the State convention of the Methodist Episcopal Church of New York in 1870. The convention gave the institution its name and appointed a board of trustees. The corner-stone of the building was laid in August, 1871, and the faculty inaugurated at the same time. The college of physicians and surgeons attached to the university commenced its first course of lectures October 3, 1872. The endowment fund amounts to $650,000. Frederick Hyde, M. D., is dean of the medical faculty, and Alexander Winchell, LL. D., is chancellor of the university.

UNIVERSITY OF ROCHESTER.

This institution offers two courses of study, classical and scientific, each extending through four years. The Hon. Hiram Sibley, of Rochester, has provided to erect a fire-proof building, at an expense of not less than $95,000, for library and cabinets. This building will be commenced during the current academic year. General John F. Rathbone, of Albany, has given $25,000, the income to be appropriated to the increase of the library. Indigent students, having the ministry in view, receive assistance from the New York Baptist Union for Ministerial Education.

VASSAR COLLEGE.

Candidates for admission must be at least 15 years of age, and no student is received for a less period than the collegiate year, or what remains of it at the time of her entrance. The full course of study extends over four years, and corresponds to the usual college course. Provision is also made for instruction in music, drawing, painting, and modeling. The price of board and tuition is $400 for the college year.

Several societies exist among the students; the Philalethian, for literary improvement; the Cecilia, for the culture of music; the Sévigné, for improvement in French; the society for natural history; the society for religious inquiry; and the floral society, for improvement in ornamental gardening.

The grounds embrace about 200 acres. An astronomical observatory, a museum of

natural history, and a cabinet of geology and mineralogy are connected with the college. The growth of the library is provided for by annual appropriations. An auxiliary fund of $50,000 was provided by Mr. Vassar for the purpose of aiding students who are unable to meet the full charges; also $50,000 for a lecture fund, and $50,000 for a library, art, and cabinet fund.

ELMIRA FEMALE COLLEGE.

The course of study embraces a collegiate department, a preparatory department, and an eclectic department. A department has also been organized for thorough instruction in drawing, painting, and modeling. The college has recently received a legacy of $25,000, and a gift of $4,000 to found a scholarship.

MANHATTAN COLLEGE.

This college has four departments, classical, scientific, commercial, and preparatory. The number of students in all departments is 707, including De la Salle Institute and Manhattan Academy, connected with the college.

SAINT JOSEPH'S COLLEGE.

This college is conducted by the Christian Brothers. The courses of study are literary, scientific, commercial, and preparatory. There is also a department of art.

SAINT STEPHEN'S COLLEGE.

This college is conducted under the auspices of the Episcopal Church, as a training school for the theological seminary.

COLLEGE OF SAINT FRANCIS XAVIER.

This institution, incorporated with the privileges of a university, is conducted by the Fathers of the Society of Jesus. There are two courses of study, collegiate and commercial, and a preparatory department.

CLAVERACK COLLEGE.

This institution is open to both sexes. A commercial college and school of trade are connected with it. The male students are under military instruction. Degrees and diplomas are conferred on male and female students alike.

PACKARD'S BUSINESS COLLEGE.

The course occupies from twelve to eighteen months. A foreign department has been established for the practical application of modern languages in business transactions.

INGHAM UNIVERSITY.

This university is devoted exclusively to higher female education. It offers two courses, classical and scientific. There is also a department of art, for instruction in drawing, painting, and music.

MONROE COLLEGIATE INSTITUTE.

This institute is open to both sexes. The course of study embraces three departments, classical, English, and preparatory.

PACKER COLLEGIATE INSTITUTE.

The object of the institution is to furnish a complete collegiate education for young ladies.

HUNGERFORD COLLEGIATE INSTITUTE.

This institute is open to both sexes. Four courses of study are offered, classical, preparatory, scientific, and commercial.

FORT EDWARD COLLEGIATE INSTITUTE.

This college is open to both sexes. The courses of study are classical, preparatory, and commercial.

JAMESTOWN COLLEGIATE INSTITUTE.

This institution is under the charge of the board of education, as a portion of the public-school system. Normal and commercial departments are connected with it.

LE ROY ACADEMIC INSTITUTE.

This institute is open to both sexes, with preparatory and academic departments.

ROCKLAND FEMALE INSTITUTE.

This was incorporated in 1855 as a female seminary. The course of study is the same as that of colleges for young men.

BUFFALO FEMALE ACADEMY.

This institution is divided into five departments—collegiate, first academic, second academic, third academic, and primary. The buildings are valued at $51,000.

MECHANICSVILLE ACADEMY.

This is open to both sexes. Having been designated by the regents of the university of the State for the education of common-school teachers in Saratoga County, a normal class will at once be organized.

ITHACA ACADEMY.

This academy is open to both sexes. Its close proximity to Cornell University affords special advantages to students. The courses of study are academic, English, and classical. Special courses may also be pursued.

CORTLAND ACADEMY.

This is open to both sexes. A teachers' department, established by the regents of the university, will immediately be opened.

HARTWICK SEMINARY.

This institution was founded in 1816 as a theological and classical seminary. It is connected with the Lutheran Church, and is open to both sexes.

THE LONG ISLAND HISTORICAL SOCIETY.

This society was incorporated in 1863, and is located at Brooklyn. The objects of the society are, first, the collection of a general library of reference, especially complete in every thing that relates to American history, composed in part also of extensive and finely illustrated works of a class not commonly found in circulating libraries or in private collections; secondly, the collection and publication of manuscripts and original matter, not before printed, upon the history of this country; thirdly, the collection of historical paintings and engravings, records, and memorials; fourthly, the formation of a museum of natural history, illustrating the flora and fauna of Long Island.

The library now contains about 21,000 bound volumes and over 20,000 selected pamphlets. It comprises many valuable volumes relating to general American history, and is especially strong in works relating to American local history and family genealogy. The other historical departments are already well furnished, and constant additions are making by purchase and gift.

UNIVERSITY CONVOCATION.

The ninth anniversary of the University Convocation of the State of New York was held at Albany, August 6, 1872.

The first paper presented was by Professor M. H. Paddock, Medina Academy, on "The academy as the educator of common-school teachers." The objections to special

training-schools were stated to be the great expense, the high wages of the graduates, and bad feeling engendered from distributing State aid unequally in different localities; while the advantages of academies were the preparation of greater numbers, more advantages for students, and the entire capability of the academies for the work demanded. He thought the academies and union schools ought equally to secure recognition from the State in her legislative appropriations for school purposes.

Professor C. M. O'Leary, Ph. D., Manhattan College, read a paper on "Ethical aspects of science," which was discussed with favor.

Professor E. F. Bullard, A. M., of Keeseville Academy, read a paper entitled "The new departure in education."

Professor Edward North, of Hamilton College, discussed, in a paper, "The good life in college." The benefits enumerated as the results of college life were, that students learn what they are in themselves, were introduced into the world of letters, gained mental discipline, power in the use of English, habits of close observation, religious character, and social cultivation.

G. W. Samson, D. D., Rutgers Female College, read an article on the "Modification of the established curriculum requisite and legitimate in colleges for young women."

President Allen, of Alfred University, read a paper on "The increase of the literature fund," and Professor Gould, of Cornell University, a paper on "Agricultural education," referring to the great lack in this direction, and the need of departments in colleges and universities for imparting this kind of instruction. In a discussion which followed, President White, of Cornell University, made a statement of what had been accomplished in agricultural education in that institution.

The second day commenced with a paper by Professor Mears, of Hamilton College, on "Herbert Spencer's religion."

President Barnard, of Columbia College, discussed the subject of "Elective studies in colleges."

Professor Tayler Lewis, LL. D., read a paper on "The moral and the secular in education." He concluded with the statement that four ideas must be taught in the schools, and we must not compromise beyond these: namely, a personal God, ruling over men and nations; divine law for moral government; man immortal; Christ the light of the world. The State cannot be neutral; to banish the Bible is to be anti-Christian.

Dr. King, of Fort Edward Institute, expressed strong disapprobation of the resolutions of the State teachers' association in opposition to the academies.

Professor H. T. Eddy, C. E., Cornell University, read a paper on "A new method of integrating the square roots of quadratics."

Professor W. C. Given, of Ithaca Academy, discussed "The co-relation of academies and universities."

Majority and minority reports were presented on "The metric system," by Drs. Davies and Thompson, respectively.

The honorary degree of Doctor of Philology was conferred upon J. E. King, D. D., of Fort Edward Institute, and that of Doctor in Literature upon Dr. Barnard, of Columbia College.

The university necrology of the year is as follows: Vice-Chancellor Erastus Corning, Albany; Professor Samuel F. B. Morse, LL.D.; Professor George W. Eaton, D. D., LL. D., Madison University; Professor Edward W. Root, Hamilton College; Trustee William Kelley, University of Rochester.

In the evening the convocation enjoyed the hospitalities of Chancellor Pruyn.

The third day opened with a paper on "The relations of the schools to the State," by Professor Oliver Morehouse, A. M., of Albion. He thought the system should be arranged so that each grade should be a feeder to the one next above; that all should be *free*, from the primary school to the university, as well as the academies and normal schools. An animated discussion followed, a unanimous opinion being expressed by those who spoke that "the State should educate the youth of the State," providing amply for free education.

A committee on subjects relating to academies reported the advantage of the preliminary examination instituted by the regents in promoting thoroughness, and recommending its extension to higher branches. After a lengthy discussion of the report, a resolution was adopted that this convention recommend the preparation by the regents of a manual of questions on the subjects of arithmetic, geography, grammar, and history of the United States, from which selections shall be made for the preliminary examinations.

The convocation then divided into college and academy sections, and each discussed certain topics pertaining to their respective sections.

In joint session the two sections afterward reported progress; and a resolution was unanimously adopted, approving the action of the State teachers' association, and pledging support to the establishment of the New York State Educational Journal; and, after a brief concluding address by Chancellor Pruyn, the convocation adjourned to the first Tuesday of August, 1873.

NEW YORK STATE TEACHERS' ASSOCIATION.

The twenty-eighth annual meeting of this association was held at Saratoga Springs, July 23, 24, and 25, 1872.

Wheaton A. Welsh, first vice-president, called the meeting to order, which was opened with prayer by Rev. Mark Hopkins, of Williams College. Superintendent L. S. Packard, of Saratoga, gave an address of welcome. Ex-President Cruikshank, of Brooklyn, responded, referring to the early history of the association, and stating that a teachers' association was formed in that place thirty-seven years ago, and three of the members then present were present also on this occasion, viz, M. P. Cavert, D. H. Crittenden, and Augustus P. Smith.

The president, J. H. Hoose, of Cortland, then gave his inaugural address. This was an elaborate address, and closed with a general summary of the discussion of the business of teaching, as to the manner of introduction, by declarations and acts of individuals, by customs and usages, and by principles of national method. He referred to the universal desire to develop the profession of teaching, as manifested in the efforts to establish a national university, to enlarge the Bureau of Education at Washington, the growing interest in educational associations, and the greater attention paid by normal schools to the philosophy of education.

The address closed with appropriate suggestions as to the work of the association for the coming year, and urged all to unite to work out speedily a higher and nobler idea of the teacher's profession.

At the evening session Rev. C. H. A. Bulkley, of Malone, read a paper upon "Music in our schools," which was followed by a lecture upon the "History of the philosophy of pedagogics," by Dr. C. W. Bennett, of the Syracuse University, who treated the subject with great thoroughness.

Second day.—Hon. Edward Danforth, of Albany, from the committee on the condition of education, reported that the school system of New York is just sixty years old, and is to-day the proudest monument and noblest achievement of the State. There is not a hamlet so obscure that the children have not the opportunity of a free education. The statistics of the schools for the year were given, as furnished by the report of the State superintendent, and it was stated, in addition, that during the year 1871 fifty-seven institutes were held in fifty-seven counties, besides one for Indian teachers on the Allegany and Cattaraugus reservations, with an aggregate attendance of 10,423, being the largest number ever recorded in a single year, and being 80 per cent. of the entire number employed in the counties where the institutes were held.

A paper on "Reading in our schools," by Mrs. Emily A. Taylor, of Albany, was then read, which was followed by a discussion of the subject, in which Dr. Armstrong, Professor Barker, Professor Barrington, Dr. Woolworth, and several others took part.

Professor S. S. Packard next read a paper on "Preparation for business," which called forth in an animated discussion Dr. Armstrong, Dr. McVicar, Professor Mead, and Professor Stowitts.

In the afternoon Professor S. A. Ellis, of Rochester, read a paper upon the "Rise and progress of high schools in the State." He said that in 1825 the first high school (for boys) was organized in the city of New York, and in 1826 a similar one was organized for girls. Now, he remarked, it is impossible to meet with an annual report of any city superintendent, in a locality where a high school has been established, in which it is not spoken of as the most valuable addition to the system of graded schools.

Dr. T. L. Griswold, of Owego, read a paper upon "Physical *versus* Mental Training," the object of which was to show that all educational training should be adapted to the outer or external man's compound nature.

Professor Stowitts, of Buffalo, favored physical training. Mr. Ross, of Seneca, thought Americans, as a race, were degenerating physically as well as mentally. Professor Barker, Dr. King, of Fort Edward, Dr. Griswold, and Dr. McVicar, continued the discussion at length.

In the evening a paper was read on the "Qualifications of teachers," by Charles T. Poole, esq., of Deansville. Mr. Jeliffe, of Brooklyn, read Dickens's trial scene from Pickwick. Hon. B. G. Northrop, of Connecticut, gave an address upon "The schools of Europe—what we may and ought to learn from them."

Third day.—Dr. J. W. Armstrong, of Fredonia, read a report on "Improved methods in education." Professor S. D. Barr, of Penn Yan, read a paper on "The aim of the State for the education of the masses." Professor Jones opened the discussion, maintaining that the academic departments in union schools are more efficient than the old academies. Professor Love, of Jamestown, Mr. Ross, of Seneca, Professor Flack, of Claverack, and others, continued the discussion.

Professor O. B. Bruce, of Binghamton, read a paper showing the advantages of phonography, and urging teachers to attend to its claims.

In the evening Hon. B. G. Northrop, of Connecticut, Professor W. L. Richardson, of Brooklyn, Hon. Joseph White, of Massachusetts, Hon. J. H. French, of Vermont, and many others, made brief addresses.

Officers elected: President, Edward Danforth, Albany; corresponding secretary, James Cruikshank, Brooklyn.

DR. FRANCIS LIEBER.—OBITUARY.

Dr. Francis Lieber died in New York, October 2, 1872.

Francis Lieber was born at Berlin, Prussia, on the 18th March, 1800. He received a good primary and secondary education; was for some time assistant in the botanical garden, but finally devoted himself to the study of medicine. His studies were interrupted by Napoleon's return from Elba, as his ardent German patriotism induced him to enter the Prussian army as a volunteer. He fought in the battles of Ligny and Waterloo, and was severely wounded on the 20th June, at the storming of Namur. On his return to Berlin, in 1816, he continued his studies, and became an enthusiastic pupil of Jahn, the famous "Father of Gymnastics," (Turnvater,) as he is commonly called in Germany.

His liberal views, which he freely uttered, brought upon him an imprisonment of four months, on the charge of being a demagogue, and the peremptory order not to study at any of the Prussian universities. He therefore went to Jena, where he took his doctor's degree. In 1820 he was allowed to continue his studies in Halle, but, being constantly annoyed by a strict police supervision, he moved to Dresden.

The struggle for freedom by the Greeks against their Turkish oppressors elicited his warmest sympathy, and in the fall of 1821 he sailed from Marseilles to Greece. After a stay in Greece of several months, full of privations and disappointments, he went to Italy, where in Rome he found a home in the house of Niebuhr, the famous historian, and wrote his first work in German: "Diary of my sojourn in Greece," (Leipzig, 1823.) With Niebuhr he returned to Germany, but, in spite of solemn assurances that he should be permitted to live undisturbed in any part of the Prussian monarchy, he was watched and persecuted by the police, and in 1824 again imprisoned, but liberated through Niebuhr's intercession.

He now, under the *nom de plume of* Franz Arnold, published a volume of German poems, "Songs of Wine and Joy," (Wein und Wonnelieder,) (Berlin, 1825.) Apprised that a new imprisonment was threatening, he fled to England in September, 1825, and lived for some time in London, where he earned a scanty living by giving private lessons.

In the year 1827 he came to the United States, and lectured in several cities on political and historical subjects. He also started a swimming-school in Boston according to the principles of General von Pfeul, whose pupil he had been in Berlin. In 1835 he became professor of history and political science in the college at Columbia, South Carolina, and in 1858 professor of the same studies at Columbia College, New York, in which position he remained until his death.

Soon after his arrival in the United States he displayed a great literary activity. Besides a large number of pamphlets and speeches on historical, political, and scientific questions, he wrote a number of large works, the more important of which are given in chronological order:

Encyclopædia Americana, (13 vols., Philadelphia, 1829–1833.)

Letters to a gentleman in Germany, (Philadelphia, 1834.)

Essay on subjects of penal law, and on uninterrupted solitary confinement at night and labor by day, (Philadelphia, 1834.)

Legal and political hermeneutics, or principles of interpretation and construction in law and politics.

On international copyright.

On Anglican and Gallican liberty.

Reminiscences of an intercourse with Niebuhr, the historian, (1837.)

Political ethics, (2 vols., Boston, 1838.)

Laws of property, (2 vols., New York, 1842.)

Bruchstücke über Gegenstände der Strafkunde, (Fragments on penal subjects,) (Hamburg, 1845.)

Ueber die Unabhängigkeit der Justiz und die Freiheit des Rechts, (On the independence of justice and the liberty of the law,) (Heidelberg, 1848.)

On institutional self-government, or discourses on civil freedom, (Philadelphia, 1853.)

When our late civil war broke out, Dr. Lieber was one of the first to struggle, by tongue and pen, against the madness of secession, and to impress upon the country the value of the institution which the insurrectionists were attempting to destroy. He continued his labor of love during the whole period of the war, publishing many treatises, letters, and addresses upon the stirring topics of the time. After the close of the war his pen was still busy with questions of public interest—the jury question, changes in the State constitution of New York, international copyright, fallacies of American protectionists, and points of international law.

As a teacher, Dr. Lieber's method of instruction was admirable. He never adopted in his lectures the simple narrative style, detailing events, nor, in recitation, the question-

and-answer plan of drawing out the knowledge of a student on any given subject. He referred to the text-book for facts, and exerted himself to show the causes—remote and proximate—of events, and their influence; to give history, not in segregated parts, but as a whole, and philosophically.

Not aiming at that "science, falsely so called," which imagines that it has found something better than the revelation of the Most High, he lived and died with all the consolations of the Christian faith.

CHARLES ALFRED LEE.—OBITUARY.

Charles Alfred Lee, A. M., M. D., professor emeritus of materia medica and hygiene in the University of Buffalo, died at his residence in Peekskill, New York, February 14, 1872.

He was born in Salisbury, Connecticut, March 3, 1801; descended from the Lees and Browns of Massachusetts and Connecticut, who for more than two centuries had occupied distinguished positions; spent much of his youth with an uncle in Sheffield, Massachusetts, where he fitted for college, at Lenox Academy; graduated at Williams College, 1822; as M. D. at Berkshire Medical College, 1825; practiced two years in his native town, and moved to New York in 1827, where, by sound principles, close attention to business, and indomitable perseverance, he soon overcame all the difficulties that usually lie in the path of young men, and took his place in the front rank of the profession.

He was a profound thinker, an enthusiastic, ceaseless worker, and a public-spirited man. Dr. Lee had an extensive private practice—after 1850, chiefly consultation; was one of our best American teachers, but won his highest reputation as an author and editor of medical works. He was one of the founders of the Northern Dispensary of New York City, in which he was for four years the attending physician; of the medical departments of the University of New York, and University of Buffalo, in both of which he was professor, as also in the medical colleges at Geneva, New York; Woodstock, Vermont; Brunswick, Maine; Pittsfield, Massachusetts; and Columbus, Ohio.

His greatest work was the American edition of Dr. James Copeland's Dictionary of Practical Medicine, the most complete and valuable work on the theory and practice of medicine ever issued from the English or American press. For an account of his other works, labors in hospitals, &c., see Dr. Toner's article in the New York Medical Journal, April, 1872.

DENNIS H. MAHAN.—OBITUARY.

Among the men of science who have recently ended their labors and taken their place in history, no one has left a wider space or a more honorable record than Dennis H. Mahan, LL.D., late professor of engineering in the Military Academy at West Point.

Mr. Mahan entered the academy as cadet, from the State of Virginia, July 1, 1820; was graduated at the head of his class, 1824, and commissioned in the Corps of Engineers. He immediately applied to the Government to be sent abroad, and in the best schools of Europe completed an education which had been well begun at home. He had early learned how to study; was a laborious student and an ardent lover of knowledge, regarding his diploma as the evidence, not of a work completed, but of the first step in the path of science.

In 1832, soon after his return, he was appointed professor of civil and military engineering, and brought back to his alma mater the culture of a man of science, the manners of a traveled gentleman, with the laudable ambition of doing a noble work in the national school which he ever honored and loved. Here he passed a laborious and useful life. The science which he taught was applied on every battle-field of the late war. Not a campaign was planned, or a trench dug, in which his instructions were not heeded. The department of civil engineering is also greatly indebted to his labors, for here, as in his own special line, his works are the standard text-books.

His social and domestic life was marked by culture and affection. For many years he was a communicant of the Episcopal Church, and bore himself with the amenity of a Christian gentleman.

The returning graduates will find his grave in the public burying-ground, surrounded by the tombs of many heroes and by all that is grand and beautiful in nature.

GEORGE W. EATON.—OBITUARY.

George W. Eaton, D. D., LL.D., late president of Madison University and Hamilton Theological Seminary, in the State of New York, was born near Huntington, Pennsylvania, July 3, 1804. In 1805 his family removed to Ohio, where he was afterward prepared for college, and in 1822 matriculated at the Ohio University.

Having remained at the university two years, the circumstances of his father rendered it necessary for him to relinquish his college course for a time that he might procure funds for its completion. With this object in view he spent two years teaching in Prince Edward County, Virginia, at the end of which time he made, principally on foot, a tour of the seaboard States, as far north as Massachusetts, spending some time at Princeton, New Jersey, and at Andover, Massachusetts, and then, in 1827, entered the junior class of Union College, at Schenectady, New York, where, under the presidency of the late noted Eliphalet Nott, D. D., LL.D., in 1829, Mr. Eaton was graduated with the highest honors of his class.

In college he was associated with men who have since risen to places of the highest eminence in civil life. Among his college associates he was highly esteemed for his unselfish disposition, his keen sense of honor, and his generous bearing toward those whose scholarship and college honors did not equal his own.

Having won the personal regard of President Nott, he was, immediately upon his graduation, elected a fellow and appointed a tutor in the college. In this position he remained one year, and then, in 1830, much against the wishes of the president, who, long years after, spoke of the circumstance with regret, he left the college and became principal of Union Academy, at Belleville, in the same State.

Having been elected to the chair of ancient languages in Georgetown College, Kentucky, in 1831, he removed to Georgetown, where he remained, during the latter part of the time acting as president, until 1833, when he was called to the professorship of mathematics and natural philosophy in what was then known as Hamilton Literary and Theological Institution, located at Hamilton, New York, a school which had for its chief object the training of young men designed for the ministry in the Baptist denomination. This institution was, in 1846, chartered as Madison University, and by this action the theological seminary became so separated from the college that, though they occupied the same buildings, and some members of the theological faculty gave instructions also in the college, yet the former was controlled by the New York Baptist Educational Society, and the latter became subject to the regents appointed by the legislature of the State. Professor Eaton remained in the chair of mathematics and natural philosophy for four years, and at the end of that time, in 1837, was elected to that of ecclesiastical history in the theological school. In 1844 he received the honorary degree of Doctor of Divinity from his alma mater, and in 1850 was elected professor of systematic theology. In 1856 he was elected to succeed Stephen W. Taylor, LL. D., deceased, as president of the university, still retaining his professorship of theology in the seminary. For twelve years he performed the double duty; as president, giving instruction in intellectual and moral philosophy, at the same time continuing his lectures in theology, until 1861, when he exchanged systematic theology for homiletics.

These arduous labors were unremitted except in the years 1863 and 1864, when, his strength giving way, he sought relief in a European tour, during which he labored earnestly and efficiently to give a true idea of the nature of the conflict then raging in our country. In this tour he formed the acquaintance and secured the personal friendship of many of the most prominent men of Great Britain and the continent, among whom were Cæsar Malan, Merle D'Aubigné, John Bright, Goldwin Smith, Professor Farrar, and Dr. McCosh.

In 1868, his physical powers having been so severely taxed for years, he sought relief from a portion of his responsibilities, and therefore resigned the presidency of the university, retaining simply that of the theological seminary, to which he had been elected several years before. Thenceforth he gave instructions only in homiletics, until, in 1871, he was forced to cease from all active labor. He died on the 3d of August, 1872.

It becomes us here to speak of Dr. Eaton as a teacher—an educator. While as a writer he was perspicuous, classical, and glowing; while as an orator he was elevated, fervid, and eloquent; while as a preacher he was catholic, tender, and convincing; while in the command of fit expression he had no superior and but few equals; yet it is as an educator that he deserves to be spoken of here; and justice demands a careful pen. Perhaps his first and most prominent characteristic as a teacher was the enthusiasm with which he entered every department of instruction to which he was called. It was his first business to make himself thoroughly familiar with the whole field of investigation, and he rested not until he had examined every cognate question—encompassed all that could be regarded as valuable in the literature of the subject.

He could never rest while there was another author unread and unweighed. The insatiate thirst for knowledge with which he began never left him through the whole forty-two years during which he occupied the position of teacher; and even after retirement from active duty, he still seemed as anxious, as zealous, for new truth, as unremitting in his investigations and readings, as when he first began his splendid career. Though he occupied so many different chairs, and had occasion to pursue so many different courses of study, he yet seemed as much at home in any one of them as though that had been the one department to which he had given his life.

Another characteristic of the teacher was the enthusiasm which he carried into the class-room and infused into his pupils. When he taught mathematics, the mathematical spirit seemed to pervade the school. Other professors sometimes complained that the attention of the students was given too exclusively to mathematics. When he taught history, then history seemed to be the prominent subject, and historical themes would be presented on public occasions. And when he taught metaphysics it was the same thing again; questions in metaphysical science from Kant, Cousin, Reid, Hamilton, and McCosh, came in for discussion, criticism, or approval. In theology he adhered to the milder type of the Calvinistic system; and as he unfolded to his classes the, to him, glorious and blessed doctrines of sin, redemption, atonement, and intercession, his whole soul seemed infused into the subject, the tear would often stand in his eye, and, rising from his chair, he would pour himself out in a flood of extemporaneous eloquence, which sent thrills of delight as well as of admiration through the hearts of his pupils. The memory "of the doctor's" lectures and gushes of eloquence lives in the hearts of hundreds of his pupils, as affording some of the highest pleasures of their lives.

In his teachings he was at the furthest remove from dogmatism. Every point had to be carefully presented, with all the pros and cons, and then the conclusion was drawn from the whole. It was his delight to set his pupils to investigations on their own account, and they seldom left the lecture-rooms without being sent to the libraries to examine some author, with instructions to bring the results of their investigations for consideration at a future day. The consequence of all this was that very few of his pupils ever found occasion to differ with him. He treated their opinions and objections so courteously, and presented the rebutting arguments so kindly, that he disarmed opposition before it had arisen, and the objector felt that his points were fairly met and completely demolished.

Finally, we would mention, as further characteristic of the man, the strong personal attachment formed by the pupil for the teacher, and so warmly reciprocated on his part. It is probable that no man ever spent any considerable time under his instruction without becoming thus bound to him by ties of affection. His appreciation of what was meritorious in the effort of the pupil, and his criticism, so kind and so just, caused him who had most to bear to feel that he was honored by the strictures of his teacher; and then the sympathy with which he opened his heart to the trials and hardships of those who were contending with poverty, his efforts at assistance where it was within his power, made the most desponding hopeful and the weakest strong. So deep and reliable was this personal attachment that his government of the college was hardly known as such. He ruled by love; so seldom had occasion to resort to other measures that some even thought that "discipline" was a nullity, and yet, during his presidency, he accomplished some of the most difficult feats of discipline which are known to college presidents. What has often shaken other colleges to their very centers and even sent away whole classes, was by him accomplished so quietly that some hardly knew that trouble existed. And it was because of the respect and love of the students who would not wound the feelings of their president.

It was always counted among the felicities of the alumni of Madison University that they were permitted to experience "a shake of the doctor's hand." His memory will be blessed as long as one of them survives to tell of his love for his old teacher.

His remains lie in the college cemetery, in a spot overlooking the scenes of his life-work and the landscape which he ever regarded with the fondest delight.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 New York was the first State in population, having 4,382,759 inhabitants within an area of 47,000 square miles, an average of 93.25 persons to the square mile. This population consisted of 4,330,210 whites, 52,081 colored, 439 Indians, and 29 Chinese. Of these, 3,244,406 were natives of the United States and 1,138,353 were foreign-born. Of the native residents 2,948,883 whites, 38,504 colored, and 389 Indians, were born within its borders, while of the foreign residents 316,902 were born in Germany, 110,071 in England, and 528,806 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 846,796 persons attended school, and of these, 40,146 were foreign-born. Of the 841,157 white scholars, 430,731 were males and 410,426 females. Of the 5,588 colored pupils, 2,835 were males and 2,753 females. One female Chinese, also 25 male and 25 female Indians, were reported as attending school.

Illiteracy.—Two hundred and thirty-nine thousand two hundred and seventy-one inhabitants, of all races, 10 years old and over, were unable to write, and of these, 168,569 were foreign-born.

Age and sex of illiterates.—Of the 228,424 white illiterates, 19,899 were from 10 to 15 years old, and of these, 10,772 were males and 9,127 females; 18,573 were from 15 to 21 years old, of whom 8,138 were males and 10,435 females; 189,952 were 21 years old and over, of whom 73,208 were males and 116,744 females. Of the 10,730 colored illiterates,

737 were from 10 to 15 years old, and of these 371 were males and 366 females; 1,207 were from 15 to 21 years old, of whom 585 were males and 622 females; 8,786 were 21 years old and over, of whom 3,912 were males and 4,874 females. Thirteen male and 2 female Chinese, also 45 male and 57 female Indian illiterates were reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 13,020, having 28,918 teachers, of whom 8,035 were males and 20,883 females, to educate 862,022 pupils, of whom 373,276 were males and 488,746 females.

Amount and source of educational income.—The total income of all the educational institutions was $15,936,783, of which $674,732 were derived from endowment, $9,151,023 from taxation and public funds, and $6,111,028 from tuition and other sources.

Public schools.—The 11,678 public schools, with 23,729 teachers, 5,711 males and 18,018 females, were attended by 719,181 pupils, of whom 302,373 were males and 416,808 females. To educate these they had a total income of $8,912,024, of which $13,122 were derived from endowments; $8,385,330 from taxation and public funds, and $513,572 from tuition and other sources.

Colleges.—The 24 colleges, with 412 teachers, 335 male and 77 female, were attended by 5,526 pupils, of whom 4,492 were males and 1,034 females. They had a total income of $1,393,559, of which $582,279 were derived from endowment, $133,805 from taxation and public funds, and $677,475 from tuition and other sources.

Academies.—The 189 academies, with 1,197 teachers, of whom 445 were males and 752 females, had an attendance of 24,212 pupils, 9,795 male and 14,417 female, and a total income of $1,292,684, of which $932 were derived from endowment, $133,548 from taxation and public funds, and $1,158,204 from tuition and other sources.

Private schools.—The 819 day and boarding schools had 1,948 teachers, 623 male and 1,325 female, and were attended by 46,851 pupils, of whom 18,597 were males and 28,254 females. They had a total income of $1,880,277, of which $300 were derived from taxation and public funds, and $1,879,977 from tuition and other sources.

Libraries.—Thirteen thousand seven hundred and seventy-one public libraries were reported, with 3,524,869 volumes; also 7,158 private libraries, with 2,785,483 volumes, in all 20,929 libraries, containing 6,310,352 volumes.

The press.—The 835 periodicals issued had an aggregate circulation of 7,561,497 copies, and an aggregate annual issue of 471,741,744 copies.

Churches.—Of the 5,627 church organizations, 5,474 had edifices with 2,282,876 sittings, and the church property was valued at $66,073,755.

Pauperism.—Of the 14,100 paupers 5,289 were native whites, 664 native colored, and 8,147 foreigners.

Crime.—Of 4,704 persons imprisoned June 1, 1870, 2,323 were native whites, 335 native colored, and 2,046 foreign-born; 5,473 persons were convicted during the year.

Age and sex of population.—Of the total population 1,230,988 were from 5 to 18 years old, of whom 613,659 were males and 617,329 females; 3,378,959 were 10 years old and over, of whom 1,658,504 were males and 1,720,455 females.

Occupations.—One million four hundred and ninety-one thousand and eighteen persons of these ages were engaged in various occupations, of whom 1,233,979 were males and 257,039 females; 374,323 persons were engaged in agricultural pursuits, of whom 373,455 were males and 868 females; 405,339 in personal and professional services, of whom 233,569 were males and 171,770 females; 234,581 in trade and transportation, of whom 229,789 were males and 4,792 females; 476,775 in manufactures and mechanical and mining industries, of whom 397,166 were males and 79,609 females.

Age and sex of working population.—Of the 1,491,018 employed persons 44,588 were from 10 to 15 years old, of whom 29,661 were males and 14,927 females; 1,364,147 were from 16 to 59 years old, and of these 1,126,865 were males and 237,282 females; 82,283 were 60 years old and over, of whom 77,453 were males and 4,830 females.

SCHOOL OFFICIALS.

ABRAM B. WEAVER, *Superintendent of public instruction, Albany.*

SCHOOL COMMISSIONERS.

Counties and districts.	Name.	Post-office address.
Albany, first district	Leonard A. Carhart	Coeymans.
second district	Julius Thayer	South Westerlo.
third district	John P. Whitbeck	West Troy.
	John O. Cole, (c)	Albany.
	Murray Hubbard, (a)	Cohoes.
Allegany, first district	Lucien B. Truman	Centreville.
second district	Richard L. Andrus	Bolivar.
Brown, first district	Henry S. Monroe	Binghamton.
second district	Newton W. Edson	Binghamton.
	G. L. Farnham, (b)	Binghamton.

School commissioners—Continued.

Counties and districts.	Name.	Post-office address.
Cattaraugus, first district	Frank A. Howell	Machias.
second district	Jerome L. Higbee	Randolph.
Cayuga, first district	Samuel A. Cole	Throopsville.
second district	Leonard F. Hardy	Weedsport.
third district	Lewis V. Smith	Genoa.
	B. B. Snow, (*b*)	Auburn.
Chautauqua, first district	Alonzo C. Pickard	Busti.
second district	Wellington Woodward	Jamestown.

NORTH CAROLINA.

[From report of Hon. Alexander McIver, State superintendent of public instruction, for the period from March 14, 1872, to October 1, 1872.]

EDUCATIONAL FUNDS.

Permanent fund.

Balance on hand October 1, 1871	$10,022 12
Received for entries of vacant lands	7,068 17
Received for fines, &c	6,216 97
	23,307 26
Paid for United States bonds	16,218 75
Balance permanent fund October 1, 1872	7,088 51

Income fund.

Balance on hand October 1, 1871	$178,523 55
Capitation taxes	1,818 31
Interest on deposits	400 88
Interest on United States bonds	421 87
Dividends of Roanoke Navigation Company	250 00
Interest on note for swamp-lands	1,513 50
Retailers' tax	28,122 39
Auctioneers' tax	188 72
Total receipts	211,239 22

FINANCIAL STATEMENT.

Received from State treasurer 1871–'72	$125,448 31
Received from poll-taxes	108,988 93
Disbursed for white schools	88,022 76
Disbursed for colored schools	27,256 14
Disbursed for school-houses	16,833 30
Disbursed for county examiners	1,154 20
Commission retained	4,473 15
Total disbursements	137,739 55
Property tax for schools, 1871	38,206 03

ATTENDANCE.

Number of white males of school age	94,061
Number of white females of school age	88,637
Number of colored males of school age	44,151
Number of colored females of school age	41,088
Number of Indians of school age	396
Total scholastic population	267,938
Number of white males enrolled in school	18,830
Number of white females enrolled in school	15,464
Total white enrollment	34,294
Number of colored males enrolled in school	8,304
Number of colored females enrolled in school	8,083
Total colored enrollment	16,387

SCHOOL BUILDINGS AND TEACHERS.

Number of public school-houses	1,627
Number of colleges and academies	93
Number of white male teachers licensed	1,261

Number of white female teachers licensed	413
Number of colored male teachers licensed	317
Number of colored female teachers licensed	141
Whole number of teachers	2,132
Number of teachers' institutes held	8

THE SCHOOL SYSTEM.

The superintendent says: We have had a system of public schools in the State since 1840. Prior to the war we had ample education funds. Additional sums were obtained by taxation. According to the reports of the superintendent of common schools, "free public schools were kept three months every year within convenient distance of every child eligible in the State." And yet the census of 1860 places North Carolina in the front rank of illiteracy.

Applying the true test, "By their fruits ye shall know them," we are compelled to admit that the school system of North Carolina has been a failure. The first general assembly which met under the present constitution provided for a general and uniform system of public schools. The failure of this system resulted from the fact that, while the county commissioners were required to establish schools and authorized to order a tax for the purchase of sites, and for the building or renting of houses, they were given no authority to levy a county tax to pay the wages of teachers.

The State school fund consists of 75 per cent. of the State and county capitation taxes, the income from taxes on auctioneers, and on licenses to retail spirituous liquors, and the income from the invested school funds. The whole amount which could be realized from these sources may be set down at fifty cents a year for each child in the State. It is true that the general assembly of 1868–'69 appropriated $100,000 for the support of public schools, to be paid out of the State treasury; but this amount was not paid except by the tax of one-twelfth of one per cent., which was levied the following year.

It is obvious that it would have required a very considerable tax on each township to build, repair, and furnish a sufficient number of school-houses, and to pay the wages of a sufficient number of teachers four months every year. The people, in their straitened condition, were unwilling to be taxed heavily for anything. In one case where the county commissioners attempted to levy such a tax, the matter was carried into the supreme court, where, in January, 1871, it was decided against the commissioners. The effect of this decision was practically to annul the school system of 1868–'69.

This was the condition of the public-school system when the general assembly met in November, 1871.

At the suggestion of the chairman of the senate committee on education, the superintendent prepared a bill to revise the school law and provide for a system of public education. This was adopted by a large majority in February, and went into operation thirty days after its ratification. The present school law has, therefore, been on trial only since March 14, 1872. It is not and was not intended to be a complete system. It is but the germ of a system to be developed by future legislation.

The extent to which the present beginning of a school system shall be made to meet the wants of the people will depend upon the action of the general assembly.

CONDITIONS OF THE PRESENT LAW RELATING TO SCHOOL FUNDS.

"The school funds for the year 1872 are: 1. All balances of apportionment heretofore made and not applied in payment of teachers' wages for schools taught prior to March 14, 1872. (The aggregate amount of these balances which has been paid by the State treasurer to the several county treasurers since the ratification of the present school law is about one hundred thousand dollars.) 2. Seventy-five per cent. of the entire State and county poll-taxes for the year 1871, or so much thereof as shall remain after paying for the schools taught prior to March 14, 1872, according to the former law. 3. Seventy-five per cent. of the entire State and county poll-taxes for the year 1872. 4. Six and two-thirds cents on the one hundred dollars' worth of all the property and credits in the State, and twenty cents on the poll.

"The school fund is not to be apportioned among the several townships as heretofore, but paid to teachers of free schools without regard to locality, in the order in which they may be presented.

"The board of education have adopted the rule that two terms of a public school may be taught in the same place in one year, if the school funds will justify it."

The superintendent thinks that "the funds will be sufficient, on the present plan, to support schools four months in nearly all the counties in the State; in many of the counties the funds will be sufficient to support two terms of four months each, in as many districts in the county as will make up free schools on the plan proposed.

"If the people of any neighborhood desire to avail themselves of the public-school money, they must make up, by subscription, an additional sum sufficient to satisfy the teacher, and then employ the teacher. The teacher will be required by the school committee to have an assistant when the number of pupils is greater than he can teach and govern well.

"If any neighborhood refuses to make up a school in this way, it can have no claim whatever to any part of the public-school funds."

DEFECTS OF THE PRESENT LAW.

The greatest defect in the practical operation of the law is, that incompetent teachers are allowed to get teachers' certificates. The county examiners yield to the idea that certificates must be given to a sufficient number of teachers to take charge of the public schools, and thus the school money is wasted.

Another defect in the present law is, the want of uniformity in school-books. However competent a teacher may be, if, when he goes into a school of forty or fifty pupils, or a less number, he finds his pupils supplied with different kinds of school-books, as is now the case, he will be unable to class them as he might otherwise do, and it will be impossible for him to instruct them to advantage.

Other defects noted are the failure to fix by law the time and manner of laying off districts, and the failure to make provision for the building and furnishing of school-houses. Concerning this, the superintendent says: "It should be submitted to a vote of the townships, whether or not a tax should be levied to defray half the expenses of building and furnishing neat, substantial, and comfortable school-houses; the other half being paid out of the general school fund."

It is the intention of the superintendent at an early day to present to the general assembly a bill intended to remedy the defects of the laws and to perfect the school system.

COMPULSORY EDUCATION.

The superintendent, after quoting from the most distinguished educators upon this subject, and giving copious extracts as indications of popular opinion on compulsory education, says: "I am convinced of the necessity of adopting it in North Carolina."

His reasons for this conclusion he gives as follows: "According to the census of 1870, there are in this State 38,647 white children and 40,955 colored children, between the ages of 10 and 15 years, unable to read and write; there are 31,911 white children and 44,805 colored children in the State, between the ages of 15 and 21 years, unable to read and write. There are, in the State 191,961 whites and 205,032 colored, over the age of 10 years, unable to read and write; adding 679 Indians, who can not read or write, we find the sum total of illiterates in the State, over the age of 10 years, to be 397,690. The entire population of the State is 1,071 361. If from this number we deduct the whole number of children in the State under the age of 10 years, and divide the remainder by 2, we will find that about one-half the population of the State, over the age of 10 years, are unable to read and write."

Upon the subject of the relation of education to crime he quotes largely from the last report of the Commissioner of Education, and continues: "If it is true, as statistics abundantly prove, that pauperism and crime every where keep pace with ignorance, North Carolina has a gloomy prospect in the future. Something must be done to arrest the evil. Compulsory education is the remedy."

INDUSTRIAL EDUCATION.

The superintendent further remarks that "industrial education is a part of the system which can not be omitted. All children should be instructed in some one of the industrial pursuits of the State. They should be instructed to make an honest living. Instruction in trades and industrial pursuits will be more valuable than instruction in books; but the latter is necessary to the former and bears to it the relation of means to an end. Every child in the State should be instructed in some trade, profession, or pursuit. And if any parent or other person, having control of a child, neglects to do this, the law should intervene and secure the rights of the child and the safety of the State."

TEACHERS' INSTITUTES.

The present school law authorizes and encourages the organization of teachers' associations and teachers' institutes. The general agent of the Peabody education fund, Rev. Dr. Sears, promised $50 to each teachers' institute which should be held in the State during the present year, under the provisions of the school law. This is the same as the amount given from the State school fund. This liberal and generous offer of Dr. Sears was advertised throughout the State early in the year, but only six

teachers' institutes have been held in the State under the provisions of the law. To each one was paid $50 from the school fund and $50 from the Peabody fund. The attendance varied from 37 to 50.

The superintendent suggests that if a well-qualified instructor could be appointed in each judicial district in the State, whose duty it should be to conduct institutes in every county in the district, and at the same time hold teachers' examinations, the licensing of incompetent teachers would be effectually prevented.

EDUCATIONAL JOURNAL.

The superintendent expresses the opinion that the department of education should have an organ to communicate with all school officers and teachers in the State upon all matters relating to schools, modes of teaching, &c. This has heretofore been done by means of circulars and letters, at very considerable expense to the State.

If the general assembly should appropriate a small sum annually to assist in defraying the expenses of publishing a State journal of education, to be distributed among school officers, it would perhaps be the most economical mode which could be adopted to communicate information relating to public schools. Such a journal would be not only an organ of communication for the benefit of school officers and teachers, but it would become a depository of the history and progress of education in the State.

EDUCATIONAL BENEFACTIONS.

About seven years ago an association of ladies in the city of Boston undertook to establish and support a school for white children in the South. Miss Bradley, a Boston lady, was delegated to select the place, and to organize and superintend the school. She selected the city of Wilmington, in this State, where she established and has ever since maintained one of the very best schools in the State, supported mainly by the ladies of Boston. Many hundreds of children have been educated in this school, who, but for this noble charity, would have remained in ignorance—victims, perhaps, of vice and crime.

About two years ago a wealthy Boston lady, who had been a large contributor in support of Miss Bradley's school, visited Wilmington. She was so well pleased with Miss Bradley's work that she purchased a square in the city of Wilmington, and authorized Miss Bradley to have a building for a normal school put up at a cost of $30,000. That building, an ornament to the city of Wilmington, is now completed; and the normal school is entirely free of tuition.

The American Missionary Association, for the education of colored people, have maintained schools for the colored people in the cities of Wilmington, New Berne, Raleigh, Beaufort, and other places since the close of the war. At one time there were 17 teachers and 1,600 pupils in Wilmington. The largest number of teachers reported at any time was 47. They now have a school at Wilmington with about 500 pupils; one at Dudley with 100 pupils; one at Raleigh with 100 pupils; one at Beaufort, and one at Alamance.

The Friends' Freedmen's Association employ 34 teachers, who instruct about 2,000 pupils.

The Baltimore Association of Friends have also done much for education in North Carolina. As soon as the war was over they sent funds to carry on Friends' schools in the South. A superintendent was sent to North Carolina. Teachers were employed, schools organized, school-houses built and furnished, school-books supplied, and educational meetings held to rouse the people to the importance of the subject.

The first year twelve schools were established, in which about 900 pupils were instructed. The schools were continued about nine months every year. The number of schools and the number of pupils increased rapidly the first two or three years. The work has been going on now seven years. During the last four years the number of schools has been from thirty to thirty-four, and the number of pupils instructed every year was from 2,700 to 3,300.

These schools were at first intended for the children of Friends. Others, however, who desired to send their children were permitted to do so. If they were able to pay any thing, they were expected to pay; otherwise, not. In this way all white children within reach of these schools were instructed upon equal terms.

For the purpose of instructing the teachers and securing the best modes of instruction in these schools, the superintendent collected the teachers once a year, and spent from four to six weeks in training them in the best modes of teaching. Seven of these institutes have been held—one annually for the last seven years—at which from 50 to 100 teachers, or persons preparing to teach, were instructed every year. Three hundred and twenty persons have been instructed in these institutes.

This association of Friends have also established a model farm near High Point, for the purpose of showing what can be done with worn-out lands in North Carolina.

While these benefactions recognize the value of education, they also indicate the good-will of their authors. They are but so many olive-branches held out to the people to unite in building up the prosperity of a common country upon the only basis on which it can be done—the education of the people.

EDUCATION IN CONGRESS.

Extracts are given from an article written by the Hon. George F. Hoar, of Massachusetts, giving a very clear account of the two bills which have been before Congress on the subject of education.

No comment is made, but the fact is stated that the national educational association fully indorsed the bill now pending in the United States Senate, and unanimously adopted a resolution asking the Senate to pass the bill.

STATISTICAL TABLES.

The tables accompanying this report give the results of the present school-law from March 14, 1872, to October 1. It will be remembered that the six and a half months within these dates include the seasons of making and gathering crops, when the great majority of the people could not spare their children from work. The mode of starting and supporting schools was new to the people, and was not readily understood. Many preferred the former law, because it promised more money while it continued. Others supposed that the present law was unfavorable to the poor, because it was calculated to aid only those who could aid themselves. So that the present exhibit can not be regarded as a fair test of the merits of the system.

PEABODY FUND.

Dr. Sears, in his sixth annual report, says: "The public mind does not seem to be so well settled here in regard to free schools as in most of the other States." The general assembly levied no State tax for schools for the present year; and the poll-taxes were, in many cases, applied to other than school purposes. A letter from the superintendent says: "In numerous instances the people had not recognized the utility of free schools.

"I believe that your fund is doing much, not only to aid but to encourage education in this State, and that your rules are framed with great wisdom and foresight."

About $10,550 have been expended from the fund during the past year in the State, besides $1,000 set apart for teachers' institutes. "The State appropriates $50 for every such institute held according to law during a period of four weeks, and attended by twenty or more teachers. We have promised the same amount on the same conditions."

UNIVERSITY OF NORTH CAROLINA.

This institution was opened to the public in 1795. The plan of the university includes eight colleges. Of these, two were fully and two partially organized at the date of the report, July, 1871.

The college of literature and the arts, and the college of philosophy are fully organized. The course in each of these extends over four years. A preparatory department is connected with them, for admission to which no examination is required. The college of agriculture and the mechanic arts is not yet fully organized, but instruction will be given in this department by the professor of agriculture. The normal college is not yet fully organized, but normal instruction will be given during the coming year (1870–'71) in connection with the classes in the college of literature and arts.

The colleges whose organization is still to be effected are the college of science and the arts, the business and commercial college, the college of law, and the college of medicine.

The library of the university is the largest in the State. The charter speaks of the library as if it were to be a prominent part of the institution; and with the gathering of the first classes, the library was begun. A yearly income was appropriated to its extension, and purchases of valuable books were at different times prior to 1825 made in Europe. The interest afterward declined, and for the last quarter of a century the library has been treated with discouraging neglect. It is now behind the requirements of the times. One of the professors, writing about the year 1836, said: "The college library is never open to the students, and is almost never used by members of the faculty." In 1850, a handsome building was erected for the library. It numbers now 6,700 volumes. The libraries of the dialectic and philanthropic societies contain together about 15,000 volumes.

DAVIDSON COLLEGE.

The twenty-fifth report of this college gives the number of students as 99, of whom 59 are from North Carolina. Although organized and controlled by Presbyterians, the instruction is not sectarian. The classical course occupies four years; the scientific three. The large and admirable cabinets of minerals, shells, and fossils offer superior facilities for the study of mineralogy and geology.

TRINITY COLLEGE.

The whole course of instruction in this college is embraced in eleven schools. Theology or law may be studied exclusively; in all other departments the student may make his own selection, but must take at least three schools. There are two courses for full graduation, of four years each. A preparatory school is connected with the college. "Certificates of proficiency" are given for satisfactory attainments in any school; also the degree of "graduate in a school," in addition to usual degrees conferred by colleges and universities.

NORTH CAROLINA COLLEGE.

This college includes four departments—collegiate, scientific, academic, and theological. The latter was established by the Evangelical Lutheran Synod of North Carolina. The course of study in this department occupies two years; in the collegiate, four.

WAKE FOREST COLLEGE.

A preparatory department is connected with this college. Besides the usual college degrees, certificates of proficiency and graduation are issued.

BINGHAM SCHOOL.

This is organized as a military school. The courses of study are classical, English, and commercial.

WESLEYAN FEMALE COLLEGE.

This college is under the patronage of the Virginia conference of the Methodist Episcopal Church South, which has always furnished its president and agents.

RALEIGH FEMALE SEMINARY.

This seminary has two departments—preparatory and collegiate. Special facilities are offered for the ornamental branches. The geological cabinet contains several hundred specimens.

SALEM FEMALE ACADEMY.

This institution is believed to be the oldest existing boarding-school for young ladies in the Southern States. It is under the auspices and control of the Moravian Church.

WILSON COLLEGIATE SEMINARY.

This seminary for young ladies has three departments—primary, academic, and collegiate. There is also an advanced class in literature for those who have completed the collegiate course.

NORTH CAROLINA INSTITUTE FOR THE DEAF, DUMB, AND BLIND.

With the close of the last session 11 of the pupils of this institution completed the allotted course of seven years. Of this number 3 were permitted to return to make special preparation for teaching. At the beginning of the session a class of 25 was organized for instruction in articulation and lip-reading. The results afford great reason for gratification. The mechanical department is not so flourishing as desirable.

The printing-office has been in operation until within the last two months. Being very much in need of books, an old graduate of the institution was employed to do the printing. Great attention and labor have been bestowed upon the musical department.

It is recommended that the State purchase the buildings used by the colored deaf, dumb, and blind, and save the annual rents for it, or provide elsewhere. Should this

not be done, this class of pupils will be left wholly unprovided for. North Carolina was the first to undertake the education of colored pupils of this class, and the hope is expressed that she will not now fail in her duty.

The institution is in a generally flourishing condition.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 North Carolina was the fourteenth State in population, having 1,071,361 inhabitants within an area of 50,704 square miles, an average of 21.13 persons to the square mile. This population consisted of 678,470 whites, 391,650 colored, and 1,241 Indians. Of these, 1,068,332 were natives of the United States, and 3,029 were foreign-born. Of the native residents, 648,245 whites, 379,231 colored, and 1,202 Indians were born within its borders; while of the foreign residents, 904 were born in Germany, 490 in England, and 677 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 65,301 persons attended school, and of these, 19 were foreign-born. Of the 53,868 white scholars, 28,357 were males and 25,511 females. Of the 11,419 colored pupils, 5,491 were males and 5,928 females. Eight male and six female Indians were also reported as attending school.

Illiteracy.—Three hundred and ninety-seven thousand six hundred and ninety inhabitants of all races, 10 years old and over, were unable to write, and of these 117 were foreign-born.

Age and sex of illiterates.—Of the 166,397 white illiterates 38,647 were from 10 to 15 years old, and of these 20,240 were males and 18,407 females; 31,911 were from 15 to 21 years old, of whom 15,384 were males and 16,527 females; 95,839 were 21 years old and over, of whom 33,111 were males and 62,728 females. Of the 230,606 colored illiterates 40,955 were from 10 to 15 years old, and of these 21,313 were males and 19,642 females; 44,805 were from 15 to 21 years old, of whom 21,341 were males and 23,464 females; 144,846 were 21 years old and over, of whom 68,669 were males and 76,177 females. Two hundred and eighty-four male and 403 female Indians were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 2,161, having 2,692 teachers, of whom 1,739 were males and 953 females, to educate 64,958 pupils, of whom 32,664 were males and 32,294 females.

Amount and source of educational income.—The total income of all the educational institutions was $635,892, of which $9,160 were derived from endowment, $232,104 from taxation and public funds, and $394,628 from tuition and other sources.

Public schools.—The 1,435 public schools, with 1,518 teachers—1,125 males and 393 females—were attended by 41,912 pupils, of whom 21,279 were males and 20,633 females. To educate these they had a total income of $205,131, of which $600 were derived from endowment, $174,197 from taxation and public funds, and $30,334 from tuition and other sources.

Colleges.—The 22 colleges, with 91 teachers, 60 males and 31 females, were attended by 1,526 pupils, of whom 694 were males and 832 females. To educate these they had a total income of $94,290, of which $5,820 were derived from endowment, $3,000 from taxation and public funds, and $85,470 from tuition and other sources.

Academies.—The 111 academies, with 238 teachers, of whom 135 were males and 103 females, had an attendance of 5,006 pupils—2,866 males and 2,140 females—and a total income of $98,631, of which $2,200 were derived from endowment, $1,040 from taxation and public funds, and $95,391 from tuition and other sources.

Private schools.—The 542 day and boarding schools had 753 teachers—378 males and 375 females—and were attended by 13,297 pupils, of whom 6,223 were males and 7,074 females. They had a total income of $178,621, of which $60 were derived from endowment, $4,448 from taxation and public funds, and $174,113 from tuition and other sources.

Libraries.—Six hundred and fifty-six public libraries were reported, with 202,651 volumes; also, 1,090 private libraries, with 339,264 volumes; in all, 1,746 libraries, containing 541,915 volumes.

The press.—The 64 periodicals issued in the State, had an aggregate circulation of 64,820 copies, and an aggregate annual issue of 6,684,950 copies.

Churches.—Of the 2,683 church organizations, 2,497 had edifices with 718,310 sittings, and the church property was valued at $2,487,877.

Pauperism.—Of the 1,652 paupers, 1,119 were native whites, 528 native colored, and 5 foreigners.

Crime.—Of 468 persons imprisoned, June 1, 1870, 132 were native whites, 330 native colored, and 6 foreign-born. One thousand three hundred and eleven persons were convicted during the year.

Age and sex of population.—Of the total population, 359,930 were from 5 to 18 years old, of whom 182,421 were males and 177,509 females; 769,629 were 10 years old and over, of whom 365,528 were males and 404,101 females.

Occupations.—Three hundred and fifty-one thousand two hundred and ninety-nine

persons of these ages were engaged in various occupations, of whom 292,439 were males and 58,860 females. Two hundred and sixty-nine thousand two hundred and thirty-eight persons were engaged in agricultural pursuits, of whom 241,010 were males and 28,228 females; 51,290 in personal and professional services, of whom 23,073 were males and 28,217 females; 10,179 in trade and transportation, of whom 10,094 were males and 85 females; 20,592 in manufactures and mechanical and mining industries, of whom 18,262 were males and 2,330 females.

Age and sex of working population.—Of the 351,299 employed persons, 47,789 were from 10 to 15 years old, of whom 37,724 were males and 10,065 females; 279,055 were from 16 to 59 years old, of whom 232,583 were males and 46,472 females; 24,455 persons were 60 years old and over, of whom 22,132 were males and 2,323 females.

OHIO.

[From report of Hon. Thomas W. Harvey, State commissioner of common schools, for the school year ended August 31, 1871.]

SCHOOL FUND.

Receipts from State school tax	$1,514,060 34
Receipts from interest on irreducible funds, &c	241,401 94
Receipts from local taxes	4,947,799 79
Receipts from sale of bonds	414,072 51
Receipts from fines, licenses, &c	248,657 62
Total receipts for 1871	7,365,992 20
Grand total of receipts, including balance on hand September 1, 1870	9,610,046 50

FINANCIAL STATEMENT.

Increase in State school tax over last year	$61,614 49
Increase in interest on irreducible funds, &c	6,652 08
Increase in local taxes	57,919 67
Increase in grand total of receipts	245,280 80
Total amount paid teachers	4,107,795 30
Increase over last year	200,528 31
Amount paid for managing and superintending schools	102,980 05
Increase over last year	4,447 04
Amount paid for sites and buildings	1,517,021 09
Decrease from last year	462,556 45
Amount paid for fuel and contingent expenses	1,103,238 12
Decrease from last year	61,950 42
Amount paid for interest on and redemption of bonds	423,694 80
Grand total of expenditures in 1871	7,254,729 36
Increase over last year	104,163 28
Balance on hand September 1, 1871	2,355,317 14

The decrease of $61,950.42 in the amount paid for fuel and other contingent expenses results from the fact that heretofore this item included the amount paid for interest on and redemption of bonds, which is now for the first time reported as a separate item. If these two amounts were united, there would be, instead of a decrease, an increase of $361,744.38.

SCHOOL POPULATION.

White males	526,109
White females	505,656
Total white scholastic population	1,031,765
Increase over last year	16,190
Colored males	13,402
Colored females	12,881
Total colored scholastic population	26,283
Increase over last year	176
Whole number of males	539,511
Whole number of females	518,537
Total scholastic population	1,058,048
Increase over last year	16,368

ATTENDANCE.

Number of males enrolled	383,722
Number of females enrolled	348,400
Total enrollment	732,122
Increase over last year	7,226
Average attendance of males	223,470
Average attendance of females	208,982
Total average attendance	432,452
Increase over last year	18,559
Per cent. of attendance on enrollment	60.54
Increase in percentage over last year	2.89

CLASS SCHOOLS AND PRIVATE SCHOOLS.

There are two kinds of class schools in the State: German schools, where instruction is given in the German language exclusively, and schools composed exclusively of colored children.

Number of pupils enrolled in German schools	5,480
Increase over last year	384
Number of pupils enrolled in colored schools	5,822
Increase over last year	495
Number of pupils enrolled in private schools	5,945
Decrease from last year	4,555

TEACHERS AND TEACHERS' PAY.

Number of teachers in German schools	91
Increase over last year	13
Number of teachers in colored schools	145
Number of male teachers in common schools	9,563
Number of female teachers in common schools	12,544
Total number of teachers employed	22,107
Increase over last year	269
Total number of permanent teachers	7,580
Increase over last year	409
Changes of teachers during the year	7,360
Whole number of teachers necessary	14,747
Increase over last year	372
Average number of weeks taught	33
Average gentlemen's monthly pay in township primary schools	$37 00
Average ladies' monthly pay in township primary schools	$21 00
Average gentlemen's monthly pay in township high schools	$57 00
Average gentlemen's monthly pay in separate district primary schools	$72 00
Average ladies' monthly pay in separate district primary schools	$41 00
Average gentlemen's monthly pay in separate district high schools	$93 00
Average ladies' monthly pay in separate district high schools	$58 00

SCHOOL PROPERTY.

Whole number of school-houses in the State	11,571
Whole number of school-rooms in the State	14,186
School-houses erected in 1871	578
Cost of school-houses erected in 1871	$1,025,077
Total value of school property in the State	$14,988,612
Increase over value of last year	$1,170,058

AVERAGE RATE OF LOCAL TAX FOR COMMON SCHOOLS.

Average number of mills on each dollar, local levy, in townships for schools in 1871	3.02
Average number of mills on each dollar, local levy, in townships for schools in 1870	3.63
Decrease	.61
Average number of mills on each dollar, local levy, in separate districts, for schools in 1871	6.19
Average number of mills on each dollar, local levy, in separate districts, for schools in 1870	7.57
Decrease	1.38

DECREASE OF TAXES.

The act of May 1, 1871, restricting township boards of education to 3¾ mills on the dollar, and all other boards of education to 5¼ mills on the dollar, has operated as the chief cause of the decrease above reported. The reduction of local indebtedness for school-houses has contributed something to the large decrease in the rate of tax in separate districts. In many districts whose aggregate valuation of taxable property under

the new appraisement is not proportionably increased, the said statutory reduction in the rate of the levy, it is feared, will seriously embarrass boards of education in their efforts to comply with the requirements of law. The interests of our public schools obviously require a restoration of the former rate of local tax for school purposes.

THE NET COST OF EDUCATION FOR THE YEAR.

In townships, total cost, less amounts paid on permanent property in 1871	$2,860,882
In separate districts, total cost, less amounts paid on permanent property in 1871	2,453,128
In the State, total cost, less amounts paid on permanent property in 1871	5,314,010

In townships, average cost per pupil on year's expenditures, net, in 1871	$9 75
In separate districts, average cost per pupil on year's expenditures, net, in 1871	$17 66
In townships, average cost per pupil on year's expenditures, net, in 1871, including 6 per cent. on estimated value of permanent improvements	$11 09
In separate districts, average cost per pupil on year's expenditure, net, in 1871, including 6 per cent. on estimated value of permanent improvements	$21 30
In the State, average cost per pupil on year's expenditure, net, in 1871, including 6 per cent. on estimated value of permanent improvements	$14 37

SCHOOL LANDS.

We have been for a year or more engaged in reviewing and correcting errors in the sixteenth-section accounts of this office, and have corrected, perhaps, one-half of them. It is recommended that the State auditor be authorized to make an examination of the records of the Land Office at Washington, that the facts concerning these grants may be ascertained. Otherwise the State will probably never obtain possession of all the lands to which it is legally entitled, and the income from the sale or rent of schools lands will never be justly apportioned.

CODIFICATION OF THE SCHOOL LAWS.

The necessity of a codification of the school laws was presented in the last, and also in several preceding reports. There are about forty thousand school officers and twenty thousand teachers in the State. That they may be enabled to perform their duties understandingly, the school laws should be plain and definite in statement. A codified bill, it is hoped, will secure this desirable result as well as furnish the occasion for making such changes in our school system as may be deemed expedient.

THE TOWNSHIP SYSTEM.

It is no wonder that a system so cumbrous and complicated should prove a fruitful source of neglect, perplexity, misunderstanding, and litigation. It is recommended that the number of local directors in each sub-district be reduced from three to one, and certain powers, neither vital nor important to local interests, be transferred from them to the township board organized precisely as it now is. A riddance will thus be made of friction and dead weight, and our school system made compact and efficient.

SUPERVISION.

Practically, our country schools are without supervision. There being no one in each county to organize, counsel, and direct, these schools are frequently a chaos of misapplied good purposes, wasteways of unused or misdirected energies. While our cities and towns have made rapid progress in every thing that concerns education, our rural districts have failed to keep pace with them, and, in some localities, have actually retrograded. Supervision has ceased to be an experiment. It is now the settled policy of the States that have once adopted it, and we confidently trust that Ohio will soon follow their example.

EXAMINERS.

The system of examination by local boards works badly in small towns and villages, and examination by county boards equally so, applied to large towns or cities. It is respectfully recommended that the State board of examiners be authorized to divide the State into districts of convenient size, and to appoint three competent persons in each

district, who shall constitute a district board of examiners, and that each district board be empowered to grant certificates which shall be valid five years, unless revoked for good cause.

At the meeting of the State board of examiners, February 15, 1871, it was agreed that English literature, general history, and the Constitution of the United States should be added to the list of test branches. It was also decided to discontinue the practice of former boards, in regard to partial examinations, and that after next annual examination each candidate should be required to pass a satisfactory examination upon the entire list of test studies. At the first examination held by this board, twenty-six persons appeared, to eighteen of whom certificates were granted.

TEACHERS' CERTIFICATES.

State certificates granted in 1871	18
County certificates granted for two years, 1871	563
County certificates granted for eighteen months, 1871	2,315
County certificates granted for one year, 1871	7,869
County certificates granted for six months, 1871	9,082
Total certificates granted in 1871	19,829
Number of colored applicants for certificates	231

ADDITIONAL CERTIFICATES REQUIRED.

There seems to be a need for a grade of certificates intermediate between those granted by the State and the county board of examiners. Certificates valid throughout the State for a longer period than two years, but issued to experienced and successful teachers only, would be highly prized by a large number who find the present method of examination expensive and embarrassing. They would also be incentives to diligence on the part of many who despair of ever obtaining a State certificate.

TEACHERS' INSTITUTES.

Reports have been received from sixty-eight teachers' institutes. These reports show that 308 instructors and lecturers were employed in conducting the exercises; that 7,158 teachers, nearly one-third of the whole number in the State, were in attendance; that the sum of $16,361.99 was expended in sustaining them. Institutes are among the most important educational helps. The suggestion has been made, and is here repeated, that some legislation is needed to make them more effective, and relieve teachers from the burden of their support.

SCHOOLS FOR COLORED CHILDREN.

The statute providing for the education of the colored children in the State is, in its practical operation, a failure. In sections where they are few in number, the public money to which they are entitled is not sufficient for the support of a separate school for any length of time, and in some instances the express provisions of the law have been disregarded, and all the school-funds appropriated to the support of schools for white children only. It is respectfully recommended that the statute be so amended as to secure for colored youth educational advantages equal to those enjoyed by others.

NORMAL SCHOOLS.

A commendable feature in some of our private schools is the attention given to normal instruction. In the absence of other efficient means and facilities for professional training, their efforts to supply a manifest want merit encouragement and reward. There exists an urgent necessity for well-conducted normal schools. We are entering upon a new era of education. Old methods of teaching are being replaced by new ones. We acknowledge that, as a class, our teachers are not so well qualified as they should be, but we fail to provide the means that will give us better ones. We have taken scarcely a single step forward since 1853, but have suffered other States to sweep past us in their onward march, while we have been drifting about in an eddy of stolid conservatism. Our school system needs to be vitalized and made efficient by the employment of agencies which will furnish us competent teachers. The sum, not exceeding $100 from each county, paid into the "teachers' institute fund," is all the provision made by Ohio for normal instruction. Policy and necessity demand the establishment of one or more normal schools, to be sustained as State institutions.

CINCINNATI.

GERMAN IN THE PUBLIC SCHOOLS.

From the large infusion of the German element in the population of Cincinnati, this important department of the school system must continue to engage the attention of a very considerable portion of the people. That more than one-half of all the pupils in the public schools study German is a striking evidence of the interest felt in it. During the past year there has been appointed an assistant to the superintendent of public schools, whose duty is principally to take special charge of the German-English department. He reports this department as, upon the whole, in a fair condition.

The establishment of a German normal department, in connection with the existing normal school, is strongly recommended. This is absolutely necessary, unless it is intended to rely in the future upon Germany for the supply of teachers in the German department. The employment of foreigners as teachers in our public schools is to be deprecated, because from such, pupils can not receive such a political education as befits the republican principles and institutions of our country. A lack of such political training is regarded as the weakest point in our educational system.

It is also recommended that the use of separate readers be dispensed with. Those at present in use answer every purpose; the requisite grammatical explanation should be furnished by the teacher, and the reading-lesson will be more interesting for being understood in both languages. Wherever, in teaching, two living languages are used co-operatively, the understanding of the one can be rendered more perfect by a knowledge of the other. And this is more particularly the case when the two most beautiful of existing languages are brought together—the mother, the German; and the daughter, the English. The German may be used by way of defining the English with infinitely more advantage than could be accomplished by a purely English definition, and so *vice versa*. At present that very important part of the study of German, the translation, is exclusively in the hands of the German teachers. This fact renders more obvious the necessity of a German normal department.

DRAWING AS A COMPULSORY BRANCH OF INSTRUCTION.

Until recently no attempt has been made to introduce drawing as a compulsory branch of instruction into all grades of schools; and for Cincinnati is claimed the honor of inaugurating this new movement on a systematic and progressive plan. Since the start she has maintained her place among the foremost in the strife for excellency in this most important branch of education. But a city setting out on such an enterprise as a general diffusion of art culture ought not to shrink from counting the cost. The board must, if it expects to reap any adequate harvest from the seed sown, nourish it with a generous hand. Every school should be provided with a liberal supply of models; for, without such aids, the superintendent of drawing and his assistants will find themselves hampered at every step.

Such arrangements have been made for the instruction of the regular teachers of the schools in this branch that it will be possible soon to reduce the number of special teachers to four, or even a less number; but that it will be possible ever to dispense with all of them, without great injury to the instruction in their department, is not believed. That the regular teachers may be trained to instruct profitably in the elements of drawing, may be assumed as an established fact; and that is all that can justly be expected of them. Professional teachers will always be needed for the higher departments of this art.

