Embraces Kenyon College, Kenyon Grammar-School, and the Theological Seminary of the Protestant-Espicopal Church in the diocese of Ohio. The theologic seminary is temporarily suspended. Students in the grammar-school are prepared for admission to college. The college-fees of indigent and meritorious students may be remitted in part or in whole, upon application. Students having the ministry in view are assisted on making the requisite application to the various educational societies of the Church.

MT. UNION COLLEGE,

Organized in 1846 as a seminary; chartered as a college in 1858. The courses of study are preparatory, classic, scientific, philosophic, commercial, and normal. There are also departments of music and drawing. Special courses are provided and elective courses are permitted. Degrees are conferred on those who have completed and sustained an actual examination in a suitable post-graduate-course of one year's study. The normal department has already sent out over 6,000 teachers. It is designed to make this course equal to that of any State normal school. Ladies are admitted on the same terms as gentlemen to all classes and departments of the college, to all honors and privileges, and to the position of trustee or professor. There is a daily attendance of over 600 students. The financial polity of the college has always been that the current income must not only pay current expenses, but add, each year, some permanent improvements to the institution.

NEW MARKET COLLEGE.

The distinctive feature of this college is its plan of study. Regular students take but one study at a time, (unless painting, music, or review-studies,) and complete from three to five studies per term. This plan was adopted three years ago and proves more satisfactory every term. It is believed that the students are more thorough and accomplish a course of study in one-third less time than when three or more studies are taken together. The courses of study are classic and scientific. Instruction in music and drawing is given to such as desire it.

OBERLIN COLLEGE.

An English-preparatory and a classic-preparatory course prepare the way here for a ladies' department, a scientific, a collegiate, and a theologic; while beside them all stands separately a conservatory of music, imparting, at moderate rates, its additional advantages to any of the students that desire them. The total number of students in all these, striking off all names reckoned twice, is 1,371 in the session of 1873–'74. The same broad system of admissions as before is still continued, with only the important guards that candidates must bring certificates of good character, students from other institutions evidence of honorable dismission, all be, in ordinary circumstances, 16 years of age, and none be admitted to full membership without a probation of six months.

OHIO CENTRAL COLLEGE

Admits both sexes on equal terms. The college-departments are: the English, especially designed for those intending to become teachers; the preparatory, for the college-course; and the collegiate, including two courses, classic and scientific. The college is a United Presbyterian school, though students of all denominations are welcomed.

OHIO FEMALE COLLEGE.

The plan of study embraces two departments, preparatory and collegiate, occupying a period of six years. Students may enter any class and pursue a partial or the entire course at option, or study any branch for which they are properly qualified. Arrangements have been made for a post-graduate-course; studies, elective. Special facilities are offered for the study of modern languages, music, drawing, and painting.

OHIO WESLEYAN UNIVERSITY.

The departments are collegiate, preparatory, scientific, and theologic. Special attention is given to the German and French languages and to practical surveying. All the studies of the freshman-year are required; after that an elective course is permitted.

OTTERBEIN UNIVERSITY.

This university has four courses of study, viz: classic, scientific, ladies', and English. There are also connected with it a preparatory, a musical, and a fine-art department. A successful experience of twenty-six years has confirmed the faculty in its belief that the co-education of the sexes is the true theory of education.

WESTERN RESERVE COLLEGE.

There are connected with the college a preparatory school and a medical department, the latter located at Cleveland. The preparatory course occupies three years and the collegiate four. Special students in elementary or analytic chemistry are received and the faculty have arranged a course of instruction for graduates who are desirous of prosecuting the study of science and literature beyond the course prescribed in colleges generally in the country.

WITTENBERG COLLEGE.

The courses of study are collegiate, select, preparatory, and theologic. The preparatory department is designed to fit students for college and to give to such as desire it a business-education. The theologic department is open for members of every branch of the Christian Church who possess the requisite attainments and a Christian character. Nearly one-third of the students in attendance on the college are candidates for the ministry.

As respects colleges, universities, higher female seminaries, and academies in general, the report of Mr. Harvey says: "Blanks for reports were sent to all these institutions. It is regretted that some have not responded."

It is stated that there are about forty colleges and universities in the State, all authorized by law to confer degrees; but it is very evident that many of them have not adequate means to furnish such an education as the students of colleges and universities should receive. Some college-presidents have recommended, as a remedy for the evils of the present system of graduation, that all collegiate degrees be abolished. While this may not be desirable, it is worthy of serious consideration whether the State cannot justly control the exercise of this privilege by appointing a board of visitors and examiners empowered to regulate the conditions of graduation and to examine candidates. A large number of the colleges should be called academies, as they are such in reality, and there is no school in the State that can be properly called a university. These institutions are, however, important agencies in educational effort and are doing excellent if not indispensable work by furnishing the facilities for acquiring a liberal education in those localities that would otherwise be deprived of them. Nevertheless, if they are not colleges in fact as well as in name, they ought not to be permitted to confer college-degrees.

Institutions of a lower grade than colleges seem also to be enjoying a satisfactory de-

gree of prosperity. There is really no antagonism of purpose or interest between the free high schools and these institutions. Their aims are identical, and their courses of study ought to be so nearly alike that pupils can be transferred from one kind of school to another without hinderance to their advancement. It is, therefore, considered desirable that principals of high-schools, seminaries for both sexes, and academies make an effort to agree upon a course of study to be adhered to throughout the State as nearly uniform as the peculiarities of some schools in organization and management will permit. This uniform course of study should also be arranged with reference to the requirements for matriculation in colleges. It may be necessary, also, to make important changes in the usual curriculum of college-studies. It is the opinion of many college-men that these changes can be made without materially lowering the present standard of qualifications for matriculation or lessening the efficiency of college-instruction.

COLLEGES FOR WOMEN.

Fourteen colleges, institutes, and seminaries in this State for the higher education of young ladies, with 162 professors and instructors—43 gentlemen and 119 ladies—report an aggregate attendance of 2,133 pupils, of whom 1,195 are in collegiate and 358 in preparatory departments, the grade of the remaining 580 not being designated. In all but two of these colleges the collegiate classification of pupils is given, and aggregates as follows: in the freshman-year, 236; sophomore, 199; junior, 149; senior, 146; in partial courses, 121; post-graduate-studies, 24; and in ornamental only, 12. Music—vocal and instrumental—drawing, painting, and French form a part of the course in all these institutions and in all but one German also; while in three Italian and in one Spanish are added to these. Chemic laboratories and philosophic cabinets are reported in ten, natural-history-museums in eight; four have astronomic observatories; while one without the observatory has a telescope; five report art-galleries, one of which is claimed to be "one of the best in the State;" another "fine," another "small;" and the same number report gymnasia or some means of physical culture. All but one have libraries, the largest numbering 2,500 volumes, the smallest 284; five number 2,000 or more, and the same number 1,000 or more volumes; the remaining three, 284, 500, and 600 volumes, respectively.

OHIO AGRICULTURAL AND MECHANICAL COLLEGE.

It was not until 1870 that Ohio took decisive action on the land-grant made her for this school in 1862. Then, by decision of the trustees appointed by the legislature, it was located in Franklin County, about two miles north of Columbus, the citizens of that county having offered $300,000 to secure it. Of this sum $111,000 went for the purchase of a farm of 320 acres; $112,000 was devoted to the erection of the needed buildings, and $75,000 to the furnishing of these and supplying them with apparatus. In September, 1873, the first session was opened in the yet uncompleted buildings, with 7 resident professors and 30 students, distributed nearly equally among the first three years of its proposed course of from four to six years. A formal opening, with some accessions to the list of students, took place in the legislative hall at Columbus on January 2, 1874. The proceeds of the land-grant having reached $500,000 and the income from this, $30,000, it has before it a fair prospect of extensive usefulness.

TOLEDO UNIVERSITY OF ARTS AND TRADES.

Mr. Jesup W. Scott, of Toledo, has donated 160 acres of land, valued at $80,000, within the limits of the city of Toledo, for the endowment of the Toledo University of Arts and Trades. A corporation under the laws of the State of Ohio has been organized to carry out the object of the trust to the full extent that means can be secured. Mr. William H. Raymond, of California, formerly a citizen of Toledo, has purchased a building in Toledo to be used as a nucleus for the first work of the university, and the property by him donated is to be used eventually to establish the Raymond School of Mining as a part of the university. The object of the founders of this institution is to provide young men and women with facilities for acquiring advanced knowledge in the arts and trades. The trustees solicit donations of money, books, engravings, models, &c., that the institution may, as soon as possible, be placed on a footing of usefulness.

BUSINESS-COLLEGES.

Eleven of these schools for commercial training exist in Ohio, situated in Cincinnati, Cleveland, Columbus, Dayton, Mt. Union, Sandusky, Springfield, Toledo, and Zanesville. They present an aggregate of 38 instructors and 2,713 students.

SCHOOL FOR THE INSTRUCTION OF DEAF MUTES.

It is but recently that any attempt has been made to open schools for the instruction of deaf mutes in connection with the regular public-school-systems of cities. Such a school has been in operation in Cleveland a little over a year. In January last it had twelve pupils, instructed by a lady teacher, on a salary of $600 per annum.

GIRLS' INDUSTRIAL HOME.

The trustees of the State Industrial Home for Girls, in their fourth annual report, state that "the institution has, during the past year, been successfully working out the beneficent designs of the legislature in its establishment. The improvement of the inmates has been no less marked than in former years." The progress of the school has been very satisfactory, and it is believed that some of the "older pupils who have been longest in the schools would not suffer in competition with those of their respective ages and opportunities in other schools in the State. Some of them, designing to become teachers, have acquitted themselves so well as to be already useful helpers in the school-room." Each inmate is expected to devote a portion of her time daily to domestic work in some department, under competent supervision. The improvement noticeable in all the industrial departments is especially manifest in the sewing-rooms.

The trustees call attention to the suggestion of the superintendent in reference to a department in which the more depraved may be kept from contact with others, and also to the suggestion in reference to such a modification of the law as will allow the retention, in certain exceptional cases, of inmates beyond the age now prescribed. The necessity of adequate appropriations is also urged upon the legislature. The appropriation for last year was $31.328.57.

HISTORIC REVIEW OF THE PUBLIC-SCHOOL-SYSTEM.*

The cession by the original States, especially Virginia, of lands claimed by them north of the Ohio River was the origin of the public-school-system of Ohio and the other Northwestern States. By one of the provisions of the ordinance of 1785, a thirty-sixth part of every township (640 acres) was expressly reserved from sale "for the maintenance of public schools within said township." These "school-sections" were for a long time the only support or endowment of the public schools. The ordinance of 1787, "for the government of the Northwestern Territory," confirmed the provisions of "the land-ordinance and made the declaration that schools and the means of education shall forever be encouraged." Subsequently two entire townships were granted for the endowment of a university and one entire township for an academy or college. The surface of the State contained 25,576,960 acres; therefore, the provision for education was: for schools, 710,471 acres; for colleges, 69,120 acres—making a total of 779,591 acres.

The whole thirty-sixth part of the surface of Ohio, originally guaranteed in the ordinance of 1785, has been devoted to the establishment and maintenance of public schools in the State; though, notwithstanding this noble grant, it was nearly forty years before a sufficient and permanent system of schools was established.

The early governors of Ohio all urged the subject of education on the legislatures, and various efforts for the establishment of public schools were made. These, however, were ineffectual, and it became evident that, as the lands in their wild state could yield no income, eventually a school-tax must be levied. In January, 1821, an act was passed, authorizing voluntary taxation by school-districts, for the support of schools. This law constituted an epoch in one particular, that of establishing the principle of taxation for the support of schools, but, from various causes, it was inoperative in most sections of the State. In 1825 another act was passed, making the levy of a school-tax imperative throughout the State. The assessment was half a mill on a dollar. In 1829 this was increased to three-fourths of a mill and in 1836 to one and a half mills.

This law was, in fact, the real formation of the Ohio system of public schools. The progress of these schools during the next thirty-five years may be judged by the two following tables, showing the increase of income and of numbers:

Table exhibiting financial progress.

Years.	Total amount of all funds.	Total amount of property.	Per cent.
			Mills.
1825	$29,763	$59,527,336	½
1829	57,750	76,527,336	¾

1852	70	240,152	197,560	437,712
1853	70	.....	.....	.....
1854	75	244,089	209,663	453,752
1855	80	357,547	311,477	669,024
1856	84	297,966	263,349	561,315
1857	88	320,386	282,961	603,347
1858	88	328,628	283,095	611,720
1859	.....	322,253	277,781	600,034

In 1848 the number of enrolled pupils was only 8 per cent. of the population, in 1859 the proportion was 25 per cent., showing how rapidly the people had grown into an appreciation of the necessity for popular education.

Universities and colleges.—The lands granted for the endowment of a university and college were loaned out at an early day when they were worth little; the consequence was that the income from these lands fell far short of the intention. In fact, the larger part of the income of these institutions (at Athens and Oxford) was supplied from tuition-fees and private contributions. Though they have sent out many graduates, it is simply matter of history that they have failed in their object, which was to establish universities. Corporate or private institutions have succeeded far better.

In the mean time the State chartered many other institutions sustained by individual or denominational funds, some of which have grown to be important institutions for higher learning. To understand their incorporation and objects it must be remembered that, up to 1850, a special incorporation was necessary; but, after that, any association might take out a charter, on certain conditions.

From 1803 to 1850, there were chartered in the State, by special acts, 56 universities and colleges. Of these, 29 are now in existence, and several of them are important institutions. There are now 36 institutions in Ohio which properly come under the head of universities and colleges.

Academies and seminaries.—From 1803 to 1860, there were chartered of this kind of schools, 161. Of these only 31 are now in existence, but in the mean time many others have risen up, so that the whole number is about 80. Some of these are chartered and others not. In 1859, the number of academies and seminaries was given as follows: "Academies, 90; teachers, 404; pupils, 8,721." The number of institutions and pupils is now somewhat reduced, but they still form an important element in the education of the State.

In the mean time a new class of institutions has arisen which properly come under this head, although more *special* in their object. These are:

Normal schools and commercial colleges.—There are in the State at least 20 of these, which more than make up the loss of academies, so called. This kind of education is popular, because it professes to teach two things which are valuable in the market: the one how to become teachers and the other how to become men.

Special instruction.—Under this head are included the schools of public and charitable institutions, taught by regular teachers, but confined to and controlled by these institutions. As nearly as can be ascertained they are as follows: the State Reform-School, thirteen orphan asylums, five houses of refuge, and the work-house. In these places education is regularly going on, but they are not included under any other class of schools.

Progress of institutions supported independently of State-funds.—Under this head are

included universities and colleges, academies and seminaries, theologic, law, medical, commercial, private, and parochial schools. The growth of these institutions since 1859 is shown in the following table:

	1859.	1873.
Institutions	279	682
Teachers	965	1,610
Students	30,425	63,000

This is an approximation, but a close one.

Private schools and academies are declining, because they are in immediate competition with the public schools. On the other hand, the colleges and parochial and technic schools are advancing.

HENRY L. HITCHCOCK, D. D.

This eminent educator was a native of Ohio, though Connecticut blood ran in his veins. His father—a lawyer of the State, a Congressman from it, 1816-'18, afterward a judge of its supreme court, and for many years chief justice—had migrated from Connecticut in 1806 to Burton, in Geauga County, after graduating at Yale and studying law at Cheshire. At Burton, Henry was born, October 31, 1813; prepared there for college, and in 1828, being then 15, entered Yale as freshman. On his graduation in 1832, youth of 19 as he was, he took charge of the academy at Burton, where he had begun his studies, and for two years taught successfully. Subsequently studying theology in the Lane Seminary under Dr. Beecher, he was ordained in 1837 pastor of a church at Morgan, Ashtabula County; there made himself a name, and after two years and a half of useful labor was called to the State capital as pastor of the Second Presbyterian Church. Here he remained for fifteen years, an exceedingly admired and faithful minister, his reputation spreading through the State and his influence becoming every year more powerful. Then came an election—which did him honor—to the presidency of the Western Reserve College, where for some years there had been difficulties about management and where a man was wanted who could command wide confidence, restore lost harmony, raise greatly-needed means, and hold the college in a high position. The choice of Dr. Hitchcock for the place was a declaration to the world that he was the wise, good, influential, and respected man the college needed; and his administration justified the judgment the trustees had formed. He entered on his work as president in July, 1855, and continued in it till his death, June 28, 1873, though for the two years before his death he laid aside the presidential name. A great success attended his endeavors to revive the college. Its friends were re-united, its opponents were hushed, its debts were liquidated, and in spite of vast financial troubles, affecting the whole country, $175,000 were put into its productive fund.

His influence with the students, too, was wonderful. His sermons in the chapel won their admiration, his obvious integrity secured for him their confidence, his excellent instructions commanded their respect, and his genially kind courtesy to them gained him their affection, so that no student ever was known to put on him any of those little insults which the officers of colleges sometimes receive.

Twelve years of exhausting labor, however, broke him down, and though nine months of European journeying somewhat recruited him, his old strength never came fully back after 1867. He had to gradually lighten his previously great labors and earnestly desired and sought release from them, but, as no one could be found willing to succeed him while he lived, had to work on till, in June, 1873, an exhausting journey brought him to his bed, never to rise again. His task was done; and failing gradually, he fell finally asleep in the Redeemer he had trusted in, leaving behind him, as the monument of his great labors, a college well established and a multitude of nobly educated youth.

SOLOMON HOWARD, D. D., LL. D.

This other eminent Ohioan was a native of Cincinnati, having been born there November 11, 1811. Dr. Howard began his college-life at Miami University when he was 17, and removing thence to Augusta College, in Kentucky, graduated with honor in 1833, then being somewhat over 22. On his graduation he was elected professor of St. Charles College, Missouri, accepted the position and served in it some time, receiving ordination to the ministry meanwhile. His qualifications as an educator having gained him reputation, he was placed in charge of the Ohio Wesleyan University at Delaware, and served there successfully from 1843 to 1845. Then he became president of the Springfield Female College, acting, also, as principal of the Springfield High School. In 1852 he was made president of Ohio University, at Athens, and for twenty years did noble service there. A broken constitution compelled him to.

remit his labors and seek rest and health in California. It was sought too late, however. Though the airs of California benefited him and eased him, he still went downward, till, in 1873, the strong mind ceased from action and the educator went to his rest.

CHARLES P. M'ILVAINE, D. D., LL. D.

This other great citizen of Ohio died at Florence, Italy, March 12, 1873, at the ripe age of 75. A native of Burlington, New Jersey, a graduate of Princeton in 1816, and afterward for some time rector of Christ Church, Georgetown, District of Columbia, he was, from the outset, evidently destined to distinction. Of noble presence, an eye that kindled as he spoke, a countenance that played with every emotion, a voice that could be musical or thunderous at his will, and a mind of lofty power and thorough culture, he was one of the born princes of the world. In 1825, when only 27, he was made professor of ethics and chaplain at West Point Academy, where his religious influence among the cadets became so great that Army officers indulged alarm lest an undue proportion of the students should become ministers, and be lost to the military service. The perception of this on his part induced him to accept, in 1827, a call to St. Ann's Church, Brooklyn, New York. Delivering here to his congregation the lectures on the evidences of Christianity prepared by him for his classes at West Point, they attracted such general attention that he was requested by the chief citizens of New York City to repeat them there. This was done in the chapel of the University, and great audiences were held enchained by them. These lectures were subsequently printed, and have passed through a great number of editions. He became, in 1831, professor of the evidences of revealed religion in the university, and the next year bishop of the Protestant-Episcopal Church in Ohio, and, *ex officio*, president of the theologic seminary of the Church at Gambier. Removing after some years to Cincinnati, he gave himself, in connection with his other labors, to the publication of important works on the chief theologic topics of the period, which made a great impression. But such work proved too exhausting. Tendencies to apoplexy became threatening, and frequent visits to Europe had to be resorted to, to keep these in check. It was in such a visit that a cold, taken from brief exposure, brought him to his end.

OTHER TEACHERS.

Miss Emma Dubach, a young teacher in the German department of the sixth district of Cincinnati, died during the session of 1872–'73. She is said to have done her work skillfully and well, with a natural tact in management of children and an aptitude in teaching which gave promise of much excellence.

Miss Laura E. Belknap, also of Cincinnati, died during the same session, after eighteen years of faithful service in the schools, first in the regular branches and afterward in the drawing department. Persevering, conscientious, self-sacrificing, she continued her labors even when exhausted nature demanded repose, and only rested from them when labor was no longer possible.

Mr. Hermann Meisner, who had served as a teacher for ten years in Cincinnati, and had risen to a principalship a few months before his death, passed from his labors also in 1873, after having won himself an honorable position by steady, unobtrusive, and honest work, work that looked only to the welfare of his pupils and threw selfish considerations entirely into the shade.

OREGON.

[From report of Hon. Sylvester C. Simpson, State-superintendent of public instruction, for the year ended April 1, 1873.]

DISTRIBUTION OF INTEREST ON THE COMMON-SCHOOL-FUND.

	1871–'72.	1872–'73.
Amount in coin	$19,626 43	$22,953 51
Amount in currency	19,826 28	9,466 24
Total	39,452 71	32,419 75

The distribution for 1871–'72 was the first ever made, and included interest gathered during two years. This accounts for the decrease in the amount distributed for 1872–'73.

FINANCIAL STATEMENT.

Amount apportioned to districts at last apportionment	$49,454 17
Amount of district-tax levied and collected	71,152 04
Amount paid teachers from district-tax	28,865 32
Amount paid teachers from rate-bill and subscriptions	45,640 38
Amount paid teachers from county-funds	80,437 85
Amount of incidental expenses	35,977 65½
Amount paid for building school-houses	2,352 45
Value of school-houses	236,001 10
Value of other school-property	76,238 89

SCHOOL-STATISTICS.

Number of districts reporting	642
Number of legal voters reported	21,547
Number of children of school-age—males, 19,391; females, 18,049	37,440
Increase over last year	928
Average attendance reported	15,329
Number of quarters school was taught	1,002⅔
Average number of quarters school was taught, per district	1.5
Number of teachers reported	607
Average pay of male teachers per month	$47 54
Average pay of female teachers per month	$43 79

The superintendent says: "The foregoing statistics cannot be relied upon as strictly correct. Indeed, there is scarcely a single particular in which they are perfectly accurate, owing to the incompleteness of most of the superintendents' reports. There are probably from twelve to twenty organized and active school-districts in the State from which there are no reports whatever. The average attendance, as appears from the table, is very small, but as many of the districts failed to report their average attendance, these figures fall short of the truth. As an example of the deficiencies of the reports in this particular, it may be mentioned that the second district in the State in wealth and population made no returns whatever excepting the number of legal voters and persons of school-age. Yet this district maintained flourishing schools, with a large attendance, during the entire year. Only three counties report any expenditures in the erection of school-houses during the year, but it must not be inferred from this that no new school-houses were built in the other counties; there was merely a failure to report them. Possibly, in some cases, expenditures for this purpose were included under the head of 'incidental expenses.' Making due allowance for these inaccuracies, the figures probably approximate the truth nearly enough to show something of the condition of public-school interests in Oregon, and also what need as well as room there is for improvement."

SCHOOL-LAW.

The new school-law, which went into force January 29, 1873, provides for a State-superintendent, State-diplomas and certificates for teachers, and a uniform series of text-books. Institutes are to be held yearly in each judicial district and at the State capital.

The State- and county-fund is to be apportioned on the third Monday of March and in September, (optional with the county-superintendent,) and the school-tax is to be three mills instead of two as heretofore. Candidates for county-certificates are not to be required to pass an examination in algebra, but the standard in all other studies is raised. All vacancies in the board of directors are to be immediately filled by election, and the clerk is required to furnish the county-superintendent the names and post-office-address of the directors within ten days after election.

GENERAL CONDITION OF THE PUBLIC SCHOOLS.

The superintendent remarks that, notwithstanding the many hinderances in the way, the public schools are steadily advancing and growing in character and efficiency and the school-system is making as rapid progress as can reasonably be expected, considering the youth of the State, the sparseness of the population, and the lack of proper educational appliances and facilities. County-superintendents generally report that their schools are "in a tolerably flourishing condition."

The great needs of the schools now are good school-houses, apparatus, libraries, higher qualifications on the part of teachers, a tax-levy sufficient to support schools for at least six months in the year, and a larger and more regular attendance.

Several of the county-superintendents strongly recommend the adoption of the principle of compulsory attendance in the school-law and nearly all favor an increase of the tax-levy for school-purposes.

SCHOOL-HOUSES.

Reports received at the superintendent's office show that there are very few public-school-buildings in the State of suitable character, and probably not more than two or three that have been constructed upon improved modern plans and that are furnished with the necessary appliances for teaching. Neither the health, comfort, nor convenience of pupils or teachers seems to have been considered in the selection of sites, the style of architecture, or the choice of furniture. Many of the school-buildings are merely rough "box-houses" or common board shanties. One county-superintendent says that in some of the districts of his county there are barns which are better, more costly, and more comfortable buildings than the school-houses. This assertion is not considered at all extravagant, and it is believed that it might be made with equal truth in the case of other counties. In addition to the inferior character of the school-houses, many of them have been damaged by ill-usage and are in bad condition.

From the reports of county-superintendents it appears that there is not a single school-library in the State and that no school is thoroughly supplied with proper apparatus. A blackboard and some chalk-crayons constitute the entire apparatus of the ordinary country school. The more pretentious city-schools have a few wall-maps and charts and—though very rarely—globes.

VISITING SCHOOLS.

Complaint is made of the apparent lack of general interest in the schools. It is said that, "aside from the county-superintendents, generally nobody in Oregon visits the schools." The teachers universally complain of the neglect of school-directors and patrons in this particular; and the lack of public interest in the schools is regarded as a serious impediment to their advancement. Parents are urged to "*pretend* an interest, even if they feel none. The *pretense* would be some stimulus to both teachers and pupils. The *reality* would help to advance every school in the State."

TEXT-BOOKS.

At the last session of the legislature a law was passed authorizing the adoption of a uniform series of text-books for the entire State. The board of education prepared a course of study and the text-books for each study were designated by the votes of the county-superintendents. These books are adopted for four years from October 1, 1873.

The uniform series has not yet been fully introduced, though the work is proceeding rapidly.

DISCIPLINE.

Corporal punishment is practiced to a greater or less extent in all the public schools in the State, though generally resorted to only after the failure of all milder methods. The best teachers seem to regard a frequent recourse to this method of punishment as an evidence of inefficiency and incapacity to govern.

MORAL TRAINING.

No special attention is given, in the public schools, to the subject of moral instruction. In a few schools it is the practice to read, daily, selections from the Bible. One school is opened with prayer. Aside from these cases, none of the schools have any religious exercises and in none is there any regular instruction in morals. If teachers

are men and women of pure lives and correct habits they will naturally and habitually inculcate proper principles and modes of thought and action among their pupils. But there is danger that where there is no regular stated moral instruction, this important branch of education may be neglected altogether.

TEACHERS' INSTITUTES.

During the school-year ended April 1, 1873, only one teachers' institute was held in the State, and this was abandoned almost immediately after its organization. During the current school-year, four county-institutes and one State teachers' institute have been held, the latter continuing five days. The county-institutes were tolerably well attended and the exercises generally interesting and profitable. It is considered that a very good beginning has been made in this respect.

TEACHERS' CERTIFICATES.

County-superintendents are required, by law, to hold four free examinations for teachers during the year and to "summon to their assistance" two practical teachers to aid in conducting the examinations. No compensation is provided for these assistants; hence this section of the law is almost wholly inoperative. Some of the county-superintendents have made no report concerning certificates granted. The reports received sum up as follows: number of first-grade-certificates granted, 197; number of second-grade-certificates, 288; number of third-grade-certificates, 33; and 40 not classified—making a total of 558.

The amended school-law authorizes the State-board of education, at its semi-annual meetings, to grant to teachers, upon examination, life-diplomas, State-diplomas, (good throughout the State for six years,) and State-certificates of the same grades as numbers 1 and 2 county-certificates, good throughout the State for two years and six months respectively.

When sitting for this purpose the law empowers the board to have not less than four professional teachers to assist it. Under this law the State-board of examination was organized in April, 1873, and the first examination was held in the following July. The rules adopted to govern the examination of applicants and the granting of diplomas and certificates are as follows:

(1) Candidates for life- and State-diplomas will be required, in addition to passing a satisfactory examination in the branches indicated, to present satisfactory evidence of good moral character and of *marked success* in teaching for a period of at least three years, one year of which must have been in the State of Oregon.

(2) To obtain a life-diploma the applicant must answer 90 per cent. of the questions in each branch correctly. To obtain a State-diploma, good for six years, he must answer 80 per cent. of the questions in each branch correctly.

(3) Candidates for State-certificates of the first and second grades must present satisfactory evidence of good moral character and of *marked success* in teaching for a period of six months.

(4) To obtain a certificate of the first grade, good for two years, the applicant must attain 90 per cent. in examination in each study. For a State-certificate of the second grade, good for six months, he must reach 80 per cent. in each study.

EDUCATION OF THE CHINESE.

Rev. George H. Atkinson, of Oregon, says: "The education of the Chinese attracts only private attention and effort as yet, but, like that of the negro, it will gradually press itself upon the public mind. They are slowly imbibing our ideas, imitating our dress, acquiring our tastes, adopting our speech and manners. They are quick to learn our language and literature. One, who began on the 1st of January to learn his letters, now (in July) reads in the Second Reader, spells well, writes a fair hand, and begins to read the Testament. This has been accomplished chiefly in short lessons, once or twice a day, in the intervals of domestic work. He has also attended an evening-school for five hours a week about half the time. The progress of others may not be quite so rapid, but it is generally commendable. Satisfactory reports are received from the Chinese day-school taught at St. Helen's Hall, and from the day- and evening-schools conducted under the auspices of the American Missionary Association. Three or four Chinese Sabbath-schools continue in operation in the city of Portland, with some increase of numbers and some improvement in results. We know of none elsewhere in the State. Private instruction is doubtless given the Chinese in many families. * * * * They are not likely to displace our people, but rather to open wider fields of enterprise. Yet contact with them must affect us and our children. Our safety and our duty alike require their education."

CITY SCHOOLS OF PORTLAND.

Attendance.—The whole number of pupils attending the public schools, exclusive of the high school, is 1,033, with an average attendance of 926 and a per cent. of 89½. In accordance with this statement it is unmistakably evident that through irregular at-

tendance more than one-tenth of the public money is uselessly expended, and, what is of more importance, one-tenth of the time of those who should be benefited is lost.

Twenty-two per cent. of the pupils are in the grammar-department and 16 per cent. in the intermediate, while 62 per cent., or over three-fifths, are in the primary schools.

Course of instruction.—During the last vacation a course of instruction was agreed upon, to take effect at the beginning of the school-year of 1873 and to be carried out as rapidly as the standing of the pupils would admit. Under the present system each teacher has but one grade of pupils, divided into two classes. One year is allowed for the work of each of the six grades. In six years from the time a pupil enters the public schools he will be admitted into the high school, provided he has been successful in passing every examination.

Phonetics, drawing, and the elements of natural science are taught in all the classes of the primary department. Physiology and philosophy have been introduced into the first grade of the grammar-department, and more time and attention will for the future be given by the grammar-pupils to these branches than has heretofore been the case. The natural world will no longer remain a sealed volume to them while they are being crammed with rules of arithmetic, rules of parsing, and lists of names in geography.

Compulsory education.—It is estimated that there are in Portland and its immediate vicinity from 600 to 700 children, between the ages of 6 and 16, who attend no school whatever, of whom, doubtless, 500 should attend school, and probably one-half of this number, at the lowest estimate, do not read and write with any facility. Any system of education which admits such a margin of ignorance to harass and cripple its movements will fail of effecting the great ends of economy and security to the State. A compulsory law is greatly needed. But a "formal protest" is entered "against the use of the word 'compulsory,' which is 'a red rag shaken before the free American people,' to keep their prejudices alive against the most obvious and safe, as it is the most needed, reform of the day." It is proposed to "regula'e" the attendance of children at school. So evident is the right of the State to legislate in this matter, that it is confidently affirmed that school-attendance in Oregon would long since have been regulated, but for the use of an obnoxious word.

Reform-school.—A reform-school-incorporation was organized in Portland, in April, 1873.

Teachers' institute.—The first session of the Multnomah County Teachers' Institute was held in Portland, in July, 1873, continuing two days.

SECONDARY INSTRUCTION.

Information has been received from three schools for secondary education, two of which are for the instruction of boys and one for both boys and girls. With 16 instructors—11 gentlemen and 5 ladies—the attendance is 275 pupils, 187 of whom are boys and 88 girls; 64 study classic and 35 modern languages and 16 are preparing for college.

Among the institutions for imparting such instruction in the State, the Portland Academy and Female Seminary seems to deserve mention, presenting 7 teachers and 145 pupils its catalogue for 1873; its studies reaching up from a primary English course through preparatory, sub-junior, junior, and senior-classes, and the last three embracing the classic and modern languages, while music runs throughout the course.

The Rev. Dr. Atkinson writes also of other institutions thus: "At the Albany Collegiate Institute, which I visited December 1, I found 130 pupils in three departments, besides that of music and book-keeping. Four lady pupils were graduated at the close of last year. The building is large, and rooms commodious, all paid for, and a fund, in notes, pays $600 to $700 per year. The Methodist Episcopal Academy is still sustained and the Roman-Catholic schools are reported to be flourishing. The Bishop Scott Grammar-School is doing a good educational work and St. Helen's Hall is also training a large number of pupils."

The former of the two last-named institutions reports 9 instructors for the year 1873, and a course embracing English, classic, and modern languages, with mathematics, natural sciences, and art. The latter reports 8 instructors and 136 pupils in English, French, and German, with music, drawing, and painting. A philosophic cabinet, a natural-history-museum, and a gymnasium are among its advantages.

THE STATE UNIVERSITY.

The State University at Eugene is not yet opened, the building promised it by the city and county not being completed. It is hoped that it may be ready in 1874.

CHRISTIAN COLLEGE.

The Christian College, at Monmouth, has two separate courses, classic and scientific, the one securing to the students that complete it the degree of bachelor of arts; the other, that of bachelor of sciences. Music is made a specialty, classes being formed in it and exercise in it mingled with the opening and closing exercises of each day.

M'MINNVILLE COLLEGE.

McMinnville College has added to its faculty teachers of music and drawing, and makes the same division of its courses as the Christian College. It offers also to those who desire to prepare for teaching the advantages of a normal department, in which, without extra charge, they may be drilled in all the common English studies of the schools and in the theory and practice of instruction.

PACIFIC UNIVERSITY.

Pacific University presents a college-course, a scientific course, à ladies' course, and a normal course. The standard for admission into these is higher than in some other institutions of the western coast and indicates a disposition to secure a very fair degree of scholarship.

WILLAMETTE UNIVERSITY.

Willamette University appears also to aim at this, and its graduating exercises in the summer of 1873 excited great enthusiasm. It has a classic, scientific, medical, and normal course, together with a musical department.

In all these institutions lady students find admission, and their declared experience is in favor of the union of the sexes in the college-course as well as in the preparatory. The valedictorian at Willamette at the last commencement was a lady, and no one of all the graduates in the country seems to have called forth such applause as she secured.

* The fact that the medical schools are generally opened late in the autumn or early in the winter probably explains the want of returns of students from the medical department of Willamette University, the alumni of which are reported to be 61. Its first medical class graduated in 1869.

† Alumni, 61.

‡ The Agricultural College at Corvallis is reported by Dr. Atkinson to be flourishing, its students, including those in preparatory and partial courses, reaching 100.

BUSINESS-COLLEGE.

One such, at Salem, reports 1 instructor and 74 pupils.

PENNSYLVANIA.

[From report of Hon. J. P. Wickersham, State-superintendent of common schools, for the year ended June 2, 1873.]

Financial statement, showing the financial condition of the school-districts of the Commonwealth, excluding Philadelphia.

RECEIPTS.

From collectors, unseated lands, and all other sources, exclusive of State-appropriation	$6,671,949 93	
From State-appropriation for 1872	447,769 39	
Total receipts		$7,119,719 32

EXPENDITURES.

Cost of instruction	3,424,977 91	
Fuel, contingencies, &c	1,756,111 73	
Cost of school-houses, including renting, repairing, &c	1,477,831 03	
Total expenditures		6,658,920 67
Balance in favor of districts		460,798 65

EXPENDITURES FOR THE STATE, INCLUDING PHILADELPHIA.

Cost of tuition for the year	$4,325,797 47
Cost of building, purchasing, and renting school-houses	1,753,812 36
Total cost for tuition, building, fuel, and contingencies	8,235,120 41
Total cost, including expenditures of all kinds	8,345,836 41
Estimated value of school-property	21,750,209 00

Including $467,132.84, the amount expended in support of the orphan schools, the total sum expended for school-purposes under the direction of the school-department for the year 1873 was $8,812,969.25.

SCHOOL-STATISTICS.

The following figures do not include the city of Philadelphia:

Whole number of districts	2,050
Whole number of schools	14,675
Whole number of pupils in attendance	694,096
Average attendance of pupils	439,393
Percentage of attendance	63
Average length of school-term, in months	6.3
Average cost of tuition per month per pupil	$0 95
Whole number of male teachers	7,866
Whole number of female teachers	9,593
Average salaries of male teachers per month	$41 58
Average salaries of female teachers per month	$32 44
Average number of mills on the dollar, school-tax	7.5
Average number of mills on the dollar, building-tax	4.3
Amount of tax levied	$5,543,985.23
Amount of tax levied and State-appropriation	$6,243,285.23

The following school-statistics are inclusive of the city of Philadelphia:

Number of school-districts in the State	2,050
Number of schools	16,305
Number of graded schools	5,307
Number of school-directors	13,576
Number of superintendents	86
Number of teachers	19,089
Average salaries of male teachers per month	$42 69
Average salaries of female teachers per month	$34 92
Average length of school-term, in months	6.67

Number of pupils	834,020
Average number of pupils	511,418
Percentage of attendance upon total enrollment	61
Average cost of tuition per month per pupil	$0 96

COMPARISON OF STATISTICS WITH THOSE OF LAST YEAR.

Increase in number of districts	22
Increase in number of schools	306
Increase in number of graded schools	309
Increase in number of school-directors	120
Increase in number of teachers	721
Increase in average length of school-term	6 days.
Decrease in average number of pupils	293
Decrease in average number of pupils	24,803
Increase in cost of tuition	$221,523.94
Decrease in cost of buildings, fuel, contingencies, &c	$219,476.31
Increase of expenditures of all kinds	$763.63

"The increase in the length of the school-term is owing to the law of 1872, making the minimum school-term five instead of four months. It is gratifying that with this increase of term teachers' salaries were also increased.

"Nothing shows more strikingly the vigorous growth of our educational system than the continued increase in the number of graded schools.

"The cause of the decrease in the average number of pupils in attendance was the long, cold winter and the great quantities of snow, that almost stopped travel in some parts of the State for days together.

"Our school-houses cost over $1,000,000 less than for the preceding year, thus showing that our pressing wants in this respect have been supplied. Henceforth, for some years, we can direct our chief energies to making improvements in the schools themselves."

SCHOOLS.

Number of graded schools	3,827
Number graded during the year	199
Number of separate schools for colored children	70
Number of schools well classified	9,680
Number in which books are uniform	11,206
Number in which the Bible is read	11,418
Number in which drawing is taught	1,642
Number in which vocal music is taught	2,803
Number in which any of the higher branches are taught	1,423

SCHOOL-HOUSES.

Number of school-houses: frame, 7,997; brick or stone, 3,776; log, 233	12,006
Number built during the year	498
Number unfit for use	1,795
Number badly ventilated	5,475
Number without suitable outhouses	4,658
Number of first-class school-houses	2,134
Number with grounds of sufficient size	5,640
Number with grounds suitably improved	1,201
Number with suitable furniture	5,690
Number with injurious furniture	2,753
Number well supplied with apparatus	1,826
Number without apparatus worth mentioning	5,702
Number in which apparatus was increased during the year	578

TEACHERS' INSTITUTES.

Number of days continued	339
Whole number of actual members	12,302
Number of members engaged in teaching common schools	8,014
Number of instructors and lecturers	478
Received for support of institutes: from county-treasurer, $9,355.92; from members, $3,677.39; from other sources, $5,272.71	$18,306 02
Paid instructors and lecturers	$10,736 38
Paid for other expenses	$5,322 34

RESPECTING SCHOOL-STATISTICS.

To estimate with accuracy the value of a school-system, four classes of facts are indispensable: (1) the number of children to be educated, (2) the number that attend school, (3) the average daily attendance, and (4) the percentage of attendance. In Pennsylvania there are means of ascertaining the three last-named facts, but no accurate enumeration of all the children in the State of school-age. The school-age is between 6 and 21, and the probable number of persons between these ages is now about 1,200,000. Of these there were enrolled during the past year: in public schools, 834,020; in private schools, orphan-homes, colleges, &c., probably 50,000 more—making, in round numbers, 900,000. Of the 300,000 children of school-age not in school, the great majority, without doubt, are between 15 and 21 years of age and have already obtained a certain degree of education; but there are still many thousands of youth growing up to manhood almost wholly ignorant and uncared for. And yet no steps can be taken towards bringing them under the operations of the school-system until it is known who and where they are, what they are doing, and why they have not attended school. It is, therefore, recommended that the legislature make provision for taking a school-census at the time of making the next triennial assessment throughout the State and every third year thereafter.

DISTRICT-FINANCES.

The taxes levied and collected for school-purposes throughout the State last year reach over $8,000,000. All this money comes out of the pockets of the people, and it is a matter of primary importance to them that the management of the school-finances in every district be judicious, economic, and honest. While it is true that the financial trust placed in the hands of school-directors is, in a vast majority of cases, faithfully administered, it must be admitted that somewhat of recklessness, if not dishonesty, is chargeable now and then against the guardians of education. Not one of the duties required by the law can be legally neglected, and yet there are hundreds of districts that overlook one or more of them, and some that habitually overlook them all. As the law now stands, there seems to be no sufficient authority, without recourse to the courts, to compel school-directors to perform all their duties. A change in the law should provide a remedy for this growing evil.

RECUSANT DISTRICT.

There is but a single district in the State that has not now in operation a system of common schools. In 1868 there were 24 recusant districts in 11 different counties, with some 5,000 children of school-age. By the act of that year and the earnest efforts made under it, 23 of these districts have been led to put free schools in operation. It is hoped that the remaining district will not long remain in such an isolated position.

The facts now stated suggest an important circumstance connected with the history of the common-school-system in this State. The earlier laws establishing and improving the system of common schools left it to a majority of the people to say whether they would have free schools or not. Districts adopted the system, therefore, only as fast as the affirmative votes of a majority of citizens could be procured. By the year 1849 so many districts had put the law in force that it was made general, but no means of enforcing it in recusant districts were provided, except the loss of the State-appropriation. In 1868 24 districts still had no free schools and few of any kind. Now there is but one of this class, all the others having, by the free suffrages of a majority of the people, been induced to put the system in operation.

DARK PLACES.

The bright places, and there are many of them, will doubtless attract of themselves the notice they deserve, and it is considered advisable to point out a few that are dark.

Unimproved school-grounds.—Out of the grounds attached to the 12,137 school-houses in the State only 1,201 are reported as being suitably improved, *i. e.*, neatly fenced, free from rubbish, planted with shade-trees, and properly prepared for play-grounds. Doubtless many grounds not included in the list of those suitably improved have one or more of these requisites, but every school-ground should have them all.

Bad ventilation.—Reports show that 5,475 school-houses have no better means of ventilation than apertures in ceilings, transoms over doors, or raising and lowering windows furnish. Many indeed have not even these imperfect modes of purifying the air; and yet pure air is a prime necessity for health as well as comfort.

Unsuitable outhouses.—It is not a mark of high civilization that 4,658 school-houses are without these necessary appendages, of a suitable kind, many hundreds of them indeed without any at all.

Want of apparatus.—Teachers need tools, but 5,702 school-houses have no school-apparatus worth mentioning; none at all, except, perhaps, a small blackboard or a single map or chart.

Want of qualifications on the part of teachers.—Of the 15,003 teachers receiving cer-

tificates to teach during the year, only 374 were found to have a "thorough knowledge of reading, writing, arithmetic, geography, and grammar, and that practical preparation for their profession which insures success."

Negligent directors.—The law requires directors to visit the schools under their charge at least once a month. Only 3,725, less than one-fourth, were thus visited.

TEACHERS' INSTITUTES.

Institutes for the improvement of teachers were held during the past year in every county in the State. They were attended in the several counties by 11,917 actual teachers, and 385 teachers were members of the institute of the city of Philadelphia, making an aggregate of 12,302. This number exceeds that of any former year. In addition to the teachers in attendance, there were present several hundred honorary members, school-directors, and friends of education, and probably 100,000 spectators.

No one acquainted with their working can doubt that these institutes accomplish much good. Their greatest defect seems to be a want of practical, systematic, professional instruction, and this is not without a remedy.

CONFERENCES OF SUPERINTENDENTS.

It has been customary ever since the establishment of the office to hold periodically meetings of the county-superintendents. These meetings, continuing in session but a day or two, did not always prove very fruitful of good. In order to avoid the forms and ceremonies of a large convention and to bring those interested face to face with the most important educational questions demanding consideration, a series of private conferences, each composed of the officers of the school-department and the superintendents of a particular portion of the State, was held during the months of May and June. Nearly all the superintendents were in attendance.

Concerning the results of these conferences the State-superintendent indorses what then appeared in the official department of the school-journal: "Much was expected from this form of consultation, but the results have surpassed all expectations. Never before have such fruitful educational meetings been held in the State. Never before have school-officers obtained so clear a view of what needs doing. And never before have such efforts been made to organize the forces that are wanted to do it. Unless we greatly miscalculate their significance, these conferences will mark a new era in educational progress among us."

GENERAL SURVEY OF EDUCATION IN THE STATE.

The common-school-system provides an elementary education, instruction in reading, writing, arithmetic, and the first principles of geography and grammar, for all the youth of the State who make voluntary application therefor. The administration of this system is still, in many respects, imperfect; but it is being rapidly improved and is bestowing untold blessings upon generation after generation of children. The work done by the common-school-system being generally well understood, it is proposed to make it the starting-point of the contemplated survey.

BELOW THE COMMON SCHOOLS.

Starting, then, with the common school, is there any educational work to be done below it? Does it reach with its light the darkness that lies at the bottom of our social structure? The following facts will answer the question: according to the late United States census, there are in Pennsylvania 31,512 youth between the ages of 10 and 21 years who cannot write, and, of course, can read very imperfectly, if at all; and as shame would naturally prevent many from reporting their ignorance, this number is, without doubt, much below the reality. It is believed that there are not less than 75,000 children in the State who are growing up not wholly without the ability to read and write a little, but altogether untrained and virtually ignorant.

PRESENT LAW INOPERATIVE.

After a thorough investigation of the matter, the conclusion is reached that the laws forbidding or regulating the employment of children under certain ages are in most cases a dead letter.

NUMBER OF UNTAUGHT CHILDREN AT WORK.

Many thousands of such children are to be found throughout the State, employed in manufacturing and mining, without schooling and, what is of more consequence, without that discipline which is necessary to constitute independent, self-governed American citizens. The extent of the evil will be better appreciated when it is added that the late census shows there are 75,643 children between the ages of 10 and 15 employed in various manufacturing and mining industries. At least one-half of these children receive no education or none that is of much value to them.

If to these thousands of youth are added the 190,844 adults who cannot write their

own names, we have a stratum of ignorance and its concomitants underneath our social structure that seems to threaten the whole with decay and death. It is in this soil that crime and penury grow. From this field comes the dreadful crop that is harvested in poor-houses, houses of refuge, jails, and penitentiaries. This is to-day the deepest stain on our free institutions. Can it be removed? Can this illiteracy be prevented? Can these neglected children be reclaimed? From what is known of the uplifting, regenerating power of a right education, it is believed that 90 per cent. of even the worst of them can be. Testimony to this is borne by every home of the friendless, reform-school, and house of refuge in the country.

But the State is doing little or nothing in this field. Only a single county is known to have made separate provision for destitute, friendless children. Private benevolence supports some thirty-five institutions employed in this work, with an attendance of about four thousand and an annual expenditure of about five hundred thousand dollars. But this work still leaves undone much that ought to be done. A few only are cared for, while the many are left to curse society with their ignorance and crime. A compulsory law, fining and imprisoning parents and guardians for not sending children to school, would not be enforced, and, if enforced, could not cure the evil.

REMEDIAL SUGGESTIONS.

It is therefore recommended that a general law be passed making it the duty of all parents, guardians, and employers to see that all children under their control attend school for a certain number of months in the year up to a certain age; that there be established in every county, or in several counties formed into a district, a home for friendless children or an industrial school, to be governed in its main features in the same way as such institutions under private control are now governed; and that it be made the duty of school-directors to see that the law in reference to attendance at school is obeyed, and if not, after proper notice and warning, let them exercise the power of sending the children to the district-home or school, compelling those responsible for the neglect to pay, in whole or in part, the necessary expense.

This is believed to be the only plan that is feasible and sufficiently comprehensive to cover the whole field. A number of counties have taken preliminary steps looking in this direction. The State should now take hold of the matter and convert these forming plans into regular systems.

ABOVE THE COMMON SCHOOLS.

The school-superintendents of the State report 1,433 schools in which the higher branches are taught. The average number of pupils studying the higher branches in each of these schools does not exceed 20, which would make the whole number 28,660. If to this are added 2,000 for the city of Philadelphia, we have an aggregate of 30,660, or about one in thirty of the children in the common schools studying one or more branches beyond the mere elementary course prescribed by law.

According to the late census, which in this respect does not differ widely from the reports of the superintendents, there are in the State 138 academies, with 10,987 pupils, and 400 private day- and boarding-schools, with 16,100, the number of pupils in both classes of schools being 27,087. If half these pupils study the higher branches—and that is a high estimate—it gives 13,594 as the number of "upper" scholars in this class of schools. An addition of 2,000 may be made from the normal schools and normal institutes.

Summing up, we find some 45,000 out of the 1,200,000 persons of school-age in the State, or out of the 900,000 children attending school the past year, who are engaged in the study of one or more branches beyond the elements. The number of those who will pursue to any considerable extent a liberal course of learning is much smaller. Small as the proportion appears, it is believed that there never was a time in the history of the State when so many young persons, relatively to the population, were studying the higher branches as now. Most of the old classic academies have died out, but their place is supplied by the graded schools, high schools, normal schools, and a new race of academies and seminaries. Not so large a proportion of students, perhaps, in these "upper schools" study Latin and Greek as was formerly the case, but, in accordance with the spirit of the times, they are studying the sciences instead. Not so large a proportion, perhaps, go from them to the colleges to pursue a course of study in the classic languages, but proportionally many more seek further instruction in scientific and technic schools.

GRADED AND HIGH SCHOOLS RECOMMENDED.

Two methods for the advancement of higher education are suggested: (1) Encourage in all proper ways the grading of public schools wherever they can be graded and the establishment in connection with them of high schools and departments for higher education. The number of graded schools has been more than trebled within the last ten years, and this rate of growth must be kept up. It would be a judicious expenditure of money to grant a special appropriation out of the common-school-fund to every

public high school. (2) Academies and seminaries, when coming up to a certain standard, should be recognized by legislative enactment as filling an important place in the system of education that cannot otherwise be occupied. It is believed that by judicious legislation, without any expenditure of money on the part of the State, some hundreds of academies and seminaries might be made to work in entire unison with the common-school-system, being to a certain extent under the supervision of its officers and fed by pupils from its ungraded schools.

Above all, the people must be enlightened with respect to the value of higher education. The fact that not more than 5 per cent. of our youth take a single step beyond the common ungraded school-course shows a public sentiment that must be changed, and quickly, if Pennsylvania is to hold her proper rank among the States that are advancing all around her.

PHILADELPHIA.

[From report of Hon. H. W. Haliwell, secretary of school-board.]

Philadelphia has much connected with her system of public schools of which she has a right to be proud. In 1818, sixteen years before the adoption of the general law of the State establishing free schools, she put in operation her present system, and her example did much to stimulate State-action in relation to the subject of popular education. Some of her leading and most public-spirited citizens formed a society for the special purpose of promoting the spread of public schools, and, as an organization, it continued for years to hold meetings, make reports, pass resolutions, and promulgate facts—seed that eventually grew and ripened into fruit in the passage of the school-law of 1834.

Growth of free schools.—The system of free schools planted in Philadelphia more than half a century ago has grown with the growth of the city, until now it embraces 425 school-houses, 1,742 teachers, 148,511 pupils, and, excluding the scholars of the night-schools, an average attendance of 72,025. The city expended during the past year for school-purposes the sum of $1,381,460.54 and the value of its school-property is not much less than $5,000,000. The school-houses, for comfort and convenience, are equal to those of any other city in the Union. The list of controllers and directors contains the names of some of the most distinguished citizens. The boys' high school is usually attended by about 600 students and is one of the best-managed institutions of the kind in the country. The girls' high and normal school is deserving of the highest praise.

Evening-schools.—Twenty-nine night-schools are open during the winter-season, for all, without regard to age, sex, or color, who desire their advantages and are unable to attend the day-schools. The number of scholars during the past year was 8,587, including 596 in the school for artisans.

School for artisans.—This school, made up mostly of practical mechanics from the mills and shops of the city, has been in operation for several years, with a good attendance and good results. The following branches are taught: practical mathematics, mechanic drawing, free-hand drawing, commercial arithmetic, penmanship, anatomy, physiology and hygiene, physics, (with special reference to the steam-engine,) and chemistry. A well-planned course of study, including vocal music and drawing, has been adopted for the schools of all grades.

More high schools needed.—But as an organization the system needs some amendment in the following respects: (1) The opportunities of obtaining a higher education are too limited. One high school for boys, accommodating 600 pupils, is not enough, and the want can scarcely be supplied by adopting the costly expedient of advanced departments in the grammar-schools. The St. Louis plan of branch high schools, located in different parts of the city, seems much better adapted to the end. (2) The girls' high and normal school should be made strictly a professional school for the training of teachers, and if the authorities are not yet ready to educate boys and girls together, a high school or several high schools for girls should be established. No one institution can perform well the functions of a high and normal school. (3) The functions of the local boards of directors and the central board of control should be completely harmonized. (4) The school-taxes should be levied and collected as such, and be kept as a separate fund, to be drawn upon at the discretion of the proper school-authorities, who should be held directly responsible for all expenditures. (5) The most pressing educational want of Philadelphia is better supervision. The city should have a general superintendent, and if, in addition, the principals of the grammar-schools or other competent persons were made sectional superintendents, it would constitute an unequaled system of supervision. (6) The time has come when the wisdom of a school-organization in Philadelphia separate from that of the rest of the State may well be questioned. Philadelphia has special school-necessities which must ever be met by special provisions of law. But all these she could have and still allow her system of schools to be organically connected with that of the State. It is believed that neither party would lose anything and that both would be gainers by such a union.

PITTSBURG.

[From report of Hon. George J. Luckey, city-superintendent.]

No city in the country has made more rapid progress in her school-affairs within the past half-dozen years than Pittsburg. Her system is now well organized, embracing a central and local boards of directors, a city-superintendent, 324 teachers, and 19,829 pupils, well-graded schools, and a high school for both sexes, a commercial department, and a department for the training of teachers, good school-houses, (that used for the high school being the best in the State,) school-property valued at $1,816,300, an institute for the improvement of teachers, night-schools, and a public school for the deaf and dumb. Pittsburg taxes herself very heaviiy for school-purposes; but the sentiment of her people is sufficiently enlightened respecting the value of education to sustain those who make judicious, if large, expenditures in that behalf.

Industrial school.—One thing she needs, and that is an industrial school for neglected children, with authority to gather them in from street and alley, from cellar and garret, and care for them as their parents will not.

SECONDARY INSTRUCTION.

What has been so well said by the superintendent, under the head "Above the common schools," almost exhausts this topic for the State. Still, in addition to the interesting information from his report, it may be noted that 47 schools for secondary instruction made returns in the autumn of 1873. Of these, 17 are for the exclusive education of boys, 11 of girls, and 19 for both sexes. The aggregate attendance was 4,394 pupils—2,525 boys and 1,869 girls—with 317 teachers, 154 of whom are gentlemen and 163 ladies. Of the pupils, 953 were pursuing the study of classic and 617 modern languages; 516 preparing for college and 176 for the scientific course. In 40 of these schools drawing is taught and in 36 music; 29 own libraries, ranging in extent from 20 volumes to 3,000.

Besides the above, six schools devoted especially to the work of preparing pupils for college report an aggregate of 493 such in collegiate classes, 183 of whom are engaged in classic studies and 323 in scientific, with 488 additional in subordinate classes. In three of these schools the pupils are classified as follows: in advanced classes, 64; in senior, 43; in junior, 83; in middle, or third, 45; in lowest, or fourth, 29. In the remaining schools there are 50 pupils in classic and 185 in scientific studies. Nazareth Hall, a well-known seminary of the Moravians, reports 125 in subordinate classes, giving no note of any in superior ones. All these schools have libraries of from 150 to 500 volumes. Three have chemic laboratories, two cabinets of natural history and philosophy and gymnasia for the physical training of their pupils.

NORMAL SCHOOLS.

These schools continue to flourish. In addition to the six reported as in operation a year ago there is is now a seventh, located at Shippensburg, Cumberland County. Its buildings are, all things considered, the best of the kind in the State and the prospects of the school seem to be very promising.* Buildings for three more schools are in course of erection at California, Washington County; Indiana, Indiana County; and Lock Haven, Clinton County. The State has already aided the projects at California and Lock Haven to the extent of $25,000 each and that at Indiana to the extent of $15,000. All these enterprises will probably go into operation as State-schools during the coming year. Under the law of 1857 there can be but two more schools, making twelve in all. The law, however, might be so modified as to admit to its benefits the normal school of Philadelphia. Philadelphia now helps to support the State normal schools, but receives no aid for her own. If the city were constituted the thirteenth normal district this injustice would cease.

The original policy concerning normal schools has undergone a change. The law of 1857 simply contemplated the establishment of a certain number of private institutions for the training of teachers under some general State-regulations. The State at first made no appropriations to them and designed to make none. Subsequently, upon application made at different times, a sum amounting to $15,000 was appropriated to each school then recognized under the law. The amount of appropriations made to the several schools, excluding all appropriations made in aid of students, now stands as follows: Millersville, $15,000; Edinboro', $25,000; Mansfield, $35,000; Kutztown, $25,000; Bloomsburg, $35,000; West Chester, $25,000; Shippensburg, $35,000; Califor-

*The new building of the normal school at Shippensburg is an elegant brick edifice four stories high and has 213 rooms, with a capacity for boarding and lodging 300 pupils and for instructing 800. It is on an elevated site, which overlooks the town and commands a fine view of the neighboring country. It is heated with steam, lighted with gas, and furnished throughout with improved furniture. The inauguration-ceremonies were held on the first day of the first term, April 15, 1873, when addresses were delivered by Henry Houck, deputy State-superintendent of public schools; Hon. John Eaton, jr. United States Commissioner of Education; and other noted educators. The school opened with 300 pupils and the aggregate enrollment for the first term reached 314. Of the 217 normal pupils, a large majority have been already teachers and a still larger number intend to graduate in the professional course and follow teaching as a life-work.

nia, $25,000; Indiana, $15,000; Lock Haven, $25,000. The State has now more money invested in some of the normal schools than have individuals and about as much in others, and a policy has been forced upon it, not at first contemplated, of demanding a direct voice and vote in their management. This policy, or something equivalent, should be adhered to in making all future appropriations to normal schools. It is the best way of securing both efficiency in the schools and safety to the interests of the State.

The legislature of 1873 enacted that there should be appropriated "for the several State normal schools, organized and accepted as such under the laws of this Commonwealth, the sum of $50,000, to be distributed by the governor, the superintendent of common schools, and the attorney-general, on such terms and conditions as they may determine, looking to the interests of the State as well as the welfare of the schools," and "all proceedings of the above-named officers under this section to be reported to the legislature in the next annual report of the superintendent of common schools."

The conditions of the act were accepted by the authorities of the State normal schools at Edinboro', Mansfield, Kutztown, Bloomsburg, and West Chester. Those of the State normal school at Millersville declined to accept them. The $50,000 were, therefore, distributed equally among the five schools above named, these being the only ones under the act entitled to it. The terms and conditions of the act were fully complied with by the several schools before the payment of the money.

At a meeting of the principals and boards of trustees of the State normal schools, held at Harrisburg, December 2, 1873, a draught of a new supplement to the normal-school-law was discussed, amended, and finally adopted for presentation to the legislature. It provides (1) that, while the existing normal-school-districts shall remain as now legally constituted, there may be established in the districts without them other normal schools, which may become State-institutions in the manner and on the conditions prescribed in the act of May 20, 1857, and its supplements; (2) that all State-appropriations made directly to normal schools shall be distributed by a commission, to consist of the governor, State-superintendent, and attorney-general, on such conditions as to protect the interests of the State and do exact justice to the several schools; (3) that the board of examiners to examine the graduating classes of the several State normal schools shall consist of the State-superintendent or his deputy, of three county-, city-, or borough-superintendents, (one of these a graduate of a State normal school,) and of the principal of the school in which the examination shall be held; and (4) that no person shall graduate at such a school or receive a State-certificate as a practical teacher unless by the affirmative votes of four out of these five examiners.

COLLEGES.

The superintendent says: "The census-returns give Pennsylvania 6 universities and 33 colleges, with 349 teachers and 6,357 students, among whom are 1,470 females. There are in the State more than thirty-nine institutions with the corporate powers of colleges; but scarcely more than one-third of that number possess full collegiate rank.

"The catalogues of the various colleges show that not more than one-third of the whole number of students are in the regular college-courses. But, in comparison with past years, this is not discouraging. The number of such students, relatively to the population, has increased and is increasing; and more of our youth are preparing to take a college-course than ever before. The colleges are generally preparing to meet this increased demand.

"Within six or eight years some five or six new colleges have been established, some of which have been provided with fine buildings and liberal endowments. During the same period, the money expended in college-buildings and endowments cannot be less than $2,500,000.*

"But the colleges need strengthening. Their students should be greatly multiplied. The State is lowered in position and dwarfed in every way by the want of men of liberal learning and broad, generous culture among her citizens.

"With respect to colleges, the following policy is suggested: (1) the legislature should grant no more charters for colleges without requiring those asking for them to bring their institutions up to the full rank of a college; (2) some way should be pro-

* Within the past year the University of Pennsylvania has erected, in West Philadelphia, one of the finest structures for educational purposes to be found in America.

Lafayette College, through the munificence of Mr. Ario Pardee, has built Pardee Hall, for the scientific department, at a cost of over $250,000, which is in addition to the $200,000 given by him for the foundation of the scientific school and to other donations in aid of it. This fine structure, imposing in external appearance, complete and elegant in its internal arrangements, heated throughout with steam and lighted with gas, is built of Trenton brown stone, with trimmings of light Ohio sand-stone. Its mainor central building is five stories in height, 53 feet in front, and 88 deep, and, with its extensive wings, the entire length of front, in a straight line, is 256 feet.

Franklin and Marshall College has enlarged her chapel and erected a fine academy-building on the college-grounds.

Washington and Jefferson and Waynesburg Colleges and Lincoln University have new buildings in process of erection. Improvements are also going forward at several of the other colleges, and additions have been made nearly everywhere to apparatuses, libraries, and museums.

vided for drawing a line between colleges worthy of the name and those that are not; and (3) more intimate relations and more exact conformity in courses of study should be brought about between the colleges and the public high schools, from which the great majority of their students must hereafter come.

"The most important problem now demanding solution by the friends of education in the State is the organization of all educational agencies into one system. There is nothing in the nature of the case to prevent the union, so far as is necessary for all practical purposes. Starting with the primary school, the boy should find a continuous grade, ascending step by step to the highest seat in the college or the university."

COLLEGES FOR WOMEN.

Sixteen institutions, exclusively for women, report, with more or less completeness, their statistics for 1873. An aggregate of 1,267 pupils are reported, 669 of whom were in collegiate and 321 in preparatory departments, while three colleges neither give the number of their pupils in total nor in any department and four give the total number in attendance without specifying their grades or whether in collegiate or preparatory departments. The classification of the pupils, as far as given in the different collegiate years, was as follows: in freshman, 146; sophomore, 131; junior, 69; senior, 75; in partial courses, 130; and in post-graduate-studies, 12. There are 227 instructors, 84 of whom are gentlemen and 143 ladies. Music, drawing, painting, French, and German form a part of the course in all but two of these institutions, in one of which French alone, and in the other German alone, is pursued; to these Italian is added in four, Spanish in one, and three teach all four languages. Chemic laboratories and philosophic cabinets are reported in 8 of these colleges, natural-history-museums in 7, an astronomic observatory in 1, art-galleries in 2, gymnasia in 9, and in 13 libraries, ranging in extent from 250 volumes to 4,700.

PROFESSIONAL INSTRUCTION.

Law.—Besides the law-course of the University of Pennsylvania, which enjoys the skillful supervision of Judge Sharswood, a peculiarly accomplished jurist, large numbers of experienced attorneys receive into their offices special students and give them the benefit of personal supervision of their studies and of that practical acquaintance with the forms of law which grows out of daily observation of them. For this class of students more particularly, two reforms have been adopted by the Philadelphia bench and bar, at the suggestion of the board of examiners. In the first place, it is now necessary that law-students, before being registered, should pass an elementary examination on all the branches of a good English education and show themselves sufficiently prepared and qualified to commence the study of the law. Then there is a prescribed course of reading laid down by the examiners and approved by the court, so that students will not be left to wander at will through the mazes of the law or to pick up here and there some knowledge of practice merely, without any sound information as to the principles and reasons that lie at the bottom of all the ins and outs of law.

The law-school of the Lincoln University is especially designed for the colored race, though others are not excluded.

Medicine.—The medical schools of Philadelphia have long had a high reputation. The late war greatly thinned the crowd of students that had been attendant on them; but since the conclusion of it both the Jefferson Medical School and that of the University of Pennsylvania have had their halls again continually crowded. The latter is to have its exercises in the future in the new buildings of the university in West Philadelphia, where on one side a hall is to be erected for its special use and on the other a hospital, which will be under its direction. The Woman's Medical College steadily grows in favor and turns out many useful female practitioners. The Hahnemann College is well officered, and combines now in itself the strength of the two homeopathic schools which previously existed. The two dental colleges of Philadelphia and the College of Pharmacy of the same place stand among the first of their class in the United States. The medical school at Lincoln University, like the law-school, is mainly for colored students.

Theology.—The theologic schools enumerated in the table are all respectable, in some cases have very able faculties, and represent almost all the prominent denominations in the country. The Crozier Seminary has a remarkably fine location on the heights which overlook the town of Chester and command a wide view of the valley of the Delaware, from Philadelphia to Wilmington. The Philadelphia Divinity School of the Protestant-Episcopal Church is also highly favored in the enjoyment of a choice location in the most elegant part of West Philadelphia. The Theological Seminary of the Lutheran Church in Philadelphia looks out, too, from beneath the shadow of the finest church of the denomination in the city, on the playing fountain and delightful shade of the finest of the city-squares. One of the theologic seminaries of the Roman Catholics has a kindred location beside another of these squares, while another is in an improving suburban locality, which must grow more and more attractive.

Technics.—The Polytechnic College of Pennsylvania and the scientific departments of Villanova College and the University of Pennsylvania afford to Philadelphia students the opportunity for full instruction in the physical sciences and in civil and mechanic engineering, with rich resources for practical information in the great laboratories and machine-shops with which Philadelphia abounds. In the same line, the Lehigh University, instruction in which is made free by the generous liberality of Hon. Asa Packer, its originator, and the Pardee Scientific School, at Easton, train students amid the great iron-works, zinc-factories, railroad-engine-houses, and immense coal-transportations of the Lehigh and Delaware Valleys. The Agricultural College, now the Pennsylvania "State College," is reported by its board of visitors to be in excellent condition and doing a better work than ever previously for the training of agricultural and scientific students.

The State-superintendent refers also in his report to the following schools, additional to the above-mentioned:

The Western University of Pennsylvania, which has at Pittsburg, in full operation, a scientific department and departments of civil and mechanic engineering.

The Night School for Artisans, under the public-school-authorities of Philadelphia, and noticed among its schools, attended last year by 596 students, 297 of whom were over 21 years of age.

The Pittsburg high school, which has a department of technic instruction in successful operation.

Schools of design for women, of which there are in operation two, one in Philadelphia, the other in Pittsburg, with a course of from two to four years.

The Academy of Fine Arts, located in Philadelphia, and at present in partial suspension for want of a building, though its instructions are continued.

The Academy of Natural Sciences, at the head of all such institutions in America, with a magnificent museum and a fine library. A new building is in process of erection for it.

Wagner Free Institute of Science, Philadelphia, designed to be made a first-class technologic college.

The Franklin Institute, Philadelphia, which, ever since its establishment, in 1826, has done a good work for technic science in Philadelphia, and instructs over 250 pupils yearly in mechanic, architectural, and general drawing.

And, not the least important, the Mechanics' High School, authorized by act of the legislature at its last session, to afford the sons of mechanics and working men a fair opportunity to obtain a scientific and technic education. Its board of trustees has under consideration the question whether to establish a distinct school or departments for technic training in connection with the public high schools, and the adoption, in some proper way by the State, of the facilities for such instruction now furnished by a number of the colleges and universities.

With the view of strengthening the schools of science and art already established and promoting the growth of others, the adoption of the following course of action is respectfully recommended:

(1) That provision be made for introducing free-hand and mechanic drawing, as rapidly as may be found practicable, into all the public schools in the State. In addition, the elements of the natural sciences might be generally taught with great advantage.

(2) That schools for artisans, like that in Philadelphia, departments for technic instruction in connection with high schools, like that in Pittsburg, or a plan of instruction partaking of the valuable features of both be established by the public-school authorities in all the large cities and towns of the State.

If the policy indicated in these two propositions be adopted, it will impart all the needed strength to the higher technic institutions, for it will fill them with students.

BUSINESS-COLLEGES.

Nine of these institutions appear in Pennsylvania: at Villanova College, Meadville, Philadelphia, Pittsburg, and St. Vincent's College. The returns from four of these are quite imperfect, while from two no return for 1873 appears. Five give an apparent aggregate of 40 instructors and 1,579 pupils.

* Apparatus.

† Information comes through the Bellefonte Republican of February 4, 1874, that, on application of the trustees of the Agricultural College, the court of Centre County has changed the name of this institution to that of Pennsylvania State College.

‡ Instruction at the Franklin Institute is given by lectures, and there are no regular classes.

§ Supported by the founder, Hon. Asa Packer.

GIRARD COLLEGE FOR ORPHANS, PHILADELPHIA.

The report of the directors of city-trusts for 1873 states that during the year 63 boys were admitted to this college and 60 left it, the number remaining being 547. The total number admitted during the twenty-six years of its existence has been 1,761, most of them coming from poor homes, from which, at least, one parent had been taken.

The boys after entering the college are, for about two years, under the care of governesses, one such being put in charge of a section of about 40 boys. An intelligent supervising governess aids these sectional ones in eradicating evil habits and imparting religious and moral instruction. The formation of habits of prayer is encouraged by these good ladies and also the committing to memory of selected portions of Holy Scripture. Five prefects, aided by an experienced supervising prefect, have charge of the larger boys when out of school and do what they can to guide them aright, as well as to restrain them from wrong-doing. Twelve women and four men have them beneath their care in school-hours, three of these women giving part of their time to instruction in reading and elocution and in the French and Spanish languages, while two of the men teach vocal and instrumental music. The elder pupils form a military

battalion of college-cadets, and the benefit to health and manly bearing derived from the drill to which these are subjected has been so great that, with a view to still further improvement in this line, it is proposed to introduce a course of calisthenics, to be extended to all the pupils of the college. By such means, together with the use of every hygienic precaution with respect to ventilation, food, clothing, and the care of excellent physicians, the greater portion of the pupils come to the enjoyment of sound health and vigorous constitutions, although more than a third of their fathers have died of consumption and many of the mothers have been similarly diseased.

PENNSYLVANIA INSTITUTION FOR DEAF AND DUMB.

This is located at the corner of Broad and Pine streets, Philadelphia. The report for 1872, published in 1873, gives the total number of pupils for that year as 265, of whom 38 were dismissed and 1 died, leaving the number at the close of the year 226. Of the whole number, 16 were from the State of New Jersey and 7 from Delaware. Notwithstanding a great prevalence of small-pox in the city during 1872, the general health of the inmates of the institution continued remarkably good, only two or three cases of serious illness having occurred. One of these, a case of malignant small-pox, terminated fatally, the only one in all the year. Nothing besides has occurred to prevent the steady prosecution of the work to which the institution is devoted. In carrying this forward a new teacher has been employed for a new class of girls received. The usual course of mental training has been pursued and in the shops the instruction in shoe-making and tailoring has gone forward with a fair measure of success. Of the 38 pupils dismissed during the year, 36 are said to have gone out with good prospects of self-support, while of those that remained the deportment has been good, and the interest taken in their studies has resulted in a degree of improvement creditable to them and encouraging to their teachers. The proceeds of their work in the shoe-shop, exclusive of the cost of material, amounted to $900 for the year, and in the tailor-shop to $800—a total of $1,700. To illustrate the benefit of the instruction thus received, it is mentioned that one of the shoe-makers, an orphan lad of 16, who left the institution on the last Wednesday in June, paid it a visit in the latter part of August, to show what he had already accomplished. He was dressed in a full suit of new clothes costing $21, which he had bought with money earned with his own hands at his trade since leaving school, having $4.50 of his earnings still remaining in his pocket.

The girls have all received instruction in the use of the needle and many of them in the art of operating the sewing-machine. Their own clothing and the underclothing of the boys have been made by them, and they do the other plain sewing of the institution, some also displaying a good degree of taste in dress-making and milliner-work.

PENNSYLVANIA INSTITUTION FOR INSTRUCTION OF THE BLIND.

This noble school, like that for the deaf and dumb, is in Philadelphia, and occupies a square of ground between Race and Summer and Twentieth and Twenty-first streets, which it nearly fills with its work-shops and school-buildings, the dwelling of the principal being at the northeastern corner. The estimated value of its property is $195,000 and its average annual receipts for five years past $73,886.48, of which $5,262.02 come from New Jersey for the support of pupils from that State and $1,007.35 from Delaware for a like purpose, with $2,570.96 from individuals, either as gifts or for support of students. The State allows it $33,500 annually for State-pupils.

The whole number admitted since the opening of the institution has been 803; the number present in 1873 was 194. Besides as full a course of instruction in the ordinary branches of education as can well be given to the blind, including music, such inmates as require it are taught handicraft-occupations, as broom-making, brush-making, mat-making, mattress-making, cane-seating, carpet-weaving, bead-work, knitting, hand- and machine-sewing.

The number of volumes in the library, largely in raised letters for the blind, is 700.

STATE TEACHERS' ASSOCIATION.

