The course of theological study in the Biddle Memorial Institute (Presbyterian) is two years for some and three for others; in the Shaw University (Baptist) is "undecided;" in the theological department of North Carolina College (Evangelical Lutheran) three years; and in the school of biblical literature of Trinity College (Methodist) is four years.—(Returns to Bureau of Education, 1875.)

LAW.

From the law department of Rutherford College no information is received for 1875. In that of Trinity College "complete instruction is given by daily lectures, examinations, &c., and students are fully prepared to obtain license."—(Catalogue for 1874-'75.)

SPECIAL INSTRUCTION.

NORTH CAROLINA INSTITUTION FOR THE DEAF AND DUMB AND THE BLIND, RALEIGH.

The number of instructors in the department for the deaf and dumb, for 1875, is reported to be 7, 1 being a semi-mute; the number of pupils, (74 males and 58 females,) 132. In this department, the ordinary English branches are taught, with shoemaking and cabinet work.

In the department for the blind are 5 instructors and employés, of whom 2 are blind, with 76 pupils, who are trained to broom-making, mattress-making, and cane-seating, if boys, and to needle work, knitting, and fancy bead work, if girls, in addition to the instruction given in ordinary literary branches.—(Printed report for 1873-'74 and returns to Bureau of Education for 1875.)

OXFORD ORPHANS' HOME, OXFORD.

A large building, originally intended for a college, pleasantly located on 60 acres of land in the suburbs of the town of Oxford, Granville County, affords a home for 56

male and 49 female orphans, under a superintendent, steward, matron, and four teachers. The institution is under the care of the Masonic fraternity, and is sustained by voluntary contributions amounting apparently to "about $13,000" in money and "$4,000 in kind," the expenditures being limited to the contributions made.

The children are all taught reading, writing, arithmetic, and vocal music, and 24 have taken lessons in drawing. Farming and gardening industries for boys and sewing and household work for girls enter also into the system of training. A library of about 200 volumes adds to the means of instruction.

A branch asylum, under the same headship and care, exists at Mars Hill, N. C., with 29 orphans under its tutelage.—(Return to Bureau of Education for 1875.)

EDUCATIONAL CONVENTION.

STATE EDUCATIONAL ASSOCIATION.

This association was permanently organized July 11, 1873. Its second annual meeting was held in Raleigh, July 8, 9, 10, 1874, when the following papers were read: Address of welcome, by his excellency Governor Tod. R. Caldwell; response, by Hon. Will. H. Battle, LL. D., president of the association; "Hygiene in schools," by S. S. Satchwell, M. D.; "Normal methods," by Superintendent H. B. Blake; "Education in Congress," by Hon. A. S. Merrimon; "Education by the public press," Rev. T. H. Pritchard, D. D.; "Examinations, certificates, and diplomas, tests of scholarship," by Rev. B. Craven, D. D.; "Higher education in North Carolina," by Ralph H. Graves, A. M.; "History of education in North Carolina," by Rev. C. H. Wiley, formerly State superintendent; "The duty of the State to educate her children," by Hon. W. N. H. Smith; "Multiplicity of studies," by Osborne Hunter, jr.; "Graded schools," by Superintendent J. B. Boone; "Louis Agassiz, the teacher," "Methods of teaching," by Rev. Charles Phillips, D. D.; "Public education," by Rev. Father J. V. McNamara; "Education in Georgia," by Superintendent Martin V. Calvin, of Augusta, Ga.—(Report of superintendent of public instruction, 1874, pp. 49, 50.)

LIST OF SCHOOL OFFICIALS IN NORTH CAROLINA.

Hon. STEPHEN D. POOL, *State superintendent of public instruction, Raleigh.*

[Term January, 1875, to January, 1877.]

STATE BOARD OF EDUCATION.

[Term January, 1875, to January, 1877.]

Name.	Post-office.
His excellency Curtis H. Brogden, governor, president of board	Raleigh.

Hon. T. L. Hargrove, attorney-general	Raleigh.
Hon. David A. Jenkins, treasurer	Raleigh.
Hon. Stephen D. Pool, State superintendent of public instruction, secretary of board.	Raleigh.

OHIO.

SUMMARY OF STATISTICS.

SCHOOL POPULATION AND ATTENDANCE.

Number of youth of school age: Whites, 995,128; colored, 22,598	1,017,726
Number of pupils enrolled in public schools: Boys, 375,436; girls, 336,693	712,129
Increase during 1875	4,186
Number enrolled in high schools: Boys, 11,280; girls, 12,932	24,212
Number of pupils 16–21 years of age enrolled: Boys, 54,941; girls, 38,110	93,051
Number 16–21 years of age enrolled in high schools: Boys, 4,746; girls, 5,523	10,269
Average daily attendance in all the schools: Boys, 225,431; girls, 209,918	435,349
Increase in 1875	5,719

TEACHERS AND TEACHERS' PAY.

Number of teachers employed: Men, 10,186; women, 12,306	22,492
Increase in 1875	117
Number necessary to supply the schools	15,087
Number employed in high schools: Men, 427; women, 214	641
Average monthly wages of—	
Men teaching in township district primary schools	$39 00
Women teaching in township district primary schools	27 00
Men teaching in city, village, and special district primary schools	55 00
Women teaching in city, village, and special district primary schools	35 00
Men teaching in township district high schools	68 00
Women teaching in township district high schools	56 00
Men teaching in city, village, and special district high schools	80 00
Women teaching in city, village, and special district high schools	58 00

SCHOOLS.

Number of school-rooms in the State	14,868
Increase during the year	100
Number of high school rooms	450
Increase	38
Whole number of school-houses in the State	11,834
Increase in 1875	146
Cost of school-houses erected in 1875	$1,010,786 00
Total value of school-houses in the State, including grounds	19,876,504 00

INCOME AND EXPENDITURE.

Income.

Receipts from all sources for school purposes	8,711,411 86
Increase in 1875	410,817 09
Grand total of receipts, including balance on hand September, 1874	11,749,360 76
Increase in 1875	689,021 08

Expenditures.

Total expenditures for public schools	8,170,959 98
Increase in 1875	98,792 33
Total of expenditures, exclusive of amounts paid for interest on and redemption of bonds in 1875	7,651,956 68
Increase during the year	96,392 28
Balance on hand September 1, 1875	3,578,400 73

PER CAPITA EXPENDITURE.

Average cost of education *per capita* of enrolment	10 57
Average cost of education *per capita* of average daily attendance	17 29

PRIVATE SCHOOLS.

Number of pupils enrolled in private schools	10,652
Decrease for the year	2,414
Number of teachers in private schools	211
Decrease for the year	54
Number of pupils in academic studies in private schools	739

—(Report for 1874–'75 of State commissioner of common schools, Hon. Charles S. Smart, pp. 7–29.)

SCHOOL SYSTEM OF THE STATE.

PROVISIONS OF THE CONSTITUTION.

The first constitution of the State, adopted in 1802, declared, article VIII, section 25, that no law should be passed to prevent the poor within the State from an equal participation in the schools, academies, colleges, and universities within it endowed in whole or in part from the revenue arising from the donations made by the United States for the support of schools and colleges, and that the doors of the said schools should be open for the reception of scholars, students, and teachers, of every grade, without any distinction or preference whatever contrary to the intent for which such donations were made.

That of 1851 used in its first article, section 7, essentially the language of the ordinance of 1787, declaring that, "knowledge being essential to good government," it should be the duty of the general assembly to encourage schools and means of instruction. In article VI, section 1, it required that the principal of all funds arising from the sale or other disposition of lands or other property granted or intrusted to the State for educational purposes should be forever preserved inviolate and undiminished and that the income arising therefrom should be faithfully applied to the specific objects of the original grants or appropriations. In the same article, section 2, it required the general assembly to make such provisions, by taxation or otherwise, as, with the income arising from the school trust fund, should secure a thorough and efficient system of common schools throughout the State. At the same time, the school funds of the State, in whole and part, were reserved from the control of any religious or other sect or sects.

PROVISIONS OF THE SCHOOL LAWS.

From Ohio school laws, an act for the reorganization and maintenance of common schools, passed May 1, 1873, with acts of May 5, 1873, and of 1874.

OFFICERS.

The legal officers of the State school system are: (1) a State commissioner of common schools; (2) State, county, and city boards of examiners; (3) boards of education of cities, villages, special districts, and township districts; and (4) local directors of subdistricts. Other State officers have also certain duties to perform in connection with these.

POWERS AND DUTIES OF SCHOOL OFFICERS.

The State commissioner of common schools is chosen by the people at each third recurrence of the regular annual election for State and county officers, beginning from 1874, and enters on his official term of three years on the second Monday of January following. Before taking office he is required to give bond in the sum of $5,000, with two or more sureties, for the faithful performance of his legal duties, with true account and application of all moneys and property coming into his hands for the use and benefit of common schools. He is to keep his office at the State capital, and attend there ordinarily for not less than ten months in the year; is to visit annually each judicial district of the State for the purpose of superintending teachers' institutes, conferring with school officers, counselling teachers, and stirring up an interest in education; is to exercise over the school funds of the State such supervision as may secure their safety and proper distribution according to the law; is to prescribe forms and regulations for making school reports and conducting all school business, and cause these to be distributed to all school officers, with needful instructions for their use; is to cause copies of the school laws also to be printed and distributed, with an appendix of appropriate forms and instructions for carrying their provisions into due effect; is to countersign all State certificates of high qualification of teachers; and is annually, on or before the 20th day of January of each year, to make to the general assembly or, in its absence, to the governor a report of his labors and observations in the school field; an account of the condition and amount of all funds and property appropriated to education; a statement of the number of common schools and of the scholars in them, noting the sexes and the branches taught; a like statement respecting private schools, teachers' institutes, and expenditures of the public school funds; and a sketch of plans for the management and improvement of public schools. His salary is $2,000.

Examining boards.—The State board of examiners is composed of three persons resident in the State, appointed by the State commissioner of common schools for an official term of two years. Its duty is to examine teachers desiring to receive State certificates of high qualification, which shall supersede the necessity for further local examinations, and to issue such certificates to such as are found worthy of them on their payment of a fee of $3.

County examining boards also consist of three persons, who are to be residents of the county, and are appointed by the probate judge of it for terms of three years, one going out each year. They are to examine, at certain fixed places, after duly

published notice, all persons desiring license to teach in the public schools of the county who pay them an advance fee of fifty cents for such examination; and are to grant, to such as they find qualified, certificates of qualification valid for six, twelve, eighteen, or twenty-four months, with power of revocation in case of proved incompetency or unworthiness. These certificates form a sufficient warrant for engagement of the holders of them in the rural school districts of the county where they are issued, but are not valid in the city or village districts having boards of education, without the indorsement of the president and secretary of the boards of examiners of such districts. The fees received for these county examinations, less the necessary travelling expenses of the examiners, are to be paid over to the county treasurer for the support of teachers' institutes, and the county auditor is to be informed of the number of persons examined. Report is also to be made by the clerk of the examining board to the State commissioner, on or before October 1, each year, of the number of examinations held, the number of applicants examined, the number of certificates granted, the length of time for which they may be held, the amount of fees paid over to the county treasurer, and the amount received of the county by the board for their services, which last is to be $2 a day to each member for every day necessarily engaged in official service.

City and village examining boards are composed of the same number of persons as those of counties, and hold office for the same term, with the same change of one member each year; only these are appointed by the city or village boards of education, instead of by the State commissioner, and in cities of the first class may consist of six or nine persons, instead of three. They have, for their respective cities and villages, essentially the same duties as the examiners for counties, with the power of examining the schools of their districts as well as the persons desiring to teach in them. Their pay is determined by the boards that appoint them. Any examining board may temporarily associate with it other persons for more full examination of candidates.

Boards of education for cities of the first class (*i. e.*, cities having a population of 10,000 or more by the census of 1870) consist of one or two members for each ward; those of cities of the second class (with less than 10,000 inhabitants by that census) and of incorporated villages consist of three or six persons; those of special districts, of three persons; those of township districts, of the township clerk and the local directors who have been appointed clerks of subdistricts, provision being made in each case for annual or biennial changes in the composition of the boards, their terms of service being two or three years.

The duties of these boards are to act as corporations for the acquisition, transfer, improvement, and custody of school property; to establish and maintain a sufficient number of schools for the free education of the youth within their districts, at such places as will be convenient for the attendance of the largest number, with schools of higher grade whenever necessary; to continue these schools, if day schools, for from 24 to 44 weeks each year, and, if evening schools, for such time as they deem necessary; to determine the studies to be pursued and the text books to be used, these books to hold ordinarily for three years; to have the general management and control of the schools, with power to appoint superintendents, assistant superintendents, teachers, janitors, and other employés, and fix their salaries; to make such rules and regulations as they think necessary for themselves, their appointees, and the pupils; to provide by annual estimates for having local taxes levied for the support of schools and the building, purchase, hire, or improvement of school-houses; to provide, through their clerk, for having an annual census of the school population of their several districts made; and to make to the county auditor, by the 1st of October in each year, a statement of their receipts and expenditures for schools, of the number of schools sustained, the length of time they were sustained, the enrolment of pupils, the average monthly enrolment and average daily attendance, the number of teachers employed, their salaries, the number of schools and school-rooms, and such other items as the State commissioner may require. Those of cities of the first class are also to publish an annual report.

Local directors for subdistricts, 3 in number for each, are elected for terms of three years, 1 being chosen annually on the second Monday of April. They have the general oversight of the schools of their subdistricts, and 1 of their number, chosen as their clerk, serves as a member of the township board of education and attends annually to the enumeration of the school population of the subdistrict.

SCHOOLS.

The schools established under the State system may be of any grade, from primary, in which only orthography, reading, writing, arithmetic, geography, and English grammar are taught, to noble high schools, in which a thorough preparation for college may be had and for which there is clear sanction in the law. All these schools are free to all youth between 6 and 21 years of age who are children, wards, or apprentices of actual residents of the school district in which the schools exist; and boards of education may admit others, not under 6 years old, on such terms as they see fit to prescribe.

Teachers' institutes—which are substantially schools for the improvement of those

actually engaged in teaching—are provided for in counties and cities, but no State normal schools exist. A State agricultural college is the only institution under State control for the higher education of the graduates of the public schools, but there are institutions for the special training of the blind, of the deaf and dumb, and of youth who need reforming influences as well as educational.

SCHOOL FUNDS.

The State common school fund is made by law to consist of such sum as will be produced by the annual levy and assessment of one mill upon the dollar of the taxable property of the State. This is apportioned, on the basis of school population, by the State auditor to the several county auditors, and by these to the school districts. The amount from the State tax for 1875 was $1,560,397 to meet local taxes of $6,153,442.

Besides this there are certain special funds, such as the sixteenth section fund, the twenty-ninth section ministerial fund, the Virginia and United States military school funds, and the western reserve school fund, the interest of which is paid out, according to special laws, for purposes of education.

The permanent school fund, including portion not now available, is reported by the State commissioner to amount to $3,646,713 in the beginning of 1876.

ELEMENTARY INSTRUCTION.

STATISTICAL RETURNS.

A portion of the information embodied in the tables, says the superintendent, is not so complete nor so reliable as it should be, though it is the best that can be obtained, and *something* more than the happy guess of the several county auditors of Ohio. Not a county of the State has made all its returns to the superintendent's office entirely correct. Seventy-five per cent. of the consolidated reports from county auditors were materially incorrect when sent to the office, and these were more nearly correct than any other returns sent. One county reported but seven of its eleven districts. The report from another county was completely incomprehensible, and scarcely correct in any single feature of information required. One county reported 194 per cent. of attendance, several reported a pluperfect attendance, and many returned an average daily attendance greater than the whole number of pupils enrolled. Inaccuracies in the financial statements of the county reports from $31,000 down to $1 are frequent. The statistical information gathered from city and village school districts provided with intelligent and efficient supervision is generally correct. This is, to a great extent, due to the fact that city and village districts are provided with efficient supervision; and, although the superintendents of these schools are not required by law to make a report to the State superintendent of the school statistics of their several districts, they usually assist the legal officers in making their reports. If the superintendents of city and village districts were compelled to make returns of school statistics directly to the county auditors and in duplicate to the superintendent's office, and if the country districts were provided with supervision similar to that already given to city and village districts, such superintendents also to report as above mentioned, a vast army of indifferent reporters could be dispensed with, and one man for each district, intelligent, thoroughly acquainted with the condition of the schools, would be responsible for the accuracy of his report. It is due to county auditors to say that they very generally indicate a desire to be prompt and accurate in making their reports. They claim to be hindered by the tardiness or incompetency of township clerks, whose excuse for whatever is lacking or wrong in their returns is based on the incompetency of teachers.—(Report, 1875, pp. 5–7.)

The number of school districts in the State is 1,942; the number of subdistricts in township districts, 10,433. The law provides for such changes or alterations of the subdistricts as may be deemed necessary by the township board of education, provided that no subdistrict shall contain less than 60 resident scholars, except in cases where, in the opinion of the board or the general assembly, it is necessary to reduce the number. It is believed that, owing to indifference or incompetency on the part of township boards of education, many townships are unintelligently subdivided. In many subdistricts the enumeration of youth amounts to even less than 20 resident scholars, and a few report an enumeration of 5, 6, 10, or 15.

The subdistrict system is regarded as responsible for the fact that the county schools do not keep pace in improvement with those of the towns and cities. The practical working of this system is far different from what its authors intended or anticipated, and that numberless complications must necessarily occur may be readily seen from the fact that powers and duties are divided between township and local boards, which should belong exclusively to either the one or the other to insure any effective adjustment of means to ends. Moreover, the subdistrict system is necessarily expensive, even though it were as good in other respects as the township system, costing, it is estimated, from $100,000 to $300,000 annually more than an intelligent provision for actual wants would cost.

The number of school officers in the State—including members, clerks, and treasurers of district and township boards; district, county, and State examiners; probate judges; county auditors; and prosecuting attorney—is 40,004. The duties required of this large number of officers, it is believed, could be performed with greater economy and intelligence and with better results by 8,000. The 31,299 local directors are frequently at war with the 1,337 members of township boards of education, making confusion and bad work generally.—(State report for 1875, pp. 10–17.)

SUPERVISION.

There is no act of legislation so needed, says the State commissioner, there can be no act passed so economic in its effects upon the expenditures of the public funds of the State, or so generally beneficial to all the interests of the State, as will be an act providing intelligent supervision for the country schools. There were expended last year to provide school buildings, sites, teachers, &c., for the country schools, $3,853,592.52. By an unwise, unintelligent, extravagant expenditure of this money in the erection of school buildings where they are not needed, in the purchase of school-house sites where they should not be located, in the employment of teachers to take charge of schools in many subdistricts enrolling from 2 or 3 pupils to 10 or 15, in the employment of hundreds of notoriously incompetent and inefficient teachers, in the generally irrational, unintelligent management and provision for the country schools, this money is largely thrown away.

The importance of school supervision has been conceded by granting it to all the city and village districts. The State pays from the public school fund $158,773.64 for school supervision, which is given to the 4,500 teachers of the city and village districts, while the 18,000 teachers of the country districts are left without skilled inspection or instruction, and without that experienced supervision that would systematize and unify their work and make it of practical worth. The school interests of the 500 city and village districts are promoted by intelligent supervision, while those of the 11,000 country districts are left without this. Moreover, the city and village districts are controlled by boards of education elected by the people, having in view, as a primary consideration, the peculiar fitness of those elected to provide for the school wants of the district, and the township districts are controlled by a board not elected directly by the people, and not chosen because of capability to make intelligent school provision. Worse than this, the schools of township districts are under the control of two sets of officers, the local directors and the township board, which bodies are almost constantly at variance with each other in respect to the management of school affairs. The remedy for all this, as the State commissioner believes, is to give to the township schools the same administration of the school system that has been given to the city and village districts.—(State report, pp. 55–59.)

PROVISION FOR THE EDUCATION OF COLORED CHILDREN.

There are very few colored children of school age in the State for whom school provision has not been made. In the cities and towns such provision is quite as adequate as is that made for white youth, while in some of the township districts such is not the case. According to a law passed in 1853 and amended in 1864, boards of education *may* provide separate schools for colored youth in districts where there are as many as 20 pupils to attend them, but the law explicitly provides for the establishment of schools "to be free *to all* youth between 6 and 21 years of age, who are children, wards, or apprentices of actual residents of the districts." Each colored as well each white child is entitled by law to the benefits of the school system. The question as to whether these benefits are to be enjoyed in common or in separate schools is to be determined by local sentiment.—(Report, 1875, pp. 26–28.)

COMPULSORY EDUCATION.

It is estimated in the report of 1874 that nearly 90 per cent. of the youth between 6 and 16 years of age are enrolled in some public or private school within the year, and that consequently very few, indeed, do not receive any school training before they are 16 years old. Enrolment in the schools, however, does not indicate actual, regular attendance, for that, especially in country districts and in many towns and villages, is notoriously irregular. In some cities, also, there is an alarming amount of irregularity, truancy, and absenteeism. These evils are confined to a comparatively small class of pupils; but it is a dangerous class. Law-abiding citizens regard its increase with anxiety, and inquire whether the State has not the power to enforce the attendance of these youth at school, as well as to compel their being trained to habits of industry and morality.

There can be no doubt that the State has the right to protect its citizens in the present and to guard against such evil influences as may be possible causes of disaster in the future. The State has the right to provide for the education of its youth; it must necessarily have the right to enforce obedience to such laws as will give efficiency to the means provided.

Admitting that compulsory laws are right in principle, the policy or expediency of their enactment must depend upon the probability or certainty of their enforcement. The State commissioner is satisfied that, if they cannot be enforced if enacted, it will not be because they are considered unjust or oppressive, but because the people may consider them infringements upon the rights of individuals. Whether or not such a view of compulsory laws is entertained by a large number of the people, he is unable to determine. He is certain, however, that there is a growing and, at the present time, a dominant feeling that children under a certain age ought to be in school or engaged in some useful employment. There is an emphatic indorsement of the view that truancy ought to be checked; that children should not be permitted to loiter about the streets engaged in no employment or at any time to frequent places of business or amusement as mere lookers on; and that they ought not to be employed permanently in any trade or business unless they have received a specified amount of education in schools of some kind. Laws tending to correct these evils are compulsory in character; but, notwithstanding they may be unpopular with a few, they will be heartily supported by the public generally.

It is believed that laws of this character will partially secure the results of compulsory education, and that without them the enforcement of laws compelling attendance would be impossible.—(State report for 1874, pp. 48–50.)

PRIVATE SCHOOLS.

The information returned of private schools is not as full and reliable as is desired. The private schools reported to the superintendent's office are, to some extent, patronized by children under 6 years of age; and many of these are continued in the towns and cities of the State only because adequate school provision is not made by the public school officers. When provision for public schools is what it should be, a large percentage of the private schools now incompletely and unreliably reported will be absorbed by the public schools. The enrolment reported in private schools in 1874 was 7,129 more than in 1873, and in 1875 it was 2,414 less than in 1874. The educational advantages of the State can never be accurately measured until there can be obtained better statistical information respecting private schools.—(Report, 1875, pp. 28–30.)

KINDERGÄRTEN.

Reports have been received from two Kindergärten: 1 in Toledo, kept by the Misses Mills and Bancroft, with an attendance of 25 during the fall term and of 15 in the winter, and 1 in Worthington, kept by Mrs. A. B. Ogden, having an attendance of 8 children. The study hours in both these schools are only three during five days in the week, and the ages of children admitted are from 3 to 7 years.—(Reports to the United States Bureau of Education, 1875.)

CITY SCHOOL SYSTEMS.

CINCINNATI.

School officers.—A board of education of 60 members, 2 from each ward, serving for two year terms, but one-half changed each year; a union board of high schools, and city superintendent of schools.

Statistics of schools.—Population, about 270,000; youth of school age, (6–21,) 88,842; enrolled in public schools, 27,897; in private and parochial, 16,454; total enrolment, 41,351; average daily attendance on public schools, 23,604. Number of teachers employed in public schools, 612; salaries of these, $400 to $2,600; salary of superintendent, $3,500. Number of public school buildings, 40; of rooms used for both study and recitation, 522; of rooms used for recitation only, 7. Receipts for schools, $757,492; expenditures on them, $650,676. Average expense per pupil: on enrolment, $17.78; on average attendance, $21.10.

Division of schools.—The schools of the city are divided into three classes: district, intermediate, and high schools. The district schools are again subdivided into 5 grades of one year each; the intermediate, into 3 such grades; the high schools, into 4. There is also a city normal school for the preparation of such as desire to be teachers; and, for the improvement of those who are already such, a teachers' normal institute, is held for the week preceding the opening of the schools. Night schools are held for the benefit of youths over 14 whose circumstances prevent them from attending the day schools; and 4 district schools, 1 intermediate, and 1 high school, for colored pupils, form part of the city system, with 1 for deaf and dumb pupils.

Studies.—The elements of reading, writing, arithmetic, grammar, object lessons, singing, and drawing are begun in the lowest grade of the district schools, the first year, with German, if desired by the parents. Geography is begun in the next grade, and continued through the intermediate ones. Systematic instruction in English composition is given in all the grades. Physics are begun in the lowest grade of the intermediate school and continued in the one above. Music has special attention given it

under 7 teachers, 1 of whom is superintendent of music. Drawing, begun at the outset, is continued throughout the course, under a superintendent of drawing and 4 assistants. Penmanship is cared for by a superintendent of the art and 2 assistants. German is prosecuted by 15,119 of all the pupils, without, it is thought, any hindrance to progress in English. The high school course adds French, Latin, and Greek to the higher English studies, the Latin commencing in the first year, the French and Greek in the second.

Sparing of pupils.—Under the belief that injury has been done in the past by study in the evenings at home, the pupils of the district schools have been released from study out of school. With a view to still further relief, the hours of tuition in the two lowest grades have been cut down to 4½ per diem, and in the remaining grades, through the intermediate, to 5½, without apparent retardation of advancement.

Moral instruction.—Religious instruction and the reading of the Bible having been prohibited in the city schools, that the children of all faiths might enjoy the benefits of them alike, moral instruction in the virtues and duties which all alike admit is required to be given by teachers, and an excellent plan for systematic teaching of such virtues and duties is published in the report.

Night schools.—Ten district night schools and 1 evening high school were held in the school year 1874–'75, the attendance in the former being 1,253, and in the latter, 332. The average number of teachers employed in the high school was 13; in the district schools, 37. The district night schools are organized on the same plan as the corresponding day schools; while in the evening high school an elective system is allowed, each pupil making choice of the nature and number of the studies he shall pursue, and being required to be present only at the time of recitation in these. The subjects taught are arithmetic, grammar, penmanship, drawing, elocution, book-keeping, anatomy and physiology, physics, general history, American history, Constitution of the United States, algebra, and German.

Library.—A public library containing 78,249 volumes, with a reading room attached, and with a yearly circulation of 429,439 books and periodicals, forms an important adjunct to the school work.—(Report of board and of Superintendent John B. Peaslee for 1874–'75.)

COLUMBUS.

School officers.—A board of education of 11 members, whose term of office is two years, a clerk of the board and city superintendent, and a board of examiners of 3 members, of which number the city superintendent is 1.

Statistics.—Population of the city, 42,707; number of school age, (6–21,) 12,198; number registered in public schools, 6,561; number in night schools, 590; number in private and church schools, 1,561; whole number receiving instruction, 8,712; number of schools: high, 1; grammar, 35; primary, 64; ungraded, 6; total, 106. Number of teachers: males, 13; females, 113; total, 126. Number of pupils who attended every school day, 118; number not absent during their enrolment, 293; not tardy, 4,104. Fifty-six per cent. of the youth of the city beween the ages of 6 and 21 and 76 per cent. between the ages of 6 and 16 were registered in the public schools.

Studies.—A full course of the studies is given in the report, together with the questions and answers of all grades at the final examination in June. The Walter Smith system of drawing was taught in all the schools, and the results were most gratifying. Specimens from all the grades are exhibited in the superintendent's report. The examinations in music and German show decided improvement for the year.

Night schools.—These schools were opened in November and continued through March. The enrolment was: boys, 440; girls, 150; total, 590. The average attendance was: boys, 156; girls, 49; total, 205. Number of different teachers, 12; average, 8. Reading, arithmetic, language, spelling, the proper use of words, the construction of sentences, and penmanship covered the range of instruction.

Free evening art school.—This school was opened on the 18th of November under the charge of Professor W. S. Goodnough, who arranged a course in free hand and mechanical drawing. The school was in session 48 nights and attended by 91 pupils, representing 27 occupations, persons not desirous of changing their avocations, but aiming to better prepare themselves for the work in hand. The progress made by many was wonderful. Specimens of work of different pupils are given in the report, with the name, age, and vocation of the draughtsman.

Teachers' institute.—Preparatory to the opening of the schools a teachers' institute was held from 7th to 11th of September. The teachers were divided into primary, grammar, and high school classes, and instruction given to each class on all the studies they were required to teach. The effects of the institute were visible throughout the year in the work of the teachers.

Year's progress.—Superintendent Stevenson says: "This year will be a remarkable one in the history of the public schools. The amount of money in the treasury is sufficient to meet every obligation of the board, if now due; two new buildings have been erected and paid for; the natural sciences recently introduced into all the grades below

the high school have been made indispensable in the curriculum of study; drawing has been shown to be one of the most delightful and practicable of the studies; music has been put upon a new basis; an appropriation has been made for a public school library; steps have been taken looking toward professional training of teachers; the attendance at the high school has been increased without lowering the standard of scholarship for admission, and the popular favor shown the schools is more apparent than ever."—(Report of Superintendent R. W. Stevenson for 1874–'75.)

DAYTON.

Official organization.—A board of education composed of 2 members from each ward, making 12 in all, with a city superintendent of schools.

School system.—The lower schools have been for some years divided into 8 grades, occupying one year each, with 4 further years in the high school. But in 1874 it was found that, owing to the removal of scholars from school before reaching the eighth year grade, the classes of that grade were very small in some of the districts. The principals, who received the highest salaries, gave, under the then existing system, most of their time and strength to these small advanced classes, and the cost of teaching them was thus excessive. To remedy this an intermediate school was established in 1874, and all the pupils of the eighth year grade in the city were transferred to that school, under the charge of a male principal and two female assistants. As at present organized, the course of study has not been enlarged, and the school is simply a union of the classes of the eighth year for convenience and economy. After a year in this school, pupils pass to the high school.

It having been objected that the strict city system of gradation excluded practically from the schools pupils who from necessity were irregular in attendance, an ungraded school was opened for such pupils in 1875. It had an attendance of 26 scholars, and, if found to meet a real want, will be continued.

A public library is an essential adjunct of a good school system. One was established in Dayton in 1855, and has been enlarged partly by appropriations from the contingent fund, but more by a tax of one-tenth of a mill on a dollar for library purposes, till now it numbers 14,000 volumes.

Progress.—The progress made since 1842 is shown in the following table:

	1842.	1857.	1867.	1875.
Total enrolment in schools of the city	No record.	3,440	4,213	5,238
Average daily attendance	No record.	1,660	2,809	3,711
Number of teachers employed	16	45	70	98
Amount of school fund	$2,483	$40,000	$60,000	$139,056
Amount paid teachers	1,583	24,120	31,055	75,826
Value of public school property	6,000	75,000	143,000	210,000

—(Historical Sketch of Public Schools of Dayton, by R. W. Steele.)

HAMILTON.

Officers.—A board of education and city superintendent of schools.

Statistics of schools.—Population in 1870, 11,081; children of school age, (6–21,) at the opening of the school year, 5,451; number between 6 and 16 years old, 3,842; enrolled in public schools, 1,631; in parochial schools, 700; in private schools, about 40. Average daily attendance in public schools, 1,202; percentage of attendance on enrolment, 74. Teachers employed: in English, 18; German-English, 11; in colored school, 1; total, 30. Amount received for public schools, including a cash balance of $31,852 from preceding year, $59,623; expended on them, $47,309; leaving a cash balance of $12,314; total cost of tuition and contingents for each pupil, on average attendance, $23.01. One new school building, said by the architect to be "fully up to, if not in advance of, any in the State," as respects completeness in all its parts, has been finished during the year, adding greatly to the accommodations for pupils and facilitating a thorough classification of the schools.

Examinations.—The examination of the different classes in the work mapped out for them in the course of study consumes a large part of the superintendent's time. An attempt is made to examine each class in one or more subjects every month. During the last year more than six hundred such examinations were held. The questions for these examinations are always prepared by the superintendent and each examination is conducted in his presence. The object secured by the plan of examination followed may be summed up thus: (1) A thorough knowledge on the part of the superintendent of the actual progress of the pupils in their studies; (2) an effort on the part of teachers and pupils to do good work at every stage of instruction; (3) more regular attendance of pupils, in order to be prepared for expected examination; (4) great improvement in methods of teaching; and (5) a determination of the fitness of any pupil for promotion.—(Report of Superintendent Austin Ellis for 1874–'75.)

LANCASTER.

Organization.—A board of education of 6 members, a board of examiners of 3, and a city superintendent of schools.

Statistics.—Population, 7,000; youth of school age, 2,232; enrolled in public schools, 1,035; average daily attendance, 762; schools, 19; teachers, 22, including special teachers of penmanship and German.

Rolls of honor.—One of the means used here to secure a regular and prompt attendance is the roll of honor containing the names of the pupils neither absent nor tardy during the month. This roll of honor accompanies each teacher's report to the superintendent at the end of each month and is read by him in all the schools. The school having the largest number in proportion to its enrolment on the roll of honor is the banner school, and is presented with a silk banner, to be kept in its room for the following month or as long as it may remain the banner school.

Examinations.—Monthly examinations are held in all the schools. In the primary schools these examinations are oral; in all above the primary they are written.

Accommodations.—The superintendent says: "A few years ago the total valuation of the school property in this city was $16,000. Now the total valuation of your school property is over $100,000."—(Report of Superintendent George W. Welsh for 1874–'75.)

STEUBENVILLE.

The system here includes a board of education of 6 members, a city board of school examiners of 3 members, and a superintendent, Professor M. R. Andrews.

Statistics.—Youth of school age, 4,253; registered in public schools, 2,181; average monthly enrolment, 1,759; average daily attendance, 1,606; per cent. of attendance on monthly enrolment, 91. Number of teachers in public schools, 34.

Discipline.—Cases of corporal punishment are becoming rare; in thirteen rooms there was not a case during the year. The number of pupils allowed to a teacher being too large to admit of thorough work, it was necessary to resort to a modification of the half day system in all the lower grades. Each primary teacher has her entire school together but one hour and ten minutes; half the school is then dismissed and the other half continue their studies until the usual time for closing the morning session. In the afternoon, the pupils who went home at recess in the morning remain until the close of the school and the others are dismissed at recess. Thus the teacher has but a small school for more than half the day, and that at the time when the control of a school is most difficult.

An evening school was opened in October by Rev. W. B. Grace, with a fair attendance, but his protracted illness and subsequent death interrupted its progress. The whole number enrolled was 65; average attendance, 31.—(Report of Steubenville public schools, 1875.)

ZANESVILLE.

School officers.—A board of education composed of 9 members, 1 from each of the wards of the city, a superintendent of instruction, and a board of examiners of 3, the term of 1 expiring each year.

Enumeration and attendance.—Total enumeration, 5,370; total enrolment, 3,063; average daily attendance, 2,160. Per cent. of average daily attendance on total enrolment, 79; on average number belonging, 93.3.

Cost of schools.—The superintendent says: "There has been a reduction in the cost of the schools, from that of the preceding year, of over $5,000, effected by a more economical disbursement of the contingent fund. The cost per pupil has varied but very little in five years; but that of instruction in the senior grades was disproportionately great, being more than double that of secondary grades, and little less than that of high school grades; while in class schools it has been greater than in the regularly graded ones. The total cost of schools for the year was $45,558.40. Cost per pupil, based on average attendance, $22.48."—(Report of Superintendent A. T. Wiles for 1874–'75.)

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

Eight normal schools, returning their statistics for 1875 to the State commissioner, report a total of 51 regular instructors and an attendance of 2,175 men and 979 women under instruction, a total of 3,154, the graduates for the year numbering 530, of whom 370 were men and 160 women. The increase of these figures over those for the preceding year was one institution, 12 instructors, 472 students, and 63 graduates.

It is a fact to be deplored, says the commissioner, that Ohio has made no provision for the professional training of teachers.—(State report, p. 33.)

TRAINING SCHOOLS.

To supply their schools with trained teachers the cities of Cincinnati, Cleveland, Dayton, and Sandusky have established training or normal schools as a part of their city systems.

Cincinnati reports a normal school for teachers, founded in 1868, in which there were employed 9 teachers—4 men and 5 women—and having an attendance of 78 students, all women, each of whom took the regular course of instruction. At the close of the year the school graduated 41; the total number of graduates since its foundation is 240. The possession of a diploma of the Cincinnati high school, a teacher's certificate from the board of examiners, or a special examination equivalent to this is fixed as the condition upon which pupils are admitted into the training school, and before graduation each pupil is required to teach from two to three months in practice schools without remuneration; and after graduation each graduate is expected to teach a reasonable length of time in the Cincinnati schools.

Cleveland reports a training school established in 1874. During the year ended August 31, 1875, there were 4 teachers employed: 1 man and 3 women. The attendance was 49, (all young women,) all of whom pursued the regular course of study. There were 26 graduates last year. Graduates from the high school of Cleveland are admitted to a one year's course and pupils who have spent two years in the high school to a two years' course. Pupils, after graduating, are required to teach from six to eight weeks in the training school.

Dayton reports a training school established in 1869. One teacher, a lady, was employed during the past year; 21 young women were in attendance, 8 were graduated at the close of the year, and 70 have graduated since its establishment. Before graduating, from four to ten weeks' practice in the training school, under the observation and daily criticism of a critic teacher, is required. The time spent at practice in the training school is, to some extent, dependent upon the proficiency exhibited by the pupil teacher in her practice work. The school is strictly professional. The course of study includes physiology, natural philosophy, methods of instruction, school economy, history, and philosophy of education, and general literature exercises.

Sandusky reports a training school, established in 1874. One teacher, (a lady,) was employed during 1875; there were no graduates during that year, but 6 young women expect to graduate in 1876. The course of instruction requires two years for its completion. After the first year the pupils are required to teach under the observation and instruction of a critic teacher, and are paid limited wages. The school is reported by the superintendent and by the committee of the school board which has it in charge as an "eminent success."

These training schools have proved of incalculable benefit to the schools at large, and they are regarded by the cities supporting them as indispensable to the success of their school systems.—(State report, pp. 50, 51.)

Normal classes and departments exist in connection with Baldwin University, at Berea, and Mt. Union College, Xenia.

TEACHERS' INSTITUTES.

During the months of July and August, 1875, the commissioner spent nearly all his time in attending county teachers' institutes and lecturing before them, but regrets that for want of a sufficient travelling fund he has been compelled to decline many requests to visit county associations and to lecture before institutes. The county institute, it is remarked, is the chief if not the only means within reach of the country teacher for that professional training that is a requisite to successful teaching. The county teachers' institutes visited by the commissioner since he came into office have, with one or two exceptions, been well attended by the teachers of the respective counties and have had able, experienced, and practical instructors. There were held during the year 92 meetings of county teachers' associations. The teachers have shown increasing interest in these meetings; and the character of the instruction given is generally practical and beneficial and is growing more profitable.—(State report, pp. 35, 37, 39.)

The reports show that 75 teachers' institutes were held during the year 1874; that the aggregate number of teachers in attendance was 8,579, or 58 per cent. of the whole number necessary to supply the schools; that their exercises were conducted by 391 different instructors and lecturers; and that the sum of $15,318.81 was expended in sustaining them, $11,792.16 being derived from the teachers' institute fund, $3,332.33 from the voluntary contributions of teachers and friends of education, and $194.32 from the balance on hand or from sources not specified.

No part of the necessary expenses incurred in the conduct of these important agencies for the professional training of teachers was borne by the State. The sessions of these institutes were held usually at times when the public schools were not in session; hence but very few teachers received any pay for the time spent in attending them. As these are the only agencies recognized by law for the training of teachers, it may be said that the State did not contribute anything whatever within the year for the maintenance of a system of normal instruction. The teachers themselves organized and sustained these institutes, and in many instances conducted the work of instruction with creditable success and efficiency. The State commissioner assisted in conducting the exercises of a large number of institutes.

SCHOOL JOURNAL.

The Ohio Educational Monthly and National Teacher, first under the editorial management of Hon. E. E. White, at Columbus, and subsequently under that of Hon. W. D. Henkle, at Salem, has aided materially in the improvement of the teachers of the State during 1875, as previously. Its original and selected articles on important educational subjects have been often very valuable, its columns of intelligence reliable, and its spirit, as might be inferred from its management, eminently good.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The number of public high school rooms in the State in 1875 is given by the commissioner as 450, and the number of teachers therein 641, of whom 427 were men and 214 women. The enrolment of students in these schools was: Boys, 11,280; girls, 12,932; total, 24,212. Of this total, 10,269 were between 16 and 21 years of age.

Latin was studied by 3,069 pupils of the public schools; Greek, by 197; French, by 129; and German, by 34,366, many of the latter, of course, belonging to the primary grades.

The number of colored pupils in academic studies is given as 199 in township districts and 2,937 in city, village, and special districts in 1875. Total of colored pupils in such studies, 3,136; total of all in them, in State schools, 27,348.—(State report, pp. 13, 14, and 26, with Tables XIV, XV.)

ACADEMIES AND SEMINARIES.

Five schools for the secondary instruction of boys exclusively report a total of 33 instructors and 443 students, of whom 32 were pursuing classical studies and 353 the modern languages. Drawing is taught in 3, and music, both vocal and instrumental, in all; 2 have libraries of 500 and 3,000 volumes respectively; and 1 only reports possession of a chemical laboratory.

Six schools for girls report a total of 54 instructors and 1,161 students, of whom 216 were in classical studies and 214 were pursuing the modern languages. Drawing and music, vocal in all but 1 and instrumental in all, are taught; 4 have chemical laboratories and philosophical apparatus, and 2 report libraries of 2,000 and 3,000 volumes respectively.

Thirty schools for both sexes report an aggregate of 112 instructors and 2,956 students, of whom 1,420 were boys and 1,536 girls; 702 were pursuing classical studies and 299 modern languages. Drawing is taught in 13 of these schools, vocal music in 18 and instrumental in 10; 8 report the possession of chemical laboratories, 12 that of philosophical apparatus, and 8 that of libraries ranging in size from 50 volumes to 1,307.

In all there are 41 academies and seminaries reporting, having a grand total of 199 instructors and 4,560 students—1,863 boys and 2,697 girls—of whom 950 were pursuing classical studies and 866 the modern languages.

To the numbers thus reported must be added 3,401 students in the preparatory departments of colleges, of whom 1,203 were preparing for a classical collegiate course and 640 for a scientific, while in other preparatory schools were 972 pupils, 119 preparing for a classical and 129 for a scientific course.—(Returns to United States Bureau of Education, 1875.)

BUSINESS COLLEGES.

Eleven business colleges, 2 located in Cincinnati and 1 each in Akron, Cleveland, Columbus, Dayton, Oberlin, Sandusky, Springfield, Toledo, and Zanesville, report a total of 29 instructors and 2,168 pupils, of whom 141 were young women. The course of instruction in some of these schools includes in addition to the usual business course the higher mathematics and in one the ancient and modern languages. Three pupils are reported as studying phonography, 26 telegraphy, and 7 German. The length of course varies from six months to two years.—(Special reports to the United States Bureau of Education, 1875.)

SUPERIOR INSTRUCTION.

REGULAR COLLEGES.

The State commissioner has received reports from 24 universities and colleges, giving their statistics for 1875. The number of regular instructors reported was 215; the number of students in attendance in 23 of these colleges was 5,402; the number engaged in the regular course of study in 22 was 3,063; the graduates in regular course reported by 21 was 357; the whole number of graduates reported by 21 colleges was 6,488.

Printed catalogues from 22 of these institutions give the following facts:

Antioch College, Yellow Springs, (non-sectarian,) affords equal opportunities for edu-

cation to both sexes. The courses of study are preparatory and collegiate; those who do not wish to pursue the regular collegiate course are allowed to select what they wish to study, but degrees are conferred on those only who complete the regular course. The number of students in 1875, including those in the preparatory school, was 131.—(Catalogue, 1874–'75.)

Baldwin University, Berea, (Methodist Episcopal,) admits both sexes to its classical, scientific, and preparatory departments. During the fall term normal classes are organized for the benefit of teachers. A college of pharmacy is connected with the university, with courses of instruction in pharmacy, chemistry, botany, and materia medica.—(Circular of University, 1875–'76.)

Denison University, Granville, (Baptist,) for young men, includes classical, scientific, and preparatory departments. The college buildings will accommodate 178 pupils; the attendance for 1875–'76 was 151, of whom 71 were in the collegiate classes.—(Catalogue for 1875–'76.)

Farmers' College, College Hill, (non-sectarian,) admits both sexes to all the classes of the entire course on the same conditions. There is a special course which substitutes the modern languages and a course in general history for the Latin and Greek of the sophomore, junior, and senior years. Drawing and vocal music are taught.—(Catalogue, 1875–'76.)

Geneva College, West Geneva, (Covenanters,) admits both sexes to its classical and preparatory departments. The total attendance during 1874–'75 was 155, of whom 103 were young men and 52 young women.—(Catalogue, 1874–'75.)

Heidelberg College and Theological Seminary, Tiffin, (Reformed,) admits both sexes, and embraces collegiate, preparatory, and theological departments. Special facilities are afforded for the study of the German language.—(Catalogue, 1873–'74.)

Hiram College, Hiram, (Disciples,) admits both sexes. Its course of study embraces classical, scientific, biblical, ladies', teachers', commercial, and preparatory departments.—(Catalogue, 1875.)

Kenyon College, Gambier, (Protestant Episcopal,) is for the education of young men exclusively. In addition to its preparatory and collegiate departments, the college includes the theological seminary of the diocese of Ohio. The attendance in 1874–'75 in the collegiate department was 52; in Kenyon Grammar School, the preparatory department, it was 67.—(Catalogue, 1874–'75.)

Marietta College, Marietta, (non-sectarian,) appears to be exclusively for young men. Attendance in preparatory department, 117; collegiate, 85; total, 202.—(Catalogue, 1874–'75.)

McCorkle College, Bloomfield, (Presbyterian,) has in operation preparatory, academic, and scientific departments. Both sexes are admitted. The principal design of the college is to qualify young men for the study of theology. Arrangements are being made to have the college properly endowed, and already about $8,000 have been secured.—(Catalogue, 1875.)

Mt. Union College, Mt. Union, (Methodist Episcopal.) Some of the special features of this institution are its elective system of studies; several important special courses, as commercial, normal, music, and designing; its non-sectarian character, and the fact that ladies are admitted on the same terms as gentlemen to all classes and departments and to all honors and privileges, including the office of trustee and professor. The courses of study are classical, scientific, philosophical, commercial, normal, and preparatory.—(College catalogue, 1874–'75.)

Oberlin College, Oberlin, (Congregational,) admits both sexes to its course of study, which embraces scientific, classical, theological, ladies' preparatory, and musical departments. The college does not furnish manual labor to students, but a few are employed in the care of the college buildings and about 40 in the higher classes, both young men and women, are employed as assistant teachers, and the long winter vacation affords opportunity to those who are qualified to engage in teaching schools abroad. The total attendance in 1874–'75 was 1,216, of whom 648 were young men and 568 young women.—(Catalogue, 1875–'76.)

Ohio University, Athens, (non-sectarian,) is for both sexes, and embraces preparatory and collegiate departments. This is the oldest literary institution northwest of the Ohio River. Its existence was provided for as early as 1787 in the purchase made from the United States Government by the Ohio Company of Associates. By the contract between these parties two townships of land were set apart for the purpose of a university and placed under the care of the legislature of the State.—(Catalogue, 1874–'75.)

One Study University, Scio, (Methodist Episcopal.)—The distinctive feature of this institution is the plan of study. Students pass through the course by taking up and thoroughly completing one study at a time. A practical test of five years, it is stated, gives a great gain both in time and scholarship. Both sexes are admitted. The number in attendance was 119.—(Catalogue, 1874–'75.)

Otterbein University, Westerville, (United Brethren,) has four courses of study, viz.: Classical, scientific, ladies, and English, of which any one may be taken by any stu-

dent, the ladies' course being so called because it is the one usually preferred by the ladies. There are also departments of music and the fine arts. Attendance of students in 1875, 201, of whom 72 were in collegiate classes.—(Catalogue, 1875.)

St. Xavier College, Cincinnati, (Roman Catholic,) includes collegiate, academic, preparatory, and commercial departments. It is provided with suitable chemical and philosophical apparatus, and possesses a valuable museum and a library of 12,000 volumes.—(Catalogue, 1874–'75.)

University of Wooster, Wooster, (Presbyterian,) includes collegiate, preparatory, and medical departments; the former, embracing the usual four years of study, has been arranged in three courses: (1) the classical, with the degree of A. B. for graduation; (2) the philosophical, with the degree of Ph. B.; and (3) the scientific, with the degree of S. B. Students of either sex are admitted, under the same requirements, to equal standing in any department or course of the university. Total attendance in the university, 349.—(Catalogue, 1876.)

Urbana University, Urbana, (New Church,) aims to combine with thorough scientific and literary culture a knowledge of the duties of a Christian life. The departments are preparatory, collegiate, and theological.—(Circular, 1875.)

Western Reserve College, Hudson, (non-sectarian,) is for both sexes, and includes preparatory, collegiate, and commercial departments.—(College catalogue, 1873–'74.)

Wilmington College, Wilmington, (Friends,) embraces preparatory and collegiate departments, the latter having classical and scientific courses. Both sexes are admitted and receive similar degrees.—(Catalogue, 1874–'75.)

Wittenberg College, near Springfield, (Evangelical Lutheran) includes preparatory, collegiate, and theological departments. Both sexes are admitted. The total attendance in 1875–'76 was 158; of these 22 were theologics, 59 were in regular collegiate classes, 22 in a select course, and 55 in the preparatory department.—(College catalogue, 1875–'76.)

Xenia College, Xenia, (Methodist Episcopal,) admits both sexes to its course of study, which embraces collegiate, primary, preparatory, and normal departments. The institution was originally organized for ladies only, but the experience of 12 years has shown that the admission of both sexes was wise, and even required. Superior advantages are offered to those wishing to make music a special study.—(College catalogue, 1875.)

COLLEGES FOR WOMEN.

Thirteen institutions of this class report for 1875 as follows: instructors, 137; students, including preparatory, 1,064; number in regular course, 710; number in special or partial course, 137. In all but one of these schools the instruction of the regular course extends through 4 years. In that one it is 6 years. About half of them are authorized to confer degrees, and 9 report libraries ranging from 500 to 2,300 volumes. In 11 are taught drawing, painting, vocal and instrumental music, French, and German; 2 add Italian also, and 1 Spanish. Seven report chemical laboratories; 8, philosophical apparatus; 2 have museums of natural history, and 4, art galleries.—(Returns to Bureau of Education, 1875.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The Ohio Agricultural and Mechanical College, organized in 1870, is founded on the congressional land grant of July, 1862, for the purpose of securing the better education of the industrial classes. The share of Ohio in this grant was 630,000 acres. This was unfortunately pressed for sale upon a temporarily overstocked market, and the State realized only 54 cents to the acre. The total amount of the sales ($342,450) was, however, put at interest, and when the college was opened in September, 1873, the principal and interest together constituted a productive fund of something over $500,000, the annual income from which slightly exceeds $30,000. In consideration of the location of the college being fixed at Columbus the institution received $300,000 from Franklin County, out of which a valuable farm was bought, college buildings erected, and various departments of instruction equipped. The value of the farm has been greatly enhanced since its purchase by the rapid growth of the city in its direction, and at present the total value of the endowment and property is estimated to exceed $1,000,000. The organization of the college has been effected in strict conformity with the provisions of the law to which it owes its foundation. The departments already established are as follows: (1) physics, (2) chemistry, (3) zoölogy, (4) botany, (5) geology, (6) agricul-

ture, (7) mathematics, (8) English, French, and German languages, (9) Latin and Greek languages, (10) political economy and civil polity, and (11) mechanical and free hand drawing. To students entering the college for the purpose of taking up some special study and who do not propose to complete a regular course, full freedom in the selection of the branches which they will pursue is granted, subject only to the necessary limitation that they are prepared to take up with advantage the studies which they select.

Special attention is invited to the advantages offered by the college to students fitting themselves to become teachers of natural science, and also to those designing to pursue the study of medicine. The resources of the college in the way of collections and the methods of study adopted in the more advanced classes—the work being mainly done in laboratories and museums—make it safe to say that a very important addition to the educational facilities of the State is here made.—(Circular and catalogue of the college, 1874–'75.)

THEOLOGY.

Theological instruction is given in Lane Theological Seminary, Cincinnati, a Presbyterian institution, having a three years' regular course of study; in Union Biblical Seminary, Dayton, under the control of the United Brethren in Christ, also with a three years' course; in the theological department of Mt. St. Mary's Seminary of the West, (Roman Catholic,) having a three years' course; the German Evangelical Lutheran Seminary, in connection with the Capital University, with a course lasting two years and a half; in the Christian Educational Institute of the Mennonite Community, Wadsworth; in Heidelberg College and Theological Seminary, (Reformed;) in the Protestant Episcopal Theological Seminary of the Diocese of Ohio, a department of Kenyon College; in Oberlin College, Urbana University, and Wittenberg College, and in Wilberforce University.

LAW.

Special reports have been received from the law school of the Cincinnati College, at Cincinnati, the Ohio State and Union Law College at Cleveland, and the law department of Wilberforce University, near Xenia. The attendance of students in the first mentioned was 60, in the second it is not given, and in the last it was only 1. The number of resident professors and instructors was 10, the number of years in course in them all is two. The law school of the Cincinnati College has connected with it a library of over 900 volumes of the best writers on law and jurisprudence and the more important reports, selected with special reference to the wants of the school. Students who attend the full course also have access, without charge, to the law library of the Cincinnati bar, which is one of the largest and best in the country.—(Reports to United States Bureau of Education and catalogue of law school of Cincinnati College.)

MEDICINE.

Three medical colleges, all located at Cincinnati—the Cincinnati College of Medicine and Surgery, the Medical College of Ohio, and the Miami Medical College—report an aggregate attendance of 528 students; graduates at the commencement of 1875, 203; number of professors and instructors, 32. The course lasts three years in two of these colleges; in the third, the Cincinnati College of Medicine and Surgery, the length of course is not reported.—(Special reports to the United States Bureau of Education, 1875.)

Medical departments also exist in connection with the University of Wooster and the Western Reserve College.—(Special reports to the United States Bureau of Education and catalogues.)

The Ohio College of Dental Surgery at Cincinnati offers a curriculum embracing anatomy, physiology, pathology, and therapeutics, chemistry, and operative and mechanical dentistry. A candidate for graduation must have two full years of pupilage, part of which, at least, should be with a reputable dental practitioner and good teacher, inclusive of two complete courses of lectures in a dental college.—(Catalogue of the college, 1875.)

SPECIAL INSTRUCTION.

EDUCATION OF THE BLIND.

The Ohio Institution for the Education of the Blind, at Columbus, reports, for 1875, 152 pupils under instruction. The employments taught are broom making, cane seating, beadwork, knitting, crocheting, and hand and machine sewing. The expenditure during the year was $59,125.55. The library numbers about 100 volumes of books in raised print, many of them being readers, of which there are several copies.—(Special report to the United States Bureau of Education, 1875.)

EDUCATION OF THE DEAF AND DUMB.

The Ohio Institution for the Education of the Deaf and Dumb reports 23 instructors, 2 of whom are semi-mute, and 488 pupils under instruction—281 males and 207 females. The average number of years spent in the institution is five; the course of study is substantially that taught in the graded schools of Ohio. Since the foundation of the institution, in 1827, it has given instruction to 1,512 pupils. The institution has a library of 3,000 volumes.—(Special report to United States Bureau of Education, 1875.)

THE KIRTLAND SUMMER SCHOOL OF NATURAL HISTORY.

This school, modeled after Professor Agassiz's institution on the island of Penikese, was founded by Professor Theo. B. Comstock and Dr. William K. Brooks. Its name was given in honor of the revered and venerable Dr. Jared P. Kirtland, who will always be remembered as a pioneer in science in the West. As soon as the plans were sufficiently matured, a proposition was made to the Kirtland Society of Natural Sciences, of Cleveland, Ohio, which resulted in the appointment of Messrs. R. K. Winslow, John Bolton, and L. Austin to act with the directors, Messrs. Comstock and Brooks, as a board of managers. It was then resolved that the board of managers be authorized to receive subscriptions of money and to disburse the same for the purposes of the school, through Professor Theo. B. Comstock as actuary. The management of the school, including the arrangement of work, purchasing of apparatus and collections, acceptance of applicants, and all matters of detail, was placed under the control of the two directors, who also took upon themselves the responsibility of procuring additional instructors.

Through the courtesy of the board of education, convenient quarters were provided in the Central High School building. Five rooms upon the third floor were used for the various purposes of the summer school.

Collections of marine invertebrates were made by Dr. Brooks, at Marblehead, Mass., and by Mr. E. A. Birge, at Eastport, Me. A dredge was also purchased for use in Lake Erie during the session of the school.

Circulars announcing the date of opening and the plan of the school were not issued until late in May, but the six weeks between that time and the 6th of July, when the session began, were sufficient to draw out many applications from various parts of the country. It was necessary to limit the number of pupils to 35, and this maximum had been reached before the day of opening. Unfortunately, however, no fee was required until the inauguration exercises took place, and some 15 whose names were upon the roll withdrew before that time, though none did so without the best of private reasons, in no way derogatory to the school or its management. The maximum number could easily have been attained by admitting applicants after the beginning of the session, but this would have been contrary to announcements made and unjust to a considerable number who were anxious to join the school. Applications were received almost daily until nearly a month after the closing of the session, showing that the demand for such instruction is widespread and urgent.