The time devoted to drawing in the primary schools is three half-hours per week, so arranged that one full hour has been given in all grades above E for explanation and development of the figures contained in the exercises. The remaining thirty minutes are taken for a practice lesson and review of the previous lesson. In the intermediate schools the time allotted is eighty minutes—forty for instruction and explanation by the special teacher of drawing, the remaining forty being taken as a practice lesson under the supervision of the class teacher.

Viewing the subject of art instruction from the pecuniary stand-point, it is fully believed that the community will receive no richer return from any branch taught in the schools, for the money invested. The same remarks will apply equally to the instruction given in music.

MUSIC.

The examination in this branch showed a very great improvement in note-reading and the singing of exercises at sight; but the greatest improvement was in song-singing. The children sang not only in better time, but with a much better quality of voice.

The regular teachers have labored in harmony with the music-teachers to advance the interests of this important branch, and in giving instruction to their classes show that they have gained greatly in skill during the year. From year to year the plans of instruction in this department are crystallizing more and more into a harmonious system. The examination of the graduating class of the normal school occupied a whole day, and was very thorough, not only in the theory of music but in the ability of its different members to give practical instruction to a class.

LANGUAGE LESSONS.

A distinguishing trait of the Cincinnati schools is the prominence that language culture occupies in their course of study. In arranging this course, the truth has been prominently borne in mind that correct expression is not only valuable in itself, but has a powerful reflex influence in promoting correct thinking.

Having long felt that technical grammar, as usually taught, is of little practical value, the committee on course of study set to work resolutely, some three or four years ago, to bring about an entire revolution in the method of teaching grammar. Instead of reserving grammar as a study for the highest grades, a course was constructed to begin with the child's first day in school, and keep him company through every grade until he reaches the high school, where it is expected that rhetoric and a critical study of some of the best English classics will finish the solid and symmetrical structure.

The teacher is not to aim at a recitation of grammatical rules and definitions, but at a ready and correct use of the language itself, the latter alone having a real and practical value in the future career of the scholar. To this end mere technicalities are to be avoided as far as practicable, but when used to be thoroughly explained in terms to be readily comprehended by children. All text-books are excluded from the district schools, and an elaborate syllabus was prepared for the use of teachers. This plan has been thoroughly tried, and its success has been all that could have been expected. The knowledge gained by pupils through its workings has been no heap of "dry grammatical compost," but a knowledge which has rendered them more familiar with the use of language in a practical way, and which is also leading them gradually up to an appreciation of the beauty and power of the highest expression of thought.

In the primary schools, object-lessons form the basis of language-lessons, the child acquiring the habit of ready and correct expression as he acquires the habit of observation. The success of this course depends almost entirely upon the teacher. If he possess method, versatility, and enthusiasm, he can make the work intensely interesting; but if he be a mere routinist, the course in his hands will prove little less technical, formal, and unpractical than the old method of etymological grammar, with its absurd and humdrum parsing exercises.

The course pursued in one of the German-English schools is worthy of commendation. It is the custom for the English teacher to write a composition on the board, the pupils following, and turning it, sentence by sentence, into German; the German compositions to be corrected by the German teacher. Then a German composition is turned into English in the same way. The compositions of this distich run in couplets; the one in English, the other in German, and on the same topic. The advantages of this plan in giving accuracy and readiness in the use of both languages can scarcely be overestimated.

NIGHT SCHOOLS.

These were opened October 16, and closed February 17, having been in session one week longer than the year before. There was a falling-off in the enrollment, while the per cent. of attendance on the enrollment remained about the same. The attendance of both years, however, was much below that of the first, in proportion to the number enrolled. It is difficult to account for these results, as no pains have been spared to induce youth unable to attend the day schools to attend the night schools. The best teachers have been employed, and every appliance necessary to the progress of the pupils has been freely furnished.

CINCINNATI UNIVERSITY.

There has as yet been no union of the different educational funds, which it was hoped would be brought together under the law passed with such remarkable unanimity by the legislature, and there seems no prospect of an early opening of this institution. Some months since an able and well-considered curriculum of study, adapted to the opening work of the university, was reported to the board of directors. Since then nothing seems to have been done. Unquestionably the best interests of Cincinnati demand an early opening of the university, and this demand is seconded by the almost unanimous voice of her citizens.

PUBLIC LIBRARY.

During the past year the library has been removed from narrow and inconvenient quarters to a beautiful and well-arranged building; and by the liberal appropriation of the board of education and the concurrent action of the city council, the completion of a fire-proof building, with a capacity of 250,000 volumes, is assured. The accessions to and the use of the library have largely increased.

COLUMBUS.

CONDITION OF SCHOOLS.

The extension of the corporate limits of the city has brought under the control of the board of education several suburban schools. The parents and children, having become accustomed to the loose discipline and unmethodical instruction of schools in the rural districts, were restive under the more rigid rules and regulations of the city schools. Owing to this the year's work in these schools has not been very satisfactory. In the others the progress has been all that could be desired. A new classification has been made, and the course in the grammar and primary schools reduced from 9 to 8 years. The unusual prevalence of children's diseases has been an insurmountable obstacle in the way of regular and uniform attendance. Some of the schools were reduced one-half.

WOMEN PRINCIPALS.

During the year the experiment has been tried of employing women as principals of schools. "So far as the results of a single year are concerned, the experiment is a success. There were fewer difficulties between teachers and pupils, and a less number of complaints entered by parents against teachers, than in former years." Nevertheless the opinion is expressed that "the only true system of education is the one wherein both men and women are employed in the training of youth."

BRANCHES OF STUDY.

Music has been included in the course of study for several years, but so unsatisfactory have been the results that the subject was in danger of being stricken out. The adoption of a course of instruction in accordance with the Boston plan gives hopes of more satisfactory results.

Drawing has been introduced into the grammar and primary schools, but until the teachers acquire greater skill little can be accomplished.

The German language was taught in 23 schools, besides the high school, during the year. The number of pupils studying this branch was 1,553. German-English schools have been a constituent part of the public-school system ever since its existence, and have been universally the best filled and most regularly attended.

NORMAL CLASS.

As a means of supplying more thoroughly trained teachers, it is recommended that a normal class be established in the high school. If this could be done it is believed there would be fewer failures resulting from the want of professional knowledge and experience.

HISTORY OF THE PUBLIC-SCHOOL SYSTEM.

The public-school system of Columbus was organized in 1845. The citizens refused to allow a tax to be levied, and the entire fund at the disposal of the board was $896.86, received from the State fund. Thirteen schools were opened. In 1847 there were 17. In 1852 the number had increased to 22, (four of which were German-English,) and in 20 years it has risen to 100, with a school property valued at $420,000.

TOLEDO.

The following account of the Toledo schools is taken from an article in the Toledo Blade, furnished by Colonel De Wolf, the city superintendent:

ORGANIZATION.

"The Toledo public schools were organized in May, 1849, under the Akron law, somewhat modified. In 1849-'50, five schools accommodated the youth of the city, of whom

682, or 60 per cent. of the enumerated youth, were enrolled. Pupils were admitted, as they were enumerated, from the age of 5 to 20, inclusive. At an early period in the history of the schools those under 6 were excluded from the schools.

EARLY TEACHERS.

"On the list of early teachers appears the name of Hon. Anson Smythe, from 1850 to 1854. Among the superintendents is the same name, from November, 1850, to February, 1856, at which time this gentleman became State school commissioner, and was succeeded by Hon. John Eaton, jr., now Chief of the Educational Bureau of the United States. Mr. Eaton was followed by Moses T. Brown, esq., in March, 1859; he resigned in April, 1864, and the present incumbent was elected to the place.

PRESENT CONDITION.

"In March, 1864, there were 24 schools and 33 teachers, enrolling during the year 2,217 pupils, out of 5,392 enumerated. The term-enrollment of the high school, four classes, was 61. In January, 1866, the German schools then existing were adopted into the public-school system, and since that time others have been added to meet the wants of this class. With these additions, the growth of the city, and a constant effort to induce all children to attend the schools, (clothing, in many cases, being provided through private benevolence for those who could not otherwise attend,) the number of schools has now reached 80, the number of teachers 100, and the number of pupils 6,572, or 62 per cent. of the mean between the 10,236 and the 10,860 youth enumerated in 1871 and 1872. The term-enrollment in the high school—now three classes—is 181.

EVENING SCHOOLS.

"The Toledo board of education also maintain evening schools three nights each week, during the winter, for those only who can not attend a day school. At these 315 pupils, over 13 years of age, were enrolled, the average weekly enrollment being 247; the average nightly attendance, 180. In the Catholic Church schools there are enrolled about 1,200 pupils.

INFLUENCE OF MANUFACTORIES.

"The growth of such manufactories as employ juvenile help is already affecting the attendance of youth in our schools. In one of these I found nearly 100 youths, from 11 to 17, and in each of several others a large number. Night schools will do something for this class, especially for such as had a good start in the day schools. Indeed, our statistics show that what is done for a large majority of our youth must be effected before they arrive at the age of 14, or even 12.

WRITING.

"Let me also say, what I find can not be too often reiterated, that writing much in school exercises, if carefully done, affords a most excellent means of fixing in the mind a systematic knowledge of the subject, and is the only means of learning to construct English sentences, to capitalize and punctuate, and also to spell. In all German schools much more use is made of the pen than in America. The good results are manifest in many directions.

DRAWING IN SCHOOLS.

"A notion prevails among large classes of our American citizens that drawing is a mere accomplishment, beneath the notice of young men looking forward to active vocations. In our new and rushing communities, where so many amass fortunes by the roughest process, it is perhaps not strange that we have given little thought to the refined methods by which older nations so greatly increase the value of their less abundant raw material. Art has thus wanted an opportunity among us to demonstrate its power to enrich or to cultivate a people. Happily, there is a promise of change in this regard.

TIME REQUIRED TO TEACH DRAWING.

"It has been demonstrated to the satisfaction of experienced educators, and I think our experience corroborates it, that drawing and writing can be taught to children with the same outlay of time and labor as is required to teach writing alone. Teachers accustomed to give systematic instruction in other branches require, it is found, but a short period, by persistent effort, to be able to instruct in free-hand and object drawing, and not many months longer to add geometric and the elements of perspective drawing.

UTILITY OF THE STUDY OF DRAWING.

"To the teacher of physical science and of history, from the primary to the highest departments of instruction, the ability to assist description by representation is of untold value. This is indispensable to the scientist as an original explorer. The development of the ideal of symmetry, with variety and elegance, is of great value to the dealer in all manufactured articles. It adds culture as well as power to the scholar and the professional man, to the man of means and large designs.

"Toledo has not wished to be behind other cities in her attempt to encourage this culture through her public schools. She has for several years furnished a teacher for special classes, and of late has required free-hand, object, geometric, and perspective drawing in their appropriate places in all the schools, two lessons being given each week.

"Map-drawing, in addition to the aid it has rendered in the study of geography, has assisted much in developing neat, precise, and rapid execution with chalk and pencil. The oral instruction required in the schools, embracing at first the forms of objects and of geometric figures, and then of vegetation and of animals, has contributed interest to our drawing-lessons, and has been greatly aided by the ability of teacher and pupil to make even flat representations of these objects.

METHODS OF TEACHING.

"The fact that a very large majority of our pupils never reach our high schools, to study text-books in those physical sciences a knowledge of which has so wide an application in common life, calls for careful consideration. It furnishes abundant reasons, if there were no other, for regular oral instruction, through all the lower grades, in the forms and qualities of objects; the laws of motion; the nature of the atmosphere, with the subject of ventilation; the forms and something of the philosophy of vegetable and animal life. Did all pupils enter the high schools, even, we have found it to be of great value to have introduced the elements of these subjects at an early age. Much familiarity is thus acquired with that part of the vocabulary of science which depends on mere forms, as in botany, and on the manifest qualities of matter, besides the gain in habits and power of observation, reasoning, and expression.

"The old ungraded district schools, in session for grammar scholars but three months in a year, proposed to, and often did, teach the "three R's," with geography and grammar, well. Is it absurd to say that our city graded schools, occupying the time and life of the pupils regularly ten months in the year, can not do more than this? Indeed, there is abundant evidence of the fact that those teachers who at once strike out into the sprightly oral methods recommended by the best educators of Europe and America find their work pleasing, their pupils highly delighted, and intellectual development sure and rapid; while those who attempt to goad on their pupils in arithmetic and grammar alone lead but a sorry life, and find their pupils behind, even in these branches, those who have had mingled with their tasks the warm, fresh thought and genial smile of an enthusiastic teacher. A superintendent has often but to pass out of an atmosphere freighted with discouragements and irksome toil, to learn, at the distance of a wall's breadth, how pupils may love to observe outside of books, and to report the results of previous observations; how they "champ upon the bit, and press into the harness," to get forward.

"Through this pleasing variety, which is rest in intellectual operations, the wise teacher develops mental strength for the quicker and easier performance of other school labors. He discovers, by closer contact with his pupils, the advantage of mind as a factor in the production of results. He sees that, with twenty units of mental power, he must reach his hundred units of excellence through eighty units of toil; but that, by profitably occupying the mind of his pupil until eighty units of mental power accrue, he may achieve the same success with twenty units of exertion. He is unwilling, therefore, to imitate the rustic who grudges the time to grease his axles, and drags the tightened wheels toilsomely along.

"A pupil dull in books is often quick and correct in his powers of observation, and may be the means of exciting mere book-worms to observe, besides being himself conducted into special channels of success for life, by an early and free development of his proper powers.

"Teachers nursed on grammar and arithmetic, and obtaining their living by instructing others in them, are hardly prepared to notice how small a part the nice analysis of sentences, or even the intricacies of the science of numbers, plays in the workshop, the management of affairs, or in social intercourse. Good in their way, they are not good enough to stand in the way of every thing else, especially of what might be of use to the man who must gain his living by knowing the nature of the elements about him. Besides this, the free interchange of original speech recommended in this oral instruction gives the accomplished teacher the best of opportunities to apply the principles of his text-books in correcting and refining the language of his pupils. These

physical sciences also afford most excellent opportunities for practice in the science of numbers.

"Thus we claim, that by such management and forethought on the part of the teacher as becomes so important a calling as his, many advantages of the study of the natural sciences may be secured, in and below our grammar schools, without greatly diminishing the valuable results now sought through an almost exclusive devotion to text-book routine. In this we do not advocate smattering; but insist all the more severely, as our interest rises in the work here recommended, that a correct and thorough method of teaching the text-books is the shortest way out of them, and the true and only way to gain time for this important work.

"In conclusion, let me beg you not to suppose that I am more interested in the few topics I have discussed than in many others. Music, well taught as a science in all our schools, may be of untold value in preparing the pupils for refined enjoyments, and for the exertion of powerful influences for good. I should like, also, to report some of the results of the sprightly conversational methods of teaching the modern languages adopted in our schools some years since, as compared with the results of the mere text-book routine of former years. The practice of early studying up short topics in biography, history, natural history, &c., as subjects of free conversations in the class, has added great interest and efficiency in the acquisition of the languages, besides furnishing an occasion, under the hand of an intelligent teacher, for the accumulation of much useful information."

STATE REFORM SCHOOL FOR GIRLS.

The general workings of this institution during the past year have been highly satisfactory. The improvement of the inmates has been, almost without exception, very marked. The entire enrollment of the school at the close of the last year was 104, of whom 5 have been discharged by the trustees, 2 by legal process, 2 by expiration of time, and 1 died. The age prescribed by law for admission to the institution is from 7 to 16 years. The average age of those admitted during the first year was 15 years; of the second year, 13 years; and of the third year, 12⅔ years. The rapid increase in the number of pupils has made it necessary to ask of the legislature an appropriation of $12,000 for one new building, and $5,000 for remodeling old ones to meet temporary demands. Receipts for the year, $25,759; aggregate expenditure, $18,180.

TOLEDO UNIVERSITY OF ARTS AND TRADES.

Mr. Jesup W. Scott, of Toledo, has donated 160 acres of land, valued at $80,000, within the limits of the city of Toledo, for the endowment of an institution to be known as the Toledo University of Arts and Trades. "All the advantages offered by this institution are to be free of cost to the pupils who have not the means to pay for the same, and all others are to pay such tuition and other fees as the trustees may require." The institution is to be open to both sexes. Mr. W. H. Raymond has made a gift to the university ample for the endowment of a professorship.

OHIO AGRICULTURAL AND MECHANICAL COLLEGE.

The land-scrip voted by Congress to Ohio for the purpose of establishing a college of agriculture and the mechanic arts has been sold, and the proceeds, with the interest thereon, amount at the present time to nearly $460,000. This fund has been increased by $300,000, voted by the citizens of Franklin County, in consideration of the location of the college within the limits of the county. Of this sum $111,000 have been paid for 315 acres of land near the city of Columbus, and $112,000 are to be paid for the college building now in process of erection. The remainder of the $300,000 will be expended for additional buildings, for apparatus, and other necessaries. The college building was to have been completed by the 1st of November, 1872. The faculty is not yet chosen.

As yet, our State has no institution which attempts to give a thorough scientific training, as a preparation either for agriculture or the arts. This deficiency the agricultural and mechanical college will supply, and, if well conducted and liberally sustained, can not fail to give a completeness to our educational system that has not thus far been attained.

KENYON COLLEGE AND THEOLOGICAL SEMINARY.

This institution embraces the theological seminary of the Protestant Episcopal Church in the diocese of Ohio, Kenyon College, and Kenyon grammar school. This school is preparatory to the college. Students are only admitted to matriculation in the college after sustaining a satisfactory probation. The course of study in the theological seminary embraces eight departments, and extends through three years. Students in the seminary are allowed to attend, gratuitously, any recitations in Kenyon College. Aid is given to properly qualified students, by scholarships, or by the education committee of the diocese.

ANTIOCH COLLEGE.

The educational course of this institution is thoroughly practical, and equal opportunities are afforded to both sexes. Students not desiring to take the regular college course may pursue selected studies, and after a satisfactory examination receive certificates of proficiency. A preparatory school is connected with the college, where students are fitted for the freshman class. To those not desiring to pursue a collegiate course this school offers the advantages of the best academies.

BALDWIN UNIVERSITY.

The design of the university is to provide for students, without distinction of sex, a thorough collegiate education in the college of arts; and by means of other colleges and departments, to provide a thorough scientific basis for the professions and industrial pursuits of the country. The university embraces the college of arts, with a classical, a scientific, and a preparatory department; the German Wallace college, formerly the German department of the university, but now an independent college, including a theological school; the college of pharmacy; and the commercial department. During the term of 1872–'73 a normal class will be conducted for the preparation of teachers of common schools. Other departments will be added, as demands and means may justify. There are 50 perpetual scholarships for the use of orphans.

OHIO WESLEYAN UNIVERSITY.

The departments of this institution are collegiate, preparatory, scientific, and theological. Special attention is given to modern languages and to practical surveying and engineering. An elective course is permitted. The museum is extensive and valuable, including an interesting collection of Indian relics. The arboretum on the college grounds is designed to include every variety of tree and shrub, native and foreign, that will grow in this latitude. The collection now embraces over 600 varieties. Valuable additions are annually made to the university libraries.

CINCINNATI WESLEYAN COLLEGE.

This institution, for the education of young women, includes six departments: preparatory, academic, collegiate, (with two courses, classical and scientific,) the department of modern languages, the department of music, and the department of drawing and painting. In the music department there are three grades, preparatory, academic, and normal. In the latter of these, pupils are fitted to become teachers of music. The college building is one of the finest and most commodious in the West. The average attendance for the last four years has been 230.

OHIO FEMALE COLLEGE.

This has been in successful operation for 21 years. The course of study is the same as in the best colleges for young men. Special advantages are offered for the study of modern languages, drawing, and painting. The college property is wholly unincumbered by debt, and the institution, both in its financial and educational affairs, is in a prosperous condition.

MEDICAL COLLEGES.

The trustees and faculty of the Cleveland Medical College, which is in its twenty-ninth session, announce that they have added greatly to the educational advantages of the college, not only in the increase of instructors, but also in greatly enlarged clinical advantages and in the means of practical illustrations and appliances. It is claimed that the course of study is exceptionally thorough.

The past session of the Miami Medical College was remarkably prosperous, the class being decidedly in advance of any preceding. The Cincinnati Hospital, located near the college, offers special advantages for clinical study. The college is in its thirteenth session.

The Starling Medical College is most advantageously situated in the vicinity of the State institutions for the insane, the idiotic, the blind, and the deaf-mute. The hospital of the Ohio penitentiary, and the city and county infirmary are open to the students. The college has been in operation twenty-five years.

The Ohio College of Dental Surgery announces its twenty-seventh annual session. The candidate for graduation must have had two full years of pupilage with a reputable dental practitioner, inclusive of two complete courses of lectures in the dental college.

OHIO INSTITUTON FOR THE EDUCATION OF THE BLIND.

During the term commencing September 13, 1871, there were 105 pupils in the institu-

tion; males 54, females 51. Of these, 28 are new pupils. In the different departments of the school a fair degree of success has been attained. The trades taught are broom-making and chair-seating. Three men who entered to learn the broom trade have learned it, and left to go into business. In addition to broom-making, the females are taught knitting, sewing, and bead-work. The new building of the institution is nearly completed. An appeal is made to the legislature for a larger appropriation.

OHIO REFORM SCHOOL.

The school is located upon a farm of 1,170 acres in Fairfield County. Since its opening, in 1858, there have been admitted 1,479 boys. The number received during the year 1871 was an increase of 34 over the previous year. The average time of detention is 2 years and 6 months. The boys are classed in families, (50 in each,) and are cared for by officers, called "elder brothers." No means are employed to prevent the boys from escaping. Most of them can, by judicious management, be trusted to go about without supervision, and without any danger of their running away. Five hours' instruction are given in the school each day, and every boy works one-half his time, either on the farm or in the shops.

HOUSE OF REFUGE.

The twenty-first annual report, for the year 1871, states that the number of inmates during the year was 474; boys 389, girls 85. Average time of detention, 1 year, 4 months and 7 days. A peculiar feature of the institution is the division of the inmates into five distinct families, with entirely separate apartments, so that each family is prevented from communicating with the others. This prevents the contamination of the younger and better class by the older and more vicious. In the schools the children have made rapid advancement. A large number of those who have been discharged give satisfactory evidence of complete reformation.

THE WESTERN RESERVE AND NORTHERN OHIO HISTORICAL SOCIETY.

This society, located at Cleveland, Ohio, was organized in 1867. It is engaged in the work of collecting the materials for Western history, especially to discover, procure, and preserve whatever relates to the history, biography, genealogy, and antiquities of the Western Reserve, the State of Ohio, and the great West. Its library is one of reference only, and is special in its objects. It contains 2,134 volumes, 3,100 pamphlets, 1,350 maps, and 28 volumes of bound manuscripts.

The following are the officers of the society: Charles Whittlesey, president; M. B. Scott and J. H. Salisbury, vice-presidents; A. T. Goodman, secretary; Samuel Williamson, treasurer.

HON. SAMUEL GALLOWAY.—OBITUARY.

Hon. Samuel Galloway, of Columbus, died of consumption April 5, 1872. He was born at Gettysburgh, Pennsylvania, March 20, 1811; removed to Ohio on the death of his father, just before his majority; graduated at Miami University, 1833; taught a classical school in Hamilton one year; studied theology a year at Princeton; elected professor of Latin and Greek in his alma mater, but resigned after one term on account of ill-health; professor ancient languages Hanover College, 1839, but soon retired in feeble health; resumed the study of law, which he had commenced on leaving college, and was admitted to the bar in 1842; secretary of State, and *ex-officio* State superintendent of schools in 1844 to 1849, in which office he labored zealously and effectively for the improvement of common schools. He prepared six annual reports, ably advocating universal education, teachers' institutions, normal schools, supervision, and other measures of improvement. The great educational revival, which began in 1845, and resulted in the liberal school legislation of 1848–'49, was due largely to his efforts. He was three years president of the Ohio teachers' association, from its organization in 1847. His interests in the association and in the progress of education continued through life.

HON. WARREN M'CLINTOCK.—OBITUARY.

Warren McClintock, superintendent of the London schools, died February 29, 1872. He was a graduate of Dartmouth College, Hanover, New Hampshire, 1864; superintendent schools, Waynesville, 1866; London, from 1867 till his death.

OHIO STATE TEACHERS' ASSOCIATION.

The twenty-fourth annual meeting of this association was held at Put-in Bay, July 3 and 4, 1872; President, George S. Ormsley, of Xenia. Besides the inaugural address

by the president, an able address was made by E. O. Vaile, of Cincinnati, on "The studies required of a pupil in a public school." Miss Harriet L. Keeler, of Cleveland, made a report on "Object lessons."

These addresses and papers were discussed at length by President E. T. Tappan, W. S. Furby, John Hancock, Professor J. B. Weston, Professor John B. Perry, President O. N. Hartshorn, of Mount Union College, President J. H. Fairchild, of Oberlin, and others.

Officers elected: President, Ulysses T. Curran, of Cincinnati; recording secretary, L. S. Thompson, of Sandusky; corresponding secretary, Lewis W. Day, of Cleveland.

OHIO SUPERINTENDENTS' ASSOCIATION.

The third annual meeting of this association was held at Put-in Bay, July 2, 1872; President, R. W. Stevenson, who gave his inaugural address on "Supervision: its extent and its limitations," which was discussed by President Tappan, of Kenyon College, Superintendent G. S. Ormsley, of Xenia, School Commissioner T. W. Harvey, and Superintendent W. Watkins.

Superintendent S. Frindley pesented an able report on "Uniform classification and course of study;" G. O. Fay reported upon "Methods of deaf-mute education;" A. T. Wiles reported upon "A uniform method of computing percentages of attendance." Each of these papers was discussed at length.

Officers elected: President, Samuel Frindley, of Akron; secretary, H. B. Furness, of Tiffin.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Ohio was the third State in population, having 2,665,260 inhabitants within an area of 39,964 square miles, an average of 66.69 persons to the square mile. This population consisted of 2,601,946 whites, 63,213 colored, 100 Indians, and 1 Chinese. Of these 2,292,767 were natives of the United States and 372,493 were foreign-born. Of the native residents 1,813,069 whites, 29,192 colored, and 52 Indians were born within its borders, while of the foreign residents 182,897 were born in Germany, 36,561 in England, and 82,674 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 645,639 persons attended school, and of these 13,437 were foreign-born. Of the 635,780 white scholars, 329,367 were males and 306,413 females. Of the 9,844 colored pupils, 5,097 were males and 4,747 females. Seven male and 8 female Indians were also reported.

Illiteracy.—One hundred and seventy-three thousand one hundred and seventy-two inhabitants of all races, 10 years old and over, were unable to write, and of these 39,070 were foreign-born.

Age and sex of illiterates.—Of the 152,383 white illiterates, 26,436 were from 10 to 15 years old, and of these 15,064 were males and 11,372 females; 16,059 were from 15 to 21 years old, of whom 8,568 were males and 7,491 females; 109,888 were 21 years old and over, of whom 41,439 were males and 68,449 females. Of the 20,766 colored illiterates, 2,389 were from 10 to 15 years old, and of these 1,274 were males and 1,115 females; 2,770 were from 15 to 21 years old, of whom 1,372 were males and 1,398 females; 15,607 were 21 years old and over, of whom 7,531 were males and 8,076 females. Nine male and 14 female Indians were reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 11,952, having 23,589 teachers, of whom 10,266 were males and 13,323 females, to educate 790,795 pupils, of whom 419,591 were males and 371,204 females.

Amount and source of educational income.—The total income of all the educational institutions was $10,244,644, of which $222,074 were derived from endowment, $8,634,815 from taxation and public funds, and $1,387,755 from tuition and other sources.

Public schools.—Eleven thousand four hundred and fifty-eight public schools, with 21,743 teachers, 9,306 males and 12,437 females, were attended by 737,693 pupils, of whom 389,022 were males and 348,671 females. To educate these they had a total income of $8,528,145, of which $10,000 were derived from endowment, $8,495,145 from taxation and public funds, and $23,000 from tuition and other sources.

Colleges.—The 33 colleges, with 268 teachers—238 males and 30 females—were attended by 6,183 pupils, of whom 4,596 were males and 1,587 females. They had a total income of $300,054, of which $144,574 were derived from endowment and $155,480 from tuition and other sources.

Academies.—The 94 academies, with 587 teachers, of whom 204 were males and 383 females, had an attendance of 12,191 pupils—5,608 males and 6,583 females—and a total income of $491,125, of which $26,000 were derived from endowment and $466,125 from tuition and other sources.

Private schools.—The 18 day and boarding schools had 26 teachers, 10 males and 16 females, and were attended by 648 pupils, of whom 268 were males and 380 females. They had an income of $28,000.

Libraries.—Six thousand and twenty-five public libraries were reported, with 1,334,363 volumes; also, 11,765 private libraries, with 2,353,000 volumes; in all, 17,790 libraries, containing 3,687,363 volumes.

The press.—The 395 periodicals issued had an aggregate circulation of 1,388,367 copies, and an aggregate annual issue of 98,548,814 copies.

Churches.—Of the 6,488 church organizations, 6,284 had edifices, with 2,085,586 sittings, and the church property was valued at $25,554,725.

Pauperism.—Of the 3,674 paupers, 2,659 were native whites, 201 native colored, and 814 foreigners.

Crime.—Of 1,405 persons in prison June 1, 1870, 892 were native whites, 126 native colored, and 387 foreign-born. Two thousand five hundred and sixty persons were convicted during the year.

Age and sex of population.—Of the total population, 845,971 were from 5 to 18 years old, of whom 425,466 were males and 420,505 females; 1,953,374 were 10 years old and over, of whom 976,588 were males and 976,786 females.

Occupations.—Eight hundred and forty thousand eight hundred and eighty-nine persons of these ages were engaged in various occupations, of whom 757,369 were males and 83,520 females; 397,024 persons were engaged in agricultural pursuits, of whom 396,267 were males and 757 females; 168,308 in personal and professional services, of whom 104,018 were males and 64,290 females; 78,547 in trade and transportation, of whom 77,690 were males and 857 females; 197,010 in manufactures and mechanical and mining industries, of whom 179,394 were males and 17,616 females.

Age and sex of working population.—Of the 840,889 employed persons, 38,437 were from 10 to 15 years old, of whom 34,392 were males and 4,045 females; 751,459 were from 16 to 59 years old, and of these 673,513 were males and 77,946 females; 50,993 were sixty years old and over, of whom 49,464 were males and 1,529 females.

SCHOOL OFFICIALS.

The names of superintendents of city schools will be found in the table of city school systems at the end of this volume.

OREGON.

SCHOOL STATISTICS.

Pupils under 20 and over 4 years	36,512
Male pupils under 20 and over 4 years	18,724
Female pupils under 20 and over 4 years	17,788
School districts	659
School districts reporting April 1, 1872	580

The reports of the county superintendents are not full except in those items furnished by the governor officially.

Average attendance in schools, as partially reported	12,120
Number of teachers reported	*198
Amount paid teachers during year ended April 1, 1872	$68,597 32
Amount received from State and county funds	$61,812 09
Amount of interest of irreducible school-fund distributed, (of which $19,626.43 were contributed)	$39,452 71
Number of legal school-votes, as partially reported	16,208

Our public free schools, private schools, seminaries, academies, and colleges probably instruct half the pupils of the State per year.

CONDITION OF SCHOOL FUND, SEPTEMBER, 1872.

Amount of coin	$206,400 78
Amount of currency	236,633 88
Amount not specified	6,189 37
Total	449,224 03

This amount does not include some $5,000 in Union County not yet reported to the board of commissioners.

DISTRIBUTION OF THE INTEREST ON THE COMMON-SCHOOL FUND FOR 1871.

Number of counties	22
Number of children of school-age, about	34,500
Amount of coin distributed	$19,626 43
Amount of currency distributed	19,826 28
Total distribution	39,452 71

CONDITION OF UNIVERSITY FUND.

Amount of coin, September, 1872	$35,178 60
Amount of currency, Sepember, 1872	6,801 14
Total amount of fund	41,979 74

SCHOOL LANDS.

During the past two years the commissioners have deeded and bonded 98,740 acres common-school lands and 10,935 acres university lands. Thirty thousand acres of the university lands remain unsold.

COMMON-SCHOOL FUND.

This fund now amounts to $450,000 in round numbers. The entire amount of the grant of such lands will amount to over 3,000,000 acres, 2,000,000 of which may be made available gradually. The governor of Oregon, in his annual message, estimates that this, with the revenue from the Oregon City Canal and locks, will make a common-school fund of nearly $3,000,000.

*This is evidently an error, and probably should be 698.

STATE SUPERINTENDENT.

The governor of Oregon in his annual message recommends that provision be made for the election of a State superintendent of public instruction.

ALBANY COLLEGIATE COLLEGE.

This college is open to both sexes, and is under the care of the Presbytery of Oregon.

PACIFIC UNIVERSITY.

The secretary of the board of education says of this institution that "it was never in a more prosperous condition."

Tualatin Academy is connected with the university as a preparatory department. Pupils in the academy are required to pass a satisfactory examination in each of the elementary branches before finally leaving those studies. During the past year, the number of preparatory students has increased, and the grade of the academy has been raised, thereby excluding primary scholars, for whom provision has been made in the public schools.

The university courses are the same as those pursued in eastern colleges, and, for the young men, cover four years; while for such as desire a shorter course the scientific and normal courses are open. The ladies' course, covering three years, has been carefully prepared to meet the wants of those wishing a thorough education. The normal course is designed especially to furnish preparation for teaching. Any person otherwise admissible may, by vote of the faculty, attend the recitations in particular branches, and, on completion of any study, may receive a certificate of proficiency therein.

The literary societies are an approved method of supplementing the instruction of teachers, and are an important instrument in education. They receive their charters from the faculty, and are expected to subserve the general purpose of the institution.

Collections in natural history and lectures on various subjects by the faculty and others, will be employed during the preparatory as well as college course, for the purpose of awakening an interest in the study of natural science.

The apparatus and the collections in the department of natural history are now considerable and are steadily increasing. To meet a long-felt necessity, the president, by an enlargement of his house, has made provision for boarding young ladies.

The completion of the Oregon Central Railroad to Forest Grove, where the university is located, makes the institution accessible from all parts of the valley.

STATE UNIVERSITY.

This institution was located at Eugene City, on condition of a good site, which has been given by Hon. J. H. D. Henderson, and a $30,000 building from the city and county.

CHRISTIAN COLLEGE.

This institution is located near the geographical center of Willamette Valley, and, by the system of railroads now in process of construction, will be very easy of access.

The north wing of the new college building was to be completed by the opening of the session in September, 1872. The style of architecture is the collegiate gothic, and the building is put up in the most substantial manner. This building, used in connection with the old one, will furnish ample accommodation for 300 students. The want of a suitable place to keep a library hitherto has prevented any considerable effort to procure one. For the same reason suitable apparatus has not been purchased. The new college building will furnish a room in which a library and apparatus may be safely kept, and every effort will be made to add to these important auxiliaries as rapidly as circumstances will permit.

The college has two separate, complete courses—classical and scientific. There is also a preparatory course laid out for the accommodation of those who wish a higher grade of instruction than is furnished in common schools, or to qualify themselves for admission to the regular college courses.

Music is made a specialty in the college. In the new building, two rooms, 18 by 30 feet, will be appropriated to the use of the music department. The modern languages will also be made a part of the course so soon as competent professors can be procured.

The college is open to both sexes. Last year the number of graduates was 8.

The legislature of the State granted to Christian College a very liberal charter, conferring all necessary powers on a board of trustees, to preserve the rights and manage the affairs of the institution. The prospects of the college are most flattering. The session just closed was by far the most prosperous since the first organization. The attendance was larger by one-third than that of any previous year. The institution is increasing in reputation, and its influence and popularity are rapidly extending.

PORTLAND ACADEMY AND FEMALE SEMINARY.

The course of study of this institution includes a commercial and a music department. The time for completing the commercial course is not fixed. It depends entirely on the ability and diligence of the pupil.

M'MINNVILLE ACADEMY.

The reports of scholarships during the past year have been in general very satisfactory. There are three departments, preparatory, academic, and normal. Pupils in the latter class are thoroughly instructed in the theory and practice of teaching.

It is the hope and purpose of the proprietors of this academy to make it a permanent institution. A subscription of $20,000 has been raised toward an endowment fund.

SAINT HELEN'S HALL.

This is a boarding and day school for young ladies. The regular course of study occupies 5 years. Those who complete all the studies of the prescribed course will receive a diploma. Pupils not wishing to take the regular course will be allowed to study special branches. The rector of the school is the Right Rev. Wistar Morris, bishop of Oregon. Bishop Morris delivered the address upon the occasion of sending out the first class of graduates from Saint Helen's Hall.

BISHOP SCOTT GRAMMAR SCHOOL.

This is a boarding and day school for boys. As compared with the attendance of last year, there has been a gain of 20 per cent. this year. Provision is made for instruction in French, German, music, and drawing.

DEAF-MUTE SCHOOL.

A provision of the resolution relating to this school required that the expense should not exceed $2,000 per annum. During the first year, beginning November, 1870, 16 pupils were entered. The school was conducted with success, but was closed on the 1st of April, the amount of the appropriation not being sufficient to carry it on. The students, teachers, and matron were all supported out of the sum appropriated. The school this year was closed before the appropriation was entirely exhausted, so as to be able to liquidate the bills accruing at the beginning of the September term, 1872. The number of pupils enrolled at the beginning of the term, September, 1872, was 18. Several others have signified their intention to attend the school, should more ample provision be made for its support.

The secretary of state, in his annual report, calls the attention of the legislature to the wants of this institution, as follows: "We may now regard this school as a permanent institution of the State, and it should receive your special consideration. There are 18 pupils now in the school, and 18 more who desire to enter, and they ought to have a building erected, especially adapted to the peculiar wants of this unfortunate class of people. As land, I understand, will be gratuitously offered to the State during the present session, by different parties, as an inducement to locate a site and erect upon it a school building suitable for mutes, I recommend that a suitable tract of land thus proffered be selected for that purpose, and that an appropriation be made to further this object. At the same time have the building so constructed as to afford room for a school for the blind, of whom there are now quite a number in this State, who require the advantages of an education."

STATE PENITENTIARY.

In August, 1872, the new penitentiary building was occupied. The present building affords opportunity for a better classification of prisoners than has heretofore been possible. The superintendent expresses the opinion that, in cleanliness, system, order, and average of health, this prison will now compare favorably with any similar institution in the country.

An evening school is maintained for those who desire instruction, and the attendance and progress are extremely gratifying. A Sabbath-school is also maintained and generally attended by the convicts. The chaplain believes that these and other moral agencies have worked a complete reformation in many cases. The library is of recent date and was started by subscription. Over 600 volumes and $30 in cash for the purchase of books have been contributed.

The labor department has been both successful and profitable. Carpenter, black-

smith, harness, and shoe shops have been built, and a large tannery has been commenced, which, when complete, will be one of the finest in the State.

About eighteen months ago the governor forbade the use of corporal punishment in the prison. The superintendent reports the successful working of this order, and says, "Notwithstanding we have some of the most troublesome and dangerous men the institution has ever known, the rules and regulations have never been better obeyed, or the discipline more perfect, than at present." The number of convicts is 96.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Oregon was the thirty-sixth State in population, having 90,923 inhabitants within an area of 95,274 square miles, an average of 0.95 persons to the square mile. This population consisted of 86,929 whites, 346 colored, 318 Indians, and 3,330 Chinese. Of these, 79,323 were natives of the United States and 11,600 were foreign-born. Of the native residents, 36,824 whites, 85 colored, 243 Indians, and 3 Chinese were born within its borders; while of the foreign residents, 1,875 were born in Germany, 1,344 in England, and 1,967 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 18,096 persons attended school, and of these, 134 were foreign-born. Of the 18,049 white scholars, 9,574 were males and 8,475 females. Of the 28 colored pupils, 20 were males and 8 were females. Seven male Chinese, also 5 male and 7 female Indians, were reported.

Illiteracy.—There were 4,427 inhabitants of all races, 10 years old and over, unable to write, and of these, 1,424 were foreign-born.

Age and sex of illiterates.—Of the 3,411 white illiterates, 960 were from 10 to 15 years old, and of these, 572 were males and 388 females; 270 were from 15 to 21 years old, of whom 161 were males and 109 females; 2,181 were 21 years old and over, of whom 1,085 were males and 1,096 females. Of the 90 colored illiterates, 7 were from 10 to 15 years old; and of these, 3 were males and 4 females; 7 were from 15 to 21 years old, and of these, 4 were males and 3 females; 76 were 21 years old and over, of whom 48 were males and 28 females; 775 Chinese males and 33 females, also 39 male and 79 female Indians, were reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 637, having 826 teachers, of whom 484 were males and 342 females, to educate their 32,593 pupils, of whom 16,753 were males and 15,840 females.

Amount and source of educational income.—The total income of all the educational institutions was $248,022; of which $24,500 were derived from endowment, $135,778 from taxation and public funds, and $87,744 from tuition and other sources.

Public schools.—The 594 public schools, with 703 teachers, 429 males and 274 females, were attended by 29,822 pupils, of whom 15,531 were males and 14,291 females. To educate these they had a total income of $139,387, of which $3,000 were derived from endowment, $134,648 from taxation and public funds, and $1,739 from tuition and other sources.

Colleges.—The 6 colleges, with 26 teachers, 16 males and 10 females, were attended by 739 pupils, of whom 420 were males and 319 females. They had a total income of $25,650, of which $14,900 were derived from endowment, $170 from taxation and public funds, and $10,580 from tuition and other sources.

Academies.—The 10 academies, with 31 teachers, of whom 16 were males and 15 females, had an attendance of 930 pupils, 507 males and 423 females, and a total income of $21,313, of which $600 were derived from endowment and $20,713 from tuition and other sources.

Private schools.—The 22 day and boarding schools had 53 teachers, 10 males and 43 females, and were attended by 1,006 pupils, of whom 200 were males and 806 females. They had a total income of $57,212, of which $6,000 were derived from endowment and $51,212 from tuition and other sources.

Libraries.—There were 166 public libraries, with 61,532 volumes, and 2,195 private libraries, with 273,427 volumes; making, in all, 2,361 libraries, containing 334,959 volumes.

The press.—The 35 periodicals had an aggregate circulation of 45,750 copies, and an aggregate annual issue of 3,657,300 copies.

Churches.—Of the 220 church organizations, 135 had edifices, with 39,425 sittings, and the church property was valued at $471,100.

Pauperism.—Of the 81 paupers, 62 were native whites and 19 foreigners.

Crime.—Of 104 persons imprisoned June 1, 1870, 55 were native whites, 12 native colored, and 37 foreign-born. Eighty persons were convicted during the year.

Age and sex of population.—Of the total population, 29,400 were from 5 to 18 years old, of whom 15,035 were males and 14,365 females; 64,685 were 10 years old and over, of whom 39,861 were males and 24,824 females.

Occupations.—The number of persons of these ages engaged in various occupations was 30,651, of whom 29,968 were males and 683 females; 13,248 were engaged in agri-

cultural pursuits, of whom 13,232 were males and 16 females; 6,090 in personal and professional services, of whom 5,522 were males and 568 females; 2,619 in trade and transportation, of whom 2,611 were males and 8 females; 8,694 in manufactures and mechanical and mining industries, of whom 8,603 were males and 91 females.

Age and sex of working population.—Of the 30,651 employed persons, 458 were from 10 to 15 years old, of whom 417 were males and 41 females; 29,066 were from 16 to 59 years old, and of these, 28,439 were males and 627 females; 1,127 persons were 60 years old and over, of whom 1,112 were males and 15 females.

SCHOOL OFFICIALS.

Hon. Mr. SAMPSON, *State superintendent, Salem.*

COUNTY OFFICERS.

County.	Name.	Post-Office.
Baker	J. T. Wisdom	Baker City.
Benton	A. R. Brown	Corvallis.
Clackamas	J. A. McCrum	Oregon City.
Clatsop	Rev. William A. Tenney	Astoria.
Columbia	J. Hamilton	Saint Helena.
Coos	Isaiah Hacker	Empire City.
Curry	J. Canfield	Ellensberg.
Douglas	C. W. Todd	Roseburgh.
Grant	J. A. Holmes	Canyon City.
Jackson	W. J. Stanley	Jacksonville.
Josephine	A. Adams	Kerbyville.
Lane	T. G. Hendricks	Eugene City.
Linn	T. J. Stiles	Albany.
Marion	Rev. P. S. Knight	Salem.
Multnomah	Rev. T. L. Eliot	Portland.
Polk	J. C. Grubbs	Dallas.
Tillamook	John S. Tripp	Tillamook.
Umatilla	John Ingle	Umatilla.
Union	H. White	La Grande.
Wasco	Thomas Smith	The Dalles.
Washington	A. J. Anderson	Forest Grove.
Yam Hill	H. H. Hewitt	

PENNSYLVANIA.

[From report of Hon. J. P. Wickersham, superintendent of common schools, for the year ended June 3, 1872.]

SCHOOL FUND.

Pennsylvania has no school fund; the money she pays for education being entirely raised by voluntary taxation.

FINANCIAL STATEMENT.

The following statement shows the receipts and expenditures for the year, excluding Philadelphia:

Receipts.

From collectors, unseated lands, and all other sources, exclusive of State appropriations		$5,120,267 77
From State appropriation for 1871		318,389 12
Total receipts		5,438,656 89

Expenditures.

Cost of instruction	$3,221,121 78	
Fuel and contingencies	863,738 96	
Cost of school-houses, including renting, repairing, &c	2,535,637 39	
Total expenditures		6,620,498 13
Deficit		1,181,841 24

COMPARATIVE STATEMENT.

The following statement presents a comparison between the receipts and expenditures of 1871 and 1872:

Whole amount of tax levied and State appropriation, 1872	$5,879,024 69
Whole amount of tax levied and State appropriation, 1871	5,516,801 73
Increase in 1872	362,222 96
Total expenditures of the system for tuition, building purposes, and contingencies, in 1872	$6,620,498 13
Total in 1871	6,988,888 75
Decrease in 1872	368,390 62

EDUCATIONAL PROGRESS.

The following table shows the educational growth in the past eight years:

Year.	Graded schools.	Superintendents.	Average salary of male teachers per month.	Average salary of female teachers per month.	Cost of tuition.	Cost of school-houses.	Total cost, including all expenses.	Number of teachers who attended county institutes.
1865	1,743	65	$31 82	$24 21	$2,515,528 63	$465,088 08	$3,614,238 55	2,755
1866	2,800	66	34 34	26 31	2,748,795 08	725,000 00	4,195,258 57	3,704
1867	3,225	68	35 87	27 51	3,028,065 70	1,262,798 68	5,160,750 17	3,944
1868	3,362	75	37 28	28 76	3,273,269 43	1,991,152 55	6,200,539 96	10,268
1869	3,425	76	39 00	30 52	3,500,704 26	2,455,847 71	6,986,148 92	11,381
1870	3,872	79	40 66	32 39	3,745,415 81	2,765,644 34	7,791,761 20	11,210
1871	4,634	81	41 04	32 86	3,926,529 88	3,386,263 51	8,589,918 33	11,890
1872	4,998	85	41 71	34 60	4,104,273 53	2,864,113 35	8,345,072 78	11,625

GENERAL STATISTICS.

The condition of the school system for the year 1872, in comparison with its condition for the year 1871, including Philadelphia, is shown in the following figures:

Whole number of schools in 1872	15,999
Whole number of schools in 1871	15,700
Increase in 1872	299
Whole number of teachers in 1872	18,368
Whole number of teachers in 1871	18,021
Increase in 1872	347
Whole number of pupils registered in 1872	834,313
Whole number of pupils registered in 1871	834,614
Decrease in 1872	301
Average attendance of pupils in 1872	536,221
Average attendance of pupils in 1871	567,188
Decrease in 1872	30,967

The following are the statistics for the year 1872, excluding Philadelphia:

Whole number of schools	14,415
Whole number of pupils	699,802
Average attendance of pupils	464,127
Percentage of attendance	66
Average length of school term	6 months.
Average cost of tuition per month for each pupil	99 cents.
Whole number of male teachers	7,674
Whole number of female teachers	9,110
Average salaries of male teachers per month	$40 55
Average salaries of female teachers per month	$31 96
Average number of mills on the dollar, school tax	7.27
Average number of mills on the dollar, building tax	5.06
Amount of tax levied	$5,229,024 69
Amount of tax levied and State appropriation	$5,879,024 69
Total amount of State appropriation paid to all the State normal schools	$284,815 28

EXPENDITURE FOR THE CORNPLANTER INDIANS.

Amount of appropriation for 1872	$300,00
Paid for four months' teaching	$100 00
Paid for school articles, books, apparatus, &c	16 40
Paid for fencing and repairs	93 60
Paid for two months' teaching	90 00
Total	300 00

TEACHERS' INSTITUTES.

The entire number of institutes held throughout the year was seventy. These had in all a continuance of four hundred and forty-one days. The attendance of actual members was 11,625; of honorary members, 898; of spectators, 28,655. The institutes were instructed by 431 lecturers and 236 essayists, the cost to the several counties being $12,150.18, to the members $4,812.03. Money was received from other sources to the amount of $4,932.97. Of the money received, $1,750.71 remain on hand.

TECHNICAL EDUCATION.

Mr. Wickersham, State superintendent of common schools, calls attention to the great need of technical schools throughout the State. He says: "We have our Franklin Institute, School of Design, and Polytechnic College, in Philadelphia, and our State Agricultural College. This is about all; and yet Pennsylvania has 4,000,000 people, and there is no better field on the broad earth for the display of high art. To our shame be it

said that the great body of our skilled artisans are foreigners. We should furnish them for ourselves." And again: "It is fearful to think how much time is lost in our towns and villages. The average Pennsylvania village has no public place better for spending the time of a leisure evening, or a holiday, than the store, the saloon, the tavern, or the street-corner. Education should not end with school-days. We want schools for men and women. We need all our three score and ten years well improved to become the full-grown men and women God intended us to be."

BUILDING SCHOOL-HOUSES.

The vast and steady increase in the money appropriated to building school-houses in the past five years has been truly wonderful.

Much money has been loaned, and many school districts are now heavily in debt; but this is inevitable under the law that limits the amount of tax that can be levied for building purposes. Nearly all the boards that have gone into debt have provided a sinking fund, and propose to make annual reductions in the amount owed by their districts. The falling off in the amount expended for school-houses during the last year is owing to the passage of the law of 1871, authorizing the several courts of common pleas of the commonwealth to grant school directors power to borrow money to build school-houses. The feature of the law most objectionable is that which requires directors "to produce to the court the consent, in writing, of a majority in number of the qualified electors" of their respective districts.

LENGTH OF SCHOOL TERM.

The minimum term fixed by law for the schools to be kept open was, up to 1854, three months; in that year it was made four months, and the last legislature enacted a law making it five months. All districts must now keep open their schools at least five months in the year, or lose their State appropriation.

NEED OF EDUCATIONAL REFORM.

The suggestions made by Mr. Wickersham to the "convention to revise the State constitution" represent the improvements needed in the constitutional provisions relating to education. The principal suggestions are that the arts and sciences shall be promoted in the several colleges of the State and other higher institutions of learning and schools of art; that normal schools shall be encouraged by appropriate legislation; that the general assembly shall provide ways of preventing truant, vagrant, and neglected children from growing up in ignorance; that a department of public instruction shall be organized, comprehensive enough to embrace all the school interests of the State; and that a State educational fund shall be provided by law.

ORPHAN SCHOOLS.

By an act of the legislature the control of the schools for soldiers' orphans came into the hands of the superintendent of common schools June, 1871. He immediately directed orders to be issued for the admission into school of all children above the age of 8 years, amounting in all to nearly 500, whose applications were on file in the department, and also established the rule that, in future, all children legally eligible as soldiers' orphans should at once be admitted into school, upon making proper application to that effect. This action increased the number of orphans in these schools to 4,235 during the year, and left, after all the discharges were made, 3,527 in them on the 31st of May.

The actual number of children in school and the average number drawing money from the State were greater during the past year than during any other year since the system of orphan schools went into operation. During the winter the legislature, at the suggestion of Mr. Wickersham, removed the restriction that kept from school children under 8 years of age, and all soldiers' orphans, from before January 1, 1866, who have asked to be admitted into the schools, have been allowed the privilege.

Much of the history of the orphan schools is condensed in the following statement:

Number of institutions in which there are soldiers' orphans	37
Number of orphans in schools and homes May 31, 1872	3,527
Number of orders issued from May 31, 1872, to October 1, 1872	880
Number of discharges issued from May 31, 1872, to October 1, 1872	847
Number of orphans in charge of the State, October 1, 1872	3,482
Number of orders of admission issued since system went into operation	7,218
Number of applications now on file	None.
Probable number of orphans that will be cared for under the system	7,000
Cost of the system for the past year	$475,245 47
Whole cost of the system since going into operation	$3,467,543 81
Probable amount of future appropriations that will be needed	$1,500,000 00

Financial statement.

State appropriation		$520,000 00
Unexpended balance for 1871		10,962 34
Amount accruing from loans		8,400 00
Total		539,362 34
Expended for education, maintenance, and clothing	$467,260 52	
Expenses of department	7,984 95	
Deficit of 1870 paid	38,685 15	
Total		513,930 62
Balance in treasury to the credit of the department		25,431 72

NORMAL SCHOOLS.

The whole number of normal schools in operation in the State is six, and buildings are in course of erection for four others. The law of 1857 contemplates the establishment of twelve such schools, and from present appearances that number will be supplied within a few years.

The report urges upon the State the importance of adopting and adhering to some broad general principles, by which the appropriations to these schools shall be equalized. The normal-school policy of Pennsylvania has differed from that of other States, in that the people have had more, and the State less, control in their management. The tendency of this policy has been to make the administration of the schools narrow and more disposed to seek private than public ends.

To make this administration broader, to give it a greater degree of public confidence, and to unite more closely the private and public interests represented in the schools, the legislature at its last session authorized the State superintendent of common schools, with the consent of the normal-school associations, to appoint two trustees to represent the State in the boards of trustees of the several normal schools.

The six normal schools already in operation have had since their organization 15,052 students, of whom 2,453 attended the past year; have graduated 575, of whom 59 graduated the past year. Four hundred and forty-one students have received State aid as graduates, and 1,049 as undergraduates. The normal schools had, during the past year, 74 professors and teachers. The aggregate number of volumes in their libraries is 9,956.

PHILADELPHIA.

CENTRAL HIGH SCHOOL.

The attendance at this school continues steadily to increase, the average for 1871 being the unprecedented number of 575.42. It is now, however, near its limit, unless enlarged provision be made for the reception of students by the erection of a new building. The growth of the school continues to be, where it is most desired, in the middle and higher classes, which proves conclusively that the full course of study is growing in favor. The demand among business men for its graduates continues in excess of the supply, and affords a gratifying indication of the good results of the methods of teaching pursued. What has been done in little more than a generation is but an earnest of what may be looked for in the future.

THE NORMAL SCHOOL.

This school completed in December, 1871, its forty-seventh term. Since its organization, 3,401 pupils have been enrolled; of that number 1,324 have graduated, and 1,916 have been appointed as teachers. The average attendance last year was more than 97 per cent. Of those who graduated this year, each one received a certificate of qualification to teach. It is recommended that there be established, in connection with the normal school, a school of practice, and that this include a kindergarten, in order to secure teachers well trained in object-teaching, thus making our primary departments schools of art.

PUBLIC NIGHT SCHOOLS.

The number of these schools has this year been increased, so that ample accommodations are provided for all adults seeking instruction. Care has been taken to place these schools in the manufacturing districts of the city, where they are especially needed. They are conducted with skill and success, and have an aggregate attendance of 6,353.

NIGHT SCHOOL FOR ARTISANS.

This school continues its useful and successful career. Almost every workshop is represented, and the lectures are listened to with the same degree of interest as in former seasons. The beneficial results which these night schools are working out in educating so many middle-aged, and even old men, and the manner in which they are absorbing the old fire department and gathering in so many whose evenings were spent in the engine-houses, are hopeful signs that the morals of the rising generation will be purified and society greatly benefited by the institution of these schools.

READING.

PUBLIC SCHOOLS.

This is the first report of the Reading public schools since 1862. During that period the enrollment of the schools has increased from 4,012 to 5,852, or very nearly 46 per cent.; the teaching force has increased from 80 to 112, (not including the normal-school teachers,) or 40 per cent.; the average number of pupils for each teacher, which was then 50, is now 52; and the cost of teaching has increased nearly 71 per cent.

Until three years ago the school accommodations were entirely insufficient. Since then four new buildings have been erected, and an extension added to the high-school building. Over $80,000 have been spent for building purposes within two years. The school property is valued at $300,000. The whole number of sittings is 5,239.

FEMALE PRINCIPALS.

Six years ago a change was made in the management of the grammar schools, by the substitution of female for male principals. This change was made in the face of great opposition. The experiment, however, has worked well, and the schools give general satisfaction.

HIGH SCHOOL.

The high school, which was organized in 1852 with 1 teacher and 35 pupils, has grown until its pupils number over 200, with 8 teachers. The greatest opposition was manifested when the male and female high schools were united in 1859, but this soon died out before the successful working of the system.

THE NORMAL SCHOOL.

Attention is called to the want of interest manifested by the teachers in the normal school. This is considered to be in great measure owing to the fact of their being required to prepare lessons which have nothing to do with what they need, namely, practical knowledge of the best methods of instruction. It is suggested that if lectures were substituted for lessons, the interest would be greater, and more good would be accomplished. Under the existing regulations of the normal school, each member is required to attain a fixed standard, to procure a renewal of the superintendent's certificate, without examination.

The establishment of night schools was agreed upon last year, but was postponed from financial considerations.

ALLEGHENY.

CONDITION OF SCHOOLS.

The committee of inspection report the schools in a generally satisfactory condition. The study of drawing was introduced into the schools about two years ago, but its success thus far has been but partial, owing to the inability of most of the teachers to give adequate instruction. It is strongly recommended that a special teacher be appointed for this branch. The study of chemistry has been introduced into the higher grades during the year with great success. The committee deem it essential that it should be taught, so far as practicable, in all the grades.

It is earnestly recommended that some means be adopted to retain the services of experienced teachers, many of whom are seeking more remunerative employment elsewhere, while their places are filled with comparatively inexperienced teachers.

EVENING SCHOOLS.

Evening schools were maintained during three months, with an enrollment of 931 and an average attendance of 412. The cost of these schools, per pupil, on total enrollment, is $25.72. The average cost per month of each pupil in the day schools is $1.

The committee on colored schools report them fully equal to any of the others.

SCHOOL FOR MUTES.

The mute school has 36 pupils enrolled. Their progress is in the highest degree satisfactory, and the teachers, one of them a mute, are indefatigable in their efforts.

UNIVERSITY OF PENNSYLVANIA.

The trustees of this institution, desirous fully to meet the needs of the times, have recently established a new department of the university, to be known as the department of science. Different departments have been heretofore established as the exigencies of the times seemed to demand them. The department of arts was established in 1755, that of medicine in 1765, that of law in 1789, that of the auxiliary faculty of medicine in 1864.

The government and instruction of the students in the department of science will be in charge of a distinct faculty, under the general supervision of the provost and board of trustees. Charles J. Stillé, LL.D., is provost of the university, and J. Peter Lesley, A. M., is dean of the faculty.

The course will extend through four years. The first two years will be devoted to a thorough training in the preparatory and elementary mathematics, chemistry, &c., English studies, modern languages, and mechanical drawing. At the close of these two years the student will select one of four parallel courses, to which, during the remainder of the course, his attention will be confined. These courses are: 1. Analytical and applied chemistry and mineralogy; 2. Geology and mining; 3. Civil engineering; 4. Mechanical engineering.

A new building, 260 feet front by over 100 feet in depth, and of most extensive and convenient arrangements, erected by the trustees for the accommodation of the department of arts and of science, was opened for the reception of students in September, 1872. The formal inauguration of the building took place October 11, 1872.

The provost, in his address, congratulated the faculties and trustees upon the fact that "we have here, at last, a true university, complete in all its parts, in which men may receive, in all the various departments of human knowledge, that training and liberal culture which shall fit them to be the leaders and guides of their fellow-men."

MEMORIAL WINDOWS.

Hon. James R. Ludlow made the presentation of the memorial windows, and in doing so sketched briefly the history of the university. The Franklin memorial window is the gift of the alumni of the institution, in honor of the founder of the college of Philadelphia. In 1749, by the direct efforts of Benjamin Franklin, his friends subscribed £800 for the endowment of an academy. The building then used stood until very recently, and in its place the present structure was built. In 1755 a charter was granted for the college. This institution was the sixth in order of age of the colleges in the United States. Franklin was a trustee until the time of his death, and the early record-books remain in his handwriting as secretary of the college.

Another memorial window is in honor of the Penn family, to whom the college is much indebted. Thomas Penn, a son of William, contributed £4,500 in money, and 2,500 acres of land in Bucks County, Pennsylvania. Other officers of the college are also commemorated: Ebenezer Kimersley, whose name is familiar to scientific men of Europe; David Rittenhouse, mechanician and astronomer, of whom Jefferson said, "the world has but one Rittenhouse, and it never had one before;" Rev. John Ewing, first provost of the university; the Pattersons, father and son, both of whom held the office of vice-provost; Bishop De Lancey; Alexander Dallas Bache, upon whom three universities conferred the degree of LL.D.; Henry Reed, LL.D., who was lost on the steamer Arctic six months after his election to the office of vice-provost, and others.

COST OF UNIVERSITY EQUIPMENTS.

The chairman of the building committee stated that the cost of the building, exclusive of special fittings for laboratories, museums, &c., and the furniture, was $235,910. Professor Lesley, in the course of his address, remarked that it would need $100,000 to supplement the present equipment with a working laboratory and complete museums, and to endow chairs to make the faculty complete.

AGRICULTURAL COLLEGE.

The president of the agricultural college, Dr. James Calder, submits the suggestion that such recognition of the college be made by the department of common schools as will bring it into fuller co-operation in the State's noble work of popular education, and that some provision be made by which at least a few of the meritorious graduates of the schools may be enabled to avail themselves of the advantages provided by the combined bounty of the National and State Governments.

He adds: "To the graduates of the schools under control of the department, and to all the students sent to us by the State, admission will be granted at any time to classes which their members may be qualified to enter; and to them our charges, already quite low, will be further reduced. The charge for the full college year of forty weeks will be $200, which will include all expenses of board and tuition."

The college property consists of a tract of 400 acres, of which 100 have been set off as a model and experimental farm, and worked separately from the main college farm.

Unusual facilities are offered for the study of chemical analysis.

Students who have conscientious scruples against bearing arms are exempted from military drill, but will be required to work three hours each week.

Until September, 1871, no provision was made for lady students. At that time it was decided to admit them, and ladies are now admitted to the same course of study as gentlemen, are subject to the same rules, and receive the same degree.

Dr. Calder suggests the appointment of a committee by the legislature to act in conjunction with the board of trustees of the college in originating some practical plan for effecting a union between the agricultural college and the schools controlled by the State.

WESTERN UNIVERSITY OF PENNSYLVANIA.

The university comprises an academical department, a scientific department, a department of civil and mechanical engineering, a law department, and a preparatory department. The collegiate course extends over a period of four years; the scientific, three.

WASHINGTON AND JEFFERSON COLLEGE.

Two full four-year courses are now organized in the college, and it is the plan of the trustees to enlarge and perfect these, and add others as the demands of the public may require and the resources at command will justify. The study of Greek and Latin in the classical course is made elective after the sophomore year. A preparatory department is connected with the college. The report states that a professorship of agriculture and correlative branches would be filled by the opening of the next college year.

DICKINSON COLLEGE.

The principle of elective courses is carried out as far as the college resources permit. A scientific department and law department have been established during the last three years; also, a biblical course for students preparing for the ministry.

PENNSYLVANIA COLLEGE.

The course of study occupies four years. The department of physical and natural sciences has been thoroughly reorganized, and now offers superior advantages for the study of these branches. The study of the German language is made a part of the regular college course. A preparatory department is connected with the college. The number of under-graduates is 92.

SAINT VINCENT'S COLLEGE.

There are three courses of study—ecclesiastical, classical, and commercial—besides an elementary school. This institution is under the care of the Roman Catholic Church.

MERCERSBURGH COLLEGE.

This college is conducted in the interests and under the care of the Reformed Church. A preparatory department is connected with it. The collegiate course extends over a period of four years; the preparatory, three.

MÜHLENBERG COLLEGE.

This institution embraces two departments—collegiate and academic. The collegiate course occupies four years; the preparatory, three. Arrangements are made for special studies.

VILLANOVA COLLEGE.

This institution was founded by the Augustine Fathers, and incorporated in 1848. It embraces two departments– collegiate and preparatory. The collegiate course extends through four years; the preparatory, three. Scientific and commercial courses have been established.

URSINUS COLLEGE.

This college was named in honor of Ursinus, the renowned German theologian. It embraces collegiate and academic departments; also a theological course.

PENNSYLVANIA MILITARY ACADEMY.

The mathematical and scientific courses are the same as at West Point; the classical department offers a full collegiate course. The institution is under strict military rule.

LUTHERAN MISSIONARY INSTITUTE.

This institute embraces three departments—preparatory, collegiate, and theological.

NAZARETH HALL.

The method of instruction is the same as that usually pursued in Moravian schools.

PITTSBURGH FEMALE COLLEGE.

This institution is incorporated with collegiate powers and privileges by the legislature of the State. It embraces a collegiate and a preparatory department, and a department of music and drawing.

UNIVERSITY FEMALE INSTITUTE.

The regular course occupies three years. There is also a preparatory department, and a department of music and drawing.

COTTAGE HILL COLLEGE.

This institution, for the education of young ladies, was chartered in 1868 with full collegiate powers. It embraces a collegiate department, a scientific course, and a preparatory department. There were 5 graduates in 1872.

SCHOOL OF DESIGN FOR WOMEN.

This institution, located at Philadelphia, has for its object the systematic training of women in a knowledge of the principles and practice of the art of design, and their qualification for the practical application of art to the common uses of daily life. The school is divided into three distinct branches of study: Class A, ornament; class B, landscape; class C, human figure; each with its subdivisions and sections. The course lasts from two and a half to four and a half years, according to the industry of the student. The fee is $20 per session of five months, except in the industrial classes, where tuition is free. The attempt has never been made to render the school self-sustaining, as that involves the necessity of raising the tuition fee to an amount that would impair the usefulness of the institution and tend to defeat its object. Therefore, subscriptions and donations are necessary to assist in meeting expenses.

THE ACADEMY OF NATURAL SCIENCES.

The Academy of Natural Sciences in Philadelphia was founded by a few gentlemen who associated together with a view to mutual instruction and research in natural history.

At first they met weekly at their own homes, in turn; then in rented rooms. In 1826 a hall was purchased, and the present edifice was built in 1840. The society was founded March 21, 1812, and incorporated by an act of the legislature of Pennsylvania, approved March 24, 1817, as a "Society in Philadelphia for the encouragement and cultivation of the sciences, by the name of the 'Academy of Natural Sciences in Philadelphia.'"

With the exception of exemption of its hall from taxation, the society has received no aid from the treasury of the State, nor from that of the municipal government. It derives support exclusively from the semi-annual contributions of its members, and donations from individuals.

Its museum now contains about 400,000 specimens, many of them typical, and some of them unique. They are classed as follows:

Minerals	6,000	Reptiles, (species)	813
Rocks	700	Fishes, (species)	1,170
Vegetable fossils	2,000	Birds, (specimens)	31,000
Invertebrate fossils	25,000	Birds' eggs, (specimens)	5,000
Vertebrate fossils	5,000	Birds' nests, (species)	200
Unarranged	33,000	Mammals, (specimens)	1,000
Botany, (species)	100,000	Osteology, (skeletons and pieces)	876
Zoophytes	1,000	Human crania	1,300
Crustaceans	2,000	Mummies	41
Myriapods and Arachnida	500	Microscopes	5
Insects, (species)	25,000	Microscopic specimens	225
Shells, (species)	20,000	Chemical apparatus, (pieces)	1,500

Each species is represented by five or six specimens.

During nearly a half century the museum has been opened gratuitously to the public two afternoons every week. The number of visitors became so large—as many as three or four thousand crowding into its saloons every afternoon—that few, if any of them, were able to obtain a satisfactory view of anything. The movements of crowds gave rise to clouds of dust, which penetrated the cases and obscured the specimens. To obviate this, and to guard the collections against damage from dust and breakage of glass, an admission fee of ten cents has been charged since June, 1870. Classes from schools, accompanied by their teachers, are freely admitted. Artists and students from the school of design occasionally resort to the museum and library for aid in the exercise of their beautiful art.

The library, which is maintained for reference exclusively, and is free to all applicants, contains 23,000 volumes.

The society has published eight octavo and seven quarto volumes, entitled "Journal of the Academy of Natural Sciences in Philadelphia," and twenty-four octavo volumes entitled "Proceedings of the Academy of Natural Sciences in Philadelphia." These volumes average 400 pages each. By means of its publications the academy is in correspondence with two hundred kindred societies in different parts of the world.

Through the Jessup fund, held in trust for the purpose, the academy enables young persons to qualify themselves to engage in original researches in natural science.

The income from all sources during the year 1872 was $6,600, and the expenditures about the same amount. This may be assumed as about the average annual cost of conducting the institution.

MORAVIAN SEMINARY FOR YOUNG LADIES.

This institution was founded in 1749 as a church boarding-school; and in 1785 was reorganized with power to receive pupils from other denominations. Under the Moravian system, no degrees or diplomas are conferred, but certificates of character and scholarship are furnished.

ALLENTOWN FEMALE COLLEGE.

This college is conducted under the auspices of the Reformed Church. It embraces three departments—primary, academic, and collegiate.

HOLLIDAYSBURGH SEMINARY.

This institution is for the instruction of young ladies. The full course occupies four years.

BROOKE HALL FEMALE SEMINARY.

This institution was organized under the auspices of Bishop Potter, of Pennsylvania. The course of study embraces classical, literary, and scientific departments. There is also a department of music and art.

WILSON COLLEGE.

This is an institution for the education of young ladies. Its charter gives full collegiate powers and privileges. Special advantages are offered in the department of music and fine arts.

SWARTHMORE COLLEGE.

This institution is under the care of the society of Friends. The college embraces a collegiate department, a scientific department, and a preparatory school, and is open to both sexes.