The twentieth annual session of this body was held in Library Hall, Pittsburg, on Tuesday, Wednesday, and Thursday, August 12–14, 1873. The subjects presented and discussed were: "Every-day logic," "The physical features of the Mississippi Valley"—at the head of one of the branches of which Pittsburg is situated—"The superintendency," "Natural science in our schools," "Conflict between science and theology," "What can public schools do to quicken the public conscience?" "Our normal-school-policy," "The place of moral instruction is our public schools," and "Sound as a force."

A brief abstract of the paper on "Our normal-school-policy," by J. A. Cooper, is all for which space can now be found. This opens with a statement that the normal-school-policy of Pennsylvania is in some respects peculiar and unlike that of any other State in the Union. Some features that mark it are thus noted:

(1) "It is a permissive policy: The original act of the legislature, instead of providing for the establishment of schools by appropriating money to erect them, says,

'Whenever any number of individuals more than thirteen shall erect, &c., then such schools may be recognized as State normal schools.'

(2) "It is a comprehensive policy: The law divides the State into 12 normal-school-districts and provides that one school may be established in each district; but no school can be recognized without accommodations for 300 pupils. Twelve schools, with capacity for 300 students each, will furnish opportunity for 3,600 pupils to receive instruction, sufficient, it is thought, to fill the common schools with all the teachers they may call for. It is comprehensive, too, in reaching every school-district, by providing that each one may send one scholar annually to the normal school.

(3) "It is a co-operative policy: It encourages the people to establish schools, by making provision for the State to add its authority and give its protection to the schools when the people have erected and established them.

(4) "It is a local administrative policy: The whole internal and external affairs of each school are managed by the local officers, without any connection with other schools. This gives opportunity to adapt the management of the separate schools to the peculiar wants of the people in different sections of the State.

(5) "It is a stimulating policy: Giving the largest liberty to individual schools and to the separate members of each school, it tends to call out the best efforts of all connected with them in generous rivalry.

(6) "It is a boarding-school-policy: The law specifies that each school must have boarding-accommodations for 300 students. To give this number of persons playgrounds and yards, there must be also at least ten acres of ground attached. These boarding-accommodations make it possible and the required extent of ground makes it necessary to establish the schools in the country, where purer airs, a greater quietness, and a better general influence can be secured.

(7) "It is an expansive policy: The schools having been erected by private munificence, because needed in the section where they are established, the same generosity which provides for their original establishment can be depended on to supply the means of healthy growth.

(8) "It is a conservative policy: Though the special details of each school are administered by the officers of that school, the course of study is the same for all the schools. It is fixed by the principals of the several schools at a meeting called for that purpose, and, once fixed, no change can be made without the approval of the State-superintendent and a majority of the principals.

(9) "It is a thorough policy: The course of study, as now settled, is less extensive than in many of the States, but what it lacks in surface it makes up in depth. Thorough instruction is the aim of the instructors and is secured by the system of examinations, which is that the students shall be examined by a board appointed by the State-superintendent, of which board he is himself the chairman.

(10) "It is a policy of fixed responsibility: The law charges the head of each school with the whole discipline and interior government of the school.

"Some of these features have been copied in other States; nearly all were new and original with the Pennsylvania normal-school-law."

OBITUARIES.

Jonathan Gause, one of the most remarkable teachers of Pennsylvania, was born, October 23, 1786, in Chester County, Pennsylvania. His early education was obtained at a common country school. He was intended by his father for a mechanic, but, an accident occurring by which he was rendered lame for life, he became a teacher. He had a mind of no ordinary character; not quick to act, but broad, comprehensive, and logical. His great energy and intense devotion to study soon enabled him to distance many who possessed minds of greater activity but lacked his iron will and determined nature. His first essay in teaching was in 1807, at Marshalltown, Chester County. In 1813 he took charge of the West Chester Academy, which flourished under his care and became quite celebrated in Eastern Pennsylvania. In 1829 he opened a select school in West Chester, and taught it until 1832, when he commenced and for seven years kept a school upon his own farm, known as Greenwood Dell Boarding-School, which became very popular. In 1839 he accepted the principalship of Unionville Academy, in Chester County, and continued in the office eight years, when he resumed teaching at Greenwood Dell, and continued until 1865, having taught during more than fifty-seven years. As a teacher, Mr. Gause was industrious, patient, hopeful, persevering, ingenious, and abundant in resources, possessing, also, a wonderful tact in developing these essential qualities in others. The dull boy became, under the inspiration of his influence, alert and often bright in some particular departments of study; the timid, shrinking, sensitive pupil grew hopeful, self-reliant, and often aggressive; the boisterous, careless, and indifferent became inspired with high resolves. As a disciplinarian he was peculiarly felicitous: there were no arbitrary rules promulgated; every pupil became a member of his family, an object of his parental care. There was no offensive espionage nor assumption of dignity or superiority, but a gentle, kindly courtesy and trustfulness that inspired affection and respect. His love of man was intensified when applied to his

pupils. His most potent characteristics as a teacher were his great love and sympathy for his pupils, his perfect self-control, and his wonderful power of government. Other teachers have rivaled him in intellectual qualifications and attainments, although his were excellent, but few or none combined with them a body so strong, a temper so even, and a love so divine. He spent the last eight years of his life with his widowed daughter, on a beautiful farm on the Brandywine, adjoining Greenwood Dell, where he died, April 9, 1873, nearly eighty-seven years of age, but in the full possession of his faculties and with a Christian's trust.

Charles Louis Steinmüller, late principal of the German-English public school of Lancaster, Pennsylvania, died May 24, 1873, after a brief illness.

He was a teacher both by birth and training, and, like the apostle of old, he ever "magnified his office." Teaching was to him a grand work, and the prospect of greater pecuniary profit in other spheres of labor never tempted him to swerve from the straight line of duty marked out for himself.

He was the son of a teacher in Hesse-Darmstadt, and was born December 4, 1836. His education as a professional teacher was received at the Teachers' Seminary, at Friedberg. He came to America when about 22 years of age, and in 1860 commenced teaching a parochial school in the German-Lutheran church of Lancaster, in which work he continued until elected principal of the German-English public school, some three or four years since, combining for some time instruction in music with his other work, this being with him a matter of intense enthusiasm.

He was buried, May 27, at Zion cemetery, in a green and wooded spot. Many hundreds of old and young gathered in honest grief about his grave, deeply impressed with the lesson all recognized as that of his modest life, that the truest wealth consists neither in gold nor lands and that neither earth nor heaven has higher meed of praise than this: faithful till death!

Mr. Charles McAllister, of Philadelphia, who showed his interest in education by the bestowment of $100,000 for the establishment of a college at Minneapolis, Minnesota, died in the latter portion of the year 1873.

Rev. Samuel S. Schmucker, D. D., long known as an educator of more than ordinary power, died at Gettysburg, Pennsylvania, July 26, 1873, aged 74. Entering the ministry at an early age, he at once became a teacher, and from 1826 to 1864 was professor of didactic theology in the Theological Seminary of the Lutheran Church at Gettysburg, when he retired with the rank of *emeritus* professor, and devoted himself to the preparation of works for the press. He was a voluminous and able writer and the author of many volumes on psychologic, theologic, and practical themes.

The Rev. Peter Van Pelt, D. D., who died in Philadelphia August 21, aged 75, was for many years professor of oriental languages, first at Burlington College, New Jersey, and afterward in the divinity school of the Protestant-Episcopal Church in West Philadelphia. For some time before his death disease had driven him into retirement, which, however, was brightened to the last by the pursuit of his favorite studies in an eminently pleasant home.

Number of children between 5 and 15 years, (estimated)	42,000
Number of pupils registered in summer-schools, (male, 12,877; female, 14,035)	26,912
Increase over last year	465
Average attendance	21,805
Increase over last year	16
Number of pupils registered in winter-schools, (male, 14,752; female, 13,950)	28,702
Increase over last year	306
Average attendance	23,052
Decrease from last year	98
Per cent. of attendance on whole number registered, (summer)	81
Per cent. of attendance on whole number registered, (winter)	80
Estimated number of pupils in private and Catholic schools	8,000
Estimated number instructed at home or detained as invalids	1,000
Estimated number at public and private schools or instructed at home	38,000
Estimated number not in attendance on any school	4,000
Estimated percentage of school-population under instruction	90
Estimated percentage of school-population not under any instruction, (or 1 child in every 10 between 5 and 15 years of age)	10

TEACHERS AND TEACHERS' PAY.

Number of teachers in summer-schools, (male, 93; female, 612)	705
Number of teachers in winter-schools, (male, 177; female, 579)	756
Increase of teachers over last year	45
Average wages per month, including board, in summer-schools	$34 85
Increase over last year	$2 33
Average wages per month, including board, in winter-schools	$39 72
Increase over last year	$1 48

SCHOOL-DISTRICTS AND SCHOOLS.

Number of school-districts	424
Number of summer-schools	687
Increase over last year	5
Number of winter-schools	727
Increase over last year	8
Average length of school-year, weeks	34

SCHOOL-TAX.

The report of 1872 shows that the local taxation for schools is very unequal. Six cents is the minimum, twenty-six cents the maximum, tax on each $100 of valuation.

For returns of 1872-'73, see statistical tables I and II.

The towns range between these two extremes. In order to equalize the burden and give to the poorest towns equal educational advantages with the richest, it is necessary that the school-fund of the State or its annual appropriations be increased. To secure this result, the State should make an annual *pro-rata* tax upon its valuation, which is constantly increasing. This would be most appreciated where now the tax falls the heaviest, upon the poorer towns and districts.

As it now stands, the State-appropriation, while it remains a fixed sum, is really decreasing, for as the children of the State increase in numbers there is less money for each child, and unless the towns make up the constant deficiency, the school-advantages must decrease. To remedy this difficulty, it is recommended to fix a ratio of taxation, say one mill upon each dollar of the State-valuation. This would yield an annual revenue of $225,000, which, divided equally among the towns, would satisfy the increasing demand for educational facilities and distribute the *burdens* among those who will most largely enjoy the pecuniary *gains*.

TOWN- AND DISTRICT-SYSTEMS.

Nine cities and towns have adopted, either wholly or in part, the town-system of school-management.

The board of education expresses the belief that the district-system is unfavorable to the school-interests of a town and recommends that it be abolished. The State-superintendent calls attention to the modification of the district-system in such a manner and to such an extent as to intrust the duty of hiring teachers, fixing salaries, &c., to the town's school-committee. "This is a much-needed change and will be gratifying to school-trustees as well as to school-committees."

The town-system has proved satisfactory wherever it has been tried for any length of time.

TOWN-SUPERINTENDENTS.

A superintendent of schools has been appointed for each town and city in the State. The present school-law regarding the salary of superintendents is considered defective. It is believed that this should be fixed by the school-committee, rather than by the people at their annual election. It is recommended that where one town is not able to support a superintendent two contiguous towns should unite in electing the same officer for both, the salary to be fixed by the school-committees of both towns; also that the superintendent be paid such a salary as will enable him to devote the whole of his time to the schools.

SCHOOL-COMMITTEES.

By the revised statutes the term of office of school-committees is changed from one to three years. This is considered a most desirable change, as giving character and permanence to the office and its work. The law allows competent women, as well as men, to be elected to this office, and experience shows that women fulfill its duties most faithfully, conscientiously, and successfully. The propriety of having active, efficient women in each school-board is suggested to the consideration of the citizens of the several towns.

CONDITION OF SCHOOLS.

As the public schools of the State have become more efficient than private institutions, patronage has been withdrawn from the latter and the attendance upon the former has improved. The registered attendance upon the public schools throughout the State has increased by 500 pupils over the preceding year. The average attendance has also improved. The town-appropriations for the support of schools have exceeded those of last year. These facts indicate a sure, if not rapid, advancement.

From a table showing the relative size of the public schools, it appears that about one-fourth of the schools in the State register less than twenty pupils each. Thus a large proportion of the public money is expended for a small number of pupils, the education of each child in some school-districts costing from $40 to $80 per annum. It is believed that a reduction of the number of school-districts and a consolidation of schools would give more money for schools to each district, and thus insure more thoroughly qualified teachers and a better classification of pupils.

EVENING-SCHOOLS.

These schools increase in number every year. The sum of $3,000 was placed by the general assembly at the disposal of the board of education to be used in the interest of these schools. Upon the request of the Rhode Island Educational Union, $1,700 of this amount was given to that organization for the establishment of evening-schools. The remaining $1,300 was distributed among the towns which support evening-schools. Believing that these schools should be put upon the same basis as the day-schools, the board of education recommends that the State-appropriation for schools for the ensuing year be increased to $100,000, and that $10,000 of this amount be set apart for the establishment and maintenance of evening-schools.

COMPULSORY EDUCATION.

The board of education recommends the passage by the general assembly this year of an enabling act, authorizing towns and municipalities, by proper provisions, to enforce the attendance at school of all children who cannot prove to the satisfaction of the local school-board that they are receiving suitable instruction elsewhere. To carry out perfectly such a reform, a State industrial school, or a home for juvenile offenders, not penal in character, is an indispensable auxiliary. The annual message of the governor calls the attention of the general assembly to this important measure, and it is hoped and expected that a joint committee will make all necessary inquiry into the extent of juvenile illiteracy and crime, and that, when the magnitude of these evils is shown, the State will institute measures for the speedy removal of them. The report of the board of education notices the condition of children employed in factories and denied the privileges of school. The legislative measures adopted by the State for the correction of this evil have thus far proved ineffectual. The question of how to ameliorate the condition of these children and secure for them the blessings of education is urged upon the consideration of the general assembly.

FREE PUBLIC LIBRARIES.

The board of education has had under consideration the subject of local free libraries as supplemental to the public-school-system and the expediency of encouraging, by State aid, to a moderate extent, the establishment and maintenance of such institutions. The State-superintendent recommends the passage of an act to encourage the maintenance of free libraries throughout the State, by offering to each town an annual appropriation from the educational fund equal to the amount that shall be annually raised for the purpose in the town itself to the limit of $300. Each local library thus assisted shall be required to report annually to the board. Failure to report or cessation of local appropriations for twelve months shall involve forfeiture to the State of all books purchased by the State's appropriation.

PROGRESS.

The report of the State-school-commissioner for 1873 says on this head: "In the year 1863 the towns raised nearly $100,000 for the support of schools. Ten years later, in 1873, the same towns raised over $300,000 for the same noble purpose; and this amount was independent of the large sum of nearly $200,000 expended in the building and repair of school-houses. Three dollars for one, or an increase of 200 per cent., is a large gain in a decade."

Looking at the work of 1873, the board of education writes: "In the survey of the work and its results for the past year, the board have abundant reason to congratulate the general assemby on the advance that has been made in the cause of popular education. * * * * * * *

"In several towns beautiful and commodious school-houses have been erected, with most of the modern improvements for the health and comfort of the pupils.

"School-officers have held frequent meetings for mutual conference and for the discussion of questions intimately connected with their important duties.

"The institutes have been well attended and are doing an important auxiliary work.

"There is evidently throughout the State an increasing interest in the cause of education. Parents are beginning to feel more deeply than ever before that the richest legacy they can leave their children is a sound practical education, such as will fit them for the duties and exigencies of life.

"The normal school, with its able corps of teachers, is accomplishing all that could be expected with its present limited accommodations, though a new and commodious building is much needed."

BRISTOL.

In Bristol a system of graded schools, from primary to high, prevails, and the school-committee, while speaking regretfully of the large number of children not embraced in these, says that at no time since this system was adopted have the schools done better work than during the past year. Of the 1,200 children of suitable school-age, about 800 have made use of the advantages provided for them in the eleven city- and three district-schools, and are reported to have made very satisfactory advance. The number in the first, second, and third grammar-schools has been about 100; that in the high school, 46. The class which is to graduate in 1874 is said to be of high promise. At the annual town-meeting in 1872 $600 was appropriated for the establishment of evening-schools, which were opened, in October, for boys and girls not able to attend during the day. Seventy boys and 68 girls were registered in these schools, and, with the aid of faithful teachers, considerable progress has been made and satisfactory results obtained.

NEWPORT.

In Newport the graded system has prevailed for seven years, with great advantage to the teachers and still greater, it is held, to the pupils under them. No scholar is

allowed to pass up from one grade to another till prepared for the change, it being thought better that a child should learn one thing completely than many things partially. Out of a total city-population of 12,521, the number of children of school-age in 1873 is given as 2,623. Of these 1,391 have been enrolled in the public day-schools, 162 in evening-schools, 500 in Roman-Catholic Church schools, and about 200 in private schools. The schools are one mixed day-school, five subprimaries, (of two grades,) one mixed primary, (of four grades,) eight primaries, (of two grades,) seven intermediates, (of two grades,) eight grammar-schools, (of four grades,) and one high school. Improvement in the order which prevails in all these schools is noted, one evidence of this being that, whereas for the year 1871–'72 112 pupils were sent to the office for discipline, and 45 of these more than once, in the year 1872–'73 the number sent was only 70, and of these only 18 more than once. In ten school-rooms there has been no case of corporal punishment, and these schools are among the best governed of the whole. In one school-building, where twelve schools are concentrated and 457 children are enrolled, one means of securing thorough order has been having pupils enter and leave in columns, marching to the sound of the drum. Music and drawing are taught in the schools, and encouraging progress has been made in both.

Evening-schools are maintained, one with 68 enrolled pupils and an average attendance of 18 having come over from a preceding year, and another, an evening high school, being a creation of the year past. It was opened in October, 1872, and continued till April, 1873. At first intended for young men and boys alone, it was opened to young ladies also in January, with highly satisfactory results, the female pupils being the most constant in attendance and as zealous as any. The number of males registered was 118; of females, 19; the average attendance, 23. In this school, besides the common English branches, English literature, political economy, Latin, and chemistry were taught to those who desired it, two special private classes being also formed, by request, in French and mechanic drawing. After one session's experience, the teacher drew the inference that in the class of pupils attending such a school there is a decided demand for the common branches of education—reading, writing, and arithmetic a less demand for geography, grammar, higher arithmetic, algebra, and geometry; and a strong one for such advanced studies as French, political economy, and English literature.

A new high school, to cost $40,000 for ground and building and to have an endowment-fund of $90,000, is about to be provided for the city, through a munificent bequest of $100,000 from the late William Sanford Rogers, of Boston, and a vote of $30,000 by the citizens. The design is Venetian Gothic, the dimensions 53 feet by 60, and the stories 12, 17, and 16 feet in height. The halls and class-rooms are large, and finished in yellow pine, except the stairs, which are of ash. There is a special room for a library, one for a chemic laboratory, and reception-rooms for visitors, with a large one, 20 feet by 50, for chapel-use and exhibitions.

PROVIDENCE.

At Providence the school-system seems to be remarkably complete, embracing primary, intermediate, grammar-, high, evening-, and vacation-schools. The number enrolled in the first four of these classes has been, for the autumnal term, 9,072; for the spring-term, 8,865; these being distributed among 29 primary schools, 25 intermediate, 7 grammar-, and 1 high school. Besides, there have been 2,566 enrolled in 6 elementary, 1 high, and 1 polytechnic school held in the evenings, together with an evening-school for Germans and another for Italians, giving a total of 11,638 for all the public schools of day and evening, except the vacation-schools, which raise this sum to 1,000 more.

The city-school-committee says, as to all these: "The results accomplished amply requite all the care, vigilance, and expense devoted to the perfecting of our school-system. We have many able teachers, who are zealous in their work. Improved methods of instruction have been introduced, tending to diversify and enliven the hours given to study. The general introduction of musical exercises is an illustration of the good results accomplished in this direction. The introduction of drawing is another."

The city-superintendent devotes much of his report to the present thorough grading of the schools and classes, shows some incidental disadvantages connected with it to be shunned, and points out how its high advantages may be secured. "To promote," he says, "the best interests of all, to crowd none beyond their strength, to encourage the studious, to give each an opportunity to advance as fast as he is able, to accommodate those who are absent on account of sickness or other necessary causes, the classes must be near together, and the promotions from a lower to a higher must be frequent. The different grades should remain unchanged and no pupil be permitted to enter on a higher work till that of the lower has been completed. Neither should a pupil, when prepared for promotion, be compelled to wait for others."

The evening-schools did a good work in the winter, the elementary imparting the ordinary branches of instruction; the high opening its doors to all who desired linguistic, literary, or special training; the polytechnic offering an education in science as

applied to industry. The records of 518 scholars attendant on these evening-schools show 65 trades as followed by that number of pupils, and yet good discipline seems to have been maintained in this seemingly incongruous mass, with very creditable results from training.

The vacation-schools were six in number; continued six weeks in July and August; were taught almost wholly orally, with blackboard, map, and pictorial illustrations; and kept more than a thousand children from the dangers of the street amidst pleasant and profitable instruction.

SECONDARY INSTRUCTION.

Two schools devoted to this make special returns for 1873, as follows:

(1) St. Bernard's Academy, Woonsocket, under the charge of the Roman-Catholic Sisters of Mercy, 5 female teachers, with 40 male and 70 female pupils. All these pupils study French as well as English, and instruction is given in drawing and music, vocal and instrumental, but not in the ancient languages; nor is there yet a chemic laboratory or a philosophic cabinet and apparatus. No library is spoken of.

(2) New England Yearly Meeting Boarding-School of Friends, at Providence, reports property of about $850,000, of which $725,000 is in grounds and buildings and $125,000 in productive funds; instructors—7 males and 6 females; pupils—male, 142; female, 75. A preparatory department exists, in which instruction is given in all the elements of an ordinary English education, and beyond this a classic course of four years, Greek, French, German, botany, physiology, and drawing being elective studies in the second and third years of this course and Latin in the fourth year. Provision is also made for the continuance of studies in the classics and mathematics beyond this four-years course, if students should desire it, the Latin, in that case, reaching to Juvenal, the Greek to Demosthenes and Homer. The school is provided with an extensive philosophic and chemic apparatus, an astronomic observatory, a rich cabinet of minerals, and a library of over 2,500 volumes. Extensive grounds furnish advantages for recreation and daily exercise in a gymnasium is required of all the pupils.

Besides the above, three schools, devoted especially to the preparation of students for college, are located respectively at East Greenwich, North Scituate, and Providence. These have an aggregate attendance of 241 pupils under 25 instructors. In two of these schools 30 pupils were, in 1873, pursuing an advanced course, with a view to entering higher classes in college; 15 were in the senior-classes, 28 in the junior-, 65 in the middle, and 38 in the lowest class. The third, the University Grammar-School, at Providence, was preparing 65 students for Brown University. The library and apparatus of the university are used in this school. The other two have libraries belonging to them, one of 2,000, the other of 200 volumes.

The high schools of the State-system, too, or at least those which appear in the State-report, have their courses so arranged as to secure for pupils that desire it a fair preparation for collegiate or university-training, their full curriculum embracing not only an excellent and thorough series of required English studies, but also an optional series of Latin and Greek, reaching to the Æneid in the former and the Anabasis in the latter; French, too, being included in Providence and Newport, if not elsewhere. No examination-papers reaching the Bureau of Education, for either school- or college-classes, show more thorough instruction or more careful sifting of the knowledge gained than those of the Providence and Newport high schools.

STATE NORMAL SCHOOL.

The first year of this institution was most successful and has clearly proved the wisdom of its establishment. At the opening of the school, in September, 1871, the number of applicants for admission was greater than could be accommodated, and at the commencement of the second year it was found necessary to enlarge the seating capacity of the school. The number entered during the year was 132, of whom 41 had previously been engaged in teaching. The average age of those who entered was 19 years 3 months. The school is divided into four classes. Instruction has been given in elementary chemistry and in free-hand drawing. A room better adapted for the practice of the latter is needed, also a suitable room for the teaching of natural science. One of the encouraging features of the school has been the persistent endeavor of the pupils to continue the course of study without interruption. The plan in accordance with which this school is established is unlike, and in some of its features is in advance of, the plan of any other school in New England.

The building now occupied by the normal school serves a valuable temporary purpose, but more extensive and more permanent quarters are needed. The State-superintendent suggests the purchase of land, which may now be procured at reasonable rates, and the erection of a substantial and commodious normal-school-building.

The report of the principal for the year ended in June, 1873, says: "During the past six months the demand for the graduates of the school has been far beyond the supply. Those who to-day graduate will make a large and effective re-enforcement for the ranks of our public-school-teachers. We expect that they will render good service.

Several have proved their aptitude for their work by their success is teaching before entering the normal school." He writes subsequently: "The necessity of securing teachers who have made the requisite preparation, and who will give themselves continuously and unreservedly to teaching, has been felt in many parts of the State, and there is a greater willingness to give such teachers, if permanently secured, better pay. The young men who hereafter enter the normal school and thoroughly prepare for teaching may reasonably expect more adequate compensation" [than has been given hitherto.]

SUPERIOR INSTRUCTION.

The one institution for imparting superior instruction in the State, Brown University, presents the following exhibition of its present state. An agricultural department has been added to the university and arrangements made for receiving thirty pupils to it on free scholarships.

Statistical summary of Brown University.

Name of university.	Corps of instruction.	Endowed professorships.	Number of students.		Corporate property, &c.						Number of volumes in library.
			Preparatory.	Collegiate.	Amount of property of corporation.	Value of grounds, buildings, and apparatus.	Amount of endowment.	Amount of productive funds.	Income from productive funds.	Receipts for last year from all other sources.	
Brown University ..	13	2	.....	212	.....	$1,500,000	.....	$700,000	$45,000	$18,407	40,000

BUSINESS-COLLEGE.

One business-college, at Providence, with 6 male and 2 female instructors, reports 125 pupils, of whom 105 are males and 20 females.

TEACHERS' INSTITUTES.

Five institutes, held during the year, have been well attended and have been productive of unusually good results to teachers and to the communities where they have been held. School-officers, in most cases, grant teachers the time to attend these institutes. The annual meetings of the Rhode Island Institute of Instruction continue to grow in interest and importance and are, in a certain sense, the exponent of the educational spirit throughout the State. No meeting ever held in Rhode Island, possibly none ever held in New England, exceeded, in the numbers and enthusiasm of its audience, the meeting of this institute in January, 1873.

During the winter and spring of 1872 a series of meetings to awaken an educational interest was held in nearly every town in the State. The plan contemplated three meetings each day: in the morning, a lecture or class-exercise for teachers and school-officers; in the afternoon, addresses to the pupils, and, in the evening, to the citizens. Among the subjects discussed in the evening-addresses were school-houses, furniture, grounds, school-taxes, parental co-operation, education, and labor, &c. No meetings have been held productive of so much practical good as these.

Teachers' associations have been formed and regular meetings held in half the towns of the State. In some places the meetings are held once a week, in others once a fortnight or once a month. Their good effect is shown in the improvement of the schools whose teachers belong to the associations.

RHODE ISLAND EDUCATIONAL UNION.

"The object of this association is to aid in supplementing the great work of public instruction." It especially aims to reach the large numbers of adults not reached by the daily public schools, by "promoting the establishment of evening-schools, reading-rooms, libraries, and kindred means of intellectual improvement." By such instrumentalities its originators thought that something could "be done for the 15,000 officially reported to be beyond the school-age in the State and yet unable to write their names—10,000 of whom could not write at all—for another 15,000 but little in advance of these, and for the educational cause at large."

Under its auspices or with its aid there have been already opened, in more than 20 towns, upwards of 60 evening-schools, averaging more than 100 scholars each, and reaching many others through their influence. During the year 1872–'73 the town of Warwick, at its annual meeting, and the town of Cumberland, at a special meeting,

were induced to appropriate $500 and $600, respectively, for the establishment of evening-schools. With some local and State-aid besides, the school-committees of these towns have set in motion 8 schools with 800 pupils, and are said to be working out excellent results. Other towns, it is hoped, will come in to aid in the good work in 1873–'74.

LIST OF SCHOOL-OFFICIALS IN RHODE ISLAND.

Hon. T. W. BICKNELL, *State-superintendent of common schools, Providence.*

STATE-BOARD OF EDUCATION.

SOUTH CAROLINA.

[From the report of Hon. H. K. Jillson, State-superintendent of public instruction, for the scholastic year ended June 30, 1873.]

FINANCIAL STATEMENT.

Receipts.

State-school-appropriation	$300,000 00
Proceeds of poll-tax	56,492 70
Local or school-district-taxes, amount reported as collected	93,475 98
Total	449,968 68
Deduct unpaid balance of the State-school-appropriation	29,714 18
Net school-revenue	420,254 50
Increase in amount of poll-tax over last year	5,430 00
Increase in amount of district-taxes over last year	28,968 27
Total valuation of taxable property in the State	167,481,092 67

In thirteen counties no school-district-taxes were raised.

Expenditures.

Salaries of teachers	$333,790 13
Building school-houses	8,559 46
Rent of school-houses	3,199 32
Other expenditures	23,883 76
Total	369,432 67

The returns received by the superintendent concerning school-expenditures are incomplete. One county makes no report of the amount of salaries paid to teachers. Only partial reports have been made of the cost of school-houses erected during the year. The returns from which the item of other expenses has been derived are particularly deficient. The office is in possession of no data upon which to base an estimate of school-expenditures during the period from July 1, 1873, to October 1, 1873, the close of the fiscal year.

SCHOLASTIC POPULATION.

The scholastic population comprises the children between 6 and 16 years of age, both inclusive:

White children—males, 43,474; females, 41,501	84,975
Colored children—males, 73,442; females, 71,685	145,127
Total scholastic population	230,102
Increase in scholastic population since 1869	32,923

ATTENDANCE.

White children enrolled in school—males, 19,346; females, 17,872	37,218
Colored children enrolled in school—males, 23,828; females, 22,707	46,535
Total enrollment	83,753
Increase over last year	7,431

Table showing number of pupils in different branches.

Branches.	1872.	1873.
Alphabet	8,581	10,320
Spelling	53,956	60,229
Reading	43,144	49,813
Writing	29,823	34,130
Mental arithmetic	19,632	26,907
Written arithmetic	20,590	24,968
Geography	16,444	22,111
English grammar	10,565	12,605
History of the United States	7,381	9,239
Higher branches	2,286	2,533

TEACHERS AND TEACHERS' PAY.

Northern white teachers—males, 20; females, 42	62
Southern white teachers—males, 900; females, 661	1,561
Northern colored teachers—males, 16; females, 10	26
Southern colored teachers—males, 448; females, 213	661
Whole number of teachers—males, 1,384; females, 926	2,310
Increase over last year in whole number of teachers	125
Number of teachers holding third-grade-certificates	780
Number of teachers holding second-grade-certificates	884
Number of teachers holding first-grade-certificates	646
Number of State-certificates granted during the year	19
Average monthly pay of male teachers	$33 78
Average monthly pay of female teachers	32 06
Largest monthly pay of male teachers, (Charleston)	133 00
Largest monthly pay of female teachers	43 28
Smallest monthly pay of male teachers	20 26
Smallest monthly pay of female teachers	14 79

Of the teachers to whom State-certificates were granted, 13 are white and 6 colored, 7 are males and 12 females.

A State-certificate is always of the first grade and is good anywhere in the State for a term of two years, unless sooner revoked.

SCHOOL-DISTRICTS AND SCHOOLS.

Number of school-districts	463
Number of schools	2,017
Increase over last year	98
Average number of months schools were in session	5

The greatest number of months schools have been in session during the year is 8 and the least 3.

SCHOOL-HOUSES.

Number of school-houses in the State	2,017
Increase over last year	147
Number of school-houses owned by school-districts	384
Number of school-houses owned by other parties	1,633
Number of school-houses erected during the year: log, 67; frame, 42	109
Cost	$8,559 46
Number of school-houses previously erected: log, 1,129; frame, 760; brick, 18; stone, 1	1,908
Valuation	$242,086 48
Number in good condition	888
Number in fair condition	575
Number in bad condition	445
Whole number of school-houses with grounds inclosed	283
Number of school-houses rented during the year	136
Amount paid for rent	$3,199 32

There are, in the city of Charleston, four good brick school-houses, valued at $100,000. They are public property and are included in the above statement.

The returns concerning the cost of school-houses erected during the year are very incomplete. It is not possible to estimate their actual aggregate cost.

SOURCES OF SCHOOL-REVENUE.

There are three sources of school-revenue, namely: (1) State-school-appropriations or the proceeds of the special State-school-tax, (2) poll-tax, and (3) local or school-district-taxes.

The general assembly, at its last regular session, authorized and directed the levy of a tax of two mills on the dollar on all the taxable property in the State for the support of public schools and appropriated for the support and maintenance of free common schools, during the fiscal year commenced November 1, 1872, the sum of $300,000 from said tax. The sum of money realized so far from this special State-school-tax is $270,285.82.

The total amount reported as collected on account of poll-tax for the year ended October 31, 1873, is $61,841. Of this amount only $56,492.70 has been available for the support of schools, the sum of $1,138.70 having been allowed to county-treasurers for collection and $4,209.60 having been collected and not accounted for.

The total assessment of polls for the year ended October 31, 1873, was $90,956, of which $61,841 were collected, $14,890 were returned as *nulla bona* and abated, and $14,225 were reported to county-commissioners for collection under the provisions of "An act to enforce the payment of the poll-tax." It is believed that the effect of this act will be to increase considerably the amount of poll-tax collected.

Attention is called to the fact that while the voting population of the State is at least 106,722, yet the total assessment of polls is reported at only 90,956. In Charleston County, which has a voting population of at least 13,850, only $1,914 was collected on account of poll-tax for the last year.

The local taxes are subject to the will of the people of the several school-districts. In very many school-districts the people have refused to vote a local tax, giving, as the reason for such refusal, the failure of the State to make good its appropriations for school-purposes. The conviction is expressed that, in order to make the common-school-system practically successful and thoroughly efficient, it must be chiefly supported by local taxation, levied by the voluntary action of the people.

APPORTIONMENT OF STATE-SCHOOL-FUNDS.

The constitution and school-law contemplate the apportionment of State-school-funds, in proportion to the number of pupils attending the public schools. This apportionment has, hitherto, been made either according to representation or on the basis of scholastic population. This course is believed to be clearly unconstitutional. Moreover, under this system a school-district which has a small school-attendance, or perhaps none at all, may receive more than a district which has a large number of pupils attending its public schools. It is therefore recommended that, hereafter, the State-school-funds be apportioned on the basis of school-attendance.

REPORTS OF COUNTY-COMMISSIONERS.

The superintendent says: "The annoyance, delay, and difficulty experienced in the preparation of my annual report for this year cannot well be described. This has been occasioned by the very careless manner in which a majority of the annual reports of county-school-commissioners have been made out. Many of these reports were found to be incorrect in the matter of simple addition. A few county-school-commissioners have not been prompt to forward their reports as the law requires.

"I am aware that county-school-commissioners have labored under serious discouragement during the year, on account of not having received their salaries. In many instances they have not been provided with suitable office-conveniences and incidentals.

"County-treasurers have shown great reluctance in furnishing this office with the required information concerning collections made by them on account of poll-taxes."

THE OFFICE OF COUNTY-SCHOOL-COMMISSIONER.

This office, which corresponds to the office of county-superintendent in the school-system of other States, is the most important one in the school-economy.

Remarks of the State-superintendents of Illinois and Minnesota concerning the qualifications for this office are quoted, and it is asked, "How many of our county-school-commissioners represent this high standard of qualification?"

While the State-superintendent is possessed of little or no direct and final authority over common-school-matters, the county-school-commissioner is vested with almost unlimited jurisdiction. The State-superintendent has not the power to appoint a single school-officer, but the county-school-commissioner is endowed with the appointment of county-examiners and school-trustees. That this appointing power is sometimes abused and perverted by the selection of political adherents and of persons utterly incompetent and unworthy to occupy these positions is a certainty and an evil which demands correction.

TEACHERS.

The inefficiency of a large majority of the schools is due to the employment of persons wholly unworthy, either morally or intellectually, to occupy the responsible posi-

tion of teacher. The mischief wrought by inferior teachers is incalculable. Boards of county-examiners are, in a great measure, responsible for the employment of so many incompetent and inefficient teachers, because of their neglect in the matter of examining candidates and granting certificates. It is suggested that this evil could be remedied to some extent by placing the power to appoint county-examiners in the hands of the State-superintendent. It is remarked, however, that the continued services of first-class teachers cannot be secured until they can be well and promptly paid.

TEACHERS' INSTITUTES.

Teachers' conventions have been held in four counties, teachers' institutes in two, and in a third arrangements have been made for a similar organization. In some of the places where the meetings were held much interest was manifested, not only by the teachers, but by the citizens generally.

"A well-organized and efficiently-conducted system of State teachers' institutes would, doubtless, accomplish much toward enhancing the efficiency of our teachers and the usefulness of our schools. It is hoped, therefore, that the matter will receive due attention and encouragement from the general assembly."

TEXT-BOOKS.

No text-books have been distributed during the year. The list approved February, 1870, is faulty and needs revision. It is recommended that the general assembly appoint a commission vested with full and final authority to revise the present list and make the necessary arrangements for the introduction of the books prescribed in the revised list.

EDUCATIONAL PROGRESS.

It is a matter of surprise and congratulation to those who feel an interest in the educational work of the State that, under the adverse circumstances attending it, even some progress has been made. The people themselves must take a greater working interest in the common-school-system before its complete and ultimate success can be fully assured. There is, however, in the minds of the people a growing spirit of interest in the matter of popular education, which, sooner or later, will assert itself in terms that can neither be misunderstood nor disregarded, and demand that educational advantages be placed within easy reach of all.

The hinderances to progress in school-matters are numerous and diverse as to their nature and degree, but, under favorable circumstances, the question of their removal could be solved without very great trouble. Attention is called to the

TWO GREAT AND SERIOUS IMPEDIMENTS

to the success of free common schools. These are (1) the unsatisfactory condition of the school-finances and (2) ignorance, incompetency, and inexcusable neglect of duty on the part of many school-officers.

(1) To suppose that the public schools can be conducted with a reasonable degree of success without a sufficiency of available funds is the height of absurdity. While the appropriations made by the general assembly for common-school-purposes have not been adequate, yet they have, perhaps, been as liberal as could have been expected. Some of these appropriations have been paid after a long, discouraging, and unpardonable delay, while others have only been paid in part. Of the State-school-appropriation of $300,000 for the fiscal year ended October 31, 1872, only $90,814.55 have been paid, leaving an unpaid balance of $209,185.45. Of the State-school-appropriation of $300,000, for the fiscal year ended October 31, 1873, there still remains an unpaid balance of $29,714.18. Not one dollar of the State-school-deficiency-appropriation of $75,000 for the fiscal year ended October 31, 1871, has yet been disbursed. If these appropriations were made in good faith—and it is fair to presume that they were—the adoption of measures to provide for their payment in full and without further delay is an act of duty and of justice. If the future management of the State-school-appropriations is to be no improvement on that of the past, it would be wise to abandon the plan altogether and impose upon the people of each county or school-district the duty of providing the means for the maintenance of the public schools. The lack of success in the school-system is not inherent in the system itself, but arises, rather, from the manner of its administration; and the chief cause of this maladministration is the deplorable condition of the school-finances.

(2) One of the most serious hinderances to the proper and judicious administration of the school-system, and second only to that occasioned by the condition of the school-finances, lies in the fact that many of the school-officers are eminently disqualified for the positions which they hold. A majority of the school-trustees manifest little or no interest in the important and responsible duties to which they have been appointed. That the success of the schools is dependent, to a great extent, upon the character and management of the local school-officers cannot be doubted. How to secure good and efficient officers is a question not easy of solution. As a step in this direction, the superintendent suggests the passage of an act providing for the election of school-trustees.

LEGISLATION RECOMMENDED.

The following special legislation concerning school-matters is recommended:

(1) The immediate enactment of such measures as will positively secure the prompt and complete payment of all unpaid balances of past appropriations for educational purposes.

(2) An act authorizing and directing each county-treasurer to set aside and retain out of the funds collected by him on account of State-taxes a sufficient sum of money to cover the apportionment of State-school-funds made to his county.

(3) A special appropriation of $5,594.63, for the completion of the Uniform System of School-Records, already authorized by law.

(4) An act requiring the county-commissioners of each county to furnish the county-school-commissioner of their county with a comfortable and convenient office and such incidentals as are necessary to the proper transaction of the legitimate business of his office.

(5) An act to fix and define the school-year and to make the same uniform throughout the State.

(6) An act to increase the annual allowance made to the State-superintendent for clerk-hire.

(7) An act to authorize the State-superintendent of education to appoint county-school-examiners.

(8) An act to provide for the election of school-trustees.

The establishment of a State-reform-school and of a school for idiots and feeble-minded children is urged upon the consideration of the general assembly.

PEABODY FUND.

The agent of the Peabody fund, in his report for 1873, says:

"So far as I can learn, what was said of this State in my last report remains substantially true. Few schools are supported through the year, consequently we have not had opportunity for many appropriations." An application from Charleston for aid stated that the school-tax levied in that city during the year had sustained the schools to the beginning of October, which exhausted the funds of the board and left no hope of relief until the city-tax for 1873 should be collected. "The legislature," it was remarked, "at its last session appropriated over $300,000 for educational purposes, not a dollar of which has been received from the treasury, and the result is that nearly all the public schools in the State have been closed." It was hoped that provision might be made in the future for the schools of the city independent of State-aid and that no further assistance from the fund would be called for.

Pine Ridge Academy was assisted to the amount of $300 and the school at Spartanburg, as in former years, to $200. Total amount paid to the State, $1,500.

SECONDARY INSTRUCTION.

Direct information has been received from only four institutions which can be held to impart secondary training: the Shaw Memorial School at Charleston; St. John's Hall, Spartanburg; and two schools sustained by the American Missionary Association of New York.

St. John's Hall is an individual enterprise, yet in its infancy, established for the time being in the buildings of the suspended Theological Seminary of the Protestant-Episcopal Church of South Carolina. It reports 3 instructors, with 9 pupils, of whom 5 are engaged in the study of the modern languages.

The Shaw Memorial School, with primary and grammar-departments, includes also a high school, in which are taught Latin, the natural sciences, and other branches of a generous education. The number of teachers in the school is 9; of pupils engaged in the higher branches, 82.

The two schools of the American Missionary Society are the Avery Institute at Charleston and the Brewer Normal School at Greenwood. The former has buildings valued at $20,000, with 9 teachers and 407 scholars, nearly one-fourth of whom are in the higher department, the senior-class in this receiving more or less normal instruction. The graduating class of 1873 numbered 13, their ages ranging from 16 to 22. Of these 13, about one-half hope to secure a collegiate education; the remainder, with possibly one exception, look forward to teaching as a profession. Of the graduates of the preceding year, all have been teaching save those that have gone on to higher schools, to pursue collegiate or scientific studies. The Brewer Normal School, with a good brick school-building, 8 acres of fine land—1 teacher, 85 pupils—is yet only in the first stage of progress, the start having had to be made from the prime elements. It aims, however, to be both a model school and an educational center for a large neighborhood.

STATE NORMAL SCHOOL.

By a provision of the constitution of the State, the legislature was required, within five years after its first regular session, to establish a State Normal School for the purpose of educating teachers for the public schools of the State.

The general assembly, at its last regular session, passed "An act to provide for the establishment and support of a State Normal School," and appropriated for the purpose of carrying out the provisions of the act the sum of $25,000. Owing to the distressed condition of the State-treasury, only $20 have been disbursed, and the work has been checked at its outset.

The president of the board of regents of the State Normal School reports that a building on the grounds of the State University has been leased by the board for a term of ninety-nine years, and there the board proposes to open the school, so soon as sufficient funds can be secured to put the building in proper condition.

The regents feel confident of the complete success of the normal school, if it can once be put in operation.

SUPERIOR INSTRUCTION.

Ten universities and colleges are reported, four of which are for the superior instruction of young ladies. Of the six devoted to the education of young men, one, the Claflin University, at Orangeburg, is for colored men.

UNIVERSITY OF SOUTH CAROLINA.

The University of South Carolina, at Columbia, is supported by public funds, and, therefore, offers tuition free, the amount necessary to defray all expenses, being annually appropriated by the legislature. The university is undenominational in its influence; it reports 70 pupils, with 8 professors, and 13 graduates at last commencement.

The State-appropriations for the university for the past year were: for the support of the university, $27,850; for improvement and repairs of the library of the university, $2,000. No information has been received in regard to the amount of money disbursed from the State-treasury on account of the first appropriation. No portion of the appropriation for the library has yet been paid.

A preparatory department, recently established in connection with the university, has an attendance of about 26 students. It is earnestly urged upon the general assembly to make ample provision for the support of this important and useful department of the university. This will require an annual appropriation of at least $2,500.

The action taken by the board of trustees, remitting all fees and rent hitherto imposed upon students, renders the university practically free to all who may choose to avail themselves of its advantages. The admission of a colored pupil to the medical school is a practical opening of these advantages to that race also.

The university-buildings are in an unfortunate condition, and unless prompt and efficacious measures be taken to protect them from the further ravages of time and the weather they will suffer permanent and irreparable damage.

COLLEGE OF CHARLESTON.

The College of Charleston, with 8 professors, had 35 students in its preparatory school, the number, if any, in collegiate classes not being reported. It has 10 scholarships admitting the students received upon them free of charge and 6 supporting the incumbents.

WOFFORD COLLEGE.

Wofford College, with 6 in the faculty, has 162 students in its classic department and 60 in the preparatory. Before the war Wofford possessed an endowment of $200,000, which was lost; $50,000, it is believed, may be raised towards restoring it during the year, (1873.) The college has one large building and five professors' houses and three tracts of land; value of grounds, buildings, and apparatus, $100,000.

MT. ZION COLLEGE.

Mt. Zion College, at Winnsboro', has recently lost by fire a fine college-building, with library, apparatus, &c. A small three-room-school-house is the only building they have yet been able to erect in place of the one burned. In this a preparatory department is in operation, with 43 students and 1 instructor.

NEWBERRY COLLEGE.

Newberry College, Walhalla, with 4 professors, has 96 students, 14 of whom are pursuing classic studies.

CLAFLIN UNIVERSITY.

Claflin University, organized in 1870, has as yet no students in collegiate branches, but 14 are in course of preparation for them. There are 2 instructors, 500 volumes in the library, and grounds and buildings valued at $40,000.

COLLEGES FOR WOMEN.

These are: Columbia Female College, at Columbia, with 9 professors, and 102 pupils in collegiate department and 5 graduates at last commencement; Due West College, at Due West, with 7 professors and 102 students, 72 of whom are in college-studies and 5

graduates at last commencement; Greenville Female College, at Greenville City, with 9 professors and 95 students, 65 of whom are in collegiate studies; and Williamston Female College, at Williamston, with 9 professors and 68 students in collegiate studies—making an aggregate of 399 students, of whom 307 were in collegiate and 92 in preparatory departments, with 34 professors and instructors, of whom 12 were gentlemen. The aggregates, as classified in collegiate years, are as follows: in the freshmen, 75; sophomore, 100; junior, 80; and senior, 35 pupils; in partial courses, there were 11, and pursuing post-graduate-studies, 2. Music and French form a part of the course in all these institutions; in all but one, drawing and painting also, and in one German. Two report chemic laboratories and philosophic cabinets, and all but one libraries, two of 300 and one of 500 volumes.

SOUTH CAROLINA INSTITUTION FOR THE EDUCATION OF THE DEAF AND DUMB AND THE BLIND.

The last school-session of this institution, which commenced October 2, 1872, was brought to an abrupt close on account of sickness among the teachers and pupils. There was a larger number of pupils in attendance during this session than at any former period since the organization of the institution. The annual report of the superintendent has not been received, and it is not possible to present a full statement of the general and financial condition of the institution. The amount of funds still due to the institution from the State-treasury is believed to be $16,500. The appropriation for the support of the institution for the fiscal year ended October 31, 1873, was $15,000.

Colored pupils admitted.—The question of the admission of colored pupils having arisen, the board of commissioners of the deaf and dumb and the blind directed the superintendent to admit such pupils on the same terms as are required for the admission of other pupils, and ordered that they should receive exactly the same attention, care, and consideration as are bestowed upon other pupils, whereupon the entire faculty tendered their resignations, the same to take effect September 30, 1873. The resignations of the matron and steward of the institution were received some months previous. All the resignations were accepted by the board. The institution is thus without officers, and its exercises have been for the present suspended.

The present location of the institution is not an eligible one, being remote from the centers of trade and travel and not easily accessible to pupils and visitors. It is recommended that authority be given to the board of commissioners to remove the institution to Columbia and that the property of the State on Arsenal Hill be set apart and devoted to the use of the institution.

The State-superintendent recommends, for the support of this institution for the year commenced November 1, 1873, a State-appropriation of $15,000.

TENNESSEE.

[From an address by Hon. John M. Fleming, State-superintendent of public instruction, before the State Teachers' Convention, held in Nashville, December 9–11, 1873, and report of the former assistant State-superintendent of public instruction, Hon. J. B. Killebrew, submitted to the general assembly January, 1873.]

STATISTICS OF SCHOOLS.

At a meeting of the State-convention of school-teachers, assembled in Nashville, December 9, 1873, the State-superintendent, Colonel Fleming, addressed the association, saying that county-superintendents had responded faithfully to his calls, all but four having made their reports. From these reports the following statement of the scholastic condition was compiled:

Number of schools organized: white, 3,369; colored, 580—total, 3,949.

Number of pupils between 6 and 18 enrolled: white, 146,233; colored, 23,446—total 169,679.

Number of pupils between 18 and 21 enrolled: white, 7,518; colored, 879; total—8,397. Total number of pupils enrolled, 178,076.

Number of teachers licensed: white, males, 3,263; white, females, 801—total whites, 4,064; colored, males, 410; colored, females, 206—total colored, 616. Total number of teachers licensed, 4,680.

Number of teachers employed: white, males, 2,899; white, females, 177—total white, 3,076; colored, males, 355; colored, females, 187—total, colored, 542. Total number of teachers employed, 3,618. Average per month paid teachers, $32.04. The lowest average per month paid teachers in any county is $20, in the county of Bledsoe; the highest is $50.63, in the county of Obion.

Counties levying no additional tax on property: Anderson, Benton, Blount, Carroll, Claiborne, Clay, Cocke, Coffee, Crockett, Fayette, Fentress, Hamilton, Hancock, Hardeman, Harding, Haywood, Henderson, Henry, James, Lauderdale, Lincoln, McMinn, Marshall, Meigs, Monroe, Perry, Rhea, Roane, Robertson, Sumner, Van Buren, Wayne, Weakley, and White—24.

Counties levying 5 cents additional tax on property: Hamblen, Maury, Shelby, and Williamson—4.

Counties levying 10 cents additional tax on property: Bedford, Bradley, Carter, Cheatham, Cumberland, Dickson, Giles, Grainger, Greene, Hawkins, Hickman, Houston, Jefferson, Johnson, Knox, Lake, Lawrence, Loudon, Mason, Madison, McNairy, Moore, Morgan, Overton, Putnam, Polk, Scott, Sequatchie, Sevier, Smith, Sullivan, Trousdale, Union, Warren, Wilson—35.

Counties levying 15 cents additional tax on property: Bledsoe, Campbell, Cannon, Dyer, Rutherford, Washington—6.

Counties levying 20 cents additional tax on property: Davidson, DeKalb, Humphreys, Lewis, Obion, Stewart—6.

County levying 25 cents additional tax on property: Franklin—1.

County levying 27 cents additional tax on property: Gibson—1.

County levying 30 cents additional tax on property: Grundy—1.

Counties levying no additional tax on polls: Anderson, Benton, Blount, Campbell, Carroll, Claiborne, Clay, Cocke, Crockett, Cumberland, Fentress, Greene, Hancock, Hardeman, Hardin, Haywood, Henderson, Henry, Lincoln, Monroe, Overton, Perry, Polk, Putnam, Rhea, Roane, Robertson, Scott, Sevier, Shelby, Sumner, Van Buren, Wayne, Weakley, White—35.

Counties levying 5 cents additional tax on polls: Bradley and Grundy—2.

County levying 10 cents additional tax on polls: Grainger—1.

Counties levying 25 cents additional tax on polls: Carter, Hawkins, Houston, Macon, Union—5.

Counties levying 50 cents additional tax on polls: Bledsoe, Cannon, Cheatham, De Kalb, Dickson, Fayette, Franklin, Hamblen, Hickman, James, Lawrence, Meigs, Moore, Obion, Trousdale, Washington—16.

Counties levying $1 additional tax on polls: Bedford, Coffee, Davidson, Dyer, Gibson, Giles, Hamilton, Humphreys, Jefferson, Johnson, Knox, Lake, Lauderdale, Lewis, Loudon, Madison, McMinn, McNairy, Marshall, Maury, Morgan, Rutherford, Sequatchie, Smith, Stewart, Sullivan, Warren, Williamson, Wilson—29.

Counties levying no additional tax on privileges: Anderson, Bedford, Benton, Bledsoe, Blount, Carroll, Carter, Cheatham, Claiborne, Clay, Cocke, Crockett, Cumberland, Dyer, Fayette, Fentress, Franklin, Giles, Grainger, Hamilton, Hancock, Hardeman, Hardin, Haywood, Hudson, Henry, Hickman, James, Johnson, Lauderdale, Maury, Meigs, Monroe, Moore, Overton, Perry, Polk, Putnam, Rhea, Roane, Robertson, Sequatchie, Sevier, Shelby, Smith, Sumner, Trousdale, Union, Van Buren, Warren, Wayne, Weakley, White—60.

Without enumerating the names of the counties, I will mention the salaries that have been allowed the county-superintendents: $1,500 by one county; $1,200 by three counties; $1,000 by three counties; $800 by two counties; $750 by one county; $700 by two counties; $650 by one county; $600 by four counties; $500 by twelve counties; $425 by one county; $400 by eight counties; $350 by two counties; $325 by one county; $300 by thirteen counties; $250 by two counties; $200 by one county; $150 by one county; $100 by two counties; $30 per month by one county; $1.50 per day by one county.

There are twenty-two counties that have not yet fixed the salaries of their superintendents.

The most important offices connected with the system are those of county-superintendents. Experience has demonstrated that without an efficient county-superintendent all the other appliances of the system are comparatively worthless. No matter how well the efforts of the other officers may be administered, if the county is not supplied with a live, energetic, and prompt superintendent, the whole operations of the school-system in that county will only tend to create disorder, and, practically, the system will prove a failure in that county. In order to retain the good material we have now in the field of county-superintendents, the county-courts of the State will have to make provision for their maintenance, for it must not be expected that men capable of taking care of the school-interests of a county should starve while attempting to advance the enterprise. There is a great lack of school-houses in most of the counties of the State. It was the intention of the law-makers that the district-provisions of the law should be used for providing means for the erection of school-houses, but we have not yet reached the point when the district-system can be relied upon for any very useful purposes. I have urged upon the county-superintendents to rely upon voluntary contributions for the erection of school-houses rather than let the school-directors lay their hands on the school-fund and appropriate it for that purpose.

In addition to the funds provided by the State and counties, the school-system has received valuable aid from the liberality of Dr. Sears, agent and representative of the trustees of the Peabody school-fund. Before finding that Tennessee had adopted a general school-law, Dr. Sears was at once impressed with the idea of making the aid given to Tennessee exclusively tributary to the support of that law. Allowance has been made to forty schools. The total amount allowed Tennessee this year is $30,000, being considerably in excess of any allowance heretofore made.

EDUCATION OF COLORED TEACHERS.

The following published letter of Colonel Fleming on this important topic declares his readiness to co-operate with the president of Fisk University, who, in view of the fact that the school-law (section 30) provides that "white and colored persons shall not be taught in the same school, but in separate schools, under the same general regulations as to management, usefulness, and efficiency," proposed to canvass the State for normal pupils to be trained in the university as teachers of the colored race:

"DEPARTMENT OF PUBLIC INSTRUCTION,
"*Nashville, August* 23, 1873.

"DEAR SIR: You have informed me of your purpose and plan to secure pupils from among the colored youth of this State for your university, with a view of educating and training them as teachers for the colored public schools in Tennessee, and you have desired to know whether your efforts in this direction meet my approval.

"I do not hesitate to give you an unequivocal answer. The public-school-law of Tennessee very properly, and in the interests of both races, provides that 'white and colored persons shall not be taught in the same school, but in separate schools, under the same general regulations as to management, usefulness, and efficiency.' So far as I have observed, the colored people of the State have shown a wise appreciation of the policy of the separation of the races in the schools and have cheerfully accepted such provision of the law. The county-superintendents of the State are, without exception, white men. Yet I have been gratified to find among them a universal disposition to administer the law with strict impartiality as between the races. I have yet to meet with or hear from a county-superintendent who does not seem controlled by a purpose to secure to the colored children all the legitimate benefits possible under the law.

"One of the chief difficulties to be encountered, and already seriously felt, is that of supplying the colored-schools with suitable teachers. White teachers prefer white-schools, and so great is the present and prospective demand for them that in many of the counties great difficulty will be experienced in supplying the white-schools with competent teachers. Consequently there will be much need of teachers from among the colored people for their own schools, and unfortunately but few of them are now to be found in this State who are sufficiently qualified for the work. Hence you are no doubt prepared to believe me when I say to you that your efforts to draw as many colored pupils as possible into your institution, with a view of preparing them as educators of their own race, command my most hearty approval, and will gain, I doubt

not, the sanction of the enlightened people of the State wherever understood. Your university has already turned out numbers of competent teachers, the value of whose qualifications is now being appreciated. The schools of the State will have use for many more. County-superintendents throughout the State will, no doubt, receive you kindly and give cheerful encouragement to your undertaking. In saying this much, I have said no more nor less to you than I would say to the accredited representative of any other similar institution engaged in a like enterprise.

Wishing you entire success, I am, very respectfully, your obedient servant,

"JOHN M. FLEMING,
"*State-Superintendent.*

"Rev. H. S. BENNETT, *Fisk University.*"

The following in relation to common schools is, in substance, taken from the report of Mr. Killebrew:

SCHOOL-FUNDS.

The first attempt at the formation of a school-fund in the State was in 1823, when the vacant lands north and east of the congressional reservation-line were sold at 12½ cents per acre and the moneys received paid to the Bank of Tennessee, to "remain and constitute a perpetual and exclusive fund for the establishment and promotion of common schools in each and every county in the State." The taxes on these lands were also to constitute a part of the perpetual school-fund.

The act of 1827 made considerable additions to this fund.

The act of 1837–'38 established the Bank of Tennessee, and by that and subsequent acts the whole of the common-school-fund of every description was made a part of the capital of that bank. Of the dividends of the bank $100,000 was annually set apart for common schools, and the faith of the State pledged for the annual appropriation to that object, and at the same time $18,000 was set apart to academies.

The amount of the common-school-fund, constituting a part of the capital of the Bank of Tennessee, was fixed at $1,500,000; and it was also provided that lands sold for taxes, escheated lands, &c., should constitute a part of the perpetual school-fund.

The constitution of 1870 declares that the fund called the common-school-fund "shall remain a perpetual fund, the principal of which shall never be diminished by legislative appropriations, and the interest thereof shall be inviolably appropriated to the support and encouragement of common schools throughout the State and for the equal benefit of all the people thereof; and no law shall be made authorizing said fund, or any part thereof, to be diverted to any other use than the support and encouragement of common schools. The State-taxes derived hereafter from polls shall be appropriated for educational purposes in such manner as the general assembly shall from time to time direct by law."

SCHOOL-LANDS.

By act of Congress of April 18, 1806, "to authorize the State of Tennessee to issue grants and perfect titles to certain lands therein described," it is provided that Tennessee should appropriate 100,000 acres to the use of two colleges, to be established by the State, one in East and one in West Tennessee; 100,000 acres for academies and 640 acres in each six miles square, when existing claims would allow of it, for the use of schools for the instruction of children, forever. These conditions were accepted by the act of September 6, 1806.

By the act of January 15, 1844, amended by act of January 23, 1846, the school-lands in the State were directed, upon certain conditions, to be sold, and the proceeds arising from the sale were to be paid into the Bank of Tennessee and its branches; and it was made the duty of the bank to invest the principal in the bonds of the State, if the bonds could be obtained at nominal value or less, the interest paid by the bank, or realized by the bank upon the investment, to be annually set apart and paid over to the districts, townships, or fractional townships to which the lands belong, according to the amount of deposit belonging to each respectively.

On September 1, 1869, the Bank of Tennessee reported to the general assembly among its liabilities the sum of $387,154.36, as the proceeds of the sale of the school-lands. Assuming this to be the correct amount and that no interest was paid on the same after October 1, 1860, the condition of that fund would be on January 1, 1873, as follows:

Amount of fund	$387,154 36
Unpaid interest	280,041 64
Total	667,196 00
To this add:	
The common-school-fund, as before mentioned	1,500,000 00
Unpaid interest on this	1,102,500 00
Aggregating a grand total of	3,269,696 00

CHANGES IN PUBLIC OPINION.

A great change has taken place in the public mind in regard to free schools during the last twelve months. In every part of the State there is a growing sentiment in their favor. Prejudices are disappearing and the truth is daily opening to the minds of the masses that increased education means increased enjoyments and increased prosperity. The belief is also gaining ground that the amount expended in private schools for the education of one-third of the children in the State is sufficient to educate them all if disbursed under proper regulations. Even the politicians are outspoken in their advocacy of public schools. These barometers of public opinion indicate an earnest desire by the great mass of people for a complete and thorough system of public schools, such a system as will furnish ample educational facilities to every class in the State and be worthy of their support and confidence. It is said now unhesitatingly: "The money heretofore appropriated by the State for the maintenance of public schools has been worse than thrown away. Not only has it been insufficient, not only has it not educated any one, but it has been in the way of private enterprises, impeded the cause of education, and in its management detracted from the respectability of the public schools."

It speaks well for the people of Tennessee that, in spite of this inefficient and destructive system—a system that has lived by pretensions, and not by performance—they are still in favor of public schools. An efficient system will be warmly welcomed, and those who shall be instrumental in fashioning and perfecting a system adapted to the society and necessities of the State will be regarded as public benefactors.

Copies of the last report of the State-superintendent of public instruction were distributed in every county in the State. Letters received from all the counties prove that the report has been productive of great good, inasmuch as it supplied to the friends of public schools ready answers to the pretentious but flimsy arguments of their opponents.

GENERAL CONDITION OF EDUCATION.

Under the county-system now in operation, only 29 out of the 93 counties in the State have levied a tax for school-purposes. In some of them the tax is only nominal and in others sufficiently liberal to maintain schools for several months in the year. The amount of tax ranges from 3 to 40 cents on the $100. In addition, all State-poll-taxes go to the school-fund.

Reports of the scholastic population have been received from only 73 counties. These returns show an aggregate of 307,164 between the ages of 6 and 18. The scholastic population of the counties failing to make returns, allowing for the natural increase since 1869, when the last report was received, is estimated at 81,904; giving a total school-population of 391,068.

The returns, as published, show that not one-fifth of this population has any means of education. In some of the counties visited last summer there was not a single school, either public or private, in operation, nor were there any efforts being made by the citizens to remedy the deficiency. The people of Tennessee have been slow to recognize the truth that "crime is directly as ignorance and inversely as intelligence," and that "the first duty of the legislator should be to provide for the suppression of crime rather than for the punishment of the criminal." Neither have the advantages that would accrue, in an industrial point of view, from an efficient system of public instruction been properly appreciated. In the want of such a system, immigration finds its greatest check. Above all things, at the present time, the State needs skilled labor, but skilled laborers will never voluntarily make their homes where they have no opportunities offered for making skilled laborers of their children. It is hoped that legislators "will look at the question in the most practical manner and do what common sense and a rational mind would direct under the circumstances."

PREVAILING IDEA REGARDING PUBLIC SCHOOLS.

The idea which prevails among the people of the State in regard to public schools is a very imperfect one. They are regarded as charity-schools—schools supported from the public funds, overseered by indifferent commissioners, and taught by stupid, incompetent, and peripatetic teachers. In the public mind, respectability does not attach to public schools, and, except in those cities that have established schools of such transcendent merit as to compel the discontinuance of private schools, no correct idea of a well-founded system prevails in the State.

HOW TO MAKE THE PUBLIC-SCHOOL-SYSTEM EFFICIENT.

In the establishment of a public-school-system, the first object should be to make it respectable, by making the schools valuable and efficient. To make them so, the very best talent should be secured, not only to teach but to supervise and direct the schools. The county-superintendent should be a man of first-rate executive ability and the commissioners of the district should be selected because of their fitness for the place. Above all, no man should be employed to teach who cannot undergo a rigid examina-

tion in all the leading English branches. It is beyond the power of legislation to make the teachings of ignorance productive of intelligence, and unless competent teachers are procured the funds provided are thrown away and the time of the children worse than lost. It is especially necessary that the law be made rigid in this matter, for good teachers are scarce. Steps should be taken, as soon as possible, to establish at least three normal schools, one in each division of the State. The Peabody fund, which is now distributed over such a wide area to so many schools, could be concentrated and made of more enduring benefit by being distributed to three schools of this character.

DEFECTS OF THE PRESENT SYSTEM.

This subject is introduced in the following forcible language: "The system of public instruction now in operation is a farce, and utterly devoid of vitality. It was begotten in a desire to shift responsibility, and is wholly unsuited for the accomplishment of the great purposes of education. It stands in the way of private enterprise, cripples the efforts of the friends of public instruction, and serves as an excuse for timid and incompetent legislators."

The objections to it are: (1) it secures no unity of action, (2) it fails to secure a lively interest in school-matters, (3) it is totally destitute of energy and is liable to be terminated in any county at the pleasure of the magistrates, and (4) its provisions to secure statistics are inefficient and unreliable.

WHAT THE SYSTEM NEEDS TO VITALIZE IT.

There is needed, first, a State-superintendent, with a salary sufficient to enable him to devote his time, energies, and talents solely to school-matters.

If the county-system, so called, is to continue, there should be some inducement held out to make the counties act. State-aid should be given only to those counties that agree to furnish an amount equal to that given by the State. A blending of the two systems, State and county, would secure the advantages of both. Unity of action and State-superintendence would be secured without lessening the sense of responsibility or personal interest which a local tax would assure.

County-superintendents should be appointed by some authority having a competent knowledge of the qualifications which such an officer should possess, and much of the power now vested in county-boards of education should be transferred to the county-superintendent.

The best men in the districts should be selected for commissioners, and they should, at least for a year or two, be appointed by the county-superintendent. Power should be centralized as far as the people will bear it without complaint. Should the commissioners be selected by the people, they will, sometimes, in districts where schools are unpopular, be selected to defeat the very purposes they should subserve. It has frequently happened that schools have been made inefficient and unpopular because the commissioners chosen were enemies to public schools. To popularize schools they must be made efficient, and to make them efficient they must have competent officers, who will feel a deep interest in their success.

RATIO OF DISTRIBUTION.

Great dissatisfaction often exists in the sparsely-settled districts because the children are not sufficiently numerous to secure a teacher. It has too often happened that the number required for a school has been too great. It is suggested that this number be variable and regulated by the density of the population, so that eight or ten scholars in the thinly-populated school-districts should be entitled to a teacher. The ratio of distribution in the counties, for the same reason, should be changed. Equality in facilities for instruction cannot be secured by dividing according to the number of children. The only just method of division is according to the number of teachers needed. The true plan is to regard every district, however small, as entitled to at least one teacher, and to fix the number above which additional force should be required, and then divide according to the number of teachers so ascertained to be needed. A similar plan, adopted many years ago in North Carolina, gave great satisfaction, and made public schools popular in regions where they had met with most disfavor.

AID FROM THE PEABODY FUND.

Mention is made of the liberal aid extended to the public free schools in the State by the general agent of the Peabody fund, Dr. Sears. In every instance, when the application has been properly made, he has responded liberally. The whole amount given is $22,850. Other applications have been forwarded which, no doubt, will receive favorable answers.

A KNOWLEDGE OF STATE-RESOURCES SHOULD BE IMPARTED IN SCHOOLS.

The assistant superintendent remarks: "A suggestion has been forced upon my attention by the degree of ignorance that prevails among our people in regard to the re-

sources of the State. Into all our public schools elementary geology should be introduced and taught, and more especially the geology of the State. For a boy or girl to go out from our schools ignorant of the fact that we have 5,100 square miles of coal, twenty-eight counties filled with inexhaustible beds of iron-ore, and streams of sufficient power to manufacture all our raw material into valuable market-products, shows an utter want of appreciation of the demands of the age. I would suggest the propriety, if not the necessity, of having prepared at an early day, and introduced into our schools, a manual of the geology of Tennessee. A child instructed in these things would show a distinctiveness in his training and be able to repay, by his knowledge, some of the expenses incurred in his education."

In a school at Elm Grove, Powell's Valley, instruction in scientific agriculture is reported to have been given to the farmers' children, adding much to the interest of the school-course and promising results most beneficial to the pupils. A committee of substantial farmers attended the summer-examination of this class and were greatly gratified at the progress manifested.

NASHVILLE.

[From report of Hon. S. Y. Caldwell, city-superintendent.]

The present population of Nashville is estimated at 27,000, very largely composed of colored people, many of these former field-hands that have drifted since the war from the country districts into the city. Hence, out of 8,370 children of school-age, only 3,722 are enrolled in the public schools, with 600 in private schools, making a total of 4,322, about one-half the school-population. The public schools are: primary, twelve, with 22 female teachers and 1,739 enrolled scholars; intermediate, ten, with 2 male and 18 female teachers and 1,100 enrolled scholars; grammar, seven, with 7 male and 12 female teachers, scholars, 768; high, one, with 3 male teachers and 1 female, and 115 pupils on the roll—giving a total of 65 teachers to the 3,722 enrolled pupils, about 1 to 57. Only six private schools are given. In these 600 enrolled scholars are said to have 20 teachers—8 male and 12 female. Income of public schools, $70,123.18; expenditure, the same. Latin is taught in the high school and there are 70 pupils in French, while 15 are preparing for the academic course in college and 5 for the scientific. Three hundred pupils in the schools study vocal music and the same number German.

Attendance.—The ratio of enrollment upon the scholastic enumeration has increased nearly 2 per cent., although the latter is greater by 1,588 than it was last year. There has also been an increase of 1 per cent. in the ratio of attendance to enrollment. The per cent. of absence is 3.4 against 4.65 last year and that of tardiness .49 against .7. These results, of themselves, sufficiently attest the successful working of the system, and they are really remarkable, in view of the fact that contagious and epidemic diseases, peculiarly inimical to children, have prevailed in the city to a greater extent and more frequently than during any previous year. Cases of truancy are very rare, averaging less than one to the thousand in attendance; yet, during the first years of the school-organization, this evil was well-nigh beyond control by either school- or parental authority. The third report, published in 1857, gives the per cent. of attendance between 83 and 89, with an average of 85, and that of tardiness was 3.52. For last session the former was from 92 to 97, the average being 95½, and the latter was only .49. It is considered cause for congratulation that these desirable events have been attained without the adoption either of excessively stringent measures or of any system of prizes for stimulating pupils.

Teachers.—It has been necessary to make more frequent changes of teachers than have ever occurred in any preceding session. The corps has been composed of 62 regular and three special teachers. There have been fifteen permanent transfers and thirty-five temporary substitutions.

There were 49 cases of tardiness charged against teachers, or two-fifths per cent. on their attendance, a showing but little better than that for pupils. The number of days' absence against teachers was 210.

Hinderances to the success of the schools.—By no means the least obstacle with which the schools have had to contend was the unfortunate discussion as to their management, which, originating in the city-council, found its way into the daily papers, causing a clash of opinion. While it lasted it was a fruitful source of disobedience to school-rules and dissipation of energies on the part of pupils, of endless troubles and vexations to teachers, and of discontent in parents. Passing by these unfortunate results, inseparable from such a controversy, the worst aspect of it is that, whether intended so or not, it will, if persisted in, prove subversive of the school-system.

School-accommodations.—The present accommodations are ample for the scholastic population, but a building containing 400 seats must be given up in a few months, and that number of children will then be unprovided for. The recommendation, made two years ago and renewed in the last report, for the erection of a high-school building, centrally located, is renewed.

Study of German.—In addition to the three-years course previously provided in the high school for German, it was, a year ago, made an elective study in the sixth- and

seventh-grade-grammar-schools. There were, in 1872–'73, 300 pupils pursuing it and making very satisfactory progress.

Music.—Vocal music has been taught irregularly by rote, and even in this unsatisfactory way was a great source of relief and enjoyment in the school-room. Arrangements have been made for introducing it as a regular branch of study.

Drawing.—Drawing has been taught very profitably in the primary grades, but merely in the art of copying. It should be regularly introduced upon a scientific, systematic, and progressive plan. It is naturally allied to penmanship, and the two should be placed under the supervision of a competent instructor. Such an arrangement is in contemplation for next session.

KNOXVILLE.

[From special report of Hon. Alexander Baird, city-superintendent.]

To prevent the intermixture of politics with school-affairs, Knoxville, December 12, 1873, passed an ordinance providing for the appointment of a board of education, to hold office for five years and to have control over the schools and teachers, its action being only subject to revision from the town-authorities. No member of this board can be a member of the city-government, his acceptance of an office in that government vacating, *ipso facto*, his position in the board.

The schools of the city number fifteen, of which six are primary, three intermediate, four grammar-, and two high schools. The teachers are 20 in all, (males 2, females 18,) with 1 male and 3 female teachers in private schools. The salaries of teachers range from a minimum of $300 per year for females in the primary schools to a maximum of $650 for both sexes in the high schools. Out of 1,654 children of school-age, 1,010, about two-thirds, are enrolled in the public and 135 in the private schools. In the high schools Latin is taught; Greek, German, French, drawing, and music do not appear to be. The school-revenue—$595 from the State, $7,500 from taxation, and $2,000 from the Peabody fund—amounted in 1873 to $10,095, the expenditure for salaries and incidentals to $9,272.

CHATTANOOGA.

[From special report of Hon. H. D. Hyatt, city-superintendent.]

With a population of 12,000, Chattanooga has 2,387 children of school-age, of whom 1,235 are enrolled in public schools and 400 in private. The public schools are six grammar-, with primary departments included, and one evening-school. The 7 male and 13 female teachers in these schools all form a normal class for instruction in the science and art of teaching. Three private schools—the Chattanooga Female Institute, Lookout Seminary, and High School for Boys—report 8 male and 5 female teachers to their 400 scholars. So that in the city we have a total of twelve schools, of 15 male and 18 female teachers to 1,635 enrolled pupils, an averarge of about 1 to 50. Teachers' salaries are from a minimum of $40 per month, for female teachers in primary schools, to a maximum of $90 per month, for the male principal of a grammar-school, the assistants in the grammar-schools receiving, males, $50, females, $45. The school-income has been—from the State $3,000, from taxation $12,000—$15,000; the expenditures—$8,335.48 for sites, buildings, and furniture and $6,658.10 for salaries and incidentals—have aggregated $14,993.58. In the higher departments of the grammar-schools Latin is taught and all the pupils of all the public schools receive instruction in drawing and vocal music.

MEMPHIS.

[From special returns by Hon. J. G. Cairns, secretary of school-board.]

The schools here have been greatly interrupted by the prevalence of yellow fever, which took off two members of the board of education, three teachers, and many of the children, and so scattered the people that no schools could be held after the middle of September, when they were broken up. The returns are hence imperfect.