Through the personal solicitations of Mr. Winslow the sum of $100 was raised in small sums, and 25 pupils raised the sustaining fund to $250 by the payment of a fee of $10 each. Though this was but one-half of the amount required, the directors decided to continue the work in the hope of demonstrating its value in the end. At this critical juncture one of Cleveland's noble men, whose modesty alone forbids the mention of his name, quietly placed a sum of money, greater than the amount already secured, in the hands of the actuary, without the slightest restriction as to its use. From this moment the success of the scheme for one year at least became a certainty. The voluntary and unremunerated services of the instructors also enabled the directors at once to enlarge their plans and to accomplish more than they had dared to hope at the outset.

The school was inaugurated July 6, 1875, with appropriate exercises, including an encouraging address from Dr. Kirtland himself, who left his invalid couch to be present on this occasion. On the following day the regular exercises of the school began without ceremony, and were continued without intermission six days in the week for five weeks, until August 9. The daily sessions extended from 9 a. m. to 1 p. m., and from 2 to 6 p. m., with frequent evening meetings from 7.30 to 10. Excursions were

made as often as possible without interfering with the work in the laboratory, and collections of botanical, geological, and zoölogical specimens were made in these excursions for use in the school work. Observation and experiment was the law of the hour, the effort being to have every subject studied illustrated by typical specimens, which were examined not only visually, but microscopically and anatomically by all concerned. In zoölogy, specimens of echinoderms, terebratulinæ, and other marine and fresh-water animals were thus studied; while in botany, the structure and growth of plants was illustrated in all its parts, geology coming in for its share of attention through lectures and specimens.

The result can hardly fail to be a quickening of interest in natural sciences and a more intelligent and effective prosecution of the study of them on the part of both the teacher students in the school and the pupils who may come under their influence.—(Report by Professor Theo. B. Comstock.)

EDUCATIONAL CONVENTIONS.

STATE TEACHERS' ASSOCIATION.

The attendance of representative teachers at the meeting of the Ohio State Teachers' Association, at Put-in-Bay, held June 29, 30, and July 1 was larger than usual. The inaugural address of the president of the superintendents' section, the address of President E. T. Tappan on qualifications for admission to colleges, of Mr. J. M. Clemens on what provision in courses of study should be made for pupils whose attendance on school is necessarily irregular, were each a practical and exhaustive treatment of the subject under consideration. Papers indicating much thought and careful preparation were read before the general meeting by Dr. Kinsman, on "Health and education;" by Superintendent J. B. Peaslee, on "Object teaching;" by Hon. James Monroe, on "The National Government and popular education;" by President Orton, on "Science in public schools; by Rev. W. H. Jeffers, on "The perils which threaten our public schools," and by Hon. T. W. Harvey, on "The life and labor of Dr. Asa Lord." The meeting was marked for the general excellence and practical worth of the several papers read, and for the intelligent and prevailing interest in the work of the association on the part of the teachers present.—(State report 1875, p. 48.)

OTHER TEACHERS' ASSOCIATIONS.

During the year meetings were held by the Northwestern, the Central, the Southeastern, and the Southwestern Ohio Teachers' Associations. The increased attendance upon these meetings indicates a growing interest on the part of teachers and the public in these aids to professional success and to a unification of the teachers' work.—(State report, p. 49.)

OHIO COLLEGE ASSOCIATION.

This body assembled at Kenyon College, Gambier, December 28, 1874. President Tappan presided and opened the exercises with an inaugural address, which was followed by a paper on rhetorical instruction in colleges, by Prof. G. Stanley Hall, of Antioch. Papers were read during the session on "Post graduate courses and degrees," by President I. W. Andrews, of Marietta College; on "The best method of teaching psychology," by President Hinsdale, of Hiram College; on "Intercollegiate contests," by Professor Judson Smith, Oberlin; on "The place of the Bible in a college curriculum," by President Marsh, of Denison University. All these papers elicited animated and interesting discussions, and were referred to the secretary and executive committee to secure their publication.—(Ohio Educational Monthly, March, 1875, p. 110.)

OBITUARY RECORD.

CHARLES G. FINNEY.

Ex-President Charles G. Finney, D. D., of Oberlin College, died of heart disease August 16, 1875, aged eighty-three.

Born in Litchfield, Conn., he emigrated at an early age to Jefferson County, N. Y., then the frontier of civilization in that direction. His early education was much neglected, but, on arriving at age, he returned east, and spent several years in teaching and studying at different academies. He took up, in this period, Latin and Greek, with the view of entering Yale College, but his teachers dissuaded him from such entrance, telling him that with his abilities he could accomplish in two years the work of the four years' college course. Returning subsequently to New York State, he commenced the study of law, and was admitted to practice, but soon felt himself called to devote all his time and strength to preaching. He began his career as a religious evangelist at his home, in 1824, and continued it until, within the next ten years, his labors extended to most of the larger towns and cities of New York, as well as to the principal cities of New England and to Philadelphia, producing everywhere a great

sensation. In 1835 he went to Oberlin, where he continued till his death. His service there as professor and president, especially from 1851 to 1866, is said to have done more to mould the sentiment and determine the character of the influential college there established than that of any other man. Of late years he has been seeking some repose from labor, but even to the day of his death his form was so erect and his intellect so vigorous and sparkling that, although 83 years old, no decline was perceptible in the personal power and enthusiasm for which he was famous as a revivalist and educator for over fifty years before.—(American Educational Monthly, October, 1875, p. 465.)

MISS ALMEDA M. BOOTH,

Who for thirty years past has been prominent as a teacher in Northern Ohio, died in Cleveland on the 15th instant. For many years she was principal of the ladies' department of Hiram College, when General Garfield was president of the institution.—(Baltimore American, December 29, 1875.)

LIST OF SCHOOL OFFICIALS IN OHIO.

SCHOOL SYSTEM OF THE STATE.

EDUCATIONAL PROVISIONS OF THE CONSTITUTION.

Article VIII, section 1, of the constitution adopted in 1857, directs that "the governor shall be superintendent of public instruction, and his duties such as may be prescribed by law; but after five years from the adoption of this constitution it shall be competent for the legislature to provide for the election of a superintendent, to prescribe his duties and fix his compensation." Section 2 says that "the proceeds of all lands heretofore or that may be hereafter granted to the State for educational purposes, except university lands; all money accruing to the State by escheat and forfeiture; all money for exemption from military services; all gifts, devices, and bequests made by any person to the State for common school purposes, or where the purpose for which such gift, devise, or bequest is intended is not expressed; all the proceeds of the lands granted to this State by Congress in 1841; and 5 per cent. of the proceeds of the land to which this State will be entitled on her admission into the Union, (if Congress shall consent to these last two grants,) shall form a permanent and irreducible fund, the income of which shall be exclusively applied to the support and maintenance of common schools in each district and the purchase of suitable apparatus and libraries therefor." Section 3 declares that "the legislative assembly shall provide for the establishment of a uniform and regular system of common schools;" section 4, that "the income from the school funds shall be distributed to the districts according to the number of children therein between the ages of 4 and 20 years;" section 5, that "the

governor, secretary of state, and State treasurer shall constitute a board for the sale of school and university lands, and the investment of the proceeds therefrom: *Provided*, That no portion of the proceeds of the university lands shall be expended within ten years from the adoption of the constitution unless, by consent of Congress, for common school purposes."

PROVISIONS OF THE SCHOOL LAW.

From School Laws of the State of Oregon, published by authority, Salem, Oregon; Eugene Semple, State printer, 1872.

OFFICERS.

A State board of education, State superintendent of public instruction, county school superintendents, and the directors and clerks of school districts are the officers recognized by the school law.

POWERS AND DUTIES OF THESE OFFICERS.

The State board of education—composed of the governor, secretary of state, and superintendent of public instruction—have it as their duty to meet semi-annually, at the State capital, on the first Monday in January and July. They have power to authorize a series of text books to be used in the public schools; to prescribe a series of rules for the government of these schools; to use a common seal to authenticate their acts; to order any printing that may be necessary; and to sit as a board of examination, granting to approved teachers life diplomas, State certificates, and two grades of certificates of the same force as those granted by county superintendents, the State diploma to be good for six years, the certificate of first grade good in any county for two years, and that of second grade good for six months. They may invite not less than four professional teachers to sit with them in their semi-annual examinations, and may also, at their discretion, grant, without examination, diplomas and certificates to persons presenting authenticated diplomas and certificates from other States, of like grade and kind. They may also revoke, for immoral or unprofessional conduct, any diploma or certificate granted by them.

The State superintendent of public instruction—who is elected by the people for a term of four years, beginning with September, 1874—has it as his duty to exercise a general supervision of the county and district school officers and the public schools of the State; to hold, once each year, a teachers' institute in each judicial district, and one for the State at the State capital; to superintend the printing and transmitting of such blanks, forms, rules, and regulations for the public schools as the State board may authorize; to act as secretary of that board; to make out, quarterly, a statement of his necessary travelling expenses for audit by the State board and payment, like other claims against the State; to issue, under the direction of the board, a circular to each county superintendent, containing a list of studies required to be taught in the public schools, allowing him to write against each study the text book preferred, the highest number of votes for any text book securing its use for the four years following, when the same process is to be repeated. The superintendent is also to report biennially to the legislature the general condition of the public schools; the amount of school money apportioned to the several counties, and the sources whence it was derived; the amounts raised by county and district taxes, and those paid for teachers' salaries, buildings, furniture, &c.; the series of text books authorized by the State board; the rules and regulations prescribed by them for the government and tuition of the schools; the number and grade of schools in each county; the number of persons of school age, (4–20;) the number attending public schools, attending private schools, and not attending any school, with statistics of chartered educational institutions, and any other information he may judge to be useful. His salary is $1,500 and travelling expenses.

The county school superintendents are elected by the legal voters of the several counties, at the biennial elections, for terms of two years. They enter upon office thirty days after the election, and receive such salaries as the county court may determine. Their duties are to lay off their counties into convenient school districts and to keep a record of the number and boundaries of these; to notify in writing some taxable inhabitant of each district what is its number and what its bounds; to establish new districts on the petition of a majority of the legal voters; to make annual or semi-annual apportionment of the school fund in the county treasury to the several reporting school districts of their counties in proportion to their school population; to keep a careful book account, with receipts and credits of school funds, with the county treasurer; to select the proper sixteenth and thirty-sixth sections of school lands in each township, or of lands in lieu thereof, when such selection has not been previously made, giving due notice to the land officer; to take good care of the school lands; to examine quarterly all persons who apply for teachers' certificates, and give to such as are approved certificates, good for six months or two years, according to their qualifications. In such examinations they must associate with them two or more competent assistants. They are also to visit the schools taught under their certificates at least once in six months, giving such information and suggestions as they may deem needful; are to receive from the district officers their

school reports, and from these make out and transmit to the State superintendent, by the first Monday of April in each year, a general report of the county schools, as well as a report to the county court, by June 30, of all moneys assessed and collected at county expense, and applied to county schools during the year ending the first Monday of April previous.

District school officers consist of 3 directors for each district, chosen at the annual meetings on the first Monday of April for terms of three years each, 1 being changed each year, and of a clerk chosen at each annual meeting for a term of one year.

The duties of the directors are to authorize the clerk to call special meetings and give him warrant to collect the school taxes; to attend for the district to the purchase or lease of school sites, and the purchase, lease, or erection of school buildings; to care for and furnish these, and provide them with fuel, light, &c.; to employ teachers for the schools, and aid them in governing these; to audit claims against the district and draw orders on the clerk for the amount; to require of the clerk a bond of such force as shall seem just and reasonable, for the faithful performance of his duties; and to examine and correct his assessment roll. Failure to attend to these duties incurs forfeiture of office and a fine of $10.

The clerks are to record the proceedings of the district; give notice of annual and special meetings; assess the taxes levied by the district; deliver the assessment roll to the directors; collect, upon their warrant, the taxes for which it calls; keep a correct book account of receipts and expenditures for the district; make report of this account to the district meeting; act as secretary of these meetings; furnish the county superintendent, within ten days after each annual one, a list of the school officers; and annually make report to the superintendent of every item required for the report to the State officer. His compensation is 5 per cent. on the moneys collected by him.

SCHOOLS.

The schools of the State are still in their infancy, and, out of the larger villages and cities, comparatively few of them are graded. They are free to all persons of school age residing in the districts where they are kept. The minimum of instruction in them is to include orthography, reading, writing, mental and written arithmetic, English grammar, geography and modern history. The maximum may be whatever teachers and scholars can make it short of college training. There were in the State in 1874, the date of the last report, 4 high schools, 31 graded schools, and 559 ungraded.

A State agricultural college, a school for deaf-mutes, and one for the blind are provided for, as well as schools in which the German language may be taught.

SCHOOL FUNDS.

The permanent school fund of the State, derived mainly from 500,000 acres of lands donated by the General Government, consisted in 1875, according to the report of the State superintendent, of $564,000 then available, with about $750,000 not yet available. The income from this, including rents of leased school lands, was, in that year, $56,400, making, with $30,273 of State school tax, a total annual school fund of $86,673.

The university land grant of 66,080 acres has yielded thus far about $100,000.

ELEMENTARY INSTRUCTION.

ABSENCE OF REPORT FOR 1875.

The report on school affairs in this State is made biennially, as before stated, and as the last one covered the years 1873 and 1874, and came into the report of the Bureau for the latter year, that for 1875 and 1876 will not be due till the Bureau report for 1876 shall be in preparation.

In this absence of a State report, all that can be done at present, with reference to elementary instruction, is to give, in addition to the statistical summary furnished, the following somewhat fragmentary information, furnished by a respected correspondent of the Bureau.

EARLY BEGINNING.

The territorial laws of Oregon, as promulgated in 1850, provided for a system of public schools. The first attempt to organize them met with many obstacles, the chief of which were the transitory character of the population and the difficulty of obtaining competent teachers. There were many persons who were ignorant of the scope and intent of public education, but the general opinion, though not prepared for any material effort in their behalf, was in favor of free schools. The first undertakings were only quasi public, and quite frequently were developed from private enterprises or adopted "rates." The towns were thought to be the only places fit for public schools. In some localities (are there not a few such even in 1876?) they continued for a long period of time to be regarded as a makeshift for the less favored members of society, and any special tax to sustain them was sure to arouse the ire of the "Philistines," as Carlyle

would call them, including bachelors, sectarians, and some of the "better classes." But, scattered everywhere, were men who had seen the system in older States and shared its benefits; who realized the central idea of public education as a chief factor in making a homogeneous people. These men and women, by their earnestness and sacrifices, have made the public school system what it is to-day. To one of our territorial representatives, J. Q. Thornton, esq., belongs the distinction of introducing the clause into the general congressional law which entitles each State to the thirty-sixth section of the public lands for school purposes. No more important act in the interest of public schools has ever passed since Nathan Dane's bill, bestowing the sixteenth section of land for the same purpose.—(History of the Public Schools of Multnomah County, prepared for the Centennial, by T. L. Eliot, county superintendent.)

SCHOOLS OF TO-DAY.

A letter from a correspondent, dated March, 1875, says the country schools were that year kept longer and better, and teachers were better fitted, so that, on the whole, the educational prospects of the State are improving.

The same correspondent, under date of September 16, 1875, says, "The schools in towns and the corporate institutions open with larger numbers this fall."

The superintendent of Multnomah County says the shifting character of many schools is a serious evil. Almost every record shows a considerable number of names attending only a week or two or with an irregularity that practically negatives the teacher's efforts. Absenteeism and tardiness may be said to waste one-third of the school funds of the county.—(County superintendent's report, March 20, 1876.)

The superintendent of Josephine County, G. M. Smith, writes to this Office: "Josephine County has 14 school districts; in each a public school of primary grade is maintained from 3 to 6 months annually. School-houses, inferior and scantily supplied in furniture or apparatus. This county is principally mountainous, more mineral than agricultural, its resources yet undeveloped, and educational matters in the background, compared with some other counties in the State.

CITY SCHOOL SYSTEMS.

PORTLAND.

Officers of the system.—A board of directors of three members, who hold office for three years, the term of one expiring each year, with a clerk of the board, and a city superintendent of schools.

Statistics.—Number of different pupils enrolled, 1,700; number attending school under 6 years of age, 126; number between 6 and 16, 1,460; number over 16 years of age, 114; average number belonging, 1,009; average daily attendance, 910; per cent. of daily attendance, 90.38; per cent. of absenteeism on whole number enrolled, 7.5; number of pupils not absent during their enrolment, 104; not tardy, 472; average number of pupils to a teacher, not including high school, 50; number of teachers employed, 24.

Studies.—The percentages in arithmetic and grammar were usually higher than in the other studies. The teaching of arithmetic by the analytical method accomplished great good, enabling the children to give an intelligent reason for the different steps in the solution of the problems. The teaching of geography by combining history and description with the map exercises was a decided improvement. Gratifying progress has been made in penmanship and reading; the superintendent, however, thinks it would be well to introduce Leigh's phonic method into the reading department. The pupils of the first grade of the grammar department and high school have been instructed in history. There has been a radical change and a marked improvement in composition writing. The superintendent recommends that this be made to include the writing of business letters, receipts, checks, due bills, promissory notes, &c. He argues for the introduction of drawing and the establishment of a public school library. —(Report of City Superintendent S. W. King, for 1874–'75.)

Good habits.—Habits of obedience, attention, promptness in recitation, neatness of the copy books, and a carefully prepared programme of the daily work are said to be some of the characteristics and attractions of most of the schools. Prior to the opening of the morning session, teachers write the lessons and general information for the day on the blackboard, adjust windows, curtains, rubbers, and crayons, and anticipate in every way the wants of the pupils.

During the last few years several important changes have been wrought in the general management of the schools of Portland. The 26 schools have been thoroughly graded, a system of semi-annual examinations instituted, a city superintendent appointed, the buildings enlarged and school furniture improved. Carefully prepared rules and regulations define the duties of teachers and scholars, and control absenteeism and tardiness. The grade work is closely defined, and the high school, with 5 efficient instructors, graduates yearly a class of well educated young women and men. The people of Portland annually vote a liberal tax for education, and thus place the

schools on a footing of equality with the best in the United States. The teachers are all of high order and ample experience; none more efficient and earnest can be found anywhere. Nothing short of general calamity to the country can disturb the stability and progress of public education in our midst.—(History of the Public Schools of Multnomah County, by T. L. Eliot.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The most important of these schools, that at Portland, graduated its first class in 1875. Its course of study covers a period of three years and embraces all the higher English branches, with Latin, Greek, French, and German. The average daily attendance in 1875 was 87; average percentage of attendance, 92.

There are 12 other schools in the State of advanced grade, by which is meant those in which the pupils are pursuing those branches not required in a county teachers' certificate. The State superintendent estimated, in 1874, that there were probably about a hundred other common schools in which some of the pupils pursued advanced studies.—(Report of Portland City for 1875, and Report of United States Bureau of Education, 1874.)

ACADEMIES.

Of the five private schools for secondary instruction existing in the State, three report their statistics for 1875, 2 of which are for boys and 1 for both sexes. Number of teachers, 16; pupils, 295; in classical course, 64; in modern languages, 26; preparing for classical course in college, 35; for scientific course, 60. Drawing is taught in 1, vocal and instrumental music in 3, and 3 have chemical laboratories and philosophical apparatus; 2 report libraries of 200 and 3,500 volumes respectively, and aggregating 3,700.—(Replies to inquiries of United States Bureau of Education.)

PREPARATORY DEPARTMENTS OF COLLEGES.

The colleges of the State report an aggregate of 761 students in their preparatory classes, 45 of whom are said to have been engaged during the year in preparing for a classical collegiate course and 97 for a scientific course.—(Returns to Bureau of Education, 1875.)

SUPERIOR INSTRUCTION.

STATE UNIVERSITY, EUGENE CITY.

A correspondent writing under date of February 25, 1875, says about $25,000 has still to be raised by the county for the university building, in order to entitle the regents to the use of the fund of $60,000 already accumulated. It does not appear that the board of instruction has yet been organized.

OTHER COLLEGIATE INSTITUTIONS.

Christian College, Monmouth, in June, 1875, graduated a class of 2 ladies and 3 gentlemen, all of whom received the degree of B. S.—(Oregonian, June 19, 1875.)

Pacific University, Forest Grove, offers classical, scientific, normal, and ladies' courses. The regular course covers four years, the ladies', three. The apparatus and the collection in the department of natural history are considerable, and are increasing. The library numbers about 5,000 volumes.—(Catalogue, 1873–'74.)

Philomath College, Philomath, established by the United Brethren, offers collegiate, scientific, and ladies' courses, and commercial and phonographic departments. The year 1874–'75 has been the most successful in the history of the school.—(Catalogue, 1874–'75.)

Willamette University, Salem, furnishes classical, preparatory, and scientific courses, a medical department, and a business education. Both sexes are admitted. The graduating class in 1875 comprised 2 ladies and 4 gentlemen.—(Register of the university 1874–'75, and Daily Bulletin, June 25, 1875.)

SUPERIOR INSTRUCTION OF WOMEN.

The only institution reporting from this State for the superior instruction of women, St. Helen's Hall, Portland, graduated 5 young ladies in 1875, after a creditable examination. During the year there were 144 pupils at the Hall, of whom 41 were boarders. Bishop Morris delivered an address commending "home" to the young ladies.—(Oregonian, June, 1875.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

AGRICULTURE.

Corvallis State Agricultural College was founded by the Methodist Church in 1868, and is still under that control, although receiving annually from the State $5,000. The value of buildings, lot, and farm is $10,000; endowment, 90,000 acres of agricultural college land; course of study, "about the same as that of other agricultural colleges." —(Report of United States Commissioner of Education, 1874.)

MEDICINE.

The medical department of Willamette University provides a six months' course of lectures, instead of four as formerly. The candidate for graduation must have studied medicine three years, lectures included, with a reputable practitioner of medicine, and he must have attended two full courses of lectures, the last of them in this institution. —(Annual announcement, 1874–75.)

SPECIAL INSTRUCTION.

EDUCATION OF THE BLIND.

No provision was made for educating the blind of this State at the public expense until the year 1872. During that year, at the suggestion of Miss Nellie Simpson, a blind young lady, and through the efforts and appeals of the officers of State and a few other friends, the legislature was induced to pass an act by which the sum of $4,000 was appropriated for this purpose. The school was opened in February, 1873, Miss Simpson being appointed principal. Instruction is given in reading, English grammar, composition, writing, history of United States, geography, principles of mathematics, mental arithmetic, cyphering, pin type printing, and vocal and instrumental music. The instruments used are the organ, piano, guitar, and violin. The girls have been taught various kinds of fancy work and plain sewing. There has been felt the need of a mechanical department in which the pupils may learn the various trades and useful arts. The pupils have been attentive and diligent in their studies, and have made commendable progress, even greater, it is thought, than seeing children in the public schools do in the same time. The credit for this improvement is almost wholly due to the principal, who has devoted herself faithfully and zealously to the work of teaching.—(Report of superintendent, 1874.)

EDUCATION OF DEAF-MUTES.

The fall session of the school for deaf-mutes opened in 1874, with about 22 pupils. The legislature of 1874 granted $5,000 a year for the support of the institution.—(Report for 1874 of United States Commissioner of Education.)

PROPOSED ESTABLISHMENT OF A REFORM SCHOOL.

A correspondent writing from Portland, November 24, 1875, says: "The public have been again aroused to the need of a reform school by the trial and commitment of four street boys, aged from 9 to 13, for felony, and their incarceration in the penitentiary. A mass meeting chose a committee of eleven to examine the whole subject, and draught a law or changes of law to be asked of the next legislature in September, 1876."

CHINESE MISSION SCHOOL, PORTLAND.

Chinese Mission School.—This mission was established by the First Baptist church of Portland, in November, 1874, and is maintained by the citizens at a cost of about $1,000 a year.

The mission sustains a Chinese minister, Rev. Dong Gong, and an American lady assistant, Miss L. A. Mitchell; also an efficient evening school where instruction is given in English reading, writing, geography, and in the science of numbers.

Thursday evenings and Sundays are set apart for religious and moral instruction given in Chinese and English, conducted by Rev. Dong Gong and Dr. Barber; also, for instruction in sacred vocal music, under the special care of Miss L. A. Mitchell.

The average attendance at evening school is about 42, at religious meetings about 36. About 35 per cent. of the pupils attend regularly.

Number of Chinese reached by the missionary, about 500. Number of converts to Christianity, 14. Number of teachers who attend regularly, 8.

The books used are charts and hymns for beginners, printed in large letters on cloth and hung on wall rollers; Harper's School Series; Loomis's Chinese and English Lessons; New Testament in Chinese and English, in parallel columns. Parley's Universal History of the World; Montieth's Geography. In teaching geography and arithmetic abundant use is made of the blackboard.

The dictionaries in use are Chalmers's, of the Canton dialect; Kong Ki Chue's, of Chinese and English; S. Wells Williams's of the Chinese language, "with the pronunciation of the characters as heard in Peking, Canton, Amoy, and Shanghai," a valuable book.

The pupils are all adults and are placed 5 in a class. They are first taught the English alphabet and advanced as they learn, just as youths are at our public schools. They learn rapidly, and after their own system of *rote* is overcome they show great quickness in comprehending our analytical mode of teaching.—(From a correspondent of the Bureau.)

EDUCATIONAL ASSOCIATION.

STATE TEACHERS' INSTITUTE.

The State Teachers' Institute met at Salem, in the legislative hall, September 1, 1875, and was called to order by Dr. L. L. Rowland, superintendent of public instruction. Remarks were made by Mr. Stevenson, on "Percentage and interest;" by Professor Morris, on "Analysis of sentences and phrases;" by Rev. Mr. Bailey, on "The teacher;" by Rev. T. F. Campbell, on "The noun;" by Miss M. A. Hodgden, on "Fractions;" by Mr. Bishop, of Brownsville, on "Constitutional government;" by Mr. Smith, on "Moral

education in schools;" by Professor Cook, on "Writing;" on "The working forces of the school," by Professor Condon; on "Fundamental rules of arithmetic," by D. V. S. Reid; and on "Object teaching," by Rev. P. S. Knight. Essays were read by Miss Ellen Luelling and by Miss L. W. Spaulding, the latter discussing the question, "What constitutes a good recitation?"—(Daily Oregonian, September 1, 2, 3, 4, 1875.)

LIST OF SCHOOL OFFICIALS IN OREGON.

Hon. L. L. ROWLAND, *State superintendent of public instruction, Salem.*

[Term, 1874–1878.]

STATE BOARD OF EDUCATION.

[Term, September, 1874, to September, 1878.]

Name.	Post-office.
His excellency, L. F. Grover, governor	Salem.
Hon. S. F. Chadwick, secretary of state	Salem.
Hon. L. L. Rowland, State superintendent of public instruction	Salem.

COUNTY SUPERINTENDENTS.

[Term, 1874–1876.]

County.	Superintendent.	Post-office.
Baker	W. F. Payton	Baker City.
Benton	E. A. Milner	Corvallis.

Yamhill	J. H. Carse	La Fayette.

PENNSYLVANIA.

STATISTICAL SUMMARY.

ATTENDANCE.

Number of pupils attending school	890,073
Average number attending	551,848
Percentage of attendance upon whole number registered	62

TEACHERS AND OTHER SCHOOL OFFICERS.

Number of teachers	19,880
Number of school directors	13,825
Number of superintendents	87
Average salary of men per month	$41 07
Average salary of women per month	34 09

SCHOOL DISTRICTS AND SCHOOLS.

Number of school districts in the State	2,089
Number of schools	17,092
Average length of school term in months	6.85
Number of graded schools	5,625
Estimated value of school property	$24,260,789

INCOME AND EXPENDITURE.

Receipts.

From local tax	$7,798,816 26
From State appropriation	1,000,000 00
Total	8,798,816 26

Expenditure.

For sites, buildings, and furniture	$2,059,464 83
For salaries of superintendents	106,050 00
For salaries of teachers	4,640,825 52
For miscellaneous or contingent	2,557,586 72
Total	9,363,927 07

Monthly *per capita* expenditure of pupils enrolled, 92 cents.

SCHOOL FUND.

Increase of permanent fund in school year	$240,000 00

—(Pennsylvania school report, 1875, and special report to the United States Bureau of Education for 1875.)

ADDITIONAL STATISTICS.

To the total of expenditures given in the preceding summary there should be added, the superintendent says, $77,324.32 increased expenditure in Pittsburg, not included in the summary; $85,815.84 expended for normal schools, and $423,693.76 expended in support of the soldiers' orphan schools, making the sum of $9,950,760.99 expended for all school purposes during the school year 1875.

The changes in the most important items of school statistics, as compared with last year, are as follows:

Increase in number of districts	18
Increase in number of schools	450
Increase in number of graded schools	39
Increase in number of school districts	75
Increase in number of teachers	553
Decrease in the average salary of male teachers per month	$1 88
Decrease in the average salary of female teachers per month	1 78
Increase in average length of school term, (in days)	2¾
Increase in number of pupils	39,299
Increase in average number of pupils	8,822
Increase in cost of tuition	$219,567 49
Increase in cost of buildings, fuel, contingencies, &c	297,158 76
Increase in cost of expenditures of all kinds	541,941 62

The only discouraging item in this statement, the decrease in teachers' salaries, is accounted for by the prevailing stringency in financial affairs. The fact, however, that the expenditures for school purposes during the past year were more than half a million of dollars (Pennsylvania school report, 1875, p. viii) greater than ever before, abundantly proves the willingness of the people to support their schools liberally, notwithstanding the hard times. The rapidity of the growth of the system within the last few years has been, it is thought, almost without a parallel in the history of this or any other country. The following table shows

THE EDUCATIONAL GROWTH IN THE PAST TEN YEARS.

Year.	Graded schools.	Superintendents.	Average salary of male teachers per month.	Average salary of female teachers per month.	Cost of tuition.	School-houses.	Total cost, including expenses of all kinds.	Number of teachers who attended county institutes.
1865	1,743	65	$31 82	$24 21	$2,515,528 63	$465,088 08	$3,614,238 55	2,755
1866	2,800	66	34 34	26 31	2,748,795 08	725,000 00	4,195,258 57	3,704
1867	3,225	68	35 87	27 51	3,028,065 70	1,262,798 68	5,160,750 17	3,944
1868	3,362	75	37 28	28 76	3,273,269 43	1,991,152 55	6,200,539 96	10,268
1869	3,425	76	39 00	30 52	3,500,704 26	2,453,847 71	6,986,148 92	11,381
1870	3,872	79	40 66	32 39	3,745,415 81	2,765,644 34	7,791,761 20	11,290
1871	4,634	81	41 04	32 86	3,926,529 88	3,386,263 51	8,580,918 33	11,890
1872	4,998	85	41 71	34 60	4,104,273 53	2,864,113 35	8,345,072 78	11,625
1873	5,307	86	42 69	34 92	4,325,797 47	1,753,812 36	8,345,836 41	12,302

1875	5,625	87	41 07	34 09	4,746,875 52	2,059,465 83	9,363,927 07	13,863

—(Pennsylvania school report, 1875, page ix.)

SCHOOL SYSTEM OF THE STATE.

PROVISIONS OF THE CONSTITUTION.

From the beginning there has been in Pennsylvania a care for education. The frame of government granted by William Penn in 1682, contained, article XII, the provision that "the governor and provincial council shall erect and order all publick schools." One of the next year contained the same. An act of the colonial assembly passed in 1696, intended to confirm this, contained the modified expression that "the governor and council shall have the care and management of all public affairs relating to * * * * the good education of youth," &c. The constitution adopted in 1776, article XLIV, read, "A school or schools shall be established in each county by the legislature, for the convenient instruction of youth, with such salaries to the masters, paid by the public, as may enable them to instruct youth at low prices; and all useful learning shall be duly encouraged and promoted in one or more universities." The ones of 1790 and 1838, in article VII, sections 1 and 2, used this language: "The legislature shall, as soon as conveniently may be, provide by law for the establishment of schools throughout the State, in such manner that the poor shall be taught *gratis*. The arts and sciences shall be promoted in one or more seminaries of learning."

The constitution of to-day, which went into effect January 1, 1874, placed, article IV, among the executive officers of the State, a superintendent of public instruction, who, according to section 20, should "exercise all the powers and perform all the duties of the" [previously existent] "superintendent of common schools, subject to such changes as may be made by law;" while in article X, on "Education," it went on to say:

SEC. 1. The general assembly shall provide for the maintenance and support of a thorough and efficient system of public schools, wherein all the children of this Commonwealth above the age of six years may be educated, and shall appropriate at least one million dollars each year for that purpose.

SEC. 2. No money raised for the support of the public schools of the Commonwealth shall be appropriated to or used for the support of any sectarian school.

SEC. 3. Women 21 years of age and upwards shall be eligible to any office of control or management under the school laws of this State.

PROVISIONS OF THE SCHOOL LAW.

From the Common School Laws of Pennsylvania and Decisions of the Superintend-

ent, with explanations, forms, &c., revised and arranged by J. P. Wickersham, superintendent of common schools, Harrisburg, 1873. Constitution as above.

SCHOOL OFFICERS.

A State superintendent of public instruction, county superintendents, city and borough superintendents, and district boards of directors are the officers distinctly recognized by the school law. The State superintendent thinks that township superintendents are also provided for.

POWERS AND DUTIES OF SCHOOL OFFICERS.

The State superintendent, formerly appointed by the governor, by and with the advice and consent of the Senate, for a term of three years, is, under the new constitution, appointed in the same way for a term of four years, subject to removal for misbehavior or misconduct. He has power to decide, without appeal, controversies or disputes among the local school officers, or between them and the State officers, respecting their relative duties; to remove, for adequate cause, any county superintendent, and appoint another in his stead until the next triennial convention of directors; to authenticate his acts by a department seal; to appoint one of his clerks* a general deputy, who may perform, in case of his absence or of a vacancy in his office, all the duties of superintendent; and to employ a competent person or persons to prepare plans for school buildings adapted for furnishing good light and ventilation, and have these published for use of districts.

His duties are to exercise a general supervision over the school system of the State; to give advice on school matters to district officers and citizens whenever it may be required; to construe for them the expressions of the school law; to sign all orders on the State treasurer for the payment of State moneys to the school districts; to determine, from the list of taxables furnished him, the proportion in which these shall be paid; to prepare blank forms for the reports from districts and forward them to the county superintendents for distribution; and to prepare and submit to the legislature an annual report, containing a full account of the condition of the public schools, the expenditure upon them for the year, estimates of the sums required for the ensuing year, the number of pupils, the cost of teaching each, the number of districts, and such other information as to school matters and plans for improvement of the schools as he may think expedient.

County superintendents are required to be persons of literary and scientific acquirements, of skill and experience in the art of teaching, of sound moral character, and of citizenship in the county; good evidence of all which is to be presented. They are elected for terms of three years at a triennial convention of the district school directors, held in each county after at least three weeks' successive previous announcements of it in two of the county newspapers.

It is their duty to visit, as often as practicable, the schools of their respective counties; to note the course and method of instruction and the branches taught; to give such directions as to the art and mode of teaching as may seem expedient; and to use their efforts to have each school equal to the grade for which it was established, and make the course of study in the several grades uniform throughout the county. They are to see that at least the required branches are taught in every district, with such other branches as the district directors may require; to make sure the employment of competent teachers by the school boards; to notify the State superintendent of any persistent neglect on this point, that the portion of the State quota for that district may be withheld; to forward annually, on or before the first Monday in June, the reports of the several school districts of their counties, together with extended report by themselves of the condition of the schools under their charge, and suggestion of whatever they may think will conduce to the improvement of the system.

It is also made their duty to examine all candidates for the position of teacher in their counties, and to give to each one found qualified a certificate setting forth the branches he or she is capable of teaching; such examination and certificate to be renewed as often as the individual shall be employed to teach any other branches than those set forth in his or her certificate.† On all such examinations the directors of the district in which the teacher seeks to be employed have the privilege of being present, as well as other persons, if they choose. The superintendents are to hold annually a teachers' institute, for the improvement of the teachers of their respective counties in the science and art of education, and to continue it in session at least five days. They may draw money from the county treasury for the expenses incurred in

*Since 1873 a second deputy has been allowed, mainly for the outside work of the department, such as visitation of normal schools, attendance on teachers' institutes, &c.

†The superintendents of counties, cities, and boroughs are to issue two grades of teachers' certificates, one called provisional, and given to applicants who possess only a fair knowledge of certain defined branches, or little or no experience in teaching, these to hold only for a year and not to be renewed without re-examination; the other called a professional certificate, given to those who show a thorough knowledge of the elementary branches and have had successful experience in teaching, these to hold during the official term of the superintendent issuing it and for a year thereafter.

holding such an institute, on filing an account of all expenditures and vouchers for the same; and must, on the adjournment of the meeting, report to the State superintendent the number of teachers in attendance, the names of the lecturers or instructors who officiated, the subjects on which instruction was given, and the degree of popular interest awakened.

City and borough superintendents are chosen by the school directors of any city or borough having a population of over 7,000 on the first Tuesday in May of every third year, from 1869, for terms of three years, and must have essentially the same qualifications and perform for their districts essentially the same duties as county superintendents, with the additions which grow out of the greater variety of grades and higher quality of schools usually found in cities and large towns.

District superintendents are not expressly named in the school law, but the superintendent holds that, as directors may legally delegate their visitorial duty to "one of their own number," and may pay their secretary for other acts and duties than those strictly belonging to his office, they have only to deputize the secretary to visit the schools for the purpose of inspection and examination, "and the district superintendency is at once in legal existence and operation." All superintendents receive such compensation as the directors by whom they are elected may determine.

District boards of directors consist of six members chosen in each district at the same time and place that elections are held for supervisors and constables, and in wards in cities or boroughs, at the time and place of the borough or ward elections. In new districts of city or country, the six are chosen at the first election, two to serve one year, two to serve two years, and two to serve three years, and annually thereafter two are chosen to take the place of the two outgoing ones,* their terms to be three years. They have power to fill any vacancy which may occur in their number until the time of the next annual election, and are exempted from serving in any township, city, or borough office. They organize by appointing one of their number president and another secretary, and by appointing a treasurer, who may or may not be one of themselves. The duties of the board are to hold at least one stated meeting every three months, and special meetings on due notice; to establish a sufficient number of schools for the free education of every child of school age in their districts who shall apply for admission; to build, purchase, or rent school-houses for this purpose and supply them with the proper conveniences and fuel; to make arrangements for having instructed in other districts such children as cannot conveniently attend the schools in their own; to exercise a general supervision over the schools of their district, visiting them, by one or more of their number, at least every month; to appoint teachers for them, fix the salaries of these, and remove them in case of proved incompetency, cruelty, negligence, or immorality; to require from each teacher a monthly report; to direct what branches of learning shall be taught and what books used; to pay all necessary expenses of the schools by drafts on the district treasurer, signed by the president and attested by the secretary, making record of each on the minutes of the board; to publish an annual statement of moneys received and expended by them, or still due; and, on or before the first Monday in June of each year, make full report of their schools to the county superintendent, embodying a number of required particulars, besides a sworn statement for the State superintendent, certifying the number of months their schools have been kept open and that no teacher has been employed who had not a valid certificate. This paper is also to contain the name and address of the district treasurer, that the proper quota of the district may be sent to him if all is right.

SCHOOLS.

The schools of the State are free to all children of school age (6–21) residing in the districts where they are taught, and are to be kept open at least five months of twenty-two school days each. The minimum instruction in them is to include orthography, reading, writing, English grammar, geography, arithmetic, and history of the United States. But as the law enjoins provision for instruction in "such other branches as the board of directors or controller may require," and gives liberty to establish "schools of different grades," the superintendent holds that "the only limit to the course of instruction in a common school is that set by the wants of the pupils and the discretion of the board." Boards may establish separate schools for colored children whenever they can be so located as to accommodate twenty or more pupils; and there is one school for Indian children, several for soldiers' orphans, one for the deaf and dumb, and one for the blind.

Ten State normal schools for the preparation of teachers exist, besides a large one connected with the school system of Philadelphia. There is also a State agricultural college, but not yet a university heading the State system.

SCHOOL FUNDS.

No permanent school fund exists in this State. The annual appropriation of $1,000,000 provided for by the new constitution, is used to stimulate local effort in the several

*In city or borough districts allowed to elect three directors, one is chosen annually for a term of three years.

school districts and supplement the local taxes raised in them for the support of schools. The amount thus raised in 1875 was, for tuition alone, $4,746,875.52 additional to the State appropriation, while for building, purchasing, and renting school-houses, for fuel, contingencies, debt, interest paid, &c., $4,617,051.55 more was raised, making a grand total of $9,363,927.07 devoted to free education in the State. Thirteen mills on a dollar is authorized to be raised by local taxation for school purposes.

ELEMENTARY INSTRUCTION.

EDUCATION FOR WORK.

Superintendent Wickersham urges the necessity, in view of the great demand and need in the country for skilled labor, of devoting more attention to the education of the people for work. He thinks our system of school education, judged by its fruits, is not sufficiently practical; that under its influence young men are too apt to seek employments that engage chiefly the head, and neglect those that call for the use of the hands. As a consequence, the professions are thronged, and there is a fearful pressing forward of able-bodied young men for clerkships, agencies, offices, and other light kinds of business, while skilful workmen are sadly needed in the mills and workshops and on farms. The measures that should be taken in the direction of securing an education for work are, in the opinion of the superintendent, (1) that industrial drawing be taught in all the public schools of the State; (2) that technical departments, with a suitable course of study, be attached to the public high schools; (3) that the technical and scientific departments now in operation at several of the colleges in the State be properly enlarged and strengthened; (4) that the State normal schools be required to give more attention to drawing and art education generally, in order that a supply of teachers qualified to teach those branches may be obtained; (5) that one or more institutions be established, by State aid or otherwise, modelled after the great English art training school at South Kensington; and (6) that municipal school authorities should supplement their present systems of public schools by one or more industrial schools, or schools for artisans, where suitable instruction could be given to apprentices and workingmen, and such trades as it might be found practicable to teach could be learned, these latter schools to be kept open either during the daytime or evening or both.—(State report, 1875, pp. xxiv, xxv.)

PROVISION FOR NEGLECTED CHILDREN.

A large number of homes for neglected and destitute children have been established by different religious denominations and by the benevolent in Philadelphia, Pittsburg, and the more populous counties of the State. The number of children cared for in these homes during the past year was not less than 2,500. Some of these institutions have received aid in the shape of irregular State appropriations, but, as a whole, they have remained unorganized, both as to a definite object and a well conceived method of attaining such an object. They have simply done the work that came to their hand, without attempting to do all that needed doing. Such, however, have been their beneficial results, and so well adapted do they seem to the purpose of gathering in and caring for the children who are neglected and growing up in ignorance, that the friends of universal education have come to look to them, increased in numbers, better organized and aided by State or municipal appropriations, as the best means of doing a much needed work beyond the reach of the public schools. With this view, an act was passed at the last session of the legislature giving to the courts of common pleas of any county the power, under certain conditions, to grant a decree authorizing and directing the payment of sums of money sufficient for the purpose out of the county funds for the education and support of friendless and destitute children in schools or homes established for them. This act has already gone into effect in several counties, and though it will need several strengthening amendments, and some years may pass before it goes into general operation throughout the State, Superintendent Wickersham hails its passage as the beginning of a most beneficent reform and a most timely supplement to the system of public schools.

The superintendent mentions, in this connection, certain laws relating to the employment of children, which are almost a dead letter. These are an act providing that no minor shall be employed in cotton, woollen, silk, paper bagging, or flax factories under 13 years of age; that no minor between the ages of 13 and 16 shall be employed in said factories for more than nine months in a year, or unless he has attended school at least three consecutive months in that year, and imposing the penalty of $50 fine for each offence upon owners, employers, parents, and guardians who violate the law; and an act, passed in 1870, forbidding the employment of boys under 12 years of age in mines under penalty of imprisonment and a fine not exceeding $500. These laws, if enforced, says the superintendent, would do much to cure a great evil, and, operating efficiently in conjunction with the laws establishing homes for neglected and destitute children, they would leave little to be desired in the way of legislation upon the subject of attendance at school.—(State report, 1875, pp. xiv, xv.)

KINDERGÄRTEN.

Reports have been received by the United States Bureau of Education from 4 Kindergärten, located, respectively, in Germantown, Philadelphia, Pittsburg, and Wilkesbarre, and having a total attendance of 88 pupils, taught by 9 teachers, including 3 assistants. Two of these schools were organized in 1874, one in 1875, and the other in 1869.

COUNTY SUPERINTENDENTS.

The office of county superintendent is now a little over 21 years old. When first established it met with great opposition and now and then, in localities, owing always to weakness or defects of administration, it is still opposed, but, on the whole, it has triumphantly sustained itself, and school supervision, professional, close, and systematic, will remain a part of the educational policy of the State. If change in this regard should be made, it will be in the direction of more superintendents and better supervision. Of the present corps of superintendents, none have been commissioned who did not possess the evidence of qualifications which the law requires. Of the 86 now in commission, including county, city, and borough superintendents, 23 are graduates of colleges, and 14 of normal schools, six others completed a partial course at schools of this kind, and the rest either hold commissions as superintendents for past terms, or one of the higher grades of certificates given to teachers. All of them have had experience in teaching or in supervising schools within three years, or they would not have been eligible to the office. The average salary paid superintendents was $1,232.55. The hard times prevented, in many cases, the fixing of higher salaries.—(State report, 1875, p. xvi.)

ABSTRACT OF COUNTY SUPERINTENDENTS' REPORTS.

The reports of the county superintendents represent the condition of educational affairs to be different in the different portions of the State. In many parts of the State there has been great progress during the past year in the common schools; new schoolhouses have been built and supplied with the best furniture and apparatus; many have been graded and have adopted a uniform series of text books; teachers are better qualified both to instruct and govern, school officers are more earnest and faithful, public sentiment has grown more favorable to the system, and the prospects are highly encouraging, showing the condition of the schools to be far better than in any previous year. But in other portions of the State there are complaints of poor schools, uncomfortable and badly situated school-houses; want of qualified teachers and intelligent and progressive school officers; lack of apparatus and classification, and numerous other complaints, all springing from a want of interest on the part of the patrons and a decided opposition by many of the taxpayers. The superintendent of Adams County says: "Among the chief obstacles to progress are youth, inexperience, and insufficient scholarship on the part of teachers; and lack of sympathy and proper encouragement in the teacher's work on the part of the public." The superintendent of Armstrong County says: "The greatest obstacle to the success of our schools is the lack of cooperation of parents. With respect to apparatus, we have not one school well supplied." The superintendent of Forest County says: "Some of our directors appear to be ignorant of their duties and show a disposition to retard, rather than advance, the interest of our schools." The superintendent of Greene says: "We have not a first class school-house in the county or one with its grounds suitably improved." The superintendent of Snyder, speaking of the influence of public sentiment upon schools, says, that where education is not properly appreciated low salaries are paid and correspondingly poor teachers employed, and consequently the schools are badly taught, badly organized, and poorly governed. The superintendent of Somerset (and the superintendents of other counties concur with him) says: "The chief obstacles in the way are numerous, among which should be especially noted indifference on the part of school officers, lack of a sufficient number of well qualified teachers, want of higher salaries to competent teachers, unequal taxation, want of better local supervision; but with the right kind of men as directors these mountains become as mole hills."

But taking the whole State into consideration the failure of some of the schools has been as nothing compared with the good results of others, and the prospects are highly encouraging for a year of great usefulness.

Music has been taught in many of the schools with greatly satisfactory results.

SANITARY CONDITION OF THE SCHOOLS.

During the summer of 1875 a committee of the board of control of the city of Philadelphia, aided by a corps of scientific gentlemen, very carefully investigated the hygienic condition of a large number of the public schools of the city, tabulated the results with great labor, and published them in pamphlet form. As similar defects in school architecture and management are to be found all over the State, the superintendent quotes a few extracts from the general report of the committee, and also from the accompanying special reports, and respectfully calls attention to them.

Position of desks.—An examination of the papers will make it apparent that in a large number of the schools reform is much needed in the matter of the position of the pupils' desks and the blackboards, as regards the direction from which the light enters the class rooms. In the class rooms where the positions of the desks are faulty because of the light falling directly upon the face of the pupil when sitting at the desk, they should, as far as possible, have their positions so changed that the light may be received at the side or from behind the pupil, and the blackboards be so arranged as to be in harmony with the light received from such directions.

Physical exercise.—Regarding the matter of physical exercise, the committee remarks that while it may not be possible in some of the school-houses to have gymnastic exercises in the class rooms, yet the importance of physical exercise as a means, if of nothing more, of withdrawing the brain from its toil, should not be overlooked, and hence that in some form such exercise should be commanded at set periods every day. In every instance where the recess required by the board is withheld from the children, there is a gross wrong done to them which must not be tolerated.

Ventilation.—Too much importance cannot be attached to the perfect ventilation of the school rooms. In Philadelphia during ten months of the year about four and a half hours of each school day are spent in the school rooms by 90,000 children, ranging from 6 to 17 years, and about 2,000 teachers. Who can possibly estimate to what extent the laws of health are violated by compelling these 92,000 persons to breathe, day in and day out, an atmosphere surcharged to the extent of five, six, or seven times the sum of carbonic acid that normal air contains, and then, superadded to this a sum of organic impurities which may be expressed by the same numbers that indicate the excess of carbonic acid? Who can, in numbers, express the degree of violence done to health, the sum of human suffering engendered, and to what extent life may be shortened by the respiration of the unnecessarily impure atmosphere of school rooms?

Improper seating.—Although the style of desks used in the various schools may be good enough, yet, owing to the total neglect of proper care in placing children of different sizes at desks of heights suitable to them, they, in a vast majority of cases, assume habitually faulty postures, both in sitting and standing, and many, likewise from the same cause, become the victims of defects of the visual organs."

SCHOOLS OUTSIDE OF PHILADELPHIA.

The following facts, taken by the State superintendent from county superintendents' reports, show, in some measure, to what extent the laws of health are violated in the schools in the State outside of Philadelphia: Of the 13,366 school-houses in the State there are reported as unfit for use 1,563; badly ventilated, 5,281; with furniture injurious to pupils, 2,618; with grounds of insufficient size, 6,453.

In view of the whole subject, the superintendent recommends a careful study of school hygiene by all superintendents of schools, and, in the light of this knowledge, a thorough inspection of the schools under their supervision and the publication of the results, with such practical suggestions to school boards as may enable them to guard against the evils now arising from a violation of the laws of health in the schools, and the election of a physician as a member of the school board, wherever practicable, and his appointment as chairman of a committee on the hygienic condition of the schools of the district.—(Pennsylvania school report, 1875, pp. xxi–xxiv.)

CITY SCHOOL SYSTEMS.

ALLEGHENY.

School officers.—A board of controllers of 66 members, 6 from each ward, with a secretary and city superintendent of public schools.

Number and classification of schools.—The whole number of public day schools, based nominally on the allotment of an average daily attendance of 50 primary, 45 medium, and 35 grammar pupils, respectively, to each female teacher in the various departments, was 170. Of these, 84 were primary schools with an average monthly enrolment of 5,311 and an average daily attendance of 4,447. In the medium department there were 43 schools, with an average monthly enrolment of 1,925, and an average daily attendance of 1,645. In the grammar department, 35 schools, with an average monthly enrolment of 1,323 and an average daily attendance of 1,149. In the high school department, 8 schools, with an average monthly enrolment of 251 and a daily attendance of 219. The whole number of pupils admitted into all the departments was 11,980; average monthly enrolment, 8,810; average daily attendance, 7,460; average percentage of attendance, 89.

Drawing.—Superintendent Davis says the history of drawing in our schools, which dates back but a few years, has not been signally marked by any special manifestation in the way of general advancement. The authority for having it taught in any of the schools, being vested in the local boards, and each being unequally impressed with its utility, all did not formally adopt it or require lessons to be given in it. Only 18

teachers out of 184 were required to teach it and less than one-tenth of the average daily attendance of pupils were required to make it a subject of thought and study.

Examinations.—Some of the schools have adopted, with good results, the plan of holding monthly written examinations. They are conducted by placing in the hands of all pupils of the same grade slips of paper containing the same series of questions, and requiring answers in writing. The superintendent says, "This method gives to each pupil the same length of time, puts each upon his own resources, secures a more uniform system of credits, and tends to accuracy of expression and neatness of work."

Teachers.—The whole number of teachers in the schools at the close of the term was 186; 14 male principals, 2 male music teachers, and 170 female teachers. Of these, 124 have taught more than five years, and the great majority of the remainder have had from one to five years' experience in professional work.

Teacher's institutes.—The teachers in the city schools organized a local institute, and held meetings once each quarter during the session of the schools. The object of the institute was to create a greater interest in the work in which they were engaged and secure by a mutual exchange of thought and sentiment greater efficiency in their profession. These issues seem to have been secured.

The teachers' annual institute was held in Allegheny City, in connection with that of the county institute, on the last three days of March and the first two of April.—(From report of board of controllers and of Superintendent John Davis for 1874–'75.)

PHILADELPHIA.

Officers.—The board of public education consists of 31 members, appointed by the judges of the court of common pleas and district court, 1 being selected from each ward. Their term of service is for three years, beginning the first Monday of January, one-third going out each year. There is no city superintendent. The duties of such are performed by the secretary of the board.

Statistics.—Enrolment in the public schools during the year—boys, 47,730; girls, 47,822 — 95,552, an increase of 3.602 over the number of 1874. There were in high schools, 1,256; in grammar schools, 13,967; in consolidated schools, 7,031; in secondary schools, 24,308; in primary, 43,990. Average attendance, 82,975. Expenditures during the year, $1,634,653.26.

Remarks.—Philadelphia has reason to be proud of her connection with the origin and growth of popular instruction. Her system went into operation 16 years before the adoption of the general State law extending the blessings of a free and substantial elementary education to children, irrespective of condition, and they were mainly her citizens who, combating violent prejudice and class opposition, planted the seed which finally came to fruition in the passage of the act of 1834 and of supplemental acts which strengthened the good cause.

The president of the board reports that there is reason to be gratified with all the departments of the school system, with the fidelity and efficiency of the teachers, with the increased attendance upon the schools, and the satisfactory results of their management. The city is unusually favored in having the services of an intelligent, capable, and conscientious corps of educators, who feel that no ability, no attainments, no attention can be too great for the accomplishment of the duties with which they are intrusted.

The results of the teaching in the Central High School for the year 1875 are very gratifying. This school went into operation in October, 1838, with 4 professors and 63 students, and it has expanded with the growth of the general system. It has now 15 professors, and at the close of the year 1875 had 601 students, over 300 having been admitted at the two semi-annual examinations.

There are ample indications of the increasing usefulness of the normal school. During the year 262 pupils were admitted to it; average attendance, 641. This school was not established until the Central High School had been in operation for some time and was effecting most satisfactory results. The plan of this school combines successfully both normal and high school training. It has given to Philadelphia nearly all the lady teachers who are now employed in its public schools.

One of the important events of the year was the offer of the trustees of the University of Pennsylvania to establish 40 free scholarships in the Towne Scientific School, at the rate of 10 scholarships a year for a four years' course.

Following close upon this was the offer of the directors of the Philadelphia School of Design to admit 10 female pupils of the public schools annually to that institution for a four years' course in art training.

PITTSBURG.

School officers.—A central board of education of 36 members, apparently holding office for three years, one-third being changed each year; subdistrict boards of directors of 6 members each, apparently holding office for the same period, with a like annual change: and a superintendent of public schools.

Statistics.—Population of the city in 1870, 121,215; estimated present population,

130,000. Number of children of school age not given. Enrolled in public schools, 20,937; average monthly enrolment, 16,272; average daily attendance, 13,572. Teachers employed, including 6 music teachers, 399; wages of these, $400 to $3,000. Salary of superintendent, $3,000. Receipts for public schools for the year ending June 1, 1875, $751,534.10; expenditures on them, $678,983.41; balance on hand, $72,550.69.

Growth in twenty years.—A table showing the annual progress of the city school system since its consolidation in 1855 gives the following exhibition of the advance made in that time: Teachers employed, 1855–'56, 109; in 1874–'75, 414. Total enrolment of pupils in the former year, 6,724; in the latter, 20,927; average monthly enrolment in the former, 5,442; in the latter, 16,272; average daily attendance in the former, 4,354; in the latter, 13,572. Amount paid teachers in the former, including salary of superintendent, $39,394.75; in the latter, $255,677.24. Paid teachers in evening schools in the former, $1,005; in the latter, $8,017.67.

Drawing.—This important art is said to have taken its place among the regular school studies, and the results, as seen in every department of the schools, from the primary to the most advanced classes of the high school, are reported by the superintendent to have exceeded the most sanguine expectations of the warmest friends of the measure.

Evening industrial schools have been kept open 65 nights, with an enrolment of 250 pupils and an average attendance of 137, under 4 teachers.

Teachers' institute meetings are held five times each year, with full attendance and apparently great interest, while for the improvement of normal pupils in the high school certain city schools are made schools of observation.—(Report of Superintendent George J. Luckey for 1874–'75.)

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

There are now ten State normal schools in active operation. A new one, located in the borough of Indiana, was recognized as a State institution in June, 1875. The Bloomsburg school, a few days after the commencement of its fall session, was destroyed by fire. The loss was about $60,000, the insurance $30,000. The calamity fell very heavily upon the school, but its trustees and friends at once resolved to rebuild the burnt building, and the work at date of the report of the superintendent was in rapid progress. The mortgage debt of all the normal schools is $190,398.45, and the floating debt $114,481.18. Some of them suffered severely from the loss last year of the usual appropriation from the State. It is believed to be good economy to make liberal provision for them, since good schools cannot be had without good teachers, nor these without special training. The State has a representation in each of the normal school boards of trustees equal to one-third the whole number, and a vote of three-fourths of all the trustees present at any meeting is required to adopt any measure upon which the yeas and nays are called. This power, it is thought, may be wielded to broaden the normal school policy and save it from the trammels of private interest.

The number of students in all the normal schools was 3,985; professors and instructors, 114; graduates, 166; students preparing to teach, and, as student teachers, receiving State aid, 2,201. There were in the libraries 14,203 volumes; the value of property belonging to the schools is estimated at $1,102,880.54; expenses for improvement, &c., $145,590.23; total income for the year, exclusive of moneys received from the State, $294,139.04; ordinary expenditures, $297,198.63.