WESTMINSTER COLLEGE.

This institution is under the care of the Presbyterian Church, and is open to both sexes. It embraces three departments—collegiate, scientific, and preparatory.

LEBANON VALLEY COLLEGE.

This college is open to both sexes, and embraces a classical department, a ladies' department, a scientific department, and a commercial department.

THEOLOGICAL SEMINARY OF THE EVANGELICAL LUTHERAN CHURCH.

The course of study extends through three years. The doctrinal system taught is that of the Lutheran Church. The number of graduates in 1872 was 9.

THEOLOGICAL SEMINARY, GETTYSBURGH.

This institution is conducted in the interests and under the care of the Evangelical Lutheran Church, though students of all Christian denominations are received. The course of study occupies three years. There were 11 graduates in 1871.

JEFFERSON MEDICAL COLLEGE.

The graduates of this college in 1872 numbered 114. Total number of graduates since organization, 6,052. Philadelphia offers superior facilities for clinical instruction, which is given at the various hospitals throughout the year.

PENNSYLVANIA COLLEGE OF DENTAL SURGERY.

The museum of this college is not surpassed by any dental museum in the country; and the faculty consider that "the facilities afforded for the acquisition of a complete theoretical and practical dental education stand unrivaled." The number of graduates last year was 29.

PHILADELPHIA DENTAL COLLEGE.

Candidates for graduation "must have had two years' private tuition, and have attended two full courses of lectures in a dental or medical college, one of which shall have been in this institution." Degrees are otherwise conferred under certain conditions. The number of graduates in 1872 was 32.

PENNSYLVANIA INSTITUTION FOR THE DEAF AND DUMB.

The report for 1871 states that "at no time since the foundation of the institution was the number of pupils as large as it is at present."

An earnest effort was made by the directors to ascertain the number of deaf-mutes in the city of Philadelphia between the ages of 6 and 12 years, with the design of establishing one or more day schools. Every leading paper in the city called attention to the subject, and requested the parents of such children to communicate with the directors. Only four communications were received.

The success thus far in teaching articulation has been sufficiently encouraging to lead to the recommendation that this be made a permanent feature of the institution. The number in this class is 25.

Shoemaking and tailoring are the trades taught. The directors have not thought it advisable to introduce any others. Sixty-nine boys have been employed at these trades with satisfactory results during the year.

Pupils are not received under 10 years of age. The term allowed in the institution is six years. Of the 49 pupils dismissed during the year 30 had completed the full term.

In February, 1871, the institution celebrated its semi-centennial anniversary. More than 300 persons educated in the institution assembled on this occasion.

PENNSYLVANIA INSTITUTION FOR THE INSTRUCTION OF THE BLIND.

The number of blind persons in the institution December, 1871, including assistant teachers and inmates of the "industrial home," was 183, of whom 103 are males and 80 females. Of this number 28 (including 18 in the home) support themselves wholly or in part as instructors, or in the industrial department; 3 are paying pupils in full; 7

in part. Over 50 of the former pupils of this institution have been, or are now, engaged as instructors in literature or music.

The branches of instruction have been generally the same as taught for several years past. The manufacturing department is, as usual, in vigorous operation. The principal remarks that, "as so large a number of the blind must hereafter depend upon the work of their hands in skilled labor, this part of their education can hardly be overestimated. The three departments of literature, music, and mechanical training are co-essential, and should be so considered in the organization of every institution for the blind." A number of the females learn cane-seating, and to operate on sewing-machines. The principal refers to the need of some provision in the shape of workshops for the blind, after their separation from the institution, and quotes the example of the London Association for Promoting the General Welfare of the Blind.

Reference is made in the report to the style of printing for the blind, which unites the capitals with the Boston system. The advantages claimed for the "combined system" are admitted, but the objection is made that it obliges the finger to distinguish 52 letters instead of 26, and defeats the hope of a simple, uniform print for adoption throughout this country.

The accommodations for pupils are entirely occupied and insufficient for all the purposes of instruction. Many applicants are still waiting admission. It is many years since any material additions were made to the buildings, and in that time the blind population has nearly doubled.

HOUSE OF REFUGE.

The board of managers make their forty-fourth annual report. On the 1st of January, 1871, there were in the white department 408 inmates; in the colored department, 139; total, 547. Received during the year, 263 whites and 53 colored. Discharged during the same period, 268 white and 73 colored. Remaining, January 1, 1872, in the white department, 337 boys and 66 girls; total, 403; and in the colored department, 81 boys and 38 girls; total, 119. Whole number white and colored, 522. Average age in the white department, boys 14⅓ years, girls 15 years; in the colored department, boys 12½ years, girls 13⅙ years.

Letters received from persons to whom former inmates have been indentured show that the reformation in many cases is assured. The managers consider that "the success that has attended these reformatory schools has amply repaid all the expense and anxiety attendant on their management." The subject of having a school-ship, similar to those in Massachusetts, has been presented to the board, but no action has been taken. It is regarded as a subject of much importance and will be carefully considered.

JOHN SMITH RICHARDS.—OBITUARY.

John Smith Richards died in Reading, August 26, 1872.

He was born in Robeson Township, Berks County, February 8, 1815; enjoyed but meager advantages for schooling, the highest and last opportunity being a year at the old Reading Academy, at the age of 15. But from his childhood he was a diligent reader, and by keeping a daily record of his boyish occupations he learned to use the pen. While tending store and serving as clerk at the iron-works, he studied algebra and geometry without a tutor; studied Latin and law, and was admitted to the bar at the age of 22.

The practice of writing for the newspapers, which he commenced in his boyhood, was continued through life; and for seven years (1838–'45) he edited the Berks and Schuylkill Journal. He was prominent as a lawyer and politician; took a leading part in the temperance movement; and was specially distinguished as the friend of education.

Says the Journal: "Not for half a century or more has any one passed away in Reading who was so widely useful in his day, or whose works will have so marked an influence for good on the rising generations. He was the father of the public-school system in our city, and the leader in every educational, literary, and progressive enterprise."

For twenty-five years he had been closely identified with the schools of Reading; and at a time when the system of popular education met with the most powerful opposition, he stood side by side, in its defense, with such men as Thomas H. Burrows and Thaddeus Stevens. May the youth who enjoy the benefits of his labors emulate his diligence in the improvement of their greater opportunities.

WILLIAM J. HAMILTON.—OBITUARY.

Lieutenant William J. Hamilton died at his home in Bristol, February, 1872. For a short time he was assistant professor of mathematics and military tactics in Cornell University, and won the respect of all who knew him there by thoroughness in instruction and gentlemanly bearing.

WILLIAM HENRY HUNTER.—OBITUARY.

William Henry Hunter, A. M., principal of the Vaughan grammar school, Philadelphia, died July 5, 1872.

He was born in Columbia, Lancaster County, April 12, 1824; entered the Central High School, Philadelphia, January, 1840; graduated December, 1843; adopted teaching as his profession, and was several years preceptor of the academy at Leesburgh, Virginia; returning to Philadelphia, he was elected principal of the public school in Roxborough; in March, 1851, he became principal of the Vaughan grammar school, which position he filled with marked energy and skill till his death.

"Formed by nature for a teacher, and liberally educated for the profession, he carried into the workings of his every-day life the patient investigation, thorough analysis, and attractive power of illustration which rendered him so successful in his art, and which has placed his name in the foremost rank of the public instructors of his day." He fitted about four hundred pupils for the high school, and was "one of the most faithful, energetic, and successful teachers of our city."

JOHN G. MOORE.—OBITUARY.

John G. Moore, principal of Hallowell Seminary, died of consumption at his residence in Philadelphia, April 18, 1872.

He was born in Chester County, February 2, 1834, and followed teaching from his youth; was among the first who entered the normal school at Millersville, where he graduated with high honor in 1858; married Miss E. McV. Budd, a teacher in the school, and settled in Philadelphia as first assistant in the Friends' High School; after some ten years, became principal, in connection with Mr. George Eastburn, of Hallowell Seminary, which was in a highly flourishing condition at the time of his death.

Mr. Moore was one of the most regular and valued contributors to the Pennsylvania School Journal; a skillful teacher, but excelled pre-eminently as a lecturer on scientific subjects. "He forgot himself in the interests of science, and toward the close of his life seemed willing to barter all his remaining strength for a new fact or a new truth."

SAMUEL HENRY DICKSON.—OBITUARY.

Samuel Henry Dickson, M. D., LL. D., professor of the practice of medicine in Jefferson Medical College, died of abdominal tumor, in Philadelphia, March 31, 1872. He was born in Charleston, South Carolina, of Scotch-Irish parents, September 20, 1798; graduated at Yale College 1814; studied medicine with Dr. Prioleau, of Charleston, and graduated Doctor of Medicine at the University of Pennsylvania 1819; took charge of the yellow fever and marine hospitals in Charleston; commenced lecturing in 1822; founded the State Medical College, in which he occupied the chair of institutes and practice of medicine, 1824; was called to the same position in the University of New York 1847; returned to medical college of South Carolina, where he received an ovation from the citizens of Charleston, 1850; resigned in 1858 to accept the position in Jefferson Medical College which he occupied until his death.

Dr. Dickson stood in the front rank of his profession. He was an acute philosophical thinker, and an accomplished writer. Prominent among his published works are "Elements of Medicine," "Essays on Life, Sleep, Pain, and Death," and "Studies in Pathology and Therapeutics."

As a man he was cheerful, genial, friendly to all, of poetical temperament and the most courteous manners.

ANN PRESTON.—OBITUARY.

Ann Preston, M. D., dean and professor of physiology and hygiene in the Woman's Medical College of Pennsylvania, died of heart disease April 19, 1872.

She was born in Chester County, Pennsylvania, 1813, and was one of the earliest graduates of the Woman's Medical College of Pennsylvania. No other individual has been more thoroughly identified with that institution, or done so much toward its permanent establishment and improvement. Probably no woman in this country, certainly none in Philadelphia, has done so much toward securing for woman the advantage of thorough medical education, and the privilege of practicing that profession.

In personal character Miss Preston was one of the gentlest of women, attaching to herself all around her with warm affection. Her lectures were characterized by excellent judgment, industrious research, and admirable clearness of expression.

As a writer she displayed uncommon power on several important occasions, especially in controversies growing out of the prejudice among medical men against the entrance of women into the profession. Calm, refined, and dignified, while thoroughly earnest in her convictions, some of her communications to the press on this subject were models of controversial writing, and to none of them was there ever sent an effectual reply.

JOHN F. FRASER.—OBITUARY.

John F. Fraser, LL. D., died at Philadelphia October 12, 1872. Professor Fraser had filled the chair of physical science in the University of Pennsylvania with signal ability for nearly thirty years. Upon the day after the proceedings at the dedication of the new building devoted to the arts and sciences, he was stricken down with heart disease while entering his own room at that building.

At a meeting of the faculty, Professor Allen, LL. D., one of his co-laborers, spoke of the deceased in the following feeling terms:

"Our deceased colleague," he said, "was undoubtedly one of those men whom we spontaneously recognize as unique. With the liveliest animal spirits, with the keenest enjoyment at the same time of out-of-door activity and of elegant society, he was always, even at the gayest period of his life, an enthusiastic and systematic student. His mind was quick in its action and penetrative beyond example. No man ever mastered a subject more rapidly, or could explain it more clearly or gracefully to others. He had received the most thorough classical training under my learned predecessor, the venerable Dr. Wylie, and did not merely keep up but constantly extended his acquaintance with the Greek and Latin authors. In some departments of French literature he was also a master. As a professor no man ever performed his duties with more alacrity and energy, or with more perfect command of his subjects. His lectures were models. To his colleagues he was a delightful companion and a friend ever ready to oblige. He was one of those who attract and charm by an irresistible fascination. While brilliant in society and chivalrous in his deportment toward women, he attached to himself, in the bonds of solid friendship, many whose acquaintance it was an honor to possess. These he never neglected or forgot, and they will never cease to cherish his memory."

PENNSYLVANIA STATE TEACHERS' ASSOCIATION.

The nineteenth annual sessions of this association were held at the Academy of Music in Philadelphia, on the 20th, 21st, and 22d of August, 1872. The number of names enrolled was nearly eleven hundred—more than had ever attended a previous meeting. The local arrangements for the meeting were very elaborate. But two sessions were held each day, leaving the afternoons for excursions. Of these there were three: one to the Park, one on the Delaware from Philadelphia to Bristol, and one to Long Branch.

These excursions were participated in by the teachers in a body. There was too much to divert the attention to make this a working meeting of the association, and, although many valuable papers were read, there was little time for discussion, or for an earnest grappling with any important question. There was a brief discussion on teachers' certificates, and the subject of the co-education of the sexes in American colleges was also discussed with much ability; the association at the end reversing its action of eighteen years ago, and passing a resolution unanimously approving of the plan.

The addresses given at the opening of the sessions were an address of welcome by Professor F. F. Christine, of Philadelphia; a response by Professor A. R. Harne; and general addresses by Professor J. R. Sypher, Dr. Frank Taylor, and the State superintendent, Hon. J. P. Wickersham. The latter gentleman referred to some historical matters in relation to the association, which, he said, was organized during Christmas week, 1852, at Harrisburgh. The first president was John H. Brown, of the Zane-street grammar school, Philadelphia.

Other addresses were the inaugural, by Hon. Henry Houck, deputy State superintendent; by Hon. A. Mori, minister from Japan; and by Hon. B. G. Northrop, of Connecticut, upon the "Schools of Europe."

Papers were read by Miss Anna B. Bailey, of Bristol, upon "Haps and mishaps;" by President W. C. Cattell, of Lafayette College; by Edward Shippen, esq., of Philadelphia, upon "Compensation of teachers;" by Professor F. A. Allen, of Cransfield, upon "Reform in primary teaching;" by Rev. S. K. Brobst, of Allentown, upon "English and German in the people's schools;" by the Rev. J. K. Loos, of Bethlehem, upon "Religion in our schools;" by Miss F. S. Nash, of Williamsport, a poem, "What hath the angel written?" by Mr. G. H. Davis, of Philadelphia, upon "Sunny teaching;" by President Edward H. Magill, of Swarthmore College, upon the "Co-education of the sexes."

Resolutions were adopted with reference to the centennial exposition, providing for the conference and co-operation, by a committee of the association, with the commissioners of the General Government for the promotion of the objects of the exposition.

Officers elected: President, Edward Gideon, of Philadelphia; secretary, J. P. McCaskey; treasurer, D. S. Burns.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Pennsylvania was the second State in population, having 3,521,951 inhabitants within an area of 46,000 square miles, an average of 76.56 persons to the square mile. This population consisted of 3,456,609 whites, 65,294

colored, 34 Indians, and 14 Chinese. Of these, 2,976,642 were natives of the United States and 545,309 were foreign-born. Of the native residents, 2,684,965 whites, 41,740 colored, and 7 Indians were born within its borders, while of the foreign residents, 160,146 were born in Germany, 69,665 in England, and 235,798 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 725,004 persons attended school, and of these, 18,288 were foreign-born. Of the 717,119 white scholars, 369,674 were males and 347,445 females. Of the 7,880 colored pupils, 4,023 were males and 3,857 females. Four males and 1 female Indian were reported.

Illiteracy.—There were 222,356 inhabitants of all races, of 10 years old and over, unable to write, and of these, 95,553 were foreign-born.

Age and sex of illiterates.—Of the 206,458 white illiterates, 10,688 were from 10 to 15 years old, and of these, 5,735 were males and 4,953 females; 18,159 were from 15 to 21 years old, of whom 8,504 were males and 9,655 females; 177,611 were 21 years old and over, of whom 61,350 were males and 116,261 females. Of the 15,893 colored illiterates, 851 were from 10 to 15 years old, and of these, 401 were males and 450 females; 1,815 were from 15 to 21 years old, and of these, 719 were males and 1,096 females; 13,227 were 21 years old and over, of whom 5,758 were males and 7,469 females. Two male and 3 female Indians were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 14,872, having 19,522 teachers, of whom 8,507 were males and 11,015 females, to educate 811,863 pupils, of whom 428,023 were males and 383,840 females.

Amount and source of educational income.—The total income of all the educational institutions was $9,628,119, of which $539,496 were derived from endowment, $7,187,700 from taxation and public funds, and $1,900,923 from tuition and other sources.

Public schools.—The 14,107 public schools, with 17,118 teachers—7,298 males and 9,820 females—were attended by 745,734 pupils, of whom 393,953 were males and 351,781 females. To educate these they had a total income of $7,292,946, of which $10,000 were derived from endowment, $7,060,111 from taxation and public funds, and $222,835 from tuition and other sources.

Colleges.—The 33 colleges, with 349 teachers—249 male and 100 female—were attended by 4,897 pupils, of whom 3,597 were males and 1,300 females. They had a total income of $733,933, of which $307,010 were derived from endowment, $17,500 from taxation and public funds, and $409,423 from tuition and other sources.

Academies.—The 138 academies, with 576 teachers, of whom 313 were males and 263 females, had an attendance of 10,987 pupils—6,010 males and 4,977 females—and a total income of $410,017, of which $8,600 were derived from endowment, $7,745 from taxation and public funds, and $393,672 from tuition and other sources.

Private schools.—The 400 day and boarding schools had 672 teachers—246 male and 426 female—and were attended by 16,100 pupils, of whom 7,720 were males and 8,380 females. They had a total income of $385,057, of which $33,749 were derived from endowment, $12,000 from taxation and public funds, and $339,308 from tuition and other sources.

Libraries.—There were 4,966 public libraries, with 3,049,247 volumes; also 9,883 private libraries, having 3,328,598 volumes; making in all, 14,849 libraries, containing 6,377,845 volumes.

The press.—The 540 periodicals had an aggregate circulation of 3,419,765 copies, and an aggregate annual issue of 241,170,540 copies.

Churches.—Of the 5,984 church organizations, 5,668 had edifices with 2,332,288 sittings, and the church property was valued at $52,758,384.

Pauperism.—Of the 8,796 paupers, 4,354 were native whites, 468 native colored, and 3,974 foreigners.

Crime.—Of 3,231 persons in prison June 1, 1870, 2,088 were native whites, 444 native colored, and 699 foreign-born. Three thousand three hundred and twenty-seven persons were convicted during the year.

Age and sex of population.—Of the total population, 1,076,040 were from 5 to 18 years old, of whom 540,133 were males and 535,907 females; 2,597,809 were 10 years old and over, of whom 1,292,518 were males and 1,305,291 females.

Occupations.—There were 1,020,544 persons of these ages engaged in various occupations, of whom 886,209 were males and 134,335 females. Two hundred and sixty thousand and fifty-one persons were engaged in agricultural pursuits, of whom 258,772 were males and 1,279 females; 283,000 in personal and professional services, of whom 192,674 were males and 90,326 females; 121,253 in trade and transportation, of whom 116,714 were males and 4,539 females; 356,240 persons were engaged in manufactures and mechanical and mining industries, of whom 318,049 were males and 38,191 females.

Age and sex of working population.—Of the 1,020,544 employed persons, 38,987 were from 10 to 15 years old, of whom 29,347 were males and 9,640 females; 926,699 were from 16 to 59 years old, and of these, 804,756 were males and 121,943 females; 54,858 were 60 years old and over, of whom 52,106 were males and 2,752 females.

SCHOOL OFFICIALS.

Hon. J. P. WICKERSHAM, *State superintendent of common schools, Harrisburgh.*

COUNTY SUPERINTENDENTS.

RHODE ISLAND.

[From report of Hon. Thomas W. Bicknell, State superintendent of instruction, for the scholastic year ended April 30, 1871.]

SCHOOL FUND.

Amount of State appropriations	$90,000 00
Amount of town appropriations	315,348 34
Amount from registry taxes and other sources	36,363 19
Amount of district taxes	58,951 66
Amount of balance unexpended last year	13,377 32
Total receipts for the year	514,040 51

EXPENDITURES.

Amount expended for teachers, &c	$312,325 73
Amount expended for school-houses, &c	148,834 68
Total expenditures	461,160 41

APPROPRIATIONS FOR 1871–'72.

State appropriation for public schools	$90,000 00
State appropriation for State normal school	10,000 00
State appropriation for mileage to State normal school	1,500 00
State appropriation for teachers' institutes	500 00
State appropriation for lectures, &c	500 00
State appropriation for Rhode Island Schoolmaster	300 00
Town appropriations for public schools	259,801 63

ATTENDANCE OF PUPILS.

Number of children in the State under 15 years of age	64,930
Estimated number between 5 and 15 years of age	42,000
Number of pupils registered in summer schools	26,447
Number of pupils registered in winter schools	28,396
Average attendance at summer schools	21,821
Increase over last year	1,773
Average attendance at winter schools	23,150
Increase over last year	715
Per cent. of children between 5 and 15 registered in summer	63
Per cent. of children between 5 and 15 registered in winter	69
Per cent. of attendance on total school population	53
Per cent. of attendance on number registered in summer	82
Per cent. of attendance on number registered in winter	85
Estimated number of pupils in private and Catholic schools	7,500
Estimated number instructed at home or detained as invalids	1,000
Estimated number at public and private schools or instructed at home	38,000
Estimated number not attending school, about	4,000
Estimated percentage of school population under instruction	90

Estimated percentage of school population not under instruction, 10, or one child in every ten between 5 and 15 years of age.

TEACHERS AND TEACHERS' PAY.

Summer schools.

Number of male teachers	92
Number of female teachers	603
Total number of teachers	695
Increase over last year	44
Average pay per month, including board	$32 52

Winter schools.

Number of male teachers	169
Number of female teachers	552
Total number of teachers	721
Increase over last year	19
Average pay per month, including board	$38 24

NUMBER OF SCHOOLS.

Number of summer schools	682
Increase over last year	99
Number of winter schools	719
Increase over last year	84
Whole number of schools	1,401
Average duration of schools	34 weeks.

EDUCATIONAL PROGRESS.

	1844.	1870.
Total receipts	$53,014 57	$514,040 51
Total expenditures	53,741 23	461,160 41
Number of districts	359	423
Number of schools	428	1,401
Number of teachers	515	1,416
Number of pupils	22,156	29,500

SCHOOL LAW.

The school laws have passed a careful revision by the general assembly. The section relating to State appropriations has been so amended as to provide that no town shall receive any part of the State appropriation for public schools, unless it shall raise by tax a sum equal to the amount to which it is entitled from the State treasury. By the former law each town was required to raise a sum equal to one-half the amount received from the State appropriation. Towns are now required to elect a school superintendent; by the former law they were simply authorized to do so. The law relating to truant children and absentees from school is wholly ineffective, inasmuch as no penalty follows a neglect to fulfill its requirements. Not a city or town in the State has taken action as authorized and required by law. It is recommended that sufficient penalties be attached to secure the enforcement of the law, or that it be wholly revoked, as it is now practically null and void.

TEACHERS' INSTITUTES.

Successful institutes of instruction have been held during the year at Providence, Chepachet, Kingston, and Central Falls. Local institutes have also been held in various places. The annual institute held at Providence in January was the largest and most spirited meeting of teachers ever held in the State. For one day the public schools of Providence were open for examination by teachers and school officers from others parts of the State. An educational mass-meeting was attended by over two thousand people, who were addressed by Governor Padelford, the mayor of Providence, Hon. Joseph White, of Massachusetts, and Hon. Warren Johnson, of Maine. Music and select readings added to the interest of the exercises. No better work to advance the interests of common schools in Rhode Island has been done than was accomplished by the various exercises of this institute.

TEACHERS' ASSOCIATIONS.

Associations of teachers have been formed, and regular meetings have been held during the year, in ten towns, and teachers' meetings have been held in nearly every town in the State, at intervals not exceeding two or three months. With the interest in this matter manifested by school officers and teachers, such meetings will soon be held in every town in our State, at least twice in each term. This is one, and not the least encouraging, of the signs of progress.

THE RHODE ISLAND SCHOOLMASTER.

This journal continues to do a good work for the cause of education in our State. The number of its readers has never been larger than at present, nor its pages more practically valuable. Nearly all its articles are from the pens of our own teachers. An appropriation of $300 is made by the State for its support. The subscriptions from other States, even as far distant as the Pacific coast, are gratifying evidence of its success.

RHODE ISLAND EDUCATIONAL UNION.

The object of this association is to aid in supplementing the work of public instruction through the agency of evening schools, libraries, and reading-rooms. By these and kindred means, it was thought something might be done for the 15,000 in the State beyond the school-age, 10,000 of whom can not read. The hope with which the union was originated has been in a large measure realized. There is a steady increase in the attendance at evening schools and reading-rooms, and an extending appreciation of their utility. Originally commenced, in many cases, by the voluntary services and subscriptions of individuals, they are gradually winning the public support. Several towns have fully adopted them, some appropriate in part for their maintenance, and others purpose to ingraft them into their system of public instruction.

The manufacturers of Woonsocket have this year united in closing their mills so early as to allow those in their employ to avail themselves of evening schools, lectures, &c. Liberal provision is made in many of our villages for reading-rooms, libraries, and evening schools, and in some cases this is done by manufacturing companies. The Lonsdale Company have, during the past year, completed a large building containing a reading-room, library, and a lecture-hall capable of seating 1,000 persons. A. & W. Sprague have erected at Central Falls a fine edifice 100 by 40 feet, with an L 40 by 50, for educational purposes. Hazard & Sons have made the same provision for Peacedale. Others, who can not be mentioned, have been equally liberal. With such facilities for self-culture well established and capable of indefinite expansion, (as lately, for example, into a "polytechnic" school in Providence,) incalculable benefits must, in a few years, result not only to the individual but to the State.

EVENING SCHOOLS.

The evening school must, for a time, supplement the common-school system, and is a necessity for that large portion of our minor population who are entirely deprived of the privileges of the day school. Many can neither read nor write on their admission. Others are young men and women who have already gained the rudiments of an English education, and are desirous of making larger acquisitions of knowledge.

The following statistics from evening schools, which have been successfully sustained, will be read with interest. They are taken from the reports of seven towns, including Providence. The average number of pupils was 103; average age of pupils, 16; average duration of school, 15 weeks; average length of sessions, 2 hours; average salary of male teachers, $9.50 per week; average salary of female teachers, $3.50 per week; average cost per pupil, $2.92. In one town the services of teachers are gratuitous, and in Providence, which is not included in the above statement of salaries, the payment is $2 a night for principals, and $1 a night for assistants, male or female. In all these schools, with the exception of Providence, the pupils are factory operatives. These schools are uniformly pronounced a success, and their reports are highly encouraging

DRAWING IN PUBLIC SCHOOLS.

"In my last annual report I referred to the importance of technical education in a State dependent, as ours, upon the value of its skilled labor. The first step toward improvement is the introduction of elementary drawing in our schools. As an initial movement, our teachers must become qualified to lead in instruction, and hence the pupils in the normal school have received a limited number of lessons in free drawing."

WOMEN AS SCHOOL OFFICERS.

"I am fully satisfied that it is wise to appoint women of talent, public spirit, and business tact, as school officers. In the town of Tiverton, the school board, during the past year, has been wholly composed of women, and it is the uniform testimony of the people of that town, that in no previous year has so much time and labor been devoted to the advancement of the interests of the schools. I trust that the public confidence will be shown by the appointment of women to fill a portion of the places upon the school boards at all subsequent elections."

ILLITERACY IN RHODE ISLAND.

Notwithstanding the great facilities for the diffusion of knowledge, and the increased interest of our people in the cause of education, we are compelled to admit the fact that illiteracy is on the increase in the State. The number of persons over 21 years of age who can neither read nor write, as given by the census of 1870, is nearly five times greater than that given in the census of 1850. In 1850 the number was 3,607, in 1870 it was 16,786; and the minor illiterate population, from 10 to 21 years,

is 5,115, making the total of illiterate population, over 10 years of age, 21,901. The source of this mass of ignorance is shown by the fact that, of this 21,901, 17,477 are of foreign-birth.

These statements only show the alarming aggregate of the illiterate population of Rhode Island. We have no statistics to show the influence of such a population upon the present history and future prosperity of our State. The intimate relations of ignorance to crime appear by reference to the records of public courts, jails, the State farm, and the State prison. Ignorance and idleness produce the evils from which we now suffer; education and labor will banish them.

Among the remedies for illiteracy are the enforcement of a law which shall not allow a child under twelve years of age to be employed in a manufacturing establishment; also, the enforcement of a law requiring children so employed to attend school at least five months in each year; a truant and vagrant law, by which every child between the ages of 6 and 16 years not attending any school, or without any regular and lawful occupation, may be committed to some suitable institution, or bound as an apprentice to some good home, for the purpose of gaining the rudiments of an education and of learning some useful trade; the establishment of evening schools in every town; and a constitutional enactment which shall restrict the franchise to those who can read and write.

PROVIDENCE.

[From report of Rev. Daniel Leach, superintendent of city schools.]

SCHOOL BUILDINGS.

The city has in use at present thirty-six school buildings, two of which are hired. Some of these buildings are equal to the best in New England. Others, however, are badly lighted, poorly ventilated, and neither pleasant nor convenient. The accommodations of the high school are by no means creditable to the city. Larger and better school accommodations are imperatively needed. The value of the school estates owned by the city is estimated at $1,000,000. The aggregate annual expenditure for the schools is nearly $170,000, about $140,000 of which are required to pay the salaries of teachers.

SCHOOL TERMS.

The school committee consider that, as a whole, the public schools are in a very satisfactory condition. By the present arrangement, the school year of 42 weeks is divided into four terms: three of 10 weeks each, and one of 12 weeks. Under this plan it becomes necessary to carry the fourth term considerably into July, a step which does not meet entire approval. The proper length of the school year and its rightful division into terms constitute a problem difficult to solve.

BRANCHES OF STUDY.

Drawing has been made an established study in the intermediate and grammar schools, and most commendable progress has been made during the year.

In the department of musical instruction, the former faulty manner of teaching has given way to a systematized method. By this change, together with a regular daily drill on the part of the pupils, the most satisfactory results have been produced. Pupils in all the grades are now taught not only to sing, but to read and write music.

TRUANCY.

It is stated that while the percentage of truants is not so large as in some New England cities, it is altogether too large, and is increasing. The committee are of opinion that the legislation which has been had upon this subject is well calculated to meet the evil, and that if a place of detention—a house of industry—were provided, the law would prove an effective means of restraint. An industrial school is needed, and it is a question whether there shall be such an institution, or whether the accommodations of reform schools and prisons shall be enlarged to meet the demand that is sure to be made.

EVENING SCHOOLS.

These schools were held for a term of twenty weeks. The number of pupils registered was 2,195, an increase of 534 over last year. In connection with the evening schools a polytechnic school was opened. The interest evinced testified to the need that had been felt for this kind of instruction. The committee are fully convinced that the time has come for the establishment of an evening high school, thus supplying the intermediate link between the lowest and highest grade of evening schools. Singing exercises were introduced in two of the schools, and in each instance the influence was marked and beneficial.

NEWPORT.

[From report of Professor A. D. Small, superintendent of city schools.]

PUBLIC SCHOOLS.

The general condition of the schools is very satisfactory. The tables of attendance show a healthy condition in this respect; and it is considered worthy of note that out of the whole number of pupils, only one hundred and twelve have been sent to the office for discipline; and of these but forty-five have come the second time. The number of really bad boys is remarkably small, and the authority of the teachers well recognized.

TRUANCY.

The passage of a comprehensive and specific law with regard to truancy is urged; also, the establishment of a reformatory school for habitual truants. The unfavorable action of the general assembly upon this matter is much regretted.

EVENING HIGH SCHOOL.

The evening school continues to do an excellent work, yet it does not fully meet the wants for free evening instruction. There is a large class who have already attended the day school, and who are prepared for more advanced studies than are usually taught in the evening school. For these an evening high school should be established. An experiment of this kind was made in the spring. The season was unfavorable, but the attendance (averaging fifty-eight) proved conclusively the demand existing for schools of this character.

HIGH-SCHOOL ENDOWMENT.

The late William Sanford Rogers, of Boston, has left $100,000 to the city of Newport, in trust, for the endowment of a high school. Detailed information concerning the bequest has not yet been communicated to the committee.

STATE NORMAL SCHOOL.

The State Normal School was opened September 6, 1871. The report of the trustees and the semi-annual report of the principal show its successful operation, and the wisdom of its establishment. Its indirect benefits are already seen and felt in the improved tone and spirit of many of our schools. An appropriation of $1,500 was made by the general assembly to aid in defraying the traveling expenses of pupils residing out of the city of Providence. The trustees recommend a renewal for the coming year of the appropriation of $10,000 for the work of the school, together with that of $1,500 to aid in defraying the traveling expenses of pupils. Lessons in drawing were given during the winter, with the view of preparing the pupils to teach the elements of that branch. The number of graduates in 1872 was 24.

BROWN UNIVERSITY.

The whole number of applications for admission during the year was 77; admissions, 69. Of those admitted, the ratio for the four years' course is 87 per cent.; a larger number than usual. This is considered as affording gratifying evidence, on the part of the public, of a desire for complete education.

Departments of practical science have been established, in which provision has been made for courses of instruction in such branches as are related to agriculture and the mechanic arts. This provision has been made in accordance with resolutions of the general assembly, assigning the congressional grant of land for the establishment of an agricultural college to Brown University.

SCHOLARSHIPS.

The fund of $50,000 which accrues from this grant is, by agreement on the part of the university, devoted to the education "of scholars, each at the rate of $100 per annum, to the extent of the entire annual income." Appointments to these scholarships are made by the governor and secretary of state, on the nomination of the general assembly. There are now 52 scholarships established for the aid of indigent students, to the amount of $60 each per annum. In consideration of the advance in the price of tuition, two years ago, from $50 to $75 per annum, the corporation gave to the faculty discre-

tionary power to make a reduction of $25 per annum on the tuition of indigent students, to a number not exceeding two-fifths of the whole number in college. Under this provision relief has been extended to 67 students.

The endowment fund of the university amounts to $602,653.73. The museum of natural history has received large additions during the year, and now comprises 19,250 specimens. Contributions amounting to $5,450 have been received in aid of this museum.

PROVIDENCE REFORM SCHOOL.

The whole number of inmates since organization has been 2,638. The average number of months in the institution of those discharged during the year is, boys, 13.7; girls, 28.3. The largest number of commitments during the year was for theft. The expenditure for the year amounts to $42,948.04, and the earnings of the children in the labor department to $19,271.36. More apparent good has resulted from the work in the boys' school than ever before. The girls' school has been less satisfactory. The report of the trustees states that the general condition of the institution is entirely gratifying, and its prospects of usefulness in the future highly encouraging.

SCHOLFIELD'S COMMERCIAL COLLEGE.

A feature of this institution is that book-keeping is never taught in class. Each student receives separate personal instruction adapted to his mental constitution and proficiency. The system upon which the college is conducted allows pupils to enter at any time.

ALBERT A. GAMWELL.—OBITUARY.

Albert A. Gamwell, principal of the Fountain-street grammar school, Providence, died of typhoid pneumonia December 18, 1871. He was born in Peru, Massachusetts, October 29, 1816; graduate of Brown University 1847; immediately after became principal of the Fountain-street grammar school, (since called Federal street, and lately the Hughes school,) where he labored with great fidelity and success till his death.

"A farmer's son, among the hills of Berkshire, he faithfully improved the advantages offered by the common school, and prepared for college at the Connecticut Literary Institution at Suffield. He was remarkable throughout life for patient, untiring industry; methodical in the employment of his time, both at school and at home; frugal in his habits, and moderate in his desires, never sacrificing substantial comfort for fashion and empty show. As a teacher he was quiet and unpretending, but thorough, teaching principles and not theories or text-books. He loved honesty and truthfulness; he despised vanity and deceit. Hence the usual quarterly examinations were with him genuine examinations, and not exhibitions specially prepared for the occasion. He did not approve the introduction of so many general exercises, believing in the old-fashioned way of studying and reciting all lessons in the school-room and within school hours, leaving the rest of the time for work and play. He had a profound reverence for religion and religious institutions, and lived and died in the Christian faith.

REV. T. A. CRANE.—OBITUARY.

The Rev. T. A. Crane, D. D., rector of St. Luke's Church, East Greenwich, Rhode Island, entered Brown University in 1823, supporting himself for the most part during his college course by his own exertions, and taking high rank as a scholar. After his graduation he was appointed to the office of a tutor in the university, which he he held for four years. In 1839 he was elected to the presidency of Kemper College, and after two years of hard labor, prosecuted in defiance of peculiar difficulties and embarrassments, he resigned his office and returned to the rank of the Christian ministry as a pastor. During his residence in Saint Louis he delivered the annual address before the medical society of the college, which was printed. The last thirty years of his life were passed in Rhode Island, and the interest that Dr. Crane had always felt in the cause of education was manifested here by the oversight that he took of our public schools, and his frequent valuable contributions to our educational journals. An accurate scholar himself, he appreciated fully the great importance of laying broad and deep foundations as the basis of all effective training, and his influence in this respect will be long felt in our community.

RHODE ISLAND INSTITUTE OF INSTRUCTION.

The exercises of the twenty-seventh annual meeting of this institution were held in Providence, commencing on the morning of the 18th of January, by visits of the members to the normal and high schools, the normal school being the special scene of

attraction, where classes in various branches were taught in the usual manner, as illustrations of the method of teaching these branches.

In the afternoon the primary, intermediate, and grammar schools were visited, and exercises similar to those of the quarterly examinations were witnessed. In the evening a most pleasant reunion of the teachers was held in the Roger Williams Hall.

On the morning of the 19th, the president, Mr. A. J. Manchester, referring to the social exercises of the preceding day, as having well replaced the usual introductory addresses, proceeded at once to the business of the day, introducing Mr. A. D. Small, superintendent of schools of Newport, who read a paper on "Practical education." He said, in answer to the question "What is practical?" there were three requisites: books, health, and religion. Under these heads, he spoke of the importance of good reading, which must be impressed upon the scholar by teacher or parent; of the necessity of health, and a better appreciation of the means of physical conservation; and the desirableness of religious instruction, which should not be sectarian, but should teach by pointing out examples of the good and the bad.

The discussion which followed was confined to the approval of the excellences of the paper, and was participated in by Mr. Merrick Lyon, Rev. E. M. Stone, Professor O. H. Kile, and Rev. Mr. Holman.

Mr. D. W. Hoyt, of the Providence high school, read an essay on "The cultivation of the memory." The paper was discussed by Mr. William A. Mowry, Professor Bancroft, Professor J. C. Eastman, and Mr. J. F. Cady.

In the afternoon a class exercise was given by the pupils of the State Normal School in reading, conducted by Mrs. M. H. Miller.

Professor J. C. Greenough, principal of the State Normal School, then read a paper on "a course of study," which, he said, "is a means to an end;" and in order to understand what means to employ to secure an end, the end itself must be clearly understood. In this country no teacher can predict what will be the life-work of his pupils, and therefore can not give special training for an employment. One of the defects of our system is a failure to develop pupils with elementary instruction, before attempting to teach them scientific truth.

Joshua Bates, esq., head-master of the Brimmer school, Boston, read a paper on "The manners and morals of school-rooms."

A mass-meeting of the institute was held in the evening at Music Hall, with exercises varied, high-toned, and enthusiastic, among which were music and addresses by Governor Padelford, Mayor Doyle, Commissioner Bicknell, and others. The commissioner stated that the State had, during the past year, appropriated $500,000 for public education; that 80 per cent. of the school population was in the public schools; and that a first-class normal school had been established and was in successful operation. Thirty-four weeks of school are now secured in every town in the State annually. The objects urged by the commissioner as necessary were, a higher public sentiment, a truant law, a law as to child-operatives, school missionary work, and homes such as are proposed in Newport.

Rev. Daniel Leach, superintendent of public schools in Providence, also made an able address; and Hon. W. P. Sheffield, of Newport, spoke of the relations of the State to the public education of its citizens.

On the closing day, the officers for the ensuing year were elected, as follows: President, Merrick Lyon; recording secretary, G. E. Whittemore; corresponding secretary, D. R. Adams, Centreville; with a list of vice-presidents, directors, &c.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Rhode Island was the thirty-second State in population, having 217,353 inhabitants, within an area of 1,306 square miles, an average of 166.43 persons to the square mile. This population consisted of 212,219 whites, 4,980 colored, and 154 Indians. Of these 161,957 were natives of the United States, and 55,396 were foreign-born. Of the native residents 122,626 white, 2,520 colored, and 123 Indians were born within its borders, while of the foreign residents 1,201 were born in Germany, 9,291 in England, and 31,534 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 34,948 persons attended school, and of these 2,027 were foreign-born. Of the 34,292 white scholars 17,643 were males and 16,649 females. Of the 618 colored pupils 309 were males and 309 females; 22 male and 16 female Indians were also reported.

Illiteracy.—Twenty-one thousand nine hundred and twenty-one inhabitants of all races, 10 years old and over, were unable to write, and of these 17,477 were foreign-born.

Age and sex of illiterates.—Of the 21,031 white illiterates 2,484 were from 10 to 15 years old, and of these 1,289 were males and 1,195 females; 2,473 were from 15 to 21 years old, of whom 1,090 were males and 1,383 females; 16,074 were 21 years old and over, of whom 5,922 were males and 10,152 females. Of the 870 colored illiterates 46 were from 10 to 15 years old, and of these 26 were males and 20 females; 112 were from 15 to 21 years

old, and of these 63 were males and 49 females; 712 were 21 years old and over, of whom 291 were males and 421 females; 6 male and 14 female Indians were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 561, having 951 teachers, of whom 237 were males and 714 females, to educate their 32,596 pupils, of whom 15,491 were males and 17,105 females.

Amount and source of educational income.—The total income of all the educational institutions was $565,012, of which $31,535 were derived from endowment, $348,656 from taxation and public funds, and $184,821 from tuition and other sources.

Public schools.—The 487 public schools, with 775 teachers—165 males and 610 females—were attended by 27,250 pupils, of whom 12,736 were males and 14,514 females. To educate these they had a total income of $355,582, of which $1,085 were derived from endowment, $348,656 from taxation and public funds, and $5,841 from tuition and other sources.

College.—The one college, with 11 male teachers, was attended by 203 male pupils, to educate whom it had a total income of $45,150, of which $30,000 were derived from endowment and $15,150 from tuition and other sources.

Academies.—The 2 academies, with 16 teachers, of whom 10 were males and 6 females, had an attendance of 415 pupils—241 males and 174 females—and an income of $20,400, derived from tuition and other sources.

Private schools.—The 63 day and boarding schools had 106 teachers—34 males and 72 females—and were attended by 1,896 pupils, of whom 820 were males and 1,076 females. They had a total income of $119,380, of which $450 were derived from endowment, and $118,930 from tuition and other sources.

Libraries.—There were 334 public libraries, with 309,696 volumes; also, 425 private libraries, with 383,691 volumes; making in all, 759 libraries, with 693,387 volumes.

The press.—The 32 periodicals had an aggregate circulation of 82,050 copies, and an aggregate annual issue of 9,781,500 copies.

Churches.—Of the 295 church organizations, 283 had edifices, with 125,183 sittings, and the church property was valued at $4,117,200.

Pauperism.—Of the 634 paupers, 407 were native whites, 35 native colored, and 192 foreigners.

Crime.—Of 180 persons in prison June 1, 1870, 113 were native whites, 12 native colored, and 55 foreign-born. Two hundred and eight persons were convicted during the year.

Age and sex of population.—Of the total population, 55,775 were from 5 to 18 years old, of whom 27,834 were males and 27,941 females; 173,751 were ten years old and over, of whom 82,824 were males and 90,927 females.

Occupations.—There were 88,574 persons of these ages engaged in various occupations, of whom 66,859 were males and 21,715 females. Eleven thousand seven hundred and eighty persons were engaged in agricultural pursuits, of whom 11,767 were males and 13 females; 19,679 in personal and professional services, of whom 12,349 were males and 7,330 females; 10,108 in trade and transportation, of whom 9,878 were males and 230 females; 47,007 in manufactures and mechanical and mining industries, of whom 32,865 were males and 14,142 females.

Age and sex of working population.—Of the 88,574 employed persons, 5,534 were from 10 to 15 years old, of whom 3,510 were males and 2,024 females; 77,102 persons were from 16 to 59 years old, and of these 58,419 were males and 18,683 females; 5,938 persons were 60 years old and over, of whom 4,930 were males and 1,008 females.

SOUTH CAROLINA.

[From report of Hon. J. K. Jillson, State superintendent of public instruction, for the scholastic year ended June 30, 1872.]

SCHOOL REVENUE.

State school appropriation, (not yet paid)	$300,000 00
Poll-tax, amount reported as collected	36,563 00
Local or school-district taxes, amount reported as collected	75,393 35
Total	411,956 35

SCHOOL EXPENDITURES.

Salaries of teachers	$268,091 67
Building of school-houses	11,505 50
Rent of school-houses	2,854 13
Total	282,451 30

The foregoing is not a complete exhibit of school expenditures for the scholastic year. Five counties made no returns of the total amount of salaries paid to teachers; and quite a number of school-houses have been erected during the year, concerning the cost of which the returns are either incomplete or entirely wanting.

The amount required for the support of the school system for the year 1872–'73 is estimated at $600,000.

ATTENDANCE.

Local school age	6–16
White children of school age, (males 40,956, females 41,240)	82,196
Colored children of school age, (males 58,776, females 56,207)	114,983
Total scholastic population	197,179
White children enrolled in school, (males 19,446, females 18,241)	37,687
Colored children enrolled in school, (males 19,428, females 19,207)	38,635
Whole number enrolled in school	76,322
Increase over last year	10,266

TEACHERS AND TEACHERS' PAY.

Northern white teachers, (males 13, females 40)	53
Southern white teachers, (males 988, females 646)	1,634
Northern colored teachers, (males 16, females 6)	22
Southern colored teachers, (males 346, females 130)	476
Whole number of teachers employed, 1872	2,185
Increase over last year	287
Number of teachers holding first-grade certificates	549
Number of teachers holding second-grade certificates	807
Number of teachers holding third-grade certificates	829
Number of State certificates granted during the year	14
Average monthly pay of male teachers	$32 55
Average monthly pay of female teachers	31 25

SCHOOL DISTRICTS AND SCHOOLS.

Number of school districts	462
Number of free common schools, 1872	1,639
Increase over last year	280
Average number of months schools were in session	5

SCHOOL-HOUSES.

Number of school-houses reported as erected during the year: log, 127; frame, 98; brick, 1	226
Cost of school-houses erected during the year*	$11,505 50

* The returns concerning the cost of school-houses erected during the year are very incomplete. It is impossible to estimate their aggregate cost.

Number of school-houses previously erected: log, 950; frame, 679; brick, 15	1,644
Valuation, (returns deficient)	$220,448 00
Condition: good, 707; fair, 460; bad, 477.	
Number with grounds inclosed	178
Whole number of school-houses in the State	1,870
Number owned by school districts	239

There are in the city of Charleston four good brick school-houses, valued at $100,000. They are public property, and are included in the foregoing statement.

CONDITION OF THE SCHOOL SYSTEM.

The superintendent remarks that "While something has been accomplished during the year in educational matters, yet it is a source of anxiety and regret to every well-wisher of the cause that so little has been done. The bankrupt condition of the State's exchequer has been most disastrous in its effect upon the common schools. Not one dollar of the State school appropriation of $300,000, for the fiscal year ended October 31, 1872, has yet been disbursed from the State treasury, and this in the face of the fact that $1,044,000 were collected on account of taxes for the said fiscal year.

"Public confidence has been betrayed and destroyed, school teachers and school officers have been forced to labor without receiving their salaries. The whole system is, in its present condition, a reproach to those who claim to be its friends and advocates. Our free common-school system, efficiently, faithfully, respectably, and successfully administered and applied, can not fail to become popular. The continuance of the present condition of affairs must plunge it into utter ruin and uselessness.

"There are two essentials to the success of the system, namely: 1. Such legislation as will secure liberal and certain school revenues. 2. The election and appointment of none but competent and efficient persons as school officers. Our whole State policy, so far as common education is concerned, has been, from the beginning, narrow and illiberal. While other enterprises and interests have received due attention and proper care, the education of the people has been a matter of the last and least consideration."

The superintendent states that he has visited several counties during the year, and has conversed with the people concerning educational matters. He has observed a growing interest in the cause of free common schools. The universal cause of complaint is that the State has not met its school appropriations.

It is believed that if the school finances were placed on a sound basis, the schools would prosper throughout the State.

SCHOOL FUNDS.

The following legislation is recommended concerning school funds: 1. That the general assembly levy a special State school-tax of two mills on each dollar of taxable property in the State. Such a tax would probably realize a revenue of about $300,000. 2. That it be declared a misdemeanor to appropriate any portion of said tax for any purpose except that of free common schools, with a penalty of not less than $10,000 attached. 3. That it shall be the duty of the State superintendent of education to apportion, as the law specifies, the free-school funds of the State among the several counties thereof only. 4. That it shall be the duty of such county school commissioner to apportion, according to law, the free-school fund of his county among the several school districts thereof. 5. That it shall be the duty of each county treasurer to report monthly the amount of collections made by him for the month, on account of school funds or taxes or poll-tax, which shall be paid on the orders of boards of school-district trustees, countersigned by the county school commissioner.

POLL-TAX.

The superintendent remarks: "There is no good reason why each and every voter in the State should not be willing to pay annually, or be compelled to pay, in case of unwillingness to do so, the small sum of $1, as a consideration of the rights and privileges of citizenship, particularly when the same is to be specially applied to school purposes."

The whole number of votes cast for governor at the last State election was 106,722; the annual amount of poll-tax collected in the State ought to be, therefore, at least $100,000, a very considerable item in the matter of school revenue. Legislation compelling the prompt and complete collection of the poll-tax is strongly urged.

ANNUAL REPORTS OF COUNTY SCHOOL COMMISSIONERS.

These reports constitute the principal source from which the information and material necessary to the preparation of annual State reports are obtained. Much delay, as

well as annoyance, is experienced every year concerning them. Many of them are not only forwarded tardily, but are made out without due regard to completeness and correctness. These reports should be printed with the annual State report; but this will be impracticable, so long as no more care is taken in their preparation.

UNIFORM SYSTEM OF SCHOOL RECORDS.

The general assembly, at its last session, appropriated the sum of $7,000 to defray the expenses of preparing, publishing, and distributing a uniform system of school records. The greater portion of these records has already been prepared and published. When completed and distributed, they will be of great service to school officers and school-teachers in making out the reports and keeping the records required of them by law. This work has been seriously hindered on account of the embarrassed condition of the school finances.

DISTRIBUTION OF TEXT-BOOKS.

School text-books have been distributed from the office of the State superintendent during the year to every county in the State, except two, which made requisitions.

The supply of books has been wholly inadequate to meet the demands, and this circumstance has given rise to much dissatisfaction. The superintendent has been led, by an unpleasant experience, to the conclusion that the plan of furnishing text-books by the State, either free or otherwise, is unsound and impracticable, and ought to be discarded at once.

TEACHERS' INSTITUTES.

Seven institutes have been held in three counties of the State during the year. No report is made of the attendance at any of the meetings.

The superintendent recommends the passage of an act providing and organizing teachers' institutes as a preliminary measure to meet the demand for a supply of competent teachers.

STATE NORMAL SCHOOLS.

The superintendent recommends attention to that part of the State constitution which refers to the establishment of State normal schools. The wisdom and importance of this requirement of the law are considered too obvious to require further comment.

PEABODY FUND.

Of this State the agent of the fund, Dr. Sears, says: "We learn from the report of the superintendent, and from the proceedings of the board of education, that the number of children of school age in the State is 296,610, of whom 123,063 are colored; that the number attending the public schools is 66,056, of whom 33,834 are colored, showing an increase of attendance of 100 per cent. over last year; that there are in the State 422 log school-houses, and 339 frame and brick houses; that the number of teachers is 1,898; that the amount raised by taxation for schools in 1871 was $250,000, while not less than $500,000 are necessary to keep free schools in operation in the State six months in the year. In the report complaints are made and reiterated of the unfaithfulness of State officials in the use of the school funds and of the incompetency and indifference of many of the school officers. Under these circumstances it has been impossible to accomplish anything important in connection with the public schools of this State the past year. We have rendered assistance to two small schools only: $300 to one in Beaufort, and $200 to another in Spartanburgh."

EDUCATIONAL INSTITUTE OF SOUTH CAROLINA.

A meeting of this institute was held at Greenville in August, 1871. The members numbered 48, most of them principals of schools or professors in colleges.

The principal subjects of discussion were "Geometrical text-books and methods of instruction," "School organization," and "Southern colleges, and their claims upon the liberality of the people."

The president was requested to appoint a committee of two on each of the following subjects: Arithmetic, history and geography, English grammar and rhetoric, and algebra; each member of these committees to present, at the next annual meeting, a report upon text-books, methods of instruction, or any other matter relative to the subjects assigned them which they may deem of interest.

STATE ORPHAN ASYLUM.

The annual report of the trustees gives the number of inmates as 140: boys 71, girls 69. The average attendance in the school connected with the institution is 87. The boys are instructed in agriculture, and the girls in needle-work.

The State appropriation for the support of the institution for the year ended October 31, 1872, was $15,000. The actual amount expended during the year was $21,396.49, an excess of $8,030.27 over the receipts.

SOUTH CAROLINA INSTITUTION FOR THE EDUCATION OF THE DEAF AND DUMB AND THE BLIND.

The twenty-fourth annual report of this institution states that, of the whole number of pupils during the year, 22 were deaf and dumb and 19 were blind. The number of pupils was larger than during any previous session. The progress of the pupils in their studies during the year is commendable.

The institution stands greatly in need of increased shop facilities. There is only the boot and shoe trade for the deaf and dumb boys, and no trade for either males or females of the blind pupils, or for the mute girls. It is recommended that an appropriation be made for the purpose of establishing an industrial department for the females of both departments, a printing office and cabinet shop for the deaf and dumb boys, and the broom, mat, brush, and chair-seating trades for the blind boys. Of the latter a majority must have trades taught them or remain in a state of dependence after leaving the institution.

It is represented that many who would gladly avail themselves of the advantages of the institution are prevented doing so by their inability to provide suitable clothing and pay the expenses of transportation. A fund should be set apart for the relief of such persons.

It is recommended that the superintendent be authorized to visit some of the leading institutions for the deaf and dumb and the blind in the United States, during the next session, in order to acquaint himself with all improvements in books, apparatus, *regime*, &c. The books and apparatus of the institution, particularly for the blind, have been in use for a long time and need replenishing.

The State superintendent of instruction recommends an appropriation of $15,000 for this institution for the next year.

UNIVERSITY OF SOUTH CAROLINA.

The university consists of ten distinct and independent schools. Students are allowed a choice, provided they enter at least three schools. The State appropriations for the university during the last fiscal year amounted to $37,850.

This institution affords superior educational advantages. The State appropriations for its support have been liberal, its location is central and healthy, its buildings are commodious, its library is the finest in the South, and there is a full corps of learned, efficient, faithful professors. The number of students in attendance, however, is exceedingly unsatisfactory, and ought, by every reasonable consideration, to be largely augmented.

The apparatus of the university, particularly in the departments of chemistry and philosophy, is incomplete and should be replenished. It is recommended that a special appropriation be made for this purpose.

WOFFORD COLLEGE.

This institution is, by the terms of its endowment, under the control and management of the conference of the Methodist Episcopal Church of South Carolina. The endowment fund of the college (over $200,000) was, with the exception of a few thousand dollars, lost during the late war. The college includes two departments, collegiate and preparatory.

NEWBERRY COLLEGE.

The college, having been removed from Newberry Court-House, is now located in Walhalla, Oconee County. It is under the care of the Evangelical Lutheran synod of South Carolina. The departments of the college are collegiate, preparatory, primary, and theological.

GREENVILLE BAPTIST FEMALE COLLEGE.

This was organized by the Baptist State convention of South Carolina. The courses of study are primary, academic, and collegiate. The collegiate course has been extended from three to four years, and the study of languages made a condition of graduation. An extended course in mathematics is not required.

CLAFLIN UNIVERSITY.

This institution is designed for the education of colored youth of both sexes. It occupies a large and commodious building. It was purchased not long since by Rev. A. Webster, D. D., president, and the late Rev. T. W. Lewis, of Charleston, through whose joint labors it assumed its present proportions. Its name was given in honor of the Hon. Lee Claflin, of Massachusetts, who contributed largely to its purchase.

The university comprises four departments: 1. The college proper, with the usual four years' course of college studies. 2. The normal department, for the training of teachers of both sexes. 3. The Baker Theological Institute, which was removed from Charleston to the university. 4. The preparatory department.

The university buildings contain 56 rooms, and will accommodate 200 scholars. No charge is made for tuition, room-rent, or lectures, but a tax of 10 cents a week is required of each student for incidental expenses. Board is provided at the rate of $2 a week.

The leading men in South Carolina favorable to education and equal rights have, without exception, commended this enterprise. His excellency Governor R. K. Scott, who is one of the trustees, headed the subscription for the purchase with $500. Senator Sawyer and others have subscribed generously.

FURMAN UNIVERSITY.

This university comprises seven distinct schools. Students are allowed entire freedom in the selection of their schools; and the schools are so arranged as to enable the student to pursue to the best advantage any particular course he may select, and to whatever extent he may desire. No limit of time is fixed for the completion of a course of study. The usual college degrees are conferred; also the degree of "proficient," in the several schools.

SOUTHERN BAPTIST THEOLOGICAL SEMINARY.

The seminary was established by general co-operation of Southern Baptists, with the design of furnishing such theological education as is needed by Baptist ministers. The course of instruction is divided into eight schools, comprising eleven departments. The course in each school is completed in one year, except Hebrew and Greek. A full course occupies from three to four years. Tuition and lodging are free. The library formerly belonging to the theological department of Furman University was transferred to this seminary.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 South Carolina was the twenty-second State in population, having 705,606 inhabitants within an area of 34,000 square miles, an average of 20.75 persons to the square mile. This population consisted of 289,667 whites, 415,814 colored, 124 Indians, and 1 Chinese. Of these 697,532 were natives of the United States and 8,074 were foreign-born. Of the native residents 270,301 whites, 408,285 colored, and 122 Indians were born within its borders, while of the foreign residents 2,754 were born in Germany, 617 in England, and 3,262 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 41,569 persons attended school, and of these 50 were foreign-born. Of the 24,692 white scholars 12,731 were males and 11,961 females. Of the 16,873 colored pupils 8,339 were males and 8,534 females; 4 male Indians were also reported.

Illiteracy.—There were 290,379 inhabitants of all races, 10 years old and over, unable to write, and of these 653 were foreign-born.

Age and sex of illiterates.—Of the 55,167 white illiterates 13,674 were from 10 to 15 years old, and of these 7,299 were males and 6,375 females; 11,102 were from 15 to 21 years old, of whom 5,411 were males and 5,691 females; 30,391 were 21 years old and over, of whom 12,490 were males and 17,901 females. Of the 235,164 colored illiterates 40,805 were from 10 to 15 years old, and of these 20,887 were males and 19,918 females; 45,605 were from 15 to 21 years old; of these 20,329 were males and 25,276 females; 148,754 were 21 years old and over, of whom 70,830 were males and 77,924 females; 48 illiterate Indians were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 750, having 1,103 teachers, of whom 620 were males and 483 females, to educate their 38,249 pupils, of whom 17,397 were males and 20,852 females.

Amount and source of educational income.—The total income of all the educational institutions was $577,953, of which $51,506 were derived from endowment; $282,973 from taxation and public funds, and $243,474 from tuition and other sources.

Public schools.—The 581 public schools, with 781 teachers, (429 males and 352 females,) were attended by 31,362 pupils, of whom 13,682 were males and 17,680 females. To educate these they had a total income of $279,723, of which $270,423 were derived from taxation and public funds, and 9,300 from tuition and other sources.

Colleges.—The 9 colleges, with 58 teachers, (40 males and 18 females,) were attended by 755 pupils, of whom 480 were males and 275 females. They had a total income of $54,800, of which $16,000 were derived from endowments, $4,500 from taxation and public funds, and $34,300 from tuition and other sources.

Academies.—The 17 academies, with 46 teachers, of whom 30 were males and 16 females, had an attendance of 1,154 pupils, (650 males and 504 females,) and a total income of $72,825, of which $15,000 were derived from endowment, $50 from taxation and public funds, and $57,775 from tuition and other sources.

Private schools.—The 132 day and boarding schools had 163 teachers, (83 males and 80 females,) and were attended by 3,966 pupils, of whom 1,798 were males and 2,168 females. They had an income of $68,040, derived from tuition and other sources.

Libraries.—There were 741 public libraries in the State, with 149,224 volumes; also, 922 private libraries, with 397,020 volumes; making in all 1,663 libraries, containing 546,244 volumes.

The press.—The 55 periodicals had an aggregate circulation of 80,900 copies, and an aggregate annual issue of 8,901,400 copies.

Churches.—Of the 1,457 church organizations 1,308 had edifices, with 491,425 sittings, and the church property was valued at $3,276,982.

Pauperism.—Of the 2,071 paupers, 888 were native whites, 1,106 native colored, and 77 foreigners.

Crime.—Of 732 persons in prison June 1, 1870, 130 were native whites, 584 native colored, and 18 foreign-born; 1,399 persons were convicted during the year.

Age and sex of population.—Of the total population 233,915 were from 5 to 18 years old, of whom 118,509 were males and 115,406 females; 503,763 were 10 years old and over, of whom 241,492 were males and 262,271 females.

Occupations.—Two hundred and sixty-three thousand three hundred and one persons of these ages were engaged in various occupations, of whom 182,355 were males and 80,946 females; 206,654 persons were engaged in agricultural pursuits, of whom 147,708 were males and 58,946 females; 34,383 in personal and professional services, of whom 15,526 were males and 18,857 females; 8,470 in trade and transportation, of whom 8,250 were males and 220 females; 13,794 in manufactures and mechanical and mining industries, of whom 10,871 were males and 2,923 females.

Age and sex of working population.—Of the 263,301 employed persons 30,414 were from 10 to 15 years old, of whom 18,968 were males and 11,446 females; 214,414 were from 16 to 59 years old, and of these 148,719 were males and 65,695 females; 18,473 were 60 years old and over, of whom 14,668 were males and 3,805 females.

SCHOOL OFFICIALS.

Hon. J. K. JILLSON, *State superintendent of education, Columbia.*

COUNTY SCHOOL COMMISSIONERS.

TENNESSEE.

[From reports of Hon. William Morrow, state superintendent of instruction, and of J. B. Killebrew, assistant superintendent.]

CONDITION OF EDUCATIONAL INTERESTS.

The facts presented in the following report bring before the general assembly the question whether it is not the duty of that body to impose a specific tax for school purposes. Less than thirty counties in the State have levied a tax for school purposes. In the remainder no action whatever has been taken by the county courts. Very few counties have schools at present in operation, and a degree of languor and inaction prevails throughout the State that bodes anything but good to our educational interests.

ILLITERACY.

Facts developed by the census and prison statistics form a startling comment upon our educational condition, and offer a warning which we shall do well to heed. From the ninth census it appears that the number of illiterate persons in the State of Tennessee, 10 years old and over, is 364,668, of whom 138,955 are between the ages of 10 and 21; the remainder, 225,713, are 21 and over. Of the adults there are of white males 37,713; colored, 55,927; aggregating 93,640 male adults unable to read and write; yet whose votes are as potential for good or evil as those of the wisest men in the State. The total vote at the last election was 120,479, and ignorance cast 93,640 of them. There are in the State, of white women 68,825, of colored women 63,248, who can neither read nor write, making in all of illiterate women, 132,073. There are also in the State, of white children between the ages of 10 and 21, 72,189, and of colored children of the same ages, 66,766, who can neither read nor write.

INCREASE OF ILLITERACY.

Another lamentable fact deducible from the census is, that while the white population has increased but 13 per cent., the increase in the number of white illiterates has been 50 per cent. The number of illiterates among the adults has increased from 71,114 to 106,538. And this illiteracy is to-day increasing in a still greater ratio.

IGNORANCE AND CRIME.

The prison statistics of the State are significant. There are now in the penitentiary 768 persons, of whom 668 can neither read nor write. Of the remaining 100, reported educated, one-half only read and write, and about five have been liberally educated. It has been estimated that the loss to the State by these 768 unproductive persons is $440 for each one annually, aggregating a sum which would educate in public schools six times the number of inmates. It is easier and less costly to prevent crime than to punish it.

The amount paid out of the State treasury for the conviction and prosecution of criminals for the year ended October 1, 1871, was $171,542.76. In this is not included damage to property, nor loss of life, nor the extra police force demanded. It is a great responsibility to levy a tax to make useful men and women instead of criminals and paupers of the children of our State; it is a still greater responsibility not to do it.

NECESSITY OF PUBLIC SCHOOLS.

One reason that should arouse our people to the necessity of establishing a good system of public schools is, that without it an industrious, intelligent, and energetic population will not be induced to settle upon its surplus lands. Out of 29,000,000 acres of land in the State, only a little over 6,000,000 are under cultivation. The remaining 23,000,000 are lying idle, contributing nothing to the State, and will hang a dead weight upon its prosperity until they can be tilled and occupied by industrious, intelligent citizens. But such will not settle in a State that offers no facilities for education. An intelligent laborer will annually add, on an average, at least 25 per cent. more to the wealth of the State than an ignorant one. Statistics show that one person in the rigorous climate and poor soil of Massachusetts makes nearly three times as much as one in the rich fields and genial climate of Tennessee.

PREJUDICES TO BE OVERCOME.

The greatest obstacle to be overcome in the establishment of a system of public instruction is the inherited idea that education should be left to private enterprise, and

that property should not be taxed to educate those without means. There is also in some localities a strong feeling against levying a school-tax, because the negroes will share its benefits. Public schools are unpopular also because they have been so inefficient.

SCHOOL LEGISLATION.

The constant changes made in the system by our legislative bodies have created in the public mind a sense of their instability and inefficiency; and the parsimonious appropriations have just been sufficient to interfere with, and, in a measure, break down, all private enterprises. If the educational bill introduced into Congress shall become a law, Tennessee will receive, under that act, about $130,000, which, with the interest on the school-fund of $1,500,000, and the sum realized from other sources, will, if supplemented by a small tax, enable the State to maintain a very respectable school system. What is most needed now is unity of action, a livelier interest in educational matters, a larger amount of energy in the school system, and more frequent and reliable statistics from each county. The meagerness of reports is sufficient proof that some other method should be devised to collect the scholastic statistics of the counties

COUNTY REPORTS.

The whole number of counties in the State is 92, from 81 of which reports have been received; in most cases meager, indefinite, unsatisfactory, and discouraging in every particular.

So far as can be gathered from these reports a school tax has been levied or voted in 37 counties, but sometimes insufficient to accomplish any object. In 44 counties the tax has been voted down or the subject utterly ignored. Commissioners have been appointed in a whole or part of the districts of 54 counties, but these are frequently reported as taking no interest in the matter, and occasionally as resigning or refusing to serve, while in 27 counties no commissioners at all have been elected. Only in 24 counties are schools of any sort reported in existence, and these not in every case free or even public; even when public they seem to be limited to white children. In 32 counties it is definitely stated that there are no schools, and in the remainder it is inferred that this is the case, there being usually no tax and no commissioners. In a few instances schools have been suspended and are to be resumed as soon as convenient or possible. Where schools are taught it is generally for but a short period, sometimes even limited to from one to two months of the year. Only in one county are the schools reported as in a really prosperous condition, and only in two or three counties is the prospect at all hopeful for improvement.

PEABODY FUND.

The agent of the fund reports as follows:

"On the 19th of December last the State teachers' association addressed to me a communication containing the following passages: 'We deem it of the utmost importance that at this juncture an efficient agent should canvass the State and arouse the various counties to action under the present school law. We would respectfully request your consideration of the propriety of appropriating $1,500, during the year 1872, toward the support of such an agent, to co-operate with the treasurer, who is, *ex officio*, superintendent, and to work under the immediate supervision of the officers and executive committee of the State teachers' association. We are satisfied that in no other way can this amount of money accomplish equal good to the cause of education in this State.'

"This recommendation was finally agreed to, not only on account of its intrinsic merits, but because the resident member of our board of trustees is the president of the association. To guard against any misapplication of the money contributed by us, it was placed at the disposal of our associate above referred to, with the request that he would make such an arrangement with the teachers' association as would, in his judgment, accomplish the greatest amount of good."

An agent was appointed who, in January, was made assistant superintendent of public instruction, which circumstance is itself the best evidence of the wisdom of the course pursued. In March last he made a most valuable report, which was published by authority, for the purpose of being circulated in the State. He says that "The system as it at present exists is utterly devoid of vitality." "Less than thirty counties have levied a tax for school purposes, and in the remainder no action has been taken by the county courts."

The assistance rendered from the fund is as follows: Knoxville, $2,000; thirteenth civil district, Davidson County, $1,000; Jonesborough, $1,000; Greenville, $1,000; Lookout Mountain normal school, $1,000; Fisk University colored normal school, $800; Edgefield, $800. The understanding with this town was that the assistance should end with

last year, but an unexpected deficiency of school funds occurring, it was considered expedient to make another donation. Four places received donations of $600 each, one of $500, ten of $450 each, thirty-four of $300 each, and one of $200; making a total of $25,400. Reports received from most of these schools give very favorable accounts of their success. Many of them have been held in college or academy buildings, and instructed by a higher order of teachers than is common in the public schools.

ADDRESS BEFORE THE TEACHERS' ASSOCIATION.

At the meeting of the Tennessee Central Teachers' Association, at Murfreesborough, in August, Dr. William Shelton delivered an address upon the relation of public schools to the welfare of the State. He considered the subject especially in its bearing on the present condition of the people of Tennessee. "Tennessee is now trying to adapt herself to the changed circumstances in which she is placed, so as to bring good for her people out of the evil she has suffered." As the great means of securing prosperity, he urged popular education. He maintained that the true principles of political economy demand the education of every child in the State.