Two school-houses have, however, been built during the year, at a cost of $81,000, while another, for colored children, to cost $20,000, was in process of erection in the fall.

NORMAL SCHOOLS.

A normal and commercial school is sustained at Memphis by one of the religious educational associations. In this 9 teachers have under their care about 300 pupils, but how many of these are in the normal classes is not indicated. An educational institution for the training of colored teachers has been established at Maryville, and is in hands which seem to promise successful operation. The Wesleyan University at Athens expresses a readiness to form a normal department as soon as a sufficient number of students present themselves to warrant the additional expense. Such departments exist at the Fisk University at Nashville and the Central College at the same place. In the former, 15 have graduated from a lower course and 50 are in different stages of a three-years course. In the latter 114 students were enrolled in the normal classes during the year 1872–'73, 2 have graduated, many more have taught without graduation, and 66 remain in the first and second years of a three-years course. A State normal school will doubtless be an early issue from the newly-organized system of free instruction.

SECONDARY INSTRUCTION.

The institutions established to supply this in the State may be found in Table VI, appended to this report. Returns for 1873–'74 have been received from 15 academies, high schools, atheneums, and kindred educational establishments, embracing a total of 74 teachers (21 males and 43 females) and 1,277 pupils, (600 males and 677 females,) of whom 267 are pursuing studies in the classic and 93 in one or more of the modern languages. In 10 of these schools music is taught (vocal or instrumental, or both) and in 5 of the 10 drawing is also in the course. Libraries, with philosophic and chemic apparatus, exist in some cases.

The number of years required for the completion of the course in these schools varies from 3 to 10, according as pupils are received at the lowest grade, to be carried fully upwards or after they have gone through a partial course in other schools. It is quite possible that the schools which furnish these statistics are not the only ones of their class within the State, but they probably present a fair sample of the character and extent of the instruction given.

Besides the independent academies and public high schools, there are, in connection with the colleges and universities of Tennessee, preparatory departments, meant to fit students for a college-course. These return, for 1873–'74, instructors, 57; students, 1,700, of whom 513 are specifically said to be preparing for the scientific course in college and 313 for the academic course, the destination of the remaining 874 not being given. Of all these students, only 128 appear to be females.

The numbers here given, added to the preceding ones, make, for schools of high grade in the State, at least 128 instructors and 2,849 pupils, while many more might probably be found by one enjoying opportunities for close inspection. In the reports of some State-superintendents, lists of such schools, with the number of instructors and pupils, sometimes with the character of the course pursued, form an interesting item of information.

SUPERIOR INSTRUCTION.

The institutions for collegiate education in this State that existed before the civil war have in no instance apparently thoroughly recovered from the disastrous influences of that conflict. As the present tendency is rather towards the origination of new colleges than towards a strengthening of the old, the likelihood appears to be that for some time there will be within the State a number of comparatively feeble institutions for high training instead of a few strong ones. The condition of the greater part of these is exhibited in the following table:

Statistical summary of universities and colleges.

Names of universities and colleges.	Corps of instruction.	Endowed professorships.	Number of students.		Corporate property, &c.						Number of volumes in library.
			Preparatory.	Collegiate.	Amount of property of corporation.	Value of grounds, buildings, and apparatus.	Amount of endowment.	Amount of productive funds.	Income from productive funds.	Receipts for last year from all other sources.	
Central Tennessee College	6	....	.....	16	.....	$40,000	.....	.....	.....	$4 620	820
Christian Brothers' College	12	0	122	37	$40,000	.....	.....	.....	.....	.....	155

* One partially.

Of the colleges here given the University of Nashville is the oldest, having been founded in 1785. The University of the South, Sewanee, appears to be among the

youngest, its organization dating as late as 1868. It was, however, really founded previous to our great civil strife, having received then its charter from the legislature, secured possession of its magnificent domain of nine miles long and two wide on the Sewanee Mountain, and laid the basis of that system of instruction in separate schools which it patterned after what prevails in the Virginia and Georgia universities. Hiwassee College, after a suspension of a year, was reopened on the 4th of August with improved buildings, with a corps of students from nearly all the Southern States, and with a hopeful and energetic president, assisted by three professors. Fisk University, Nashville, stands probably alone in the State in being open to all races.* The East Tennessee University, Knoxville, includes in it the Agricultural College of the State. It has recently had adjudged to it $15,000 for the purchase of a library. Giles College, Pulaski, makes no return for the fall of 1873. Greenville and Tusculum College, Greenville, reports by catalogue, for the year ended June 6, 1873, 4 professors and 3 other instructors; college-students, 11.

COLLEGES FOR WOMEN.

The colleges devoted specifically to the education of females reporting for 1873 are: (1) Tennessee Female College, Franklin; professors and instructors, 7; students, 113; number of years in course, 4; French, German, music, drawing, and painting taught. (2) State Female College, Memphis; professors and instructors, 14; students, 215; course, 4 years; French, German, Italian, Spanish, music, drawing, and painting taught. (3) Cumberland Female College, McMinnville; professors and instructors: resident, 5; non-resident, 7; students in college proper, 44, with 2 post-graduates—whole number, 128; French, music, drawing, and painting. (4) Soule Female College, Murfreesboro'; professors and instructors, 6; number of students, not given; course, unlimited, "attainment, not time," being the motto; French, German, Spanish, and Italian, music, drawing, and painting taught. (5) Mary Sharp College, Winchester; professors and instructors, 9; students in college proper, 134—in all, 177; French and German, with music, drawing, and painting. (6) W. E. Ward's Seminary for Young Ladies; professors and instructors, 16; students in college proper, 216—whole number, 292; course, 5 years; French and German, music, drawing, and painting. All the above-mentioned report chemic laboratories and philosophic cabinets. (7) Washington Female College, Washington County, with 2 instructors, 12 students in college, and 72 in all; music in the course. (8) McKenzie Male and Female College, not included in the table, reports 5 instructors, 83 male and 94 female students; but whether these are in a preparatory department or in college-classes, or in both, does not appear. Volumes in library, 550.

At Nashville, already favored with the presence of three kindred institutions, another being not far off, the foundation of a new university has been laid, on the high ground overlooking the city from the west, where a *campus* of 70 acres is secured. It is to bear the name of Vanderbilt University, from the fact that Commodore Cornelius Vanderbilt, of New York, has generously given it an endowment of $500,000.

Another, to be called the Knoxville University, was located in May, 1873, at Knoxville, the citizens of which place pledged to it $40,000 in money and 100 acres of choice land near the town, on condition of its being established there.

The Baptists of the Southwest have also been agitating a proposition for establishing for their denomination a Baptist university, to embrace within its field at least Tennessee, Alabama, Louisiana, and Mississippi. This, if established, seems likely to be located in Tennessee.

BUSINESS-COLLEGES.

Four of these institutions in this State, at Lebanon, Memphis, and Nashville, report an aggregate of 291 pupils in 1873.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

The Agricultural College of Tennessee, at Knoxville, using at present the buildings and apparatus of the East Tennessee University, except about $1,000 worth of its own, reports as belonging to it 167 male students in the preparatory department, under the

* The corner-stone of Jubilee Hall, the new and noble building of the Fisk University, which is to be the fruit of the Jubilee Singers' concerts, was laid with imposing ceremonies October 21, 1873. Prof. A. K. Spence, the principal of the university, as now constituted, welcomed the audience to these ceremonies, expressing his conviction that Providence had guided, and would continue still to guide, the efforts made to build up here a great educational institution for a previously neglected race. The Rev. E. M. Cravath gave a history of the University, saying that eight years ago the land was bought, the Rev. E. P. Smith, now of the Indian Bureau, Prof. John Ogden, and himself advancing their individual means and notes for $16,000 for the purchase. The buildings for the school were then opened by the Government, through the agency of the Freedmen's Bureau, which also built the Howard Chapel and Dormitory. Then came aid from the Peabody fund for carrying on the school, and then Prof. White, to train the Jubilee Singers, through whose efforts twenty-five acres of land within the limits of the city are now held for the university, and the foundations of the building meant to be its home are laid and paid for, with a considerable overplus for carrying on the work. And as these singers, in a European tour, have met warm welcome and a large success, the building started by them is to be still wrought upon, with reasonable prospect of an early and entire completion.

charge of 3 teachers, and 82 in its college-classes, with 3 instructors, 1 lecturer, and 7 resident professors, its endowment ($396,000) invested in Tennessee State-bonds, and its income from these $22,500; course in the college proper, 4 years. Out of the 275 students whom the State has a right to send to it for education, about 190 are in attendance. Four graduated in 1873 as bachelors of art and 2 as bachelors of science.

The Tennessee College of Pharmacy, at Nashville, with 5 professors and 2 years in its course, reports 50 volumes in its library, a cabinet and apparatus worth $2,000, and 20 students attendant on its instructions.

The department of medicine and surgery in the University of Nashville has 9 resident professors, 1 other instructor, its library destroyed during the war, 160 students in the first year of its course and 75 in the second.

The theologic department of the Central Tennessee College, Nashville, with 1 resident and 1 non-resident professor, 2 years in course, and 825 volumes in library, reports 12 students in the first year of its course. No graduates.

TENNESSEE SCHOOL FOR THE BLIND, NASHVILLE.

The report of this school for 1873 states that it is pretty certain there are in Tennessee not less than 1,200 persons partially or wholly blind. Of this number the State has, in her school, cared for about 38 annually for the last three years. The inability to do more than this is lamented by the trustees, who have been laboring under great disadvantages from want of means and house-room. The difficulty with respect to means continues still and greatly hampers operations. That with respect to house-room will be remedied to some extent by the generous action of Hon. John M. Lea, who, at a cost not stated, but necessarily considerable, has purchased and donated to the institution an estate of between six and seven acres within the limits of Nashville, on which is a fine private residence with nine rooms. This grand gift, it is hoped, may lead to such others from the State or individuals as will enable the trustees to erect other buildings on the property and greatly extend the benefits of the school. Meantime, it goes on caring, as it best can with its small means, for the 36 pupils at present within its walls, teaching them in the morning-hours the ordinary English branches, with music, giving, of course, intervals of recreation. In the afternoon, the pupils are engaged in vocal and instrumental practice in music, with fancy bead-work, knitting, sewing, and cane-seating. In the evening the time is spent in listening to reading and renewed exercises in music.

STATE TEACHERS' ASSOCIATION.

Two meetings of this organization were held during the year 1873, at Nashville, in the senate-chamber. The first was on January 22, 1873, and was largely attended by members of the State-legislature, who joined the teachers and school-officers of the State in their deliberations as to the best means of improving the educational condition of the State. In the absence of Governor Brown, the address of welcome was delivered by Mr. James, of the State-senate, who, in behalf of that body, expressed his satisfaction that the members might avail themselves of the experience of the association in the preparation of a bill which should meet the educational wants of the State.

Remarks embodying the main facts in respect to the condition of education in the State and suggestions of measures for its improvement were made by the State-superintendent, Hon. J. M. Fleming; the assistant superintendent, J. B. Killebrew, and others. Different systems of education were discussed and divers resolutions offered and referred to committees. The importance of the establishment of teachers' institutes was strongly urged and generally indorsed. A statement of the resources of the school-fund was made by Mr. John Frizzell, who said that the code in 1848 fixed the fund at $1,500,000, and though the body of the fund was squandered the constitutional convention of 1870 re-enacted the provision of the old constitution fixing the amount as before at $1,500,000, the interest of which was to be inviolably appropriated for common schools, and without conditions, according to the scholastic population. This interest, which has not been paid since 1860, must now amount to about $1,102,500, a sum which, added to the permanent fund, would swell the amount to about $2,600,000, the interest of which would be about $160,000. He thought if the State raised this it would do all it could, and with a county-tax there would be sufficient funds for school-purposes.

The last meeting of the association was held December 9–11, 1873, also in the senate-chamber at Nashville. The State-superintendent, Colonel Fleming, said, in his address of welcome, that out of the counsels, the thoughts, and earnest importunities of this association has sprung whatever there is of the educational public system in Tennessee.

The necessity for the establishment of a school-journal was discussed, and it was finally resolved that the executive committee of the association should proceed at once to establish a monthly journal under the official authority of the State-superintendent of public instruction.

Address of Hon. John H. Fleming, State-superintendent.—Superintendent Fleming gave a brief abstract of his report for 1873, with some remarks as to the workings of the new law. He thought the people had good cause to be satisfied with the results achieved during the year, urged the importance of making provision for the support of county-superintendents of schools and the necessity of arousing an intelligent public sentiment in school-matters in the State—a sentiment informed as to the needs of the country, the State, and the community, and that will impress itself upon the county-courts and impel action.

Address of Dr. Sears, agent of Peabody fund.—Dr. Sears addressed the association upon the general importance of education to the welfare of the State, both from a moral and material point of view. "If it costs much money," he said, "to support an efficient system of public schools, it costs still more to support private schools, and to allow people to live in ignorance would cost more than anything else." The State-controller of Tennessee publishes the statement that the cost of criminal prosecutions in the criminal courts of Tennessee amounted to one-half of the entire expenditures of the State. Thus the people are paying out more money for ignorance than they need to pay for intelligence, while but few criminals are ever reformed by incarceration, which has, moreover, but little effect in restraining vice in general.

Address of Prof. A. B. Stark on normal schools.—The importance of professional training for teachers was enlarged upon by Prof. A. B. Stark, of Lebanon, who said a majority of the persons who are—not teaching—but hearing the lessons and whipping the children in the schools of Tennessee to-day are boys and girls, too young to obtain other work and entirely untrained in methods of instruction. The speaker contrasted such a system with that of Germany, where teaching is a permanent and honorable profession, into which no untrained man, however learned and eminent in another profession, can possibly enter; where even a bishop would not be allowed to teach a primary school in the obscurest village. Tennessee should have a number of liberally-endowed normal schools for the training of the 10,000 teachers needed to teach the 400,000 children in the State; but for the improvement of those teachers who must instruct the present generation, he regarded the establishment of teachers' institutes as of supreme importance and submitted a plan for their establishment and management in Tennessee. Several other resolutions were offered referring to the establishment of teachers' institutes, the whole subject being finally referred to the consideration of the county-superintendents present, who, it was understood, were to meet immediately in the capacity of a convention.

CONVENTION OF COUNTY-SUPERINTENDENTS.

Subsequent to the adjournment of the State Teachers' Association, the school-superintendents of the counties met in convention in the senate-chamber at Nashville, all members of the Teachers' Association present being invited to participate.

Superintendent Fleming, who presided, suggested as the first subject for consideration the report of the committee on teachers' institutes of the Teachers' Association. Dr. Sears stated that the trustees of the Peabody fund would contribute $100 each to defray the expenses of ten institutes in the State which should be attended by not less than 50 teachers. The State-superintendent was then requested by the convention to make arrangements for holding ten district-institutes during the present scholastic year; and it was also suggested that county-superintendents should hold at least two county-institutes in their respective counties. Superintendent Fleming announced that he would, by a requisition from his office, make teachers' institutes a part of the machinery of the public-school-system and would partition the State into institute-districts comprising nearly 10 counties each, there being 93 counties in the State.

The convention expressed its approval of the educational bill introduced into the House of Representatives by Hon. G. F. Hoar, on December 4, 1873, and requested the Representatives of the State in Congress to give their influence and votes for it, believing its enactment by Congress would be promotive of the educational interests of the country, and particularly valuable to their own State.

OBITUARY.

Prof. Samuel Snapp Doak, A. M., died at his residence, at Tusculum College, East Tennessee, on the 5th of August, 1873, in the forty-second year of his age.

He was born November 8, 1831, in Washington County, Virginia. At the age of four years his parents moved to Chattanooga, Tennessee, where his early years were spent. In 1852, before he was quite 21 years of age, he graduated at Tusculum College, under his grandfather, Rev. S. W. Doak, D. D. In the following year he entered upon the study of the law in the office of Judge Sam. Milligan, in Greenville, Tennessee, and was admitted to the bar at the age of 23 years. He never attempted, however, to practice the law, but turned his attention to teaching. For several years he was an instructor in Hiwassee College, Tennessee. In 1859 he accepted the chair of mathematics in Tusculum College, his *alma mater*, where he labored faithfully to the end of his life.

As a student he was always noted for diligence and close application to study. His scholarship was varied, extensive, and exact. As a teacher he was apt, faithful, and successful. As a man he was humble and retiring—modest to a fault. He was a kind neighbor and a faithful friend. As a citizen his influence was ever on the side of peace and order. In the late rebellion he adhered to the flag of the Union. As a Christian, he was consistent in his walk, conscientious in his duties. Prof. Doak leaves many friends to mourn his early death.

LIST OF SCHOOL-OFFICIALS IN TENNESSEE.

Hon. JOHN M. FLEMING, *State-superintendent of public instruction, Nashville.*

Union	W. J. Nash	Sharp's Chapel.
Van Buren	J. D. Cummings	Spencer.
Warren	A. M. Burney	McMinnville.
Washington	H. Presnell	Jonesboro'.
Wayne	James Anderson	Waynesboro'.
Weakley	E. H. Hatcher	Dresden.
White	Thomas L. Mitchell	Sparta.
Williamson	John B. McEwen	Franklin.
Wilson	A. D. Norris	Austin.

TEXAS.

[From information furnished by Hon. J. C. De Gress, State-superintendent of public instruction.]

The amount of accounts approved during and for the fiscal scholastic year ended August 31, 1873, was as follows:

Payable by the State		$51,619 66
Payable by the counties, for salaries of teachers and employés	$993,997 06	
Rents of school-houses	29,251 46	
Fuel for school-houses	6,578 39	
Furniture for school-houses	19,025 76	
Purchase and building of school-houses, &c	44,063 22	
		1,092,915 89
Aggregate, State and counties		1,144,535 55

The amount approved payable in the counties was payable out of the proceeds of the 1-per-cent. school-tax levied for the building of school-houses and maintaining public free schools.

On the 2d of June, 1873, the thirteenth legislature made an appropriation of $400,000, to assist in paying off the outstanding indebtedness to teachers, which had accumulated, partly in consequence of the absence of a State-appropriation by the twelfth legistature, for the year ended August 31, 1873, and partly in consequence of the tardy collection of the special school-tax.

The following is a statement of assets and liabilities, from the commencement, under the act of April 24, 1871, to August 31, 1873:

AVAILABLE ASSETS.

Appropriations by twelfth legislature, in 1871, for scholastic purposes, (except fees of scholastic-census-takers and certain other items not within my jurisdiction,) to August 31, 1872		$559,500 00
Appropriations by thirteenth legislature in 1873, including the $400,000 above mentioned and excluding fees of scholastic-census-takers		423,168 66
Total appropriations by State, for the years ended August 31, 1872 and 1873		982,668 66
Add amount of special school-tax of 1 per cent. levied by boards of school-directors in 1871, which has been reported received by treasurers of boards of school-directors in the different counties of the State:		
Received during year ended August 31, 1872		569,857 69
Received during year ended August 31, 1873		497,217 92
Received during the current year, so far as reported		11,116 52
Aggregate assets, State and county		2,060,860 79

LIABILITIES.

Total amount of accounts approved, payable by State and counties, in and for the year ended August 31, 1872	$1,228,243 66	
Add amount approved for the year ended August 31, 1872, during the year ended August 31, 1873, payable by State and counties	114,550 33	
Total, for year ended August 31, 1872	1,342,793 99	
Add amount, *ut supra*, for the year ended August 31, 1873	1,144,535 55	
Total		2,487,329 54
Leaving a balance due to teachers, and on other accounts, of		426,468 75

Had the 1-per-cent. school-tax levied in 1871 by school-directors been collected, it would have paid all debts contracted and, after making all reasonable allowances and deductions, would have left a balance of upwards of $500,000.

The additional statistics for the year 1872-'73 are as follows:

SCHOOL-POPULATION—ENROLLMENT AND ATTENDANCE.

Total scholastic population of the State, (estimated)	280,000
Number enrolled in public schools	129,542
Average attendance	83,000

TEACHERS AND TEACHERS' PAY.

Number of teachers in public schools	2,207
Average salary of teachers (of either sex) per month	$57

The figures for each month, from September, 1872, to May, 1873, inclusive, are thus given:

Tables showing the total number of public free schools in the State, the total number of teachers, and the total number of pupils attending school during the months from September, 1872, to May, 1873, inclusive.

	September.	October.	November.
Public free schools	1,165	1,561	1,824
Teachers	1,359	1,837	2,182
Pupils	46,320	68,214	83,082

	December.	January.	February.
Public free schools	1,824	1,776	1,842
Teachers	2,193	2,095	2,207
Pupils	81,502	77,713	82,903

	March.	April.	May.
Public free schools	1,874	1,774	1,638
Teachers	2,236	2,141	1,980
Pupils	82,858	76,151	69,769

Total number of pupils enrolled in the public free schools who have received instruction during the ten months ended June 30, 1873, 129,542.

The report of the superintendent for the year 1872 indicated a steady progress up to that period in educational matters and a gradual change of public sentiment favorable to free schools. Attendance upon public schools had largely increased over the previous year. Private schools had decreased to the number of 1,100, their best teaching material and nearly all their pupils having been absorbed in the public schools, leaving only a few higher-grade private schools or academies in operation.

There had been a marked advance in the qualifications of teachers; the prejudice against them reported the previous year had changed as if by magic; occasions of personal violence or outrage upon them had become rare, notwithstanding the large proportion of those engaged in teaching colored children; from being subjects of social ostracism they had become favorites, and, with the exception of the vexations of delay in the payment of their salaries, their positions had really become pleasant.

PROVISIONS OF THE NEW SCHOOL-LAW.

In May, 1873, the State-legislature abolished the school-law which had been in operation since April, 1871, substituting for it one of which the following is a brief synopsis: "A State-superintendent is to be elected every four years by the voters of the State, whose salary is to be $3,000 annually and who is allowed a clerk at a salary of $1,800. The superintendent may be impeached and removed from office for sufficient cause, and may also be removed by the governor, at the request of two-thirds of the members of the legislature. His duties are to counsel and advise with teachers as to the best manner of conducting public free schools, to have the supervision of all the public free schools in the State and be the general adviser and assistant of county-superintendents, to make an annual report to the governor of the condition of the schools, and to require of school-officers and teachers a rendering of the necessary

schedules and reports. He is also to apportion the public-school-fund among the several counties. County-superintendents are to examine teachers, issue certificates to them, and report to the State-superintendent. A board of five school-directors is to be elected in each county, whose duty it is made to define the course of study in the public schools, select text-books and apparatus, and prescribe the duties of trustees and teachers. Three trustees are to be elected in each school-district, who are to take the census of the scholastic population, making separate lists of white and colored children; provide schools and school-houses, separating the children of the two races; employ teachers, and see that the schools are taught and properly conducted for at least four months in the year. All the children of school-age in the State are required to attend school, unless prevented by certain specified causes, as sickness, danger from Indians, or great distance from school, except such as may be shown to have received regular instruction for four months in every year from any private teacher having a proper certificate." It is provided, also, that "the board of trustees of any school-district may adopt any private school established in their district, when the teachers of such school shall have obtained a certificate of competency and shall conform to the general regulations of this act." If the public-school-fund apportioned to any particular district should not be sufficient for the support of the schools during four months in each year, an *ad-valorem* tax upon all the taxable property of the district is to be levied by the county board of directors." Provision is further made that, "in any case where it may become desirable in any school-district to have a high school taught, any principal of such high school shall have the privilege of blending the free school with the private school by consent of a majority of the trustees of the former, said principal agreeing and contracting with said trustees to teach the children within the scholastic age; and said principal shall have the right to receive into his school and instruct any number of students who are over the scholastic age, at such rates of tuition as he may prescribe, and his patrons consent to pay, to the end that high schools may be established with authority to confer degrees or give certificates of merit and scholarship: *Provided*, That said high schools shall be under the control and supervision of the county-board of directors."

OBJECTIONS OF THE GOVERNOR TO THE ACT.

The governor of the State, in his message to the legislature declining to approve the foregoing act, submitted the following, among other, in his opinion, very serious objections thereto:

"(1) The constitution (Article IX, Section 4) directs the legislature to 'establish a uniform system of public free schools throughout the State;' but this act, though it proposes in its title to establish such a system, in realty does away with all systems. It gives in Section 18 authority to the county-boards to 'define the course of study in the public schools in their respective counties and direct the class and kind of school-books and apparatus to be used therein,' and to 'prescribe the duties of the trustees and teachers.' These powers embrace pretty much everything that is essential to a system of schools, and it is plain that under them, instead of having one system for the State, we may have as many as there are organized counties, or, say, 135 systems.

"(2) It further strikes at uniformity of system by dispensing with the board of education for the State. Such or a similar board, having supervisory control and direction of the schools, has been found essential to their success in all States, both American and foreign, where the public schools have reached the greatest perfection. A board of education, with powers analogous to those created by the law in force, is not a new thing in this State. It was provided for in the provisional constitution of 1866, Article X, Section 10.

"(3) It provides (Section 22) that the schools shall only remain open for four months annually. This provision alone will, if adopted, put an end to the public schools on a scale of efficiency and permanency in any respect worthy of our State. It is obvious that well-qualified teachers cannot be had at a reasonable compensation to give their services for so short a period annually. Persons who devote themselves to teaching as a life-profession (and, if possible, such persons only should be employed in teaching) cannot, and will not, accept employment of this temporary nature. As a consequence, professional and competent teachers who remain in the State will be driven to take private schools, and the public schools, now so creditable in their results, must soon, from inefficiency, lose the respect and patronage of the people and fall into disuse."

* * * * * * * * * * *

"The expense attending the county-organizations under this act and the multiplicity of officers it creates should be noted. There is to be for each county a county-board of five directors, which, for the first year, is calculated to cost each county $520, or, for the whole State, upwards of $70,000. These boards are intended, in a vague and ineffective sort of way, to take the place of the present supervisors and inspectors. They cannot, it is clear, perform the duties of those officers, but they cost more, the supervisors and principals (the latter then doing the duties of the present inspectors) having cost for the last scholastic year but $65,810.72. It must also be remembered

that this was the cost of supervisors and principals for ten months, while the above cost of the county-boards is for only four months. But in addition to these county-boards is an army of school-trustees provided for. These cannot be less than fifteen, and may be many more, for each county. In this respect it is quite remarkable that, while the county-boards, which have little or nothing to do, are paid at the rate of $4 each per day, the trustees, who, if they do their duty, will find their time pretty much engaged for the whole scholastic year, are to be paid nothing. It will be interesting to compare the importance of the duties to be required of the unpaid trustees, in Section 22 and elsewhere, with those required of the paid county-boards. The main business of the latter seems to be that of keeping the former busily at work. It is scarcely necessary to remark that in no county of the State will fifteen honest and competent persons be found willing to attend, without pay, to the duties required of these trustees.

"The act repeals all previous acts, thus repealing the taxes assessed under those laws. It is true the repealing section proposes not to affect the legal liability of any one for taxes claimed to be due under those acts for the year 1871, but the taxes under the act of April 24, 1871, are nearly or quite altogether due for 1872 and 1873. In most counties the first year's assessment did not go into effect until 1872. Thus it would happen that in counties where the wealthy have taken advantage of the law's delay, the poor and people of moderate means who have paid their school-taxes would find their rich neighbors given by this an unfair advantage. Direct encouragement would thus be offered to those who have evaded their share of the burden, to the great detriment of the schools and injury of the teachers whose pay has been thereby wrongfully withheld."

OFFICIAL OPINION OF THE ATTORNEY-GENERAL.

The official opinion of the attorney-general of the State, respecting the constitutionality of the present school-law, as given in a letter to Richard B. Sempler, esq., and dated September 19, 1873, is as follows:

"The words in section 27 of the present school-law of May 22, 1873, are: 'May adopt any private school established in their district.'

"That provision can only be held constitutional where such adopted school is (as Section 4 of Article IX of the constitution provides) a part of a 'uniform system of public free schools throughout the State;' or, in other words, when it uses the course of study and books that constitute the system heretofore organized—for none other has been substituted for it—and when the adopted school becomes and continues for the four months an exclusively public free school: not receiving pay otherwise than from the school-fund. Section 18 of the present school-law, being contrary to the above-cited section of the constitution, is clearly unconstitutional, null, and void. If the trustees do not put in operation in their respective districts schools sufficient for all scholastic pupils living in sufficient numbers near enough together to be entitled, they cannot use the public free-school-fund for any partial or insufficient schools they may organize.

"After a careful study of the school-law of May 22, 1873, I am forced to conclude that so many of its provisions are unconstitutional, while others are impracticable, that it cannot be put into operation. Section 4 of Article IX of the constitution imperatively prescribes the establishment of a 'uniform system of public free schools throughout the State.' If adopting 'any private school,' and defining 'the course of study,' and directing 'the class and kind of school-books,' in a discordant manner, in different districts, amounts to a uniform system throughout the State, I am unable to perceive it.

"Besides, section 6 of Article IX of the constitution, after stating what shall constitute the school-fund, concludes by enacting that 'no law shall ever be made appropriating such fund for any other use or purpose whatever.' The Congress of the United States guaranteed this enactment by providing 'that the constitution of Texas shall never be so amended or changed as to deprive any citizen or class of citizens of the United States of the school-rights and privileges secured by the constitution of said State.'—(U. S. Statutes at Large for 1869-'70, ch. 39, p. 81.)

"WILLIAM ALEXANDER,
"*Attorney-General.*"

As to the working of the system thus referred to, the State-superintendent (November 26, 1873) says: "The last legislature enacted a new school-law, repealing the old one and in effect abolishing our rapidly-growing system of common schools. The scholastic year commenced, under the new law, on September 1, 1873, and, to date, only seventy-four free white- and three free colored-schools have been reported to this office as organized. Under this law no uniform system of public free schools, as required by the State-constitution, can be established; in fact, the poor, to whom only the free schools are opened, can never (under it) be educated. Private schools are being adopted as free schools, which means that the poor will be excluded; in short, the old pauper-law of the State is substantially re-enacted. The school-fund is, hence, likely to be given away to private institutions of learning, while those who are unable to pay for the tui-

tion of their children, and who are too proud to acknowledge themselves paupers, will be deprived of an education solemnly guaranteed them by the constitution of the State and indorsed by the Congress of the United States.

The law requires certain laborious duties to be performed by officers termed trustees, but makes no provision for their payment. Hence, with few exceptions, these officers have remained inactive. The consequence has been that the foundation of the establishment of a system of public schools has not been laid. I refer to the taking of the scholastic census, without which the school-fund cannot be apportioned to the different counties and the teachers cannot be paid. This law also provides for the office of a superintendent for each county, but requires no qualification except citizenship. He is to be paid $120 per annum. But few educated men will be willing to sacrifice their private interests to accept this responsible office, the duties of which are arduous and constant during the entire year, the law allowing each school-district of a county (and in some counties forty-five school-districts have been established) to choose four consecutive months in which to keep open its free schools. Some counties have gone to work, Galveston taking the lead, ignoring the present school-law and authorizing the employment of teachers for eight months.

The public domain, on the 31st day of August, 1872, consisted of 88,842,704½ acres of land, the proceeds of which were, by Section 6, Article IX, of the State-constitution, to become part of the common-school-fund, but the last legislature gave away one-half of such lands to corporations.

It is hoped that the legislature to be elected on the 2d day of December will be composed of liberal-minded men, who will have the foresight to see that without a thorough educational system the broad prairies of the State can never be settled.

To add to our embarrassments, the rich, in many instances, take advantage of the law's delay and refuse to pay their school-taxes. Out of a tax of $2,200,000 levied in 1871, less than $1,100,000 has been collected, and although the supreme court decided this tax to be legal, more than a year ago, still, collecting officers, in sympathy with the rich, persist in neglecting their duty, and no remedy can be had for this evil. The legislature has also failed to make appropriation for rent of school-houses, fuel, and other incidental expenses necessary to carry on schools, so that, even if this law could be successfully executed, their non-action has rendered it inoperative

NO AID FROM THE PEABODY FUND.

The State-superintendent of public instruction, in response to his application made to the agent of the Peabody fund for the *pro-rata* assistance the State would be entitled to from that fund, in accordance with its established free schools, received the following reply:

"STAUNTON, VIRGINIA, *May* 13, 1873.

"MY DEAR SIR: I have consulted with the trustee of the Peabody fund residing here, and he agrees with me that in the present unsettled state of school-matters in Texas we should not be justified in making donations from the fund. We therefore feel obliged to wait, in accordance with our rules and usages.

"Yours truly,

"B. SEARS.

"Hon. J. C. DE GRESS."

The agent of the Peabody fund, in his report for 1873, explaining this, says that, while ready to make liberal contributions to the public schools of the State, he has been met with requests to do something which the rules of the trust do not allow, such as purchasing apparatus, paying teachers over and above their stipulated wages, and making up deficiencies in the school-fund, arising from a neglect to collect the taxes legally assessed. Hence have come embarrassments which, with the unsettled condition of school-affairs, have led to the action referred to.

SECONDARY INSTRUCTION.

The comparative imperfection of returns from Texas makes the information the Bureau is able to communicate on this head proportionately slight.

Of the private schools, we have, for the year 1873, distinct intelligence respecting only these which follow, as imparting instruction beyond that given in the public schools: (1) The Austin Female Institute, at Austin, with 3 instructors and a course of English, higher mathematics, Latin, Greek, French, German, and Spanish. (2) A German-American young ladies' boarding-school at the same place, with 6 instructors and 53 pupils, of whom 42 pursue an English course alone and 34 unite with this one in the modern languages. (3) The Live Oak Female Seminary, near Brenham, with 4 instructors, 50 pupils, and a four-years course, embracing English, Latin, Greek, and modern languages. (4) The Barnes Institute, in Galveston, with 2 instructors and 39

pupils, of whom 13 are male and 26 female. (5) The St. Mary's Institute, San Antonio, with 10 instructors and 325 pupils; course not described, but said to be preparatory to college.

* Partially.

Of these Baylor University, at Independence, has its students classed, as is common at the South, in schools. It is the same with the Texas University, of Georgetown, formerly the Soule University, of Chapel Hill, which was provisionally organized in the autumn of 1873, until its change of place and title should be sanctioned by the legislature.

Henderson College, Henderson, is yet only in an incipient state, with three college-professors, but only a preparatory department in operation, 47 out of the 100 pupils in which are females.

Marvin College, Waxahatchie, has gone further, having now two college-classes.

COLLEGES FOR WOMEN.

The institutions for the higher instruction for young ladies which make returns for 1873 are: (1) The Andrew Female College, Huntsville, with 4 female teachers and 4 years in its collegiate course, 15 students being in the first year, 10 in the second, 13 in the third, and 12 in the fourth; music, drawing, and French attended to, and a chemic laboratory and philosphic apparatus possessed. (2) The Bryan Female Seminary, at Bryan City, with 2 male teachers and 1 female; collegiate students, 53, of whom 25 are in the first year of a four-years course, 10 in the second, and 3 in the third; music, with German, French Italian, included in the course. (4) The Chappell Hill Female College, at Chapel Hill, with 1 male and 3 female instructors, a course of study divided into 11 schools, and a body of 54 students in the regular collegiate course, besides 3 in a special course, and 3 post-graduates; music, the arts of design, French, and German included in the course. (5) The Lamar Female Seminary, Paris, with 1 male teacher and 3 female, 75 students in its preparatory department, but those in the collegiate not accurately classified; music, drawing, painting, and French a portion of the course.

The five institutions for the superior instruction of young ladies reporting partial statistics for the year 1873 have a total attendance of 563 pupils, 184 of whom are in preparatory departments. One of these institutions gives no statistics of attendance and another gives only the total without distinguishing between collegiate and preparatory pupils. The aggregate of collegiate classification, as far as given, is as follows: in the freshman-year, 40; sophomore, 20; junior, 16; senior, 12; in partial courses, 17; and in post-graduate-studies, 4. There are 31 professors and instructors, 8 of whom are gentlemen. Music, both vocal and instrumental, forms a part of the course in all, drawing and French in all but one, and painting in all but two. Two teach both French and German and in one Spanish is added. Two report chemic laboratories and philosophic cabinets; 3 gymnasia and libraries of 200, 500, and 800 volumes, respectively.

BUSINESS-COLLEGES.

One of these schools for commercial training, at Waco, reports 3 teachers and 27 pupils.

TEXAS INSTITUTION FOR EDUCATION OF DEAF AND DUMB.

The excellence of the site of this institution, as shown in the general good health of the inmates, is much dwelt on in the last report. Considerable additions have been made to the buildings, the school-room having been enlarged, the boys' wash-room extended, the main building lengthened, and a new dining room and dormitory erected in the rear, connected with the other by a covered-way, a new wash-house completing the improvements made. Thirty pupils only had availed themselves during the year 1872 of the advantages here freely offered and only 82 since the opening of the school in 1857. The trustees, therefore, urge that judges and county-officers should co-operate with them in their endeavors to extend throughout the State the knowledge of the existence of the school and of the importance of securing its instructions for all deaf-mute Texan children, every deaf mute in the State between the ages of 10 and 20, of sound mind, good character, and general good health, being eligible for admission.

EDUCATIONAL CONVENTION.

During the school-vacation of the year 1872 a convention of teachers and other educators of the State was held in Austin, for the purpose of consulting together as to the working of the school-law then in operation and of pointing out objectionable features in it, if any such existed. Representatives of the educational interests of nearly every section of the State were present and the convention lasted four days, two sessions being held each day. In the law few defects were found. Recommendation was made for a change in the manner of auditing and proportioning teachers' pay; the urgency for county teachers' institutes as a temporary substitute for normal training was strongly pointed out; the organization of a national system of education, to assert its prerogatives where States failed to do their duty to the rising generation, was indorsed, and a final resolving of the convention into a central and State Teachers' Institute was accomplished. Hon. J. C. De Gress, State-superintendent, was elected president of the institute, and Mrs. M. J. Young, Miss S. J. Newcomb, and H. B. Phillips were made vice-presidents.

The urgent need of an exclusively educational journal or magazine, to disseminate facts in connection with school-interests and to serve as a reference to teachers in the exposition of educational laws and other educational matters, was discussed and resolutions were adopted pledging the united support of teachers to such a publication, should one be started.

It is believed that much good was accomplished by this re-union of educators. It stimulated teachers to renewed exertions and created a bond of sympathy between them and the people; it contributed to a clearer understanding between the executive officers of the law and the teachers, and aided in correcting the few abuses or evils running through the system in remote districts. From the State Teachers' Institute, moreover, sprang county teachers' institutes, twenty five of which were organized in the State during the year.

VERMONT.

GENERAL REMARKS.

The reports of the board of education of this State being issued biennially, no official information as to educational progress can be obtained. In respect to primary education, therefore, few facts can be given; summaries of returns received from institutions for secondary and superior instruction are, however, presented.

Rev. William S. Palmer, of Wells River, writes:

"The institutes in the several counties of the State are to be held three days instead of five as heretofore, and teachers attending during their terms of teaching are not required to make up the lost time, but are paid just as if they were all the while in the school-room.

"The new St. Johnsbury Academy building, now under the charge of Rev. H. T. Fuller, is one of the finest school-edifices in the State, costing $53,000.

"Wells River school-district is to have a brick school-building, with Mansard-roof and granite-foundations, costing some $10,000. The ground has been excavated, and is all ready for the edifice to be put up in the early spring.

"The University of Vermont, at Burlington, has been opened to women. President Buckham told me there were fourteen ladies of various scholarships but excellent training. They have no sort of difficulty, he said, about the association of the sexes. They have abolished the law requiring church-going, and now have no difficulty in getting students to attend church regularly."

SECONDARY INSTRUCTION.

Engaged in the work of secondary education there are 32 academies, seminaries, and public and private high schools from which special reports have been received, having an aggregate attendance of 3,487 pupils—1,600 boys and 1,887 girls—with 131 instructors, of whom 52 are gentlemen and 79 ladies; 550 pupils study the classic and 264 the modern languages; 85 were preparing for college and 30 for scientific departments. Drawing is taught in 20 of these schools and music in 23; 20 have libraries ranging in extent from 10 volumes to 3,687; 2 are exclusively for girls and have 139 pupils, of whom 24 study classic and 113 modern languages; 2 others were exclusively for boys, with an aggregate of 43 pupils; had 32 engaged in the study of classic and 7 in that of modern languages. The remaining 28 schools are for the education of both sexes.

PREPARATORY SCHOOLS.

Castleton Seminary, at Castleton, and Burr and Burton Seminary, at Manchester, have 258 pupils engaged in preparing for college, of whom 172 are in classic and 44 in scientific studies. Castleton Seminary, with 122 in classic and 4 in scientific studies, has 17 in advanced classes, 32 in senior, 29 in junior, 27 in middle, and 21 in fourth or lowest classes; it has a library of 400 volumes, a chemic laboratory and philosophic apparatus. Burr and Burton Seminary, with 92 in classic studies and 40 in scientific, has in advanced classes 66 pupils—in senior, 16; in junior, 24; and in third, or middle, 26. It has a library of 2,000 volumes, a chemic laboratory, a cabinet of natural history, and a philosophic cabinet and apparatus.

UNIVERSITY OF VERMONT.

A gift has been received from T. W. Park, esq., of Bennington, for the purpose of adding an art-gallery to the university. This is to be for the benefit of the public as well as of the university; and several gentlemen of means and influence have promised the gift of some valuable art-productions as a nucleus for future collections.

The library, to which 840 volumes have been added during the year 1873–'74, has been selected with special reference to the several departments of study and is open to all students of the university.

The cabinet, containing, with other material, the collection of the College of Natural History of the University of Vermont, has recently received important additions by donation and exchange. It now comprises the following collections: of lithologic specimens, 3,500; of mineralogic, 3,000; of metallurgic, 1,000; of geologic, 3,000; of conchologic, 6,500; of ornithologic, 350; of zoölogic, 1,000; of botanic, 1,000; of archæologic, 200; and of numismatic, 250 specimens.

By the recent action of the trustees all the courses in the academic and scientific departments have been opened to young women upon the same conditions as to young men.

The freshman-class for 1873 numbers 33, the largest for thirteen years. The catalogue for 1873–'74 enumerates 25 officers of instruction and government in the various departments, 91 undergraduates, and 56 medical students.

MIDDLEBURY COLLEGE.

In this college there are beneficiary and scholarship-funds sufficient to provide for those students who require assistance to the extent of three-fourths and in most instances to the full amount of their college-bills.

The cabinet, designed chiefly for the benefit of the classes in natural history, contains 2,700 specimens in zoölogy, 400 in botany, and 1,500 in mineralogy, 1,000 of which, presented by the State, are separately arranged.

The alumni have, during the past year, taken measures to secure a permanent library-fund of $5,000; a considerable portion has already been subscribed, and the income will soon be available for the purchase of new books.

* Two, partially.

SUPERIOR INSTRUCTION OF WOMEN.

The only institution for this specific purpose sending a report is the Vermont Methodist Seminary and Female College at Montpelier. There are, with 11 professors and instructors—6 gentlemen and 5 ladies—507 pupils in attendance, of whom 13 are in the freshman-, 15 in the sophomore-, 7 in the junior-, and 5 in the senior-year; 30 are pursuing a commercial course, and 51 are in a preparatory department. Music—both vocal and instrumental—drawing, painting, French, and German form a part of the course. The institution has a chemic laboratory, a philosophic cabinet, a natural-history-museum, a gymnasium, and a library of about 700 volumes.

TEACHERS' INSTITUTES.

The State-superintendent gives the following list of institutes for the improvement of teachers, held or to be held during the winter of 1873–'74: Windham County, Bel-

lows Falls, December 15, 1873; Orange County, Post Mills, December 18, 1873; Washington County, Waitefield, December 22, 1873; Franklin County, Enosburg, January 15, 1874; Windsor County, Springfield, January 28, 1874; Grand Isle County, North Hero, February 2, 1874; Addison County, Bridport, February 4, 1864; Orleans County, Newport, February 9, 1874; Essex County, Island Pond, February 11, 1874; Caledonia County, Peacham, February 16, 1874; Lamoille County, Waterville, February 18, 1874; Rutland County, not announced; Chittenden County, Jericho, February 25, 1874; Bennington County, not announced.

THE RELATION OF EDUCATION AND LABOR,

(As illustrated in the workshops of Messrs. E. and T. Fairbanks & Co., of St. Johnsbury, Vermont.)

As showing the relations possible between labor and capital, the following sketch by the Rev. W. S. Palmer, of Wells River, Vermont, of a well-known New England village, whose inhabitants for the most part are all interested and employed in the same business, is of interest. The value also to a community or a State, of a single person possessing inventive genius with sufficient knowledge to make it available, is shown by the building up of this great business, which, itself directly the result of invention, is the sole support of so many inhabitants. The common school, which give to all the children sufficient knowledge to enable them to develop whatever faculties of inventive power they may possess, are thus shown to be possible sources of wealth to a community instead of being an unremunerative expense. Not only do they do this by increasing the productive value of all labor, as statistics have clearly shown, but also in guaranteeing that any exceptional inventive talent shall not be lost to a community for want of elementary instruction. New England is dotted over with manufacturing-villages and towns that have each sprung up from the inventive power of one or two men, and it is creditable to the practical good sense of these creators of fortune that they have so generally realized the value of both common and higher education and and have given freely to their support. As showing the particular methods adopted and their results in this community, the Rev. Mr. Palmer's statements are of value.

The firm of Fairbanks & Co. has existed forty-three years. From small beginnings it has come to manage the largest scale-manufactory in the world. Its workshops cover ten acres; its annual sales amount to $2,000,000; its products are sold in nearly every important nation of the globe; its employés at St. Johnsbury number 600 to 650 mechanics, besides some 400 in the warehouses and other service elsewhere.

The relation of education and labor in their workshops will appear by considering two questions. What have the proprietors done for the community? And what is the position of the workmen towards the firm and the community?

WHAT THE PROPRIETORS HAVE DONE.

Example.—They have always set example worthy of imitation. Earnest and benevolent Christian men, they have assiduously cultivated business-integrity. No man in their employ is ever allowed to do any sham-work. Their test-room is a silent but perpetual educator. In all their dealings with their workmen they have been generous as well as just. They have paid liberal wages, so far as possible, by the piece. They have encouraged the invention of machinery to expedite processes and have given inventors a large share in the profits of such improvements. Both by precept and practice they have cultivated a habit of economy and have stimulated thousands of employés to lay up something every month.

Care for their welfare.—From the first they have constantly taken a deep interest in all that concerns the welfare of the community. In the early years of the firm, when they had less care and fewer outside calls, they gave more personal attention to their workmen than is possible now. They built a hall, where employer and employés with their families often met together for the cultivation of mutual acquaintance. They have always tenderly cared for the sick among their workmen and their households, determined that none of them should want anything essential to their comfort. Governor Fairbanks, the senior partner, used to say to the men, "You should always come to me as a to father."

Attention to mental and moral improvement.—They have devised various plans to promote the mental and moral improvement of their workmen. Their theory has always been, "that a man is worth more than a machine." Scientific lectures were often given in their workshops. Mr. Thaddeus Fairbanks, himself, one winter, gave a course in chemistry. A lyceum was early organized, in which the proprietors freely discussed various questions with their laborers and offered liberal prizes for the best essays read. Twenty-five years since, the "Franklin Library" was started by the firm, but managed by the men, helped by their employers. That library still exists, though it is now only as the morning-star after the rising of the sun. Within a few years, Mr. Horace Fairbanks, one of the present members of the firm, has built a magnificent edifice, 94 by 45 feet, two stories high, and so finished in every particular as to be an educating power in itself. This atheneum comprises a spacious lecture-hall, a free library, already numbering 8,300 volumes, and a free reading-room, in which are found the best English

and American periodicals. The books are choice and costly, selected by the help of W. F. Poole, the bibliographer. The hall has been opened for several free lectures. The library and reading-room are open every week-day and evening, except the evening of the weekly prayer-meeting in the several village-churches.

Art-culture for the men.—Mr. Fairbanks is now building an elaborate addition to the atheneum for an art-gallery. It will contain paintings, statuary, rare illustrated volumes, &c. Representative American artists have been engaged to paint masterpieces for its walls. What treasures of art other men of wealth would store away in their private parlors, Mr. Fairbanks's heart prompts him to open for the delight and profit of all classes. He hopes to provide a place where the humblest laboring man, as well as the man of most leisure, may gain the best esthetic culture "without money and without price."

Care for the children.—The Messrs. Fairbanks have always deemed it highly important to raise the standard of education in their community. They have felt it to be for their own interest that all the children should be well taught. Paying, themselves, a large per cent. of the taxes in the village, they have steadily favored the most liberal expenditures for public instruction. Some ten years ago they gave a beautiful site for a public high school and have been strenuous advocates of every measure by which that school might take the highest rank among institutions of its class. Some twenty years ago, members of this firm founded the St. Johnsbury Academy, and, putting tuition at moderate rates, have always taken care that a full board of competent teachers should be liberally paid. From the first, provision has been made for generously aiding indigent students of worthy aims. Mr. Thaddeus Fairbanks has recently put up a new academy-building of ample proportions and rare architectural finish.

Religious influence.—They have freely aided in building the several churches in the village. The churches of their own denomination rent pews at very low prices, they preferring to be assessed for the balance requisite to meet current expenses rather than have the poorest unable to command sittings.

HOW THE WORKMEN HAVE RESPONDED.

The second question we have to consider is, How do their workmen respond to these efforts for their good?

1. *By permanency.*—It is a significant fact that more than half of them have families, and are permanent residents of the place. Their permanency, as a rule, is a striking fact. Many of them have been in this service from twenty to forty years. Two have worked "from the start," in 1830. One of these two, a foreman who has accumulated large wealth by his work, a few months ago tendered his resignation, on the ground that the infirmities of age forbade his earning his wages. Mr. Franklin Fairbanks replied to him: "No, sir, we cannot accept your resignation. Work more or less, as you are able. Rest when you please. I learned my trade of you, and wish you to continue in our service as long as you live." An assistant was given him, and he goes and comes at his pleasure.

2. *By providence.*—The workmen generally are not only well paid, but remarkably provident. Many are independent. Large numbers own their homes—have beautified their grounds and furnished their dwellings with elegance. Some have sent daughters to Vassar College and numbers have helped their sons to the highest standing in the best New England colleges.

3. *By mental improvement.*—The workmen as a whole are intelligent citizens of a singularly intelligent community. Of the thousand "takers" from the library, from 250 to 300 are from the households of scale-workers. "Beyond my expectation," said Mr. Horace Fairbanks, "the laborers use the library. To a gratifying extent, the librarian assures me, they read a high class of books. One comes in saying, 'I want to read the history of old Napoleon,' and another, 'I want to read English history.' Few boooks are more in demand than such works as Turner's England. Persons temporarily in the scale-works, seeing others reading, wish to join them, and make the deposit of $3 demanded of those taking out books before becoming residents of the place. In the evenings many of the workmen may be found in the reading-room. Two hundred and fifty of their families are represented at the annual courses of lyceum-lectures in the village."

4. *By a manifestly good spirit.*—Seven-eighths of the employés of this house are church-going men. Many of them are among the most useful members of the several churches. Not one who has children is indifferent to the school-privileges of the place. They are vitally concerned in the public schools and take part in their direction as members of committees, &c. Some fifty foreigners, employed about the coarsest work of the scale-factory, cannot read and write; but their children are in the schools with the others. Some of the finest scholars of the academy are sons and daughters of the laborers. I saw one young man in the class, nearly prepared for college, who was a laborer himself certain parts of each day.

5. *By cordial appreciation of the efforts made for their benefit.*—It is everywhere

manifest that the best feeling prevails between the employers and the employed. It seems to be the unanimous testimony throughout the place, "I never hear the men make a word of complaint." Hon. B. G. Northrup, of Connecticut, not long since spent some days studying the working of the system, talking freely with proprietors, laborers, their families, and other citizens of St. Johnsbury, and testifies:

"I have never seen a better practical solution of the labor-question. There is the fullest and happiest conciliation between labor and capital."

He asked one laborer whose house he visited, "Why is it that you never have any strikes here?" The answer was, "Well, to start with, we have a good set of men, temperate and moral. Then, we are well paid. Wages have been often advanced. The owners take an interest in the men. They are liberal and public-spirited, and are doing a good deal for the place, and we feel an interest in the concern which has been the making of St. Johnsbury."

VIRGINIA.

[From report of Hon. W. H. Ruffner, State-superintendent of public instruction.]

FINANCIAL STATEMENT.

Receipts.

From State-funds	$424,154 30
From local taxation	434,111 08
From Peabody fund and private donations	92,153 67
Total receipts for school-purposes	950,419 05

Expenditures.

For pay of teachers	625,900 82
For real estate, building, and repairs	122,965 14
For rent, fuel, lights, and other contingent expenses	99,417 49
For pay of superintendents	45,296 77
For pay of treasurers and assessors	23,919 63
For pay of district-clerks	13,775 75
For furniture and school-apparatus	12,959 90
Expenses of central office	6,183 55
Total expenditures for school-purposes	950,419 05

SCHOOL-POPULATION.

Number of white persons, 5 to 21 years of age—males, 128,967; females, 124,444	253,411
Number of colored persons, 5 to 21 years of age—males, 87,399; females, 83,297	170,696
Total school-population of the State	424,107

ENROLLMENT AND ATTENDANCE.

Number of white pupils enrolled—in cities, 7,354; in counties, 105,909	113,263
Number of colored pupils enrolled—in cities, 5,911; in counties, 41,685	47,596
Total enrollment in public schools	160,859
Number of white children in average daily attendance—in cities, 4,430; in counties, 60,279	64,709
Number of colored children in average daily attendance—in cities, 2,883; in counties, 23,583	26,466
Total average attendance	91,175
Percentage of white children enrolled	44.8
Percentage of colored children enrolled	27.7
Percentage of white children in average attendance	25.5
Percentage of colored children in average attendance	15.4
Percentage of average attendance on enrollment of white children	57.1
Percentage of average attendance on enrollment of colored children	56.6

TEACHERS AND THEIR PAY.

Number of white male teachers—in cities, 33; in counties, 2,150	2,183
Number of white female teachers—in cities, 156; in counties, 1,039	1,195
Number of colored male teachers—in cities, 4; in counties, 247	251
Number of colored female teachers—in cities, 19; in counties, 109	128
Average monthly salary of male teachers—in cities, $80.86; in counties, $30.45	$52
Average monthly salary of female teachers—in cities, $45.52; in counties, $28.35	$32

SCHOOL-PROPERTY.

Number of school-houses in the State: log, 1,914; frame, 1,239; brick and stone, 171	3,414
Number of school-houses owned by districts	764
Value of school-property owned by districts	$524,638

SCHOOLS.

Number of public schools for whites—in cities, 113; in counties, 2,674	2,788
Number of public schools for colored children—in cities, 66; in counties, 843	909
Total number of public schools in the State	3,697
Number of graded schools	123
Average length of sessions of public schools in months—cities, 9.46; in counties, 4.96	7.22

SUPERINTENDENTS OF SCHOOLS.

Number of county-superintendents	87
Average number of visits made to schools	48
Average number of teachers examined	43
Average number of official letters written	212
Average number of miles traveled on official business	808
Average number of days employed	131
Average amount of incidental expenses (defrayed by himself)	$77 85
Average salary from the State	286 39
Average salary from State and county	433 17
Number of city-superintendents	6
Average number of visits made to schools	527
Average number of teachers examined	48
Average number of official letters written	183
Average number of days employed	209
Average amount of incidental expenses (defrayed by superintendent)	$42 15
Average salary from the State	304 17
Average salary from the city	856 33

COMPARATIVE STATEMENT.

	1871.	1872.	1873.
Whole number of public schools	3,047	3,695	3,696
Whole number of graded schools	.....	107	123
Whole number of pupils enrolled	131,088	166,377	160,859
Number of pupils in average attendance	75,722	95.488	91,175
Percentage of school-population enrolled	3.18	40.5	37.9
Percentage of school-population in average attendance	18.8	23.2	21.5
Number of teachers in public schools	3,084	3,853	3,757
Number of school-houses owned by districts	190	504	764
Estimated value of public-school-property	$211,166	$389,380	$524,638
Average number of months schools were in session	4.66	5.72	5.22
Cost of tuition per month per pupil enrolled	$74 00	$70 00	$75 00
Average monthly salary of teachers	$29 86	$29 81	$32 00

EDUCATIONAL PROGRESS.

In respect to the only falling-off worthy of notice in 1873, that of 5,518 in the number enrolled, the superintendent explains that, "apart from the occasional hinderances, such as bad weather and roads, contagious and epidemic diseases, poverty, and such like—of all which there was unusual complaint—there are two very different sets of causes which might have been expected to affect the attendance without any loss of educational zeal. Improved teaching, regulations, and discipline tend to reduce the schools to such pupils as attend with tolerable regularity and apply their minds to their studies, and this is the only class that need go to school. Sharply-graded city-organizations will lose such pupils as cannot or will not keep step and special schools will be provided for those pupils who cannot bear the regular service. But there is another set of reasons which must be mentioned. Bad teaching and bad management constitute a far more common cause of decline in numbers. No intelligent parent will

damage his child by continuing to send it to a teacher who has, on trial, been found to be incompetent.

The favorable advance in public sentiment has continued, as is unequivocally shown by the testimonies of county-superintendents, while the platforms of both political parties and the political speeches made during the canvass would have placed the fact beyond a doubt if there had been no other evidence. The number of school-houses built during the year and the large increase in the aggregate value of school-property evince the purpose of the people to build up the public-school-system solidly and permanently. The general financial condition is more satisfactory than it has ever been. The State-tax on property for school-purposes is as large as it ought to be at any time

INCREASED SALARY OF TEACHERS.

It is gratifying to observe that the average monthly pay of teachers has increased by the amount of $2.14. In the long run the rate of pay will determine the quality of the teaching.

PAY OF COUNTY-SUPERINTENDENTS.

The fact that one-third of the number of county-superintendents in the State have, during the last three years, resigned their office is mentioned as going to prove that the responsibility, work, and worry belonging to the office are out of proportion to the remuneration given; and the fact that the work done each year has borne about the same proportion to the pay illustrates a trait of human nature that men set a certain value on their services, and, no matter what amount of duty is attached to their positions, they will not, in practice, do more than they think they are fairly paid for.

CENSUS OF SCHOOL-POPULATION.

Nothing in connection with the school-work has been so badly done as the taking of the school-census, and yet nothing more demands to be well done, since on this enumeration is based the division of the school-money, both State and county. The superintendent regards it as very important to amend the law so that an accurate census may be obtained without further waste of money. Each census requires an expenditure of about $8,400, and although three efforts were made, under the direction of the superintendent, he was not able to obtain a satisfactory list.

AID FROM THE PEABODY FUND.

During the past year the State received from this source $31,450. The various appropriations were useful far beyond their nominal value in stimulating local enterprise and liberality. The effect of this system of supplementary donations has been striking, and suggests the adoption of the feature of extra appropriations on specified conditions as a part of the regular policy of public-school-systems. The value of the Educational Journal has been recognized by an annual contribution of $200 from this fund. Although the amount given to teachers' institutes was small, the agent stands ready to aid liberally such institutes as are properly attended and are rendered valuable by the systematic teachings of trained instructors. Assurances are also given that as soon as the legislature makes provision for normal instruction still more liberal appropriations may be expected from the Peabody fund for that purpose.

RICHMOND.

[From report of Hon. J. H. Binford, city-superintendent.]

School-statistics.—The practical working of the school-system has so commended it to the judgment of the people that each year witnesses a steady increase in the number of applicants for admission to the schools. The school-accommodations are ample, and the school-houses and grounds are all in excellent condition. The number of seats furnished for white scholars is 3,126; for colored scholars, 1,813. The enrollment in the white schools is 2,751 and the average attendance 1,981. In the colored-schools the enrollment is 1,912 and the average attendance 1,273. Eight colored teachers are employed. The examinations held at the close of the term were generally satisfactory. The total average of the white-schools was 75 per cent.; of the colored-schools, 70 per cent.

The school-board proposes for the next session to open a high school.

Study of German.—During the past session there were 621 scholars studying German, under the instruction of two teachers. The introduction of any new branch of study is always attended with more or less difficulty, and a positive opinion as to its utility or success cannot justly be formed during the first session.

Saturday teachers' meetings.—A feature in the Richmond system of schools regarded by the superintendent as the fountain of its excellence is the Saturday teachers' meetings. These meetings were commenced by Superintendent Binford during his first year, (1871,) and they have been continued with great regularity for three years. For the first two years the labor of conducting the meetings was performed almost exclu-

sively by the superintendent, aided by occasional visitors, but in the third year he divided the work among his nine male principals, assigning to them, in pairs, special subjects of a purely practical character, such as methods of teaching the various branches. Besides his regular school-duties, each principal is expected to study carefully the particular subject assigned to him, to make experiments, and, from time to time, to give to the corps of teachers the benefit of his work. The general order of exercises at these meetings, which are limited to two hours, is, after calling the roll, music; suspensions of pupils read, so that each teacher may know the name of every suspended scholar; the superintendent gives the results of his observations made in visits during the week, with such commendations, criticisms, and suggestions as are called for; half an hour is consumed in the study of phonetics, Calkins's phonic chart being used as a guide, and in penmanship, the Spencerian system. The last hour is occupied by the discussion of special subjects assigned for the day; practical difficulties presented by teachers are considered and differences of opinion as to discipline or methods of instruction presented, and the opinion of the superintendent given thereon.

PETERSBURG.

Excellent teaching has been done in Petersburg from the beginning, and a fine educational spirit and cordiality towards the public system have characterized the people. During the past year a great advance has been made towards perfect grading of the schools, systematizing the instruction of teachers and providing suitable accommodations. The city-council appropriated $40,000 in 8-per-cent. bonds for building-purposes, and two well-planned brick buildings, one for each race, of eight and twelve rooms, respectively, are now far advanced, which will be sufficient to accommodate all the children of the city in the grades below the high school, for which there is a separate building. There will be thirteen grades in the system, including those of the high school. The school-board of the city introduced vocal music last year and employed an expert to teach it.

LYNCHBURG.

The favorable state of school-affairs in this city has continued. The new buildings are elegant brick structures, well planned and well furnished. The high school is under the best auspices, and has risen to a high position in public estimation. A good spirit pervades the corps of teachers, who are here, as in Petersburg, gathered once a month for normal instruction and exercise. The school-board in this city, as is the case generally in city and country, is made up from the best class of citizens and has from the beginning been zealous and efficient.

NORFOLK.

Public schools having long been among the established institutions of this city, there have been but few incidental difficulties to contend with beyond the usual paucity of means. Heretofore the schools have not been graded; but last July the authorities determined to avail themselves of the advantages of the graded organization.

PORTSMOUTH.

This city has long had public schools, and, but for financial difficulties, the cause would be in a highly satisfactory condition. The teaching and management have been excellent and the city-authorities show every favorable disposition.

ALEXANDRIA.

There has been a steady improvement in the teaching and gradation of the schools of this city and in the general management of school-affairs. Disadvantage has been suffered for want of suitable buildings, but the school-board is laboring to supply the want, with good prospect of success.

STAUNTON.

The public-school-interest in this city has always been in the best hands and has gradually been tending towards a first-rate system. By common consent, primary education was, upon the passage of the school-law, turned over to the public-school-officers, except so far as it was carried on in connection with the admirable female-seminaries of the city. The city-council, having its mind full of material improvements and large enterprises, did not at first quite appreciate the claims of this new applicant for assistance; but, as is always the case among an intelligent people, its spirit gradually became more liberal, and measures were at length taken to provide the public schools with accommodations somewhat appropriate to their size, dignity, and usefulness. A separate superintendent has been appointed for the city and a thorough graded organization determined on.

IMPROVEMENT IN TEACHERS.

There is a general testimony to the improvement in the qualifications of teachers, although nine-tenths of them are yet far below what they ought to be and must be-

come. In the larger cities and occasionally in the smaller places some really fine teachers may be found, but most frequently the spectacle of misrule and superficial teaching meets the eye; and, what is worst of all, the teacher's poor performance is often satisfactory to himself or herself, to the school-board, and to the community. A slow improvement is going on, even with the present means at command, but it is regarded as highly important for the board of education to have authority to use a portion of the school-funds for the systematic training of teachers. A large number of teachers' institutes were held during the year; but, in default of the means of paying even the traveling-expenses of men qualified to give systematic instruction, the officers could, in most cases, hold only what might be called educational lyceums.

SECONDARY INSTRUCTION.

The 25 schools, academies, and seminaries, from which special information is received, report an aggregate of 98 instructors—39 gentlemen and 59 ladies—and 1,318 pupils, 652 being young gentlemen and 666 young ladies. Of these, 712 were engaged in English studies, 285 in classic, and 189 in modern languages; 98 are preparing for college, and 25 graduated the previous year, of whom at least 10 entered college. The various religious denominations have control of 11 of these schools, five being under Catholic influence and the remaining 14 unsectarian; 11 are for the exclusive education of boys, 7 for girls, and 7 for both boys and girls.

PREPARATORY SCHOOLS.

Four schools and academies devoted to the work of preparation for college report an aggregate of 146 in classic and 115 in scientific studies; 48 in advanced classes, 29 in senior, 55 in junior, 60 in middle or third, and 42 in lowest or fourth classes. In one of these schools with 25 pupils in classic studies their classification is not given. All but one have libraries, ranging in extent from 300 to 1,500 volumes; two have chemic laboratories, one has a philosophic cabinet and apparatus, and two have gymnasia.

SUPERIOR INSTRUCTION.

"The prosperity of our higher institutions during the past year," the State-superintendent remarks, "has exceeded that of any previous year in the history of the State; and now we have the satisfaction of seeing Virginia leading, not only her southern sisters in the work of higher education, but leading the whole thirty-seven States of the Union." In support of this statement a table is presented giving the comparative statistics of colleges in six States, five of which have the largest numbers in the United States.

Table of comparative statistics of colleges.

State.	Number of students attending in 1872.						
	In each State.	From each State.	In their own State.	From other States.	In other States.	In proportion to the white population.	In proportion to the whole population.
Connecticut	887	332	244	643	88	1 to 1,529	1 to 1,630
Massachusetts	1,186	902	656	530	246	1 to 1,588	1 to 1,615
New York	2,213	2,442	1,668	545	774	1 to 1,773	1 to 1,790
Ohio	1,639	1,710	1,301	338	409	1 to 1,521	1 to 1,557
Pennsylvania	1,622	1,669	1,145	427	474	1 to 2,011	1 to 2,110
Virginia	1,813	986	921	857	65	1 to 722	1 to 1,233

The above figures are taken from a circular, issued in 1872, by the United States Commissioner of Education, except those for Virginia, which were gathered from original sources. The superintendent continues:

"Scotland was the first country in modern times to establish universal education, and has to-day probably the best-educated population in the world. It is said that her college-attendance is one to every 1,000 of her population. Germany comes next in the educational list, and she has at college one to 2,500, while England, heretofore without universal education, but with upper schools of the first order, has only one college-student to 5,800 of her population. It is worthy of note that, when the white population alone is considered, Virginia has a larger proportion of her sons in supe-

rior institutions, probably, than any State or country in the world. And even when the entire negro population is included in the estimate, she is the first on this continent, and second only to Scotland among all nations."

EDUCATION OF WOMEN.

In respect to the facilities afforded by the State to women for the acquirement of a superior education the facts are not so creditable. The superintendent says: "Although Virginia has made large contributions to higher education from her treasury and although she accumulated during a period of nearly sixty years a literary fund which at one time exceeded $2,000,000, yet from no source, so far as I know, has the State ever given anything to advance the education of her daughters. Nor has private liberality taken that direction to any considerable extent. The religious denominations have raised small amounts for this purpose, but the means furnished have, in nearly all cases, been exhausted in the erection of imperfect buildings, leaving nothing for endowment or literary apparatus." Private and denominational enterprise has done wonders with small means, and, perhaps, the best female-schools in the southern country are to be found in Virginia, but they are compelled to labor under serious disadvantages. Some compensation, however, will yet be made to the sex by the State in the establishment of normal schools which will be attended in large proportion by young women.

UNIVERSITY OF VIRGINIA.

In this institution there is no curriculum. All studies are elective. At the same time the courses of academic study are so arranged as to provide for the systematic prosecution of a complete plan of general education. While every student may select the schools he will attend, he is required in the academic department to attend at least three.

The university includes four departments: literary and scientific, agricultural, medical, and law. Eleven scholarships, awarded at a competitive examination, will be open to candidates from all the States at the beginning of the academic year, October 1, 1873. Free tuition is given in the university to one student from each senatorial district of the State. In return for this aid these beneficiaries are required to sign an engagement to teach in some school in Virginia for two years after leaving the university.

The alumni of the university have undertaken to raise $500,000 for the endowment-fund, and are making good progress in the work.

The library of the university, now amounting to 35,000 volumes, was originally selected and arranged by Thomas Jefferson.

The university proposes to throw open forty farmers' scholarships in the agricultural department in addition to the fifty now existing by State-law. These will be tenable for two years, and will afford free tuition in natural history; in agriculture; in general, industrial, and agricultural chemistry; in natural philosophy; in mineralogy and geology; in mathematics, history, and English literature. They will be given only to such students as may declare their intention to practice agriculture as a profession and present evidence of their being at least 17 years of age, of irreproachable moral character, and of capacity to profit by the instruction to be received at the university.

From President Venable's description of the system on which this university is founded, it appears that certain questions, both of instruction and of discipline, on which our more progressive northern universities are still doubting or only timidly experimenting, have here long since been solved. These are the elective system of studies; instruction by lectures, as well as through recitations; the bestowment of degrees only after rigorous examinations; the abolition of the inquisitorial and police-system of government, and the recognition of religious freedom as a right belonging even to university-students. The results of this system of religious freedom are said to be that the students contribute with commendable liberality to the support of the chaplain and that remarkably earnest, Christian activity has existed among them for years. The system of discipline the president believes to be one of the best features of the university. No method of surveillance is employed; the students are governed as little as possible and their statements in all transactions with the authorities are received as on honor. "The effects of this system," it is stated, "in imbuing the body of the students with the spirit of truth and candor, in giving them the proper scorn for a lie, and in promoting a frank and manly intercourse between the students and professors, cannot be too highly estimated. A student who is known to have been guilty of a violation of his examination-pledge, or any other falsehood, in his dealings with the authorities, things of rare occurrence, is not permitted by his fellows to remain in the institution."

WASHINGTON AND LEE UNIVERSITY.

This university includes five departments: academic, agricultural, law, civil and mining engineering, and a business-college. The course of study is arranged in distinct elective schools. Prize-scholarships are offered to high schools and academies, the suc-

cessful candidates receiving their first year's tuition free. The faculty is authorized to appoint to scholarships a number of young men intending to make practical printing and journalism their business in life. A summer-school is organized during the vacations to enable students to make up special deficiencies or to enter advanced classes at the beginning of the next session, and is also designed to offer facilities to teachers who may wish to devote their vacation to study.

COLLEGE OF WILLIAM AND MARY.

This is, next to Harvard, the oldest college on the continent. At the beginning of the Revolution it was the richest college in America, but by that war the greater part of the endowment-fund was lost. In 1705 the college-buildings were burned for the first time. In 1859 they were again burned, and rebuilt the following year. They were destroyed by fire for the third time in 1862. The college is well supplied with chemic and philosophic apparatus, and its library is one of the most valuable in the State. The faculty recently appointed is actively engaged in laboring for the success of the college.

RICHMOND COLLEGE.

The year 1873 was the fiftieth of the existence of the General Association of the Baptists of Virginia. In connection with the celebration of this anniversary it seemed to them expedient to build up some monument of the half century past which should carry forward educational advantages to ages in the future. Richmond College, which had been crippled by the war, was selected as the special object of benefactions to be made for this purpose, and with brave hearts the ministers and members of the church throughout the State devoted themselves to the accomplishment of the design. At the memorial celebration in May, 1873, they were enabled to report subscriptions to the amount of $200,000 from Virginia alone. This sum was raised during the meetings at that time to $240,000. An additional sum of $20,000 had been contributed by friends in other States, and the remaining $40,000 it was agreed should be raised at once in the associations of the church in Virginia, thus making $300,000 for the endowment and building of the college. Out of this fund provision has been made for the erection of one of the finest college-buildings in the country, with a towered center, deep, flanking wings, and a cloistered porch surrounding all. The old college, renewed and ornamented, is made one of the wings of the new structure. The center had risen to its full height in July, 1873. The whole, when completed, will do honor to the college-architecture of the time, and probably become a model for such constructions at the South.

The college is composed of eight independent academic schools and a school of law. The course of study is elective, but each student is required to attend at least three schools. A course of biblical lectures is open to all the students free of charge.

ROANOKE COLLEGE.

The college embraces three departments: preparatory, collegiate, and normal. A select course is provided for students not wishing to pursue the college-course and efforts are made to afford them a good business-education. Experience has convinced the faculty that the regular course of study has superior advantages over any partial or select course, and they advise that students be entered in a regular college-class, even when they do not expect to graduate.

ROANOKE FEMALE COLLEGE.

The course of study embraces the following departments: preparatory, collegiate, music, and drawing.

SOUTHERN FEMALE COLLEGE.

The departments of study are preparatory and collegiate. Special facilities are offered for the study of the modern languages and music.

RANDOLPH MACON COLLEGE.

This college had in 1872 an attendance of 234 students, representing, in addition to Virginia, eleven States and the Cherokee Nation. Three hundred students were expected at the opening of the fall-session, 1873.

COLLEGES FOR WOMEN.

Ten institutions claiming to belong to this class report partial statistics for the year 1873, giving an aggregate of 694 students, 220 of whom are in preparatory departments, the remainder presumably in collegiate, although not so designated. The Martha Washington College, at Abingdon, is the only one reporting a collegiate classification of pupils, and has in its preparatory department 26; in the freshman-year, 16; sophomore, 12; junior, 5; and in the special course, 55. The only statistics of attendance given by the Wesleyan Female Institute, at Staunton, is 135, in a preparatory depart-

ment, no indication of the existence of a collegiate course being given. There are 94 professors and instructors, 43 gentlemen and 51 ladies. Music is taught in all these institutions, drawing and painting in all but one, French and German in all, with the addition of Italian in two and of Spanish in three. Chemic laboratories and philosophic cabinets are reported in 7, astronomic observatories and art-galleries in 3, and gymnasia or calisthenia in 4. Five have libraries, the largest numbering 1,250 volumes, the smallest, 300.

* Several partially endowed.

LAW-DEPARTMENT OF THE UNIVERSITY OF VIRGINIA.

This department comprises two schools, each of which is divided into two classes. A moot-court, in connection with other instruction, tends to perfect the student in the details of practice. The degree of bachelor of laws is conferred upon those who in a written examination manifest an intimate acquaintance with the subjects taught in all the classes.

MEDICAL DEPARTMENT OF THE UNIVERSITY OF VIRGINIA.

A feature in the course of instruction is the space given to comparative anatomy and comparative physiology. Pharmacy has been introduced into the course of instruction. The equipment of the medical department in apparatus, specimens, and drawings is extensive and excellent. The collection of paintings for the illustration of the lectures on anatomy, physiology, and surgery, several hundred in number, is unequaled by anything of the kind in the United States or perhaps abroad.