Deputy Superintendent Curry, who during the year visited all the State normal schools, looked into their workings, noted their surroundings, and took an active part in the examination of all their graduating classes, testifies as to their continued prosperity. He has observed a gradual increase from year to year of their efficiency. But while this is the case, and while the schools are now equipped for effective labor, being supplied with suitable grounds, ample buildings, able principals, and, in most cases, a full corps of professors, they are yet, he says, far from accomplishing all that they should. Most of them, being comparatively new, are still in a formative condition, and none of them is yet sufficiently professional in its character. In theory they are all professional institutions, devoted exclusively to the education and training of teachers. And if such were now their real character it would not be long before they would furnish a grade of teachers whose superior qualifications, professional enthusiasm, and transforming influence would be felt and recognized throughout the State, and teaching would soon take rank among the learned professions. But practically, according to Mr. Curry, these institutions are as yet only mixed schools, open to all classes and grades of pupils of proper age, with but little regard to their previous qualifications or prospective occupations. Some of these are anxious to qualify themselves for teaching, others desire to prepare for college, while many of them simply wish to obtain a good practical education. All receive thorough academic instruction, while those of them who expect to teach are required to pursue a short collateral course in methods, and, in some instances, in the science of teaching; but, in most cases, with little practice in a model school. He thinks that this condition of things is wrong. The normal schools

should be devoted exclusively to the preparation of teachers. It was for this purpose they were established. At first they had to labor under many disadvantages, and in order to overcome popular prejudice and secure final success, it seemed expedient to admit students seeking only a general education. But if the circumstances which could justify such a course ever existed the time has now passed away, and all thoughts of making money out of the schools by retailing knowledge to the general public should be abandoned. They should be made such that the graduates of the best academies and colleges in the State could enter their classes to advantage. They should be organized on a strictly normal school basis and wholly consecrated to the work of preparing teachers. It is hoped, therefore, that the next legislature will relieve these schools of all financial difficulty, and thus enable them to proceed hereafter on a professional basis alone.—(State report, 1874–'75, pp. xiii, xxxii, xxxv.)

COUNTY INSTITUTES.

A table of statistics of teachers' institutes presented in the superintendent's report shows that 67 were held in the State during the year 1874–'75, at which the whole number of spectators present was 28,870; actual members, 13,863; those engaged in teaching common schools, 9,441; school directors, 1,935; honorary members, 2,060. There were 474 instructors and lecturers engaged, and 277 essays were read.

Deputy Superintendent Curry, who was present giving instructions at twenty of these institutes, reports that they were, for the most part, very interesting and well attended, and that, in many cases, the houses in which they were held were not large enough to accommodate all who wished to be present at the evening sessions. He thinks no other agency in the State capable of doing more for education than a well regulated county institute, bringing together, as it does annually, all the teachers of the county into a kind of migratory normal school, which holds its successive annual sessions in as many different neighborhoods. And as its exercises comprise instruction in the science of education, the art of teaching, methods of instruction, school organization, school government, and, in general, a free discussion of all questions relating to school management, such an institute cannot fail to be a source of great improvement to the teachers, not only in a professional point of view, but incidentally in breaking up the monotony of their school routine, extending their acquaintanceship, and widening their views.

SCHOOL JOURNAL.

The Pennsylvania School Journal, conducted by the State superintendent, and serving as his organ for communication with school teachers and school officers, has continued through 1875 its good work of improving these by many excellent articles on proper methods of instruction, management, and discipline, as well as by information and decisions on points of school law.

SECONDARY INSTRUCTION.

HIGH SCHOOLS.

The superintendent's report does not give the number of public high schools in the State, nor any general information concerning them, but states that in 1,601 of the public schools some of the higher branches are taught. The reports of city and borough superintendents, included in the State superintendent's report, mention the existence of 13 high schools, all of which appear to be prospering and accomplishing a good work. In Philadelphia there is a high school for boys and a high and normal for girls. The course of instruction in the high school, as given in the report of the Philadelphia board of education for 1875, embraces belles-lettres, higher mathematics, natural history, natural sciences, mental and moral philosophy, physiology, the Latin and German languages, commercial calculations, business forms, &c. Its students are trained in drawing, from the elementary stages up to the mechanical, and are thereby fitted for the various pursuits of a great industrial centre, as well as for college.

ACADEMIES AND SEMINARIES.

Of the 124 academies and seminaries in the State which have at some time reported to this Office, specific reports have been received from 88, of which 24 are for the education of boys, 28 for girls, and 36 for both sexes. The boys' schools report a total attendance of 2,136 pupils; those for girls, 1,522; and those for both sexes, 4,385, making a grand total of 8,043. The number of teachers is 568. The schools for boys report 543 students pursuing classical studies and 516 modern languages, those for girls 303 in classical and 627 modern languages, and those for both sexes 749 in classical and 402 in modern languages. The number of pupils preparing for a classical course in college was 470; preparing for a scientific course, 288. Drawing was taught in 71 of these schools, vocal music in 57, and instrumental music in 54. Chemical laboratories exist in 35, philosophical apparatus in 44, and libraries in 41. In the boys' schools these range in size from 400 to 5,000 volumes; in the girls', from 100 to 3,100, and in those for both sexes, from 10 to 4,500, the total number of volumes reported aggregating 47,519.—(Returns to Bureau of Education, 1875.)

PREPARATORY SCHOOLS.

In the 7 preparatory schools reporting their statistics for 1875 to this Office, 49 teachers are employed and 917 pupils are in attendance, of whom 119 were preparing for a classical course in college and 47 for a scientific course. Chemical laboratories exist in 4 of these schools, philosophical apparatus in 5, and gymnasiums in 4, and libraries in all but 1, ranging in size from 175 to 1,200 volumes, three having 500, and aggregating 3,200.

The preparatory departments of colleges report 1,757 students in them, of whom 674 were preparing for a classical course in college and 346 for a scientific course.—(Returns to Bureau of Education, 1875.)

BUSINESS COLLEGES.

Ten business colleges report their statistics, as follows: Instructors: male, 38; female, 2; total, 40; students, 1,647. In addition to the common and higher English and commercial studies pursued in these schools some of them embrace German, French, Spanish, phonography, and telegraphy. Ten students were pursuing phonography, 17 telegraphy, 8 German, 4 French, 7 Spanish, 5 banking, and 8 commercial law. Two report the possession of libraries, of 20 and 100 volumes respectively.—(Returns to Bureau of Education, 1875.)

SUPERIOR INSTRUCTION.

The superintendent gives statistics of 19 colleges and universities which reported to him. From 8 no report had been received. In 17 of the colleges reporting the total attendance of students was 2,687; the number of professors and instructors, 184; 14 report a total in the preparatory department of 1,064; in 4 there were 58 students who were preparing to become teachers; all but four give the number of graduates in 1874–'75, (231,) and the total number since commencement, 7,736. All but three report libraries, of from 140 to 27,503 volumes, 7 out of the 16 having 10,000 volumes and more, and all but two having 2,000 and over.—(State report, p. lxxxii.)

THE UNIVERSITY OF PENNSYLVANIA.

Although this is not strictly a State university, its age, its wealth, and its present great concentration of advantages give it naturally prominence.

Instruction is given here in four different departments, viz, those of arts, sciences, medicine, and law. The course of instruction in the department of arts is prescribed during the freshman and sophomore years; for the remaining two years a limited election or choice of various studies is permitted. The scientific, like the classical course, extends through four years, and choice is afforded in the former of five different professional courses, namely: analytical and applied chemistry and mineralogy, geology and mining, civil engineering, mechanical engineering, and drawing and architecture Great additions have been recently made to the libraries of the university, and it is proposed to enlarge them still further as occasion may offer.—(Catalogue, 1874–'75.)

OTHER COLLEGES.

Allegheny College, Meadville, (Methodist Episcopal,) is for both sexes; has preparatory, classical, scientific, and biblical departments.—(College catalogue, 1874–'75.)

Haverford College, Haverford, (Friends,) admits only young men. There are classical, English, and mathematical departments.—(College catalogue, 1874–'75.)

Lafayette College, Easton, (Presbyterian,) is also exclusively for young men. Its classical course is similar to the undergraduate course of the best colleges, and its Pardee scientific department embraces, besides the general scientific course, three technical courses.—(Catalogue, 1874–'75.)

The entire library of the late Hon. C. L. Ward, of Towanda, Pa., has been donated to this college. The library numbers over 11,000 volumes, and contains many rare editions of the classics and other valuable and expensive works.—(Pennsylvania School Journal, April, 1875.)

Lehigh University, South Bethlehem, (Protestant Episcopal,) was endowed by Hon. Asa Packer, in 1865, with the sum of $500,000, for the purpose of offering to young men free instruction in those branches necessary to complete a liberal education, but more particularly in those industrial pursuits which tend to develop the resources of the country, such as engineering, civil, mechanical, and mining; chemistry, metallurgy, architecture, and construction.—(Catalogue, 1874–'75.)

Mr. Packer has since done much to increase the advantages of the institution, improve its buildings, and enlarge its grounds.

Lincoln University, Lower Oxford, (Presbyterian,) is especially intended for the education of the colored race. It offers them a collegiate, a normal, and a commercial course, while for those looking to a profession there are studies in theology, law, and medicine.

Monongahela College, Jefferson, (Baptist,) is for both sexes, and offers classical, scientific, English, normal, and preparatory courses.—(Catalogue, 1874–'75.)

Muhlenberg College, Allentown, (Lutheran,) offers to young men a preparatory and the regular classical collegiate course.—(Catalogue, 1874.)

New Castle College, New Castle, (strictly non-sectarian,) was organized in 1872, and chartered with full college powers in 1875. It is for both sexes, and embraces courses in science, mathematics, languages, music, painting, drawing, waxwork, book-keeping, telegraphy, and science of teaching.—(Catalogue, 1875–'76.)

Palatinate College, Myerstown, (Reformed,) is for both sexes, and embraces elementary, academic, and collegiate departments, the latter comprising seven special courses, viz: mathematics, classics, modern languages, history, natural sciences, philosophy, and fine arts. Drawing, vocal and instrumental music may be continued in all the courses. Lessons in elementary drawing are given gratuitously.—(Catalogue 1874, p. 16.)

Pennsylvania College, Gettysburg, (Lutheran,) apparently, only for young men, affords preparatory and regular collegiate courses of instruction, the latter including the German language as a required study; Greek is continued throughout the course, the Continental method of pronunciation being adopted. Much attention is given to mental philosophy, moral science, and Christian evidences.—(Catalogue, 1875–'76.)

Pennsylvania Military Academy, Chester, (undenominational,) for boys, adds to its English and scientific courses one answering to a moderate collegiate course. In this there appear to be at present 4 students.—(Catalogue, 1875.)

St. Vincent's College, Latrobe, (Roman Catholic,) is under the direction of the Benedictine Fathers, and offers its students classical, commercial, and ecclesiastical courses.

Swarthmore College, Delaware County, (Friends,) is on the road from Philadelphia to West Chester; is for both sexes, and embraces preparatory, classical, and scientific departments. Regular daily exercise in the open air is required of all the students, for which the extensive grounds connected with the college afford ample facilities. The gymnasium is well supplied with suitable apparatus, and is open every day for the voluntary exercise of boys and girls in separate classes. They also receive regular instruction from a teacher of gymnastics. No form of dress is prescribed for either sex, but simple attire is earnestly recommended; and ear-rings, bracelets, necklaces, and elaborately trimmed dresses are prohibited. Girls must be provided with gymnasium dresses.—(Catalogue, 1873–'74.)

The University at Lewisburg, (Baptist,) unites with its classical and scientific curricula a course for ladies in the University Female Institute, under the same presidency with the college, but with a lady principal and a corps of 8 lady teachers.

Villanova College, Delaware County, (Roman Catholic,) affords classical, preparatory, scientific, and commercial courses. It was incorporated and authorized to confer academic degrees in 1848. Extensive college buildings have recently been completed and fitted up with modern improvements.—(College catalogue, 1874–'75.)

Western University of Pennsylvania, Pittsburgh, (non-sectarian,) affords to young men preparatory, classical, and scientific courses of study; the latter divided into courses for the degrees of Ph. B. and Sc. B. There is an engineering department, with courses in civil and mechanical engineering.—(College catalogue, 1874–'75.)

The Philadelphia Evening Telegraph, of June 16, 1875, contained the following pleasing intelligence: "William Thaw, of Pittsburgh, has offered to give $100,000 to the Western University of Pennsylvania, conditioned on the institution securing $100,000 additional by July. Efforts are being made to comply with Mr. Thaw's stipulation, and the prospect is that they will be successful."

Westminster College, New Wilmington, (United Presbyterian,) is for both sexes. Preparatory, scientific, and classical courses are arranged; the latter, however, being the prominent feature in the college curriculum, receives most attention.—(College catalogue, 1875.)

COLLEGES FOR WOMEN.

There are 17 institutions of this class reporting their statistics for 1875 to this Office, as follows: Number of instructors—men, 66; women, 159—225. Pupils—in preparatory departments, 365; in collegiate, 1,189—1,554; in regular collegiate classes, 365; in partial courses, 122; in post graduate studies, 10. Music, both vocal and instrumental, is taught in 13 of these schools, French in 14, German in 13, and Italian and Spanish in 2. Nine have chemical laboratories, 10 philosophical apparatus, 5 museums of natural history, 1 an art gallery, and 13 libraries of from 275 to 5,000 volumes, and aggregating 25,145.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

Towne Scientific School, (University of Pennsylvania.)—The name of the scientific department of the University of Pennsylvania has been changed to that of the Towne Scientific School, in acknowledgment of a bequest received from the late J. Towne, esq., who made the university his residuary legatee, with the proviso that the money thus realized be expended in paying the salaries of professors and instructors in the new department of science. What the university will receive from this bequest, after all settlements are made and various life interests expire, is variously estimated; some believe the sum will reach a million of dollars. This is the largest single gift to the cause of scientific education ever made in America.—(Pennsylvania Monthly, August, 1875, p. 557.)

The post graduate courses of instruction, announced to begin September 15, 1875, are (1) in chemistry and metallurgy, (2) geology, (3) civil engineering, (4) dynamic engineering, (5) physics, and (6) architecture. These courses will extend over two years, at the conclusion of which, and upon satisfactory examination and presenting a thesis, students will receive the degree of master of science.—(Philadelphia Evening Telegraph, September 9.)

Following close upon Mr. Towne, Mr. Reese Wall Flower leaves the university an

estate, estimated, after all deductions, at some $200,000, for the establishment of an observatory.—(Pennsylvania Monthly, August, p. 557.)

Pardee scientific department of Lafayette College was founded by A. Pardee, esq., who gave more than a quarter of a million of dollars for the erection of the new building at present in use by the department. The following courses are embraced:

1. A general scientific course, parallel with the classical course of the college, except that the philological study of the English and other modern languages takes the place of Latin and Greek. It is designed, therefore, for those who wish to study the natural sciences, mathematics, modern languages and literature, history, mental and moral philosophy, rhetoric and logic, as a substantial basis of knowledge and scholarly culture, and who would be glad to enjoy the cultivation and learned habits and associations of college life, but who will not study Greek and Latin. Graduates in this course receive the degree of bachelor of philosophy. 2. Engineering course, designed to give professional preparation for the location, construction, and superintendence of railways, canals, and other public works; the trigonometrical and topographical surveys of States, counties, &c.; the surveys of rivers, lakes, harbors, &c., and the direction of their improvement; the design, construction, and use of steam engines and other motors, and of machines in general; and the construction of geometrical, topographical, and machine drawings. Graduates in this course receive the degree of civil engineer. 3. Mining and metallurgy. This course offers the means of special preparation for exploring undeveloped mineral resources and for taking charge of mining and metallurgical works. It includes instruction in engineering as connected with the survey and construction of mines, with the construction and adjustment of machines, and with machine drawings; also, instruction in chemistry and assaying as applied to the manipulation of ores and other minerals. Graduates in this course receive the degree of mining engineer. 4. Chemistry. This course includes text book study, lectures, and laboratory practice, every facility for which is found in the extensive laboratories of Pardee Hall. Particular attention is given to the chemistry of agriculture, medicine, metallurgy, and the manufacturing processes. Graduates in this course receive the degree of analytical chemist. 5. Special courses or working sections, designed for those who wish to devote their whole attention for a short time to thorough preparation for professional employment in road engineering, mining engineering, metallurgy, and economic geology or applied chemistry. Those who complete the work of either of these sections receive a certificate from the faculty. 6. Post graduate courses, designed for graduates of colleges or scientific schools and others having suitable preparation. Those who complete a three years' course in these post graduate studies receive the degree of doctor of philosophy.—(Catalogue of La Fayette College.)

Five other scientific and polytechnic schools in addition to the above are reported by the superintendent, in all of which there were 331 students, with 41 instructors.

THEOLOGY.

The theological schools contained in the table below have their statistics sufficiently exhibited in its columns. It may be noticed that the course in the Moravian and Roman Catholic schools appears longer than in the others. This, however, is attributable to the fact that in the former the preparatory course, as well as the strictly theological, is included, while in the latter the theological alone appears.

The studies in a greater portion of these seminaries embrace the Scriptures of the Old and New Testament in the original Hebrew and Greek, scriptural exegesis, Church history, systematic divinity, pastoral theology, sacred rhetoric, Christian antiquities, church polity, &c., some including also liturgics.

LAW.

Law school of the University of Pennsylvania.—This department of the university has been recently reorganized, with a view of enlarging its aims and rendering more systematic the instruction given by it. The design is not only to prepare gentlemen for the bar, but also to offer to others not having the bar in view the opportunity of acquiring knowledge in any one or all of the branches of legal learning. Students are not examined for matriculation, nor is a college degree nor any previous line of study required. The full course occupies two years.—(University catalogue, 1874–'75.)

In consequence of the new rule adopted by the courts, allowing persons who have been graduated as bachelors of law by the university to be admitted to the bar without further examination, the trustees of the university have adopted stringent regulations as to the examination required of students in order to obtain the degree. It is required of every candidate that he shall have attended on the full course of instruction, both lectures and examinations, except the lectures upon medical jurisprudence; that he shall have prepared and submitted to the faculty an essay composed by himself on some legal subject sufficient in merit to satisfy the faculty of his fitness to receive the degree; that he shall have passed an examination at the end of each session upon the subjects of study during that session, such examination to be conducted by the faculty, either

orally or in writing, as they may determine.—(Philadelphia Evening Telegraph, July 24, 1875.)

There is also a law department connected with Lincoln University.

MEDICINE.

Medical department of the University of Pennsylvania.—In the catalogue and announcement for 1875–'76, the faculty of this department direct particular attention to its precise style and title, in view of the fact that "several colleges with names closely resembling the name of this school, having been chartered by the legislature of Pennsylvania without a due scrutiny of their character, have carried on a dishonorable and disgraceful trade in diplomas, both at home and abroad, and thereby inspired unjust and injurious suspicions of the honor and scientific character of this institution. To some extent such nefarious practices have been limited by the action of the courts, but others continue to be perpetrated in defiance of law and morals. The medical faculty of the university, therefore, renew their protest against them and their guilty authors, and proclaim anew that its honors are neither bought nor sold, nor conferred in any manner save that which its statutes have for more than a century prescribed."

This school was founded in 1765; its graduates now number nearly 9,000; it has occupied several buildings in succession, which were more or less suitable for its purpose, and its present eligible site forms a portion of a large plot of ground ceded at a moderate price to the university by the city of Philadelphia. Here a hall of very large dimensions has been erected and arranged for the convenient accommodation and instruction of students, in accordance with plans based upon long experience. Adjoining this building a large university hospital has been erected by the trustees, which is placed in charge of the medical faculty. It is an elegant and commodious edifice, constructed according to the best established principles of hospital architecture, provided with all the appliances pertaining to such institutions of the first class, and forms an integral portion of the medical department. In addition to the means of instruction afforded by the department, its students are admitted to the lectures and clinics of various other hospitals in the city, among which are those on clinical medicine and surgery, which are delivered twice a week at the Pennsylvania Hospital, and those on medicine, surgery, and the diseases of women and children at the Philadelphia Hospital, which is contiguous to the grounds of the university, and contains 900 beds.—(Catalogue, 1874–'75.)

Superintendent Wickersham gives the statistics of 8 schools of medicine, including the above, reporting an aggregate of 1,109 students and 162 instructors.

The Woman's Medical College.—The Woman's Medical College of Pennsylvania announces, at the opening of the twenty-sixth winter term in the new college, a progressive course and more demonstrative and practical education, with more instructors and other material advantages. The Woman's Hospital is open to students. There are 8 female and 6 male teachers and professors, and there were 46 matriculants at the last session, from fourteen States and Canada.—(Evening Telegraph, October 2, 1875.)

SPECIAL INSTRUCTION.

SCHOOL OF DESIGN FOR WOMEN.

This institution, located at Philadelphia, has for its object the systematic training of women in a knowledge of the principles and practice of the art of design and their qualification for the practical application of art to the common uses of daily life. The school is divided into three distinct branches of study: Class A, ornament; class B, landscape; class C, human figure—each with its subdivisions and sections. The course lasts from 2½ to 4½ years, according to the industry of the student. The fee is $20 per session of 5 months, except in the industrial classes, where tuition is free. The attempt has never been made to render the school self sustaining, as that involves the necessity of raising the tuition fee to an amount that would impair the usefulness of the institution and tend to defeat its object. Therefore, subscriptions and donations are necessary to assist in meeting expenses.—(Report of a former principal.)

EDUCATION OF THE DEAF AND DUMB.

The Pennsylvania Institution for the Deaf and Dumb, at Philadelphia, since its foundation in 1821, has graduated 1,566 pupils, 11 of whom have become teachers. The number of pupils under instruction in 1875 was 338; number of professors and instructors, including the principal, 17. The branches taught are those usually embraced in a common school course. By a rule of the institution deaf and dumb children are not received under 10 years of age. The annual charge is $280, for which sum everything necessary is provided, including the usual clothing of the institution, boarding, lodging, washing, tuition, stationery, and medical attendance. A majority of the pupils in 1874 were supported by the State, a few by their parents, and other States, but the regulations respecting this subject are not given in the catalogue at hand, (1874,) nor in the special report to the United States Bureau of Education for 1875. Two new and noble buildings, additional to the one long in use, add much to the advantages of the institution.

The day school for deaf-mutes, Pittsburg, was founded in 1869, and is under the control of the central board of education of Pittsburg, which appropriated from the school fund during 1875 $1,500 for the support of the school. The legislature has not yet made any provision for the school. The branches taught are elements of written language, arithmetic, geography and drawing, and articulation.—(Report to the United States Bureau of Education, 1875.)

EDUCATION OF THE BLIND.

The Pennsylvania Institution for the Instruction of the Blind, Philadelphia, founded in 1833, belongs to a corporation, but receives an annual appropriation from the State. This, in 1875, amounted to $39,000. The number of pupils admitted since the opening is 885; present number attending, 207; number of instructors and other employés, 63; number of blind employés and workmen, 67. The employments taught are broom, whisk, brush, mat, and mattress making, carpet weaving, cane-seating, piano tuning and repairing, music, bead work, crocheting, knitting, and machine and hand sewing. The library numbers about 800 volumes.

Here, as at the institution for the deaf and dumb, the buildings have been, of late years, much enlarged and improved.

EDUCATION OF THE FEEBLE-MINDED.

The Pennsylvania Training School for Feeble-Minded Children, at Media, established in 1853, aims to furnish, through the school-room, calisthenium, workshop, domestic service, and light out-door labor, special means for the mental, moral, and physical improvement of youth who are so deficient in mind or have such marked eccentricities of intellect or such perversion of habits as to deprive them of the benefits of other educational institutions and ordinary methods of instruction. The number of instructors and other employés in 1875 was 60; of inmates—male, 133; female, 92—225. Number dismissed since 1864: Improved, 247; not improved, 76; self supporting, 49; total, 372. There are at present 7 lists on which children are admitted: (1) State fund of Pennsylvania, (2) State fund of New Jersey, (3) State fund of Delaware, (4) city of Philadelphia fund, (5) soldiers' orphans of Pennsylvania, (6) free fund, and (7) private list. The State fund provides for the support of 100 children of the Commonwealth for a period of not more than seven years, apportioned, as nearly as possible, among the senatorial districts, according to representation. The free fund is for the benefit of a limited number of such feeble-minded persons as may be selected by the superintendent and committee on admission, and whose support is not otherwise provided for.—(Report to United States Bureau of Education, 1875, and printed report of institution, 1875.)

GIRARD COLLEGE.

The Girard College for Orphans was established in 1848 by funds given by Stephen Girard. It is for the benefit of poor white male orphans born in Pennsylvania. The course of study embraces, in addition to the elementary branches, physics and indus-

trial science, mathematics, drawing, writing and book-keeping, natural history, vocal music, military discipline and military evolutions, Spanish, and French. The average length of course is eight years; number of inmates since foundation, 1,816. The number in 1875 was 550. Children when they leave the institution are apprenticed to trades. There is a library of about 5,000 volumes belonging to the institution.—(Report to the United States Bureau of Education, 1875.)

THE EDUCATIONAL HOME FOR BOYS, PHILADELPHIA.

There were admitted and cared for here in 1874 146 orphans. Much attention is given to the educational department. With three competent and experienced teachers, the school has attained a high standing.—(Report of the home, 1875.)

LINCOLN INSTITUTION, PHILADELPHIA.

Here is furnished a home for working boys, principally soldiers' orphans, though others in need of the care here furnished are admitted. The institution affords a training in the elements of a common school education, and, when the boys are old enough to work, obtains employment for them, giving them still a home and parental care in the institution. During 1875 there were 84 boys in the home.—(Report of institution, January 1, 1875.)

THE AIMWELL SCHOOL, PHILADELPHIA.

This school provides free instruction for girls. It had its origin more than fifty years ago, in the charitable efforts of a few women to teach poor girls, and in 1859 it was incorporated under the title of the Aimwell School Association.—(Account of Aimwell School, 1874.)

BENEFACTIONS.

The will of the late Henry J. Stout, of Philadelphia, contributes to various educational objects, mostly in that city, an aggregate of $26,000. Of this sum the Northern Home for Friendless Children and the Pennsylvania Institution for the Instruction of the Blind received $5,000 each; the Union Temporary Home for Children, the Philadelphia Orphans' Society, the Pennsylvania Institution for the Deaf and Dumb, and the Industrial Home for Blind Women, Philadelphia, each, receive $3,000; the Philadelphia Society for the Employment and Instruction of the Poor receives $2,000, and $1,000 each are given to the Apprentices' Library Company and the Union School and Children's Home of Philadelphia.—(Evening Telegraph, February 11, 1875.)

The late Charles A. Morris, of York, Pa., is also reported by the Evening Telegraph to have bequeathed, in 1874, $20,000 to the Pennsylvania College, at Gettysburg; to the Orphans' Home, at Loysville, $2,000; and to the Theological Seminary at Gettysburg, $1,000. He also willed $5,000 to the Children's Home at York, and $2,000, in trust, to supply a Sunday school paper to each family whose children attend the Sunday school of St. Paul's Lutheran Church there.

These both are additional to the generous gifts of Mr. Towne, Mr. Whitney, and Mr. R. W. Flower to the University of Pennsylvania, previously referred to.

EDUCATIONAL CONVENTION.

STATE TEACHERS' ASSOCIATION.

The twenty-second annual session of the State Teachers' Association, held at Wilkesbarre on the 10th, 11th, and 12th of August, 1875, was a success. Some of the mistakes of other years were entirely avoided by the management of the officers, and others were guarded against as far as possible. Notwithstanding an urgent request to the contrary, a few of the papers were much too long, and on one or two occasions when time was allowed for the full discussion of interesting subjects, a sufficient number of speakers were not prepared. In numbers, the meeting was an average one, there being enrolled nearly 300 members, but the State, as a whole, was well represented. The papers read cover some of the subjects that are now of most vital interest to the friends of education. Among these were the inaugural address of President Woodruff on "Moral and religious instruction in the public schools," "The relation of the preparatory schools to the universities," by Rev. D. Copeland, A. M., of Wyoming Seminary; "Lessons in manners and morals," Miss Maria L. Sanford, professor of history at Swarthmore College; "Need of a normal school in the fourth district," by J. L. Richardson, of Luzerne County; "Industrial drawing," by Prof. J. V. Montgomery, of Millersville; "The study of civil government," by Prof. E. A. Angell, of the State Normal School at Shippensburg; "Industrial education," prepared by Superintendent H. S. Jones, of Erie County, and read by Superintendent T. F. Gahan;" "The study of the physical sciences in our primary schools," prepared by Professor B. C. Jillson, of Pittsburg, and read by Miss Hannah Holcomb; "Physical training in public schools," by Miss L. E. Patridge, late in charge of the department of elocution and physical training of the Girls' Normal School, Philadelphia; "College and normal school discipline," by Dr. E. B. Fairfield, of the Indiana Normal School; "Spelling," by Dr. F. A. March, professor of English language and comparative philology in Lafayette College; "Teaching of English literature," by Miss

Esther Trimble, of Swarthmore College; "A course of study for ungraded schools," by Superintendent Jesse Newlin, of Schuylkill County, and "Pennsylvania at the Centennial Exposition," State Superintendent J. P. Wickersham.—(Pennsylvania School Journal, September, 1875, pp. 65–114.)

OBITUARY RECORD.

MISS MARGARET MARKEE,

Of St. James's Protestant Episcopal Parochial School, of Lancaster, Pa., passed to the better world beyond this, February 21, 1875, in the forty-fifth year of her age. For five years she had been a beloved and efficient teacher in the parish school, and for some fifteen previous years a leading teacher in the public schools, resigning the principalship of the best secondary school in the city to take charge of the primary department, in charge of which she died, it being her conviction that the best teaching talent possible should be devoted to the lowest grades. A woman of quiet and retiring manner, and yet of marked individuality, combining high intellectual gifts with great force of character, she was reckoned by those who knew her best as a model teacher in her way, having great insight into the nature of children, great tenderness toward them, strong sympathy with them, and a strange power over them, which drew the little ones around her as by a magnetism they could not resist. She left behind her the best record that can be left, that of having lived a life spent in being good and doing good.—(Pennsylvania School Journal, March, 1875, pp. 310, 311.)

MR. JOHN MILLER,

Of French birth and German training, paid the great debt of nature at Altoona, Pa., September 3, 1875, aged about seventy-five years, nearly fifty years of which time were employed in teaching in the western portion of this State. In 1826 he became principal of the high school in Altoona, and held that position till he was elected city superintendent in 1869. He filled the office of superintendent till 1874, when failing health induced him to resign it and undertake private tuition in Latin, German, and French to pupils attendant on him at his house. This work was continued till about two months before his death, when it, too, had to be relinquished and all the later hours of life were devoted to a preparation for the final rest.—(Pennsylvania School Journal, November, 1875, p. 180.)

RHODE ISLAND.

STATISTICAL SUMMARY.

SCHOOL POPULATION AND ATTENDANCE.

Number of children of legal school age, 4–16 years	53,316
Number under 6 years of age	4,995
Number between 6 and 16	48,321
Number enrolled in day schools	38,554
Number enrolled in evening schools	*4,600
Average monthly enrolment in day and evening schools	33,408
Average daily attendance in day schools	26,163
Average attendance in evening schools	2,256

SCHOOLS.

Number of school-rooms in day schools, exclusive of those used only for recitation	739
Number in evening schools	39
Number used exclusively for recitation in day schools	85
Estimated value of sites, buildings, and other school property	$2,360,017
Average duration of day schools, in days	178
Average number of evening school sessions	64

TEACHERS AND THEIR PAY.

Number of teachers employed in public day schools: Men, 195; women, 861	1,056
Number of teachers employed in evening schools: Men, 83; women, 109.	192
Total number of teachers employed	1,248
Number necessary to supply the schools	985
Average salary of men per month in day schools	$85 18
Average salary of women per month in day schools	46 17
Average salary of men per evening in evening schools	1 56
Average salary of women per evening in evening schools	1 06

INCOME AND EXPENDITURE.

Receipts.

From State tax	70,402 50
From local tax	614,382 57
Total from taxation	684,785 07
From interest on permanent fund, including rents of school lands	22,092 50
From other funds, individuals, and corporations	10,286 13
From other sources	44,633 22
Total	761,796 92

Expenditures.

For sites, buildings, and furniture	274,326 41
For libraries and apparatus	1,508 61
For school supervision	11,681 02
For salaries of teachers	383,284 14
Miscellaneous or contingent	77,059 23
For evening schools	16,784 33
Total	764,643 74

SCHOOL FUND.

Amount of available school fund	250,376 37
Amount of permanent school fund	265,142 51
Increase of permanent fund in the school year	1,810 02

*Of these, 146 are reported as also registered in day schools.

SCHOOLS OTHER THAN PUBLIC.

Number of boys attending private schools of grades below high	1,770
Number of girls attending private schools of grades below high	1,870
Total attending private schools of such grades	3,640
Number of boys attending private schools for secondary instruction	2,260
Number of girls attending private schools for secondary instruction	1,600
Total attending private schools of such grade	3,860
Number of men teaching private schools of all grades	100
Number of women teaching private schools of all grades	175

—(From special report for 1875 to the United States Bureau of Education, kindly forwarded by Hon. Thomas B. Stockwell, State commissioner of public schools.)

SCHOOL SYSTEM OF THE STATE.

EDUCATIONAL PROVISIONS OF THE CONSTITUTION.

Article XII, section 1 of the constitution, provides that "it shall be the duty of the general assembly to promote public schools, and to adopt all means which they may deem necessary and proper to secure to the people the advantages and opportunities of education;" section 2, that "the money appropriated by law for the establishment of a permanent fund for the support of public schools shall be securely invested and remain a perpetual fund for that purpose;" section 3, that "all donations for the support of public schools or other educational purposes shall be applied according to the terms prescribed by the donors;" section 4, that "the general assembly shall not divert said money or fund from the aforesaid uses, nor borrow, appropriate, or use the same, or any part thereof, for any other purpose, under any pretence whatsoever."

PROVISIONS OF THE SCHOOL LAWS.

The School Laws of Rhode Island, with Decisions, Remarks, and Forms, for the use of the School Officers of the State, 1873. Printed by order of the general assembly.

OFFICERS OF THE PRESENT SYSTEM.

A board of education, commissioner of public schools, trustees of normal school, school committees and superintendents, district trustees, clerks, collectors, and treasurers are the officers provided for.

POWERS AND DUTIES OF THESE OFFICERS.

Board of education.—The general supervision and control of the public schools of the State are vested in the State board of education, composed of 8 members. The governor and lieutenant-governor are *ex officiis* members, and each county of the State is entitled to 1 member in the board, except Providence, which is entitled to 2. The members are elected by the general assembly for three years. The terms of 2 expire each year, and the vacancies thus caused are filled by the general assembly at their meeting in May. The duties of the board are to elect the commissioner of public schools; to hold quarterly meetings; to consult with reference to the interests of education in the State; to prescribe, and cause to be enforced, all rules and regulations necessary for carrying into effect the laws in relation to public schools; to make an annual report to the general assembly at its adjourned session at Providence upon their doings; and to set forth the state of the schools, and their needs, with such recommendations as to methods of improvement as their judgment may dictate. The governor is the president and the commissioner the secretary of the board. The members serve without compensation beyond expenses.

The commissioner of public schools, elected annually by the board of education and *ex officio* its secretary, is the executive officer in the administration of the school system of the State. His duties are to advise with school officers, teachers, and others in all matters relating to education; to visit and inspect the schools of the State; to deliver addresses in the several towns on subjects relating to the progress of the schools; to arrange and conduct teachers' institutes in various parts of the State, as the different localities may demand; to recommend and secure, as far as is desirable, a uniformity of text books; to assist in the establishment of school libraries and the selection of books for them; to draw orders on the treasurer for school moneys in favor of such towns as comply with the requisitions of the school law; and to make an annual report to the board of education on the last Monday in December of each year, upon the state and condition of the schools and education, with plans and suggestions for their improvement. The commissioner decides all disputes and controversies arising in the administration of the school laws and all appeals from any decision of school committees, district meetings, or trustees. If requested, he shall lay a statement of the facts of the case before one of the justices of the supreme court, whose decision shall be final.

Trustees of normal school, composed of the board of education and the commissioner of public schools, have the control, management, and general supervision of the normal school; examine applicants for positions in the public schools, and give certificates to such as are found qualified. The commissioner makes an annual report to the State auditor of the receipts and expenditures of the school.

School committees, composed of not less than three members, are elected by the towns for terms of three years, one retiring each year. Where the town system prevails the schools are wholly in charge of the school committee. Their duties are to meet for consultation at least four times a year to fix boundaries of school districts; to locate school-houses; to examine and license applicants to teach or revoke the certificates of such teachers as are disapproved; to visit, by one or more of their number, every public school in the town, at least twice during each term, once within two weeks of its opening and once within two weeks of its close; to make rules for the attendance and classification of pupils, for the introduction of text books and works of reference, and for the instruction, government, and discipline of the schools; to prescribe the studies to be pursued therein; and to draw all orders for the payment of the school expenses. They are at all times subject to the supervision of the commissioner. In towns under the district system, the trustees have the superintendence of the district school property and the contracts with teachers, while the school committee exercise all other authority over the schools.

School superintendents, elected by the voters of the towns, or, upon their failure to do so, by the school committees, perform such duties and exercise such powers as may be assigned to them by the school committees. Their compensation is fixed by the towns.

District trustees—either one or three for each school district, as the district may decide—are annually elected by the voters of the district. They receive no compensation, unless the district vote to levy a special tax for that purpose. They have the custody of the school-houses and other district property, and the employment of teachers; they provide school-rooms and fuel; visit the schools twice each term, and notify the committee or superintendent of the time of opening and closing the school. They are required to make returns to the school committee in manner and form prescribed by them, or by the commissioner, or by law.

District clerks.—These officers, one for each district, like the two following, are elected by the voters of the districts for a term of one year or until their successors are appointed; keep record of all meetings of the district, and a description of the boundaries of the school districts.

District treasurers.—Their duties are to keep the districts' school money, if they have any; pay it out to order; keep proper accounts of it, and exhibit them to the trustees or districts, when required.

District collectors collect the taxes levied by their respective districts.

THE SCHOOLS.

The State appropriates annually $90,000 for the support of public schools; $63,000 to the several towns in proportion to the number of children therein under the age of 15 years, according to the last census; and $27,000, according to the number of school districts in each town. The $90,000 appropriated by the State is called teachers' money, and can be used for no other purpose than the payment of teachers' wages. No town may receive any part of such State appropriation, unless it appropriate or raise by tax, on or before the 1st day of July, for the support of public schools, an amount equal to what it is entitled to from the State.

Every district must maintain a school, and if any district fail for seven months to open one, the town committee may establish it and employ a teacher. It is the duty of school trustees to employ one or more teachers for every fifty scholars. The school committee grades the schools and prescribes the studies to be pursued therein. Two or more districts may unite to maintain a school for older children.

No minor under 15 years may, on pain of $20, be employed in any manufacturing establishment, unless he has attended school at least three months during the preceding year, nor may any such minor be employed for more than nine months in any one calendar year. Towns may enact truant laws, but the offenders must be confined in some institution of instruction, not in prison.

The normal school is open, free of tuition, to all applicants from the State who pass the required examination and signify their intention to teach in the public schools at least one year.

An appropriation of $200 is annually made to support a school for the children of Indians in Charlestown, provided they keep their school-house in a suitable condition.

The sum of $3,000 is also annually appropriated for the education of the indigent blind of the State at South Boston, Mass.; for the education of the indigent deaf-mutes of the State at the American Asylum, at Hartford, Conn., and for the education of idiot and imbecile persons of the State, at institutions within or without the State for the education and improvement of such idiots and imbeciles.

SCHOOL FUNDS.

The permanent school fund of the State, amounting now to $265,142.51, including a small amount not at present available, is kept invested in bank stocks within the State, and increased annually by the proceeds of auctioneers' duties and by school moneys forfeited by towns through neglect or violation of legal provisions in respect to them. The income only of this fund may be appropriated to public schools.

The annual fund for distribution among the schools, arising from State and local taxes, from interest on permanent fund, and from other sources, amounts at present to about $762,000.

ELEMENTARY INSTRUCTION.

NON-ATTENDANCE.

According to the State census taken in June, 1875, there were, at that time, 53,316 children in the State between the ages of 5 and 15 years. The school enrolment of 38,554 includes some under 5 and over 15 years, so that it is impossible to know exactly how many between those ages were enrolled. But, taking the census returns alone as the basis of calculation, and making a small allowance from the number reported as attending school (31,899) for those outside the limits of school age, it appears that about 14,000, or 26 per cent., of the children of legal school age have not had the value of one month's schooling during the year; for, by the census estimate, no one was credited with having attended unless he had been present at least one month. It further appears that at least 8,000 of these, or nearly 15 per cent., were not in school at all, and that about 6,000 children who attempted to go to school did not attend for the space of one month. It should be understood, also, that in the number of those reported as attending school are included all who were members of any school, whether public, private, or parochial.

A closer inspection of the census returns reveals the fact that this neglect of school privileges is greatest in the large centers of population, and especially in those localities where cotton and woolen manufactures are the chief industry. The State commissioner found, in every community visited by him where there was any branch of industry that could profitably employ child labor, the tendency of the working classes was to put the child to work at the earliest moment and to keep him there as continuously as possible. If employment cannot be had and there is nothing else to be done, then he may attend school; but at the first opportunity for entering the mill he is withdrawn, no matter how well he may have succeeded in his school work or how deeply interested he may have become in the new life opened to him.

In view of such facts and as the only means of bringing the cupidity of parents to a practical recognition of the rights of the child and of society in this matter, the State commissioner and the board of education unite in recommending the enactment by the legislature of a law enforcing the attendance at school of all children of legal school age. They also recommend, in order to assist in the enforcement of such law, that provision be made for taking an annual State census of children of school age, the establishment of an industrial school for the purpose of furnishing an education to those children who either have no parents or responsible protector, or, having such, are by them deprived of their rights. An amendment of the truant law is another measure urged by the commissioner and the board. The present truant law is simply a permissive one, giving to the several towns the power to make such provisions as they deem best.—(Report of Hon. Thomas Stockwell, State commissioner of public schools, 1875, pp. 64–72.)

ATTENDANCE.

Turning from a consideration of the question of non-attendance to that of actual attendance, some encouragement is met with. With an enrolment ostensibly less than that of the previous year, though really a little larger, owing to the subtraction from the whole number this year of the re-enrolments which had not been possible before, it is found that the average attendance has increased 1,729, or that the number of months' attendance of all the pupils has increased 16,052. This shows a greater permanency in the character of the attendance, proving that those pupils who are in the schools appreciate them, or their parents for them.—(Report, for 1875, of commissioner of public schools, pp. 71, 72.)

INCREASE IN TEACHERS' WAGES.

The increase in current and permanent expenditure over that reported for last year is $73,792.21, which is nearly equally divided between the two classes. The increase in current expenditures is mainly caused by an increase in the number of teachers employed, in the greater number of months' service performed by male teachers, and by a general increase in the pay of both male and female teachers. This increase in average wages of teachers, especially at a time when almost every interest is depressed, is regarded as very encouraging. The larger increase has been in the pay of women, which results from the raising of the wages of teachers in the lower grades. The com-

missioner has long regarded as necessary a change in the common method of determining the salaries of teachers according to the grade of the school, without reference to the ability of the teacher. It appears, too, that the increase in teachers' wages has been almost wholly in the smaller towns of the State, indicating that they are striving to secure better talent for their schools.—(Report of commissioner, 1875, pp. 79, 80.)

EVENING SCHOOLS.

The commissioner reports a decrease both in the number of evening schools kept and in the attendance upon them. The percentage of attendance on the number enrolled, however, is a trifle larger for the present year. This branch of the work presents some difficult and discouraging features. The school is hardly yet recognized as a permanent part of the system, and must always be on the defensive against those who doubt its efficiency and utility; the material of the school is of a fluctuating character and is liable to prove turbulent; and, being but transient in existence, it is rarely provided with suitable accommodations. In spite of all these obstacles, however, the public sentiment in favor of the evening school is constantly gaining strength in all places where the work has been carried on with any degree of enthusiasm for any length of time. The commissioner deems the evening school one of the most important agencies in securing the education of the masses, even allowing that many of those who attend fail to appreciate their advantages and often abuse their privileges; for there are many instances in which young men and women have through its aid advanced rapidly from the lowest plane of ignorance and servile labor to the higher levels of knowledge and self control; and were each school to afford but one such illustration each winter, it would, he claims, fully justify its existence, for thereby have been saved to the community a power and an influence of inestimable value, that otherwise had been lost.—(Report of commissioner, 1875, pp. 84, 85.)

DISTRICT VS. TOWN SYSTEM.

The relative merits of the district and town systems of school management are discussed at considerable length by Commissioner Stockwell, who says, in respect to the former: "Among the causes to which may be ascribed many of the failures of our present educational efforts no one is, as it appears to me, more powerful than the so-called district system. It serves but few interests; it accomplishes most where it should do the least, and it oftener proves a hinderance than a help. In short, for the good wrought by it we shall look long, and often in vain, while the evils following therefrom are so numerous as to raise the query whether it were possible to outweigh them with any advantages."

* * * "It concentrates local interest not on the management and character of the schools, but on the finances; it is the fruitful source of innumerable local quarrels and jealousies which develop in the life of the school and prove often an insurmountable obstacle to its success. It imposes a long round of duties, sometimes tedious and perplexing, upon officers frequently wholly unqualified, whose influence, therefore, must be always for the worse. * * * By imposing the duty of contracting with the teacher and providing a place for the school upon one officer, and that of determining as to the qualifications of said officer and the suitableness of the school-house upon another officer or body of officers, a division not only of labor is secured, but of authority, which is fatal to its proper exercise."

While a change in the system is strongly advised, a gradual one, according to the plan adopted in Massachusetts and Connecticut, is deemed the more judicious. The commissioner, therefore, recommends the passage by the legislature of such an act as shall grant to every town the right, by vote of the citizens thereof in legal town meeting, to abolish its districts and make such changes and transfers of property as shall be needful.—(Report of commissioner, 1875, pp. 92, 93, 97.)

SCHOOL SUPERVISION.

The office of school committee, it is believed, did not exist in this or, in fact, in any New England State before the year 1826. Prior to that, persons were appointed in some of the towns of some of the States, but the choice was optional under one name or another. This board of town supervision now exists in all the New England States, and exercises a general charge and superintendence over all the public schools in the town. The law vests a plenary authority in the committee to arrange, classify, and distribute pupils as they think best adapted to their general proficiency and welfare.

The one office of highest value to the school system is that of city and town superintendents. While the other States of New England have much else to be proud of educationally, it is to the honor of Providence that over her schools the first city superintendent in New England was appointed. Hon. Nathan Bishop, afterward the first superintendent of the schools of Boston, was the first to hold this office in Providence in the year 1838. Springfield, Mass., followed the example of Providence about six months later by the appointment of Samuel S. Greene to the new trust, who succeeded Mr. Bishop as superintendent at Providence, after his removal to Boston.

To-day there is scarcely a village of 1,000 children that has not its salaried superintendent.

One great fault of the present general supervision is said to be that it is intrusted to too many individuals, so that direct, energetic, and systematic action is, to a great extent, lost. There are in Rhode Island 2,216 school officers to look after the education of 40,000 children. As might be expected, with such armies of supervisors, very little supervision is accomplished, and that of a comparatively inferior quality.

Of the value of good State superintendence Commissioner Stockwell has given evidence in the fact that he has visited during the year 165 schools situated in 20 different towns, and they in all parts of the State. In ten of these towns he visited every school, paying special attention to the smallest and most inaccessible, that he might encourage and inspire them.—(Report of Mr. Bicknell, 1874, pp. 48–51, and of Mr. Stockwell, 1875, p. 101.)

DRAWING.

Attention is called to a branch of instruction which, it is believed, demands an important place in the course of studies in the common schools, at once from its value to various industries of the State and also from its education of the mental faculties. Like mathematics or language, the acquisition of drawing has an influence upon the easier reception of all knowledge, and in that sense has a relation to every sphere of labor and every field of thought. The population of no other State is so generally engaged in manufactures as is that of Rhode Island. These manufactures are varied in kind and quality and demand skill, not only in those who take the general charge, but also in the workmen. It is generally conceded, and all Europe is acting upon the belief, that a knowledge of drawing, since it deals with the representation of forms, which all objects possess, is the most essential element of skilled labor. Moreover, of all the things that Rhode Island manufactures, there is scarcely one that will not command a better price for being beautiful. And when it is considered that nearly everything is now made from a drawing; that a beautiful object cannot be made by a person lacking in taste; that one cannot work from a working drawing without previous instruction, unless he works under the direct supervision of a second person, it appears evident that a knowledge of drawing will add, on an average, at least one-third to the daily wages of the workman and increase the profits of him who employs. It is believed that with suitable drawing books, containing good copies with full explanatory text, the present regular teachers can accomplish creditable work in the instruction of the pupils in this branch. The school superintendents of the State, at their meeting in December, 1874, recommended the introduction into the public schools of some system of industrial drawing.—(Report, 1874, pp. 57–59, 68, 69, 78.)

FREE PUBLIC LIBRARIES.

Good results have already appeared from the act passed in January, 1875, in aid of free public libraries. Seven libraries have received aid, amounting in the aggregate to $550, at date of the report of the board of education. In some instances, libraries already existing under the control of close corporations were made free: in others, where, from lack of means to sustain the enterprise, it had failed, the old library was revived, and a new organization effected; while in still other localities attempts are being made to organize new institutions.—(Report for 1875, pp. 22, 23.)

CITY SCHOOL SYSTEMS.

NEWPORT.

Officers.—There is here a school committee consisting of 12 members, elected for terms of three years, part going out each year, and a city superintendent, appointed by the school committee.

Statistics.—Number of pupils attending public schools: boys, 1,124; girls, 944; total, 2,068; attending other schools, 592; not in school during the year, 142. Number of day schools, 33; evening schools, 2. Number of teachers in the school department, 50. Average number of scholars to each teacher in the day schools, including the high school, 49; not including the high school, 54; average to each teacher in the evening schools, 27.

Notes.—Attendance at the schools during the year covered by the report (1874–'75) increased largely upon that of the previous year, there being registered in the day schools 1,769, an increase of 294 in enrolment, with an increase of 300 in the average attendance. Great attention was paid to regularity of attendance; tardiness diminished more than 60 per cent., and many scholars present a record of being neither absent nor tardy during the year.

The attendance upon the evening schools was not so large as during the year previous. The falling off is attributed to the hard times, some not being able to furnish books, slates, and other necessaries. About 60, it is believed, absented themselves on this account, and it is proposed by the superintendent that next year readers and slates be

loaned to those unable to furnish them. Many expressions of gratitude were heard during the winter for the opportunity afforded by these schools. One young man volunteered the statement that the schooling had benefited him more than the value of $100 in the study and practice of writing alone.

A growing interest in the subject of drawing is reported, also considerable advancement in the study of music.

The school committee, while bearing testimony to the fidelity given to instruction in the primary, intermediate, and grammar grades, commend particularly the Rogers High School. The attendance at this school increased from 66 in 1873-'74 to 100 in 1874-'75, an increase of 52 per cent.—(Report of school committee, 1874-'75.)

PROVIDENCE.

Officers.—Here, as in Newport, there is a school committee of 6 from each of the ten wards, elected for terms of three years, one-third going out of office each year, with the mayor, president of common council, and chairman of committee on education as *ex officiis* members, and a city superintendent, appointed by the school committee.

Statistics.—Whole number of pupils admitted for the year, 12,507, exclusive of 2,228 enrolled in evening schools and 1,100 in vacation schools. Of this number 10,928 were registered in the last term, 376 in the high school, 2,978 in 11 grammar schools, 2,680 in 33 intermediate, and 4,894 in 37 primary schools.

The superintendent in his quarterly report dated February, 1875, says that, notwithstanding the adverse influences of severe weather and a large amount of sickness, the schools were never in a better condition than, with a few exceptions, they were at that time. He believes that, taken as a whole, they will compare favorably with the very best schools of similar grades, public or private, in New England or elsewhere. But few, he says, are aware of the actual amount of labor that is being performed by the best teachers. In the high school and in most of the grammar schools almost as many hours are spent each day out of the school-room in correcting written examination papers and compositions and in preparing themselves for their work as are spent in it. The results of this extra labor are made apparent to those who examine carefully into the working of the school system.

The evening schools were unusually successful, having a larger and more regular attendance than ever before. The number registered at the 7 schools was 1,876, (besides 352 in the Polytechnic Evening School,) of whom 1,264 were young men and 612 young women, the average attendance being 880. Compared with the statement of the previous year, these figures show a large increase in the enrolment and a gain of over 4 per cent. in the average attendance. The general appearance and deportment of the scholars were very satisfactory. The writing books show neatness and painstaking on the part of the pupils and speak well for the system of teaching adopted.

The progress made in music since its introduction into the schools in 1846 has been constant and satisfactory.

Drawing has occupied a moderate portion of time in the grammar schools without interfering with other studies, and very creditable specimens of skill have been produced. In free hand map drawing it is believed that the schools are not surpassed by any in the country.

Sewing is still occupying its accustomed place in the schools, with great advantage to the girls receiving instruction, and without detriment to their usual studies.

The Polytechnic School maintained the high rank gained by its predecessor of the previous year. The principal gave instruction in the practical mathematical branches to classes of very full membership. The classes in mechanical and architectural drawing were well attended throughout the winter. The class of Germans learning English proved, as in previous winters, a decided success.

Six vacation schools were held during a session of about six weeks and were attended by about 1,100 children. Besides the usual course of study, a large amount of oral instruction, not furnished by the school-books, was given in respect to the names and uses of the various products of agriculture and of manufactures, and also those which constitute the main features of domestic and foreign commerce.—(Report of school committee, 1875.)

The joint committee of 5 appointed by the city council to investigate the subject of the public schools have decided upon the main points of the inquiry they propose making. Some of these are as to "the massing of large numbers of children in one school; the advisability of having the details of the system more generally understood by members of the city council and the school committee; the possible reduction of the number of the school committee, (the present number being regarded as too unwieldy for the proper supervision of the schools,) the necessity for uniformity in the system of instruction, of superseding the less capable by better educated teachers, of giving more attention to the care of school property, and to the purchase and dissemination of text books.—(New-England Journal of Education, October 9, p. 167.)

THE CITIES AND TOWNS IN GENERAL.

Apparatus.—In many of the reports of superintendents and school committees complaint is made of the lack of such needful apparatus as blackboards, erasers, wall maps, globes, dictionaries, and proper text books. The marked exceptions are in Woonsocket, where many deficiencies of this kind have been supplied within the past year, and in the Rogers High School, Newport, which seems to be unusually well equipped.

Discipline.—On this point there are many exceedingly valuable observations in the reports of superintendents, appended to the State report, especially on the value of judicious appeals to the honor of pupils, on the importance of steadily cultivating in them a high sense of moral propriety, on the good effect of exercising kindness in preference to coercion, on the need of beginning with a firm yet kind hold of the reins at the very opening of the school, and on the indispensability of a thorough self-control as a first requisite to control of others.

Co-education of the sexes.—The chairman of the school committee in Newport says: "Those who desire the most elevated type of manhood and womanhood generally believe that the truest method of development with children is to begin in the earliest schools under a system of co-education. This has been faithfully regarded in this city since 1865; so successfully, too, that not by intimation or argument has a return to the former system of separate schools for the sexes been considered in our board. After a most scrutinizing inquiry, we are assured that rudeness has diminished; that politeness has increased; that decision of character, self-reliance, good manners, and mutual willingness to better obey the rules of school are some of the results of our system of co-education. Nor has the virtue or happiness of either sex appeared to be endangered. In fact, in no single instance during the past year has it been necessary to offer reproof for the slightest indelicacy, in word or act, between the sexes."

Evening schools.—These have been held, in most instances with encouraging results, at Bristol, Burrillville, Cumberland, East Greenwich, East Providence, Johnston, Newport, North Providence, Pawtucket, Providence, Smithfield, Warren, and Woonsocket. In some of these places several schools were maintained—for boys, for girls, for pupils in different stages of advancement—there being at Bristol two departments, for the sexes; at Newport, four grades; at Providence, seven schools and a special polytechnic school; and at East Greenwich, one for Swedes learning our language.

The public schools not godless.—In answer to the charge that the schools, as now conducted, are "godless" institutions, from which children should be withdrawn, the school committee of Providence write, in words applicable to the whole system of public instruction: "That our schools are not, like parochial schools, denominational is true. They do not teach dogmatic theology. They do not meddle with nor sit in judgment on the various beliefs. In what peculiar form of faith a child should be brought up they leave to parents and the church. But in no sense are they godless in character. Every one familiar with their origin knows that they were founded on the recognition of the superintending providence of God, the duties to Him and the laws He has ordained." It is shown that the original regulations for them provide that, "good morals being a matter of the highest consequence," the youth in them "are strictly enjoined to avoid idleness and profanity, falsehood and deceitfulness, and every other wicked and disgraceful practice, and to conduct themselves in a sober, orderly, and decent manner, both in and out of school;" while teachers are enjoined to "endeavor to impress the minds of their pupils with a sense of the being and providence of God, and the obligation they are under to love and reverence Him; their duty to their parents and masters; the beauty and excellence of truth, justice, and mutual love; tenderness to brute creatures; the happy tendency of self government and obedience to the dictates of reason and religion; the observance of the Sabbath as a sacred institution; the duty which they owe to their country and the necessity of a strict obedience to its laws; and that they caution them against the prevailing vices."—(Reports for 1874–'75.)

TRAINING OF TEACHERS.

STATE NORMAL SCHOOL.

This normal school, while fitting teachers for schools of higher grade, especially aims to prepare for teaching schools of the primary, intermediate, and grammar grades. It is a State institution, and, it is believed, can be of more service to the cause of education by providing excellent teachers for the elementary schools than in any other way, as in these the great majority of pupils will always be found.