"A common-school education for all the children of Tennessee is absolutely indispensable: 1. As a means of increasing our population. Our sources of wealth lie unimproved for the want of population; and immigrants are unwilling to settle in a State where they can not educate their children. 2. As a means of preventing crime. The vast majority of our criminals are men of no education; 87 per cent. of the inmates of the penitentiary in Nashville can not read or write. If the State can diminish the amount of crime by furnishing the means of education to her people, true State policy requires that she shall expend a few thousands to prevent what it requires many thousands to punish. 3. As a means of utilizing labor. Capacity for useful labor is so much productive capital; and as the State increases the capacity of her laborers by educating them, she increases in the same proportion the productive capital of her people. 4. As a means of protecting property. If the people had intelligence enough to make them good citizens, property would be rendered more secure and its value thereby increased. Is it not then the duty of the State, by an efficient system of public schools, to augment the intelligence of the next generation? And if property receives such advantages from the public schools, is it not just and fair that property should be taxed for their support? 5. As a means of perpetuating our free, democratic institutions. An ignorant and degraded people are incapable of governing themselves. The doctrine of universal suffrage, without general education, will inevitably lead to anarchy, and finally to despotism. If we would preserve our free institutions we must educate our people.

"Our legislators plead our impoverished treasury as an unanswerable argument against establishing an efficient system of public schools. They shrink from the idea of increased taxation. They are afraid the people will not bear the necessary tax. The people are willing to bear any tax that they are convinced is necessary to secure their own advantage." "They have been opposed to taxation for public schools, because the taxation is not great enough to make the public schools efficient. They ought not to be taxed for an object that is never received. Let there be an adequate taxation for public schools, or else let public schools be abandoned." "The school-tax need not be very high, no higher than is necessary to put the educational interests of the counties under the supervision of the State, and also to enable the State to make such appropriations to the counties as will induce them to tax themselves. According to the educational bill passed by the last Congress, Tennessee will be entitled to about $130,000. This, added to the other sources of income to the State for educational purposes, will diminish the amount of taxation for public instruction; so that by a moderate increase in the present rate of taxation, the legislature may do all that is necessary to make our system of public schools efficient." "This will be the most important question that will come before the next legislature. It is earnestly to be hoped that they will lift themselves high enough above mere partisan aims to take the responsibility of doing what they know is for the good of the people."

MEMPHIS.

CONDITION OF SCHOOLS.

The growing popularity of the schools is plainly indicated by the demand for increased accommodations. Commencing in September with 42 rooms, the requirements of the schools rendered it necessary to increase the number to 48. The presence of sickness of various types has militated seriously against the attendance and strength of the schools, but in other respects their condition is in the highest degree satisfactory. The closing exercises of the schools were very creditable.

At the commencement of the session the colored schools required the services of only 8 teachers; but as the season advanced the number had to be increased to 12. It has

been a difficult matter to provide suitable teachers for these schools. The attendance is variable and unsatisfactory.

The per cent. of attendance has been in white schools, 88.04; in colored schools, 80.43. Per cent. of tardiness in white schools, 2.89; in colored schools, 5.18. Cost of maintaining white schools, based on enrollment, $25.94; based on attendance, $28.24. Cost of maintaining colored schools, based on enrollment, $20.86; based on attendance, $22.52.

SCHOOL BUILDINGS.

During the year a new school building has been completed, at a cost (including furniture and lot) of $81,500. It contains 12 rooms, each provided with accommodations for 60 pupils. The Peabody building is approaching completion, and will probably be ready for use in September. It will afford sittings for 480 pupils. Cost of building, $30,000.

NASHVILLE.

CONDITION OF SCHOOLS.

In consequence of the reduction of the school age from 21 to 18, the scholastic population is 1,456 less than last year, but the total enrollment is about the same. The per cent. of attendance on number belonging is 95⅓ against 93 last year, and on total enrollment it is 66¼ against 61. The per cent. of attendance on number belonging is, in white schools, 95.7, and in colored, 93.7; on total enrollment, it is 71 in the former and only 51 in the latter. The per cent. of tardiness of the colored schools is four times as great as that of the white schools. They have, however, made a much better record this year than last.

SCHOOL BUILDINGS.

No funds have been placed at the disposal of the board of education since 1865 for providing buildings to accommodate the increasing number of children. Two government buildings, patched up for temporary purposes, have become utterly worn out, and the city should, within the next year, provide better accommodations for the 400 children now most uncomfortably housed in them. A special tax, sufficient to raise $25,000, is recommended for this purpose. The other school buildings are in good order.

BRANCHES OF STUDY.

During the past session the study of German has been added to the high-school course. By enactment of the city council, it will be introduced next term into the grammar schools. It is recommended that steps be taken to provide for the systematic teaching of drawing and music.

ADDRESS OF HON. WILLIAM H. STEPHENS BEFORE THE UNIVERSITY OF NASHVILLE.

The annual address before the alumni society of the University of Nashville was delivered by Hon. William H. Stephens, of Memphis, Tennessee. His theme was, "Tennessee, and the duty of her educated sons."

While endeavoring to strengthen the feeling of attachment to the State, he should aim at the same time and by the same means to awaken a deeper interest in behalf of her eldest daughter, the University of Nashville. He sketched briefly the history of the university. The first settlement on the Cumberland was only six years old when, in 1785, its inhabitants procured from the legislature of North Carolina the charter of an academy. This was the first incorporated seminary of learning in the valley of the Mississippi. In 1806 the academy was raised to the rank of Cumberland College, and in 1826 to that of the University of Nashville. Nine years after the creation of this academy, the legislature, in 1794, incorporated Blount College, at Knoxville, now the University of East Tennessee; and at the same session, Greene College, in Greene County; and in 1795, Washington College, in Washington County.

What is the duty, he asked, of educated men toward this university, which is so closely connected with the fortunes of the State, and which should exert so great an influence? He deprecated the general feeling of indifference. In New England, college commencements are subjects of general attention and interest. But when the central university of Tennessee assembles her children to take counsel for the promotion of education in the State, the fact is scarcely known by the mass of the people, and where known excites little or no interest.

Much of the blame of this lies at the door of the educated class of Tennessee. No one feels called upon to speak a word in behalf of our own schools, or to demonstrate the advantages of sustaining within our borders at least one complete university. "Yet it is

undoubtedly the duty of every citizen to endeavor, according to his ability, to make our schools and colleges as useful, as successful, and as perfect as those of any other State. Viewed in the light of a mere business transaction, such a consummation would save to the State a fund sufficient to give a gratuitous English education to every indigent child within her limits. "It would cheapen every branch of education, and would save millions to our overburdened people." "Moreover, as a question of wise political economy, it must be granted that the great body of our young men who seek a collegiate education, poor as well as rich, should have the opportunity of being trained together at the same university, so as to measure strength with each other, and to learn by actual contact and intercourse that in this free land there is no other aristocracy than that of individual merit and personal accomplishments."

There is no cause which renders it impossible to maintain in the city of Nashville a university of the highest order of excellence. "The cause of the university is the cause of the State. The prosperity of the one is the prosperity of the other. The university has already emerged from her dim twilight, and, with her 400 students, stands forth in conscious strength. And in regard to the State, it is permitted to us, in the exercise of a reasonable hope, to anticipate the speedy coming of a brighter day."

The number of graduates from the university since 1813 is as follows: In 1816, 1857, and 1871, 2; 1814, 1854, 1858, and 1862, 3; 1855 and 1859, 5; 1813, 1815, 1829, and 1856, 7; 1830 and 1860, 8; 1832 and 1851, 9; 1826 and 1834, 10; 1852 and 1861, 11; 1827 and 1837, 12; 1853, 13; 1842 and 1850, 14; 1828, 1833, and 1840, 16; 1836, 1843, 1846, and 1849, 18; 1835 and 1838, 20; 1839, 1847, and 1848, 21; 1831 and 1845, 22; 1841, 23; 1844, 25. Whole number of graduates from 1813 to 1871, 512. For eight years—1863 to 1870, inclusive—there were no graduates.

LOOKOUT MOUNTAIN EDUCATIONAL INSTITUTION.

The school at Lookout Mountain was closed at the expiration of the academic year, June, 1872, and, in place of the usual annual report, there is presented a brief sketch of its origin, history, and the causes of its discontinuance:

Early in the year 1865, Mr. C. R. Robert, of New York, conceived the plan of establishing a school of high character at some central, accessible point in the South. Several gentlemen, at nearly the same time, independently of each other, were found to be interested in such a project. The plan contemplated a school open to both sexes, under the most approved modern methods of instruction, with accessories inviting to persons of refinement, yet at a cost not beyond the reach of pupils dependent upon their own exertions. State patronage, with its political complications; a partisan bias, with its sectional prejudices; a sectarian control, with its incidental exclusiveness; were to be equally avoided. Dependence upon local patronage would give a local character and tone to the school, while the association of minds of both sexes from a wide range of society was regarded as the best condition of a truly liberal education. The growing tendency to a superficial and merely ornamental education was to be firmly resisted.

The summit of Lookout Mountain was selected as a site combining the best advantages. A tract of land, more than two hundred acres in extent, about five miles from Chattanooga, elevated two thousand feet above the sea-level, with fine building-stone near by, was purchased, as were also the buildings erected thereon by the Government. Parts of these buildings were finished and fitted up for school purposes, with accommodations for eighty pupils, the resident officers and their families, at an expense of over $40,000. A charter from the legislature of Tennessee conferred university privileges, and a name was adopted which would cover whatever departments the future of the institution might demand. The school opened May 15, 1866. The whole number of pupils received was 953, averaging 80 per half-year, with an average of five teachers.

Private gifts of the founder and others, an annual appropriation for the last three years from the Peabody fund, in connection with the normal department, together with certain benevolent and educational society funds, amounting in all to several thousand dollars, have been distributed to students needing assistance. Many of the students are proving their education in the higher institutions, in the professions, and in practical life. A number have begun their preparation for the ministry, and some are already in the field.

It had been the aim of the founder, as soon as the institution should be well organized and placed on a sound financial basis, to transfer it to a board of trust, who would conduct it after the original design. Several causes have combined to defeat this intention. Neither the men nor the money could be secured. Protracted and vexatious litigation has prevented the accumulation of endowments and the erection of permanent buildings. For these reasons Mr. Robert has felt constrained to close the school, sell the property, and transmit the proceeds to the trustees of the Robert College, Constantinople. It is believed that a concentration of funds and effort upon this institution will secure larger results than the separate maintenance of both. The officers, in closing their connection with the Lookout Mountain school, express the belief that its career, though short, has been honorable, and its influence good, wide-spread, and lasting.

FREEDMEN'S NORMAL INSTITUTE.

This institution is the result of a convention held in December, 1871, by the colored citizens of East Tennessee, at the instance of Professor Yardley Warner, of Germantown, Pennsylvania.

Resolutions were offered by several colored men present. The most important of these were carried by an overwhelming majority, and were to the effect that—

1st. The colored people of East Tennessee would have, Providence favoring the enterprise, a teachers' training school, so conducted as to enable those unable otherwise to procure boarding, and to liquidate other contingent expenses, to do so at the expense of the labor of their hands, while at the institution and under instruction.

2d. That the institution should be exclusively for the benefit of the freedmen, and therefore should be called "The Freedmen's Normal Institute of East Tennessee."

Over $300 were subscribed at the convention, and many white persons of East Tennessee have also offered subscriptions. In all, $14,000 have been subscribed, of which nearly $8,000 have been paid in. Liberal subscriptions have been made by some friends in Philadelphia. Aid has also been received from New York, Rhode Island, New Jersey, Ohio, Delaware, Indiana, and England. The subscription of the colored people has reached the amount of $2,300.

With this subscription list before him, and at the earnest desire of the colored people to commence the work, Professor Warner had plans and specifications prepared for a suitable building, 120 feet long, 36 feet wide, two stories high, with a basement.

Thirty acres of land, suitably situated near Maryville, the county-seat of Blount County, were purchased, at a cost of $1,000, and deed taken in the name of the trustees of Indiana Yearly Meeting. A barn, 40 by 50, has been built, and 500,000 bricks have been made. The corner-stone of the building was laid August 29, 1872, and it is fairly under way. The whole cost is estimated at $12,000, and is to be completed by February or March. It is built to accommodate 60 or 70 normal students and 200 day scholars.

After it is completed it is to be conducted by a board of managers, mostly selected from citizens of that vicinity. Great enthusiasm is felt by the colored people in the enterprise. They have done most of the work. All the workmen enter into an obligation to avoid profanity and intemperance.

A circulating library of 400 volumes has been placed in the Maryville institute, for the use of the public; and it is estimated that, through the liberality of several book-publishers and friends in Philadelphia, nearly $4,000 worth of school and other books have been gratuitously distributed within the past two years in East Tennessee.

A monthly newspaper, the Maryville Monitor, is published in the interest of the freedmen, education, and religion, and is found to accomplish much good.

The whole expenditure, up to September 17, is reported to be $7,217.33.

The interest in this work is not confined to any particular religious creed or political faith; all have entered into the work with heart and soul.

UNIVERSITY OF NASHVILLE.

This institution dates its origin more than ten years anterior to the birth of the State of Tennessee, having been founded, incorporated, and endowed in 1785, under the name of Davidson Academy. The collegiate department embraces nine distinct schools. Each student may select the schools he will attend, but must attend at least three. The medical department is rapidly regaining the position it held before the war. The class of last session was the largest for several years. The military department is in successful operation.

MONTGOMERY BELL ACADEMY.

This is the preparatory school of the university, and had its origin in the benevolent bequest of a late citizen of Tennessee, whose name it bears. It annually supplies gratuitous instruction for 25 students from four counties of the State.

It consists of a high school and grammar school, each having a three years' course. The school aims to prepare young men for business as well as for college.

EAST TENNESSEE UNIVERSITY AND STATE AGRICULTURAL COLLEGE.

The proceeds of the sale of land scrip which fell to the share of the State of Tennessee were appropriated to East Tennessee University, and in 1869 a college of agriculture and the mechanic arts was established. The work has been prosecuted in the face of unexpected difficulties, resulting especially from the delay in the payment of accrued interest on bonds constituting the endowment. These obstacles have been to a considerable extent removed, and the success of the enterprise is certain, if it only has the hearty and generous co-operation of the legislature and the people.

The standard of attainments for admission to the agricultural and mechanical courses has heretofore been considerably lower than for admission to the classical course. In the incipient stages of the departments this has seemed an unavoidable evil. The faculty are, however, of the opinion that the scientific courses should be such that students completing them shall have gone through as thorough a course of study as those who graduate from the classical course. The requirements for admission to these two will, therefore, be raised materially. A preparatory department is connected with the university. The college is under military discipline.

FISK UNIVERSITY.

In January, 1866, the American Missionary Association and Western Freedmen's Aid Commission founded in Nashville, Tennessee, the Fisk School. In August, 1867, a charter, as Fisk University, was secured, and the academic and normal departments were opened the following September. In June, 1871, a college course was established and a class admitted.

The courses of study already established are the college, the college preparatory, the theological, the higher normal, and the common-school normal. Other courses, including medicine and law, will be added as may be required. A model school is connected with the normal school. Students in the normal and preparatory courses are required to take book-keeping. The graduates of the normal school have, as a rule, obtained good positions as teachers. The demand for them is in excess of the supply.

The great wants of the institution are permanent and commodious buildings on a permanent site, and endowments. At present the salaries of its teachers, as well as its current expenses beyond its income, are paid by the American Missionary Association. Without a permanent fund, from which a continual income is obtained, it can not rest on a solid basis. The trustees of the Peabody fund have for some time past given aid to needy and worthy students preparing themselves for teaching. It is expected that this will continue.

The Jubilee Singers have, by concerts given during the year, raised the sum of $20,000 toward the erection of a building to be called "Jubilee Hall."

The privileges of the university are offered alike, without distinction of race or sex. Students may defray a portion of their expenses by labor in the city or institution.

CUMBERLAND UNIVERSITY.

This comprises the following departments: Collegiate, theological, law, medical, a commercial school and an engineering school. Several courses of elective studies are provided. The course in the law school has been condensed so as to allow gentlemen to graduate in two sessions of five months each. The medical department, located in Memphis, became a branch of the university in 1871.

Camp Blake, an institution organized in connection with the theological department, in September, 1868, for the gratuitous instruction of candidates for the Presbyterian ministry, continues in successful operation.

WEST TENNESSEE COLLEGE.

This comprehends four departments of study, each complete in itself, and furnishing together, by easy transition, a consecutive course of 10 years; the primary school, the grammar school, the academy, and the college. An elective course is permitted. Students pledging themselves to teach for five years after graduation receive tuition free. The college is under military discipline.

KING COLLEGE.

This college has only been in operation three years. Of the 11 graduates sent forth, 10 are engaged in the work of the ministry. The course of study prescribed is equal to that of the best colleges. One professorship has been endowed by Holden Presbytery with $25,000, the interest of which alone is to be used. Two other presbyteries have engaged to raise a like amount. These presbyteries will be entitled to nominate the men who shall fill the chairs which they endow.

MARYVILLE COLLEGE.

This was founded in 1819 by the Rev. Isaac Anderson, D. D., who was its president for thirty-eight years. The college was in continuous operation from its beginning up to the spring of 1861, when its work was suspended by the war, but resumed again in 1866. More than 120 of its graduates are in the profession of the ministry.

Its work has been accomplished with very limited means. Young ladies are admitted to all the classes in the college.

EAST TENNESSEE WESLEYAN UNIVERSITY.

The course of study comprises classical, scientific, and preparatory departments. A normal school for the training of teachers will be opened whenever a sufficient number of students apply to justify the additional expense.

The institution is open to both sexes.

MARY SHARP COLLEGE.

In the work of giving to women a truly liberal education, this college claims to be a pioneer. At the time of its foundation it is believed there was no school in existence which offered to women a course of study so nearly commensurate with that of colleges for young men, as was then, and still is, insisted upon at this institution, in order to obtain the honors of the college. More than 100 graduates of the college are now engaged in teaching. The institution is sustained without endowments.

TENNESSEE TEACHERS' ASSOCIATION.

At the meeting of the Tennessee Teachers' Association, Hon. James Whitworth presiding, an interesting debate upon "Normal schools" followed a lecture on this subject by Professor B. W. McDonald, of Cumberland University. General E. Kirby Smith thought good normal schools constituted the basis of every system of public instruction. Captain Donelson, superintendent of the public schools of Davidson County, reported 83 schools, 60 white and 23 colored, in operation in the county.

The committee on the school fund reported that the fund originally amounted to $1,500,000, from which accrued annually $100,000, which were annually appropriated for common schools until and including 1861; and that, as there had been no interest paid since that date, there was now an amount of $900,000 of accrued interest, which, by the constitution, should be appropriated to the superintendent of common schools.

A committee of five was appointed to report some feasible plan whereby Tennessee might secure the advantages of normal schools.

Professor A. L. Mint gave an address on "The necessity of the professional teacher," and was followed by Professor Baldwin, who thought teachers should have as much liberty accorded to them as is allowed to the profession of law or medicine. On motion of Professor Baldwin, a resolution was adopted for appointing a committee of three members of the association, who are actually engaged in teaching in public schools, to consider what legislation, if any, is needed to protect the rights of teachers, and report at the next annual meeting.

At the closing session, addresses were given by Professor McDonald, who claimed that Tennessee could educate her youth more economically in public than in private schools; and by Professor Baldwin, who extolled the work of education as equal to any other in importance; he expected, by training youth in his school for the responsible duties of citizens, to aid the State in all enterprises looking to her welfare.

Other addresses were made by Professor A. R. Spence, of Michigan, Professors Phelan and Stobey, and Dr. Stout.

Officers elected: President, Hon. James Whitworth, with a number of vice-presidents, and an executive committee of three.

The next meeting of the association is to be held at Knoxville.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Tennessee was the ninth State in population, having 1,258,520 inhabitants within an area of 45,600 square miles, an average of 27.60 persons to the square mile. This population consisted of 936,119 whites, 322,331 colored, and 70 Indians. Of these, 1,239,204 were natives of the United States, and 19,316 were foreign-born. Of the native residents, 766,997 whites, 260,630 colored, and 26 Indians were born within its borders, while of the foreign residents 4,539 were born in Germany, 2,085 in England, and 8,048 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 120,710 persons attended school, and of these 141 were foreign-born. Of the 110,314 white scholars, 58,524 were males and 51,790 females. Of the 10,391 colored pupils, 4,938 were males and 5,453 females. Five male Indians were also reported.

Illiteracy.—There were 364,697 inhabitants of all races, 10 years old and over, unable to write, and of these 1,742 were foreign-born.

Age and sex of illiterates.—Of the 178,727 white illiterates 38,878 were from 10 to 15 years old, and of these 20,887 were males and 17,991 females; 33,311 were from 15 to 21 years old, and of these 15,962 were males and 17,349 females; 106,538 were 21 years old and over, of whom 37,713 were males and 68,825 females. Of the 185,952 colored illiterates 31,632 were from 10 to 15 years old, and of these 16,407 were males and

15,225 females; 35,134 were from 15 to 21 years old, of whom 16,299 were males and 18,835 females; 119,186 were 21 years old and over, of whom 55,938 were males and 63,248 females. Nine male and 9 female Indians were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 2,794, having 3,587 teachers, of whom 2,440 were males and 1,147 females, to educate their 125,831 pupils, of whom 65,979 were males and 59,852 females.

Amount and source of educational income.—The total income of all the educational institutions was $1,650,692, of which $79,100 were derived from endowment, $629,461 from taxation and public funds, and $942,131 from tuition and other sources.

Public schools.—The 1,932 public schools, with 2,141 teachers, 1,579 males and 562 females, were attended by 82,970 pupils, of whom 43,600 were males and 39,370 females. To educate these they possessed a total income of $683,008, of which $1,100 were derived from endowment, $580,416 from taxation and public funds, and $101,492 from other sources.

Colleges.—The 51 colleges, with 225 teachers—140 males and 85 females—had an attendance of 5,579 students, of whom 3,082 were males and 2,497 females. They possessed a total income of $288,950, of which $63,540 were derived from endowment, $4,110 from taxation and public funds, and $221,300 from other sources, including tuition.

Academies.—The 152 academies, with 391 teachers, 208 males and 183 females, were attended by 12,793 pupils, of whom 6,418 were males and 6,375 females. They possessed a total income of $247,485, of which $5,160 were derived from endowment, $6,135 from taxation and public funds, and $236,190 from other sources, including tuition.

Private schools.—The 624 day and boarding schools had 740 teachers, of whom 461 were males and 279 females, and were attended by 22,461 pupils, of whom 11,815 were males and 10,646 females. They possessed an income of $303,215, derived from tuition and other sources.

Libraries.—There were 773 public libraries, containing 204,713 volumes, and 2,732 private libraries, with 597,399 volumes; making in all 3,505 libraries, containing 802,112 volumes.

The press.—The 91 periodicals had an aggregate circulation of 225,952 copies, and an aggregate annual issue of 18,300,844 copies.

Churches.—Of the 3,180 churches 2,842 had edifices, with 878,524 sittings, and the church property was valued at $4,697,675.

Pauperism.—Of the 1,332 paupers 966 were native whites, 314 native colored, and 52 foreign-born.

Crime.—Of 981 persons imprisoned June 1, 1870, 342 persons were native whites, 560 native colored, and 79 foreign-born.

Age and sex of population.—Of the total population 429,592 persons were from 5 to 18 years old, and of these 217,922 were males and 211,670 females; 890,872 were 10 years old and over, of whom 436,154 were males and 454,718 females.

Occupations.—There were 367,987 persons of these ages engaged in various occupations, of whom 322,585 were males and 45,402 females; 267,020 were engaged in agricultural pursuits, of whom 237,953 were males and 19,067 females; 54,396 in personal and professional services, of whom 30,077 were males and 24,319 females; 17,510 in trade and transportation, of whom 17,417 were males and 93 females; 29,061 in mechanical and manufacturing and mining industries, of whom 27,138 were males and 1,923 females.

Age and sex of working population.—Of the 367,987 employed persons 41,456 were from 10 to 15 years old, of whom 34,091 were males and 7,365 females; 303,655 were from 16 to 59 years old, and of these 268,463 were males and 35,192 females; 22,876 were 60 years old and over, of whom 20,031 were males and 2,845 females.

TEXAS.

[From the report of Hon. J. C. De Gress, State superintendent of public instruction, for the fiscal year ended August 31, 1871, and supplementary report to December 10, 1871.]

PERMANENT SCHOOL FUND.

Specie	$1,199 17
United States currency	919 58
Six per cent. bonds of the United States	61,000 00
Five per cent. bonds of the United States	49,000 00
Six per cent. State bonds	320,367 13
Five per cent. State bonds	82,168 82
Six per cent. railroad bonds	1,753,317 00
Total	2,267,971 70

In the above item of "Six per cent. railroad bonds" the amount of $295,800 in bonds of the Houston and Brazoria Railroad Company is included. That road has been sold by the governor for about $130,000, which renders the $295,800 in bonds virtually null. That amount, therefore, is to be taken from the total, and $130,000, the proceeds of the road, added.

AVAILABLE SCHOOL FUND.

The available school fund, liable to appropriation, is declared by the school act to be all interest which has accrued, or may hereafter accrue, to the school funds from railroads or otherwise since March 31, 1870; one-fourth of all the *ad valorem* and occupation taxes assessed since that date, the poll tax, and such other taxes as have been or may be provided by law for the support of public schools. This fund, as shown by comptroller's report, August 31, 1871, is as follows:

Balance on hand in specie	$62,036 62
Balance on hand in currency	74,060 19
Total	136,096 81

SCHOOL APPROPRIATION.

The twelfth legislature, at its first session of 1871, appropriated as follows for the period ended August 31, 1871:

For salary and expenses of superintendent of public instruction	$1,300 00
For salaries of teachers and employés	50,000 00
For stationery, printing, school-books, and apparatus for public schools	10,000 00
Amount of appropriation expended up to August 31, 1871	15,194 59

SCHOOL STATISTICS.

Scholastic population, white males	71,762
Scholastic population, white females	65,536
Scholastic population, colored males	25,636
Scholastic population, colored females	23,961
Total scholastic population, from county returns	191,009
Number upon which apportionment was made from the United States census returns	229,568
Number of pupils in public schools	63,504
Average number of pupils to a school	48
Average appropriation per child	$1.75
Number of teachers	1,578
Number of teachers' certificates issued to December 10, 1871	3,687
Number of graded schools	1,107
Whole number of schools	1,324
Number of school directors in 123 counties	615
Number of school (judicial) districts	35
Number of supervisors of districts	35

INAUGURATION OF A FREE-SCHOOL SYSTEM.

The first annual report of the superintendent of public instruction of the State of Texas contains a statement of the difficulties encountered in the organization of a free-school system. Assuming the responsibilities of his position in May, 1871, he found nothing but a bare office and the educational laws approved April 24, 1871, as the ground-work of a system that required care, caution, and patience in bringing it to a successful working. No records of educational work of the past existed. No approximate estimate, even, could be made of the number of children to be provided for. Prejudice of the most unfounded character existed in many communities against public schools, and unscrupulous persons sought to add to the opposition by misrepresentation. At every step, stubborn opposition has been met from factions opposed to free schools; but, notwithstanding, schools have been opened in nearly every district and are now in operation, and, as if by magic, over 63,000 children have been gathered into these schools, and a corps of teachers, able, efficient, and experienced, been provided, who already report most favorable progress.

SUCCESS OF THE SYSTEM.

The success of the system during the first scholastic term has exceeded the most sanguine expectations. From the workings of the educational law and the rules and regulations adopted by the board of education, the most gratifying results have been experienced. As yet, few of the schools have advanced to anything more than a primary or preparatory system of instruction. High schools and normal schools have yet to be established; but an amount of latent progressive force has been developed among the people of the State that insures complete success for the future, if the proper means are but taken to enlist their sympathies, hopes, and ideas in educational advancement.

SCHOOL LAW.

The governor, in his message to the legislature in January, 1871, recommended the passage of an efficient school law, declaring the law of 1870 impracticable, and to this recommendation, and the knowledge of the inoperativeness of the old law, the State is indebted for the law under which the present system has been established. Until the passage of this act, April 24, 1871, there has not been in the State an educational law free from the most glaring defects. In the present law there are advantages that many States, after years of experience, are just preparing to adopt, "and we know that the fundamental principles of our educational structure are those most approved by educators of experience and ability."

The educational law has undergone some modifications since its passage. Economy suggested some changes; the number of educational districts has been reduced to twelve; a corresponding reduction has been made in the number of supervisors, and the area of country over which each has control is thus considerably extended.

SCHOOL LANDS.

In 1839 three leagues of the public domain were set apart for each county, for school purposes, and in the following year a further donation was made to each county of an additional league. A portion of this land has been sold. The permission to sell was subsequently restricted to lease for a specific period. The number of acres claimed by counties in 1868 aggregated 2,763,072 acres. The convention of 1866 set aside the alternate sections of land reserved from surveys made by railroad companies, so that the land endowment of schools aggregated nearly 5,000,000 acres.

In February, 1858, an act was passed adding to the principal of the school fund the proceeds of all sales of public lands. This act was repealed by the legislature of 1862, to enable them to apply the moneys from sales to war purposes. There was thus diverted from the school fund the amount of $236,579.40. Most of this amount was paid into the treasury in State war warrants or confederate notes, and it is a question whether titles to land thus acquired are valid. The present law gives to the school fund all money that may be realized by the sale of public lands. The report from the Land Office shows the unclaimed public domain to be 91,920,420 acres, and the sales of portions of it in the future will bring a handsome sum to the school fund.

SCHOOL FUND.

This fund, that in 1861 amounted to $2,592,533.14, became during the war the prey of the enemies of the National Government, and every available portion of it was used by them for furthering their treasonable purposes. One million two hundred and eighty-

five thousand three hundred and twenty-seven dollars and five cents of available funds were, from time to time, during the existence of the rebellion, withdrawn from the school fund and expended, most of it under the direction of the military board.

"But fraudulent legislation or corruption can not again reach the heritage that is the endowment of the school fund. A higher law, which shields this fund with national care, has been enacted by Congress, and only through the National Government itself can its permanency hereafter be affected." The "act to admit the State of Texas to representation in the Congress of the United States," approved March 30, 1870, contains these words: "The constitution of Texas shall never be so amended or changed as to deprive any citizen or class of citizens of the United States of the school rights and privileges secured by the constitution of said State."

Out of thirty-seven States Texas ranks seventh in the possession of a large permanent school fund; this now amounts to $2,670,798.12.

SCHOOL TAX.

The collection of the 1 per cent. tax levied in the different counties by the boards of school directors promises to be accompanied by many difficulties. In December, 1871, it was found necessary to pass a law providing that any officer who shall fail to assess and collect such taxes shall be guilty of a misdemeanor.

GRADATION OF SCHOOLS.

The gradation of schools and teachers' pay proved a difficult and delicate matter, but has been so adjusted that every part of the State shares alike in the benefits of the public free schools. Special provision was made for settlements on the frontier, and others, where the population was small in numbers and widely scattered. The minimum number for which a teacher could draw third-class pay was placed at 20 in such settlements, and is a provision far more liberal than that of any other State in the Union.

SCHOOL BUILDINGS.

While nearly every other State of the Union has its public school-houses and colleges that are State or corporation property, Texas had, when this system was inaugurated, not more than one or two, and those of small capacity. It was decided to lease buildings until such time as the State or counties were able to provide for building them. In 386 instances a merely nominal rent of $1 has secured a school-house. "And it is with pride that I thus record the public spirit shown, and the liberality of those who evince their willingness to foster and encourage the educational interests of the State.

"In other communities, where opposition to free schools found a strong foothold, buildings that were for rent have been refused for school purposes; while in others the speculative propensities of lessees have evinced themselves in the high charges made for the use of their buildings."

It is to be regretted that a bill introduced at the last session of the legislature, to provide for the building of school-houses throughout the State, without entailing upon the people burdensome and immediate taxation, did not become a law. The character of buildings leased as school-houses is very poor, lacking space, convenience, furniture, and, what is of greater importance than all, proper ventilation.

SCHOLASTIC TERMS.

The scholastic year has been divided into three terms. The first to commence September 4, and to close December 1. The second term to commence December 11, and close March 19, with a vacation from December 23 to January 2, both days inclusive. Third term to commence April 1 and close June 28. This division gives teachers full opportunities to complete their quarterly reports, and in other ways possesses advantages for both teachers and scholars.

SCHOLASTIC CENSUS.

It is feared that the present law directing the compiling of the scholastic census statistics has proved and will continue to prove inoperative. The returns lack that accuracy so requisite in guiding the distribution of funds to the different counties. Steps should be taken before the next appropriation to have the scholastic census perfected, and such penalties attached as will insure full and accurate returns from every part of the State.

SUPERVISORS.

The employment of thirty-five supervisors was a necessity in the organization of schools, but economy suggested a reduction in number as soon as headway was made in opening schools. The superintendent extends to these supervisors his thanks for their "uniform zeal, ability, and discretion in managing the affairs of their respective districts." Their districts were large, the means of transportation expensive and fatiguing, their duties onerous. Undaunted by any obstacles, they have performed their duties in the most satisfactory manner, and, above all, they are to be complimented for the patience and courtesy with which they have withstood the opposition of the enemies of public schools.

SCHOOL DIRECTORS.

In the matter of selection of school directors much difficulty has been experienced. A commendable spirit has been shown in some counties, by the best citizens accepting the office of school director, which offers no emoluments, but a decided degree of responsibility and considerable labor; but in others sectional feeling has operated to such an extent that it was impossible at first to obtain a sufficient number of citizens to act as a board of directors.

Great difficulty has been experienced in keeping directors to the strict limit of the rules and regulations and the provisions of the circulars of instruction issued from the superintendent's office. This is manifested in an extraordinary degree in the matter of levying the school tax. In some counties board after board of directors have resigned their positions under the pressure of political influence brought to bear by opposing factions, the proceedings of a so-called tax convention at Austin making it a part of their programme to invite the non-payment of this tax. In a State with but a few hundred miles of railroad, the inconveniences of travel, coupled with its expense, operate against the frequent convening of boards of directors. This accounts for much that should have been done in their districts remaining undone.

PRINCIPALS.*

In the second scholastic term approaching, an increase in the number of schools, and consequently of teachers and pupils, can be expected. The reduction of the number of supervisors from thirty-five to twelve may necessitate the employment of principals in our State, which will throw the work of grading schools and making the examination of classes, as prescribed in the law, on them. Teachers, following the law of self-interest, are liable to push scholars beyond their actual capacities in enlarging the first or second classes, so as to draw larger salaries. This evil the employment of principals will remedy, and they will, in this feature alone, be able to save to the State yearly many thousands of dollars—more than sufficient to pay the salaries allotted to them.

EXAMINERS.

The small appropriation made for the purposes of examination rendered it impossible to appoint boards of examiners for each county, and it was decided to appoint traveling boards of examiners, whose powers should extend to several districts. The results of this arrangement have been most happy. Three thousand six hundred and eighty-seven certificates have been issued and 1,337 applicants rejected. The number of examinations is still very large. The certificates issued are chiefly of the second, third, and fourth grades.

TEACHERS.

The teachers selected in the different districts are giving complete satisfaction both to the department and to the parents and guardians of pupils. In some localities they are subject to such persecutions as malice and political bias of opinion can invent.

Owing to the sparse population of some districts, and the distance that some scholars would have to travel to reach the nearest graded school, it has been deemed expedient to authorize a school, or fourth class, in which all the primary branches are taught, and young children can attend without being under the necessity of walking three or four miles. The rate of pay for fourth-class teachers has been fixed at $35 a month, and the selection of such teachers fills a vacancy that was keenly felt in the less populated districts of the frontier and coast counties.

Assistants are also provided for where pupils to the number of fifteen more than the minimum number prescribed for one teacher attend a public school. Their pay is fixed at $1.50 per month for every scholar of the fifteen and over.

---

* The report speaks of the "principal of a county," or of "one or two counties," so this office would seem to correspond with that of "county superintendent" in the Northern States, rather than with that of "principal of a school."

EQUAL COMPENSATION TO MALE AND FEMALE TEACHERS.

In the matter of equal compensation to male and female teachers, Texas has taken a stand that places her in advance of a majority of the States of the Union. The experience of all States has proved that as educators women are fully as efficient as men; in the matter of primary education they are far preferable. There is no shadow of reason why a faithful and competent female teacher, subject to the same expenses as a male teacher in supporting herself, should be wronged by an act of partiality in the important consideration of pay. The drawing of lines of distinction is simply a relic of barbarism.

TEACHERS' CONVENTIONS.

The superintendent urges the importance of holding teachers' conventions, especially in a State where, for want of a system of normal schools, the most approved methods of teaching can not receive such attention as they otherwise would. It is suggested that such a convention be called by the board of education.

TEXT-BOOKS.

The text-books adopted by the board of education are giving universal satisfaction and are rapidly being introduced into the schools of the State. In the introduction of a uniform system of school-books, the State has been saved the annoyances which result from leaving the selection of these to the counties. Scholars who, by change of residence, are transferred from one school to another, find the same texts, treated in the same familiar way, and are able to go on with their studies without mastering new definitions. In the matter of economy the saving to the people is immense.

LANGUAGES IN SCHOOLS.

The large proportion of citizens of German and Spanish birth and descent in the State rendered necessary the introduction of a rule providing for instruction in the French, Spanish, and German languages. Under its provisions teachers are permitted to teach these languages in the public schools, provided the time so occupied shall not exceed two hours each day. This provision has met with much favor throughout the State, as it brings children of scholastic age, of foreign birth or descent, into the public schools, while otherwise they would be subject to the expense of supporting private schools. Great difficulty is experienced in finding teachers fully conversant with these languages, and at the same time up to the required standard in other branches. What few are found deem themselves entitled to extra remuneration for instruction in languages, which, in view of the liberal provision already made for teachers, the superintendent has not felt at liberty to grant.

NIGHT SCHOOLS.

Privilege has been extended to teachers of public schools to open night schools, and use the school-houses of their respective districts for that purpose. This privilege is accompanied by a proviso that attendance upon such night schools does not exempt children of scholastic age from attending public day schools the required four months in the year. But little progress has been reported by teachers in opening night schools, though it is believed they would be largely attended if the system was duly inaugurated and proper publicity given to the announcement of their organization.

PRIVATE SCHOOLS.

A positive indication of the success of the free-school system is found in the daily applications from persons controlling private schools, offering to reorganize under the present free-school law. Among these applications are many from teachers of experience, who express themselves in decided approval of our public-school system. The number of private schools is becoming gradually less, few people being so blind to their own interests as to incur the expense of from thirty to fifty dollars per year for a child at a private school and pay the assessed taxes besides, when the public schools are fully equal in every respect to the best of private schools.

EDUCATION OF THE COLORED RACE.

Schools for colored children have been opened all over the State, and are crowded to overflowing with children who evince an eager thirst for knowledge that augurs well for the future of the race. The problem that agitated the southern mind a few years

ago, of what would be the future of the colored people, is settled, for education will make them self-reliant, self-supporting, and valuable citizens. They enter into the educational work before them with a zest that bespeaks their full understanding of its importance. Where it has been impossible to lease buildings for school-houses, they have offered their churches, and in many instances have clubbed together and put up buildings for the purpose.

The greatest difficulty experienced in giving them the benefits of the law has been in procuring teachers for them, few persons having the nerve and hardihood to meet the continual insults, the social ostracism, the threats of injury, and all the annoyances to which teachers of colored schools are subject. Some few teachers have braved all this and conquered; but in other cases insult and intimidation have done their work, and the schools are closed for want of teachers. In some communities teachers of colored schools have been unable to procure board or even lodging; in other instances they have been dragged from their houses at night and whipped; others, going to their school-houses in the morning have found them a heap of ashes.

This state of affairs can be remedied in every community by the citizens frowning upon such violations of law, but they will not do it till they begin to feel that their interest demands it. It is recommended that a law be passed assessing communities where school-houses are burned with the expense of a new one, and midnight incendiarism will soon cease. Let a provision of that law allow an action for damages to be entered against the people in places where teachers are outraged by midnight whippings or other bodily injury, and this phase of Ku-Klux management will also disappear. Something must be done speedily to remedy these evils, and give to the colored people full protection in person and property in their educational rights.

ILLITERACY.

The statistics of illiteracy show this State in an unenviable light. Of illiterate persons 10 years old and over, the census returns show, of whites, 70,893; of colored persons, 150,617. The division of male and female illiterates is nearly equal: of males, 110,448; of females, 111,064; and the aggregate is 27 per cent. of the population. Add to this the number of children between the ages of 6 and 10 who have received no education, and we have a result alarming in its proportions and truly significant of the cause that reveals such an exhibit of crime.

CRIME.

Of the exhibit of homicides in the thirty-seven States of the Union, Texas shows more than double the number of any other State for 1870. Only four other States reach the number of 100. The highest of these is Louisiana, with 128; while the number reported in Texas is 323.

COMPULSORY EDUCATION.

"With the statistics of crime and illiteracy in Texas, as warning of the shoals over which our ship of state has been strained and weakened, we should be earnest in the support and advocacy of the compulsory feature of our school law, which strikes at the eradication of our greatest evils." The law requires that all children of suitable age shall attend some school for four months in the year. Sufficient time has not elapsed to give any experience of the workings of this feature of the school law.

SECTARIANISM AND POLITICS IN PUBLIC SCHOOLS.

Great care has been taken to secure the public schools from the introduction of any sectarian or political influence, and notice of any such attempted exercise of religious or political bias has met with the prompt discharge of the offending teacher.

PEABODY FUND.

The sixth report of the agent of the fund contains the following with regard to this State:

"The school fund, after being sadly plundered, is still larger than that of any Southern State, being $2,285,279. The number of children of school age in the State is, according to the imperfect returns recently made, 227,615. Of these 63,504 (increased to about 90,000 April 5) have been already brought into the public schools.

"The superintendent in a letter says: 'I can not sufficiently thank you for your kind suggestions concerning the donation intended for this State. I commend the wisdom of the plans proposed, and shall enter into a hearty co-operation with you in executing the same.'"

CONDITION OF SCHOOLS AT THE CLOSE OF THE YEAR 1872.

A letter from the superintendent, dated December, 1872, says: "At present there are comparatively few injunctions restraining the collection of the school tax as provided for by the twelfth legislature, and in two of the counties where such injunctions stand, the people, with but few exceptions, refuse to take advantage of them, and willingly and cheerfully pay the tax. In fact, throughout the whole State, there is a strong feeling favorable to public schools. The counties have built many schoolhouses out of the proceeds of the 1 per cent. tax, and a very liberal spirit is evinced on the part of many citizens in the donation of school sites and buildings for educational purposes.

"The number of pupils enrolled in the schools averages about 115,000. In the grading much improvement is noticeable. The duties of officers having one, two, or three counties in charge have been so modified as to make it incumbent on them to personally visit, report upon, and grade every school at least once in every two months. The consequence has been a large reduction of expenses, and selection of the better teaching material at hand.

"Regarding the compulsory features of our law, I can as yet say nothing definite. Sufficient time has not elapsed to speak advisedly of its workings."

We have teachers' institutes organized in seventeen counties, and a State teachers' institute, whose officers are constantly busy in endeavoring to further the cause of education by the dissemination of useful information. An educational journal has been established in the State.

This year we will be entitled to a considerable sum from the Peabody fund, for we have many schools that, in every respect, fulfill the requirements of the trustees in order to receive aid.

The whole expenditure for 1871-'72 amounts to $1,217,101.48. Of this there were received from the State appropriation, $477,633.44; from county taxation, $739,468.04.

The amount expended for salaries of teachers and employés was $1,066,604.26; for the purchase and building of school-houses, $18,435.33, and for rent of school-houses, $64,866.25.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Texas was the nineteenth State in population, having 818,579 inhabitants within an area of 274,356 square miles, an average of 2.98 persons to the square mile. This population consisted of 564,700 whites, 253,475 colored, 379 Indians, and 25 Chinese. Of these 756,168 were natives of the United States, and 62,411 were foreign-born. Of the native residents 254,091 whites, 134,306 colored, 109 Indians, and 4 Chinese were born within its borders, while of the foreign residents 23,985 were born in Germany, 2,037 in England, and 4,031 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 65,205 persons attended school, and of these 821 were foreign-born. Of the 61,010 white scholars, 31,598 were males and 29,412 females. Of the 4,189 colored scholars, 2,045 were males and 2,144 females; 1 male and 5 female Indians were also reported.

Illiteracy.—There were 221,703 inhabitants of all races, 10 years old and over, unable to write, and of these 18,369 were foreign-born.

Age and sex of illiterates.—Of the 70,895 white illiterates, 19,919 were from 10 to 15 years old, and of these 11,171 were males and 8,748 females; 13,626 were from 15 to 21 years old, and of these 7,144 were males and 6,482 females; 37,350 were 21 years old and over, of whom 17,505 were males and 19,845 females. Of the 150,617 colored illiterates, 27,689 were from 10 to 15 years old, and of these 14,323 were males and 13,366 females; 28,110 were from 15 to 21 years old, of whom 13,070 were males and 15,040 females; 94,818 were 21 years old and over, of whom 47,235 were males and 47,583 females; 114 male and 77 female Indian illiterates were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 548, having 706 teachers, of whom 600 were males and 106 females, to educate their 23,076 pupils, of whom 12,244 were males and 10,832 females.

Amount and source of educational income.—The total income of all the educational institutions was $414,880, of which $760 were derived from endowment, $15,230 from taxation and public funds, and $398,890 from tuition and other sources.

Colleges.—The 4 colleges, with their 18 teachers—16 males and 2 females—had an attendance of 425 students, of whom 319 were males and 106 females. They possessed a total income of $14,500, of which $400 were derived from endowment and $14,100 from other sources, including tuition.

Academies.—The 3 academies, with 32 teachers—12 males and 20 females—were attended by 290 pupils, of whom 170 were males and 120 females. They had an income of $3,500, derived from tuition and other sources.

Private schools.—The 535 day and boarding schools had 649 teachers, of whom 567

were males and 82 females, and were attended by 22,276 pupils, of whom 11,690 were males and 10,586 were females. They possessed a total income of $381,330, of which $360 were derived from endowment, $480 from taxation and public funds, while $380,490 were derived from other sources, including tuition.

Libraries.—There were 135 public libraries, containing 25,018 volumes, and 320 private libraries, with 62,093 volumes; making in all 455 libraries, containing 87,111 volumes.

The press.—The 112 periodicals had an aggregate circulation of 55,250 copies, and an aggregate annual issue of $4,214,800 copies.

Churches.—Of the 843 church organizations 647 had edifices, with 199,100 sittings, and the church property was valued at $1,035,430.

Pauperism.—Of the 202 paupers 73 were native whites, 104 native colored, and 25 foreign-born.

Crime.—Of 732 persons imprisoned June 1, 1870, 237 were native whites, 365 native colored, and 130 foreign-born; 260 persons were convicted during the year.

Age and sex of population.—Of the total population 284,851 persons were from 5 to 18 years old, and of these 145,184 were males and 139,667 females; 571,075 were 10 years old and over, of whom 297,356 were males and 273,719 females.

Occupations.—There were 237,126 persons of these ages engaged in various occupations, of whom 208,529 were males and 28,597 females; 166,753 were engaged in agricultural pursuits, of whom 152,722 were males and 14,031 females; 40,882 in personal and professional services, of whom 27,168 were males and 13,714 females; 13,612 in trade and transportation, of whom 13,576 were males and 36 females; 15,879 in mechanical and manufacturing and mining industries, of whom 15,063 were males and 816 females.

Age and sex of working population.—Of the 237,126 employed persons, 17,760 were from 10 to 15 years old, of whom 13,544 were males and 4,216 females; 210,387 were from 16 to 59 years old, and of these 186,697 were males and 23,690 females; 8,979 were 60 years old and over, of whom 8,288 were males and 691 females.

SCHOOL OFFICIALS.

STATE BOARD OF EDUCATION.

Governor E. J. Davis, Austin; Attorney-General William Alexander, Austin; Hon. J. C. De Gress, Austin.

Hon. J. C. De Gress, *superintendent of public instruction.*

SCHOOL INSPECTORS.

District.	Inspector.	Post-office address.
First district	Charles Parker	Houston.
Second district	A. T. Monroe	Crockett.
Third district	A. D. Tinsley	Henderson.
Fourth district	W. A. Ellett	Clarksville.
Fifth district	David Mackay	Dallas.
Sixth district	A. G. Stobaugh	Benham.
Seventh district	Thomas Ford	Waco.
Eighth district	J. W. Shafter	Austin.
Ninth district	W. D. Carey	Seguin.
Tenth district	A. Zoeller	Bourne.
Eleventh district	J. W. Talbot	Georgetown.
Twelfth district	A. J. Bennett	Brownsville.

VERMONT.

[From report of Hon. John H. French, secretary of the board of education, for the school year 1872.]

TEACHERS' INSTITUTES.

A comparison of the institute statistics for the past three years indicates a growing interest in these important educational auxiliaries, which is in the highest degree encouraging. In 1870 the total membership was 1,165; in 1871 it increased to 1,177; and in 1872 to 1,262. The total attendance at the institutes of 1872 was 4,611 days. The average attendance in 1872 was 73 per cent., against 65¼ per cent. in 1870. There were 54 town superintendents present in 1872 against 44 the year previous. The prominent obstacles to greater usefulness are: 1. Indifference of superintendents. Of the 229 superintendents in the counties in which institutes have been held the past year, only 54 were present, and some of these but a single day. 2. Indifference of some teachers. Although the attendance increases from year to year, yet the total annual enrollment has not reached more than one-third of the teachers employed in the State. 3. Opposition of prudential committees. In some instances committees have forbidden their teachers to attend, and the opposition is growing stronger every year, principally from the fact that the discontinuance of a school for five days involves a loss of the public money, which is divided, "in proportion to the aggregate attendance," among the various school districts. To obviate this trouble, it is recommended that the terms of county institutes be reduced to two days; that teachers attending the institutes be authorized to give as the attendance of those two days the daily average attendance for the term, thus securing the district against loss of public money; that three State institutes be held annually, in different parts of the State, during the spring and fall, when but few schools are in session; and that the examination of teachers for institute certificates be confined to these State institutes and to the teachers who attend them through the entire session.

EXAMINATIONS OF TEACHERS.

The statistics of teachers' institutes show that the proportion of those passing the institute examinations has increased 38 per cent. in six years. In the last two years the increase has been 15 per cent., notwithstanding the higher standard of qualification adopted by the amendment of 1870. The opinion has been expressed that the additional requirements of this amendment make the law unjust to the teachers of the State. The secretary reviews the method of examining teachers, and shows that some of the requirements are hardly up to the standard of other States mentioned. He regards this law as making "a 'new departure' in the educational affairs of the State." "It was regarded with favor by superintendents, progressive teachers, and the active friends of common schools throughout the State; and an interest greater than had been known for many years at least, if ever before, was awakened on the subject of qualifications of teachers." One of the most noticeable results of the enforcement of this law is the largely increased attendance at normal and high schools of young persons who are fitting themselves to become teachers.

TEACHERS' ASSOCIATIONS.

The annual meetings of the Vermont State Teachers' Association have done valuable service to the cause of education in the State. The attendance of teachers and others was large; the addresses and discussions were full of interest; and the proceedings reflected credit upon the association, and gave renewed courage to the teachers present. Five county teachers' associations have been organized. Four of these meet annually and one semi-annually.

NORMAL SCHOOLS.

There are three normal schools in the State, supported at an expense to the State of $3,000 per annum. These schools have been steadily improving in the quality of their work, and they accomplish as much as could reasonably be expected of institutions no better endowed. The board of education recommend a larger appropriation for each of them. The benefits resulting from the action of the board, under the enactments of 1870, are seen in the greater maturity of the students, and the advance in the grade of scholarship.

UNIFORMITY OF TEXT-BOOKS.

The law requires the use, in all the schools of the State, of the text-books selected by the board of education. This selection is to be made once in five years. During the present year a selection has been made of text-books to be used in the schools for five years from November 1, 1873. Guyot's Geography, French's Arithmetics, Greene's English Grammars, and the New American Readers are substituted for the books now in use. It is recommended by the board of education that physiology, vocal music, and elementary drawing be added to the list of studies, and that the board be authorized to select suitable text-books upon these subjects, and also to adopt a text-book on civil government, and some uniform system of penmanship.

THE TOWN OR MUNICIPAL SYSTEM.

The secretary strongly advocates the "town system," as provided for in the law of 1870. "It has not had a fair, impartial trial. A constant, persistent, active opposition to the law has been kept up in the towns where it has been adopted, evidently for the purpose of making it so unpopular as to cause its repeal by the general assembly." It is admitted that there are objectionable features in the law, which it is very desirable to have modified: 1. The lack of any provision whereby a town may, after a trial of the system, have the opportunity to vote whether it will continue this or return to the district system. 2. The people of a town have no voice in determining the number of primary schools that shall be maintained in the town. 3. The difficulties that are found in attempting to equalize the value of the district property, under the provisions of the law. It is the opinion of many that, if these objectionable features could be done away with, many towns would, in the coming two years, adopt the law and give the system a fair trial. It is strongly urged that the law be amended in these respects. The town system is advocated by all the teachers of the State and by a majority of the town superintendents; and the leading educational sentiment of the State is decidedly in favor of it.

EDUCATIONAL PROGRESS.

"While we are thoroughly conscious that there is yet much to be done to elevate our common schools to their highest capabilities, it is gratifying to know that those who have closely observed the development and working of our school system for the past few years concede that we are making commendable progress; that our schools are improving; and that we have never had more to encourage us to work for the further advancement of our school interests than we have at the present time. Graded schools are being organized in many of the larger villages, and central and union schools in some of the towns; better qualified teachers are being employed throughout the State, and better schools are the inevitable result; the average length of the school year is gradually increasing; the expenditures for new buildings are liberal; the teachers' wages are increasing; and more attention is given to the subject of common schools, year by year, in nearly all parts of the State."

RECOMMENDATIONS OF THE SECRETARY.

In an address delivered by the secretary of the board of education in the hall of the house of representatives, before members of the legislature and others, he recommended a State property-tax of 20 per cent., and a poll-tax of $2; 5 per cent. of the whole State tax to be set apart for the purchase of books and apparatus. He made some statements concerning the scarcity of apparatus, dictionaries, and globes in most schoolhouses in the State.

VERMONT STATE NORMAL SCHOOL.

This was established as a normal school in 1866. The number of pupils for five quarters, beginning with the winter quarter of 1870–'71, and ending with the winter quarter of 1871–'72, was 258. Cost of tuition, $6 per quarter.

STATE NORMAL SCHOOL, CASTLETON.

This institution has completed its sixty-sixth year, having been known as Castleton Seminary before it became a normal school. Cost of tuition: Primary and junior years, $8 per quarter; middle and senior years, $10 per quarter.

LYNDON LITERARY INSTITUTION.

A new, commodious building has recently been erected for the use of the school.

BARRE ACADEMY.

This institution is open to both sexes. A "teachers' class" is organized in connection with this school, in which instruction is given on the various subjects connected with teaching.

CALEDONIA COUNTY ACADEMY.

The academy has a fund of some $14,000, the income of which is applied to the payment, in part, of teachers' salaries and defraying the other expenses of the institution, so that the tuition is a merely nominal sum. The income from a legacy of $1,000 is applied to paying the tuition of indigent students. There is a good library in the village, to which the students may have access. By the will of the late Hon. Thaddeus Stevens, the library receives a bequest of $1,000, the interest of which is to be expended yearly for the best books and publications of the day.

VERMONT EPISCOPAL INSTITUTE.

Gymnasium, bowling-alley, and carpenter-shop are connected with this school, and there is a regular military drill.

NORWICH UNIVERSITY.

The students are called cadets, and are under military discipline. The military department is under the charge of an officer of the United States Regular Army, appointed by the Secretary of War.

MIDDLEBURY COLLEGE.

Seven scholarships have been recently provided by donations of $1,000 each. A permanent fund has recently been established for the enlargement of the library. There is also a valuable cabinet of natural history.

STATE UNIVERSITY AND AGRICULTURAL COLLEGE.

This institution has, by the decision of its trustees, opened the doors of all its departments to students of both sexes, on terms of equality. Several ladies have taken advantage of the opportunity thus offered to pursue a regular university course.

VERMONT REFORM SCHOOL.

The seventh annual report of this institution shows that during the year 15 boys have been furloughed, 29 discharged, 7 have escaped, and 1 has died. Number remaining July 31, 1872, 117. Average number during the year, 122. Average time of detention of those discharged during the year, 1 year, 9 months, 17⅞ days.

After considerable experience, it has become the practice of the institution not to discharge boys, but to furlough them for good conduct; then, if their conduct under the furlough shows that they need further discipline, they are easily recalled to the school without additional legal proceedings, and thus no pretended reformation can deceive the officers of the school. The adoption of this rule has been followed by the most satisfactory results. The number of inmates could be increased 100 or more with little additional expense; and there are more than 100 boys in the State, in the daily practice of vice, and truants from school, whom a residence here might place in the class of the virtuous and useful, instead of the dangerous and criminal.

New buildings have been erected during the year at a cost of $47,290.74, including fixtures. Of this amount, $2,185.54 were paid by the surplus earnings of the school.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Vermont was the thirtieth State in population, having 330,551 inhabitants within an area of 10,212 square miles, an average of 32.37 persons to the square mile. This population consisted of 329,613 whites, 924 colored, and 14 Indians. Of these 283,396 were natives of the United States and 47,155 were foreign-born. Of the native residents, 243,272 whites, 540 colored, and 2 Indians were born within its borders, while of the foreign residents, 370 were born in Germany, 1,946 in England, and 14,080 in Ireland.

School attendance.—According to Table IX, vol. 1, of the Census Report, 70,1699 persons attended school, and of these 2,964 were foreign-born. Of the 70,104 white scholars, 36,755 were males and 33,349 females. Of the 95 colored scholars, 58 were males and 37 females.

Illiteracy.—There were 17,706 inhabitants of all races, 10 years old and over, unable to write, and of these 13,804 were foreign-born.

Age and sex of illiterates.—Of the 17,584 white illiterates 1,850 were from 10 to 15 years old, and of these 1,035 were males and 815 females; 2,422 were from 15 to 21 years old, and of these 1,317 were males and 1,105 females; 13,312 were 21 years old and over, of whom 6,867 were males and 6,445 females. Of the 116 colored illiterates 6 were from 10 to 15 years old, and of these 3 were males and 3 females; 28 were from 15 to 21 years old, of whom 16 were males and 12 females; 82 were 21 years old and over, of whom 45 were males and 37 females. Three male and 3 female Indians were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 3,084, having 51,60 teachers, of whom 1,356 were males and 3,804 females, to educate 62,913 pupils, of whom 31,295 were males and 31,618 females.

Amount and source of educational income.—The total income of all the educational institutions was $707,292, of which $13,046 were derived from endowment, $523,970 from taxation and public funds, and $170,276 from tuition and other sources.

Public schools.—The 2,830 public schools, with 4,622 teachers—1,171 males and 3,451 females—were attended by 52,067 pupils, of whom 25,872 were males and 26,195 females. To educate these they possessed a total income of $516,702, of which $1,366 were derived from endowment, $504,006 from taxation and public funds, and $11,330 from other sources, including tuition.

Colleges.—The 3 colleges, with 19 male teachers, had an attendance of 155 male students. They possessed a total income of $21,251, of which $8,550 were derived from endowment, $3,203 from taxation and public funds, and $9,498 from other sources, including tuition.

Academies.—The 41 academies, with 174 teachers—74 males and 100 females—were attended by 3,973 pupils, of whom 2,029 were males and 1,944 females. They possessed a total income of $80,050, of which $2,400 were derived from endowment, $373 from taxation and public funds, and $77,277 from other sources, including tuition.

Private schools.—The 203 day and boarding schools had 316 teachers, of whom 80 were males and 236 females, and were attended by 5,770 pupils, of whom 2,731 were males and 3,039 females. They possessed a total income of $77,793, of which $11,427 were derived from taxation and public funds, and $66,366 from other sources, including tuition.

Libraries.—There were 736 public libraries, containing 321,727 volumes, and 1,056 private libraries with 405,536 volumes; making in all 1,792 libraries, containing 727,263 volumes.

The press.—The 47 periodicals had an aggregate circulation of 71,390 copies, and an aggregate annual issue of 4,055,300 copies.

Churches.—Of the 699 churches 744 had edifices with 270,614 sittings, and the church property was valued at $3,713,530.

Pauperism.—Of the 1,785 paupers 1,231 were native whites, 31 were native colored, and 523 were foreign-born.

Crime.—Of 193 persons imprisoned June 1, 1870, 143 were native whites, 2 native colored, and 48 foreign-born; 139 persons were convicted during the year.

Age and sex of population.—Of the total population 89,831 persons were from 5 to 18 years old, and of these 45,667 were males and 44,164 females; 258,751 were 10 years old and over, of whom 129,248 were males and 129,503 females.

Occupations.—One hundred and eight thousand seven hundred and sixty-three persons of these ages were engaged in various occupations, of whom 95,263 were males and 13,500 females; 57,983 were engaged in agricultural pursuits, of whom 57,889 were males and 94 females; 21,032 in personal and professional services, of whom 9,680 were males and 11,352 females; 7,132 in trade and transportation, of whom 7,101 were males and 31 females; 22,616 persons in mechanical and manufacturing and mining industries, of whom 20,593 were males and 2,023 females.

Age and sex of working population.—Of the 108,763 employed persons 2,224 were from 10 to 15 years old, of whom 1,615 were males and 609 females; 97,333 were from 16 to 59 years old, and of these 84,821 were males and 12,512 females; 9,206 were 60 years old and over, of whom 8,827 were males and 379 females.

VIRGINIA.

[From the report of Hon. W. H. Ruffner, State superintendent of public instruction, for the scholastic year ended August 31, 1872.]

FINANCIAL STATEMENT.

Received from State funds	$422,602 43
Received from county funds	219,863 63
Received from district funds	249,104 33
Received from other sources	101,748 20
Total receipts for school purposes	993,318 59
Expended for pay of teachers and treasurers	$643,065 68
Expended for pay of county superintendents	45,295 03
Expended for central office	6,490 33
Expended for district expenses	298,467 55
Total expenditures	993,318 59

ATTENDANCE.

Number of pupils enrolled in public schools	166,377
Increase over last year	35,289
Per cent. of school population enrolled	40.5
Average daily attendance	95,488
Increase over last year	19,766
Per cent. of school population in average attendance	23.2
Per cent. of enrollment in average attendance	57.4
Average cost of tuition per month, per pupil enrolled	$0.70
Average cost of tuition per month, per pupil in average attendance	$1.22
Number of pupils attending private schools	20,497
Decrease from last year	5,451
Total number of pupils in public and private schools	186,874
Increase over last year	29,838

TEACHERS AND TEACHERS' PAY.

Number of teachers in public schools	3,853
Increase over last year	769
Average monthly pay of teachers	$29 81
Number of county and city superintendents	91
Average number of visits by county superintendents	78
Average number of days employed	138
Average salary of superintendents	$497 75
Number of school trustees in cities and counties	1,362

SCHOOL DISTRICTS AND SCHOOLS.

Number of counties in the State	99
Number of cities of first class	6
Number of school districts in cities and counties	454
Number of public schools in cities and counties	3,695
Increase over last year	648
Number of graded schools	107
Average number of months schools were taught	5.72
Increase over last year	1.06

SCHOOL PROPERTY.

Number of school-houses owned by districts	504
Increase over last year	414
Estimated value of public-school property	$387,672
Increase over last year	$176,506

GROWTH OF THE PUBLIC-SCHOOL SYSTEM.

"Considering the embarrassments under which the mighty work of universal education was begun and has been continued, we have reason to thank God and take courage. The

hostile and the feeble-hearted expected that in a year or two our public-school system would end its existence, but it was born a giant and has grown with giant vigor."

During the past year, the second of the public-school system, there has been an increase of 648 schools and 769 teachers. More than a month has been added to the average length of the school session, and there has been an addition of 35,289 pupils to the enrollment in the schools.

It is evident from the diminution of pupils in the lower grades of private schools, taken in connection with the large increase in the corresponding public schools, that the latter are rapidly absorbing the former. "The increased liberality of the people is worthy of note, especially in view of the fact that in the counties and districts the money was voted by the people at the polls, and came in most opportunely to supplement the waning income from the State."

DIMINUTION IN THE PROCEEDS OF STATE SCHOOL TAX.

The amount received from this source during the year 1870–'71 was $362,000; received during 1871–'72, $315,428; diminution, $46,572. After the expiration of the scholastic year 1870–'71 additional funds pertaining to that year were received, which raised the total to $435,182. Even this sum, however, fell short of the first auditor's estimate by more than $55,000. On September 1, 1872, the school revenue from the State tax was nearly $175,000 short of the auditor's estimate. Part of this will, no doubt, yet come in. Still the amount can not reach within $100,000 of what was expected. The disastrous results were mitigated by the interest received from the vested literary fund. But liabilities must be paid in the districts out of money belonging to the now current year. This, with the danger of still further diminution from reduced assessments, must tell badly on the schools during the year upon which they have entered.

THE LITERARY FUND.

On the 1st of May, 1871, this fund consisted of $1,596,069 in solvent securities, on which the unpaid interest would, on the 1st of July, 1871, amount to $566,616. Inasmuch as the constitution, and also the school law, set apart this fund, and require its annual interest to be used for the support of the public free schools, it is to be hoped that the general assembly will provide for the payment of full interest on the fund. Unless some special effort be made, the school revenues for the current year will be seriously curtailed.

AID FROM THE PEABODY FUND.

The Virginia schools received from the Peabody fund during the past scholastic year the sum of $28,900. The bulk of this was given to graded schools, and was highly influential in promoting the formation of this class of schools, and in the prolonging of their sessions. Aid was also rendered to teachers' institutes, and to the Educational Journal. "Dr. Sears has contributed his much-coveted personal services in aid of the work, by traveling extensively, delivering addresses, and rendering counsel."

The agent of the fund says: "The cities and districts in Virginia which we have assisted to the amount of $26,000 this year have themselves paid for schools and school-houses not far from $280,000; more than half as much as was paid last year ($550,000) by all the places receiving aid from us in twelve States."

PROGRESS OF PUBLIC SENTIMENT.

There is abundant evidence that the public-school system is growing in favor with all classes of the people. There are some counties in which many of the land-holders have as yet strangely failed to recognize the advantages of popular education to the owners of the soil. But, every thing considered, the advance in public sentiment has been far more rapid than could have been anticipated. Many leading men who are still theoretically opposed to public education are co-operating in the effort to make the system a good one. The existence of public schools being thoroughly assured, there is now special need of proper sentiment as to the character and efficiency of the schools.

LAW-ABIDING CHARACTER OF THE PEOPLE.

A section in the constitution providing that "each city and county shall be held accountable for the destruction of school property that may take place within its limits by incendiaries or open violence," discloses on the part of its framers some apprehension of resistance to the working of the public free-school system in Virginia. Results have proved that this provision was unnecessary. Not a case of incendiarism or violence has occurred. It is worthy of remark also, that, although the mode of raising local school taxes first adopted was unpopular, there was a disposition manifested in only two or three counties, and these on the part of a very few individuals, to throw obstacles in the way of their collection. "Taken altogether, probably no new scheme of legislation ever operated more smoothly."

IMPROVEMENT IN SCHOOL-HOUSES.

The funds applicable to district purposes were so small that but little improvement has been made in comparison with what is needed. Yet there has been some advance. In many counties several new houses have been built, and a large majority of the superintendents report much done in the way of refitting. Many districts would gladly multiply and improve their school accommodations, if they were allowed to raise the necessary means of so doing.

IMPROVEMENT IN THE QUALITY OF SCHOOLS.

An important item of improvement is the approach which has been made to uniformity of text-books. There has also been great improvement in the teachers, who in many places have progressed rapidly in professional intelligence and skill. The examination by the county superintendents has proved a powerful stimulus; and the re-examination which was required at the beginning of the second year enabled the officers to drop such teachers as had not met expectation. But there is still great room for improvement. In some places the mode of teaching is the same that was practiced half a century ago, and the teachers can not be induced to read or inquire. The only means by which the schools can be brought up to the educational advance of the times lies in the thorough and systematic training of teachers. The graded system has been introduced to a considerable extent in the cities and towns.

The cities of Richmond and Lynchburgh have made the greatest advance in organization, systematic visitation of schools, instruction of teachers, and commodious school accommodations. The authorities of those cities embraced the cardinal doctrine that a superintendent of schools, sufficiently paid to enable him to give his whole time to official duties, was the only guarantee of complete success. "Considering how short a time has elapsed since the establishment of the system in those cities, the maturity and efficiency of their plans of instruction and management are really surprising. This is especially true of Richmond, where the school officers have been greatly strengthened by the liberality of the city council and the aid of an enlightened mayor. Already families are moving into the city, in order to obtain for their children the educational advantages there presented."

THE COLORED PEOPLE.

The statistical tables show in many counties a better average of school attendance for the blacks than for the whites, and a general average nearly as good. The fact that the number of colored schools is not as large as of white, in proportion to population, may be ascribed mainly to the want of a sufficient number of teachers and of school-houses for colored schools. The average ability of the teachers of colored schools has been rising, partly because of the improved feeling on the subject, and partly as a consequence of the educational work which has for seven years been going on among the colored people.

The Hampton Institute, the colored normal school, and the Colver Institute in Richmond, are doing a most valuable work in giving to colored youth of both sexes a sound education, and training them for teachers. But there must, for a time, continue to be a deficiency of really competent teachers for colored schools. The only remedy for the want of suitable school-houses is an adequate public provision.

"It is pleasant to observe," says the superintendent, "that our intelligent citizens are becoming more and more favorable to the education of the negro. But the burden of taxation is heavy, and many of them feel that the Congress of the United States should grant them aid in the heavy work of educating the children of the freedmen."

COUNTY SUPERINTENDENTS.

The superintendent bears emphatic testimony to the ability and faithfulness of the county and city superintendents. After a comparison with other States he feels "safe in saying that our superintendents stand in the front rank of their class in point of ability and efficiency, and at the fag-end in pay." The average salary is $497.75; or, deducting official expenses, $405.34; equivalent to a per diem of $2.93. The State gives only $310.95 of this, or $218.44 above official expenses; a per diem of $1.58. The additional pay was voted to them by the people of their counties; so that, by the present law, they must run the gauntlet of school trustees, supervisors, and county judges before they can get anything beyond the $1.58.

SCHOOL TRUSTEES.

These have in most cases discharged their duties with a remarkable degree of attention; in individual instances with devoted zeal. It is recommended that, to secure the proper discharge of trustees' duties, each trustee receive some remuneration. Many of the townships are of such unusually large size that, in attending the meetings of

school boards, trustees are frequently subjected to personal expense, which ought to be paid out of the local school funds; but this the law does not permit. "Either trustees must be paid or the districts must be made smaller. The former alternative is greatly preferable."