VIRGINIA AGRICULTURAL AND MECHANICAL COLLEGE.

This institution was opened October 1, 1872, and during the year 132 students were enrolled, of whom 127 were present at one time. The number of free scholarships is 132. There are eight officers, including the librarian and farm-manager, of whom five are professors. The manual-labor-system has been adopted, and a detail of students is worked every day. Instruction in military tactics is given daily, including much of guard-duty. This course is thought to be of much value, besides the preparation given for possible future duty as soldiers, in their improvement in neatness and the gain of a soldierly and graceful figure, manner, and carriage, in place of the awkward appearance which is apt to be caused by rustic training or hard labor. The departments of instruction are those of English language and literature, Latin, Greek, mathematics, natural sciences—including agriculture and mechanics—and both technic and moral philosophy.

Out of the 300,000 acres of the congressional land-grant, sold at 95 cents per acre, two-thirds of the proceeds have been given to the college by act of the general assembly. Exclusive of this, there have been received $35,000 for a college-building and lot. The estimated value of all the property of the institution is about $225,000; that of the domestic animals upon it, $25,000; farming-implements, $15,000. A considerable outlay has been made in remodeling and repairing buildings and in fitting them with scientific apparatus, as well as in fencing and ditching. The college has rapidly filled up; the best students in its schools find the curriculum not above their stage of preparation, the expenses not above their means, and an education practical enough to promise them remunerative employment from the day they graduate. The college is, however, laboring under an embarrassment which not only cramps its present move-

ments, but absolutely forbids growth much beyond its present dimensions, its only school-building being crowded and thoroughly unsuited to its present purpose; and as the conditions of the congressional grant strictly prohibit any of its proceeds to be used for building or even for repairs, it is hoped that the legislature will, in its next session, appropriate, at least for three years, the sum given to the other State-institutions of learning.

Manual labor for about two hours per week is required of the students on the college-farm. Any labor beyond this on farm or buildings is paid for at stipulated rates, and such labor has now become so popular that even the surrounding farmers seek for it. Labor at the rate of about 10 cents per hour is thus secured.

HAMPTON NORMAL AND AGRICULTURAL INSTITUTE.

This institution, which receives one-third of the income of Virginia funds derived from the congressional land-grant for the benefit of agriculture and the mechanic arts, and founded upon the same theory as is the State Agricultural College, is devoted exclusively to the education of the colored population.

While the main object of the institution at present is to qualify the colored people as teachers of their own race, agricultural and industrial departments have been introduced, affording facilities for instruction in agriculture, printing, and various mechanic employments, as well as in everything relating to the domestic management of a household. It is expected, by building up here a system that shall embrace a number of light manufactures and the most profitable kind of agriculture, to supply teachers experienced in good agricultural and mechanic methods and trained to regard labor as honorable. The school is at present much straitened for room, some thirty of its students having spent last winter (1873) in tents. A large building is going up, which will cost about $75,000. There is still a large sum needed for its completion, although some $10,000 were raised by concerts given by the Hampton Singers, who hope to earn $20,000 during the following year in the same way and for the same purpose, and as the management of the institution has been so eminently happy as to secure alike the hearty approbation of former slave-holders and their liberated slaves, of the State-superintendent of Virginia, and of the northern friends of free education at the South, there can be little doubt of their success.

BUSINESS-COLLEGES.

One only of these schools appears in Virginia at Richmond, and reports one teacher, with 62 pupils.

VIRGINIA INSTITUTION FOR THE DEAF AND DUMB AND THE BLIND.

For the year ended September 30, 1872, the whole number of pupils in this institution was 125, the deaf mutes being 89, the blind 36. Of this number, 1 deaf mute died, and at the close of the session 14 (11 deaf mutes and 3 blind) were discharged, reducing the pupils to 110. Seventeen new pupils were admitted in the fall of 1872, and, allowing for all changes, it was supposed that 127 would be about the full number for 1872–'73. General good health, beyond the one case of typhoid fever resulting in death, is noted, with good progress in the various branches of study pursued and a manifest improvement in moral tone. It is urged that, from the difficulties of instructing deaf-mute-classes sufficiently in four years, the course should be reorganized and made to cover seven years. The German method of articulation and lip-reading, too, it is desired, should find more notice than it has had in the past, the number of semi-mutes that may avail themselves of it having increased; but the opinion is expressed that, if adopted, it must be made exclusive of the sign-method for the ones engaged in it. The success of the industrial department, in imparting a knowledge of several useful trades and occupations and securing remunerative results from the engagement in them, is spoken of in most encouraging terms, and a detached building, for hospital-purposes, is presented as among the things for which a need may at any time arrive.

EDUCATIONAL ASSOCIATION.

The eighth annual meeting of the State Educational Association was held at Alexandria, July, 1873, in which the teachers and other educational men of the State were well represented, the city-corps of instructors being also out in full force. The meeting was called to order by Prof. Ed. S. Joynes, of Washington and Lee University, and the address of welcome was delivered by Rev. H. R. McKim, who spoke earnestly upon the importance of education, placing it next to religion.

The president of the association, in his opening address, said that "never before, in proportion to the means of the people, have the schools of the State been more active or more successful, and never, in view of the condition of the country, has a larger number of young men from other States been present in our universities and colleges; while the newspapers of Virginia, by the prominence which they have given to the commencements of our universities, colleges, and schools, have given both ample and generous evidence of the unequaled interest with which education is regarded by the press, the public men, and the people of Virginia. It seems to be conceded that Virginia, once the mother of States and of statesmen for the whole country, is now to be the mother of schools and scholars for the South, and many of our sister-States unite in looking to her for the highest education of their sons."

The president referred feelingly to the serious loss sustained by the association during the past year in the deaths of Commodore Matthew F. Maury and of Dr. William

H. McGuffey, both of whom were not only members of the association, but earnest and active workers in the cause of education.

The committee appointed to report a three-years course in history for schools reported, through Mr. Blackford, chairman, recommending a course in sacred, ancient, and modern history. Questions being raised as to the order in which history should be studied and as to the value of historical novels and plays, Prof. Joynes, of Washington and Lee University, said that, as respects order, we must distinguish between the elementary stage of study, the stage of information, and the more advanced one, the stage of culture. In the former, we should begin with the history of our own country and pass to other facts of modern history as matter of useful information. In the latter, there should be a beginning with ancient and a coming down to modern history, in philosophic and consecutive arrangement. Abridgments and compilations for the elementary stage, full histories for the more advanced one, were recommended. As to the use of fiction, it was useless to say that children should not read it. They crave its glowing pictures, and will have them. We must only try to regulate this imaginative instinct, direct it into proper channels, and make it aid in brightening and freshening all history.

The report of Prof. John Hart, chairman of the committee to report on the propriety of mathematics as a study for girls, was read by Prof. Blair.

A resolution was introduced by Mr. Pendleton, and referred, inviting ladies engaged in teaching to become members of the association. The proposition was discussed, sometimes earnestly, sometimes facetiously, committed and recommitted, amended and substituted, some votes seeming to indicate a large majority in its favor, others an equally strong opposition. Finally, without directly deciding the question, it was resolved to invite the female teachers in Virginia schools to attend as visitors and to ask the railroads and steamboats to extend to them the privileges usually granted to members.

A telegram was read from Hon. B. G. Northrop, superintendent of education of Connecticut, who had been invited to be present, as follows:

"Detained by sickness. Connecticut sends cordial greeting. Success to your meeting."

A vote of thanks was returned for the kind expressions.

The next day the report of the committee on the nomination of officers was taken up and an election gone into, which resulted in the choice of B. L. Gildersleeve, of the University of Virginia, as president; of H. H. Harris as corresponding secretary, and of John T. McGuire, jr., as treasurer.

Colonel R. E. Withers, from the committee on the Educational Journal, reported that, though much more ably edited than formerly, the Journal was not yet quite self-sustaining.

The report of the committee on the study of languages was received and laid on the table. That of Prof. English, from the committee on the best method of teaching young pupils spelling, reading, and the elements of grammar, drew forth remarks from Messrs. Little, Webster, Petty, Blackford, Taylor, and Smith. Mr. Binford, in the course of the discussion, made an interesting and most satisfactory statement on the instruction of beginners in English by the object-method, as pursued in the Richmond schools. He was heard with great interest, the importance of the subject in hand and the ability with which it was discussed by him combining to secure a fixed attention.

General Eaton, United States Commissioner of Education, being invited to address the meeting, spoke of the pleasure with which he had listened to the main discussion of the morning, and in particular to the remarks of Mr. Binford. He had never heard a better exposition of the subject, and congratulated the speaker on his success in presenting it and the association on having such a presentation.

On the third day the report on the study of languages was discussed at length. Another, on "the sequence of linguistic studies" followed, when Prof. Joynes stood up stoutly for classic culture as indispensable to thorough education, but thought that some elementary study of modern languages should precede. Mr. R. J. Ambler preferred to begin with Latin. Prof. C. L. Cocke was afraid of making the early stages of learning too difficult, but had no objection to beginning any study early, if only it was made attractive; otherwise there was danger.

After some other business the association adjourned, to meet in Norfolk on the second Tuesday in July, 1874.

OBITUARIES.

The following prominent educators in the Old Dominion have deceased since our last report:

COMMODORE MATTHEW FONTAINE MAURY, LL. D.

This distinguished scientist died at his home, at the Virginia Military Institute, on Saturday, February 1, 1873, at 12 o'clock m.

Born in Spottsylvania County, Virginia, on the 14th of January, 1806, but removing, not long after, to Tennessee, he had the advantages of an "old-field" school, and for several years attended Harpeth Academy, then under charge of Rev., afterward

Bishop, James Otey. He had improved his time and had made very respectable attainments, when, in 1825, he obtained a midshipman's warrant and entered the United States Navy. There was then no Naval Academy, and he entered at once on the active duties of his chosen profession, making his first cruise to the coast of England.

His opportunities for study were by no means favorable, and yet it required no prophetic ken to predict that the young "middy" who chalked diagrams on cannon-balls in the quarter-deck-shot-racks, to enable him to master problems while pacing his watch, and left the sports of rollicksome comrades to study Spanish, in order that he might have the use of his only accessible text-book on navigation, would one day win his way to high places. In 1831 he became master to the sloop-of-war Falmouth, and on a voyage to Rio Janeiro first conceived the idea of his afterward celebrated Wind and Current Charts. He wrote, about this time, several scientific articles that elicited great attention and high commendation and in 1834 published his work on navigation. It was considered a bold step in one so young and who had only attained to the rank of passed midshipman, and some of his superiors were inclined to ridicule it; but it received the highest commendations in England, and, in time, by its solid merit, worked itself into the place of standard text-books in the United States Navy.

In 1837 he was promoted to lieutenant, and, not long after, by the breaking of his right leg, was rendered a cripple for life and laid aside from active service on shipboard.

He soon after published, over the *nom de plume* of Harry Bluff, a series of articles exposing the abuses in the Navy and suggesting a number of important reforms, which were afterward adopted, such as the establishment of the bureau-system, the Naval Academy, &c. He was active in founding the navy-yard at Memphis and the originator of many most important schemes for the good of the service. In 1842 he was appointed superintendent of the depot for charts and instruments at Washington, which, under his able management, gradually grew into the famous National Observatory.

The conference at Brussels in 1853, the establishment of the meteorologic department of the British board of trade, his world-famous Wind and Current Charts and Sailing Directions, and his great work on the Physical Geography of the Sea (which the renowned Humboldt declared made him the founder of a new and important science) were some of the fruits of his genius and patient investigation.

His name now became famous throughout the world, and the crowned heads of Europe recognized the value of his services by bestowing various orders of knighthood and other honors.

As early as 1848 Maury began his efforts to test his theory of the character of the bed of the ocean. In this he had the able assistance of Lieutenant John M. Brooke, (now professor in the Virginia Military Institute,) who invented the celebrated apparatus for deep-sea-soundings, which, under the skillful manipulation of Lieutenant Berryman, fully verified Maury's theory of the "telegraphic plateau" and led to the successful laying of the Atlantic cable and to other most important facts concerning the physics of the sea.

Mr. Maury had now reached a high pinnacle of honor and was elected a member of the most famous scientific associations in different countries. The University of Cambridge, England, invested him with its degree of LL. D. and several of the German universities conferred similar honors on him. His unbounded influence enabled him to manage the affairs of the Observatory so as to raise it to the first rank, and he was making satisfactory progress in his great work on astronomy when the war between the States burst upon the country.

At the breaking out of the rebellion Mr. Maury resigned his position under the Government, tendered his services to his native Virginia, went with her into the confederacy, and served that confederacy through the war. That ended, he refused some tempting offers from foreign potentates, as well as one from the State of Alabama, became professor of physics in the Virginia Military Institute, and devoted himself to his work on the Physical Survey of the State, uniting with this the preparation of a series of popular geographies.

Amiable, sociable, with fine powers of conversation, and of unimpeachable character, he was the favorite of every circle in which he moved, while as an affectionate husband, a devoted father, a genial companion of his children, he was the idol of a loving household in his home. A consistent Christian, devoted to his church, but charitable to all, he walked the path of duty, and was ready when his summons came. Ill for several months, he was entirely conscious of his approaching dissolution, arranged all his temporal affairs, summoned to his side the absent members of his family, and calmly awaited the issue.

When his last moments came, he asked his son, "Do I seem to drag my anchors?" and seemed gratified at the answer, "They are sure and steadfast." When he was supposed to be unconscious he was asked to give some sign if all was well, and he replied with firm emphasis, "All is well. All is well." Thus, with religious trust in God and happy hope of a future immortality, passed from the labors of earth to the rest of heaven, one that, perhaps, stood next only to Agassiz among the scientists of the United States.

DR. WILLIAM H. M'GUFFEY.

Dr. William H. McGuffey, the distinguished scholar, teacher, and author, died at his home in Charlottesville, Virginia, May 4, 1873, aged 73 years. His boyhood was spent on a backwoods-farm in preparation for college, walking several miles to recite to a ministerial friend and supporting himself by teaching. He graduated at Washington College, Pennsylvania, in 1825, and was immediately appointed a professor of the ancient languages in Miami University, Ohio, and in 1832 was transferred to the chair of moral philosophy. He was president of the Cincinnati College from 1806 to 1839 and of the Ohio University from 1839 to 1845, when he accepted the chair of moral philosophy and political economy in the University of Virginia, which he filled until his death. Dr. McGuffey is most widely known as the author of the Eclectic Series of Readers, whose extensive use and long popularity are unparalleled in the history of school-books. For years the annual sales of McGuffey's Readers have averaged more than a million dollars. He had a work on mental and moral philosophy under revision when he was stricken down with the disease which proved fatal. His death is widely lamented.

LIST OF SCHOOL-OFFICIALS IN VIRGINIA.

Hon. WILLIAM H. RUFFNER, *State-superintendent of public instruction, Richmond.*

COUNTY- AND CITY-SUPERINTENDENTS.

County or city.	Name.	Post-office.
Accomack	James C. Weaver	Onancock.
Albemarle	D. P. Powers	Scottsville.
Alexandria County and City	Richard L. Carne	Alexandria.
Alleghany and Craig	Paris V. Jones	
Amelia	Dr. M. F. T. Evans	Paineville.
Amherst	C. B. Christian	
Appomattox	Chapman H. Chilton	Spout Spring.
Augusta	Dr. Robert S. Hamilton	Staunton.
Bath and Highland	J. Kenney Campbell	Spruce Hill, Highland County.
Bedford	Sidney L. Dunton	Liberty.
Bland	Rev. William Hicks	Bland Court-House.
Botetourt	Rev. G. Gray	Fincastle.
Brunswick	B. B. Wilkes	Charlie Hope.
Buchanan	Jacob Baldwin	Grundy.
Buckingham	William Merry Perkins	Buckingham Court-House.
Campbell	Dr. R. T. Lemmon	Castle Craig.
Caroline	Thomas R. Dew	Rappahannock Academy.
Carroll	D. B. Brown	Hillsville.
Charles City and New Kent	Dr. Samuel P. Christian	Providence Forge, New Kent County.
Charlotte	William W. Read	Charlotte Court-House.
Chesterfield	B. A. Hancock	Black Heath.
City of Staunton	John H. Ladd	
Clarke	Capt. William N. Nelson	Millwood.
Culpeper	Dr. Robert E. Utterback	Jeffersonton.
Cumberland	Dr. Richard P. Walton	Cartersville.
Dinwiddie	Roger P. Atkinson	Dinwiddie Court-House.
Elizabeth City and Warwick	George M. Peek	Hampton, Elizabeth City County.
Essex	Dr. Henry Gresham	Tappahannock.
Fairfax	D. McC. Chichister	Fairfax Court-House.
Fauquier	William A. Cave	Salem, Fauquier County.
Floyd	Dr. C. M. Stigleman	Floyd Court-House.
Fluvanna	Dr. P. J. Winn	Fork Union.
Franklin	W. A. Griffith	Gogginsville.
Frederick	W. H. Gold	Winchester.
Giles	James B. Peck	Pearisburg.
Gloucester	Rev. William E. Wiatt	Gloucester Court-House.
Goochland	Dr. O. W. Kean	North Side.
Grayson	Fielding R. Cornett	Elk Creek.
Greene and Madison	Rev. William A. Hill	Rapidan Station, Culpeper County
Greenville and Sussex	Capt. W. H. Briggs	Hicksford, Greenville County.

WEST VIRGINIA.

[From report of Hon. W. K. Pendleton, State-superintendent of public instruction, for the year ended August 31, 1872.*]

STATE-SCHOOL-FUND.

Amount of State-fund invested	$256,300 00
Balance in treasury uninvested August 31, 1872	28,417 12
Total amount of permanent fund	284,717 12

FINANCIAL STATEMENT.

Receipts.

Received from State-school-fund	134,666 58
Received from township-levies	366,120 57
Received from other sources	50,605 46
Total receipts for year ended August 31, 1872	551,392 61
Decrease from last year	80,676 88

Expenditures.

Amount expended for teachers' salaries	376,982 91
Amount paid secretaries of boards of education	6,758 21
Amount paid for apparatus	1,901 29
Amount paid for contingent expenses	26,302 77
Amount paid for sites, buildings, rent, furniture, &c.	124,791 42
Total expenditures for year ended August 31, 1872	536,736 60
Decrease from last year	40,982 12

ATTENDANCE.

Number of children between the ages of 6 and 21	170,025
Number enrolled in school—males, 46,745; females, 39,020	85,765
Average attendance—males, 30,661; females, 25,656	56,317
Average age of pupils, years	11.55
Amount expended per pupil on enrollment	$6 24
Amount expended per child on enumeration	$2 21

TEACHERS.

Number of teachers employed—males, 2,095; females, 550	2,645
Number of months taught—by males, 7,974.92; by females, 2,827.62	10,802.54
Average number of months taught	4.09
Average monthly pay of male teachers	$35 04
Average monthly pay of female teachers	$28 98
Number of teachers' certificates granted: first grade, 649; second grade, 840; third grade, 560; fourth grade, 330; fifth grade, 127	2,506

SCHOOL-DISTRICTS AND SCHOOLS.

Number of school-districts	2,567
Number of schools: high, 3; graded, 64; common, 2,412	2,479
Number of city- and county-superintendents	55
Number of visits by superintendents	7,663

SCHOOL-HOUSES.

Number of school-houses in the State: frame, 1,290; log, 843; brick, 74; stone, 9	2,216
Number built during the year	116
Commenced, but not completed	125
Total value of school-houses	$1,070,803 30
Total value of school-property in the State	$1,236,194 43

SCHOOL-FUNDS.

The permanent school-fund has not been invested in the manner prescribed by the constitution. This requires that the fund shall be invested in "United States securities, or securities of this State, if they can be had." The auditor's report shows that,

* For returns of 1873, see statistical tables I and II, at end of volume.

besides the balance of $28,417.12 in the treasury, there are $120,000 in stocks of national banks, which should be converted into the securities prescribed in the constitution. It is also provided in the constitution that this fund shall not be used for any purpose other than that for which it was appropriated. The school-fund has heretofore been drawn upon to a large extent to meet the current expenses of the treasury. Last year the treasury's indebtedness to this fund was $56,490.64 and the previous year it was still greater. This indebtedness has been discharged, and it is recommended that provision be made to prevent its recurrence.

The rate of taxation for the general school-fund is 10 cents on the $100 valuation, or a total for the last year of $132,356.70. The capitation-tax of $1 per head for the last year was $87,044 from whites and $3,357 from colored, a total of $90,395. The amount raised for schools by district-levies for last year was $366,120.57. This was raised by an average tax of about 28½ cents on the $100 valuation. Owing to the increased apportionment, this tax can this year be reduced to 23½ cents without diminishing the sum total. In consequence of the decrease in the amount to be raised for schoolhouses, there will also probably be an average reduction of general taxation for the current year of five or six cents on the $100 of valuation.

Few States present more or greater difficulties in the way of levying a tax for free schools than West Virginia. The population is so unevenly distributed and the wealth of the people so out of proportion to the number of children to be provided for, that it is impossible to devise any plan for taxation that will not operate unequally and to the prejudice of that harmony of action which is so essential to the success of the work. The legislature, at its last session, provided for a levy by districts: for the building-fund, an annual levy not to exceed 40 cents on every $100 of taxable property, and for the support of primary free schools, such a tax as will, with the money received from the State-apportionment, be sufficient to keep such schools in operation for at least four months in the year, provided this tax in any year shall not exceed 50 cents on every $100 valuation. No district shall hereafter receive any share of the State-fund for any year in which this levy has not been made. All school-money for the several districts of a county shall be collected and disbursed by the sheriff or collector of the county. He shall keep an account with the several boards of education of each district and shall receive no pay for the disbursement of any school-money.

SCHOOL-LAW.

The school-law, as amended by the legislature, April, 1873, provides for a system of county-superintendence, for a board of education in each district, and that each subdistrict shall be under the control of one trustee. White and colored persons are not to be taught in the same school; but, whenever the number of colored persons of school-age in a district exceeds 25, schools shall be established for them. When no school is established, the fund applicable to the support of free schools in the district, whether from the State- or local taxation, shall be divided in the proportion which the number of colored children bears to the white, and the share of the former set apart for their education and applied for that purpose in such way as the board of education of the district may deem best. Provision is made for furnishing more correct and complete reports by county-superintendents and district-trustees than have been hitherto received. High schools may be established in a district by agreement of three-fifths of the voters who voted on the question, and for their support a tax may be levied, not to exceed 30 cents on every $100 of taxable property. Graded schools may be established by the board of education as they shall deem necessary; but in every such case involving additional taxation, the matter shall be first submitted to a vote of the people, and no levy for a graded school shall exceed, in any one year, 15 cents on every $100 valuation. Provision is made for the examination of teachers by a board of examiners in each county, to be composed of the county-superintendent and two experienced teachers. No diploma or certificate shall be taken to supersede the necessity of examination by the board of examiners. No certificate issued by a county-board shall be of force except in the county in which it was issued, nor for a longer period than one year, and the examiners may, for just cause, revoke a certificate. Certificates of five grades are granted. A number-five certificate shall never be granted to a teacher more than once. If, upon a second examination, the applicant is not found entitled to a higher grade, no certificate shall be granted in any county of the State. A number-four certificate shall not be granted more than twice to the same applicant. Institute-certificates may be granted by the professors who have conducted the institute only to the pupils of the institute. They shall be valid for one, two, or three years, as may be designated, in any part of the senatorial district in which they are granted. Diplomas from the normal schools of the State shall be accepted as a certificate of qualification to teach throughout the State. These may, for suitable cause, be annulled by the State-superintendent. Professional certificates, admitting the holder to the profession of teacher throughout the State during his life, may be granted by the State-board of examiners; but the State-superintendent shall have power to revoke such certificate for causes specified and clearly proved.

CONDITION OF SCHOOLS.

The reports furnished by county-superintendents were so incomplete and defective that accuracy, in most of the particulars embraced in the statistical tables, was absolutely unattainable, and the figures given are in most cases to be regarded as only approximations. The policy has been adopted of making no estimate of the school-statistics of counties or districts not reported by their officers, thus giving an underestimate of the condition of education in the State, with the hope of inducing, in the future, more full and complete reports from the delinquent officers. But, notwithstanding the many defects and deficiencies of these reports, the results exhibited are, as a whole, encouraging. The number of teachers and scholars, schools and school-houses, and the number of months taught during the school-year are regularly increasing. The debts of the townships for school-houses and land are being discharged. The permanent school-fund is annually augmenting and the amount received from township-levies increasing from year to year. Public sentiment is becoming more enlightened on the subject of free-school-education; opposition is less violent and open, and the free-school-system, by its practical results, is daily growing in favor with the people.

GRADED SCHOOLS.

Of graded schools there are but sixty-four in the State, and only three high schools; and these receive no assistance from the State further than the privilege granted to the districts in which they are located to levy an extra tax for their support by the consent of the people. Were it not for a number of private academies in the State, the slight provision for higher elementary instruction would be very discouraging. Even at the best it is feared that but a very small proportion of the youth of the State have facilities for anything that can be called a liberal English education. Most parents desire their children to acquire a better education than can be afforded in a primary school, and it should be the educational policy of the State to foster and encourage schools of a higher grade as far as is practicable.

INSUFFICIENT PAY OF TEACHERS.

The principal cause of dissatisfaction with the free-school-system, a cause which must be removed before the schools can win the favor or cordial support of those whose approbation is essential to their success, lies in the incompetency of the teachers. The reasons for this incompetency are (1) the inadequate compensation offered to teachers and (2) the want of proper provision for their instruction. It is believed that if the teachers were better qualified the people would be willing to pay better salaries. Improvement in the instruction imparted is one of the steps towards increased compensation. But it is impossible that the salaries can for some time to come be such as to secure the services of those whose education is above the grade of the primary school. The only remedy, therefore, is considered to be in some easier and more generally accessible provision for the special instruction of the teachers already employed.

NORMAL INSTITUTES PROPOSED.

The normal schools do not meet the difficulty, for they furnish only 3 per cent. of the teachers actually employed in the primary schools. The greater number of the teachers in these schools have themselves been taught only in primary schools, and all that can for the present be done beyond this is to give them some special training in the art of teaching. This, it is confidently believed, can be best accomplished by the establishment of a system of teachers' normal institutes, so distributed that all the teachers in the State can attend them. It is recommended that the proficiency of the pupils of the institute be carefully graded and certified and that these grades be made the basis of a schedule of graded salaries and other professional advantages. The cost of these institutes would be comparatively small and should be paid out of the general school-fund, so that no extra taxation for the purpose would be necessary.

VOCAL MUSIC SHOULD BE TAUGHT.

The superintendent advises that to the course of instruction now prescribed by law for the primary schools, embracing orthography, reading, penmanship, English grammar, and geography, be added history and, as far as practicable, exercise in vocal music. The latter, in view of its refining and cultivating influence, should be made a part of the daily order of every school.

Great encouragement is derived from the fact that educators are beginning to recognize the importance of the primary schools as an agent for the moral training of children, and not solely for their intellectual training. Statistics show that, with a very large proportion of our youth, what is omitted in the primary school is omitted altogether. It is believed that the same attention that is given to the intellectual culture of the children in our free schools should be given to their moral and religious culture. "Therefore, let the Bible, without note or comment, be read in our public schools."

UNIFORMITY OF TEXT-BOOKS.

The selection of school-books is considered a matter of the highest importance. Partiality for favored authors or publishing-houses is strongly discouraged. "The best

books on all subjects which any market affords" should be the rule adopted. It is proposed to commit this matter to the control of the board of the school-fund, who shall appoint a revisory committee of five experienced teachers to take the supervision of the whole question of class-books and report and advise such changes in them as the interests of the schools require. The legislature, at its last session, provided for uniformity of text-books throughout the State.

WHEELING.

With a total population of 25,235, Wheeling has 8,604 children of legal school-age—6 to 21 years—of whom 3,700 are enrolled in public schools. The monthly average enrollment is 2,569 and the monthly average attendance 2,199. Of the 23 schools, 9 are primary, 7 intermediate, and 7 grammar-schools. These are taught by 65 regular instructors, of whom 8 are gentlemen and 57 ladies, aided by 4 special teachers. The annual salaries of teachers in primary schools range from $360 to $600; in intermediate schools the salary is $385; in grammar-schools, for principals it is $1,100, and for assistants $440. Only one female principal was employed in the intermediate schools during the year past, and she received $600; but the present year her salary is the same as that of male principals, $1,100.

The total income for the school-year ended June 30, 1873, was $82,161.60; expenditures, $71,230.45.

At present 123 pupils study drawing. During the current year about 1,000 received instruction in it. Four hundred study German. Music is not a prescribed study, but nearly all the children sing.

There are five parochial or church-schools, of which three are Roman Catholic, and two German Protestant: one academy for boys, known as The Lindsley Institute, and two academies for girls, one entitled The Seguin Female Institute, the other The Wheeling Female College. Besides these there are three or four small private schools. About one mile from the city is a flourishing Roman-Catholic female-seminary, known as Mt. de Chantal Academy.

The superintendent has not been able to obtain statistics from any of these schools except the Seguin Institute, which for the last year had an attendance of about 50 pupils and employed 3 teachers. The attendance in the church-school was large; that in the others named did not, it is believed, aggregate 350 pupils.

NORMAL SCHOOLS.

There are three of these schools in successful operation, the State Normal School at Huntington, known as Marshall College, and two branch schools, one at Fairmount, called the Fairmount Normal School, and one at West Liberty, called the West Liberty Normal School. One was organized at Glenville, in February, 1872; and two others have been authorized by the legislature, but have not yet complied with the conditions of their organizations.

The catalogue of Marshall College shows an attendance for the last session, of ladies, 78; gentlemen, 117—total, 195. No statement is made of the classes into which they are distributed.

The Fairmount Normal School seems to be very thoroughly organized and systematically managed. It reports in the normal school 22 ladies, 41 gentlemen; in the academic department 38 ladies, 19 gentlemen. In the model school, senior-preparatory, females, 7; males, 13; in the junior-preparatory, females, 20; males, 25—total, 185.

The West Liberty Normal School makes no report, but is believed to be energetically and successfully managed.

"The great value of these schools is the facility they afford for a higher grade of education than can be procured in the schools of inferior rank. Regarded only as the source of teachers for primary schools, they are a failure. But they are valuable as higher academies, to give a sufficient education to many who do not desire a college-course and to supply the intermediate training between the high school and the college, which is the great want of the American system of free schools. There is no intermediate education between the common school and the college; hence many colleges are obliged to degrade themselves into little more than preparatory schools. They have a nominal college-class, but most of their work is strictly preparatory, and the majority of their students are boys who ought to be in the high school."

BETHANY COLLEGE.

The New York School Journal of December 20, 1873, stated that the legislature of West Virginia had ordered an appropriation of $3,000 to this college, on condition that the institution educate gratuitously a student from each county in the State.

WEST VIRGINIA UNIVERSITY.

The board of regents of this institution reports it as steadily gaining in patronage and in the extent of its work. The corps of professors is ample and the financial support generous. The current expenses of the year 1871–'72 amounted to $16,310. "It

is to be hoped," says the State-superintendent, "that this large annual outlay may be made more directly tributary to higher collegiate education and the institution be speedily freed from the duties and functions of a high or normal school. Students emulous of college-distinctions are not apt to be attracted to institutions in which the preparatory department preponderates over the college-work, nor are professors of eminence likely to remain content with such situations; and this, probably, is the explanation of the fact that the university in five years turned out only seven graduates and also of the frequent 'changes in the board of instruction,' of which the president complains. During the five years of the university's operation there have been 53 State-cadets in attendance. As each cadet is allowed to attend two years, this makes an average of about 21 per session. Of these cadets the catalogues show only 14 that have attended any of the regular college-classes and only 4 cadets have ever graduated. When it is remembered that these cadets are the only students of the university that get the benefit of free education, it will be apparent that the State is accomplishing but little towards providing a free collegiate education for her sons."

COLLEGES FOR WOMEN.

Parkersburg Female Academy of the Visitation reports 8 lady teachers and about 80 students. There is also attached to the institution a school of about 60 girls, instructed gratuitously by the Sisters in the common-school-branches. In the academy, music—vocal and instrumental—drawing, painting, French, and German form a part of the course. A philosophic cabinet has been commenced and is increasing, and a library has also been recently begun.

Wheeling Female College has 13 professors and instructors—4 gentlemen and 9 ladies—and an attendance of 214 students—139 in collegiate and 75 in preparatory departments. In the freshman-year were 44; sophomore, 35; junior, 29; and senior, 19 pupils. In a special course were 10 and in a post-graduate-course 2. Music, art, and composition are reported in the course; drawing, painting, French, and German are taught. The institution has a chemic laboratory, philosophic cabinet, natural-history-museum, and a library of 300 volumes.

* For returns of 1873, see statistical tables I and II, at end of volume.

† The school-fund is composed of proceeds of lands granted by the United States for support of schools, moneys accruing from forfeiture or escheat, and trespass-penalties on school-lands, fines collected in the several counties for breach of the penal laws, moneys paid as an exemption from military duty, and 5 per cent. on sale of Government-lands. The amount of the productive school-fund, on the 30th day of September, 1871, was $2,389,488.28 and on the 30th day of September, 1872, $2,482,771.28, showing an increase in the productive fund of $100,283 during the year.

EDUCATIONAL PROGRESS.

The State-superintendent of public instruction reports that the past year has been one of substantial progress in every department of the educational system.

"From nearly every part of the State cheering evidence comes of the increasing intelligence as well as prosperity of the people; of a deeper interest taken by them in the common schools; of a pressing demand for more experienced teachers; of a higher standard erected and maintained by county-superintendents in their examinations; of a larger attendance upon teachers' institutes; of the building of more convenient school-houses, provided with better seats and more abundant apparatus than the old ones, and of improvement in school-house-grounds.

"The unmistakable evidences of improvement are the erection of new houses, reseating others, procuring apparatus, maps, &c., more frequent inquiries for the best teachers, a willingness to pay such for their labor, and a very high appreciation of teachers' institutes."

SCHOOL-DISTRICTS.

"The whole number reported by the county-superintendents (not including joint districts) is 4,145. Adding 50 for Jackson County, which reported 48 last year, the whole number of ordinary districts is 4,195, an increase of 106. The number of parts of districts returned is 2,042, making, by the usual estimate of two and a quarter parts to a district, 908 joint districts, or only four more than last year. The whole number of districts, therefore, not including those cities which are not under the jurisdiction of county-superintendents, is 5,103. Last year the number, excluding the cities, was 4,993, so that the increase in districts is 110. It seems useless to classify the cities as districts. The number of cities now reporting independently is 19. The wards of a city are in some degree analogous to a school-district, as each ward usually has its school. The number of wards in the cities above referred to is about 90, which, added to the above 110, would give 200."

CHILDREN OVER 4 AND UNDER 20.

"The number reported is 423,717, an increase from last year of only 2,769. During the previous year the apparent increase was 8,467." Total for two years, 11,236.

CHILDREN OF SCHOOL-AGE IN DISTRICTS WHICH MAINTAINED SCHOOL FOUR OR FIVE MONTHS.

The number reported under this head is 422,045, which is only 1,672 less than the whole number of school-age, indicating that few districts failed to maintain school five or more months.

TOTAL ATTENDANCE.

After making some corrections in the returns and adding 3,102 pupils for the cities of Berlin, Oshkosh, and Stevens Point, the whole number of persons attending the public schools the past year is found to be 270,292, which is 5,007 more than attended the previous year and more than double the increase of school-children. The number attending between 4 and 20 is 266,789, leaving 3,403 as the number under 4 or over 20 in attendance. Tabulating all classes of pupils, the following is the result for 1871 and 1872:

	1871.	1872.
Number reported as attending public schools	265,285	270,292
Number reported as attending private schools	17,267	18,020
Number reported as attending academies and colleges	2,253	2,831
Number estimated for benevolent institutions	1,150	1,200
Total	285,955	292,343

"The number of pupils elsewhere tabulated as attending private schools, and not registered in public schools, is 11,920; but to this number should be added about 6,000 for Milwaukee, 400 for Madison, and 700 for Watertown, making a total of 18,020. Allowing 7,500 as the number of school-children in attendance upon some sort of school, but in no way reported, the aggregate is 292,343, leaving apparently 131,374 persons of school-age not in attendance upon any school."

TEACHERS AND TEACHERS' WAGES.

"The whole number of teachers required is 5,881, or forty-four more than last year. The number employed some part of the year was 9,267, an increase of 81 over last year.

"The average wages of male teachers, not including the independent cities, is $43.33 per month, a gain of $1.93 from last year. The wages for female teachers out of the cities is $27.04, a decrease of 58 cents.

"In the cities the average wages of male teachers has decreased from $1,053 per annum to $982, while those of female teachers have advanced from $367 to $376. There is a growing disposition in the cities to retain those ladies who give satisfaction in the schools and to advance their wages with increase of experience."

The whole number of teachers' certificates issued, exclusive of State-certificates and of those issued in the cities, was 7,383, which is 151 more than the number for the previous year.

GRADED SCHOOLS.

"Outside the independent cities, the number of schools with two departments is 151, a decrease of 17; but the number with three or more departments is 142, or 44 more than last year. Attention is again called to the fact that graded schools could be much more extensively introduced in the rural districts, under the town-system. Estimating the cities to embrace 217 graded schools, or one for each school-house reported, the whole number in the State is 410, an increase of 25."

SCHOOL-HOUSES.

"The whole number returned is 4,979. The number reported last year was 4,933, showing an increase of 46. The amount expended for building and repairing was $294,345, or about $10,853 less than last year. The number of good school-houses increases every year. Among the finest completed during the last school-year are those at Monroe and Black River Falls, each valued, with the site, at $25,000. The school-houses of the State will accommodate 312,612 pupils, which is 111,105 less than the whole number of school-age and entitled to attend school, but 42,320 more than the whole attendance."

Besides the houses built, many school-yards have been inclosed and outhouses put in good condition. But there is yet much to be done in this direction. According to President McGregor, there are still over 3,000 school-houses in the State not well inclosed or not inclosed at all, while few of the actual inclosures contain any trees, flowers, or vines. As to the practicability of such attractive adornment, attention is directed to the example of Racine College, where the grounds are kept as neat as any garden by interesting the young men themselves in this good work and allowing them to have each his own little plat of ground to care for.

SUMMARY OF GENERAL STATISTICS.

	1871.	1872.	Increase.
Whole number of districts in the State, not including cities	4,493	5,103	110
Number of districts reported	4,938	4,989	51
Number of children over 4 and under 20 years of age in the State	420,948	423,717	2,769
Number of children over 4 and under 20 in districts maintaining schools five or more months	418,358	422,045	3,687
Number over 4 and under 20 who have attended school	262,947	266,789	3,842
Total number of different pupils who have attended the public schools during the year	265,285	270,292	5,007
Average number of days a school was maintained, (estimated)	155	153	*2
Number of days' attendance of pupils over 4 and under 20	20,546,904	19,663,667	*883,237
Total number of days' attendance of different pupils during the year	20,627,575	19,929,416	*698,159
Number of days schools have been taught by qualified teachers	842,200	801,007	*47,193
Number of pupils who have attended private schools	17,267	18,020	753
Number of schools with two departments	230	213	*17
Number of schools with three or more departments	155	199	44
Number of teachers required to teach the schools	5,837	5,881	44
Number of different persons employed as teachers during the year	9,168	9,267	99
Average monthly wages of male teachers in the country	$41 40	$43 33	$1 93
Average monthly wages of female teachers in the country	$27 62	$27 04	$0 58
Average monthly wages of male teachers in the city	$105 30	$98 20	*$7 10
Average monthly wages of female teachers in the city	$36 70	$37 60	$0 90
Number of schools visited by the county-superintendents	4,886	4,296	590
Number of public-school-houses in the State	4,933	4,979	46
Number of pupils the school-houses will accommodate	310,292	312,612	2,320
Number of sites containing less than one acre	3,705	3,733	28
Number of sites well inclosed	1,353	1,392	34
Number of school-houses built of brick or stone	605	656	51
Number of school-houses with outhouses in good condition	2,957	3,497	540
Highest valuation of school-house and site	$75,000	$75,000	.....

* Decrease.

ABSTRACTS OF COUNTY-REPORTS.

In Barron County school-houses have been built and schools maintained in many districts that could not have supported them previously.

In Brown County, exclusive of the schools in the city of Green Bay, there are five graded schools. Out of 150 applicants for teachers' certificates, 100 received them. Four new school-buildings have been erected during the year and four more are to be.

In Buffalo County excellent new school-houses have been built in five districts and more projected.

In Columbia County fault is found with some dilapidated school-houses, the use of roads for play-grounds, and the hiring of cheap teachers. Still some school-houses have been built in the county during the year that are creditable to the localities in which

they stand. Modern improvements have been introduced in seating and ventilating and several old school-houses have been thoroughly repaired. Out of 490 applicants for teachers' certificates, only 70 per cent. passed.

In Dane County, out of 560 applicants for teachers' certificates, about 40 per cent. received them. Educational prospects are said to be brightening here, and there is a demand for experienced teachers and a willingness to pay them living wages. Miserable old shells, that have disgraced too many districts, have given place to better and more convenient buildings. In many districts they have added to the attractions of the school-houses by inclosing the grounds and planting out shade-trees.

In Dodge County, out of 333 applicants for teachers' certificates, 109 have been rejected.

In Eau Claire County there has been an effort to raise the standard of qualifications of teachers. A commendable interest is manifested by the people in raising money to build school-houses, even in the country districts.

In Fond du Lac County, of 225 applicants, only 110 received teachers' certificates. A large proportion of the school-houses are creditable structures, and many would be an honor to wealthy and populous communities. One school-house has been built. There are six graded schools that will compare favorably with any in the State. This county is well represented in the State normal schools, sixteen pupils having been nominated for admission thereto—twelve at Oshkosh and four at Whitewater.

In Grant County 392 certificates have been granted to applicants for teachers' positions, less than one-fourth of the applicants having been rejected. The normal schools are said to have done much to improve the condition of the common schools. There is a perceptible advance in the qualifications of teachers and in the interest manifested in relation to common-school-education.

In Juneau County the schools in the villages of New Lisbon, Mauston, and Necedah are said to challenge comparison with those of any of the neighboring villages in the State. Of the county-schools, many are in excellent condition and are doing good work. Four of the districts of this county sustain graded schools. One hundred and one certificates were granted to applicants for teachers' positions.

In Kenosha County, the school-interests are reported to be in a flourishing condition. Three new school-houses have been built and furnished, while many of the old ones have been repaired. Of 140 applicants for teachers' certificates, only 83 received them. The names of all pupils who are neither absent nor tardy, and who are correct in deportment, are recorded on a roll of honor, which is published monthly in The Educational.

In La Crosse County many of the old school-houses have been refitted and the standard of teaching has been raised.

In Marathon County two new school-houses have been built and another is projected. The schools are reported to be steadily progressing.

In Marquette County there are evidences of gradual improvement. Of 90 applicants who were examined, only 53 received certificates. Several new school-houses have been completed and one or two more will be ready for occupancy during the winter.

In Milwaukee County, out of 76 applicants, 59 received teachers' certificates. Great interest has been manifested by the people in building substantial and commodious school-houses, nearly one-third being built of brick.

In Monroe County two frame school-houses have been erected and in the more wealthy districts there is a growing inclination to replace the old structures with new and improved buildings. There are two graded schools, one at Sparta and one at Tomah. The monthly reports of the teachers have induced better organization and systematic management of the schools and have caused teachers to feel an accountability that has had a salutary effect. Of 159 applicants, 90 received teachers' certificates.

In Pepin County improvement is reported in the way of caring for the health and comfort of the children in the schools. New houses have been built and new furniture substituted for the old.

In Polk County, of 62 applicants for teachers' certificates, 56 received them. Thirteen school-houses have been built. Much of the school-work has been a great improvement compared with that of previous years.

In Racine County a good degree of progress is reported. Three new school-houses have been erected, each arranged and furnished in modern style, and preparations are being made for building others.

In Richland County improvement is reported in the erection of new school-houses, reseating others, procuring apparatus, &c., and a willingness to pay good teachers for their labor. Fine school-houses are being built. Of 180 applicants at the spring-examination, 141 received certificates, 51 of them being limited. Of 118 applicants at the fall-examination, 77 received certificates, 26 of them being limited.

In Sauk County the efforts of many of the teachers to attain better qualifications, as exhibited by their attendance upon institutes, have resulted in the acquirement of a good degree of skill in teaching. The schools are said to be progressing.

In Sheboygan County the schools are reported to be in a flourishing condition. Good

wages are being paid to teachers, and the result is that a better class of teachers is being employed. Many school-houses have been erected, the one in the village of Sheboygan Falls being the most costly.

In Trempealeau County a few school-houses have been built or partially finished in new districts, while in the older districts progress has been made in building, improving grounds, fencing, and furnishing. Several village-schools have grown to such proportions as to render it necessary to grade them at no distant day. There is a more general call for superior teachers. Eighty-nine certificates have been granted.

In Vernon County the schools are reported as prosperous and the teachers are commended for their devotion to the cause in which they are engaged.

In Walworth County the institute and teachers' meetings have proved of great benefit to the schools. The graded schools deserve special mention; their influence on the mixed schools is helpful. Some school-houses have been built and others are contemplated.

In Waushara County the schools have made steady progress; 154 certificates to teach have been issued to applicants. One school-house has been built and a number repaired.

In Winnebago County the schools are reported to be prosperous and successful. About 75 per cent. of the number applying for teachers' certificates received them. There are seven graded village-schools, taught by able teachers. The influence of the normal school at Oshkosh is being felt more and more, as teachers seek to obtain the thorough drill there given. The two teachers' associations have held meetings during the winter- and spring-terms once in four weeks, with good results. Marked changes are being made in the school-houses. Two new ones have been built and others are being erected, while several houses have been repaired and the school-grounds in many districts have been inclosed and improved.

In Wood County a decided change has taken place. Good teachers are wanted and good wages paid them. A teachers' association was held in February, at Grand Rapids, which was attended by nearly all the teachers of the county, and a school-officers' convention was held a few days later at the same place. Use of the press has been made to circulate educational matters and to urge upon the public such measures as seemed necessary and important. The city of Grand Rapids voted to raise by tax $10.000, to be added to the "Howe fund" of $10,000, for the erection of a high-school-building.

With some abatements and exceptions it will be seen that nearly all these county-reports show progress, new school-houses, better teachers, deepening interest in school-work, and increasing readiness to meet the necessary expenses of it—in some instances a willingness to encourage better teaching by offers of higher pay. From the towns the reports indicate the same advance. At Mineral Point the school-buildings have been made sufficient to accommodate not only all the pupils in the city, but also those of higher grade from the surrounding country. The high schools there have raised their standard, too, adding Latin and German to their former English course. At Oconto the cause of education is said to be well on the advance, provision being made for more school-room, as the school-census outnumbers, by hundreds, that of last year. In Portage the schools are reported to be in a prosperous condition and teachers to be paid in cash at the expiration of each ten weeks.

SECONDARY INSTRUCTION.

Five institutions of this class have been reported, viz: Evansville Seminary; German and English Academy, Milwaukee; Kemper Hall, Kenosha; Rochester Seminary; and Santa Clara Academy, Sinsinawa Mound; the first reporting 152 students, the second 334, the third 66, the fourth 85, and the fifth 118.

(For further information, see statistical tables at end of volume.)

PREPARATORY INSTITUTIONS.

Wayland University, at Beaver Dam, and Milwaukee Academy are preparing 98 students for college; 53 are engaged in classic and 45 in scientific studies, of whom 18 are in senior-, 20 in junior-, 23 in middle or third, and 37 in fourth-grade-classes.

NORMAL SCHOOLS.

Of these there are four in the State: one in Platterville, one in Whitewater, one in Oshkosh, and one (not in full operation at the date of the report) in River Falls. Each assembly-district in the State is entitled to six representatives in the normal schools. Candidates for admission must be at least 16 years of age, of sound bodily health, of good moral character, and must declare their purpose to be to fit themselves for the profession of teaching, and actually to teach in the public schools of the State. No person is entitled to a diploma who has not been a member of the school in which such diploma is granted at least one year, nor who is less than 19 years of age.

At Platterville the students are reported to be, as a general thing, earnest in their work and to be making good improvement of their time and opportunities. The apparatus and fixtures of the school have been greatly improved during the past year. The number of pupils in December, 1872, was 295.

At Whitewater every available seat has been occupied and every energy of the faculty taxed, 221 students being registered in the normal department and 141 in the training-department. Among other subjects treated have been school-architecture, ventilation, and kindred themes. The building and grounds have been improved, and large additions made to the philosophic apparatus and to the laboratory and museum. A teacher of light gymnastics is connected with the school.

At Oshkosh, where the school is of recent establishment, 70 have been in attendance and have been engaged in teaching during some portion of the year.* A fine philosophic and chemic cabinet has been purchased and a reference-library and mineralogic cabinet are to be added.

"Measures have been taken to have the normal schools brought into harmonious relations with the university and other higher institutions of learning, by suggesting to the various faculties the practicability of making the courses of study parallel in the university and the normal schools up to the junior- or senior-year in the department of arts in the university, so that graduates of the normal schools may graduate from the university after completing the remaining course of study. The plan seems to be entirely feasible and will doubtless be adopted in due time. This will be another step in the advance towards the realization of the long-wished-for unity in the school-system advocated by the best educators."

Besides the State normal schools there is in Racine City a normal school for the instruction and training of teachers of the public schools, which holds an annual session of two weeks preceding the commencement of the school-year, and during that year a session every Saturday, excepting on Saturdays prescribed as holidays by the school-board. Teachers are required to attend all the sessions regularly and punctually and to be prepared to recite lessons assigned by the principal.

UNIVERSITY OF WISCONSIN.

According to the report of General C. S. Hamilton, president of the board of regents, the University of Wisconsin is in a very flourishing condition. Under the efficient management of the president, Rev. J. H. Twombly, D.D., assisted by an able faculty, the number of students is greater and the standard of scholarship higher than at any previous period.

Ample facilities are afforded young ladies for acquiring a thorough education, the option being given them of reciting alone or with students of the opposite sex.

The law passed in the legislative session of 1871–'72, bringing the university into vital relations with the public schools, has been already of great benefit to the university and to the graded schools. In many places the additional studies are being taught, to correspond with the requirements of the faculty, and ten young gentlemen and ladies have been admitted to the college-classes, the first fruits of a great future harvest.

The report of the regents for the year ended September 30, 1872, states also that the female-college-building provided for by the legislature in 1870 has been entirely completed and formally opened to lady students. That the advantages of such a building in connection with the university are appreciated by the public, it is only necessary to say that with the opening of the fall-term the building was occupied to its full capacity by lady students and room for many more wanted. The accommodations of the building are sufficient for eighty students, with room for the lady teachers. It is insufficient for present needs, and if it be the wish of the people to see the requirements of the organic law fulfilled, the building will have to be enlarged at no distant day.

In the management of this branch of the university the regents have endeavored not only to carry out that provision of the organic law which requires that female students shall have all the advantages of the university, but they have also conceded to them the privilege of a distinct ladies' education. The sexes are not required to recite together, but a preference in this respect, requested by parents and students, is granted to the ladies, and competition for all the honors of the university is open alike to both male and female students.

At the opening of the fall-term of 1872 the total number of students present at the university was 435, of whom 142 were females. When this is taken in connection with the fact that raising the standard of scholarship has been the cause of rejection of many applicants, it shows, not only a steady growth in numbers, but cheering evidence of improvement in the true direction.

Prof. Kerr states, in the Wisconsin Journal of Education, that at the examination for admission to the several departments of the university the average attainments of the candidates were considerably above those shown on any previous occasion. On arranging their plans of study, after the examination was completed, more young men than usual decided in favor of the long course. Three ladies also entered the lists for honors in the college of letters, and commenced with good prospects of success.

*At a convention of superintendents and principals, held in Madison, December, 1872, the number in this school, including 58 in the preparatory department and 70 out teaching, was reported to be 286.

CONNECTION OF GRADED SCHOOLS WITH THE UNIVERSITY.

In his report of 1870, Superintendent Fallows expressed the decided opinion that the preparatory department of the State-university ought to be abolished and the work done by it be remitted to the academies and high schools of the State. In the report for 1871, this opinion was again expressed with more detail and emphasis, the graded schools of the State being then included with the high schools; and it was proposed that the university should furnish to all such schools a list of the studies required for admission to the different collegiate departments, with the per cent. to be attained in each. That done, it was further proposed that the graduates of these State-schools should be admitted, on the certificates of their principals, into the college-classes for which they were prepared, without further examination and without any charge for tuition during their stay at the university. It was held that the adoption of such a plan, with the addition of a publication of the names of these students, would have a healthily stimulant effect upon the schools, would "make the principals vie with each other as to the quality and quantity of the students sent to the university," and would awaken in parents a new interest in the schools, as enabling them to prepare their children for collegiate studies without sending them from home.

After considerable debate respecting this proposal among the principals of public schools and members of the faculty and regents of the university, the plan was acceded to, and in March, 1872, a law was passed providing that all graduates of any graded school of the State, who should have passed an examination at such school satisfactory to the faculty of the university for admission into the sub-freshman-class and college-classes of the university, should be at once and at all times entitled to free tuition in all the colleges of the university.

It was directed that the examinations in these cases should be in writing; that a certain defined number of questions should be submitted on each study; that orthography and penmanship should be determined from the written papers; that the principal should examine the papers and mark them on a scale of 100, candidates obtaining at least 76 in each study and an average of at least 85; and that then the principal should forward to the president of the university the questions, the written answers of the candidate, and a certificate that the papers had been prepared under his supervision, and, to the best of his knowledge and belief, in an entirely fair way.

To the objections that the standard of admission to the university might be lowered if so many schools were to be made preparatory to it, and that discrimination would be made in favor of students from the public schools, if free tuition should be given them, answer was made that the faculty of the university would always have the matter of standard in their own hands and that the principle of discrimination in the matter of tuition was already recognized in the public-school-system, so that no injustice would be done by an extension of the thing.

Since the passage of the law, 47 students have been admitted, under its provisions, to the university, (11 in 1872 and 36 in 1873,) and the superintendent of instruction thinks that the good effects anticipated have been fairly realized.

COLLEGES AND UNIVERSITIES.

The following institutions have reported to the State-superintendent in compliance with law: Beloit College, Galesville University, Lawrence University, Milton College, Milwaukee Female College, Racine College, Ripon College, and Wisconsin Female College.

The following table presents a summary of the most important statistics for the past two years, showing a large increase of younger students and a decrease of irregular students:

	1871.	1872.
Number of colleges reported, (not including State-university)	7	8
Number of members of faculties	63	79
Number graduated at last commencement	61	66
Total number who have graduated	418	598
Number of students in senior-classes	47	73
Number of students in junior-classes	78	93
Number of students in sophomore-classes	103	115
Number of students in freshman-classes	115	153
Number of students not in regular classes	313	289
Number of students in preparatory departments	495	894
Total number in the institutions reported	1,151	2,368
Number of acres owned by the institutions	4,829	4,086
Estimated cash-value of lands	$119,900 00	$135,700 00
Estimated cash-value of buildings	282,500 00	371,000 00
Amount of endowment-funds, except real estate	203,256 00	213,205 00
Amount of income from tuition	20,090 71	25,952 09
Amount of income from other sources	69,198 73	22,978 00

STATISTICS OF ALUMNI OF BELOIT COLLEGE.

In a late number of The Monthly, published by the students of Beloit College, we have a statement which goes to show the issues of college-education. It says: "Of the 200 alumni of our college, nearly all are engaged in or are studying for some one of the four professions. More than one-third are clergymen; one-fifth, lawyers; thirteen, physicians; while about twenty-five fill the chairs of editors and teachers. Now and then we find one who has taken up some substantial work, such as that of a manufacturer or business-man; but only two, it seems, are following farming." As to the last point, the agricultural colleges will probably soon make a decided change, elevating farming to the dignity of a scientific pursuit, deserving the attention of the most cultivated intellect. As to the tendency of the college-bred towards what have been esteemed the learned professions, the scientific schools will likewise show their influence ere long. But probably the statement here made may be taken as exhibiting the general drift of college-training as it has been in the past; and, as for the colleges of arts or academic departments of the universities, it is likely to be in all the future.

COLLEGES FOR WOMEN.

Milwaukee Female College, at Milwaukee, and Wisconsin Female College, at Fox Lake, report an aggregate of 262 pupils, 74 in preparatory and 44 in collegiate studies. Milwaukee Female College, with 6 professors and instructors, has 15 pupils in the freshman-, 7 in the sophomore-, 18 in the junior-, and 4 in the senior-years, and 74 in the preparatory department. Wisconsin Female College reports the total attendance of pupils as 70; the collegiate department not yet classified. It has a chemic laboratory, a small natural-history-museum, a gymnasium, and a library of 600 volumes. Music—both vocal and instrumental—drawing, German, and French form a part of the course of study.

INSTITUTE FOR THE BLIND.

The year has been marked by an attendance greater than that of any previous one, and by increased efficiency of the industrial department; 76 pupils have been present, the majority of whom have been connected with each of the three departments of literature, music, and handicraft. Two choirs have been maintained and many pupils have received private voice-culture. An orchestra of fifteen pieces has been supported. In the industrial department the seating of cane-seated chairs has been introduced. A change of policy, by which the foreman of the shop is made partially dependent upon its pecuniary success for his compensation, seems to secure greater economy, thoroughness, and more rapid progress than the former system. To this department a few adults have been admitted. The law passed by the last legislature, providing for obtaining a census of blind children, has resulted in securing the attendance here of some of whose existence the superintendent had no knowledge and who had themselves not known of the existence of an institution for their benefit. The institution is open, free of expense for board or tuition, to all blind persons or persons with defective vision, between the ages of 8 and 21, who are legal residents of Wisconsin.

INSTITUTE FOR THE EDUCATION OF THE DEAF AND DUMB.

The attendance of pupils has been larger than ever before, 164 being the number connected with the school during the year. The school is in need of enlarged accommodations, the present edifice being only large enough to accommodate 150. Tuition is furnished by the State. The medium of instruction is the sign-language. The revision of the school-law places the maximum school-period for ordinary pupils at five years; and in cases where promise is given that more time would be of special advantage an additional period may be allowed.

SOLDIERS' ORPHANS' HOME.

On the 1st day of October, 1872, there were 207 children in the "Home." Since March last, the public-school-system of discipline, classification, drill, &c., has been introduced and followed and normal-trained teachers secured. Last June a class of ten pupils passed a creditable examination for admission to a normal school.

INDUSTRIAL SCHOOL FOR BOYS.

The managers of the Wisconsin Industrial School for boys report as follows: whole number in school since July, 1860, 900; present number, 275. Besides the main building occupied for school-purposes and the residence for officers and employés, there are six family-buildings and two shop-buildings. Since the legislature of 1870 limited the commitment to boys, the State has had no provision for wayward girls. The average time of detention has been between two and three years, depending principally on the conduct of the boy and the character of the home to which he is to go. The family-system is still successfully continued. The school is graded into five departments, in which all the branches of a common-school-education are taught. As a rule, the boys do not make great advance in scholarly attainments; still, there are many marked exceptions. A farm of 233 acres is worked by them. The products of their labor are mainly consumed in the institution, the willow-broom and cane-seating manufactures being the principal exceptions.

WISCONSIN INDUSTRIAL SCHOOL.

The board of managers notes, first, an unusual and unexpected increase in the number of inmates. An increase certainly was expected, but not such as has been realized. It is difficult to convey to one unfamiliar with this class of institutions a clear idea of the consequences growing out of this influx. In order to make room for the newly committed boys, there was no alternative but to send away many who ought to have been retained. Those sent away were selected from among the boys furthest advanced in reformation of character and in ability to aid in their own maintenance; but, after all, the necessities of the case furnished the reason for removing them, rather than any fitness in themselves to justify it. Of course, they were among the older and larger boys. Sending them away lessens the working power of the school in all its departments. Average of age, deportment, tone of manners, the general *physique* of the school, all are lowered, and visitors are at once struck with the thought that a school which has been in existence so long ought to exhibit stronger marks of improvement than it can with the new and younger recruits to which it is reduced by reason of having made no provision for the changed condition of things.

The boys in the school at the date of the last report averaged a little below 14 years of age; those committed since average 12¼ years of age; as their numbers increase, their ages decrease. The rooms are generally so crowded as to hinder or seriously embarrass all attempts to preserve order or enforce such rules as are necessary for the government of any class of boys. The family-sitting-rooms and the assembly-rooms have come to resemble a crowded camp, rather than a place where one is expected to learn good manners or morals.

Another year of good health is reported among the inmates. Only one death has occurred, that of a colored boy who had been for a long time suffering with a disease

of the lungs brought with him from the South, when he followed the army "home from the war." Attention is called to the fact that the medical bills are so small, when the number of inmates is so large, of such a class and crowded into such close quarters. The continued good health of the boys is attributed to the attention that is paid to their habits of personal neatness, to careful and judicious nursing, and to a plain palatable and plentiful diet.

As to the productions of the farm, garden, shops, &c., the results may be regarded as satisfactory upon the whole, when the reduced condition of the labor-power in the school and the severe drought of the season are remembered.

There are no causes for discouragement, except those growing out of the crowded condition of the school, in consequence of which boys have been compelled to leave, whom it would be advisable to recall. In view of this, it is proposed to erect two family-buildings of the character needed, and in addition to the main building, affording school-, assembly-, lodging-rooms, office, &c., the means for which are now in the treasurer's hands.

THE STATE-PRISON-SCHOOL.

This school was instituted under authority of law in 1867 and has been in constant and successful operation ever since. Every effort is made to educate and reform the convicts, and the good results thereof are felt in every part of the institution. For the whole term of five years that this school has been in operation, with a membership of from 40 to 70 scholars, not a solitary breach of order has occurred. All the common elementary branches of education are taught. Two hundred and sixty-eight scholars have been admitted since its organization; at the present time there is a membership of 42. During the past year a library of 451 volumes, carefully selected and embracing a wide field of general information, has been added to the school.

CONVENTION OF SUPERINTENDENTS.

A convention of city- and county-superintendents was held at Madison, December 27, 28, and 29, in pursuance of the call of the superintendent of public instruction.

The report on "course of instruction for country schools" was ordered to be published in the Journal of Education for critical examination by the teachers of the State, and a committee was appointed by the State-superintendent, with Mr. Viebahn as chairman, to report on the whole subject of "course of instruction," "classification in schools," and "text-books," pertaining to the common schools, at the next meeting of the superintendents.

A resolution was adopted, appointing a committee to secure legislation giving county-superintendents discretion to refuse certificates to such teachers as persistently refuse to attend institutes.

One prominent sign of progress noted in 1873 is a large increase in the number of county teachers' associations, these, in some instances, being maintained in each assembly-district. An educational column, too, is found in many of the county-papers, the county-superintendent keeping himself by this means in weekly communication with the teachers. The newspaper serves as a medium by which he may make needed suggestions, while public interest is secured by giving the results of his observations.

TEACHERS' INSTITUTES.

A conviction of the value of the institute is continually growing in the minds of teachers and people. Fifty-six short-term institutes have been held and eleven normal institutes, the largest number ever held in the State in one year. The attendance on both classes of institutes has been over three thousand. The normal institutes were conducted as schools, and not as conventions without method or discipline. It is said that they are at present doing more for the State at large than the normal schools, because the benefits of the former reach the mass of teachers who must for some time to come have charge of the country schools, while the latter do not. The institute at Sparta was held six weeks. One hundred and twenty-four teachers were enrolled. The interest in the institute was unbroken to the end. As an experiment it was a grand success. The superintendent of public instruction believes that the institute-work can be more thoroughly and economically done by connecting it more closely with the normal schools and suggests that the State be divided into institute-districts, according to the number and location of the normal schools; that a teacher in each normal school have charge of the institutes in the district contiguous to his school; that one of these teachers, or some other person, be appointed, from his peculiar fitness for the position, director of the institute-work.

It appears from a table appended to the report of the State-superintendent for 1872 that institutes were held in 45 counties and covered, in the whole, 439 days.

OBITUARIES.

Three prominent educators in the State have died during the year past: Rev. M. Montague, superintendent of the schools of Walworth County; Prof. Jackson J. Bushnell, professor of mathematics and natural philosophy in Beloit College, and Prof. J. K. Purdy, president of the State Teachers' Association.

Mr. Montague died in the winter, thrown from his sleigh, while on a tour of in-

spection of the schools. He is said to have been a man of stern exterior but of kind and gentle heart, a model superintendent, attending with scrupulous care to the details of his office, visiting the schools frequently, holding almost weekly meetings of teachers, and commanding in a high degree the respect of his constituents and the esteem and affection of his teachers. Mr. Montague was 53 years of age; had been a resident of Wisconsin for about twenty-five years; had held many positions of honor and trust as an educator and a Christian minister, and had performed a noble work.

Prof. Bushnell died on Saturday the 8th of March, 1873. The State Journal says: "Prof. Bushnell was, we believe, about 58 years of age, a native of Connecticut, and a graduate of Yale College. He came to Wisconsin in the latter part of April, 1848, and was the pioneer-professor of Beloit College, which owes its establishment largely to his indomitable courage and unwearied, persevering labors."

Prof. Purdy is said to have been an efficient officer, an untiring student, a patient instructor, and a most genial man.

LIST OF SCHOOL-OFFICIALS IN WISCONSIN.

Hon. EDWARD SEARING, *State-superintendent of public instruction, Madison.*

COUNTY-SUPERINTENDENTS.

County.	Name.	Post-office.
Adams	J. M. Higbee	Plainville.
Ashland	John W. Bell	La Pointe.
Barron	A. B. Finley	Prairie Farm.
Bayfield	Edwin Leehy	Bayfield.
Brown	Martin H. Lynch	De Pere.
Buffalo	Lawrence Kessinger	Alma.

Washington	Fred. Regenfuss	West Bend.
Waukesha	Isaac N. Stewart	Waukesha.
Waupaca	Justus Burnham	Waupaca.
Waushara	Theodore S. Chipman	Berlin, Green Lake Co.
Winnebago	H. A. Hobart	Winneconne.
Wood	Clarence L. Powers	Grand Rapids.

ALASKA.

The only report from this distant and isolated Territory comes from Captain Charles Bryant, agent of the Treasury Department, and gives some information respecting the the population and schools of two of the Aleutian Islands. It is as follows:

"The census taken January 1, 1873, on St. Paul's Island, gives the number of the native inhabitants on the island, 218. To these should be added the 17 then absent and properly to be reckoned as belonging to the island, making in all 235, (males, 114; females, 121,) showing a decrease since 1870 of 12 persons. The whole population of the Territory of Alaska is 30,000: 7,000 Aleutians on the islands, about 11,000 Coloshes on the coast, and the remaining portion scattered over the Territory in wandering tribes. The Aleutians live in villages of from a few families to 500 or 600 persons. For the last thirty years they have had priests of the Greek Church, educated to some extent to minister to their spiritual wants. These have so far taught the people that most of them understand the service in Russian, can manage their accounts and transact business successfully. The Coloshes have a tribal organization and little or no education. The priests scattered through the different villages are all natives, under a Russian bishop, and were educated in a school established by the Russian government at Sitka. Since the country came into possession of the United States, that and all the schools under Russian control have ceased operations, and there is yet no law under which any community or group of families may organize themselves for the support of schools. At Sitka, however, the necessity for some civil organization has been so great that, even without a law to authorize it, the citizens have settled themselves into a voluntary community, elected certain officers, and established an English school.

"The chief contact of the people of the Territory with civilization now is through the traders, who have posts established at different eligible points to the number of twenty or more. These are visited about once a year by vessels sent out for trading-purposes. The effect of this trading on the population of course must depend largely on the character of the agents employed in it.

"The islands of St. Paul and St. George represent an interest apart from other portions of the Territory, and have been made by resolution of Congress a Government-reservation. The contract made with the Alaska Seal Company requires them to keep up each year for eight months a school on each island.

"A school-house was fitted up and properly dedicated, and a school commenced October 2, 1873, and continued eight months; but, on account of a prejudice among the people, who have a fear that in learning English their children will forget their Russian and weaken their attachment to their church, only seven attended regularly. Under the assiduous care of the teacher, these made very commendable progress. There were at the same time three classes taught by natives, two in Russian, one in Aleut. In all, seventeen scholars attended schools of all kinds."

Assistant-Agent Samuel Falconner reports the same difficulties existing on the island of St. George in regard to securing attendance at school.

ARIZONA.

[From report of Hon. A. P. K. Safford, governor and, *ex officio*, superintendent of public instruction, for 1873.]

STATISTICS.

Number of males between the ages of 6 and 21 years	836
Number of females between the ages of 6 and 21 years	824
Total school-population	1,660
Number attending public schools	333
Number attending private schools	149
Whole number attending school	482
Number that can read and write	500

"PIMA COUNTY.

"Cash on hand January 1, 1873, $874.95; cash received from the territorial school-fund, $1,433.22; and from all sources received, $4,291.77. Amount paid to teachers, $1,676.88; for school-houses and furniture, $241.61; for school-books, $39.90; for salary of superintendent, $100; for rent of school-house, $363.50; incidental expenses, $449.75; on hand, $1,420.13; making in all $4,291.77, the amount received. The probable amounts that will be received in 1874 are $1,500 from the county and $1,000 from the Territory. The probable amount that will be required for 1874 is $2,900.

"The number and condition of the schools are: A primary school was kept open in Sanford three months by a male teacher, at $100 per month.

"One has been maintained in Florence for two months by a male teacher, at $100 per month, with an average daily attendance of 20.

"A primary school was open in Tucson for boys and continued four months. Two schools are now open in charge of female teachers, each with a salary of $100 per month. One teacher has charge of the boys and the other of the girls, in separate rooms. There is an average daily attendance of 50 boys and 25 girls. The progress made by the pupils is reported to be excellent. A school-house 16 by 30 has been built at Florence. It was done by volunteer-subscriptions on the part of the citizens. The other schools in the county are kept in rented buildings. McGuffey's series of books is used.

"The census-returns show the whole number of children between the ages of 6 and 21 to be 751, of which 110 are reported attending public schools.

"The value of school-houses and furniture in the county is reported to be $975.

"YAVAPAI COUNTY.

"Cash on hand January 1, 1873, $151.48; received from territorial school-fund, $1,488.79; from county-school-fund, $753.04; from contributions and all other sources, $205; making a total of $2,598.31. Cash paid for school-house and furniture, $2,100; other expenses, $229.12; on hand, $269.19; in all, $2,598.13. The probable amount of receipts for 1874 is $1,100, and probable amount needed for this year, $1,200.

"The number and condition of schools in Yavapai are: a school was kept open in Prescott for three months by a female teacher, at $100 per month. The average daily attendance was 45. The progress made is reported as having been very satisfactory. The census-returns show the total number of children in the county between the ages of 6 and 21 to be 106, of which 53 attended public school. The value of school-house and furniture in the county is $2,175.

"YUMA COUNTY.

"Cash received from territorial school-fund, $2,134.92; from county-school-fund $915.18; in all, $3,050.10. Amount paid to teachers, $1,450; for school-houses and furniture, $450.68; for school-books, $458; salaries of officers, $75; rent of school-house, $64; error, $26.95; on hand, $525.47; in all, $3,050.10. The probable amount that will be received from the Territory and county in 1874 is $1,000 and the probable amount needed to support schools in each district during 1874 is $2,400.

"The number and condition of the schools are: a school was kept open in district No. 1, Ehrenberg, for three months by a male teacher, at a monthly compensation of $100, in which the pupils made good advancement. A school was taught in Yuma for nine months—six months by a female and three months by a male teacher. The

monthly pay of each was $100. In both districts the boys and girls attended in the same rooms. The Union series of books was used.

"The census-returns show the total number of children between the ages of 6 and 21 years to be 473 and the number attending public schools 75 and private schools 25. The value of school-houses and furniture in Yuma County is $1,047.

"MARICOPA COUNTY.

"Cash received from territorial fund, $1,392.94; from county-fund, $729.46; from contributions and other sources, $345; in all, $2,467.40. Amount paid teachers, $650; for school-houses and furniture, $1,564.40; school-books, $56; salaries of officers, $110; other expenses, $29.33; on hand, $57.67; in all, $2,467.40. Probable amount of receipts from territorial and county-school-funds during 1874 is $1,000 and estimated amount that will be required for the support of schools in the several districts, $1,500.

"In the district No. 2 a school was taught four months by a male teacher, at a monthly salary of $100, and in No. 1 the school was kept open for six months. In the early part of 1874, two male teachers were employed at different periods and in the latter month a female teacher was employed, and she is still teaching, each at a monthly salary of $100. Fine progress is reported. A series of text-books has not been adopted. The census-returns show total number of children between the ages of 6 and 21 to be 302 and that 60 have attended public school. The value of the school-houses and furniture in the county is $2,000.

"MOHAVE COUNTY.

"Cash received from the territorial school-fund, $1,337.90; from county-fund, $87.05; in all, $1,424.95. Cash paid teachers, $600; school-furniture, $50; to officers, $75; rent of school-houses, $200; cash on hand, $490.95; in all, $1,424.95. No estimate is forwarded to me of the probable receipts for 1874, nor of the amount required for the year. A mixed school was taught at Cerbat for six months by a female teacher, at a salary of $100 per month, and the pupils are reported to have made rapid progress. No uniform series of text-books has been adopted there. The census-returns show the number of children between 6 and 21 years of age to be 28 and that 14 attended public school. Value of school-furniture in the county, $50.

"RECAPITULATION.

"The total receipts from all sources, by counties, show: in Pima, $4,291.77; in Yavapai, $2,598.31; in Yuma, $3,050.10; in Maricopa, $2,467.40; in Mohave, $1,424.95; in all, $13,832.53.

"The total expenditures by counties show: in Pima, $2,871.64; Yavapai, $2,329.12; in Yuma, $2,524 63; in Maricopa, $2,409.73; in Mohave, $925; in all, $11,060.12.

"Amounts on hand are as follows: in Pima, $1,420.13; in Yavapai, $269.19; in Yuma, $525.47; in Maricopa, $57.67; in Mohave, $499.95; in all, $2,772.41.

"The cash invested in public-school-houses and furniture is: in Pima, $1,200; in Yavapai, $2,175; in Yuma, $1,047; in Maricopa, $2,000; in Mohave, $50; in all, $6,472.

"The number of children in the Territory between the ages of 6 and 21 years is 1,660 and the numbers attending public schools are: in Pima, 140; in Yuma, 75; in Maricopa, 61; in Yavapai, 53; in Mohave, 14; in all, 343.

"EDUCATIONAL PROGRESS.