During the year 1875, while the course of study was not essentially changed, the requisites for graduation were increased, so that the graduating class of that year numbered less than that of the year previous. The year was one of marked success, not only as regards the number of pupils attending, but in the earnestness of the pupils and in the quality of the work done. The number of pupils who were in the school during the year was 159, of whom 26 had previously taught.—(State report for 1875, pp. 41–46.)

TEACHERS' INSTITUTES.

Aside from the annual meeting of the Rhode Island Institute of Instruction, only three teachers' institutes were held during the year under the direction of the State commissioner. Arrangements were partially made for two others, but, owing to peculiar local causes, they were obliged to be temporarily postponed. At each of the institutes the attendance of the teachers of the immediate vicinity was very good, while the several communities evinced a deep interest in the work by their cordial reception of the institute, and also by a very general attendance on its sessions. The State commissioner, who was present at each institute, endeavored to confine the work as closely as possible to the real wants of the locality, and so interspersed the various teaching exercises with work by himself as to give the requisite variety and completeness.

An association of the teachers of public schools in Richmond and Charlestown was formed in the winter of 1874-'75, with a view to mutual improvement, and seems to have been attended with much enthusiasm.

Four teachers' institutes have also been held under the direction of the school committee or superintendent, or both, in Hopkinton, North Smithfield, and Richmond with apparently excellent results, securing better acquaintance with each other on the part of teachers, a greater unity and sympathy with one another in school work, and a new energy and life in the prosecution of it.—(Report for 1875, pp. 98–100, and appendix, pp. 87, 88.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

In 13 cities and towns of the State there exists some provision for secondary instruction in high schools or schools of equal grade, either public or private.

At the Rogers High School, Newport, the number of pupils has been 100, more by 52 per cent. than that of last year. This increase has been attended by no change in the size of the corps of instruction. The number of classes was so large that it was found necessary, at the opening of the fall term, to divide the sessions into six recitation periods instead of five, thus materially shortening the time assigned to each class, a change that was made with great reluctance, but that seemed an unavoidable evil. It has been felt very seriously in the classical and scientific recitations.

A fine telescope was presented to the school by Mrs. Henry B. Humphrey at the opening of the fall term, forming a very valuable addition to the apparatus. The department of science is well equipped; the laboratory well stocked with chemicals and glassware, and a want in the classical department has been met by the purchase of a complete set of Kiepert's wall maps, illustrating ancient geography.

The advantages of the school are available to all persons of the requisite attainments, who, while prevented from taking a complete course, have wished to pursue particular studies. Eleven special students have attended. There is also a disposition, on the part of graduates, to return for the pursuit of special studies. The class which graduated last summer has been represented by one or more of its members during this year, and several of the present senior class have expressed an intention to take a special course after graduation.—(Report of F. W. Tilton, head master, in State report for 1875, pp. 36, 99.)

In 1838 an ordinance was passed by the city council of Providence establishing a high school as a part of the system of public education, a measure that had required ten years of industrious efforts to secure. In this school were to be taught "all the branches necessary to a useful mercantile and classical education." During the thirty-two years of its existence it has educated upward of 4,500 pupils. The school is a crowning feature of the public educational system; it adds completeness to the course of instruction pursued in the primary, intermediate, and grammar departments, and brings the pupil to the very door of the university. Here he can stop, with as thorough a scientific and classical education as could have been obtained at the commencement of the present century at the best college in the land.—(School committee in State report for 1875, pp. 99, 100.) The superintendent makes the admissions for 1875, 376.

It is well said of this school by the committee that it is a help to schools of lower grade. To the pupils of such it becomes an objective point, inspiring a desire for a more complete education than the grade below can furnish, and inducing efforts to secure qualification for the higher work of the high school.

Two girls, graduates of the classical department of this school, were unconditionally admitted to the Boston University at the September term, (1875,) while two entered Wellesley College. Another has been a year in Michigan University.—(New-England Journal of Education, October, p. 166.)

At the Pawtucket High School, the enrolment of pupils was 272 and the attendance 93 per cent. Fifty-two pupils, or nearly one-fifth, were perfect in attendance, and 7 were absent only half a day.—(New-England Journal of Education, February 27, p. 107.)

The Woonsocket High School, which had gotten into fine working order, with 4 classes of high grade, had its house burned in October, 1875; loss estimated at about $20,000; insurance, $7,000. There was a large geological and mineral cabinet, the value of which cannot be estimated in figures.—(Report for 1875, p. 101, and New-England Journal of Education, October 23, p. 190.)

OTHER SECONDARY SCHOOLS.

It was said in the New-England Journal of Education, April 10, p. 178, that the University Grammar School at Providence was never doing a better work than at present. Merrick Lyon, LL.D., who has had charge of the classical department for 30 years past, has acquired a wide reputation for scholarship and culture. Dr. Emory Lyon, at the head of the English and scientific department, maintains an equally high standard of scholarship.

Messrs. Mowry & Goff's English and classical school at Providence has lately had completed for it a new, commodious, and elegant building, which was dedicated in May, 1875. While nothing has been spent upon mere external decoration, every effort has been made to leave nothing undone that could contribute to the well being of the pupils or to the power and influence of the teacher. Especial care has been taken to provide ample ventilation and light.

Three academies and seminaries report their statistics for 1875 to this Office as follows: Number of teachers, 18; pupils, 269, of whom 130 were pursuing a classical course, 46 were in modern languages, and 32 were preparing for a classical course in college. Drawing was taught in all and vocal music in one. One reports the possession of a chemical laboratory, 1 philosophical apparatus, and 2 libraries of 500 and 3,000 volumes, respectively.

PREPARATORY SCHOOLS.

Four schools for the preparation of students for college report a total of 33 teachers and 465 pupils, of whom 60 were preparing for a classical and 24 for a scientific course. Three of these schools report the possession of chemical laboratories and philosophical apparatus, 1 a gymnasium, and 3 have libraries numbering, respectively, 400, 600, and 1,000 volumes.

BUSINESS COLLEGES.

Two business colleges report a total of 19 teachers and 605 pupils, of whom 405 attended the day and 200 the evening sessions. Both have libraries, numbering, respectively, 120 and 3,000 volumes. Phonography is studied in addition to the business and common English branches.

SUPERIOR INSTRUCTION.

BROWN UNIVERSITY.

The catalogue of the university for 1875–'76 gives the total attendance of students during the year as 255, of whom 58 were seniors, 57 juniors, 76 sophomores, and 64 freshmen. The degree of bachelor of arts was conferred in 1875 on 39; that of A. M. in course upon 27; the honorary A. M. on 5; and that of LL. D. and D. D., each, on 2.

After the close of the academic year of 1877, it is proposed to raise the requirements for admission to the university in Latin, Greek, and mathematics. Candidates will be examined in 7 books of the Anabasis, or in 5 of the Anabasis and 2 of Homer's Odyssey; in 5 books of Cæsar's Commentaries, and in 8 orations of Cicero; and in solid as well as plain geometry. It has also been decided that, after the commencement of 1876, the courses of study for candidates for the degree of bachelor of philosophy are to be extended through four years instead of three. There are at present two parallel courses of instruction for this degree, each lasting three years, the one including classical studies, the other substituting for these a larger amount of scientific studies. Departments of practical science, including agriculture and the mechanic arts, have been established in the university for the benefit of students who wish to prepare themselves for such pursuits as require especially the knowledge of mathematical and of physical science, and their applications to the industrial arts. These studies may be pursued in connection with the regular scientific and classical studies of the university or they may be taken as a select course, either partially or in full, the students, upon leaving, being entitled to a certificate stating the time of their university residence and the amount of their acquisitions.

The university library contains 45,000 well bound and carefully selected volumes, the greater part of which have been procured within the last 30 years, with special reference to the wants of professors and students and of other persons engaged in literary and scientific research. Besides being well supplied with works illustrating the various courses of college study, it has a large number of collections pertaining to civil and ecclesiastical history, antiquities, literature, and the Greek and Latin classics. It is especially rich in bibliography and patristics, and in the pamphlet literature of New

England, and has a large number of works upon architecture.—(University catalogue, 1875–'76.)

At a meeting of the Philadelphia Alumni Association of Brown University, held January 1, 1875, it was resolved to found a scholarship of $1,500, to be known as the Philadelphia alumni scholarship. The conditions of the gift are that the scholarship be not confined to candidates for any one calling or to members of any one denomination, but that it be open to competition and conferred on the basis of high attainments, mental and moral. It is to be limited to the members of the two higher classes.—(New-England Journal of Education, March 6, 1875, p. 119.)

SPECIAL INSTRUCTION.

REFORM SCHOOL, PROVIDENCE.

A report of the trustees submitted in March, 1875, shows the school to be in good condition; that both boys and girls are well cared for and provided with good facilities for acquiring a common school education, and developing habits of neatness, order, and industry. Number of inmates: boys, 162; girls, 35; total, 197. Out in situations, sentences unexpired: boys, 21; girls, 6; total, 27; making the number on the books 224.—(New-England Journal of Education, March 6, 1875, p. 118.)

EDUCATIONAL CONVENTIONS.

RHODE ISLAND INSTITUTE OF INSTRUCTION.

The institute held its thirtieth annual session at Providence in January, 1875, a large number of enthusiastic teachers from all parts of the State being present, as well as many from the bordering towns of Massachusetts. The morning of the first day was devoted to a proceeding which, it is believed, originated with this association and is peculiar to it: the visiting of the schools of the place by teachers from other sections; a thing which has proved so valuable in its results that its future continuance is well assured. In the afternoon, the high school department of the institute assembled in the high school building, the grammar and primary departments met together at the normal school hall. Professor Blake, of Brown University, read a paper on "The present condition of optical science, and the methods of teaching it," which was followed by one from Professor Davis, of the Worcester High School, upon the study of English literature, a paper which had attracted considerable notice in Massachusetts associations and was well received here. The grammar and primary departments, meantime, listened to exercises in teaching conducted by Mr. B. W. Hood, principal of the department of vocal music in the city schools, and A. J. Manchester, principal of Thayer Grammar School. Mr. Thayer illustrated his method of teaching music by drilling a grammar school class upon a piece of music which they had never sung before, showing by it satisfactorily that pupils in the public schools can, with a very few minutes of daily practice, learn to sing ordinary music almost at sight. Mr. Manches-

ter illustrated, by a class from his school, a new method of vocal drill, which was so far appreciated by the educators present that a resolution was passed expressing the hope that he would put his material into a permanent book form, convenient for class use. In the evening, the entire institute listened to an address by Rev. Phillips Brooks, of Boston, on "Milton as an educator." The exercises of the following day were held in Music Hall, before the entire institute and many citizens of the place. The principal feature of the morning was a paper by Mr. William T. Peck, of the Providence High School, upon "The educational system of Germany." The New-England Journal of Education came in for its share of attention, and its claims were earnestly advocated by many present, after which a very large list of subscriptions was obtained. Some very interesting readings, and also an exercise in teaching reading, were given by Professor Hibbard, of the Wesleyan University, Middletown, Conn.; and the discussion of industrial art as related to public schools was opened by a paper upon the subject by Frederick Grinnell, esq., president of the Providence Steam and Gas Pipe Company. The matter was presented from a business point of view chiefly, the importance of elementary drawing being especially urged, after which remarks were made by his honor the mayor and the president of the school committee and letters were read from others who were absent, all emphasizing the benefits to be derived from teaching this branch in the schools.

The Friday evening gathering of the institute has come to be the great educational banquet of the State. If Music Hall, seating over 2,000 people, were twice as large, it would apparently be always filled on this occasion. With one meeting a year of this kind it is impossible for the cause of education to languish in the State. Here is heard the best speaking on education which the State, and indeed the country, affords. On the present occasion addresses were received from his excellency Governor Howard, President Robinson, and others; also readings from Professors Hibbard and Pond, and vocal solos by Mr. Elsfree.

On Saturday, resolutions, among others of respect to the memory of Hon. John L. Kingsbury, the first president and life long friend of the institute, were passed, and remarks were made by several expressing grateful remembrance of his life as a teacher and citizen. After the election of officers, a paper was presented by J. C. Greenough, principal of the normal school, on "The proper studies for public schools and their relative importance," urging that the studies should be such as would develop the pupil's powers and fit him for active life, whatever his employment.—(New-England Journal of Education, January 22, p. 42.)

LIST OF SCHOOL OFFICIALS IN RHODE ISLAND.

Hon. THOMAS B. STOCKWELL, *State commissioner of public schools, Providence, R. I.*

STATE BOARD OF EDUCATION AND TRUSTEES OF STATE NORMAL SCHOOL.

[Elected by the general assembly, pursuant to chapter 44 of the public laws.]

Name.	Post-office.
His excellency Henry Lippitt, governor, *ex officio* president	Providence.
Henry T. Sisson, lieutenant-governor, *ex officio*	Little Compton.
Charles H. Fisher, M. D., term expires June, 1878	North Scituate.
Rev. George L. Locke, term expires June, 1878	Bristol.
Rev. Daniel Leach, term expires June, 1877	Providence.
Ezra K. Parker, term expires June, 1877	Summit.
Samuel H. Cross, term expires June, 1876	Westerly.
Thomas H. Clarke, term expires June, 1876	Newport.
Thomas B. Stockwell, commissioner of public schools, *ex officio* secretary	Providence.

Quarterly meeting of the board of education the first weeks of March, June, September, and December of each year.

SUPERINTENDENTS OF SCHOOLS 1875–'76.

Town.	Superintendent.	Post-office.	Salary.
Providence	Rev. Daniel Leach	Providence	$2,500 00

Per capita of pupils enrolled	3 86

SCHOOL FUND.

Amount of available school fund	439,542 75

—(From report kindly forwarded to the United States Bureau of Education, December 3, 1875, by Hon. J. K. Jillson, State superintendent of education.)

SCHOOL SYSTEM OF THE STATE.

EDUCATIONAL PROVISIONS OF THE CONSTITUTION.

The constitution of this State, article X, section 1, provides that "the supervision of public instruction shall be vested in a State superintendent of education, who shall be elected at the same time and in same manner as other State officers." Section 2, that "there shall be elected, biennially, in each county one school commissioner, said commissioners to constitute a State board of education, of which the State superintendent shall be chairman." Section 3, that "the general assembly shall, as soon as practicable, provide for a liberal and uniform system of free public schools." Section 4, that "the general assembly shall provide for the compulsory attendance, at some public or private school, of all children between the ages of 6 and 16, not physically or mentally disabled, for a term equivalent to at least twenty-four months, provided no such law shall be passed until a thorough system of public schools has been organized." Section 5, "the general assembly shall levy a tax for the support of the schools on all taxable property and a *per capita* tax of $1 on every male person over 21 years of age." Sections 6, 7, 8, and 9 provide for "the establishment of a State normal school, the education of the deaf, dumb, and blind, a State reform school for juvenile offenders, and the organization of an agricultural college in connection with the State university." Section 10, that "all the public schools, colleges, and universities, whether supported in whole or in part by the public funds, shall be free and open to all the children and youths of the State without regard to race or color."

PROVISIONS OF THE SCHOOL LAWS.

From "An act to amend an act entitled 'An act to establish and maintain a system of free schools for the State of South Carolina,' approved March 6, 1871," with amendments to date.

OFFICERS OF THE PRESENT SYSTEM.

The commission on text books, State board of education, State superintendent of education, school commissioners, boards of county examiners, and school trustees.

POWERS AND DUTIES OF THESE OFFICERS.

The commission on text books—composed of the governor, *ex officio* chairman; the chairmen of the committees on education of the senate and house of representatives, and one member from each branch of the general assembly—have the duty of deciding upon, and furnishing to the board of education, a list of text books to be used in the common and public schools throughout the State.

The State board of education—composed of the several county school commissioners and the State superintendent, who is *ex officio* chairman—are the trustees of all donations to the State for educational purposes, and are to pay into the treasury for safe keeping and investment all moneys and incomes from property so received. Their annual meeting is held the first Wednesday in October. The members receive a mileage at the rate of twelve cents per mile going to and returning from the meetings of the board.

The State superintendent of education—elected by the qualified voters of the State for a term of four years—has the general supervision over all the common and public schools, and gives bond in $5,000 for faithful performance of his work. It is his duty to visit every county, inspect the schools, and awaken a favorable interest in education by public addresses and personal communication; to secure a uniformity of text books, and forbid the use of sectarian or partisan books and instruction; to transmit to school commissioners such forms and instructions as may be necessary to aid school officers in making their reports and carrying into full effect the school laws; to see that the school laws are printed and distributed; to collect such school books, apparatus, maps, and charts as can be obtained without expense to the State; to purchase, at an expense not exceeding $50 per annum, rare and valuable works on education, for the benefit of teachers, authors, and others who may desire to consult them; to apportion, on the 1st day of November, or as soon as practicable thereafter, all school moneys to the school districts in proportion to the number of children of school age therein; to draw his warrant on the State treasurer in favor of each county treasurer for the amount apportioned; to examine teachers, and grant certificates, valid for two years. He is required to make a report to the general assembly at each regular session thereof, showing the number of persons in the State between the ages of 6 and 16 years; the number in each county; the number, sex, color, and studies of those attending the public schools; the number, material, and cost of school-houses; the number of county teachers' institutes and where held, together with such plans and suggestions as he may deem proper. His compensation is $1,875 per annum, with an allowance of $900 for his chief clerk.

County school commissioners—one elected by the voters of each county for a term of two years—are to visit every school within their jurisdiction at least three times a term, note the method of teaching in each, and make such recommendations as to defects as they see proper; to encourage the formation of teachers' associations for mutual improvement, and attend their meetings; to deliver a public lecture to the people of each school district of their counties for the purpose of elevating the standard of education and increasing the general interest in the public schools; and to see that in every school under their charge the prescribed studies are taught as far as practicable. They are required, on or before the 1st day of October, each year, to forward to the State superintendent a report containing an abstract of the reports made to them by the various school officers and teachers in their several counties, suggesting such improvements in the school system as they may deem useful, and giving such other information as may be deemed of public interest. On failure to make such report, they forfeit their salary for the last quarter and are liable for damages. Their compensation is twenty-five cents *per capita* upon the school attendance in their counties, not to exceed $1,000 per annum; in Charleston County, $1,200 salary.

Boards of county examiners—a board for each county, composed of the commissioner and two members holding first grade certificates, appointed by him for a term of two years—have the duty of meeting at least twice each year to examine all applicants for the profession of teacher, and to grant to such as are qualified a certificate, valid for one year, setting forth the branches they may be found capable of teaching; no teacher to be employed without such certificate.

District trustees—three in number for each school district, appointed by the county boards of examiners for their respective counties for a term of two years—take the management and control of the local educational interests of their districts and visit

the school at least once every month during the term; select sites, establish schools, employ teachers, and withhold the wages of the same until they make their monthly report as required. They are required every two years to make an enumeration of the children of school age (6-16) within their districts, distinguishing between male and female, white and colored, and furnish a duplicate of the same to the county school commissioner. Each trustee receives 5 cents *per capita* for each child enumerated by him. If trustees, without good cause, fail to make the enumeration, their offices shall be declared vacant and new trustees appointed.

THE SCHOOLS.

There is to be a school in every school district. The school law requires that there shall be taught, as far as practicable, in every public school, orthography, reading, writing, arithmetic, geography, English grammar, history of the United States, the principles of the Constitution and laws of the United States and of this State, and of good behavior. The State furnishes all text books required for the pupils of the public schools. No high schools exist in the State system except at Charleston. The school year is to continue for a period of nine months, commencing and ending as, in the opinion of the county examiners, will best subserve the educational interest of their county; but the county commissioner has the power to limit the school year according to the school fund apportioned to his county. In Columbia and Charleston attendance on some school is compulsory between the ages of 8 and 16.

The board of regents of the State normal school decide upon the number of pupils to be admitted to the school, and these are apportioned among the counties according to their number of representatives in the general assembly, provided that teachers holding second and third grade certificates may be admitted from the State at large. The candidates, if male, must be 15 years of age, and, if female, 14 years of age, to enter the junior class, and proportionately older to enter an advanced class. All applicants for admission must sign a declaration that it is their intention to engage in teaching in the public schools of the State, and must, before appointment, stand successfully a competitive examination with the other applicants from their counties.

A State University and State Agricultural and Mechanical College offer their advantages to properly prepared graduates of the lower schools. A special school for the deaf and dumb and the blind has been suspended.

SCHOOL FUNDS.

The amount of available annual school fund reported December 3, 1875, was $439,542.75. This is derived from a State levy of two mills on the dollar, a State poll tax of $1, imperfectly collected, from local taxes, and from "other sources" not enumerated. It is apportioned to the several counties and school districts on the basis of the number of pupils attending the public schools in them.

There appears to be no permanent school fund, though provision is made in the school law for the creation of one.

ELEMENTARY INSTRUCTION.

ADDITIONAL STATISTICS.

The increase in the scholastic population since 1869 has been 42,085, or upwards of 21 per cent. The increase in school attendance during the year past (1874-'75) was 5,678; in that of white children it was 1,227; colored, 4,451. The increase in the number of teachers employed was 228. Of the teachers employed, 1,876 were white; 979 were colored; 940 held third grade certificates; 1,049, second; and 866, first grade certificates. The schools were in session an average of 4½ months during the year. The number of free common schools in the State in 1874 was 2,353, in 1875 it was 2,580, an increase for the year of 227. There were in 1875, 2,347 school-houses, of which only 701 are owned by school districts; 320 have grounds inclosed; 118 were erected during the year, of which 56 were of log and 62 of frame. The material of those previously erected was as follows: Log, 1,291; frame, 919; brick, 18; stone, 1. There were reported as in good condition, 1,209; 565 were fair, and 455 bad; while the grounds of 307 were inclosed.

The returns received by the superintendent concerning school expenditures for the scholastic year ending June 30, 1875, are not complete. Only partial returns were made as to the cost of school-houses erected.

Thirty-three State certificates of qualification were granted to teachers by the State superintendent's office during the year; of which 13 were to men (5 to white and 8 to colored men) and 20 were to women, (12 to white and 8 to colored women.) These certificates are of the first grade, and are good anywhere in the State for a term of two years, unless sooner revoked.—(Report of Superintendent Jillson for 1875, pp. 5-16.)

EDUCATIONAL ADVANCEMENT.

The foregoing statistics show that a measurable degree of advancement has been made in the common school work during the past year; an improvement in school

management as well as in efficiency. Still, the undertaking has been but fairly begun. The reduction of the average length of the school session by one half a month as compared with that of last year is partly dne to the fact that the amonnt of money received this year from the State for school purposes was some $30,000 less than last year, and partly from the anxiety of most of the county school commissioners to keep their school expenses within the limits of their revenues. The repeated failure on the part of the State to meet in full its appropriations for school purposes has been a source of sore perplexity to these officers and a very serious detriment to the cause.

Four main causes check the efficiency and success of the free common schools, namely: want of qualified and efficient teachers, inefficiency and unfitness of school officers, lack of sufficient interest of the right kind on the part of the people in general, and inadequacy of means.—(Report of Superintendent Jillson, 1875, pp. 77, 78.)

UNPAID SALARIES OF COUNTY SCHOOL COMMISSIONERS.

The annual report of the treasurer of the State for 1875 shows that the balance due on account of salaries of county school commissioners amounts to $20,332.96. The superintendent urges as an act of justice such legislation as may be required to secure the early payment of these salaries. There is also an unpaid balance of $9,480.95 due for salaries of commissioners and other school claims prior to November 1, 1873.—(Report of superintendent, p. 22.)

LEGISLATION RECOMMENDED.

The State superintendent recommends to the legislature, among other measures, the immediate enactment of such provisions as will secure the prompt and complete payment of all unpaid balances of past appropriations for educational purposes, an act authorizing and directing each county treasurer to set aside and retain out of the funds collected by him on account of State taxes a sufficient sum of money to cover the apportionment of State school funds made to his county, one providing a comfortable and convenient office for each county school commissioner, one defining and making uniform throughout the State the school year, and one authorizing and requiring each county school commissioner to withhold from such school district as shall fail to provide for the raising of a local or school district tax said district's apportionment of the State appropriation for school purposes, and to distribnte the same to the other districts of the county that shall have provided for the raising of the tax.—(Report for 1875, p. 84.)

CITY SCHOOL SYSTEM.

CHARLESTON.

Officers.—The school commissioners of the city, one from each ward, have power to elect a superintendent of city schools, to prescribe his term of office, duties, and compensation, and to establish and make all arrangements for the common schools.

Statistics.—The city is four square miles in area and has taxable property valued at $26,661,634. The amount of local or city school tax raised in 1875 was $39,600. The population of school age numbered 12,727, of whom 5,873 were white and 6,854 colored. The total attendance upon public schools was 6,070, including 3,008 white and 3,062 colored. There were 87 teachers employed, of whom 8 were colored; 82 women and but 5 men; 24 with first grade certificates, 54 with second, and 9 with third. The average wages paid to men was $121.66; to women, $39.45. The schools were in session an average of ten months during the year. Receipts for school purposes from all sources, $61,886.65; expenditures, $59,932.50.—(Report of State superintendent, 1875, pp. 16, 17.)

TRAINING OF TEACHERS.

STATE NORMAL SCHOOL, COLUMBIA.

The report for 1875 of the board of regents states that the school is prosperous, and that its influence for good is being felt in nearly every portion of the Commonwealth, as the demand for educated teachers increases. The principal of the school reports an attendance of 39 pupils, all but 6 being women. The full course of instruction lasts three years; but there is a "training class" for the accommodation of those who do not complete the whole course, in which the studies are those taught in the common schools. A completion of this course is intended to fit students to teach schools of the lower grades, while the normal classes proper undertake all, or nearly all, those higher studies pursued in other normal and high schools. The course for the training class has been so arranged that the admission of new members at the beginning or close of a term interferes in but a slight degree with the regular order of the lessons, and several teachers have joined the class during vacation. The training class thus becomes for a short time a kind of teachers' institute. The law founding this school proposes that pupils be loaned such books as they may need; but no funds have yet been received for that purpose, and books and apparatus are very much needed. Of the $10,000 appropriated by the general assembly for the support of the school in 1875, there has been paid only $7,640, leaving still due a sum sufficient to furnish the books and apparatus needed.—(Report of State superintendent, 1875, pp. 97–101.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The superintendent gives the number of pupils studying each of the branches taught in the public schools, from which it appears that 2,752 were in 1875 pursuing the higher studies, against 2,848 in 1874, a decrease of 96 during the year. The number of high schools in operation in the State is not mentioned; but, as before stated, there appear to be none organized as such outside of Charleston, where 301 pupils are reported in "higher branches," the remaining 5,769 being in the studies required to be taught, if practicable, in all schools.

Superintendent Jillson recommends the establishment of county high schools wherever practicable, and the governor in his message to the legislature, November, 1875, strongly seconded on this point the recommendation of the superintendent, giving as reasons for it that no additional expense would thereby be incurred, while opportunity now wanting and greatly needed would be afforded to intelligent and ambitious youths to go beyond the ordinary common school studies without leaving their counties.

ACADEMIES AND SEMINARIES.

Seven of these schools—1 for boys, 2 for girls, and 4 for both sexes—report their statistics for 1875 as follows: Number of teachers, 22; pupils, 663; pursuing classical course, 77; modern languages, 1; preparing for classical course in college, 11; for scientific, 4. Drawing is taught in 2 of these schools, vocal music in 4, and instrumental in 3. Only one reports the possession of chemical laboratory and philosophical apparatus. Three have libraries, numbering, respectively, 500, 700, and 1,200 volumes.—(Returns to Bureau of Education.)

PREPARATORY SCHOOL.

One school for the preparation of pupils for college, at Orangeburg, reports an attendance of 209 pupils, 11 of whom are preparing for a classical course. There is a library of 882 volumes.

PREPARATORY DEPARTMENTS OF COLLEGES.

There are reported in preparatory departments of colleges 322 students, taught by 4 instructors. Six of the students are preparing for scientific courses and 224 for classical.

SUPERIOR INSTRUCTION.

UNIVERSITY OF SOUTH CAROLINA, COLUMBIA.

The university was organized as such in 1865. It had previous to that time been known as South Carolina College, having been chartered under that name in 1801 as a place "where all its youth may be educated." The campus and grounds, including 18 acres, are in the centre of the city. The library, which survived the hazard of war, is still in excellent condition and contains nearly 30,000 volumes, among them many rare and old works. The instruction is free. There are no charges for rent of rooms or matriculation. The governor of the State is president of the board of trustees and the State superintendent of schools is its secretary. The course of instruction embraces preparatory, academic, law, and medical departments.

The general assembly at the session of 1873–'74 established 124 beneficiary scholarships. These are open for general competition, and yield $200 a year to each successful applicant. The scholarships are apportioned to the several counties according to the number of representatives the county is entitled to in the general assembly. They hold good for four years, or until graduation.

During 1874–'75 the courses of study have been rearranged and extended and now comprise two quadriennial courses; an academical course, corresponding to the usual courses pursued in American colleges by candidates for the degree of A. B., and a course in which French and German are substituted for Greek and Latin. A special course is also provided for students who have not the time or means to spend four years at the university.—(Report of the chairman of the faculty and message of the governor, 1875.)

OTHER COLLEGES.

Claflin University, Orangeburg, says the State superintendent, is an important instrument in the educational interests of the State. Established for the benefit of colored youth and sustained mainly by benevolent contributions from the North, it has done a noble work. A higher grade of scholarship is aimed at ultimately, but, thus far, its chief work has been the preparation of teachers for the common schools and of students for its future college classes.—(Report of the superintendent, 1875, p. 25.)

College of Charleston, Charleston, (non-sectarian,) was chartered in 1785 and organized in 1789. There is a regular collegiate course of four years, including Latin, Greek, French, and German.—(Circular of the college.)

Erskine College, located in the village of Due West, four miles from the Greenville and Columbia Railroad, includes preparatory and collegiate departments. The college has a library containing a choice selection of books, a well selected geological cabinet, and philosophical and chemical apparatus, together with an excellent equatorial, acromatic, refracting telescope, mounted on an observatory which overlooks the whole surrounding country and affords a magnificent view of the heavens.—(Catalogue, 1874–'75.)

Newberry College, located at Walhalla, a quiet inland town at the base of the Blue Ridge, comprises collegiate and preparatory departments. Eclectic courses in both are also offered to those who do not wish to pursue the regular ones.—(Catalogue, 1874–'75.)

Wofford College, at Spartanburg, includes preparatory and collegiate departments, the course in the latter leading to the degree of A. B. The degree of A. M. is given, on application, to any A. B. who has been engaged in some literary occupation for three years after graduating.—(College circular, 1876.)

COLLEGES FOR WOMEN.

Four institutions for the superior instruction of women report a total of 35 instructors, 13 of whom were gentlemen. Eight teachers and 239 pupils were engaged in preparatory departments; 335 pupils were pursuing regular collegiate studies; 29, special or partial courses; and 2, post graduate studies; total attendance, 406. Music—vocal and instrumental—and French, are taught in 4; German in 1; drawing in 4; and painting in 3. Two report chemical laboratories and philosophical apparatus; and 3 have libraries of 100, 400, and 500 volumes each.—(Returns to Bureau of Education, 1875.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

AGRICULTURAL AND MECHANICAL COLLEGE.

The Agricultural College and Mechanics' Institute is co-ordinate with Claflin University, by act of the general assembly. The year 1874–'75 was the first in which any appropriations were made for the running expenses and to develop the course of study, and then only a very limited amount was given. Still, something has been done. A small class has been formed on the studies of the first year, and military tactics have been successfully taught the whole year. All that is wanted to secure a larger attendance and a rapid development of the agricultural college is adequate funds.—(State report, 1875, pp. 25, 26.)

A letter from the president, dated December 10, 1875, says: "The State has failed to meet its obligations, and the consequence is we have done but little to organize and develop the course of study. A large farm has been purchased and paid for in part. A small class was formed on the first year's course, and $1,800 was appropriated for instruction." The congressional land grant of 180,000 acres was sold for $130,500, and the funds invested in South Carolina State bonds, the interest of it annually being

$11,508. This for five years amounts to $57,540, of which only $11,836 have been paid, leaving now due from the State $45,704. "When the State," he says, "shall be able to pay regularly the annual interest, $11,508, we shall be able to pay the balance of indebtedness on the farm and put the institution into more successful working condition."

PROFESSIONAL SCHOOLS.

Theology.—The Southern Baptist Theological Seminary is located at Greenville, in the northwestern part of the State, distant only a few miles from the boundary lines of North Carolina and Georgia. Its object is to furnish "such theological education as is needed by Baptist ministers;" the theory being that the ministry must not be confined to such as have enjoyed superior advantages for mental culture; but that every one who proposes to be a preacher shall be encouraged to gain the most thorough education in his power.—(Catalogue, 1874–'75.)

The Presbyterian seminary sends no report descriptive of its location, course, &c., beyond the particulars presented in the table.

Law.—Law finds its exposition in the law school of the State University, the course in which may be completed in a year. It includes common and statute law, contracts, mercantile law, pleadings, code of practice, constitutional and international law.

Medicine.—The medical college of the State of South Carolina is located at Charleston. Its fees are low, but the faculty say, "It is furthest from our object to render still easier the already great facility for obtaining the medical diploma. The standard of graduation in the school has not been lowered; nor have the reduced fees brought us men inferior to those who in former years were applicants for the honors of the institution."—(Annual announcement for the session of 1875–'76.)

SPECIAL INSTRUCTION.

SOUTH CAROLINA INSTITUTION FOR THE EDUCATION OF THE DEAF AND DUMB AND THE BLIND.

State Superintendent Jillson urges upon the general assembly the speedy reopening of this institution. There are, he says, outstanding and unpaid claims against it,

amounting to between seven and eight thousand dollars, that should be paid by the State, which owes the institution, according to the annual report of the treasurer for 1875, $26,510.

As the present location of the institution is not easily accessible to pupils and visitors, the superintendent recommends its removal to Columbia.—(State report, 1875, p. 21.)

OBITUARY RECORD.

JAMES W. MILES.

Rev. James W. Miles, who died on the 14th at Charleston, S. C., was a prominent clergyman of the Protestant Episcopal Church. He served for many years as a missionary in Asia Minor, acquiring a thorough knowledge of the Oriental languages while living in Constantinople. Returning home, he for three years filled the chair of Greek literature in the College of Charleston, and after a trip to Europe for his health, at the close of the war, was elected professor of the classical languages in the same institution. He was a profound Sanskrit scholar.—(Central Advocate, St. Louis, September 29, 1875.)

LIST OF SCHOOL OFFICIALS IN SOUTH CAROLINA.

Hon. J. K. JILLSON, *State superintendent of education, Columbia.*

[Term, from January 1, 1873, to January 1, 1877.]

SCHOOL SYSTEM OF THE STATE.

EDUCATIONAL PROVISIONS OF THE CONSTITUTION.

The constitution, as amended in 1870, article XI, section 12, provides that "it shall be the duty of the general assembly, in all future periods of this government, to cherish literature and science. The fund called the common school fund, all appropriations heretofore made or that may hereafter be made for the use of common schools, shall remain a perpetual fund, the principal of which shall never be diminished by legislative appropriation; and the interest thereof shall be inviolably appropriated to the support and encouragement of common schools throughout the State and for the equal benefit of all the people thereof; and no law shall be made authorizing said fund or any part thereof to be diverted to any other use than the support and encouragement of common schools. No school established or aided under this section shall allow white and negro children to be received as scholars together in the same school."

PROVISIONS OF THE SCHOOL LAW.

The public school law of Tennessee, passed March 6, 1873, approved March 15, 1873, with amendments to the public school law of Tennessee, passed March 24, 1875.

OFFICERS OF THE EXISTING SYSTEM.

A State superintendent, a State board of education, county superintendents, district directors, and district clerks and treasurers are the school officers.

POWERS AND DUTIES OF THESE OFFICERS.

The State board of education, created by a law passed March 23, 1875, consists of 6 members, appointed by the governor, 2 for two years, 2 for four, and 2 for six, and, after the expiration of their first terms of office, each set of 2 for six years. The duty of the board is to establish, regulate, and report upon State normal schools.

The State superintendent—nominated by the governor and confirmed by the senate for

a term of 2 years—has the duty of collecting and disseminating statistical and other information relating to the public schools; of making tours of inspection among the schools; of seeing that the school laws and regulations are faithfully executed; of preparing and distributing blank forms for all returns required by law or deemed by him necessary to be made by school officers; of furnishing school officers with copies of the school laws and with appropriate forms and instructions for carrying said laws into execution; of appointing, at his discretion, persons in each county to visit and examine, as his agents, the public schools therein; of requiring of school officers such annual and special reports as he may deem necessary; of prescribing the mode of examining and licensing school-teachers and their necessary qualifications; of preserving in his office all documents and matters in relation to educational subjects that may come in; of reporting to the comptroller, on the 1st day of December in each year, the scholastic population of each county; and of submitting to the governor, on or before the 15th day of December, a report for the year ending August 31, exhibiting a plain statistical account of receipts and expenditures for public schools, and of their condition and progress in various specified particulars. His compensation is $3,000 per annum.

County superintendents—one for each county, elected by the county court, at its January term, for two years—are required to be persons of literary and scientific attainments, and, when practicable, of skill and experience in teaching. Their duties are: to have supervision of the public schools in their respective counties; to visit the schools, confer with the teachers as to the improvement of them, and suggest to the district directors such changes in text books as may be advisable; to see that the directors make their reports as required; to perform such duties in relation to the examination of teachers, and issuing to them certificates of qualifications, as may be required of them by the State superintendent; to report to the county trustee the scholastic population of each district; to keep records of all their official acts, of the number and boundaries of the school districts and the changes therein; and to make special reports whenever required, and, on or before the first day of October annually, to make a report to the superintendent for the year ending August 31, in such form and containing all such particulars as shall be prescribed and called for, a copy of this report to be furnished the county court. Their compensation is such as the county courts may prescribe.

District school directors—3 for each school district, elected by the voters thereof for three years, the term of 1 expiring each year—have the duty of explaining and enforcing the school laws and regulations; of visiting the schools within their districts, to see that they are conducted according to law; of employing teachers and dismissing the same for good cause; of regulating the discipline of the schools; of using the school fund for their districts to the best advantage; of seeing that the census of each district is taken, as required; of keeping separate and apart the schools for white and colored children; of drawing all orders upon the county trustees and treasurers for money for distribution in their district; of managing and controlling public school property in their districts; and of making such reports as the county superintendents may require.

District clerks and treasurers.—Each board of school directors may elect one of their number clerk and treasurer, and it shall be his duty to keep correct minutes of all the meetings of the directors, and a full and accurate account of all receipts and expenditures of the district directors. The directors may allow the clerks a compensation not to exceed $1 a day, to be paid out of the district school fund.

THE SCHOOLS.

The law provides that when the money derived from the school fund and the taxes imposed by the State on the counties shall not be sufficient to keep up a public school for five months in the year in the school districts in each county, the county court shall levy an additional tax sufficient for this purpose, or submit it to a vote of the people, and may levy a tax to prolong the schools beyond the five months. In every public school must be taught orthography, reading, writing, arithmetic, grammar, geography, elementary geology of Tennessee, and history of the United States. Vocal music also may be taught therein; but no other branches shall be introduced unless provided for by local taxation or the payment of tuition fees. Where the number of children will warrant it, preference shall be given to schools in which the pupils are taught in the same building, but in different rooms and by different teachers, according to advancement, the studies being the same as in schools which have but one teacher. District directors may make contracts of consolidation with academies, seminaries, colleges, or private schools, whereby public school studies shall be taught, free of charge, in such institutions, under the direction of the public school officers.

The public schools shall be free to all persons between the ages of 6 and 18 years residing within the school district, and, in certain cases, in different districts, provided that white and colored persons shall not be taught in the same school, but in separate schools, under the same general regulations as to management, usefulness, and efficiency.

The school year begins September 1 and ends August 31, as respects the making up of annual accounts.

The University of Tennessee, at Nashville, has been made by the State board the first State normal school, under the principalship of Professor E. S. Stearns, formerly of Exeter, N. H.—(State report for 1875, pp. 36 and 233.)

The Agricultural and Mechanical College of the State is conducted in connection with the East Tennessee University at Knoxville.

SCHOOL FUNDS.

The permanent school fund of the State is a certificate of indebtedness from the State authorities for $2,512,500, bearing interest at the rate of 6 per cent., to which may be added the proceeds of escheats, forfeitures, lands sold and bought in for taxes, personal effects of intestates, and donations made to the State for public schools, unless otherwise directed by the donors.

The annual fund is the annual proceeds of this permanent one, a poll tax of $1 on every male inhabitant of the State subject thereto, and any money that may come into the State treasury for the purpose from any source whatever, one of these sources being a tax of one mill on the dollar, annually assessed on all property subject to taxation, and paid over to the county trustee in each county where collected, for the support of public schools in the districts according to their scholastic population. This annual fund, as before indicated, goes to supplement the local taxation for schools, and amounted, at the date of the last report, to $740,316.

ELEMENTARY INSTRUCTION.

ATTENDANCE.

A table of comparative statistics for 1873–'74 and 1874–'75, published in the annual report, appears to show a considerable falling off in the number of schools, the enrolment of pupils in them, the average attendance, and the number of teachers employed, as well as in the compensation of county superintendents.

The superintendent attributes this mainly to the following causes: (1) The postponement of the collection of the taxes of 1874, by the general assembly, until November. * * * (2) The financial pressure which prevented many from enrolment who would have otherwise attended. The short crop of 1873 created an absolute necessity for every available hand on the farms in the subsequent year. Absolute poverty and want thus cut off the attendance. (3) The reckless miscalculations of the school officers in some counties in 1873–'74 involved them in an indebtedness which made it impossible to open their schools until the debt was first paid to the creditor teachers. * * * To these special causes may be added the general one resulting from the fact of the county courts failing or refusing to allow sufficient compensation to the officers whose duty it is to infuse unity, efficiency, and vitality into the schools, who, if left to perform their work untrammeled by private occupations and cares would induce many a thousand to attend the schools who now absent themselves, and who could give a wiser direction to the expenditures than is now given by totally irresponsible boards of directors. It is also believed that there is some deficiency in the reports of attendance upon the schools by reason of the enforced failure of superintendents to make full reports in the counties so manipulated as to show no systematic returns.

Notwithstanding, however, the reduced averages of enrolment on scholastic population and the reduction shown in the number of teachers and of schools as compared to 1873–'74, it appears that, leaving out of the calculation those 18 counties which have not reported average attendance, the percentage on scholastic population is the same as in 1873–'74, viz, 38. So that, with all the drawbacks and disadvantages resulting from the postponement of collection of taxes, the reckless and oversanguine estimate which led to indebtedness, the general scarcity of currency, and poverty, the schools have maintained their average attendance. From this fact, and from the spirit everywhere manifested by the friends of the schools, it is believed that henceforward there will be a real and substantial progress, both as to the numbers receiving the benefit of the schools and as to their quality and efficiency.

This condition of progress is confidently calculated on in those counties where the local authorities shall supplement the State tax by levying a sufficient county tax to continue the schools at least five months in the year, and shall employ a capable and energetic superintendent to organize, strengthen, and unify them. In too many counties the fund is frittered away by the multiplication of schools in every neighborhood, thus dividing the available amount among half a dozen teachers, where two, or at most three, would suffice; in which case more competent teachers, at better salaries, might be employed.—(Report, pp. 19–23.)

CONSOLIDATED SCHOOLS.

The superintendent recommends, as a measure of true economy, the more extensive establishment of consolidated schools, *i. e.*, private seminaries and public schools com-

bined, free as to the branches of instruction prescribed by law, but in which tuition may be collected from those pursuing other and higher studies. During the school year there were in operation 174 such consolidated schools, averaging nearly two in each county. The number might be greatly increased by the zealous co-operation of the county superintendents and of the school directors, and thus the popularity and efficiency of the school system be greatly strengthened. Such schools are, or should be, of the best character of graded schools.—(Report, 1875, p. 23.)

PRIVATE SCHOOLS.

The superintendent has endeavored during the past year, by every means in his power, to collect statistics of private schools, with the result of having obtained complete returns from 26 counties and partial reports from 7. It is regretted that there is no fixed system provided by law for the collection of such statistics. The principals of these schools would cheerfully furnish information, it is believed, if there were a strictly legal demand made for it. There is no rivalry, in any sense, between them and the public schools. In the 26 counties from which complete returns of private schools were received there were 10,083 pupils attending during the school year. The scholastic population of these 26 counties, according to the late enumeration, is 99,715. If, therefore, the attendance in private schools in the remaining counties in the State was in the same proportion in a scholastic population of 426,612, there were 43,138 pupils attending the private schools, which, added to the enrolment in the public schools, will make a total of 241,223 pupils attending either public or private schools at some time during the school year.—(Report, 1875, pp. 26–28.)

SCHOOL FUNDS.

In 56 counties of the State levies have been made of additional tax for school purposes for 1875, either by the county courts or by a direct vote of the people. In 37 counties no such levies have been made. Such failure by any county indicates a great indifference to the spirit of the law. The interest on the school fund apportioned to the counties forms a basis upon which the counties may build a liberal system of free instruction. But it should be supplemented by a county tax sufficient to continue the schools in session not less than five months.—(Report, pp. 32–35.)

GRADED SCHOOLS.

Earnest efforts have been made by the most enlightened and efficient superintendents, in counties where there was any occasion for effort, to establish graded schools in accordance with the positive spirit of the public school law, and, from reports received by the superintendent, it appears that there are about 90 of these schools at present in the State. The aid offered by the Peabody education fund has contributed very materially to encourage the establishment of such graded schools.—(Report, p. 43.)

SCHOOL-HOUSES.

There were 138 new school-houses erected in the State during the year, as reported to the superintendent's office in reply to a circular of inquiry sent out, answers having been received, however, from only 54 counties. The majority are reported to be plain, substantial frame structures, a few of a better quality, and some of an inferior character. A large number of the country school-houses are of a very poor type, "not being adapted," says the superintendent, "for any known purpose, unless it be to house cattle," whereas the structures in which children are taught should be well warmed, well ventilated, with ample light and space, and furnished with convenient modern seats and desks, blackboards, maps, charts, &c.

It is regretted that no reliable statistics exist of the character and value of the common school property of the State, but measures will be adopted during the next year to ascertain these facts.—(Report, pp. 44, 45.)

PEABODY SCHOOLS.

In consequence of the large and disproportionate appropriations from the Peabody education fund in the past to graded schools of a certain class, the allowance made to the schools of the State for the present year was perceptibly diminished. In the spring, when it was believed that the fund would be larger, an appropriation of $1,500 was given to the Shelbyville High School, $6,000 to the State normal university, and $1,500 appropriated to furnishing the office of the State superintendent with such assistance as would enable him to bestow more time and energy upon canvassing and arousing the public mind on the question of free schools. In December, an additional sum of $6,000 was recommended for appropriation to 26 graded schools, making a total of $15,000 during the year.—(Report of superintendent, 1875, pp. 47, 48.)

CITY SCHOOL SYSTEMS.

ORGANIZATION.

As to all the following cities, it is believed that the city school organization is composed of a board of education of 3 members, or some multiple of 3, one-third being

changed each year, and a city superintendent; though no distinct information on this point is contained in the school law and direct reports from the cities are wanting, except from Nashville.

CHATTANOOGA.

Statistics.—Scholastic population of the city: whites, 1,474; colored, 812; total, 2,286. Number of pupils enrolled, 1,674; per cent. of daily attendance in city on average number belonging, 92.44. There are 7 schools—4 for white and 3 for colored pupils—with 23 teachers, of whom 21 are white. Average salary paid teachers, $59.66 a month. average number of months taught during the year, 10. Receipts of school moneys: from the State, $1,231.03; from the county, $2,428; from other sources, $12,161.17; total, $15,820.20. Expenditures: for teachers' wages, $13,721.95; for school-houses, $1,749.88; other expenses, $2,536.75; total, $18,008.58. Balance on hand as by last report, $660.96; deficit this year, $2,188.38; balance of deficit this year, $1,527.42.

Remarks.—In addition to the primary and grammar grades, a high school grade has been established during the past year, embracing in its course of study ancient and modern languages and a thoroughly practical English course. It is gratifying to note the degree of zeal and energy displayed by the citizens in their liberal support of the schools, notwithstanding the fact that hard times and lack of commodious buildings and convenient school appliances throw many obstacles in the way of rapid advancement. So recent has been the organization, and, withal, so successful, that the finances have not kept pace with the actual needs of the system; but the will is here, and such is the enthusiasm for the highest success of the school interest that it is believed ways and means will be provided in a short time commensurate with the demands of the rising generation.—(Report of Superintendent H. D. Wyatt, in State report, p. 172.)

KNOXVILLE.

Statistics.—Scholastic population: whites, 1,407; colored, 585; total, 1,992. Enrolment of pupils, 840; average daily attendance, 609. There are 13 schools, 11 for white and 2 for colored pupils, with 20 teachers, of whom 18 are white. They receive an average salary per month of $45.25. Number of months taught during the year, 10. Receipts of school moneys during the year: from State, $3,100; from county, $3,500; from other sources, $13,900; in all, $20,500. Expenditures: for teachers' wages, $8,750; school-houses, $8,900; other expenses, $2,850; in all, $20,500.

Remarks.—The public schools have been quite a success, and are almost universally patronized, and the private schools are almost broken up. A beautiful new school building has been erected and other improvements are in prospect. Night schools are kept up about six months in the year. Teachers' meetings are held twice a month. The schools are a permanency, and are steadily growing in prosperity and efficiency.—(Report of Rev. H. T. Morton, superintendent, in State report, p. 173.)

MEMPHIS.

Statistics.—Scholastic population: whites, 6,598; colored, 3,821; total, 10,419. Enrolment in public schools, 5,000; average daily attendance, 2,927. Number of schools for whites, 52; for colored, 12; for all, 64. Teachers: white, 56; colored, 13; total, 69. The salaries paid them average $76.63; average number of months' employment during the year, 9. Receipts of school funds during the year: from State and county, $22,758.77; from other sources, $42,326; total receipts, $65,084.77. Expenditures: for salaries of teachers and superintendent, $60,077.88; for building, repairing, and furnishing school-houses, $3,408.60; for other expenses, $6,775.22; total, $70,261.70. Excess of expenditures over receipts, $5,176.93.—(Report of Superintendent A. Pickett, in State report, p. 174.)

NASHVILLE.

School officers.—A board of education, composed of 9 members, of whom 3 retire each year, and a superintendent of schools.

Statistics.—Population of the city, 27,014. Enumeration, from 6 to 18, 8,851; different pupils enrolled, 3,998; average number belonging, 2,950; average number attending, 2,851. Approximate number in private schools, 500. Percentage of attendance on number belonging, 96.63; on enrolment, 71; on enumeration, 45. Number of special teachers, 4; regular, 71; total, 75. Number of school-houses, 8; number of school-rooms, 34; number of sittings, 3,620. Total school expenditures during the year, $68,250. Cost of tuition per pupil belonging, $17.08; cost of tuition per pupil attending, $17.67.

Special branches.—The French language has been very thoroughly taught by one of the lady assistants in the high school and the German has been committed chiefly to the care of two teachers of that nationality, who have devoted their entire time to it. The progress made has been satisfactory in the upper grades and the teaching all that could be desired in the lower. Drawing has been taught with somewhat satisfactory results.

Vocal music is being taught with fine effect in all the grades. Its introduction is an

entire success, and the highest expectations entertained with respect to it have been more than realized.

It is said to have been demonstrated that all can learn to sing, though of course not all with the same perfection. Many voices that appeared permanently out of tune and unmanageable have gradually yielded with practice, and some pupils with such voices now excel and are delighted with their new faculty; while others, naturally gifted, have been brought out and bid fair to be one day famous in the world of song.

Written examinations.—The plan of testing the standing of pupils by monthly written examinations exclusively has been tried in the four highest grades during the past year, and with the best results. Pupils are said to have been incited to do more generally honest work for real improvement; have been better satisfied that justice was done them in making up the record; and have, in many cases, corrected the pernicious habit of keeping up appearances by cramming for recitations. Time and labor have been largely economized by teachers and principals, under this system, and a valuable adjunct has been secured for determining the fitness of pupils for promotion.—(Report of Superintendent S. Y. Caldwell for 1874–'75.)

TRAINING OF TEACHERS.

NORMAL UNIVERSITY.

In December, 1875, a normal university was established provisionally for two years, in pursuance of an act passed by the general assembly of the State, March 23, 1875, providing for the establishment of a normal school or schools in connection with the public school system. The board of education created by this act accepted a proposition from the trustees of the University of Nashville tendering the use of their college buildings, grounds, &c., for two years, and also the income arising from their permanent fund, and from that of the Montgomery Bell Academy, amounting together to $6,000 per annum, on the condition that this academy be made a model and training school to the normal university. At the same time the agent of the Peabody fund appropriated $6,000 annually to the university for two years, and with this income of $12,000 the university was organized, and a corps of professors of the highest qualifications appointed. The formal opening was on Wednesday, December 1, 1875, with addresses from State Superintendent Trousdale; President Eben S. Stearns, of the Normal University; Judge Samuel Watson, of the Peabody board of trust; and President E. H. Ewing, of the University of Nashville.—(State report, pp. 35–37, 200.)

NORMAL SCHOOLS FOR COLORED TEACHERS.

A new normal school for the training of colored teachers has recently been established by Mr. Yardley Warner, of Philadelphia—long engaged in kindred work for the colored race in Tennessee—funds having been contributed by the Society of Friends in the Northern States and in England for this purpose. The Holston Male Institute, at Jonesborough, a commodious building, has been purchased for the school, costing $3,600. The aims of those connected with this effort are threefold: (1) To train teachers near where they live and are needed; (2) to help and encourage State school officers so as to enlist them heartily to coöperate in the provisions required (as buildings, stationery, maps, school fixtures, &c.) for the efficient education of colored citizens, hoping, also, thereby to foster an interest in the education of all classes; and (3) to furnish solid reading matter, and, by supplying Sabbath schools with Bibles and by personal intercourse, to improve the worship and spiritual condition of the negro.

Various other institutions for the colored race in the State are sustaining normal classes. Fisk University, Nashville, has prepared many good teachers; the Central Tennessee College, at Nashville, under the control of the Freedman's Aid Society of the Methodist Episcopal Church, with 130 pupils, has for its permanent object "the preparation of students to teach and for the practical duties of life;" while the Nashville Normal and Theological Institute, at Nashville, supported by the American Baptist Home Mission Society, with 136 pupils enrolled; the Freedmen's Normal Institute, at Maryville, under the care of the Society of Friends, with 182 pupils, and the normal or training school at Knoxville, supported by the United Presbyterian Church of North America, with 90 pupils, are all working in the same field.

NORMAL CLASSES.

Several colleges for the education of the white race also offer their students opportunity for training as teachers, and in some cases special facilities are afforded those who purpose to teach by the remission of tuition fees. Normal classes are reported in Neophogen, Maryville, and Central Female Colleges, and in other institutions of a lower grade.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

There is no positive information at hand as to the number of public high schools in the State or the number of pupils engaged in them in secondary studies. Such schools,

however, or departments, appear to exist in the more populous cities of the State, as Nashville, Memphis, Shelbyville, Gallatin, Chattanooga, and Murfreesborough. Out of the list of 26 graded schools aided in 1875 by the Peabody fund, all but about half a dozen appear to be schools for secondary instruction, some being private seminaries and academies, which have probably been adopted by or consolidated with the public school system under a provision of the school law to that effect.

OTHER SECONDARY SCHOOLS.

One school for boys, 11 for girls, and 41 for both sexes report, for 1875, 162 instructors and 4,424 pupils, of whom 591 are said to be studying ancient and 223 modern languages; 352 to be preparing for a classical course in college, and 291 for a scientific course. Of these 53 schools, 19 teach drawing, 34 vocal and instrumental music, while 6 report the possession of chemical laboratories and 7 have apparatus for illustration of natural philosophy. Five of the schools for girls have libraries of 300 to 3,000 volumes and 9 of those for both sexes have them reaching from 150 to 1,300 volumes, the sum of the volumes in the 14 libraries reported being 10,297.—(Returns to Bureau of Education, 1875.)

PREPARATORY CLASSES OF COLLEGES.

The preparatory departments of the colleges in the State report for 1875 a total of 1,176 male pupils and 266 female, under 34 instructors, exclusive of those in the colleges proper. Of the 1,442 students, 674 are reported to be preparing for a classical collegiate and 346 for a scientific collegiate course.—(Returns to Bureau of Education, 1875.)

BUSINESS COLLEGES.

Two of these institutions report 6 instructors and 346 pupils in day and evening classes, the branches studied being common English ones, and correspondence, penmanship, book-keeping, commercial law, and political economy.—(Returns to Bureau, 1875.)

SUPERIOR INSTRUCTION.

DENOMINATIONAL AND OTHER COLLEGES.

Beech Grove College, Beech Grove, ("strictly anti-sectarian in its management,") has preparatory and collegiate departments, and is for both sexes.—(Catalogue, 1875.)

Bethel College, McKenzie, (Cumberland Presbyterian,) for both sexes, offers preparatory and collegiate departments, with classical and scientific course, and a ladies' department.—(Catalogue, 1873–'74.)

Central Tennessee College, Nashville, (Methodist Episcopal,) is sustained almost entirely by the Freedmen's Aid Society of the Methodist Church. The course of study is preparatory and collegiate, and embraces classical, scientific, normal, and theological courses.—(Catalogue, 1874–'75.)

Christian Brothers' College, Memphis, (Roman Catholic,) is exclusively for young men, and has classical and scientific departments.—(Report to Bureau of Education, 1874.)

Cumberland University, Lebanon, (Cumberland Presbyterian,) has preparatory and collegiate departments, the latter including scientific and classical courses, also theological and law schools, a business college, and a telegraph school. For young men exclusively. Attendance for 1874–'75, 391.—(Catalogue, 1874–'75.)