LOCAL SCHOOL TAXES.

The reports of county superintendents show that the present law regulating the raising of local school taxes is almost universally regarded as an improvement on the former law. But objection is made to the power given to the supervisors and the county judge to curtail and damage, if not to destroy, the means of education in any county. In a number of cases these evil results occurred. It is claimed that these questions should be left entirely in the hands of the school trustees, who are better able to judge of them; also, that if the decision as to school estimates is placed in the hands of supervisors, the interests of education will be dragged into every local contest, and men will go into office simply on the question of the school tax.

With regard to the severe limitations placed by the present law upon the raising of means for the support of schools, the superintendent says: "This will, I fear, have a bad effect in many ways. School privileges will be reduced in so many counties this current year that I dread the exhibit which I must make in my next report. Bitter complaints will abound when the result is seen and felt. No doubt strong efforts will be made to supplement the public funds from private sources. But the people grow more reluctant to draw on their private means for public purposes, and the operation of the plan of private additions is unequal and unsatisfactory."

PROPOSED CHANGE IN THE TAX LAW.

As the law now stands it is possible for the supervisors to cut the people off from all school privileges, or, by failing to make appropriations, leave the State money to be absorbed by the wealthy neighborhoods. The superintendent suggests the following plan for the consideration of the general assembly, as a compromise: Allow the several school boards to fix absolutely the rate of taxation up to the present maximum of the law, leaving the option so far only to them. Then legalize a certain higher maximum, and put the increase at the discretion of the supervisors, so that a part will be sure and part contingent. From $150,000 to $175,000 more than was expended last year would pay teachers for a full supply of primary schools for the State.

CENSUS OF SCHOOL POPULATION.

The change made in the law concerning the taking of the census of school population proves to have been an unfortunate one. There is no economy in it, and there was scarcely a county in the State in which the assessors performed the work satisfactorily, and in some counties they neglected it wholly. So unreliable are the lists returned that the census of the previous year will be used as the basis of apportionment, until more accurate lists can be obtained. The superintendent suggests that the responsibility of taking the census be left, where it properly belongs, with the school officers. They alone appreciate the matter, and they alone can be subject to a proper supervision.

ACADEMIES AND COLLEGES.

It is stated, as a highly gratifying fact, that during the year there have been in operation in the State 187 high schools or academies, with 7,701 pupils, a large portion of whom will shortly enter the colleges.

The statistics of colleges for the past year are very encouraging. The aggregate of students was probably greater than at any previous period in the history of the State. The colleges are ably manned, and lack nothing but large endowments. The two universities are worthy of their fame, and should not be allowed to languish for want of means. Ten technical schools, representing at least six different vocations, were sustained last year. To these have since been added the agricultural and mechanical college.

With regard to the use of the land-scrip, nothing could ever be agreed upon in the legislature until, in the winter of 1870–'71, the senate passed a bill requiring that any institution which might receive the fund should give up its name and distinctive character, and be fully merged into a new agricultural and mechanical college. It was not believed that there was any existing demand for such a school; but it was believed that there was a great popular want or need of it, and that its creation would gradually develop a consciousness of want, succeeded by an active patronage.

In the winter of 1871–'72, after a long struggle, the general assembly, by a large majority, besides giving a third to Hampton Institute, which was a technical colored school already established, set apart the remaining two-thirds to the establishment of a special school for the whites. It accepted the offered property of Preston and Olin

Institute, swept away all its previous character and history, and ordered the creation of a new institution for the benefit of the agricultural and mechanical people of Virginia.

At the farmers' convention, held at Petersburgh, November 27 and 28, Professor C. L. C. Minor, president of the agricultural college, stated that "The rapid growth of the college for some weeks past has shown that the trustees were right in not delaying the opening for another year, as some thought it necessary to do, that there might be some accumulation of the funds to meet the expenses of equipment for a first opening. At first but a handful of students presented themselves, but as the knowledge of the real work that was doing spread abroad, and the mistaken impression that it was to be a mere labor school of the most elementary sort was dissipated, the students came in fast. In sixty days after the opening the number had reached 78, and there were indications of a further increase. A farm has been purchased, and in January the trustees will appoint a professor of agriculture and a farm-manager.

"Many appointments were yet vacant, as has always been the experience of the military institute and the University of Virginia, but, like the faculties of those institutions, the faculty of the agricultural college are prepared to give appointments, in place of the counties not applying, to students who may seek them from the counties that have already secured appointments."

ALEXANDRIA.

HISTORY OF THE PUBLIC SCHOOLS.

The first free school in Alexandria was founded by George Washington. In December, 1785, he wrote to the trustees of the Alexandria academy, as follows: "It has long been my intention to invest, at my death, £1,000 in the hands of trustees, the interest of which is to be applied in instituting a school in the town of Alexandria for the purpose of educating orphan children, or the children of such indigent parents as are unable to give it. * * * I will, until my death, pay the interest thereof, to wit, £50 annually. * * * It is my intention to apply this to that sort of education as would be most extensively useful to people of the lower classes of citizens, viz, reading, writing, and arithmetic, so as to fit them for mechanical pursuits." From General Washington's will it appears that he left twenty shares in the Bank of Alexandria, worth $4,000, to the trustees for the support of the school.

The records show that in April, 1786, a school was opened with 20 scholars. "Two girls were admitted upon this condition: 'that General Washington shall explain it to be consistent with his intentions that girls may be taught in this school.'" That General Washington approved the admission of girls is to be inferred from the fact that these were retained and others afterward admitted.

The school hours at that date were as follows: "From the 1st of May to the 1st of September from 6 to 8 and from 9 to 12 a. m., and from 2 to 5 p. m.; and from the 15th of September to the 1st of May from 9 to 12 a. m., and from 2 to sunset.

CONDITION OF THE SCHOOLS.

The greatest difficulty at present is in securing full attendance. The percentage of enrollment to the school population is only 53. The average attendance is far lower than it should be. Children are kept at home for the most frivolous reasons.

The great wants of the schools are competent teachers and good school-houses. The former can only be secured by the payment of suitable salaries, and it is recommended that some plan be at once adopted whereby the salaries of the most efficient teachers shall be gradually raised.

But one school-house belongs to the city, and that is sixty years old. The colored schools are well accommodated, but most of the white schools are crowded into small apartments in every way unsuitable, and only two of these have furniture better than the long old-fashioned forms and benches.

TEACHERS' INSTITUTES.

The first meeting of this kind in Alexandria was held August 21 and 22, 1871. About 40 persons, including all the teachers of the public schools, attended. On the 26th, 27th, and 28th of August, 1872, the second institute was held. This was largely attended by private teachers and others interested in education, besides the public-school teachers.

UNIVERSITY OF VIRGINIA.

This institution has completed its forty-eighth session. In establishing the University of Virginia, Mr. Jefferson, for the first time in America, threw open the doors of a univer-

sity in the true sense of the name, providing for thorough instruction, in independent schools, in all the chief branches of learning. The wisdom of this plan has been amply vindicated by time and experience.

The university includes four departments: literary and scientific, agricultural, medical, and law. The library of the university was originally selected and arranged by Mr. Jefferson, and has since been enlarged by purchases and donations.

In the medical department the collection of paintings for the illustration of the lectures on anatomy, physiology, and surgery—several hundred in number—is unequaled by anything of the kind in the United States, or perhaps abroad. The university offers no facilities for clinical instruction.

VIRGINIA MILITARY INSTITUTE.

This institution was organized as a State military and scientific school upon the basis of the United States Military Academy at West Point, and the system of instruction and government is very nearly the same as in the latter institution. During the war the buildings, with the library and apparatus, were destroyed, and the institute was temporarily transferred to Richmond. In 1865 it was reorganized at Lexington, and opened with 50 cadets.

The State makes an annual appropriation for the support of the institute of $15,000. A number of the cadets are annually appointed by the State, and receive tuition free. The number of State cadets admitted since organization is 575; of pay cadets, 2,050. Number of cadets during the past year: State, 46; pay, 300; total, 346. Since organization there have been 715 graduates. The military staff numbers 7.

The State property attached to the institution is worth about $250,000. There is also an interest-bearing fund, the gift of private individuals, to the amount of $50,000, the income of which sustains the chairs of agriculture and of animal and vegetable physiology applied to agriculture.

WASHINGTON AND LEE UNIVERSITY.

This university includes the following departments: academic, law, engineering, and a business college. It is proposed to add to the course schools of agriculture, commerce, and mechanical engineering. The course of study is elective. Prize scholarships are offered to high schools and academies, and the board of trustees have authorized the faculty to appoint to scholarships a number of young men intending to make practical printing and journalism their business in life. A summer school is organized during the vacations, in which students may be prepared for entrance with advanced classes at the beginning of the regular session. A flourishing Young Men's Christian Association exists among the students.

UNION THEOLOGICAL SEMINARY.

This institution is under the care of the Presbyterian synods of Virginia and North Carolina. It was opened January 1, 1824, with 1 professor and 3 students. After the war, the seminary, left without income, was sustained for a year by private subscriptions. The buildings have since been put in repair, and the losses sustained by the war replaced. The seminary possesses the control of funds for eight or nine scholarships. Hampden Sidney College, near by, offers collegiate instruction in all its classes gratis to the students of the seminary.

ROANOKE COLLEGE.

The course of study includes a preparatory department, a collegiate department, and a special course. A normal department has been established in connection with the college. Special facilities are offered for acquiring a business education. One thousand volumes have been added to the library during the past year.

RANDOLPH MACON COLLEGE.

Of the 167 students during the year, 32 were studying for the ministry. There is no preparatory school, but young men not prepared for the regular college classes receive instruction separately.

RICHMOND COLLEGE.

The college embraces an academic, a law, and a commercial department. The academic department comprises seven independent schools. Every student is required to attend at least three of these schools. The success of the college has made it necessary to provide additional buildings. For this object the sum of $12,000 has already been secured.

STAUNTON BAPTIST FEMALE INSTITUTE.

This school was established at Charlottesville in 1857, and transferred to Staunton 1871. The course of study is arranged in four departments: preparatory, collegiate, a school of music, and a school of drawing and painting.

ROANOKE FEMALE COLLEGE.

The course of study is divided into three departments, viz, preparatory, collegiate, and ornamental.

LOUDOUN VALLEY ACADEMY.

This institution is open to both sexes. A normal department and a commercial department are connected with the school.

THE OLD DOMINION BUSINESS COLLEGE.

The aim of this institution is to impart a thorough and systematic mercantile education. There are three departments: theoretical, theory and practice, and actual business. There is also a normal class in penmanship, for such as wish to become teachers of this art.

INSTITUTION FOR THE DEAF AND DUMB AND THE BLIND.

Of the pupils enrolled during the past year 100 are deaf-mutes, and 38 are blind. This number is quite in excess of any former period, and beyond the convenient accommodations of the institution. The dormitories are too crowded, and great embarrassment is caused by the want of sufficient school-rooms.

The schools during the past session have attained a higher position than ever before. The scholarship of the pupils has been, in a very marked degree, advanced beyond that of any previous period. The class in articulation has made excellent progress. The mechanical department has been very successful, and almost every male pupil, on leaving the institution, has acquired the means of gaining an independent livelihood. An appropriation for the purchase of a printing-office is recommended, printing being one of the avocations open to deaf-mutes, and one in which many of them have excelled.

SOCRATES MAUPIN.—OBITUARY.

Socrates Maupin, A. M., M. D., professor of chemistry and pharmacy in the University of Virginia, died at Lynchburgh, in consequence of being thrown from a carriage, October 19, 1871. He was descended from Huguenot ancestors who emigrated to America on the revocation of the edict of Nantes; born in Albemarle County, November 12, 1808; graduated at Washington College, (now Washington and Lee University,) 1828; studied medicine at the University of Virginia; graduated M. D. 1830; changed his plans of life and entered upon a general literary and scientific course of study; received the degree of A. M., having graduated in all the academic schools of the university, 1833; was immediately elected professor in the College of Hampden Sidney, where he filled successively and very successfully the chairs of ancient languages and mathematics; became principal of Richmond Academy, 1835; resigned in 1838, and established a private school of a high order, which he conducted with signal success as long as he remained in the city; was one of the founders, in 1838, of the Richmond Medical School, in which he was professor of chemistry, and afterward dean, where he showed that remarkable administrative capacity which was always the distinguishing feature of his character; was a member of the city council of Richmond, and extremely active in promoting the interests of the Virginia Historical Society; was appointed professor of chemistry and pharmacy in the University of Virginia, 1853, and spent the rest of his life in the service of his cherished alma mater. In 1854 Dr. Maupin became chairman of the faculty, and as such the chief executive officer of the university.

In this position, to which he was annually re-elected by the board of visitors for fifteen successive years, his services were inestimable. At the close of the war, in 1865, the institution was constrained to commence a new career, amid multiplied embarrassments, with a precarious income and dubious prospects. Present resources were supplied by the private credit of Dr. Maupin and his colleagues. His brave spirit triumphed over all difficulties, and he soon had the satisfaction of seeing the university rival the extraordinary prosperity which, under his administration, it had achieved before the war.

The university faculties have expressed their estimate of Dr. Maupin in the follow-

ing terms: "During this long incumbency (of the chairman's office) his official conduct was characterized by such moderation, firmness, and tact as to win universal confidence and respect. It was, indeed, a post in which his sympathy with the young, his sincerity and manliness, as well as his sound judgment and insight into men, had ample scope. Merit was sure to be appreciated by him, and youthful frailties met with a construction as indulgent as a father could extend to an erring child.

"His extraordinary aptitude for affairs, his clear perception of complex transactions, his rare sagacity and promptness of decision, his varied knowledge of the practical interests of society, would probably have led him, had he adopted an active career, to the highest pinnacle of success, whether of fortune or of fame.

"Always the mirror of integrity and truth, just, benevolent, and self-denying, exemplary in all the relations of life, our departed colleague had yet looked closely enough into his own heart, and into the perfect law of God, to know that he had no merit with which to approach the throne of his judge, and he had accordingly fled for refuge to the hope set before him in the gospel of Christ."

A. L. COLEMAN.—OBITUARY.

Arthur Ludwell Coleman, student in the University of Virginia, and professor-elect of Greek in Miami University, Ohio, was killed by a railway accident near Charlottesville in the spring of 1872.

He was a young man of brilliant promise, sound scholarship, and exalted Christian character. He belonged to a family distinguished in connection with higher education in Virginia, being the son of the late Judge Richard H. Coleman, of Caroline County, and nephew of Mr. Frederick Colcman, a teacher of great renown in the State.

VIRGINIA EDUCATIONAL ASSOCIATION.

The seventh annual session of this association was held at Staunton, June 9 to 12.

The president, Professor W. K. Abbot, called the meeting to order, and, after prayer by Rev. J. William Jones, an address of welcome was extended to the association by Rev. R. H. Phillips, in behalf of the citizens of Staunton.

The president then read his annual address, congratulating the association on its flourishing condition, and making important practical suggestions as to its general interests. Fitting tributes were paid to several members of the association who had deceased during the year.

The report of the secretary showed that there had been twenty-two additions to the association during the year, making its present number one hundred and sixty-five.

On the second day the committee on nominations reported Professor E. S. Jaynes as president, and a full list of officers. Professor Jaynes then read a paper on "A curriculum for primary and secondary schools, and some system of equivalents for secondary schools, whereby, if possible, students, not studying the complete curriculum may be brought to pursue some complete and consistent course of study." He argued in favor of the elective rather than the curriculum system, insisting that the latter is fast passing away; but deprecated the extremes of both systems. While he would allow a choice of studies by the student, the choice should be regulated by the advice of the teacher.

A discussion of the paper by Professor Jaynes then took place, Mr. Abbot, of Bellevue school, agreeing with Professor Jaynes so far as colleges and universities are concerned, but doubted the applicability of the doctrine to secondary schools. He insisted on the absolute necessity of the classics in the secondary schools.

General F. H. Smith insisted that the teacher was better qualified than the pupil to judge as to the proper studies. He thought the tendency to abolish the curriculum should be resisted, as a great evil.

Colonel William P. Johnson gave an address on "The importance and place of history in a school of liberal education." "The best projection for school maps" was the subject of considerable discussion, Major J. Hotchkiss advocating the "projection" adopted by the United States Coast Survey.

Other subjects discussed were with reference to the establishment of a polytechnic school for the South, the expediency of regular and systematic exercise in elocution, and the propriety of the association expressing an opinion in regard to text-books.

Professor H. H. Harris read the report on German, and Professor J. A. Turner read that upon French. These reports were discussed at length by Professor John Hart, Professor Jaynes, Professor Abbot, and Professor L. M. Blackford. Professor Hart was opposed to *free* translation, while Professor Jaynes favored it, and insisted that good French should be put into good English.

Professor C. D. Walker, of the Virginia Military Institute, read the report on "Instruction, higher and lower, in mathematics." The metric system was earnestly approved for primary schools. The report was discussed by several members of the association.

Professor W. A. Shepard, of Randolph Macon College, read a report upon the question, "Which of the natural sciences will it be best to introduce into our system of male school instruction?" While admitting the importance of the classics, as occupying the first place, the report claims that natural sciences should not be neglected. Zoölogy and botany especially are recommended for the primary and secondary schools; the latter, rather than the former, if both can not be included.

Mr. R. Carue, superintendent of public schools in Alexandria, and Professor Pike Powers cordially indorsed the recommendations of the report.

A joint paper on "Instruction, higher and lower, in English," prepared by Professor George F. Holmes and Mr. Hugh Craig, was read and subsequently discussed.

Mr. A. O English wanted to know how to teach English grammar. Mr. Abbot thought Latin grammar was the best to teach English. Professor Jaynes was persuaded that we have no suitable book on English grammar, but earnestly combated the idea that we should learn English through the Latin; and insisted that both English and French should precede Latin. Mr. Abbot would reverse the order of Professor Jaynes, and insisted on his own views. Professor Harris would take English, French, and Latin, and then reverse the order.

A report on "Instruction in Latin, higher and lower," by Professor T. R. Price, was read and briefly discussed; and a report on "Method and discipline," by Rev. Dr. J. M. P. Atkinson, was also read. This report strongly advocated physical exercises in schools; the principle of obedience; and the curriculum rather than the free-choice system in all institutions below the university; took strong ground in favor of a high standard of admission to college, as well as of graduation; and severely condemned the loose manner of conferring degrees.

There was a general expression as to the success of this meeting, and it was proposed to meet on the 8th of July, 1873, at Alexandria.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Virginia was the tenth State in population, having 1,225,163 inhabitants within an area of 38,348 square miles, an average of 31.95 persons to the square mile. This population consisted of 712,089 whites, 512,841 colored, 229 Indians, and 4 Chinese. Of these 1,211,409 were natives of the United States, and 13,754 were foreign-born. Of the foreign residents, 4,050 were born in Germany, 1,909 in England, and 5,191 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 70,871 persons attended school, and of these 103 were foreign-born. Of the 59,792 white scholars, 31,783 were males and 28,009 females. Of the 11,048 colored scholars, 5,105 were males and 5,943 females. Fourteen male and 17 female Indians were also reported.

Illiteracy.—There were 445,893 inhabitants of all races, 10 years old and over, unable to write, and of these 1,270 were foreign-born.

Age and sex of illiterates.—Of the 123,538 white illiterates, 34,103 were from 10 to 15 years old, and of these 18,745 were males and 15,358 females; 21,438 were from 15 to 21 years old, and of these 11,095 were males and 10,343 females; 67,997 were 21 years old and over, of whom 27,646 were males and 40,351 females. Of the 322,236 colored illiterates, 57,433 were from 10 to 15 years old, and of these 29,723 were males and 27,710 females; 57,208 were from 15 to 21 years old, of whom 26,161 were males and 31,047 females; 207,595 were from 21 years old and over, of whom 97,908 were males and 109,687 females; 1 Chinese male, and 51 male and 67 female Indian illiterates were reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 2,024, having 2,697 teachers, of whom 1,452 were males and 1,245 females, to educate their 60,019 pupils, of whom 30,878 were males and 29,141 females.

Amount and source of educational income.—The total income of all the educational institutions was $1,155,585, of which $47,586 were derived from endowment, $120,148 from taxation and public funds, and $987,851 from tuition and other sources.

Public schools.—The 122 public schools, with 171 teachers, 43 males and 128 females, were attended by 8,700 pupils, of whom 4,275 were males and 4,425 females. To educate these, they possessed a total income of $98,770, of which $1,050 were derived from endowment, 55,425 from taxation and public funds, and $42,295 from other sources, including tuition.

Colleges.—The 14 colleges, with 113 teachers, 93 male and 20 female, had an attendance of 2,097 students, of whom 1,535 were males and 562 females. They possessed a total income of $203,329, of which $25,626 were derived from endowment, $17,250 from taxation and public funds, and $160,453 from other sources, including tuition.

Academies.—The 88 academies reported, with 206 teachers, 141 males and 65 females, were attended by 4,027 pupils, of whom 2,201 were males and 1,826 females. They possessed a total income of $190,592, of which $1,080 were derived from taxation and public funds, and $189,512 from other sources, including tuition.

Private schools.—The 1,722 day and boarding schools had 2,019 teachers, of whom 1,086 were males and 933 females, and were attended by 40,519 pupils, of whom 20,621 were males and 19,898 females. They possessed a total income of $505,501, of which $1,723 were derived from taxation and public funds and $503,778 from other sources, including tuition.

Libraries.—There were 1,409 public libraries, containing 386,020 volumes, and 2,762 private libraries, with 721,293 volumes; making in all 4,171 libraries, containing 1,107,313 volumes.

The press.—The 114 periodicals had an aggregate circulation of 143,840 copies, and an aggregate annual issue of 13,319,578 copies.

Churches.—Of the 2,582 churches, 2,405 had edifices, with 765,127 sittings, and the church property was valued at $5,277,368.

Pauperism.—Of the 3,280 paupers, 1,942 were native whites, 1,312 were native colored, and 26 were foreign-born.

Crime.—Of 1,244 persons imprisoned June 1, 1870, 331 were native whites, 901 native colored, and 12 foreign-born; 1,090 persons were convicted during the year.

Age and sex of population.—Of the total population 396,812 persons were from 5 to 18 years old, and of these 200,103 were males and 196,709 females; 890,056 were 10 years old and over, of whom 427,455 were males and 462,601 females.

Occupations.—There were 412,665 persons of these ages engaged in various occupations, of whom 337,464 were males and 75,201 females; 244,550 were engaged in agricultural pursuits, of whom 228,082 were males and 16,468 females; 98,521 in personal and professional services, of whom 45,407 were males and 53,114 females; 20,181 in trade and transportation, of whom 19,992 were males and 189 females; 49,413 in mechanical and manufacturing and mining industries, of whom 43,983 were males and 5,430 females.

Age and sex of working population.—Of the 412,665 employed persons, 48,346 were from 10 to 15 years old, of whom 33,954 were males and 14,392 females; 333,527 were from 16 to 59 years old, and of these 275,501 were males and 58,026 females; 30,792 were 60 years old and over, of whom 28,009 were males and 2,783 females.

SCHOOL OFFICIALS.

W. D. RUFFNER, *State superintendent of public instruction, Richmond.*

COUNTY AND CITY SUPERINTENDENTS.

County or city.	Superintendent.	Post-office.
Accomack	James C. Weaver	Onancock.
Albemarle	D. P. Powers	Scottsville.
Alexandria County and City	Richard L. Carne	Alexandria.
Alleghany and Craig	Robert L. Parrish	Covington.
Amelia	Dr. M. F. T. Evans	Paineville.
Amherst	W. B. Henley	Amherst C. H.
Appomattox	Chapman H. Chilton	Spout Spring.
Augusta	J. E. Guy	Staunton.
Bath and Highland	J. Henry Campbell	Monterey, Highland Co.
Bedford	Sidney L. Dunton	Liberty.
Bland	Rev. William Hicks	Bland C. H.
Botetourt	Rev. G. Gray	Fincastle.
Brunswick	B. B. Wilkes	Charlie Hope.
Buchanan	Jacob Baldwin	Grundy.
Buckingham	William Merry Perkins	Buckingham C. H.
Campbell	Dr. R. T. Lemmon	Castle Craig.
Caroline	Thomas R. Dew	Rappahannock Academy.
Carroll	D. B. Brown	Hillsville.
Charles City and New Kent	Rev. James A. Waddell	Providence Forge, New Kent County.
Charlotte	William W. Read	Charlotte C. H.
Chesterfield	B. A. Hancock	Black Heath.
Clarke	Jarvis Jennings	White Post.
Culpeper	Robert E. Utterback	Jeffersonton.
Cumberland	Dr. Richard P. Walton	Cartersville.
Dinwiddie	Roger P. Atkinson	Dinwiddie C. H.
Elizabeth City and Warwick	George M. Peek	Hampton, Elizabeth City County.
Essex	J. G. Cannon	Tappahannock.
Fairfax	D. McC. Chichester	Fairfax C. H.
Fauquier	William A. Cave	Salem, Fauquier County.
Floyd	Dr. C. M. Stigleman	Floyd C. H.
Fluvanna	Dr. P. J. Winn	Fork Union.
Franklin	William A. Griffith	Gogginsville.
Frederick	W. H. Gold	Winchester.
Giles	James R. Peck	Pearisburgh.
Gloucester	Rev. William E. Wiatt	Gloucester C. H.

County and city superintendents—Continued.

County or city.	Superintendent.	Post-office.
Goochland	Dr. O. W. Kean	Northside.
Grayson	Fielding R. Cornett	Elk Creek.
Greene and Madison	Rev. William A. Hill	Rapidan Station, Culpeper County.
Greenville and Sussex	John K. Mason	Hicksford, Greenville County.
Halifax	Henry C. Coleman	South Boston.
Hanover	J. B. Brown	Negro Foot.
Henrico	Dr. J. N. Powell	Richmond.
Henry	G. T. Griggs	Martinsville.
Isle of Wight	Col. E. M. Morrison	Smithfield.
James City and York	Col. James H. Allen	Burnt Ordinary
King and Queen and Middlesex	Dr. J. Mason Evans	Church View, Middlesex County.
King George and Stafford	Addison Borst	Fredericksburgh.
King William	Dr. John Lewis	King William C. H.
Lancaster and Northumberland	A. T. Cralle	Heathsville, Northumberland County.
Lee	Rev. William A. Taylor	Jonesville.
Loudoun	John W. Wildman	Leesburgh.
Louisa	Rev. L. J. Haley	Harris.
Lunenburgh	Robert M. Williams	Lunenburgh C. H.
Lynchburgh	A. F. Biggers	Lynchburgh.
Matthews	G. Taylor Garnett	Matthews C. H.
Mecklenburgh	Rev. Edward L. Baptist	Boydton.
Montgomery	George G. Junkin	Christiansburgh.
Nansemond	R. L. Brewer	Churchland, Norfolk Co.
Nelson	Patrick H. Cabell	Variety Mills.
Norfolk County	John T. West	Lake Drummond.
Norfolk City	W. W. Lamb	Norfolk.
Northampton	John S. Parker	Eastville.
Nottoway	Rev. Thos. W. Sydnor	Blacks and Whites.
Orange	Jaq. P. Taliaferro	Orange C. H.
Page and Warren	Martin P. Marshall	Front Royal, Warren Co.
Patrick	A. Staples	Patriek C. H.
Petersburgh	Sidney H. Owens	Petersburgh.
Pittsylvania	Rev. George W. Dame, D. D	Danville.
Portsmouth	James F. Crocker	Portsmouth.
Powhatan	Dr. P. S. Danee	Powhatan C. H.
Prince Edward	Rev. B. M. Smith, D. D	Hampden Sidney.
Prince George and Surry	Col. M. W. Rainey	Prince George C. H.
Princess Anne	Edgar B. Maeon	London Bridge.
Prince William	Major W. W. Thornton	Brentsville.
Pulaski	J. G. Cecil	Newbern.
Rappahannock	Henry Turner	Woodville.
Richmond and Westmoreland	Rev. W. W. Walker	Oldham's Cross-Roads, Westmoreland County.
Richmond City	James H. Binford	Richmond.
Roanoke	Major W. W. Ballard	Salem.
Rockbridge	Professor J. L. Campbell	Lexington.
Rockingham	Rev. George W. Holland	Harrisonburgh.
Russell	E. D. Miller	New Garden.
Scott	George H. Kendriek	Point Truth.
Shenandoah	John H. Grabill	Woodstoek.
Smyth	D. C. Miller	Seven-mile Ford.
Southampton	Dr. James F. Bryant	Franklin Depot.
Spottsylvania	John Howison	Fredericksburgh.
Tazewell	Rev. Jonathan Lyons	Tazewell C. H.
Washington	Rev. A. L. Hogshead	Oseeola.
Wise	William Wolfe	Big Stone Gap.
Wythe	Rev. James D. Thomas	Wytheville.

WEST VIRGINIA.

[From report of Hon. C. S. Lewis, State superintendent of instruction, for the scholastic year ended August 31, 1871.]

SCHOOL FUND.

The State school fund is invested as follows:

Stock in the First National Bank of Fairmont	$50,000 00
Stock in the First National Bank of Wellsburgh	18,800 00
Stock in the National Bank of West Virginia, at Wheeling	30,000 00
Stock in the Parkersburgh National Bank	40,000 00
United States registered Central Pacific Railroad bonds	37,000 00
United States registered Union Pacific Railroad bonds	35,000 00
United States 5-20 bonds	18,500 00
Certificates of United States 5-20 stock	45,800 00
Total	275,100 00

FINANCIAL STATEMENT.

Receipts.

State school fund	$212,711 38
Township levies	384,100 59
From other sources	25,258 47
Total receipts for 1871	632,070 44
Balance on hand at commencement of year	51,443 58
Total assets for school year	683,514 02

Increase in State school fund	$94,192 68
Increase from township levies	85,823 98
Total increase in receipts over last year	172,038 31
Total value of school property in State	1,266,711 08
Increase in value of school property over last year	209,273 14
Amount paid per pupil for tuition, 1871	4 77½
Amount paid per pupil for all purposes, 1871	7 54¼
Total expenditures for schools	365,685 21
Total expenditures from building fund	212,033 51
Total expenditures during the year	577,718 72
Increase in expenditures over last year	107,609 19

ATTENDANCE.

Number of males enrolled	41,586
Number of females enrolled	35,413
Total enrollment	76,999
Average attendance of males	28,758
Average attendance of females	22,578
Total average attendance	51,336

NUMBER OF PUPILS STUDYING THE VARIOUS BRANCHES.

Orthography	60,342
Reading	43,026
Writing	36,572
Arithmetic	24,317
Geography	10,263
English grammar	10,416
Algebra	697
Other branches	3,084

TEACHERS.

Number of male teachers	1,951
Number of female teachers	517
Total	2,468

SCHOOL DISTRICTS AND SCHOOL-HOUSES.

Number of school districts	2,339
Number of high schools	3
Number of graded schools	48
Number of common schools	2,272
Total number of schools	2,323
Number of school-houses	2,059
Number built during the year	151

SUMMARY OF STATISTICS.

Number enrolled in public schools	76,999
Average attendance	51,336
Number of teachers	2,468
Average salary of teachers per month	$32.69
Number of months taught	10,260.03
Certificates granted during the year	2,506
Number of visits of county superintendents	1,649

SCHOOL REPORTS.

The officers of some of the counties have failed to report, and the reports from others are incomplete. There are fifty-four counties in the State, and the city of Wheeling has a separate school organization. From the city of Wheeling and five counties only, have full statistical reports been made for the school year ended August 31, 1871. From twenty-one the reports received were incomplete in several important particulars, and from the residue they were very deficient. Therefore the summary given only approximates the actual results. Part of this is owing to the defective blanks furnished. This has been remedied, and the excuse for insufficient and incomplete reports will no longer exist.

A HOPEFUL PROSPECT.

Notwithstanding the many defects and deficiencies in the several reports, the results exhibited give just cause of hope and no cause of discouragement for the future educational interests of West Virginia. The number of teachers and scholars, schools and school-houses, and the number of months taught during the year are regularly increasing. The debts contracted for the purchase of land and the building of school-houses are being discharged. The permanent school-fund is annually augmenting, and the amount received from township levies increasing from year to year. Public sentiment is becoming awakened, interested, and enlightened on the subject of free-school education; opposition is withdrawing, and by its practical results our system is daily recommending itself to the judgment and affections of the people. The several county superintendents bear unmistakable testimony on this subject.

THE PEABODY FUND.

During the school year just closed, Dr. Sears, the general agent for the Peabody fund, has distributed $12,750 in aid of our common schools, and in August last he expressed a desire to continue his co-operation with the friends of our State school system, and thought he would be able, during the present year, to aid all our free schools that would probably comply with the terms and conditions theretofore prescribed by the board of trustees.

The agent of the fund reports as follows:

"Some apprehension was felt, in the early part of the year, that the convention which was to be held in the autumn for revising the constitution would abolish that feature of it which provided for free schools. Having been advised to suspend operations in the State till that question should be settled, I deemed it prudent to consult the superintendent of schools on the subject. He replied to my inquiries: 'I do not believe there is the least cause of apprehension from that body. True, we are not a unit on

the subject of free schools, but there is in this State no party that would dare to raise its hand against it.' The subsequent action of the convention verified these predictions. After a very earnest discussion of the subject, this part of the constitution was left untouched."

The distribution of aid to schools in this State is as follows: Wheeling, $1,500; Wellsburgh, Parkersburgh, Martinsburgh, Fairmont, $1,000 each; Clarksburgh and Grafton, $800 each; Buckhannon, Palatine, and Morgantown, $600 each; and to sixteen other places sums varying from $500 to $200. To four normal schools $2,000 have been given in sums of $500 each. An appropriation of $1,000 has been conditionally made for teachers' institutes, and another of $200 for a journal of education.

SCHOOL LAW.

Our school statistics clearly demonstrate the inefficiency of some provisions of the school law to accomplish the end proposed. It is suggested that some slight modifications be made which will render the law more practical, efficient, and salutary.

INDEPENDENT SCHOOL DISTRICTS.

A number of these have been created by special laws, and at each session of the legislature applications for others are made. An indiscriminate organization of independent districts is believed to be at variance with some of the most prominent features of our system, and otherwise injurious. It tends to localize the system by giving to wealthy neighborhoods the exclusive control of their own school-funds and schools, regardless of the wants and necessities of the other and often less-favored parts of the townships from which they are taken. It is recommended that special privileges be granted to none, except for special reasons, keeping in view at all times the uniformity, equality, and symmetry of our system, and its paramount purpose of extending to the children of all the citizens of our State the blessing of a free-school education.

DISTRICT TRUSTEES.

This feature of our system seems to meet with especial disfavor. It is reprehended and condemned by many, and approved by few, if any. Where friends and enemies alike concur, as in this instance, the conclusion is almost irresistible that the public-school interests demand some change.

TEXT-BOOKS.

Frequent and unnecessary changes in text-books are to be deprecated; but a fixed and unalterable series, except by legislative enactment, is not thought to be the most wise and salutary expedient that may be devised to avoid the evil. Some of the books named in the series now prescribed by law, after a trial for three years and more, are condemned as defective and unsuitable by many of our best teachers. That the authority to make such changes in the text-books as our educational interest may require should be more conveniently provided for, is considered important, and is most respectfully and earnestly recommended.

STATE TEACHERS' ASSOCIATION.

The session of this association was held at Ravenswood, in the county of Jackson, on the 27th of last June. It was numerously attended and quite successful in its results. To its agency may justly be attributed much of the impetus recently given to the cause of popular education in our midst. About seventy-five teachers were present, comprising representatives from twenty-two counties. Among the distinguished persons present may be mentioned Hon. E. E. White, of Columbus, editor of the National Teacher; Professor F. A. Allen, of Pennsylvania; Professor Kidd, the elocutionist; President Martin, of the State University; and Professors Crago and Gilchrist, principals of the State normal schools. After a three days' session the association adjourned to meet in Fairmont next summer.

NORMAL SCHOOLS.

These schools for the training of teachers must be regarded as indispensable to a successful common-school system. We have three of these schools, Marshall College, in the city of Huntington, one at Fairmont, and the other at West Liberty. Their condition is prosperous and promising of good results, and with confidence they are all recommended as eminently deserving a continuance of the fostering care of the State. It is also recommended that two, if not three, additional normal schools be established, one in the northeastern and the other in the southeastern part of the State.

WHEELING.

SCHOOL PROPERTY.

The borough of South Wheeling has been recently included within the city limits. Its school property is valued at $6,000. Exclusive of this, the estimated value of the public-school property of Wheeling is $145,500.

POPULARITY OF THE PUBLIC-SCHOOL SYSTEM.

Little more than twenty-three years have elapsed since the first establishment of public schools in the city of Wheeling. The movement at first met with great opposition from members of both political parties. In evidence that these schools have grown in the popular favor, may be stated the fact that whereas for a number of years after their organization the ratio of entire enrollment to entire population was about as 1 to 10, during the last scholastic year the total enrollment was equal to about one-sixth of the entire population. What our school system now needs is the crowning feature of a central high school. Although the public schools have done and are doing effective work, yet it can not be expected that they will compare favorably with the schools of other cities until the high school is added.

MARSHALL COLLEGE NORMAL SCHOOL.

This, the recognized head of our State normal schools, is under the immediate direction of a full, able, and efficient board of instruction. Its statistics for the present year exhibit an increased and growing prosperity. It has already taken high rank among kindred institutions of the country.

FAIRMONT STATE NORMAL SCHOOL.

The normal school located at Fairmont, on the banks of the Monongahela River, has had a varied history, but under its present corps of teachers it has acquired new impulses, and is giving promise of greater success. The number of pupils is much increased, and the work of the school more systematic and thorough. The results, so far, under the present administration of the school, are well calculated to encourage renewed efforts to place the institution on an independent footing, and to afford it every facility for expansion. More capacious buildings are needed; also a library for the use of normal pupils.

WEST LIBERTY STATE NORMAL SCHOOL.

This institution has entered upon its present school-year with an increased number of pupils, giving assurance of renewed prosperity and usefulness. Its board of instructors is substantially the same as heretofore, and is able, popular, and efficient.

WEST VIRGINIA UNIVERSITY.

The State university has an endowment of $100,000, mainly realized from a grant of land-scrip from the National Congress. Fifty thousand dollars have been contributed in grounds, buildings, and money, by the citizens of Morgantown. Regular appropriations are also annually made by the legislature. The board of regents consists of eleven gentlemen, one from each senatorial district. The grounds of the university consist of about twenty acres, finely adapted for a college campus. It does not appear from the report of the regents that any grounds have yet been purchased, as authorized and required by Congress, for experiments and improvements in agriculture.

Two State cadets from each regent's district are required by law to be taught free of charge for tuition, books, and stationery. Under the presidency of Doctor Martin, the university has risen to a first-class position among the literary institutions of the land. Beginning with less than forty students, last year's catalogue shows an aggregate of one hundred and seventy-one in attendance. The increase, so far, this year, indicates that the attendance will exceed two hundred. This success is, no doubt, owing in great measure to the wise adaptation of the university to the actual wants of the State. Other elements of success are the character, both as scholars and teachers, of the professors, the thorough instruction imparted, and the firm but kindly discipline maintained.

WEST VIRGINIA TEACHERS' ASSOCIATION.

This association held its session at Fairmont, at which an address of welcome was extended by ex-Governor Pierpont; other addresses were given by Professor Allen, of Pennsylvania; by Hon. C. S. Lewis, State superintendent; Professor Kidd, of Indiana, and others.

Hon. Mr. Lewis stated that in his travels through the State he had found no organized opposition to the public-school system; that all parties were equally in favor of such a system.

There was a general attendance of nearly all the prominent educators of the State, including several professors from the university, the principals and teachers of the State normal schools, and many county superintendents.

Resolutions were adopted, pledging every effort to promote free schools and promote higher education; that the office of county superintendent should be retained, and the incumbent designated by the teachers of the county; that the State superintendent should be designated by the teachers of the State in the State teachers' association; recommending teachers' institutes in every locality where the number of teachers will warrant; and that teachers who do not attend institutes or take educational works are recreant to duty, and not worthy the name of teacher.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 West Virginia was the twenty-seventh State in population, having 442,014 inhabitants within an area of 23,000 square miles, an average of 19.22 persons to the square mile. This population consisted of 424,033 whites, 17,980 colored, and one Indian. Of these, 424,953 were natives of the United States, and 17,091 were foreign-born. Of the foreign residents, 6,232 were born in Germany, 1,811 in England, and 6,832 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 82,193 persons attended school, and of these 407 were foreign-born. Of the 80,981 white scholars, 43,278 were males, and 37,703 females. Of the 1,212 colored scholars, 634 were males, and 578 females.

Illiteracy.—There were 81,490 inhabitants of all races, 10 years old and over, unable to write, and of these 3,101 were foreign-born.

Age and sex of illiterates.—Of the 71,493 white illiterates, 20,046 were from 10 to 15 years old, and of these 10,704 were males and 9,342 females; 11,721 were from 15 to 21 years old, and of these 5,808 were males and 5,913 females; 39,726 were 21 years old and over, of whom 15,181 were males and 24,545 females. Of the 9,997 colored illiterates 1,665 were from 10 to 15 years old, and of these 861 were males and 804 females; 1,704 were from 15 to 21 years old, of whom 844 were males and 860 females; 6,628 were 21 years old and over, of whom 3,186 were males and 3,442 females.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 2,445, having 2,828 teachers, of whom 2,070 were males and 768 females, to educate 104,949 pupils, of whom 55,238 were males and 49,711 females.

Amount and source of educational income.—The total income of all the educational institutions was $698,061, of which $15,300 were derived from endowment, $598,124 from taxation and public funds, and $84,637 from tuition and other sources.

Public schools.—The 2,371 public schools, with 2,687 teachers, 1,997 males and 690 females, were attended by 101,493 pupils, of whom 53,587 were males and 47,906 females. To educate these they possessed a total income of $599,811, of which $1,800 were derived from endowment, $575,324 from taxation and public funds, and $22,687 from other sources, including tuition.

Colleges.—The 6 colleges, with 49 teachers, 31 males and 18 females, had an attendance of 1,290 students, of whom 599 were males and 691 females. They possessed a total income of $58,300, of which $13,500 were derived from endowment, $22,800 from taxation and public funds, and $22,000 from other sources, including tuition.

Academies.—The 8 academies, with 20 teachers, 8 males and 12 females, were attended by 312 pupils, of whom 125 were males and 187 females. They possessed an income of $16,856, derived from tuition and other sources.

Private schools.—The 54 day and boarding-schools had 72 teachers, of whom 28 were males and 44 females, and were attended by 1,546 pupils, of whom 749 were males and 797 females. They possessed an income of $17,364, derived from tuition and other sources.

Libraries.—There were 638 public libraries, containing 152,183 volumes, and 1,090 private libraries, with 220,562 volumes; making in all 1,728 libraries, containing 372,745 volumes.

The press.—The 59 periodicals had an aggregate circulation of 54,432 copies, and an aggregate annual issue of 4,012,400 copies.

Churches.—Of the 1,529 churches, 1,018 had edifices, with 297,315 sittings, and the church property was valued at $1,835,720.

Pauperism.—Of the 994 paupers, 839 were native whites, 109 native colored, and 46 foreign-born.

Crime.—Of 191 persons imprisoned June 1, 1870, 138 were native whites, 37 native colored, and 16 foreign-born. One hundred and fifty-five persons were convicted during the year.

Age and sex of population.—Of the total population, 150,844 persons were from 5 to 18

years old, and of these 76,879 were males and 73,965 females; 308,424 were 10 years old and over, of whom 154,234 were males and 154,190 females.

Occupations.—There were 115,229 persons of these ages engaged in various occupations, of whom 107,076 were males and 8,153 females; 73,960 were engaged in agricultural pursuits, of whom 73,725 were males and 235 females; 16,699 in personal and professional services, of whom 9,636 were males and 7,063 females; 6,897 in trade and transportation, of whom 6,888 were males and 9 females; 17,673 in mechanical and manufacturing and mining industries, of whom 16,827 were males and 846 females.

Age and sex of working population.—Of the 115,229 employed persons, 6,212 were from 10 to 15 years old, of whom 5,608 were males and 604 females; 101,394 were from 16 to 59 years old, and of these 94,070 were males and 7,324 females; 7,623 were 60 years old and over, of whom 7,398 were males and 225 females.

SCHOOL OFFICIALS.

Hon. C. S. LEWIS, *general superintendent of free schools, Charleston.*

COUNTY SUPERINTENDENTS.

County.	Name.	Post-office address.
Barbour	Simon Buckingham	Philippi.
Berkeley	Rev. William S. Penick	Martinsburgh.
Boone	John W. Mahan	Madison.
Braxton	Thornton J. Berry	Braxton C. H.
Brooke	John W. Hough	Bethany.
Cabell	Wm. Alger	Ouslie's Gap.
Calhoun	Alexander Rice	Grantsville.
Clay	S. B. Grose	Clay C. H.
Doddridge	F. J. Ashburn	West Union.
Fayette	H. K. Shumate	Fayette C. H.
Gilmer	John S. Withers	Glenville.
Grant	E. F. Vossler	Grant C. H.
Greenbrier	Walter C. Preston	Lewisburgh.
Hampshire	Townsend Clayton	Springfield.
Hancock	Thomas C. Carothers	Holliday's Cove.
Hardy	Philip W. Anderson	Moorefield.
Harrison	Cruger W. Smith, jr	Clarksburgh.
Jackson	George B. Crow	Jackson C. H.
Jefferson	William L. Wilson	Charlestown.
Kanawha	W. L. Hindman	Charleston.
Lewis	John S. Hall	Jacksonville.
Lincoln	I. V. Sweetland	Hamlin.
Logan	Crispin S. Stone	Chapmansville.
Marion	Dr. J. C. Barnes	Boothsville.
Marshall	Samuel R. Haven	Moundsville.
Mason	Dr. Charles T. B. Moore	Point Pleasant.
Mercer	Wm. M. Reynolds	Princeton.
Mineral	John W. Vandiver	Burlington.

Wetzel	Wm. A. Newman	Knob Fork.
Wirt	Charles C. Little	Burning Springs.
Wood	Samson H. Piersol	Parkersburgh.
Wyoming	Theodore F. Bailey	Sun Hill.
Wheeling	F. S. Williams	Wheeling City.

WISCONSIN.

[From the report of Hon. Samuel Fallows, State superintendent of public instruction, for the scholastic year ended August 31, 1871.]

EDUCATIONAL FUNDS.

The amount belonging to each of the trust-funds of the State on the 30th day of September, was as follows:

School fund	$2,389,488 28
University fund	207,139 38
Agricultural-college fund	182,970 20
Normal-school fund	734,111 24
Total of educational funds	3,513,709 10

FINANCIAL STATEMENT.

Receipts.

Money on hand August 31, 1870	$388,856 94
From taxes levied for building and repairing	250,646 65
From taxes levied for teachers' wages	871,452 70
From taxes levied for apparatus and libraries	9,568 01
From taxes levied at annual town meeting	219,156 30
From taxes levied by county supervisors	195,615 14
From income of State school-fund	148,395 79
From all other sources	221,690 73
Total receipts	2,305,382 26

Expenditures.

For building and repairing	$305,198 79
For apparatus and libraries	6,549 65
For services of male teachers	503,954 60
For services of female teachers	790,055 99
For old indebtedness	101,750 80
For furniture, registers, and records	35,962 66
For all other purposes	195,616 32
Total expenditures	1,932,539 24

ATTENDANCE.

Scholastic population	420,948
Increase over last year	8,467
Scholastic population of districts maintaining school 5 or more months	418,358
Number of pupils enrolled in public schools	*265,285
Decrease from last year	2,606
Number of days' attendance of different pupils during the year	20,627,575
Increase over last year	315,649
Number of pupils who have attended private schools	17,267
Increase over last year	1,649
Number of children of school age not in attendance upon any school	126,764

SCHOOL DISTRICTS AND SCHOOLS.

Number of school districts	5,031
Number of districts reported	4,976
Number of schools with two departments	230
Number of schools with three or more departments	155
Whole number of graded schools	385
Increase over last year	50
Number of days in which schools have been taught by qualified teachers	848,200
Increase over last year	52,305
Average number of days in which schools were maintained, (estimated)	155
Number of schools visited by county superintendent	4,886
Increase over last year	205

*Of these, 2,338 are over or under the legal school age.

TEACHERS AND TEACHERS' PAY.

Number of teachers required for the schools	5,837
Increase over last year	176
Number of different teachers employed during the year	9,168
Average wages of male teachers in the country	$41.40
Average wages of female teachers in the country	$27.62
Average wages of male teachers in the cities	$105.30
Average wages of female teachers in the cities	$36.70
Number of certificates issued, (exclusive of the city and State certificates,) males, 2,272; females, 4,953	7,225
Number of certificates issued in cities	448
Number of State certificates granted	15
Total of teachers' certificates granted during the year	7,688

SCHOOL-HOUSES.

Number of public school-houses in the State	*4,933
Number of pupils the school-houses will accommodate	310,292
Increase over last year	13,923
Number of sites containing less than one acre	3,705
Number of sites well inclosed	1,353
Number of school-houses built of brick or stone	605
Increase over last year	25
Number of school-houses with outhouses in good condition	2,957
Decrease from last year	577
Highest valuation of school-house and site	$75,000
Total valuation of school-houses	3,441,120
Total valuation of sites	468,609
Total value of apparatus	81,138

APPORTIONMENT OF SCHOOL-FUND INCOME.

The ratio of apportionment for the past year was 39 cents per scholar. The apportionment is made on the basis of the number of children returned as residing in those districts which maintained school five or more months during the preceding year. No apportionment was made for those districts which did not maintain school at least five months during the preceding school year, except in some cases of peculiar hardship, which were provided for by special legislation. As such legislation is now prohibited, some general provision seems necessary, more especially in view of the destruction of so many school-houses in the northern portions of the State by the great fires of October last.

TEACHERS' INSTITUTES.

Forty-eight institutes have been held during the last school year, the largest number ever held in the State in one year.

At the request of the teachers of the State, on the recommendation of the State superintendent, the legislature at its last session appropriated $2,000 annually for the support of normal institutes, of not less than four weeks in length, to be held in counties not directly enjoying the benefits of the normal schools. It is expected that at least 800 teachers will be directly reached by these institutes the first season, and thereafter from 1,000 to 2,000.

STATE TEACHERS' ASSOCIATION.

The nineteenth annual meeting of this body was held at Madison on the 12th and 13th days of July last. Addresses were delivered by the president, Professor Peabody, of Harvard University, and others, and several valuable papers were read. The discussions held on various topics connected with the work of education, and the results of the meeting can not but be of benefit to the State.

STATE PRINCIPALS' ASSOCIATION.

The leading principals of public schools in the State have formed an association, and held a meeting at Madison in December last. Among other subjects discussed were, "Compulsory education," "How far may the State wisely prescribe matter and method of instruction in the schools it supports?" "What course of instruction best disciplines the child for good citizenship?" A resolution was passed which declares "that, in the opinion of this convention, it is both the right and the duty of the State to enforce the elementary education of all its children." It was also resolved to petition the legislature to make some provision for the education of feeble-minded children.

* This would be a decrease of 32 from last year. As a number of houses have been built, this is not probable.

STATE TEACHERS' CERTIFICATES.

The attention of teachers has been called to the desirability of their obtaining the highest certificates known to the law. Twenty persons presented themselves for examination in July. To fifteen of these certificates were awarded; seven of the first grade and eight of the second grade. It is recommended that limited State certificates, good for five years, be given to teachers who shall pass a successful examination in the studies required for a first-grade county certificate, with the addition of one or two more studies. It is believed the effect would be to stimulate many to reach at once a higher standard of qualification.

CHILDREN INCAPACITATED FOR COMMON-SCHOOL INSTRUCTION.

An effort has been made to ascertain the number of children who, from defect of vision, or of hearing, or of intellect, are incapacitated for instruction in the common schools. From eleven counties no returns have been made. The returns from the remaining twenty-five counties are as follows:

Incapacitated for instruction from defect of vision	136
Incapacitated for instruction from defect of hearing	218
Incapacitated for instruction from defect of intellect	351

In view of the fact that the most numerous of the three classes are those incapacitated by defect of intellect, the hope is expressed that the subject of providing for their education, as has been done for the other two classes, will receive the favorable consideration of the legislature.

COMPULSORY EDUCATION.

Alarm has been felt at the large number of persons of school age not in attendance upon the public schools. At the last session of the legislature it was enacted that each district clerk, in addition to the returns already provided for as to school attendance, shall report "the number of children attending school, any part of the year, between the ages of 4 and 7, 7 and 15, 15 and 20, respectively." The returns, though imperfect, show that nearly five-eighths of those who attend school are between the ages of 7 and 15. But still the attendance out of this class is 45,334 less than the whole number embraced in the class. The majority are no doubt kept away from school through the ignorance, neglect, or poverty of parents. This is precisely the class that should be regarded and cared for as the wards of the State. The subject is commended to the earnest attention of the legislature.

With regard to legislation in this matter, the superintendent says: "Although some legislation may be needed upon the subject of vagrancy and truancy, I do not think public sentiment would, as yet, sustain compulsory attendance upon our public schools. The more prevalent feeling seems to be that we must raise our schools to a higher degree of efficiency before we can sustain any law of this character."

THE COUNTY SUPERINTENDENCY.

This feature of the school system has been in operation nine years. The number of superintendents now in commission is sixty-three. An efficient county superintendency is the "right arm" of a State school system. "It is all important that the offices be filled with competent men, and these can be secured only by the payment of a reasonable salary. It is quite safe to say that, where the administration of the office has not given reasonable satisfaction, a niggardly policy has been content to employ inferior men, or to pay for but a portion of a competent man's time."

TOWNSHIP SYSTEM.

The superintendent strongly recommends more simplicity and unity in the school system. The general drift of intelligent opinion in this, as in other States, has been toward a preference for the "town system of school government," as distinguished from the "single district system." It is deemed important to keep the matter before the local school officers, and extracts are made from discussions of the subject. Attention is called to the fact that graded schools could be much more extensively introduced in the rural districts under the "town system."

ACADEMIES.

The fact noticed last year may be repeated with emphasis, namely, that there is a tendency to the extinction rather than increase of academies, arising from the fact that the high schools, normal schools, and the preparatory departments of the State university and the colleges absorb the larger share of academical students. In fact,

most of the colleges in the State are as yet in the academical rather than the collegiate stage of development. As they take a higher rank, it may be presumed that their preparatory departments will disappear, and that academics, a part of whose especial work it shall be to fit young persons for college, may be again built up and liberally sustained.

A bill was introduced at the last session of the legislature bearing upon this subject. It proposed the appropriation of $100,000 annually for the establishment of an academy in each county in the State having a population of 2,000 or over. Any county that shall establish such an academy in the manner prescribed shall receive $100 for every 1,000 inhabitants, provided that the county will raise at least an equal amount and provide for the necessary building.

NORMAL SCHOOLS.

These important institutions are in a prosperous condition. The Oshkosh school, opened September, 1871, has been placed in charge of G. S. Albee, A. M., formerly principal of the Racine high school, and widely known as one of the best educators in the State. Twelve students graduated during the year at Platteville and ten at Whitewater. The graduates of these institutions are filling responsible positions, with credit to themselves and their instructors. Nearly four hundred undergraduates are engaged in teaching in the common schools, with greater or less success.

The board of regents of normal schools at their meeting in June last directed that an institute course of six weeks in duration be held at the opening of the fall term of each normal school, for the benefit of teachers who are unable to take the requisite course for graduation.

INSTITUTE FOR THE EDUCATION OF THE DEAF AND DUMB.

The articulation class has been continued during the year with varied success. One section has constituted a regular class in the school, with uniform studies.

According to the present law the maximum school period is seven years. In some cases all that can be done for a pupil is accomplished in less time; but there are other cases where an extension of the time is very desirable. In consequence of this limitation the institute has not yet had the opportunity of illustrating the full measure of attainment possible to the deaf-mute. It is strongly recommended that the time be extended for those whose attainments warrant the privilege.

The work of the institution is hindered for want of suitable accommodations. The present edifice is not adapted to a school numbering over 150. Besides the 100 between the ages of ten and twenty, not now in school, a sufficient number arrive at the school-age every year to form a new class. "Immediate and prospective wants demand planning and execution without delay."

INSTITUTE FOR THE BLIND.

Instruction has been given during the year, as usual, in literature, music, and various branches of industry. Those which are usually styled "common branches" have received by far the greater amount of attention. In harmony there have been two classes. The orchestra numbers fourteen pieces. In the industrial department pupils have been taught broom-making. It is hoped that the law passed by the last legislature, providing for obtaining a census of blind children, may afford the means of communicating with the parents of such children, many of whom do not even know of the existence of an institution for their benefit.

UNIVERSITY OF WISCONSIN.

Since the last annual report, the regents have secured the services of Rev. J. H. Twombly, D.D., of Boston, as president of the university. Rev. J. W. Sterling, who has been identified with the institution for a quarter of a century, retains his position as vice-president.

The university report shows the institution to be in a very prosperous condition. The college classes are above the average of former years, both in numbers and scholarship, while an unusually large number of the preparatory students are fitting for the regular courses.

The university embraces, 1. The college of arts, in which are included the departments of agriculture, mining and metallurgy, and engineering; 2. College of letters; 3. Female college; 4. Law department; 5. Preparatory department, where pupils are fitted to enter either the college of arts or the college of letters.

The legislature of 1870 appropriated $50,000 for the erection of a college building for females, the first instance of a State appropriation for university buildings. The completion of this building and its opening, during the past year, mark an era in the history of the university. While other high educational institutions of the country

have opened their doors to ladies seeking college education, this State, it is claimed, has taken a step in advance of all the others in making such provision that they may avail themselves of all the privileges of the university, or may choose their studies entirely within the limits of a female seminary of the highest character. The board of visitors speak in high terms of this college. The report says: "The classes of ladies show a scholarship not inferior in any respect to those of the gentlemen." The board, however, "fail to see the necessity of having a distinct department, known as the female college," and "suggest the propriety of allowing ladies and gentlemen, pursuing the same studies, to recite together."

The military department is thoroughly organized, and placed under the direction of an officer of the United States Army. By action of the board of regents, military drill is required of all the members of the sophomore and freshman classes.

The department of agriculture is well organized and well conducted. The land given by Congress has been located, and when sold will afford abundant means for carrying on this department in the most liberal manner.

The law department offers peculiar advantages to students, from the fact that the law library of the State, which is the largest collection of the kind in the Northwest, is at all times accessible. The library of the historical society, numbering over 30,000 volumes, is also open to the students of this school.

The present income of the university is insufficient to meet its actual wants. It is estimated that at least $10,000 per annum will be needed to cover the deficiency. The choicest lands of the original grant by Congress, and of the agricultural college grant, have been sold by the State for $1.25 per acre only, and but a little over $500,000 will be realized from these grants when the remaining 86,000 acres shall have been sold.

The report of the board of regents says: "There is urgent need of books for the library; of apparatus for school-room and laboratories; of maps and furniture; all essential for thorough teaching, but entirely beyond the means at the disposal of the regents." "A stringent need is for a public hall or chapel, large enough to assemble the whole school." The regents urge upon the legislature to give the university a chapel, and such an annual appropriation as will enable the board to meet these pressing needs.

RIPON COLLEGE.

There are two courses of study, the classical and scientific—which extends over four years—and a normal course. The courses of study are open to students of both sexes. Young ladies, who wish, may assist in the domestic department, and thus pay in part for their board. Young men who need it may generally find remunerative employment, but the college does not agree to furnish it.

The progress of the college has been very encouraging. The endowment subscription has reached nearly $40,000, of which about $27,000 are paid in and well invested. But the work which the college is doing requires that its endowment fund should be raised to $100,000.

The cabinet is furnished with a valuable collection of minerals.

BELOIT COLLEGE.

A preparatory school is connected with this college, for which there is marked out a three years' course of study, in preparation for college, and a parallel three years' course for students who do not intend entering college.

Funds are provided to some extent for aiding indigent students who have the ministry in view. Through the board of education in Wisconsin, and the educational organizations of various denominations, young men of this class may receive assistance to the amount of from $60 to $80 a year during their preparatory course, and from $80 to $100 a year when in college.

RACINE COLLEGE.

The college charter provides that all the trustees shall be communicants of the Protestant Episcopal church. The object of the college is to educate youth in the principles of that church. There are four college classes, and a scientific school has been organized.

NASHOTAH THEOLOGICAL SEMINARY.

The object of this institution is to educate ministers for the Protestant Episcopal church. It is the outgrowth of a mission established in 1841. The seminary has heretofore been supported by voluntary contributions. Adequate endowments are essential to its permanence. The fund should be from $50,000 to $100,000.

WISCONSIN FEMALE COLLEGE.

Two scholarships have been founded during the year, and a fund of $1,000 has been given for the support of the principal. Several valuable donations of books, pictures, and coins have been received.

GALESVILLE UNIVERSITY.

This university offers both a classical and scientific course. Students completing the classical course receive the degree of Bachelor of Arts. Upon the completion of the scientific course young gentlemen receive the degree of Bachelor of Science, and young ladies that of Mistress of English Literature.

NORTHWESTERN UNIVERSITY.

This institution was founded by the Evangelical Lutheran Synod of Wisconsin. Instruction in some of the studies is given in the German language. The faculty and most of the students are German. The institution is open to both sexes.

MILWAUKEE ACADEMY.

Two general courses of study are laid down: an English and scientific course, and a classical course. There is also a preparatory department. The study of German is made a prominent feature of each course.

ROCHESTER SEMINARY.

This institution is under the control of the Free-Will Baptists, but, though denominational, it is not sectarian.

SAINT CLARA ACADEMY.

This academy is conducted by the Sisters of the Order of St. Dominic.

WISCONSIN ACADEMY OF SCIENCES, ARTS, AND LETTERS.

The academy was organized February 16, 1870, by a convention called for that purpose by the governor and more than one hundred other prominent citizens of the State.

The general objects aimed at were the material, intellectual, and social improvement of the State, and the advancement of science, literature, and the arts. The academy was broadly planned, so as to embrace every important interest of the State and every department of investigation looking to the advancement of knowledge.

One of its specific objects is a thorough scientific survey of the State, with a view to determine its mineral, agricultural, and other resources.

The departments named in the constitution are the department of sciences, the department of arts, and the department of letters. With a view to subsequent development, it is provided that "any branch of these departments may be constituted a section, and any section or group of sections may be expanded into a full department whenever such expansion shall be deemed important."

The present scheme of the departments is as follows: I. The department of speculative philosophy, (not yet organized.) II. The department of the social and political sciences, embracing jurisprudence, political science, political economy, education, public health, and social economy. III. The department of the natural sciences; embracing mathematics, physics, natural history, and medicine. IV. The department of arts; embracing the useful arts and the fine arts. V. The department of letters; embracing language, literature, and history.

Each department has its own officers, while all are under the direction of a general council. Three meetings are held annually for the reading and discussion of papers. The proceedings at these meetings, including abstracts of the papers read, are published in a periodical called The Bulletin.

The presidents of our colleges, as well as the professors connected therewith, distinguished scientists, and members of the several professions, have heartily united in the inauguration of this enterprise, and have shown their deep interest in its welfare by giving to it not only their moral and pecuniary support, but also the fruits of their intellectual labor. Since the organization of the academy, (1870,) forty-two papers on subjects embraced by the different departments have been prepared for its meetings.

The duties of all officers have been performed without compensation, and the expenses of members in making investigations and attending the meetings have been defrayed by themselves.

The museum of natural history and the useful arts has made considerable growth, and must eventually come to be exceedingly valuable to the State for scientific uses.

The present number of life members is 12; of annual members, 55; of corresponding members, 27.

INDUSTRIAL SCHOOL.

The managers of the Wisconsin Industrial School for boys report as follows: Number in school October 1, 1871, (boys, 237; girls, 2,) 239; whole number in school during the year, 288; whole number in school since July, 1860, 779. During the year 30 have

been returned to parents on ticket-of-leave; 8 have gone out to place on ticket-of-leave; the term of one has expired; 1 has been honorably discharged; 6 have escaped, and 3 have died. The expenses for the year amount to $32,387.95. The legislature, at its last session, appropriated $16,000 for the erection of another building, and $4,000 for the purchase of 40 acres of land.

In the government of the institution the family system has been adopted, with eminent success. In the school all the common branches of English education are taught.

A new branch of industry has been introduced—the cane-seating of chairs. This furnishes employment to a number of small boys who could not be employed in the other work-shops. The school is not self-sustaining. It is not considered important that it should be. Pecuniary profit is a small matter to be considered in an institution like this, intended for the reformation of character and the formation of honest, law-abiding citizens. Its usefulness can not be measured by money returns.

MILWAUKEE ORPHAN ASYLUM.

There have been 94 children in this institution during the year, 47 boys and 47 girls. Of these 9 have been given homes in families where they will be well cared for; 26 have been taken by their friends, leaving 59, the present number. Whole number since the foundation of the institution, 603. Colored orphans are received, and entitled to the same privileges as other children. A school is maintained and attended by all inmates over 3 years of age.

WISCONSIN STATE TEACHERS' ASSOCIATION.

The twentieth annual meeting of this association was held at Madison, July 9, 10, and 11; President Samuel Shaw, of Berlin, occupied the chair. An address of welcome was given by the president of the board of education of the city of Madison.

Addresses were given upon "Educators and their profession," by President J. H. Twombly, of the State University; an inaugural address, by President Shaw; on "Conscience and culture," by Rev. J. L. Dudley, of Milwaukee; by Dr. J. W. Hoyt, on "A national university;" on "The work in the Chicago schools during the past year," by Hon. J. L. Pickard. Essays and papers were read on "Woman's wages for teaching," by Miss Martha A. Perry; on the "Self reporting system," by W. C. Whitford; on "Rhetorical exercises," by A. Salisbury; on "The child," by Mrs. H. E. G. Arey; on the "State school system," by G. S. Albee; on "The county teacher," by Mrs. I. N. Stewart; on "Oral instruction," by D. E. Gardner.

Ex-Governor Fairchild also addressed the teachers very effectively.

Discussions were had on many of the papers read, and reports made upon educational progress in the State by a number of the county superintendents.

The session was divided into a high-school section, and an intermediate and primary section.

Messrs. A. Earthman and Warren D. Parker, a committee on the establishment of county academies, in closing a lengthy report on the subject, express the opinion that at present it would be impolitic to ask for a law for that purpose.

Resolutions were adopted re-affirming the duty of the State to provide for the education of the feeble-minded children of the State; urging greater efforts to secure normal training for teachers; approving the policy of holding teachers' institutes throughout the State; and indorsing the plan of a national university.

Officers elected: President, J. R. Purdy; vice-presidents, Dr. McGregor, T. C. Chamberlain, and Ella M. Stewart; secretary, M. T. Park; treasurer, D. E. Gardner; and an executive committee of five members.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Wisconsin was the fifteenth State in population, having 1,054,670 inhabitants in 53,924 square miles, an average of 19.56 persons to the square mile. This population was composed of 1,051,351 whites, 2,113 colored, and 1,206 Indians; 690,171 were natives, and 364,499 were foreign-born. Of the native residents 448,743 whites, 611 colored, and 918 Indians were born within the State, while of the foreign residents 162,314 were born in Germany, 28,192 in England, and 48,479 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 260,732 persons attended school. Of these 24,897 were foreign-born. The white scholars numbered 260,296, of whom 135,015 were males and 125,281 females. The colored scholars numbered 306, of whom 180 were males and 126 females; 60 male and 70 female Indians were also reported.

Illiteracy.—The number of inhabitants of all races, 10 years old and over, unable to write was 55,441, of whom 41,328 were foreign-born.

Age, sex, and race of illiterates.—Of the 54,845 white illiterates, 9,274 were from 10 to 15 years old, of whom 5,030 were males and 4,244 females; 5,264 were from 15 to 21 years old, of whom 2,777 were males and 2,487 females; 40,307 were 21 years old and over—17,637 males and 22,670 females. Of the 360 colored illiterates 19 were from 10 to 15 years old—12 males and 7 females; 41 were from 15 to 21 years old—25 males and 16 females; 300 were 21 years old and over, of whom 185 were males and 115 females; 101 male and 135 female Indians were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 4,943, with 7,955 teachers—2,511 males and 5,444 females, and with 344,014 pupils—176,541 males and 167,473 females.

Amount and source of educational income.—The total income of all the educational institutions was $2,600,310, of which $32,953 were derived from endowment, $2,027,876 from taxation and public funds, and $539,481 from tuition and other sources.

Public schools.—The 4,859 public schools had 7,669 teachers—2,383 males and 5,286 females, with 337,008 pupils—172,950 males and 164,058 females. They possessed a total income of $2,209,384, of which $350 were derived from endowment, $1,962,741 from taxation and public funds, and $246,293 from other sources, including tuition.

Colleges.—The 12 colleges had 99 teachers—62 males and 37 females; they were attended by 2,387 students—1,439 males and 948 females. They had a total income of $161,300, of which $30,603 were derived from endowment, $13,823 from taxation and public funds, and $116,874 from other sources, including tuition.

Academies.—The 5 academies had 24 teachers—6 males and 18 females, with 451 pupils—205 males and 246 females. They possessed a total income of $23,200, of which $2,000 were derived from endowment and $21,200 from tuition and other sources.

Private schools.—The 38 day and boarding schools had 51 teachers—6 males and 45 females, and were attended by 1,319 pupils—421 males and 898 females. They possessed an income of $46,625, derived from tuition and other sources.

Libraries.—There were 1,332 public libraries, with 378,680 volumes, and 1,551 private libraries, with 527,131 volumes; in all 2,883 libraries, with 905,811 volumes.

The press.—The 190 periodicals had an aggregate circulation of 343,385 copies, and an aggregate annual issue of 28,762,920 copies.

Churches.—Of the 1,864 church organizations, 1,466 had edifices, with 423,015 sittings, and the church property was valued at $4,890,781.

Pauperism.—Of the 1,126 paupers, 374 were native whites, 16 native colored, and 736 foreigners.

Crime.—Of 418 persons imprisoned, June 1, 1870, 192 were native whites, 23 native colored, and 203 foreigners. Eight hundred and fifty-seven persons were convicted during the year.