"Under all the circumstances there has been gratifying progress in the promotion of education in Arizona during the past year. The last legislature imposed a tax of 25 cents on each $100 of taxable property in the several counties for school-purposes and a like tax on all the property of the Territory, to be collected and paid to the various counties in proportion to the number of children within each. But a small portion of the taxes derived from these two sources was paid until late in 1873, and therefore the benefits of this wise statute are only beginning to be realized. It is believed that there will be sufficient revenue in the future to maintain free schools in each of the districts in the Territory for at least six months of the year. As our schools are all primary in their character, the policy of employing female teachers has been favored and put in practice so far as practicable. The experience of the most eminent educators throughout the land is in favor of female teachers. It has been the purpose of the officers in charge of our schools to procure the services of the best and most thorough teachers, and I believe that, in the main, such have been secured. The people, speaking through their representatives, have said that free schools must be provided, whereby every child of sound mind and proper age can receive an education free of individual cost, and that the children of poor parents in our Territory may as readily acquire an education and have an equally intelligent start in life as those of rich ones. Agreeably to the demand of the people, means for this purpose have been provided and the schools are in successful operation. The census shows that many children do not attend school, but an increase of attendance is gradual and equal to reasonable expectations. To the end that children of every religious faith may consistently attend these

schools, the legislature wisely prohibited the use of sectarian books and religious teaching in them. Therein children of parents of any and every faith can meet in harmony and upon an equality in all respects. Based upon any other character of law, the free-school-system would and should soon be destroyed. Were one religious doctrine taught, children of other religious doctrines would surely be driven from the schools. In this age of science, learning, and religious and political independence, it will not do to promote any sect at the common expense. The funds which maintain the grand free schools are drawn from people of every creed, and it is but just that all shall be equally benefited, without the least attempt to inculcate any of the many religious beliefs. Religious instruction peculiarly belongs to the family-circle and church. The most cruel and bloody wars recorded in the pages of history show that they were the offspring of the intolerance of religious sects. Bigotry has brought untold thousands of innocent men and women to torture and death. The cloak of religion has been used to cover dire crimes against mankind; but happily for poor and rich of all beliefs and conditions, the time for such cruel intolerance has passed away. Under the benign influences of our free Republic, every one has and can exercise the inalienable right, free from threats and oppression, to worship God in his own way; and our public schools constitue the safe foundation upon which the prosperity and endurance of our beloved country rest and our rightful liberties are secured and assured. In the public-school-room the children of every creed are gathered, not to despise and hate each other, as in olden times, under sectarian teaching, but to love and respect manly and womanly virtues wherever or in whomsoever found, regardless of the faith one or the other entertains."

The following extracts from letters of Governor Safford, received during the year, contain such further information of the condition and progress of education in the Territory as is of general interest.

In a letter dated August 30, 1873, Governor Safford states that arrangements have been completed for opening a free school in every district in the Territory the first Monday in October, to be continued for at least nine months during the coming year. The governor had delivered addresses upon the subject of education in different parts of the Territory and had found the people generally interested in the cause and willing to co-operate in any measure for its advancement.

In a letter of a later date, (November 11, 1873,) he says: "We have, after considerable delay, secured the services of experienced teachers from the older States. Our schools are now all supplied and in operation, and we shall have sufficient revenue from taxation to keep them open the larger part of each year. The average price paid teachers is $100. They are mostly females. I preferred them for several reasons: first, they usually have better faculty and more patience to teach children in their primary studies; secondly, they are not so liable to become dissatisfied with their occupation and change to other duties which they consider more profitable; thirdly, I desire their influence to give tone to the morals of the community.

"After nearly four years' incessant labor, I have succeeded in obtaining means, books, and teachers for excellent schools, so that every child within the Territory may obtain an education. While I remain in office our free schools will be kept open, and I shall endeavor at the next session of the legislature to make education compulsory.

"I am more than ever convinced that no time should be lost in making the free-school-system a part of our federal constitution. I fear that, conscious as we are of the benefits of this system, we are resting with a feeling of too much security that it will be sustained and perpetuated, while active, sleepless enemies are at work to destroy it; and they are too often enabled to receive the aid and support of those who only seek for self-aggrandizement. Those who are opposed to the free-school-system of America are not generally friendly to republican institutions. This is self-evident to every one who has taken deep interest in education, and it behooves every man who loves his country to spare no effort in placing this system where no unfriendly hand can tear it down."

PROGRESS OF THE SCHOOLS.

The first year after the appointment of a superintendent of public instruction, ended December 31, 1871, was spent in collecting funds and preparing to open schools, but none were actually put in operation until 1872. The total receipts for school-purposes for 1871 and 1872 were $7,653.81. The total expenditures were $5,165.46, leaving on hand at the beginning of the school-year of 1873 an unexpended balance of $2,488.35.

The friends of education have every reason to feel encouraged at the progress made in the brief period since the establishment of schools in the Territory. Without books, school-houses, or teachers to commence with, in less than two years the free-school-system has been fairly and successfully put in operation throughout the Territory. The most cordial support and assistance have been given by the residents of all the school-districts, and if all that could be desired has not been done for educational advancement, it has not been for want of aid and sympathy of the people.

TEXT-BOOKS.

The school-law provides that the territorial board of education shall prescribe a uniform series of text-books. In pursuance of this provision, the series in use in California was adopted.

The opinion is expressed that "it is not good policy to adopt a uniform series for the whole Territory; but that the selection of books should be left to the county-superintendents. There are many series of school-books of about equal excellence, and by leaving the choice to the superintendents the series most familiar to the teachers in each county could be selected."

SCHOOLS AMONG THE INDIANS.

In February, 1871, a school was opened in a room of the Indian agency for the Pima Indians and in October of the same year another was commenced at a Maricopa village, in a building put up by the Indians for the purpose. The Pima children have to come a distance of two and one-half miles to school, and this, with other unfavorable circumstances, has caused a very irregular attendance. The average attendance is 64, about 60 per cent. of the whole number enrolled. The Pimas have offered to build a school-house near their homes. The teachers in the Indian schools are greatly encouraged by the progress already made and by the interest manifested. In cases where progress has not been satisfactory, irregular attendance has been the main cause. Arrangements have been made for a school-house and teachers for the Papago Indians, the most orderly and industrious of all the tribes in Arizona, who would accept school-privileges more readily and appreciate them more highly than any others. These arrangements will be fully carried out when the necessary funds are supplied. It is estimated that to give the majority of children on this reservation a common-school-education would require at least four or five school-houses and an annual expenditure of about $10,000.

COLORADO.

[From biennial report of Hon. Horace M. Hale, territorial superintendent of public instruction, for the term ended September 30, 1873.]

SCHOOL-FINANCES.

There is no permanent school-fund; the average rate of taxation for school-purposes is 3¼ mills.

Receipts.

Amount of special tax collected in school-districts	$55,923 90
Total from taxation	137,557 61
From other sources	120,000 00
Total receipts for school-purposes	257,557 61

Expenditures.

For sites and buildings	155,579 45
For libraries and apparatus	1,800 00
For salaries of superintendents	1,200 00
For salaries of teachers	71.258 28
Miscellaneous expenditures	22,461 26
Total expenditures for school-purposes	252,298 99

SCHOOL-POPULATION.

Number of male persons of school-age, 5 to 21 years, in the Territory	7,617
Number of female persons of school-age	6,800
Total school-population	14,417
Increase from 1871 to 1872	2,396
Increase from 1872 to 1873	4,284
Per cent. of increase in two years	86

SCHOOL-ATTENDANCE.

Number of children enrolled in public schools	7,456
Average attendance	7,214
Increase in average daily attendance, 1871–1872	431
Increase in average daily attendance, 1872–1873	1,130
Per cent. of increase in two years	59
Average monthly cost of tuition per pupil	$3 12
Number of pupils in private schools	702

TEACHERS AND THEIR PAY.

Number of teachers in public schools—males, 107; females, 134	241
Average monthly salary paid male teachers	$62 00
Average monthly salary paid female teachers	51 00
Highest monthly salary paid male teachers	250 00
Highest monthly salary paid female teachers	100 00

SCHOOL-PROPERTY.

Value of school-houses, lots, furniture, &c.	$260,185 46
Increase in value of school-houses, 1871–1872	20,691 97
Increase in value of school-houses, 1872–1873	157,917 44
Per cent. of increase in value for two years	2.16

SCHOOL-DISTRICTS.

Number of school-districts in the Territory	243
Increase in the number of districts from 1871 to 1872	38
Increase in the number of districts, 1872–1873	45
Per cent. of increase in two years	52

SCHOOLS AND SCHOOL-HOUSES.

Number of schools in the Territory	180
Increase in the number of schools, 1871–1872	25
Increase in the number of schools, 1872–1873	20
Per cent. of increase in two years	56
Average duration of schools in days	111
Number of school-houses in the Territory	125
Number erected during 1873	26
Per cent. of increase in two years	54

PROGRESS.

The figures given above are certainly encouraging. Receipts of $257,557 for school-purposes, expenditures of $155,597 for sites and buildings, and an advance of 86 per cent. in the school-population show decided growth. The last item is especially remarkable and indicates a rapid filling of the Territory with settlers who bring their families with them, forming an element of stable and permanent increase.

As respects school-buildings, the report of the superintendent states that there are several large and costly ones in process of construction not included in the number on which the $155,000 mentioned was expended. Besides these, others are arranged for in many districts, and in some the funds have been provided and architectural plans agreed upon.

The public schools of Golden City entered, December 1, 1873, into possession of a new and elegant school-building. When the plans of this building were decided on the attendance on the public schools was only 98. In the new structure it has been 251.

The school-fund, nearly double that of the preceding biennial report, has been raised upon a considerably lower rate of taxation, a steady increase in the value of taxable property admitting of a lessening of the burdens of individuals, while securing a larger revenue for the schools.

ATTENDANCE.

Only 52 per cent. of persons between 5 and 21 years have been in attendance on the public schools during the year 1873. Not counting, the superintendent says, those above 18, who perhaps are expected to attend, and those under 6, who, he thinks, ought not to attend, but 65 per cent. of the ones for whom the schools are opened are found upon the rolls and but 56 per cent. are ordinarily attendant. Of course allowance must be made for those attending private schools; but even with this allowance it is estimated that not more than 50 per cent. of those reckoned of school-age have attended school 111 days in the past year. The superintendent holds, however, that Colorado is not in this respect below the general average of the States. "Illinois and New York can show no better record, while Tennessee and Mississippi rank far below."

SALARIES.

In the matter of salaries to male and female teachers, the tendency in Colorado is towards equality. There is less difference than formerly in the pay of these two classes. In some counties the men teachers receive less than the women. The average salary of both, however, is smaller than in the preceding biennial term, partly from the fact that increasing inflow of population brings a supply of teachers somewhat in excess of the demand and partly from the false economy of some neighborhoods in employing inferior teachers, because they can be had at a low rate. On this point the superintendent says: "Our teachers are as competent as the average elsewhere. But let us insist on having first-class talent only. Such we may command by signifying our willingness to pay for it." The employment of a poor teacher, at any rate, he holds to be "an extravagant economy."

THE TEACHERS THAT ARE NOT WANTED.

In connection with a decided expression of opinion that the course of study in the schools is below the demands of a rapidly advancing age, the further opinion is declared that the examination of teachers should extend beyond the present requirement of ability to teach orthography, reading, writing, arithmetic, geography, English grammar, and the history of the United States, and reach to at least the elements of the natural sciences, mechanic appliances, and technic research. Then comes a statement which may apply elsewhere as well as in Colorado: "We have little use for teachers who are never more than one lesson in advance of the pupils, and who, if some bright, inquisitive scholar seeks information as to the philosophy of fire-extinguishers, or the manufacture of lucifer-matches, or of the bursting of water-pitchers on frosty nights, or of the rebounding of a marble from the stone pavement, or of the injuriousness of lacing tightly any portion of the body, or of wearing metallic bracelets and necklaces in a freezing atmosphere, are compelled, through ignorance, to reply 'It will do you more good to find that out for yourself,' or 'I'll tell you some other time.'"

DIVISION OF SCHOOL-DISTRICTS.

Of this, it is said:

"We doubt very much the wisdom of subdividing school-districts so as to accommodate small communities, if such division can possibly be avoided. A better school can be established with fifty pupils than with twenty-five or ten. One teacher can easily manage the large school and be able to awaken an amount of enthusiasm and interest that would not be attainable in either of the small schools The disadvantage arising from the necessity of long walks by the children is more than compensated by the healthful physical exercise in the open air, thus necessitated, and by being able to maintain a single school for a term of six months at no greater cost than would be incurred in maintaining two schools, each for three months. Thus the children, by walking perhaps five miles a day, practically furnish the means for continuing the school just double the length of time that it could otherwise be kept up. 'Concentration is power' in school-matters as well as elsewhere."

CORPORAL PUNISHMENT.

On this much-vexed topic we have the following clearly-expressed judgment:

"We are of those who firmly believe that the cry against the use of corporal punishment in school is loudest from those who know the least about school-work. We do not believe that the best experienced teachers in the land deem it prudent or wise to forbid it. The best disciplinarians seldom make use of it, yet they do not like to be disarmed. We would have as little punishment of any kind as practicable. The best-managed schools are the least disciplined. We would not have cowhides and ferules constitute an essential part of the school-apparatus, to be used daily, nor weekly, nor monthly, but only when there seemed to be no other judicious remedy."

SECONDARY INSTRUCTION.

St. Mary's school, (Roman-Catholic,) Denver, reports, for 1873, instructors, 11, (an increase of 2 on the number for 1872,) students, males, 25; females, 113, a decrease of 7 in the number of females, while the addition of the males carries the total to 28 beyond what it was last year. A new building has been erected for this school.

Jarvis Hall, Golden City, a collegiate school for boys, intended to be the foundation of a future university, affords to the residents in that locality, under the guidance of competent educators, the ordinary branches of a thorough English secondary course, with a good grounding in Greek, Latin, the French and German languages.

Wolfe Hall, Denver, a high school for young ladies, with 11 instructors, affords the same for the territorial capital, having a full English and classic course, with modern languages, music, drawing, painting, &c., all in connection with the religious influences of the Protestant-Episcopal Church, by which both it and Jarvis Hall have been established. The two institutions have fine buildings, erected mainly by the liberal aid of George A. Jarvis, esq., of Brooklyn, Long Island, and John D. Wolfe, esq., of New York.

To the credit of Denver City it may be mentioned that, with a population of only about 16,000, which St. Mary's school and Wolfe Hall partially supply with educational advantages, the people have erected in 1873 a public high-school-building, costing $50,000, exclusive of the furniture with which it is to be supplied, and in appearance comparing very favorably with almost any in the eastern cities. The high-school-course for this and other kindred schools embraces, besides the higher branches of an English, mathematic, and scientific curriculum, drawing and music, a pretty thorough series of Latin studies, and an optional one in German and Greek.

SUPERIOR INSTRUCTION.

It is intended that this shall be furnished increasingly by steady enlargement of the course at Jarvis Hall, so that when the Territory shall have grown into a State it may find there a native university, complete in all its departments, which has grown with its growth and which may be ready to take the place of a true college for the people.

The Baptists are also said to have secured a charter for an educational institution of high order, to be called the Rocky Mountain University. Its location will probably be at Denver, where buildings and endowment are to be provided for it out of the proceeds of the centennial collections of the Baptist Church.

PROFESSIONAL AND TECHNIC INSTRUCTION.

A divinity-school in connection with Jarvis Hall has been in operation in its own building since September, 1872. "The same theologic course which is pursued in the eastern church-schools is here carried out in all its details" in a course which is at present three years in extent, with a probability of its being lengthened out to four.

The territorial school of mines is also connected with the same institution, and in it two lectures weekly have been delivered on geology, with special reference to mining-developments. The cabinet-collection here has been pronounced by the Hayden

expedition and M. Lesquereux, of Columbus, Ohio, the most unique and valuable of its kind in the United States.

A very complete philosophic apparatus is possessed by the school of mines, with the details of a large chemic laboratory, in which every process connected with the reducing of metals can be illustrated.

An eminent physician of the Territory has promised to commence a course of medical lectures, preparatory to which there has been some instruction in physiology.

OBITUARY.

The Rt. Rev. George M. Randall, D. D., bishop of the Protestant Episcopal Church in Colorado, deserves mention here from his efforts to promote education in the Territory. A graduate of Brown University in 1835 and of the General Theological Seminary, New York, in 1838, he was first settled at Fall River, Massachusetts, and afterward for some years in Boston. In 1865 he was elected missionary bishop of Colorado, and, entering actively upon his labors there, continued them with unabating zeal till his death, September 28, 1873. Perceiving from the first the need of educational institutions for the youth of a new region, he set himself to the establishment of parish-schools in connection with the churches and of boarding-schools in the larger towns. Through aid derived from eastern friends, he succeeded in building up three important schools within his diocese: Jarvis Hall, Golden, a diocesan collegiate school for boys; St .Matthew's Hall, also at Golden, a diocesan divinity-school; and Wolfe Hall, Denver, a diocesan school for girls; each housed in a substantial building of its own, and all, at his death, in successful operation.

LIST OF SCHOOL-OFFICIALS IN COLORADO.

Hon. HORACE M. HALE, *superintendent of public instruction, Denver.*

COUNTY-SUPERINTENDENTS.

County.	Name.	Post-office.
Arapahoe	Frank Church	Denver.
Bent	Robinson M. Moore	Las Animas.
Boulder	Charles E. Sherman	Boulder.
Clear Creek	C. F. Bridges	Georgetown.
Conejos	Juan F. Chavez	Conejos.
Costilla	Juan Ygnacia Jacques	San Luis.
Douglas	Frank B. Edmond	Frankstown.
El Paso	F. C. Millington	Colorado Springs.
Fremont	J. D. Bell	Cañon City.
Gilpin	Silas B. Hahn	Central City.
Greenwood		
Huerfano	Willis M. Allen	Walsenburg.
Jefferson	M. C. Kirby	Golden City.
Lake	Galaia Sprague	Granite.
Larimer	Clark Boughton	Fort Collins.
Las Animas	Joab M. Bernard	Trinidad.
Park	William E. Musgrove	Fairplay.
Pueblo	Joseph S. Thompson	Pueblo.
Saguache	J. Ross Pennisten	Bismarck.
Summit	George W. Wilson	Breckinridge.
Weld	Alvin J. Wilber	Greeley.

DAKOTA.

[From information furnished by Hon. J. W. Turner, territorial superintendent of public instruction.]

FINANCIAL STATEMENT.

Receipts.

Total income for school-purposes, from taxation	$16,672 79

Expenditures.

Total expenditures for school-purposes	$16,672 79

SCHOOL-POPULATION AND ENROLLMENT.

Number of youth reported between 5 and 21 years of age	5,312
Number enrolled in schools only partially reported	2,006

SCHOOLS.

Number of public schools in the Territory	100

SCHOOL-OFFICERS.

Average salary of teachers per month	$30
Average salary of school-superintendents per day	3

The superintendent of schools for the Territory, in forwarding the above information, states that he cannot rely upon its exactness in many respects, owing to the very imperfect returns received from county-superintendents. Many districts, he says, failed to report, and many of the reports received from teachers and district-clerks were so imperfect that county-superintendents were unable to make correct returns from them. He believes that, had full and correct returns been made, the number of children from 5 to 21 years of age would be seen to amount to not less than 7,500 or 8,000, the number enrolled to about 3,500, and the number of terms of school taught to about 160. He believes that there has been raised by taxation during the past year for all school-purposes not less than $22,000, a sum which will be largely increased, he hopes, during the present year. While the average salary of teachers per month is estimated at $30, a few receive from $50 to $80. "Many of the schools," says the superintendent, "are in a very flourishing condition, and we have generally a very good class of teachers."

The new territorial superintendent of public instruction is Hon. E. W. Miller, Elk Point, Union County.

DISTRICT OF COLUMBIA.

SCHOOL-STATISTICS.

Area of the Territory of the District of Columbia, including the cities of Washington and Georgetown, and an adjacent rural district, generally known as the county, 64 square miles.

	Washington.	Georgetown.	County.	Total.
Population, United States census, 1870	109,199	11,384	11,117	131,700
SCHOOL-POPULATION.

Colored	8,532	796	1,166	10,494
Total	25,935	2,882	2,854	31,671
PUPILS ENROLLED IN PUBLIC SCHOOLS, 1872 AND 1873.				
White	8,935	758	877	10,570
Colored	4,834	426	940	6,200
Total	13,769	1,184	1,817	16,770
Average number of pupils in private schools, from report of United States Commissioner of Education				6,759
Whole number of seats provided for pupils in the public schools, 1872 and 1873	11,910	1,173	1,412	14,495
Whole number of teachers in the public schools, 1872 and 1873	220	20	31	271
Valuation of taxable property, 1872 and 1873	$72,900,000	$6,300,000	$8,600,000	$87,800,000
School-tax, (per cent.,) 1872 and 1873	.0033	.0053	.0050	
Total receipts from school-tax, &c., 1872 and 1873	$173,053 03	$20,975 21	$26,485 91	$220,514 15
Total payments for public-school-purposes, 1872 and 1873	$259,837 76	$13,773 38	$24,670 28	$298,281 42
Value of public-school-property	$909,287	$41,520	$54,600	$1,005,407

EDUCATIONAL PROGRESS.

The foregoing statements show progress during the past year in the following respects: increase in the value of school-property, $53,707; in the number of seats provided for pupils, 430; in the number of teachers, 8; in the whole number of pupils enrolled, 1,215, of whom the white-schools gain 450 and the colored-schools 765.

There is a very gratifying gain in the percentage of pupils enrolled in the white-schools of Georgetown. In 1871–'72, the percentage was 28.6; in 1872–'73, it was 36.3.

TOO MANY SCHOOL-BOARDS.

The four independent systems of public schools in the District are still continued. Of the four boards of trustees, one controls the white-schools of Washington, one the white-schools of Georgetown, one the colored-schools of Washington and Georgetown, and one the white- and colored-schools of the county, including all that portion of the District outside the cities. The power to appoint the trustees and officers of all the boards is vested in the governor of the District.

CONSOLIDATION OF SCHOOL-BOARDS RECOMMENDED.

The experience of another year has strengthened the opinion, expressed in the last report, that a board of education for the District of Columbia should be created, with the members so selected as to fairly represent all the public schools in the District, and that to them should be transferred the powers relating to schools now vested in the legislative department of the District-government, and such powers now exercised by the trustees as may be necessary to secure uniform and efficient administration of the

several systems. It would not, however, be considered advisable, for a time at least, to have this entirely supersede the present organizations.

STATISTICS OF PUBLIC SCHOOLS FOR WHITE CHILDREN OF WASHINGTON.

Hon. J. ORMOND WILSON, *Superintendent.*

White population	73,731
White school-population—males, 8,371; females, 9,032	17,403
Number of pupils enrolled in white public schools—males, 4,521; females, 4,414	8,935
Average enrollment	6,980
Average attendance	6,417
Per cent. of the whole school-population enrolled	51
Per cent. of attendance upon total enrollment	71.8
Per cent. of attendance upon average enrollment	93
Number of pupils in private schools	5,414
Number of regular teachers in public schools	133
Number of special teachers in public schools	8
Whole number of teachers—males, 10; females, 131	141
Average salary of teachers per annum	$757 26
Number of school-buildings owned	14
Number of school-rooms—owned, 96; rented, 37	133
Number of seats for pupils	7,996
Value of school-property	$659,477 00
Amount paid for teachers' salaries	106,774 21
Amount paid for incidental expenses	53,794 08
Amount paid for permanent improvements	62,171 63
Total payments during the year	259,837 76
Total receipts	173,053 03
Excess of payments over receipts	86,784 73
Total cost of education per pupil	23 30

SCHOOL-ACCOMMODATIONS.

The efficiency of the schools is seriously impaired by the inadequacy of school-accommodations. With a school-population of 17,403, seats are provided for only 7,996. The rooms rented for school-purposes are, in most cases, entirely unsuitable, while their annual rent adds about $12,000 to the incidental expenses of the schools. In view of the present and prospective want of school-accommodations and funds, attention is called to the subject of half-day-schools. In two instances these have been organized in the lowest grades.

ATTENDANCE.

The attendance in the public schools was lessened to a considerable extent by the prevalence of small-pox in certain parts of the city for several months. Notwithstanding this, there has been an increase of 171 in the total enrollment, of 156 in the average enrollment, and of 186 in the average attendance. The percentage of attendance upon the average enrollment was 93 against 92.5 for last year. Each month had an average of 3,455 pupils present every session, and 724 pupils were not once absent during the entire year. The whole number of cases of tardiness was 5,113. This is 1,764 cases less than last year.

DISCIPLINE.

There have been 325 suspensions, 276 less than the number last year, and 173 dismissals, 124 less than last year. The number of cases of corporal punishment was 429, which is 62 more than the number for the previous year. Of 133 schools, there were 69 in which there was no corporal punishment, and the 64 in which it was resorted to were for the most part boys' schools.

COURSE OF STUDY.

The division of the elementary course of instruction into eight distinct grades, the work of each to be completed in one year, has done much to promote the efficiency of the schools. A subdivision of these grades is considered advisable, so that the work of each will require but half of a school-year; and the pupil who fails to accomplish it satisfactorily will have to fall back only half a year, instead of a whole one. Thus one of the defects of a strictly graded school-system—a lack of adaptation to individual requirements—will be somewhat lessened.

Over 1,000 pupils in the grammar-schools are reported as pursuing high-school-studies. The necessity for a high school is urgent and constantly increasing. The present plan is not to be commended for either economy or efficiency.

DRAWING.

Drawing has been included in the regular list of studies since 1868; but the results of the attempts to give instruction in this branch have not been satisfactory. This want of success must be attributed to the failure to furnish teachers qualified to give

instruction, rather than to a lack of ability on the part of the pupils. A special teacher of drawing has lately been appointed, who will instruct all the regular teachers in elementary drawing. The pupils in the normal school will receive a thorough course of instruction, and a class of advanced boys, who have given evidence of marked ability, is to receive a higher course of one or two years' instruction from the special teacher. This plan is now being carried out in a most satisfactory manner.

GERMAN.

The attendance upon the classes in this study has been considerably less than that for last year and the progress made was not satisfactory to the committee. The principal reason for this probably lies in the fact that from the first this study has been entirely optional, and the trustees, feeling that the demand for it did not justify any interference with the programme of regular studies, have not allowed the recitations to occupy any portion of the school-sessions.

The members of the board have refused to appoint special teachers of German for the school-year of 1873–'74 and have been unable to agree upon any satisfactory arrangement for the continuance of the study.

VOCAL MUSIC.

This branch is under the care of a director of music with two assistant teachers. The following rules have been adopted: all other teachers are expected to co-operate with the teachers of music and render all the aid they can in that department. In addition to the time occupied by the teacher of music, at least forty minutes in every week are to be devoted by the teacher of each school in instructing the pupils in the theory of music. There is to be a recitation in music every day or on alternate days, for which marks shall be given as for other lessons.

FINANCIAL VIEW OF THE PUBLIC-SCHOOL-SYSTEM.

The educational work of the city of Washington is conducted under circumstances of exceptional difficulty. The school-tax (amounting, during the last two years, to 46.5 cents per annum on each $100 of taxable property) is larger than in any city in the United States.

In comparing the taxable property and school-population of other cities with Washington, the latter city shows apparently a large excess of school-population. The reasons for this are obvious. On the one hand, about one-half of the property within the city-limits is exempt from taxation, the Government of the United States being the owner; on the other, the school-population has been greatly increased, from two sources: the sudden and large influx of colored people during the late war and the great number of persons in the service of the National Government, few of whom acquire a permanent residence in the city. Almost one-third, 32.46 per cent., of the population is colored, and during the past year 30.79 per cent. of the whole number of pupils enrolled in the public schools of the city were children of persons in the employ of the United States Government. These two classes add greatly to the demand for schools, but do not perceptibly increase the revenues to maintain them.

It is evident that the city cannot sustain the burden of taxation required to carry on the present system of public schools and that either assistance must be obtained from the General Government or a tuition-fee, covering the cost of education, must be exacted from those pupils who are not permanent residents of the city. The latter would be a measure greatly to be deprecated; but, unless adequate means are provided for the support of the schools, all other efforts to advance them will be of little avail.

Notwithstanding these obstacles and hinderances, much has been accomplished during the last few years. "During the period commenced July 1, 1871, and ended June 30, 1873, the District-government has expended for the public schools of the city all the revenue derived from the school-tax and a sum over and above this amounting to $193,826.73. Since 1863 the city has built up an excellent system of public schools for colored children, of whom over 4,000 are now enrolled. Besides paying the current expenses of these schools, it has provided for their permanent use sites and school-buildings now valued at $250,000. During the same period (the last ten years) the District of Columbia has invested $1,000,000 in property for the permanent use of its public schools. Surely this is a fair record for the last decade."

RECOMMENDATIONS.

The superintendent repeats the recommendations contained in his last report for the establishment of a high school and the erection of a suitable building for the female-schools of the second district. He also recommends: (1) the establishment of sixteen additional intermediate schools; (2) that the salary of the principal of each male-grammar-school be fixed at $1,800, with an annual increase of $100 until it reaches a maximum of $2,000; and the salary of each assistant in said school be fixed at $1,200, with an annual increase of $100 until it reaches a maximum of $1,400; (3) that the "fund to endow the public schools," now amounting to about $80,000, be used to purchase a site and commence the erection of a high school; that a vigorous effort be made to induce Congress during its present session to give some aid, by a donation of public lands or money, to the public schools of the District of Columbia.

NORMAL SCHOOLS.

By an act of the legislative assembly, approved June 23, 1873, the trustees were authorized to establish a normal school. The number of pupils is limited to twenty. Each candidate for admission must be 17 years of age and must have been a pupil of a female grammar-department of the public schools of Washington. The course of study is to be strictly professional and limited to one year. Each graduate shall receive a certificate, which shall be equivalent to a primary certificate. Graduates from the normal school who have taught in the public schools of Washington one year, and given satisfactory evidence of their ability to govern and conduct a school, shall be entitled to receive diplomas, which shall be equivalent to intermediate certificates. It is expressly provided by law "that the graduates of this school shall have preference in all cases when appointments of teachers for the public schools are to be made." The average number of new teachers required annually during the past three years has been from fifteen to twenty; and if the normal school be liberally supported and efficiently conducted, it will, without doubt, supply an adequate number of well-qualified teachers to meet the future demads of the schools.

The female teachers of the public schools of the city now constitute 95 per cent. of the entire corps; and the demand for male teachers is, therefore, so slight that no necessity exists for any provision for their education in the normal school.

STATISTICS OF PUBLIC SCHOOLS FOR COLORED CHILDREN OF WASHINGTON AND GEORGETOWN.

Hon. GEORGE F. T. COOK, *Superintendent.*

Colored school-population of Washington and Georgetown	9,328
Number of children in public colored-schools	5,188
Average number enrolled	3,578
Average attendance	3,385
Per cent. of attendance	94.7
Number of school-houses—owned, 9; rented, 4	13
Number of sittings in all the school-houses	4,322
Number of teachers, (female, 83; male, 2)	85
Number of schools, (primary, 44; secondary, 15; intermediate, 10; grammar, 7)	76
Average number of pupils to a teacher	49
Average monthly pay of teachers	$65

COMPARISON OF STATISTICS FOR THE YEARS 1869 TO 1873.

	1869–'70.	1870–'71.	1871–'72.	1872–'73.
Largest number of schools	66	68	75	76
Average number of schools	63	66	74	73
Whole number enrolled	3,650	4,986	4,661	5,188
Average number enrolled	3,082	3,075	3 480	3,578
Average number in daily attendance	2,748	2.775	3,261	3,385
Cases of tardiness	27,775	23,984	15,080	5.976
Percentage of tardiness	2.7	2.3	1.3	.5
Percentage of attendance	89	90.2	93.6	947

COURSE OF STUDY.

In accordance with the recommendation contained in the last report, the course of study has been revised, the revision to take effect at the commencement of the school-year of 1873-'74. The present course, in the length of time (seven years) required for its completion and the amount of instruction it covers, is well adapted for the schools at present, though a higher standard will be advisable, and, doubtless, even demanded in a few years.

The classification of the schools has also been changed by omitting the secondary and intermediate grades. The grades are now primary, grammar, and high.

DRAWING.

Drawing has been introduced into all the grades with marked success. A special drawing-teacher has been appointed, and a normal class has been formed for the instruction of the regular teachers. Each teacher in turn is required to take charge of the normal class, under the observation, and subject to the criticism, of the special teacher. This affords the best possible preparation for giving instruction to their respective classes.

TEACHERS.

In these schools, all teachers, without regard to the extent or degree of their general qualifications, receive the same salary. The only distinction made is that one year's experience in them entitles the teacher to an increase of $100 in salary. Some system for determining and classifying teacherships is considered necessary. It is therefore

recommended that certificates be issued of different grades and that the salary of the teacher be based upon the grade of certificate she holds. Teachers holding a low grade of certificate may procure a higher one by passing an examination.

RECOMMENDATIONS.

In view of the inadequacy of the present school-accommodations, the superintendent repeats the recommendations contained in his last report:

(1) That a site be purchased in the second district and a building erected sufficient to accommodate at least twelve schools.

(2) That the buildings in the fourth district be disposed of and another erected which will afford greater and better accommodation.

(3) That the miserable site and building in Georgetown be also disposed of and a building erected in a more convenient locality.

(4) That a central site be purchased for a building for the high school, both for the convenience of that school and to obtain, for their intended uses, the rooms in which it is now located.

The establishment of a teachers' library is recommended; also the adoption of some judicious system of annual rewards—as diplomas, books, and medals—to deserving pupils.

Statistical summary of universities and colleges.

* Property not separate from that of the university. † Apparatus.

COLUMBIAN UNIVERSITY.

The Columbian College was organized by act of Congress in the year 1821. The regular exercises commenced in January, 1822, the medical department in the same year, and the law-department in 1826. The president is James C. Welling, LL. D., professor of moral and intellectual philosophy and history.

By an act of Congress approved March 3, 1873, the title of Columbian College was changed to the Columbian University.

The university consists of three departments, viz: (1) the academic, including nine tutors; (2) the law, with five professors and two lecturers; (3) the medical, with eight professors, not including several *emeritus* professors.

At present the law-school has about 150 students; the medical, 55; and the academic, 120. At the last commencement the academic school graduated 8, the medical school 10, and the law-school 44 students.

GEORGETOWN COLLEGE.

Georgetown College, Rev. P. F. Healy, S. J., president, is on the heights of Georgetown. Founded in 1789, Congress, in 1815, granted it the charter of a university, with the right to confer degrees. Under this charter, departments of law and medicine have been organized, in addition to the classic department—the former in 1870, the latter in 1851.

The classic department, to which is joined a preparatory school, is under the direction of ecclesiastics, but no religious tests are required of students entering. The curriculum embraces all the studies necessary to a liberal education, in addition to the ordinary English branches. The concluding year of the college-course is devoted to mental philosophy. A post-graduate-course is also available, embracing natural right; the fundamental principles of civil, political, and international law; the critical history of philosophy, and special branches of science. Degrees, to be obtained, must be amply merited.

The extensive premises attached to the college, embracing over 150 acres, are entirely devoted to the purposes of the college, with such additional provisions for health and recreation as circumstances call for. Twenty professors and teachers are attached to this department, and six other officials, not engaged in teaching. One hundred and eighty-seven students attended during the past year, of whom 11 graduated in June, 1873. The attendance for 1873-'74 will somewhat exceed this number and 14 are expected to graduate.

The medical department in the city of Washington occupies buildings on the corner of Tenth and E streets. This department was attended during the past year by 56 students, of whom 24 graduated in medicine in March, 1873, and one in pharmacy. Its faculty embraces ten professors.

The department of law occupies the former premises of Gonzaga College, F street, between Ninth and Tenth, Washington. Its students numbered 56 during the past year, of whom 23 graduated in June, 1873. Judge Charles P. James, LL. D., presides over its faculty, assisted by 3 professors

The president of Georgetown College is at the head of all the departments and confers the degrees in each.

HOWARD UNIVERSITY.

Howard University, General O. O. Howard, LL. D., president, is near the head of Seventh street, outside of the northern boundary of Washington, and overlooking the city. It forms a part of a general system of institutions of learning which have grown out of the action of benevolent associations in concert with the Freedmen's Bureau. Intended to be a national institution for higher education, including theology, medicine, law, and agriculture, it is a university especially for colored men, though there is no designation of race or sex in the act of incorporation. There are eight buildings in use. The principal edifice, four stories in height, contains rooms for lectures and recitations a chapel, library, philosophic rooms, museum, and offices, while the lodging-halls have room for 400 pupils.

Buildings for a medical department adjoin the university-park and a hospital connected with this department will accommodate 300 patients.

The university consists of seven departments: the normal, with 114 students; the preparatory, with 75; the collegiate, with 35; the commercial, with 30; the medical, with 19; the law, with 35; and the theologic, with 29 students. It possesses libraries (law, theologic, and general) of over 8,000 volumes, a mineralogic cabinet, a museum of curiosities, and a picture-gallery. About two-thirds of the students are of African descent; the remainder are of different nationalities, including whites, Indians, Chinamen, &c.

AMERICAN UNION ACADEMY OF LITERATURE, SCIENCE, AND ART.

The objects of this academy are "to secure co-operation and concert of action in the advancement and diffusion of knowledge, to aid inquiries in any department of

learning, and to promote the elevation of taste in this community and throughout the country." The academy is divided into several departments which embrace, among other things, mathematics, engineering, mechanics, chemistry, hygiene, ethics, natural history, literature, architecture, music, statistics, and political economy.

The regular meetings are held on the second Monday of each month. At these meetings papers approved for reading by the appropriate committees are read, discussions held, and queries answered. Any visitor may be invited to speak or any special topic may be introduced for consideration.

COLUMBIA INSTITUTION FOR THE DEAF AND DUMB.

This institution, E. M. Gallaudet, Ph. D., LL. D., president, originated by Hon. Amos Kendall and chartered by Congress February 16, 1857, is near the junction of M and Boundary streets, northeast, and is the only deaf-mute-college in the world. The object of its founders was in part to prove that persons deprived of hearing and speech could engage successfully in the advanced studies pursued in colleges for the hearing and still more to afford to a class of persons already numerous, and increasing with the population, an oportunity to secure the advantages of a thorough course of training in literature and liberal arts.

Seven professors, including the president, are employed and the course of study is substantially the same as in other colleges. The students are taught by signs and the finger-alphabet; but the time consumed in pursuing the studies of the preparatory department and the college proper is no longer than that required by other colleges. There is a department especially for residents of the District of Columbia and the children of soldiers and sailors. About seven years are required to complete the course of studies in this department and about four years in the National Deaf-Mute College. Instruction in articulation is given those who promise to profit by it.

A small library, supported wholly by the students, and a reading-room are attached to the institution.

President Gallaudet, who has been abroad for health, has returned, and resumed the duties of his position in September, 1873, with health fully restored.

THE NATIONAL COLLEGE OF PHARMACY,

Organized in November, 1872, is now in successful operation. About 30 students were in attendance during the year. There were 4 students graduated during the same period. The lectures, which embrace *materia medica* and botany, practical chemistry, and the theory and practice of pharmacy, are delivered by competent professors. The degree conferred at graduation is that of doctor of pharmacy. Mr. W. S. Thompson is president of the college, which was incorporated under the general incorporation-act of Congress applicable to corporations in the District of Columbia.

THE WASHINGTON BUSINESS-COLLEGE.

The Washington Business-College, Henry C. Spencer, president, is one of the international association of business-colleges in the principal cities of the United States and Canada. The course of instruction is designed to qualify young men and women for business and the United States civil service. Day-sessions are for students who devote their whole time to the course, and evening-sessions for men, women, and youth who are obliged to work during the day. Average membership—males, 100; females, 60.

NATIONAL UNIVERSITY LAW-SCHOOL.

This department, located at No. 428 Seventh street, is now in the fourth year of its existence and was established as a department of a proposed national university. The chancellor is the President of the United States, *ex officio;* the vice-chancellor, Professor W. B. Wedgwood, LL. D.; G. W. Paschal, president of the regents; T. C. Connelly, secretary; the law-professors being Judges Joseph Casey and Arthur MacArthur and Professor Wedgwood. Since the organization of the college, instruction has been given to 275 students. All the officers of the college serve gratuitously and the students are charged only a sufficient sum to cover expenses. Recitations are held daily and lectures are given on Monday and Thursday evenings by members of the bar. During the year over one hundred students entered the department. There were 32 graduates at the commencement in May of the present year.

THE CORCORAN ART-GALLERY.

This contains a valuable collection of paintings and statuary, (among the latter, Powers's "Greek Slave,") valued at over one hundred thousand dollars. It was donated in 1869, by Mr. W. W. Corcoran, to a board of trustees, of which Mr. James M. Carlisle is chairman, "for the purpose of encouraging American genius in the production and preservation of works pertaining to the fine arts and kindred objects." It is the intention of the trustees to establish a school of design in connection with the gallery and to make additions to the latter annually The value of the gift, including the building, which is worth $250,000, is over $1,000,000, the endowment-fund being

about $800,000. During the year about $40,000 worth of paintings and bronze-ware, purchased in Europe, has been added to the gallery, which was formally dedicated and opened to the public early in the winter of 1873-'74. No admission-fee will be charged visitors on Tuesday, Thursday, and Saturday of each week; on other days an admission-fee of 25 cents will be required. It is probable that eventually the gallery will be free to the public at all times.

THE SMITHSONIAN INSTITUTION,

Chartered by Congress in August, 1846. This institution is for "the increase and diffusion of knowlege among men." An account of the system pursued in it and of its museum and library was given in the report of this Bureau for 1871.

The institution has a system of international exchange, through which it distributes, not only its own publications to institutions in every part of the world, but also those of nearly all the scientific and literary societies of the United States. The number of its foreign correspondents is at present about 1,950, from which it receives annually copies of all the important transactions and proceedings of the learned societies of the world. Through this system of exchange it collected a most valuable library, which a few years since was incorporated with the Library of Congress. This system of exchange includes specimens of natural history. The President of the United States is, *ex officio*, presiding officer of the institution. Chief Justice Chase, at the time of his death, was president of the board of regents.

The following are regents of the Smithsonian Institution for 1874: Henry Wilson, Vice-President of the United States; M. R. Waite, Chief Justice of the Supreme Court of the United States; Alexander R. Shepherd, Governor of the District of Columbia; Hannibal Hamlin, John W. Stevenson, and A. H. Sargent, of the United State Senate; Samuel S. Cox, E. R. Hoar, and G. W. Hazelton, of the House of Representatives; John McLean, citizen of New Jersey; Peter Parker and William T. Sherman, citizens of Washington; Asa Gray, citizen of Massachusetts; J. D. Dana, citizen of Connecticut; and Henry Coppée, citizen of Pennsylvania.

WAYLAND SEMINARY.

This institution has for its object the education of preachers and teachers for the colored people. It now occupies new buildings upon Meridian Hill, on Sixteenth street. The American Baptist Home Mission Society has the general charge of the support of the school.

The school has three departments: theologic, academic, and normal. The number of students during the past year was 85, of whom 70 were males and 15 females. The instructors are a principal and four assistants. The corner stone of a new building for the seminary was laid, with appropriate ceremonies, on Meridian Hill September 22, 1873.

THE LINTHICUM FUND.

Several years ago the late Edward Linthicum, of Georgetown, District of Columbia, left the sum of $50,000 to a board of trustees, for the purpose of establishing "a school for indigent whites." The bequest now amounts to $55,000. The trustees of this fund have recently loaned the board of school-house-trustees of Georgetown $40,000 of the fund to aid the latter in the work of building a public high school. In consideration of this the school-trustees are to give the trustees of the fund the use of a room and a large hall in the new building. In this large hall the trustees of the fund propose to establish a night-school. It is also their purpose to give occasional courses of lectures in this hall.

UNITED STATES NAVAL OBSERVATORY.

The great equatorial telescope.—The great equatorial telescope, (the largest in the world,) for the construction of which Congress, several years since, appropriated $50,000, has been completed, and in November of the year 1873 was mounted at the United States Naval Observatory. The instrument is of American manufacture, the only foreign element in its construction being the optical glass in the lenses. The different parts of the instrument are so finely proportioned that its immensity is lost sight of, and the visitor at first might not give full credit to its vast dimensions. The protecting building is circular in form and about forty feet in diameter, and is surmounted by a dome of the same diameter, resting on a circular system of wheels, so that it may be readily revolved through the whole or part of a circle. The dome is provided with an opening six feet in width from the horizon to a little beyond the zenith; this is protected by a sliding shutter. The telescope is equatorially mounted; that is, it has two axes of motion, at right angles to each other, one of which is parallel to the earth's axis; consequently the telescope may be made to follow the diurnal movement of a heavenly body by revolving it on this latter axis alone, which is commonly called the polar axis, because it is directed toward the pole of the heavens. The instrument rests on a pier of stone- and brick-work. The optical glass is twenty-six inches in diameter and cost $7,000. The instrument is furnished

with finely-graduated declination- and hour-circles. For reading the circles, the divisions under the reading-microscope are illuminated by passing a powerful current of electricity through a small platinum wire, which is thereby raised to a white heat. The two microscopes for reading the declination-circle are so situated that they may be read by the observer while at the eye-piece of the telescope. The pier of the instrument contains an archway, in which is mounted the clock-work which moves the telescope, so that an object may be held in the field of view as long as may be desired. The motive-power is a reaction-wheel, driven by aqueduct-water at the rate of three turns in a second. The regulating-apparatus is a conical pendulum, revolving once in two seconds, which is automatically controlled by an electro-magnet, which permits friction on a revolving-disk when the velocity is too great and removes it when it is too little. This remarkable instrument promises to play an important part in future astronomic investigations.

THE SIGNAL-OFFICE OF THE ARMY.

The United States signal-service may properly be classed among national educational agencies in the particular branch of meteorology. The special duty of disseminating meteorologic information was assigned the Signal-Corps in 1870, in deference to a popular desire for weather-forecasts and especially for the benefit of commerce and agriculture. There are now ninety-two stations from which observations are made, and on the reports from these stations the tri-daily reports of the Signal-Office are compiled. A scientific library of 2,470 volumes, exclusive of pamphlets, maps, and charts, is attached to the office.

THE BOTANIC GARDEN

Is located a few hundred yards west of the Capitol and contains over 4,000 species of plants. In the conservatories the plants are arranged geographically and in the grounds outside according to Gray's Manual of Botany. The collection is being continually enlarged by purchase, by exchanges with foreign conservatories, and by contributions from United States diplomatic agents abroad. A lecture-room has recently been attached to the garden, where students in botany may at all times pursue their investigations. During the past year the wooden structures in the grounds have been replaced by substantial iron buildings. The garden was established in 1858.

PUBLIC LIBRARIES.

The Library of Congress now comprises a most extensive collection of books in every department of science and literature. To it have been added, within the past few years, the library of the Smithsonian Institution, the copyright-library of the Patent-Office, the law-library of the Supreme Court, and the valuable historic library of Peter Force. Its collection numbers over 250,000 volumes, being the largest in the United States. Congress appropriates $10,000 annually for the increase of the library, and has further enacted that two copies of every book copyrighted in the United States shall be deposited here, the office of the Librarian being the place of entry for all copyright-publications. Any person is allowed to examine the books, but none are permitted to be taken away except by the President of the United States, the Vice-President, members of the Senate and House of Representatives, judges of the Supreme Court, Cabinet-officers, the Diplomatic Corps, and a few other high officials. This truly national collection is very seriously cramped for room, and plans for a new library-building have been invited, which Congress will doubtless authorize to be erected during the coming year. Mr. A. R. Spofford is librarian.

The library of the Surgeon-General's Office contains 25,500 volumes and 18,000 pamphlets, principally on medical and surgical subjects. Some of these works are very rare and valuable and date back to 1470. The catalogue of the library contains over 50,000 titles and includes 6,850 volumes of medical journals. Congress annually appropriates a certain sum for the purchase of books. The appropriation for 1873 was $5,000. About 500 volumes and a large number of pamphlets have been added during the year. The library, which is accessible to all, is invaluable to students of medicine and surgery.

The library of the Department of Agriculture contains over 6,000 volumes. Among other recent acquisitions are Sowerby's English Botany, in 11 volumes, royal octavo, a very full view of British plants; the Flora Française, in several folio-volumes; Siebold's Flora Japonica; the Botany of the Himalaya Mountains; and many other elegantly-illustrated volumes. The collection is yearly swelled by the choicest productions of the foreign scientific and industrial press, especially from that of France and Germany. Exchanges are at present made with over 1,500 native and 300 foreign societies.

The library of the Navy Department contains about 3,200 volumes, a large number of which are of a historic and scientific character, relating especially to naval affairs. A number of these are printed in foreign languages. The library also contains a large number of volumes of congressional enactments, executive documents, &c., and some works of a miscellaneous nature. As the Department is at present cramped for room,

no additions are being made to the collection. Books may be withdrawn by employés of the Department.

The library of the War Department numbers 11,470 volumes, which include a law-library of 2,000 volumes. During the year nearly 500 new volumes have been added. About 50 per cent. of the books are works on military science; 25 per cent. are books of reference, such as encyclopedias, congressional debates, and laws, &c., while the remainder are of a miscellaneous character. Small additions are made to the library annually. Books cannot be withdrawn except by employés of the Department.

The library of the Patent-Office comprises 22,800 volumes, mainly of a technologic character, and intended to illustrate the progress of invention in all countries. It contains many rare works and is accessible to everybody, but no books can be withdrawn, as the library is for reference only. Several hundred volumes are added to the collection annually.

The library of the Department of the Interior contains 4,901 volumes of a miscellaneous character. The books can be withdrawn by employés of the Department only. Several hundred volumes are added annually.

The Bureau of Education, connected with this Department, possesses a unique collection of old and rare educational works, especially relating to the history of educational progress, as well as a small miscellaneous library, with the new books relating to education and large collections of catalogues, documents, and pamphlets relating to schools and school-systems in this and other countries, being especially rich in recent foreign educational reports.

The library of the Treasury Department contains 8,355 volumes, of which 3,600 volumes were added during the present year. The library contains a large number of works of reference. It also possesses a copy of all the correspondence of the office of the Secretary of the Treasury from 1789 to date and some rare old works. A few volumes are added yearly. The books can be withdrawn only by employés of the Department.

The library of the Department of State, which was established by Thomas Jefferson, first Secretary of State, contains about 17,000 volumes, mainly of a miscellaneous character, and embraces a large number of works on diplomacy, international law, &c. Books may be withdrawn by the employés of the Department and members of the diplomatic corps. Small additions are made yearly.

The library of the Academy of the Visitation, Georgetown, District of Columbia, contains between 5,000 and 6,000 volumes of a miscellaneous character. The books are accessible to the female students of the institution only.

Under this head it may be stated that Mr. George Peabody, the philanthropist, several years before his death, gave the sum of $15,000 to a board of trustees as the nucleus of a public library in Georgetown, District of Columbia. The library has never been established, and the fund now amounts to about $23,000. The trustees have under consideration a proposition from the board of trustees of the public schools of Georgetown to loan a portion of this sum to the latter body, in return for which the school-trustees agree to give the trustees of the Peabody fund suitable accommodation for a public library in the new high-school-building, now in process of erection in Georgetown.

The library of the Washington Library Company and the Young Men's Christian Association is located in Lincoln Hall and contains 12,500 volumes of a miscellaneous character. It is in charge of the Young Men's Christian Association. The library is accessible to all, but books can be withdrawn only by subscribers. Small additions are made to the collection annually.

The Odd-Fellows Library comprises 3,500 volumes of a miscellaneous character. The use of the library is restricted to members of the order of Odd-Fellows and to the widows and children of deceased members. The collection is increased by the addition of a few volumes yearly.

The document-libraries of the Senate and House of Representatives contain nearly 100,000 volumes of congressional documents, reports, debates, &c.

The library of the Naval Observatory consists of more than 6,000 volumes, mostly astronomic in character, but includes many works on other branches of science and higher matematics.

The Masonic Library consists of 1,000 bound and 2,150 unbound volumes. These include about 200 excellent standard works and 300 novels, magazines, and miscellaneous works. Of the bound volumes, seven-eighths are of a Masonic character. The books are accessible to members of the Masonic fraternity only.

MUSEUMS.

The Army Medical Museum.—This, a branch of the Surgeon-General's Office, is an outgrowth of the great rebellion and is located in what was Ford's theater, on Tenth street, between E and F.

The collections of the museum are divided into sections, as follows: (1) The surgical section, containing 6,500 specimens, showing the effects of missiles of every variety

on all parts of the human body. (2) The medical section, containing 1,500 specimens, the majority of which illustrate morbid conditions of the internal organs in fever, chronic dysentery, &c. (3) The microscopic section contains 6,000 specimens, embracing dissevered tissues, dissevered organs, &c. (4) The anatomic section consists of skeletons, separated crania, (of which there are 1,000,) and the section of comparative anatomy of 1,200 specimens. (5) The section of miscellaneous articles includes models of hospital-barracks, ambulances, and medical wagons, a collection of surgical instruments, samples of artificial limbs; &c.

Congress annually appropriates $5,000 for the museum.

During the year 5,000 copies of the first two volumes, constituting Part 1 of the Medical and Surgical History of the War, were issued under authority of Congress. Two additional volumes, constituting the second part of the Medical and Surgical History of the War, are now in press.

The museum of the Smithsonian Institution.—For several years past Congress has annually appropriated $15,000 for the keeping of this museum. In 1872 that body also appropriated $15,000 to fit up large rooms for the better display of the specimens. A large hall has been opened during the year in the second story of the main building, in which a number of additional cases have been placed for the exhibition of curiosities. The value of this museum to the student cannot be estimated.

The museum of the Department of Agriculture.—This is in the large hall on the second floor of the building occupied by that Department. Attached to this museum are representations of various insects, with their transformations, showing such as are especially beneficial or injurious to the crops, together with specimens of our native birds: those which injure the crops and those which are beneficial by destroying such insects and worms as prey upon the cereals, fruits, &c.

The United States Patent-Office model-room, is located in the upper story of the Patent-Office building. This may very properly be reckoned among the museums, containing, as it does, for preservation, the largest and finest collection of models in the world, about 145,000 being on exhibition and the collection being increased annually. During the past year, some 23,000 models of rejected applications, representing all classes of inventions, have been distributed among over seventy educational institutions throughout the United States, and an equal number have probably been otherwise disposed of, under a late act of Congress, the object being to make room for models of patented inventions. Besides the models of patents, the gallery contains many curiosities of national interest, among which are the original Declaration of Independence, the commission of General Washington by the Continental Congress, articles of personal and household property, and camp-equipage used by the General in the revolutionary war. Here are also the sword and uniform of General Jackson, and a large number of swords, sabers, and other articles presented to naval officers on foreign duty. Besides the models required to be presented with each case capable of being so illustrated, drawings are required in all similar cases, and these are classified by subjects into groups, the latter being subdivided into sections, in which the drawings themselves are arranged in folio-drawers alphabetically as respects the names of the inventors, in order to be convenient of access.

PRESIDENT EARLY.

The late Rev. John Early, S. J., President of Georgetown College, District of Columbia was born in Fermanagh, Ireland, in 1814. He laid the foundation of his classic studies at the Academy of Armagh, where he acquired notable success. In his nineteenth year he came to the United States with a view to prepare himself for the sacred ministry. He continued his classic studies, first, at Mt. St. Mary's College, Maryland, subsequently at Georgetown College, and was ordained at Georgetown in 1845. During his eleven years' residence at this college, 1836 to 1847, besides pursuing his own studies he was actively engaged as teacher and disciplinarian. In the former capacity, rising from class to class, he became acquainted, by intimate experience, with the scope and needs of a whole college-curriculum, while, as disciplinarian, he acquired that knowledge of character, as developed in youth, which is so essential to a practical educator.

After a year spent in missionary duty in Philadelphia, Father Early was appointed, in 1848, to the presidency of the college of the Holy Cross, Worcester, Massachusetts. This institution was then newly founded, and stood in need of just such traits on the part of its presiding officer as pointed out Father Early to his superiors as the fitting person for the place. His administrative ability, prudence, experience, attractive manners, and scholastic acquirements contributed essentially to the early success of that college and laid the foundation of its subsequent prosperity. At the end of three years, the usual term of a presidency in Jesuit colleges, he was recalled on other duties, which gave him a year of comparative rest.

At this time the Sulpitians of St. Mary's College, Baltimore, were desirous of closing that institution, in order to devote themselves to the special object of their society, the training of ecclesiastics. St. Mary's was founded in 1792, by members of the French clergy who had sought refuge in the United States from the horrors of the French revolution. The success it had acquired and the large place it filled as a house of superior education rendered some provision for a suitable succession a matter of solicitude on the part of its conductors. With this view they applied to the Jesuits, and Father Early was at once selected to inaugurate the new enterprise.

In 1852 he opened Loyola College, Baltimore, in rented buildings, and proceeded as soon as possible to erect the edifice now occupied by that institution and the elegant church of St. Ignatius, adjoining, on the corner of Calvert and Madison streets. In the weighty and responsible duty of organizing and regulating the new college, he spent two terms, and finally, in 1858, only exchanged one presidency for another, being called that year to his old home, Georgetown College. Here he remained until 1866, embracing the entire period of the inception and close of our civil war, a time of great peril and of many trials. At its outbreak, many of the northern students sought protection at home from impending perils, and the southerners left, almost *en masse*, to precipitate themselves into the conflict. The grounds were for a season converted into a camp by the Federal soldiers and a great part of the buildings occupied as a hospital. Still, with the few students that remained, the classes and discipline of the college were regularly carried on, and never intermitted from any extraneous cause. The prudence and circumspection needed on the part of its presiding officer to conduct the institution in safety through this period of agitation, and in the very center of the military movements of one of the parties to the conflict, no one can sufficiently appreciate who had not himself been a resident of the District at the time.

With the return of peace came a gradual return to a better and more promising state in the affairs of the college, although it has not yet attained to the numbers who frequented it before the war. The four years from 1866 to 1870 were spent by Father Early in the renewed charge of Loyola College, and in the latter year he was recalled to Georgetown, again its president. During this latter term the law-department of the college was organized, achieving immediate success. Father Early died at the college May 23, 1873, aged 59 years, having filled the chief executive office of sundry colleges for twenty-five successive years, intermitting the single year 1851.

Hon. George F. T. Cook, superintendent of public schools for colored children of Washington.	Washington.

IDAHO.

[From information furnished by Hon. Joseph Perrault, territorial superintendent of public instruction.]

FINANCIAL STATEMENT.

Three counties make no report. The remaining ones report as follows:

Receipts.

Balance on hand at beginning of school-year	$4,724 24
Received from Territory	2,624 82
Received from county-taxes	13,281 66
Received from district-taxes	4,223 04
Received from other sources	8,150 23
Total	33,013 99

Expenditures.

For teachers' salaries	19,446 44
For buildings, repairs, furniture, &c	5,866 37
For school-libraries and apparatus	319 00
For rent, fuel, and contingent expenses	1,549 79
Total	27,181 60

SCHOOL-STATISTICS.

Number of children between the ages of 5 and 25 years—boys, 1,657; girls, 1,556	3,233
Number of children enrolled in school	2,196
Average attendance	891
Number of school-districts	54
Number of school-houses	41
Number of schools	51
Number of school-libraries	3
Number of volumes in school-libraries	198

The superintendent, in a letter dated November 11, 1873, says:

"In the district in which Boisé City, the capital of Idaho Territory, is situated, we have no public school, as the revenues from territorial and county-sources are not sufficient to defray the expenses. It takes more than the revenue of two years to pay the expenses of one year.

"As it is certainly the policy of the Government to foster and encourage every movement that tends to invite emigration to the undeveloped Territories of the nation, I would respectfully urge that Congress grant us aid, so that we can have schools the whole year.

"The population of the Territory is composed of young men of refinement and education, who have left their homes in the various States for the purpose of giving full scope to their energies and ambitions; and while they are building a new State, Congress might help educate their children.

"The nation expends yearly hundreds of thousands of dollars to educate the Indians, and yet nothing is done for the children of the pioneers, who are adding new stars to the flag of the Republic."

COST OF EDUCATION.

The expenditure for the support of public schools in Idaho, averages $8.40 per pupil of school-age, $12.30 per pupil of total enrollment, and $30.50 per pupil of average attendance.

PROGRESS.

Rev. George H. Atkinson, in a letter dated January 6, 1874, says: "New and well-trained teachers are entering the field, who bring the experience of years in the eastern schools to aid in establishing our school-system.

"The text-books are among the most approved kinds, and the fact of three libraries is a good sign of what may be in the future."

PRIVATE SCHOOLS.

There are in Boisé City three private schools, one under the direction of the Episcopal Church, the other two under the control of lady teachers. Also one French school, where French alone is taught, under the direction of the superintendent of public instruction.

COUNTY-SUPERINTENDENCE.

The school-law makes it the duty of county-superintendents to visit each public school in their respective counties at least once in each year and to exercise a general supervision over the interests of the schools. The superintendent, referring to this, says: "It must be said that in several of the counties the office of county-superintendent is merely a name—a misnomer—as the superintendents rarely or never visit the schools, and the office might as well be abolished altogether as far as practical results are concerned.

"The influence of efficient supervision can be seen in Ada County, the present superintendent having visited all the schools and excited a general interest in their success.

"The success of the schools depends more on efficient county-superintendence, inspection, and management, than on any other one instrumentality."

NATIVE INDIAN TEACHERS.

"The principal of the Ocmulgee (Creek Nation, Indian Territory) female free school and her first assistant are Indian women, born in the Territory, but educated, and well educated too, in Texas."

MONTANA.

The report of Superintendent Hedges for 1873 having failed to reach this Bureau, we are compelled to be contented with that portion relating to it which is included in the message of Governor Potts, from which we extract as follows:

"The report of Hon. Cornelius Hedges, superintendent of public instruction, is herewith submitted. Almost every question connected with our public-school-system is ably and frankly discussed. The report is a credit to that officer and an honor to the Territory. The following statistics are taken from the report:

The whole number of children of school-age, between 4 and 21 years, in the Territory is	3,517

ATTENDANCE.

Number attending school during the year	1,881
The percentage of attendance of those enrolled	50
Number of organized school-districts	91
Number of schools taught during the year	99
Number of male teachers employed	50
Number of female teachers employed	49
Average length of school, in days	82½
Number of school-houses	51
Number of districts with graded schools, to wit, one each in Virginia, Helena, and Deer Lodge	3
Number of private schools taught in the Territory during the year	11
Number of scholars attending the same	149
Number of children not attending any school	1,497

FINANCIAL STATEMENT.

Amount of money raised for schools by county-tax	$31,350 42
Amount raised by district-tax, to wit, in Madison County	934 55
Amount from all sources apportioned during the year	33,161 50
Average pay of teachers per month	68 41

EDUCATION OF COLORED CHILDREN.

"The superintendent says that 'the provision of the present school-law which requires that the education of children of African descent shall be provided for in separate schools practically excludes them from all opportunity to obtain an education.' You should not hesitate to so amend the law as to afford an opportunity for each child in the Territory, without distinction, to enjoy all the benefits that are to be derived from a system of free schools established and supported by the people. Prejudice should not be permitted to stand in the path of justice, and I cannot believe that any considerable number of our citizens are willing that any child shall be excluded from the privileges of an education at the public expense on account of color. The law makes no distinction between citizens as to the right to exercise the elective franchise or the duty to share the burden of taxation; and, certainly, no distinction should be made in the opportunities afforded the youth of the Territory to qualify themselves for the duties of citizenship."

COMPULSORY EDUCATION.

"I believe it is the duty of the Territory to place education not only within the reach of all the people, but to compel them to avail themselves of its benefits. An elementary education should be considered as much a legal obligation as it is a necessity, and the Territory has the same power to enforce it that it has to enact any other law to promote the public welfare. All [measures] designed to advance the public interest, 'contribute to the general happiness of the people,' give vitality and stability to the government, and promote virtue and intelligence, are proper subjects of legislation. [In] the states of both Europe and America where the law requiring compulsory education has been tested crime has decreased, pauperism diminished, and marriages largely augmented. The indigent in every country, as a rule, belong to the illiterate class; and the same rule will apply with almost equal force to the convicts confined in the prisons of the country."

ABSENTEEISM.

"The report of the superintendent of public instruction discloses the fact that but a little over one-half of the children of school-age in the Territory attended school dur-

ing the last year. I think this should induce the legislative assembly to provide by law for the compulsory attendance of children between the ages of 6 and 16 years, at least three months in the year, where their parents reside within two miles of a public school taught for that period.

"The violation of the school-law by the commissioners of Meagher County, in refusing to levy a tax of three mills on the dollar for school-purposes, as required by law, demands of the legislative assembly the enactment of a law to punish county-officers by fine and imprisonment for refusing to perform a plain legal duty. No officer is above the law; and when he takes an oath to enforce the law and violates it, he should be punished as a criminal and forfeit his office.

"Authority should be granted the superintendent of public instruction to enforce the provisions of the school-law by suit; and you should provide for the payment of the expenses of the same. I commend the report to you as worthy of your careful consideration and recommend that you authorize the printing [of], at least, one thousand copies of the same."

LETTER OF SUPERINTENDENT HEDGES.

"HELENA, MONTANA TERRITORY, *October* 13, 1873.

"DEAR SIR: Yours of 1st instant, soliciting information of the progress of schools in Montana for past year or two, is just at hand. I am sorry to be able to give no fuller reply. Our new school-law went into effect less than two years since. It is modeled after that of California, with many curtailments. Since I have held the office of superintendent I have prepared full blanks for the transaction of all school-business, and for reports; but these have only been distributed during the year past, and I shall not have them returned to me before December. I expect then to make a report to the legislature and shall forward copies to your Bureau. I can at present only say generally that, notwithstanding the general depression in all branches of business and a considerable decrease of population since the census-report was taken, there has been a steady improvement in our schools. The only revenue now that sustains them is the 3-mill-county-tax. The districts have power to raise any additional amount by special tax, but I know of no instance in which this has been done. Our people are generally poor and very scattered. Many of our school-districts are of greater area than whole counties in the Eastern States. There are, as near as I can estimate at present, about eighty organized school-districts in the eight organized counties in this Territory. In some of the principal cities, such as Helena, Virginia, Deer Lodge, Bozeman, and Missoula, there is some attempt towards grading, but it is poorly done at best, and the scholars are generally backward. The school-money is not sufficient to sustain schools more than from four to six months during the year. The wages paid to teachers average from $50 to $150 per month; but the portion of the year is so small that teachers can find employment, that I have not felt like encouraging good teachers to come this way, and the quality of those we have in most instances is rather inferior.

"In the public schools of this city there are about 200 scholars in attendance, and our trustees hope to sustain the schools this year eight months. There are five teachers employed in these schools, three male and two female. Two receive $125 per month each, another $100, and the two ladies $85 each per month.

"I am about setting out on my annual tour of visitation, and could give you more information on my return; but that will be so near the time of making my annual report that I will send that instead of writing again.

"Yours truly,

CORNELIUS HEDGES,
Superintendent of Public Instruction, Montana.

"Hon. CHARLES WARREN,
"*Acting Commissioner of Education.*"

NEW MEXICO.

EDUCATIONAL PROGRESS.

Governor Giddings, in his message, expresses his gratification at the fact that, through the enactments of the legislature of 1871 and 1872, a system of free common schools was inaugurated and a tax levied on all the property of the Territory to sustain such schools, thus determining, it is hoped, forever, the fact that New Mexico shall have the same facilities for common education as are provided throughout the United States. Persons can now make New Mexico their home without being obliged to feel that all advantages for educating their children are left behind. The intelligent and educated class of emigrants could never before think of settling permanently in this Territory. Taking only this view of the matter, the establishment of a school-system is a great gain.

VALUE OF COMMON SCHOOLS.

The condition of the Territory can be best appreciated by considering what would have been the effect upon the States had the common schools therein been blotted out for the last twenty-five years. Education and schools have been entirely lost sight of, and a desire for them had almost to be created before any steps could be taken, by way of legislation, to secure common schools. Books were scarce, and school-houses, if ever there were any, had disappeared. There were not even the proper teachers, and, until within the last year and a little over, there were not, probably, outside of Santa Fé, half a dozen schools of all kinds in New Mexico; and so little were they desired that when a law for the establishment of common schools, and their support by a system of general taxation, was put to vote, only 37 votes were cast in favor of, to 5,000 against, it.

But a great change has been made in the right direction. The people have become satisfied that the intelligent of other States and countries will not bring their children and their wealth into a country which furnishes neither colleges nor universities, nor the means of a common-school-education, and a desire and a determination have arisen to place such an education at the command of all; and although the people have been impoverished by war and by Indian depredations from the earliest times, still they are ready to be taxed a reasonable sum for the support of common schools. But to begin with a population of 100,000, and without any books, is an immense undertaking, and progress must necessarily be very slow for many years.

AMENDMENTS TO THE SCHOOL-LAW.

"The law should undoubtedly be amended, as there are many defects and there are some doubts as to the intention of its makers. There should be some provision made to secure uniformity, and a correct report to the executive, as early as the 1st of October in each year, of all that has been done during the previous year, with the amount of money paid out, and such other information as will enable the executive to recommend, and the legislature from time to time to make, such additional laws as may be needed to forward the great interests of education.

"While the new statute provides for county-supervisors, it does not directly repeal the old law in regard to the territorial superintendent, and it is believed that for uniformity and general supervision there should be a general superintendent of schools. There is abundant work for such an officer. At any rate, the law should be made plain where it is now exceedingly doubtful."

FUTURE PROGRESS.

"Then, with patience, toil, and time, we shall make progress, if but slowly, in the great work which must continue forever. Our people have redeemed themselves before the world from the charge of disregard for the welfare of their race, and we shall soon see the effects of our system of education in the prosperity which cannot fail to surround an educated and enlightened people. Manufacturing-pursuits and scientific utilization of the materials of wealth, scattered over the country in its mines of gold, silver, platinum, copper, lead, zinc, coal, marble, gypsum, and iron, will follow the establishment of common schools, and our Territory will soon take a stand among the great Commonwealths of the nation."

OBSTACLES IN THE WAY.

"Our poverty stands in our way everywhere. The vast destruction of property from time immemorial by Indian raids and other wars has made the people poor; and the lands set apart to us for school-purposes are, as yet, unavailable. In other Territo-

ries the school-lands were sold in time to provide for the wants of schools; but here most of the land is, as yet, unsurveyed, and the sixteenth and thirty-sixth sections are entirely unavailable.

"In the Territories generally are enterprising people from the oldest States, possessing the knowledge, the intelligence, the language, laws, habits, and institutions of the most enlightened states of the world. They had the means of starting schools at once: the teachers, the books, a knowledge of the system, and countless other advantages. But here is a people a thousand miles inland, away from all sources of knowledge and civilization; with scarcely the power, in the midst of the relentless, cruel, and devastating savages everywhere surrounding them, to secure the bread necessary to keep soul and body together. This people, transferred without their consent or choice to another government, of whose laws, language, and institutions they have no knowledge, now lift their hands and in the name of humanity ask that they may have the means of knowledge furnished them which shall fit them to stand equal with any other Commonwealth of America, they themselves contributing all the means within their power to secure so desirable an end.

"No people on earth without education is possessed of more practical wisdom or common sense in the ordinary affairs of life than the people of New Mexico. But their creative power is not adequate to our necessities in the way of public-school-houses. They are shrewd and foreseeing, but they cannot devise means to meet the present wants of the people in the matter of schools."

ARRANGEMENT SUGGESTED.

The suggestion contained in the last message is repeated, viz: "That it is possible an arrangement might be made by which Congress would permit the Territory to anticipate to the extent of $100,000 on the lands bestowed for school-purposes, and furnish a small amount to aid in the erection of at least 100 school-houses in the most populous districts.

"The details of the plan for anticipating the $100,000, or the interest thereof for the term of twenty years without interest, were given at length in the last executive message to the legislature."

SCHOOL-STATISTICS.

"With a view of securing some definite information as to our actual success in commencing a system of common schools, circulars were sent to the probate judges of the several counties, asking information as to the number of schools in each county, length of school-term, and the amount expended. Only a few returns have as yet been received, but so far the results are most gratifying."

Bernalillo County reports 14 schools. Of these 3 were continued ten months each and the remainder from three to five months each, an average of five months for the entire number. The expenditure for the year has been $2,867.

Taos County reports 12 schools. Length of term not given. Expenditure, $765.94.

Valencia County reports that 16 schools have been maintained from three to eight months each, at a cost of $1,642.

San Miguel reports 22 schools, of which 21 were kept four and a half months each, and 1 eight months. Total cost for the year, $5,265.27.

Santa Fé County has collected for school-purposes for the year the sum of $3,992.49. The number of schools is not given.

The number of schools in the Territory for the year 1873 is about 200 and the cost of maintaining them about $33,000.

"This presents the fact that our people pay a tax of nearly 33 cents *per capita* for every man, woman, and child, for 200 schools, kept on an average in each precinct from five to six months in each year. It is believed that no State in the Union can show a more excellent record in its regard for the common education of its people. And this is the record of its first year, in a country where such institutions were before unknown."

The following letter, from Hon. W. G. Ritch, secretary of the Territory, received as this report is passing through the press, contains the latest additional information:

"TERRITORY OF NEW MEXICO, OFFICE OF THE SECRETARY,
"*Santa Fé, December* 31, 1873.

"Hon. JOHN EATON,
"*Commissioner of Education:*

"In answer to your inquiries of October 1 and December 19, respectively, for 'information respecting schools in New Mexico,' for your report of 1873, I have the honor to post you the following:

"The public-school-law of New Mexico creates a board of supervisors and directors of public schools for each county, consisting of three persons elected biennially, with the probate-judge of the country as, *ex officio*, president of the board. 'The sole and entire management, supervision, and control' are given to this board 'of the public

schools within their respective counties,' as are also 'the entire and exclusive management and supervision of the school-funds of the respective counties and of the control and expenditure thereof.'

"THE SCHOOL-FUND

Consists of 25 per cent. of the entire tax on property, a poll-tax of $1 on every male citizen above the age of 21 years, and any 'surplus of more than $500 in the treasury of any county after paying the current expenses of such county.'

"This school-law, and the provision for the school-fund, was enacted by the legislative assembly of 1871-'72, and is probably the most effective law that the friends of education in New Mexico have ever succeeded in placing on the statutes. The greatest practical results, at least, have followed, and its workings have unquestionably popularized free schools throughout the Territory.

"The better to learn the progress of the work under the law and to give a clear idea respecting the same, on the receipt of your letter in October last, I addressed a circular-letter and blank to presidents of school-boards, teachers, and educational men throughout the Territory, asking for certain statistics therein indicated. Most of these persons have answered, and with a commendable interest. Much delay has been unavoidably incurred by reason of the entire absence of any system for obtaining the information sought. I give you the following aggregated statement of the schools in this Territory:

Schools.	Number of schools.	Pupils.	Teachers.	Average number of months taught.	Average of wages of teachers.	Languages taught.	Funds.
Public schools supported by taxation	133	5,625	136	6¼	$28 69	10 English 111 Spanish 12 E. S.	$29,721 57
Private schools	26	1,370	53	9	.....	7 English.. 19 E. S.....	27,100 00
Pueblo schools	5	107	7	6	.....	English.....	4,000 00
Total	164	7,102	196	.....	.....	.....	60,821 57
Census-returns for 1870, public and private schools	44	1,798	72	.....	.....	.....	29,886 00
Increase for 1873	120	5,304	124				30,935 57

MISREPRESENTATIONS CORRECTED.