East Tennessee University, Knoxville, (non-sectarian,) includes the State Agricultural College. The collegiate course embraces the usual four years and comprises three distinct courses, viz, the agricultural, mechanical, and classical. The degrees conferred are A. B. on graduates of the classical and B. S. on those of the other two courses. Free tuition is given students nominated by members of the State legislature, each senator having the right to nominate two and each representative three. Young men who wish to prepare for the ministry also receive tuition free. The discipline is military, and a small amount of manual labor is required of all able bodied students. Attendance during 1874–'75, 315, including preparatory department; collegiate, 101.—(Catalogue, 1874–'75.)

Fisk University, Nashville, (non-sectarian and mainly for the colored race,) was founded in 1867 as a chartered institution by the American Missionary Association, by which society its expenses have been defrayed to the present time. There are collegiate, normal, and theological courses. Both sexes are admitted. The expenses to students, including board, tuition, room, fuel, &c., have been placed as low as $12 per month. The trustees of the Peabody fund have for some years past given aid to a limited number of needy and worthy students to the amount of $800. Aid has also been received from private individuals.—(Catalogue, 1874–'75.)

The new building for the university, Jubilee Hall, was dedicated January 1, 1876. It is in the form of an L, and has an east front of 145 feet and a south front of 128, including basement and cellar; it is six stories high and is supplied with all the conveniences of water, steam, and gas. It is heated throughout by steam and each room

has a radiator. The entire building contains 120 rooms. Jubilee Hall is to be ultimately the Woman's College of Fisk University, but, until other college buildings can be erected, will be made to answer all purposes. In solidity of its walls, carefulness of construction, fitness for its purpose, in its safety for health, in safeguards against fire, and in its general convenience and facility for study and work, Jubilee Hall is worthy of its origin in the songs of the Jubilee singers.—(University History and Services of Dedication, 1876, pp. 8, 10.)

Greeneville and Tusculum College, Greeneville, (independent,) is for both sexes. There are primary, preparatory, and collegiate departments. Hebrew, French, and vocal and instrumental music are elective studies.—(Catalogue, 1874–'75.)

Hiwassee College, Monroe County, (Methodist Episcopal South,) is for young men. The year 1874–'75 has been the most prosperous one in the history of the college.—(Circular for 1875.)

Maryville College, Maryville, (Presbyterian,) is for both sexes. The departments are preparatory, collegiate, ladies' course, and English course. Attendance, 1875–'76, 137.—(College catalogue, 1875–'76.)

Mosheim Institute, Mosheim, for both sexes, has preparatory and collegiate departments and a select course for those who do not wish to study the regular curriculum.—(Catalogue, 1874–'75.)

Neophogen College, Gallatin, (non-sectarian,) for both sexes, has preparatory, collegiate, and normal departments, and a law school. Music, drawing, painting, and modern languages are optional studies. Careful attention is given to the study of the English language; elocution and etiquette are a specialty; and the school of oratory, which claims to afford a superior training, is open to students of the law school.—(College catalogue, 1875.)

Southwestern Presbyterian University, Clarksville, formerly Stewart College, was chartered as a university in 1875. The former faculty and school of Stewart College have been continued provisionally, until such time as the formal organization of the university may be accomplished.—(Report of State superintendent, 1875, pp. 256, 260.)

Southwestern Baptist University, Jackson, was opened in 1874, in the buildings of the West Tennessee College. The higher department of the university was opened in August, 1875. There are at present two departments, viz: of literature and science and of law.—(Superintendent's report, 1875, pp. 240, 244.)

University of Nashville.—The collegiate department of this institution was suspended in 1875, and in its stead a State normal school established. Its preparatory department, Montgomery Bell Academy, constitutes the boys' model school. The medical department is still in operation.—(Report of State superintendent, 1875, pp. 230–233.)

Vanderbilt University, Nashville, (Methodist Episcopal.)—This university, numbering more than 250 matriculates, is now in complete and successful operation in its four departments of liberal, theological, legal, and medical education. The department of philosophy, science, and literature is distributed into 8 separate and independent schools. The course of instruction is divided into two parts, one collegiate, embracing two years, and one of the university in its proper and high sense, embracing three years. The departments of theology, law, and medicine are in operation, and the board design to establish, as soon as possible, schools of civil engineering, mining engineering, horticulture, agriculture, and the useful and fine arts.

Among the liberal measures proposed by this university are the offer of free tuition for a year to the prize scholar in each of a number of schools, private or public, which the faculty may select, and free scholarships to teachers of at least one year's standing who desire to prepare themselves for more advanced work in teaching.—(Report of State superintendent, 1875, pp. 234, 235.)

Wesleyan University of East Tennessee, Athens, admits both sexes; has preparatory and collegiate departments, with classical and scientific courses.—(Catalogue, 1874–'75.)

Washington College, Jonesborough, is the oldest classical school west of the Alleghanies. It was opened in 1780, by Rev. Samuel Doak, in a plain log building upon his own farm. In 1796, the same year in which Tennessee was admitted as a State, the school (Martin Academy) was raised to the rank of a college, and received its charter as Washington College from the first legislature ever held in the State. In 1809 a new frame building took the place of the log house which had served for 29 years. The present college building, a substantial brick structure 86 by 36 feet, was erected in 1840.—(Report of State superintendent, 1874–'75.)

COLLEGES FOR WOMEN.

Catalogues have been received from 9 colleges for women in the State, namely: Bristol Female College, Bristol; Wesleyan Female College, Brownsville; Bellevue Female College, Collierville; Tennessee Female College, Franklin; Odd Fellows' Female College, Humboldt; Female College, McMinnville; Memphis Conference Female Institute, Jackson; Murfreesborough Female Institute, Murfreesborough; and Mary Sharpe College, Winchester. In addition to these there are written returns from W. E. Ward's

Seminary for Young Ladies, an important institution, at Nashville, and from several besides, making 17 in all.

Reports from these 17 institutions show a total of 119 instructors and 1,467 students in 1875, of which number 16 instructors and 451 pupils were in preparatory departments. Of the remaining pupils 916 were in the regular collegiate course, 104 in partial courses, and 28 in post graduate studies. Drawing is taught in 16 of these schools; painting in 13; vocal and instrumental music in all the 17; French in 16; German in 9; Latin in 3, and Greek in 1. Nine have means for chemical illustration; 8, for philosophical; while 2 have museums and 5, art galleries. Calisthenic exercises are provided for in 3.—(Returns to Bureau of Education, 1875.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The Tennessee Agricultural College was established in 1869, in connection with the East Tennessee University, upon a broad and liberal foundation. Notwithstanding several obstacles it had to contend with, among others the failure of the State to pay the interest on its bonds constituting the college endowment, the success of the enterprise has been very gratifying. The institution has a very fine farm on which three large buildings have been erected, an excellent chemical laboratory has been provided and equipped by the donation of $15,000 from the city of Knoxville, the means are secured for the purchase of a good library, and the grounds have been improved and adorned. Every year the number of students is increased from a wider sphere, and each year the standard of scholarship and the tone of the institution are elevated.

Special attention is paid and prominence given to studies which are related to agriculture and the mechanic arts. The college is chiefly a scientific school, but its classical department is ably maintained.

The government of the institution is military, and is administered by student officers, under the direction of an officer of the United States Army, by whom the students are taught military tactics.—(Report of State superintendent, 1875, pp. 229, 230.)

LAW.

Law schools are included in the curriculum of Cumberland University, Southwestern Baptist University, Vanderbilt University, and Neophogen College, the latter of which claims to offer special facilities for the study and mastery of the profession, including a school of elocution and oratory.

THEOLOGY.

Schools for instruction in theology are reported as existing in connection with Cumberland, Fisk, and Vanderbilt Universities and Central Tennessee College.

MEDICINE.

The University of Nashville and Vanderbilt University afford instruction in medical schools.

For returns of all these schools see the following table, and Tables X to XIII at the end of this volume.

Statistics of schools for scientific and professional instruction, 1875.

Schools for professional instruction.	Corps of instruction.	Endowed professorships.	Number of students.	Number of years in course.	Property, income, &c.				Number of volumes in library.

b Apparatus.

SPECIAL INSTRUCTION.

TENNESSEE SCHOOL FOR THE DEAF AND DUMB.

This institution is located at Knoxville, on an eminence overlooking the city and affording a view of rare beauty. The buildings consist of the main building, an addition used exclusively for school purposes and erected at cost of some $10,000, the principal's residence, a printing office and shoeshop, a stable, and a coal and wood house, all costing about $75,000. The institution can accommodate comfortably 150

pupils. The grounds, comprising 7 acres, are now very valuable, and since the close of the war they have been, mainly by the boys' labor, improved and beautified to such an extent that they will compare very favorably with those of similar institutions elsewhere. The value of buildings and grounds is estimated at about $125,000.

The school derives its support almost entirely from the State. An annual appropriation of $5,000 is received from the State treasury, and an additional amount *per capita* is allowed for each indigent pupil admitted into the institution.

The school numbers 129 pupils, classified according to their attainments, without reference to the length of time under instruction. The number of classes taught is 6. The method of instruction principally used here is that known as the French system, which imparts the meaning of written language by means of a language of signs. The method of articulation, combined with the other, has been used in this school for several years past to some extent, but, except for a few of the more promising pupils, nothing has been accomplished.

A printing office and shoeshop have recently been established in connection with the school.—(State report, 1875, pp. 55, 221–225.)

EDUCATIONAL CONVENTIONS.

STATE TEACHERS' ASSOCIATION.

An annual meeting of the State Teachers' Association was held at Nashville January 20, 21, 1875, Dr. J. B. Lindsley, president of the association, presiding. The subject most prominently before the meeting was that of school supervision. The necessity for sustaining the offices of county and State superintendents of schools was discussed by Dr. Sears, agent of the Peabody fund; Hon. H. A. M. Henderson, State superintendent of schools, Kentucky; Superintendent Presnell, of Washington County; and many others. A number of interesting addresses on various topics were delivered. That of President Lindsley was a "Plea for normal colleges," being a full, forcible and learned argument on the necessity of schools for training teachers.—(Report of superintendent for 1875, pp. 56–59.)

The eleventh annual meeting of the association assembled in Knoxville on Tuesday, December 28, 1875. After the address of welcome by Dr. T. W. Humes, of East Tennessee University, Professor Mallon, superintendent of the city schools of Atlanta, Ga., and Rev. H. T. Morton, superintendent of the city schools of Knoxville, addressed the meeting. Rev. H. A. M. Henderson, State superintendent of instruction in Kentucky, spoke upon education in Kentucky, stating that no one opposed to the public school system could be elected to any important office of trust in that State. Colonel Fleming, former State superintendent, addressed the association on the state of education in Tennessee, and was followed by Professor John Collins, of Maryville. "The place of physical sciences in common schools" was discussed by Professors Sharp and Collins. Maj. R. W. Jones, of Martha Washington College, Virginia, delivered an address on "Relative discipline of linguistic and scientific studies." Professor Stearns, of the State Normal School, delivered an able address on normal schools, and remarks were made on the same topic by Dr. Sears, Professors Presnell and Sharp, Dr. Henderson, and others. A letter was read from President Eliot, of Harvard, in which he took the position that the State should be taxed only for the support of the common branches of education. This view was sustained by Professor Nicholson and objected to by Dr. Sears and Superintendent Mallon. Professor Hastings gave an able address on the best methods of conducting recitations and examinations. State Superintendent Trousdale read a letter from Professor Ed. Joynes, of Vanderbilt University, offering free scholarships on conditions hereafter to be published, after which addresses were delivered by Mr. Henderson and Dr. Sears.—(American Journal of Education, February, 1876, p. 11.)

OBITUARY RECORD.

CHARLES COLLINS, D. D.

Rev. Charles Collins, D. D., was born in North Yarmouth, Me., April 17, 1813. Having passed through the several stages of a primary education at Portland, he entered the Maine Wesleyan Institute, where he remained until he had completed the appointed course of study. Having been employed as teacher for a number of years, and part of the time as principal of the Wesleyan Institute, he gradually advanced to the higher branches of academic education, and finally entered the sophomore class of the Wesleyan University, but from close application was advanced to the senior and the following year awarded the first honor and delivered the valedictory. Such distinction is more noticeable from the fact that at the time of graduation his classmates were Daniel Curry, D. D., editor of The New York Christian Advocate; E. E. Wiley, D. D., president of Emory and Henry College; W. H. Anderson, D. D., of the Louisville Conference, and principal of the Boys' High School of the city of Louisville; E. Wentworth, D. D., late editor of The Ladies' Repository of Cincinnati, and others of like order.

Immediately after leaving the university, he took charge of the Augusta High School, where he remained one year, and left it only to accept the presidency of Emory and Henry College, near Abingdon, Va., upon the recommendation of Dr. Wilber Fisk, chancellor of the Wesleyan University. He was then only 25 years of age, and certainly a young man of no ordinary attainments to be deemed worthy of this important trust by so distinguished an educator. Charles Collins was the first president of Emory and Henry College. To him was given the honor of launching and manning that beautiful and stately vessel of letters and intellectual culture upon the prosperous sea of her historic mission. This was no small responsibility, and required upon his part a large outlay of physical and intellectual activity. In connection with this service, as a member of the Holston conference, his labors in the pulpit were abundant and effective. By this time he had sufficiently prepared himself in polemic theology to enter the field in vindication of the doctrines of the church, as evidenced in his controversial papers against Romanism in 1844, and, again, in 1848, with Rev. F. A. Ross, of the Presbyterian Church, in his doctrinal tracts, entitled "Methodism and Calvinism compared," at present issued by the publishing house. In addition to this he edited The Southern Repertory and College Review, was a regular contributor to The Ladies' Repository, and sundry church papers and periodicals. In 1851 he received his doctorate from Centenary College, Louisiana, Masonic College, Missouri, and Dickinson College, Pennsylvania. In 1852 he was elected to the presidency of Dickinson College, which position he filled with great acceptability and usefulness for eight years. During this time he came within a few votes of being elected chancellor of the Wesleyan University, his alma mater; declined the presidency of Centenary College, Louisiana; Central College, Missouri; the chancellorship of the Universities of Missouri and Michigan, and of the Southern University, Greensborough, Ala.

These facts reveal to us the widespread and well earned reputation of Dr. Collins as a man of letters and distinguished ability in the management of literary institutions. August, 1860, he took charge of the State Female College, Memphis, Tenn. He entered upon this new field of labor with his accustomed energy. Hitherto he had confined himself to the education of boys and young men, but was no less successful in the instruction and management of young ladies. The prosperity of that institution to the day of his death affords abundant evidence upon this point. Though he was the sole proprietor and owner of the school, and the grounds and buildings attached thereto, he soon identified his important enterprise directly with the church, by placing it under the patronage of the Memphis annual conference. Hence he was liberally sustained in West Tennessee, Arkansas, and Mississippi. With this institution he closed his labors in the city of Memphis, July 10, 1875.

Dr. Collins was no ordinary man, but eminent for intellectual culture and classical attainment. There were many brilliant points in his character, but all so beautifully blended as to make him a great light—steady, reliable, radiant. His learning was without pedantry; his philosophy without stoicism; his dignity without affectation; his reserve without austerity. With the simplicity of a child, the tenderness of a woman, and the wisdom of true manhood, he graced the domestic and social circles. The all-pervading law of his being was order. Under its rule he systematized duty, whether to God or man or self. It was this that gave elasticity to the burden of accumulated responsibility and enabled him to bear it with comparative ease. In the school-room he swayed an invisible sceptre, not of stern authority, but a sweet inspiration of love and veneration, to which all hearts bowed in the obeisance of a true devotion. He governed well, and yet seemed not to govern. To awaken thought, and imprint truth upon the young mind, was his daily work, one done with wonderful facility. A faithful servant of sixty-two years, after he had served his own generation by the will of God, he fell asleep.—(Minutes of the Memphis conference.)

—(Report of Hon. O. N. Hollingsworth, State superintendent of public instruction, for 1875.)*

SCHOOL SYSTEM OF THE STATE.

EDUCATIONAL PROVISIONS OF THE CONSTITUTION.

Article VII, section 1, of the constitution as amended in 1875, provides that it shall be the duty of the legislature to establish and make suitable provision for the support and maintenance of an efficient system of public free schools. Section 2. That "all funds, lands and other property heretofore appropriated for the support of public free schools; all the alternate sections of land reserved by the State out of grants heretofore made or that may be hereafter made to any corporation of whatsoever nature, one-half of the public domain of the State, and all sums of money that may come to the State from the sale of the same, shall constitute a perpetual school fund." Section 3. That "there shall be set apart annually not more than one-fourth of the general revenue of the State, and a poll tax of $1 on every male between 21 and 60 years of age, for the benefit of the public free schools." Section 4. That "the board of education, composed of the governor, comptroller, and secretary of state, shall invest all proceeds from the sales of these lands in State or United States bonds." Section 5. That "the principal of all bonds and other funds, and the principal arising from the sale of lands set apart to the school fund, shall be the permanent school fund; and all the interest derivable therefrom and the taxes herein authorized shall be the available school fund, which shall be applied annually to the support of the public free schools, to be distributed to the counties according to their scholastic population. No part of these funds shall ever be applied to any other purpose, nor appropriated to the support of sectarian

*It should be stated, in justice to both the superintendent and the State, that the above statistics represent the returns from only 97 counties, that being the whole number reporting to him out of 139 counties in which schools were kept.

schools." Section 7. That "separate schools shall be provided for the white and colored children, and impartial provision made for both." Section 9. That "all lands heretofore granted for the benefit of the lunatic, blind, deaf and dumb, and orphan asylums, together with such donations as may have been or may hereafter be made to either of them, are hereby set apart for a permanent fund for the support and maintenance of said asylums." Section 10. That "the legislature shall, as soon as practicable, establish, organize, and provide for the maintenance and support of a university of the first class, to be located by the voters of the State and styled the University of Texas, for the promotion of literature and the arts and sciences, including an agricultural and mechanical department." Section 11. That "all lands and other property set apart for the establishment and maintenance of the University of Texas, together with the proceeds of the same and of all grants and donations that may hereafter be made, shall constitute a permanent university fund, provided that one-tenth of the alternate sections of lands granted to railroads reserved by the State shall not be included in the university fund." Section 13. That "the Agricultural and Mechanical College of Texas shall constitute a branch of said university, and the legislature shall, at its next session, make an appropriation not exceeding $40,000 for the construction and completion of the buildings and improvements and for providing the furniture necessary to put said college in immediate and successful operation." Section 14. That "the legislature shall also, when deemed practicable, establish a college or branch university for colored youths, provided no tax shall be levied and no money appropriated out of the general revenue, either for this purpose or for the establishment and erection of the buildings of the University of Texas." Section 15. That "there is set apart and appropriated for the endowment and maintenance of said university and its branches 1,000,000 acres of the unapportioned public domain of the State."

The stability of educational institutions in this State is further secured by an act of Congress, approved March 30, 1870, which made the following stipulation as one of the conditions of admission to representation in Congress after the interruption occasioned by the late war: "That the constitution of Texas shall never be so amended as to deprive any citizen or class of citizens of the United States of the school rights and privileges secured by the constitution of said State."

PROVISIONS OF THE SCHOOL LAW.

From "An act to establish and maintain public free schools in the State of Texas," passed May 22, 1873, with amendments of 1874.

OFFICERS OF THE PRESENT SYSTEM.

A superintendent of public instruction, school directors, county superintendents, and district school trustees.

POWERS AND DUTIES OF THESE OFFICERS.

The superintendent of public instruction—elected by the voters of the State for a term of four years—has the supervision of all the public free schools in the State and is the general advisor and assistant of county superintendents. It is his duty to preserve all papers, reports, and public documents relative to schools, and to keep a fair record of all business pertaining to his office, and to hold the same in readiness to be exhibited to the governor or any committee of either house of the legislature; to issue circular letters to county superintendents, giving advice as to the best manner of conducting schools, constructing school-houses, furnishing the same, and examining and procuring competent teachers; to furnish such forms, blanks, &c., as may be necessary for use in the public free school system, together with forms of certificates for teachers; to distribute to school officers copies of school laws; to order all money withheld from any school officer not making the reports required by law; to apportion State school money to counties according to their scholastic population, and draw his warrant in favor of each county treasurer for the amount so apportioned. He is required, on or before the 1st day of December preceding each regular session of the legislature, to make a full report to the governor as to the condition of the public free schools, with such plans and suggestions as he may deem important. His compensation is $3,000 per annum, and all necessary expenses for books, postage and stationery, with $1,800 for clerk hire. He is subject to impeachment and removal for malfeasance in office, and may be removed by the governor, at the request of two-thirds of the members of the legislature.

County directors.—The voters of each county elect for a term of 4 years 5 directors, 1 residing in every magistrate's district, and these select from their number a president, who is *ex officio* county superintendent. It is their duty to divide the county into school districts, so that each school district shall be wholly within some magistrate's district, and to order in each district an election for a board of school trustees; to define the course of study in the schools, direct the class and kind of books and apparatus to be used therein, and prescribe the duties of trustees and teachers not inconsistent with law. They are allowed $4 a day for each whole day employed, but the number of such days shall not in any one year exceed 10.

County superintendents, appointed as aforementioned, have the duty of meeting on

the last Saturday of each month at the county seat all persons desirous of passing an examination for a certificate to teach, and of examining all applicants as to their competency and ability to teach orthography, reading, writing, English grammar, history of the United States, practical physiology, and the laws of health, and no person shall be entitled to a certificate unless he is of good moral character and is well qualified to teach the above named branches. They are required to report to the superintendent of public instruction on or before the first Monday of November preceding each regular session of the legislature such information and statistics upon the subject of schools in their counties as he is bound to embody in his report to the governor. They receive $3 for each applicant examined and $4 for every day employed as county superintendents, the number of such days not to exceed thirty in any one year.

District school trustees, 3 elected by the voters of each district on the first Tuesday of September, are charged with the duty of taking the scholastic population in their respective districts, keeping a separate list of the white and colored children; of providing necessary schools and school-houses; of employing competent teachers and seeing that the schools are taught for 4 months in each year; and of reporting to the county superintendents, whenever required, all such data, facts, and statistics in reference to the schools in their districts as the county superintendents are required to embody in their report to the superintendent of public instruction.

THE SCHOOLS.

The public free schools are required to be taught 4 months in each year at such time and place as the trustees may select, and if the school fund apportioned to any particular district is not sufficient to maintain the schools for that length of time the county board of directors must levy on all taxable property in the district an *ad valorem* tax sufficient to meet the deficiency. All the scholastic population of the State is required to attend some public free school, or private school taught by a competent teacher, for 4 months in each year, unless prevented by ill health, feeble physical constitution, or by reason of danger from hostile Indians, or by the prevalence of contagious or infectious diseases. Upon their failing to attend they forfeit their interest in the school fund for the time so lost, provided that no child under 10 years of age shall be compelled to attend school over a mile from home, and no child, any school over two miles. In districts where a high school is desirable, the principal of such school, with the consent of the trustees, shall have the privilege of blending the public free with the private school by teaching all of scholastic age, and receiving into the school and instructing, at such rates of tuition as he may prescribe, any number of pupils over school age; but said school shall be under the control and supervision of the county board of directors.

SCHOOL FUNDS.

The permanent school fund is derived, as stated in the constitution, from all funds, lands, and other property appropriated for the support of public free schools; all the alternate sections of land reserved by the State out of grants to railroads and other corporations; one-half the public domain of the State, and all sums of money that may come to the State from sale of the same. The proceeds of fines and forfeitures have also been included, but are not mentioned in the new constitution. The amount from these sources in 1874 was $2,631,672.82.

The available school fund, comprising all interests which have accrued or may accrue to the State from railroads or otherwise since March 30, 1870; one-fourth of the *ad valorem* and occupation taxes assessed since that date, and such other taxes as are provided by law for the support of schools, amounted in 1874 to $1,128,942.35. What it may be under the provisions of a constitution which proposes to set apart annually the proceeds of the permanent school fund, not more than one-fourth of the general revenue of the State, and a poll-tax of $1 on male citizens from 21 to 60, remains yet to be seen.

ELEMENTARY INSTRUCTION.

SUPPLYING DEFICIENT STATISTICS.

As has been before said, the statistics given by the State superintendent in his summary came from only 97 counties, 42 others, in which schools were kept, having failed to make returns to him. He therefore undertakes to supplement the known facts by making for the whole State, on the basis of the returns made to him, the following estimates:

Enrolment in the public schools	184,705
Average attendance	125,224
Number of schools organized	3,898
Number of teachers employed	4,030
Percentage of scholastic population enrolled	59
Percentage of scholastic population in actual attendance	40
Percentage of enrolled pupils in actual attendance	68

Of the 97 counties which reported for the year 1875, there are 60 that reported for the scholastic year ended August 31, 1874. A comparison of the reports for the two years exhibits an increased attendance in these 60 counties of 17,336 children. The result, it is claimed, establishes the fact that a public school system in Texas is practicable, and, further, that under the school law of May 22, 1873, with all its defects, public free schools were decidedly successful in those counties where school officers, even in the face of opposition, went actively to work with a determination to make a bad law a good one by an earnest and faithful administration of it.

AID FROM PEABODY FUND.

Assistance has been rendered by this fund to six schools in different portions of the State, ranging in amount from $300 to $600, and aggregating $2,250. Owing to the inability of the trustees of the fund to collect the full amount of interest on bonds, they were not able to give more liberally.

FUTURE PUBLIC SCHOOL POLICY.

The superintendent advises, in case the new State constitution be adopted, rendering it impracticable to establish and maintain any general system of public free schools, that the State should aid private educational enterprise, to the extent of the means authorized by the new constitution to be expended for gratuitous instruction, by providing that a certain proportion of the scholastic population may be instructed in private schools at the expense of the State.

CITY SCHOOL SYSTEM.

GALVESTON.

No city in the State presents, either through the State superintendent or directly to this Bureau, any full report of its school system. The president of the board of directors of Galveston County kindly furnishes the Bureau with the school population there, of the age of 6 to 16 years, making it, according to a recent census, consist of 3,378 white children and 1,355 colored, 4,733 in all. How many of these had been gathered into public schools during the time that these were taught he does not state, but says that no public schools were taught there from March, 1875, to the close of that year and into 1876. The teachers were, however, allowed the use of the public school-houses and furniture free of charge, till new laws for the government of the schools should be passed.

TRAINING OF TEACHERS.

Under this head no returns of any kind appear for 1875, neither normal schools nor normal classes for the preparation of teachers appearing to exist, except in connection with Wiley University, Marshall, where is a normal department for the preparation of such as propose to teach among the colored people. The course here embraces the ordinary school studies, with vocal music and rhetorical exercises, normal methods of teaching, keeping of school records, and Texas school law.—(Circular of university.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

Under this head nothing appears in the report of the State superintendent, and it is supposed that the provision of the school law allowing the incorporation of public schools with private seminaries has led to the making of these seminaries, in large measure, the complement of the public school system, and the reception into them, as pay scholars, of pupils over 16 years of age.

OTHER SECONDARY SCHOOLS.

Four schools for girls and 8 for boys and girls, professedly engaged in secondary training, report, for 1875, instructors, 29; pupils, 1,166; in classical courses, 129; in modern languages, 163; preparing for classical course in college, 103; preparing for scientific course, 90.

In 4 of these 12 schools drawing and vocal music were taught, and in 5, instrumental music. Two had some sort of chemical laboratory and some philosophical apparatus, while 7 report libraries of from 100 to 400 volumes, the total number of volumes being 1,890.—(Returns to Bureau of Education.)

PREPARATORY SCHOOLS AND PREPARATORY DEPARTMENTS.

In one preparatory school and in the preparatory departments of the several colleges there were reported 1,350 pupils, of whom 225 were preparing for a classical collegiate and 354 for a scientific collegiate course.—(Returns to Bureau of Education, 1875.)

SUPERIOR INSTRUCTION.

COLLEGES FOR YOUNG MEN.

St. Joseph's College, Brownsville, (Roman Catholic,) is under the immediate supervision and direction of the Oblate Fathers. Although primarily designed simply to afford a commercial course of instruction it has by the force of circumstances been compelled to embrace in its curriculum all that pertains to a first class college.—(Circular without date.)

Salado College, Salado, furnishes preparatory and collegiate departments and a ladies' course, including music, both vocal and instrumental. While reciting in the same classes the sexes are not permitted to associate together socially.—(Catalogue for 1875.)

Texas Military Institute.—In the curriculum of this institution 11 schools are embraced, and from these the student may select his studies, providing, however, that he shall attend at least 3 schools. The military department has been adopted for the purpose of governing the school and of giving the cadets regular and healthful physical exercise, not to train officers for the profession of arms, and it is made entirely subordinate to the academic department.—(Annual register, 1873–'74.)

Southwestern University.—The course of study here is elective, and students have the opportunity of selecting their course of study from 11 schools. There is also a preparatory department connected with the university.—(Circular for 1873.)

Trinity University, Tehuacana, is under the care of the Texas, Brazos, and Colorado synods of the Cumberland Presbyterian Church. There are preparatory, collegiate, musical and ornamental departments, also commercial and law schools. Candidates for the ministry of all orthodox denominations are received free of charge for tuition. Students may pursue either regular or irregular courses. Both sexes are admitted.

Waco University, Waco, (Baptist,) has for the past ten years followed a similar plan of co-education, and with satisfactory results. The university reports a condition of great prosperity, with a faculty fuller and better organized, and larger college classes than ever before. The property is valued at $53,000.—(Circular, 1875.)

Wiley University, Marshall, was established in 1873 by the Freedmen's Aid Society of the Methodist Episcopal Church, especially for the benefit of the freedmen, though open to all races. There are primary, intermediate, academic, normal, and preparatory courses, each of two years and a collegiate one of four. Especial attention is given to preparation for the ministry and for teaching.—(Circular 1875–'76.)

COLLEGES AND SEMINARIES FOR LADIES.

Institutions of this class reporting to the Office are: (1) Austin Collegiate Female Institute, with a course of study embracing the higher English branches, with music, painting, &c. Latin and Greek, though not considered necessary to graduation, are earnestly recommended, also the study of one or more of the modern languages. (2) Bryan Female Seminary, where the course of instruction embraces primary, preparatory, and collegiate departments, with music, vocal and instrumental, painting, drawing, and wax work. A department has been opened for boys of 6 to 15 years of age, who recite with the girls, but are kept separate from them at other times, except in chapel. (3) Galveston Female High School, comprising primary, preparatory, and intermediate classes, and a collegiate department. Drawing, painting, French, Latin, Greek, German, and music are taught. (4) Chappell Hill Female College, Chapel Hill; here the curriculum in all departments, it is claimed, is equivalent to that of the oldest and best colleges for women. The English language and English classics occupy a prominent place in the course. Music, drawing, painting, French, German, &c., are taught. (5) Lamar Female Seminary, Paris, which is undenominational in its management, and offers preparatory and collegiate courses; the latter being divided into three classes, junior, middle, and senior. The completion of this course entitles the student to a diploma as a full graduate.—(Catalogues of these institutions.)

In these institutions and in the Andrew Female College, Huntsville, the Baylor Female College, Independence, the Nazareth Convent, Victoria, and the Waco Female College, Waco, are reported 71 instructors, with 536 students, 209 of these being in preparatory classes, 321 in the regular collegiate course, 4 in partial courses, and 2 post graduates. Three of the nine institutions have libraries of 400, 600, and 800 volumes. In 8 of them drawing, vocal and instrumental music were taught; in 7, painting and French; in 6, German; in 1, Italian, Latin, and Greek. Three had chemical laboratories; 4, philosophical apparatus, and 2, art galleries.—(Returns to Bureau of Education, 1875.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

In the *Texas Military Institute* there is a scientific course leading to the degree of Sci. B., which is conferred on such students as have graduated in the schools of mathematics, natural philosophy, chemistry, mineralogy, and geology, and English, and have obtained a certificate of proficiency in physical and descriptive geography.—(Catalogue of institute.)

Of the *Agricultural and Mechanical College* of the State no returns for 1875 have been received to indicate whether it is yet organized or not.

PROFESSIONAL.

Texas Medical College and Hospital.—This college, located at Galveston, was incorporated May 31, 1871. It is, in some sense, a State institution, the provisions of the charter liberal and ample. The legislature of 1873 gave a small donation to the hospital department, and further endowments were expected. In the plan of instruction adopted, clinical teaching constitutes an important and prominent feature. Regular clinics are held at the city hospital and at St. Mary's Infirmary, where many hundred cases are treated annually. Material for dissecting is supplied in abundance and at a very low rate.—(First announcement and circular of the college, 1873.)

In *Trinity University Law School* is a course "as extensive as most young gentlemen will take before commencing practice." Moot courts are held regularly, in which each student is drilled in the forms of pleading and practice.—(Catalogue for 1874–'75.)

SPECIAL INSTRUCTION.

TEXAS INSTITUTION FOR THE BLIND.

This school for the unfortunate, located at Austin, makes report for 1875 of 53 inmates, under the instruction of 4 ordinary teachers and 3 teachers of music, besides a superintendent, matron, and shop manager.

In connection with the common English studies the pupils are taught broom and mattress making and the seating of chairs with cane and rattan. The library consists of about 150 volumes of serviceable books, with some others too old for use, and some files of magazines.—(Return to Bureau of Education, 1875.)

TEXAS INSTITUTION FOR EDUCATION OF THE DEAF AND DUMB.

Situated opposite Austin, in Travis County, this school is under the control of a board of 5 trustees and a superintendent. It had 3 teachers and 46 pupils at the close of the year 1874–'75. Of the pupils, 26 were male and 20 female. No return is made of the branches taught in the literary department. In the industrial, gardening receives attention, and printing had been introduced at the date of the report, which was in the autumn of 1875. The State appropriation for the year was $10,000, and the expenditure $10,350. Value of grounds, buildings, and apparatus, $55,000, including 57½ acres of land.—(Return to Bureau of Education.)

—(From special return kindly furnished by Hon. Edward Conant, State superintendent of public instruction, for the school year ended March 31, 1876.)

SCHOOL SYSTEM OF THE STATE.

CONSTITUTIONAL PROVISIONS.

The first imperfect constitution, adopted in 1777 by the inhabitants upon the New Hampshire Grants, which was then the title of the settled portion of the State, contained no provision for educational institutions, although modeled in the main on the constitution of Pennsylvania, where schools for each county were to be established. In 1786, when something more nearly resembling a full State organization was effected, the Plan or Frame of Government, chapter II, section 41, declared that "Laws for the encouragement of virtue and prevention of vice ought to be constantly kept in force and duly executed. And a competent number of schools ought to be maintained in each town for the convenient instruction of youth, and one or more grammar schools be incorporated and properly supported in each county in this State."

PROVISIONS OF THE SCHOOL LAWS.

The school laws of the State having never yet been codified, reliance has to be placed, in the present brief sketch of their provisions, on such laws as are within reach and on a statement kindly prepared for the Bureau of Education by the late secretary of the board of education, a board existent from 1856 to 1874, but now abolished.

OFFICERS.

The officers of the school system, as now constituted, consist of a State superintendent of public instruction, town superintendents of schools, and district prudential committees, with other associated officers.

POWERS AND DUTIES OF THESE OFFICERS.

The State superintendent of public instruction has the general supervision of the State normal schools, with the duty of visitation of them twice in each term. In connection with 3 examiners, appointed by the governor, he examines the candidates for gradua-

tion in these schools and determines their fitness for certificates of graduation. He has also the duty of holding a teachers' institute annually in each of the fourteen counties of the State, and a county convention of town superintendents also annually in each county; of examining, at the former, candidates for State certificates; of furnishing school registers for use in the State schools, with the necessary blanks for school returns and for certificates to be given by town superintendents to licensed teachers; of making biennially a report of the condition of education in the State; and of exerting himself in every way to secure a general interest in the proper training of the young. His salary is believed to be $1,600, with allowance for the current expenses of his office.

Town superintendents, elected annually by the qualified voters of the several towns, have it as their duty to examine and license teachers; to visit, at least once in each year, all the legally organized common schools within their respective towns; to examine into the condition of such schools; to give advice to the teachers as to the government and course of studies; to use all needful measures for the improvement of the scholars in their learning, and for the due inspection and government of the schools; to receive and dispense the school census blanks and school registers furnished by the State superintendent, and to make to him an annual report. The town superintendents of each county are required by law to meet the State superintendent, at his call, for consideration of the interests of education in the county and for consultation as to the condition of the schools and the means for the improvement of them. Compensation: $2 a day for all time necessarily spent in the discharge of duty, a reasonable sum for annual reports, and 10 cents a mile for necessary travel.

Prudential committees, consisting of either one or three legal voters in a school district, are chosen annually by the voters of the district at the district meeting on the last Tuesday of March. They look after the interests of the schools of their districts; select and hire teachers for them; provide them with the necessary furniture and fuel; see to the repair of them when necessary; and institute such grades and studies as may be required by the number and advancement of the scholars or seem to promise an improvement of the schools.

Towns may, however, abolish the district system and place all the public schools under the management of three or six directors, one-third elected each year for terms of three years. These directors then have general charge of the educational interests of their towns without the intervention of prudential committees. But few towns have taken advantage of this provision.

SCHOOLS.

The schools of the rural districts of the State are, for the most part, only primary in character. In the larger villages, in the cities, and in certain "central schools" the graded system is prevalent. To secure a wider extension of the advantages of this system, an act approved November 15, 1869, permitted any school district in the State in which an academy was located, or any district adjoining this, to authorize the prudential committee to make arrangements with such academy to instruct in it all or a part of the scholars belonging to the district in all studies required to be taught * in common schools, and such others as belong to the more advanced classes of graded schools. There are in all about 2,800 schools.

The school day is of six hours, the school week of five such days, the school month of four such weeks. The length of the school year varies greatly, not only in different counties in the State, but in different towns in the same county and in different districts in the same town, ranging from 20 to 42 weeks.

There are acts for compelling attendance at school at least three months of the year in the case of children between 8 and 14, and forbidding the employment of such in any mill or factory without such previous three months' attendance.

The University of Vermont, at Burlington, Middlebury College, Middlebury, and Norwich University, Northfield, though without any link of connection with the public schools, afford opportunities for higher education to the graduates of these. A State Agricultural College is connected with the university at Burlington, and, like the university, is open to young women as well as young men. For juvenile delinquents there is a State Reform School.

SCHOOL FUNDS.

The State has no permanent school fund. The foundation of one was laid in 1825, and was to accumulate till it amounted to a sum whose annual interest should be adequate to pay the expenses of keeping a good free common school in each district in the State for the period of two months annually. "In the year 1845," writes the late secretary of the board of education in his report for 1873–'74, "this fund had reached the sum of $235,000. In that year the State, owing $224,000 to this fund, cancelled the

* The studies required to be taught, according to section 19 of chapter 22 of the general statutes, are orthography, reading, writing, English grammar, geography, arithmetic, history and Constitution of the United States, and good behavor, with special instruction in the geography and history, constitution, and principles of government of the State of Vermont.

debt by appropriating the fund to its payment. Had this fund remained inviolate, it would now, at 6 per cent. simple interest, have amounted to $517,100, and in the year 1890, at compound interest, to a sum the interest of which would support a common school in each district in the State for two months annually. But the State borrowed the fund to pay money borrowed by the State from the fund; that is, borrowed the fund and then repudiated the debt."

In this absence of a permanent school fund, the money to defray the expenses of the common schools is raised annually by direct tax on town and district, with, it is believed, some additions from school lands, from United States deposit fund, from gifts, and other sources. The total expenditure for all school purposes was, in 1875, $565,044.57.

ELEMENTARY INSTRUCTION.

ABSENCE OF INFORMATION FOR THE YEAR.

The reports in this State being biennial, and that for 1873 and 1874 having had its main points presented in the Bureau report for the latter year, no further official information can be had respecting common school instruction till the winter of 1875–'76.

TRAINING OF TEACHERS.

THE STATE NORMAL SCHOOLS.

At a special meeting of the State board of education, held in the city of Burlington on the 8th day of August, 1866, a written proposition was submitted to the board from the trustees of the Orange County grammar school for bringing the said school under the supervision and patronage of the State as a State normal school. The proposition was considered, and on the 17th day of November, 1866, an act passed the legislature of the State constituting and establishing at Randolph Centre a normal school for the State of Vermont, and authorizing the State board of education to establish, on certain conditions, not to exceed two other normal schools.

The standard of qualification for admission to these schools and the course of study to be therein pursued were adopted at a special meeting of the board held in St. Johnsbury, December 5–7, 1866.

At an adjourned special meeting of the board, held at Waterbury, February 18, 1867, the trustees of the Orange County grammar school informed the board by written communication that they had voted to accept the provisions of the act of November 17, 1866, to establish a State normal school at Randolph, and the necessary steps for this establishment were thus completed.

A written communication was also submitted from the trustees of the Lamoille County grammar school, proposing to the State board of education to make the said Lamoille County grammar school a State normal school for the third congressional district of Vermont. The board voted to accept the proposition, and thus was established the State Normal School at Johnson.

At a special meeting of the board, held at Castleton, August 22, 23, 1867, a written proposition to the board from the trustees of the Rutland County grammar school to make said institution a normal school was accepted, and the State Normal School at Castleton was accordingly established.—(Report of secretary of board of education for 1873 and 1874, pp. 209, 210.)

The amount of State appropriation to these schools for 1874–'75 was $1,500 for each: $500 for assistant and $1,000 for tuition in State scholarships of $24 each. The number of years in the full course is, in each case, 3, but with the privilege of graduating at the close of a shorter course.

At Castleton, for that year, there were 6 resident instructors, 100 students, and 26 graduates; at Johnson, 5 resident instructors and 4 non-resident, 140 students, and 13 graduates; at Randolph, 5 resident and 2 non-resident instructors, 242 students, and 57 graduates. Drawing is taught in all the 3; vocal and instrumental music in the first 2, and "incidentally" in the third. All report the possession of more or less philosophical apparatus, and Castleton a chemical laboratory also, with "a shadow of one" at Randolph; Castleton possessing also a museum of natural history and a gymnasium, and Randolph a nucleus of the former.

Graduates from the shorter course of these schools are licensed to teach in the common schools of the State for 5 years; those who pass through the full course, for 10 years.—(Returns to Bureau of Education, 1875.)

TEACHERS' INSTITUTES.

Provision is made for the continued improvement of teachers by the holding of teachers' institutes, of three days each, in the several counties at least once in each year. The time, not to exceed five days, spent by any teacher of a common school in attendance upon such institute in the county in which such teacher may be employed is considered as time lawfully spent in the service of his district and in the legitimate performance of his contract as a teacher.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

Of the number of these schools, the number of teachers in them, and the character and extent of the course pursued, there are no such statistics as could be desired. In the tables appended to the last State report there are enumerated 7,334 pupils engaged in higher studies; but whether these pupils are all in public high schools or in academies connected by contract with the State school system is not indicated.

OTHER SECONDARY SCHOOLS.

Here again full information fails us. The tables of the superintendent give 96 as the number of permanent academies, select schools, and other private schools, but do not show how many of them teach the higher branches or how many pupils are engaged in studying these. There are said to be 87 incorporated academies, county grammar schools, and academic departments of graded schools; but reports from only 26 of these had been received, and it is not stated how many of the 26 belong to the two latter classes.

Reports have been received by the Bureau of Education from 3 schools for boys, 3 for girls, and 20 for both sexes, all professing to be engaged in giving secondary training in 1875. In these schools were 115 instructors, with 2,647 pupils, 631 of whom were in classical studies, 138 in modern languages, 303 preparing for a classical course in college, and 39 for a scientific course. Drawing was taught in 19 of these schools; vocal music in 17; instrumental music in 21. Fourteen of them report chemical laboratories, 15 philosophical apparatus, and as many, libraries of from 21 volumes to 3,100, the sum of all the volumes in the 15 libraries being 11,062.

In the preparatory department of one college also 10 students are reported, 9 of them preparing for a scientific course in the college.

SUPERIOR INSTRUCTION.

UNIVERSITY OF VERMONT, BURLINGTON.

Instruction is given here in three different departments, viz: The department of arts, the department of applied science, and the department of medicine.

The first of these comprises the usual academical course in languages, mathematics, physical sciences, philosophy, rhetoric, literature, and history. The other courses may be found under the head of scientific and professional instruction.

Students have full liberty to elect their courses; but beyond this options are not allowed to those who may be candidates for a degree, except that, to a limited extent, substitutions may be made by express permission of the faculty. The full course is of four years, and is open to young women upon the same conditions as to young men. They are, however, required to room and board in private families approved by the faculty. All are examined by two members of the faculty at the close of each study, or particular branch of study, besides a public examination at the close of the spring term in all the studies pursued during the year.

Among the advantages enjoyed are privileges of access to a library of 16,000 carefully selected volumes, to a museum and cabinets containing nearly 50,000 specimens, and to an art gallery composed of a choice collection of paintings, engravings, photographs, and casts intended to illustrate the history and progress of both ancient and modern art.—(Catalogue for 1875–'76.)

OTHER COLLEGES.

Middlebury College, Middlebury, (Congregational,) has the usual four years academical course, in which instruction is given by text books during the freshman year and by lectures and text books during the three following years. At the close of each fall term there is a public examination of all the classes in the studies pursued during the term and at the close of the collegiate year another in all the studies of the year.

The college library of 11,000 volumes is being steadily enlarged, and efforts are on foot to make this enlargement more rapid and complete in the near future. There is also a cabinet of natural history containing 2,700 specimens in zoölogy, 400 in botany, and 1,500 in mineralogy.—(Catalogue for 1874–'75.)

Norwich University, Northfield, (Protestant Episcopal,) has a classical and a scientific course, each of four years, and a special course in philosophy of three years, meant to meet the wants of those who wish to enter the profession of medicine or law but feel the need of a good preliminary training. There is also a college preparatory and business department, in which students may be fitted for the collegiate classes or for the pursuits of ordinary business.

In addition to the ordinary college studies, military instruction, both theoretical and practical, is given, especially in infantry and artillery tactics and drill, bayonet and

sword exercise, fortification, castrametation, reconnoissance, and guard and outpost duty.

The location of the college is said to be eminently beautiful and healthy.—(Catalogue for 1874–'75.)

SUPERIOR INSTRUCTION OF WOMEN.

The Vermont Methodist Seminary and Female College, Montpelier, is the only institution for superior instruction of young women reported to the Bureau for 1875 from this State. It makes return of 8 instructors and 166 students, 34 of these being in the preparatory department and 52 in the regular collegiate course.

The value of grounds, buildings, and apparatus is set at $80,000. The regular course is four years, but there is also a three years' course differing from the longer only in requiring less attention to languages other than English. Latin and French are the other languages studied, but Greek may be substituted for French. Diplomas are awarded to all who complete either of these courses. Drawing and painting, and vocal and instrumental music are taught; and a chemical laboratory and philosophical apparatus add to these advantages.—(Return to Bureau of Education and catalogue for 1875.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

The agricultural and scientific department of the University of Vermont forms the State Agricultural College, and presents a course in agriculture and related branches, one in theoretical and applied chemistry, one in civil engineering, and one in metallurgy and mining engineering. In addition to these, a literary scientific course has been arranged, coinciding substantially with the academic course, save that Greek is omitted and its place supplied by substitutions from the department of science. A laboratory course is also offered to such as are pursuing studies in the medical department and to teachers of academies who are required to give instruction in chemistry.—(Catalogue for 1875–'76.)

In *the scientific department of Norwich University* there is a course of 4 years, including mathematics and higher English studies, with German and Latin in the freshman year, and German or Latin in the sophomore. For the Latin in the freshman year may be substituted Anglo-Saxon in the first term, semi-Saxon in the second, and early English in the third.—(Catalogue for 1874–'75.)

MEDICAL.

The medical department of the University of Vermont opens to its students a medical course embracing three terms of 13 to 16 weeks each. To graduate in this school the candidate must be 21 years of age and of good moral character; must have studied medicine 3 years with a regular practitioner; must have attended two full courses of lectures in some medical school recognized by the American Medical Association, the latter of which must have been in this school; must write a thesis on a medical subject, and present it, with his graduation fee, one month before the close of the session, and must pass a satisfactory examination before the medical faculty and a board of medical examiners appointed by the State Medical Society.—(Catalogue for 1875–'76.)

SPECIAL INSTRUCTION.

HOME FOR DESTITUTE CHILDREN, BURLINGTON.

On the 3d of October, 1865, through the persevering efforts of an invalid, a little family of seven destitute girls was gathered in a small house in the city, and thus the foundation of a home for such was laid. A charter of incorporation for it was obtained in 1865, under the name "Home for Destitute Children," the object being to provide for this class a place of refuge; to supply their necessities; to promote their intellectual, moral, and religious improvement; and to fit them for situations of usefulness and self-support. As soon as the existence of such an institution became known, applications for admission to it poured in, and to some extent the means for meeting these were furnished. A larger house was purchased and immediately filled. A matron was obtained, and the work systematized,

In the summer of 1866 an opportunity was afforded for the purchase, at $7,000, of the United States Marine Hospital, a fire-proof building, two stories in height and fifty feet square, with ten acres of ground attached. The building had cost the Government $40,000 only ten years before. Trusting to the liberality of friends, the managers, July 16, 1866, assumed the responsibility of the purchase, and on the 8th of the following October found that they had sufficient room for 40 children. The building was consecrated to its new and sacred use November 26, 1866. Up to this time only girls had been admitted; now the managers decided to take children of both sexes. The means for this addition were obtained by personal solicitation of annual contributions from liberal friends, and until 1869 this was the sole reliance.

In 1867 a movement was made to establish a permanent fund of $50,000, and a manager appointed from each county in the State to enlist the ladies of the State in general in the enterprise. By this means $45,000 out of the $50,000 has been raised, and a new building, erected at a cost of $22,000, was dedicated September 29, 1875.

During the ten years of its work the home has received 276 children, who have been supported and educated at the low average annual expense of $70 each.—(New-England Journal of Education, October 16, 1875, p. 178.)

EDUCATIONAL ASSOCIATIONS.

STATE TEACHERS' ASSOCIATION.

The twenty-sixth annual meeting of the association was held at Burlington, February 3, 1876. Notwithstanding bad weather, there was present a goodly representation of teachers and school superintendents. The first subject discussed, after the address of welcome by President Buckham, was: "What can be done to enforce respect for authority among the pupils of our schools?" the next was, "How to teach English." Professor Perkins's address which followed was an earnest plea to teachers to include instruction in natural history in their daily course of instruction. The evening session was opened by a debate on the question "How shall history be taught in common schools?" Next came an address by Rev. C. B. Hulbert, of Middlebury College, in which

he took the position that the only hope for the perpetuity of our republic is the inculcation of religious teaching both in the home and the school. The exercises of the second day were commenced by the reading, by Mr. Pollen, of a paper on arithmetic, written by Professor G. N. Abbott, of Mercersburg, Pa. The questions treated of were, "What is the least time absolutely needful for the mastery of arithmetic; how shall the work be condensed into this time; and at what age shall the study be commenced?" Following the discussion of this topic, which was participated in by several gentlemen, Miss A. M. Guernsey presented a paper advocating the use of Shakspere as a reading book in the school room. The need of a classical fitting school for Western Vermont was discussed by Rev. C. C. Torrey, Professor Goodrich and President Hulbert, after which J. S. Cilley, of Brandon, read a paper on "The relation of the school and the state." A series of specimen lessons in primary and intermediate school work was given by teachers of the Burlington public schools under the general supervision of Superintendent C. J. Alger, when Mr. Fuller, of St. Johnsbury, explained the aims and plans of the New-England Journal of Education and commended it to the support of the teachers. A discussion on the proper order and proportion of studies in intermediate and grammar schools was opened with a paper by J. W. Dunham, and continued orally by Superintendent Alger and others. A paper discussing "The relations of our public schools to pauperism and crime," was presented on Friday evening by Rev. Dr. J. H. Worcester, after which Professor Edwin D. Sanborn, of Dartmouth College, addressed the association on "The origin and characteristics of the English language." On Saturday, after a business meeting, Hon. Edward Conant, State superintendent of instruction, addressed the association upon the Vermont school system, Mrs. O. H. Kile, of Essex, read a lively and interesting paper on "Self culture," and Rev. L. G. Ware presented a very entertaining one on "Genteel English." Before adjournment several resolutions were adopted, among them one commending to the continued support of Congress the National Bureau of Education, and one repeating a previous request of the association that the proceeds of the sale of public lands be applied to the promotion of education.—(New-England Journal of Education, February 12, 19, 26, 1876, pp. 82–83, 94–95, 106–107.)

CHIEF SCHOOL OFFICIAL.

Hon. EDWARD CONANT, *State superintendent of public instruction, Burlington.*

VIRGINIA.

SUMMARY OF STATISTICS.

SCHOOL POPULATION AND ATTENDANCE.

Number between 5 and 21 years of age:	
In cities: white, 26,024; colored, 20,330	46,354
In counties: white, 254,125; colored, 182,310	436,435
In the State: white, 280,149; colored, 202,640	482,789
Pupils between 5 and 21 years of age:	
In cities: white, 7,599; colored, 4,507	12,106
In counties: white, 121,946; colored, 50,434	172,380
In the State: whites, 129,545; colored, 54,941	184,486
Number in average daily attendance:	
In cities: white, 4,954; colored, 2,947	7,901
In counties: white, 69,102; colored, 26,924	96,026
In the State: white, 74,056; colored, 29,871	103,927
Number supplied with text books at public expense	4,025
Number over 21 years of age: white, 385; colored, 196	581
Percentage of school population enrolled:	
In cities: white, 29.2; colored, 22.2	26.1
In counties: white, 48.0; colored, 27.7	39.5
In the State: white, 46.2; colored, 27.1	38.2
Percentage of school population in average daily attendance:	
In cities: white 19.0; colored, 14.5	17.0
In counties: white, 27.2; colored, 14.7	22.0
In the State: white, 26.5; colored, 14.7	21.5
Percentage of attendance on average monthly enrolment:	
In cities: white, 88.1; colored, 89	88.6
In counties: white, 75.2; colored, 72.3	74.4
In the State: white, 76; colored, 73.5	75.3
Average number of pupils in average monthly enrolment to each teacher:	
In cities	42
In counties	32
Cost of tuition per month per pupil enrolled: in cities, 92 cents; in counties, 66 cents	.70
Cost of tuition per month for each pupil in average attendance: in cities, $1.41; in counties, 49 cents	1.25
Whole cost of education per month per pupil enrolled: in cities, $1.18; in counties, 83 cents	.89
Whole cost of education per month for pupils in average attendance: in cities, $1.81; in counties, $1.50	1.58

TEACHERS AND TEACHERS' PAY.

Number of teachers in public schools:		
In cities: white, males, 34; females, 158	192	
In cities: colored, males, 4; females, 17	21	
Total number of teachers in cities		213
In counties: white, males, 2,326; females, 1,205; total white, 3,531; colored, males, 347; females, 171; total colored, 518		4,049
In the State: white, males, 2,360; females, 1,363; total white, 3,723; colored, males, 351; females, 188; total colored, 539		4,262
Average monthly salary from all sources:		
In cities: males, $34.07; females, $44.75		$52 45
In counties: males, $30.47; females, $27.80		28 16
In the State: males, $33.52; females, $28.71		30 48

SCHOOLS AND SCHOOL PROPERTY.

Number of public schools:*	
In cities:† for whites, 129; for colored pupils, 70	199
In counties: for whites, 2,942; for colored pupils, 994	3,936
In the State: for whites, 3,121; for colored pupils, 1,064	4,185
Average number of months that schools were taught: in cities, 9.69; in counties, 5.42	5.59
Number of graded schools included in the 4,185 reported: for whites, 108; for colored pupils, 47	155
Number of schools yet needed, at an average of 15 pupils each	953
Number of log school houses, 2,101; of frame, 1,617; of brick, 129; of stone, 38	3,885
Number with good furniture	676
Number owned by districts	1,256
Number built during the year	292
Value of school property owned by districts	$757,181 00

INCOME AND EXPENDITURE.

Receipts.

From property and capitation tax during the year	$423,000 00
From balance on hand September 1, 1874	23,022 14
From interest on literary fund	65,490 44
From apportionments of 1873–'74 unexpended by districts	6,198 19
	517,710 77
Deduct $6,062.33, refunded by order of legislature to claimant of an escheated estate, and $10 to escheator	6,072 33
	511,638 44

Expenditures.

For current needs:		
Pay of teachers	$726,300 37	
Rent, fuel, &c	99,301 09	
Pay of superintendents	46,668 47	
Pay of treasurers and assessors	25,588 08	
Pay of district clerks	19,473 32	
Expenses of central office	6,787 14	
		$924,118 47
For permanent improvements:		
Real estate, buildings, and furniture	94,582 40	
School apparatus	2,695 81	
		97,278 21
Total expenditure		1,021,396 68
Of this amount there was received—		
From State funds	$478,750 46	
From local taxation	465,414 09	
From Peabody fund, and private gifts	77,232 13	
		1,021,396 68

SUPERINTENDENTS OF SCHOOLS.

Number of county superintendents	89

SCHOOL SYSTEM OF THE STATE.

EDUCATIONAL PROVISIONS OF THE CONSTITUTION.

Article VII, section 1, of the constitution as amended in 1870, provides for the appointment in each county of a superintendent of schools; provided, that counties containing less than 8,000 inhabitants may be attached to adjoining counties for the formation of districts for superintendents of schools; provided, also, that in counties having 30,000 inhabitants, there may be an additional superintendent. Section 3, that each township be divided into school districts, no district to contain less than 100 inhabitants. In each district there shall be elected annually one trustee, who shall hold office for three years, provided, that at the first election three trustees shall be elected, whose terms shall be one, two, and three years, respectively.