Age and sex of population.—Of the total population, 354,016 persons were from 5 to 18 years old, of whom 178,669 were males and 175,347 females; 751,704 were 10 years old and over, of whom 391,603 were males and 360,101 females.

Occupations.—Two hundred and ninety-two thousand eight hundred and eight persons of these ages were employed in various occupations, of whom 267,273 were males and 25,535 females; 159,687 persons were engaged in agricultural pursuits, of whom 158,300 were males and 1,387 females; 58,070 in personal and professional services, of whom 37,898 were males and 20,172 females; 21,534 in trade and transportation, of whom 21,342 were males and 192 females; 53,517 in manufacturing and mechanical and mining industries, of whom 49,733 were males and 3,784 females.

Age and sex of working population.—Of these 292,808 employed persons, 7,750 were from 10 to 15 years old, of whom 6,472 were males and 1,278 females; 266,699 were from 16 to 59 years old, of whom 243,457 were males and 23,242 females; 18,359 were 60 years old and over, of whom 17,344 were males and 1,015 females.

ARIZONA.

The following letter from the governor of the Territory, Hon. A. P. R. Safford, who is also *ex-officio* superintendent of public instruction, gives the most recent information of the educational condition of the Territory:

EXECUTIVE OFFICE, *Tucson, A. T., July* 8, 1872.

SIR: In compliance with your request, I send you six copies of the school law of this Territory. No amendments have been made to the law since communicating with you before. The free-school system has been successfully inaugurated throughout the Territory, and a free school has been put in operation during the present year in every school district where there was a sufficient number of children, and have been or will be in all cases continued three months, in most of the districts six months, and in some nine months.

The present law is a very good one, needing some slight amendments. The territorial revenue should be increased, and no doubt will be, by the next legislature, as the Territory is out of debt and we shall have a considerable surplus in the treasury by the time the next legislature meets, and an increased sum can be paid for school purposes without additional taxation. The boards of supervisors should be compelled to levy a uniform tax for school purposes in every county. The trust is too sacred to leave to the discretion of three men. While in some counties a sufficient tax may be levied, in others it may not, and this is not doing equal justice to all the children of the Territory. I believe it should be the duty of governments to give all an equal start in life as far as education is concerned, and to do this the first and most important duty is to raise the necessary means. This being done, then parents should be compelled to send their children to school.

Before the free-school system was inaugurated in this Territory, many doubted its practicability, and but few believed it could be made a success; but now all, with one accord, are pleased with it, and I think but little difficulty will be met with in continuing and perfecting the system.

The larger portion of the children are of Mexican birth, and but few of them can speak the English language. They have been taught altogether in English, and their progress has been all that could be desired. Our funds have been limited, but every dollar has been used to pay the salary of teachers. Neither myself nor any officer charged with executing the law has charged or received anything for services.

As soon as the county superintendents send in reports, I will send you in detail a report of the schools of the Territory.

Respectfully, your obedient servant,

A. P. R. SAFFORD,
Ex-officio Superintendent Public Instruction.

Hon. JOHN EATON, Jr.,
Commissioner of Education, Washington, D. C.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Arizona was the ninth Territory in population, having 9,658 inhabitants within an area of 113,916 square miles, an average of 0.08 person to the square mile. This population consisted of 9,581 whites, 26 colored, 20 Chinese, and 31 Indians. Of these 3,849 were natives of the United States, and 5,809 were foreign-born. Of the native residents, 1,221 whites, 1 colored, and eighteen Indians were born within its borders, while of the foreign residents, 379 were born in Germany, 134 in England, and 495 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 149 persons attended school, and of these 85 were foreign-born. Of these white scholars, 79 were males and 70 females.

Illiteracy.—There were 2,753 inhabitants of all races, 10 years old and over, unable to write, of whom 2,491 were foreign-born.

Age and sex of illiterates.—Of the 2,729 white illiterates, 299 were from 10 to 15 years old, and of these 177 were males and 122 females; 496 were from 15 to 21 years old, of whom 242 were males and 254 females; 1,934 were 21 years old and over, of whom 1,167 were males and 767 females. One male colored illiterate was reported, 21 years old; 12 male and 11 female Indian illiterates were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was one, (a parochial or charity school,) having 7 female teachers to educate 132 pupils, 72 of whom were males and 60 females.

Amount and source of educational income.—The income of this educational institution was $6,000, derived from tuition and other sources.

Library.—There was one public library in the Territory, with 1,000 volumes, and 5 private libraries, with 1,000 volumes; making in all 6 libraries, containing 2,000 volumes.

The press.—The one periodical had a circulation of 280 copies, and an annual issue of 14,560 copies.

Churches.—Of the 4 church organizations, 4 had edifices, with 2,400 sittings, and the church property was valued at $24,000.

Crime.—There were 11 foreigners imprisoned June 1, 1870, and 29 persons were convicted during the year.

Age and sex of population.—Of the total population 1,621 were from 5 to 18 years old, of whom 831 were males and 790 females; 8,237 were 10 years old and upward, of whom 6,148 were males and 2,089 females.

Occupations.—There were 6,030 persons of these ages engaged in various occupations, of whom 5,734 were males and 296 females. Of these employed persons, 1,285 were engaged in agricultural pursuits, of whom 1,284 were males and 1 female; 3,115 in personal and professional service, of whom 2,979 were males and 136 females; 591 in trade and transportation, of whom 588 were males and 3 females; 1,039 in manufactures and mechanical and mining industries, of whom 883 were males and 156 females.

Age and sex of working population.—Of the 6,030 employed persons, 118 were from 10 to 15 years old, of whom 88 were males and 30 females; 5,833 were from 16 to 59 years old, and of these 5,578 were males and 255 females; 79 were 60 years old and over, of whom 68 were males and 11 females.

COLORADO.

From biennial report of W. C. Lothrop, superintendent of public instruction, for the scholastic years ended September 30, 1870, and September 30, 1871.]

FINANCIAL STATEMENT.

	1870.	1871.
Rate of school tax	$0 41	$0 41
Amount of school-tax levied	55,997 86	79,901 04
Amount of tax collected by county treasurer	44,996 60	47,387 53
Amount raised by taxation in the districts	19,842 79	33,886 49
Total amount of school fund	64,839 39	81,274 02
Amount expended for school purposes	53,763 14	67,395 48
Average cost of tuition for each pupil per month	3 63	3 66

ATTENDANCE.

	1870.	1871.
Number of white persons between 5 and 21 years	6,308	7,607
Number of colored persons between 5 and 21 years	109	135
Total scholastic population	6,417	7,742
Number enrolled in school	3,430	4,357
Average attendance	1,995	2,611

TEACHERS AND TEACHERS' PAY.

	1870.	1871.
Number of male teachers	75	80
Number of female teachers	57	84
Whole number of teachers	132	164
Average monthly pay of male teachers	$66	$69
Average monthly pay of female teachers	$57	$54

SCHOOL DISTRICTS AND SCHOOLS.

	1870.	1871.
Number of school districts	129	160
Number of schools	110	120
Average number of days school has been taught	86	92
Number of volumes in school libraries	132	652

SCHOOL-HOUSES.

Number of school-houses in 1870—brick, 4; stone, 2; frame, 36; log, 21; adobe, 5	68
Number of school-houses in 1871—brick, 4; stone, 4; frame, 41; log, 25; adobe, 6	80
Value of school-houses in 1870	$66,106 55
Value of school-houses in 1871	$82,574 05

CONDITION OF THE SCHOOL SYSTEM.

The superintendent, in reviewing the work of the past two years, finds much that needs yet to be accomplished. Whatever improvements he has been able to introduce, he considers to a great extent due to the cordial co-operation of the intelligent classes of citizens, and the active sympathy of teachers and school officers. It is believed that in the future, similar progressive measures, supported by the friends of education and wise legislation, will witness yet higher results. The importance of good schools as a means of attracting to the Territory the better class of those who are seeking homes in the West is strongly urged.

SCHOOL LAWS.

The present school law is considered, as a whole, a good one, and as affording an excellent basis for a complete system of education. Some amendments are suggested, as follows: "The imposing of a penalty for the failure of county commissioners to levy a school tax; apportionment of the school fund in accordance with the actual attendance at school, instead of in accordance with the enumeration; provision for the election of boards of education in cities and towns, giving to the municipal authorities the power to levy a tax for school purposes." The necessity for this change has been fully demonstrated in some of the districts. An amendment is also proposed providing for the granting of graded certificates, by a territorial board of examiners, appointed by the superintendent of public instruction, valid throughout the Territory for a period not longer than three years.

POLITICS IN SCHOOLS.

The superintendent is glad to be able to say that the schools of the Territory are not "run" as political machines, although the manner of electing school officers makes them to some extent dependent upon political parties; but in many instances the names of the school boards are selected from both political parties, and but one ticket is submitted to the votes of the people, political and sectarian prejudices being laid aside for the common good.

SCHOOL-HOUSES.

Proper attention to school architecture is considered indispensable in carrying out a true educational system. The style of a school building has its effect upon the deportment and progress of pupils. It is recommended that, no matter what the contemplated cost of the house, a professional architect be consulted. Greater attention to the lighting and ventilating of school-rooms is urged.

The proper furnishing of the school-room is also considered of the greatest importance. Careful inquiry proves that good school furniture of eastern manufacture is less expensive than common pine desks and seats made to order by carpenters in the Territory. This is commended to the consideration of school officers throughout the Territory.

COUNTY SUPERINTENDENCE.

This is established by law, and the territorial superintendent considers it indispensable to the proper working of the school system. "When only persons well qualified are elected to the office, it will do more than any other agency to make our schools what they should be."

TEACHERS.

Under the present school law no teacher can be employed, or receive any portion of the public school funds, without the county superintendents' certificate of qualification. They, therefore, can prevent the employment of incompetent teachers; but they must have the cordial co-operation of the district boards.

A great obstacle to the success of the school system is the frequent changes of teachers. This, in most instances, is attributable to want of sufficient compensation. District officers too frequently employ teachers of inferior qualifications, who "work cheap," that thereby the current expenses may be lessened, and the school continued for a longer time. The superintendent considers it far better that the school should be taught three months by a first-class teacher, than six months by a poor one. "Liberal salaries should be paid and good services be required in return."

TEACHERS' INSTITUTES.

Successful institutes have been held in Arapahoe and Boulder Counties. The county superintendents are urged to take measures to establish institutes in all the counties. They are considered the most efficient means of improvement for teachers, and they, in part, supply the place of normal schools, "an institution which, it is earnestly hoped, will soon be one among the many evidences of prosperity" in the Territory.

TEXT-BOOKS.

Uniformity of text-books is considered of the greatest importance in a system of public schools. Any change should be well considered, and frequent changes should, if possible, be avoided. In the absence of any provision of law, authorizing the introduction of a uniform series of text-books, the superintendent has not thought it advisable to recommend a special list of books. The multiplication of so many serial books on each branch of study is considered an evil, involving not only great expense, but a useless waste of time on the part of the pupils. It is believed that in the primary schools it would be better to dispense with text-books almost entirely.

GRADED SCHOOLS.

It is considered very essential that schools should be graded in accordance with the qualifications of the pupils, and separate teachers employed for each department. A great mistake is made in giving the charge of the primary classes to teachers of ordinary qualifications and but little experience. Good primary teachers are the most needed, and the most difficult to obtain.

Graded schools are in successful operation in Denver, Central, Black Hawk, and several other towns in the Territory.

TEACHERS' LIBRARIES.

The superintendent earnestly recommends that "in all counties where there is a sufficient number of teachers for the purpose, associations be formed, and teachers' libraries and other aids be purchased." It is also recommended that an appropriation be made for the purchase of educational works for the territorial library.

SCHOOL GOVERNMENT.

It is insisted that the "teachers' authority should be firmly maintained at all times and by whatever legitimate means are the most effectual. An appeal to the better nature should, in every case, be first thoroughly tried, and severer methods resorted to only in case of necessity." While believing that corporal punishment may, in the great majority of cases, be avoided, the superintendent can not fully coincide with those who insist upon its entire abolition.

TRUANCY AND TARDINESS.

These are referred to as great hinderances to the success of the schools. The remedy lies in the hands of parents. "If they could be sufficiently interested in the education of their children to see the absolute necessity of their regular attendance at school, it would be a great vantage-ground gained."

COMPULSORY EDUCATION.

A compulsory law would be of no avail in the Territory, while the school accommodations are so entirely insufficient as at present. This obstacle is being gradually overcome. When sufficient accommodations are provided it may become necessary to pass laws compelling all persons of school-age to attend school some portion of each year. The subject is considered worthy the careful attention of educators and legislators.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Colorado was the fourth Territory in population, having 39,864 inhabitants within an area of 104,500 square miles, an average of 0.38 person to the square mile. Of this population 39,221 were whites, 456 were colored, 7 were Chinese, and 180 were Indians. Of these 33,265 were natives, and 6,599 were foreigners. Of the native residents 6,277 whites, 45 colored, and 22 Indians were born within the Territory, and of the foreigners 1,456 were born in Germany, 1,358 in England, and 1,685 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 2,617 persons attended school, and of these 135 were foreign-born. The white scholars numbered 2,597, of whom 1,376 were males and 1,221 females. The colored scholars numbered 19—12 males and 7 females. One female Indian was reported.

Illiteracy.—The number of inhabitants of all races, 10 years old and over, unable to write, was 6,823, of whom 255 were foreign-born.

Age, sex, and race of illiterates.—Of the 6,564 white illiterates 970 were from 10 to 15 years old, of whom 483 were males and 487 females; 1,215 were from 15 to 21 years old, of whom 498 were males and 717 females; 4,379 were 21 years old and over, of whom 2,305 were males and 2,074 females. Of the 146 colored illiterates 8 were from 10 to 15 years old, of whom 4 were males and 4 females; 27 were from 15 to 21 years old, of whom 13 were males and 14 females; 111 were 21 years old and over, and of these 63 were males and 48 females. Thirty-four male and 79 female Indians were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 142, with 188 teachers, of whom 89 were males and 99 females, and 5,033 pupils, 2,755 males and 2,278 females.

Amount and source of educational income.—The total income of all the educational institutions was $87,915, of which $73,375 were derived from taxation and public funds, and $14,540 from tuition and other sources.

Public schools.—The 124 public schools had 156 teachers, 81 males and 75 females, with 4,517 pupils, of whom 2,552 were males and 1,965 females. They possessed a total income of $75,025, of which $73,025 were derived from taxation and public funds, and $2,000 from tuition and other sources.

Academies.—The 2 academies, with 12 female teachers, were attended by 120 female pupils. They possessed an income of $5,800, derived from tuition and other sources.

Private schools.—The 16 private day and boarding schools had 20 teachers—8 males and 12 females, with 396 pupils—203 males and 193 females. They possessed a total income of $7,090, of which $350 were derived from taxation and public funds, and $6,740 from other sources, including tuition.

Libraries.—There were 30 public libraries with 11,385 volumes, and 145 private libraries with 27,959 volumes; making in all 175 libraries, with 39,344 volumes.

The press.—The 14 periodicals had an aggregate circulation of 12,750 copies, and an aggregate annual issue of 1,190,600 copies.

Churches.—Of the 55 church organizations, 47 had edifices, with 17,495 sittings, and the church property was valued at $207,230.

Pauperism.—Of the 19 paupers, 8 were native whites, and 11 foreigners.

Crime.—Of 19 persons imprisoned June 1, 1870, 11 were native whites, 5 native colored, and 3 foreigners; 32 persons were convicted during the year.

Age and sex of population.—Of the total population, 8,957 persons were from 5 to 18 years old, of whom 4,605 were males and 4,352 females; 30,349 were 10 years old and over, of whom 19,931 were males and 10,418 females.

Occupations.—There were 17,583 persons of these ages employed in various occupations, of whom 17,147 were males and 436 females; 6,462 persons, all males, were engaged in agricultural pursuits; 3,625 in personal and professional services, of whom 3,245 were males and 380 females; 2,815 in trade and transportation, of whom 2,813 were males and 2 females; 4,681 in manufacturing and mechanical and mining industries, of whom 4,627 were males and 44 females.

Age and sex of working population.—Of these 17,583 employed persons, 268 were from 10 to 15 years old, of whom 246 were males and 22 females; 17,157 were from 16 to 59 years old, of whom 16,748 were males and 409 females; 158 were 60 years old and over, of whom 153 were males and 5 females.

DAKOTA.

[From report of Hon. J. M. Turner, superintendent of public instruction, for the scholastic year ended December 31, 1871.]

CONDITION OF SCHOOLS.

The annual reports of the county superintendents show a large increase in the number of schools during the year; but the failure of several school-district clerks in each county to forward their annual reports to the county superintendent makes the statistics imperfect and unsatisfactory.

During the past year many of the schools in each county have been visited, and generally found to be prosperous. New and commodious school-houses have been built in several of the older settled districts, and it is hoped the coming year will witness the displacement of a number of the log school-houses.

TEXT-BOOKS.

The diversity of text-books heretofore used in the schools of this Territory has been a hinderance to their prosperity. Some districts had adopted and were using almost exclusively one series; but these instances were very rare. The county superintendent of one of the most populous counties in the Territory says: "The books used are partly the National Series, with specimens of almost every series published in the United States for the past fifteen years." In October last the superintendent issued a circular with a view of uniformizing the text-books used in his jurisdiction.

SCHOOL PROSPECTS.

The coming year bids fair to be one of unexampled prosperity to our Territory. Railroads are being built, giving us increased facilities for immigration; our country is becoming more extensively known and better appreciated at the East; all of which give us reason to expect a large increase of our population, requiring the organization of many new school districts. With the faithful discharge of their duty by school officers, we may reasonably expect to see a decided improvement in the condition of our schools during the coming year.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Dakota was the eighth Territory in population, having 14,181 inhabitants, within an area of 150,932 square miles, an average of 0.09 person to the square mile. Of this population 12,887 were whites, 94 colored, and 1,200 Indians. Nine thousand three hundred and sixty-six persons were natives of the United States, and 4,815 were foreign-born. Of the native inhabitants, 1,307 whites, 16 colored, and 765 Indians were born within the Territory, while of the foreign residents 563 were born in Germany, 248 in England, and 888 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 1,144 persons attended school, of whom 136 were foreign-born. The white scholars numbered 1,128, of whom 606 were males and 522 females; the Indian scholars numbered 16, 8 males and 8 females.

Illiteracy.—The number of inhabitants of all races, 10 years old and over, unable to write, was 1,563, of whom 805 were foreign born.

Age, sex, and race of illiterates.—Of the 914 white illiterates, 114 were from 10 to 15 years old, of whom 56 were males and 58 females; 91 were from 15 to 21 years of age, of whom 44 were males and 47 females; 709 were 21 years old and over, of whom 403 were males and 306 females. Of the 31 colored illiterates, 2 were from 10 to 15 years old, 1 male and 1 female; 11 were from 15 to 21 years old, 3 males and 8 females; 18 were 21 years old and over, of whom 6 were males and 12 females. Two hundred and sixty-nine male and 349 female Indians were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 35, with 52 teachers, 23 males and 29 females, and with 1,255 pupils, of whom 694 were males and 561 females.

Amount and source of educational income.—The total income of all the educational institutions was $9,284, of which $8,364 were derived from taxation and public funds, and $920 from tuition and other sources.

Public schools.—The 34 public schools had 48 teachers—22 males and 26 females, with 1,223 pupils, of whom 679 were males and 544 females. They possessed a total income of $8,684, of which $8,364 were derived from taxation and public funds and $320 from tuition and other sources.

Libraries.—There were 5 public libraries reported with 2,788 volumes, and 14 private libraries with 6,938 volumes; making in all 19 libraries with 9,726 volumes.

The press.—The 3 periodicals had an aggregate circulation of 1,652 copies, and an aggregate annual issue of 85,904 copies.

Churches.—Of the 17 church organizations, 10 possessed edifices, with 2,800 sittings, and the church property was valued at $16,300.

Crime.—Of 3 persons imprisoned, June 1, 1870, 1 was native white and 2 foreigners; 2 persons were convicted during the year.

Age and sex of population.—Of the total population 3,367 persons were from 5 to 18 years old—1,736 males and 1,631 females; 10,640 were 10 years old and over, of whom 7,047 were males and 3,593 females.

Occupations.—There were 5,887 persons of these ages employed in various occupations, of whom 5,727 were males and 160 females; 2,522 persons—all males—were engaged in agricultural pursuits; 2,704 in personal and professional services, of whom 2,562 were males and 142 females; 204, all males, in trade and transportation; 457 in manufacturing and mechanical and mining industries, of whom 439 were males and 18 females.

Age and sex of working population.—Of these 5,887 employed persons, 24 were from 10 to 15 years old, of whom 19 were males and 5 females; 5,727 were from 16 to 59 years old, of whom 5,575 were males and 152 females; 136 were 60 years old and over, of whom 133 were males and 3 females.

Number of school-houses	21	26

CONDITION OF SCHOOLS.

The report shows the schools to be in a very favorable condition, and affords evidences of unusual activity throughout the Territory.

SCHOOL LANDS.

There have been no moneys paid into the territorial treasury on account of sales of school lands, although sections 16 and 36 of each township have been reserved by the United States for school purposes; the title to the same still being in the United States, this Territory has no jurisdiction over them, therefore no disposition of the same can be made.

DISTRIBUTION OF SCHOOL FUNDS.

The superintendent suggests that section 10 of the school law, passed January 13, 1871, be amended so that the entire amount of money held by the county treasurer for school purposes, and by him reported to the county superintendent, shall be divided *per capita* among the several districts, in proportion to the number of children in each, as shown by the last report of the school-census marshal of each district. This section of the law, as it now stands, is the subject of great complaint. I ask the earnest attention of the law-making power to this subject, as a school district containing ten children receives as much of the two-thirds distributed under the present law as does a district containing one hundred.

COUNTY SUPERVISION.

It would seem that the portion of section 15 of the school law of 1870 and 1871, in relation to the requirement that the county superintendents should visit the several schools in the county at least once a year, has been sadly neglected. The salaries as now allowed are quite sufficient to defray all the expenses and enable them to give a more full account of the condition of each school under their supervision to the territorial superintendent.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Idaho was the seventh Territory in population, having 14,999 inhabitants within an area of 86,294 square miles, an average of 0.17 person to the square mile. This population consisted of 10,618 whites, 60 colored, 4,274 Chinese, and 47 Indians. Of this population 7,114 were natives and 7,885 were foreign-born. Of the native inhabitants 921 whites, 2 colored, 2 Chinese, and 21 Indians were born within the Territory, while of the foreign inhabitants 599 were born in Germany, 540 in England, and 986 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 466 persons attended school, of whom 50 were foreign-born. The white scholars numbered 458, of whom 240 were males and 218 females. The colored scholars numbered 8, 4 females and 4 females.

Illiteracy.—The number of inhabitants of all races, 10 years old and over, unable to write, was 3,388, of whom 3,250 were foreign-born.

Age, sex, and race of illiterates.—Of the 486 white illiterates, 36 were from 10 to 15 years old, of whom 17 were males and 19 females; 28 were from 15 to 21 years old, of whom 9 were males and 19 females; 422 were 21 years old and over, 315 males and 107 females. Of the 16 colored illiterates, 1 male was from 10 to 15 years old; 2 were from 15 to 21 years old—1 male and 1 female; 13 were 21 years old and over, of whom 4 were males and 9 females; 2,872 Chinese and 14 Indians were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 25, with 33 teachers, 23 males and 10 females, and with 1,208 pupils, of whom 602 were males and 606 females.

Amount and source of educational income.—The total income of all the educational institutions was $19,938, of which $16,178 were derived from taxation and public funds and $3,760 from tuition and other sources.

Public schools.—The 21 public schools had 26 teachers, 20 males and 6 females, with 1,048 pupils, of whom 527 were males and 521 females. They possessed an income of $16,178, derived from taxation and public funds.

Private schools.—The 3 private day and boarding schools had 3 teachers, 1 male and 2 female, with 105 pupils, 50 males and 55 females. They possessed an income of $2,060, derived from tuition and other sources.

Libraries.—There were 11 public libraries with 2,860 volumes, and 32 private libraries with 7,765 volumes; making, in all, 43 libraries with 10,625 volumes.

The press.—The 6 periodicals had an aggregate circulation of 2,750 copies, and an aggregate annual issue of 200,200 copies.

Churches.—Of the 15 church organizations, 12 had edifices, with 2,150 sittings, and the church property was valued at $18,200.

Pauperism.—Of the 4 paupers, 3 were native whites and 1 foreigner.

Crime.—Of 28 persons imprisoned, June 1, 1870, 17 were native whites, 1 native colored, and 10 foreigners. Twenty-six persons were convicted during the year.

Age and sex of population.—Of the total population 1,695 persons were from 5 to 18 years old, of whom 897 were males and 798 females. Thirteen thousand one hundred and eighty-nine were 10 years old and over, of whom 11,270 were males and 1,919 females.

Occupations.—There were 10,879 persons of these ages employed in various occupations, of whom 10,754 were males and 125 females; 1,462 persons—all males—were engaged in agricultural pursuits; 1,423 in personal and professional services, of whom 1,310 were males and 113 females; 721 in trade and transportation, of whom 720 were males and 1 female; 7,273 in manufacturing and mechanical and mining industries, of whom 7,262 were males and 11 females.

Age and sex of working population.—Of these 10,879 employed persons, 33—all males—were from 10 to 15 years old; 10,808 were from 16 to 59 years old, of whom 10,683 were males and 125 females; 38 males were 60 years old and over.

MONTANA.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Montana was the sixth Territory in population, having 20,595 inhabitants within an area of 143,776 square miles, an average of 0.14 person to the square mile. This population consisted of 18,306 whites, 183 colored, 1,949 Chinese, and 157 Indians. Of these 12,616 were natives of the United States, and 7,979 were foreign-born. Of the native residents 1,588 whites, 15 colored, 84 Indians, and 6 Chinese were born within its borders; while of the foreign residents 1,233 were born in Germany, 692 in England, and 1,635 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 919 persons attended school, and of these 24 were foreign-born. Of the white scholars, 499 were males and 420 females, a total of 919. No colored, Chinese, or Indian pupils were reported.

Illiteracy.—There were 918 inhabitants of all races, 10 years old and over, unable to write, of whom 524 were foreign-born.

Age, sex, and race of illiterates.—Of the 643 white illiterates, 105 were from 10 to 15 years old, and of these 69 were males and 36 females; 58 were from 15 to 21, of whom 29 were males and 29 females; 480 were 21 years old and over, of whom 399 were males and 81 females. Of the 68 colored illiterates, 4 were from 10 to 15 years old, of whom 2 were males and 2 females; 15 were from 15 to 21 years old, of whom 2 were males and 13 females; and 49 were 21 years old and over, of whom 34 were males and 15 females. The Indian and Chinese illiterates numbered 207.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 54, having 65 teachers, of whom 34 were males and 31 females, and 1,745 pupils—1,027 males and 718 females.

Amount and source of educational income.—The total income of all the educational institutions was $41,170, of which $30,434 were derived from taxation and public funds, and $10,736 from tuition and other sources.

Public schools.—The 45 public schools, with their 46 teachers, 33 males and 13 females, were attended by 1,544 pupils, of whom 965 were males and 579 females. To educate these they possessed a total income of $32,925, of which $30,434 were derived from taxation and public funds and $2,491 from tuition and other sources.

Academy.—The one academy, with its 8 female teachers, had an attendance of 50 pupils, 10 of whom were males and 40 females. It had an income of $1,200, derived from tuition and other sources.

Private schools.—The 7 private day and boarding schools had 7 teachers, 1 male and 6 females, and 130 pupils, 52 males and 78 females. They possessed an income of $5,245, derived from tuition and other sources.

Libraries.—There were 13 public libraries with 5,100 volumes, and 128 private libraries with 14,690 volumes; making in all 141 libraries, containing 19,790 volumes.

The press.—The 10 periodicals had an aggregate circulation of 19,580 copies and an aggregate annual issue of 2,860,600 copies.

Churches.—Of the 15 church organizations 11 had edifices with 3,850 sittings, and the church property was valued at $99,300.

Pauperism.—Of the 23 paupers 8 were native whites and 15 foreigners.

Crime.—Of 16 persons imprisoned, June 1, 1870, 13 were native whites, 1 native colored, and 2 foreigners; 24 persons were convicted during the year.

Age and sex of population.—Of the total population 2,101 were from 5 to 18 years old, of whom 1,134 were males and 967 females; 18,170 were 10 years old and over, of whom 15,517 were males and 2,653 females.

Occupations.—There were 14,048 persons of these ages engaged in various occupations, of whom 13,877 were males and 171 females. Of these 2,111 were engaged in agricultural pursuits, of whom 2,110 were males and 1 female; 2,674 in personal and professional services, of whom 2,515 were males and 159 females; 1,233 in trade and transportation, of whom 1,232 were males and 1 female; 8,030 in manufacturing and mechanical and mining industries, of whom 8,020 were males and 10 females.

Age and sex of working population.—Of the 14,048 employed persons 5 were from 10 to 15 years old, 1 male and 4 females; 14,011 were from 16 to 59 years old, of whom 13,846 were males and 165 females; 32 were 60 years old and over, of whom 30 were males and 2 females.

NEW MEXICO.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 New Mexico was the second Territory in population, having 91,874 inhabitants within an area of 121,201 square miles, an average of 0.76 person to the square mile. This population consisted of 90,393 whites, 172 colored, and 1,309 Indians. Of these 86,254 were natives of the United States and 5,620 foreign-born. Of the native residents 82,193 whites, 57 colored, and 925 Indians were born within its borders, while of the foreign residents 582 were born in Germany, 120 in England, and 543 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 1,889 persons attended school, and of these 59 were foreign-born. Of the white scholars 1,095 were males and 782 females—a total of 1,877. Of the 3 colored pupils 2 were males and 1 female; 5 male Indians and 4 females were also reported.

Illiteracy.—There were 52,220 inhabitants of all races, 10 years old and over, unable to write, of whom 2,909 were foreign-born.

Age, sex, and race of illiterates.—Of the 51,140 white illiterates 9,423 were from 10 to 15 years old, and of these 4,530 were males and 4,893 females; 9,690 were from 15 to 21 years old, of whom 3,956 were males and 5,734 females; 32,027 were 21 years old and over, of whom 14,892 were males and 17,135 females. Of the 109 colored illiterates 9 were from 10 to 15 years of age, of whom 5 were males and 4 females; 18 were from 15 to 21 years old, of whom 7 were males and 11 females; 82 were 21 years old and over, of whom 58 were males and 24 females; 331 males and 640 female Indian illiterates were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 44, having 72 teachers, of whom 38 were males and 34 females, to educate their 1,798 pupils, 1,014 of whom were males and 784 females.

Amount and source of educational income.—The total income of all the educational institutions was $29,886, of which $1,200 were derived from taxation and public funds and $28,686 from tuition and other sources.

Public schools.—The 5 public schools, with 5 male teachers, were attended by 188 pupils, of whom 84 were males and 104 females. To educate these they possessed an income of $1,000, derived from tuition and other sources.

Colleges.—The one college, with 4 male teachers, was attended by 261 male students. It possessed an income of $4,500 from tuition and other sources.

Academies.—The 3 academies, with 17 female teachers, had an attendance of 235 female pupils. They possessed an income of $12,250, derived from tuition and other sources.

Private schools.—The 29 day and boarding schools had 34 teachers, of whom 25 were males and 9 females, and were attended by 775 pupils—467 males and 308 females. They had an income of $7,232, derived from tuition and other sources.

Libraries.—There were 33 public libraries, with 9,620 volumes, and 83 private libraries with 29,805 volumes—making in all 116 libraries, containing 39,425 volumes.

The press.—The 3 periodicals had an aggregate circulation of 1,525 copies, and an aggregate annual issue of 137,350 copies.

Churches.—Of the 158 church organizations 152 had edifices, with 81,560 sittings, and the church property was valued at $322,621.

Crime.—Of the 24 persons imprisoned June 1, 1870, 18 were native whites, 3 were native colored, and 3 foreigners. Nine persons were convicted during the year.

Age and sex of population.—Of the total population 29,312 were from 5 to 18 years old, of whom 14,440 were males and 14,872 females; 66,464 were 10 years old and upward, of whom 34,415 were males and 32,049 females.

Occupations.—There were 29,361 persons of these ages engaged in various occupations, of whom 26,281 were males and 3,080 females. Of these, 18,668 were engaged in agricultural pursuits, of whom 18,432 were males and 236 females; 7,535 persons in personal and professional services, of whom 5,542 were males and 1,993 females; 863 persons—all males—were engaged in trade and transportation; 2,295 in manufactures and mechanical and mining industries, of whom 1,444 were males and 851 females.

Age and sex of working population.—Of the 29,361 employed persons, 1,295 were from 10 to 15 years old, of whom 994 were males and 301 females; 26,250 were from 16 to 59 years old, and of these 23,633 were males and 2,617 females; 1,816 were 60 years old and over, of whom 1,654 were males and 162 females.

UTAH.

[From report of Hon. Robert L. Campbell, territorial superintendent of public instruction, for the scholastic year ended December 31, 1871.]

SCHOOL REVENUE.

The schools generally are sustained by tuition fees, which range from $2.50 to $8 per quarter. The amount of taxes appropriated to the use of schools during the year was $5,254; amount of building-fund raised, $32,907.70.

ATTENDANCE.

Number of boys between 4 and 16 years	14,434
Number of girls between 4 and 16 years	14,303

SCHOOL DISTRICTS AND SCHOOLS.

Number of school districts	223
Number of districts reported	198
Number of schools	268
Number of months schools have been open	6.9

FINANCES.

An era in our financial status dawns upon us. The opening of new lines of railroad, the development of the mineral resources of the Territory, and the immunity enjoyed in 1871 by the husbandman from the "raids" of the grasshoppers, which have for the four years preceding, either partially or entirely destroyed our crops, have conspired to place us financially in a condition to increase our efforts for the aid and support of common schools. The lack of means meets trustees on every hand. Philanthropic trustees and teachers have done much toward schooling indigent children; this burden should be borne, not by a profession nor by individuals, but by the commonwealth. It is respectfully submitted whether the territorial tax should not be increased one-fourth of one per cent., and that this amount be appropriated for the use of common schools; also, that it be enacted that the tax collected by the counties from railroads, and the licenses by cities from banks, inure to the school fund. And it is further submitted whether the school fund is not the proper one to receive all fines, forfeitures, and escheats.

DONATIONS.

It is respectfully suggested that there should be an agent appointed in behalf of the Territory to solicit and receive benefactions which may be made to the common-school fund of the Territory. If any of the States or Territories have claims upon the generosity of philanthropists throughout the nation for assistance in their educational efforts, surely Utah, whose inhabitants are engaged in reclaiming the most arid and forbidding portion of the public domain, will not be forgotten.

FREE SCHOOLS.

The communications of county superintendents favor the adoption of a system of free schools. The public sentiment is sufficiently ripe to justify favorable legislation looking to that end. Antecedent to this, however, there is an essential preparatory work, without which the results anticipated from such a system will fail of realization. Taking advantage of the seventh section in the present school code, which authorizes the assessment and collection of one per cent. to pay teachers, several school districts have essayed to adopt the free-school system before they have erected the necessary buildings, or been able to supply the aids absolutely needed to make the work of the school-room approach success, and leaving almost entirely in the background the hiring of teachers of acknowledged ability. If, in the judgment of the assembly, it is deemed immature or unadvisable to inaugurate a system of free schools, the amendment of the present school code so as to authorize districts, by a two-thirds vote of the tax-payers in the same, to collect 1½ per cent. to pay teachers, would enable many districts that prefer the system of taxation to do so successfully.

COUNTY SUPERINTENDENTS.

Upon the efficiency of this officer much of our educational success depends. When the time arrives that county courts have funds sufficient and are so fully alive to school interests that they will be willing to employ practical educators of ability, allowing such a salary as will adequately compensate a county superintendent for the employment of so much of his time as may be necessary for the direction and regulation of the schools in the county, then a step will be taken which can not fail of producing a revolution greatly needed in our school system. Salt Lake County demands nearly the whole time of an efficient county superintendent, who should be a practical educator. Smaller counties may be divided into school districts, with a district superintendent, who should be the officer to hold institutes and give direction in the most approved methods of discipline and instruction to be adopted uniformly throughout the Territory.

TRUSTEES.

It is maintained by some of our educators that the trustees in cities should be relieved by educational boards, whose secretary should be city superintendent. County superintendents universally complain of the laxity of trustees in furnishing statistics. It is respectfully submitted whether it would not be the better method to allow some reasonable compensation for this labor, which could be performed by one of the trustees, to whom the county superintendent could address all communications with the assurance that the same would receive immediate attention.

TEACHERS.

Experience in Utah has demonstrated that the cheapest teachers have been those who were professional and whose abilities have commanded the highest salaries, and *vice versa*. The cry from north to south is, "Send us competent teachers." It is hoped that the day has passed in Utah when cheapness will be considered a teacher's greatest recommendation, and that it will not be long before we shall be willing to pay such salaries as will secure the best quality of instruction.

TEXT-BOOKS.

An effort has been made by the school authorities to secure and maintain uniformity in text-books; also, to reduce the prices of the same. The text-books in the schools, with the exception of the readers, are those that have been in use during the last ten years. The readers were objectionable, and from year to year prominent teachers urged a change. Recently this has been made, and the National Series of readers and spellers adopted. Changes are not desirable, and in our present immature financial condition are annoying.

SCHOOL APPARATUS.

To supply the district schools throughout the Territory with necessary school apparatus will require a considerable amount of means, as in some of the districts the furnishings are very meager.

NORMAL SCHOOL.

The superintendent renews his recommendation for the establishment of a normal school. A public block in the Twentieth ward of Salt Lake City is suggested as a suit-

able location. It has been also suggested that South Willow Creek would afford a good site for a normal school. In some respects it would be less objectionable than Salt Lake City, and it has the recommendation of being one of the first school districts in Utah to hire competent teachers and furnish the necessary school apparatus.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Utah was the third Territory in population, having 86,786 inhabitants within an area of 84,476 square miles, an average of 1.03 persons to the square mile. This population consisted of 86,044 whites, 118 colored, 179 Indians, and 445 Chinese. Of these, 56,084 were natives of the United States, and 30,702 were foreign-born. Of the native residents 41,211 whites, 39 colored, and 176 Indians were born within its borders, while of the foreign residents 358 were born in Germany, 16,073 in England, and 502 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 14,632 persons attended school, and of these 2,006 were foreign-born. Of the 14,616 white scholars 7,616 were males and 7,000 females. Of the 9 colored scholars 6 were males and 3 females; 1 male and 6 female Indian scholars were also reported.

Illiteracy.—There were 7,363 inhabitants of all races, 10 years old and over, unable to write, and of these 4,029 were foreign-born.

Age and sex of illiterates.—Of the 7,097 white illiterates 2,828 were from 10 to 15 years old, and of these 1,539 were males and 1,289 females; 952 were from 15 to 21 years old, and of these 523 were males and 429 females; 3,317 were 21 years old and over, of whom 1,137 were males and 2,180 females. Of the 22 colored illiterates 3 were from 10 to 15 years old, 2 males, and 1 female; 1 female was 21 years old; 18 were 21 years old and over, of whom 8 were males and 10 females; 209 male and 6 female Chinese, also 13 male and 16 female Indian illiterates, were reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 267, having 408 teachers, of whom 207 were males and 201 females, to educate their 21,067 pupils, of whom 9,844 were males and 11,223 females.

Amount and source of educational income.—The total income of all the educational institutions was $150,447, of which $4,151 were derived from taxation and public funds, and $146,296 from tuition and other sources.

Private schools.—The 262 day and boarding schools had 398 teachers, of whom 201 were males and 197 females, and were attended by 20,772 pupils, of whom 9,683 were males and 11,089 females. They possessed a total income of $135,342, of which $4,151 were derived from taxation and public funds, and $141,191 from other sources, including tuition.

Libraries.—There were 74 public libraries, containing 31,493 volumes, and 59 private libraries with 7,684 volumes, making in all 133 libraries, containing 39,177 volumes.

The press.—The 10 periodicals had an aggregate circulation of 14,250 copies, and an aggregate annual issue of 1,578,400 copies.

Churches.—Of the 165 churches 164 had edifices, with 86,110 sittings, and the church property was valued at $674,600.

Pauperism.—Of the 51 paupers, 19 were native whites, 1 native colored, and 31 foreign-born.

Crime.—Nineteen native whites were in prison June 1, 1870. Twenty-seven persons were convicted during the year.

Age and sex of population.—Of the total population 30,416 persons were from 5 to 18 years old, and of these 15,344 were males and 15,072 females. Fifty-six thousand five hundred and fifteen were 10 years old and over, of whom 28,729 were males and 27,786 females.

Occupations.—Twenty-one thousand five hundred and seventeen persons of these ages were engaged in various occupations, of whom 20,442 were males and 1,075 females; 10,428 were engaged in agricultural pursuits, of whom 10,417 were males and 11 females; 5,317 in personal and professional services, of whom 4,384 were males and 933 females; 1,665 in trade and transportation, of whom 1,648 were males and 17 females; 4,107 persons in mechanical and manufacturing and mining industries, of whom 3,993 were males and 114 females.

Age and sex of working population.—Of the 21,517 employed persons, 832 were from 10 to 15 years old, of whom 597 were males and 235 females; 19,697 were from 16 to 59 years old, and of these 18,885 were males and 812 females; 988 were 60 years old and over, of whom 960 were males and 28 females.

WASHINGTON TERRITORY.*

[From report of Hon. N. Rounds, territorial superintendent of public instruction, for the scholastic year 1872.]

SCHOOL STATISTICS.

Number of school districts	222
Number of school-houses	144
Number of schools taught	157
Number of persons of school-age, (4 to 21)	8,306
Number attending school	3,820
Amount of public money paid teachers	$28,088

CONDITION OF EDUCATIONAL INTERESTS.

There is a university at Seattle, a female seminary at Olympia, a conference seminary at Vancouver, and four Catholic schools.

A uniform series of text-books has been generally adopted in the public schools. Measures have been taken to increase the attendance at school by compulsory legislation.

Teachers' institutes are held in several of the judicial districts. Rev. George H. Atkinson, of Oregon, says of one of these institutes, held at Vancouver, Clarke County, which he attended: "It was a very profitable one. The people came out in good numbers, children took part, and teachers were wide awake."

SCHOOLS OF THURSTON COUNTY.

The superintendent of Thurston County reports 856 scholars in the county, of whom three-fifths have attended school. Number of school-houses, 18. The average length of time school has been kept is four months. The number of persons in the county over 21 years of age who can neither read nor write is 13.

It is stated that there have been more experienced teachers teaching in the county during the past year than at any previous time. It is feared, however, that these will not long continue without an increase of salary.

It has been found impracticable to adopt the books recommended by the territorial superintendent. There is not a general willingness on the part of parents to buy new books, and to use them in part would increase instead of diminish the diversity of books.

The superintendent urges the importance of teachers' institutes, and remarks: "It is just as necessary to have educational meetings to keep up sufficient interest as it is to have political meetings to save the country."

He urges the importance of making school-houses comfortable and attractive, and recommends the greatest care in the selection of teachers.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Washington was the fifth Territory in population, having 23,955 inhabitants to 69,994 square miles, an average of 0.34 person to the square mile. Of this population 22,195 were whites, 207 were colored, 234 were Chinese, and 1,319 were Indians. Of these 18,931 were natives of the United States, while 5,024 were foreign-born. Of the native residents 5,862 whites, 102 colored, and 968 Indians were born within its limits, while of the foreign residents 645 were born in Germany, 791 in England, and 1,047 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 3,537 persons attended school, of whom 214 were foreign-born. The white scholars numbered 3,503, of whom 1,864 were males and 1,639 females. The colored scholars numbered 29, 14 males and 15 females; and the Indian scholars numbered 5, 4 males and 1 female.

Illiteracy.—The number of inhabitants of all races, 10 years old and over, unable to write, was 1,307, of whom 503 were foreign-born.

Age, sex, and race of illiterates.—Of the 823 white illiterates 129 were from 10 to 15 years old, of whom 71 were males and 58 females; 78 were from 15 to 21 years old, of whom 44 were males and 34 females; 616 were 21 years old and over, 437 males and 179 females. Of the 34 colored illiterates 4 were from 10 to 15 years old, 2 males and 2 females; 6 were from 15 to 21 years old, 4 males and 2 females; 24 were 21 years old and over, of whom 15 were males and 9 females; 450 Indian illiterates were also reported.

* "The returns are partial, and their correctness is only approximate."—*Extract from letter of superintendent.*

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 170, with 197 teachers, 85 males and 112 females; and with 2,499 pupils, 2,816 males and 2,683 females.

Amount and source of educational incomes.—The total income of all the edueational institutions was $48,302, of which $800 were derived from endowment, $30,326 from taxation and public funds, and $17,176 from other sources, including tuition.

Public schools.—The 154 public schools had 158 teachers, 75 males and 83 females; with 4,760 pupils, 2,456 males and 2,304 females. They possessed a total income of $33,746, of which $30,326 were derived from taxation and public funds, and $3,420 from tuition and other sources.

Colleges.—The 2 colleges had 8 teachers, 5 males and 3 females, and were attended by 199 students, 140 males and 59 females. They had a total income of $4,800, of which $800 were derived from endowment and $4,000 from other sources, including tuition.

Academy.—The 1 academy had 4 teachers, 2 males and 2 females, with 61 pupils, of whom 29 were males and 32 females. It possessed an income of $1,188, derived from tuition and other sources.

Private schools.—The 11 private day and boarding schools had 20 teachers, 3 males and 17 females, with 358 pupils, 135 males and 223 females. They possessed an income of $7,068, derived from tuition and other sources.

Libraries.—There were 30 public libraries, with 13,552 volumes, and 72 private libraries, with 19,810 volumes, making, in all, 102 libraries with 33,362 volumes.

The press.—The 14 periodicals had an aggregate circulation of 6,785 copies, and an aggregate annual issue of 396,500 copies.

Churches.—Of the 47 church organizations, 36 had edifices, with 6,000 sittings, and the church property was valued at $62,450.

Pauperism.—Of the 20 paupers, 13 were native whites, 2 native colored, and 5 foreigners.

Crime.—Of 19 persons imprisoned, June 1, 1870, 7 were native whites, 1 native colored, and 11 foreigners. Twenty persons were convicted during the year.

Age and sex of population.—Of the total population, 6,458 were from 5 to 18 years old; and of these 3,332 were males and 3,126 females; 17,334 were 10 years old and over, of whom 11,611 were males and 5,723 females.

Occupations.—Nine thousand seven hundred and sixty persons of these ages were employed in various occupations, of whom 9,524 were males and 236 females; 3,771 persons were engaged in agricultural pursuits, of whom 3,759 were males and 12 were females; 2,207 in personal and professional services, of whom 2,000 were males and 207 females; 1,129 in trade and transportation, of whom 1,127 were males and 2 females; 2,653 in manufacturing and mechanical and mining industries, of whom 2,638 were males and 15 females.

Age and sex of working population.—Of these 9,760 employed persons, 45 were from 10 to 15 years old, of whom 37 were males and 8 females; 9,532 were from 16 to 59 years old, of whom 9,310 were males and 222 females; 183 were 60 years old and over, of whom 177 were males and 6 females.

WYOMING.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 Wyoming was the tenth Territory in population, having 9,118 inhabitants, within an area of 97,883 square miles, an average of 0.09 person to the square mile. This population consisted of 8,726 whites, 183 colored, 66 Indians, and 143 Chinese. Of these 5,605 were natives of the United States, and 3,513 were foreign-born. Of the native residents 259 whites, 2 colored, and 32 Indians were born within its borders, while of the foreign residents 652 were born in Germany, 556 in England, and 1,102 in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 364 persons attended school, and of these 28 were foreign-born. Of the 363 white scholars 178 were males and 185 females. The 1 colored pupil was a male.

Illiteracy.—There were 602 inhabitants of all races, 10 years old and over, unable to write, and of these 336 were foreign-born.

Age and sex of illiterates.—Of the white illiterates 41 were from 10 to 15 years old, and of these 22 were males and 19 females; 28 were from 15 to 21 years old, of whom 14 were males and 14 females; 412 were 21 years old and over, of whom 326 were males and 86 females. Of the colored illiterates 1 male was 10 years old; 3 males were from 15 to 21 years old; 45 were 21 years old and over, of whom 33 were males and 12 females; 33 male and 1 female Chinese, 8 male and 30 female Indians were also reported.

Educational institutions.—According to Table XII, vol. 1, of Census Report, the total number of educational institutions was 9, having 15 teachers, of whom 7 were males and 8 females, to educate 305 pupils, of whom 190 were males and 115 females.

Amount and source of educational income.—The total income of all the educational institutions was $8,376, of which $2,876 were derived from taxation and public funds and $5,500 from tuition and other sources.

Public schools.—The 4 public schools, with 4 teachers, (2 male and 2 female,) were attended by 175 pupils, of whom 100 were males and 75 females. To educate these they had an income of $2,876, derived from taxation and public funds.

Private schools.—The 5 day and boarding schools had 11 teachers, (5 males and 6 females,) and were attended by 130 pupils, of whom 90 were males and 40 females. They had an income of $5,500, derived from tuition and other sources.

Libraries.—There were 11 public libraries, with 1,103 volumes; also, 20 private libraries, with 1,500 volumes; making in all 31 libraries, containing 2,603 volumes.

The press.—The 6 periodicals had an aggregate circulation of 1,950 copies, and an aggregate annual issue of 243,300 copies.

Churches.—Of the 12 church organizations 12 had edifices with 3,500 sittings, and the church property was valued at $46,000.

Crime.—Of the 13 persons imprisoned June 1, 1870, 7 were native whites and 6 foreign-born; 24 persons were convicted during the year.

Age and sex of population.—Of the total population 856 were from 5 to 18 years old, of whom 449 were males and 407 females; 8,059 were 10 years old and over, of whom 6,650 were males and 1,409 were females.

Occupations.—Six thousand six hundred and forty-five persons of these ages were engaged in various occupations, of whom 6,345 were males and 300 females; 165 persons were engaged in agricultural pursuits, of whom 164 were males and 1 female; 3,170 in personal and professional services, of whom 2,898 were males and 272 were females; 1,646 males were engaged in trade and transportation; 1,664 persons were engaged in manufactures and mechanical and mining industries, of whom 1,637 were males and 27 females.

Age and sex of working population.—Of the 6,645 employed persons 4 were from 10 to 15 years old, of whom 1 was a male and 3 females; 6,633 were from 16 to 59 years old, and of these 6,337 were males and 296 females; 8 were 60 years old and over, of whom 7 were males and 1 female.

DISTRICT OF COLUMBIA.

SCHOOL STATISTICS.

[For the school year ended August 31, 1872.]

Area of the District of Columbia, including the cities of Washington and Georgetown, and an adjacent rural district, generally known as the county, 64 square miles.

Population, United States census, 1870:	
Washington	109,199
Georgetown	11,384
County	11,117
Total	131,700
School population, (age 6 to 17 years, inclusive:)	
Washington	25,935
Georgetown	2,882
County	2,854
Total	31,671
Pupils enrolled in public schools, 1871–'72:	
Washington	12,989
Georgetown	1,032
County	1,534
Total	15,555
Aggregate number of pupils in private schools, 1872, (report of United States Commissioner of Education)	5,882
Whole number of seats provided for pupils in the public schools, 1871–'72:	
Washington	11,643
Georgetown	1,008
County	1,412
Total	14,063
Whole number of teachers in the public schools, 1871–'72:	
Washington	213
Georgetown	19
County	31
Total	263
Valuation of taxable property, 1871–'72:	
Washington	$62,400,000
Georgetown	5,900,000
County	6,500,000
Total	74,800,000
School tax, (per cent.,) 1871–'72:	
Washington	$0.006
Georgetown	.0025
County	.004
Total receipts from school tax, &c., 1871–'72:	
Washington	$318,701 98
Georgetown	13,519 96
County	23,418 13
Total	355,640 07

Total payment for public-school purposes, 1871–'72:	
Washington	$425,743 98
Georgetown	14,266 00
County	39,985 96
Total	479,995 94
Value of public-school property:	
Washington	$870,000
Georgetown	27,100
County	54,600
Total	951,700

No change has been made in the organizations of the public-school system of the District since the last report. The schools are still under the control of four boards of trustees, each one entirely independent of the others. One board has charge of the white schools of Washington, one of the white schools of Georgetown, one of the white and colored schools outside the city, (known as county schools,) and one of the colored schools of Washington and Georgetown. The members of the first three are appointed by the governor. The fourth board is appointed by the Secretary of the Interior.

The school revenue of the District is derived almost entirely from taxation, and in no other part of the United States is so heavy a school tax levied. The rate of tax for 1871–'72 was, in Washington, .006 ; in Georgetown, .0025; in the county, .004.

WASHINGTON.

WHITE PUBLIC SCHOOLS.

Hon. J. O. WILSON, *superintendent.*

White population	73,731
White school population	17,403
Number of pupils enrolled in white public schools	8,764
Average enrollment	6,734
Average attendance	6,231
Per cent. of attendance on average enrollment	92.5
Number of pupils in private schools	5,704
Number of regular teachers in public schools	130
Number of special teachers in public schools	8
Whole number of teachers	138
Amount paid for teachers' salaries	$102,477 90
Amount paid for incidental expenses	$63,605 18
Amount paid for permanent improvements	$132,476 96
Cost of tuition per pupil	$24 66

The result of the past year's labor, as exhibited in the annual report, affords unmistakable evidence of improvement in the common-school system, and indicates a growing tendency on the part of all classes to avail themselves of its advantages.

RECOMMENDATIONS OF THE SUPERINTENDENT.

The superintendent repeats the recommendations contained in his last report, that a normal or training school, and a high school, be established without delay. He recommends the erection of a large building for the female schools of the second district, and one or more buildings for primary schools in other districts; also, that steps be taken for training and educating such boys as are found unmanageable in the public schools. He urges the active co-operation of the board with the Delegate in Congress to secure the donation of public lands to aid public education in the District.

NEW PUBLIC-SCHOOL BUILDINGS.

During the past year the Cranch building, containing 6 rooms, and the Jefferson building, with 20 rooms, accommodating 1,200 pupils, have been completed. The latter edifice comprises a center building 111 by 59 feet, and two adjoining wings, each 30 feet 9 inches front by 88 feet deep. The height of the building is 60 feet. The third story contains the public hall, which occupies 4,600 square feet and is capable of seating 1,200 persons. There are six play-grounds, two under each wing, each 41 feet 6 inches by 27 feet, and two under the rear of the center building, 27 by 39 feet 6 inches

each. The dedicatory exercises took place December 7, 1872. Addresses were made by several gentlemen, from whose remarks the following extracts are taken:

Hon. J. O. Wilson, superintendent of public schools for white children in Washington, said: "The name with which the board of trustees of public schools have thought proper to honor this grand edifice calls up the earliest efforts made to establish a system of public education in the city of Washington.

"In August, 1805, the first board of trustees of public schools was organized, and Thomas Jefferson was unanimously elected president of the board. Mr. Jefferson's letter of acceptance is in the following words:

"'MONTICELLO, *August* 14, 1805.

"'SIR: A considerable journey southwardly from this has prevented my sooner acknowledging letters from yourself, from Mr. Gardiner, and S. H. Smith, announcing that I had been elected by the city council a trustee of the public schools to be established at Washington, and by the trustees to preside at their board. I received, with due sensibility, these proofs of confidence from the city council and the board of trustees, and ask the favor of you to tender them my just acknowledgments. Sincerely believing that knowledge promotes the happiness of men, I shall ever be disposed to contribute my endeavors toward its extension, and, in the instance under consideration, will willingly undertake the duties proposed to me, so far as other paramount obligations will permit my attention to them.'

"Mr. Jefferson was re-elected annually, and continued president of the board for three successive years, when his term of office as President of the United States expired and he returned to Monticello.

"Two schools were established at first, one in the east and one in the west section of the city; and it was ordered that two school-houses, each 50 by 20 feet, should be built, at a cost not exceeding $1,200 each. The part of the city in which we are now convened was ignored in this order. Here might have been seen at that time an unbroken wilderness; but if a willful wrong was then done, *South* Washington is amply and nobly revenged to-day."

Governor Cooke spoke in strong terms of the "claim of the District of Columbia to a share of the beneficence of the National Government, so liberally extended to all the other Territories of the United States in aid of education. As early as 1805 a memorial was presented to Congress upon this subject. Through two-thirds of a century of great history the righteousness of that prayer has been of no avail; but still our faith abides that this little Territory, forever excluded from the full benefits and high privileges of the Union, will at least receive a fair equivalent to the rich dower bestowed upon each of her more favored sisters."

Hon. B. G. Northrop, secretary of the Connecticut board of education, after alluding to the vast improvement of the Washington City public schools during the last ten years in buildings, supervision, instruction, and public regard, spoke of the good influence of the public school on all, rich or poor, who attended its instruction. "The high school is truly democratic; it is a leveler, and, best of all, it always levels *up*."

"Washington has lately made munificent expenditures for schools, but they will prove your most profitable investments. I advocate the most rigid economy in all things, but this is by no means a synonym for parsimony. A mere saving of money is not economy where there is a proportionate loss of something of greater value. In the beautiful letter in which Penn took leave of his family, he said to his wife, 'Live low and sparingly until my debts be paid.' Yet for his children he added, 'Let their learning be liberal, spare no cost, for by such parsimony all is lost that is saved.' Many, unlike Penn, would 'save' and curtail all educational expenses, that they may leave a larger fortune for half-educated children to squander in luxury and idleness, forgetting that a good moral and mental training is the richest and safest legacy, the best safeguard against prodigality. Without it the sudden inheritance of wealth will be likely to transform the frugal boy into a reckless spendthrift.

"American and European schools have their distinctive excellences, and can each learn much from the other. Of late the schools of Prussia have been overpraised. Though justly lauded by Horace Mann, Professor Stowe, and others thirty years ago, they do not retain the same pre-eminence. Relatively there has been greater progress in some other lands. Stimulated, indeed, by their illustrious example, others have overtaken them in the race. These remarks apply to the general public-school system, and not to their magnificent universities and other higher institutions. For graduates of our colleges, with fixed principles, studious habits, and disciplined minds, the great universities of Europe proffer the means of higher culture than America can yet furnish. But for our youth the so-called golden opportunities of continental culture have been greatly exaggerated. For them our schools are better than the European. To send our boys away to foreign boarding-schools is a great mistake. This is one of the fashionable follies which is just now having its day, for with fashion one can not reason.

"Laws, customs, manners, and institutions educate as well as the schools. Like an atmosphere, these influences surround the child, and unconsciously mold his character.

These elements, healthful and invigorating in republics, are repressive in monarchies, where you witness on every hand an obsequiousness to rank, a deference to usage, an unquestioning submission to mere authority, which are unfriendly to the elasticity, the independence, and, still more, to the aspirations of the juvenile mind. The *gens d'armes* standing at every corner make only one of many reminders that there is always near you, or rather over you, the outstretched arm of resistless power. In the knowledge of men and things, in courage and aspiration, in push and energy, in solid utility, and the adaptation of means to ends, American education means more than that of any other nation."

Mr. Northrop also spoke of the points in which our schools excel those in Europe, viz: 1. School architecture; 2. Ventilation; 3. School furniture; 4. Text-books, 5. Rapid mental combinations in arithmetic; 6. Geography and map drawing; 7. Religious instruction; 8. School government; 9. Co-education of the sexes; and said, if time permitted, he could present twenty particulars in which the schools of Europe excel ours, and in reference to which we may follow their example and ought to do so.

Professor Tyndall said that he had followed all the exercises with the keenest interest. He could not resist the invitation to be present. He was anxious to learn something of the manner of the education of American youth from personal observation. What he had seen had deeply interested him. He had spent two years of his life in educating the young, and it was one of the greatest pleasures he had ever experienced to see the young mind brighten and expand. He referred to the German educational system. It was a splendid one, but not suitable for America.

Senator Patterson expressed himself as believing that all the States owe a debt of gratitude to the District of Columbia for what it has done during the years past, and for the reason that the people of the District were in a certain sense the representatives of all the people. Strangers judge very much of the whole country by what they see here. The substantial advancement accomplished in ten years was most gratifying. He thought that Congress, in its failure to set apart a portion of the public domain for the support of schools in the District, had perhaps acted too much on the principle that "to him that hath shall be given, but from him that hath not shall be taken away even that which he hath."

Mr. Mori, the embassador from Japan, spoke of himself as the only representative present of a nation with whom education is at its dawn. The exercises had given him the greatest pleasure. He sketched briefly the new plan of education that had just been adopted in Japan.

The United States Commissioner of Education was invited to address the audience, but declined to make any extended remarks on account of the length of the previous exercises.

The following letter was received from the President of the United States:

EXECUTIVE MANSION,
Washington, D. C., December 6, 1872.

MY DEAR SIR: I regret that I shall be unable to be present, in accordance with your very polite invitation, at the formal opening and dedication to-morrow of the Jefferson school building. The cause of education is one in which all good citizens must take great interest, and the praiseworthy efforts in behalf of that great object made by the District of Columbia can but be a source of great gratification to its citizens, and reflect much credit upon the officers in charge of the work.

It would afford me much pleasure to be present to-morrow, if my public engagements would allow, and I beg you to accept my thanks for your kind invitation.

Very respectfully, yours,

U. S. GRANT.

Mr. J. ORMOND WILSON,
Superintendent of Public Schools.

COLORED PUBLIC SCHOOLS OF WASHINGTON AND GEORGETOWN.

GEORGE F. T. COOK, *superintendent.*

Colored school population of Washington and Georgetown	9,328
Number of children enrolled in colored schools	4,661
Average enrollment	3,481
Average attendance	3,261
Increase over last year in attendance	271
Per cent. of attendance	93.6
Number of school-houses	9
Number of sittings in all the school-houses	4,259
Number of schools, (primary 41, secondary 17, intermediate 10, grammar 7)	75
Number of teachers, (female)	84
Average monthly pay of teachers	$63
Average number of pupils to a teacher	47
Amount of receipts for colored public schools, (1871–'72)	$127,183 94

The report for 1871–'72 shows a gain of 6 schools and 13 teachers over the year previous. It is an indication of increasing stability in the schools that, while the total enrollment is less than the year before, the average attendance has increased. Another indication of improvement is the great reduction in the per cent. of tardiness in nearly all the schools. The past year has been altogether one of great prosperity and advancement.

A high school has been established, which it is hoped will act in a measure as a training school until the establishment of a normal school. Several graduates from this and the grammar schools are already teaching in the public schools of the city, with marked success.

Music is taught in all the schools, two special teachers being employed for the purpose.

Examinations are held semi-annually, and promotions made, based upon the standing of the pupils in these examinations.

The rules relating to the course of study in these schools provide that lessons which require study after school hours shall not be given to pupils in the primary schools, and lessons that require more than two hours of study shall not be required of pupils in the intermediate or grammar schools.

DEDICATION OF THE SUMNER PUBLIC-SCHOOL BUILDING.

This building, though not the first in school capacity, is altogether the finest that has yet been erected for the colored schools, and will compare favorably with the best school buildings in the Northern States. It contains 9 school-rooms, 3 recitation rooms, and a spacious hall, used at present for the high school. It is heated throughout with steam, and is well ventilated. The basement is occupied by two large play-rooms. It is probably the finest colored public-school edifice in the United States. The building was named by the board of trustees of colored schools in honor of Hon. Charles Sumner. The exercises connected with the dedication took place September 2, 1872. From the addresses made upon this occasion the following remarks are extracted:

George F. T. Cook, superintendent of the colored schools of Washington and Georgetown, briefly reviewed the history of the colored public schools in the District. The first school was organized in March, 1864, and the first school-house built in the winter of 1864–'65. This building contained four rooms, two of which were illy adapted to school purposes, and the internal arrangements were of the poorest order. The number of school-houses has increased to 9. Some of these buildings, in convenience, comfort, and architectural beauty, are not surpassed in the District. The number of teachers has increased from 3 to 84, and the number of pupils from 100 to nearly 5,000. All this has been done in less than 8 years. Experience has shown that the style of school buildings has a potent influence upon the deportment and character of the children. As they improve, the children are more regular in attendance, more devoted to study, and evince a nicer sense of propriety.

General N. P. Chipman, who represented Governor Cooke on this occasion, received from the trustees, in the name of the District of Columbia, the keys of Sumner school building, "a temple of education worthy of the man whom it is intended to honor by bearing his name." He paid a glowing tribute to the liberality of the citizens of Washington in sustaining education, remarking that, notwithstanding the complaints entered against taxation, no murmur ever escaped them against supporting their public schools, and closed by complimenting the officers of the colored schools upon their management and the success which had attended their efforts.

General John Eaton, United States Commissioner of Education, being called upon, remarked: "You ask me to add to the expressions of this interesting occasion. This high-school building for the colored children of Washington, combining, as it does, the grace of architecture with all the appliances and furnishing of the best modern school-buildings, this audience, and the wise words that have been addressed you by the able speakers who have preceded me, each and all are full of significance, and teach a lesson to which no art, no oratory, no sculpture, no painting, can give full expression. They recall all the past of this race, which is even now merging into the fullness of freedom; they are an earnest of the present with its rich fruition, and a pledge of the nobler promise of the future—that future, the grounds of whose hope rest upon the solid, underlying present fact of free schools.

"What a step this day marks, from that time when to this whole people even the knowledge of the alphabet was forbidden by law; that day when they had no control of the labor of their own hands; no possession of their own person; no certainty in the dearest and holiest relations of husband and wife, of parent and child; when they held all things wholly at the will of another. Through the great transitions of the past few years, the pupils who are to enjoy the privileges of this school, the people whose race is to be directly benefited, have come each into the possession of his own person, and to the enjoyment of all the personal rights and privileges guaranteed to every citizen in the American Constitution. These changes are manifest in the appearance of this audience.

"This building, now dedicated to learning, is set apart to assure the growth of these youth in knowledge and virtue. Here they are to receive education as free as the light and air of heaven. What words of mine can add to the significance of such an occasion? Shall I attempt to gild fine gold?

"The thought that comes to me most forcibly is that this school building, grand as it is, indispensable as it is, is, nevertheless, but the instrument and not the end; and with all its cunning appliances must fail unless there is on the part of teachers, competency, diligence, faithfulness; on the part of school officers, wisdom, watchfulness, and earnestness; and on the part of parents, an intelligent appreciation, and daily and hourly sympathetic co-operation, so as to secure the regular and punctual attendance and attentive and assiduous efforts of the pupils. Without these, this noble building will stand here as a monument of folly rather than a temple of wisdom. The motives which will inspire a high endeavor must be brought out, emphasized, and fixed in the minds of all. No indolent acceptance of good gifts will avail to win the harvests that should here ripen and be garnered. Effort—earnest, persistent, unremitting—on the part of each, is the law of success in the domain of mind as of matter."

COLLEGES, LIBRARIES, MUSEUMS, ETC.

In compliance with the demands upon this office for information respecting the various institutions in this District, these additional notes are included:

THE SMITHSONIAN INSTITUTION.

This institution was chartered by Congress in August, 1846, and the corner-stone of the present building was laid May 1, 1847. Its endower to the extent of $515,000 was James Smithson, a man of high scientific attainments, a native and resident of England. The object of the testator was, in his own words, "the increase and diffusion of knowledge among men." An account of the system pursued by the institution and of its museum and library, was given in the report of this bureau for 1871.

The permanent fund of the institution has been increased from $541,000 to upward of $700,000, by savings and judicious investments.

While attention has been given to all parts of the original law of Congress in relation to the institution, the latter has contributed to advance almost every branch of science, as evinced by the eighteen volumes of its series of quarto publications entitled "Smithsonian Contributions to Knowledge;" while it has diffused valuable information through its two other series, viz, "Miscellaneous Collections" and "Annual Reports." The character of these publications is briefly given by Professor Henry in his report of 1871. The first consists of memoirs containing positive additions to science resting on original research, and which are generally the result of investigations to which the institution has in some way rendered assistance. "Miscellaneous Collections" are composed of works intended to facilitate the study of branches of natural history, meteorology, &c., and are designed especially to induce individuals to engage in studies as specialties.

The annual report, besides an account of the operations, expenditures, and condition of the institution, contains translations from works not generally accessible to American students, reports of lectures, extracts from correspondence, &c. The President of the United States is, *ex officio*, presiding officer of the institution, and Chief Justice Chase is president of the Board of Regents.

AMERICAN UNION ACADEMY OF LITERATURE, SCIENCE, AND ART.

The objects of this academy, which was organized November 1, 1869, are "To secure co-operation and concert of action in the advancement and diffusion of knowledge, to aid inquiries in any department of learning, and to promote the elevation of taste in this community and throughout the country."

The academy is divided into the following departments: 1. Mathematics, engineering, and mechanics. 2. Physics and chemistry. 3. Medical science and hygiene. 4. Psychology, ethics, and social sciences. 5. Ethnology and natural history. 6. Archæology, geography, and civil history. 7. Philology and literature. 8. Fine arts, architecture, and music. 9. Law and polity. 10. Finance, statistics, and political economy.

The regular meetings of the academy are held on the last Monday of each month. At these meetings, papers approved for reading by the appropriate committees are read, discussions held, and queries answered. Any visitor may be invited to speak, or any special topic may be introduced for consideration, by vote of a majority of the members present. John William Draper, M. D., LL.D., was the first president of the academy. After the departure of Dr. Draper for Europe, Dr. Francis Lieber was elected president. The recent death of Dr. Lieber left a vacancy not yet filled.

COLUMBIAN COLLEGE.

This institution, which was established in Philadelphia in 1814, by several Baptist ministers, prominent among whom was the Rev. Luther Rice, was originally designed for the education of candidates for the ministry. The regular exercises of the college were commenced in January, 1822, under the direction of an able faculty. The medical department of the college was organized in the same year, and the law department in 1826. The president of the college is James C. Welling, LL.D., professor of moral and intellectual philosophy and history. He succeeded the Rev. G. W. Samson, D. D., who resigned in 1871.

The college consists of three departments, viz: 1. The academic department, including the preparatory and collegiate department, with six professors and two assistant professors. 2. The law school, with three professors, (located on Fifth street, between D and E streets, northwest.) 3. The medical school, with seven professors, not including several emeritus professors.