"Right here, allow me to digress for a word, and call the attention of those who within the past year or two have seemed to delight in misrepresenting the educational interests of New Mexico through the public press outside of the Territory, both East and West, and otherwise, by asserting, with a recklessness for truth astonishing to relate, that either there are no schools whatever in the Territory or, at most, a number expressed by a unit of medium value. I would respectfully refer those making these erroneous statements to the census-report of 1870, Table XII, of New Mexico, vol. 1, and to the Report of the Commissioner of Education, 1872, where will be found the statement above set forth for 1870 of public schools."

STUDIES TAUGHT.

"We glean the following items from the mass of local reports at hand. There are taught in all the schools reading, writing, and arithmetic; grammar in 41, geography in 34, and history in 17. A few also teach other of the higher branches."

PROGRESS.

"The county of San Miguel reports two public-school-houses worth $1,824.43. In Silver City, Grant County, the ladies have formed an educational society; have raised a fund of $1,400, and express a determination to increase it to $2,500. They have also adopted plans for a brick school-house 20 by 40 feet on the ground, and we doubt not that they will carry the enterprise to completion. God bless the ladies! A subscription is also out in Lincoln for the same noble purpose. Doubtless there are other enterprises of a similar character in other enterprising towns, of which mention has not been made. In very many districts the use of a school-room is donated; in others, rented

for a moderate sum. In Doña Aña and Grant Counties the supervisors of public schools donate their *per-diem* allowed by law to the school-fund.

"The school-books used are legion in variety and run from a sectarian catechism to Ollendorf's method. School-books are very generally bought for the indigent. So deep is the interest in some of the counties, that the local school-boards have made inquiries of the territorial officers if there was not a law or some means by which the attendance of children could be enforced. One county reports that boys only are admitted to the schools. Four public schools reported are combined with parochial or mission-schools."

ABSENTEEISM.

"Taking the usual percentage of children relative to the aggregate population, and there are 22,969 children in New Mexico of school-age. Deduct the number reported attending both the public and private schools and we find still in the Territory 15,974 children absentees, in most cases, doubtless, without the opportunity of attending school."

PRIVATE SCHOOLS.

"Of private schools five are convents, under the control and management of the Sisters of Loretto, with an attendance of 546 pupils, 120 of whom are poor. To them tuition is free. They have 21 teachers and an income of $12,000. Next are the schools under the control and management of the Christian Brothers, (Catholic,) of which there are three. Two of these schools have an attendance of 180 pupils, 10 teachers, and an income of $5,450.

"There is also a Jesuit school at Albuquerque. There are two Presbyterian mission-schools reported, with an attendance of 80 pupils and 3 teachers. Tuition generally free. There is also one Methodist-Episcopal mission-school, with an attendance of 80 pupils, 2 teachers, and an income of $700.

"The above schools, as also others of the private schools, teach both the common and higher English and Spanish branches, and will doubtless prove of great value in educating teachers. Some of them, we have reason to believe, are model schools.

"PUEBLO-INDIAN SCHOOLS.

"We learn from the Pueblo agent that two of these schools are under the Presbyterian Board of Missions, but that they are not managed in a spirit of sectarianism; that a growing interest is manifested, and that they are open to all who apply. Twelve hundred dollars of the fund is contributed by the Presbyterian board and $2,800 by the General Government.

"The manifest need among the public schools at this time is a uniform system throughout the Territory—something in the nature of a central board of commissioners, composed of practical educators, who feel a pride in the work, with authority to establish some simple, general plan, embodied in printed form, for the government of schools.

"The necessity for such board is intensified for the reason that the masses of the people are entirely unused to the advanced systems of free schools of the present day and age, and, with few honorable exceptions, are also unacquainted with the management of public schools in any form. There is scarcely less need for public-school-buildings.

"There is also a want of uniform school-books in individual schools, and also of competent teachers, both in English and Spanish. Some standard of qualification among teachers should be adopted, and to that end an examining officer or a board of examiners is an absolute necessity. It should also be their duty to visit and examine the schools at stated times.

"The legislative assembly, now in session, shows a commendable interest in behalf of progress; indeed, we may say is unanimously in favor of further legislation to that end.

"A joint committee has been appointed having for its object a revision of the assessment- and tax-laws, the improvement of the school-system, so as to admit a more general availability of its advantages, and an increase of the school-fund. It is confidently expected that minor differences about details will be harmonized and healthy progress be the result.

"Of the people it is simple justice to say that as a class they are kind, hospitable, industrious, tractable, and law-abiding; and in point of morals and integrity they will compare favorably with very many who have enjoyed much greater advantages in life. They pay their taxes as promptly and as fully as any people in the land and submit as cheerfully when they are satisfied that a substantial public good is to be the result."

FORMER CONDITION OF THE TERRITORY.

"It is well to bear in mind the entirely anomalous condition of the people and Territory, when compared with any other State or Territory in the Union, and that the

power has not in all cases been vouchsafed to human wisdom to eradicate the abuses of years in a day. New Mexico, before its acquisition by the United States, had been utterly neglected for generations by the government of Old Mexico in all things appertaining to its material prosperity and social advancement; and that the people are only cognizant of a superior power as indicated in the presence of exacting revenue-officers, or the recruiting sergeants incident to the chaotic and turbulent state of a government beset with revolutions and counter-revolutions, which in effect were, of course, most paralyzing to productive industries, exhausting to accumulated resources, and which made even existence itself problematic. In those times, self-preservation, the first law of nature, became the chief thought in the family-circle and the main business of life with each family. There was no time, opportunity, or impulse for social or intellectual improvement, nor had there been for generations. Such, in brief, was the condition in which the Government found the people at the time the Territory became part of the Republic. They were, and likewise continued to be for a long time, beset on all sides by hostile and nomadic Indian tribes, embodiments of all the villanies incident to unregenerate man, and also with not a few of the outlaws—hair-brained and graceless set—ever present on the frontier of an advancing American civilization. Scarcely had the Government, through the civil and military authorities, made an impression towards bringing order out of chaos, when followed the rebellion, threatening the integrity and life of the nation, during which event, be it said to the credit of the people of New Mexico, they remained true to the flag and cheerfully contributed their quota of patriotic citizens towards the defense of her soil and the suppression of the rebellion. This event, of course, still further kept education and progress in abeyance."

EDUCATIONAL PROSPECTS.

"Under the protection which they have enjoyed from the Government, more particularly for the past few years, and the freedom from oppression of the old government and resultant prosperity, they are coming to think of those matters calculated to better their condition in life; and not the least of these is education.

"New Mexico has, we submit, made a commendable start in educational interests. It will never be less, but, to the contrary, is destined to develop and grow with accelerating progression, ever onward with the approach and advent of railroads and telegraphs, and the consequent development of its material resources, its rich and varied mining deposits, its extensive agricultural, pastoral, and lumber-interests, and the manufactories, intelligent immigration, and general accessories that, hand in hand, naturally accompany, and which go to make the sum of the advancing elements of a higher civilization in store for the near future of New Mexico.

"Very respectfully,

"W. G. RITCH,
"*Secretary of New Mexico.*"

UTAH.

[From biennial report of Hon. Robert L. Campbell, territorial superintendent of common schools, for the term ended October 31, 1873.]

FINANCIAL STATEMENT.

Receipts.

Amount of building-funds raised	$44,582 22
Amount of taxes appropriated to the use of schools	12,885 41

TEACHERS AND THEIR PAY.

Number of teachers—males, 177; females, 178	355
Amount paid to male teachers	$55,092 41
Amount paid to female teachers	27,803 50
Total paid to teachers	82,895 91

SCHOOL-POPULATION.

Number of children of legal school-age, (from 4 to 16 years)—boys, 13,867; girls, 13,856	27,725

ENROLLMENT AND ATTENDANCE.

Number enrolled in public schools—males, 8,210; females, 7,860	16,070
Percentage of enrollment	57.9
Average daily attendance	11,842
Percentage of school-population in actual attendance	42.7

SCHOOLS AND SCHOOL-DISTRICTS.

Total number of school-districts	202
Number of school-districts reported	163
Number of schools	251
Number of months school has been taught	6.7

The foregoing statement does not include the amount of school-enrollment in all the counties, the returns from some being, for various reasons, too imperfect to be tabulated. The present condition of school-buildings is reported "good" in eleven counties, in three it is "medium," and in one "fair."

SCHOOLS OF SALT LAKE COUNTY.

In his last report the county-superintendent of Salt Lake makes the following statement:

"The percentage of pupils enrolled is exceedingly low, and for the last few years has gradually become less; not that there is really less school-attendance in this county, but for the following reasons: the Deseret University in 1869 commenced a model school, which received primary and intermediate pupils; this institution has grown in public favor until, during the last year, it has had over 300 pupils enrolled in these departments. The St. Mark's school, (Protestant-Episcopal,) established in 1867, has received public patronage to the same extent as the university, and has enrolled during the last year upwards of 300 primary and intermediate pupils.* The Rocky Mountain Conference Seminary has enrolled during the same period about 220 pupils and the Morgan College had enrolled in March, 1873, 290 pupils. These popular institutions, all clustering around the heart of the city, have drawn largely from the public schools.

"In 1865, the percentage of enrollment for Salt Lake County was 69, while the percentage of actual attendance exceeded 50. In 1866 it was nearly the same, while schools were kept open on an average throughout the county during each of these years eight months. Were the enrollment of the primary and intermedate departments

* This church has also two other schools in the Territory: that of the Good Shepherds, at Ogden, with 55 male and 70 female pupils, and St. John's, Logan, numbering 29 boys and 20 girls.

The Rev. Mr. Turner, from whom this information is derived, says that there are no free schools in Salt Lake City. There are many Mormon schools, but not good ones.

of these institutions added to the enrollment in the district-schools, the present year's statistical table would show a percentage of about 62 and an actual attendance of upwards of 50 per cent."

"Amid the many discouragements attendant upon our efforts to elevate the school-interests of this county, it is gratifying to observe that the trustees have been able to keep schools open upon an average of seven months."

Utah has improvised and sustained the present school-system without a dollar or an available acre of land from the General Government. The superintendent of Salt Lake County, in his report to the territorial superintendent, presents some data obtained from the report of the Bureau of Education for 1872, showing that the average time schools are kept open in the thirty-nine States and Territories noted is a little more than six months in the year. Utah Territory keeps schools open longer during the year than some States which have a school-fund amounting to millions of dollars.

"RELIGIOUS TEACHING.

"The common school-code of Utah does not require nor authorize educators to inculcate religious tenets, but all teachers are advised to open their schools by prayer and to inculcate the 'fear of God,' and morality, both by precept and example.

"SCHOOL-HOUSES.

"The erection of so many new school-houses throughout the Territory is a matter of congratulation and reflects much credit on the trustees in the respective districts which have stepped forward in this direction. Most of the buildings are very substantial, and though little unnecessary expense has been lavished to put on style and ornament, yet some of those recently erected in Salt Lake County are handsome edifices. The subject of properly heating and ventilating school-rooms should receive more attention.

"'NO-SCHOOL' SYSTEM.

"It may sound strange to those who have inveighed so much against our 'no-school system' to state that little more is needed on our statutes other than that which is already enacted, until means become available or until the school-lands and the munificent grants given by Congress to States may be accorded to Utah, when she shall be clothed with the robes of State-sovereignty. Perhaps there are few States in the Union—the superintendent does not know of any—where so high a percentage is collectable by statute, as there is in Utah Territory, for school-purposes.

"CITIES.

"It is the opinion of the superintendent that Salt Lake, and perhaps other cities, should have a city-school-system. Since 1872 there are statutory provisions which give the right to certain cities to regulate and control public schools.

"LABORS OF THE SUPERINTENDENT.

"The superintendent in 1872 visited many of the counties, and during the year 1873 nearly all the counties, in the Territory, and counseled with the county-superintendents, school-trustees, and teachers, in relation to the educational interests of their respective districts, and delivered addresses, wherever opportunity presented, on educational and kindred subjects. In his intercourse with the county-courts, the superintendent found that many members thereof were in favor of appropriating a certain percentage of their yearly revenue to aid the common schools of their county. A few of the probate-judges signified their willingness to join in petitioning the legislative assembly to designate the amount of percentage to be thus applied. Some were in favor of 15, others of 25, per cent.

"RECOMMENDATIONS.

"Drawing, sewing, and vocal music should be taught in common schools. The county-superintendents should be authorized to collect statistics of private and night-schools and allowed a small amount to procure them where not obtainable gratuitously.

"NORMAL SCHOOLS.

"A few years ago there were presented in the house of representatives, simultaneously, two bills looking to the establishment of a normal school, wherein advanced pupils who proposed to become teachers might receive special training for the profession. Neither of the bills was passed, but in lieu thereof it was proposed to ingraft upon the university a normal course; but no appropriation at that session was made to aid the university financially, and, as might have been expected, the executive committee, to whose hands its financial interests were committed, were embarrassed, and labored under difficulties which they found themselves impotent to remove.

"In the absence of a normal school, the superintendent believes it necessary to pro-

vide for institutes, to be held in all the counties, where the teachers and advanced pupils can meet, and, under the superintendence and instruction of a competent instructor, be qualified to do better and more efficient work in the school-room. If in States where normal schools are sustained this work is deemed necessary, how much more needful in our Territory, where normal training has not been extensive. In these institutes the importance of moral training should receive special attention.

"FIRST NORMAL SCHOOL OR INSTITUTE IN UTAH.

"In July last the superintendent called together the teachers throughout the Territory for the purpose of instruction and improvement. Some of those called to act as teachers in Utah have had but limited opportunities of becoming acquainted with modern improved methods of instruction. The institute continued a month and had enrolled over one hundred advanced students and pupil teachers. The occasion was one of great benefit and was a season of rejoicing to the teachers. The superintendent was petitioned by all present to continue the same yearly.

"Although there was no appropriation for the purpose, yet the superintendent procured the means and hired Profs. John R. Park, Karl G. Maeser, W. N. Dusenberry, and Mary E. Cook, four of the most experienced instructors accessible, to teach in the institute, giving the conduct of the same to Dr. Park."

SCHOOL-LAW.

The following law was approved February 20, 1874:

SECTION 1. *Be it enacted by the governor and legislative assembly of the Territory of Utah*, That $15,000 yearly, for the next two years, be, and the same is hereby, appropriated, out of any moneys not otherwise appropriated, for the use and benefit of common schools of this Territory, to be drawn and disbursed as provided in the following sections of this act.

SEC. 2. It shall be the duty of each county-superintendent of this Territory to report yearly, in the first week of November, to the territorial superintendent of schools, the number of all children between the ages of 4 and 16 years, in each district of his county, in accordance with the blank form in Section 18 of "An act providing for the establishment and support of common schools," approved January 18, 1866.

SEC. 3. It shall be the duty of the territorial superintendent, on receipt of county-lists, in the first week of December of each year, to make a *pro-rata* dividend of the school-money to the various school-districts of the Territory, according to the number of all the children in the districts between the ages of 4 and 16 years, and forward one certified document to each county-superintendent, setting forth the amount allotted to each county, and one copy of each document to the territorial auditor, whose duty it shall be to issue a warrant to each county-treasurer on application therefor, setting forth the amount allotted to his county.

SEC. 4. It shall be the duty of the trustees of each school-district in this Territory, to cause be be kept in their respective districts a good school at least three months in each year; a failure to do so shall disqualify them from drawing their share of the public moneys, and said moneys shall revert to other districts of the county.

SEC. 5. On presentation of the auditor's warrant, the territorial treasurer shall pay over to the county-treasurer such money as shall have been placed to the credit of the county of which he is treasurer, as per list filed in his office, taking receipt therefor. County-treasurers shall hold such money in their treasury subject to the order of county-superintendents, for payment to district-trustees, who shall, on presentation of the superintendent's order, receive the same from county-treasurers, giving receipt therefor, and such money shall only be used in payment of teachers.

SEC. 6. County-treasurers shall keep a separate account of the territorial school-moneys and make a report to their respective county-courts once in each year.

SEC. 7. Any person having the care or management of the public moneys herein contemplated, and failing to comply with the requirements of this act, shall be deemed guilty of a misdemeanor, and, on conviction thereof in any court having competent jurisdiction, may be fined in any sum not exceeding $1,000 for each offense. Such fine shall revert to the school-fund of the county where such cause shall have originated, and no property shall be exempt from the payment of such fine.

LIST OF SCHOOL-OFFICIALS IN UTAH.

Hon. ROBERT L. CAMPBELL, *territorial superintendent of common schools, Salt Lake City.*

COUNTY-SUPERINTENDENTS.

County.	Name.	Post-office.
Beaver	John Lee	Beaver.
Box Elder	A. Christensen	Brigham City.
Cache	Samuel Roskelly	Smithfield.
Davis	Jacob Miller	Farmington.
Iron	W. C. McGregor	Parowan.
Juab	Thomas Ord	Nephi.
Kane	Martin Slack	
Millard	E. M. Webb	Fillmore.
Morgan	J. R. Porter	Porterville.
Piute.*		
Rich	Perry Nebeker	Laketown.
Salt Lake	Robert L. Campbell	Salt Lake City.
San Pete	William T. Reid	Manti City.
Sevier	Hans P. Miller	Richfield.
Summit	John Boyden	Coalville.
Tooele	A. Galloway	Tooele.
Utah	W. N. Dusenberry	Provo.
Wasatch	Thomas H. Giles	Heber City.
Washington	J. E. Johnson	St. George.
Weber	W. W. Burton	Ogden.

* County abandoned in consequence of Indian hostilities; population returning.

WASHINGTON.*

[From biennial report of Hon. N. Rounds, territorial superintendent of public instruction, for the year ended September 30, 1873.]

SCHOOL-STATISTICS.

	1871–'72.	1872–'73.	Increase.
Number of school-districts	222	248	26
Number of school-houses	144	189	45
Number of schools	157	196	39
Number of persons of school-age	8,290	9,949	1,659
Number attending school	3,828	5,928	2,100
Amount paid teachers	$29,318 64	$44,007 94	$14,689 30

ATTENDANCE.

In noticing the large gain in attendance during 1872, the superintendent says: "This is attributable, in a great measure, no doubt, to the effect of the compulsory law."

LENGTH OF SCHOOL-TERM.

The average period during which the schools are maintained is encouraging. In Jefferson County it is nine months; in King, six months; in four counties it is five months; in five counties, four months; and in the remaining counties, three months

TEXT-BOOKS.

The text-books recommended by the superintendent in the last report have been unanimously approved by the county-superintendents, all of whom express their willingness to adopt them. It is therefore now recommended that uniformity of text-books be secured by legislative action. The suggestion is that a law for this purpose embrace the following points: (1) Require the selected series to be uniformly used for a term of four or five years. (2) Let no change of books be made subsequently but by statute. (3) Allow one year from the passage of the act in which to complete the introduction of the legal series. (4) Make it penal for any district to continue the use of other books after that period.

The recommended books are now in use, to a greater or less extent, in one-half the counties.

EDUCATIONAL PROGRESS.

There are encouraging signs of progress in education in Walla-Walla, Thurston, and King Counties and in the city of Vancouver. The superintendent of Cowlitz County says: "It is gratifying to note the increasing interest in schools and educational matters generally throughout the county. The people are moving in the right direction, and a much more favorable showing is anticipated at the close of the ensuing year than was ever before reported." At Colfax, in Whitman County, a fine school-house has been built, costing $800.

The superintendent remarks: "The cause of education would be greatly benefited if by some means a more thorough visitation by the county-superintendents could be secured."

Rev. George H. Atkinson writes, under date of July 11, 1873: "The school-sentiment is becoming stronger. Last week I was in Atalanam Valley, 200 miles northeast of Portland, and was glad to find that four school-districts had been defined by the superintendent of Yakima County and two of them organized; two good school-houses built, and schools in operation from three to six months in the year. This settlement is really but little more than three years old, though a few settlers were there in 1866–'67."

The same gentleman, under date of January 20, 1874, writes: "The town- and city-schools of Washington Territory flourish most in winter; those in the country are held chiefly in summer, on account of sparse settlements and bad roads.

"Olympia has two district-schools, partly graded, with four or five teachers, and one seminary, first designed for girls, but now for boys also, with three teachers. Tacoma has one school, not yet graded. Seattle has one district, two school-buildings, and

* Information has been received that the school-law has been revised somewhat in accordance with the action of th territorial association, and that Mr. J. P. Judson has been elected superintendent of schools in place of Hon. Nelson Rounds, deceased.

three or four grades; also the territorial university, well graded from primary to academic studies. Port Madison has a small school; Port Gamble, one larger; Port Townsend, a school somewhat graded, with two teachers. Unity of effort and vigor of plan are needed to carry out and perfect the school-system of Washington Territory."

TEACHERS' INSTITUTES.

During the past two years teachers' institutes have been held at important points in the Territory. They were generally conducted with ability and success and have been of great profit to school-interests. It is recommended that institutes be held in every county where it is possible.

A teachers' association has been organized and will hold a session when the legislature meets in Olympia.

NORMAL AND GRADED SCHOOLS.

The superintendent says: "We shall feel, I hope, the importance of early establishing a normal school, to improve the qualifications of teachers, and also of establishing graded schools wherever practicable."

MORAL AND RELIGIOUS INSTRUCTION IN THE PUBLIC SCHOOLS.

That portion of the school-law relating to moral and religious culture in the schools has attracted much attention on account of its importance, and in some localities has awakened opposition. These sections exact good moral character on the part of all teachers, and, anticipating that they will endeavor to promote the same character in their pupils, simply prohibit their teaching "sectarian or denominational doctrines" and their using "sectarian or denominational books" in the schools. This, of course, does not exclude the reading of the Bible.

The school-law is framed in accordance with the view that moral culture should be a constant and prominent object in the public schools of the Territory, and the legislature, while excluding all sectarian books and teachings, leaves the way open for instruction in Christian morals and in all the fundamental religious principles which are the common ground of belief in a Christian nation. As this law is constitutional, so also it is founded on a wise and liberal policy, for all the religious elements which it is desired to cultivate in the schools are subscribed to by all denominations, and the objection that Protestants and Catholics cannot co-operate in the public-school-system falls to the ground.

TEACHERS' CERTIFICATES.

It is recommended that the territorial certificates given to teachers should continue valid for a period of three or four years, unless revoked for cause.

Schools among Indians in Washington Territory.

Reservation.	Denomination.	Post-office.	Pupils, (estimate.)

UNIVERSITY OF WASHINGTON TERRITORY.

An impression has prevailed that this university has in part failed, in years past, from the want of primary and grammar-schools to furnish pupils prepared for the higher studies. To some extent this impression is correct. A university means an institution for advanced classic, scientific, and professional culture; not for mere elementary studies. But a new State or Territory must for the most part prepare its own pupils for these higher studies, or the university will be a failure. At this moment the regents seem to be uniting with President Hill and his lady to meet this defect.

A published circular presents the following scheme, viz: two departments: a preparatory department, embracing all the studies of the primary, intermediate, and grammar-school-grades, (occupying eight years;) and an academic department, with four courses, at the option of the student; either one occupying four years.

But it has been suggested by a correspondent of the Seattle Dispatch that, unless there be a co-operation with this scheme throughout the Territory, there must be continued difficulty in securing well-prepared college-students. He therefore suggests that there

be adopted in the public schools a course adapted to prepare students for the university.

This union of plan and effort in grading and conducting all the schools of the Territory would, he says, quickly give higher character and greater value to them all, and make the primary, grammar-, and university-schools in reality what each name imports. The school-system of the Territory would then be a unit in plan and complete in all its parts.

An approach is made to this ideal in some of the older States. Towns elect a school-committee and authorize it to hire teachers and to pay them from the public-school-fund, for the different districts; also to establish new districts and erect school-houses. The town requires them also to establish a central high school, to which all pupils are admitted on examination. After a three-years course in the high school, the student receives his diploma and enters his chosen college or university, or goes into business-life.

It would not seem difficult, he thinks, for the counties of Washington Territory to do in this respect what towns do in more thickly-settled States. For example: Thurston County owns a good building at Olympia, now doing good service as a female-seminary, but only partially graded, which, at the expiration of the present rental, might be made the county high school, supported from the county- and public-school-fund, and pupils from every district in the county be entitled to admission on certificates of examination and to enjoy its full course without charge for tuition. The local district-schools would adapt their grades with reference to the high school, and this would be adapted to the university-course. Those pupils who failed to complete the course would have all its benefits as far as they should go. The integrity of the system could be retained and its details perfected, although districts might be slow to adopt it. King County could easily have a high school at Seattle, and Clark County at Vancouver, and other counties at their chief towns, to which the qualified scholars from all the districts could go free of charge and fit themselves for business or for the university. There would then be among the people a conscious power to control and improve the public schools and make them serve all the desirable purposes of educational institutions. The waste which annually occurs for lack of system could be thus easily avoided. A sense of real progress to something higher, even in the humblest rural district, would stimulate teacher, parent, and pupil to improve every term with reference to the next step upwards, and so to the end. Children in the country would have their equal class-rank with those in town, and there would be less feverish desire to get into town to be educated, while too young for its exposure, and at too great a cost for its benefits.

Such a system would conduce to the employment of the best teachers and the use of uniform books; to the efficiency of teachers' institutes; and to a steadily improving public sentiment upon this whole subject.

It would also attract a better class of population, that would enrich the communities in which it might settle.

It would awaken thought and care for the school-lands and funds, and secure the same for their true use.

For these reasons it is urged on the attention of the people.

Statistical summary of a university and college.

Names of university and college.	Corps of instruction.	Endowed professorships.	Number of students.		Corporate property, &c.						Number of volumes in library.
			Preparatory.	Collegiate.	Amount of property of corporation.	Value of grounds, buildings, and apparatus.	Amount of endowment.	Amount of productive funds.	Income from productive funds.	Receipts for last year from all other sources.	
Holy Angel's College	2	....	43	.....	.....	.....	.....	.....	.....	.....	650
University of Washington	3	....	50	.....	$65,000	$50,000	*	$15,000	$2,000	$1,000	125

* The endowment of the university, which has thus far been only existent as a preparatory school, consists of lands not now susceptible of advantageous use or sale.

OBITUARY.

Rev. Nelson Rounds, D. D., died at his residence near Vancouver, Clark County, Washington Territory, January 2, 1874. He was born in Winfield, Herkimer County, New York, May 4, 1807.

His parents being poor, he obtained his education by his own exertions, paying his

way by teaching or manual employment. He prepared for college at the academies of Utica and Clinton; studied for three years at Hamilton College; and, then passing to Union College, graduated there, in 1829, at the age of 22 years.

Dr. Rounds entered the traveling ministry of the Methodist-Episcopal Church in the year 1831. He served at two different times as professor of ancient languages in Cazenovia Seminary, New York. In 1844 he was elected by the general conference as editor of the Northern Christian Advocate, which position he occupied four years. The degree of D. D., was conferred upon him by Dickinson College, Carlisle, Pennsylvania. In 1868 he was elected president of Willamette University, Salem, Oregon, and presided over this institution for two years with marked ability and success, though much of the time in poor health. Resigning in 1870, he moved to Washington Territory, and was soon after elected by its legislature as territorial superintendent of public instruction. As the first incumbent of that office, he was able to exert an extensive influence in securing moral and religious instruction in the public schools of that Commonwealth.

Dr. Rounds was well known, both as a minister and an educator, throughout many States, both East and West. His miscellaneous writings, published in the current periodicals of the church, were numerous. He often indulged in biblical criticism, which department of study he had cultivated with assiduity. He devoted his life to the promotion of education and religion.

WYOMING.

Number of pupils in private schools	100

TEACHERS AND TEACHERS' SALARIES.

Average salary of teachers per month:	
Male	$150
Female	70

The above are approximate estimates for the Territory. The whole population in it amounts to only nine to ten thousand; these are scattered along the Union Pacific Railway for over 500 miles. The places where there is a population sufficient to support a school are few; but wherever there are people and children in one place enough to form a school, a school is established and an effort made to have a good one. The laws make liberal provision for schools by taxation, but the school-lands have not yet come into market. The whole Territory is divided into five counties, each having a county-superintendent. There are no township-organizations. Except along the line of the Union Pacific Railroad, the Territory is very sparsely settled, hence there are but about ten school-districts in the Territory. Two of these districts, No. 1, Laramie City, and No. 2, Cheyenne, have commodious buildings, and schools of three departments each, well graded. High-school-departments will be added this year. The schools of the other districts are smaller, but efficiently managed. In fact, in no State or Territory of equal opportunities can be found manifested a deeper interest in education or a public-school-system better organized and more liberally sustained.

Dr. J. H. Hayford, of Laramie, has been appointed territorial superintendent of public instruction for 1874.

ADDENDUM TO NEW HAMPSHIRE.—OBITUARY.

Notice of the decease of Prof. Dixi Crosby, M. D., LL. D., an eminent physician and medical instructor in Dartmouth College, had not been received when the matter relating to New Hampshire was passing through the press. Rather than neglect wholly one well worthy of remembrance, a brief notice of him is appended here.

Dr. Crosby had been professor of anatomy, surgery, and obstetrics in the medical department of Dartmouth College for thirty-five years, when, in his seventy-fourth year, death arrested his labors, September 26, 1873. Though occupying a retired and quiet sphere, he bore the reputation of being one of the most skillful surgeons of our country, and some thought him one of the first in the world. "Fearless and original, fertile in expedients and ingenious in their use," he often acted while others were deliberating, and saved endangered lives by rapid and decisive operations. While yet a student, he, by such action, preserved two patients whom old surgeons had declared to be beyond all hope, securing thus fame as an operator which never afterwards was forfeited. As a lecturer, he attained equal reputation, his instructions being marked by a perspicuity, an energy, a pointedness, and a felicity of illustration, which captivated interest from the outset and retained attention to the close, flashes of quiet humor lighting up dark places and fixing impressions that might otherwise have faded from the mind.

EDUCATION AMONG THE INDIANS.

In presenting the facts in relation to this subject for the year 1873, it is difficult to define, in direct terms, whether they do or do not present a satisfactory result. Some progress has evidently been made, but it is as yet only in isolated cases. No general proofs are as yet obtainable, beyond that one which is evident to all who watch the course now being pursued, viz, that the Government is yearly obtaining a firmer control over the wandering and more or less predatory tribes, concentrating and settling scattered portions and bringing the more formidable bands to feel its power. This is a condition precedent to all real progress. The general divisions which have heretofore been made of civilized and settled communities, of reservation- and nomadic tribes and bands, will be readily borne in mind. They will be found serviceable by those interested and can be easily traced in the facts hereinafter presented.

INDIANS IN THE STATES, AND NOT ON RESERVATIONS.

There are small fragments of Indian tribes, who do not merge in the general body of citizens, residing in the States of North Carolina, Georgia, Tennessee, Florida, Texas, Indiana, and Iowa. They may be classified as follows:

Cherokees, estimated, in the three first-named States	1,700
Seminoles, in Florida	300
Sacs and Foxes,* Iowa	419
Liperons and Tonkaways,* in Texas	2,000
Miamies,* in Indiana	345
Miamies,* in Michigan	19
Total	4,783

The bands marked with an asterisk (*) are to be removed, those from Iowa to the Indian Territory, while the Miamies are about to become citizens. The Cherokees will generally remove or lose their identity; the Florida Seminoles will doubtless be "ground out;" and the Indians in Texas are about to be removed to the Indian Territory. There is nothing of special interest as to educational matters in connection with these bands to be recorded here.

THE SIX NATIONS IN NEW YORK.

The New York Indian tribes known as the Six Nations, located in that State on eight small reservations, show a steady advance in all the elements of civilized life. They numbered at the close of September, 1873, 5,141, of whom 2,531 were males and 2,610 females. This is an increase over the preceding year of 71, which is about the average per cent. of births. There are 28 district-schools on the reservation, with 28 teachers, (an addition of 2 for the year,) of whom 24 are females, with 1,259 pupils, an increase of 130 for the year. Of these, 676 were males and 583 females. During the year 208 Indians have learned to read. The Indians pay a regular school-tax and the schools are arranged under the State law. Individual Indians contributed $611 during the year; religious societies, $250. There are 13 organized churches, supplied by missionary effort. Two are Indian preachers. Of the missionaries, three are Presbyterians, four Methodists, and two Baptists. The Quakers have a training and boarding-school on the Tonawanda reservation, which is doing well. The return of dwellings, 1,024, is a little more than one for every five persons. The number of acres under individual cultivation is 19,735; the Government has none.

INDIANS IN MICHIGAN, WISCONSIN, AND MINNESOTA.

These three States are properly classified together, as the largest Indian nation with which the Government deals, the Chippewa or Ojibbeway, is indifferently resident or migratory in each of them. In these three States considerable bodies of Indians are taking their land in allotment and otherwise preparing to merge into citizenship. To some extent this change has been retrogressive—missionary—and, as a consequence, educational efforts have been retarded or stopped altogether. During the past year, however, there has been a beneficial change in this respect. The Indian population in these three States is divided as follows:

Chippewas of Red and Leech Lakes	6,500
Ottawas and Chippewas	6,039
Chippewas of Lake Superior	1,498
Chippewas of Swan Creek, &c	1,630
Chippewas of Fond du Lac	5,125

Chippewas of Pillagers and Mississippi	4,547
Chippewas of Red Lake	1,141
Stockbridges	576
Menomonees	1,480
Oneidas	1,279
Total	29,815

The Chippewas in Wisconsin and Michigan alone number 8,533 males and 9,755 females. The value of their individual property is estimated at $911,048. Stated according to agencies, the area of their reservations, acreage under cultivation, and houses occupied by the Indians of these two States are as follows:

Agencies.	Area of reservation, (acres.)	Number of houses.	Acres under cultivation.	
			Individual.	Government.
Green Bay	302,720	418	4,654	100
Michigan	1,040,640	959	12,075	.....
La Pointe	606,500	135	326	69
Chippewa	2,432,000	145	500	85
Chippewa, (special agency)	2,240,000	200	350	.....
Chippewa, (Red and Leech Lakes)	4,672,000	.....	.....	.....
Total	11,293,860	1,857	17,905	254

This makes a total of over 4,331 acres *per capita*, and for Michigan and Wisconsin of 13 to each house, and of about three-fourths of an acre under cultivation for each Indian. The schools show very little progress. There are reported only 17 schools, with 24 teachers and 645 pupils, of whom 344 are males and 300 females. During the past year 130 have learned to read, and there have been 3,615 Indians brought under the direct influences of the agencies and missionary teaching. In all, there are 11 school- and 5 church-buildings, the latter with a membership of 580. The amount of money contributed by religious societies for school-purposes was $2,560 and by individual Indians $200. Eight missionaries labor among them, of whom two are Roman-Catholic, three Methodist, one Presbyterian, and two Episcopalian. The inspector, Mr. O'Conner, in his report, considers the advance as quite considerable, especially in the industrial direction. He also accords special praise to the efforts being made in Minnesota. He describes them as "plain and sensible;" states the White Earth reservation to be peculiarly adapted to the use of the Indians. The Indians there are cheerful and contented. There are 4 schools, with 9 teachers, (three being employed by the American Missionary Association.) The Indians are paid for work done, principally in provisions, and considerable progress has been made. They are nearly all comfortably housed and are all owners of good stock. At Leech Lake there is 1 school, with 2 teachers. The number of scholars is not given. Efforts are being made at both reservations to establish manual-labor-schools.

NEBRASKA AND DAKOTA.

In Nebraska the Indian population is largely removed from the conditions of nomadic life, and is now manifesting the improved relations which must follow civilized surroundings. With the exception of the Pawnees, the small tribes located in the State are industrious and thriving, while the promise of the rising generation is very good. The population, their reservations, cultivated land, &c., are given in the following table:

Tribes.	Population.	Area of reservation, (acres.)	No. of houses.	Acres under cultivation.	
				By Indians.	By Government.
Santee Sioux	917	115,200	150	350	250
Winnebagoes	1,522	97,000	125	1,500	350
Omahas	1,001	200,000	68	600	25
Pawnees	2,376	288.000	10	1,300	210
Iowas, &c., (two agencies)	763	32,000 165,000	52	1,300	.....
Total	6,579	897,200	405	5,050	835

The population is divided into 2,572 males, and 3,055 females. There are 14 schools and 28 teachers, 8 of whom are males. The attendance includes 482 male and 282 female pupils, a total of 764. The amount of money contributed by missionary and other religious societies for educational purposes is $12,080; by individual Indians, $310. Laboring among them are 14 missionaries, of the Episcopalian, Congregational, and Presbyterian Churches. The Quakers have several missions. Out of 19 school-houses, on different reservations, 13 are under the control of the Friends. There are but three church-buildings, one of which was erected by the Friends. The total membership is 570. The number who have learned to read during the past year is 101, while 4,203 are now under the direct influence of the several agencies. The foregoing facts show an average area for each Indian of 119¾ acres—an area far less than that possessed by any other similarly located tribes. The area under cultivation is about nine-tenths of an acre *per capita*, or, putting it into families averaging five each, the amount is about 4½ acres for each family. There is about one house for every 16 persons and but one school for every 469 persons. The number of pupils reported is a fraction more than one in eight and one-third. According to the statistics of the preceding year there has been a decrease of attendance to the number of 207, the total reported for 1872 being 207. The figures are, after all, not accurate, in most instances being estimated, while the attendance is so irregular as to make it difficult to make exact statements. An examination of the reports shows that the general condition of the Indians in Nebraska has improved. Good manual-labor-schools are established at the Sisseton and Wahpeton, the Pawnee, Omaha, Santee Sioux, and Winnebago agencies. All of them have good buildings for their use, and the attendance upon the schools is large. The inspector reports of the Sisseton Sioux: "Their progress is all that could be expected." The Pawnees are improving slowly. The Omahas are well disposed. The Winnebagoes live in good houses, "are cheerful and well satisfied with their lot" and they "present on every side evidences of industry, thrift, and good management." The Santee Sioux "appear to be gradually improving in their inclination to and ability for labor." The Sioux of Spotted Tail's band at Whiteston's agency are reported by Inspector Daniels to be "peaceable, with professions of friendship for all." Spotted Tail declares they want to do like the whites: farm and live in houses.

In Dakota there are 15 different agencies, with a population under their charge of 97,217, nearly all of them being Sioux. The following table shows their condition as to industry and lands:

Tribes.	Population.	Area of reservation, (acres.)	No. of houses.	Acres under cultivation.	
				By Indians.	By Government.
Sioux, Sisseton, and Wahpeton	1,540	1,200,000	150	500	.....
Sioux, Sisseton, Wahpeton, and Cut-Heads	1,020	500,000	75	150	.....
Sioux, Yanktons, (lower)	2,534	400,000	.....	640	.....
	1,200	.....	.....	.....	.....
Sioux, Yanktons, (upper)	1,386	.....	30	250	9
Sioux, Uncapapas	1,502	8,444,000	4	110	.....
Sioux, Blackfeet	847	.....	180	900	225
Sioux, Brûlés, (Iowa)	1,800	.....	8	450	40
Sioux, Minnecoujons	600	.....	.....	.....	.....
Sioux, Yanktons, and Poncas	2,685	710,000	74	285	40
Sioux, Upper Brûlés	5,000	.....	.....	.....	.....
Arickarees and others	2,103	.....	501	.....	.....
Total	22,817	10,654,000	521	3,285	314

There are several reservations, the extent of which is not yet even estimated, while the area under cultivation is also larger than as given, and there is little to choose, hardly enough to make a comparison with.

Leaving out the Upper Brûlé Sioux, there are 17,217 Indians enumerated, of whom 7,040 are stated as females. Fourteen schools have been in operation, with 236 pupils, 12 teachers, and 6 school-buildings. Religious societies have contributed $11,000, and 2,538 Indians have been brought into settled conditions.

The Red Cloud and Shoshone agencies have under their control 1,224 persons, which, with the Indians who are attached but are still warring, makes their total 6,320. They have one school under the charge of an Episcopalian teacher, in which there have been 42 pupils. Eleven Indians have learned to read, and 800 have been induced to abandon their nomadic life. These facts, meager as they are, are still indicative of growth, as it is the first year they have been stated.

KANSAS AND THE INDIAN TERRITORY.

Two questions are continually rising in any broad consideration of the Indian population and its necessities. They are: first, what is the best method of withdrawing Indian tribes and bands from a nomadic and predatory life? and, secondly, when that

has been done, and the influences of civilized existence have, in greater or less degree, obtained control, what is to be the final result to the Indian minority? The latter question is in process of being answered by the conditions surrounding and permeating the influential Indian communities embraced in the geographic area under consideration, for, with the exception of a few scattered bodies like the Six Nations of New York; the Stockbridges, Oneidas, and others, in Michigan; the Miamies, in Indiana; the Otoes and Winnebagoes, in Nebraska; numbering in all not more than 10,000 persons, the Indians of Kansas and the Indian Territory are by all odds the most advanced of their race. Their condition is such as to hold out the definite hope of saving the Indian as an integral part of our composite nationality, and so in a degree returning some compensation for the wrongs that the stronger have perpetrated upon the weaker.

KANSAS.

A large proportion of the Indians once resident or roaming in this State, have, during the last six years, been definitely removed therefrom and settled in the territory south thereof. There are at present only four agencies located in the State, with a population, reservations, &c., as follows:

Tribes.	Population.	Area of reservation, (acres.)	No. of houses.	Acres under cultivation.	
				By individuals.	By Government.
Kickapoos	296	26,138	53	1,140	.....
Kaws	*627	100,000	3	.....	.....
Pottawatomies	*1,336	77,640	44	580	62
Peorias and others, (Quapaw agency)	*151	48,000	56	1,567	.....
Sacs and Foxes and Iowas, †(White Cloud agency)	313	6,000	.....	.....	.....
Indians in the State without agencies	‡565	5,760	.....	207	.....
Total	3,288	263,538	156	3,494	62

* Estimate of 1872.
† These are partly in Nebraska, one reservation of 6,000 acres being in that State.
‡ Estimated.

This gives an aggregate of about sixty-one and one-third acres to each Indian. The statistics of cultivated land are altogether imperfect, and it will be found that it is at least one acre and a half to each individual. The school-statistics are not separated clearly, from the summaries at hand, for the entire central superintendency. It is quite certain, however, that reasonable progress has been made. At the Kickapoo agency there is a mission-boarding-school, with an average attendance of twenty-five pupils. There are also two or three small district-day-schools. Inspector O'Conner considers the younger pupils fully as far advanced as white children of the same age. He says they "seem unusually bright." The agency is under control of the Friends, and the Indians' advancement is slow but steady. The Pottawatomies living on their reservations are known as the "Prairie band." They have long resisted the influences which have disintegrated the tribal character of a large number of their people, who are now citizens of the State and nation. The tribe proper does not now number over 400 persons, the balance being "sectionized" citizens, who hold their lands in severalty but retain a common interest in certain annuities and other payments. Their children generally attend either the common schools or those of the Catholic mission at St. Mary's, on the Kansas River. The educational fund of this people is $10,585 annually, appropriated under treaty-stipulations or arising from the interest of trust-funds. There is a very good manual-labor-school on the reservation, in which the inspector says the children are well instructed. The scholars number thirty-four. The Iowas and the Sacs and Foxes (the major portion of this once powerful tribe are resident in the Indian Territory, only eighty-eight being included in the White Cloud agency) are stated to be thrifty and industrious; especially the former. There are sixty scholars in the day-school, being one in four of the entire number. The Iowas also have an industrial home for orphans, supported by themselves. No data are now accessible with regard to the Kaws and their school. Their condition is stated to be improving in all respects.

As for the other small communities, their condition is in all respects equally as good as that of their white neighbors.

THE INDIAN TERRITORY.

The importance of the Indian communities residing in this Territory may be best appreciated by an estimate presented from a table of comparative statistics, relative to this and other Territories. The basis is that of 1872, and is as follows:

Population	68,505
Acres of reservation	44,154,240
Improved	204,674

Bushels of wheat, &c	6,739,355
Value of farm-produce	$4,663,610
Number of horses, cattle, &c	464,465
Their value	$4,947,101
Total value of real and personal property	$16,987,818

Lands are held in common, and not valued. This is the largest amount given for any Territory except Colorado and New Mexico, and it is practically much larger than in both, as the land thereof is embraced in their valuation. The following statistics are reliable as to population, &c.:

Nations and tribes.	Population.	Area of reservation, (acres.)	No. of houses.	Acres under cultivation.	
				By individuals.	By Government.
Civilized.					
Cherokees	17,217	5,000,000	3 965	89,250	.....
Choctaws	16,000	6,668,000	.....	50,000	.....
Creeks	13,000	3,215,495	.....	31,000	4,390
Chickasaws	6,000	4,377,600	.....	39,000	.....
Seminoles	2,438	200,000	500	7,600	.....
Quapaws, Senecas, Wyandotts, Shawnees, &c.	1,219	157,000	879	.....	65
Total	55,874	19,618,095	5,344	216,850	4,455
Uncivilized.					
.....	1,192	483,840	164	1,342	50
Osages	2,823	1,500,000	83	90	116
Caddoes	1,528	.....	.....	925	180
Kiowas	2,000	3,549,440	9	186	70
Comanches	2,198	4,011,440	.....	60	250
Apaches and Delawares	804	.....	.....	.....	.....
Cheyennes	2,200	.....	.....	.....	.....
Arapahoes and Apaches	1,770	.....	.....	.....	.....
Total	14,515	9,544,720	256	2,603	666
Total of both divisions	70,389	162,815	5,600	194,232	5,121
Total for Kansas	3,288	263,538	156	3,294	62
Grand total	73,677	29,426,353	5,756	197,526	5,183

These totals are not given as perfect, for, even as to the civilized Indians, though the figures are mainly correct, they, with the others, leave a great deal wanting. As to school-statistics, the data available for this presentation are quite imperfect. Chief Ross, in an argument before the House Committee on Territories, thus summarized the educational situation for the nations he named: "The Creeks have three missions and 2,050 church-members and an average Sunday-school-attendance of 464. They have one boarding-school and thirty-one day-schools, attended by 860 pupils, at a cost of $14,258 for the past year. The Choctaws and Chickasaws, numbering 20,000, have three missions and 2,500 church-members. They have two boarding-schools and forty-eight neighborhood-day-schools. Thirty-six of these are sustained by the Choctaws, at a cost of $36,500; fourteen by the Chickasaws, at a cost of $33,000 last year." Mr. S. S. Stephens, Cherokee superintendent of public schools, in a communication to the Bureau of Education, gives the present condition of their schools in the following statement:

Number of Cherokee schools	61
Number of colored-schools	5
Aggregate attendance	2,300
Average attendance	1,300
Number of colored children	200
Pay of teachers, first-class	$50
Pay of teachers, second-class	$40
Pay of teachers, third-class	$30
Months taught	9½

The following English branches are taught: geometry, algebra, arithmetic, rhetoric, English composition, grammar, orthography, geography, and writing. Native teachers, 44; white teachers, 22.

REMARKS.

There is an orphan-school, with 90 pupils; one female high school, teacher from Mount Holyoke Seminary, South Hadley, Massachusetts; and one missionary-school, (Moravian.) School-fund, annual, $50,000; orphan-fund, $19,000.

Mr. Stephens appeals earnestly for all possible aid in this work. He claims that the Cherokees have been at work for thirty-five years; that they show great energy and activity, and that an especial need of the Territory is a normal school for the civilized natives. The reports of the missionaries laboring among these people are encouraging, and especially so in the direction of education. All experience points to the advantage of object-lessons in attracting the attention of Indian children, whose further education is to be advanced by means of labor-schools and general industrial training. Colonel Boudinot, a prominent Cherokee citizen, (who represents the growing sentiment favorable to abnegating the tribal systems, sectionalizing the territory, taking lands in severalty, and disposing of the remainder through the Government to ordinary settlers,) urges very strongly the necessity of separating the children at an early age from Indian habits, the teaching of the English language, the use of more of their large fund for school-purposes, and the bringing of the Indians everywhere into closer and more compact settlements, where they can be reached by, not removed from, the influences of civilization.

The following schools belonging to the tribes in the Territory are held in trust by the United States for educational purposes:

Cherokee school-fund	$520,134 64
Cherokee orphan fund	248,600 51
Choctaw school-fund	50,355 20
Creek orphan-fund	77,015 25
Delaware school-fund	11,000 00
Kansas school-fund	27,267 31
Kaskaskias, Peorias, &c., school-fund	44,700 00
Osage school-fund	40,236 63
Total	1,019,309 54

The total amount of all funds held in trust for the tribes aggregates about $8,000,000.

That there has been some advance is evident from the fact that by the carefully-prepared table of the Indian peace-commissioners for last year the total number of schools for the five nations—Cherokee, Choctaw, Creek, Chickasaw, and Seminole—was stated at 148, with an attendance of 4,439 pupils, while in the statistics quoted here from Ross and Stephens the total for the four principal tribes—Cherokee, Creek, Choctaw, and Chickasaw—is stated at 148 schools, with an aggregate attendance in the two first alone of 3,160 scholars. Adding, from last year's report, for the Choctaws, 900; Chickasaws, 439; Seminoles, 207, the total will be, for the Territory alone, 4,706, an increase of 267.

The careful summary of the reports received at the Indian Bureau results in the following aggregates:

Results in Kansas and the Indian Territory.

Number of males	31,587
Number of females	33,564
Sex not stated	4,826
Total	69,977

Value of individual property, $12,438,016; schools, 179.

Teachers, male	116
Teachers, female	101
Total	217
Pupils, male	2,373
Pupils, female	2,502
Total	4,875

School-buildings	78
Learned to read during the year	169
Amount contributed by religious societies	$6,983
Number of churches	62
Indians brought under control of agencies	60,257

The total increase of schools for the year 1873 over that of 1872 is 15; of teachers, 29. As to scholars, there appears to have been a decrease of 218. In all probability there is more apparent than real decrease, as the returns are by no means complete, and such details as are at hand in regard to the principal nations certainly show a steady growth of attendance on the schools. The cost of the schools for both classes is given at $127,408.92. This is below the real sum, which cannot be less than $150,000.

In other matters there are some gratifying proofs of progress, but the Territory has evidently been retarded in a moral point of view, by the character of the population and other influences brought in or produced by the existence of the railroads passing through the territory.

Republican citizenship, with severalty in land ownership, an unalienable title for a period of years, and a large use of funds for the establishment of common schools, under forms of government similar to their neighbors, seems the only adequate remedy.

WYOMING AND COLORADO.

Only one agency is located in Wyoming, and the Shoshones and Bannacks attached thereto do not number more than 1,000. The Ogallala Sioux and detached bands of Northern Arapahoes, Cheyennes, and Blackfeet find refuge in the northwest portion of Wyoming.

An effort has been made during the summer of the past year to secure the removal of the latter bands to their affiliated tribes in the Indian Territory. It has been in part successful. Nothing is said of any school at the agency.

There are three agencies in Colorado. The Indian population is chiefly Pi-Utes, and numbers 4,349, of whom 1,766 are males. Their individual wealth is stated at $150,000. The only reservation particularized is that of the Los Piños agency. This contains 14,480,000, with 35 houses and but 45 acres under cultivation. At Denver agency there is a school-building, with a school of 40 pupils. The teacher is a lady. There is no agricultural effort, and nothing but the most meager proofs given of the want of interest in such matters as education.

UTAH AND NEVADA.

There is little to be said of the Indians in this area. With the exception of a few bands of Pi-Utes in Nevada, they are all among the least advanced and most degraded of their race. There are no schools reported in Utah.

There are four agencies with the following population under the care of the officers in charge:

Pi-Utes	9,000
Washoes and other bands	2,204
Shoshones	2,000
Total	13,204

The area of reservations, cultivated lands, &c., so far as given, is as follows:

In Nevada there are 640,000 acres embraced in the Lake Pyramid and Walker reservations, and in Utah at Uintah Valley agency 2,039,040 acres, with 180 under cultivation. There is a successful school at the Pi-Ute agency, Nevada, and the Indians have 300 acres under cultivation. The Pi-Utes at Pyramid Lake and Walker River, about 600 in all, are reported to be in an advanced state of civilization. All are well dressed, without blankets, paint, or trinkets. The men work steadily. Their settlements "present the appearance of a respectable and orderly community." The agent provides for the sick, aids the industrious, but extends no aid to idle Indians. Other small bands of Utes are scattered through Nevada, the men earning their own living, as a rule, and thus showing themselves orderly and industrious.

NEW MEXICO AND ARIZONA.

The growing importance of New Mexico and the probable construction of the Southern Pacific Railroad through that Territory and Arizona make the relations of the resident Indian tribes and bands of considerable significance.

In New Mexico the Indians have to overcome the *vis inertiæ* of surroundings wholly unprogressive in character. Their progress is, on the whole, quite significant. There are

few or no hostile bands in this Territory and there is considerable industry among the several tribes. The following statistics are of value:

Tribes.	Population.	Area of reservation, (acres.)	No. of houses.	Acres under cultivation.	
				By individuals.	By Government.
Navajos	9,114	3,328,000	.....	.....	.....
Mescalero Apaches	1,875	.....	.....	.....	.....
Pueblos, (19 villages)	7,879	505,657	1,850	13,940	.....
Southern Apaches, &c	1,770	.....	.....	.....	.....
Mouache Utes and Apaches	1,210	.....	.....	.....	.....
Total	21,848	3,833,657	1,850	13,940	.....

Of the population there are enumerated 9,932 males and 10,726 females, the balance not being stated. The statistics of land and industry are quite imperfect, and the foregoing table is not a fair representation of their condition in this respect. Of schools there are 5 reported, with 110 pupils; boys, 73; girls, 37; teachers, 6. The amount contributed by religious societies to this purpose was $1,208. During the year 73 have been taught to read and 5,095 have been brought directly under control of the agencies.

In Arizona there has been considerable progress made towards a cessation of the Apache warfare, the first step towards any advance of the Territory. There are seven different tribes and agencies, as follows:

Tribes.	Population.	Area in reservation. (acres.)	No. of houses.	Acres under cultivation.	
				By Indians.	By Government.
Mohaves	3,840	131,200	1	100	.....
Yumas	2,000	75,000	.....	.....	.....
Hualapais, &c	2,184	.....	.....	.....	.....
Pimas and Maricopas	4,326	64,000	1	4,400	890
Papagoes	6,000	.....	800	340	.....
Moquis, (7 villages)	1,700	.....	.....	.....	.....
Apaches, various bands	5,972	139,000	.....	341	32
Total	*26,022	409,200	802	6,081	922

* Of these 8,937 are enumerated as males and 8,201 as females.

In this population of 26,000, there are only 4 schools reported, and 6 teachers, with 188 pupils—108 males and 80 females. The missionaries are Roman-Catholic and the Reformed Church, the latter denomination contributing $600 for educational purposes. There is one church-building, with 1,500 members. The amount of personal property reported is $75,500. From reports of the several agents it is stated that the Navajoes are peaceable, industrious, expert in the manufacture of blankets and the raising of sheep and other stock; that they are very susceptible of advancement, but are without schools. The Moquis are reported as peaceable and industrious. There is only one school established among them. It is well attended.

The bands around Fort Wingate, New Mexico, are averse to labor, given to horse-stealing, and without any means of instruction. At Camp Apache, Arizona, the chiefs express a desire for schools. At Prescott there are none, and, until the Indians are better cared for, the inspector thinks it useless to establish any. One school is found at the Papago agency, the Indians of which tribe are well spoken of. The Pima and Maricopa Indians are reported most favorably as industrious, orderly, and loyal in the best sense. They have "a flourishing and exceedingly interesting school, with about 50 pupils." Among other attractive features is the teaching of music, for which the children show aptitude. There is danger, from the constant encroachment of the whites, of an interruption to the unbroken friendship of the people; indeed, reports of hostile action have already been received. The condition of this population, nearly 50,000 in the two Territories, conclusively shows the needs of some more definite policy in regard to the maintenance of schools and of other elevating efforts.

MONTANA AND IDAHO.

In these mountain-Territories there is a large Indian population, in which are found nearly all conditions, from settled and industrious communities to the savage Arabs

of the West, wandering and predatory, whose "hands are against every man." The large proportion of this population is found in Montana, the statistics being embodied in the following statement:

Blackfeet	3,000
Bloods	1,750
Flatheads	1,700
Piegans	2,750
Crows, (three bands,)	5,440
Pend d'Oreilles	1,821
Bannacks and Shoshones	677
Gros Ventres	1,100
Assinaboines	4,790
Sioux, Teton, Yankton, and Santee	10,625
Total	33,653

Of the foregoing there is a separate enumeration of 5,821 males and 7,640 females. The area of the several reservations in Montana is about 27,000,000 acres; cultivated by the Indians about 2,000 and by the Government 632 acres. There are 145 houses reported on the several reservations. The Blackfeet and Crows have the largest reservations, that of the former being over seventeen million acres, or nearly seventy thousand acres *per capita*. The day-school at the Crow agency makes a favorable report. The Catholic mission boarding-school at the Flathead agency is reported by the inspector as showing creditable results. There are 29 pupils. The day-school is not regarded as satisfactory. The reports from Fort Peck are not satisfactory. Little or no improvement is shown for the past nine years. In all, but four schools are reported in Montana; 164 pupils and 6 teachers. During the past year 43 were taught to read. The missionaries are Catholic and Methodist; there are nine of the former. The property owned by the Indians is stated at $290,000.

In Idaho there are but three agencies, controlling the following population.

Nez Percés	2,807
Bannacks and Shoshones	1,500
Cœur d'Alènes	2,000
Total	6,307

Their reservations, &c., are as follows:

Reservations.	Acres.	Cultivated.	Houses.
Nez Percés	1,344,000	1,562	33
Bannacks and Shoshones	1,568,000	285	2
Cœur d'Alènes	256,000	.....	.....
Total	3,168,000	1,847	35

The two first tribes or agencies named are enumerated, separately, as 1,811 males and 2,020 females, owning property to the amount of $302,000. There are three schools reported, with 69 scholars and 4 teachers; also, one Presbyterian missionary and two churches, with a membership of 709. The report of Inspector Kemble does not speak encouragingly of the results made with the Nez Percés, who have often been quoted as among the most advanced of Indian tribes. Mr. Kemble says that he finds "the civilization lacking in the most essential features of Christian education. The women have not been emancipated from their servile condition, but still perform all the severe labor of the fields, cutting saw-logs and toiling under enormous loads, like beasts of burden. The husbands of these women are members of the church and some of them very earnest and fervent leaders in prayer. The consequences of this half christianization are that there are no Christian homes, the children are brought up in the old heathen way, the families dwell in wretched lodges, and filth and degradation abound. Perhaps, however, the greatest evil is the effect upon the training of the young. The day-schools have been very poorly attended. There is said to be no adult Indian on the reservation out of school that can read and write English, and the indifference of parents to the advantages of education has been very hard to overcome. Labor being regarded as degrading or *womanly*, there have been few Indian youths to offer as apprentices in the machine-shops and mills. There is not one being taught a trade.

"The treaties provide liberally for the education of the tribe; but, until the present agent was appointed, the $8,000 annually appropriated for schools and teachers seems to have accomplished literally nothing that it was intended to accomplish. Under the

new management of the Indians, a better prospect has dawned. Competent teachers have been sent to the work by the missionary board, and capable matrons are to have charge of the boarders at the two schools."

From the Fort Hall agency no school-report is given and none at all from the Cœur d'Alènes.

CALIFORNIA, OREGON, AND WASHINGTON TERRITORY.

The Modoc war, with its sadly dramatic details, called, during the early part of the past year, a great deal of attention to the Indians of the Pacific coast. But that, after all, is an episode rather than an example of their condition. Statistics show some progress, and are, on the whole, satisfactory, apart from that history. In California there are three agencies, embracing the following population, area in reservations, &c.: total population, 21,161; * reservation, acres, 65,863; † cultivated by Indians, 142, and by Government, 1,549; houses, 122.

There are four schools reported at the reservations, with 266 scholars, an increase over the preceding year of two schools and 139 scholars. During the year 63 have been taught to read. Inspector Kemble does not appear to be favorably impressed by the condition of these Indians, but believes they are well disposed.

In Oregon the Indians have, as a rule, improved slowly but steadily. There, seven agencies have control of the following population:

Wascoes and other bands	626
Molels	924
Rogue River, (fourteen bands)	1,058
Walla-Walla, (four bands)	837
Klamath, Modocs, &c	1,120
Umpquas and others	343
Roving bands	4,200
Total	9,108

As far as enumerated separately, there are 1,751 males and 2,099 females. Individual property is stated at $311,200. Five reservations cover an area of 4,073,920 acres, of which there are cultivated by individuals 4,159 and by the Government 622 acres. The Indians are the owners also of 708 houses. There are two missionaries laboring among them.

In Washington Territory there is a large Indian population, uniformly peaceable and generally industrious, though not systematically so. There are in all seven agencies, with a population of 13,782 persons under their charge. As far as reported, the sexes stand 5,762 males and 6,220 females. There are six reservations reported, having an aggregate area of 887,524 acres—under Indian farmers, 4,133; cultivated by Government, 492 acres—with 475 houses. The number of schools reported is 18, with 13 teachers and 187 pupils. There are seven missionaries at work, representing different denominations. The property of these people is stated at $286,000.

Inspector Kemble draws an admirable picture of a wise agent, in his report of affairs at Yakama agency, Fort Simcoe. He says that among the domesticated and Christian portion of the Yakama Indians he found many evidences of thrift and progress; farms finely fenced; good crops raised and harvested. One secret of this condition is the admirable example set by the agent, who also acts as missionary, the *only* one among these Indians. He illustrates the excellency and dignity of labor by working with his own hands, cheerily and heartily, while he instructs the Indians in their labors, "working them in," as he describes it, in every species of farm-labor and common industry. The employés, catching his genial spirit, labor with him among and for the Indians, with patience and alacrity. It would be well, it is thought, if the method by which this agent manages Indians could be copied on other reservations. This inspector thinks Father Wilbur, as he is called, is bearing too heavy a burden; that he should be relieved by the appointment of a missionary. There is a want of increased school-facilities and hospital-accommodations, which the Government, in accordance with its treaties, should furnish. There is no lack of children for the boarding-school, and yet the agent is only able to take between forty and fifty, or about one-tenth of the children in the tribe of school-age.

The inspector suggests the employment of native teachers for primary day-schools at three or four different points on the reservation; also that some of the girls in the boarding-school be taken into the families of the employés to assist in and learn housekeeping. At a meeting of the employés and their wives, he asked that the agents' hands might be upheld by the voluntary labor of ministering women going from lodge to lodge, a suggestion which he has reason to believe will be acted upon.

* Of the foregoing population, the larger portion are not yet settled on reservations. During the past year 1,017 have been so placed.

† The total area embraces three, of which Round and Hoopa Valleys are the largest.

MISSIONARY SCHOOL-WORK AMONG THE INDIANS.

The American Board of Commissioners for Foreign Missions reports the following as their Indian schools: among the Dakotas, one training-school, with 10 pupils; one boarding-school for girls, with 6; three common schools, with 120; total of pupils, 136. Among the Choctaws, one boarding-school for girls, with 6 pupils.

Bishop Schweinitz, of the Moravian Church, reports two station-schools among the Indians, with one male and one female teacher and 73 pupils. The secretary of the Missionary Association of the Presbyterian Church South reports one school among the Cherokees, one among the Creeks, and one among the Choctaws, embracing between 50 and 60 boys; but whether this refers to the last-mentioned school, with which it is immediately connected, or to the two preceding also, is uncertain.

The American Missionary Association reports 28 teachers. The Protestant-Episcopal schools are not reported, nor are any by the Methodists or Baptists.

The following, from the missionary bishop of Niobrara, Rt. Rev. W. H. Hare, Protestant Episcopal, illustrates and enforces a very essential element in the successful education of Indians, and one which has heretofore been wanting. The bishop writes from Dakota, in reference to the school-work of his church, that "our missions are placed among a wild people, who, from the oldest down to the youngest, have never known any control, but have lived independent, idle lives, with no higher law than the whim of the moment. It is not easy to induce the children of such people to come to a day-school, and their parents would not think for a moment of compelling them. But they will come to a boarding-school, for there they find what they do not know in their own homes, regular meals, good clothing, and comfortable beds. These wild children become quite docile in the schools and their improvement is decided."

The bishop has arranged, therefore, that a number of children shall be taken into the mission-family at each of the mission-stations, and a small boarding-school thus established wherever it is practicable. He has also begun a central boarding-school of higher grade, where he himself lives, to which the other schools shall be tributary, by sending to it their most promising boys for education as teachers and missionaries.

About the middle of December five picked boys, all of the Yankton tribe, were admitted, their ages ranging from 12 to 21 years, the plan being to train a limited number, so that they might assist in training others who should come after. The plan worked admirably; before a month had passed five more boys were admitted, and the intention is soon to receive some of the Ponca and also of the Santee tribe. The boys are taught to serve themselves and to take care of the house. They are divided into three squads, to each of which is assigned for one week a particular department of the work, namely: the dormitory-, table-, and out-door-work. By 10 o'clock all manual work for the morning is over, and the boys go into school for two hours, when they have dinner and recess till 2 o'clock, then work again till 3, then school till 5. The bishop says the boys take to work better than he dared expect; sometimes, however, they do not feel like work, and when the outside-work-hour arrives they are as hard to catch as wild deer; and when caught they go to their work somewhat as a man goes to be hanged.

SCHOOL-STATISTICS OF THE PEACE-COMMISSION.

The Board of Indian Peace Commissioners has conducted inquiries by means of its own agents, and the following is a summary of the results:

It reports a total of 247 schools, 28 of which are boarding-schools; 273 teachers, 60 in boarding-schools; 7,032 pupils enrolled in day- and boarding-schools, of whom 6,200—3,658 boys and 2,542 girls—were in day-schools and 1,032—560 boys and 472 girls—were in boarding-schools. The average attendance at the day-schools was 2,771 and at the boarding-schools 502. The cost of supporting the day-schools during the past year was $71,688.44, of which $21,270.58 was defrayed by Government; upon the boarding-schools was expended the sum of $55,180, $22,800 of which was furnished by Government.

Summary of the Indian Bureau.

Number of Indians in the United States, exclusive of Alaska	295,084
Wealth in individual property	$16,082,155
Number of schools upon Indian reservations	285
Number of pupils—males, 4,792; females, 4,234	9,026
Number of teachers—males, 172; females, 185	357
Number of school-houses	167
Amount contributed by religious societies for schools	$27,173
Amount contributed by individual Indians	$1,121
Number of missionaries	91
Number of Indians brought under the influence of agencies	38,637
Number of Indians who have learned to read and write during the year	1,019
Number of church buildings on reservations	103
Number of church-members, (Indians)	9,664

There are some apparent discrepancies, both in the details first presented and in the statistics gathered, from the Peace Commission, but on the whole the figures of the Indian Bureau itself will be found most reliable. The larger portion of such conclusions must, in the main, be simply estimated from imperfect data; being, in many instances, only guesses at the truth. Concentration of the Indians is in all circumstances the first condition of knowledge and progress. Education must always be objective and industrial, to in any way accomplish desirable results

EDUCATIONAL WORK OF SUNDAY-SCHOOLS AND FOREIGN MISSIONS.

The secretaries of the principal Sunday-school-unions and missionary associations have kindly furnished the Bureau with details of the educational operations conducted by them. It was at first intended that these should be included in the report in full. The pressure of other matter compels a relinquishment of this intention and a presentation of only such statistics as may show to what proportions these forms of educational agency have reached. But it is hoped that the interesting exhibition made in the fuller details may yet find room for more adequate display in a "circular of information" from the Bureau. Meanwhile this briefer showing must suffice:

Statistics of Sunday-schools.

Denomination.	Officers and teachers.	Children in schools.
Methodist-Episcopal Church	190,060	1,259,464
Baptist Church North	84,700	642,500
Baptist Church South	31,345	240,000
Presbyterian Church	65,000	600,000
Protestant-Episcopal Church	25,851	233,565
Moravian Church	912	11,828
Reformed Church in the United States	9,500	66,000
Congregational Church	28,080	280,890
Disciples of Christ	27,173	284,470
Total	462,621	3,618,717

Returns from the denominations from which no reports have been received would probably increase the totals above given to at least 500,000 teachers and 4,000,000 scholars—numbers which amply indicate the importance of this agency in the education of our youth.

The American Sunday-School Union, belonging to no one denomination, but managed by representatives from several, reports 30,616 schools—embracing 191,946 teachers and 1,230,265 scholars—established by it during the past twenty years. Most of these are probably included in the above returns, as the policy of the union is not to retain the charge of the schools formed by its agents, but to turn them over to the first co-operating denomination that may follow in its footsteps and take possession of the ground.

STATISTICS OF MISSION-SCHOOLS.

These embrace only schools established by United States missionary associations in foreign countries or among Indians not admitted into citizenship with us, as all others are supposed to be included in the current statistics of the Bureau. The only exception to this is in the case of the Moravian Church, whose mission-schools are sustained by the whole body of its members, so that, save in the case of its Indian work, it cannot be told which are the product of foreign and which of domestic contributions.

The American Board of Commissioners for Foreign Missions, whose operations are in Mexico, Spain, Bulgaria, Turkey, India, China, and Africa, reports as follows:

Number of training- and theological schools	12
Number of boarding-schools for girls	21
Number of common schools	496
Total	529
Number of pupils in training-schools, theological and station-classes	360
Number of pupils in boarding-schools for girls	627
Number of pupils in other adult-classes	531
Number of pupils in common schools	17,126
Total	18,644

The Missionary Association of the Baptist Church North, with missions in Hindostan, Burmah, Assam, China, Africa, and Sweden, reports:

Schools.	No.	Teachers.	Students.
College	1	5	89
Theological schools	2	4	75
Literary and theological schools	2	6	40
Normal schools	9	.....	180
Training-schools	1	2	60
Village- and station-schools	142	.....	5,842
Boys' schools	2	.....	.....
Girls' schools	2	4	32
Totals	161	21	6,318

The Baptist Church South reports no foreign mission-schools, but gives 1,353 as the number of its teachers and pupils among the Creeks, Choctaws, and Cherokees.

The Presbyterian Board of Foreign Missions, working in Mexico, Brazil, Colombia, Africa, Hindostan, Siam, China, Persia, Syria, and among the Indians of our plains, reports 295 males and 393 females in its boarding-schools and 7,575 males, with 1,530 females, in its day-schools; total, 10,201. The number of schools and teachers is not given.

The Presbyterian Church South, with fields in Colombia, Brazil, Italy, and China, has 6 schools, with about 120 pupils.

The Reform Presbyterian has in Syria 18 teachers, with 70 boarding and 160 day pupils; total, 230.

The United Presbyterian Church has in Syria, Egypt, India, and China, 465 pupils in Sunday-schools, 2,495 in day-schools, 11 in boarding-schools, and 12 in theological; total, 2,983.

The Protestant-Episcopal Church, whose mission-stations are in Mexico, Greece, Palestine, Africa, China, and Japan, has in its different fields 4 boarding-schools for boys and youths and 1 for girls; 14 day-schools for boys, and 7 for girls. The teachers in these schools are about 68, the scholars about 1,437.

The Reformed Church in America (late the Dutch) has in India and China 48 day-schools, with 824 pupils; 2 higher seminaries, with 94 pupils, and a medical class of 5 students. In Japan it has 3 schools for boys and 2 for girls, the number of pupils in which averages 50 males and 60 females.

The Evangelical Lutheran Church reports that in India it has schools in 70 villages, attended by 25 itinerant and 17 stationary teachers, which have an average attendance of about 300 pupils, and who have given instruction during thirty years past to not less than 9,000 pupils. In Liberia, Africa, it has 1 school, with 2 teachers and 50 scholars.

The American Missionary Association (Congregational) does not in its report sufficiently separate its domestic and foreign work to enable one to judge how many of the 14,048 pupils enumerated are in its Indian and foreign schools.

The Moravian Church, in its missions in Greenland, Labrador, among our Indians, in the West Indies, in Hindostan, Australia, and South Africa, has 78 boys and 15 girls in training-schools for preparing teachers, with 206 station- and out-station-schools, containing 15,101 scholars, under 176 male and 93 female teachers, with 673 assistant monitors.

The Woman's Union Missionary Society, laboring for the education and elevation of women in Oriental lands, has in Calcutta, India, 75 native teachers under 12 missionary principals, with 1,000 day-pupils and 30 female pupils in an orphanage. There is also a normal school for training teachers, and 30 schools (probably under the care of the native teachers) are held in the suburbs of the city. In Allahabad it has, under 2 missionaries, 2 schools with 2 native teachers and 130 scholars. At Yokohama, Japan, it has, under 5 missionaries, 40 day-pupils—10 in boarding-school, 10 in a daily Bible-class, and 30 in Sunday-school.

The whole number of pupils in mission-schools supported from the United States, distinctly returned, is nearly 40,000, exclusive of the 15,101 of the Moravian Church and the 14,048 of the Congregational.

EDUCATIONAL CONVENTIONS AND INSTITUTES.

THE NATIONAL EDUCATIONAL ASSOCIATION.*

The thirteenth annual meeting of this body was held in Elmira the first week of August. The arrangements made for the accommodation of the association gave universal satisfaction and the spirit of the meeting was excellent. President Northrop and the other officers were strongly commended for the admirable manner in which they discharged their duties.

We give a brief report of the proceedings, condensed from a very full report in the Elmira Advertiser. The forenoons and evenings were occupied by the general association and the afternoons by the departments.

General association.—The association met in the Opera House, Tuesday, August 5, at 10 a. m., President Northrop, of Connecticut, in the chair. Prayer was offered by Rev. Dr. George, of Elmira, and, after the appointment of assistant secretaries and treasurers and the usual committees, Mayor Caldwell, of Elmira, and George M. Diven, esq., president of the board of education, cordially welcomed the association in brief addresses, to which President Northrop appropriately responded.

The question "Ought the Chinese and Japanese indemnities to be refunded unconditionally or devoted to specific educational purposes?" was introduced by Hon. Edward Shippen, of Philadelphia, who has charge of the younger Japanese students in this country. He gave a brief history of the Japanese indemnity of $750,000 in gold, one-half of which has already been paid to the United States and invested in bonds, now amounting, with the accumulated interest, to $800,000. The other half remains unpaid. The actual damage suffered by the United States in the difficulty did not exceed $19,500. He next sketched the rapid progress of Japan during the four years past, notwithstanding powerful internal opposition, and urged that, while she is struggling to meet the enormous expense of this progress, she should not be crippled by demands for the payment of the balance of the indemnity. He argued that Japan should not only be released unconditionally from its payment, but that the United States should refund the principal and interest of the indemnity now received over and above the actual damage sustained. He stated that there were reasons to believe that if this should be done without conditions Japan will devote all of it to the cause of public education. He paid a high tribute to the government of Japan.