Article VIII, section 1. The general assembly shall elect, within 30 days after its organization under this constitution, and every 4 years thereafter, a superintendent of public instruction. Section 2. There shall be a board of education, composed of the governor, superintendent of public instruction, and the attorney-general, which shall appoint, subject to confirmation by the senate, all county superintendents, and remove the same for cause. Section 3. The general assembly, at its first session under this constitution, shall provide a uniform system of public free schools, and for its gradual, equal, and full introduction into all the counties of the State, by the year 1876, or as much earlier as practicable. Section 4. The general assembly shall have power, after a full introduction of the public free school system, to make laws preventing parents and guardians from allowing their children to grow up in idleness and vagrancy. Section 5. The general assembly shall establish, as soon as practicable, normal schools, and it may establish agricultural schools, and such grades of schools as may be for the public good. Section 6. The board of education shall provide for a uniformity of text books, and the furnishsing of school-houses with necessary apparatus and library. Section 7. The general assembly shall set apart as a permanent and perpetual "literary fund" the present literary funds of the State, the proceeds of all public lands donated by Congress for public school purposes, of all escheated property, of all waste and unappropriated lands, of all property accruing to the State by forfeitures and fines, and such other sums as the general assembly shall appropriate. Section 8. The general assembly shall apply the annual interest of the literary fund, the capitation tax for school purposes, and an annual tax upon property of not less than 1 nor more than 5 mills on the dollar, for the equal benefit of all the people of the State, the number of children between 5 and 21 years in each school district being the basis of such divis-

* These expenses are not paid out of public funds, but out of superintendents' private purses.

† The 243 at Hampton Normal and Agricultural Institute not included, that not being reckoned a college.

‡ Not including those attending college, or over 21 years of age.

ion. Provision shall be made to supply public school pupils with text books where the parent or guardian is unable, by reason of poverty, to furnish them. Each district may raise additional sums by a tax on property not to exceed in any one year 5 mills on the dollar, for the support of public free schools. Section 9. The general assembly shall have the power to foster all higher grades of schools under its supervision, and to provide for such purpose a permanent educational fund. Section 10. All grants and donations for educational purposes are to be applied according to the terms of the donors. Section 11. Each city and county shall be held liable for the destruction of school property within its limits by incendiaries or open violence. Section 12. The general assembly shall fix the salaries and prescribe the duties of all school officers, and make all needful laws to carry into effect the public school system provided for by this article.

PROVISIONS OF THE SCHOOL LAW.

From The School Law of Virginia, codified for office use. Richmond, R. F. Walker, superintendent of public printing, 1873.

OFFICERS OF THE PRESENT SYSTEM.

A board of education, a superintendent of public instruction, county superintendents of schools, district school trustees, county school boards, city boards of education, and city superintendents, are the authorities provided for by law to administer the public free school system.

POWERS AND DUTIES OF THESE OFFICERS.

The board of education is composed of the governor, who is *ex officio* president, the superintendent of public instruction, and the attorney-general. The duties of the board are to make by-laws and regulations for its own government, and for carrying into effect the school laws; to observe the operations of the public school system and suggest to the general assembly any improvement therein; to invest the school funds; to appoint and remove district trustees, also county superintendents, subject to confirmation by the senate; to decide appeals from decisions of the superintendent of public instruction; to determine the necessary contingent expenses of the superintendent's office; to audit all claims to be paid out of the State funds; to approve the appointment of a clerk by the superintendent of public instruction, who shall also act as secretary of the board; to regulate all matters arising in the administration of the school system, which are not otherwise provided for; and to punish county superintendents for neglect of duty or official misconduct by fine, suspension, or removal. The board is required to make an annual report to the legislature, on or before the first day of December, covering the annual report of the superintendent of public instruction, giving an account of the operations of the board during the year ending the preceding 31st day of August, and especially showing the condition of the literary fund, and making suggestions concerning the same.

The superintendent of public instruction, elected by the general assembly for a term of four years, is the chief executive officer of the public free school system. It is his duty to see that the school laws and regulations are faithfully executed; to determine the true intent and meaning of the school laws, and to explain to school officers the duties enjoined upon them; to prepare blank forms and regulations for making reports and conducting business under this act, and by circulars and otherwise give such information as he may deem conducive to the proper organization and government of the public free schools; to require of county superintendents detailed annual reports, and of all school officers special reports whenever he may deem it necessary; to make tours of inspection among the public free schools throughout the State; to decide, subject to an appeal to the board of education, all appeals from the decisions of county superintendents, or, at his discretion, he may refer the matter to the board of education; to keep on file in his office copies of all decisions of himself and the board, as well as of all his official acts; to preserve all school books, documents, apparatus, maps, charts, and all other matter of educational interest that may be sent to his office; to prepare annually and as much oftener as necessary a scheme for apportioning the annual school fund among the cities and counties according to the number of children between 5 and 21 years of age in their respective school districts; to submit annually to the board, on or before the 1st day of November, a detailed report of his proceedings for the year ending August 1, exhibiting a plain and statistical account of the receipts and expenditures for public schools, and their condition and progress. He is at liberty, and it is his duty, to offer suggestions to the board of education and the general assembly, at any time the public interest may seem to him to require it. His compensation is $2,000 per annum.

County superintendents, appointed by the board of education and confirmed by the senate for a term of three years, have the duties of explaining the school system upon all suitable occasions, and of promoting an interest in education among the people by all proper means in their power; of annually preparing a scheme for the distribution of school moneys among the districts of their counties; of examining all applicants for

license to teach; of promoting the improvement and efficiency of teachers by all proper methods under directions from the superintendent of public instruction; of visiting and examining all schools under their care; of keeping a record of their acts and filing all official papers; of requiring reports from district trustees; and, on or before the 15th day of September, of making to the superintendent of public instruction an annual report containing such particulars as may be prescribed and called for—a brief abstract of these annual reports to be furnished to every newspaper in their respective counties. Their salaries are fixed by the board of education, but in no case shall such salary exceed $350 per year, except by voluntary additional compensation from the people.

District school trustees, three in number, appointed by the board of education for each district for three years, the term of one expiring each year, explain and enforce the school laws and regulations; employ and dismiss teachers; suspend or dismiss pupils when necessary; supply text books to the pupils not able to buy them; call meetings of the people, and consult together concerning school interests; lay before the county board estimates of amounts necessary for schools during the year; visit the schools; manage and control school property of their counties; make a report to the county superintendents on or before September 8. They are exempt from serving on juries, from working on roads, and from militia service in time of peace.

County school boards, composed of the county superintendent and the trustees of the several districts of the counties, are the custodians of the school funds of each county, and it is their duty to invest all school funds, and to see that in the disposition of donations the wishes of the donors are carried out. They also examine the books and vouchers of all county treasurers and boards of school trustees as to the receipts and payments on account of public free schools, and where any irregularity is discovered in the accounts of any school officer, institute such proceedings as they deem necessary.

City boards of education, appointed by the council of each city, not exceeding three from each ward or school district, for terms of three years each, one-third going out each year, have the same powers and duties in their respective cities as ordinary boards of district trustees. The municipal authorities of any city have the power of raising such sums of money as may be deemed necessary by a tax, provided no such tax on property shall in any one year exceed three mills on the dollar, and no capitation tax shall exceed fifty cents for all purposes.

City superintendents, appointed by the city boards of education in cities of 10,000 or more inhabitants, or in cities situated in counties the population of which, exclusive of the cities, is 15,000, are the executive officers of the city boards of education. They receive pay from the State in like proportion to county superintendents, but without limit to the amount which they may receive from the city.

THE SCHOOLS.

An average attendance of 20 pupils is required in order to constitute a school supported wholly by public funds. The average may be as low as 15 when not more than two-thirds of the teacher's pay is drawn from State funds. It may be reduced to 10 when not more than one-third of the pay comes from the State. Schools must be taught five months during the year to enable them to draw money from the State. All public schools are free to all persons between 5 and 21 residing in the district in which they are situated. In every public free school there are taught orthography, reading, writing, arithmetic, grammar, and geography; and no other branches shall be introduced except as allowed by special regulations of the board of education. Preference is given to graded schools. A uniform series of text books is required to be used in all country public schools, and the primary schools of all cities, except Richmond, Petersburg, and Norfolk. The board of education must guard against too great a multiplication of schools.

SCHOOL FUNDS.

The permanent school fund of the State, known as "the literary fund," consists, as provided in the constitution, of the literary funds existing before the establishment of the present school system, of the proceeds of public lands donated by Congress for public school purposes, of all escheated property, of all waste and unappropriated lands, of property coming to the State by forfeiture, of all fines collected for offenses committed against the State, of donations made for the purpose, and of such other sums as the general assembly may appropriate.

The funds applicable annually to the establishment and maintenance of public schools consist of: (1) State funds, embracing the annual interest on the literary fund, a capitation tax of not more than a dollar per annum on every male citizen over 21, and such tax on property (not to be less than one mill nor more than five mills on the dollar) as the general assembly may order; (2) county funds, embracing such tax as may be levied by the board of supervisors, fines and penalties imposed on delinquent school officers or teachers, and donations, or the income therefrom; (3) district funds, embracing such tax as may be levied by the supervisors of the county for the purposes of the schools districts; (4) aid from Peabody fund and private donations.

The school revenue from these various sources, including income of permanent fund and unexpended balances of taxation was, in 1875, reported to be $1,215,354.18.

ELEMENTARY INSTRUCTION.

EDUCATIONAL CONDITION.

The year's progress is said to have been satisfactory. The addition of 10,611 to the public school attendance, and of 283 to the number of schools, was more than there was reason to expect. In many counties there is a steady improvement in the qualifications of teachers. In other counties it is feared this is not the case, and the wish is expressed that the school authorities in each county had leave to employ even a small amount for the improvement of teachers.

As a means of educating the people, the superiority of public over private instruction is sufficiently demonstrated by the recent history of education in Virginia. Previous to 1870, the people were dependent chiefly upon private schools for primary instruction. Many poor children had their tuition paid from the literary fund, and there were nine counties where there were some public schools. For higher instruction the State supported two institutions. The number of pupils attending schools of all sorts in the counties now composing Virginia was as follows: year 1850, 51,808; 1860, 67,024; 1870, 58,974; but how small is the number, when compared with the attendance of 1875, it being 207,771. If the colored pupils be thrown out of the calculation, we have for 1860, (all white,) 67,024; in 1875, white pupils, public and private, 149,011. This contrast is sufficiently striking, but it should be remembered that of the number attending schools in 1860, the tuition of 31,516 was paid out of the literary fund, their parents being too poor to pay anything. Deducting this number from the number attending schools in 1860, we have as the net result of private school instruction, in the best year of the history of the State, 35,508 pupils.

It is not pretended that the public school system has reached any high degree of efficiency; but more than three times the number of children are now seen going to school in Virginia than were ever seen going before. And if this gain can be made in the first five years, what may not be hoped for by the end of the next five?—(State report 1875, pp. 82, 83.)

SUMMARY OF REPORTS.

Seventy-nine counties report a gain in public sentiment concerning public schools during the year; 26 report no change, and 4 report unfavorably. Ninety-nine counties and cities report improvement or prospect of improvement in school-houses; and 10 report no improvement.

In 92 counties the meetings of county school boards were held according to law; and in 7 counties meetings were held, but not according to law.

In 77 counties and cities the accounts of the treasurers and the records of the district boards were reported satisfactory; in 32 counties and cities the accounts were reported not satisfactory. In 46 counties and cities regular meetings of the district school boards were held; in 64 counties and cities the meetings were not regular. Ninety-seven counties think the new scheme of subdistricting unsuitable; and 2 counties think it suited to their wants.

The following suggestions as to changes in the school law or regulations of the board of education are made: 26 counties and cities suggest a per diem to trustees, and 10 counties ask for a yearly appropriation for teachers' institutes; 3 ask for a law requiring the supervisors to levy the amount asked for by the county board; 3 desire a law requiring clerks to give monthly statements to superintendent of receipts and disbursements; 2 ask for a longer school term; 4 suggest that the capitation tax be increased; 3 think the school boards should have exclusive control of school affairs. Thirty-one counties and cities make no suggestions, 2 do not answer the questions; 1 suggests that district boards be abolished, and that county boards consist of one paid member from each district. In 68 counties and cities educational meetings were held; in 36, not held; in 3 this question unanswered.—(State superintendent's report 1875, pp. 51, 52.)

APPROPRIATIONS FROM PEABODY FUND.

Lynchburg, $2,000; Alexandria, $2,000; Staunton, $1,800; Portsmouth, $1,500; Manchester, $1,350; Charlottesville, $900; Christiansburg, $900; Hampton Normal School, (colored,) $800; Richmond Normal School, (colored,) $800; teachers' institutes, $800; Salem, $750; Hollins Institute, $500; Woodstock, $650; Fincastle, $600; Midlothian, $600; Strasburg, $450; Liberty, $450; Chatham Hill, $450; Goodson, $450; Barracks Institute, $450; Lincoln School, (colored,) $350; Bland County, $300; Buchanan, $300; Culpeper, $300; Leesburg, $300; Wytheville, $300; New Hope, $300; Hillsville, $300; Berryville, $300; Falls Church, $300; Saltville, $300; Cripple Creek, $300; Matoaca, $300; Abingdon, $300; Liberty Hall, $300; Antioch School, $300; Hollywood School, $300; Butler School, (colored,) $200; Educational Journal, $200; total amount received by Virginia from the Peabody fund, $23,750.—(State report 1875, p. 53.)

Comparative statement showing the condition of the schools for the year ending July 31, 1875, as compared with that of the four preceding years.

CITY SCHOOL SYSTEMS.

ALEXANDRIA.

Officers.—The school board is composed of three members from each ward, one of whom goes out each year, a president being chosen from among the members of the board and a clerk from among the citizens. The board employ a superintendent of schools.

Statistics.—There appear from the tables to be 4 school-houses, with 7 grades in each, the total enrolment being 931; the average monthly enrolment, 745; the average attendance, 670; the monthly percentage of attendance, 90. A comparison of the enrolment and average attendance, taken from observations made on the last day of each year since the schools were commenced, in 1871, shows an increase of 30 per cent. in the enrolment and 16 per cent. in the attendance in the five years. This increase has been in very large proportion in the schools for colored children, and that, too, in spite of violent opposition on the part of some of their race to attendance in the public schools.

The receipts of the school board for the 11 months ending July 1, 1875, were $14,369.49; the expenditures for school purposes, $13,364.20; leaving a balance of $1,005.29 in the treasury.

Parish schools.—The parish schools connected with two Protestant Episcopal churches in the city are said by the superintendent to have rendered much service to the cause of free education during the year, proportionately lessening the burdens of the taxpayers. One of these schools had in it during the year 109 children; the other, 168.

Teachers' meetings.—A teachers' institute held in August, 1875, with the aid of State Superintendent Newell, of Maryland, and monthly meetings of teachers, at which school methods and school management were discussed, are said to have proved greatly useful.—(Report of Superintendent R. L. Carne for 1874–'75.)

LYNCHBURG.

Officers.—A school board of nine members, three for each ward, one-third being changed each year, and a city superintendent of schools elected by the board. The board elects also its own chairman and clerk—the city superintendent, A. F. Biggers, serving at present in the latter office.

Statistics.—Population, of school age, (5-21,) 4,093; enrolled in public schools, 1,486; average daily attendance in these, 873; school rooms for study and recitation, 30; for recitation only, 4; school buildings, 7; sittings for study in these, 1,100; teachers employed, 28—of whom 11 were males and 17 females; salaries of teachers: minimum for assistants, $400; maximum for principal, $1,100; salary of superintendent, $1,300. Receipts for public schools, $19,116.61; expenditures, $18,696.08. Expense per capita of average daily attendance, $21.13.

The estimated enrolment in private and parochial schools is 416. No other statistics of these are given.

Notes.—There appear to be seven grades, of one year each, below the high school, devoted to the ordinary studies of primary and grammar schools. The high school course is of three years. In all the divisions drawing and vocal music are taught, as far as the superintendent may deem expedient and practicable.—(Organization, Rules, and Regulations of School Board of Lynchburg, and return to Bureau of Education, 1875.)

RICHMOND.

Officers.—A school board, composed of nine members, three from each district into which the city is divided, has general control of the city schools. The board elects

from among its members a secretary and supervisor of school property, and from without a superintendent of city schools. The mayor of the city is *ex officio* president. One-third of the elected members of the board are changed each year.

Statistics.—Population of the city, 72,500; number of school age,(5–21,) 20,754; number enrolled in public schools, 4,898; average daily attendance, 4,297. Number of different public school buildings, 13; of public school rooms for study and recitation, 100, besides 6 for recitation only; number of sittings for study in public schools, 5,024; number of teachers, including principals, 111; average daily attendance per teacher, 39. Salaries of teachers, $270 to $1,350; salary of superintendent, $2,000. Total receipts for public schools, $70,044.98; expenditures the same. Average expense per capita of children taught, including everything, $16.64. Value of school property, $215,000.

Enrolment in private and parochial schools, 4,194; number of school rooms for study and recitation used by these schools, 105; for recitation only, 10. Number of sittings for study in these rooms, 2,940; number of teachers employed, including principals, 126.

Notes.—In the public schools there has been an increase of 181 in enrolment, and of 293 in average attendance over the session of 1873–'74.

The public schools consist of 70 primary and of 23 grammar schools. with 1 high school. There have been 10 grades below the high school, but it is proposed to reduce these to 9, and, if possible, to 8.

Fifteen of the former pupils of the high school are among the teachers in the public schools, and it is hoped that ere long a normal and training school for the special preparation of teachers for the schools may be added to the city system.—(Report of Superintendent J. H. Binford, for 1874–'75.)

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

The State has not yet established any institution for the training of white teachers. The only facilities afforded them for such training are the normal courses provided by some few of the colleges. Roanoke College, at Salem, includes in its curriculum a course for the preparation of teachers, which is under the immediate supervision of the president of the college. Students entering this department have the privilege of taking any studies they may wish in the college classes without additional charge. Two colleges for ladies, Hollins Institute and Marion Female College, also include normal courses in their curricula.

The Hampton Normal and Agricultural Institute is accomplishing an important work in the education of teachers for the colored schools. The report of the principal for 1874–'75, says of its graduates: "They have, as a class, faithfully and successfully taught their race, and have won the esteem of their southern neighbors, who have treated them with marked kindness and justice. It has not yet been possible to supply the demand for colored teachers; hundreds are needed in Virginia alone." The school reports for 1875 a total of 18 instructors and 243 students in a three years' course, 39 graduates in the last year, and 36 of these engaged in teaching. Vocal and instrumental music are taught.

A Richmond normal school for colored youth reports 5 instructors and 118 students in a three years' course, in which drawing and vocal and instrumental music are among the branches taught. The school graduated 18 students in 1875, and has in all 52 of its graduates teaching in different fields. One at Petersburg, under the care of the Rev. G. B. Cooke and four assistants, numbered 150 pupils in 1875.—(Returns to Bureau of Education, 1875.)

TEACHERS' INSTITUTES.

In the absence of State normal schools, efforts are made to improve the teachers by means of institutes and kindred meetings held in the counties in which they are employed. In 1874–'75 it appears that such educational gatherings were held in 68 counties and cities, the meetings in some instances being monthly, in others quarterly, and in yet others from two to seven times a year.—(State report, p. 50.)

EDUCATIONAL JOURNAL.

The influence of a well conducted paper, devoted to the discussion of school methods, discipline, and studies, can hardly fail to be improving to the teachers who peruse its pages. Important practical questions relating to the teacher's work come up in it for notice, and are sometimes treated with much ability. Mistakes of young teachers are thus often happily corrected. Knowledge of all school matters is increased. The good examples or good advice of veterans in the work aid those who still are novices; and, as a general rule, the intelligence and usefulness of a teacher may be determined pretty accurately from the number and character of the educational papers which he reads.

In this line the Educational Journal of Virginia, the official organ of the educational association of the State and of the State superintendent of instruction, has rendered valuable service, and, like other kindred papers published elsewhere, may be reckoned almost equal in influence to a teacher's training school.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

In how many of the 155 graded schools reported by the State superintendent there were high school departments in 1875 does not appear. Nor do high schools present themselves in the returns received from the cities of the State, except at Richmond and Lynchburg. In both of these the course covers three years, embracing Latin and French or German in the former, and Latin and French, with the option of Greek or German in the latter. The enrolment in the Richmond school in 1875 was 237; that in Lynchburg not given.

OTHER SECONDARY SCHOOLS.

Returns from 26 private schools engaged in secondary training of boys, of girls, or of both sexes, indicate the presence of 95 teachers and 1,409 pupils; 401 of whom were, in 1875, in classical studies, and 228 in modern languages, 121 preparing for a classical course in college and 40 for a scientific course. In 8 of these schools was taught drawing; in 10, vocal music; in 12, instrumental music. Three report chemical laboratories; 12, philosophical apparatus. Three of the schools for boys and three for girls report libraries of 150 to 1,000 volumes, the number of volumes in the 6 libraries being 3,050.

PREPARATORY SCHOOLS AND DEPARTMENTS.

Three schools, largely devoted to the preparation of students for college, report for 1875 as follows: Instructors, 9; students, 126; preparing for classical course in college, 57; for a scientific course, 23. Two of these schools have libraries of 200 and 850 volumes; two report chemical laboratories; one has philosophical apparatus; and all three have gymnasiums for physical exercise.

In the preparatory departments of colleges appear 158 male students, 40 of whom are reported to be preparing for a classical collegiate course, and 25 for a scientific one.—(Returns to Bureau of Education, 1875.)

BUSINESS COLLEGE.

One business college in Richmond makes return of a course of one year in book-keeping, arithmetic, commercial law, and commercial English branches; 1 instructor and 47 students.—(Return to Bureau, 1875.)

SUPERIOR INSTRUCTION.

UNIVERSITY OF VIRGINIA, CHARLOTTESVILLE.

In this institution there is no curriculum or prescribed course of study to be pursued by every student, whatever his previous preparation or special objects. In establishing the University of Virginia, Mr. Jefferson, for the first time in America, threw open the doors of a university in the true sense of the name, providing as amply as the available means would permit for thorough instruction in independent schools in all the chief branches of learning, assuming that the opportunities for study thus presented were privileges to be voluntarily and eagerly sought, and allowing students to select for themselves the courses they might choose. The university furnishes, besides its professional departments, instruction in eleven separate schools, viz: (1) Latin, (2) Greek, (3) modern languages, (4) moral philosophy, (5) history, general literature, and rhetoric, (6) mathematics, (7) natural philosophy, (8) general and applied chemistry, (9) applied mathematics, engineeering, and architecture, (10) analytical and agricultural chemistry, and (11) natural history, experimental and practical agriculture.

In order to encourage the study of scientific and practical agriculture in Virginia, and thus promote the farming and planting interests of the State, 40 farmers' scholarships (one for each senatorial district) will be open next session in the university, in addition to the 50 State scholarships now existing under the law. These scholarships will be tenable for two years, and will afford free tuition in the schools of natural history and agriculture, general and industrial chemistry, agricultural chemistry, (with a prescribed course of analytical chemistry in connection with it,) natural philosophy, mathematics, and history and English literature. These scholarships will be conferred on those who are unable to incur the expense of their education, whose parents cannot furnish the means for it, and who will declare their intention to become *bona fide* farmers or planters.

No honorary degrees are conferred by the university; a satisfactory examination is the necessary preliminary for every degree it grants.

Of the 368 students attendant on its schools in 1874–'75, Virginia furnished 186. The others represented 21 different States of the Union, with 1 from Wiesbaden, Germany, and 1 from the Prussian capital.—(Catalogue of 1874–'75.)

OTHER COLLEGES.

EMORY AND HENRY COLLEGE, EMORY, (METHODIST EPISCOPAL.)

This college, secluded amidst the mountains in the southwestern portion of the State, on the line of the Virginia and Tennessee Railroad, has a classical course of four years, a select scientific course, a special business course, and a preparatory course. Special attention is given to the English language and literature.—(Catalogue for 1874-'75.)

HAMPDEN SIDNEY COLLEGE, PRINCE EDWARD COUNTY, (PRESBYTERIAN.)

The old four years' curriculum is still retained here also, as best adapted, in the view of the authorities, for a truly liberal education. But as everything cannot be taught within four years, the effort is not to do all that may be desirable; only to do well and thoroughly what is professed to be done.

There is a German course of two years, independent of the ordinary college course.—(Catalogue.)

RANDOLPH MACON COLLEGE, ASHLAND, (METHODIST EPISCOPAL.)

The course of study here is distributed into separate schools, as the school of Latin, that of Greek, English, French, German, pure mathematics, applied mathematics, natural science, chemistry, physiology and hygiene, moral philosophy and metaphysics, biblical literature and Oriental languages. After an experience of many years in testing both methods, that of a prescribed and that of an elective course of study, the faculty are satisfied that the latter possesses great advantages over the former. The method of instruction is by text books and lectures. The effort is made to secure thorough scholarship, and students are retained in lower or returned from higher to lower classes, until the professor, to whose school they belong, considers them qualified to advance. The degrees conferred are: graduate in a school, distinguished graduate, bachelor of science, bachelor of arts, and master of arts. The government of the college is not by arbitrary restraint, but by the cultivation of moral principles—a plan that has borne such good fruit that it is believed to be far superior to any system of special restrictive rules. Of the 215 students in 1874-'75, there were 134 from Virginia, the remainder being from 13 different States and the District of Columbia.—(Catalogue, 1874-'75.)

RICHMOND COLLEGE, RICHMOND, (BAPTIST.)

The course of study is arranged in eight separate and independent schools, viz: Latin, Greek, modern languages, English, mathematics, physics, chemistry, and philosophy. The faculty of instruction and government consists of coequal professors, one of whom is annually chosen to be the chairman and chief executive officer. While allowing each student, under their advice, to select such studies as are most important in qualifying him for his future pursuits, the faculty always encourage a regular and complete course. Every student is required to attend at least three schools. The academic degrees conferred are those of B. Lit., B. S., B. A., and M. A., the latter only on such students as have obtained diplomas in all the eight academic schools, and have passed satisfactory general examinations in review on all the subjects embraced therein.—(Catalogue for 1874-'75.)

ROANOKE COLLEGE, SALEM, (LUTHERAN.)

This college offers, besides the regular college classes, preparatory, select, and normal courses, the latter being under the immediate supervision of the president of the college. Students entering this department have the privilege of taking any studies they may wish in the college classes, without additional charge. Of the 167 students attendant for the year 1874-'75, it appears that 40 were in select and normal courses and 43 in the preparatory department.—(Catalogue, 1874-'75.)

WASHINGTON AND LEE UNIVERSITY, LEXINGTON, (NON-SECTARIAN.)

The course of study here is divided into 13 distinct departments, from which students, under the advice of the faculty, may select any studies which they may be prepared to attend. These departments are: (1) Latin, (2) Greek, (3) modern languages, (4) English language and philology, (5) moral philosophy, (6) history and literature, (7) English literature, mathematics, (8) applied mathematics, (9) natural philosophy, chemistry, (10) mineralogy and geology, (11) applied chemistry and mining, (12) civil and mining engineering, and (13) law and equity. A summer school has been organized to enable students to make up special deficiencies, or to enter advanced classes at the beginning of the next session, and also to afford facilities to teachers who may wish to devote their vacations to study.

Students are encouraged, as far as possible, to complete some one of these several courses. The degrees of B. A., Sc. B., and Ph. B., which are the collegiate degrees of the university, are founded upon these respective courses of study, and each embraces a combination of required with elective studies, so as to allow the largest liberty consistent with thorough culture. The degree of master of arts is founded upon the highest attainments in the several departments. The degree of doctor of philosophy is in-

tended to encourage post graduate study. The professional degrees of civil engineer, mining engineer, and bachelor of law are attached to the several professional schools. No degrees are conferred except upon examination and recommendation by the faculty. Number of students, 196, of whom 68 were from Virginia, the remainder representing 17 other States.—(Catalogue for 1874–'75.)

WILLIAM AND MARY COLLEGE, WILLIAMSBURG, (NON-SECTARIAN.)

This venerable institution still holds upon its way, endeavoring, amidst many discouragements, to repair the losses sustained by it during the war. Disentangled from all sectarian control, it seeks to fill its place as the college of the eastern section of the State. The subjects taught in it are Latin, Greek, mathematics, natural philosophy, chemistry, geology, mineralogy, physiology, moral and intellectual philosophy, belles-lettres, French, and German.

COLLEGES FOR WOMEN.

Nine institutions for the superior instruction of women have been heard from through their annual catalogues or in reply to circulars of inquiry. The facts respecting them are as follows:

Albemarle Female Institute, at Charlottesville, (non-sectarian,) comprises in its course schools of literature, design, and music. Art is taught in a thorough and practical manner, not altogether as an accomplishment, but as affording a suitable avenue for employment. Special attention is bestowed on those who wish to study art as a profession. The importance of physical exercise is recognized, and the gymnasium is supplied with the best apparatus. The college confers degrees.—(Catalogue of the institute, 1874–'75.)

Farmville College, Farmville, (Methodist Episcopal Church South,) reports an attendance of 90 students. The course of instruction includes music, (vocal and instrumental,) drawing, painting, French, and German.—(Replies to inquiries, 1875.)

Hollins Institute, Botetourt Springs, (Baptist.)—The collegiate department embraces 7 distinct schools, in any one of which the pupil may graduate. These are (1) the English, (2) the ancient, (3) the modern languages and literature, (4) mathematics, (5) natural science, (6) mental and moral science, and (7) history. There are also normal and ornamental departments, the latter including music, (both vocal and the use of three instruments,) drawing, and painting. The college confers degrees.—(Catalogue, 1874–'75.)

Marion Female Institute, Marion, (Evangelical Lutheran,) reports 75 students engaged in primary, preparatory, academic, collegiate, and normal departments.—(Catalogue, 1874–'75.)

Martha Washington College, Abingdon, (Methodist Episcopal,) with 81 pupils, has preparatory, ornamental, and collegiate departments, the latter being arranged in 7 schools, including those of ancient and modern languages and English literature. The ornamental department comprises schools of music and of drawing and painting. Degrees are conferred.—(Catalogue, 1874–'75.)

Petersburg Female College, Petersburg, (Methodist,) was established in 1854, by 48 gentlemen of the city, with the view of providing the highest grade of instruction for young women in the more solid as well as in the ornamental branches. The studies in the collegiate department are elective, and are classified into 8 schools, including those of Latin, French, German, and music. Primary and preparatory courses are also provided.—(Catalogue, 1874–'75.)

Southern Female College, Petersburg, claims to be not denominational, though under the supervision of the Methodist Church South. The course of study comprises, among other schools, those of Latin, German, French, and music. Elocution and English studies receive special attention.—(Catalogue, 1874–'75.)

Virginia Female Institute, Staunton, was established over 26 years ago as a first class institution. It is authorized to confer collegiate degrees. The course of study has grown with the wants of the age, and at present is embraced in 10 schools, from which pupils may select such studies as suit their taste or limited time, or they may pursue them in regular order to the attainment of a full diploma of the institute. To obtain this, pupils must pass an examination in history and English literature, mathematics, natural and moral science, and Latin or some modern language. Much attention is paid to physical exercise, which is taken regularly, subject to the advice of the two skilful physicians in whose care the institution is placed.—(Catalogue, 1874–'75.)

Wesleyan Female Institute, Staunton, (Methodist Church South,) confers collegiate degrees. Latin, Greek, four modern languages, music, and art form a part of the extensive course provided here. Each pupil is allowed to choose those studies which may be best suited to her taste, but, in order to obtain a full diploma, must be graduated in mathematics, two languages, (either an ancient and modern or two modern ones,) natural philosophy, chemistry, history, English literature, and moral philosophy. —(Annual announcement, 1874–'75.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

AGRICULTURAL AND MECHANICAL COLLEGE.

The attempt to adapt the work in this institution to the needs of farmers and mechanics has been successful. A great majority of the students are sons of men engaged in farming or in trades, youths who have worked and expect to work at those industries. The number, which was 132 the first year and 197 the second, was, in the third, 222. They came from every part of the State, 80 counties and towns being represented, while 10 were from other States.

The plans proposed in order to secure cheap living have been carried out successfully. Nearly 100 students lived in messes, at a cost per month that averaged less than $6.50 for the session of 10 months, having free tuition and free quarters. The rates paid by the others varied between $10 and $12 a month for table board, and $13 to $15 for that and lodging, which last is the highest price that has ever yet been paid by a student.

Besides the unpaid work done by the regular daily details, from which no student was exempt, except for physical disability, all the other work that could be supplied was eagerly taken by the students, being paid for at the rate of 10 cents an hour or 75 cents a day, less being allowed to the smaller and less skilful youths, and more, rising to 18 cents an hour, to those having skill in trades or to those who showed great efficiency in directing the work of parties under their charge. The system exacts labor from every student, furnishes paying work to the neediest, and tends, by the mess system, to inculcate and foster economy and self help. Each year one or two or more students have met their whole expenses by the earnings from their work, and numbers have earned a considerable part of their expenses.

In the mechanical department, a two-story shop of 60 by 30 feet was finished and furnished with a steam engine of eight horse power, circular and vertical saws, lathes, forges, work benches, and tools. A school of telegraphy was also equipped and started, and photographic apparatus provided.

The military instruction required by the conditions of the congressional land grant is confined to drill in the school of the soldier, the company, and the battalion.

Plans were adopted for two college buildings of 135 by 45 feet, of two stories, with high basements; for a dwelling house for the president and one for a professor; and the corner-stone for the new buildings was laid August 12, 1875, with masonic rites and great rejoicings. On that day diplomas were delivered to the first class of graduates that the college has sent out, 12 in number, 6 of whom were declared graduates in the school of agriculture, 3 in that of mechanics, and 3 in those of agriculture and mechanics.—(Report of President C. L. C. Minor, in report of State superintendent, pp. 56, 57.)

SCIENTIFIC DEPARTMENT OF WASHINGTON AND LEE.

The school of civil and mining engineering in Washington and Lee University, with its course in mathematics, natural philosophy, astronomy, chemistry, mineralogy, ge-

ology, and modern languages, includes special instruction in drawing, architecture, topography, and full practice in field work and use of instruments. The degree bestowed upon graduates is that of C. E.

The course for the degree of mining engineer in Washington and Lee includes, besides the course of civil engineering, that of applied chemistry, with experiment and practice in analysis, assaying, metallurgy, and special instructions on tunnels, shafts, arches, and chemistry applied to manufacture, agriculture, and the mechanic arts.—(Catalogue of university.)

VIRGINIA MILITARY INSTITUTE, LEXINGTON.

The system of instruction and government in this important school is distinctive, and is founded upon that of the United States Military Academy at West Point. As soon as a young man enters the institution it assumes entire control of him, and not only directs his moral and intellectual education, but provides everything required for his personal wants or comfort. He is lodged, boarded, and taught within the walls, his clothing, books, and other supplies being furnished by the quartermaster at cost. If sick, he is under the special care of the surgeon, with hospital and other facilities for nursing care. It is claimed that the energy, system, subordination, and self reliance which the military government of the institute cultivates give a practical character to the education which it supplies.

The special school of applied science in the institute is arranged in the following courses, which may be prosecuted separately or in combination: (1) A course of architecture, (2) a course of civil engineering, (3) a course of machines, (4) a course of mining, (5) a course of metallurgy, (6) a course of analytical and applied chemistry, and (7) a course of agriculture.—(Official register, 1874–'75.)

HAMPTON NORMAL AND AGRICULTURAL INSTITUTE.

This school for the colored race is a little more than seven years old, during which time the admissions have been: boys, 342; girls, 221; total, 563. The number of these who have been engaged in teaching is: boys, 103; girls, 48; total, 151. The number of students from Virginia for 1874–'75 was 152; the total number 243, of whom 154 were boys and 89 girls. The boys, among other occupations, are employed as farmers, printers, painters, carpenters, coopers, and shoemakers. The girls are engaged principally in household work and in sewing. They have had the opportunity to learn the use of several different sewing machines, and many have become good operators. An improvement in this respect is reported over last term, some of the senior class having made specimen garments very creditably. A large amount of work has been done, and it has been of better quality than formerly.

The present annual running expenses of the school, including necessary repairs and new outfit, are about $35,000. To make ends meet requires, besides the State appropriation, about two months' effort on the part of the principal, with the constant labors of the financial secretary, whose time is devoted chiefly to the endowment fund, the interest of which shall finally maintain the school. The trustees have undertaken to raise $200,000 for this purpose. The large sum needed for building has heretofore checked the growth of the endowment fund.

Student's labor is twofold in its object: instruction and production, knowledge and support. This involves much non-productive labor, and is a direct tax upon the cash income. The employment of ninety young men on the farm costs yearly a thousand dollars more than would ordinary labor hired to do the same work. Paying unskilled boys is good for them, but not for the balance sheet. The farm must stand the loss, for its work is to educate rather than to make money. The question is not, "Does the farm support itself?" but, "What does it do for the students?"

Most of the students are detailed for labor one school day in each week, and for the half or whole of Saturdays. A few work under contract. Needy students are provided with extra days' work. During the summer vacation of three and a half months, nearly all are engaged in teaching, farming, or hotel service, in order to pay their old debts or to provide for the next term's needs. There has always been a right spirit regarding work, it being held in proper esteem, while it is also in steady demand. The average age and manual skill of students are diminishing. Fewer come who have felt the pressure of slavery; more enter from the common schools. There is less earnestness than formerly, but better preparation and equal, if not superior, average ability. The capacity of the institution is limited to 300 boarders and 50 day scholars. The average attendance at present is 200, and is increasing.

The yearly admissions are about 100, of which number from 40 to 50 may be expected to graduate. Some are dropped for incapacity or bad conduct or are called home by friends. Some are too dull to keep up with their classes and are not carried beyond the second year. These are capable of teaching primary schools and sometimes rank with the best of the graduates in strength of character and in usefulness.—(Report of C. C. Armstrong, principal, in report of State superintendent for 1875, pp. 63–71.)

PROFESSIONAL.

LAW.

The law department of the University of Virginia comprises two schools, one of common and statute law and one of equity, mercantile and international, constitutional and civil law and government. The instruction given is thorough and practical, the means used being text books, lectures, daily examinations, and moot courts, where, under the supervision of the professors, the student is required to pronounce opinions upon supposed cases, to devise and institute remedies by suit or otherwise, to conduct suits at law and in equity from their inception through all their stages, to draw wills, conveyances, and other assurances, and, in short, to perform most of the functions of a practising lawyer.

The private summer course of law lectures which has been maintained here for six years past, having proved beneficial to a large class of persons, will be vigorously continued in the future.—(Catalogue of University of Virginia, 1874–'75.)

The school of law and equity at Washington and Lee University furnishes instruction in the principles of the law of real and personal property, in the system of equity jurisprudence, and in the forms and practice in the courts of law and equity. It is a leading purpose here to show to the student the dependence of municipal, constitutional, and international law upon the fundamental principles of natural law, to trace the history of the municipal law of England, to develop the principles of the science of government, and especially to present historically a view of the British and American forms of constitutional government. The historic and judicial interpretation and construction of the Federal Constitution are fully developed.—(Catalogue of Washington and Lee University, 1874–'75.)

MEDICINE.

The medical department of the University of Virginia is organized on the same general plan as are its other departments, the distinctive features of which are claimed to be comprehensiveness and thoroughness of instruction, and the graduation of the student upon satisfactory evidences of attainments only, without regard to the length of time he may have been attending the lectures. An experience of more than 40 years has fully tested the excellence of the plan. The equipment of the department in apparatus, specimens, and drawings is extensive and excellent, and the collection of paintings for the illustration of the lectures on anatomy, physiology, and surgery, several hundred in number, is unequalled, it is claimed, by anything of the kind in the United States.—(Catalogue of university.)

THEOLOGY.

The Richmond Institute, (Baptist,) intended to prepare students for either teaching or preaching, requires of all candidates for admission evidence of good moral character and of ability to read readily in the Fourth Reader. Once admitted, they are trained as circumstances require. In the theological department instruction is given largely by lectures and discussions, which embrace systematic theology, evidences of Christianity, biblical geography and antiquities, interpretation of Scripture, church polity, composition and delivery of sermons, &c.—(Catalogue for 1874–'75.)

The Theological Seminary of the Diocese of Virginia (Protestant Episcopal) requires of every candidate for admission either a diploma from some college or university, or an ability to translate and parse some Greek and Latin author, and to stand a satisfactory examination on natural, intellectual, and moral philosophy. He must then enter the junior or lowest class at the commencement of the session, or stand a satisfactory examination on the studies that have been pursued by the higher class into which he may seek admission. The full course of study occupies three years in the Hebrew of the Old Testament, the Greek of the New, ecclesiastical history, evidences of revealed religion, interpretation of Scripture, systematic divinity, church polity, and pastoral theology, with constant exercise in essay writing and composition and delivery of sermons.—(Catalogue for 1874–'75.)

Union Theological Seminary (Presbyterian) makes nearly the same requisitions on its entering students, and carries them, after entrance, through nearly the same course as the Theological Seminary of Virginia.—(Catalogue for 1874–'75.)

The same is believed to be the case with the theological seminary of the Lutheran church, from which no printed report has been received.

SPECIAL INSTRUCTION.

VIRGINIA INSTITUTION FOR THE DEAF AND DUMB AND THE BLIND.

"The report of this most useful institution for the year ending September 30, 1875, shows every department to be in good condition. There were 142 pupils on the roll last year: 100 deaf-mutes and 42 blind. The studies of the deaf-mute department are language, arithmetic, geography, history, grammar, natural and moral science, Scripture lessons, penmanship, composition, drawing, and painting; those of the blind: embossed alphabet, embossed reading lessons, arithmetic on boxes, mental arithmetic, English grammar, history, geography with raised maps, mathematics, physics, French, and music. It seems that the blind are carried further into liberal studies than the deaf-mutes. The length of the curriculum in either case is not given."—(Official department of Virginia Educational Journal, March, 1876, p. 209.)

The pupils are taught various handicrafts, those of the deaf-mutes being cabinet-making, carpentering, shoemaking, tailoring, type-setting, printing, and book-binding; those of the blind, mattress-making, broom-making, mat-making, and cane-seating of chairs. The receipts from shops and pay pupils have been $1,692.

There are 7 instructors in the deaf-mute department, 1 being a deaf-mute, while in the department for the blind there are 5 instructors and 3 blind employés. The institution has a cabinet and apparatus for illustration of natural philosophy, and a library for both departments of 1,600 volumes.—(Direct report to Bureau for 1875.)

EDUCATIONAL CONVENTIONS.

EDUCATIONAL ASSOCIATION OF VIRGINIA.

The tenth annual meeting of this association took place at White Sulphur Springs, commencing on July 13, 1875, and continuing four days. The attendance, it is estimated, was about two-thirds of what has been usual for several years, yet all who were there went at some sacrifice, and not from mere curiosity, but because they felt an interest.

The first day was mostly occupied by the reading of the minutes of the previous meeting, the election of officers for the ensuing year, and the arrangement of the order for receiving reports from the various special and standing committees. The subjects embraced by these reports covered a wide range, and were all of practical interest to educators. The first committee reporting was one on "Methods and discipline;" then followed "Physical culture in schools for girls and boys," "The comparative disciplinary value of linguistic and scientific studies," "Instruction in moral and mental science," "Instruction in Greek," "Elocutionary training in schools," "The comparative merits of the curriculum and elective system in colleges," "Instruction in mathematics," and "Instruction in history." All these subjects were quite fully discussed by members present, after the reports were received, in an eminently practical, courteous, and interesting manner. The discussion of Dr. Atkinson's report on "The comparative merits of the curriculum and the elective system in colleges" excited much interest, opening as it did for consideration the proper relation of university, college, and secondary school.

An address was delivered by R. G. H. Kean, esq., on "The public economy of the higher education," which was highly appreciated by the association. A resolution was passed thanking the speaker and requesting him to furnish a copy of the address for publication and wide circulation.

A history of the origin and early years of the association, drawn up at the request of the body, by W. T. Davis, principal of the Southern Female College, was read by the secretary.

The presentation of the report of the committee on the Educational Journal was followed by resolutions heartily approving of the management of the Journal and declining to accept the resignation of the editor, Mr. H. H. Davis. The executive committee were instructed to appoint twenty-four special contributors to the Journal each of whom is to report at the next meeting the amount of work done by him.—(Educational Journal of Virginia, August, 1875, pp. 441–452, 466.)

—(Return of Hon. B. W. Byrne, State superintendent of free schools, for 1874–'75.)

SCHOOL SYSTEM OF THE STATE.

EDUCATIONAL PROVISIONS OF THE CONSTITUTION.

Article VII, section 1, of the constitution as amended in 1872, provides for the election of a State superintendent of free schools, who shall hold office for 4 years; article X, that there shall be a poll tax of $1, and also a tax on property not to exceed 95 cents on the $100. Article XII, section 1: The legislature shall provide for a thorough and efficient system of free schools. Section 2 gives the State superintendent general supervision over the free schools of the State. Section 3 says "the legislature may provide for county superintendents and such other officers as may be necessary to carry out the objects of this article, and define their duties, powers, and compensation." Section 4 declares, in substance, that the existing permanent and invested school fund, and all money accruing to the State from forfeited, delinquent, waste, and unappropriated lands, and from lands heretofore sold for taxes and purchased by the State of Virginia, if hereafter redeemed or sold to others than this State; all grants, devises, or bequests to the State for educational purposes, or where the purpose is not stated; this State's proportion of the Virginia literary fund, and all money and property which the State shall have the right to claim from Virginia for educational purposes; the proceeds of the estates of all intestates without heirs; the proceeds of taxes on the revenue of corporations; all money paid for exemption from military service, and all appropriations by the legislature for the purpose, shall constitute the "school fund" and shall be invested in such interest-bearing securities as shall be approved by the governor, State superintendent of free schools, auditor, and treasurer, who are hereby constituted "the

board of the school fund." Section 5 requires the legislature to appropriate for the support of free schools the interest of the school fund, the net proceeds of all fines and forfeitures and of the taxes provided for by this constitution, and also to provide that the people in each county and district shall raise such a proportion for the support of schools therein as shall be prescribed by law. Section 6. That the present school districts shall remain until changed by law. Section 7. Levies for free schools must be reported to the clerk of the county and be collected by the sheriff. Section 8. White and colored persons shall not be taught in the same schools. Section 9 provides that no person connected with the public free school system or any institution under State control shall be interested in the sale, proceeds, or profits of any book or other thing to be used therein; but this shall not apply to any work written or thing invented by such person. Section 10. That no independent free school district shall be organized without the consent of the district or districts out of which it is to be created. Section 11. That no appropriation shall be made to any State normal school or branches thereof, except such as are now in operation or chartered. Section 12. That the legislature shall foster and encourage moral, intellectual, scientific, and agricultural improvement, and, whenever practicable, make suitable provisions for the blind, mute, and insane, and for the organization of such institutions of learning as the best interests of general education in the State may demand.

PROVISIONS OF THE SCHOOL LAW.

From School Law of West Virginia, passed April 20, 1873. Charleston, Henry S. Walker, public printer.

OFFICERS OF THE PRESENT SYSTEM.

A State superintendent of free schools, county superintendents, county boards of examiners, district boards of education, secretaries of the boards, and subdistrict trustees are the authorities provided for by the school laws.

POWERS AND DUTIES OF THESE OFFICERS.

The *State superintendent of free schools*, elected by the voters of the State for a term of four years, is required to be a person of good moral character, of temperate habits, of literary acquirements, and skill and experience in the art of teaching. His duties are to cause to be prepared all forms and blanks necessary to secure a uniform operation of the public free school system throughout the State, and to forward the same to county superintendents for distribution; to furnish all school officers with a copy of the school laws, and such forms and instructions as he may judge expedient; with an aim to improve the system of the State, to collate and acquaint himself with the systems and results of free schools in other States and countries; to recommend the best methods of instruction; and to sign requisitions on the auditor for State school money. He is required, on or before the first day of January in each year, to make a report to the governor in regard to the condition of the schools, embracing such statistics, compiled from county superintendents' reports and other authentic sources, as may show the working of the system, together with such plans for improvement as he may have matured. The constitution fixes his salary at $1,500 per annum and all necessary expenses, not to exceed $500 in any one year.

County superintendents, elected by the voters of their respective counties for a term of two years, must possess the same qualifications as the State superintendent. Their duties are to visit all schools at least once, note the course and method of instruction in each, and give such directions and advice as may be expedient; to encourage the formation of teachers' institutes and attend the meetings thereof; to distribute all papers and documents from the State superintendent, and to serve as the organ between him and the several boards of education. They are required, on or before the 30th day of September, to transmit to the State superintendent an abstract of the reports of the trustees and secretaries of the boards of education of their counties, together with a detailed report showing the condition of the schools under their charge, noting all deficiencies and suggesting their remedies, giving their opinions of the school law and the amendments needed thereto, and also reporting such districts as have failed to make the enumeration of the youth or levy of tax, as required by law. Their compensation must not exceed $300 in any one year.

County boards of examiners, composed of the county superintendent and 2 experienced teachers, appointed by the presidents of the several district boards of education of each county for one year, meet twice each year to examine all applicants for the teachers' profession and grant certificates to all applicants of good moral character and qualified to teach the branches required. They issue five grades of certificates, each valid for one year. They receive $3 each for every day employed.

District boards of education, composed of a president and 2 commissioners in each district, elected for two years, have the control of school matters for their districts; determine the number and location of the schools to be taught; see that a sufficient number of primary schools are kept in every subdistrict, and that competent teachers be employed therein; submit it to a vote whether the schools shall be continued

longer than four months, and cause an enumeration of the children between the ages of 6 and 21 years to be made, (distinguishing between male and female and white and colored.)

Secretaries of the district boards, elected by the several boards, have the duty of keeping a full record of all the meetings of their boards, and posting an abstract of the same on the door of the place of meeting within three days after any meeting; of making reports to the county superintendents, compiled from the minutes of the boards and the reports of the trustees, and a full financial report of all taxes levied and collected, and of all receipts and expenditures for school purposes. For this report they may receive $10, but exclusive of this their compensation shall not exceed $25 in any one year.

District trustees, 1 elected in each subdistrict by the voters thereof for a term of two years, have the management of the schools in their subdistrict under the supervision of the boards of education. They employ and dismiss for cause all teachers for the schools under their charge; regulate the discipline; visit all schools twice, once within two weeks after the opening and once within two weeks before the closing of such schools, and during such visit examine into the condition of the school-house, library, apparatus, teachers' registers, &c., and make such inquiries and suggestions respecting the studies, discipline, and general condition of the schools as they may deem proper; cause school-houses and everything pertaining to be kept in good repair; furnish estimates for improvements to their boards of education; keep itemized account of all expenses, and render the same to the boards of education at or before their last meeting for the year. The trustee of each subdistrict is required to establish a primary school for colored children whenever the number of scholastic age shall exceed 25, and when the number enumerated is less than 25 to set aside their proportion of the school fund to be used for their benefit as the district board may prescribe. The trustees report to the secretaries of the boards the condition of the school-houses, apparatus, and libraries, and the value thereof, with such remarks and information as they may deem useful or as the blanks furnished by the State superintendent may require.

THE SCHOOLS.

The law makes provision for the establishment of primary, graded, high, and normal schools. A primary school is required to be maintained in every subdistrict 4 months during the year, in which shall be taught orthography, reading, penmanship, arithmetic, English grammar, history, geography, and such other branches as the board of education may direct. Any board of education may establish a graded school, but if there is any additional expense the consent of three-fifths of the voters must be obtained. With like consent, the board may establish a high school, or two districts may establish a union high school.* All free schools must be maintained 4 months during the year and give instruction gratis to all between 6 and 21 residing in the districts in which they are situated. The following series of class-books is required to be used in the free schools: McGuffey's Revised Readers and Eclectic Spelling-Book; Kidd's Elocution and Vocal Culture; Ray's Arithmetics and Algebras; Evans' School Geometry; Robinson's New Geometry and Trigonometry, Surveying and Navigation, and Progressive Table Book; Harvey's Grammar; Kerl's Treatise for High Schools; Knote's Geography of West Virginia; Mitchell's Revised Geographies; Cornell's Outline Maps; Guyot's Physical Charts; White's Class Book of Geography; Lessons on the Globe, by Mary Howe Smith; Goodrich's Common School History; History of the United States, Holmes; Natural Philosophy, Comstock; Philosophy of Natural History, Ware and Smilie; Rhetoric, Blair; Chemistry, Youmans; Geography of the Heavens, Burritt; Astronomy, Robinson; Geology, Mineralogy, Dana; Botany, Gray; Physiology, Cutter; Dictionary, Webster.

All teachers and school officers are charged with the duty of providing that moral training for the youth of this State which will contribute to securing good behavior and manners and furnishing the State with exemplary citizens.

The number of school districts in 1874 was 321; of subdistricts, reported, 2,845; of independent districts, 38; of teachers in 1874–'75, 3,461.

SCHOOL FUNDS.

The amount of the permanent State school fund derived from the various sources mentioned in the constitution was, in 1872, $284,717.18. Subsequent reports give only the interest, which indicates some slight annual increase.

The annual fund for the support of free schools is derived from the interest on the permanent fund, from a uniform State tax of 10 cents on the $100 valuation of all taxable property, from a State capitation tax on all male inhabitants over 21 years of age, and from a district levy for a school fund † and a building fund. The amount realized from all these sources for 1874–'75 was $753,477.50.

*No levy for a graded school, however, may exceed 15 cents on every $100 of valuation, nor any for a high school exceed 30 cents on $100.

†Not to exceed 50 cents on every $100 valuation.

ELEMENTARY INSTRUCTION.

ABSENCE OF INFORMATION.

Although the report of the State superintendent is by law required to be made annually to the governor, it is at present only printed every second year. The ones for 1875 and 1876 will thus not see the light till 1877. In this lack of detailed report respecting school affairs in 1875, the summary of statistics on the first page of this abstract has been kindly furnished by the superintendent, and constitutes our only present information for that year, except the following item respecting the allowance from the Peabody fund and some details respecting schools in Wheeling.

PEABODY FUND ALLOWANCE.

The appropriation to West Virginia from the trustees of the Peabody fund was for 1875 as follows: For the five normal schools, $2,500; for the schools of Martinsburg, $1,000; of Charleston, $1,000; of Huntington, $600; of Clarksburg, $500; of Coalburg, $300; for teachers' institutes, $1,000; for the West Virginia Educational Monthly, $200.

PROPOSED AMENDMENTS OF THE SCHOOL LAW.

On this subject the State superintendent, in his last report, makes the following remarks:

The school law in several of its provisions needs amendment. In some cases it needs to be made plainer and in others additional provisions should be enacted.

Section 2, which provides for the election of school officers, might be so amended as to provide for holding the elections for school officers only at the usual places of voting at general elections. This would reduce the number of voting places in the State more than two thousand. Section 4 can then be so amended as to provide that the boards of education shall, at their first meeting after their election, appoint the trustees for the subdistricts. It is believed that by this method good trustees can be provided, while the expense and inconvenience of holding so many elections will be avoided.

Section 12 ought to be so amended as to require one district transferring pupils to a school in another district to pay the tuition of the pupils so transferred to the board of education of the district to which the transfer is made.

Section 17 should be so amended as to require the board of education of each district to provide schools for colored children, instead of leaving it to the trustees of the subdistrict to do so.

Section 24 ought to be so amended as to authorize the board of education to submit the question of organizing a "high school" to the voters of the district at any time they may determine upon; this section should also give the board of education, under whose care and direction the school is, authority to employ teachers therefor and fix their salaries.

Section 25 should also authorize the board of education, having charge of graded schools, to employ teachers and fix their salaries.

The same provision for the employment of teachers of union high schools, provided for in section 26, should be made.

Section 27 is defective in relation to the appointment of boards of examiners. It should provide that two experienced teachers should be appointed for the term of one year, from the 1st day of September of each year, by the presidents of the district boards of education, who should meet for that purpose, at the county seat, on the first day of the county court next preceding the 31st day of August of each year, or, if a quorum fails to attend on that day, as soon thereafter as may be, after due notice, to be given by the county superintendent, of the time appointed for another meeting; that said presidents shall meet and make the appointments, and that a majority of said presidents, or any three of them, shall constitute a quorum.

Vacancies in the office of examiner should be filled for the unexpired term in the same manner as the original appointments are made.

The provision in section 28 in relation to the time at which teachers' certificates expire has been a subject of much controversy and great inconvenience; some contending that all certificates are good by law for one year from their date, while others contend that the examining boards have no right to grant a certificate to extend beyond the scholastic year in which they are issued. The practice has not been uniform throughout the State as to the time for which certificates have been issued. When they are issued one year from date many of them expire during the school term, producing great trouble and confusion. Teachers are, in such cases, either bound to stop their schools, stand a new examination, or teach without a certificate. The State superintendent has construed the law to require all certificates to teachers to end within the school year.

It is suggested that this section be so amended as to remove all doubt on this subject by requiring all certificates granted to teachers to end on the 31st day of August next after their date

Section 29 provides that normal school diplomas shall be accepted as a certificate of qualification to teach the common schools throughout the State. But section 28 provides that no teacher shall be employed to teach in any public school until he shall present to the trustee a certificate of his qualification, in duplicate, to be filed with the secretary of the board of education. This provision evidently refers to certificates issued by the county boards of examiners, yet many of the school officers of the State are not able to reconcile this provision with the provision in relation to the normal diplomas, and, therefore, do not feel authorized to employ holders of these diplomas to teach the district schools.

The holders of normal school diplomas and of professional certificates, county superintendents, and members of the county boards of examiners are all authorized by law to teach in the free schools without further examination by the county boards of examiners, as well as teachers examined by the county boards. But there is no provision of law specifically providing for the grading of any of these teachers, except those examined by the county boards.

It is suggested that the law be so amended as to authorize the trustees to employ all these teachers upon presentation of their certificates, diplomas, or evidence of their election and appointment, and that the boards of education, in fixing the salaries of the different grades of teachers, should place these officers and the holders of diplomas from the normal schools and professional teachers' certificates on the same footing with the holder of a No. 1 county certificate. Section 29 provides for the appointment of a State board of examiners, to examine applicants for professional certificates for teachers, but the law does not provide for the payment of this board for its services in the discharge of this duty. Provision should be made by law for the payment of these officers.

It is suggested that section 31 be so amended as to require teachers to teach the district schools twenty days and attend some teachers' institute for two days for each month they shall be employed to teach, or forfeit their wages to that extent.

Section 33 should be so amended as to authorize the board of education to remove a school-house to some other place in the subdistrict if they see proper to do so.