At present the law school has about 150 students; the medical school, 53; and the academic school, 120. At the last commencement of the institution the academic school graduated 7, the medical school 7, and the law school 70 students. Professor Lemuel Tyler, LL. D., is instructor of the senior law class, and Professor John O. Riley, M. D., is dean of the medical faculty.

A library of considerable magnitude is attached to the college.

HOWARD UNIVERSITY.

Howard University, General O. O. Howard, LL. D., president, is located near the head of Seventh street, just outside of the northern boundary of Washington. It was organized by a special act of Congress in 1867, and forms a part of a general system of institutions of learning which have grown out of the continued action of benevolent associations in concert with the Freedmen's Bureau, which in some instances established, and in others aided in establishing, these institutions.

It was intended as a national institution for higher education in the training of teachers and in the usual college course, (including preparatory and normal departments,) as also in the departments of theology, medicine, law, and agriculture; and to be truly a university of the highest grade, specially for colored men, though not exclusively, there being no designation of race or sex in the act of incorporation. There are eight buildings in use. The principal edifice is four stories in height, and contains rooms for lectures and recitations, a chapel, library, philosophical rooms, museum, and offices. Miner Hall, for the lodgment of female students, is three stories in height, and will accommodate 100 persons. Clark Hall, the lodging-house for young men, will accommodate 200 students. In its basement is a large room adapted to military drills and gymnastic exercises.

The buildings for the medical and normal departments, and hospital, with their grounds, adjoin the university park. The general hospital connected with this department will accommodate 300 patients. (An account of this will be found under the head of "Statistics of charitable institutions in the District of Columbia.")

The university at present (November, 1872) consists of seven departments, viz: The normal, with 180, the preparatory, with 60, the collegiate, with 32, the law, with 71, the commercial, with 30, the medical, with 37, and the theological, with 26 students. Connected with the university is a grammar school of 30 pupils, taught by a lady student. Rev. J. B. Reeves, (colored,) D. D., is professor of theology; and has been the means of fitting for the ministry many able and worthy young men. Professor John M. Langston, A. M., is the dean of the law school. A marked feature in the educational progress of the District, of special interest, has been the graduation within two years of 26 young colored men, and 1 lady, from the law department of the university, under the instruction of Professor Langston. In spite of previous disadvantages, they gave proof of thorough and excellent attainments in their professional studies. Of the 27 graduates mentioned, 18 are practicing law, and the remainder have remunerative positions for which their legal knowledge peculiarly fits them.

Although, at first, assisted by the Government in establishing the institution, the trustees of the university now depend upon yearly contributions and endowments, and moneys derived from students for board and tuition. Toward a purposed endowment of $300,000, $100,000 have been subscribed. President Grant, Hon. David Clark, Hon. Gerrit Smith, Professor John M. Langston, and John Taylor, esq., of London, are among the principal contributors.

The university possesses a library of over 6,500 volumes, a mineralogical cabinet, a museum of curiosities, and a picture gallery. About two-thirds of the students are of African descent; the remainder are of different nationalities, including whites, Indians, Chinamen, &c.

GEORGETOWN COLLEGE.

Georgetown College, Rev. John Early, S. J., president, conducted under Roman

Catholic auspices, is situated on the heights of Georgetown, District of Columbia. It was founded by the Rev. John Carroll, S. J. subsequently the first archbishop of Baltimore. The first building was erected in 1789. The classical department was opened in 1792, and in March, 1815, the college was raised by Congress to the rank of a university. The faculty of the college consists of the president and 21 professors.

The degree of Bachelor of Arts is conferred on those students only who have completed the regular course satisfactorily.

A course of mathematics and one of the modern languages are obligatory upon all the classical students.

Two general examinations are had during the year: the minor, or "middle," in January, at the end of the first term, and the major, or "final," in June.

At the beginning of each month the marks and the standing of the students in their respective classes for the preceding month are publicly proclaimed and testimonials awarded to those who have attained the prescribed degree of excellence.

A quarterly report of the standing in class, the progress, and general conduct of each student, is sent to his parents or guardian.

The classical department had 179 students at the close of the term in June last.

The medical department, Noble Young, M. D., president, was organized in May, 1851, and has 10 instructors. The lecture-rooms are at the corner of Tenth and E streets, northwest. During the past year 62 students were in attendance. A school of pharmacy has recently been organized in the college, in which diplomas are given for proficiency. This school had four graduates last year.

The law department, F street between Ninth and Tenth, was organized in October, 1870, Judge Charles P. James, LL. D., vice-president, and gave instruction during the year ended in June last to 46 students.

COLUMBIA INSTITUTION FOR THE DEAF AND DUMB.

This institution, E. M. Gallaudet, Ph. D., LL. D., president, was founded by Hon. Amos Kendall, (who was its first president,) and was chartered by Congress February 16, 1857. It is located near the junction of M and Boundary streets, northeast. It is the only deaf-mute college in the world. "The object of the directors in establishing a school of this grade, unprecedented in the history of deaf-mute instruction," says the "announcement" of the college, "was in part to prove, what had been doubted by some, that persons deprived of the senses of hearing and speech could, in spite of their disability, engage successfully in the advanced studies pursued in colleges for the hearing. The more important end in view, however, was to afford to a class of persons in the community, already numerous and increasing steadily with the population, an opportunity to secure the advantages of a rigid and thorough course of intellectual training in the higher walks of literature and the liberal arts. The experience of nearly five years in the progress of the college has fully satisfied those familiar with its workings that their assumption as to the ability of deaf-mutes to master the arts and sciences was well founded; while at the same time the expressions of interest which the enterprise has called forth from instructors of youth, from deaf-mutes and their friends, and from the public journals, are taken as evidence that the community approve the undertaking."

Seven professors, including the president, are employed, and the course of study is substantially the same as in other colleges. The students are taught by signs and the finger-alphabet; but the time consumed in pursuing the studies of the preparatory department and the collegiate department proper is no longer than that required by other colleges. The institution consists of two departments, one called the National Deaf-mute College, organized in 1864, the other the preparatory department, organized in 1857. The latter department is especially for residents of the District of Columbia and the children of soldiers and sailors. The branches taught are those in which instruction is given in the usual primary, grammar, and high schools. About seven years are required to complete the course of studies in this department, and about four years in the National Deaf-mute College. Instruction in articulation is given those who promise to profit by it. Quite a number of students have been taught to speak with tolerable distinctness and fluency, and at the annual commencement of the college in June last, two of the graduates were believed to be sufficiently proficient in articulation to deliver their orations orally. Owing to the publicity of the occasion and their natural diffidence, however, they concluded not to run the risk of failure, and spoke in the sign-language.

The institution is at present attended by about 100 students. Of this number about one-third are females. The students in the college proper are all males, and come from twenty-seven different States of the Union. In 1869 there were 4 graduates from the college; in 1870 there were 5; and in 1872 (at the commencement in June last) there were 8. All of these graduates, so far as can be learned, are doing well and receiving fair salaries. One of them is an assistant examiner in the Patent Office, having received his appointment after a competitive examination over seventeen other applicants; one

is a microscopist in the Coast-Survey Office; several are in different departments of the Government as clerks; but the majority are engaged in teaching in deaf and dumb institutions.

A small library and reading-room are attached to the institution, supported mainly by congressional appropriations, by the tuition-fees of paying pupils, (a small number,) and by voluntary contributions. During the past year a chemical laboratory has been added to the institution. Until last year twenty-five scholarships were provided by the Government. These scholarships have been abolished by Congress, which body, it is presumed, will hereafter make more liberal appropriations for the support of the institution. Prior to last year the amount annually appropriated was $40,000, with occasional extra allowances for building purposes. Last year the appropriation for the support of the institution was $48,000; and $70,000 were appropriated to purchase what is known as "Kendall Green," a tract of 100 acres adjoining the college. The purchase was recently concluded for $85,000, a number of benevolent gentlemen contributing to make up the difference between this sum and the congressional appropriation.

As it is estimated that there are at least 20,000 deaf-mutes in the United States; and as all of the different States of the Union, except Florida, have recently established preparatory schools for the education of their deaf-mutes, it is believed that within a short time the National Deaf-mute College will be unable to accommodate the large number that will apply for admission. But one wing of the college proper has been built, and the friends of the institution are anxious to see the main structure erected as soon as possible. Since the establishment of the institution it has instructed 223 students. Of this number 71 were attendants of the National Deaf-mute College. Professor Gallaudet is at present in Europe for the benefit of his health.

GONZAGA COLLEGE.

This institution, which was formerly known as the "Washington Seminary," was reopened for the youth of Washington and vicinity on the 2d of October, 1848. It is conducted by the Fathers of the Society of Jesus, (Roman Catholic,) and is located on I street, between North Capitol and First streets, northwest, near Saint Aloysius church. The president is the Rev. James Clark, S. J. This college was incorporated by Congress in May, 1858, under the name of the "president and directors of Gonzaga College." The college is intended for day scholars only, irrespective of creed or religious profession. It is usually attended by about 150 students, whose ages range from 10 to 18 years, and has 7 instructors.

WAYLAND SEMINARY.

This institution was organized in 1865, having for its object the education of preachers and teachers for the colored people. Its present location is at the corner of Nineteenth and I streets, but land has recently been purchased for new buildings upon Meridian Hill, on Sixteenth street, and the funds for the erection of the buildings are in process of collection among the members of the Baptist denomination. The value of the school property at present is estimated at $10,000. Funds for the current expenses of the institution are furnished by Sabbath-schools, individuals, and churches. The American Baptist Home Mission Society has the general charge of the support of the school.

The school has three departments—theological, academic, and normal. The number of students during the past year was 85, of whom 70 were males and 15 females. The average age of the students is about 23 years. Connected with the school is a students' home, where 45 are boarded, the funds for their support coming from abroad, without which aid it would have been impossible to carry on the school. The instructors are the Rev. G. M. P. King, A. M., principal, and two assistants.

THE WASHINGTON BUSINESS COLLEGE.

The Washington Business College, H. C. Spencer, president, is located at the corner of Seventh and L streets, northwest. This college is one of the international associations of business colleges. The course of instruction comprises: Business arithmetic, grammar, composition and correspondence, commercial geography, United States history, spelling, reading, and declamation, penmanship, book-keeping applied to the various kinds of business, actual business practice, commercial law, political economy, phonography, French and German languages, and incidental lectures and exercises.

Average membership, about 160.

THE LAW COLLEGE OF THE NATIONAL UNIVERSITY.

This college, located at No. 501 Fifth street, is now in the third year of its existence, and was established, mainly through the efforts of Professor W. B. Wedgewood, as a branch of a projected national university.

The chancellor is the President of the United States, *ex officio;* the vice-chancellor, Professor W. B. Wedgewood, LL. D.; G. W. Paschal, president of the regents; T. C. Connelly, secretary; the law professors being Judges Joseph Casey and Arthur MacArthur, and Professor Wedgewood. The first annual commencement was held in May last, 31 students graduating, and President Grant signing and presenting the diplomas as chancellor. Since the organization of the college, instruction has been given to 175 students. All the officers of the college serve gratuitously, and the students are charged only a sufficient sum to cover expenses. Recitations are held daily, and on Saturday evenings moot-courts are conducted by the professors.

NATIONAL COLLEGE OF PHARMACY.

The National College of Pharmacy commences its career under very favorable auspices. The first year's expenses have been assured by the liberal contributions of the pharmacists of the District of Columbia; convenient rooms in the building of the Colonization Society, corner of Pennsylvania avenue and Four-and-a-half street, have been secured; necessary apparatus for giving practical illustrations in the several branches taught has been obtained, and the services of gentlemen of eminence to fill the several professional chairs have been secured.

The course of lectures will embrace materia medica and botany, practical chemistry, and the theory and practice of pharmacy. Instruction in these several branches will be as thorough as possible.

Qualifications for graduation.—Applicants for graduation must be 21 years of age, and of good moral character; have attended two full courses of lectures in this college, or one course in some respectable college of pharmacy, or medical college, where the same branches are taught, and the last course in this college; have had four years' experience in the drug business, of which circumstance sufficient evidence shall be produced; have presented to the board of trustees an original thesis upon some subject applicable to pharmacy, written with neatness and accuracy; have been recommended in writing by the committee on examination and the professors jointly. Upon final approval by the board of trustees, the diploma of the college will be granted.

The degree conferred at graduation is that of Graduate in Pharmacy. At the expiration of three years, upon the evidence of professional advancement, that of Master of Pharmacy may be conferred; and upon those who, for ten years, shall have maintained the dignity and honor of the profession, the degree of Doctor of Pharmacy may be conferred.

PUBLIC LIBRARIES.

The public libraries are great educational repositories. Those of national importance are the Library of Congress, the library of the Department of State, the document library of Congress, the library of the Naval Observatory, the Patent-Office library, and the medical and surgical library of the Army Medical Museum.

The Library of Congress now comprises the library of the Smithsonian Institution, the copyright library of the Patent Office, the law library of the Supreme Court, and to it was added, a few years since, the library of Peter Force, ex-mayor of Washington. Its collection numbers over 245,000 volumes, being the largest in the United States. Congress appropriates $10,000 annually for the increase of the library, and has further enacted that two copies of every book copyrighted in the United States shall be deposited here. Any person is allowed to examine the books, but none are permitted to be taken away except by the President of the United States, the Vice-President, members of the Senate and House of Representatives, judges of the Supreme Court, Cabinet officers, the Diplomatic Corps, and a few other high officials. A. R. Spofford, esq., is librarian.

The Library of the Army Medical Museum numbers about 32,000 volumes, principally medical and surgical works, some of them being very rare and valuable, and the only copies in the United States. Among these latter may be mentioned Mascagni's Anatomical Plates. Congress usually appropriates $3,000 annually for the purchase of books for this library, but at its last session doubled this sum. This is really the nucleus of what promises to be a great national medical and surgical library. It is open at all times to students and others. Should the Government conclude in the future to construct a building for a great national library, as it is believed it will, this collection (as well as all other libraries—including the Library of Congress—connected with the different departments of the Government) will be removed, and will form one division of it.

The Library of the Department of Agriculture contains over 8,000 volumes. It is the most complete in agricultural literature of any in the country, comprising nearly all the standard works on agriculture and its kindred sciences of botany, geology, meteorology, entomology, &c.; also, nearly complete sets of the reports and transactions of the various boards of agriculture in the United States, and of the leading agricultural and scientific associations of Europe. An attractive feature of the library is a series

of eleven elegant folio volumes, presented by the Emperor of Austria, filled with costly engravings, (by the new process of "nature-painting,") embracing nearly a complete flora of Central Europe. The collection is yearly swelled by the choicest productions of the foreign scientific and industrial press, especially from that of France and Germany. Exchanges are at present made with over 1,500 native and 300 foreign societies.

The Library of the Department of the Interior contains about 5,000 volumes of a miscellaneous character. The books are available only to employés of the Department. About $1,500 are spent yearly in making additions to the collection.

The Library of the Treasury Department comprises 5,000 or 6,000 volumes of a miscellaneous character. No additions are being made to this collection.

The Library of the Department of State contains nearly 19,000 volumes, embracing works on diplomacy, international law, &c.

The Document Libraries of the Senate and House of Representatives contain nearly 100,000 volumes of documents, reports, debates, &c.

The Library of the Young Men's Christian Association of Washington contains 12,500 volumes, and is under the charge of the Washington Library Company. It embraces every species of general literature. The books are free to the use of all, in the rooms, but only members or subscribers can take them away.

The Odd-Fellows Library is of a miscellaneous character, and has 3,500 volumes. It is limited to the use of the members of the order, their widows and children.

The Library of the Naval Observatory is noticed under that institution.

THE PATENT-OFFICE MODEL-ROOM.

The United States Patent-Office occupies two squares, bounded by F and G and Seventh and Ninth streets, northwest. A portion of the building is occupied by the Interior Department and its bureaus. The whole of the upper story, consisting of four halls, each containing galleries, and measuring, the north and south halls 242 feet, and the east and west halls 273 feet in length, by 75 feet in width, are filled with glass cases, of which there are at present 349, calculated to hold on an average 500 models each. There are now about 130,000 models in these cases. During the past year some 23,000 models of rejected applications, and representing all classes of inventions, have been distributed, on application, among some 71 educational institutions in all parts of the country. Besides the models of patents which this great gallery of inventive art contains, it holds many curiosities of national interest, such as interesting relics of George Washington, the original printing-press of Benjamin Franklin, unique presents from the rulers of foreign countries to American Presidents, &c., and is one of the main points of attraction to visitors at the capital. It is the finest and largest collection of the kind in the world.

In connection with the model-room may be mentioned the fact that drawings of every model presented are made, and are so classified and filed that any one desiring information in regard to a particular subject has only to consult them to ascertain the character of every patent issued, since the establishment of the office, relating to the matter about which he seeks to be enlightened. Another educational agency connected with the Patent-Office is the Patent-Office Gazette, a weekly publication, containing the list of patents, re-issues, designs, extensions, and trade-marks, with illustrations of all the mechanical patents and re-issues. It is published simultaneously with the delivery of the patents described in its columns, and also contains subject-matter and inventors' indices of the contents. In addition, it contains early reports of the Commissioner's decisions on appeals, interlocutory or otherwise, and decisions of the United States courts in the matters of patents and trade-marks.

The Gazette has been published since the commencement of the present year, and is distributed gratis, under act of Congress, to nine public libraries in each congressional district, as indicated by the member for the same. Half a year forms a volume, which is handsomely bound, and contains an index and digest of the decisions of the Commissioner and the courts, and makes a book of 654 pages text, 208 pages of engravings, 16 pages of index; total, 878 pages.

The illustrations consist of selected portions of the photo-lithographic engavings, which are made to accompany the patents. These are grouped on cards, eight to each week's issue, and a negative, containing the contents of each card reduced to one-quarter size, is obtained by the photographic process. A print of each negative is transferred to stone, the pages imposed in octavo, and the remainder of the process is that of ordinary lithographic printing.

THE BOTANICAL GARDEN,

located a few hundred yards west of the Capitol, contains over 4,000 species of plants, geographically arranged, from almost every quarter of the globe.

The garden was established in 1858, the nucleus of the collection being furnished by the Wilkes Exploring Expedition.

The collection is being continually enlarged by purchase, by exchanges with foreign conservatories, and by contributions from United States diplomatic agents abroad. A lecture-room has recently been attached to the garden, where students in botany may at all times pursue their investigations.

THE CORCORAN ART GALLERY.

which contains a collection of paintings and statuary valued at several hundred thousand dollars, was donated to the city of Washington by Mr. W. W. Corcoran, in 1869. It is the intention of the donor to establish, in connection with the gallery, an art school, for practical instruction in drawing, painting, sculpture, &c. The value of the whole gift, including the building, which is worth $250,000, will ultimately reach nearly $1,000,000. The admission will be free on at least two days of each week. The date of opening is now placed for the early winter of 1873.

THE MUSEUM OF THE SMITHSONIAN INSTITUTION

possesses the collections made by more than fifty Government expeditions, and thousands of contributions from other sources. They embrace the larger North American and European mammalia, both skins and skeletons; stuffed birds and fish; a series of minerals, meteorites, fossils, rocks, plants, originals and casts of the giant vertebrates of the past and present time, and a display of objects of human art and industry. During the present year the mineral cabinet, fossil Indian curiosities, &c., of the General Land Office were transferred to the Smithsonian museum.

Previous to the last two years Congress made an annual appropriation of $4,000 for the keeping of the Smithsonian museum; but since then it has increased this sum to $15,000, and has appropriated an equal sum toward fitting up large rooms for the better display of the specimens. The value of this museum to the student can not be estimated.

THE MUSEUM OF THE DEPARTMENT OF AGRICULTURE

occupies the whole of the large hall on the second floor. Among other objects here represented are samples of cotton, wool, flax, silk, jute, varec, and other fibers; wheat, barley, oats, and other cereals; grasses from various foreign countries; specimens of some of the various grains, and tobacco from our own country; paper from various products, and in great variety, including Chinese and Japanese papers; honey, sorghum, cane and beet sugars and sirups; domestic fowls, &c. A leading feature of the museum is its department of model fruits and vegetables, embracing *fac-simile* representations of the various fruits and vegetables of the United States, so arranged as to exhibit their adaptations to the various soils and climates of the country. Attached to the museum are representations of birds and of various insects, with their transformations, showing such as are specially beneficial or injurious to the crops.

THE ARMY MEDICAL MUSEUM,

which is a branch of the Surgeon-General's Office, is an outgrowth of the great rebellion, and is located in what was Ford's Theater, on Tenth street, between E and F.

The collections of the museum are divided into sections, as follows: 1. The surgical section, containing 6,500 specimens, showing the effects of missiles of every variety on all parts of the human body. 2. The medical section, containing 1,500 specimens, the majority of which illustrate morbid conditions of the internal organs in fever, chronic dysentery, &c. 3. The microscopical section contains 5,000 specimens, embracing dissevered tissues, dissevered organs, &c. 4. The anatomical section consists of skeletons, separated crania, (of which there are 1,000,) &c. 5. The section of miscellaneous articles includes models of hospital-barracks, ambulances and medical-wagons, a collection of surgical instruments, samples of artificial limbs, &c.

Congress annually appropriates $5,000 for the museum.

The work of collecting specimens was begun in 1862, but it was not until 1867 that the collections were removed to Ford's Theater building, its present location. There are in the museum over 17,000 specimens, illustrating, in the different phases, wounds and diseases of all kinds. This institution is one of growing national importance, and at present is the finest medical and surgical museum in the world. Since its establishment over 5,000 pages of valuable quarto matter, relating to medical and surgical subjects, have been prepared under the auspices of the officers of the museum, and distributed either as executive documents, or by order of Congress. Many of these volumes are illustrated in the highest style of art, and are invaluable as works of reference.

THE UNITED STATES NAVAL OBSERVATORY

was established in 1842, by the Government, for the purpose of making astronomical and meteorological observations for the especial benefit of navigators and astronomers, and as a depot for charts and instruments. The astronomical observations are made with a view of preparing celestial catalogues, of discovering new planets, and of noting the different changes which take place, from time to time, among the heavenly bodies. Special observations are at present being made for the purpose of revising the lunar theory, and of ascertaining more definite information in regard to the effect of changes in the moon upon the earth. A new equatorial telescope, which will be the largest in the world, being 26 inches in diameter of object-glass, is now in process of construction at Cambridgeport, Massachusetts, for the observatory, and will be mounted early in September, 1873. The library, consisting of between 5,000 and 6,000 volumes, mostly astronomical in character, but including many works on other branches of science and higher mathematics, is especially for the use of the professors and observers of the observatory, but is open to men of science generally. Rear-Admiral B. F. Sands, of the United States Navy, is in charge, with seven naval professors, three assistant observers, and, generally, from one to three line-officers of the Navy in charge of chronometers. The observatory officers are now engaged in the preparation of details for the observation of the transit of Venus, in December, 1874.

THE SIGNAL-OFFICE OF THE ARMY.

The United States Signal-Service, which played so conspicuous and honorable a part during the rebellion, may now properly be classed among our national educational agencies, at least in the particular branch of meteorology. The special duty of disseminating meteorological information was not assigned to the Signal Corps until the year 1870. Its legitimate functions were diverted in deference to a popular desire for weather forecasts, and especially for the benefit of commerce and agriculture. Since the establishment of the storm-signal service, hundreds of thousands of bulletins, maps, and press-reports have been widely disseminated, mainly through the press, and thousands of precautionary signals telegraphed to such points as would be most liable to suffer without any premonition of approaching storms. The result of this has been the saving of a large amount of property, and the general awakening of the public to the value of meteorological predictions founded on scientific calculations. There are now seventy-two stations from which observations are made, and on the reports from these stations the tri-daily reports of the Signal-Office are compiled. Over five hundred sets of tri-daily maps and bulletins have been sent out to foreign societies since 1871. A library of 1,340 volumes is attached to the office. General A. J. Myer, Chief Signal-Officer of the Army, is in charge of the Bureau.

THE NAUTICAL ALMANAC.

The office of the American Ephemeris and Nautical Almanac, which is in charge of Professor J. H. C. Coffin, of the United States Navy, with fifteen scientific assistants, is located at No. 817 Twenty-second street. It is a branch of the Navy, and is supported by the Government. The duty of this office is to prepare yearly, in advance, a volume which gives the place of the sun, moon, principal planets, and standard stars for each day of a future year, together with other data of interest and importance to astronomers. The first half of the volume (which is known as the Nautical Almanac) is specially prepared for the use of navigators, and about 5,000 copies of this division are annually issued for the benefit of the merchant service. The remainder of the volume is of peculiar interest to astronomers, since in it are noted all important celestial phenomena. This portion of the volume is distributed to observatories and other institutions which make a specialty of the study of astronomy. The office has published valuable tables of the moon, Mercury, Venus, and several of the asteroids. The last volume which was printed contained astronomical calculations for the year 1875.

NATIONAL SOLDIERS AND SAILORS' ORPHANS' HOME.

The annual report of the lady managers states that there have been 70 children in the home during the year. Finding that the boys required a stricter discipline, the school has been placed in charge of a male principal, with most satisfactory results. It is intended to give those who are mentally qualified a good general education, which will insure their advancement in life, and those not so capable of intellectual culture will receive such practical knowledge as will make them useful members of any community. A boy from the home entered the Naval Academy during the year, on appointment by the President. The hope is expressed that, in repealing the usual appropriation for these orphans, Congress will see fit to enlarge the permanent fund, which is demanded by their increasing years and necessities.

INDUSTRIAL HOME SCHOOL.

This school was organized in 1867, and incorporated by act of Congress in March, 1872. It gathers in children who otherwise would be street-beggars, and, besides giving them an elementary education, furnishes such a practical knowledge as will enable them to support themselves. A carpenter-shop for the boys, and a paper-box manufactory for the girls, are in successful operation. A factory, with extensive machinery, given by Congress, has been opened in connection with the school during the year. Turning of every description is done and furniture of all kinds repaired. A great variety of work is taught here, and it is expected that, when fairly established, the factory will be self-sustaining. Some of the larger boys are learning to manage the engine. The children are paid for their work in clothing. The number of children received during the year was 59. Whole number received since organization, 340.

REFORM SCHOOL OF THE DISTRICT OF COLUMBIA.

The last report states that there are 86 boys in the school. Working hours are equally divided between the school-room and the farm, or other manual employment, so that the boys secure not only a common-school education but a knowledge of some useful trade, by which they may earn their living after leaving the school. The building now occupied by the school is not at all adapted for its use, being small and inconvenient. A new building, which is in process of erection at Mount Lincoln, in the suburbs of Washington, will be ready for occupancy during the present winter.

REV. EDMUND TURNEY.—OBITUARY.

Rev. Edmund Turney, D. D., president National Theological Institute and University, Washington, died September 26, 1872. He was born in Easton, Connecticut, May 6, 1817; graduated at Madison University, New York, 1838; theological department, 1840; pastor Second Baptist Church, Hartford, Connecticut, for several years, then of the church in Granville, Ohio, and afterward of the Broad Street Church, Utica, New York; professor of biblical literature and interpretation in Madison University, 1850; professor in the Fairmount Theological Seminary, Cincinnati, Ohio, 1853; came to Washington in 1852; formed a society for the education of colored preachers and teachers, which was soon after incorporated and, by a subsequent act of Congress, intrusted with full university powers; he was president of this institution till his death.

Dr. Turney deserves to be held in grateful remembrance, not only for eminent services as preacher and pastor, for distinguished scholarship, successful teaching, and the excellent treatises of which he was the author, but especially for his devotion to the work of training colored men for the Christian ministry. In this work he was one of the foremost pioneers, and labored with great zeal, patience, and perseverance, amid appalling discouragements and privations. He appreciated the importance to our country of the changed condition and relations of the colored race, and the imperative demand for the intellectual improvement of their leaders and ministers. Not waiting for others, he went to work himself and did what he could. His pupils lament his death as that of a friend whose like they may never see again.

FACTS FROM THE UNITED STATES CENSUS.

Area and population.—In 1870 the District of Columbia was the first Territory in population, having 131,700 inhabitants within an area of 64 square miles, an average of 2,057.81 persons to the square mile. This population consisted of 88,278 whites, 43,404 colored, 3 Chinese, and 15 Indians. Of the native population, 38,889 whites, 13,448 colored, and 3 Indians were born within its borders; while, of the foreign population, 4,920 were born in Germany, 1,422 in England, and 8,218 were born in Ireland.

School attendance.—According to Table IX, vol. 1, of Census Report, 19,941 persons attended school, and of these 389 were foreign-born. Of the 14,819 white scholars, 7,505 were males and 7,314 females. Of the 5,122 colored scholars, 2,499 were males and 2,623 females.

Illiteracy.—There were 28,719 persons, 10 years old and over, unable to write, and of these 2,218 were foreign-born.

Age, sex, and race of illiterates.—Of the 4,876 white illiterates, 659 were from 10 to 15 years old, and of these, 366 were males and 293 females; 461 were from 15 to 21 years old, of whom 150 were males and 311 females; 3,756 were 21 years old and over, of whom 1,214 were males and 2,542 females. Of the 23,843 colored illiterates, 2,132 were from 10 to 15 years old, of whom 972 were males and 1,160 females; 3,355 were from 15 to 21 years old, of whom 1,117 were males and 2,238 females; 18,356 were 21 years old and over, of whom 7,599 were males and 10,757 females.

Educational institutions.—According to Table XII, vol. 1, of Census Report, 313

educational institutions were in the Territory, having 573 teachers, 183 of whom were males and 390 females, and 19,503 pupils, of whom 10,142 were males and 9,361 females.

Amount and source of educational income.—The educational institutions possessed a total income of $811,242, of which $23,000 were derived from endowment, $476,929 from taxation and public funds, and $311,313 from tuition and other sources.

Public schools.—The 216 public schools reported had 218 teachers, 15 males and 203 females, with 11,182 pupils, 5,510 males and 5,672 females. They possessed a total income of $439,929, of which $3,000 were derived from endowment, $431,929 from taxation and public funds, and $5,000 from tuition and other sources.

Colleges.—The 4 colleges had 50 teachers, 46 males and 4 females, with 802 students, 726 males and 76 females, and a total income of $93,500, of which $20,000 were derived from endowment and $73,500 from tuition and other sources.

Academies.—The 1 academy had 24 female teachers and 120 female pupils. It possessed an income of $35,000, derived from tuition and other sources.

Private schools.—The 61 private day and boarding schools had 154 teachers, 44 males and 110 females, with 2,613 pupils, of whom 1,182 were males and 1,431 females. They possessed an income of $117,583, derived from tuition and other sources.

Libraries.—There were 127 public libraries, with 409,936 volumes, and 569 private libraries, with 383,766 volumes; making in all 696 libraries, with 793,702 volumes.

The press.—The 22 periodicals had an aggregate circulation of 81,400 copies, and an aggregate annual issue of 10,092,800 copies.

Churches.—The 111 church organizations possessed 112 edifices, with 63,655 sittings, and the church property was valued at $3,393,100.

Pauperism.—Of the 279 paupers, 135 were native whites, 99 native colored, and 45 foreigners.

Crime.—Of 143 persons imprisoned June 1, 1870, 38 were native whites, 79 native colored, and 26 foreigners; 121 persons were convicted during the year.

Age and sex of population.—Of the total population, 35,569 persons were from 5 to 18 years old, of whom 16,954 were males and 18,615 females; 100,453 were 10 years old and over, of whom 46,652 were males and 53,801 females.

Occupations.—Forty-nine thousand and forty-one persons of these ages were employed in various occupations, of whom 35,200 were males and 13,841 females; 1,365 persons were engaged in agricultural pursuits, of whom 1,350 were males and 15 females; 29,845 in personal and professional services, of whom 17,927 were males and 11,918 females; 6,126 in trade and transportation, of whom 5,852 were males and 274 females; 11,705 in manufacturing and mechanical and mining industries, of whom 10,071 were males and 1,634 females.

Age and sex of working population.—Of these 49,041 employed persons, 1,494 were from 10 to 15 years old, of whom 641 were males and 853 females; 45,532 were from 16 to 59 years old, of whom 33,013 were males and 12,519 females; 2,015 were 60 years old and over, of whom 1,546 were males and 469 females.

NOTE.—The statistics embraced in the above table were collected in the latter part of November of the present year. Last year the total number of private schools in the city of Washington, noted in the report of the Bureau of Education, was 99, with an aggregate attendance of 5,134; this year there are 101 private schools, with an aggregate

attendance of 5,348, showing a gain of 214 pupils over last year. During the year 28 new schools have been established in Washington, and during the same period 25 were discontinued, in most instances for lack of support, many students preferring to avail themselves of the increased facilities afforded by the public schools. Of the 101 private schools referred to, 20 (a number of them parish schools) are conducted under Roman Catholic auspices, and have an aggregate attendance of 2,963, or more than one-half the total number attending the private schools. There are 9 colored pay-schools (some of them evening-schools, principally for the benefit of adults) in operation, with an aggregate attendance of 362 pupils. Of this number 2 are Roman Catholic. No note is made in the above table of perhaps a dozen small family schools, having an attendance of not more than from 2 to 5 pupils each; nor of professors and others who give private instruction in music, the modern languages, phonography, &c.

For other private schools in the city of Washington, see Table VI, at the end of this volume.

Statistics of private schools in Georgetown, District of Columbia, for 1872.*

* The total number of schools in November, 1871, was 24, with an aggregate attendance of 826. The entire number of schools this year (1872) is 21, with an attendance of 869, showing a decrease in the number of schools, but a total increase of 43 in the aggregate attendance.

Charitable and reformatory institutions in the District of Columbia, December 1, 1872.

Number.	Name.	Location.	When established.	How established.	Chief officer.	Inmates.

21	Reform School for Boys (*u*)	Mount Lincoln, three miles northeast of the Capitol.	1869	By act of Congress	Hon. Nathan Sargent	79	.....	79

(*a*) The inmates are mainly widows, whose ages vary from fifty to ninety-two. The home was established by the Ladies' Benevolent Society, composed of Christian ladies of all denominations, and is supported by voluntary contributions. No one under fifty years of age is taken into the home.

(*b*) The asylum was established through the instrumentality of Miss Dorothea Dix, the eminent American philanthropist, and went into operation on the breaking out of the rebellion. It receives all the insane of the Army and Navy and the revenue-cutter service, and the indigent insane of the District of Columbia, under prescribed official recommendation. During the fiscal year ended June 30, 1872, there were discharged from the asylum—males, 66; females, 22; total, 88. Of those discharged 51 had recovered, 29 had improved, and 4 were unimproved. These are thought to be favorable ratios, in view of the fact that a large proportion, both of the inmates of the hospital at any one time, and of the current admissions, are chronic cases, that generally remain in the institution as long as they live. The asylum is managed by a board of visitors, appointed by the President of the United States.

(*c*) This institution was organized by Secretary Stanton, at the instance of Dr. J. Harry Thompson, present surgeon-in-chief, and others, for the especial benefit of females drawn to Washington during the rebellion. In 1866 Congress gave it an appropriation of $10,000, and has annually increased this sum. That body last year also made

an appropriation for the purchase and improvement of the building, and when the latter is done, the hospital will accommodate from 75 to 100 patients. The improvements will embrace private rooms for pay patients. The number of out-door and in-door patients treated during the year ended June 30, 1872, was 4,576, of which 3,708 were cured and 561 relieved. Of the whole number 3,236 were Americans. Since the establishment of the hospital, March, 1866, 11,455 patients have been admitted, of which number 9,457 were cured and 1,081 relieved. No deaths from surgical operations have occurred in four years. In proportion to the population, 20 per cent. more patients have been treated in this hospital than in any similar institution in the larger cities. The figures relative to inmates, in the table above, include only the in-door patients in the hospital at the date of this report, November, 1872. Mrs. A. L. S. Thombs is matron.

(*d*) With the exception of $1,000 appropriated by the District legislative assembly during the present year, this institution has been and is supported wholly by the voluntary contributions of philanthropic men and women of the District. The object of its founders was to provide a hospital and dispensary for the care of sick and crippled children between the ages of fifteen months and fifteen years, to be treated gratuitously, and also to provide for the admission of sick children whose parents or guardians might be able and willing to defray the necessary expenses. It is governed by a board of directors, and has a board of lady visitors, and the matron is Miss A. C. Magruder. A free medical dispensary is attached to the hospital, which has furnished hundreds of poor people with medicines, while a large number of surgical operations has been performed gratuitously. It is probable that Congress will be asked to make an annual appropriation for this worthy institution.

(*e*) This institution is conducted under Protestant auspices, and is supported wholly by voluntary contributions. The ages of the inmates vary from two to eighteen years. Mrs C. Johnson is the matron.

(*f*) This institution is conducted by the Sisters of the Holy Cross, although no distinction is made on account of religion in receiving inmates. It is supported entirely by voluntary contributions. The ages of the inmates range from five to twelve years. It is governed by a board of trustees, of which the Rev. J. A. Walter is president. Since the organization of the institution 366 orphans have been cared for.

(*g*) Since the establishment of this asylum over 5,000 orphan girls, who were received at the age of five years, and retained until sixteen, when homes were found for them, have been cared for. Rev. Father Boyle is president of the board of directors. The asylum is supported by voluntary contributions, and by the interest on small bequests which have been left it from time to time.

(*h*) This institution was established by the Sisters of St. Vincent's Orphan Asylum. The ages of the inmates range from fourteen to twenty, and the institution is supported by the efforts of the young ladies who were formerly inmates of St. Vincent's Asylum. In fact, the institution is a branch of the asylum.

(*i*) This worthy institution is in charge of Sisters of Charity, and receives children from birth up to five years. It is wholly supported by voluntary contributions.

(*j*) The Forty-first Congress appropriated $15,000 to establish this institution, which receives only the orphans of Union soldiers and sailors. The ages of the present inmates range from six to fifteen and a half years. The president of the board of lady managers is Mrs. General David Hunter; the superintendent of the home is Mrs. E. E. Scarborough; and the teacher, Mr. Corlen. The home is supported by annual appropriations of Congress and by voluntary contributions. Suitable positions are obtained for the older inmates, through the personal influence of the boards of trustees and lady managers. Among the incorporators of the home are Mrs. President Grant, Mrs. General Sherman, and Mrs. Governor Cooke.

(*k*) This institution was established by a number of Christian ladies under an act of Congress "to provide for the creation of corporations in the District of Columbia by general law." The object of the association was to found a home, temporarily, for destitute females (including fallen women) and children, and to obtain employment for the adults. The young inmates, of whom there are usually from 20 to 50, are cared for in a "Foster Home" attached to the institution. The ages of inmates vary from birth to eighty years of age. Several old ladies are boarded at the expense of their respective churches. The home is supported by voluntary contributions. The general secretary in charge is Mrs. Clark. Many fallen women have been wholly reclaimed through the instrumentality of the members of the association.

(*l*) This hospital was organized by the Sisters of Charity, and subsequently, in 1863, Congress granted it a charter, and has since appropriated $12,000 annually toward its support. The other source of its support is the money received from pay patients. Since its organization this hospital has received and cared for thousands of persons (many of them soldiers and sailors) in need of medical and surgical treatment. Although conducted under Roman Catholic auspices, no distinction is made in regard to religion, sex, or color, in the reception of patients. Dr. Grafton Tyler is the surgeon-in-chief, and has a number of able assistants.

(*m*) Endowed by Mr. W. W. Corcoran with $160,000. This institution is designed for the support and maintenance of a limited number of gentlewomen, who have been reduced by misfortune, so as, in the judgment of the trustees and directresses, to receive such assistance. It will accommodate sixty inmates. There are fourteen trustees and nine directresses. Mr. James M. Carlisle is president of the board of trustees; Mrs. Benjamin Ogle Tayloe is president of the board of directresses.

(*n*) In 1858 the Ladies' Association of the Epiphany Church organized to provide for the destitute of the parish. In 1861, owing to the war, its active agencies were suspended, but last year the home was re-organized, mainly to care for abandoned or neglected children. It is supported by voluntary contributions. Mrs. Jane C. Acker is matron. The ages of the inmates vary from two to eight years.

(*o*) Supported wholly by voluntary contributions. No applicants under sixty years of age are received. The ages of the present inmates range from sixty-five to eighty-seven. A new home is in process of construction, and is now nearly completed, on H street, between Second and Third streets east. When completed it will accommodate from seventy to eighty inmates, and aged men as well as women will be cared for. In the admission of applicants no religious distinction is made, the aged destitute of all denominations being taken.

(*p*) This hospital was established through the efforts of General O. O. Howard, and is supported by Congress, which body at its last session appropriated $74,000 for its maintenance. It was originally intended for the special benefit of freedmen and refugees. Of the present inmates but ten are white, the larger portion being sick, crippled, and aged colored men and women, whose ages range from twenty to one hundred. The surgeon-in-chief of the hospital is Dr. Robert Reyburn; the executive officer, Dr. P. Glennan. Applicants are admitted on the recommendation of the governor of the District.

(*q*) Supported by voluntary contribution. The school is especially for juvenile street vagrants of either sex. Mrs. Manifield is the matron of the school.

(*r*) The house is not yet in full operation. A new building was erected this year, and will be occupied early in February, 1873. The inmates will be destitute females, principally girls, who will be taught house-work and general domestic duties, and furnished with suitable employment, through the efforts of the lady managers of the house.

(*s*) During the war between the United States and Mexico, General Scott levied contributions, amounting to several hundred thousand dollars, on the city of Mexico, Pueblo, and several other Mexican towns. Most of these moneys were expended, under the direction of General Scott, in the purchase of clothing and commissary stores for the Federal troops. The remainder, $118,000, was brought to Washington at the close of the war, and, at the urgent solicitation of General Scott, Congress set that particular sum apart to found the present home. The recent purchase of the "Harewood" estate of Mr. W. W. Corcoran, of Washington, by the board of commissioners of the home, swells the area of the grounds attached to the institution to about four hundred acres. Although Congress at first aided in the building of the home and the purchase of grounds, it has been supported mainly by a levy of 12½ cents on the monthly pay of soldiers of the Regular Army. The pensions due inmates of the home from the Government also go toward its support. The ages of inmates vary from twenty to ninety years. About 10 per cent. of the inmates are superannuated, the remainder being disabled by chronic disease contracted, or wounds received, in the military service of the United States. A considerable income is also derived from the cultivation of the grounds, which is done by the inmates. The buildings themselves are handsome and commodious, and during the summer months the President and family have the privilege of residing in one of them. President Lincoln made this his summer residence.

(*t*) The asylum is almost as old as the city of Washington itself. It receives sick and destitute persons, and vagrants and petty criminals committed by the courts, the asylum being supported by the District government and by the products of the farm attached, which is worked by the prisoners. The inmates range in number from 50 to 200.

(*u*) This school was removed from the vicinity of Georgetown, in August last, to Mount Lincoln, where the boys are temporarily quartered in a barn until the new buildings (to accommodate three hundred inmates) authorized by Congress are completed. That body, at its last session, appropriated $100,000 for the purchase of a farm and erection of buildings, and one hundred and fifty acres were purchased last summer, and the new structures will be ready for occupancy within a few months. Juvenile delinquents are sent to the school by the courts, and destitute boys are admitted on the order of the governor of the District or trustees of the schools.

GENERAL CONDITION OF EDUCATION AMONG THE INDIANS.

The humane and honest policy which has been systematically pursued toward the Indian wards of the General Government by the present Executive and officers charged with the administration of Indian affairs has in no previous year produced a more marked effect than in the one now closing. The results of steady and persistent effort are visible in a better understanding of the Indian problem; in a more thorough adoption of the means needed to carry forward the purpose of the administration; in a better state of public feeling, not alone toward the Indians but to those who are employed to carry out the policy approved by experience and indorsed by the people; above all, in a wide-spread and distinctly-marked improvement among the Indians themselves.

This improvement is visible in many ways. Among the peaceable and settled tribes it is seen in greater readiness to accept the inevitable and become one with the great body of American citizens. Among others who have, within short periods only, been brought directly under influences that aim to both restrain and civilize, there is an earnest desire that their children may have schools and other opportunities for instruction heretofore denied adults, and the latter are showing a spirit of industry which is quite marked in the evidence of prosperity it brings. One of its crowning rewards is the breaking up of alliances among implacable tribes and bands, their isolation and separation from each other, the comparative freedom from more than sporadic warfare with which our extended frontiers have been favored, and the bringing of some of the most formidable and heretofore unyielding of our savage foes into such relations with the Government as afford reasonable prospects that the tribes whose lives have been the bane of our border-land and whose names are its dread, to be uttered only with "bated breath," may be kept within bounds, and year by year brought nearer to a reasonable degree of civilization. In fine, the country may be congratulated on the fact that it is both possible and profitable to maintain a policy based on some ground other than the atrocious humor of the frontier proverb that "the only good Indians are dead Indians." The educators of the country may reasonably congratulate themselves on the measure of success already achieved by a policy of intelligent discipline, direction, and development, so much in accordance with the ideas upon which all genuine education proceeds.

In reviewing the condition of Indian education for the current year, it will be found more convenient than the former grouping to follow in the main the broad geographical generalizations presented in the current report by the able Commissioner of Indian Affairs, General Francis A. Walker. In that way the educational condition of the more advanced tribes and bands will be first seen, and traveling across the continent westward, as our national and material growth have done, we shall be able to gather panoramically what has been and is being done, and what may be reasonably expected.

ENUMERATION OF INDIANS.

Prefacing the brief details of each agency or superintendency, it may be serviceable to present some of the facts relative to the numbers and location of the Indian population which the census of 1870 exhibits. In 1860 the number of Indians embraced in the census proper, which included only Indians not in tribal relations, was stated at 44,021. In the census of 1870 the figures are given at 25,731. In the first-named year those in the States so grouped were 30,737; in the last, 21,228. In the Territories the figures are for the first 13,284; in the last, 4,503. The discrepancy is easily explained. In the States and Territories acquired from Mexico, the reservation system has not existed until within a few years, while there was, under Spanish law, no recognition of the Indian, individually or communally. He was regarded as some one apart from the body of the people. Hence, Indians, in California and New Mexico especially, were, in 1860, enumerated as part of the people. In 1860 California shows out of tribal relations 7,798, in 1870 only 7,241, the balance being gathered on reservations and grouped as tribes or bands. New Mexico enumerated in 1860 10,507 Indians as not in tribal relations; in 1870 only 1,309. During the past decade the Pueblo Indians, whose civic status is a matter of inquiry before the Supreme Court, have been placed under the Indian Bureau and its agents. In other States and Territories where the census of 1860 enumerates more Indians out of tribal relations than that of 1870, the difference is to be accounted for by the fact that nomadic bands, and families that were heretofore vagabonds and wanderers, have been brought on to reservations. In every such instance the change is advantageous to both Indians and whites.

The following table, from the census of 1870, gives the total Indian population of

the country, both in and out of tribal relations, on reservations, at agencies, and nomadic:

States and Territories.	INDIANS—1870.									
	Grand total.	Out of tribal relations.	Total nomadic and in tribal relations.	Sustaining tribal relations on reservations and at agencies—Enumerated.					Enumerated.	Nomadic—Estimated.
				Total.	Men.	Women.	Male children.	Female children.

By the foregoing it appears that the total number of Indians in the United States enumerated and estimated is 383,712, of whom 111,185 are residents of the States and 272,527 of the Territories, organized and unorganized. The total school population (enumerated) is set down at 39,319, of whom 19,740 are males and 19,579 females. Of this total 12,717 are residents of the States and 26,602 of the Territories. The total estimated population (not divided by sex or age) is, "on reservations or at agencies," 26,875; while that classified as nomadic is set down at 234,740, making a total of 261,615. Taking the number of children from the whole number of those enumerated, and the ratio is slightly over 1¼ of the whole. Calculating on this ratio, and the num-

ber of Indian children of the school age will be about 67,695, making a total of 107,004 from the whole race, tribal or otherwise. Deducting 25,731 Indians regularly enumerated and their *pro rata* of children on the basis assumed, and the total number of Indian children will be about 100,000. Making an estimate of the children too young for school as being one-fifth of the whole, and we shall have remaining 80,000, to whom the General Government is in duty bound to provide some opportunities for education on the earliest occasion offering.

THE NEW YORK INDIANS.

The Six Nations, whose remnants still reside in the Empire State, over whose territory their ancestors once held sway, and in whose colonial and early State history they filled so important a part, show commendable progress. They number 5,070 souls, located on reservations under the authority of the State, possessing a total area of 68,668 acres. The population shows an increase of 100 for the past year and of 1,300 for the decade, as shown by the census of 1870.

The schools are part of the public-school system of the State, with the exception of three; one being a training-school long under the control of the society of Friends. A manual-labor school is in progress on the Tonawanda reserve. A notable instance of educational growth is seen in the establishment of a teachers' institute in August, 1872, which was at once attended by 38 applicants, of whom, on November 1, 26 were in training. These pupil-teachers are Indians. Of the whole population there are about 2,700 children, while, as will be seen, the school enrollment is about 1,100, with an average daily attendance of 608. The facts, however, go to show that all the Indian youth get some training in school, though the comfortable condition of the tribes and the educational facilities they possess deserve a steadier recognition by attendance on the schools than is apparent from the following statistics:

Tribes.	Population.			No. of schools.	No. of scholars.		*No. of teachers.	
	Male.	Female.	Total.		Male.	Female.	Male.	Female.
Allegany reservation: Senecas and Onondagas, New York; Corn-planters, Pennsylvania	507	533	1,040	8	145	120	2	6
Cattaraugus reservation: Senecas, Onondagas, and Cayugas	855	804	1,659	10	250	225	2	6
Oneida reservation: Oneidas	91	107	198	2	14	25	....	2
Onondaga reservation: Onondagas	157	182	339	2	71	55	....	2
Tonawanda reservation: Senecas, Onondagas, Cayugas, Oneidas	311	361	672	2	47	32	....	2
Tuscarora reservation: Tuscaroras, Senecas, Onondagas	230	249	479	2	35	60	....	2
Saint Regis reservation: Saint Regis Indians	341	342	683	2	24	26	....	2
	2,492	2,578	5,070	28	586	543	4	22

Another proof of the prosperous condition of these Indians is a movement among those on the Cattaraugus and Allegany reservations for separate allotments of the same. The Tuscaroras have in operation a plan which seems to secure the advantages of individual ownership without the dangers to the Indians themselves which it is justly feared may arise from the protection afforded the weak by the system of common and inalienable ownership now in vogue. Under the plan adopted on the Tuscarora reservation, improved lands are practically allotted to individual adults in fee. Two-thirds are thus controlled, the Indians having the right to buy and sell among themselves, the timber-land being held in common. Of the total area of these reservations, one-third, or 20,000 acres, is under cultivation. The character of the cultivation, yield of crops, (especially fruit,) farm-buildings, tools, stock, &c., are quite as good as of the white farmers of the section.

INDIANS IN THE STATES AND NOT ON RESERVATIONS.

There are about 1,700 Cherokees living in adjacent portions of North Carolina, Georgia, and Tennessee, being that portion of the nation who elected to remain east when the great body removed to the territory they now occupy.

These people are very poor, are not embraced as citizens within the States in which they reside, and impoverished, too, by the late rebellion, their meager annuity, being

* Of the 26 teachers employed 15 are Indians, who stand in character and capacity on a par with the whites.

only the interest of $53.33 *per capita*, (the sum set apart to effect their removal when ready to join the balance of the nation,) does not enable them unaided to better their circumstances. Under a law of 1868, the Indian Bureau has direct supervision of their interests, but, as no appropriation has been made, it is of no practical benefit. Educational facilities are poor enough for the ordinary population of the region in which these Cherokees live; but, poor as they are, there is no evidence that the Indians are admitted to them.

Florida still contains about 300 Seminoles, of whose condition very little is known.

Indiana contains about 345 Miamies, who did not remove to Kansas under the treaty of 1840. There is another and very small band (19) known as the Eel River Miamies, who live partly in Michigan. The Miamies are good citizens and thrifty persons, with farms well cultivated and respectable homes. They send their children to the district schools. They are not yet made citizens of the United States.

There is a small band of Sac and Fox Indians, who have within the past two years been gathered at Toledo, Iowa, numbering in all 317; 83 men, 102 women, 70 boys, and 62 girls. Since their location, the increase has been 21, two-thirds being during the last year. The reservation allotted them comprises only 419 acres, and they possess individual property to the amount of $15,159. During the last year they raised from neighboring farmers about $1,200. No school has yet been organized, but it has been decided to turn the agency building over to a missionary laboring among them, for school purposes. As these Indians were literally a short time since vagabonds, living by begging and pilfering, these facts show good progress.

INDIANS IN MICHIGAN.

The Indians residing in this State are the Chippewas of Saginaw, numbering 1,630; the Ottawas and Chippewas of Swan Creek and Black River, numbering 6,039; the Pottawatomies of Huron, who number only 50; and the L'Anse band of Chippewas, numbering 1,195. This tribe or band is identified with the Lake Superior Chippewas of Wisconsin and Minnesota. The Saginaw Chippewas have abandoned tribal life, are citizens of the United States, have patents for their homesteads, and possess no annuities. The Indian Bureau reports two schools, with 150 scholars. The Ottawas and Chippewas are also citizens. Two schools, with 152 pupils, are reported. As their population is estimated at 7,669, there is evidently a lack of both educational interest and facilities in that only four schools, with 302 scholars, are reported. According to the tabular statements of the Indian Bureau, the Indians of Michigan are, as regards educational facilities, thus reported:

Independent agency No. 3, (Ottawas, Chippewas, and Pottawatomies:) Males, 4,339; females, 4,828; total population, 9,167; number of schools, 8; scholars, total, 358; teachers, male, 5, female, 4, total, 9; amount paid by individual Indians, $50.

Of the schools 5 were maintained by the Catholics, and 3 by the Methodists. One of the latter closed July 10, 1872. The greater body of these Indians having become citizens, it is possible that a larger number of their children than is shown in the report attend the district public schools, and have thus become one with the people of the State. Of the above 8 schools, having 56 scholars, 2 are located among the L'Anse Chippewas. There is no doubt, however, that educational interest has decreased since appropriations have ceased. Missionary efforts have also relaxed since the Indians have become citizens. These facts are shown by the following figures: 1862, schools 30, scholars 1,068; 1872, schools 8, scholars 358. This is not a flattering exhibit, it must be confessed.

INDIANS IN WISCONSIN.

The Indians are the Chippewas of Lake Superior, numbering 5,150; Menomonees, numbering 1,362; the Stockbridges and Munsees, numbering 250; the Oneidas, numbering 1,259; and stray bands of Winnebagoes, Chippewas, and Pottawatomies, numbering about 1,600; in all, 9,621. The Lake Superior Chippewas have no stated reservation, but the several bands have a central location at which sub-agents are stationed.

The reservations occupied by the other tribes are in area as follows:

	Acres.
Menomonees	230,400
Stockbridges and Munsees	68,800
Oneidas	60,800
Total	360,000

The stray bands already named have no reservations, schools, or religious facilities. The schools among the settled Indians seem to be in an unsatisfactory condition. The Chippewas have an annual educational appropriation, under treaty, of $3,800, but only

one school is reported, the number of scholars in which is not given. It is under the control of the Presbyterian board, under contract with the Interior Department, and takes the place of one established some years since by the American board, but discontinued on account of the unfriendly attitude of the Indians.

These people (the Chippewas) deserve more attention from the several religious and educational associations interested in the training of the Indians. One or more manual-labor boarding-schools at accessible points, in which the children would be removed from the influence of the roving lives of parents and tribes, are much needed and would be a good work.

The Menomonees show, in a population of 1,362, only one school, having 60 pupils enrolled and an average attendance of 50. This tribe is able to do better, and a large school is projected but not yet opened.

The Stockbridges and Munsees are under the same agency, (Green Bay,) as are also the Oneidas. The agent's report on education for the three tribes or bands is as follows: Population: males, 1,404; females, 1,467; total, 2,871; number of schools, 5; pupils: boys, 188; girls, 137; total, 325; teachers: males, 5; females, 2; total, 7. Four missionaries are sustained by the Presbyterians, Episcopalians, Methodists, and Catholics.

The Stockbridge schools, which are under charge of Indian superintendents, are reported as very successful. The use of liquor is the greatest curse to the Oneidas, but there is a better spirit growing among them on this subject.

THE MINNESOTA INDIANS

embrace five large bands of the Chippewa or Ojibway Nation; three of the same people being connected with the Wisconsin agency. The five bands in this State number 6,455 souls. Their three reservations embrace an area of 4,672,000 acres. They are nomadic in habits, and only a small portion are permanent occupants of the reservations intended for them. The only schools now in operation are at White Earth and Red Lake agencies. The former is quite successful, and additional accommodations are needed. The Red Lake school is under the direction of the American Missionary Association. The Leech Lake school was closed by the resignation of the teachers. No successors have been appointed.

The Indians propose to give $1,000 per annum for the establishment of a boarding-school at Leech Lake, under the American Missionary Association. The school will soon be in operation. These bands have in all about $9,000 per annum set apart by treaty for educational purposes, and there is both room and means for greater activity than has yet been displayed.

EAST OF THE MISSISSIPPI.

This comprises all the Indians living east of the Mississippi River who still maintain relations with, or are presumed to be under the control of, the General Government. The total figures relating to them are thus summaried:

Tribes.	Population.	Schools.	Scholars.	Teachers.	Number of acres in reservation.
New York Indians	5,070	28	1,129	26	68,668
Cherokees, (North Carolina)	1,700	.....	.....	.....	.....
Seminoles, (Florida)	300	.....	.....	.....	.....
Miamis, (two bodies,) Indiana*	319	.....	.....	.....	.....
Sac and Fox, (Iowa)	317	.....	.....	.....	419
Michigan, (three bodies)	9,167	8	358	9	.... (†).....
Wisconsin, (five tribes)	9,621	16	323	7	360,000
Minnesota, (five bands)	6,455	12	.....	.....	4,672,000
Total	32,949	44	1,800	42	5,101,087

The next geographical division covers

NEBRASKA, KANSAS, AND THE INDIAN TERRITORY,

with a total Indian population of 70,450 souls, 62,465 of whom live in the Indian Territory proper. The Indian (tribal) population of Kansas is set down at but 1,500,

* Well-to-do farmers; children go to district schools.

† Lands in severalty.

‡ One of the schools given in Wisconsin and the two in Minnesota do not report the number of scholars or teachers. The figures will not exceed 100 pupils and 3 teachers.

while in the table given from the census of 1870 it is stated at 8,700. Since the enumeration, the larger portion of the several tribes have removed to their new homes south of Kansas. This change somewhat retards their educational privileges, though it will be of benefit ere long, in that and other directions.

INDIANS IN NEBRASKA.

There are seven agencies, controlling eight different tribes or bands, within the limits of this State and superintendency. These are generally in very good condition, prosperous and progressive. The following table illustrates this:

Tribes.	Population.			No. of schools.	No. of scholars.		No. of teachers.	
	Male.	Female.	Total.		Male.	Female.	Male.	Female.
Iowas, Sacs and Foxes of Missouri	157	156	313	1	33	30	.....	2
Omahas	497	472	969	3	70	50	2	1
Winnebagoes	700	740	1,440	3	160	90	1	2
Pawnees	907	1,538	2,445	2	77	41	1	7
Otoes and Missourias	243	221	464	1	53	44	.....	2
Santee Sioux	424	563	987	3	214	109	5	5
Total	2,928	3,690	6,618	13	607	364	9	19

The total number of pupils, according to the above, is 971 in a population of 6,618, or about one in seven, a better exhibit than that of any other superintendency. The Santee Sioux present a very favorable picture of missionary effort. The two Episcopal churches and schools on their reservation are under charge of Indian pastors, and a majority of the teachers are also Indians. This agency has under its control four bands, or tribes, of Sioux, who but a few years ago were among the most hostile of their nation.

The reservations occupied by the Nebraska Indians cover the following areas:

	Acres.
Santee Sioux	83,200
Winnebagoes	128,000
Omahas	345,000
Pawnees	288,000
Sacs and Foxes of the Missouri	16,000
Iowas	16,000
Otoes	160,000
Total	1,036,200

The average amount *per capita* of land will be nearly as follows: Santees, 84 acres; Winnebagoes, 90; Omahas, 355; Pawnees, 117; Sacs and Foxes, 184; Iowas, 71; Otoes, 345; making a *per capita* average on the total Indian population of about 156 acres. There is something worth considering in these figures, as they may serve to illustrate the results of limited reservations in solving the problem of change from the life of the nomad hunter and warrior to that of the farmer and citizen. The school statistics show that the Indians on the smallest reservations are, in the main, the most advanced, and this, too, as in the case of the Santees, does not result from long isolation from the usual influences among Indians, but rather from favorable conditions and well-directed missionary efforts. The Winnebagoes, having the next smallest area in their reservation, are next in the scale, and the Pawnees follow them; while the bands or tribes with the largest amount of land at their disposal are, in spite of long settlement, prosperity, and peace, smallest in the scale of educational advantages and results. The Indians and their agents appear to work harmoniously together, and the recommendations of previous years, for enlargement of the manual-labor school at the Pawnee agency, and for the establishment of similar schools among the Santees and Winnebagoes, are now being put into effect.

INDIANS IN KANSAS.

There are only five small agencies left in this State, which, with those in the western Indian territory, are under the control of the central superintendency.

These agencies present the following statistics:

Tribes.	Population.	Reservation.	Schools.	Scholars.	Teachers.	Annuity for education.
		Acres.				
Kickapoos	290	19,200	2	51	2	$5,000 00
Pottawatomics*	400	77,307	1	84	2	9,585 00
Chippewas and Munsees	56	5,760	1	16	1	.....
Miamies	95	10,240	.....	.....	.....	2,560 00
Kansas, or Kaws	593	.....	1	45	1	1,538 57
Total	1,434	112,507	5	196	6	18,623 57

THE INDIAN TERRITORY.

The most interesting phase of Indian education and advancement is that presented in the Indian Territory, where the administration is now engaged in the concentration of the semi-civilized and uncivilized tribes and bands who have heretofore roamed at large or lived on reservations in the region north of the Territory. The presence of the five tribes of civilized Indians, who have long been settled in the eastern portion of the Territory, was a chief incentive to this policy, as it was reasonably expected their example and presence would greatly facilitate the movement. The expectation has, in the main, been realized.

From an elaborate table in the last annual report of the board of Indian peace commissioners, the following has been condensed:

* The Pottawatomies are those known as the "Prairie bands;" the remainder of the tribe have been citizens for several years. It is the desire of the Indian Bureau to remove these bands to the Indian Territory, where the larger portion of those who formerly lived in Kansas are now settled. So, also, with the Kickapoos and Kaws, though it is probable that a majority of the first-named tribe, now remaining in the State, may elect to become citizens. On the whole, the educational condition of the Indians remaining in Kansas has not improved during the year past.

Condition of tribes in the Indian Territory.

Tribes.	Number.	Wealth in individual property.	Acres in reservation.	Acres cultivated by Indians.	Acres cultivated by Government.	Total acres cultivated.	No. of schools.	No. of teachers.	No. of scholars.	Cost of schools.	Am't of stock.

There is some difference between the figures of the Indian Bureau and those of the Indian board which are given in preceding table. These differences are not very material, the principal ones being, by the commissioners' report, an addition of 1,000 each in the population of the Choctaws and Chickasaws, making them 22,000 in all. The statistics of education in the five nations are given in the report, as follows:

	Scholars.	Schools.	Teachers.		Total.
			Indians.	Whites.	
Cherokees	2,950	60	48	15	63
Choctaws	819	36	37	.....	37
Chickasaws	379	11	14	.....	14
Creeks	760	33	17	16	33
Seminoles	207	4	.....	4	4
Total	5,115	144	116	35	151

This shows a difference in the two statements of 4 schools and 3 teachers in favor of the peace commissioners' tables, and of 276 scholars for the Bureau's regular annual report. Among the schools are three for the colored people forming part of the Cherokee Nation; also an orphan asylum, in which 54 children are supported. The Creeks support one boarding-school, and the Choctaws and Chickasaws support two; besides, each nation maintains a number of students at colleges in different States. The Cherokees have recently revived their female seminary, under good auspices. There is a prevailing criticism among those interested in education there, to the effect that children of the full-blood Indians speak Cherokee at home and in familiar intercourse only, and that, as a consequence, though they learn to read, spell, and write in English, they do not really understand or master it. The amount of real work to be done among these people can be appreciated by an estimate of percentage of school attendance with the population. Taking the table before given as a basis, and the total number of Indians in the five civilized nations, with a few small bodies located in the northeastern portion, we have the aggregate of 49,982, while the total number of scholars is but 4,439, or about 1 in every 10.2 persons. With the large amount of funds at their disposal, the larger average of real and personal wealth they possess, and their favorable location, these nations ought to do better. There is great need of a normal college, not alone for the training of Indian teachers, but the imparting of a higher education to their youth in all the higher and practical paths of life.

According to the complete tabular statements, it appears that the number of bushels of grain raised in the whole Territory was 6,739,335, of the value of $4,663,615; that the number of horses, cattle, &c., owned there was 464,465, of the value of $4,947,121; while the number of tons of hay cut was 8,508, valued at $73,149; and the value of furs sold was $302,700; being a total valuation of produce, stock, &c., of $9,986,588. The total valuation of property, real and personal, is $16,987,818, excluding real estate, and of stocks, $4,342,707.88⅔, both of which are held in common.

New Mexico and Colorado are the only Territories exceeding these figures, which in their totals speak well for the Indian population.

The five nations, in proportion to the whole population, possess about six-sevenths of the individual property, and cultivate about twenty-five times as many acres as the other tribes. The proportion is similar throughout. The Indian peace commissioners' reports state that the Chickasaws and Choctaws maintained three missions, and have a church-membership of 12,500; the Creeks have three missions, and 2,050 church members; the figures are not given for the Cherokees and Seminoles. That these Indians have mental power of a high order has been made manifest in all their history, but in no instance so conspicuously as in that of the inventor of the Cherokee alphabet, George Guess, or "Sequoyah," whose ability deserves renewed recognition.

THE INVENTION OF THE CHEROKEE ALPHABET

excited at the time of its introduction the astonishment of philosophers in this country and in Europe, and as it has an important bearing in connection with educational movements generally, an account of its progress and history, the work of genius throughout, is thought worthy of being brought forward at the present time, the data for which are found in a carefully-prepared article by Elias Boudinot, himself a Cherokee, and published in the "Annals of Education" in April, 1832. Mr. Boudinot makes use in part of statements by Mr. Knapp in a lecture on "American literature," and which may be relied upon, as they were derived from Sequoyah himself.

Mr. Knapp says that when a delegation of the Cherokees visited Washington in the

winter of 1828, Sequoyah, the inventor of the Cherokee alphabet, accompanied them. His English name was George Guess; he was a half-blood, but had never spoken a word of English up to the time of his invention.

The substance of an examination of Sequoyah, through the medium of two interpreters, was this: That he, Sequoyah, was now about sixty-five years old; that in early life he was gay and talkative, and although he never attempted to speak in council but once, yet was often, from his fine colloquial powers, the story-teller of the convivial party. His reputation for talents of every kind gave him some distinction when he was quite young, so long ago as Saint Clair's defeat. About this time a letter was found on the person of a prisoner, which was wrongly read by him to the Indians. The question then arose among the Indians as to the mysterious power of *the talking leaf*, some believing that it was the gift of the Great Spirit to the white man; but George Guess maintained that it was the discovery of the white man himself. Deprived of the excitement of war and the pleasures of the chase, in consequence of the lameness of a knee which rendered him a cripple, his mind was directed to the mystery of the power of *speaking by letters*.

The inventive powers of Sequoyah were put in active operation, while he had to contend with the prejudices of some of his nation, who believed that the knowledge of letters belonged only to the white man. He was not dissuaded, however, from an attempt to prepare an alphabet for his people. He knew that feelings and passions were conveyed by different sounds from one intelligent being to another, and the thought struck him to try to ascertain all the sounds in the Cherokee language. In this he had the aid of his wife and children; and when he thought he had distinguished all the different sounds in their language, he used pictorial signs of birds and beasts to convey an idea of these sounds to others, but soon dropped this method, as difficult or impossible, and tried arbitrary signs, distinguishable from each other.

For about a year he tried the plan of making a character for each word, in which time he put down several thousand characters, but became convinced that his object was not to be attained in that way. After trying other methods, he hit upon the idea of dividing the words into parts, or syllables. He soon found, to his great gratification, that the same characters would apply in different words, and that the number would be comparatively few. After putting down all the syllables he could think of, he would listen to speeches and the conversation of strangers, and would make a character for any new syllable. In this way he succeeded in completing his system.

As representatives of these syllabic sounds, he adopted a number of English letters, taken from a spelling-book. Even then he had about two hundred characters in his alphabet; but, by the aid of his daughter, who entered into the genius of his labors, he reduced them at last to eighty-six.

As yet he had no knowledge of the pen as an instrument, but made his characters on a piece of bark with a knife or nail. He soon after procured paper and a pen, and made his own ink from some bark of the forest trees, whose coloring property he knew.

Even when his system was completed, he found much difficulty in persuading people to learn it. But going to Arkansas Territory he taught a few people there at first, one of whom wrote a letter to some friends in the Cherokee country and sent it by Sequoyah, who read it to the people. It was a difficult matter to make his invention known among his people, as he had been so long abstracted from their usual pursuits that he was viewed with suspicion. To convince them of the reality of his invention, he summoned some of the more distinguished of his nation, and after explaining the matter to them, his daughter, who was his only pupil, was directed to go out of hearing while he put down any word or sentiment which his friends named, and then she was called in and read it to them; then the father retired, and the daughter wrote. The Indians were astonished, but not convinced. It was at length agreed that the tribe should select several youths from among their brightest young men, that they might be taught. After several months' instruction, an examination was made by various tests, which destroyed all infidelity on the part of the nation and fixed their faith most firmly. The Indians made this the occasion of a great feast, at which Sequoyah was conspicuous, and he became at once schoolmaster, professor, philosopher, and chief, held in reverence by his nation as one favored by the Great Spirit.

When the usefulness of the Cherokee alphabet became fully developed, it spread through the nation in an unprecedented manner, and reading and writing soon became common. It is worthy of remark, however, that it was for some time confined to the more obscure individuals, the others not considering it of sufficient importance. To increase its utility the council of the nation had a font of type cast and a newspaper printed in the English and Cherokee languages. About two hundred copies of this newspaper were soon circulated weekly, and read by numbers in every section of the country. At a convention of gentlemen held at New Echota, six years after the invention of the alphabet, it was calculated that upward of one-half of the adult males could read and write in their own language.