He was followed by President Northrop, who commended the Japanese students in this country in high terms; Rev. Dr. McCosh, of Princeton; Prof. Atherton, of New Brunswick; Charles Hammond, of Massachusetts; Mr. Frank Hall and Prof. W. B. Wedgwood, of Washington. Dr. McCosh suggested that, if our Government refunds the indemnity, care should be taken that it do not fall into the hands of the reactionary party. Mr. Hall and Prof. Atherton stated that the reactionary party is the one now in power there, though forced by the pressure of circumstances into a progressive policy.

At the evening-session, Rev. Dr. McCosh, of New Jersey, read a very able and suggestive paper on "Upper schools," the grade of schools between the elementary schools and the colleges. He believed that the elementary schools of the United States rank as high as those of any country in the world, but that we are in danger of being surpassed by other nations, owing to our want of an organized and efficient system of school-supervision. He described the Irish system of school-inspection, the best known to him. He also expressed the opinion that American colleges impart as high and certainly as useful an education to the great body of students as European colleges, including the great European universities, "in all of which there are fully as many idle boys and fully as many graduate with a miserably imperfect knowledge as in the American colleges." The superiority of the higher colleges of Europe is found in the fact that they produce a select few, at the most not more than one-tenth of the whole, who have attained a riper scholarship or have reached a higher culture, or who leave college with a more fixed determination to do original work. "The grand question for American colleges to consider at present is, How may we keep the excellences we have and add to them this special culture of the highest European universities?" He did not think that this end, the training of a few higher minds, could be reached by elevating the standard of admission now adopted in our best colleges. The great majority of students do not now enter college too young. Healthy youths should be prepared for college by 16 or 17. He suggested that, perhaps, 10 per cent. of the students who show themselves fitted to be superior scholars should be encouraged by fellowships, earned by competition, to go on to higher, special studies. With such a system, he believed

*This report of the meeting of the National Educational Association, held at Elmira, New York August, 1873, is taken from the National Teacher, Columbus, Ohio, edited by Mr. E. E. White.

that American colleges would produce a select body of scholars fit to match the first wranglers of Cambridge, the double first of Oxford, or the doctors of philosophy and science of the scientific schools of Europe. The great defect of our American system of education is the want of a sufficient number of upper or secondary schools, between the elementary schools and the colleges, to enable abler youths to pass from the former to the latter. He sketched the systems of secondary schools in Germany and Great Britain and showed how defective and inadequate is secondary instruction in the United States. The remedy proposed was, first, the establishing of preparatory schools by private endowments and, secondly, by State- and city-endowments. The man who endows a first-class academy deserves more credit than he who founds "a weakling college." He urged that the ninety millions' worth of unappropriated land belonging to the General Government should be devoted to the encouragement of secondary schools in the Eastern, Middle, and Western States, and in the Southern States one half of it should be devoted to secondary schools and the other half to aid and encourage the establishment of common schools. He urged that no more of this land should be given to the so-called agricultural colleges or to schools of science and technology, at least until a special inquiry has been made into the actual work now done by these institutions. He stated that in no country in the world has agriculture been much benefited by mere agricultural schools. In all Germany there are but six agricultural schools, and some of these are "very feeble institutions." Cornell University, with its $900,000 endowment from the agricultural-land-grant, graduated only two agricultural students in June last. He also maintained that no part of this ninety millions should be given to colleges. The address produced a deep impression on the large audience present.

Prof. Edward S. Joynes, of Washington and Lee University, Virginia, made a spirited reply to Dr. McCosh's reference to the condition of education in the Southern States. He said that Virginia was doing nobly for the elementary instruction of her children, both white and black, and added, "Let the North be patriotic and generous to their southern brethren; let there be equal treatment." Dr. McCosh replied as spiritedly, that he meant that the South should be assisted in her heroic efforts to elevate all her people. This little episode created quite an excitement and much enlivened the proceedings. Prof. Roche, of Baltimore, added a few remarks.

The session of Wednesday morning was devoted to a discussion of Dr. McCosh's paper on "Upper schools." Speeches were made by Dr. Eli T. Tappan, of Kenyon College, Ohio; Hon. J. P. Wickersham, of Pennsylvania; Dr. Daniel Reid, of the University of Missouri; Dr. Charles Hammond, of Massachusetts; Dr. J. H. Raymond, of Vassar College, New York; Dr. Joseph White, of Massachusetts; President Eliot, of Harvard; Superintendent W. T. Harris, of St. Louis, Missouri; Mr. Ross, of Seneca; Dr. G. P. Hays, of Washington and Jefferson College, Pennsylvania; Prof. E. D. Blakesley, of the Potsdam Normal School, New York; Mr. Root, of Missouri; Prof. Atherton, of New Brunswick, New Jersey, and Dr. McCosh.

President Tappan, of Ohio, stated that the high schools of that State do not prepare one-tenth of the students who enter Ohio colleges. They are doing different work. He urged the multiplication of preparatory schools.

Superintendent Wickersham, of Pennsylvania, urged that the number of public high schools should be increased and that the attention of boys should be directed to a higher education, and not so generally to business. There should be a heartier sympathy between the colleges and the common schools.

Dr. Reid, of Missouri, spoke in favor of every land-grant made by Congress for industrial education; great advantages had been derived from them in Missouri.

Dr. Hammond, of Massachusetts, urged the importance of preparatory schools in addition to the public high schools.

President Raymond, of New York, spoke strongly in favor of schools preparatory to college. There is nothing to take the place of the academies which are "dying out." The high schools should meet the emergency.

Dr. White, of Massachusetts, said we must carry on the high schools by force and the academies by love. The poor boy must have an opportunity of securing as good an education as his rich neighbor. The agricultural college gives a liberal education, and we want intelligent farmers and mechanics.

President Eliot, of Harvard, believed it to be a positive evil to have such incomplete statistics as those used by Dr. McCosh; they mislead. Massachusetts's high schools do not fill her colleges. Harvard does not receive over 10 or 15 per cent. of her students from the high schools of Massachusetts or over 30 or 35 per cent. from that source in the country generally, but they come principally from private schools. Massachusetts is endowing private academies, which are preparatory to college. Denominational schools are a difficulty. The interference of the national Government in educational interests weakens them. He deprecated asking the Government for aid in any good work which we ought to attend to ourselves. It was pernicious and demoralizing.

Superintendent Harris, of St. Louis, reviewed the supervision of schools in this country and spoke in favorable terms of the high schools. They now afford an educa-

tion really better than was obtained in our colleges at the beginning of this century. He thought the university should change.

President Hays, of Pennsylvania, advocated the establishing of strong preparatory schools instead of weakling colleges and hoped a committee would be appointed to report at the next meeting what changes in the high schools are necessary to meet the requirements.

Prof. Blakesley, of New York, spoke of the evil of underrating education. He condemned commercial colleges in unmeasured terms as completely demoralizing to the boys in the land. What was needed was a liberal education, and boys should be directed to seek the highest and best education obtainable.

Prof. Atherton, of New Jersey, spoke in favor of agricultural colleges, and especially of the last land-grant.

Dr. McCosh closed the discussion. He disclaimed any intention to cast aspersion upon any locality. What he proposed was to aid the common schools where needed. He advocated colleges for females as well as males. He took the best statistics that could be got, but they were not claimed to be perfect. According to the last report, 4,171 pupils in high schools and 4,000 in academies in New England were preparing for college. He did not think the religious schools would effect any harm; let them all go on together. He proposed to give this last $90,000,000 conditionally, that the districts shall give an equal amount. He had no very high opinion of agricultural schools.

The session closed after the transaction of business, including the appointment of Dr. Reid of Missouri, Prof. Joynes of Virginia, and Dr. Creery of Maryland a committee to report resolutions on the death of Dr. William H. McGuffey.

At the evening-session an able paper by Richard Edwards, president of the Illinois Normal University, on "How much culture should be imparted in our free schools?" was read by I. N. Carlton, of Connecticut. It advocated the highest culture practicable. It was discussed by Superintendent Wickersham, of Pennsylvania, who believed that our high schools would grow into higher schools and finally end in the college or university. He could put no lower limit to public education. Prof. W. P. Atkinson favored the system of free schools, but not a compulsory education beyond the elementary branches.

A paper on "The relation of the General Government to education" was read by Prof. G. W. Atherton, of Rutgers College, New Jersey. It was a paper of great practical interest and received much attention. The conclusion reached was that the nation must educate, and practical ways were pointed out in which this can be done. It was advocated that the proceeds of the sales of public lands should be devoted to the purposes of education and that the agricultural colleges should have their share.

Dr. George P. Hays of Pennsylvania, D. B. Hagar of Massachusetts, E. S. Joynes of Virginia, Newton Bateman of Illinois, and R. G. Williams of Vermont were appointed a committee to report on the changes needed in high schools to make them preparatory to the colleges.

The session of Thursday morning opened with miscellaneous business.

M. A. Newell, president of the State-board of education of Maryland, described and ably defended the school-system of that State, and he was sustained by Rev. Dr. Van Bokkelen.

Superintendent John Hancock, of Ohio, advocated the propriety and importance of State- and national action in support of schools. He believed that it was proper for the Government to establish a great national university. He offered the following resolution; which, after reference to the committee on resolutions, was unanimously passed:

"*Resolved*, That, in the opinion of this association, the proceeds of the sales of the public lands should hereafter be set apart by Congress, under such conditions as it may deem wise, as a perpetual fund for the support of public education in the States and Territories."

The resolution was strongly advocated by Prof. Atkinson, of Boston.

Addresses on "Education in the South" were delivered by Hon. W. G. Brown, State-superintendent of Louisiana, and Hon. J. C. Gibbs, State-superintendent of Florida, and a lively discussion took place between Prof. Atherton, M. A. Newell, and Dr. McCosh on the paper read the previous evening by Prof. Atherton. President Fairchild, of Kentucky, and Professor Joynes, of Virginia, spoke of the school-privileges in the South.

Ex-Governor Horatio Seymour, being in the hall, was called upon and introduced by President Northrop. He was received with applause and spoke briefly and to the delight of the audience on the general subject of teaching and education.

The evening-session was also devoted to business and brief addresses. Among the resolutions reported by the committee, and unanimously adopted by the association, was one discharging all permanent committees who have neither met within the past year nor reported to the association at the present meeting. This discharges the committee on a national university.

Dr. Hammond, of the special committee on the Japanese indemnity, reported a reso-

lution, which was adopted, recommending the unconditional relinquishment of the fund to Japan, and a committee, consisting of the officers of the association and one member from each State, was appointed to memorialize Congress on the subject.

Dr. Daniel Reid, chairman of the committee, reported appropriate resolutions in regard to the late Dr. McGuffey, which were adopted.

Brief and stirring addresses were made by President Northrop; Prof. J. M. Langston, of Howard University, District of Columbia; Hon. Joseph White, of Massachusetts; Rev. Thomas K. Beecher, of Elmira; Prof. Edward S. Joynes, of Virginia; Superintendent J. H. Binford, of Richmond, Virginia; Superintendent McIver, of North Carolina; Prof. Rounds, of Maine; Superintendent Jillson, of South Carolina; and Superintendent W. G. Brown, of Louisiana.

President Northrop made the announcement that the enrollment at this meeting of the association had been far greater than that at Boston last year or at St. Louis the year before, and the association adjourned *sine die*.

The officers elected for the coming year are as follows: President, S. H. White, Illinois; secretary, A. P. Marble, Massachusetts; treasurer, John Hancock, Ohio; vice-presidents: Dr. James McCosh, New Jersey; Dr. G. P. Hays, Pennsylvania; J. W. Dickinson, Massachusetts; James H. Binford, Virginia; Miss D. A. Lathrop, Ohio; Mrs. M. A. Stone, Connecticut; W. J. Phelps, Minnesota; Dr. Daniel Reid, Missouri; E. J. Fairchild, Kentucky; W. R. Creery, Maryland; John Swett, California; and N. A. Calkins, New York; counselors: B. G. Northrop, Connecticut, at large; John Eaton, District of Columbia, at large; C. C. Rounds, Maine; J. H. French, Vermont; Allen A. Bennett, New Hampshire; Joseph White, Massachusetts; J. C. Greenough, Rhode Island; H. E. Sawyer, Connecticut; G. L. Farnham, New York; H. B. Pierce, New Jersey; G. P. Beard, Pennsylvania; M. A. Newell, Maryland; J. Ormond Wilson, District of Columbia; E. S. Joynes, Virginia; Alex. McIver, North Carolina; J. K. Jillson, South Carolina; G. W. Walker, Georgia; J. C. Gibbs, Florida; Miss Isabel Babcock, Mississippi; W. G. Brown, Louisiana; T. J. Mulvany, Arkansas; Mr. Shackelford, Kentucky; W. D. Henkle, Ohio; A. C. Shortridge, Indiana; E. C. Hewett, Illinois; Miss Rectina Woodford, Michigan; E. A. Charlton, Wisconsin; A. Armstrong, Iowa; O. Root, jr., Mississippi; P. G. Williams, Kansas; and A. P. Benton, Nebraska.

On Friday the members of the association, with invited guests, made an excursion to Watkins's Glen.

Elementary department.—This department, N. A. Calkins, of New York, president, met in the Opera House on Tuesday, Wednesday, and Thursday afternoons. The entire session of Tuesday was devoted to a discussion of the subject of elementary reading. It was introduced by an elaborate paper on "The thought and sentence method," by George L. Farnham, of Binghamton, New York. This was followed by a paper on "The phonetic method, with pronouncing orthography," by Edwin Leigh, of New York. The subject was further discussed by Dr. Adolf Douai, of New Jersey; W. N. Barringer, of Newark, New Jersey; Mrs. A. J. Rickoff, of Cleveland, who spoke with great acceptance; Charles O. Hurlbut, of Paterson, New Jersey; E. A. Sheldon, of Oswego, New York; Mr. Ross, of Seneca, New York; Prof. Goodwin Clark, of Boston; Mr. Freeborn, of Wellsville, New York, and Mr. Abbott, of Brooklyn, New York. This was probably the most thorough discussion of the subject that has yet taken place in any educational meeting in this country, and we advise all who are interested in primary teaching to purchase a copy of the proceedings when published.

The second session opened with an interesting paper by Dr. Malcolm McVicker, of Potsdam, New York, on "Principles and methods of teaching arithmetic." He alleged that every principle and process should be presented objectively, and fully illustrated his method of eye-teaching. His views were sustained by J. H. Hoose, of Cortland, New York, and G. L. Farnham, of Binghamton, New York.

An eloquent and effective paper was next read by Henry F. Harrington, of New Bedford, Massachusetts, on "What should be the leading object of American free schools?" His answer was that the great purpose of popular education is "to bring to the highest possible state of efficiency that sum total of all the powers of the pupil's being, purely and nobly interacting and interdependent, which is termed manhood." Only the complete and perfect man can be relied on to make the upright, trustworthy, and orderly citizen. This thought was fully elaborated.

At the Friday's session, Prof. J. W. Dickinson, of Westfield, Massachusetts, on behalf of a committee appointed last year, submitted a report upon the Kindergarten, which elicited considerable discussion, participated in by Mr. Barringer of New Jersey, Mr. Richards of Washington, and others. Miss Amy L. Bradford, of North Carolina, proposed to try the Kindergarten in her school.

Mrs. Krause, of New York City, read a valuable paper on "What Fröbel's system of Kindergarten-education is, and how it can be introduced into the public schools." The paper elicited an interesting discussion, participated in by both ladies and gentlemen. Miss Payson, of Chicago, and Miss Kate French, of New Jersey, approved of the views of the paper. Prof. Z. Richards, of Washington, presented his views on the subject of school-houses and recreation.

Resolutions were adopted recognizing the Kindergarten as a potent means for the

elevation of primary education; recommending the establishment of Kindergärten, public and private, and also of a normal school for the special purpose of training Kindergarten-teachers; and calling attention to the importance of initiatory experiments to determine the best methods of connecting the Kindergarten with our present school-system.

A brief and practical paper was next read by Superintendent A. J. Rickoff, of Cleveland, Ohio, on "School-hours for children under 10." He would not keep children at first in school more than three hours a day, and until 9 years of age not more than four hours a day, and above 9 years of age not more than five hours a day.

The session closed with an excellent paper by Prof. A. Eiswal, of Savannah, Georgia, on "The education of the emotional nature."

The officers elected for the ensuing year are as follows: President, Henry F. Harrington, New Bedford, Massachusetts; vice-president, Miss Hannah Cummings, Kirksville, Missouri; secretary, George B. Sears, Newark, New Jersey.

Normal department.—This department, A. G. Boyden, of Bridgewater, Massachusetts, president, met each afternoon at Stancliff Hall. Tuesday's session was devoted to the consideration of a paper by Dr. Richard Edwards, of Illinois, on "Duties and dangers of normal schools," which was read by Prof. D. B. Hagar, of Salem, Massachusetts. The paper elicited an interesting discussion, participated in by R. G. Williams, of Vermont; J. H. Hoose, of New York; C. C. Rounds, of Maine; Oliver Airey, of Wisconsin; George P. Beard, of Pennsylvania; I. N. Carlton, of Connecticut; M. A. Newell, of Maryland; C. H. Verrill, of Pennsylvania, and others.

The second session was opened with a discussion of the question, "What should the normal schools aim to accomplish in the teaching of natural science?" Mr. Dwight, of New Britain, Connecticut; J. C. Greenough, of Rhode Island, and Mr. Winters spoke on the subject.

This was followed by the reading of a very logical and thoughtful paper on "Elementary and scientific knowledge," by Prof. J. W. Dickinson, Westfield, Massachusetts.

Miss Delia A. Lathrop, of Cincinnati, read a paper on "Training-schools," in which the subject of normal training was discussed under the heads of normal schools, teachers' institutes, and training-schools. This was one of the ablest and most valuable papers read at Elmira. It elicited an earnest discussion, participated in by Mr. Brown, of Maine; E. C. Hewitt, of Illinois; John Hancock, of Ohio; D. B. Hagar, of Massachusetts; H. B. Buckham, of Buffalo, New York; Zalmon Richards, of Washington; E. A. Sheldon, of Oswego, New York; and E. T. Tappan, of Ohio. Miss Lathrop congratulated the speakers on the fact that they had not sacrificed truth to gallantry in discussing her paper.

The closing session well sustained the interest manifested from the first. Prof. C. C. Rounds, of Maine, introduced a resolution affirming it to be the sense of the department that all normal schools should have practice-schools. It was passed after a discussion in which Prof. C. H. Verrill of Pennsylvania, Dr. McVicker of New York, and others took part.

Prof. Henry B. Buckham, of Buffalo, New York, read a thoughtful and valuable paper on "The relation of scholarship and method in normal schools." He took the position that scholarship should not be subordinated to method in normal instruction; neglect method rather than scholarship. It gave rise to a spirited discussion, in which Prof. Carlton, of Connecticut, and Dr. McVicker, of New York, took a prominent part.

The officers elected for the ensuing year are as follows: President, J. H. Hoose, Cortland, New York; vice-president, W. N. Hailman, of Louisville, Kentucky; secretary, Miss Roolison, of Cincinnati.

Department of higher instruction.—This department met Tuesday afternoon in the City Hall, Dr. Daniel Reid, of Missouri, president *pro tem.* President Charles W. Eliot, of Harvard College, presented a report on a national university. He gave a somewhat facetious account of what the National Educational Association has done about a national university since 1869, reaching the conclusion that the permanent committee appointed at St. Louis has never had a moment's existence, and that the association is "thus far free from all responsibility for whatever may have been done since August, 1871, about a national university." He next examined the two bills on the subject which were introduced into the Senate in 1872, and then proceeded to discuss the true policy of our Government as regards university-instruction. He denied that it is the duty of Government to provide and control educational institutions, affirming that this conception of government is abolescent everywhere. Our Government is not the guardian of the nation's morals. It is no more the duty of Government to direct secular education than to conduct religious education. As religion is properly left to voluntary support, so may the people be left to provide suitable universities for the education of their youth. The very essence of republicanism is self-reliance, and hence the Government should perform no function which any private agency can perform as well. The subsidizing process saps the foundations of public liberty. Let us cling fast to the genuine American method of public instruction—the American voluntary system—in which the higher grades of instruction are provided by permanent endowments administered by incorporated bodies of trustees.

Chancellor Wedgwood, of Washington, followed with a paper in favor of a national university. Dr. McCosh, of New Jersey, opposed a national university, but he believed the Government should look after schools and morals. He alluded to the fact that Harvard had repeatedly received aid from Massachusetts. Dr. Reid, of Missouri, gave a history of the establishment of State-universities by grants of public lands, and added, that he believed in a national university. He did not fear such appointments as those of Bache, Henry, and Peirce. Messrs. Sprague, of Washington; Hancock, of Ohio; Harris, of St. Louis; and Atherton, of New Jersey, spoke in favor of a national university, and Messrs. Atkinson, of Iowa; Joynes, of Virginia; Vail, of Rochester; and Root, of Missouri, against. No action on the subject was taken by the department.

The second session was held in the chapel of the First Presbyterian church. A suggestive and scholarly paper on "The study of the classics" was read by Prof. Edward S. Joynes, of the Washington and Lee University, Virginia. It took a strong position in favor of the study of the ancient languages, pronouncing it the noblest element in modern culture.

The paper was discussed by President Eliot, of Harvard, who stated that linguistic study in early life is necessary to the after-study of the sciences; Prof. John R. Roche, of Maryland; Prof. Meres, of Hamilton College; Rev. F. G. Surbridge; and Professor E. G. Youmans, of the Popular Science Monthly. Prof. Youmans stated that Count Rumford and Prof. Faraday absolutely ignored a classic education, and that Prof. Tyndall has no knowledge of Latin and Greek. President Eliot replied that these distinguished scientists were exceptional representatives of remarkable genius. Lincoln was not liberally educated, but his Gettysburg speech is unsurpassed, and perhaps unsurpassable. The average boy is not thus educated. Prof. Atkinson thought that this speech by Lincoln pointed a lesson. He believed that Latin grammar had made many a man a dunce who, without it, might have been a genius.

The closing session was devoted to a paper by Prof. W. P. Atkinson, of Boston, entitled "A liberal education for the nineteenth century." The main drift of the paper, which was full of well-turned hits, was against the study of the classics to the extent that has been demanded. It provoked a very spirited discussion, which was participated in by Dr. Reid, of Missouri; Dr. Hammond, of Massachusetts; Professor Meres and President Brown, of Hamilton College, New York; Prof. Bennett, of Syracuse University, New York; Prof. Joynes, of Virginia; President Hays, of Pennsylvania; and President Tappan, of Ohio.

The officers elected for the ensuing year are as follows: President, Daniel Reed, of Missouri; vice-president, W. P. Atkinson, of Boston; secretary, George P. Hays, of Pennsylvania.

Department of superintendence.—This department, Superintendent W. T. Harris, of St. Louis, president, met on Tuesday and Thursday afternoons in the Joy Lodge-Rooms. At the first session, Superintendent A. J. Rickoff, of Cleveland, read a paper on "School-house-plans," illustrating the same with drawings upon the blackboard. Special attention was given to ventilation and light.

Superintendent J. H. Binford, of Richmond, Virginia, read a suggestive paper on "The relation of school-boards to superintendents." The subject was discussed by Superintendent Packard, of Saratoga; Superintendent Hancock, of Cincinnati; Superintendent A. Armstrong, of Iowa; Superintendent Wickersham, of Pennsylvania; Superintendent Rickoff, of Cleveland; Superintendent Creery, of Baltimore; Superintendent Marble, of Worcester, Massachusetts; and Superintendent Sawyer, of Connecticut.

At the second session, a paper by Chancellor Eliot, of Washington University, St. Louis, on "Western university-education," was read by President Harris.

A paper on "Leigh's method of teaching reading," by Superintendent William M. Bryant, of Burlington, Iowa, was read by J. H. Binford, of Richmond. It was an able defense of Dr. Leigh's method. The subject was further discussed by Prof. Hurlbut, of New Jersey; J. W. Bulkley, of Brooklyn; Superintendent Harris, of St. Louis; Superintendent Farnham, of Binghamton, New York; Superintendent Shortridge, of Indianapolis, Indiana; Superintendent Wilson, of Washington City; and Dr. Leigh, nearly all of whom commended the method.

Superintendent Rickoff, of Cleveland, chairman of the committee, submitted a report recommending that a meeting of the department be held in Washington City some time next winter. The report was adopted, and the officers of the department were constituted a committee to call the meeting.*

Superintendent J. H. Binford, of Richmond, Virginia, was elected president for the ensuing year and Superintendent A. Armstrong, of Iowa, secretary.

* The meeting above referred to was held in the legislative hall, Washington, District of Columbia, on Thursday and Friday, January 29 and 30. Representatives were present from Texas, South Carolina, Virginia, West Virginia, District of Columbia, Maryland, Pennsylvania, Connecticut, Rhode Island, Massachusetts, New Hampshire, Ohio, and Indiana. Important business was transacted, looking to a uniformity in school-statistics, promotion of the bill for aiding education from the proceeds of the sales of public lands, and proper representation of educational interests at the centennial. The convention then adjourned to meet at Detroit, in August.

AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

The twenty-second annual meeting of the American Association for the Advancement of Science was held at Portland, Maine, August 20–26, 1873. The attendance was large and the papers presented numerous and valuable.

The permanent secretary, F. W. Putnam, read a short necrology of the association for the past year. The losses by death have been as follows: Prof. J. B. Perry, Dr. H. C. Perkins, Prof. J. H. Coffin, Mark Fisher, Dr. John Torrey, Miss S. L. Blatchley, Prof. W. S. Sullivant, Judge T. B. Butler, Col. J. W. Foster, Isaac Ferris, J. O. Noyes, and Dr. G. A. Maack. To these he added the name of Prof. J. F. Frazer, who was once a member of the association. At about noon the general meeting adjourned, and the association resolved itself into sections; section A, devoted to physics, chemistry, and mathematics; section B, to natural history, botany, geology, &c.

The afternoon-sessions of the sections were devoted to the reading of papers, among the most practically important of which were the following: First day, T. Sterry Hunt's "Notes on the geology and economic mineralogy of the southeastern Appalachians." The author began with a brief sketch of the physical geography of that mountain-region which borders on its southeast side the Appalachian Valley, from Southern to Northern Virginia. After describing the mineral deposits of these Appalachian rocks, Dr. Hunt called attention to their great economic value, referring especially to the phosphates of South Carolina, the copper deposits at Ducktown, Tennessee, and the vast beds of pyrites available for the manufacture of acid, which lie hidden within the mountains of the Blue Ridge. England sends to Spain for pyrites, making therefrom acids to convert South Carolina phosphates into fertilizers. We import sulphur from Sicily to make our acids, while the Blue Ridge deposits of pyrites far exceed those of Spain. The paper was one of great interest and called forth many questions and considerable discussion.

Prof. Young, of Dartmouth, described, "A new form of break-circuit and the electric control of chronographs." The difficulty with the break-circuits in general use is that they act irregularly, altering the rate of the clock and producing an irregular line upon the chronograph. The apparatus described had been in use at Dartmouth for three years with fine results. By its use he had been able to make a chronograph, constructed from the barrel of an old clock, work with highest accuracy.

Mr. E. B. Elliot, of Washington, followed with a paper on the "Relation of the frequency of auroras to changes in the length of the earth's radius-vector," in which some curious facts were given as to the relation between auroras and magnetic changes which take place upon the earth. A vigorous discussion followed the reading of the paper.

On the second day Prof. Young, of Dartmouth College, communicated an interesting paper on "The possibility of a liquid solar envelope." He said that it is generally agreed that the sun is, in the main, a gaseous body. It is also maintained that there are on the outside of the sun clouds of metallic vapor. The professor held that instead of these there is probably a shell of liquid matter, so that the sun is like a gigantic bubble with a bottomless ocean below. This theory seemed to him to explain the phenomena of spots, &c., better than the other. Some discussion followed on the subject touched upon, one speaker denying altogether the conclusion at which most men of science seem to have arrived from observations made by the spectroscope.

Prof. Hilgard, of the Coast-Survey, then read a paper describing the measurement of areas of meridians in the progress of that survey on the eastern coast of the United States, one in New England, and one near Delaware Bay. These, added to previous measurements in other parts of the earth, make together nearly a quadrant of longitude, carefully measured.

Prof. Peirce, Superintendent of the Coast-Survey, then gave some account of the object and proposed work of that Department. He showed that there is still a great deal that ought to be done, and said the maps of China were more accurate a thousand years ago than those of our Western country are to-day. But the accuracy of the Coast-Survey, as far as it has gone, is greater than that attained in any other country in the world.

On the afternoon of the same day Prof. Benjamin Peirce gave an article on the rotation of the planets as a result of the nebular theory.

Gen. J. G. Barnard, of New York, next presented an article on the relation of internal fluidity to the precession of the equinoxes. He thought that the earth is much nearer being a rigid solid than is supposed by modern geologists.

In the evening the whole association met in the city-hall, and heard an article by Dr. Franklin B. Hough on "The duty of governments in the preservation of forests." The author attributed the growing prevalence of floods and droughts to the clearing of the surface of the ground from the shade of trees. Several countries of Europe have national forests, as in France, where they cover more than 13,000 square miles. Our older States do not own forests, so that regulations of this kind must begin with the people. He desired the establishment of schools of forestry, and he pointed out the

action which a State might take to encourage the growth of forests. He ended by offering a resolution providing for the appointment of a committee to memorialize Congress and the several State-legislatures on this subject. The resolution went to the standing committee. Some discussion, however, took place on this subject, one speaker claiming that the amount of woodland in the West is constantly increasing, and that there is no need of laws to protect the forests in that quarter of the country.

Mr. L. H. Morgan read an article on the "Architecture of the American aborigines," describing that of the Village Indians of New Mexico and Central America, stating that they lived, on the principles of communism, in immense houses, accommodating sometimes about 2,000 people in one building, and that these large buildings could not have been, as has been thought, palaces of chieftains.

On the third day came a paper from Prof. G. C. Swallow, of Missouri, on "The origin of species," taking ground against the Darwinian theory. The reading of the paper was followed by a warm discussion.

Next followed the address of J. Lawrence Smith, the retiring president of the association, which was read by Prof. Putnam, the secretary, the president being absent in Vienna.

On the fourth day C. H. Hitchcock communicated a paper from George Washburn, of the American College at Constantinople, on "Calvert's supposed relics of man in the Miocenes of the Dardanelles." The supposed finding of human traces and relics of barbarous men in the above-named locality was controverted.

On the sixth day the following papers, with others, were read: "The need of a uniform position for anatomical figures, with a recommendation that the head be always turned toward the left," by B. G. Wilder; "Means of determining the stratigraphical order of seams of coal in Ohio, Kentucky," &c., by E. B. Andrews; "On the origin of mountain-chains," by Charles Whittlesey; "The Devonian limestone in Ohio," by O. H. Winchell.

In the general session the following officers were elected for the ensuing year: Dr. Lecomte, of Philadelphia, president; Prof. C. S. Lyman, of New Haven, vice-president; Dr. A. C. Hamlin, of Bangor, general secretary; W. S. Vaux, of Philadelphia, treasurer.

NEW ENGLAND ASSOCIATION OF SCHOOL-SUPERINTENDENTS.

At a meeting of this association, held in Boston, October 17, 1873, papers were read on "The relative number of male and female teachers desirable in our high, and grammar-schools," "Selection of teachers," and "The limits of public education." These papers were afterward discussed by the superintendents present. That on the relative number of male and female teachers called forth special interest and was terminated by the unanimous adoption of the resolution that "an increase in the relative number of male teachers would increase the efficiency of our schools."

Mr. Philbrick, superintendent of the Boston schools, by request of the association, occupied an hour in some very interesting remarks on the Vienna Exposition, especially, the educational department, and the European system of education in general.

Programme of studies adopted by the New England Association of School-Superintendents at their meeting at Boston, February 14, 1873.—The programme includes nine classes, the work of each class covering a period of one year.

The classes are numbered from one to nine, the lowest primary being the first and the highest grammar the ninth class.

The number of hours per week allotted to each study or exercise is indicated by the figure annexed, the whole number of school-hours per week being 25.

First class: Reading, 10; printing, (first half of the year,); —writing, (last half of the year,) $2\frac{1}{2}$; oral instruction, (including number, morals, and manners,) 3; drawing, 1; spelling, $2\frac{1}{2}$; music, 1; physical exercises, $1\frac{1}{2}$; and opening exercises and recesses, $3\frac{1}{2}$.

Second class: Reading, 8; writing, 2; oral instruction, (including morals and manners,) 3; number, $2\frac{1}{2}$; drawing, 1; spelling, $2\frac{1}{2}$; music, 1; physical exercises, $1\frac{1}{2}$; and opening exercises and recesses, $3\frac{1}{2}$.

Third class: Reading, 8; writing, 2; oral instruction, (including morals and manners,) $2\frac{1}{2}$; arithmetic, 3; drawing, 1; spelling, $2\frac{1}{2}$; music, 1; physical exercises, $1\frac{1}{2}$; and opening exercises and recesses, $3\frac{1}{2}$.

Fourth class: Reading, 6; writing, 2; oral instruction, (including morals, and manners, and geography,) 3; arithmetic, 4; language, 2; drawing, 1; spelling, $2\frac{1}{2}$; music, 1; physical exercises, 1; and opening exercises and recesses, $2\frac{1}{2}$.

Fifth class: Reading, 6; writing, 2; oral instruction, (including morals, and manners, and geography,) 3; arithmetic, 4; language, 2; drawing, 1; spelling, $2\frac{1}{2}$; music, 1; physical exercises, 1; and opening exercises and recesses, $2\frac{1}{2}$.

Sixth class: Reading, 4; writing, 2; oral instruction, (including morals and manners,) $2\frac{1}{2}$; geography, 3; arithmetic, 4; language, 2; drawing, $1\frac{1}{2}$; spelling, $1\frac{1}{2}$; music, 1; physical exercises, 1; and opening exercises and recesses, $2\frac{1}{2}$.

Seventh class: Reading, 4; writing, 2; oral instruction, (including morals and man-

ners,) 2; geography, 3; arithmetic, 4; language, (including grammar,) 3; drawing, 1½; spelling, 1; music, 1; physical exercises, 1; and opening exercises and recesses, 2½.

Eighth class: Reading, 4; writing, 1½; history and review of geography, 3; oral instruction, (including morals and manners,) 1½; arithmetic, 4; language, (including grammar,) 4; drawing, 1½; spelling, 1; music, 1; physical exercises, 1; and opening exercises and recesses, 2½.

Ninth class: Reading, 4; writing and book-keeping, 1½; history and review of geography, 4; oral instruction, (including morals and manners,) 1½; arithmetic, 3; language, (including grammar,) 4; drawing, 1½; spelling, 1; music, 1; physical exercises, 1; and opening exercises and recesses, 2½.

INTERNATIONAL ACADEMY OF NATURAL SCIENCES.

The opening exercises of this association were held in the city of New York, November 3, 1873. The inaugural address was by Dr. Howard Crosby, chancellor of the University of the City of New York. He stated that the aims of the institution were to have a double organization, one in Boston, one in New York; to give its students a thorough scientific training under the best instructors, both American and European; to organize, after a preparatory course of lecture-room- and school-instruction, a system of travel, under competent professorial charge, and thus to establish a system of objective teaching.

A communication on the claims of science in systems of education for females was presented by Dr. West of the Brooklyn Female Seminary. Other matters connected with the idea of the academy were brought forward, as follows: by Prof. George N. Bigelow, A. M., "Travel as a means of teaching;" by Rev. John T. Bigelow, D. D., "Methods of teaching;" by Prof. R. M. Labberton, LL.D., "The history of nations as a branch of natural science;" by William Henry Goodyear, "Art and esthetic culture;" and by Dr. A. Leue, of Rostock University, Germany, "The peculiarities of German schools."

SPECIAL ARTICLES.

ART-EDUCATION.

[By Prof. C. O. Thompson, Worcester, Massachusetts.]

DRAWING.

Art-education embraces all those appliances and methods of training by which the sense of form and proportion is developed. It is successful when the student unerringly discriminates between what is ugly and what is beautiful, and expresses his ideas of form in drawing as readily as ideas of other sorts on the written page.

The interests of art-education in Massachusetts center at present in the work undertaken and vigorously prosecuted by Mr. Walter Smith. This gentleman holds a commission from the city of Boston as general supervisor of drawing in the public schools, and one from the State of Massachusetts as State-director of art-education. He was formerly a South Kensington art-master at Leeds, England.

The plan of instruction for the schools is very simple. The teachers assemble at stated intervals, and the lesson is given them by Mr. Smith, which they are to reproduce in their schools. For the teachers of the State at large, this work is done at teachers' institutes.

The scheme of instruction for graded public schools is set forth in the following table:

Scheme of instruction in drawing suggested for graded public schools in Massachusetts, complying with the act of 1870 *concerning industrial drawing.* (*Arranged by Walter Smith, State-director of art-education, Massachusetts.*)

Schools.	Classes.	Time given per week.	Number of lessons per week.	Length of lesson.	Drawing on—	Taught by—
		Hrs.		*Mins.*		
1. Primary schools..	6, 5, 4	2	4	30	Slates.....	Regular teachers.
2. Primary schools..	*3, 2, 1	2	4	30	Paper in blank-books ..	Do.
3. Grammar-schools.	*6, 5, 4	2	3	40	Paper in blank-books and text-books.	Do.
4. Grammar-schools.	*3, 2, 1	2	3	40	Paper in blank-books and text-books.	Do.
5. Latin and high schools.	* Lower classes..	2	2	60	Paper in blank-books and text-books.	Do.
6. Latin and high schools.	* Higher classes..	2	2	60	Paper in blank-books and on sheets.	Special instructors.
7. Normal schools ..	* All the classes..	2	2	60	Paper in blank-books ..	Do.

Subjects taught, and order of lessons for each week.—The figures 1, 2, 3, 4, signify the first, second, third, and fourth lesson in each week.

Where two alternative subjects are named, one is to be taken one week and another the following week.

Reference to a text-book means that whatever drawing-book is in use in the schools shall be drawn from, as a distinct exercise.

All the classes marked thus * are to draw upon the blackboard, when the lesson is suitable to such an exercise; one-third of the class to draw each lesson, so that the whole class will have drawn upon the board every three lessons.

1. Free-hand-outline from cards, charts, and blackboard-lessons, the first copies. Memory-lessons, drawing previous exercises from memory. Definition of plane-geometry, to be learned by heart, and illustrations drawn. Dictation-lessons of right-line-figures and simple curves.

Order of lessons: 1. From cards or charts. 2. From blackboard. 3. Memory and dictation, alternately. 4. Geometric definitions.

2. The more advanced copies in cards, charts, and blackboard-lessons. Memory- and dictation-lessons, (without illustrations.) Object-lessons, illustrated by drawings. Geometric definitions, drawn on a large scale.

Order of lessons: 1. From cards or charts. 2. From blackboard. 3. Memory and dictation, alternately. 4. Object-lessons and geometric definitions, alternately.

3. Free-hand-outlines of ornament and objects, from blackboard. Lessons in text-book. Map-drawing. Memory- and dictation-lessons. Geometric exercises, plane-geometry, up to 50 problemso f constructional figures.

Order of lessons: 1. Objects from blackboard and drawing from text-book, alternately. 2. Memory-drawing and dictation-exercises, alternately. 3. Geometric and map-drawing, alternately.

4. Free-hand-outline-drawing, from solid models. Geometric drawing, up to the end of the course. Design in geometric forms, from the blackboard. Memory-drawing. Map-drawing. Dictation-lessons.

Order of lessons: 1. Model-drawing, from object. 2. Geometric and memory-drawing, alternately. 3. Map-drawing and design, alternately.

5. Model- and object-drawing, with exercises in perspective, drawn by the free hand. Object-lessons, illustrating historic art and architecture. Shading from models and copies. Harmony and mixture of colors. Design from natural foliage.

Order of lessons: 1. Model-shading and object-lessons, alternately. 2. Lessons in color and exercises in design, alternately.

6. Perspective by instruments. Shading in chalk and color, from models and natural objects, and foliage. Design in color and shadow. Projection. Lectures on painting, sculpture, and architecture.

Order of lessons: 1. Perspective and projection, alternately. 2. Painting or shading and design, alternately.

7. Object-drawing and design. Ornamental design. Historic lessons. Advanced dictation- and memory-lessons. Lessons in teaching drawing. Perspective, advanced. Designing blackboard-examples.

Order of lessons: 1. Object-drawing and design, alternately. 2. Perspective and dictation- or memory-lessons, alternately. 3. Lessons in teaching drawing, occasionally.

The results so far obtained, though necessarily meager, are very encouraging. A large majority of teachers in the State will second the resolution recently adopted by a convention of London school-masters: "That half the time previously given to writing had been given to drawing, with the result that the writing had been better, and the power of drawing was a clear gain." This was in 1852, when England was beginning the series of experiments in art-education which has culminated in South Kensington.

EVENING-SCHOOLS FOR ADULTS.

The law requires all towns of more than 10,000 inhabitants to provide free instruction in drawing for mechanics and artisans and all others who may desire it. The law has been in force two years, and nearly all the towns included in its provisions have established evening-drawing-schools. An exhibition was held in Boston in May, 1872, when drawings from the different classes were exhibited, and great interest was thus awakened in the subject.

The report of the committee, C. C. Perkins, W. R. Ware, and Walter Smith, appointed to examine the drawings, affirms the entire success of the scheme, as judged by practical benefits, and suggests the necessity of large provision of models and art-examples for future classes.

GENERAL IDEA.

The general grounds of public polity upon which these classes are deemed necessary and expedient have been thoroughly traversed. They belong in the same category as public libraries and reading-rooms. The library is needed as a force to influence the faculties which the school has wakened and partially trained and to guide them towards truth and justice. The drawing-school is needed to carry forward the art-training, begun in schools, to large and beneficent results in quickened invention and improved taste. If this art-training has been neglected in school, the drawing-class offers the community a chance to rectify the mistake. Drawing is regarded in this movement, not as an accomplishment for a few gifted individuals, but as a necessity in the future for every first-rate artisan.

WHO ATTEND THESE CLASSES.

Two sorts of pupils have appeared in them: First, those who are disposed to undertake a general art-training, so as to learn to draw from models, free hand, without reference to any immediate practical benefit. In this class are teachers, engravers, architects, stone-cutters, and others. The main point in the training of such persons is discipline of the sense of form and proportion by carefully-studied exercises. The second class consists of artisans of all sorts, mainly machinists and carpenters, who have no time, or think they have none, for sheer art-training, but want a knowledge of instrumental drawing which will be of immediate use in business. Statistics of the Worcester class of 1870 show some interesting results. The class numbered 145—136 men and 9 women. In respect of age, there were one over 60, two between 50 and 60, four between 40 and 50, twenty-eight between 30 and 40, sixty-one between 20 and 30, and forty-nine under 20. In respect of occupation, there were, of machinists, 42; carpenters, 26; pattern-makers, 7; architects, 4; while the others represented thirty different trades and occupations.

More than half the class walked two miles to get the lessons, two-thirds of them were usually in their seats a half hour before the lesson began, and three-fourths of them were present at the last lesson as punctually as at the first.

In 1871 there were 250, representing as great a variety of age and occupation as the first class. Other towns in the State have a similar record.

TESTIMONY TO THE NEED OF ART-EDUCATION.

The statistics just given furnish strong evidence of the widely-felt need of these drawing-classes. Other corroborative evidence is abundant. Mr. E. P. Morgan, mechanic engineer of the Saco Water-Power Machine-Shop, says: "Through the inability of our workmen to understand a working-drawing, hundreds of dollars are

lost every year in this establishment." Commenting on this, Mr. Bartholomew, of Boston, says: "What is true in this case is true of our manufacturing-establishments all over the land. The time lost in doing that which must be done again because of error, the loss of material and of power, the wear and tear of tools to no good purpose, the time of engineers and foremen spent in explaining drawings which would have been understood at a glance had the workmen been instructed in drawing, and the time consumed in listening to these explanations cost the country, it is safe to say, millions of dollars annually."

Mr. C. H. Morgan, superintendent of the Washburn & Moen Manufacturing Company, Worcester, Massachusetts, says: "When a boy, I was one of a class of thirteen who spent all their leisure time in studying drawing. At the present time every one of that class has attained to an important position, either as manufacturer or manager; and each has owed his power to seize the opportunity of his advancement to his knowledge of drawing."

Prof. C. O. Thompson, of the Worcester Free Institute, says: "It is estimated that the productive efficiency of every machine-shop would be increased 33 per cent. if every journeyman could read any common working-drawing and work by it."

Prof. Bail, of Yale College, says: "At the conclusion of a lesson in drawing, gray-haired mechanics have often almost overpowered me with thanks, saying, 'This lesson is worth hundreds of dollars to me,' or 'I shall work better all my life for this.'"

Abundant evidence of the same sort is contained in a pamphlet entitled Papers on Drawing, issued by the Massachusetts board of education in 1870.

It is an important consideration that progress in ability to read a drawing is vastly more rapid than in skill to make one.

PLAN.

The plan pursued varies but little in the different towns. The whole number of lessons averages thirty each winter. All beginners have ten lessons in free hand. There are three lessons in horizontal and vertical lines, and plain and ornamental forms composed of those lines; three lessons in curves; two lessons in perspective; two lessons in review of all these.

An important point here is, not to dwell on the mere practice of drawing straight lines. All drawing consists of lines, and these may as well be drawn in some relation one to another as isolated. After the preliminary ten lessons there will be some persons in this class who will prefer to devote themselves to free-hand-work. Let such form a class and go on. They can begin at the sixteenth lesson, drawing from objects. Others will insist on instruction in "drawing to a scale," as it is called; *i. e.*, making plans, elevations, and projections. In the instruction of these persons, a good part of the time is spent in learning the elements of descriptive geometry; *i. e.*, the method of representation of any object in horizontal and vertical projections in any position. Each lesson occupies an hour and a half.

An important fact here is that ordinary mechanics and artisans need not be reduced to the barren labor of copying either drawings or machines. It is possible to give them clear notions of the principles by which all solid objects are represented on a flat surface. This is, in fact, the only hopeful kind of instruction for them.

Copying, in any strict sense, should not be allowed in any of these classes. The pupils should see the teacher work at the blackboard. The *process* is the important thing for them, rather than the result. The difference between this method and working from copies is exactly analogous to that between translating a page of Latin with or without the aid of a translation.

After the first winter in any town there will arise a necessity for an advanced class in free-hand-drawing, the same in mechanic drawing, and in certain cases for instruction in special branches, as carpentering, ship-construction, &c.

AUXILIARIES.

Teachers.—It is found that good draughtsmen do not necessarily make good teachers. Attendance at a technic school or a normal class, at least, is indispensable. A good teacher commands $10 an evening for his services.

Models.—Sets of models for the free-hand-classes and for schools are made, after designs by Walter Smith, at the work-shop of the Worcester school. A collection of models for the mechanic classes can be obtained for the asking in any large manufacturing-town. It will consist mainly of patterns and castings of parts of machines. Good models are indispensable.

Utensils.—The town furnishes a room, warmed and lighted, and equips it with tables and models. The pupil provides drawing-board, paper, instruments, &c.

Books.—For teachers, Mr. Walter Smith has published his address at Lewistown, before the American Institute of Instruction; The Teachers' Companion, designed to accompany the models; and Art-Education, or Lowell Lectures of 1871. He is preparing a series of text-books on free-hand, perspective, and model-drawing. Teachers of

mechanic drawing will get very valuable aid from a set of lessons given at the Ecole de Dessin in Paris, by MM. Petitcolui and Chaumont.

Art-museums.—The great need beyond all others, the great result which all this work, at present so interesting, is to accomplish, is the establishment of an art-museum at every important manufacturing-center. Such a museum is in progress at Boston. When it is completed, art-education will begin in earnest.

STATE NORMAL ART-SCHOOL.

This institution was established by legislative action in 1873, it having become evident that, if drawing was to be successfully taught in the public schools, provision must be made for the training of competent teachers.

Its specific aim is to prepare teachers for the industrial drawing-schools of the State, who may also superintend instruction in drawing in the public schools. In the future it may be necessary to provide for high skill in technic drawing and fine-art-culture, but the immediate pressing demand is for teachers who know thoroughly the elementary subjects and can teach them with fair intelligence. This demand the school will aim to supply by providing, at the outset, training in elementary studies only, making this, however, as complete and practical as circumstances will admit.

Conditions of admission.—For the first year connection with the public schools or with the industrial evening-classes in the State will be a condition of admission. But if this class of applicants should not fill the school, the complement will be made up of the most promising candidates resident in the State who declare their intention to become teachers of drawing. If there is still room, others, residents or non-residents, may be admitted. In every instance, however, an examination in free-hand-drawing will precede admission, and only those who show an aptitude for drawing, with some proficiency in its elements, can be received.

Course of instruction.—The course for the first year only is determined. During this year there will be careful individual instruction in free-hand-drawing, painting, and designing. Instrumental industrial drawing will be taught by lectures, with blackboard-illustrations, which method will also be pursued in the instruction in architecture, machine-drawing, orthographic projection, isometric projection, projection of shades and shadows, geometric drawing, and perspective.

The school-year.—The school-year, which began November 6, 1873, will terminate May 9, 1874, the sessions for ordinary students being on Mondays, Tuesdays, Thursdays, and Fridays of each week, from 9 a. m. to 2 p. m., and from 3 to 5 and 7 to 9 p. m. Students engaged in teaching drawing are required to attend four of these sessions per week, and those not so engaged eight sessions per week. For teachers of the State normal schools, a special session is held on Wednesday of each week, from 3 to 5 p. m.

Examinations and diplomas.—To secure permission to be examined for a diploma, each student must submit twenty-four exercises, the subjects of which are indicated in a printed list of diploma-works. These exercises are to show whether the student possesses the manipulative skill necessary to teach drawing. If they should be approved, the student will be allowed to offer himself for the diploma-examination held at the close of the annual session. This being passed satisfactorily, a diploma will be given testifying to the scientific and artistic qualifications of the holder to give instruction in elementary drawing.

Should a student fail to pass on any subject, he may present himself again at a subsequent examination, the subjects already passed being recorded in his favor; but he cannot receive the diploma of the school until all the subjects given out for examination have been passed successfully.

Demand for such a school.—Four months after the opening of the school two hundred applications for admission had been received. The superintendent, indeed, estimates that if all the needed conveniences were given, such a school must open next year with five hundred pupils. He says that he has in his desk applications from many colleges and universities in several States for accomplished teachers of art, to which he is unable to make any favorable response from lack of present trained *matériel*, and fears that such *matériel* cannot be prepared in less than four years with the instrumentality already in his hands.

He expresses the hope that America may yet have an institution kindred with the great industrial art-schools of European states, which may, through its graduates, affect the value and beauty of every branch of industry.

ON THE INSTRUCTION OF DEAF MUTES.

[By E. M. Gallaudet, Ph. D., LL. D.]

In reviewing the history of deaf-mute-instruction, we discover that controversies begun in a former century have become the inheritance of recent times.

Disciples of Heinicke still contend earnestly for the principles and practice of their master and the successors of De l'Epée and Sicard urge the superiority of their system with equal vigor.

There are skilled instructors who can scarcely be patient in their condemnation of the folly of attempting to impart the power of oral speech to congenital mutes, while others may be found who inveigh with ignorant bitterness against the use of pantomimic gestures or the manual alphabet.

Until the beginning of the last decade, this controversy was practically confined to Europe.

In this country, for a period of nearly fifty years, the so-called French system, based upon the methods of De l'Epée and Sicard, had held almost undisputed sway. The ideas of Heinicke, which had ruled in Germany for more than a century, found no acceptance in America. And while institutions for the moral, intellectual, and industrial training of deaf mutes were multiplied, it was nowhere really attempted to teach them to use their vocal organs or to understand the oral utterances of others.

About seven years ago, the efforts of certain benevolent and public-spirited citizens of Massachusetts resulted in the establishment in that State of a school in which the process of teaching deaf mutes to speak and to read from the lips was to have full and careful trial.

To Miss Harriet B. Rogers, who opened this school at Chelmsford, and has since perfected it at Northampton, the credit is due of having initiated and measurably completed this important undertaking.

The results attained by Miss Rogers and her efficient corps of assistants having recently passed under our observation, we venture to present in this paper some of the impressions we received and certain conclusions to which we were led.

The principal questions upon which our investigations at Northampton were intended to throw light were the following:

(1) May deaf mutes acquire such a degree of fluency and readiness in oral utterance and lip-reading as shall compensate for the time and labor necessarily involved in imparting these powers to such as are absolutely without them?

(2) Do deaf mutes, educated in and by articulation, acquire the power of using correct written language more rapidly and perfectly than those educated under the system which makes large use of the language of signs and the manual alphabet, discarding articulation?

(3) Is it desirable or important to attempt to teach the entire number of deaf mutes to speak and read from the lips?

(4) Is it practicable or desirable to dispense with the language of signs and the manual alphabet in the instruction of deaf mutes?

In the discussion of these questions it is proposed to consider semi-mutes and the semi-deaf as forming classes quite distinct from deaf mutes, properly so called.

The term semi-mute includes all such as have acquired the power of oral speech, and consequently the ability to think in language, before losing their hearing.

The semi-deaf are those who possess sufficient hearing to enable them to comprehend and imitate vocal utterances without the aid of the eye, while they are too deaf to understand ordinary oral discourse.

These classes of persons, usually regarded in civil law as deaf mutes, and hence entitled, when of teachable age, to admission as pupils into schools for the deaf and dumb, differ so widely from other deaf mutes in their intellectual status and capacity for acquiring the power of using written or spoken language, as to demand an entirely distinct consideration.

In all the essential elements of deaf-mutism, considered either from a physiologic or psychologic point of view, the semi-deaf and semi-mute are not deaf mutes at all. And we incline to the opinion that if their education during their earlier years could be carried on in separate classes the interests of all concerned would be advanced. To avoid misconception, then, when we wish to include these exceptional classes we will use the words "deaf mutes of all sorts," limiting the ordinary term "deaf mute" to those who are actually such in the strict signification of the words.

In the examinations we were enabled to make of pupils at the Northampton school, we gathered a decisively affirmative answer to the first question we have proposed. Deaf-mute children of the age of 15 and under, who had been taught for six years,

were able to speak with a degree of fluency and distinctness not difficult to be understood by a stranger. They could also read from the lips of a stranger with readiness, and with but few occasions for repetition. The time and labor involved in making these acquirements did not seem to have been greater than their very high value would warrant. That so much can be predicated of all deaf mutes must not, however, be supposed. It is not claimed by Miss Rogers that all can be trained in articulation and lip-reading as successfully as those we particularly examined. And our impressions, derived from somewhat extended observations of articulating-schools in Europe, that the number that may be expected to succeed in oral utterance and lip-reading is a decided minority, taking into account "deaf mutes of all sorts," was fully confirmed at Northampton.

The utterance of many pupils was so indistinct and imperfect as to be understood only when most closely attended to, while that of others was, to a stranger's ear, hardly more than gibberish. And yet nearly or quite all of this could be comprehended by the teachers.

Passing to our second question, we are led to give a negative answer, and this rather unexpectedly, for we had been disposed to the contrary view before visiting the Northampton school.

We were permitted to examine two deaf mutes placed before us as the best illustrations that could be afforded of the success of Miss Rogers's training.

A boy of 15, born totally deaf, who had been under instruction six years, wrote as follows, in reply to written questions:

"Will you please tell me some of the pleasant things you did during your last vacation?"

"I went to the sea-shore and staied there for one day—I have been in bathing. I played with my friend the games were "Hide and Seek," Tag and croquet. Almost every day I swimmed with the boys. I helped my friend raking hay in the meadow. I visited my grandFather and Cousins. I have gathered some apples and setted the trap for wood-chuck. I have not caught it. My friend caught six wood-chucks last summer. I drove the cattle to the pasture from the barn."

"Tell me of your excursion to Mount Tom."

"I went with the children to Mount Tom and we have a pic-nic. We ate some sandwiches, pears, cakes and crackers."

"What did you see on the mountain?"

"I went in the house on the top of the mountain and saw many different kinds of stiffed birds and live rattlesnakes, owls and young foxes."

The other deaf mute, whose proficiency in ordinary written language I was permitted to test, had been under instruction six years, was born totally deaf, and was a girl of eleven and a half years of age.

The principal questions and answers in our written conversation were as follows:

"What did you do with yourself during your last vacation?"

"On July 22 we went home. We are very glad because we go home. I went to Boston. My brother met me at Boston Albany depot. I was very glad to see him. My brother put me in another cars. I go alone in the cars. I went at four o'clock and I go home to East Dennis at half-past six o'clock. My Father and mother met me at the depot. I was glad to see them. They were glad that I was safe from Boston to South Dennis. Then they brought me home. I was hungry and sleepy. My mother gave me some supper. Then I go to bed. The next day my mother and I went to Grandfather's house to stay the afternoon."

"Do you think Northampton is a pretty place?"

"Yes."

"Why do you think it is pretty?"

"Because in the summer the trees have very many leaves, many beautiful things hung in the stores and the grass is green. It look very beautiful."

"Tell me a little about your excursion up Mount Tom."

"I went with the large children when Miss Rogers went to Europe. We went in the cars to Mount Tom. We walk very long way to the house in Mt. Tom—There are two snakes in the store some boys killed. We saw an owl. It has two eye-lids. Some of the children trouble it. It is very cool in Mount Tom. Then we came home in the cars from Mt. Tom to Northampton."

Those who are familiar with the written compositions of deaf mutes will observe in the specimens we have transcribed substantially the same errors as are found in the writing of pupils taught "under the system which makes large use of the language of signs and the manual alphabet, discarding articulation."

The misuse of tense and number in verbs, the omissions of articles and pronouns, the defects of punctuation, the mistakes as to the plurals of nouns, are all such as will be recognized by every teacher of the deaf and dumb; and we are of opinion that in the paragraphs we present these "deaf-mutisms" are more numerous than would appear in similar productions from pupils of equal intelligence and similar standing in our older institutions.

This conclusion must not, however, be taken as implying that, on the whole, results of the six years' instruction to the two pupils we are considering are to be counted as of less value than those they would have been likely to have secured in the same length of time in a first-class non-articulating-school, for these two deaf mutes had acquired what they would have entirely failed to secure under the old system, a degree of facility in oral speech and lip-reading of unquestionable value as a means of communication in society and in the general business of life. Their utterances, though peculiar, were easily understood. They read from the lips of a stranger with readiness. They conversed with pleasure at the table.

When the importance of this accomplishment is fairly weighed, we are led to pronounce the aggregate value of the six years' training in these two cases as higher than any results that have come to our notice under the system which entirely discards articulation. This conclusion is in accordance with expectations we had been led to entertain by what appeared in an examination of European schools in 1867, and sustains the opinions recorded in a report we had the honor to make at that time.

That there may be no misapprehension as to the scope of the judgment just announced, it should be said that it applies only to such deaf mutes as the two whose attainments we have under discussion. Their success is by no means to be taken as proving what may be done with the mass of deaf mutes. That they are to be regarded as exceptional cases is sustained by an authority no less distinguished than that of Moritz Hill, of Weissenfels, Germany, now retired from his profession after a half-century of successful labor in teaching the deaf and dumb strictly on the system which makes articulation the prominent feature.

Mr. Hill, in 1867, expressed the following opinions in answer to queries presented to him by the writer of this paper:

"Out of 100 pupils, 85 are capable, when leaving the school, of conversing on commonplace-subjects with their teachers, family, and intimate friends. Sixty-two can do so easily.

"Out of 100 pupils, 11 can converse readily with strangers on ordinary subjects. Many others learn to do this after quitting school." *

Eleven per cent. only of deaf-mutes of all sorts, including, therefore, the semi-mute and the semi-deaf, are claimed by one of the greatest of living teachers of articulation as "being able to converse readily with strangers on ordinary subjects" when they leave school. Allowing that double this number "learn to do this after quitting school," by reason of their increased intercourse with strangers, we have remaining 67 per cent., or a full two-thirds majority, of deaf mutes of all sorts, who, after all the help that can be given them in schools founded on the articulation-basis, can never hope to do more in oral speech than "converse on commonplace-subjects with their teachers, family, and intimate friends;" and in this number we include 15 per cent. who cannot hope to do even so much as this.

Commenting on these facts in our report of 1867 we expressed ourselves as follows, and the conviction then recorded remains unchanged:

"We are inclined seriously to question the desirableness of continuing instruction in speech during a series of years when no higher result can be expected than to enable the pupil to converse on commonplace-subjects with his teachers, family, and intimate friends; for with the instructor he has always the much easier and equally precise language of signs or the manual alphabet, while the family and intimate friends can with little effort acquire facility in dactylology; and this their interest in their mute friends will naturally lead them to do."

A negative answer to our third question will follow naturally from what has already appeared in the discussion of the first two inquiries.

And at the same time we cannot too strongly urge the importance of teaching articulation and lip-reading to all who give fair promise of attaining success therein; and, lest some deaf-mute, capable of securing this valuable acquisition, should fail of doing so through inadvertence, the capacity of all should be experimentally ascertained before he or she is pronounced hopelessly dumb.

That the semi-deaf and the semi-mute should have the benefit of thorough instruction in speech- and lip-reading does not require argument, and their advantages, other things being equal, over the congenitally and totally deaf are very great in this feature of their education.

In the Northampton school, as in many European institutions where articulation is made a prominent feature, it is attempted to dispense with the language of signs, and the use of the manual alphabet is forbidden.

We think this is a mistaken policy, persistence in which cannot fail to involve serious disadvantages.

In this opinion, so far as it relates to the sign-language, we are sustained by Mr. Hill, to whom we have already referred.

---

* According to statistics gathered recently in this country, the semi-mute and semi-deaf, taken together, constitute about 10 per cent. of the aggregate body of deaf mutes of all sorts.

In his well-known work, Der gegenwärtige Zustand des Taubstummen-Bildungswesens in Deutschland, Mr. Hill presents the following unequivocal declarations, in speaking of those who pretend that in the "German method" every species of pantomimic language is proscribed:

"Such an idea must be attributed to malevolence or to unpardonable levity. This pretense is contrary to nature and repugnant to the rules of sound educational science. If this system were put into execution, the moral life, the intellectual development of the deaf and dumb would be inhumanly hampered. It would be acting contrary to nature to forbid the deaf mute a means of expression employed by even hearing and speaking persons. * * * It is nonsense to dream of depriving him of this means until he is in a position to express himself orally. * * * Even in teaching, itself, we cannot lay aside the language of gestures, (with the exception of that which consists in artificial signs and in the manual alphabet, two elements proscribed by the German school,) the language which the deaf-mute brings with him to school, and which ought to serve as a basis for his education. To banish the language of natural signs from the school-room, and limit ourselves to articulation, is like employing a golden key which does not fit the lock of the door we would open, and refusing to use the iron one made for it. * * * At the best it would be drilling the deaf mute, but not molding him intellectually or morally. Where is the teacher who can conscientiously declare that he has discharged his duty in postponing moral and religious education until he can impart it by means of articulation?

"Although the use of the language of pantomime acts, in several respects, in an unfavorable manner on the teaching of articulation, it ought to be remembered that institutions for the deaf and dumb are not created solely to impart this latter kind of instruction: their object is much more extensive, and they have to meet wants which depend on education taken in its entirety."

We would direct especial attention to the closing sentence quoted from Mr. Hill and his clear statement of the true object of institutions for the deaf and dumb.

We learned from Miss Rogers that a means of communication between her pupils and their teachers, as well as among themselves, by writing in the air had come into use. This was regarded as more desirable than the manual alphabet, for the reason (and this was the only one given) that it could easily be resorted to as a means of communication between deaf mutes and those who had never learned the manual alphabet.

That writing in the air may often be found a convenient means of communication between deaf mutes and speaking people when no other can be resorted to, we are ready to admit; but to accept it in a school for the education of deaf mutes as a substitute for the manual alphabet seems to us hardly more reasonable than to prefer an artificial limb to a natural one, or to choose the little child's method of printing letters rather than the free and rapid swing of an accomplished penman.

By using the finger-alphabet arranged for one hand, words may be intelligibly expressed with a rapidity four times as great as that of the fastest writing. Greater precision, too, will be secured in using dactylology than in air-writing, and we can see no possible impediment to progress in articulation growing out of the use of the manual alphabet that would not equally attach to writing in the air.

It is admitted by Miss Rogers, as by all disciples of Heinicke, that "natural signs" must be used to a certain extent, even in articulating-schools. It is to the "language of signs" that most teachers of articulation take exception, the use of which they prohibit in their schools.

We are disposed to believe that the usefulness and efficiency of the Northampton Institution and all similar schools would be increased by the judicious introduction of the "language of signs" among teachers and pupils, and we trust we commit no breach of courtesy when we ask if the judgment of those who have been familiar with this much-abused medium of communication from their infancy, who have used it for a life-time of intimate intercourse with deaf mutes, may not be as well entitled to respect as the *ipse dixit* of such as have never attempted to learn the language, much less to master it.

We must not close this paper without mentioning the name of the late John Clarke, esq., of Northampton, through whose munificent benefactions, amounting to more than two hundred thousand dollars, the school of Miss Rogers has been sustained on a more liberal scale than most of the older institutions in this country. The institution very properly bears the name of its most prominent patron, and will be known as the Clarke Institution for Deaf Mutes.

In noting the results of the systems of instruction pursued in the Clarke Institution, it would be premature to undertake to speak with any fullness of the Bell method of visible speech.

This important invention is due to Prof. A. Melville Bell, formerly of Edinburgh, and has been introduced into this country by his son, A. Graham Bell, lately appointed professor of vocal physiology in the Boston University.

The process provides for a representation of sounds, not as in the usual alphabets, by arbitrary symbols, but by actual symbolic illustrations of the action of the vocal organs.

The invention has been adopted by Miss Rogers, and early results indicate a marked success as probably in store for the future.

Other schools for the deaf and dumb besides that at Northampton are making trial of the visible-speech-method, and a convention in the interest of its general introduction was held in January, 1874, at Worcester, Massachusetts.

This meeting seems to have been little more than an effort to bring the Bell method into public notice, and few results or reports of results were presented.

Teachers of deaf mutes, generally, are disposed to accept this new process of teaching articulation to the deaf as an important contribution to the existing means of educating this class of persons, and it is believed that within a very few years it will find wide acceptance and approval.

FURTHER INTERESTING FACTS.

The following interesting facts respecting the correspondence between the sign-language of the deaf mutes and that used by the wild Indians of the plains were kindly communicated by William Welsh, esq., of Philadelphia:

Two large tribes of Indians, the Cheyennes and the Arapahoes, formerly together, separated, one-half going to Indian Territory; the other half are roaming Indians, chiefly in the western part of Wyoming Territory. The latter have never come in contact with civilization, not having even seen corn-planting. A delegation from this tribe recently visited Washington, Philadelphia, and New York.

When they were in Philadelphia an effort was made to ascertain the measure of correspondence between the sign-language of these Indians and the educated deaf mutes. The Indians have a sign-language by which they are enabled to communicate with each other in all important particulars, although, from the diversity of their tongues, they are unable to understand a word of the spoken language. These Indians were first brought in contact with the deaf mutes at the Academy of Music, where a striking correspondence between the sign-languages was discovered, but the Indians were too diffident to speak much. A private interview was arranged between them and the principal of the Deaf and Dumb Institution, a male teacher, and five young women, who are pupils in the institution.

At the tea-table they became interested in each other by finding that they had the same signs in common for coffee, milk, sugar, and other things on the table. The Indians have no sign for tea, because it was not used by them, but pointing to the tea made a sign that it was coffee made from leaves. Two hours were afterward spent in social intercourse mutually agreeable, the deaf mutes understanding almost everything that the Indians described in sign-language, and with which the Indians were familiar. The Indians were delighted to find that educated people could speak to them in the sign-language, which seemed to reach their hearts more thoroughly than the spoken language. It made the Indians so happy that after retiring to their rooms they spent a long time singing, for joy, although they had not sung before, except just after they had left home. They view these girls and their teachers as their friends, and wish them to go and live with them, feeling that they have hearts in common as well as a language in common.

Mr. William Welsh, who had arranged this interview, had desired to test the similarity of the sign-language, and asked Mr. Edgerton Crouter, who was present, to note down the signs they had in common, and received a letter, from which the following is an extract, in reply:

* * * * * * *

"At the recent interview between several of our pupils and the delegation of Indians visiting the city under your care, it was found that they make signs identical or strikingly similar to those made by deaf mutes for the following list of words:

Love.	Bullet.
Hatred or dislike.	Scissors.
Fear.	Looking-glass.
Truth.	Cold.
Falsehood.	Warm.
Death.	Lightning.
Anger.	Thunder.
Astonishment.	Coffee.
Sorrow.	Milk.
Hunger.	Sugar.
Sun.	Butter.
Moon.	Earth or ground.
Stars.	Grass.
Night.	River.
Darkness.	Tobacco.
Sun-rising.	Snow-shoes.

Sun-setting.

INDUSTRIAL TRAINING FOR GIRLS, WITH PRACTICAL LESSONS IN HOUSEHOLD-ECONOMIES, AS TAUGHT IN GERMANY.

[By J. Fred. Myers, Washington, D. C.]

A Russian publicist of intelligence and high standing, who had devoted many years of his life to projects of reform in his native land, (all of which had been unsuccessful,) finally discovered that the real mission of a philanthropist in that empire lay in the introduction of a more liberal and thorough system of education among the masses, and his chief regret seemed to be that he had made this discovery too late in life to take full advantage of the knowledge so dearly purchased.

Not Russia alone, but all European nations are agitating this vital question, because neither civil nor political institutions can progress faster than the educational system of the nation will bear. It is, therefore, unquestionably one of the most assuring symptoms of the prosperity of mankind in the future, that there are in the present era so many distinguished and philosophic minds engaged in the field of educational inquiry. Educational literature, already large, is annually increasing by the acquisition of books, pamphlets, and periodicals. In addition to this, the local press of the United States very generally gives a column each week to the discussion and advancement of educational interests. Yet, notwithstanding these increasing activities, the full importance of the subject is rarely comprehended, for the safety of the republic and the foundation of order, as well as the solution of the intricate problems of social science and of political and domestic economy, are dependent thereon. Education is conceded to be, by even the bitterest opponents to its introduction among the masses, the supporting pillar of all political and religious institutions. Though much has been written, educational science is still in its infancy, and the discussion of its methods has not exhausted the theme. In fact, the science of education is so extended in its scope, that, as an astronomer can only observe an infinitesimal part of the horizon at one time, so a thorough view of the educational field can only be obtained by separate discussions of its various phases; and it is only a portion of one of these we are about to bring under examination.

In a recent tour through Europe, our attention was particularly directed to the question whether a special training for female pupils in our public schools would be of advantage. We waive that branch of the inquiry which would discuss the propriety or the desirability of educating both sexes (subsequently to the age of 14 years) in separate apartments. Whether the sexes are trained in separate apartments or together, it is evident the general course of life and future destiny of the average man and woman are radically different. Exceptions there are; for women are sometimes found filling creditably the places of men. Some have already graduated from universities, with honor, as doctors of medicine, as ministers of the gospel, and as lawyers and professors. The masses of women, however, cannot, any more than the masses of men, become members of the learned professions, but will have to engage in manual labor and business-pursuits. To all who choose to become, and are capable of becoming, graduates of universities, the doors of such institutions should be open; and the question on entering and graduating should not be What is the sex of the scholar? but What are the mental attainments?

SPECIAL TRAINING AS TEACHERS.

One of the curious blunders which so many writers make when comparing the sexes is that they compare the best woman with the average man, instead of comparing the best with the best or the average with the average. The destiny of the average woman is to become, in the capacity of wife, mother, or daughter, the superintendent of the household; nor does it matter, in principle, whether this involves the doing of household-work with her own hands or through the agency of servants. Upon the average woman also devolve the education and training of children, the households where the father takes the charge of the education of the children being exceedingly rare. Thus, if education means the development of the mental and moral powers of the individual to their utmost usefulness in life, girls ought to be so taught as to enable them to manage the children of the household successfully and secure both the affection and obedience of the little ones intrusted to their care. If this is correct, it follows that in all our higher educational institutions, such as, for instance, our union- or high schools, and in our academies, special instruction should be given upon these topics, and the advanced female pupils should be detailed as teachers to the primary schools, under the guardianship of the regular teachers, so that they may have some experience in the practical management of children.

In Germany the Kindergarten-schools are considered invaluable aids for this purpose; so much so that princesses and ladies of the highest nobility engage in them as

amateur teachers, for the chief purpose of learning how to obtain control over their own children; for these ladies realize, more fully than those who are born in the ordinary walks of life, what a delicate and responsible task it is so to fortify children in character that they may be able to resist the innumerable temptations which high station and riches always bring. Instruction in the art of teaching and controlling children will, therefore, be of great advantage, not merely to women who expect to become professional teachers, (and a very large number in the United States teach for a greater or less period,) but to all, in enabling them to become successful instructors and controllers of their own children, in case the future should bring with it these blessings.

FEMALE-HANDIWORK.

The average woman is placed in a position where a thorough knowledge of needle-work will be a source of comfort when presiding over the family.

In the common schools of Germany two afternoons in each week are set apart for the instruction of girls, by a competent person, in the art of sewing, the pupils beginning, as early as 6 years of age, with sewing through paper. They are also taught to knit, each child furnishing its own material and keeping the product of its labor. When they have learned to hem, the next step is mending. Neat mending will be found to require much greater care and skill than is generally supposed, and much wearing-apparel is thrown aside because the owner does not possess the necessary knowledge to mend it in a skillful manner. From plain sewing, mending, and knitting, the pupil advances to fine needle-work, tatting, and crocheting. Some of the tapestry-work of the older pupils is often so beautiful in design and so artistic in execution as to challenge general admiration. We saw some of this work at the Vienna Exposition, in the female-handiwork-department, which fell short only of the master-works of the Middle Ages in flexibility and expression.

The average woman becomes the wife of the mechanic and the working man, and a complete knowledge of sewing is to her a great source of comfort as well as of profit, and enables the family to save a sufficient amount to secure a home and protection against poverty when age, with its incidental weaknesses, draws nigh. Therefore, as our common schools are intended more especially for the average children of our country, the teaching of the art of needle-work, which might also be extended to learning the use of the sewing-machine, ought not to be neglected. At present our girls are either compelled to pick up a knowledge of this useful art by piecemeal or become apprentices to some dress-maker or milliner, which, for various reasons, is rarely practicable. Instruction in needle-work in the school would encourage economy and industry and become a solid benefit to many households. The higher branches of artistic needle-work would, as they have in centuries gone by, afford pleasant occupation to the wealthy classes, who are suffering from *ennui*.

Since nearly all the teachers of female pupils in our common schools are ladies, it seems to us that it would increase the interest of both teachers and pupils if two half-days were set apart for instruction in sewing, mending, and knitting. It certainly would be popular with parents, who would quickly perceive the advantage which the product of the labor and the increased diligence and skill of the children would bring to the household.

DOMESTIC ECONOMY TAUGHT AS A SCIENCE.