The following amendment is suggested to section 45: "No debt contracted or liability incurred in any year prior to 1873 shall be paid out of any money received from the State or from any district or independent district levy for the year 1873 or any subsequent year; but any balance on hand on the 31st day of August, 1872, or any uncollected balance of any levy for 1872, or any preceding year, may be applied to such debts; and if such amount is not sufficient to pay all such just debts, the board of education of the district from which such debts are due may make a special levy or levies to pay such debts, not exceeding in any year —— cents on the one hundred dollars valuation of the taxable property in such district."

There is no provision in the present law for the payment of back debts, except by an application to the circuit court for a mandamus for an order for a special levy, as provided in section 37. Heavier penalties should be imposed upon the sheriffs for failing to make the settlements required by sections 46 and 52.

Section 5 of the school law provides that the term of office of trustees and commissioners of the boards of education shall commence on the 1st day of September and continue for two years. Section 53 provides that the county superintendent shall hold his office for two years from the 1st day of September next after his election. Thus it will be seen that the offices of all these officers expire on the 31st day of August every second year. By section 21, the secretary of the board of education is required to make his annual report to the county superintendent by the 20th day of September of each year; and by section 22 the county superintendent is required to make his annual report to the State superintendent by the 30th day of September of each year. It will be observed that every second year the offices of these officers expire before the time at which they are required to make their official reports. This is productive of great inconvenience and, in some cases, of great evil. Boards of education and county superintendents do not feel bound to make their annual reports after their term of office has expired, and their successors have great difficulty in making these reports of the school management for the preceding year, since they cannot be as familiar with the transactions of the year as the officers are by whom the business was transacted. It is suggested that the law be so amended as to require the official term of these officers to end at a later day than the 1st of September; perhaps the 1st of January would be the proper time. It is believed that the election under section 2 should be held in July instead of August, as now provided by law. There is scarcely time for these officers to qualify after the election before the stated meeting of the boards of education on the first Monday of September, as provided in section 6.—(Tenth and eleventh annual reports of State superintendent of free schools.)

CITY SCHOOL SYSTEM.

WHEELING.

The statistics which follow contain the substance of the report of Superintendent Williams concerning the schools of the city of Wheeling, as published in the Wheeling Daily Intelligencer of July 6, 1875:

Wards.	Average monthly enrolment.	Average daily attendance.	Number of teachers.	Average number of scholars per teacher.	Teachers' salaries.	Cost per scholar.
First	427	377	10	43	$4,520 00	$10 59
Second	127	115	3	42	1,105 00	8 70
Third	304	273	7	43	3,390 00	11 12
Fourth	474	417	12	40	5,240 00	11 05
Fifth	298	259	8	37	3,775 00	12 67
Sixth	407	345	9	45	4,110 00	10 10
Seventh	274	247	7	39	3,390 00	12 37
Eighth	530	456	12	44	5,240 00	9 89
Total	2,841	2,489	68	42	30,770 00	10 83
Colored	67	56	.....	34	1,156 36	17 86
Grand total	2,908	2,545	70	42	31,926 36	10 98

The principals of the schools generally find it necessary to devote their time mainly to regular classes in the grammar schools; for this reason they are counted in making up the number of teachers for these schools.

*Comparative.**

	1875.	1874.	Increase.
Average monthly enrolment	2,908	2,788	120
Average daily attendance	2,545	2,444	101
Average monthly enrolment in grammar schools	251	235	16
Average daily attendance in grammar schools	217	203	14
Average monthly enrolment in primary schools	2,657	2,553	104
Average daily attendance in primary schools	2,328	2,241	87

* The foregoing comparison has reference to the English department of the day schools.

The total amount paid to teachers of English in day schools was	$31,926 36
Amount paid to teachers of German language	2,300 00
Total paid for instruction in day schools	34,226 36

Cost per scholar, $11.77; cost per scholar last year, $11.76; difference, 1 cent.

The cost this year for incidentals is not yet (July 1) made up, and will not be until after the settlement of the collector with the finance committee. Last year it was per scholar $3.31. Under head of "incidentals" are included cost of repairs, rents, books and stationery, salaries of clerks, superintendent, janitors, and examining committee, and all other expenses incurred in operating the schools, except teachers' wages.

The average monthly enrolment in the classes in German was 482.

Evening schools were in session during four months of the year at an expense for tution of $1,562.54. The enrolment in these schools for the session was: males, 461; females, 115; total 576; average monthly enrolment, 521; average attendance, 535; total expense, exclusive of fuel and light, $1,828.98; cost per scholar, $4.34.

Salaries of teachers in day schools: principals, $1,100; assistants in grammar schools, $440; teachers in "A" and "B" divisions primary schools, $385; in "C" and "D" divisions, $360; principal of colored school, $800; assistant, $360; superintendent of German instruction, $800; teachers of German, $300. The schools were in session 194 days.

TRAINING OF TEACHERS.

STATE NORMAL SCHOOLS.

The Marshall College State Normal School, Huntington, reports, for 1875, a State appropriation of $1,500; resident instructors, 3; normal students, 43 males and 40 females; graduates in the last year, 14; number of such who have engaged in teaching, 6. The course is 2 years; the library, 1,000 volumes. Vocal and instrumental music are taught, and in the study of natural philosophy there is the aid of a cabinet and apparatus.

The branch at Fairmount reports a State appropriation of $1,500; resident instructors, 5; non-resident, 4; students in attendance, 120 males and 47 females; number of graduates in the year past, 33; number of such who have engaged in teaching, 31; number of years in course, 2. The library of the school contains 300 volumes, with an average annual increase of 45. There are in it 42 pedagogical works, and 14 educational journals are taken. Drawing and vocal and instrumental music are taught. There is a chemical laboratory and some philosophical apparatus. A model school is connected with the institution and a gymnasium for physical exercise is possessed.

The branch at Glenville reports also a State appropriation of $1,500; resident instructors, 3; students in attendance for the past year, 60 males and 45 females; number of graduates in the year, 10;* number of graduates teaching, 13;* number of years in course, "nominally 2, really about 3." Library in the neighborhood of 50 volumes, with 4 or 5 pedagogical works. One educational journal taken.

The branch at Shepherdstown reports, for 1875, $1,500 State appropriation; income from tuition, $2,000; resident instructors, 5; non-resident, 1; normal students, 84 males and 76 females, or 160 in all; graduates in the last year, 21; number of such graduates who have engaged in teaching, 16. The normal course is two years, the collegiate course connected with it, 4 years. Vocal and instrumental music is taught, and there is a library of 200 volumes, of which 10 are pedagogical. Two educational journals are taken and there is a model school connected with the institution.

The branch at West Liberty reports, for the same year, $1,500 State appropriation, 2 years in course, 24 male and 18 female students, 4 graduates in the last year, 35 graduates teaching, vocal and instrumental music in the course, and a library of 400 volumes belonging to the school. No other particulars given.—(Returns to Bureau of Education, 1875.)

OTHER NORMAL SCHOOLS.

The normal department formerly connected with the West Virginia University appears to have been discontinued, though at what time or for what reasons, no official information indicates.

The Storer Normal School, at Harper's Ferry, a department of Storer College, makes report of 5 resident instructors and 1 non-resident, of three years in the normal course, 94 male and 84 female students attendant in the past year, and 7 graduates, all engaged in teaching. The whole number of teachers sent out from the school in 6 years is said to be 62. Drawing and vocal and instrumental music are taught, and there is a library of 975 volumes, of which 4 are pedagogical.—(Return to Bureau of Education, 1875.)

A normal school at Concord, Mercer County, under the supervision of Professor S. H. French as principal, was spoken of in the West Virginia Monthly for September, 1875, but no other information in relation to it has been received.

TEACHERS' INSTITUTES.

In the absence of a State report for 1875, the information with respect to this most useful class of meetings for improvement of teachers already in the schools is too meagre and unreliable to be given.

EDUCATIONAL JOURNAL.

The West Virginia Educational Monthly, conducted by Dr. J. G. Blair, principal of the Fairmount State Normal School, is believed to have continued throughout 1875 its useful work of endeavoring to improve the teachers of the State, but the reception of its issues at the United States Bureau of Education has been too infrequent and uncertain to warrant any decided assertion on this point.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

For this class of schools distinct provision is made in the school law; but how many of them have been established or what may be the courses of the probably few existent ones, there is no present official information.

*These are the figures given. It is supposed that there should be a transposition of them.

PRIVATE SECONDARY SCHOOLS.

Seven of these schools, 3 for girls and 4 for both sexes, report, for 1875, a total of 32 teachers and 873 scholars, of whom 2 are said to be engaged in a classical course and 428 in modern languages. Drawing is taught in 3 of these schools and vocal and instrumental music in 5. One has a chemical laboratory and philosophical apparatus and 5 report libraries of 300 to 3,000 volumes each, the total number of volumes being 4,700.—(Returns to Bureau of Education, 1875.)

COLLEGE PREPARATORY STUDENTS.

In the preparatory departments of the West Virginia College and West Virginia University there were reported for 1875 a total of 148 students, of whom 32 were preparing for a classical collegiate course and 30 for a scientific course.—(Returns to Bureau of Education, 1875.)

SUPERIOR INSTRUCTION.

WEST VIRGINIA UNIVERSITY.

This institution owes its organization in part to the liberality of Congress in donating a certain amount of land scrip to promote the practical and liberal education of the people in the several pursuits and professions of life, and in part to the felt necessity of some such institution in a new State. When the subject of locating the chief educational enterprise of the Commonwealth was before the legislature it was found that Morgantown made the most liberal offer to secure it.

The proceeds of the sale of the land amounted to about $90,000; the citizens of Morgantown contributed, in grounds, buildings, and money, about $51,000 additional. The legislature, realizing that it takes money to establish and develop anything worthy the name of a State university, has with wise liberality made regular appropriations to this end.

The result has fully justified the means employed. A large and efficient board of instruction, comprising men who represent the best culture of the South, the East, and the West, and some from the Old World, has been provided. Liberal courses of study and instruction in literature, science, engineering, military tactics, agriculture, &c., have been organized. Fine collections in the way of apparatus, library, cabinets of conchology, geology, paleontology, mineralogy, &c., have been provided, and in short the whole work of study and culture as fully established as in any institution in the land.—(College circular, 1874–'75.)

A complete reorganization of the faculty of the university was effected in August, 1875, by something like a *coup de main*, each officer in it being made, for the future, the subject of an annual election, and several of the chairs being made vacant. The trustees hope that, when the effervescence which naturally arose from this action shall have subsided, a greater efficiency in the working of the institution may be secured.

OTHER COLLEGES.

Bethany College, Bethany, (Christian,) has 3 separate, complete courses, the classical, the scientific, and the ministerial, conferring respectively the degrees of A. B., Sci. B., and Lit. B. In addition, there are 3 special courses in engineering, physics, and chemistry, for which certificates alone are given. For the accommodation of young men who wish a higher grade of instruction than is furnished in the common schools or who desire to qualify themselves for admission into the regular college courses, there is also a preparatory department, with a course of one year. The classical and scientific courses are, after a common southern custom, divided each into five schools. The ministerial course has a like division. There is also a teachers' course in natural philosophy.—(Catalogue of college.)

West Virginia College, Flemington, (Free Will Baptist,) has a preparatory and a collegiate department, but, as its work is still comparatively in infancy, only one student had, in 1875, reached its collegiate classes. These will, however, doubtless be soon filled from its preparatory school.

COLLEGES FOR WOMEN.

Two institutions for the superior instruction of young women, the Parkersburg Academy of the Visitation and the Wheeling Female College, make return of 22 instructors, of whom 12 are females, 60 students in their preparatory departments and 50 in their collegiate classes. Both teach drawing and painting, vocal and instrumental music, French and German. The latter adds also Italian and Spanish, and gives its students the advantage of a chemical laboratory and philosophical apparatus, with a gymnasium for physical exercise.—(Returns to Bureau of Education, 1875.)

SPECIAL INSTRUCTION.

WEST VIRGINIA INSTITUTION FOR THE DEAF AND DUMB AND THE BLIND.

This interesting school, located at Romney, reports the value of its grounds and buildings $70,000 and the State appropriation for its current expenses $25,000.

The department for the deaf and dumb has 5 instructors, 1 of whom is a semi-mute, and 63 pupils, 39 male and 24 female. These are taught the usual common school branches, and of course the sign language for deaf-mutes, and have the advantage of a library of about 300 volumes. The whole number who have received instruction since its foundation in 1870 is 99, the time spent in the institution being usually 5 to 6 years.

The department for the blind has 3 teachers and 20 pupils, who, in addition to their literary training, are taught mattress and broom making and cane-seating. Number of pupils admitted since the opening, 29; library for the blind, 50 volumes.—(Return to Bureau of Education, 1875.)

EDUCATIONAL CONVENTION.

EDUCATIONAL ASSOCIATION OF WEST VIRGINIA.

The association, pursuant to a resolution passed at Clarksburg, August, 1874, met at Point Pleasant August 3, 1875, and was called to order by the president, State Superintendent Byrne. After some preliminary exercises and the admission of several new members, a committee was appointed to revise the constitution, which appeared to have been somewhat hastily prepared.

On the second day Professor Morton moved the appointment of a commitee on school law, pending the discussion of which Rev. W. E. Hill read a paper on "The relation of the family to the teacher." Mrs. Mary McGwigan followed with one on "Primary schools."

In the afternoon Professor Crago read a paper on "Our public schools; their failure and the cause," which led to some discussion. Professor F. S. Williams having furnished an essay on the question, "Is uniformity in text books in the schools of West Virginia desirable?" it was read by Professor Crago and discussed by the association. Result not stated. A paper entitled "Words and the study of them" was, also, presented by Professor Hogg.

At a night session a motion from the committee on revision of the constitution passed to a resolution changing article 3 so as to read "Any person who is identified with the cause of education in West Virginia, as teacher or otherwise, may become a member of this association by," &c. Adopted, and several new members admitted.

At the election for offices State Superintendent Byrne was chosen president, Messrs. W. J. Kenny of Point Pleasant, F. H. Crago of Moundsville, D. P. Guthrie of Clifton, and W. H. Morton of Wheeling vice-presidents; Mrs. Mary R. McGwigan of Charles-

ton, corresponding secretary; Professor T. M. Marshall, of the Glenville Normal School, recording secretary; and Miss Nannie J. Mason, treasurer.

On Thursday, the 5th, a committee on text books and periodicals reported against any present change of the books in the existing list, but that Harvey's Language Lessons be adopted to precede the study of grammar; expressed a desire to see the West Virginia Educational Monthly represent the educational interests of the whole State, and with this understanding promised it a hearty support and recommended the continuance of the Peabody fund grant of $200 to it.

Resolutions of great respect and regard for Rev. C. W. Andrews, D. D., recently deceased, were then passed. A committee on normal schools reiterated a resolution of 1874, and recommended that the State Normal School and its branches be earnestly recommended to the legislature for full indorsement and liberal support. They also recommended that some suitable person be appointed to prepare an essay on "The normal school, its end, and the best method of attaining this end," to be read at the next annual meeting of the association, with a standing committee on normal schools and revision of the school law, whose duty it should be to report at the next annual meeting and to memorialize the legislature in behalf of these subjects. Adopted.

At the afternoon session Dr. W. K. Pendleton read a paper entitled "The true method of education," and the next day, August 6, amendments to the constitution were adopted, (1) making the time for the regular annual meeting of the association the fourth Tuesday in August of each year, at such place as shall have been decided on by the association at a previous meeting, and (2) declaring that any five members assembled at the time and place of a regular annual meeting should be competent to admit persons to membership and to adjourn from day to day; but that not less than fifteen should constitute a quorum for the transaction of any other business.

On motion of Professor Kenny, after some formal arrangements, the association adjourned to meet at Moundsville, W. Va., on the fourth Tuesday in August, 1876.—(West Virginia Educational Monthly, September, 1875, pp. 544, 553.)

LIST OF SCHOOL OFFICIALS IN WEST VIRGINIA.

Hon. B. W. BYRNE, *State superintendent of free schools, Wheeling.*

[Term, March 4, 1873, to March 3, 1877.]

COUNTY SUPERINTENDENTS.

WISCONSIN.

SUMMARY OF STATISTICS.

SCHOOL POPULATION AND ATTENDANCE.

Number of children in the State 4–20 years of age	461,829
Increase during the year	8,668
Number of such age who attended school	277,884
Increase	1,006
Total number of pupils attending school	279,845
Increase	1,086

TEACHERS AND TEACHERS' PAY.

Number of different persons employed as teachers	9,451
Increase	119
Number required to teach the schools	6,224
Average monthly wages of male teachers in the counties	$43 50
Decrease	3 94
Average monthly wages of female teachers in the counties	27 13
Decrease	5 00
Average monthly wages of male teachers in the cities	109 40
Decrease	5 40
Average monthly wages of female teachers in cities	39 40
Increase	2 30

SCHOOLS AND SCHOOL-HOUSES.

Number of schools with two departments	184
Decrease during the year	26
Number of schools with three or more departments	210
Increase	38
Whole number of graded schools	394
Average number of days schools were maintained: in cities, 195; in counties, 149	172
Number of public school-houses	5,260
Increase	147
Number of pupils the school-houses will accommodate	330,189
Increase for the year	10,783
Number of sites containing less than one acre	3,672
Decrease	70
Number of sites well enclosed	1,550
Increase	56
Number of school-houses built of brick or stone	663
Decrease	23
Number with outhouses in good condition	3,180
Increase	24

INCOME AND EXPENDITURE.

Receipts.

Money on hand August 31, 1874	$469,870 00
From taxes levied for building and repairing	234,297 00
From taxes levied for teachers' wages	992,674 00
From taxes levied for apparatus and libraries	15,556 00
From taxes levied at annual meeting	395,052 00
From taxes levied by county supervisors	241,920 00
From income of State school fund	178,072 00
From all other sources	200,616 00
Total receipts	2,728,157 00

Expenditures.

For building and repairing	298,657 00
For apparatus and libraries	27,223 00
For services of male teachers	551,039 00
For services of female teachers	799,745 00
For old indebtedness	102,418 00
For furniture, registers, and records	45,516 00
For all other purposes	241,777 00
Total amount expended	2,066,375 00

EDUCATIONAL PRODUCTIVE FUNDS AND INCOMES.

Amount of school fund	$2,624,239 55
University fund	222,255 89
Agricultural college fund	236,133 90
Normal school fund	976,364 34
Income from school fund	186,409 05
Income from university fund	42,671 13
Agricultural college fund income	16,206 97
Normal school fund income	61,128 70

SCHOOL SYSTEM OF THE STATE.

PROVISIONS OF THE CONSTITUTION.

Article X, section 1, of the constitution provides that the supervision of public instruction shall be vested in a State superintendent and such other officers as the legislature may direct.

Section 2, that the proceeds of all lands, except university lands, granted to this State by Congress for educational purposes, all money from forfeitures, escheats, fines, and exemptions from military service, and from all grants to the State where the purpose is not stated, and the 500,000 acres of land donated by an act of Congress approved September 24, 1849, and also 5 per cent. of the proceeds of the land to which the State will be entitled upon admission to the Union, (if Congress assent to the last two grants,) shall be applied: first, to the support and maintenance of common schools in each school district, and the purchase of suitable libraries and apparatus therefor; second, to the support and maintenance of academies and normal schools, and suitable libraries and apparatus therefor.

Section 3, that the legislature shall provide for a system of district schools, as nearly uniform as practicable, to be free to all children between 4 and 21 years of age; and no sectarian instruction shall be allowed in such schools.

Section 4, that each town and city shall raise, for public school purposes, an amount equal to one-half of that received from the State.

Section 5, that the income from the school fund shall be distributed among the towns and cities, according to the number of children of school age residing therein.

Section 6, that provision shall be made by law for the establishment of a State university at or near the seat of State government, and for connecting with the same such colleges in different parts of the State as the interests of education may require; the proceeds of the university lands to be applied to the support of the same.

Section 7, that the secretary of state, treasurer, and attorney-general shall constitute a board of commissioners for the sale of school and university lands and for the investment of the funds arising therefrom.

PROVISIONS OF THE SCHOOL LAW.

Laws of Wisconsin relating to common schools, normal schools, and the State university, prepared and published, in pursuance of law, under the direction of the State superintendent, 1870, with subsequent amendments.

OFFICERS OF THE PRESENT SYSTEM.

A State superintendent, county superintendents, town clerks and treasurers, district directors, clerks, treasurers, and boards of supervisors are the officers provided for by law. Women, as well as men, are eligible to all school offices below that of State superintendent.

POWERS AND DUTIES OF THESE OFFICERS.

The *State superintendent*, elected by the qualified voters of the State for a term of two years, has a general supervision over the common schools. It is his duty, as far as practicable, to visit every county, for the purpose of inspecting the schools and awakening an interest favorable to education; to recommend the most approved text books; to endeavor to secure a uniformity of text books throughout the State; to advise in the selection of books for school libraries; to prescribe rules for the management of the libraries; to cause to be printed, for the use of common school officers, the laws relating to schools, and all forms and instructions necessary in the execution of the same; to decide appeals from the decisions of school officers; to collect in his office such school books, maps, and apparatus as may be obtained without expense to the State, and to purchase, at an expense not exceeding $50 per annum, rare and valuable works on education, for the benefit of teachers, authors, and others who may wish to consult them; and to distribute the income from the school fund. He is required, on or before December 10 in each year, to submit to the governor a report, containing an abstract of all common school reports from clerks of county boards of supervisors, estimates and accounts of expenditures of school moneys, plans for the improvement and management of the school fund and the better organization of the schools, and such other

information as he may deem useful. He may appoint an assistant superintendent, at a salary of $1,800 a year. His salary is $1,200 per annum and all necessary expenses, not to exceed $1,500 in any one year, and also $1,000 for clerk hire.

County superintendents, elected biennally in each county by the voters thereof,* have the power and duty to examine and license teachers, and for cause to annul certificates; to visit and examine all schools and school districts within their jurisdiction, and make such recommendations and give such advice as is expedient; to direct any alteration or repairs necessary to the health, comfort, or progress of the pupils; to condemn, in concurrence with the chairman of the board of supervisors, an unfit schoolhouse; to examine and decide upon all charges against teachers; to report annually to the board of supervisors of their counties the condition and progress of the schools; to transmit the abstracts of the reports received from the district clerks to the State superintendent, and also the name and post-office address of all town clerks and such other reports and information as the State superintendent may require; to conduct at least one institute for the year, and to advise on all questions of school law. If they receive an annual salary it shall not be less than three nor more than fifteen hundred dollars, or if by the day not less than $3 per diem, to be regulated by the county board of supervisors.

Town boards of supervisors form and alter school districts; issue notices for first meeting of new districts; dispose of the property of disorganized districts; form, in conjunction with boards of other towns, joint school districts; equalize valuation of property in joint district; and locate and establish school-house sites.

Town treasurers have the duty of receiving from the county treasurers all money apportioned to the districts of their towns, of paying the same, with all raised in the town for the support of schools, to the treasurers of districts, and of certifying to the town clerk, on or before the second Monday in March in each year, the amount on hand.

Town clerks assess delinquent school tax; sell fallen timber and grass from school lands; notify the district attorney of trespass upon the same; fill vacancies in district board; file all reports and official papers; record description of school districts; make a map of the town showing the same; report the names and post-offices of themselves and of the district clerks, and also make between the 15th and 25th of September a report to the county superintendent, showing the number of school districts, the number of schools, and the time taught therein, the number of districts reporting, the amount of public money received and expended in such districts, and the sources whence received, the balance on hand, and such other information as the State superintendent may from time to time require.

District directors, chosen at annual district meetings for terms of three years, call special district meetings, countersign all orders on the district treasurers for the payment of moneys, and, in case of removal of the treasurers, act in their stead.

District treasurers.—Same duties in the districts as town treasurers exercise within their jurisdiction.

District clerks are the secretaries of all meetings of their districts; give notice of district meetings; may call special meetings; keep records of such meetings; with consent of director and treasurer employ teachers and sign orders on the district treasurer for their wages; furnish registers for their use; certify district taxes to town clerks, and, between September 1 and 10, make to town clerks a full report of the district schools, in reference to the scholars, teachers, studies, length of school, kind of books used, and such other information as the State superintendent may require. The treasurers and clerks, like the directors, are elected by the voters of their several districts for a term of 3 years.

The *district boards*, composed of the district clerks, treasurers, and directors, have the power and duty to purchase or lease sites for school-houses; to purchase, hire, or build school-houses; to purchase the necessary record and blank books; to keep schoolhouses in repair; to present account of expenses incurred to district meetings for allowance; to purchase school books for children whose parents are unable to furnish them; to make rules for the government of the schools; to suspend or expel pupils; to adopt a uniform series of text books for all schools under their charge, and to visit and exercise a general supervision over all the schools of their districts.

THE SCHOOLS.

The law requires that in every district there shall be maintained a school for five months during the year, and that in such schools tuition shall be free to all persons between the ages of 4 and 21 years residing in the district in which the school is situated. In every district school are taught orthography, reading, writing, English grammar, geography, arithmetic, and such other branches as the district board decide upon. No branch of study is to be taught in any other than the English language. No sectarian instruction is permitted in the district schools or in the State University.

*In counties of 15,000 inhabitants there may be two, and as many in any county as there are senatorial districts outside of incorporated cities.

Districts, towns, villages, and cities may purchase, own, and lend to scholars the needful text-books, if they choose to do so.

Provision is made in a law of 1875 for high schools in towns, villages, or cities, and for joint ones formed by the concurrent action of adjoining towns, the supervision and management of such schools in each case to be vested in a high school board composed of three members chosen by a convention of district officers of all the school districts composing the high school district, the term of office of the members to be three years, and one member to be changed each year.

There are four State normal schools and a State university, with a department of agriculture.

SCHOOL FUNDS.

The amounts of the educational productive funds are stated in the last report of the State superintendent, 1875, to be as follows: school fund, $2,624,239.55; university fund, $222,255.89; agricultural college fund, $236,133.90; normal school fund, $976,364.34.

The distributable State fund, accruing from the income of the school fund and some other sources, was for the same year $186,409.05, and was apportioned, at the rate of 41 cents per scholar, to 450,304 children of school age, making, with $2,541,748 raised by local effort, $2,728,157 expenditure for public schools in the year.

ELEMENTARY INSTRUCTION.

REMARKS ON THE STATISTICS.

As the superintendent of one county (Chippewa) made no report, the totals given in the opening general summary are less than they should be. The number of children in the State 4-20 years of age would be increased by 3,000 if those in Chippewa County were included. To the number of school-houses given (5,197) should be added 63 for the county not reporting, which would make an increase over the previous year of 147. The whole accommodation is sufficient for 330,189 children, or 50,345 more than the actual attendance. Adding to the total attendance upon public schools (279,854) the number attending private schools, (10,733,) colleges and academies, (2,151,) and benevolent institutions, (1,150,) we have a grand total of 293,888, who are under instruction in schools of some class, making 3,816 over the figures for the previous year. Of the 8,892 teachers' certificates granted during the year, 217 were of the first, 624 of the second, and 8,051 of the third grade. These were divided between the men and women teaching as follows: First grade: men, 143; women, 74; second grade: men, 295; women, 329; third grade: men, 2,210; women, 8,051; total: men, 2,648; women, 6,244; grand total, 8,892.—(Superintendent's report for 1875, pp. 8–10.)

EDUCATIONAL PROGRESS.

Superintendent Searing commences his report for 1875 by stating that the experience of another year has further assured him of the correctness of the general remarks respecting "defects and desirable improvements" and "encouraging facts and omens" with which his report of the previous year was prefaced. He is gratified, however, in being able to acknowledge the removal, by the last legislature, of some of the defects referred to. The encouragement given by that body to secondary or academic instruction through a new high school law, and to superior instruction through the liberal appropriation of $80,000 to the university for the erection of a college of science; the happy approach to a satisfactory solution of the question of text books through the law providing for district, town, village, or city purchase and ownership of the books, and their free use by the pupils of the schools; and, finally, the removal of the legal barrier that has prevented women from sharing in the official management of the schools in which they constitute a large majority of the teachers, and in whose external control they as a class are peculiarly qualified to take an intelligent and profitable interest. These measures he regards as adapted to remove some of the evils referred to. Those which still remain, and which can be remedied by legislation, are enumerated by the superintendent as follows: (1) The injurious extent to which the schools of the State are supported by local taxation, resulting in a great lack of uniformity, both in character and cost. (2) The independent district system, which, in the judgment of nearly all educational men, is a source of great and unnecessary weakness to the schools. (3) The unnecessary and easily remedied defects in the present system of county supervision. (4) The variability of the school month, which is a cause of much misunderstanding and annoyance. The other defects mentioned—the poor character of a large number of school-houses, the youthfulness and inexperience of many of the teachers, irregular attendance, and the impatience of older pupils to leave school—are to be remedied by time rather than by legislation.

With all these defects and hinderances the superintendent finds in the State unmistakable signs of a healthy educational activity and growth. There is, for instance, a slowly improving public opinion, a gradually increasing number of qualified teachers, held in higher esteem and receiving better compensation; numerous teachers' associa-

tions in vigorous being in nearly all parts of the State; a harmonious coöperation of the various educational forces in the State, both public and private, and effective aid lent to education by the press, which constantly and liberally opens its columns to superintendents, teachers, and others for the discussion of school topics.

The flourishing condition of the State University and of the four normal schools is also mentioned as evidence of the promising condition of the school interests.

Nevertheless, the conviction is expressed that the present State system of public instruction of Wisconsin, in common with that of many other States, is, as a business system, far from being the best that can be devised for the important ends sought; that it does not secure results proportioned to the money expended, to say nothing of those demanded by our political institutions and by our increasingly complex social and industrial life; that popular education has not kept pace with the material development of the country; and that the average country school of to-day does not so well qualify the average pupil for the struggle of life, as he now finds it, as did the same school a generation ago qualify this pupil's father for the simpler and less exacting demands of that period.—(Report of the superintendent, 1875, pp. 5–7, 21.)

SUPERVISION.

The defect that seems to comprehend nearly all minor ones, says the superintendent, is "the absence of any permanent, uniform, and competent guiding or supervising force at the head of, and permeating, the State system." He argues that every important work, public or private, requiring a large expenditure of money and the continued labor of many men directed to a common purpose, must be, if the largest and best results are to be secured, under wise, constant, and strict supervision; that the education of its citizens is among the greatest and most important work undertaken by the State, whether it be considered in its results or in its cost. Wisconsin, it is stated, has already educational buildings and appliances worth between $4,000,000 and $5,000,000, and she now expends annually for the support of her public schools over $2,000,000. The system by which these vast interests are administered is not, in the opinion of the superintendent, nearly as wise and successful as it can be made. He enumerates and enlarges upon three serious faults in it, namely: (1) Lack of intelligence in supervision; (2) lack of permanence in it; and (3) lack of authority.

As to the first point, he says, very justly, the knowledge and skill necessary to the supervision of any interest are gained, almost invariably, by slow, laborious, and successful experience in subordinate posts, and if there should be a wise and efficient civil service anywhere it should be in the educational department of the Government. Nowhere else are attainments, experience, skill, and competence so imperatively necessary. And yet the system in force does not as certainly and uniformly secure these qualities in teachers and superintendents as in town and county clerks, in supervisors and justices of the peace. It puts into office men morally and intellectually incapable of performing the very duties which the law requires at their hands. It puts into the office of county superintendent men scarcely qualified to obtain a good third grade certificate, and yet the law requires them to examine candidates for a first grade one. It puts in men of little experience as teachers and of no conception of teaching as a science, and yet the law requires them to hold institutes for instructing and inspiring the teachers who are to give knowledge and culture to the people's children. It puts in every two years, sometimes to succeed better men, those who seek the office for its pay and its honor or as a stepping-stone to something else, and not men who are themselves sought for their fitness.

As to the second point mentioned by the superintendent—lack of permanence in supervision—he says: "A system by which superintendents are elected biennially in general State elections gives to the office so uncertain a tenure that it largely paralyzes the energies and frustrates the work of the most competent among them. A man who is not reasonably certain to remain in office more than two years cannot feel the profound interest in his work which greater permanence would engender. Moreover, it puts a premium upon the unfaithful performance of duty. When continuance in office is altogether dependent upon the popular will or upon political influence, the strict and impartial performance of duty lies in a path beset with temptations."

The third fault charged upon the system—lack of authority in supervision—leaves county superintendents with no power to correct flagrant wrongs, no power to remove or to correct the incorrigibly stupid, careless, or vicious subordinates beneath them, confining their work almost entirely to mere inspecting, inquiring, and advising. As an illustration and a result of this feature, he cites the almost worthless character of the statistics prepared by many school officers of all classes, from district clerks to superintendents of counties, which are scarcely worth the paper on which the State prints them.

One of the worst results of this unbusiness-like system of supervision is poor teachers. With more intelligent, permanent, and authoritative supervision, many who now receive certificates would not be permitted to disgrace the profession, while thoroughly independent and honest supervision would cut off nepotism and favoritism, both

potent causes of weakness in the common schools. With such supervision would come, too, wise and effective methods of instruction, rational courses of study, better school accommodations, uniformity of text books, and more regular attendance, secured by greater attractiveness in the schools. There would also come a saving of money, from not having to pay untrained and incompetent teachers and from securing better care of school property. The heavy taxes for school purposes have generally been cheerfully paid by property owners, under the impression that the money was wisely expended; but doubts are beginning to arise, and they will multiply and prove a source of serious opposition to the free school system unless the defects in it are soon removed. There must be a reorganization of the whole scheme of State management, if results commensurate with the outlay are to be realized and if continued harmony in the support of public education is desired.—(Report of superintendent, 1875, pp. 23–31.)

PROPOSED SCHEME FOR A STATE SYSTEM OF PUBLIC SCHOOLS.

The superintendent gives an outline of a scheme of such a system as he thinks will accomplish the desired results. The main features of it are the appointment of State and county superintendents by a State board of education, (which board must comprise the elements of permanence and high character possessed by the present State University and normal school boards;) the township system of school government; a central high or grammar school in each township, to be made obligatory by law; a uniform State tax for the support of schools, aggregating annually, with the income of the school fund, enough to meet about one-half of the cost of the schools; the State funds to be distributed, to a certain extent, on the principle of "payment by results," thus stimulating local effort and checking irregular attendance; uniform examinations throughout the State for teachers of the same grade; and a system of township libraries, the joint creation of State and local action. Such a system, it is believed, would be comprehensive, practical, and efficient, and would be wholly removed from politics. A similar system has accomplished grand results in Prussia and Holland; has made the province of Ontario, in Canada, a model for the study of educational men; and has, within ten years, brought the State of New Jersey from the rear to the front educational rank.—(Report of superintendent, 1875, pp. 31–33.)

COMPULSORY ATTENDANCE.

The superintendent still entertains the sentiments expressed in a previous report as to this subject, opposing any general legislative enactment to secure the attendance of children at school, his former conclusions on the matter having been confirmed by the experience of those States where compulsory laws have been in operation. He, however, recommends the enactment of a good truant law. After the schools have been made attractive, efficient, and free, and after wise supervision has done its proper work, there will remain, he believes, but a small fractional portion of the children of the State upon whom the strong hand of compulsion must be laid.—(Superintendent's report, 1875, pp. 79–81.)

FREE TEXT BOOKS.

There have been many and long continued complaints on the part of teachers and superintendents of a lack of uniformity in the text books used in the schools and on the part of people generally similar complaints of the high price and the too frequent changes of the school books. The annoyance and injury to schools from the multiplicity of text books brought by pupils have been aggravated by the facts that many pupils are destitute of proper books for some days after the beginning of school terms, and that not a few pupils are, from the poverty of parents, permanently destitute of the same, unless provided by charity. In consideration of these facts the superintendent recommended the enactment of a law providing for township uniformity of text books and their purchase by school authorities and distribution by them to the pupils as a loan or at cost price. The legislature, however, did not see fit to provide for enforced township uniformity, but passed an act permitting such uniformity and such action as may be deemed best in regard to free use of text books in townships, cities, and villages, wherever desired. This law has met with much favor from the people wherever their attention has been fairly called to it, and many districts, towns, villages, and cities are taking advantage of its provisions and purchasing the books and stationery used in the schools. In some instances the books are furnished to the pupils free; in others, at cost price.—(Report of superintendent, pp. 54, 55.)

LIBRARIES.

"The free library," says the superintendent, "ought everywhere to be an adjunct and supplement to the free school. The knowledge and culture obtained in the latter are, at best, only a beginning." This was recognized by the founders of the State system, who made provision, as they supposed, not only for common schools, academies, and normal schools, but for suitable libraries for the same. But while the school system is vigorous and promising and likely to fairly accomplish the ends for which it

was designed, the library system has been, almost from the beginning, a piece of incompetence and uselessness. Libraries are not to be found in the great majority of the districts. The number of both libraries and books is steadily diminishing. From over 40,000 volumes in 1850 there was a decrease to little more than 16,000 in 1874. In the latter year there were reported in the 24 cities of Wisconsin only 1,840 volumes, worth less than $3,000. The cause of this failure is familiar to all who have investigated the subject. The school district is too small a unit of territory in which to establish and maintain a library of sufficient size and vigor to command respect and care, and hence to secure its continuance. The district system that is injurious to the schools is nearly fatal to the libraries. The township system, which would be useful to the former, is indispensable to the success of the latter.

In 1859 an admirable library law was passed, which would probably be conferring incalculable benefits upon the State to-day if it had not met an untimely death by the opening of the civil war. The present State superintendent hopes to secure the reënactment, in substance, of this law.—(Report, 1875, pp. 61–63.)

KINDERGÄRTEN.

Special returns have been received by the United States Bureau of Education from 5 Kindergärten, all in Milwaukee, having an aggregate attendance of 290 pupils, instructed by 16 teachers. In one of these schools the hours of instruction per day are 3, in two they are 5, in one, 3–5, and in another, 4–5. One of them, the West Side Kindergarten, is attended exclusively by German children.

CITY SCHOOL SYSTEMS.

MILWAUKEE.

Organization.—The public schools here are under the general management of a school board consisting of 2 members from each ward of the city, appointed by the aldermen of such ward and confirmed by the common council. These members hold office for two years, one-half going out each year. The immediate supervision is intrusted to a superintendent of schools, Professor James MacAlister.

Statistics.—Population of city, by city census of 1875, 100,775; number of school age, (4–20,) 33,919; enrolled in public schools, 12,745; enrolled in private school, 9,269; total enrolment, 22,009; average daily attendance in public schools, 7,548. The number of teachers employed in public schools to the close of the school year 1874–'75 was 46 males and 144 females; total, 190; average number during the year, 182. The number of different school buildings used by the public schools was 20; used by private schools, 51; total, 71. The salaries paid teachers ranged from $350, the minimum, for assistants in primary schools, to $2,500, the maximum, for principal in high school. Salary of superintendent, $3,000. Special teachers of music and drawing had $1,800 and $1,500 each. The receipts for the schools were $217,657.67 and the expenditures for them $157,645.03. Expense *per capita* on average daily attendance, $20.86.

Special studies.—The committee on German report that the effort to systematize the study of German in the public schools by means of a graded course of instruction has been a great success, the results attained having exceeded the most sanguine expectations. The committee on music and drawing report great progress made during the year on the part of both pupils and teachers; the latter having received instruction with a view to better training of those committed to their care. The superintendent of drawing teaches only the pupils of the high and normal schools, the remainder of his time being given to instructing the teachers of the other schools and supervising their work. Professor Walter Smith's system is employed, and the results, as shown in an exhibition of 14,000 drawings by the teachers and pupils, appear to have been highly satisfactory; this, too, with an expense of only $1,500 for instruction and the purchase of a small quantity of drawing paper for the examinations.

Means of improvement.—There is, in connection with the high school, a normal department for the training of teachers for the city schools, and from this many of the best qualified teachers are said to be supplied, nearly all its graduates being employed by the city as they come forth. For the improvement of teachers already at work, teachers' classes have been organized, and instruction given in algebra, in human physiology, in physics, and in physical geography. The lectures were given on Saturdays at the high school; the attendance, without compulsion, averaged more than fifty at each lecture; and the interest manifested seems to have fully satisfied those concerned. An extension of the plan is proposed for 1875–'76, and subsequently.—(Report of commissioners and superintendent for 1874–'75, with special return to Bureau of Education.)

TRAINING OF TEACHERS.

THE STATE NORMAL SCHOOLS.

These schools, now four in number, are, says the State superintendent, enjoying great prosperity, and are performing, in their sphere, a work of incalculable value to

the Commonwealth. Results have abundantly shown the wisdom of establishing several of these schools in various parts of the State instead of a single one at a central point. Their influence is now widely extended, reaching nearly every county, and their popularity fills their halls with eager students, even beyond the capacity of buildings and faculties. Hence frequent enlargements have from time to time been rendered necessary.—(State report, p. 78.)

The board of regents has encouraged the attendance at the schools of that large class of teachers who come but for a year, a term, or it may be less; for although the best results of classification may not be obtained by these means nor so much glory be reflected from the work of undergraduates, yet the little rills of influence emanating from the large host of normal undergraduates and institute students help to make and swell the mighty river of educational progress.—(State report, p. 186.)

According to the report of the president of the board of regents for normal schools, the amount expended in 1875 for the instruction of teachers, including $6,163.31 for institute work, was $123,224.24. The amount of normal school productive funds (derived from the sales of land set apart for the support of normal schools) was, September 30, 1875, $976,364.34, an increase during the year of $2,558. The normal school fund income for 1875 amounted to $149,719.84.—(State report, pp. 181–184.)

Platteville.—At this school the year has been marked by earnest work and faithful attention to duty on the part of the normal students. The moral tone of the school improves from year to year, cases of discipline are extremely rare, and harmony characterizes the work of the teachers. The attendance in the normal department was: ladies, 104; gentlemen, 109; total, 213. The present seating capacity of this department is 350. Number of graduates since the commencement of the school, 88; of these 47 are at present teaching in Wisconsin.—(State report, pp. 181–190.)

Oshkosh.—The fourth annual report of the Oshkosh normal school gives a total attendance in the normal department of 293 students, and in the grammar, intermediate, and primary departments of 215 more. At the close of the school year the school graduated its first class in the advanced course, numbering 8, while 12 completed the elementary course.—(State report, pp. 198, 211.)

Whitewater.—During the year ending June, 1875, the school at Whitewater sent out as instructors into the district schools 81 undergraduates, besides 6 graduates from the advanced course and 9 from the elementary, making in all 96 teachers furnished the State in the year. Others of the undergraduates have undoubtedly taught, but the institution has no record of them. Gratifying reports of the work of the graduates are received and reasonable satisfaction, it is believed, has been given by the undergraduate teachers, though the character of their work cannot be so readily ascertained. The condition of the institution is prosperous. The number in attendance is greater than at any period in the history of the school, while its earnestness and spirit have increased.—(State report, 1875, pp. 192, 193.)

River Falls normal school was organized September 7, 1875. A special return from it dated December 6, 1875, gives the number of instructors belonging to it as 10; that of students in attendance as 100, of whom 68 are ladies. The number of years in the elementary course is 2, in the full course 4. Drawing and vocal music are taught. The institution possesses a library of 60 volumes, a chemical laboratory, a philosophical cabinet and apparatus, and a museum of natural history. Diplomas are given to graduates from the four years' course; certificates to those who complete the two years' course. In this, as in all the State normal schools of Wisconsin, graduates who have received certificates are authorized by law to teach in the common schools of the State without further examination.—(Return to Bureau of Education, 1875.)

In addition to facilities for the instruction of teachers in the above mentioned State normal schools, Milton College, at Milton, offers a teachers' course to such of its students as desire it, and the Seminary of the Holy Family, at St. Francis Station, for the instruction of teachers, reports an attendance of 80 students, all males. The course of study at this seminary lasts four years, and includes, in addition to other studies, free hand drawing and vocal and instrumental music. The graduating class of last year numbered 7, all of whom engaged in teaching. This seminary was organized in 1870, has a library of about 600 volumes, a natural history museum, and a gymnasium.

INSTITUTES.

Careful attention has been given by the board of regents of normal schools to institute work, so organizing, distributing, and conducting the institutes that no teacher or expectant teacher need be without their benefit. A committee of two members of the board, one of whom is the State superintendent, is especially charged with the duty of providing for the institute work of the State and carrying on and supervising the same, according to the general plan marked out by the board. The State is divided into four institute districts, each one of them being conducted by a member of the faculty of the normal schools.

During the summer and fall of 1875 institutes were held in 40 different counties of the State. Of these 6 were held for a term of four weeks, 2 for three weeks, 12 for two

weeks, and 20 for one week. A very few applications for institutes the committee were obliged to reject or modify, because unable to procure conductors. The amount expended in this work, including printing, is $5,206.68. The number of teachers reached by these institutes was very large. In no previous year has the work been as carefully, thoroughly, and conscientiously performed, as general in its scope, and as effective of good results as during the present. The committee recommend, as the result of their experience, that a change be made in the law so that institutes may be held not less than two weeks in any place, instead of four, as now provided, and that more definite arrangements as to meeting the expenses may be settled.—(Superintendent's report, 1875, pp. 186, 219–222.)

EDUCATIONAL JOURNAL.

The value of a good school journal has been stated under the head of Virginia. The Wisconsin Journal of Education, edited by Superintendent Searing, meets the needs of the State in this respect, containing regularly a large number of official opinions on questions relating to the school laws, besides educational intelligence from various parts of the State and from other States and countries, with practical and useful discussions of educational topics. That it is not a hasty compilation from other periodicals, but, to a great extent, a repository of original and carefully prepared articles from the teachers and school officers of Wisconsin, inspection will prove.

SECONDARY INSTRUCTION.

TOWNSHIP HIGH SCHOOLS.

In accordance with a recommendation of the State superintendent in a previous report, the legislature in 1875 passed a law providing for the establishment of township high schools. As soon as possible after the passage of the law the superintendent issued and distributed a circular, setting forth their purpose and character, and giving what he considered judicious courses of instruction for them. The law has met with very general favor, and there is reason to believe it will, in due time, accomplish all that its projectors and friends have anticipated.—(Report, 1875, p. 34.)

The State superintendent does not give the number of public high schools in the State, but it is known that such exist in connection with the school systems of some of the cities.

The report of Superintendent James MacAlister, of the Milwaukee public schools, for 1875, gives the attendance in the high school of that city as 150, of whom 85 belonged to the academic and 65 to the normal department. In the classical course of the school Latin is obligatory; Greek, German, and French, optional. In the general course German is obligatory for three years and optional in the fourth, while French, geometry, trigonometry, mensuration and surveying, English literature, and book-keeping are optional in the third and fourth years. Music and drawing are studied throughout the course.—(School Bulletin for the Northwest, July, 1875.)

Superintendent MacAlister recommends the organization of the academic and normal departments into separate schools, all the academic training to be transferred to the high school proper, making of the normal a purely professional school, following in order after the academic course, or a portion of it, has been finished. From the School Bulletin for October, 1875, it would appear that this plan, or a similar one, has been adopted, and several important changes made in the high school course, such as omitting Greek and forming a two years' and four years' courses.

ACADEMIES AND SEMINARIES.

One school for boys, 5 for girls, and 6 for both sexes, mainly for secondary training, report for 1875, from Wisconsin, 130 teachers and 1,927 pupils, 306 of whom were for that year in classical studies and 727 in modern languages, while only 34 are explicitly stated to be preparing for a classical course in college and only 3 for a scientific course. Four of these schools are controlled by the Roman Catholics, 2 are nonsectarian, and 5 are under the influence, respectively, of the Baptists, Presbyterians, Protestant Episcopalians, United Brethren, and Universalists, the remaining 1 not reporting on this point. In 9 of these schools drawing and instrumental music are taught; 10 teach vocal music; 7 have chemical laboratories; 10, more or less philosophical apparatus. Nine report libraries ranging from 26 volumes to 7,000, the total sum of the 9 libraries being 14,526 books.

PREPARATORY DEPARTMENTS OF COLLEGES.

Preparatory departments are reported in 10 colleges of the State as having an aggregate attendance of 1,359 pupils—1,007 young men and 352 young women—of whom 337 were engaged in preparation for a classical course and 338 for a scientific.

BUSINESS COLLEGES.

Seven such schools, located in the chief cities of the State, report a total of 26 instructors and apparently 1,313 pupils, 1 at Green Bay making a very indistinct return on this point. Besides instruction in arithmetic, book-keeping, penmanship, commercial law and commercial forms, 14 students are taught phonography; 50, telegraphy; 95, German; 48, French; and 1, Spanish.—(Returns to Bureau of Education, 1875.)

PREPARATORY SCHOOL.

Milwaukee Academy, corner of Cass and Knapp streets, is an English and classical school for young men, its special work being the preparation of young men for college. There is also a comprehensive course of instruction in English, scientific, and mathematical studies, with such other branches as have a more immediate application to business pursuits. Ample facilities are provided for illustrating the principles of the natural sciences. The German and French languages are thoroughly taught.—(Milwaukee Monthly Magazine, January, 1875, p. 4.)

In this school and the Wayland University, at Beaver Dam, there were reported for 1875 a total of 12 teachers and 184 pupils, of whom 36 were preparing for a classical collegiate course and 32 for a scientific one. Both schools report the possession of philosophical apparatus. The former has a gymnasium and the latter a library of 1,500 volumes.

SUPERIOR INSTRUCTION.

UNIVERSITY OF WISCONSIN.

The university embraces a college of arts, one of letters, and a law school. It is under the immediate charge of a president and 26 professors and teachers, and is in a highly prosperous condition. There has been a steady increase for some years past in the number of students in the regular classes, and this notwithstanding the enlargement of the terms of admission and a more careful examination of applicants. There has been, during the year past, an appropriation by the legislature of $80,000 for the erection of Science Hall, a gift followed by that of the property known as the Orphans' Home. Science Hall will give the best accommodations in all branches of physical science to 600 students, and will leave nothing to desire in the external conditions of instruction in this department for a long time to come.

During the past year the young women have been put, in all respects, on the same footing in the university with the young men. "No difficulties," says the president, "have arisen from it. There were eight young women among the graduates at the last commencement. Their average scholarship was certainly as high as that of the young men, and they were apparently in good health. We feel, however, that the young women in attendance on the university should be sheltered from the claims of general society, and that they cannot meet the exactions, in dress, labor, and time, incident to society, without suffering either in health or scholarship, or in both."

During the year, the opportunity of taking special studies in the subfreshman classes has been withdrawn. The object of these classes is exclusively to fit students for the university, and it is not desired to do any preparatory work for its own sake, but, on the contrary, the time is anticipated when the university will be entirely relieved of preparatory work. Much aid in this respect is anticipated from the operation of the new high school law.

Special students are admitted freely to the college courses, provided they can pass an examination in the English studies included in the terms of admission to the freshman year of the scientific course. It is believed, however, that the students would, with scarcely an exception, be profited by choosing some one course and adhering to it. When a regular student becomes a special student it is regarded as a retrogression, while the acceptance of a regular course is almost sure to result in new effort, more satisfaction in labor, and more firmness in purpose. Haste and vacillation are the besetting sins of the students. A portion of the instability is referable to poverty, but a large remainder must be attributed to a low estimate of thorough scholarship and to a haste to enter, ready or otherwise, on the work of life.—(Report of State superintendent, pp. 157–160, 164, 165.)

The catalogue of the university for 1875–'76 gives the number of students for that year as 345, including 49 special students, 71 in the subfreshmen classes, and 25 law students. Of the 200 remaining engaged in regular collegiate classes, 39 were pursuing the ancient and 26 the modern classical course, 120 the course in general science, 12 that in civil engineering, and 3 that of mining and metallurgy.

OTHER COLLEGES.

Beloit College, Beloit, (Congregational,) aims to provide a thorough, liberal, and Christian education for young men. Its main course of study corresponds with that found in the best New England colleges, known as the "American college course." It

comprehends a training in language, in mathematics and science, in the histories of nature and of man, and in those philosophic and religious principles necessary to complete the general preparation for a broad and useful life.—(College catalogue, 1874–'75.)

Galesville University, Galesville, (Methodist Episcopal,) admits both sexes to its privileges, which include preparatory, classical, and scientific courses. The building will accommodate 200 students.—(Catalogue of the university, 1874–'75.)

Lawrence University, Appleton, (Methodist Episcopal,) is for both sexes. In addition to its classical, scientific, and commercial studies, French, botany, music, drawing, and painting are attended to.—(State report, p. 226.)

Milton College, Milton, (Seventh Day Baptist,) offers to young men and young women on equal terms a classical course, embracing both collegiate and preparatory studies, a scientific course, and a teachers' course. The number of students in collegiate classes in 1874–'75 was 79; in the preparatory class, 176.—(Circular of college for 1875–'76 and report of State superintendent, 1875.)

Racine College, Racine, (Protestant Episcopal,) is for boys and young men only. In the school of letters a full collegiate course of four years is provided. The course in the school of science also lasts four years, and is intended to provide a thorough course in the natural sciences, mathematics, the English branches, and the modern languages. German and French are obligatory. The preparatory department includes classical and mathematical schools. The latter teaches book-keeping and German, and is intended to fit boys for business or for the school of science in the college; the former prepares them for the classical department.—(College catalogue, 1874–'75.)

A later circular states that, in February, 1875, Taylor Hall, the building used for college students was burned, destroying with it the valuable college library, the scientific apparatus as well as furniture, &c. But as the walls of the building were left standing, preparations were at once made for renewal of it; and a picture since sent in shows it as renewed.

Ripon College, Ripon, (Congregational,) admits both sexes to its collegiate and preparatory departments, the former including classical and scientific courses.—(College catalogue, 1875–'76.)

There is also a musical department, under the control of Professor J. C. Fillmore, of the Leipzig Conservatory of Music, which provides thorough instruction in both vocal and instrumental music.—(School Bulletin, December, 1875.)

COLLEGES FOR WOMEN.

Three colleges for women, all authorized by law to confer degrees, report an aggregate attendance of 228 pupils in collegiate studies, instructed by 38 teachers, all of the latter except 4 being ladies. There were in the regular course 216 students, in special or partial courses 6, and in post graduate studies 6. Two report libraries of 800 and 821 volumes respectively. One is under the patronage of the Congregational Church, one the Roman Catholic, and the other is non-sectarian. In all the 3, drawing and painting, vocal and instrumental music, and German are taught. Two teach French and 1 Italian and Spanish. All the 3 report chemical laboratories and philosophical apparatus, and 2 have museums of natural history.—(Returns to Bureau of Education, 1875.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

The agricultural college of the State is comprised in the college of arts of the University of Wisconsin. This college embraces the departments of general science, agriculture, civil engineering, mining and metallurgy, and military science. As soon as the income of the university will allow, and in such order as the wants of the public shall seem to require, these departments are to be expanded into distinct colleges of the university, each with its own faculty and appropriate title.

The amount of agricultural college fund which was productive in September, 1875, was $236,133.90; the income received from it during that year was $16,148.41. The number of students pursuing the agricultural course is not given; but it is stated that the was received from the sale of products from the experimental farm during the year was $359.99. In the course of general science there were 120 students; in that of civil engineering, 12; and in mining and metallurgy, 3.

The legislature of 1875 appropriated $80,000 for the purpose of building an additional university edifice for scientific purposes.—(Report of board of regents and catalogue of university for 1875.)

THEOLOGICAL.

Nashotah Theological Seminary, Waukesha County, (Protestant Episcopal,) founded in 1842 and incorporated in 1847, and the Salesianum, near Milwaukee, (Roman Catholic,) are the only theological schools in the State from which printed catalogues or circulars have been received. Each has a three years' course, that of the former including biblical and ecclesiastical histories, systematic divinity, scriptural exegesis, Hebrew, pastoral theology, and elocution; that of the latter, dogmatic, moral, and pastoral theology; canon law; liturgies, exegesis of Old and New Testament; church history, and homiletics.—(Circulars of these institutions.)

LEGAL.

The law department of the University of Wisconsin numbered, in 1875, 25 students in its classes. The course of instruction is for the most part by lectures, and by reading under the direction of the professors, with weekly moot court practice. Among the advantages which this law school affords the student is its location at Madison, the seat of the law library of the State, which is probably the largest collection of the kind in the Northwest, and which is at all times accessible to the students, as is also the library of the State Historical Society, numbering over 50,000 volumes.—(Catalogue of university, 1875.)

SPECIAL INSTRUCTION.

WISCONSIN INDUSTRIAL SCHOOL FOR BOYS.

This was at first really a prison with its cells and grates; it is now a home, with its social relations, and its family circle. It was organized on the congregate plan, with its crowd of boys in a single herd; it is now a miniature colony, with its homes and workshop, its farms and gardens, its schools, reading rooms and library, its social, educational, and religious facilities. During the sixteen years of its history, 1,184 children have been brought under its influence. Of this number, about one-fourth are still in the school, and fully two-thirds of the others are, so far as our knowledge extends, acting the part of good citizens by living quiet, industrious lives. No computation can show the amount of good returned to the State by the reformation of so large a percentage of its juvenile violators of law and order; but every observer can realize that the perpetration of a vast amount of crime has been prevented and a large number of boys restored to society, growing and grown into good citizens, the friends of law instead of its enemies, earning by their own efforts an honest living, instead of preying upon others, or wasting life in confinement at the expense of the taxpayers of the State.—(Report of Superintendent Hendrickson, in State report, pp. 254, 255.)

WISCONSIN INSTITUTE FOR THE INSTRUCTION OF THE BLIND, JANESVILLE.

Since the fire which destroyed the main building of this school in April, 1874, its operations have been carried on under great disadvantages, in small and inconvenient buildings, poorly supplied with apparatus. The new building authorized by the legislature will accommodate but a portion of the household, and the difficulties incident to the occupation of detached buildings must still be met.

Since the last report, 85 pupils have been in attendance, 4 of them adults, connected with the mechanical department, and admitted for a brief time, that they might acquire the knowledge of a trade by which to sustain themselves.