Since then several books have been printed in these characters, and at the present time these are in use. A Cherokee newspaper is also printed in the nation. The

Cherokee language is, however, being discarded by the more intelligent, only about two-thirds using it commonly. The apathy of the full-bloods hinders progress in this as well as other directions. The pressure from without is growing stronger. It is to be regretted that activity from within does not fully create a sufficient counter-force.

OTHER TRIBES IN THE TERRITORY.

A closer distinction ought in justice to be made, as the Senecas and Shawnees making 3,030; the Quapaws, 240 strong; the Ottawas, 150; the Peorias, or confederated tribes, numbering 160; the Absentee Shawnees, 663; the Sacs and Foxes, 463—in all, 4,706 souls—are, as a rule, in a condition of civilization quite equal to the five large tribes. They are collectively in possession of reservations covering an area of 709,760 acres. The Absentee Shawnees hold their lands by allotment. Their school facilities are limited, but the privileges thereof could be readily made available. The tribes just emerging are the Osages, Kickapoos, Kaws, Wichitas, Caddoes, and some much smaller bands, while those that require steady and vigilant oversight are the quite powerful tribes of Kiowas, Comanches, Apaches, Arapahoes, and Southern Cheyennes, numbering in all 3,990.

INDIANS IN DAKOTA, MONTANA, AND IDAHO.

These three Territories embrace the most powerful of the nomadic tribes now remaining in the United States, and hence their condition is necessarily an interesting feature of this review. Foremost among them is the Sioux Nation, embracing many bands, and numbering 26,216 persons, mostly living in Dakota, though the Ogallalas are mainly in Wyoming. The facts relative to the several tribes within the assigned geographical limits are as follows:

Tribes.	Population.	Reservations, area in acres.	Schools.	Scholars.	Annual fund.
Dakota.					
Sioux	26,216	26,987,300	10	489	.....
Poncas	735	576,000	3	77	.....
Arickarees, Gros Ventres, and Mandans	2,200	8,640,000	.....	.....	.....
Tribes in Montana.					
Blackfeet	7,500	Not stated.	None.	.....	.....
Gros Ventres, Assinaboines, Crows, Santee Sioux, Northern Cheyennes.	10,750	.....	.....	.....	.....
Mountain Crows	2,700	6,250,000	1	90	.....
Flatheads	1,700	1,433,600	1	27	.....
Shoshones and Bannocks	677	.....	.....	.....	.....
Tribes in Idaho.					
Nez Percés	2,807	1,344,000	2	124	$7,300
Shoshones and Bannocks	1,037	1,568,000	.....	.....	.....
Cœur d'Alênes	2,000	256,000	.....	.....	.....
Total	58,322	47,054,900	17	807	7,300

There is something more favorable than the above statement to be said in regard to the Indians in Idaho. The Nez Percés are, as a rule, more advanced than their school statistics would indicate. There has been something of disturbance and conflict among them in the past.

Great progress is reported during the past year. Favorable results are also reported from other tribes in that Territory, while the Dakota Sioux are being placed yearly in more favorable conditions for both restraint and training in the arts of peace.

During the past year the Interior Department has succeeded in opening friendly relations with the heretofore hostile Sioux and fragments of other tribes and bands who have for some years past made portions of Montana debatable ground between themselves and the white pioneers. There is opportunity in the Northwest for a comprehensive policy and a better chance, when it is begun fairly, to teach and train the growing generation of Indians. A special effort should be made on the more advanced reservations in Dakota and Idaho to organize manual-labor schools, into which children might be brought, cared for wholly, and educated to new conditions. A special effort should be made to reach the females, for, as the Cherokees have already proved, there may be many bright boys turned out of school, but unless their homes have an elevating influence and their sisters and female associates are their equals, retrogression will, as a rule, be more rapid than their progress.

THE INDIANS OF WYOMING, COLORADO, UTAH, AND NEVADA.

The Territories and State named fall naturally in a geographical group, and the condition of the Indian population, which is at the lowest ebb, also justifies the treating of them under one head.

WYOMING.

A large body of Ogallala Sioux are found just within the borders of Wyoming, but have been mentioned in connection with Dakota, where they properly belong. The only Indian tribes permanently located in Wyoming are the Eastern Shoshones, numbering above 1,000. There are roving bands of Cheyennes, Arapahoes, Sioux, &c., but they are interlopers, and will, as the lines of settlement and travel press closer, be brought on to their reservations.

The Shoshones have had a large reservation assigned them, but, owing to the incursions of hostile Sioux and others, have not remained thereon. There is one school established, under the charge of an Episcopal missionary, with ten scholars, and recently the chiefs have shown a desire to settle their people and engage in stock-raising, and have schools established among them.

COLORADO.

In Colorado there are about 3,800 Indians, 3,000 of them belonging to the Tabequache band of Utes at Los Pinos, and the Yampa and Uintah Utes at the White River agency. The latter number 800. These bands are native to this region, and are now in possession of a very valuable territory, embracing 14,784,000 acres, for the transfer of a large portion of which to the Government, efforts, but partially successful, have been made during the past year. The Tabequache Utes have thus far shown no interest in education, while at the White River agency a small school has been in operation for some time past. The Unitarians have this in their charge, and have just established one at Los Pinos. There are 41 scholars and 1 teacher at the latter place, and 6 pupils and 1 teacher at the former. The Los Pinos school is organized on the industrial plan.

UTAH.

The Indians in Utah are under the charge of two agencies, that of the Shoshones, numbering 3,000, belonging to three bands, and that of the Utes, consisting of ten bands and numbering 8,300; in all, 11,300. The Shoshones have no reservation, are thorough nomads, are difficult to reach, and show no desire for schools or other agents of the "white man's" life. The Utes have a reservation of 2,039,040 acres in the Uintah Valley, but the bands are generally migratory and warlike. No school has been established. The comment made, in the last annual review on this subject, as to the lack of interest in the Indians' welfare exhibited by the Mormon community controlling this Territory, loses no force by repetition.

NEVADA

has an Indian population of about 12,500, divided into five tribes or bands; two of Pah and Pi Utes, and the others, Washoes, Shoshones, and Bannocks. The Pah-Utes number 6,000, and have two reservations of 320,000 acres each, are quiet, peaceable, very poor, have no schools, and are generally left to their own devices for subsistence and habits. The Pi-Utes number 2,500, have no treaty, contract, or reservation, and no aid, in any shape, is given them. They are very poor, generally steal for a living, though a few engage in farming. No schools are mentioned.

The Washoes are a miserable and drunken remnant of vagabonds and beggars, with no agent in charge and no reservation, settlement, or school. The Shoshones are under the Utah agency for the same people. They number about 2,000, while the Bannocks, about 1,500 in all, are probably to be removed to the Fort Hall reservation, Idaho. No schools or missions exist in Nevada.

Taking this exhibit, and the condition of the Indians, estimated at 26,600 souls, living in the great area designated, it is not very encouraging to them or flattering to the "superior" race with whom they have, for twenty years or more, been brought into contact.

INDIANS IN NEW MEXICO AND ARIZONA.

The condition of this population in both these Territories has attracted great attention during the past year or so, owing to the vigorous efforts of the Government to obtain control of the Apaches, and the very animated discussion that has arisen over the policy adopted. The construction of the Southern Pacific Railroad, like that

of the northern line, has been in great part the cause of active effort, thereby turning the public attention to the remarkable phases of the Indian question presented in Arizona.

The New Mexico Indian tribes are under direction of five agencies. Their numbers, &c., are as follows:

Tribes.	Population.			Reservation.	Schools.	Scholars.	Teachers.	Fund.
	Male.	Female.	Total.					
Navajoes	4,310	4,804	9,114	3,328,000	1	40	2	$2,000
Capote Utes, Weeminuche Utes, Jicarilla Apaches.	600	670	1,270	.....	.....	.....	.....	.....
Muache Utes and Jicarilla Apaches	776	683	1,459	.....	.....	.....	.....	.....
Apaches and others	781	1,114	1,895	.....	.....	.....	.....	.....
Apaches	200	250	450	.....	.....	.....	.....	.....
Pueblos	3,946	3,737	7,683	439,664	5	.....	5	.....
Total	10,613	11,258	21,871	3,767,664	6	40	7	2,000

The Navajoes are peaceable and industrious, engaged chiefly in sheep-farming. Their school is not very successful, but provision is being made for the establishment of a manual-labor boarding-school among them, from which better results are expected. Nothing has been, and probably nothing can be, done in this direction at present with the Apache and Ute bands in New Mexico. All of the Pueblo schools have been broken up but those in which the teachers are able to instruct in English, five in number.

INDIANS IN ARIZONA.

This Territory has an Indian population estimated at from 25,000 to 28,000, divided into the following tribes, with the reservations they occupy:

Tribes.	Number.	Acres.
Pimas and Maricopas	4,342	64,000
Papagoes	5,000	.....
Mohaves	4,000	75,000
Yumas	2,000	75,000
Hualapais	1,500	.....
Yavapais and Apaches	8,000	139,000
	24,842	353,000

In the case of the Apaches, their numbers are by some estimated as high as 12,000, but it is safer to take the lower estimate. A considerable band has been located with Cochise, on a large reservation, and there are a number of small reservations, temporary in character, set apart at different military posts, on which small bands have been gathered. The two tribes first named are the only ones over whom even a rude civilization has had any influence. The first-named show considerable progress, and the second are also making efforts in the right direction. The following table contains the facts relating to the settled tribes bearing on schools:

Tribes.	Population.			Number of schools.	No. of scholars.		No. of teachers.	
	Male.	Female.	Total.		Male.	Female.	Male.	Female.
Pima and Maricopa	2,199	2,143	4,342	1	54	51	1	1
Moquis Pueblo	800	863	1,663	1	41	19	1	.....
Papago	2,400	2,600	5,000	.....	.....	.....	.....	.....
Mohaves of Colorado River	450	378	828	.....	.....	.....	.....	.....
Total	5,849	5,984	11,833	2	95	70	2	1

The Mohaves and other tribes are averse to attempts at education, and of course, as yet, little or no effort has been made to reach the Apaches.

THE PACIFIC COAST INDIANS.

This designation embraces the three superintendencies of Washington, Oregon, and California. They may be thus tabulated:

Superintendency.	Indian population.	Males.	Females.	Area reservation in acres.	Schools.	Scholars.	Teachers.	Amount of school fund.
Washington	13,641	6,427	7,214	898,574	7	144	12	$16,700
Oregon	7,162	3,326	3,836	4,473,938	3	149	7	4,450
California	20,970	9,918	11,052	70,363	2	127	2	.....
Total	40,773	19,671	32,100	5,446,875	12	420	21	21,150

According to these figures the report is, on the whole, not very promising, yet some advancement is manifest. In Washington Territory there is general provision, embracing each agency, for the establishment and maintenance, under treaty stipulations, of industrial schools. Some additional interest in farming is exhibited, and generally prosperity is greater. The Yakamas are regarded as models; most of them are skilled mechanics as well as farmers. The manual-labor school is declared to have been of incalculable value to the children. Good churches, as well as schools, well attended, with native pastors and teachers, are notable features. In this Territory the Indians are commonly industrious, working at farming, trades, lumbering, &c. In Oregon, the Indians at Umatilla, Warm Springs, and Grande Ronde agencies are reported in a thriving condition, industrious and prosperous. Manual-labor schools are needed and urged. The other agencies are not in a position to do much for schools.

The California Indians are worse off in educational facilities than those in either of the other superintendencies. The Hoopa Valley agency shows the most progress, while that of Tule River is improving. But on the whole the Pacific coast does not present a very gratifying exhibit of Indian educational efforts. Perhaps one of the most pitiable facts is the neglect of the aborigines of Alaska. The Indian Bureau does not take cognizance of their condition or wants, as it is not disposed to regard them as Indians, in the general acceptance of the term. Left to themselves, it seems certain that their tendency is to retrograde. Something ought to be done toward reaching a population estimated at 70,000 souls.

CONCLUSION.

Careful examination of the foregoing facts must convince the intelligent mind that while a very encouraging change has occurred in regard to the Indians and their circumstances, more especially so in the matter of the interest attaching thereto among the more favored race, yet, that nothing of a permanent character for their adaptation to civilized habits will ever be really achieved until we take in hand more seriously and systematically the educational work among them. Decidedly the best missionary labor will be that which can obtain control—First. Of the female children, and place them under efficient training. Secondly. Of the boys, and not simply teach them to read and write, sing hymns and pray, but train them to habits of intelligence and, wherever possible, to skilled labor. Thirdly. That will, as a rule, supply to the male adults occupations more suited to their nomadic habits, such as trading stock, making of them herdsmen and shepherds.

Thus, by separation of the rising generation from wild habits and roving life, we may hope to successfully save this race to a more useful existence, and help those beyond such ambition to quieter and more peaceable surroundings.

The Indian service is necessarily expensive; yet, with more present aid and wise direction, the establishment of industrial and other schools might in a comparatively short time greatly reduce those expenditures, by making the Indians self-supporting, and finally one with the great body of the American people.

RICHARD J. HINTON.

EDUCATIONAL CONVENTIONS AND INSTITUTES.

THE NATIONAL EDUCATIONAL ASSOCIATION.

The twelfth annual meeting of the National Educational Association was held, as appointed, at Boston, Massachusetts, on the 6th, 7th, and 8th days of August, 1872. The day sessions were held, with one exception, in the girls' high and normal school building, and the evening sessions at the Lowell Institute. The forenoons and evenings were occupied by the general association, and the afternoons by the four departments.

The spirit of the meeting was excellent. The interest in each department was admirably sustained, a result chiefly due to the excellent manner in which the presidents—Miss Lathrop, and Messrs. Rounds, Hancock, and Wallace—discharged their duties.

For the following report we are indebted largely to the Ohio Educational Monthly, edited by Hon. E. E. White.

GENERAL ASSOCIATION.

The association met in the beautiful hall of the girls' high school, Tuesday, August 6, at 10 a. m., the president, E. E. White, of Ohio, in the chair.

Prayer was offered by Rev. Dr. Miner, of Boston, after which Mayor Gaston made a brief but happy address of welcome on behalf of the city.

Mayor Gaston was followed by Rev. Dr. R. C. Waterston, who, on behalf of the school committee of Boston, cordially welcomed the association to the city and congratulated the teachers of the country on the deep and general interest now taken in public schools, and the wonderful progress that has already been made. As an illustration of this progress, he stated that 150 years ago girls were first admitted to the public schools of Boston to fill seats vacated by the boys in summer time. Now the National Educational Association, with scores of women in full membership, assembles in this magnificent building, erected solely for the higher education of girls.

Dr. F. H. Underwood made a humorous allusion to the idea, commonly held by residents of other places, that the Boston man considers himself finished in every particular, and is absorbed in the contemplation of his perfections. He assured the audience that, whatever may have been true, this state of things no longer exists. The young president of Harvard University has inaugurated reforms, and the movement has reached the high schools and the other schools of Boston. Those intrusted with the management of the public schools were conscious that perfection has not yet been reached, and are seeking light from every source.

The president of the association responded. He gave to Massachusetts the great honor of establishing the first system of free public schools, and spoke in words of high eulogy of what the State had done for the cause of education. On behalf of the association he thanked the mayor of the city and the representatives of the school committee for their cordial welcome. In conclusion, he thanked the association for the honor of presiding over its deliberations.

After the appointment of Mr. E. B. Frost, of Illinois, as assistant secretary, and Messrs. Chauncey R. Stultz, of Ohio, and R. Woodbury, of Maine, as assistant treasurers, the meeting adjourned.

Evening session.—The association re-assembled at eight o'clock, in the Lowell Institute.

Rev. Dr. A. D. Mayo, of Cincinnati, gave a very able lecture on "Methods of moral instruction in public schools." He said that we live in the era of methods in public instruction, and now approach the era of methods in moral culture. We must first rid ourselves of a huge drift of error in regard to the province of our public schools. Their purpose is to make neither profound scholars nor saints, but to make good American citizens, such men and women as will preserve and ennoble the Republic. The morality to be inculcated in these schools is that of the Christian religion. We can not teach a Chinese or heathen morality, nor can we teach the vague standards of materialism. Every method presupposes a living soul at the center of operation, without which it is a mere machine; and hence, the first condition in moral instruction is a teacher whose life is the embodiment of such morality.

The rage for intellectual culture is becoming the Moloch of American schools. The teaching of children is now almost entirely in the hands of young women, and their intellectual qualifications are subjected to constant scrutiny and supervision. They are compelled to run a gauntlet worse than their grandmothers who were captured by the Indians. Their moral fitness is vastly more important. The new methods of teaching

open a way for the most successful moral instruction, but they are powerless in the hands of a teacher who has no moral perception. The methods of object and oral instruction are still on trial. Unless we place in our school-rooms a class of teachers filled with a high moral purpose, the children will be dragged down to common earthworms. The common school is the place where the child should be taught the great lessons of morality in public life, for morality and patriotism are inseparable in a country like ours.

Our teachers are too often so highly wrought in æsthetic and literary culture that they go into our schools with an utter ignorance of, and almost an utter contempt for, our common American life; very charming, no doubt, as ornaments of wealthy homes, but utterly unfit to mold our boys into well-rounded American citizens. The imperative need of our schools to-day is some method of common-sense moral supervision.

The discussion was opened by Dr. J. M. Gregory, of the Illinois Industrial University, who said that Dr. Mayo had exhausted the subject, and he could only retouch the picture. Our schools are designed not only to educate the children intellectually but morally, and the expenditure for their support can not be justified if we take away that which causes the children to grow up into good citizens. We can not send a child's intellect to school and keep his moral nature at home. The highest intellectual culture can not be attained unless there is a moral nature which will furnish the necessary incentives. The safety of the Republic and of humanity itself depends upon moral instruction in our public schools. The grand purpose of the teacher is to form character.

Hon. Joseph White, secretary of the board of education of Massachusetts, said that Dr. Mayo had spoken the truth in eloquent words and in a more eloquent spirit. With such sentiments inspiring our teachers the Republic is safe.

Three years since a great audience applauded the sentiment, "The school for intellectual education, and the church for moral education"—a heresy whose adoption would be fatal to the public-school system. His creed was a brief one, and not of his own originating, but derived from the words of one of the best friends of education, now gone to his final rest, Josiah Quincy, who said, "There can be no freedom without morality, no morality without religion, and no religion without the Bible"—and so give us and our children the Bible.

Second day.—The association convened Wednesday morning at 9 o'clock. Prayer was offered by Rev. Dr. Wallace, president of Monmouth College, Illinois.

After the appointment of committees on places for teachers, resolutions, and the transaction of other business, the president called upon Dr. J. W. Hoyt, of Wisconsin, chairman of the permanent committee on the national university to make a brief report of progress.

Dr. Hoyt stated that the idea of founding a national university had been in the minds of many of the leading statesmen and educators of the country for many years, and gave the history of the action of the National Educational Association on the subject. With a view of bringing the subject in a practical form before the country, the committee appointed at Saint Louis prepared a bill, which was submitted to many persons for criticism and suggestion. The bill was then carefully revised, and on the 28th of May last it was introduced in both Houses of Congress by the Committees on Education and Labor. He stated that the bill had been favorably received in Congress, and that it had been approved by nearly all of the higher institutions of the country. The prospects of its early passage he thought were encouraging.

Professor William F. Phelps, principal of the First State Normal School of Minnesota, read a paper on "The system of normal training-schools best adapted to the wants of our people," presenting the necessity of the normal training of teachers, giving the history of the establishment and growth of normal schools in this country from the opening of the first at Lexington, Massachusetts, in July, 1839. He paid high compliments to Father Pierce, Horace Mann, Nicholas Tillinghast, and other pioneers in the normal cause. In conclusion, he urged that every university or college should have a professor of teaching; that every State should support one or more normal schools of a high grade, an elementary normal school in each county, and a system of normal teachers' institutes.

After a few songs by the Jubilee Singers from Fisk University, Tennessee, who were warmly applauded, Professor D. B. Hagar, of Salem, Massachusetts, opened the discussion of the paper. He stated that the normal schools of Massachusetts embrace a course designed to prepare teachers for high schools, and also one to prepare teachers for lower schools. He was not in favor of establishing normal schools of a lower grade, but believed strongly in the value of teachers' institutes.

President N. T. Lupton, of the University of Alabama, said that a normal department has been organized in that institution, and briefly described the course of instruction.

Hon. John Eaton, jr., national Commissioner of Education, read an interesting and able paper on "The educational lessons of statistics." These lessons were partly drawn from the early records, but chiefly from the census of 1870.

Hon. B. G. Northrop, secretary of the State board of education of Connecticut, stated that the statistics of illiteracy in this country were distorted and improperly used. No less a man than Hepworth Dixon, of England, had pointed him to these statistics as proof of the failure of the school system in the United States. He replied, that in the Northern States, at least, this illiteracy was imported illiteracy, and largely from the United Kingdom of Great Britain.

Evening session.—The association met in the evening at the Lowell Institute. Hon. J. P. Wickersham, of Pennsylvania, chairman of the committee on nominations, reported the following officers:

President—B. G. Northrop, Connecticut.

Vice-Presidents—Newton Bateman, Illinois; George P. Beard, Missouri; Abner J. Phipps, Massachusetts; Edward Brooks, Pennsylvania; James H. Binford, Virginia; John Swett, California; N. T. Lupton, Alabama; A. P. Stone, Maine; N. A. Calkins, New York; Miss D. A. Lathrop, Ohio; W. N. Hailmann, Kentucky; N. P. Gates, Arkansas.

Secretary—S. H. White, Illinois.

Treasurer—John Hancock, Ohio.

Counselors—E. E. White, Ohio, and John Eaton, jr., at large; Warren Johnson, Maine; Judah Dana, Vermont; D. Crosby, New Hampshire; E A. Hubbard, Massachusetts; J. C. Greenough, Rhode Island; Mrs. M. A. Stone, Connecticut; J. H. Hoose, New York; Charles H. Verrill, Pennsylvania; M. A. Newell, Maryland; J. O. Wilson, District of Columbia; A. E. Dolbear, West Virginia; M. Webster, Virginia; H. B. Blake, North Carolina; W. H. Baker, Georgia; Joseph Hodgson, Alabama; Miss H. E. Hasslock, Tennessee; W. T. Harris, Missouri; Mrs. A. S. Kissell, Iowa; Miss E. D. Copley, Kansas; George Howland, Illinois; C. R. Stultz, Ohio; J. Newby, Indiana; E. Olney, Michigan; J. W. Hoyt, Wisconsin; H. B. Wilson, Minnesota.

The report was adopted, and the officers named elected.

Hon. Newton Bateman, State superintendent of public instruction of Illinois, read an able and elaborate paper on "Compulsory school attendance." He said, that were compulsory attendance to be made a matter of legislation, he should have his bill entitled "An act to secure the educational rights of children," rather than "An act to compel the attendance of children at school." He proceeded to treat his theme under two heads, offering two reasons for such legislation, viz: because it is within the legitimate province of a republican government; and because it is necessary and expedient. He showed, by numerous arguments and examples, that the principle of compulsion is the basis of all laws as well as of government itself. Compulsion is the bed-rock on which every human government rests. Bayonets and bomb-shells are the final adjudicators. Without this investiture of force, and the right to appeal to it in emergencies, every organized government would go to pieces. In every case, in the last resort, it meets the culprit with clenched fist, and not with moral precept. In the matter in question, the compulsion of attendance would be infinitely less repugnant than countless laws which have been swallowed and digested.

The hour being late when Mr. Bateman closed, there was no further discussion of the subject.

Third day.—Thursday morning's session was opened with prayer by Rev. David Crosby, of Nashua, New Hampshire.

A communication was read from the German-American Teachers' Association, requesting permission to co-operate with the National Educational Association, and offering to present the plans and methods of some German educators at the next annual meeting. The communication was referred to the board of directors, and the delegates from the German association present were invited to participate in the proceedings.

Hon. John Swett, deputy superintendent of the schools of San Francisco, California, read a spicy and suggestive paper on "The examination of teachers." He took strong grounds against the New England system of examining and employing teachers, as vexatious and useless, and gave an amusing account of his early experience as a teacher both in New England and California. He was happy to say that this ill-advised system had been abolished in California, and that the office of teacher had risen to the dignity of a profession. The remedies for the evils of the New England system were the organization of State and county boards of examiners, composed exclusively of professional teachers; the issuing of a graded series of certificates, from life certificates down to limited certificates for temporary teachers; the adoption of written examinations, the percentages to be indorsed on the certificates; a legal recognition by each State of the professional certificates given on actual examinations by legal boards in every other State, and of the normal-school diplomas issued in other States; and a combined effort to lengthen the terms of school officers.

The paper elicited a spirited and interesting discussion, which was participated in by Professors S. S. Green and M. Lyons, of Rhode Island; Superintendent Northrop, of Connecticut; Dr. Levison, of New York; Dr. F. Taylor, of Pennsylvania; Superintendent Abernethy, of Iowa; John Hancock, of Ohio; Professor Stevens, of West Virginia; President Chadbourne, of Williams College, Massachusetts; Mr. A. Bronson

Alcott, of Massachusetts; Mr. J. Dana, of Vermont; and Superintendent Wickersham, of Pennsylvania.

On motion of Mr. Beard, of Missouri, the subject was referred to a committee, with Hon. John Swett as chairman, to report at the next meeting. Hon. J. L. Pickard, of Illinois, and Hon. Joseph White, of Massachusetts, were appointed the other members of the committee.

The following resolution, offered by W. E. Crosby, of Iowa, was referred to the above committee:

"*Resolved*, That this association gives its influence to the securing of a common recognition throughout the Union of normal-school diplomas and State certificates, as evidences of qualifications actually possessed by higher classes of teachers, principals, superintendents of the States, counties, and cities; provided that an equal and impartial basis of training and scholarship can be generally adopted."

ART EDUCATION.

Mr. Walter Smith, State director of art education in Massachusetts, read an excellent paper on "Drawing in public schools." He advocated the teaching of drawing as a relief to the mental faculties of children, often overstrained by the ordinary school routine; and, to this end, the first lessons should exercise the eyes and fingers in a manner least likely to tax the mind. What is needed is a system of drawing simple enough to be taught by all teachers and learned by all pupils.

Drawing should be taught by the regular teachers, for the employment of a special teacher of drawing caused the pupils to believe that it was a very difficult study. Many children, not skillful in drawing lines, are very quick in drawing conclusions.

The first lessons in drawing should be each a stepping-stone to the next. In primary and grammar schools drawing should be taught as a language, the speech of the eye; while in the high schools it may be taught as an art. A course of instruction for the different grades of pupils was sketched, and printed outlines were distributed.

Mr. Smith believed that art education could be made more successful in this country than in any other. The paper was very acceptable to the audience, and was frequently applauded.

Mr. Northrop, of Connecticut, congratulated Massachusetts on being the first State to adopt, by legislation, a system of art education for the public schools.

CLOSING EXERCISES.

At 4.30 o'clock Thursday afternoon the general association convened for the closing exercises. The president introduced Mr. Mori, the Japanese minister to this country, who was received with hearty applause.

ADDRESS OF THE JAPANESE MINISTER.

Mr. Mori said that he was happy to say a few words respecting the educational movement in Japan. All had heard of the social and political revolution in that country. Until recently, education was considered of little importance except for the officials. A bureau of education has been established, and several foreign teachers, mostly Americans, have been employed. The language of Japan was too poor—too short—to use for higher steps. Five or six hundred persons were sent abroad to study, and some returned with the belief that without education at home their civilization can not be improved.

This not being fully appreciated, the embassy recently here was sent out. It was very difficult to send these high officials abroad, and during their absence very little is doing in Japan. The schools of that country are mainly for the high officials, but the members of the embassy were convinced of the necessity of education for all, both male and female. The commissioner of education, a member of the embassy, had told the speaker that he had become convinced of the necessity of teaching the English language. The mayor of Yedo, now in Boston, told him he was very anxious to have the millions of people in his city lifted up as much as possible; that the teaching of English is a step toward it. His belief was that education must be undertaken first, in preference to railroads and other accompaniments of an advanced civilization. Many schools for both sexes have been established in Japan, but owing to the want of teachers they are unable to do as much as they would like to do. They are obliged to take the foreigners residing there, tradesmen, and even sailors; and they do not make a good impression on the Japanese. He had advised the establishment of a good number of normal schools to train teachers. He hoped to receive suggestions in the matter from prominent educators in this country. If Japan fails in this, all Asia will lose, as Japan is the gate to Asia. He predicted that when public schools are generally established in Japan, the English language will become the prevailing language of the country, and the native language would in time only be preserved as a curiosity.

The president thanked Mr. Mori for the honor conferred on the association by his presence, and assured him of the deep interest felt by the educators of this country in the great educational movement in Japan.

William Gaston, the mayor of Boston, Rev. R. C. Waterston, D.D., Dr. Francis H. Underwood, A. Bronson Alcott, Henry Barnard, Mr. Mori, the Japanese minister, and Edward Shippen, of Philadelphia, were chosen honorary members.

RESOLUTIONS ADOPTED.

Resolutions were adopted approving of the bill now pending in Congress for the appropriation of the proceeds of the sales of public lands to educational purposes; congratulating the country on the great usefulness of the National Bureau of Education, and recommending to Congress the furnishing of increased facilities for the publication of circulars of information and the issue of a much larger edition of the annual report for distribution among the teachers and school officers of the country; recommending to boards of education and teachers the adoption of measures looking to the introduction of art instruction into all schools; recommending the introduction of instruction in the elements of physical science; and urging the establishment of normal schools, teachers' institutes, and other instrumentalities for the special preparation of teachers.

The president made a brief closing address, and then introduced Hon. B. G. Northrop, the president-elect, who accepted the position in a few well-chosen words. He announced that the next meeting of the association would be held in Elmira, New York. After singing the doxology, the association adjourned.

ELEMENTARY DEPARTMENT.

The first session opened at 2.30 o'clock, Tuesday, August 6. The exercises were introduced by a few appropriate and happy remarks by the president, Miss D. A. Lathrop, of Cincinnati.

N. A. Calkins, assistant superintendent of schools of New York City, read an able paper on "Object-teaching." He contrasted the methods of instruction in the kindergarten school with the system of the ordinary primary schools, and urged that primary instruction should be in harmony with the nature of the child. The true office of object-teaching is to prepare for the study of text-books, by observation and oral instruction.

DISCUSSION.

Zalmon Richards, Washington, District of Columbia, thought that a thorough reform was needed in our system of primary instruction, and that object-teaching should become a principle instead of a conviction. He was convinced that we are radically wrong in our whole system of primary instruction, in our school-rooms, our play-rooms, and our books.

The discussion was continued by A. Bronson Alcott, of Concord, Massachusetts, who expressed himself in full sympathy with the advanced educational movements of the day.

Professor M. A. Newell, principal of the State normal school, Baltimore, Maryland, read a paper on "English grammar in elementary schools." He said that among modern writers of distinction not one in a hundred ever studied English grammar as such. We learn to sing by singing, and to draw by drawing, and in the same way we must be taught to speak and write correctly by speaking and writing. He thought that text-books in grammar should be abolished in all grades below the high school.

Mr. W. C. Crosby, superintendent of schools of Davenport, Iowa, who opened the discussion, believed that theory and practice must go hand in hand. He thought that Professor Newell would have many disciples but very few followers.

The subject was discussed by other speakers, after which the session closed.

Wednesday's session was opened by a paper on "The adaptation of Froebel's educational ideas to American institutions," by W. N. Hailmann, editor of the Schulzeitung, Louisville, Kentucky. He thought that the United States offered the greatest field for the system of education invented by Froebel. He proposed the appointment of a committee of true-hearted, clear-headed people from all parts of the land to examine this system and consider what is needed to adapt it to the wants of our schools, and report at the next meeting of the department. In closing he offered a resolution to that effect, which was adopted, and a committee of seven appointed to carry out its provisions.

Dr. Adolph Douai, of Newark, New Jersey, spoke in commendation of the kindergarten system. Miss Elizabeth Peabody, of Boston, thought Froebel's peculiarity to be, that he prepares the child to learn. She gave an interesting account of the gradual development of a child's perception, illustrating the method by means of some of the appliances used in the system.

After a short recess, Mr. Ambrose P. Kelsey, principal of the high school in Clinton, New York, read a paper on "School architecture and furniture," speaking principally of the school buildings of small towns. He treated of their size, internal arrangements, external appearance, location, grounds, &c., and gave many excellent suggestions respecting the heating, ventilation, and other accessories of the school-room.

On Thursday afternoon, Mr. C. O. Thompson, principal of Worcester Free Institute of Industrial Science, read a paper on "Physical science in elementary schools." He advocated the teaching of the elements of the physical sciences in common schools, giving the preference to natural history. He would make room for such instruction by abolishing the study of grammar, substituting therefor the teaching of language orally.

The subject was discussed by I. N. Carlton, principal of the State normal school of Connecticut, and C. M. Woodward, dean of the polytechnic department of Washington University, Saint Louis, Missouri.

A paper, by Dr. F. H. Underwood, of Boston, on "English literature in popular education," was next read.

The following officers were elected: President, N. A. Calkins, New York; vice-president, Miss H. N. Morris, New York; secretary, Miss Augusta M. Manly, Cincinnati.

NORMAL DEPARTMENT.

The first session opened on Tuesday afternoon, at 2.30 o'clock. The president, C. C. Rounds, of Maine, made a brief and appropriate address.

Mr. J. C. Greenough, principal of the State normal school of Rhode Island, read a paper on "What is the proper work of the normal school?" The paper was discussed by A. G. Boyden, of the Bridgewater normal school, Massachusetts, and Dr. M. R. Leveson, of New York.

General S. C. Armstrong, of the Hampton Normal Institute, Virginia, read a paper on "Normal work among the freedmen." He urged that the great demand for colored teachers in the South should be met by normal schools, supported by the charity of the North.

Miss Emma C. Brackett, of New York, recently of Saint Louis, read a paper on "The American normal school," which, she urged, should give to its pupils the garnered treasure of the past, and send them forth with the ability to dispense it. It should also give its pupils, though sparingly, special methods and rules for doing this work. There should be a uniform system of normal training, so far as principles are concerned.

The exercises of Wednesday afternoon were opened by a discussion of the papers by Mr. Greenough and Miss Brackett. Mr. Williams, of Vermont, believed that the true work of the normal school was to teach methods, not subjects. George P. Beard, of Missouri, said that subjects and methods should be taught together, and that the recitations should be topical in form. E. H. Cook, of Pennsylvania, thought that the principles, the science, of education should be taught as well as methods. Charles H. Verrill, of Pennsylvania, said that normal pupils should study every subject, with the idea of learning how to teach them. C. F. R. Bellows, of Michigan, did not believe that subjects and methods could be separated in normal schools.

Hon. T. W. Harvey, State commissioner of common schools of Ohio, read an able paper on "Professional training in normal schools." He urged that the course of training in normal schools should be mainly adapted to the wants of those who intend to make teaching a life profession, and that the preparation of temporary teachers should be left to normal institutes, State and county, and to other institutions.

He thought that the wisdom of establishing expensive normal schools to give temporary teachers academic instruction, thus duplicating the work of high schools and academies, may well be doubted.

The paper was discussed by J. H. Hoose, of New York; George P. Beard, of Missouri; Miss Anna C. Brackett, of New York; Mr. Blake, of North Carolina; Wm. H. Phelps, of Minnesota; J. P. Wickersham, of Pennsylvania; and A. Bronson Alcott, of Massachusetts.

Mr. Beard urged that normal institutes must be relied upon for the professional instruction of the great body of teachers. Mr. Wickersham thought that, for many years, there would be two classes of teachers, permanent and temporary, making necessary two classes of normal schools. In one class, chiefly professional work should be done; in the other, there must be academic instruction. Mr. Phelps thought that academic and professional instruction must be combined in the normal schools of the West.

The first exercise on Tuesday afternoon was the reading of a paper on "The relation between matter and method in normal instruction," by George P. Beard, principal State normal school, Warrensburgh, Missouri. He said that the teacher must have a knowledge of the subject-matter of instruction as well as of methods, and, hence, matter and method must be combined in normal schools. Method must be taught in

connection with matter. The theory that pupils should come to normal schools with a good education merely to receive professional training, lacks practicability. Normal schools should be more than academies; they should impart a knowledge of the principles and methods of teaching.

Mr. Williams, of Vermont, who opened the discussion, did not see how normal schools were to reach a professional basis by continuing the practice of academic teaching. Mr. Verrill, of Pennsylvania, said that if only professional work was done in normal schools, many of them would have very few pupils. Mr. Greenough, of Rhode Island, thought that the plan of giving professional instruction only did not preclude the attainment of academic knowledge, for in learning how to teach a subject, a pupil's knowledge of it would be increased.

Miss J. H. Stickney, principal of the Boston training school, spoke on "Practice schools; their uses and their relation to normal training." She said that practice should have at least one-third of the attention of the normal pupil. Abstract professional instruction in methods is not enough. Practice schools will enable teachers to acquire much which they can get in no other way. She doubted the wisdom of making the normal class a class for practice.

The following are the officers elected: President, A. L. Boyden, Massachusetts; vice-president, J. Estabrook, Michigan; secretary, M. A. Newell, Maryland.

DEPARTMENT OF SUPERINTENDENCE.

This department held its first session Tuesday afternoon, the president, John Hancock, of Cincinnati, in the chair.

Rev. Henry F. Harrington, superintendent of schools of New Bedford, Massachusetts, read an elaborate paper on "The extent, methods, and value of supervision in a system of schools." He said that wherever schools are defective and poor, the cause, in almost every case, is a want of the right kind of supervision. The value of the supervision of a single mind is no more important in business enterprises than in education. It is impossible for local school committees to supervise schools properly, because they rarely, if ever, are fitted for the work by nature or training, and have not the time which they are willing gratuitously to give to the work. He advocated a system of supervision, comprising a State superintendent, next county superintendents, then town and city school committees or directors—towns and cities being left free to appoint superintendents. He strongly urged the creation of the office of county superintendent, which twenty States had done, and had no excuse to offer for Massachusetts' neglect of this agency.

The discussion was opened by Superintendent W. T. Harris, of Saint Louis, who spoke of the advantages of the system of supervision in Saint Louis. He was followed by Superintendent J. P. Wickersham, of Pennsylvania; Superintendent J. L. Pickard, of Chicago; Secretary Joseph White, of Massachusetts; and others, all of whom urged the value of supervision. Mr. White did not believe that county supervision would work well in Massachusetts. The entire civil system of the State is based on the town, and not on the county.

On Wednesday afternoon, W. T. Harris, superintendent of the schools of Saint Louis, read an able paper on "The early withdrawal of pupils from school—its causes and remedies."

The discussion was opened by A. P. Stone, principal of the high school, Portland, Maine, who was followed by Superintendent John Hancock, of Cincinnati; Superintendent W. E. Crosby, of Davenport, Iowa; Superintendent E. A. Hubbard, of Springfield, Massachusetts; and Superintendent H. F. Harrington, of New Bedford, Massachusetts; all of whom dissented from one or both of the remedies recommended in the paper, viz, the admission of pupils at four years of age, and the frequent transfer of pupils. Mr. Seaver, of Iowa, and Rev. Mr. Stone, of Providence, supported Mr. Harris's views.

The exercises of Thursday afternoon were opened by the reading of an excellent paper on "Public education in the South," by Hon. Joseph Hodgson, State superintendent of public instruction, Alabama. He spoke of the condition of the South with respect to territory and capabilities, claiming that, for natural advantages and possibility of development, it was one of the most favored regions of the earth. Unfortunately, however, the ignorance of the common people there was general and lamentably great. The condition was even worse among the whites than among the colored population, for the former were actually growing more and more illiterate. Of the voters of that section upward of 1,120,000 were unable to read or write. He was in favor of the idea of compulsory education, believing that if the Government has the right to tax the people to educate the masses, it has an equal right to make those masses receive the benefit of the levy.

At the conclusion of the paper, President Hancock called attention to the very great importance of its statements. Commissioner Eaton and Superintendent Wickersham strongly favored the granting of needed educational aid to the Southern States. Mr.

Blake, of North Carolina, said that the paper expressed the exact condition and great need of the South. Mr. Hubbard, of Iowa, expressed similar views. Dr. Henry Barnard, of Connecticut, desired to see a school system inaugurated in the South similar to the itinerant system of Sweden. President Hancock closed the discussion with a touching tribute to the educators of the South, who are laboring to establish public-school systems.

W. T. Harris, superintendent of the schools of Saint Louis, Missouri, read the report of the committee on "Percentages of school attendance," which was adopted.

The following officers were elected: President, W. T. Harris, Saint Louis; vice-president, J. W. Page, of Maryland; secretary, A. P. Marble, Worcester, Massachusetts.

DEPARTMENT OF HIGHER INSTRUCTION.

The president, Dr. D. A. Wallace, of Monmouth College, Illinois, read a paper on "College degrees," in which he urged that honorary degrees should be based upon attainments as well defined as other degrees. As a remedy for the evils of irregularity in the conditions on which degrees are bestowed, it was suggested that each State should establish a senate of learned men to pass on the qualifications of candidates for degrees, the degree being bestowed by colleges on the certificate of the senate.

President Eliot, of Harvard, saw practical difficulties in the plan proposed, and suggested, as a temporary remedy, the adoption of the German system of adding the name of the college to the letters indicating the degree. The subject was further discussed by Dr. Gregory, of Illinois; Dr. Reed, of Missouri; Professor Stevens, of West Virginia; President Baird, of Maryland; and President Tappan and Mr. Henkle, of Ohio.

The session of Wednesday afternoon was held in the lecture-room of the Institute of Technology.

Professor H. M. Tyler, of Knox College, Illinois, read the report of the committee on "Greek and Latin pronunciation." He recommended that the rules given in Goodwin's Greek Grammar should be substantially followed in the pronunciation of Greek. In Latin the ancient Roman pronunciation was recommended; Professor Lane, of Harvard, being named as the best authority.

The report was briefly discussed. President Baird, of Maryland, approved of the report. Professor Harkness, of Rhode Island, and Professor Crosby, of Massachusetts, strongly advocated the English pronunciation. Professor Bartholomew disapproved of the "continental" method, and favored the ancient pronunciation as recommended in the report. Mr. Henkle had used the continental, but had gone back to the English; he thought the ancient method would save time.

Professor E. C. Pickering, of the Institute of Technology, next gave a lecture on "Laboratory methods of teaching physics." He said that he used the old method of lectures, illustrated by experiments, for preliminary instruction, after which each student studies the science practically, by manipulating the apparatus, or whatever is used, under the direction of the professor. The lecturer illustrated this method in the presence of the audience.

Professor Shaler, of Harvard College, followed with a lecture on "The method of teaching natural history."

On Thursday afternoon, Professor F. A. March, of Lafayette College, Pennsylvania, read an able paper on "The method of teaching English in high schools."

The next exercise was a discussion of the bill now before Congress for the establishment of a national university. It was opened by Dr. J. W. Hoyt, of Wisconsin, who was followed by President Eliot, of Harvard; Superintendent Northrop, of Connecticut; and Professor Stebbins, of Massachusetts.

The subject was referred to a committee, consisting of President Eliot, Dr. Hoyt, and President Lupton, of Alabama, to report next year. Inasmuch as this measure is in the hands of a permanent committee appointed by the general association, the propriety of this action by the department of higher instruction was questioned.

The following are the officers elected:

President, D. A. Wallace, of Illinois; vice-president, J. D. Runkle, of Massachusetts; secretary, W. D. Henkle, of Ohio.

THE RECEPTION AT FANEUIL HALL.

A fine reception, tendered to the association by the city government, took place on Thursday evening, at Faneuil Hall. A splendid and superabundant collation was served at an early hour.

The divine blessing was invoked by President Chadbourne, of Williams College. After nearly an hour had been spent at the tables, Rev. Dr. Waterston called the assembly to order, and, with a few remarks, introduced Hon. A. H. Rice, who spoke in behalf of the city of Boston. Speeches were also made by Hon. B. G. Northrop, of Connecti-

cut; Hon. Joseph White, of Massachusetts; President E. E. White, of Ohio; Hon. John Eaton, jr., national commissioner; Hon. J. P. Wickersham, of Pennsylvania; Hon. John Swett, of California; Hon. Joseph Hodgson, of Alabama; and Superintendent W. T. Harris, of Saint Louis.

The occasion was a fitting close to the exercises of the three previous days.

The attendance at this meeting was very satisfactory, but would have been much larger, had not the principal railroads, for some unexplained reason, failed to extend the usual courtesies in the reduction of fares.

THE AMERICAN INSTITUTE OF INSTRUCTION.

The forty-third annual meeting of this institute was held at Lewiston, Maine, on the 13th, 14th, and 15th of August. The indefatigable efforts of the president, Abner J. Phipps, Ph. D., of Massachusetts, to make this meeting an interesting and profitable one, were crowned with success.

At the first session, on Tuesday evening, which was held in the grammar-school hall, Rev. F. F. Ford offered prayer. The secretary read the minutes of the last annual meeting, held at Fitchburgh, Massachusetts, July, 1871. Hon. M. T. Ludden, in the absence of Mayor Cowan, made the address of welcome. President Phipps responded briefly, and Hon. J. L. Pickard, superintendent of schools of Chicago, as a substitute for Hon. James G. Blaine, gave the chief address of the occasion. His theme was "The hinderance to making the work of teaching a profession."

On Wednesday the institute occupied Lyceum Hall at each of its three sessions. The attendance of educators was very good for a rainy day. Rev. E. N. Haynes, of Lewiston, offered the morning prayer.

Walter Smith, esq., late of England, now of Boston, Massachusetts, State director of art education in Massachusetts, read an admirable paper on "Drawing in our public schools." A pleasant discussion followed, Mr. Smith being called upon to answer several questions from the floor.

An admirable paper on "Music in schools" was then presented by J. Baxter Upham, M. D., chairman of the committee on music of the Boston school board. Dr. Upham sketched the history of the study of music in our public schools, especially in the schools of Boston, where in 1839 the study was first regularly introduced by the school board. Mr. Luther W. Mason, teacher of music in the primary schools of Boston, with a class of little ones from the Lewiston schools, illustrated his method of teaching.

Francis H. Underwood, esq., and Rev. Dr. Bartol, of Boston, occupied the afternoon in discoursing, the former upon "English literature," and the latter on "Industrial education."

The evening address was on the "Influence of education upon labor," by Hon. J. W. Patterson, United States Senator from New Hampshire.

On Tuesday the weather was exceedingly unpleasant, and the attendance consequently small. The morning session was opened with prayer by Rev. J. S. Burgess, of Lewiston.

Officers for the next year were elected, as follows: President, M. C. Stebbins, of Springfield, Massachusetts; forty-two vice-presidents; secretary, W. Eaton, Charlestown, Massachusetts; assistant secretary, Alfred Bunker, of Boston, Massachusetts; treasurer, George A. Walton, Westfield, Massachusetts; and twelve counselors.

Resolutions of respect to the members of the association deceased the past year were adopted. These are the Rev. Charles Brooks, of Medford, Massachusetts; Rev. Cyrus A. Crane, D. D., of East Greenwich, Rhode Island; William Seaver, of Northborough, Massachusetts; Albert A. Gamwell, of Providence, Rhode Island; and Dr. Lowell Mason, of Orange, New Jersey. Addresses were made by Rev. Charles Hammond, of Monson, Massachusetts, and Professor Green, of Providence, on Dr. Mason. Mr. Lyon, of Providence, paid a tribute to the memory of the late Mr. Gamwell. Mr. T. W. Valentine, of Brooklyn, New York, paid the same tribute to the memory of Mr. Seaver, of whom he spoke as one of the earliest members of the institute, who had labored with the pioneers in the promotion of its objects.

At 10.15 a. m. the association listened to a paper, by Nathaniel T. Allen, of West Newton, Massachusetts, on "Public instruction in Germany."

Professor Pickering, of the Massachusetts Institute of Technology, gave a brief address on the "Laboratory method in physics." He advocated tin and pine as the materials for apparatus, and the system of giving the pupils the handling of experiments.

At 2 p. m. the institute re-assembled, and listened to a paper by Hon. E. E. White, of Columbus, Ohio, on "The two systems of education." He urged that the first and highest function of school training is the development and culture of all man's powers and faculties in due harmony and equipoise. The subordinate function is to impart a knowledge of those things practically useful for guidance. The first aim is discipline; second, knowledge. The study that meets both tests is of assured value.

At 4 p. m. the newly-elected president, Mr. Stebbins, was introduced to the institute,

and thanked the members for the honor. After singing the doxology, the institute adjourned.

The next annual session will be held at such place as the directors may decide.

NATIONAL BAPTIST EDUCATIONAL CONVENTION.

The second National Baptist Educational Convention was held in the First Baptist Church of Philadelphia, May 28, 29, and 30, 1872, there being in attendance about 140 delegates from twenty States and two Territories.

Hon. Francis Wayland, Connecticut, was elected president, who, on taking the chair, expressed his hearty sympathy with the object of the convention, viz, the consideration of the best methods by which the denomination might be lifted to a higher plane of Christian education.

The secretary, Dr. S. S. Cutting, read a communication from the American Baptist Educational Commission, surrendering to the National Baptist Educational Convention the care of the educational work in which it has been engaged.

An address of welcome was made by Rev. George Dana Boardman, D. D., which was followed by the opening address by Rev. B. Sears, D. D., LL.D., on "Institutions of learning established by Christian denominations, considered with reference to present and probable systems of public instruction," which was discussed under the following heads: Religious education in the family, the church, and the Sabbath school; elementary education in the public schools; higher education in the academy, the scientific school, the college, and the professional school; and general education acquired in business, in society, and by general reading.

On Tuesday afternoon, President Kendall Brooks, D. D., of Kalamazoo College, read a paper on the question, "How, and to what extent, may colleges, established for the education of young men, and adjusted to that end, be made, by the teaching which they offer, and by their apparatus of instruction, to serve, without damage to that original purpose, in the education of young women?"

This was followed by a discussion of the paper, by Dr. Broadus, of South Carolina; Dr. Bliss, of Pennsylvania; President Burleson, of Waco University, Texas; and President Brooks.

Rev. A. C. Kendrick, D. D., LL.D., of the Rochester University, read a paper on "The methods and uses of classical studies." The paper was discussed by Professor J. L. Lincoln, of Brown University; Dr. Bliss, and Dr. T. G. Jones.

This was followed by a paper, prepared by Rev. S. S. Cutting, on "The organization of the educational work of the Baptist denomination." The paper was discussed by Dr. J. Wheaton Smith, Mr. Shepardson, Dr. Turnbull, President Hovey, Dr. Murdock, and Rev. Mr. Cushman.

Rev. R. C. Mills, D. D., read a paper on "Hinderances to the increase of the ministers of the gospel," which was discussed at length. Professor George D. B. Pepper, D. D., read a paper on "What is a theological education?" Professor N. L. Andrews, of Madison University, spoke on "The moral elements of a teacher's art." Professor H. H. Harris introduced a paper on "Methods and limits of beneficial aid."

The committee on "Organization of the educational work of the Baptist denomination" reported a constitution as the basis of a national society, the discussion of which was postponed until evening, when, after the reading of a paper on "The relative claims of our institutions of learning on the public benefactions of our churches," it was opened by President Bailey, of California, and continued by Professor Greene, Dr. J. A. Smith, Dr. Turnbull, and others, and recommitted. Being subsequently reported back with modifications, it was discussed at length and laid on the table, and then it was voted to proceed to form a national educational association, to be known as "The American Baptist Educational Commission," which adopted a constitution.

Among the incidents of the convention was an excursion to Crozier Theological Seminary at Chester, and a breakfast in Fairmount Park, on Friday. A train of cars being specially provided for the purpose, the members of the convention, and many guests invited, left the city for the park at about 9 o'clock a. m. The breakfast was spread in a tasteful pavilion. Hon. Francis Wayland, president of the convention, presided. After the repast several speakers were called upon to respond to sentiments, among whom were the host, W. R. Bucknell, esq., W. E. Littleton, esq., Rev. J. W. Smith, D. D., Father Gavazzi, Rev. Lemuel Moss, D. D., Rev. S. S. Cutting, D. D., Rev. Alexander Reed, D. D., George H. Stuart, esq., and others. Considering the character of the persons present, the beauty of the day, the elegance of the repast, and the excellence of the addresses, the "Bucknell breakfast" was a most delightful incident of this otherwise memorable occasion.

GERMAN-AMERICAN TEACHERS' UNION.

The third annual meeting of this union was held in Hoboken, New Jersey, July 31, and was welcomed by Mr. C. Rübsamen, who, as the president of the local committee

of arrangements, tendered the accommodations connected with the Stevens Institute of Technology for the general meetings and those of the sections. W. N. Hailmann was elected president, and other officers were duly chosen. The afternoon was spent in visiting the Stevens Institute of Technology, founded by the late Edwin A. Stevens.

At the first general meeting of the union, a paper prepared by the central committee on the question "How can the developing method be introduced into the English normal and public schools?" was read by Mr. P. Stahl.

The president, Mr. W. Hailmann, L. Hotse, and Dr. A. Douai, were appointed delegates to attend the National Teachers' Association in Boston, in August, with a statement that the members of the Hoboken convention desire to join their efforts with those of the National Teachers' Association in the cause of educational reform.

A paper was read by Mr. L. Klemm on "What separates the German from the American schools, and what connects the two?" This was followed by a paper upon "The relation of the public and the German-American school to the German nationality within the United States," which was discussed by Messrs. Feldner, Moeller, Deghee, Oesmann, Klemm, Dr. Douai, and others; and the following resolution was adopted: "That the German-American school should be as much as possible perfected so as to serve as a model to the public school."

The last paper was a report from the central committee on the question "How can the German language be successfully introduced into the public schools?"

A letter was received from the "committee on invitations" of the Pennsylvania State Teachers' Association, inviting this convention to a participation in their meeting; and Mr. Schoedler, of Pennsylvania, was appointed to represent the union there.

On invitation of Hon. Mr. Harris, superintendent of schools, Saint Louis, the union voted to hold its next annual meeting in that city, from the 28th to the 31st of July, 1873.

EDUCATION OF THE DEAF AND DUMB.

GENERAL STATISTICS.

According to the census of 1870, the whole number of deaf and dumb in the United States was 16,205. Teachers of the deaf and dumb believe that these figures are far too low, this belief being based upon the fact that they individually know of many deaf-mutes whose names do not appear upon the rolls of the census. The information thus obtained from private sources is, of course, too vague and fragmentary to admit of any conclusive criticism of the census, or of trustworthy estimates as to what the returns ought to be; but it certainly shows that numerous errors do exist. It is supposed that the omissions are chiefly due to the difficulty of determining, with regard to very young children whether they are deaf or not; the unwillingness of parents to acknowledge the affliction of their children; the doubt in the minds of census-takers and parents, with many cases of semi-mutes, whether these ought or ought not to be included among the deaf and dumb—as for purposes of education they undoubtedly ought—unless formed into a class by themselves; and the neglect of the census-takers, in some instances, to make their inquiries sufficiently full and explicit. The whole number of the deaf and dumb in the United States is variously estimated at from 20,000 to 25,000; but it can not be determined at present with any approach to accuracy.

STATISTICS OF EDUCATION.

The census of 1870, as was stated in the last report of the Commissioner of Education, contains very full and valuable statistics of illiteracy in the United States. It is much to be regretted that the inquiries upon this subject were not extended to the deaf and dumb, and tables prepared showing, as accurately as might be, the proportion of the uneducated among this class. In the absence of such information no definite conclusions can be reached with regard to the whole body of deaf-mutes. With respect, however, to such of them as are now of a suitable age to be in school, the statistics gathered from the institutions for the deaf and dumb afford a basis for an approximate estimate.

The number of deaf-mutes between the ages of 5 and 20, in 1870, according to the census, was 7,562. As the proper school age is comprised within these limits, and the length of time requisite for the acquisition of an average common-school education by a deaf-mute is from seven to eight years, one-half of these, or 3,781, ought to have been in school when the census was taken. The number actually in school in 870, according to a carefully prepared table published in the American Annals of the Deaf and Dumb, for January, 1871, was 3,784. As many as 9 per cent. of these must have been in school the day the census was taken. If, then, we could believe the census to be correct, we should be able to congratulate the United States that nearly all the deaf and dumb of the country of suitable age were under instruction.

But, unhappily, the inquiries made by the officers of several of our institutions show that, notwithstanding the generous provision made for the education of the deaf and dumb, in all the States of the Union, except Florida, a large number of this class are not receiving its benefits. Mr. G. O. Fay, superintendent of the Ohio institutions says in his last report, that he has definite information concerning 182 deaf-mutes in the State, between the ages of 10 and 20, who are not, and never have been, at school. Mr. J. L. Noyes, superintendent of the Minnesota institution, publishes a similar list of 76 deaf mutes, in that State, between the ages of 8 and 25. The commissioners of the Kentucky institution say that scarcely more than half the deaf and dumb of their State who are of suitable age are in the institution. In Pennsylvania, the proportion is still less. Of the 65 counties in the State, 21, including some of the largest and most populous, are not represented, in either the State institution at Philadelphia, or the school at Pittsburgh. There are three counties, with an aggregate population of 150,000, that do not furnish a single pupil.

It is true that some of these cases, especially the last-named, are extreme instances, but they are, probably, not without parallels in the Western and Southern States. While there are no data sufficiently full and accurate to enable us to make a close estimate, there is good reason to believe that from 25 to 40 per cent. of the deaf and dumb of the United States who ought to be in school are growing up in ignorance.

HOW SHALL THE UNEDUCATED DEAF AND DUMB BE REACHED?

When we consider how fully and liberally the means of education for the deaf and dumb are provided in this country, it seems strange that there should be so many who

are deprived of it. Various causes have been assigned for this. Some parents and guardians are ignorant of the existence of institutions for the deaf and dumb; others, illiterate themselves, have no idea of the value of education; others, from misguided affection, are unwilling to part with their children; others are so selfish as to keep them at home for the sake of the rude manual labor which they are able to perform.

The manner in which these painful cases are to be reached has been a subject of earnest thought and frequent discussion in our profession. It is generally agreed that much can be accomplished by means of circulars addressed to postmasters, tax-collectors, clergymen, teachers, and others; by interesting the country newspapers in the undertaking, and especially by canvassing the State with a few pupils and giving public exhibitions. In proportion as such measures as these have been taken in the several States, the ratio of the uneducated deaf and dumb has been made appreciably less. But when every thing has been done in this direction that is possible, there still remain some parents and guardians who will not allow their children to go to school. Is there no remedy for these cases?

COMPULSORY EDUCATION.

Compulsory education for the deaf and dumb, long advocated in Germany, was first proposed in this country, so far as the writer is aware, by Mr. J. L. Noyes, at the convention of instructors of the deaf and dumb held at Indianapolis, Indiana, in 1870. An interesting discussion followed the reading of Mr. Noyes's paper on this subject, but his views seemed to meet with little acceptance, the usual objections to State interference being urged with additional force from the fact that, in the case of the deaf and dumb, it would be necessary in most instances to remove the children from their homes in order to have them educated. Since the convention, however, the idea of compulsory education has been growing in favor; it was advocated by several principals of institutions in their last reports, and at a conference of principals held at Flint, Michigan, during the present year, resolutions were passed recommending its adoption.

Whatever considerations of humanity to the individual, and of self-preservation for the community, may be urged in favor of compulsory education in general, apply with peculiar force to the circumstances of the deaf and dumb. Lack of education in their case is fraught with results vastly more disastrous both to themselves and others than in the case of those who can hear and speak. Deplorable as is the condition of the hearing person when deprived of the training of schools and the knowledge of books, it is far superior to that of the uneducated deaf-mute. Unhappy, and even dangerous, as is the state of the community in which there are many illiterate persons, it is not exposed to the same dangers as a community whose deaf-mutes are allowed to grow up in ignorance. For the hearing person, though wholly shut out from schools and utterly ignorant of books, has a continual means of education in his daily intercourse with his fellow-man; he may be illiterate, but he can not remain uneducated. Even in the lowest state of ignorance, provided this stops short of idiocy, he knows the difference between right and wrong, and is justly held responsible before the law for his acts.

But the uneducated deaf-mute, though endowed with a mind and soul capable of the highest development, is left in a condition of intellectual and moral darkness. While he gives evident proof of the possession of faculties that place him far above the idiot and the brute, and is able under favorable circumstances to develop a language by which he can communicate with his friends upon a limited range of subjects, he is incapable of receiving any such clear understanding of moral truths, of his own rights and the rights of others, as to render him properly responsible for his actions.

The condition of the uneducated deaf-mute, and his moral and legal responsibility, are admirably treated in a paper by Isaac Lewis Peet, LL. D., principal of the New York institution, entitled "The psychical status and criminal responsibility of the totally uneducated deaf and dumb," published in the journal of Psychological Medicine for January, 1872, and in the Annals for the Deaf and Dumb for April, 1872.

DANGER TO SOCIETY FROM UNEDUCATED DEAF-MUTES.

The cases in which crimes have been committed by uneducated deaf-mutes, both in this country and in Europe, are not few; and while the usage of the courts has varied somewhat, and unfortunately no statutes have been enacted with special reference to such cases, the general precedent goes to establish the principle, which must seem reasonable to all who are familiar with this class of persons, that uneducated deaf-mutes can not justly be held accountable to the laws.

In this view of the case, does not society owe it to itself, for its own protection, as well as to the deaf-mute for his welfare, to provide that when parents or guardians, through ignorance or selfishness, refuse to allow their deaf-mute children to receive the education freely offered by the State, the law shall interfere, and compel them to send the children to school?

THE GROWTH OF THE INSTITUTIONS.

While we lament that the blessings of education do not reach all the deaf-mutes of the country, the growth of the institutions affords gratifying evidence that the proportion, as well as the number of those who do receive its benefits, is constantly increasing. In 1863 there were 22 schools for the deaf and dumb in the United States, with an aggregate of 2,012 pupils; there are now 36 schools, and the number of pupils under instruction in 1871 was 4,068, an increase of more than 100 per cent. in eight years. During the present year, there have been 4,253 pupils in the 36 institutions from which returns have been received.

CONFERENCE OF PRINCIPALS.

A conference of principals of American institutions for the deaf and dumb was held at Flint, Michigan, in August last. Though the attendance was small, the discussions were spirited and profitable, and the proceedings, when published, will be of value to the profession and others interested in the education of the deaf and dumb. The principal topics discussed by the conference were the classification of pupils; institution registers and records; education of the deaf and dumb and the blind in the same institution; instruction in articulation; compulsory education; congregate dormitories; recreations; hygiene; discipline; best order of daily exercises; best mode of collecting statistics, &c.

One interesting feature of the conference was an exposition by Mr. A. Graham Bell of his father's ingenious and valuable method of "visible speech," which has been applied with successful results in the instruction of the deaf and dumb in articulation. The proceedings of the conference are to be published in connection with the next report of the Michigan institution.

EDWARD A. FAY.

EDUCATION OF THE BLIND.

It is pleasant to note that there is a growing interest throughout the United States in the education of the blind, and a better knowledge of their conditions and wants.

At first thought, blindness seems to be the sorest bodily evil to which man is subject, and no other one so readily calls forth human sympathy with the sufferer. This sympathy, however, has, thus far, acted blindly, and therefore has failed to give the relief which it sought to bring, because applied unwisely.

The privation of the pleasures which come through sight is not the chief cause of the hardship of blindness. Men can bear that and be happy; indeed, all men have to bear it half of every day.

Individual independence is one of the essentials for human happiness; and the only secure basis of that is the ability to work. Man is created an industrious animal. Work of some sort is essential to his welfare; and light is given to him by which to work. But all the industries of the world are conducted upon the idea of the prevalence of light, and of the ability of the workmen to see. The blind, lacking this ability, are thrown out of the industrial and productive classes, and fall into the dependent class. In all ages and in all countries people have regarded them as necessarily paupers and dependents. This dependence is the bitter drop in their cup of life. They are, however, in some respects, the least unfortunate of all dependent classes, because their very appearance challenges sympathy. Men perceive the fearful infirmity at a glance. They feel that it cuts off the sufferer from the usual modes of activity and of enjoyment, and suppose that it leaves him no means of happiness.

Hence it is that the blind have probably had less of positive suffering from cold, nakedness, and hunger than other dependent classes. Neither the deaf-mutes, nor the lunaties, nor the idiots, nor the halt, nor the cripple, excite so much compassion, nor receive such ready aid, as do the blind. Their infirmity seems the sum of all infirmities, and men, not knowing how else to relieve it, give alms. Their readiness to give encourages the habit of asking, and the blind beggar is the favored of all beggars. He holds his lucrative place by the church-doors, and at the street-corners, after all other beggars are banished from the streets of cities by the police.

Previous to the present century the principal special establishments for the blind were, for the most part, eleemosynary in their nature and demoralizing in their tendencies. A brief notice of the two principal asylums will illustrate the evil effects which follow the indulgence of the tender feelings of compassion toward the blind without careful consideration of their real wants, and without insisting that they shall be constantly occupied at some wholesome work, and recompensed according to their industry and their deserts.

History says that in the thirteenth century Louis IX retreated from his foolish crusade, leaving behind many knights and gentlemen prisoners in the hands of the Moslems. He afterward ransomed three hundred of them, but only after the barbarians had put out their eyes. Instead of pensioning them, and letting them take care of themselves, he established what was intended as a monument of pious benevolence, the hospital called the Quinze Vingt (Fifteen Scores) for the three hundred blind men. Like many other establishments which, like evil weeds, get root in a community, this one was perpetuated after the exigency that called for it had ceased to exist. As the blind crusaders died off, other blind soldiers took their places. As no strict discipline was enforced, and no steady occupation required, the usual demoralization followed upon the aggregation of great numbers of men in an abnormal condition of body.

The establishment was not well enough endowed to prevent the necessity of begging. Charity-boxes were set up at the church-doors, and the inmates were allowed to parade about in bands, making wretched music, braying, and demanding alms. These blind and sturdy beggars seem to have got complete mastery of the establishment, and to have laid hands upon the contents of the charity-boxes, for we find them refusing to accept the rule proposed by the chancellor, which was as follows:

"*Ordered*, That a deputation of said brethren shall, on Sundays and feast-days, visit all the chapels and churches, and seek alms, but without crying aloud or braying, as some have done, and that what they gather shall be put into the common purse, and not appropriated to their private benefit, as has been the case."

The establishment seems now to have degenerated into a center of demoralization to the inmates, and a nuisance to the public, for we find the poet Rutebœuf crying out in vexation of spirit, "I don't know why the King should have gathered into one great house three hundred blind men, who are allowed to go about the streets of Paris in bands, braying the livelong day. As they have no leaders, they go butting up against each other, and against other folks, and so bruising themselves." "Would that fire might strike the house, and the establishment be consumed, so that we might construct another on a better scale."

An old book, called "The Cries of Paris," mentions the blind beggars going about and shouting for bread:

A pain crier, mettent grant peine,
E li avugle, à haute alaine,
Du pain à cels de champs porri,
Dout moult sovent, sachiez, mè ri.

The author of the Persian Letters speaks of visiting the establishment in the eighteenth century and finding the blind men "gaily roistering at unknown games and playing cards." And we ourselves can testify that in the middle of the nineteenth century the same thing was to be seen. The great establishment at Naples was in an even worse condition.

The point of interest and of instruction for us, in the history of these and other large establishments, is that some of the sources of demoralization seem to grow necessarily out of the unwise practice of segregating adult blind people from the community, and congregating them together in one great establishment for permanent residence.

During this century, organized efforts have been made to aid the blind in several European nations, and generally under better auspices than before.

We shall notice briefly those of Great Britain as being most cognate to those of our own country. In that country, as in others, the blind were generally driven to begging as their only means of living; blindness and beggary were synonymous; and among most people the idea of a blind person even now instantly suggests the idea of a beggar.

Early in this century, organized efforts were made in Great Britain for the relief of this unfortunate class. They were based upon the idea that the class must necessarily remain dependent upon the higher classes, and at the foot of the social scale. The best that occurred as possible to be done for them, was to train them to some handicraft, by the exercise of which they could gain a livelihood in part. Societies were organized for the purpose of supplying employment to the trained workmen; paying the rent of workshops and sales-rooms, and selling their wares without commission. At the same time a little secular knowledge and a great deal of religious instruction were imparted.

There are 19 institutions of this kind, (a sort of training-school,) containing in all nearly 1,000 inmates. These establishments differ from those of the United States mainly in the fact that mental education is but little attended to in comparison with mechanical training. There the blind man accepts the situation, and proposes to work with his hands for a partial livelihood, depending upon some society or friends for the rest; here he means to do something better, and to work at his trade only in the last necessity.

There are in Great Britain 16 establishments, of the nature of the well-known "association for promoting the general welfare of the blind," which support in whole or in part nearly 500 blind persons.

There are 16 associations for aiding the blind by direct charity in the form of pensions; about 2,000 are thus aided. The charity is given conditionally. In most cases the applicant must not be less than fifty years old and must not solicit alms. In some they must be Protestants, in others must be members of the Church of England. In two they must be freemen, or widows of freemen. In some they must be permanent residents of certain parishes.

These establishments are not self-supporting; that is, the sales of the wares do not cover the expenses of the establishment. The defect is made up by annual contributions and legacies. They do not therefore lift the blind out of the dependent class and give them the proud consciousness of being entirely independent; but they help them to help themselves, and this is a noble work.

The best feature in these establishments, and the one which is most instructive to us, is that of supplying work to the blind in their several homes. Preserve to the blind man his home, and you save much of his self-respect; give him means of self-support and you save all of it, and make him happy. You remove from his mental sight that dark prospect of ending his days in an almshouse, which is touchingly sketched by the blind poet when he says:

Dejecting prospect! soon the hopeless hour
May come, perhaps this moment it impends,
Which drives one forth to penury and cold,
Naked, and beat by all the storms of heaven,
Friendless and guideless to explore my way;
Till on cold earth the poor unhallowed head
Reclining, vainly from the ruthless blast
Respite I beg, and in the shock expire.

It will be seen that the main object of these establishments was to train the blind man to such skill in handicraft that, with a little aid in the way of shop-rent, and by sale of his wares without commission, he could compete in certain simple trades with the least skilled who work by sight.

The success of this effort depends greatly upon the condition of the hand-workers,