Another most important and useful branch of instruction is the delivery of lecture-conversations upon the science of domestic economy. We are witness to-day to events where men, supposed to be worth millions of dollars, are stricken with bankruptcy as with the palsy, and reduced to poverty; and the evil results of such a calamity are often needlessly increased by an utter ignorance on the part of wives and daughters of the purchasing value of money and its uses as applied to household-affairs.

We were present in the Köhler Kindergarten, at Gotha, at several of these interesting lectures, in which the professor discussed with his pupils every phase of domestic economy; and for the purpose of affording to American teachers the opportunity of fathoming its scope and simply as an illustration of method, and *not* for the absolute value of the suggestions, we shall quote the lectures in detail.

"Young ladies," says the professor, "suppose that you had to keep house, either as a wife or as a daughter, and that the family consisted of two grown members and three children, and that the income was $1,200 a year, how would you spend it to the greatest advantage and comfort? If you had to reside in a rented dwelling, what kind of a house could you afford to lease? What proportion of this $1,200, in justice to all other necessities and requirements, should be expended for rent? What number of rooms are essential? Would a garden be an advantage; and, if so, how large? What are the prices of house-rent in the city of Gotha?"

This field of inquiry seemed to be entirely new, and few pupils were prepared to answer. The professor then said: "Make inquiries; let us know how many rooms a family so circumstanced could afford, so as not to intrench too largely upon other necessary expenditures."

The next inquiry of importance is the question of nourishment. The professor said: "Ladies, for to-day's dinner," many of the pupils being boarders, "as you know, we had rice-soup, beef, and vegetables for the first course, sausage and potatoes for the second, and pudding for dessert; can you tell me what was the cost of that dinner per person?" They could not. "What is the price of beef; what is the price of potatoes?" They did not know. "For to-day I will excuse you; but when we take up this subject again you must be better informed. Inquire of your mothers or friends, for it is of importance to you to know the value of the necessaries of life."

Coming back to the initial point, the annual income, the conversational lecture involved a thorough sifting of the details. Its chief value lay in its minute examination, so that every pupil could make either an additional inquiry or relevant suggestion. After a thorough canvass of the house-rent-question, the conclusion was reached that a family, with the income specified, could afford $150 per annum for house-rent in that city. In other words, after surveying the whole field, the conclusion was reached that $150 house-rent would be a proper proportion of the whole expenditure and that any considerable increase of expenditure in that direction would tend to diminish the comfort of the family in matters equally essential.

The discussions of the question of proper nourishment and its relations to price, health, and comfort were continued through a number of sessions. Not merely were the prices brought forward, but the questions What kinds of food contain the most nourishment? How to secure a reasonable variety consistently with economy, and How various dishes can be prepared and waste prevented were treated in the same suggestive and familiar manner. In fact, these conversations were so genial, and withal so dignified, so pleasant, and, for girls, so interesting, that the pupils looked forward to them with anticipations of both pleasure and profit. Questions were submitted by pupils, and the zest with which the discussion was followed up showed that not merely was the topic in itself congenial, but that they appreciated its important relations to their future welfare. After a final and exhaustive review, it was determined that, with the existing prices of food in the city of Gotha, a family with the income stated could afford to spend $300 a year for food.

The next great question was the one of clothing. How shall we be clothed? The consideration of What are the chief requisites for clothing? brought out a number of answers. The first one—Germany being a cold country—was, quite naturally, that it should afford the requisite warmth and protection in winter. This was followed by the suggestions that it should be suited to the seasons; that it should be handsome in appearance; unchangeable in color; of firm and durable texture. The wearing-apparel of the grown members of the household was first considered, and the cost of silk, woolen, linen, cotton, broadcloth, and cassimere was discussed. The relations of colors to each other and their correspondence with the complexion of the wearer were also discussed, and in this field the ladies were able to contribute many interesting observations.

It was finally concluded, after a number of conversations, carried on twice a week, that $300 per year would clothe the family in a neat and respectable manner. Incidentally the question of making over garments was brought up, and, strange as it may seem to us, that part of the question which treated of the limits to which remaking and turning can be carried with advantage, was brought prominently forward, for in that country careful women often go the extreme of repairing and making over garments when they no longer pay for the labor expended on them.

One feature upon which the professor dwelt most emphatically was the ever-recurring incidental or extraordinary expenses of the family; and this is a matter of importance to both sexes and to all classes. The breaking of a pitcher does not happen every day, but in the aggregate there is an ever-recurring wear and tear of furniture and household-goods, which, as these articles must be replaced at irregular periods, constitute what are called incidental or extraordinary expenses, though they are as truly ordinary expenses as any others. The keeping in repair of furniture and other household-necessaries requires an average expenditure of $100 per annum, and $50 more may well be kept in reserve to meet the demands for literary and religious expenditures and to provide for sickness, family-presents, amusements, &c. In a growing family $50 must be set apart for educational purposes, and the father may be considered an economic man if $50 suffices for his incidental expenses, particularly if—as is the case with most Germans—he is addicted to the use of wine and tobacco. Fifty dollars are also needed for fuel, the economic use of which and the various kinds to be used formed an interesting and profitable topic. Finally the expenditures foot up as follows:

For house-rent	$150
For clothing	300
For food	300
For special expenditures	100
For extraordinary expenditures	50
For education	50

For fuel	$50
For incidentals	50
Total	1,050

This leaves about $150 as a savings-fund, and is as little as ought to be saved in times of prosperity; for as children grow larger, and it may be desirable to send a son to the university, and as the family may increase and times may change, no man ought to spend regularly a larger portion of his income than is here set forth.

But many men in Germany have not an income of $1,200. The great majority must live on $800, and even less. Let us, then, consider the question how a similar family can live on $800, remain out of debt, and be comfortable and respectable. The first question is, "Where can we retrench?" We must at once cut down the rent to $80 per annum. We must retrench in the article of food, but the reduction here must not be too great, because a certain amount and quality are absolutely necessary to keep the family in good working condition. It will cost us $250, at least. Then, we must dress plainly; we must use simple, strong woolen goods. This will enable us to reduce this expenditure to $180. Thus all the household-expenses are revised, and, while re-enforcing previous lessons, these new discussions give to them a pleasant variety. These careful and well-digested reviews of the various phases of domestic economy are exceedingly attractive to the pupils, in part, doubtless, because they can ventilate the theories—which nearly every young woman cherishes in her heart—of domestic life.

In this manner a young woman becomes so thoroughly acquainted with the demands and details of domestic economy that she has well-defined ideas, based upon reality and reflection. Far from encouraging the husband or father—the purchasing power of whose income she knows—in extravagance, or in the waste of money in some particular direction, to the diminution of other necessary comforts, she will be prepared to resist temptation herself and to give sufficient reasons why the income should not be misdirected. Instead of looking upon marriage as a New Jerusalem, where troubles cannot intrude, she is prepared to bear her share of its great responsibilities and to assume a portion of its ever-increasing cares. Thus the woman becomes self-poised, firm in character, ready to adapt herself to the varying changes of fortune and to meet with courage the vicissitudes of life. Her children will also be taught that frugality and economy, with the careful use of clothing and household-goods, furnish the only sure way to prosperity.

Is not the average woman, when thus thoroughly equipped with a large store of practical information, better fitted to be a successful wife and mother than if her time had been taken up exclusively with the study of geometry and botany? Will she not be prepared to avoid the dangers of the bankruptcy of her husband and the terrible and harrowing course of "keeping up appearances," in which every comfort is sacrificed to the supposed requirements of social position?

We all know that the happiness of married life is worn out by the ever-recurring annoyances of little things. "Empty pots are filled with contention" is a proverb, in substance, of many nations, and the divorce-courts are often called in as a last resort—and a most terrible one they are—when the struggle between impecuniosity on the one hand and desires for extravagant expenditure on the other have turned the love of early days into gall and wormwood.

In view of these facts, so common that they must have come under the observation of all, it is to be hoped that these features of special female-education will receive full and fair discussion, so that these new studies, with such modifications as experience shall suggest, may be introduced into our high schools and academies for advanced female pupils.

We are the more certain that these methods are deserving of recognition and adoption because the schools of the city of Gotha enjoy a high reputation upon the continent. The seminary for the education of male teachers and the common schools, under the zealous care of School-Director Dr. Möbius, and the Kindergarten-seminary, under Dr. Köhler, have earned so great a reputation that pupils from Greece, Russia, Hungary, and England, in increasing numbers, are being matriculated. This reputation for thorough and useful training is, moreover, based upon an unselfish devotion and a love for the cause as rare as it is delightful.

a Private.
b One colored; not specified.
c Also 9 male and 3 female teachers of music, &c.
d Average monthly enrollment.
e One school for colored children, with 20 enrolled and 16 average attendance.
f One music-teacher, also.
g Five graded and 5 ungraded schools.
h Also 5 mixed schools.
i Also 5 in mixed schools.
j Eleven not specified, and 2 training schools.
k Including 1 professor of vocal music.
l Including 1 professor of drawing.
m Two not specified.
n Eleven not specified.
o Includes 13 not graded.
p Also primary, white and colored.
q One hundred and eighty-eight colored.
r Includes primary and intermediate schools.
s Also teachers' school.
t One special.
u Two special.
v Also 6 female principals.
w Probably school-houses; schools not specified.

a Two ungraded, not specified.

b Also 1 school for colored children, with 1 female teacher, and 36 enrolled and 30 average attendance.

c Includes grammar.

d Mixed and ungraded.

e Also 12 suburban schools, with 12 female teachers, and 300 enrolled and 225 average attendance; and 1 select school, with 1 male and 4 female teachers, and 300 enrolled and 275 average attendance.

f Includes 1 apprentice-school.

g Also 15 rural or ungraded schools, with 15 female teachers, and 411 enrolled and 356 average attendance; and 1 practice-school, with 1 female teacher, and 10 enrolled and 10 average attendance.

h Also 1 miscellaneous school, with 1 male and 1 female teacher, and 116 enrolled and 75 average attendance; and 1 mixed school, with 1 female teacher, and 16 enrolled and 9 average attendance.

i Four mixed.

j Also 15 mixed schools, with 1 male and 14 female teachers, and 570 enrolled and 492 average attendance.

k Including teachers of music and writing.

l Also 12 mixed schools, with 2 male and 10 female teachers, and 330 enrolled and 250 average attendance.

m Six are not specified.

a These are colored-schools.
b These are corporate schools, under the immediate care of private corporations of an eleemosynary character, subject, however, to the supervision of the board of education and participating in the apportionment of the school-fund.
c Also, 1 unclassified school, with 1 male and 1 female teacher, and 261 enrolled and 88 average attendance.
d Also, 2 ungraded schools, with 4 male teachers, and 180 enrolled and 85 average attendance.
e Also, 1 ungraded school, with 1 female teacher, and 50 enrolled and 48 average attendance.
f Includes grammar.
g Also, 1 ungraded school, with 1 female teacher, and 50 enrolled and 35 average attendance.
h Includes teacher of penmanship.
i Includes teacher of vocal music.
j Also, 9 special teachers.
k Also, 3 special teachers.
l Includes primary.
m Includes grammar.
n Includes 1 irregular day-school, with 1 male teacher, and 55 enrolled and 34 average attendance.
o One special teacher.

TABLE II.—*School-statistics of cities, &c.*—Continued.

St. Paul's School	St. Paul, N. H	Not found.
St. Mary's Hall	Burlington, N. J	See Table VII.
Peddie Institute	Hightstown, N. J	See Table VI.
Angelica Academy	Angelica, N. Y	Closed.
Black River Conference Seminary	Antwerp, N. Y	See Northern New York Conference Seminary, (identical.)
Claverack Academy and Hudson River Institute.	Claverack, N. Y	See Table VI.
Central New York Conference Seminary.	Cazenovia, N. Y	See Cazenovia Seminary, Table VI, (identical.)

MEMORANDA—Continued.

Name.	Location.	Remarks.
Fort Edward Collegiate Institute	Fort Edward, N. Y	See Table VI.
Grammar-School of Madison University.	Hamilton, N. Y	See Colgate Academy, Table VI, (identical.)
Ithaca Academy	Ithaca, N. Y	See Table VI.
Clinton Grammar-School	Clinton, N. Y	See Rural High School, (identical.)
Fairfield Seminary	Fairfield, N. Y	See Fairfield Academy, (identical.)
St. Joseph's Literary Institution	Jackson, N. Y	Closed.
Kingston Academy	Kingston, N. Y	See Table VI.
Anthon Grammar-School	New York, N. Y	See Table VI.
Columbia Grammar-School	New York, N. Y	See Table VI.
University Grammar-School	New York, N. Y	See Table VI.
East Genesee Conference Seminary	Ovid, N. Y	Closed.
Schenectady Union School	Schenectady, N. Y	See Table VI.
Seneca Falls High School	Seneca Falls, N. Y	Closed.
St. John's School	Sing Sing, N. Y	See Table VI.
Webster Academy	Webster, N. Y	Gives no statistics.
Chickering Classical and Scientific Institute.	Cincinnati, Ohio	See Table VI.
Curran & Kuhn's Boys' Academy	Cincinnati, Ohio	Not found.
Mt. Pleasant Academy	Kingston, Ohio	Closed.
Kingsville Academy	Kingsville, Ohio	Closed.
Central Ohio County Seminary	Maumee City, Ohio	Closed.
Third Street Seminary	Steubenville, Ohio	Suspended.
Chambersburg Academy	Chambersburg, Pa	See Table VI.
Wyoming Seminary	Kingston, Pa	See Table VI.
Academy and Graded School	McKeesport, Pa	Closed.
Nazareth Hall	Nazareth, Pa	See Table VI.
Hallowell Select High School	Philadelphia, Pa	See Table VI.
St. Joseph's Academy	Pottsville, Pa	A parish school.
Classical Academy	Reading, Pa	Closed.
Providence Conference Seminary	East Greenwich, R. I	See East Greenwich Academy, Table VI, (identical.)
Lapham Institute	North Scituate, R. I	See Table VI.
Bedford Male and Female Seminary	Shelbyville, Tenn	Now public free school.
Castleton Seminary	Castleton, Vt	See Table VI.
Burr & Burton Seminary	Manchester, Vt	See Table VI.
Lydon Graded School	St. Johnsbury, Vt	See St. Johnsbury graded school, (identical.)
Green Mountain Institute	Waterbury Center, Vt	See Table VI.
West Randolph Academy	West Randolph, Vt	Closed.
Preston and Ohio Institute	Blacksburg, Va	Closed.
Montgomery Male Academy	Christiansburg, Va	Merged in public schools.
Danville Male Academy	Danville, Va	Closed.
Masonic School	Richmond, Va	Closed.
Milwaukee Academy	Milwaukee, Wis	See Table VI.
Select School for Young Ladies, (Mrs. S. M. McDonald.)	Georgetown, D. C	Not found.
De Beaulieu Institute	Washington, D. C	Closed.
The Misses Wotherspoons' School	Washington, D. C	Not found.

TABLE VI.—*Statistics of preparatory schools, including schools for secondary instruction having preparatory departments, for* 1873; *from replies to inquiries made by the United States Bureau of Education.*

[NOTE.—× indicates an affirmative answer; 0 signifies no or none; .... signifies no returns received.]

Number.	Name.	Location.	Date of charter.	Date of organization	Principal.	Religious denomination.	Number of instructors.	Students.							
								Number of students in classic department.	Number of students in scientific department.	Number in English department, (exclusive of classic and scientific.)	Age required for admission.	Entered college since close of last academic year.	Entered scientific school since close of last academic year.	Completed course at close of last academic year, and did not enter other institutions.	Number of scholarships.

* From Report of the Commissioner of Education, 1871.
† Not including contract-price of 98,976 acres of agricultural college-land.
a Including board.
b Tuition-fees remitted to all indigent pupils.
d Tuition in most cases free.
e From report of the treasurer for the year ended May 31, 1873.
f Total receipts for all departments, (from the same.)
g Free.
h Tuition free to twelve students from Macon and to sons of clergymen.
i Also 1,000 pamphlets.
j One is but partially endowed.

Colleges from which no information has been received.

Name.	Location.	Name.	Location.
La Grange College	La Grange, Ala	Shaw University	Holly Springs, Miss.
Petaluma College	Petaluma, Cal	Jefferson College*	Washington, Miss.
San Rafael College	San Rafael, Cal	Thayer College	Kidder, Mo.
Washington College*	Washington Corners, Cal.	Martin Luther College	Buffalo, N. Y.
Christ's College	Montpelier, Ga	St. John's College*	Fordham, N. Y.
Parsons College*	Cedar Rapids, Iowa	Harlem Springs College	Harlem Springs, Ohio.
College of the Immaculate Conception.*	New Orleans, La	St. Louis College	Louisville, Ohio.
Jefferson College.	St. Michael, La	Oregon State University	Eugene City, Oreg.
Loyola College*	Baltimore, Md	Philomath College	Philomath, Oreg.
Mt. St. Mary's College	Emmittsburg, Md	Maimonides College	Philadelphia, Pa.
Borromeo College	Pikesville, Md	Knoxville University†	Knoxville, Tenn.
Semple-Broaddus College	Centre Hill, Miss	Franklin College	Nashville, Tenn.
		St. Mary's College	San Antonio, Tex.

* Known to be in existence. †Not yet organized.

MEMORANDA.

Name.	Location.	Remarks.
McKenzie College	Batesville, Ark	Closed.
Union College	San Francisco, Cal	Not in existence.
Sonoma College	Sonoma, Cal	Charter withdrawn and college closed in 1872.
Oglethorpe University	Atlanta, Ga	Suspended in 1873.
St. Aloysius College	East St. Louis, Ill	Suspended in 1873.
Freeport College	Freeport, Ill	Closed.
Mendota College	Mendota, Ill	Closed in 1870, to be re-opened in 1874.
Quincy College	Quincy, Ill	See Table V.
Jubilee College	Robin's Nest, Ill	See Table X.
St. Patrick's College	Ruma, Ill	Merged in the College of the Sacred Heart of Jesus.
Dunkard College	Bourbon, Ind	Suspended indefinitely.
Salem College	Bourbon, Ind	Closed.
Brookville College	Brookville, Ind	Closed.
Howard College	Kokoma, Ind	Suspended in 1873.
Valparaiso College	Valparaiso, Ind	Changed into Northern Indiana Normal School, see Table III.
Griswold College	Davenport, Iowa	Suspended in 1873.
Fairfield College	Fairfield, Iowa	See Table V.
Augusta College	Augusta, Kentucky	Closed.
Thomson University	Baldwin, La	Merged in New Orleans University.
Mt. Lebanon University	Mt. Lebanon, La	Merged in a male and female school in 1872.
Calvert College	New Windsor, Md	Temporarily suspended.
College of St. Philip Néri	Detroit, Mich	Closed.
Oakland College	Oakland, Miss	Merged in Alcorn University, see Table IX.
Alcorn University	Jackson, Miss	See Table IX.
Jefferson City College	Jefferson, City, Mo	Closed.
Johnson Male and Female College	Macon City, Mo	Suspended.
Bethel College	Palmyra, Mo	Changed to Ingleside Female Seminary, see Table VII.
St. Charles College	St. Charles, Mo	See Table V.
Congregational College	Fontanelle, Nebr	Suspended.
St. Louis College	New York, N. Y	Not in existence.
St. Joseph's College	Rhinecliff, N. Y	Closed.
Ohir College	Iredell County, N. C	Closed and merged in an academy.
Miami University	Oxford, Ohio	Suspended.
Oregon College	Oregon City, Oreg	Closed.
Avery College	Allegheny City, Pa	Suspended.
Andalusia College	Andalusia, Pa	See Table V.
Moravian College	Bethlehem, Pa	See Table X.
Lehigh University	South Bethlehem, Pa	See Table IX.
Jonesboro' College	Jonesboro', Tenn	Not in existence.
Virginia Military Institute	Lexington, Va	See Table IX.
St. John's College	Norfolk, Va	See Table X.
St. Vincent's College	Wheeling, W. Va	See Table V.
Wayland University	Beaver Dam, Wis	Closed as such. Continued as a preparatory school for Chicago University, see Table VI.
Carroll College	Waukesha, Wis	See Table V.
Santa Fé University	Santa Fé, N. Mex	Closed.

a Buildings are not completed.
b From report of the treasurer for the year ended May 31, 1873.
c College not yet established.
d Statistics included in those of the Georgia State College of Agricul. and Mech. Arts.
d^1 Will open for the reception of students March 1, 1874.
e $5 for non-residents.
f Annually from the State
g Free to State students; $20 for others.
h Also 171,074 acres of land.
h^1 No separate organization.
i Non-residents, $15.
i^1 Annual appropriation in State-warrants worth 80 cents on the dollar.
j Also 8,000 acres of land.
k Apparatus.
l Reported with classic department.
l^1 Suspended since 1871.
m^1 Formerly called the Agricultural College of Pennsylvania.
m Cadet-engineers.

TABLE IX.—PART II.—*Statistics of schools and of collegiate departments of science, (mining, engineering, &c.,) for 1873, not endowed with the national grant of lands; from replies to inquiries made by the United States Bureau of Education.*

a Total income.
b Students are aided from the general fund of the college.
c Apparatus.
d Reported with classic department.
e Not yet organized.
f Five years for mining.

MEMORANDA.

The following scientific departments are omitted from the table, as they are included in the general statistics of the universities and colleges to which they belong and have no distinct organization:

Name.	Location.	Name.	Location.
Scientific department of St. Mary's College	San Francisco, Cal.	Scientific department of Hillsdale College	Hillsdale, Mich.
Scientific department of Blackburn University	Carlinville, Ill.	Scientific department of McGee College	College Mound, Mo.
Scientific department of St. Meinrad's College	St. Meinrad, Ind.	Scientific department of Mt. Union College	Mt. Union, Ohio.
Scientific department of Cornell College	Mt. Vernon, Iowa.	Scientific department of Otterbein University	Westerville, Ohio.
Scientific department of University of Michigan	Ann Arbor, Mich.	Scientific department of Cumberland University	Lebanon, Tenn.

TABLE X.—*Statistics of schools of theology for* 1873; *from replies to inquiries by the United States Bureau of Education.*

Number.	Name.	Location.	Date of charter.	Date of organization.	Denomination.	President.	Corps of instruction.			No. of students.

William Wood & Co.	New York, N. Y	Dr. C. Stellwag's Treatise on the Diseases of the Eye, by D. B. St. John Roosa, M. D.; C. S. Bull, M. D.; and C. E. Hackley, M. D. Fourth revised and enlarged edition.	8vo	915	$7 00
Do	do	On the Mechanical Treatment of Disease of the Hip-joint, by C. F. Taylor, M. D.	8vo	62	1 00
Do	do	A Year-Book of Therapeutics, Pharmacy, and Allied Sciences. Edited by H. C. Wood, jr., M. D.	8vo	377	2 50
Do	do	Treatise on Obstetrics. Second edition, by W. H. Byford, A. M	8vo	469	4 50
Do	do	Diseases of the Urinary Organs, by J. W. S. Gouley, M. D	8vo	368	3 75
Do	do	Treatise on Apoplexy, &c., by J. A. Liddell, M. D	8vo	395	4 00
Do	do	Skin Diseases, by Tilbury Fox, M. D	8vo	532	5 00
Kay & Bros	Philadelphia, Pa	Wharton & Stillé's Medical Jurisprudence, by Francis Wharton. Third edition, vol. 2, in 2 parts.	8vo		12 00
Henry C. Lea	do	Introduction to the Study of Clinical Medicine, by Octavius Sturges, M. D	12mo	127	1 25
Do	do	Hand-Book of Physiology, by William S. Kirke, M. D	12mo		3 25
Do	do	Diseases of the Prostate, by Sir Henry Thompson, F. R. C. S. Fourth edition	8vo	355	3 75
Do	do	The Students' Guide to Medical Diagnosis, by S. Fenwick, M. D., F. R. C. S	12mo	328	2 25
Do	do	A Manual of Medical Jurisprudence, by A. S. Taylor. Seventh American edition, edited by John J. Reese, M. D.	8vo	879	5 00
Lindsay & Blakiston	do	Dental Caries and its Causes, by Drs. Leber and Roltenstein. Translated by Th. H. Chandler, M. D.	8vo	104	1 50
Do	do	Aphorisms on the Mental Culture and Training of a Child; and On Other Subjects Relating to Health and Happiness. By Pye Henry Chavasse.	16mo	250	1 50
Do	do	Club Foot; its Causes, Pathology, and Treatment, by William Adams, F. R. C. S.	8vo	464	6 00
Do	do	Materia Medica for the Use of Students, by John B. Biddle, M. D	8vo		4 00
Do	do	Notes on Asthma; its Nature, Forms, and Treatment, by John C. Thorowgood, M. D.	12mo	166	1 75
Do	do	A System of Dental Surgery, by John and Charles S. Tomes	Demy 8vo	748	5 50
Do	do	A Hand-Book of Hygiene and Sanitary Science, by George Wilson, M. D	8vo		3 25
Do	do	A Hand-Book of Medical Electricity, by Herbert Tibbitts, M. D	8vo	150	2 25
Do	do	Ophthalmic Contributions, by George Strawbridge, M. D. Eighth edition	8vo	26	2 00
Do	do	Manual of Dental Mechanics, by Oakley Coles	Demy 8vo	284	2 50
Do	do	Treatise on Midwifery, by P. Cazeaux. Translated by William R. Bullock, M. D.	Royal 8vo	1100	6 50
Do	do	Manual of Midwifery for Students, by Alfred Meadows, M. D	8vo		3 00
Do	do	Contributions to Practical Surgery, by George W. Norris, M. D	8vo	318	4 00
Do	do	Pharmaceutical Lexicon, by H. V. Sweringen	8vo	VI, 576	6 00
Do	do	Lacerations of the Female Perineum, by D. Hayes Agnew, M. D	8vo		2 00
Do	do	Lectures on Diseases and Injuries of the Ear, by W. B. Dalby, F. R. C. S	12mo		1 50
Do	do	A Manual of Practical Hygiene, by E. A. Parkes, M. D., F. R. S. Fourth edition.	8vo	672	6 00

Do	do	Lectures on Madness, by Edgar Sheppard, M. D	8vo	186	2 50
Do	do	On the Preventive Treatment of Calculous Diseases and the Use of Solvent Remedies, by Sir Henry Thompson, F. R. S	12mo	72	1 00
Do	do	Lectures on Clinical Medicine, by A. Troussean. Translated from the third revised and enlarged edition, by Sir J. R. Cormack, M. D., and P. Victor Bazire, M. D. 2 vols.	8vo	925, 992	10 00
Do	do	A Treatise on the Diseases of the Eye. Third revised and enlarged edition, by J. S. Wells, M. D.	8vo	831	6 50
Do	do	The Anatomists' Vade Mecum, by E. Wilson, F. R. S., edited by George Buchanan, A. M., M. D. Ninth London edition.	Cap. 8vo	743	5 50
J. B. Lippincott & Co	do	Epidemic or Malignant Cholera, by Alfred Stillé, M. D	12mo	45	30
Do	do	Pneumatic Aspiration of Morbid Fluids, by Dr. Georges Dienlafoy	Crown 8vo		4 00
Do	do	An Essay on the Principles of Mental Hygiene, by D. A. Gorton, M. D	12mo	242	1 75
Do	do	Mineral Springs of North America, by J. J. Moorman, M. D	12mo		2 00
H. N. McKinney & Co	do	How to Acquire and Preserve Health, by C. W. Gleason, M. D	8vo	480	3 00
Do	do	The Cholera; Its History, Cause, &c., by Seth Pancoast, M. D	8vo	64	Paper, 25
James Van Holt Nash	Petersburg, Va	Clinical Reports from Private Practice, by J. H. Claiborne, M. D	8vo	175	3 00
		NATURAL SCIENCES.			
J. H. Carmany & Co	San Francisco, Cal	Marine Mammals of the Northwestern Coast of North America, by Charles M. Scammon, U. S. R. M.	Large 4to		10 00
C. C. Chatfield & Co	New Haven, Conn	New Theory of the Origin of Species, by Prof. B. G. Ferris	Crown 8vo	70	25
Do	do	Half-Hours with Modern Scientists	Crown 8vo	325	1 50
Murphy & Co	Baltimore, Md	Elements of Philosophy, by Rev. W. H. Hill, S. J	12mo	234	1 50
John Allyn	Boston, Mass	Chemical Physics, by Josiah P. Cooke	8vo	740	5 00
Do	do	Quantitative Chemical Analysis. Part 2. By Prof. Frank H. Storer, A. M	8vo	120	1 65
Estes & Lauriat	do	The Geology of the Stars, by Alexander Winchell, LL. D	Crown 8vo		25
Do	do	The Utility of Natural Phenomena, by Emile Saigey. Translated by Prof. Thomas Freeman Moses, A. M., M. D.	Crown 8vo	253	2 00
Do	do	Flower Object Lessons, or First Lessons in Botany, by B. M. Le Maout	16mo	55	75
Do	do	Half-Hours with Insects, by Prof. A. S. Packard. 12 parts			Each, 25
Do	do	Key to North American Birds, by Elliot Coues, U. S. A			
Do	do	Spectrum Analysis Explained	12mo		1 50
Do	do	Our Common Insects		200	2 50
Do	do	Half-Hour Recreations in Popular Science, No. 8, by Huxley & Tice	Crown 8vo		Paper, 25
Lee & Shepard	do	Autology: An Inductive System of Mental Science, by Rev. Dr. David H. Hamilton.	8vo		5 00
D. Lothrop & Co	do	Wonders Near Home, or Talks on Natural History, by Rev. W. Houghton	16mo		1 00
Roberts Brothers	do	Manual of Metallurgy, by Geo. H. Makins. New edition	Crown 8vo		6 50
Do	do	Chapters on Animals, by Philip G. Hammerston	8vo		6 00
Charles Reiche & Brother	do	Holden's Book of Birds, by C. F. Holden	16mo	100	Paper, 25
Naturalist's Agency	Salem, Mass	Birds of Florida, by C. J. Maynard. Part 2	4to	32	1 00
D. Appleton & Co	New York, N. Y	Natural Philosophy: An Elementary Treatise, by Prof. Deschanel			
		Part 1. Mechanics, Hydrostatics, and Pneumatics			P'r part, 1 75
		Part 2. Heat. Translation by J. D. Everett			
		Part 3. Electricity and Magnetism. 1 vol	8vo		
		Part 4. Sound and Light			
Do	do	Natural Philosophy, by Prof. Deschanel. Complete in one volume	Med. 8vo	1050	6 50
Do	do	The Coal Regions of America, by James Macfarland, A. M	8vo	700	5 00
Do	do	Electricity and Magnetism, by Fleming Jenkins, F. R. S	12mo	379	1 50

		NATURAL SCIENCES—Continued.			
D. Appleton & Co	New York, N. Y	Popular Lectures on Scientific Subjects, by Prof. H. Helmholtz. Translated by E. Atkinson, Ph. D. Introduction by Prof. Tyndall. 1 vol.	12mo		$2 00
Do	do	The Ocean World. From the French of Louis Figuier	8vo		3 50
Do	do	The Strength of Materials and Structures, in 2 parts, by John Anderson, C. E. 1 vol.	12mo		1 50
Do	do	The Principles of Psychology, by Herbert Spencer. Vol. 2	8vo		2 50
Do	do	Lectures on Light, by John Tyndall, LL. D	12mo		1 00
Do	do	The Expression of the Emotions in Man and the Lower Animals, by Charles Darwin, M. A., F. R. S. 1 vol.	12mo		3 50
Do	do	Reptiles and Birds. From the French of Louis Figuier	Small 8vo		3 50
Do	do	Botanical Charts, (Henslow's,) adapted for use in United States, by Eliza A. Youmans.			18 00
Do	do	Second Book of Botany, by Eliza A. Youmans	12mo	310	1 50
Do	do	Foods. Vol. 3. International Scientific Series, by Ed. Smith, M. D., LL. B	12mo	485	1 75
Do	do	Mind and Body. International Science Series, by Alex. Bain, LL. D	12mo		1 50
Do	do	The Moon: Her Motions, Aspect, Scenery, and Physical Condition, by R. A. Proctor, B. A.	12mo	394	5 00
Do	do	The Comparative Anatomy of Domesticated Animals, by A. Chanveau. Translated and edited by George Fleming, F. R. G. S. 1 vol.	8vo		6 00
A. S. Barnes & Co	do	Steele's New Chemistry, by J. Dorman Steele, A. M., Ph. D	12mo	300	1 50
Do	do	Intuitive Inquiries in Physiology, Ethics, and Ethnology, by A. H. Dana	12mo	308	1 25
E. B. Benjamin	do	American Hand-Book of Chemical and Physical Apparatus	8vo	260	1 50
Boericke & Tafel	do	Ophidous Zoölogical Arrangement of the Different Genera, by S. B. Higgins, S. A.	8vo		2 00
Robert Carter & Brothers	do	The Present World, by Wm. Arnot	12mo	252	1 25
Dodd & Mead	do	Our Common Insects, by A. S. Packard, jr	12mo	225	2 50
Do	do	The Sea and its Living Wonders, by Dr. G. Hartwig	8vo		6 00
Harper & Brothers	do	The Atmosphere. Translated from the French of C. Flammarion	8vo		6 00
Do	do	Annual Record of Science and Industry for 1872, by Prof. Spencer F. Baird	12mo		2 00
Mason, Baker & Pratt	do	Martin's Natural History. New edition	Great 8vo		3 50
Munn & Co	do	Science Record for 1873, by A. E. Beach	8vo	600	2 00
Nelson & Phillips	do	Diamonds Unpolished and Polished, by Rev. John F. Richmond	Large 16mo	249	1 25
Thomas Nelson & Son	do	Sketches of Natural History, by Mary Homitt	Small 4to		3 00
Do	do	Talks About Animals	16mo		75
Pott, Young & Co	do	The Animal Series. 4 vols	Sq. 12mo		5 00
Do	do	Natural History of Animals, by A. Romer	12mo	368	2 50
G. P. Putnam's Sons	do	Geological Stories, by J. E. Taylor, F. G. S	12mo		1 75
Do	do	Putnam's Elementary Science Series:			
		Animal Physiology, by Prof. John Angell	16mo		75
		Geology, by Prof. W. S. Davis	16mo		75
		Nautical Astronomy, by Henry Evers	16mo		75
		Chemical Analysis	16mo		75

Do	do	The Preparation and Mounting of Microscopic Objects	12mo		1 25
Do	do	Manual of Popular Physiology, by Henry Lawson, M. D	18mo		1 00
Do	do	Diamonds and Precious Stones, by Harry Emanuel, F. R. G. S	8vo		2 75
Do	do	Putnam's Science Series. Nos. 1, 2, 8, 11, 13, 17, 20, 22*a*, 22*b*, 23, 24, 25	16mo		Per No., 75
Do	do	More Worlds Than One, by Sir David Brewster, K. H., M. A., D. C. L	12mo		1 50
Do	do	The Natural History of Gems and Decorative Stones, by C. W. King, M. A	8vo		2 75
Do	do	Half-Hours with the Microscope, by Edwin Lankaster, M. D., F. R. S	18mo		1 00
Do	do	Half-Hours with the Telescope, by R. A. Proctor, B. A., F. R. A. S	18mo		1 00
Do	do	Half-Hours with the Stars, by R. A. Proctor, B. A., F. R. A. S	Demy 4to		2 25
Scribner, Armstrong & Co	do	On Outline Study of Man, by Mark Hopkins, D. D., LL. D	12mo		1 75
Do	do	Year-Book of Nature and Science, by Dr. J. C. Draper			
Do	do	Elementary Chemistry, by L. C. Cooley, Ph. D	12mo	200	1 00
University Publishing Co	do	Physical Geography, by M. F. Maury	Imperial 8vo	218	2 25
D. Van Nostrand	do	The Galvanometer and Its Uses, by C. H. Haskins	18mo		2 00
William Wood & Co	do	A Contribution to the History of Fresh-Water Algæ of North America, by H. C. Wood, jr., M. D.	4to	272	7 50
Do	do	Mind and Matter; or, Physiological Inquiries. By Sir Benj. Brodie	12mo	279	1 25
Do	do	Ganot's Elementary Treatise on Physics, by E. Atkinson. Sixth edition, revised and enlarged.	8vo	859	5 00
Henry Carey Baird	Philadelphia, Pa	Geological Evidence of the Antiquity of Man, by Sir Charles Lyell, Bart., M. A., F. R. S. 4th edition.	8vo	573	5 00
Henry C. Lea	do	Chemistry, Inorganic and Organic, by C. L. Bloxam	8vo	700	4 50
J. B. Lippincott & Co	do	An Introduction to Practical Hystology, by J. Tyson, M. D	12mo	50	75
Do	do	A Dictionary of Science, by G. F. Rodwell	8vo	694	5 00
Do	do	Comets and Meteors, by Daniel Kirkwood, LL. D	12mo	98	1 25
Do	do	Evolution of Life, by H. C. Chapman, M. D. 2d edition	12mo	193	2 75
National Publishing Company	do	Human Science, by Prof. O. S. Fowler	8vo	1211	4 50
T. B. Peterson & Brother	do	Liebig's Complete Works on Chemistry, by Justus Liebig, M. D., Ph. D	8vo		4 00
E. H. Cushing	Houston, Texas	Family Lessons on Botany and Vegetable Physiology, by Mrs. M. J. Young		192	
Do	do	Familiar Lessons on Botany, by Mrs. M. J. Young	12mo	650	2 00
		PHILOLOGY AND TRANSLATIONS.			
John P. Morton & Co	Louisville, Ky	Latin Grammar, by Henry M. Bruns, LL. D	12mo	212	1 00
Warren F. Draper	Andover, Mass.	A Grammar of the New Testament, Greek, by A. Buttman. Translated by J. H. Thayer.	8vo	494	3 50
John Allyn	Boston, Mass.	Satires of Juvenal, edited by A. J. Maclane	16mo	250	1 50
Do	do	Thirteen Satires of Juvenal, by G. A. Simcox, M. A	12mo	172	1 50
Do	do	The Electra of Sophocles. Edited by R. C. Jebb, A. M., revised by Prof. R. H. Mather.	16mo	248	1 50
Ginn Brothers	do	Shorter Course of Latin Prose, by Allen & Greenough	12mo		2 50
Do	do	Cicero: Select Orations. Edited by Allen & Greenough	12mo		1 75
Do	do	The Oedipus Tyrannus of Sophocles. Edited by John W. White, A. M			
Do	do	Allen & Greenough's Latin Selections, by J. H. Allen and J. B. Greenough	12mo	198	1 56
Lee & Shepard	do	Latin School Series, vol. 2, by F. Gardner, LL. D.; A. M. Gay, A. M.; and A. H Buck, A. M.	16mo	448	1 50
Andrews, McChain & Lyons	Ithaca, N. Y	The Shortest Road to German, by F. L. O. Roehrig	12mo	226	1 50
D. Appleton & Co	New York, N. Y	A German Primer, by Herman D. Wrage. 1 vol	12mo		40
Do	do	First German Reader, by Herman D. Wrage. One volume	12mo		50
Do	do	Cicero's Select Orations, by Albert Harkness, LL. D	12mo		1 50
A. S. Barnes & Co	do	French Pronunciation, by Rev. E. S. Joynes, A. M	18mo	100	30
Do	do	Latin Pronunciation, by Prof. Walter Blair	12mo	144	1 00

TABLE XXV.—*Publications, educational, historic, &c., for* 1873, *&c.*—Continued.

Name of publisher.	Place of publication.	Name of book and of author.	Size of book.	Number of pages.	Retail price per copy.
		PHILOLOGY AND TRANSLATIONS—Continued.			
A. S. Barnes & Co	New York, N. Y	Elementary German Reader, by Prof. James H. Worman	12mo		$1 50
Harper & Brothers	do	Language Lessons, by Prof. William Swinton, A. M. (Harper's Language Series.)	16mo	176	50
Do	do	Greek Syntax for Schools and Colleges, by Basil L. Gildersleeve, Ph. D., LL. D			
P. M. Haverty	do	Easy Lessons in Irish, by Rev. U. J. Bourke	12mo	390	1 50
F. J. Huntington & Co	do	Latin Reading Book, by Charles D. Morris, M. A	12mo		1 50
Do	do	Vocabularies to Morris's Latin Grammar, by Rev. Hall Harrison, M. A., and Rev. Robert Benton, M. A.	12mo	66	75
Mason, Baker & Pratt	do	An Analytical and Practical French Grammar, by J. G. Keetils	12mo	523	2 00
Do	do	An Elementary French Grammar, by J. G. Keetils	12mo	240	1 50

TABLE XXVI.—*Statistics of Kindergärten for* 1873, *&c.*—Continued.

No.	Occupation of pupils.	Apparatus and appliances.	Effect of the system.
	14	15	16
1	Building, laying tablets, folding paper, weaving, interlacing wooden sticks, modeling, drawing, exercises in thinking and speaking, singing, &c.; gardening.	Fröbel's "gifts"	The pupils advance in their studies with more facility than in the old system, particularly in habits of attention, concentration, and free obedience.
2	do	Fröbel's "gifts"	Do.
3	General instruction by objects and oral instruction in speaking and reading German.	Fröbel's twenty "gifts," flowers, birds, fishes, music, pictures, a piano, charts, games, gymnastics, &c.	Habitual cheerfulness; improvement in disposition, mind, and health; quick perception; habits of order and system.
4	Object-lessons and lessons from nature without books, and making forms with toys, tending plants, movement-plays.	Pots of plants and flowers	To sharpen the senses, induce skill of hand, interest the fancy, and improve mind and manners.
5	Vocal music, drawing, object-lessons, &c	Square table, blocks, paper, &c	Harmonious development.
6	Rudiments of arithmetic, drawing, geometry, games, gymnastics, playing with "gifts" of all kinds.	Fröbel's "gifts," &c	Do.
7		Checked tables, geometric blocks, planes, weaving papers, clay, &c.	
8	Elementary studies, with Fröbel's "gifts"	Fröbel's "gifts"	Harmonious development of all the faculties.
9	Building with blocks, drawing, braiding, molding, music, gymnastics, peas, games, gardening, &c.	Fröbel's "gifts"	Superior preparation for the elementary schools.
10	Fröbel's regular course	Ruled tables, "gifts," and material required by Fröbel's method.	Mental and physical development and ability for self-occupation.
11		Sewing, weaving, drawing, modeling, and pricking; ruled tables, slates, clay, sticks, blocks, colored papers, &c.	Heightened observation and thought, skill of fingers, mental and physical improvement.
12	Object-lessons and other usual exercises	Fröbel's "gifts"	Harmonious unfolding of the threefold nature of the pupils.
13	Reading, botany, physiology, and geography, by connected conversations.	Fröbel's "gifts"	Ease of movement, flexibility of limbs, and development of faculties of observation and invention.
14	Fröbel's system used as Fröbel recommends		Do.
15		Blocks, bells, sticks, drawing, weaving sticks, and peas.	Strengthens the physical system, improves the powers of thought and conversation.
16	With Fröbel's "gifts"	All the simplest of Fröbel's "gifts"	Improved manners, order, and system.
17	Foundation for mathematics, elements of drawing, knowledge of familiar objects; Fröbel's "gifts."	Fröbel's "gifts," ruled tables, blocks, maps, pictures, straws, &c.	Power over mind and body.
18	Fröbel's "gifts"		Beneficial in every way.
19		Benches and chairs, but no desks; blackboards, slates, pencils, and paper.	Physical development, interest, and enthusiasm.
20	Fröbel's regular course	Ruled tables, "gifts," and other Kindergarten-material.	Mental and physical development, quickened observation, and ability for self-occupation.
21	Kindergärten branches orally in German and English	Settees and desks, pianos, staves for gymnastics, blackboards, Prang and Calkins' Natural History Series, pictures, modeling clay, flower- and plant-boxes, vines on walls, toys, &c.	Do.

22	Singing, elementary sounds of German alphabet, combinations of letters into syllables with blocks, marching to music, sewing, folding, weaving, building, calisthenics.	Balls, blocks, triangles, rings and half rings, as recommended by Fröbel.	Quickened mental perception, preparation for higher studies strength to the muscles, and prevention of stupidity and inattention.
23	All the lessons connected with Fröbel's "gifts"	Fröbel's "gifts"	Harmonious development.
24	Miscellaneous object-lessons, with Fröbel's "gifts," calisthenics, worsted-work, &c.	Blocks, sticks, peas, paper, slates, &c	Children keep well, improve rapidly, and love the school.
25	All the lessons connected with Fröbel's "gifts"	Fröbel's "gifts"	Harmonious development.
26	Geography by stories, arithmetic by counting, blocks, angles, lines, &c., drawings on blackboard copied on slates, singing, gymnastics, cutting papers into forms, molding in wax and clay.	Fröbel's "gifts"	Habits of accuracy and an amiable and happy disposition.
27		Tables and settees, complete set of toys and playthings, and piano.	Remarkable physical health.
28	Phonetic spelling, English and German, playing with balls and figures, perforating, folding, cutting, weaving, embroidering, peaswork, modeling, singing, &c.	Fröbel's 20 "gifts," Prang's natural-history-chromos, geometric figures, seeds, minerals, insects, pictures, microscope, plants, &c.	Harmonious and rapid development, &c.
29		The usual appliances; also birds and animals	Superior to those attained by home-education.
30	Everything necessary to Fröbel's system; "gifts," including Wiseneder's apparatus for musical key.		Physical and mental development; teaches combination of knowing with doing; benefits nervous children.
31	Kindergarten-branches; also reading, writing, spelling, drawing, and numbers for pupils over 7.	All the Kindergarten-material, blackboard, numerical frame, globe, cabinet of miscellaneous specimens, pictures, plants, aquarium, and piano.	A higher physical and mental development than can otherwise be secured.
32	All the lessons connected with Fröbel's "gifts"	Fröbel's "gifts"	Harmonious development.
33	Gymnastics, drawing, singing, modeling, building with blocks, &c.	Pictures, slates, blocks, clay, &c	Keeps children out of the streets; they learn to think, and are strengthened mentally and physically.
34	The child is prepared for an intelligent use of books, regular Kindergarten-occupations, tending plants, making forms with sticks, songs, and plays.	Plants, checked tables, attractive objects, blackboard, and slates.	Most satisfactory.
35	Speaking, playing, singing, gymnastics		
36	Arithmetic, geography, natural history, botany, drawing and singing, movement-plays.	Balls, blocks, sticks, paper, cards, rings, clay, slates, and blackboards.	Harmonious development of the physical, mental, and moral nature.
37	Singing, plays, calisthenics, drawing, reading, and spelling		Admirable—physically, mentally, and socially.
38			
39	Fröbel's plays and exercises	Fröbel's "gifts" and gardens	Beneficial to mind and body.
40	All the lessons connected with Fröbel's "gifts"	Fröbel's "gifts" and gardens	Harmonious development.
41	Object- and oral lessons, phonetic spelling, English and German, and playing with "gifts" of all kinds.	All of Fröbel's "gifts"	Harmonious development of all the faculties.
42	Primary English branches and object-lessons	All of Fröbel's "gifts"	In every way beneficial.

TABLE XXVII.—*Showing improvements in school-furniture, apparatus, ventilation, &c., patented in the United States for the year ended June 30, 1873.*

Names of patentees.	Residence.	Number.	Titles of patents.
Read, Winfield S	Oakland, Cal	135,487	Improvement in blackboard-erasers.
Drasser, Charles	Chicago, Ill	136,591	Improvement in slates.
Sherwood, John B	Chicago, Ill	137,866	Improvement in school-desks and seats.
Westlake, William	Chicago, Ill	138,218	Improvement in slate-washers.
Presbrey, Charles H	Sterling, Ill	135,154	Improvement in school-desks.
Riter, John L	Brownsville, Ind	136,548	Improvement in school-furniture.
Foster, W. A	Indianapolis, Ind	128,871	Improvement in school-desks.
Cox, Sylvanus, and Fanning, William W.	Richmond, Ind	135,089	Improvement in school-desks.
Roberts, Albert E	Des Moines, Iowa	138,045	Improvement in school-desks and seats.
Venable, David S	Christiansburg, Ky.	137,263	Improvement in school-desks.
Hemenway, B. N	Rockland, Me	129,559	Improvement in school-desks.

Piper, E. J	Springfield, Mass	138,190	Improvement in school-chairs.
Stebbins, Milan C., and Piper, E. J.	Springfield, Mass	137,732	Improvement in school-desks.
Thompson, James M., and James Cordley.	Adrian, Mich	138,714	Improvement in musical blackboards.
Childs, John W	Kansas City, Mo	139,543	Improvement in school-desks.
Keuffel, Wilhelm, and Esser, Herman.	Hoboken, N. J	138,896	Improvement in drawing-boards.
Larned, J. N	Buffalo, N. Y	131,356	Improvement in book-cover protectors.
Thorp, Thomas J	Buffalo, N. Y	135,019	Improvement in blackboards.
Barnes, H. B	New York, N. Y	130,179	Improvement in slated books.
Covell, Adelia C	New York, N. Y	139,237	Improvement in device for teaching drawing.
Hitchcock, Alonzo	New York, N. Y	139,507	Improvement in drawing-boards.
Johnson, F. G	New York, N. Y	138,583	Improvement in blackboards.
Jocelyn, Albert H	New York, N. Y	140,275	Improvement in book-covers.
Kane, Thomas H	New York, N. Y	134,550	Improvement in drawing-boards.
Roberts, E. Walter	Troy, N. Y	135,158	Improvement in slates.
Thompson, R. A	Beaver Falls, Pa	133,551	Improvement in school-desks.
Coffin, Jas. H. and George S.	Danielsville, Pa	138,005	Improvement in machinery for finishing slate-frames.
Burlock, W. L	Philadelphia, Pa	134,249	Improvement in book-covers.
Boucher, William F	Philadelphia, Pa	135,315	Improvement in transparent slate-frames.
Hickman, Francis	Reading, Pa	136,058	Improvement in slate-cleaners.
Meyer, Herman H	Denver, Colo	139,411	Improvement in drawing-boards.

INDEX TO REPORT FOR 1873.

[The report proper of the Commissioner has been indexed with minuteness; the appendix has been indexed by general topics. Plentiful cross-references have been inserted.

Education, teaching, instruction, school, and a few other words of like character, will not be found among the topics; *e. g.*, instead of "Instruction in music," look for "Music, instruction in."

In indexing the abstracts of State-school-reports (pp. 3–468), the schedule on p. 2 has been followed for the arrangement as nearly as possible.]

A.

Absenteeism and truancy:
In California, 20; in New Haven, Connecticut, 39; in Illinois, 83; in Kansas, 115; in Maryland, 154; in Massachusetts, 174, 175; in Minnesota, 204; in Mississippi, 213; in Nevada, 245; in New Hampshire, 250; in Ohio, 311; in Montana, 453; in New Mexico, 458. (See, also, Attendance.)

Academies:
In Massachusetts, 177; in Michigan, 196; in Missouri, 226; in New Hampshire, 251; in New Jersey, 264; special appropriation for, 284; musical academies, 161; normal instruction in, xxxiii; preparatory students in, xlviii, xlix; endowments of, l, li. (See, also, Secondary instruction and Preparatory schools.)

Academy, Military: (see Military Academy.)

Academy, Naval: (see Naval Academy.)

Agassiz, Prof. Louis J. R.: (obituary notice, 188–190.)

Age of the scholastic population;
In Alabama, 3; in Arkansas, 11; in California, 19; in Connecticut, 36; in Florida, 65; in Georgia, 69; in Indiana, 94; in Iowa. 107; in Kansas, 115; in Louisiana, 134; in Maine, 145; in Maryland, 151; in Massachusetts, 166; in Michigan, 192; in Minnesota, 202; in Missouri, 220; in Nebraska, 233; in New Jersey, 256; in New York, 270; in North Carolina, 298; in Rhode Island, 353; in South Carolina, 360; in Virginia, 393; in West Virginia, 407; in Wisconsin, 414; in Arizona, 425; in Colorado, 429; in Dakota, 433; in Idaho, 451; in Montana, 453; in Utah, 460; in Wyoming, 468. (See, also, Table I, Part 1, p. 510.)
Diversity of, in the enumeration, x; table of ages in the school-censuses, x.

Agriculture, College of:
In Arkansas, 16; proposed in Florida, 68; in Kansas, 119; the Agricultural College grant for, in Louisiana, 140; in Massachusetts, 182; in Michigan, 198; in New York, 290; in Ohio, 327; in Tennessee, 376; in Virginia, 400; statistics of, (see Table IX;) summary of, lxix–lxxi.

Alabama, State of:
Elementary instruction—school-finances, school-population, and attendance, 3; average attendance, teachers, schools, financial difficulties, proposed law relative to the duties of county-superintendents and to the employment and pay of teachers, 4; powers of the State-board of education, 5; school-statistics of Montgomery, Opelika, and Selma, 5; general statistics, (see Table I.)
Secondary instruction—number of high schools, 5; private secondary schools, 6; statistics, (see Tables V and VI.)
Normal training—institutions and students, 6; statistics of, (see Table III.)
Superior instruction—University of Alabama, 6, 7; Howard College, 7; Spring Hill College, 7; Talladega College, 7; colleges for women, 7; statistical summary of universities and colleges, 7; statistics of, (see Tables VII and VIII.)
Professional instruction—Agricultural and Mechanical College of Alabama, 8; statistical summary of schools for, 8; statistics of, (see Tables IX, X, XI, and XII.)
Special instruction—Alabama Institution for Deaf, Dumb, and Blind, 8; asylums and industrial homes, 9; statistics of, (see Tables XIX *et seq.*)
School-officials—the State-board of education, 9; county- and city-superintendents, 9, 10.
Summary of educational condition of, xiii.

Alaska, Territory of: View of school interests in, 424.

Argentine Republic: Recent educational statistics of, clxxi.

Arizona, Territory of:
Elementary instruction—school-population and attendance, 425; abstracts of county-reports, 425, 426; educational progress, 426, 427; text-books, 428; schools among the Indians, 428; statistics of, (see Table I.)

Arkansas, State of:
Elementary instruction—school-finances, scholastic population, school-attendance, and school-teachers, 11; number and value of school-houses, 12; want of funds, 12; depreciated State-scrip, 12, 13, 14, 15; effect on the school-revenue and fund, 13; misappropriation of school-moneys, 13; school-supervision, 14; the Arkansas Journal of Education, 14; schools in cities, 14; present unfavorable condition of the public-school-system, 14, 15; diminution of distributable fund, 14; provisions of the new school-law, 15; public opinion, 15; proposed amendment of the school-law, 17; statistics of, (see Table I.)

Arkansas, State of—Continued.
Normal training—in the Industrial University, 16; suggested for colored people, 17; statistics of, (see Table III.)
Superior instruction—statistical summary of institutions, 16; statistics of, (see Tables VII and VIII.)
Professional instruction—the Industrial University, 16, 17; statistics of, (see Table IX.)
Special instruction—Institute for the Blind, 17; Deaf-Mute Institute, 17; statistics of, (see Tables XIX and XX.)
Benefactions—the Peabody fund, 13.
School-officials—State- and county-superintendents, 18.
Summary of educational condition of, xiii.

Art-education, Article on, 495–498:
Scheme of instruction in drawing for graded public schools in Massachusetts, subjects taught, and order of lessons for each week, 495, 496; evening-schools for adults, 496; general idea of art-training, 496; classes of pupils, 496; testimony to the need of art-education, 496, 497; plan pursued, 497; State Normal Art-School, 498.

Art to education, Relation of, xcix–cvi:
Value of art-education, need of instruction in drawing in public schools, xcix; drawing easily taught in public schools, xcix, c; technical-art-schools in Great Britain, c; European nations competing in establishment of art-schools, c; our facilities for art-training, c, ci; why public schools should teach drawing, ci; drawing in the schools of Massachusetts, ci, cii; Massachusetts Normal Art-School, letter of Mr. Walter Smith, cii, ciii; exhibition of art-work of free industrial classes, ciii; industrial importance of a knowledge of drawing, ciii, civ; facilities for art-education now existing in the United States, civ, cv.

Art, Museums of: Statistics of, 770–773.

Asia:
India (British)—provinces of, clxvii; school-statistics, clxvii, clxviii; comparative statistics of university-examinations in 1870–'71, clxix.

Atlanta, Georgia: Schools of, noticed, 71.

Attendance in schools:
In Alabama, 3; in Arkansas, 11; in California, 19; in Connecticut, 36; in Georgia, 69; in Illinois, 78; in Indiana, 96; in Iowa, 107; in Kansas, 115; in Louisiana, 134; in Maine, 145; in Maryland, 151; in Massachusetts, 166; in Michigan, 192; in Minnesota, 202; in Mississippi, 211; in Missouri, 220; in Nebraska, 233; in Nevada, 242; in New Hampshire, 247; in New Jersey, 256; in New York, 270; in North Carolina, 298; in Ohio, 309; in Oregon, 332; in Pennsylvania, 337; in Rhode Island, 353; in South Carolina, 360; in Texas, 382; in Virginia, 393; in West Virginia, 407; in Wisconsin, 414, 415; in Arizona, 425; in Colorado, 429; in District of Columbia, 435, 437; in Idaho, 451; in Montana, 453; in Utah, 460; in Washington Territory, 464.
Compulsory, (see Compulsory education.)
Method of improving, suggested, 168; increased, in New York, 274; decreased, in Ohio, 311; per cent. of, in Colorado, 430, and in District of Columbia, 435; irregularity of in New Jersey, 260.
Summary of, in 1871, 1872, 1873, xi.

Auburn, New York: Schools of, noticed, 282.

Augusta, Georgia: Schools of, noticed, 71.

Australasia:
Queensland—recent educational statistics, clxxii.
South Australia—recent educational statistics, clxxii.
Victoria—recent educational statistics, clxxii.
New South Wales—recent educational statistics, clxxiii.
Western Australia—recent educational statistics, clxxiii.
Tasmania—recent educational statistics, clxxiii.
New Zealand—recent educational statistics, clxxiii.

Austro-Hungarian Monarchy, cliii–clv:
Austria—supervision of education, cliii; statistics of primary instruction, cliii, cliv; statistics of secondary instruction and of superior instruction, cliv; of technical instruction, cliv; of special instruction, clv.
Hungary—school-legislation, statistics of primary, secondary, superior, and special instruction, and total expenditure for public instruction, clv.

B.

Baird, Prof. Thomas D., obituary notice, 165.

Barnes, Samuel C., obituary notice, 295, 296.

Belgium, Kingdom of:
Supervision of education, clv; statistics of primary, secondary, superior, and special instruction, clv–clvii.

Belknap, Miss Laura E., obituary notice, 331.

Benefactions:
To the Bulkley School, Connecticut, 46; of Johns Hopkins 164, 165; to Harvard University, 180; to the College of New Jersey, 265; to several colleges in New York, 288, 289; to Newport High School, Rhode Island, 356; to colleges, lxiv, lxv; table of educational, 806–823; statistical summary of, by institutions, cxi; statistical summary of, by States, cxii, cxiii.

Blind, Instruction of the:
In Alabama, 8; in Arkansas, 17; in California, 26; in Illinois, 90; in Kansas, 120; in Kentucky, 130; in Maryland, 160; in Michigan, 200; in Minnesota, 208; in Mississippi, 219; in Missouri, 230; in New York, 293; in Pennsylvania, 349; in South Carolina, 367; in Tennessee, 377; in Virginia, 402; in Wisconsin, 421; statistics of institutions for, 778, 779; summary of, cvi.

Board of education:
Power of, in Alabama, 5; law providing for, in Arkansas, 15; pay of, in Indiana, 98; members of, in Kentucky, 124; powers and duties of, in Massachusetts, 167; rules adopted by, in North Carolina, 299; consolidation of boards in District of Columbia recommended, 434.
Members of: (see Officials of school-systems.)

Boston, Massachusetts: Schools of, noticed, 172, 173.

Brazil: Recent educational statistics, clxxi.

Bristol, Rhode Island: Schools of, noticed, 355.

Buffalo, New York: Schools of, noticed, 279, 280.

Buildings for schools:
In Arkansas, 12; in Connecticut, 37; in Indiana, 96, 97; in Iowa, 107; in Louisiana, 134, 135; in Maine, 145; in Michigan, 193; in Minnesota, 202; in Mississippi, 211; in Missouri, 220; in Nebraska, 233; in Nevada, 243; in New Jersey, 258, 264; in New York, 272; in Ohio, 310, 315; in Oregon, 333; in Pennsylvania, 338; in South Carolina, 361; in Virginia, 394; in West Virginia, 407; in Wisconsin, 415; in District of Columbia, 435, 437; in Montana, 453; in Utah, 461.

Bushnell, Prof. J. J., obituary notice, 423.

Business-colleges:
In California, 29; in Illinois, 88; in Indiana, 104; in Iowa, 111; in Kansas, 119; in Kentucky, 130; in Louisiana, 138; in Michigan, 199; in Minnesota, 207; in Missouri, 229; in New Hampshire, 253; in New Jersey, 267; in New York, 291; in Ohio, 327; in Oregon, 336; in Pennsylvania, 347; in Rhode Island, 358; in Tennessee, 376; in Texas, 387; in Virginia, 401; in District of Columbia, 440; statistics of, 581–585; comparative summary for four years, xxxiv; summary of statistics, xxxv.

C.

California, State of:
Elementary instruction—school-finances, scholastic population, school-attendance, and school-teachers, 19; number of schools, 20; necessity of compulsory attendance, in view of the increase of truancy, urged, 20; decrease of private schools, 20; teachers' certificates, 20; inequality in length of school-terms deplored, 21; defects of the present system, 21; proposed new method of apportioning school-funds, 21; San Francisco statistics and course of instruction, 22–25; Sacramento schools, 25; Oakland schools, 25; statistics of, (see Table I.)
Secondary instruction—notes on certain institutions, 25, 26; preparatory schools, 26; statistics of, (see Tables V and VI.)
Normal training—the State Normal School, 21; Evening Normal School of San Francisco, 23; statistics of, (see Table III.)
Superior instruction—the University of California, 26, 27; President D. C. Gilman, 27, 28; Santa Barbara College, Franciscan College, College of Saint Augustine, College of Nôtre Dame, Pacific Methodist College, 28; statistical summary of institutions for superior instruction, 28; statistics of, (see Tables VII and VIII.)
Professional instruction—Pacific Theological Seminary, medical colleges, business-colleges, and statistical summary, 29; statistics of, (see Tables IX, X, XI, and XII.)
Special instruction—Institution for the Deaf, Dumb, and Blind, 26; California Academy of Sciences, 29, 30; San Francisco Art-Association, 30, 31; School of Mechanic Arts in San Francisco, 31; Handel and Haydn Society, 31; education of the Chinese neglected by the State, 31; mission-schools for Chinese, 31, 32; post-schools for soldiers, 32; labor-schools and training-ships, 32; orphan-asylums, 32, 33; San Francisco Industrial School, 33; libraries, 33, 34; statistics of special instruction, (see Tables XIX, XX, XXI, and XXII.)
School-officials—State- and county-superintendents, 35; summary of educational condition of, xix.
Benefactions, (see Table XXIV.)

Cambridge, Massachusetts: Schools of, noticed, 173.

Canada, Dominion of:
British Columbia—recent educational statistics of, clxxi.
New Brunswick—statistics of common, superior, and grammar schools, clxx.
Nova Scotia—statistics of primary, secondary, and superior instruction, clxx.
Ontario—recent educational statistics, clxx.
Quebec—Statistics of primary, secondary, superior, and special instruction, clxx.

Chattanooga, Tennessee: Schools of, noticed, 374.

Chesebro, Miss Caroline: Obituary notice, 295.

Chicago, Illinois: Schools of, noticed, 83–85.

Chinese, Education of: In California, 32, 33; in Oregon, 334.

Circulars of information, 1873: Number and subjects of, clxxvi.

Cincinnati, Ohio: Schools of, noticed, 315–317.

Cities:
Statistics of school-systems of, 514–572; general summary of public schools and of private schools, xxi; statistical summary of school-systems of, xxii, xxiii.
School-statistics of fifty principal cities, xxiv–xxx; enrollment in public schools, pupils in private and parochial schools, number of preparatory students in high schools, xxix; school-expenditure, xxx.

Clark, Prof. Henry James, obituary notice, 188.

Clark, William W., obituary notice, 296.

Cleveland, Ohio: Schools of, noticed, 317.

Cleveland, Prof. William C., obituary notice, 295.

Cobleigh, Rev. N. E., obituary notice, 75.

Co-education of the sexes:
In the University of Michigan, 196; in the University of Wisconsin, 418; provision for, in universities, colleges, and schools of science, lvii, lviii, lxv.

Colleges and universities:
Notices of, in Alabama, 6, 7; in Arkansas, 15, 16; in California, 26–28; in Connecticut, 42, 43; in Delaware, 63; in Georgia, 72–74; in Illinois, 87, 88; in Indiana, 102, 103; in Iowa, 111; in Kansas, 118; in Kentucky, 127, 128; in Louisiana, 138; in Maine, 149; in Maryland, 155, 156; in Massachusetts, 179–182; in Michigan, 196; in Minnesota, 205, 206; in Mississippi, 216, 217, 218; in Missouri, 226, 227; in Nebraska, 238; in Nevada, 245; in New Hampshire, 252; in New Jersey, 265; in New York, 288, 289; in North Carolina, 303; in Ohio, 323–326; in Oregon, 335, 336; in Pennsylvania, 344, 345; in Rhode Island, 358; in South Carolina, 365; in Tennessee, 375, 376; in Texas, 386; in Vermont, 388, 389; in Virginia, 398, 399; in West Virginia, 410, 411; in Wisconsin, 418–420; in District of Columbia, 439.
(See, also, Statistical summaries of professional instruction in the several States.)

Colleges and universities—Continued.
Table of statistics of, 663–683; statistical summary of, lix–lxv; relations of secondary schools to, xlviii–liv; co-education in, lxv; rise of, for colored people, lxvi; elevation of standard, lxvii. (See, also, Schools of science, Female colleges, &c.)

Colleges of Agriculture and the Mechanic Arts: (see Scientific schools; see, also, Agriculture, College of.)

Colombia, Republic of: Recent educational statistics, clxxi, clxxii.

Colorado, Territory of:
Elementary instruction—school-finances, school-population and attendance, 429; teachers and their pay, 429, 430; school-property, school-districts, 429; number of schools and school-houses, 430; educational progress, 430; per cent. of attendance, 430; subdivision of school-districts to be avoided, 431; corporal punishment, 431; general statistics, (see Table I.)
Secondary instruction—institutions noticed, 431.
Superior instruction—universities of the future, 431.
Professional instruction—Divinity School of Jarvis Hall and the School of Mines, 431, 432.
Obituary—Rt. Rev. Geo. M. Randall, D. D., 432.
School-officials—State- and county-superintendents, 432.
Educational condition of—noticed, xx.

Colored children, schools for:
In Alabama, 4; in Arkansas, 11; law providing for, in Delaware, 51, 52; in Florida, 67; in Indiana, 100; in Kentucky, 125, 127; in Maryland, 152, 153; law providing for, in Maryland, 154; in Mississippi, 212, 214–216; in Missouri, 220; in Nevada, 245; in North Carolina, 298; in Ohio, 313; in Pennsylvania, 338; in South Carolina, 360; in Virginia, 393; in District of Columbia, 437, 447, 448, 449; in Montana, 453.

Columbus, Georgia: Schools of, noticed, 71.

Columbus, Ohio: Schools of, noticed, 318.

Commissioner of Education, Report of:
Progress of education during the year, v.
Importance of a general summary of education, v, vi.
General view of the proper work of the office, vi, vii.
Sources of material, vii.
Comparative summary of institutions, instructors, and students for four years, viii.
Improvement in educational statistics, viii, ix.
Remarks on State-systems of public instruction—comparative statement for 1871–'72–'73, ix, x; table of school-ages, x; statistical summary, showing school-population, &c., for three years, as collected by the Bureau of Education, xi; summary of public-school-expenditure per capita, xii; monthly compensation of teachers, xiii; summary of educational condition for 1873—in the Southern States, xiii–xv; in the Middle and Northern States, xv–xvii; in the Great Lake and Mississippi States, xvii, xviii; in the Missouri River States, xviii, xix; in the States on the Pacific slope, xix; in the Territories, xix, xx; confirmation of public high schools, xx, xxi.
School-statistics of cities—general summary, xxi; summary of population, enrollment, and attendance, xxii, xxiii; statistics of fifty principal cities, xxv–xxx.
Normal schools—comparative exhibit for four years, xxx; statistical summary, xxxi, xxxii; teachers required, xxxii; normal instruction in academies, xxxiii; table showing per-capita-appropriation for State-normal schools, xxxiv.
Commercial and business colleges—comparative exhibit for four years, xxxiv; statistical summary, xxxv; extracts from address of General R. D. Mussey, xxxv–xxxvi.
Secondary instruction—comparative exhibit for four years, xxxvi; statistical summary of schools for, xxxvii–xlii; statistical summary of city-high schools, xliii; table showing proportion of enrollment in high schools, xliv; preparatory schools, xlv–xlviii; relation of secondary schools to colleges and schools of science, xlviii–liv.
Superior instruction of women—comparative exhibit for four years of institutions for, liv; statistical summary of institutions, lv, lvi; degrees conferred, lvii; co-education, lvii, lviii; Harvard examinations for women, lviii, lix.
Universities and colleges—comparative exhibit for four years, lix; statistical summaries, lix–lxiv; benefactions, lxiv; colleges for colored people, lxvi; Harvard entrance-examinations, lxvi, lxvii; table showing number of students, &c., in institutions for superior instruction, lxviii.
Schools of science—comparative exhibit for four years, lxviii; statistical summaries, lxix–lxxi; preparatory training, lxxii, lxxiii; standard of admission in several colleges, lxxiii; the law of Congress, lxxiii, lxxiv; instruction in agriculture and mechanic arts considered, lxxiv; gifts, endowments, proceeds of land-scrip, &c., lxxv, lxxvi; occupations of graduates and former students, lxxvi, lxxvii.
Schools of theology—comparative exhibit for four years, lxxvii; statistical summaries, lxxviii, lxxix.
Schools of law—comparative exhibit for four years, lxxix; statistical summary, lxxx.
Schools of medicine—comparative exhibit for four years, lxxx; statistical summary, lxxxi, lxxxii.
Degrees—classification of, lxxxii; number conferred by each class, lxxxiii; statistical summary, lxxxiii–lxxxvii.
Military and naval academies, lack of thoroughness in preparation for, lxxxvii.
Libraries—statistical summary of additional libraries, lxxxviii; statistical summary of increase of libraries in 1873, lxxxix, xc; Concord (Mass.) Free Library, dedication of, xci, xcii; Cincinnati Public Library, xcii–xciv; need of new building for Library of Congress, xciv.
Museums of natural history—difficulty in classifying collections, xcv–xcvii; importance of classification, xcvii, xcix; letter of Prof. Agassiz, xciv, xcv, (note;) schedule of inquiries, xcv–xcviii.
Art to education, relation of—value of industrial-art-training, xcix, c; technical-art-schools in Great Britain, c; establishment of art-schools in Europe, c; why public schools should teach drawing, ci; drawing in schools of Massachusetts, ci, cii; Massachusetts Normal Art-School, cii, ciii; exhibition of art-work in Massachusetts, ciii; industrial importance of a knowledge of drawing, ciii; facilities for art-education now existing in the United States, civ, cv.
Schools for the deaf and dumb—statistical summary of, cv.
Schools for the blind—statistical summary of, cvi.
Asylums for orphans—statistical summary of, cvii; review of the educational and reformatory work of, cvii, cx.
Reform-schools—statistical summary of, cx.
Schools for feeble-minded—statistical summary of, cxi.
Benefactions—summary of, by institutions, cxi; summary of, by States, cxii, cxiii.
Publications, educational—summary of, for 1873, cxiv.

Commissioner of Education, Report of—Continued.
Kindergärten in the United States—number in each State, cxiv; results of the method, and testimony of teachers, cxiv, cxv.
Patents for improvements in school-furniture—summary of, cxv, cxvi.
Comparison of results between statistics from the United States census of 1870 and statistics collected by the United States Bureau of Education in 1873, cxvi, cxvii.
School-superintendence, cxvii–cxxiii; table showing designation, pay, &c., of school-supervisors, cxx–cxxiii.
Education and police—cost of, cxxiv; table of arrests, cxxv.
Ventilation of school-houses, cxxv–cxxxiii.
Women as school-officers, cxxxiii, cxxxiv.
Women, education of, cxxxiv–cxliv—tables showing excess of female population in certain European countries and in some parts of the United States, cxxxv; table showing excess of male population, cxxxvi; extracts from article by J. M. Toner, M. D., on vital statistics of the United States, cxxxvii, cxxxviii; higher education of, in other countries—in England, cxxxviii, cxxxix; in Ireland, cxxxix; industrial training in schools of Boston, cxl; work-schools of Switzerland, cxl, cxli; female education in Würtemberg, cxli–cxliv.
Vienna Exposition, the, cxliv–clii.
European tour, clii–cliii.
Statistics of education in foreign countries:
Europe—Austro-Hungarian monarchy, cliii–clvii; Denmark, clvii; Germany, clvii, clviii; Great Britain and Ireland, clviii–clxi; Italy, clxi–clxiii; Netherlands, clxiii–clxv; Sweden and Norway, clxv–clxvii.
Asia—British India, clxvii.
America—Dominion of Canada, clxix–clxxi; Prince Edward's Island, clxxi; Jamaica, clxxi; Mexico, clxxi; Argentine Confederation, clxxi; Brazil, clxxi; United States of Colombia, clxxi; Ecuador, clxxii.
Australasia—Queensland, South Australia, Victoria, clxxii; New South Wales, Western Australia, Tasmania, New Zealand, clxxiii.
Crime and education—criminal statistics of England and Wales, clxxiii; of Ireland, clxxiv; of Scotland, clxxiv; of Italy, clxxv.
Library of the office, clxxvi.
Circulars of information, 1873, clxxvi.
Office-correspondence, clxxvi, clxxvii.
Recommendations, clxxvii, clxxviii.
Conclusion, clxxviii.

Compulsory education:
Importance of, considered, in California, 20; results of, in Connecticut, 38, 39; advocated, in Kansas, 116; also in Kentucky, 126; in Michigan, 195; in Minnesota, 204; in Mississippi, 213; in Pennsylvania, 341; in Montana, 453; law providing for, in Nevada, 244; in New Hampshire, 250; right of State to enforce, considered in North Carolina, 301; passage of law, recommended in Rhode Island, 355. (See, also, Attendance.)

Connecticut, State of:
Elementary instruction—the school-fund, finances, scholastic population, and attendance, 36; teachers, 36, 37; schools, school-districts, and school-houses, 37; comparative decennial statistics of 1864, 1873, 37; the importance of the compulsory-attendance-law, 37, 38; effects of its enforcement, 38, 39; absenteeism in New Haven, 39; children forced to grow up in ignorance, 39; effect of poor school-buildings, 40; instruction in drawing, 40; in music, 40; improvements in school-architecture, 40; adoption of union-districts, 40; school-law of 1872, 47; the inventive genius of Connecticut, 47; women as school-officers, 47; general statistics, (see Table I.)