In the literary department instruction has been given in reading, writing, spelling, arithmetic, geography, grammar, United States history, geometry, natural philosophy, and mental philosophy. In the musical department vocal and instrumental music have been taught, not merely as a pleasant accomplishment, but also as a means of earning a livelihood. In the mechanical department the elder boys have been taught broom-making, while the younger boys and girls have learned to make bead work. The girls learn also to sew, knit, crochet, and do a variety of useful and ornamental kinds of work.—(Report of Mrs. Thomas H. Little, superintendent, in State report, pp. 58, 256.)

WISCONSIN INSTITUTE FOR THE DEAF AND DUMB, DELAVAN.

At the date of the report, November 29, 1875, there were in this school 148 pupils, divided into 8 grades, each grade in charge of a teacher, and a class of 20 in articulation, under a special teacher.

The course of study is the same as that in the public schools, and the same text books are used, except in the study of language in the two lower grades, where special books are used.

The advancement of the pupils is said to compare favorably with that of children in the common schools.

In addition to the schooling in literary branches and the language of signs and lips, the pupils are taught to work. There are, for the boys, a cabinet shop, a shoeshop, and the garden, grounds, barn, &c.; and, for the girls, the varieties of sewing, chamber and dining room work, &c.—(Report of principal, W. H. DeMotte, in State report, p. 258.)

EDUCATIONAL CONVENTIONS.

WISCONSIN STATE TEACHERS' ASSOCIATION.

The twenty-third annual session of this association was held at Eau Claire, July 28, 29, 30, 1875. The meeting, it is stated, was a most agreeable and profitable one, the exercises, consisting of addresses, papers, and discussions, being participated in by both ladies and gentlemen, and frequently enlivened by music and readings, while the people among whom the meeting was held manifested an overflowing hospitality. President Emery's address (to be found in full in the Wisconsin Journal of Education for September, 1875) was an appropriate, practical, and suggestive paper, and its various topics were taken into consideration and reported upon by committees appointed for that purpose. The president expressed the opinion that the association has been successful in a good degree in accomplishing its two great objects: self-improvement of the members and the advancement of the cause of popular education throughout the State.

The topics considered in the papers and addresses delivered were: "The function of the normal school," by President O. Arey, of Whitewater; "Drawing," by W. E. Ander-

son, of Waukesha; "Entomology," by John H. French, LL. D., of Vermont; "The district school curriculum," by A. Salisbury, of Whitewater; "The student's hope," by Professor E. H. Merrill; "Can we do it?" by Miss Martha Kidder, of Oshkosh; "A State school tax," by Superintendent James MacAlister; "The high school law," by Superintendent Searing; "Language study: its means and its end," by Superintendent Pickard; "Architecture," by President John Bascom, of the University of Wisconsin; "Educational backbone," by E. B. Wood, of Oshkosh; "The coming teacher," by Helen M. Bingham, of Monroe; and "Teachers' examinations and State certificates," by A. F. North, of Pewaukee.

The committee to which was referred that portion of the president's address relating to "a township system of school government" and "free town high schools" reported favorably to the town and adversely to the district, as the unit in school government; also expressing their hearty approval of the present high school law and their earnest desire that it may receive a thorough and fair trial.

The ladies of the association, as a separate body, expressed their thanks to all who were instrumental in the passage of the law last winter making women eligible to school offices in the State.—(Wisconsin Journal of Education, September, 1875, pp. 351–357.)

An executive session of the association met at the same place in December, 1875, when papers were presented, addresses made, reports of committees received and considered, and other important business discharged.—(Wisconsin Journal of Education, January, 1876, pp. 28–36.)

CONVENTION OF SCHOOL SUPERINTENDENTS.

In response to the call of the State superintendent, the county and city superintendents convened at Madison, December 29, 1875. The first topic considered was how to secure more effective and permanent supervision of schools. Superintendent Searing commenced by alluding to the fact that measures were being taken to secure the abolition of the superintendency, on account of its alleged inefficiency, produced by the incompetency, negligence, and indolence of some past and present incumbents of the office. The general opinion appeared to be that many defects exist in the office, among which were mentioned "meagreness of beneficial results, incompetent incumbents, uncertain tenure of office, imperfect mode of providing salary, meagreness of salary, amount of work too great," &c. The remedies proposed were "an educational qualification, change of removing power, uniform examinations, change of electing power, a longer term, change of time of electing, payment by the State, more work among the people, superintendents to meet for counsel, more control by State superintendent, and obligatory institute attendance." The next subject considered was that of irregular attendance and the best means for securing regularity. Superintendent Searing thought one important means of securing regular attendance would be the provision of comfortable and attractive houses and grounds. Children love beauty and shun the opposite. In the village of Necedah there was a primary room, built of poor, cheap materials, that had been made positively attractive by the teacher's taste, tact, and work, and all at a cost of less than one dollar. The ornamentation was a few nice, cheap pictures, framed by the teacher, and natural curiosities picked up in the neighborhood. Others spoke in favor of wide-awake teachers, the distribution of a State tax on the basis of attendance, a regular course of study, monthly reports, &c. At the request of Superintendent Searing, a vote was taken on the subject of a State tax, which resulted in 16 in favor of, and only 1 against, such tax. A committee was appointed to report at the next session on the subject of a "course of study in district schools.'—(Wisconsin Journal of Education, January, 1876, pp. 37–41.)

OBITUARY RECORD.

SUPERINTENDENT THOMAS H. LITTLE.

In February, 1875, Mr. Thomas H. Little, for more than thirteen years superintendent of the Wisconsin Institute for the Education of the Blind, was removed by death. A notice of him in the report of the institution says: "His integrity and absolute truthfulness gave him a reputation it is an honor for any man to wear. As a private citizen, he was quiet, unassuming, and upright; as a public officer, thorough, untiring, efficient, and jealously watchful of the interests committed to his care. As an instructor, he was a recognized leader in his profession, a disciplinarian who knew how to govern without seeming to govern at all, and who was to his pupils far more like a wise and kind parent than a superintendent. As a Christian, he was manly, generous, humble, full of faith, and given alike to prayer and good works. In his death, the community has lost a useful citizen, the State a faithful and valued servant, and the church an exemplary member and efficient officer."—(Report of institution in State report, pp. 256 257.)

ALASKA.

A gentleman connected with the Coast Survey, who has had large opportunities for observation of the Indian population on the northwest coast, kindly furnishes the following interesting information respecting matters in Alaska:

WASHINGTON, D. C., *March* 22, 1875.

MY DEAR SIR: In response to your inquiry as to the condition of the inhabitants of Alaska I beg leave to submit the following summary of facts which I have reason to believe are substantially accurate. As the climate and condition of the territory are but little understood and have been erroneously represented, a few preliminary remarks on these points may not be out of place.

The area of the territory is nearly one-sixth as much as that of the whole of the remainder of the United States put together. The coast line is fully as great as the whole coast line of the rest of the United States, and a large part of it is composed of islands covered with a dense forest or growth of herbaceous plants.

This great region is divided climatologically into three subdivisions, characterized by wholly different conditions of climate and vegetation.

(1) The most northern is that which furnishes the popular idea of Alaska. It has a climate which in most respects is properly called arctic. The winters have periods of very severe cold, while the summers, extending from June to September, inclusive, are very hot, at least during part of every clear day. Travelling is done by means of dog-sledges or canoes, according to the season. The climate is somewhat tempered on the immediate sea-coast, but a few miles in the interior the above conditions prevail. Extensive forests of spruce, birch, poplar, and alder border the rivers, especially the Yukon, the great river of Northwest America. Some quick growing vegetables will do well during the short summer, such as turnips, lettuce, radishes, &c., but the main reliance of the inhabitants will always be on the salmon, white-fish, and trout which swarm in the rivers, the immense flocks of wild fowl which spend the breeding season there, and on the meat of the reindeer and other products of the chase. Trees are not found on the immediate sea-coast. The trade of the country is exclusively in furs, skins, whale oil, and bone and walrus ivory. This region extends from the Arctic Ocean to the Peninsula of Alaska, on the mainland, and to St. Matthew Island, on the sea of Behring. Notwithstanding the climate, it affords subsistence to a large native population, and with the proper precautions (I speak from nearly three years' experience, including two winters) a white man in ordinary health finds no difficulty, when provided with the clothing worn by the aborigines, in existing with tolerable comfort.

(2) The second region includes all the Aleutian Islands west of the end of Alaska peninsula and is in every respect different. It is in a general way about the latitude of Edinburgh, and possesses a climate similar to that of the west of Ireland and the north of Scotland. I have never seen the thermometer down to ten degrees above zero of Fahrenheit in four years, and in thirty years, as far as we know, it has only been down to zero seven times. The islands are covered with rank herbage, and toward the east have small willows and blueberry bushes, but nowhere any trees. Fuel is supplied by drift-wood which is cast on the shores in tolerable abundance.

The chief trouble with this region is the superabundance of cloudy weather, fog, and rain. These prevent the summer from being as warm as the very mild winter would lead us to anticipate. The annual mean is about that of Philadelphia. Most vegetables, if properly cultivated, will grow, and there seems to be no reason why fruit trees should not do well if sheltered when young and planted where there is good drainage. There is no difficulty whatever in keeping sheep and cattle, which, as a rule, find enough to eat on the hillsides all winter, though they would doubtless do better if protected and furnished with hay, which can be cut anywhere. I have seen sheep and cows support themselves all winter without any care and rear their young in the spring.

(3) The last region is that extending from Kadiak Island to the eastern end of the territory southeast of Sitka. Though the high mountains of this region nourish local glaciers, and there is nearly as much rain at Sitka as in parts of Oregon, yet the shores are covered with a dense forest of large trees, and the climate, a little colder in winter and a little hotter in summer than the Aleutian district, affords as high an annual mean as Baltimore. This, it may be mentioned, is due to a warm current similar to the Gulf Stream, which bathes the Aleutian Islands and the coast about Sitka, and is responsible for the warm temperature as well as the abundant rain. Of this district Kadiak and Cook's Inlet have been called the "garden of the territory." In the western part of the Aleutians, fish are not very plenty and there are no large land animals, though water-fowl abound. But in this region, which I will call the Sitka district, food is

incalculably abundant. Game, reindeer, cod, halibut, salmon, and herring are inexhaustible. Indian corn has been grown at Cook's Inlet successfully, which will give an index to its agricultural capacity, while almost any vegetables, if properly cultivated, will do well at Kadiak. First rate potatoes have been grown of late at Sitka, and previous failures were undoubtedly due to ignorance of proper cultivation. The inhabitants of the territory are about 20,000 in number, of whom at least 18,000 are natives.

They are of four classes:

(1) The Koloshian Indians, who inhabit the Sitka archipelago and coast as far as Yakutat or Admiralty Bay. These are a bad class of natives. Bold, impudent, fond of liquor, which they manufacture from molasses bought of the whites, ready to use weapons on any provocation, vindictive, and sensual, they only attract admiration for their courage and unusual intelligence, which latter is particularly manifested in their carvings, canoes, and dwellings. They purchase most of their clothing from the whites, but for almost anything else they are quite independent. I fear they cannot be considered amenable to any system of education disconnected from the "strong arm." Still, by a rigorous system of excluding whites, of imposing responsibility, and appealing directly to their material interests, the mission of Rev. Mr. Duncan, among somewhat similar Indians at Metakatla, British Columbia, has, in many respects, proved a success. Most of these Indians understand the Chinook jargon.

(2) The interior Indians. These are of the usual Chippewayan type, very different from the Koloshians, and extend from the mouth of the Copper River to Cook's Inlet, and in the interior north to the Arctic Circle. They have had little intercourse with whites except on the Yukon, are essentially wild at present, but in some places, as at Cook's Inlet, might be reached without much difficulty. Few of them speak anything but their own language, and these few only add to it a little Russian. None of them have been subjected to any educational processes, though a few have been baptized by the Russian priests. Unless in Cook's Inlet, they cannot be said to offer much of a field for instruction at present.

(3) The Eskimo or Innuit. These people, though identical as to race and nearly so as to language, offer a very favorable contrast in intelligence and physique to the Eskimo of Greenland and Labrador. With many of the faults of the savage, they unite a fundamentally more tractable character, greater intelligence, and less devotion to gloomy superstitions. They are nearly white, and extend over the entire coast line of the Territory from the Arctic Seas to Cook's Inlet and the shores of Prince William's Sound, and west as far as the Chirikoff or Ukamok Island, near Kadiak. They speak a language which is readily acquired and near Kadiak and Norton Sound many of them understand a little Russian. They chiefly live by fishing and hunting.

These people have been brought under Russian influences at Kadiak and in Prince William's Sound, and the results are favorable. Though their present condition is not of the best, yet, considering the circumstances, these people offer more qualifications for benefiting by instruction than any I have yet mentioned. In the localities just mentioned most of them have connection with the Greek chapels established by the Russians. The influence of the priests there at present seems, however, wholly bad, as the people are given over to gambling and drunkenness. In Norton Sound they have been greatly demoralized by the class of whites with whom they are most familiar, and the annual alcohol traders of the Arctic coast and Kotzebue Sound, mostly Hawaiians by flag but Americans by birth, are rapidly depopulating that region.

(4) The Aleuts. These are also Eskimo in race, but differ so much from all the other branches of that stock that they may with propriety be considered separately. They inhabit the Shumagin Islands, the western end of the peninsula of Alaska, and the Aleutian and Pribiloff Islands. Their principal settlements are at Unga Island in the Shumagins, Belkoffsky on the peninsula, Unalaska, Umnak, Atka, and Attu, among the Aleutian Islands. The other settlements are all clustered within a few miles of one or the other of those named. These people speak the Russian language, as well as the native dialect, almost without exception. They are about 2,000 in number, and have remained stationary at about this figure for a number of years. Whatever their original character may have been, through nearly a century of Russian influence they have become docile and tractable, are in most places more than half civilized, wear civilized clothing, subsist to a large extent on flour, sugar, and tea bought of the traders, and are almost without exception devoted members of the Greek Church. It cannot be doubted that many of them understand but little of the doctrines they profess, but they are none the less devoted to them, and very naturally so, as nearly all that is good in their natures and mode of life is due to the self-sacrificing efforts of one devoted missionary, once a poor missionary priest at Unalaska, now aged and blind, but retaining the clearness of his faculties, occupying the exalted position of primate of the Greek Church, or Metropolitan of Moscow. To this person, Innocentius Veniaminoff, we owe a monograph on these people and an account of the islands which is the fullest and most reliable extant. Each village has its church, where, in the absence of a consecrated priest, some native deacon officiates, and even in their temporary hunting camps a

cross is usually erected in some convenient locality, where on Sundays one of the party reads or repeats a portion of the liturgy.

These people were considered as wards of the company under the Russian monopoly and were obliged to work a certain number of years for the company at very small wages; but, on the other hand, so far as the company's charter could be made to cover the case, their rights were not forgotten. They received a certain amount of flour and tea at fixed and very moderate prices, which often ran below the actual cost. They had the privilege of a certain amount of schooling, being taught the rudiments of reading, writing, and arithmetic, especially reading the Slavonic or church characters. Part of the gospels, a catechism, primer, and several tracts were translated into the Aleut tongue by Veniaminoff, and printed by the Russian synod in a modified character, especially adapted to the peculiar combination of sounds which are used.

Most of the older natives can read and write in the Russian language. When enjoying their hospitality, which was always generous to the extent of their means, during my explorations in the islands, frequently the host would open a home-made box or cabinet and point with pride to a few church books and old Russian almanacs, &c., as proof of his acquirements. Their intelligence is remarkable, when we consider how lately they have been redeemed from barbarism. They are usually eager to learn, and in Russian times the children who showed any marked ability were sent to a higher seminary at Sitka, and sometimes even to St. Petersburg.

In this way the company added to its corps quite a number of good navigators, some of whom afterward became quite noted as explorers. Thirty-eight charts relating to the Territory, the best existing up to a recent date, were drawn and engraved on copper by an Aleut named Kadin, at Sitka, in 1848. They make good mechanics, carvers, and domestic servants.

On the other hand, they are somewhat wanting in energy, owing to the state of tutelage in which they have existed so long; many of them require training in the art of cleanliness, and the natural tendency to stimulants and sensuality, existing in all uncivilized races, has been aggravated in certain localities where they have been brought into contact with seamen and unscrupulous traders.

Their present condition is less favorable to their improvement than it was under the Russian *régime*.

A word as to the condition of the Territory. Few citizens of the United States realize that in one-seventh of her vast Territory there are literally no civil law, no government, no redress for injury, no protection for whites or natives, no legal authority for settlement, and no punishment for crime. The Territory of Alaska is in that condition. There is no civil government. The authority of the commander of the two military companies at Sitka extends only over his own men and the limits of the military reservation; except the authority of power, by which he may hold turbulent natives in check. By a recent construction of a law of Congress the military are held responsible for catching and disposing of offenders who introduce liquors into the Territory.

There are revenue officers who collect customs and internal revenue, and who have authority over offenders against revenue laws. On the Pribiloff Islands are four special treasury agents, who have power to prevent infringements of the provisions of the monopoly lease granted by Congress to the Alaska Commercial Company. They can, to some extent, protect the natives, but have no authority to punish civil offenses other than those relating to the contract mentioned. We have then the anomaly that for violating the revenue laws an offender can be seized and sent two thousand miles for trial, while for murdering the revenue officer, in a private quarrel, no punishment can be inflicted and no court has jurisdiction. This has been legally tested in Oregon and a murderer discharged for the above reasons. For offenses against individuals, other than infringements of its contract, neither the company nor its agents can be held to answer.

By law, schools were required to be established on each of the two Pribiloff Islands. What these amount to may be seen in your last report. Some of the more intelligent natives, half-breeds, and resident whites have succeeded in sending their children to San Francisco to school. Here, however, they are very likely to come to grief through want of parental supervision. Some individuals have become interested in particular children and have brought them to civilization, where, with proper care, they have invariably done well.

I brought down in 1872 an orphan boy, a native Aleut, whose intelligence and desire to learn, while employed as cabin boy on my vessel, had attracted every one to him. Through the assistance of kind friends he has been placed at school in Michigan, where he is doing well. In two years he has learned to speak, read, and write the English language, and, though obliged to associate with children younger than himself, for want of early advantages, he has stood at the head of his class in drawing and geography and already evinces great interest in natural history. When he was brought to San Francisco he was 15 years old, and his countenance has, since that time, entirely lost the stolidity of the ignorant native and taken on a pleasing expression of intelligence and amiability. This shows that these people are not beyond redemption.

Meanwhile more than fifteen hundred of these people are without a school of any kind, unless, as occurred at Unalaska, the more intelligent of them get up a little school of their own, in order that their children may be able to read the Russian catechism.

Formerly these people had a sort of town government, which decided questions of general interest to the community and elected a toyon, whose duty was to stand as arbitrator between the traders and the natives. He was paid a small sum by each native for his services. The popular voice has also been used, since I have been in the islands, to expel people of notorious immorality from the church and to punish various offences.

Now, however, the toyon is elected at the company's order, and usually paid a salary by them, so that his original position as arbitrator has been entirely lost.

The people of the Pribiloff Islands are more favorably situated than any of the others. They have a certain kind of schools; and in other things the influence of Special Agent Bryant and the interests of the company have to some extent been parallel, as it was manifestly to the latter's advantage to have the people contented and well off, in order that the seal-killing might not be interfered with. Even here, however, the mainspring of action is interest, and not justice in the abstract nor the authority of law. This is not a desirable state of things.

In the earnest hope that something will be done to encourage education, especially of a preliminary and technical character, and to extend the authority of law over the land, I remain, very truly yours,

WM. H. DALL.

Hon. JOHN EATON,
Commissioner of Education, Washington, D. C.

ARIZONA.

SCHOOL SYSTEM.

OFFICERS.

These are a territorial board of education, territorial superintendent of schools, county superintendents, county examiners, and school trustees of districts.

DUTIES OF OFFICERS.

The *territorial board*, which is composed of the governor, secretary, and treasurer of the Territory, the governor being chairman, looks after the management of the public school funds and the better organization of the schools of the Territory.

The *territorial superintendent*, whose office for the present is held by the governor, apportions the school moneys to the counties under the supervision of the territorial board, prepares and furnishes the necessary forms for school officers and teachers; visits annually each county, for the purpose of examining into the condition of the schools, consulting with county superintendents, and addressing the people on educational topics; and is to make to the territorial board a yearly report of everything relating to the schools and school funds.

The *county superintendents*, the probate judges acting *ex officio* as such, apportion the school moneys of their counties to the respective districts in proportion to the number of children that have attended school in them for three months previously; visit and inspect the schools once every year; exercise a general supervision over them; distribute the blanks forwarded by the governor; file the reports of trustees, marshals, and teachers; and make to the governor annually a report, containing an abstract of the reports of these subordinates respecting the schools, school population, attendance, &c.

The *county examiners*, three for each county, are appointed by the governor to examine and license teachers for the public schools of their several counties the county superintendent being *ex officio* a member of the board and chairman.

The *district trustees*, three for each school district, are elected by the people, and have the care of school property and a general oversight of the schools of their districts, with the duty of levying a local tax for keeping them open three months, when necessary; of having a census of the school population made each year, and of making annual report to the county superintendent respecting this census and all things relating to the schools.

* The figures given here include those of all the counties in the State except one, which did not report on these points.

SCHOOLS.

The public schools are required to be entirely undenominational and unsectarian; must be taught by a regularly licensed teacher, and must use a uniform series of text books prescribed by the territorial board. They are to be held ordinarily for at least three months, consisting of four weeks of five days each. There is a law requiring the attendance of children not otherwise taught.

SCHOOL FUNDS.

A territorial tax of 15 cents on the $100, a county tax of 35 cents on the $100, and (where these prove insufficient for maintaining schools three months) a special district levy voted by the people are the ordinary reliances for annual school purposes.—(School law of Arizona, 1875.)

ELEMENTARY INSTRUCTION.

CONDITION OF THINGS IN 1875.

Of the 2,508 youth in the Territory between 6 and 21 years of age, 908 are reported as able to read and write, leaving 1,600 who are not able. In reference to the fact of the existence of this proportion of illiterates in the Territory the governor remarks:

It must be borne in mind that it is only about three years since the public school system has been put into successful operation, and from want of school-houses and means to defray the expenses of schools, a large number of the children were unable to find school accommodations. But the school revenue is constantly increasing, and it is to be hoped that in a short time every child within Arizona will have an opportunity of obtaining the rudiments of an education.

A tax of 15 cents on each one hundred dollars' worth of taxable property is levied and collected annually for a territorial school fund, and is divided between the several counties in proportion to the average daily attendance at the various public schools. A tax of 35 cents on each one hundred dollars' worth of taxable property is levied and collected by each county in its own confines, for a county school fund, and is divided between the public schools of the county on the same basis as is the territorial school fund. This makes a total tax of 50 cents on each one hundred dollars' worth of taxable property in the Territory for the maintenance of public schools, and I believe is the largest direct public school tax paid by any State or Territory in the Union. It is cheerfully paid by the people, and it is believed that the rapid increase of taxable property in the Territory will afford the necessary funds to keep pace with increasing public school demands. It is to be hoped, however, that Congress will, at an early date, make some arrangement for the sale of the sixteenth and thirty-sixth sections of public lands, set apart for school purposes, so that the fund accruing therefrom may be made available immediately. There can be no period in the existence of the Territory when such aid will be so much needed as it is in its infancy. The people are comparatively poor, the population sparse and widely scattered over the country, while the necessity for training the young to be self-governing and intelligent American citizens is of the first importance.

The last territorial legislature passed an act to enforce the education of children, but there has so far been no necessity of exercising the power granted by this law, the parents and guardians of children having uniformly shown a willing disposition to send children to some school. Besides, the public school accommodations have generally been inadequate to receive more pupils than have applied for admission. It is considered, however, that the law giving this power of enforcing education is a good one, affording a certain remedy should any parents or guardians be so far neglectful as to leave a child under their charge to grow up in ignorance. It has now become a well-settled conviction with intelligent, thinking people, that, to secure good government, to relieve the overcrowded prisons, and to insure the perpetuity of the Republic, a common school system of education must be maintained, and every child of sound mind and sufficient age must be given an elementary education. In no way can this be accomplished except by providing the means and place of instruction free of cost. And to insure equal and exact privileges to every citizen, the school-room must be carefully guarded against every kind of sectarian teaching, so that the children of every nationality and creed may meet upon this common, neutral ground, and while receiving instruction may learn to respect each other, regardless of accident of birth or difference in religious belief. Any other course, it is believed, can only result in the utter destruction of the public school system. The church and home circle teach the rising generation such religion as the parent or guardian may desire, while the public school affords the means for all to become useful American citizens. Depart from this well founded principle and unite the schools and church, and the union of church and state is as sure to follow as that the night follows the day. Then the struggle to compel a unity of faith such as is now going on in Spain will follow, with all its attendant suffering, oppression, and wrong.

There is a steady advancement of public education in the Territory. The people are

very generally united in favor of sustaining and maintaining the system of free schools, and nothing besides in the organization of the Territory has done more to attract an intelligent and industrious population to settle there.—(Report of Governor Safford to the legislature, 1875.)

PROGRESS.

The following information, of less recent date, confirms the previous statement as to steady advancement of public education in the Territory. It comes from the Tucson Citizen, of May, 1874. Its statement is that—

"Less than two years ago the free school system was started in Arizona, without school-houses, books, or teachers. It seemed a forlorn hope for the poor, Apache-ridden people to provide for the education of the children under such adverse circumstances, but the same undaunted spirit that had faced death and torture through a long series of years said we must either have schools or more jails, and we preferred the former; and the result shows what people can do if they will. Yuma has a good school-house and neatly furnished, and one will soon be erected at Ehrenberg. We are assured that Mohave County will erect school-houses as fast as required. The people of Prescott are now constructing a school-house that will be a credit to the town and Territory. A school-house was built six miles below Phœnix, in Maricopa County, last year, and now the people of Phœnix are making arrangements, and already have the necessary subscription, to build one worthy of that enterprising and growing town. A school-house is in process of construction at Florence, in every way suitable for the purpose. The people of Tucson are determined not to be outdone by their young neighbors, and are now making arrangements to build a house with sufficient capacity to accommodate two hundred pupils, and we trust that the San Pedro and Sanford settlements will not be behind in the good work. But the most encouraging feature of all is that our late legislature made provision for sufficient school revenue to keep free schools in operation in every school district in the Territory for from six to nine months during each year. With these advantages the poorest children in the Territory are provided with ample opportunities for an education, and if in after-years they do not make useful men and women, it will be their own, and not the fault of the Territory."

In connection with this, the editor remarks: "We think it but right that credit should be awarded to the man whose persistent efforts have brought about the present interest in education in our neighboring Territory. We refer to Governor A. P. K. Safford, who has worked night and day and travelled all over Arizona in this cause. We know the people of the Territory will second what we say."

—(From the report of Territorial Superintendent Hon. H. M. Hale, for two years ended September 30, 1875.)

CONSTITUTIONAL PROVISIONS.

The new constitution, under which Colorado will probably be admitted as a State, places the superintendent of public instruction among the executive officers, thus removing his office from liability to legislative abolition.—(Article IV, section 1.)

Article VIII, section 1, provides that "educational, reformatory, and penal institutions, and those for the benefit of the insane, blind, deaf, and mute, and such others as the public good may require, shall be established and supported by the State."

Article IX, in section 1, vests the general supervision of the public schools in a board of education to consist of the State superintendent as president, the secretary of state, and attorney-general; in section 2, requires the general assembly to provide for the establishment and maintenance of a thorough and uniform system of free public schools throughout the State, to be free to all residents between the ages of 6 and 21, one or more schools to be maintained in each school district at least three months in each year; and any school district failing to have such school not to be entitled to receive any portion of the school fund in that year; in section 3, prescribes that "the public school fund of the State shall forever remain inviolate and intact," the interest only to be expended in the maintenance of the schools of the State, and the State to supply all losses that may in any way occur; in section 6 provides for a county superintendent of schools in each county, whose term of office shall be two years, whose duties shall be prescribed by law, and who shall be *ex officio* commissioner of lands within his county, under a State board of land commissioners. Section 7 interdicts the general assembly, counties, cities, towns, townships, school districts, and other public corporations from ever making appropriations or payments from any public fund in aid of any church or sectarian society, or for any sectarian purpose, or to help to sustain any institution controlled by a church or sectarian society. Section 11 gives the general assembly liberty to require by law that every child of sufficient mental and physical ability shall attend school for a time equivalent to three years, between

the ages of 6 and 16, unless educated by other means. Sections 12 to 14 provide for the election by the qualified voters of the State, at the next general election after the adoption of the constitution, of six regents of the university, to be classified by lot after election into sets of two, to hold office for terms of two years, four, and six; a new election to be held every two years after the first for the choice of two regents to serve six years; the board of regents to elect a president of the university, and to have the general supervision of it, with control and direction of its funds and of all appropriations to it. Section 15 directs that the general assembly shall provide by law for organizing school districts of convenient size, in each of which shall be established a board of education, to consist of three or more directors, to be elected by the qualified voters of the district, and to have control of instruction in the public schools of their respective districts. Section 16 withholds from both the general assembly and State board of education the power to prescribe text books for the public schools.—(Constitution to be voted on July 1, 1876.)

SCHOOL SYSTEM.

PROVISIONS OF THE SCHOOL LAW.

School law of Colorado in force from February 12, 1876.

OFFICERS.

Conforming in general to the school laws of other sections, that for Colorado presents at this time a territorial superintendent of public instruction, (who will be a State superintendent in 1876,) county superintendents, and boards of directors of school districts, as the officers of its school system.

POWERS AND DUTIES OF THESE OFFICERS.

The *territorial superintendent*, first appointed by the governor, with the concurrence of the legislative council, and from 1877 to be elected every two years by the people, has a general supervision of all the county superintendents and of all the public schools, and has authority to make rules and regulations to carry into full effect the provisions of the school law, which law, with the necessary forms, rules, and regulations annexed, he is to have printed and distributed among teachers and school officers. He is to furnish the county superintendents with suitable blanks for teachers' certificates and for superintendents' reports; and, on or before the 20th day of December in every year preceding a regular session of the legislature, is to make report to the governor of the condition of the public schools, with such suggestions and recommendations as he may think proper. He is also to render an opinion, in writing, touching the administration and construction of the school law, whenever asked by a school officer to do so. He must provide and keep an official seal, and authenticate with it copies of papers deposited or filed with him, as well as acts or decisions made by him; and any paper so authenticated is to be evidence in any court in the Territory equally with the original. He gives bond in the penal sum of $5,000, with two good and sufficient sureties, for the faithful discharge of his official duties, and, entering upon office on the first Monday of February, biennially, is to receive an annual salary of $1,500 from the public treasury. Under the new constitution he will be *ex officio* State librarian.

County superintendents are elected biennially by the people at the regular county election in each county, take office on the first Monday of the month next succeeding their election, and hold it for two years, to the election and qualification of their successors. They give bond in not less than $2,000, with two or more sureties, for faithful performance of their duties. These duties are to examine and license teachers; to keep an official record of the persons so examined, giving name, age, nativity, date of examination, and grade of certificate; to furnish themselves, teachers, district secretaries and treasurers all necessary blanks and blank books required for official use; to apportion school moneys to the school districts, and certify to the county treasurer the amounts to be placed to the credit of the several districts; to exercise a careful supervision over the schools of their counties, visiting each once a quarter while it is in session, and seeing that all provisions of the school law are observed by teachers; to keep a record of official acts and of all matters required by law to be recorded; to exhibit their records and report the financial condition of their offices to the boards of commissioners of their respective counties on or before the 20th day of August in each year, publishing such financial report in some newspaper of the county on or before the 31st of August; and, on the 1st day of October in each year, to make report to the territorial superintendent for the school year ended August 31 preceding, embodying in this report an abstract of those made to them by the district secretaries, with a statement of the financial affairs of their offices and of such other matters as the territorial superintendent shall direct or they themselves deem expedient. Failure to make this report, or that to the county commissioners, involves a forfeiture of $100.

It is further made their duty to ascertain and record the boundaries of each school district in their counties, to harmonize these where they are conflicting, to report such action to the board of school directors affected by it, to appoint directors for any dis-

trict that fails to elect them at the regular time, and to fill vacancies that may occur in any board from death, removal, resignation, or otherwise, except in districts of the first class.

They have, besides the power of supervision and general control, the power to administer oaths and affirmations to school directors, teachers, and other persons, in official matters relating to schools.

For the time necessarily spent in the discharge of their official duties, they are entitled to $5 a day and travelling expenses, provided that the annual compensation shall not exceed $300, or $100 for each regularly organized district.

It is an excellent feature of the county superintendency here that, besides the possession of a good moral character, a candidate for it must have evidence of competency, in either a diploma from some chartered educational institution, a State certificate of ability to teach, a first grade county certificate from a county superintendent of the Territory issued at least a year prior to the election, or a certificate of competency from the territorial superintendent.

Boards of school directors consist of 6 members for districts of the first class (with 1,001 inhabitants or more) and of 3 members for those of the second class, (with 1,000 or less,) one-third of each class going out each year. Elected in full by the people of their respective districts, for terms of 3 years, 2 years, and 1 year, at the regular election on the third Saturday in June, 1876, one-third of each class is, after that, to be annually elected for a term of three years, to fill the place of the retiring third.

The officers of each board are a president, secretary, and treasurer. These act as judges of the annual elections after entering on their respective offices, and the treasurer gives bond in double the amount of money liable to come into his hands.

The boards have power to make by-laws for their own government and for the government of the schools; to employ or discharge teachers, mechanics, and laborers; to enforce the rules and general regulations of the territorial superintendent; to fix the course of study, exercises, and text books in the schools; to provide for building, renting, repairing, furnishing, and insuring school-houses; to remove these, when necessary, sell the lots and purchase new ones; to hold in trust for their districts all school property; to suspend or expel refractory pupils; to determine the number of teachers to be employed and the length of daily and yearly school sessions; to provide books for indigent children, and require that all pupils be furnished with the proper books; and to settle questions respecting the establishment of high schools and the grade of qualification for admission to them. It is made their duty to exclude from school all publications of a sectarian or partisan character; to require teachers to conform to the law; to make to the county superintendent annually, on or before the 10th day of September, a report of the schools in the manner and form prescribed by the territorial superintendent, and on the blanks furnished by him; and to report to the territorial superintendent himself, whenever required by him to do so.

Specific duties are also prescribed for the president, secretary, and treasurer of the school board; such as, that the president shall preside in the district meetings, as well as those of the board; that the secretary shall keep the records of both these, make out the reports, collect school moneys and pay them over to the treasurer; and that the latter shall pay them out on the order of the president, countersigned by the secretary, and keep, in a separate book, account of the receipts and expenditures.

SCHOOLS UNDER THIS SYSTEM.

The public schools of all grades, from the primary to the high school, are to be taught in the English language, and in such branches as orthography, reading, writing, arithmetic, English grammar, geography, the history and constitution of the United States, physiology, the laws of health, and the elements of the natural sciences. Provision may also be made in them for German and Spanish. They are to be freely open to all children residing for six months of the year in the school districts where they exist, with certain exceptions in the case of high schools—the grades in which the children shall be placed, to be determined, of course, by teachers.

The school month is twenty days, the school week five days, the school day not longer than six hours, exclusive of the noon intermission; but no special length of annual school session is prescribed.

A deaf-mute institute, a school of mines, an agricultural college, and a State university enter also into the idea of the educational system of the State, but are provided for by separate enactments. Under the new constitution (Article VIII, section 5) these are all to become State institutions on the adoption of that instrument.

TEACHERS' INSTITUTES.

The law (section 79) provides for the territorial superintendent's calling of a convention of teachers, county superintendents, and school officers three times during each biennial term, one in each judicial district, to be held in vacation if practicable; and allows $150 to be drawn from the territorial treasury for the expense of employing teachers, lecturers, &c., at each session.

SCHOOL FUNDS.

The means for sustaining public schools are at present drawn from county and district taxes, but eventually a large addition to the income for schools will probably be derived from sale and lease of the lands donated by Congress for educational purposes; from estates that may fall to the State by escheat; and from the proceeds of grants, gifts, and devises for educational purposes—all which, by the constitution, are to go to make up the school fund.

ELEMENTARY INSTRUCTION.

EDUCATIONAL PROGRESS.

The Territory has not waited for Government lands to furnish the means of education, but whenever there has arisen a demand it has been promptly met. The Territory is entirely free from debt, with a surplus in the treasury. "The most ardent educational enthusiast," says the superintendent, "ought to be satisfied with the progress made." He offers the following figures in proof of the fact that "the citizens of the centennial State are carefully guarding and generously fostering education:

Statistics showing progress in five years.

	1870.	1875.
Number of persons between 5 and 21 years of age	6,417	23,274
Number of school districts	129	329
Number of schools	110	280
Number of teachers	132	377
Amount paid teachers	$39,248	$102,783
Total school fund	64,839	193,908
Number of school-houses	68	172
Value of school property	$66,106	$414,008*

There has been a constant increase in the school population as well as in school appointments, not only during the past year, but reaching back to the early settlement of the Territory. And yet the school advantages are not commensurate with the progress and demands of the age. Among the defects to which Superintendent Hale calls attention are the low average term during which the schools are kept and the large number of children who never enter a school room. The low average term, it is stated, results from the very short terms kept in every rural district. Although the city and village schools remain open during a period of from 150 to 200 days, the time of the country school seldom exceeds 100 days, and in many districts falls as low as 60, 40, and even 20 days, while there are some districts in which no school was opened. The remedy suggested is a larger school fund, and a provision in the law requiring the directors to keep the schools in session a specified time as a prerequisite to their claims to any portion of the school money.

It appears that 45 per cent. of the children of school age did not attend school even for one day, while, of the number enrolled, not more than one-half were regular in attendance during the session and not more than one-third attended school 116 days during the year. The superintendant recommends, in view of these facts, that one-half of the school fund be apportioned among the districts according to the actual attendance at school, instead of, as now, according to the school population.—(Report of superintendent, pp. 11, 12.)

MISAPPROPRIATION OF SCHOOL FUNDS.

The superintendent alludes, in this connection, to certain facts which do not appear in the official reports, but which have reached him from time to time incidentally, namely, "the misappropriation and embezzlement of school funds by public officers, including district directors, county superintendents, and county treasurers." "During the many years that I have been connected with the public schools in the Territory," he says, "not a year has passed that could not show a defalcation of this kind. Should it not be made as great a crime to steal from this sacred fund as from the merchant's till?"—(Report, p. 13.)

OBSTACLES IN THE WAY OF THE EFFICIENCY OF THE SCHOOLS.

Some of the difficulties in the way of the efficiency of the schools, the superintendent believes, might be removed by legislation, and others by the moral influence of the friends of the school. The people should cease to make the school offices objects for political barter. Whenever a county superintendent proves himself to be fearless and efficient in the discharge of his duties, he should be kept in office; and when a teacher proves to be capable and enthusiastic in the work, a few dollars' salary should not stand in the way of his retention.

*Exclusive of university building, school of mines, and deaf-mute institute, $60,000.

There is no one element operating so powerfully to retard the progress of the schools of Colorado as that of the frequent changes in the administration of school affairs. Of the 25 county superintendents recently elected for two years, 22 are new men.

While they are probably as competent and zealous as were their predecessors two years ago, it is not to be supposed that they can be as efficient as they will be two years hence, when they, in turn, will retire to give place to a new set of tyros. But a greater evil still is wrought by the frequent change of teachers, particularly of principals. During the past year or two, there seems to have prevailed an epidemic in this regard. Schools that might become models are by such a course reduced to inferiority. Every change of teachers involves, to a certain extent, a change of text books, a change of base, a change of methods, and a general confusion of ideas in the minds of pupils as to what constitutes a course of study. Meanwhile, time flies, the children pass beyond the school age, and opportunities are lost forever.—(Report, pp. 18, 19.)

CITY SCHOOL SYSTEM.

DENVER.

City system.—There is here a board of education, consisting of six members, and a superintendent of schools, Professor Aaron Gove. One-half of the directors go out annually to be replaced by new elections.

Details.—The schools of Denver consist of nine grades, and are divided into primary, grammar, intermediate, and high. All in the schools above the sixth grade receive instruction in German, to which French is added in the high school.

The high school embraces a general and a classical course. The classical occupies four years and includes the studies required for admission to most colleges.

The number of pupils enrolled in all the schools for 1874–'75 was 1,769; average attendance, 1,012. The names of 17 pupils who have been neither absent nor tardy during the year are mentioned.

Teachers are employed for a trial term of 12 weeks, and then a vote of the board is required to confirm them. Four examinations of applicants have been held, the number of applicants being 49. Certificates were granted to 21, and 14 of these employed. The number of teachers in the schools was: males, 2; females, 23; total, 25.

At the commencement of the year, the pupils of the ninth grade were in school but one-half the day. By this arrangement the seating capacity of the grade was doubled, and the children remained in school three hours instead of four and a half. The seventh and eighth grade pupils have been in school two sessions each day; the first, three hours, the second, one and one-half hours. All others grades have had the full day in school.—(Report of the board of education, for 1874–'75.)

SECONDARY INSTRUCTION.

ACADEMIES AND HIGH SCHOOLS.

The earliest provision made for secondary education was in Jarvis Hall, Golden City, a diocesan collegiate school for boys, and in Wolfe Hall, Denver, a diocesan high school for girls, both established by the late Right Reverend S. Randall, D. D., Protestant Episcopal missionary bishop to the Territory. They still continue, under his successor, the work of imparting a good English education, with Latin, Greek, French, and German. St. Mary's School for Girls (Roman Catholic) continues its instruction at Denver, on the same plane and in nearly the same line. The public high school of Denver, a branch of the public school system, was established one year ago by the Denver board of education, being the first regularly organized high school in the Territory. Its four years' course of study is comprehensive, embracing all the branches necessary to fit its graduates for entrance into the best American colleges. The German language forms a part of the course, and all pupils above the sixth grade, inclusive, receive daily instruction in it; the study, however, being permissible, not compulsory. A classical course, including Latin and Greek for the whole four years, is provided for such as desire it.—(Report of territorial superintendent, p. 8, and of Denver school board, pp. 26, 27, and 36.)

SUPERIOR INSTRUCTION.

COLLEGES.

Two colleges, one Congregational, the other Presbyterian, outgrowths of the missionary as well as of the literary spirit, have been established, the former at Colorado Springs and the latter at Evans. Both sexes are represented in each. The curriculum has not yet in either attained a degree much beyond that of a high school, but the prospects for a full collegiate organization in the early future are flattering.

UNIVERSITY.

The University of Colorado, at Boulder, presents every appearance of having become

a fixed fact. This is to be a State institution, supplemental to the public schools. A beautiful building is rapidly approaching completion, erected at a cost of $35,000, by the joint appropriation of the legislature and the citizens of Boulder. The buildings will be ready for occupancy in the spring, (1876,) and it is the determination of its friends that the institution shall rank with the highest.—(Report of superintendent, pp. 9, 10.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

The Territorial School of Mines, at Golden, was started about two years ago, as the scientific school of the prospective State University. The school is, in a measure, associated with Jarvis Hall, but it is under the control and management of the Territory, through a board of trustees elected by the legislature. The present number of students is 19; the value of buildings, grounds, and apparatus, $12,000. The school is open to either sex and to any color.

THEOLOGICAL.

Matthew's Hall, at Golden, also closely associated with Jarvis Hall, is a theological school under the auspices of the Protestant Episcopal Church.—(Superintendent's report, 1875, p. 10.)

SPECIAL INSTRUCTION.

TERRITORIAL DEAF-MUTE INSTITUTE.

The Deaf-Mute Institute, at Colorado Springs, was established two years ago. The legislature of 1874 appropriated $5,000 for immediate use and levied a tax of one-fifth of one mill for its second year's maintenance. During the first year there were 12

pupils; at present the number is 19. Total appropriation for its support by the Territory for the two years, $13,878.65. The Colorado Springs Town Company donated to the institute 13 acres of land, valued at $6,500, upon which a comfortable stone building has been erected by the trustees. Attendance on the institute is free, including board, washing, and instruction, to all deaf-mutes in the Territory.—(Superintendent's report, 1875, p. 10.)

EDUCATIONAL CONVENTIONS.

ORGANIZATION OF STATE TEACHERS' ASSOCIATION.

About one hundred and fifty county and city school superintendents, teachers, and friends of education met in convention at the high school building, Denver, December 28, 1875. A State Teachers' Association was organized "in order to advance the interests of education and to diffuse a professional and friendly spirit among the teachers of the Commonwealth." After this action, many important questions involving the welfare of the school system were discussed, and measures were adopted which it was hoped would result in securing it. The territorial superintendent, Hon. H. M. Hale, and six others, selected by him, were constituted a committee to confer with the educational committee of the constitutional convention, which was at that time holding its session in the city, in respect to the educational provisions that should be incorporated in the constitution for the State of Colorado, and also with the educational committee of the territorial legislature. Among the points which this committee was instructed to urge upon the constitutional convention were the following: That the school fund be sacredly preserved intact, the interest of it only to be expended; that the sale of educational lands be postponed, to the end that the proceeds may in time be sufficient to maintain public schools without taxation; that it be made the duty of the legislature to provide for the establishment and maintenance of a uniform system of schools, including elementary, normal, preparatory, and university departments, such schools to be free to all residents of the State; to provide for the offices of State and county superintendents, for the establishment of libraries, for the care and education of the blind, mute, and feeble-minded, for the establishment of a reform school; to exclude sectarianism; to forbid the appropriation of public money to any sectarian school or institution whatever, and to have a fixed State tax for school purposes.

In addition to such business, a number of addresses and essays were delivered, and their topics afterward discussed by the association. Among those who spoke were Superintendent Hale, Mr. W. A. Henry and Dr. J. B. Groesbeck, of Boulder; Mr. W. E. Pabor, of Greeley; Judge Bedford, of Central. The subject of Mr. Henry's essay was "My hobby; a plea for a happier method of teaching reading in our common schools;" Dr. Groesbeck's essay showed the importance of the study of physiology and hygiene. The sentiments of both of these addresses were adopted as those of the association and ordered to be printed.—(Proceedings of the first annual session of the Colorado Teachers' Association.)

LIST OF SCHOOL OFFICIALS IN COLORADO.

Hon. HORACE M. HALE, *superintendent of public instruction, Denver.*

[Term, 1876–'78.]

COUNTY SUPERINTENDENTS, 1875–'77.

From county tax	$13,138 41
From district tax	15,512 49
From other sources	3,952 23
Total	32 603 13

Expenditures.

For teachers' wages	18,045 86
For building, repairs, rent, &c	9,985 01
For incidentals and furnishing	4,572 26
Total	32,603 13

SCHOOL SYSTEM.

OFFICERS.

A territorial superintendent of public instruction, county superintendents, and school district boards are the officers of the school system.

POWERS AND DUTIES OF OFFICERS.

The *superintendent of public instruction* has the general oversight of the schools of the Territory, with power to grant to duly qualified persons authority to teach in any of these schools, to regulate the grade of county certificates, and to appoint a deputy for all duties to be performed north of the forty-sixth parallel of latitude. He must visit the schools, confer with county superintendents, hold teachers' institutes in company with them, furnish them with the needful blank forms, and make to the governor before the 15th day of December in each year a report of his official acts, and of the condition of the public schools and expenditure of school money. His election is by the people; his term of service, 2 years; his compensation, $5 a day for every day spent in performance of the duties of his office, with necessary office expenses. His deputy receives the same.

County superintendents, elected by the people at the same time and in the same manner with other county officers, hold office also for 2 years, give bond in $500 for faithful performance of duty, and have general charge of the common school interests of their several counties; must divide these into proper school districts; must apportion the school moneys to these in proportion to their school population; must examine and license teachers; must visit the county schools, look into their condition and management, and make full annual report respecting them. Compensation, $3 a day for each day spent in the discharge of official duties.

School district boards are composed of a director, clerk, and treasurer; are elected by the people at the annual district meetings for terms of 3 years each, one going out each year. They have the care of the school property of their districts and the general control of all matters relating to the schools, such as the hiring of teachers, admission of scholars, providing of school-houses, furniture, &c.

SCHOOLS.

The schools established under the territorial law are to be at all times equally free and accessible to all children over 5 and under 21 years of age, residents of the dis-

tricts in which they exist. In every school district are to be taught orthography, reading, writing, English grammar, geography, and arithmetic, if desired, and such other branches as may be determined by the district board.

SCHOOL FUNDS.

A poll tax of $1 on each elector and a further tax of 2 mills on the dollar on all taxable property form the current funds for the support of schools, and are distributed among the districts in the proportion of the population of school age.—(Public school law for the Territory of Dakota, approved January 15, 1875.)

ELEMENTARY INSTRUCTION.

GENERAL VIEW.

In the absence of any published report of educational affairs in this Territory for 1875, the following extracts are made from a letter received from Hon. J. J. McIntire, territorial superintendent of public instruction, under date of February 21, 1876:

"Our educational interests are in a state of formation. The masses who are rushing together here from all parts of our country and the Old World are forming settlements here and there in remote and, in many instances, in widely separated parts.

"Our school laws are mostly copied after those of the older States that have been most successful in carrying forward the work.

"We have no regularly formed school associations, except in some of the older counties, which are beginning to organize county teachers' associations.

"The graded system has been introduced in seven of the larger villages.

"Yankton contains a prosperous academy, the only school of a higher grade in the Territory.

"There will be no published report of schools in this Territory for the year 1875 until next fall, when the report for 1875 and 1876 will be presented to our biennial legislature."

STATISTICAL REPORT BY COUNTIES, 1875.—BON HOMME COUNTY.

Number of children over 5 and under 21 years of age, 602; number attending public schools, 237; number not attending public schools, 365; number of organized districts, 19; number of schools taught, 15; number of male teachers, 6; number of female teachers, 9; amount of public money apportioned, $557; amount raised by district tax, $379; amount paid for teachers' wages, $885; amount paid for incidental expenses, $45; amount paid for school property, not reported.

CLAY COUNTY.

Number of children over 5 and under 21 years of age, 1,655; number attending school, 913; number not attending school, 742; number of organized districts, 45; number of schools taught, 40; number of male teachers, 15; number of female teachers, 25; amount of public money apportioned, $2,010.65; amount raised by district tax, $3,632.82; amount paid for teachers' wages, $3,095.43; amount paid for building, $2,548.04.

DAVISON COUNTY.

Number of children between 5 and 21 years of age, 22; number of children attending school, 12; number of children not attending school, 10; organized district, 1; amount raised by tax, $91; amount paid for teachers' wages, $91.

GRAND FORKS COUNTY.

Number of children between 5 and 21 years of age, 125; number of children attending school, 45; number of children not attending school, 80; organized district, 1; school taught, 1; amount of money apportioned, $225; amount of money raised by district tax and subscription, $1,500; amount of money paid for teachers' wages, $180; amount of money paid for building, $1,545.

HANSON COUNTY.

Number of children between 5 and 21 years of age, 36; number of organized districts, 2; amount raised by district tax, $764; amount paid for building, $764.

HUTCHINSON COUNTY.

Number of children between 5 and 21 years of age, 74; number of children attending school, 45; number of children not attending school, 29; number of organized districts, 5; school taught, 1; amount apportioned from county tax, $60; amount raised by district tax, $183; amount paid for teachers' wages, $60; amount paid for building, $123.

LAKE COUNTY.

Number of children between 5 and 21 years of age, 47; number of children attending school, 19; number of children not attending school, 28; number of organized districts, 3; school taught, 1; amount of money apportioned, $23.52; amount raised by tax, $36.48; amount paid for teachers' wages, $60.

LINCOLN COUNTY.

Number of children between 5 and 21 years of age, 755; number of children attending school, 416; number of children not attending school, 339; number of organized districts, 40; number of schools taught, 20; number of male teachers, 2; number of female teachers, 18; amount of money apportioned, $1,200; amount raised by tax, $1,538; amount paid for teachers' wages, $914; amount paid for building, &c., $1,824.

MINNEHAHA COUNTY.

Number of children between 5 and 21 years of age, 740; number of children attending school, 377; number of children not attending school, 363; number of organized districts, 37; number of schools taught, 30; number of male teachers, 5; number of female teachers, 25; amount of money apportioned, $1,091.30; amount raised by tax, $3,073.20; amount paid for teachers' wages, $2,387; amount paid for building, $1,777.50; value of school property, $5,000.

MOODY COUNTY.

Number of children between 5 and 21 years of age, 225.

PEMBINA COUNTY.

Number of children between 5 and 21 years of age, 117; number of children attending school, 30; number of children not attending school, 87; school taught, 1; number of organized districts, 1; amount of money raised by tax, $135; amount paid for teachers' wages, $105; amount paid for incidentals, $35.

RICHLAND COUNTY.

Number of children between 5 and 21 years of age, 71; number of children attending school, 40; number of children not attending school, 31; number of districts organized, 3; number of schools taught, 3; amount raised by tax, $180; amount paid for teachers' wages, $180.

TURNER COUNTY.

Number of children between 5 and 21, 266; number of children attending school, 99; number of children not attending school, 167; number of schools taught, 5; number of organized districts, 15; amount of money apportioned, $149.86; amount of money raised by tax, $239.20; amount of money paid for teachers' wages, $240; amount of money paid for building, $149.06; value of school property, $850.

UNION COUNTY.

Number of children between 5 and 21, 1,904; number of children attending school, 1,400; number of children not attending school, 504; number of organized districts, 68; number of schools taught, 55; amount of money apportioned, $2,052.73; amount of money raised by tax, $3,402.56; amount of money paid for teachers' wages, $4,659.08; amount of money paid for building, $766.21; value of school property reported, $4,464.

YANKTON COUNTY.

Number of children between 5 and 21, 1,611; number of children attending school, 772; number of children not attending school, 839; number of organized districts, 45; number of schools taught, 31; amount apportioned districts, $3,444.35; amount raised by tax, $1,797.35; amount paid for teachers' wages, $3,254.45; amount paid for building, $1,987.25; value of school property, $6,550.—(Special report, for 1875, from Hon. J. J. McIntire, territorial superintendent of schools.)

Per capita expenditure for education, including contingent expenses	22 80

—(Superintendent Wilson's report, 1874–'75, pp. 95–98.)

SCHOOL SYSTEM.

OFFICERS.

The public schools of the District are under the control of a board of 19 trustees, 11 of whom must be residents of the city of Washington, 3 of the city of Georgetown, and 5 of the county, which is the part of the District lying outside of the limits of the cities named. This board is composed of 14 white members and 5 colored ones. To facilitate the transaction of business and the personal attention to the schools and school buildings required of the trustees, the board divides itself into 7 subboards; but all matters of any considerable importance require the authority and sanction of the whole board.

There are two superintendents of schools, one having charge of the schools for whites of Washington and Georgetown and the schools for whites and colored of the county, the other having charge of the schools for colored of the two cities.

The members of the board and the superintendents are appointed by the commissioners of the District of Columbia, and the term of office is subject to their pleasure.—(Superintendent Wilson's reports of 1873–'74 and 1874–'75.)

ELEMENTARY INSTRUCTION.

PUBLIC SCHOOLS IN THE DISTRICT OF COLUMBIA.

The District of Columbia has an area of about sixty square miles, and is divided into the cities of Washington and Georgetown and an adjacent rural district called the county. The school population is composed of white and colored children, about two-thirds belonging to the former class and one-third to the latter. These classes are separated in the public schools, but like advantages are afforded to each. The white schools are taught exclusively by white teachers. The establishment of schools for colored children was one of the happy sequences of the rebellion, and their history, therefore, extends back but little beyond a decade. In their beginning the employment of white teachers to a great extent was quite necessary. As their schools have advanced, they have furnished competent and in many cases excellent teachers, until very few white teachers are now found in charge of these schools. About one-eleventh of the school population of the District of Columbia, nearly 3,000 children, is found in the county. The schools for these are similar to country and village schools elsewhere, many of them being ungraded. All of these schools are under the control of one board of trustees, composed of 19 members, 14 white and 5 colored; 14 from the cities and 5 from the county. The board of trustees has divided the schools under its charge into 7 school districts, the white schools of Washington constituting 4 of these districts and the white schools of Georgetown, the white and colored schools of the county, and the colored schools of the two cities each constituting one. It has also divided itself into 7 subboards, severally subject at all times to the control of the board and assigned to each the practical supervision of the schools of a district.—(Superintendent Wilson, in report of board of trustees, 1874–'75, pp. 132, 133.)

PROGRESS.

The facts indicating progress during the year 1874–'75 are as follows:

Increase in the value of school property, $107,355; in the number of seats provided for pupils, 994; in the number of teachers employed, 17; in the whole number of pupils enrolled, 946. It will be noticed that the total payments for school purposes were $140,059.69 in excess of the total receipts from the school tax: a state of the school account with which we have been familiar for many years; the causes have been stated repeatedly.

The whole number of pupils enrolled was divided as follows: White pupils, 12,137; colored pupils, 6,648; total, 18,785. The increase for the year in the number of white pupils was 625, and in the number of colored pupils, 321. The percentage of the entire school population enrolled was 59.3. If we add to the 18,785 pupils enrolled in the public schools the 7,261 pupils reported to be attending private schools, we have a total of 26,046 children attending school.—(Report, pp. 134, 135.)

HINDERANCE TO PROGRESS.

The report of the school committee calls attention to the great obstacle in the way of the progress of the public schools, namely:

"The want of adequate means to maintain the schools now in operation and provide accommodations for the increasing numbers who are urgently seeking admission into them. The honorable commissioners have shown a most friendly disposition toward the schools and have aided to the full extent of their power to give them efficiency and success. They have provided for the prompt payment of our teachers and made liberal provision for incidentals, providing, furnishing, and repairing school buildings so far as the law and means at their command would admit.

"There is still a pressing demand for increased school accommodations in almost every section of the District. This state of things does not arise from unwillingness of taxpayers to contribute for the maintenance of the public schools, for no tax has been more cheerfully paid; but the people of this District are not wealthy and are almost entirely destitute of the means of acquiring wealth. They have no manufactories or commerce or mechanical arts to any extent. The population is largely composed of those in Government employ, many of whom pay no taxes, while their children are admitted to the benefits of the public schools. Add to this the large influx of colored people, numbering now more than one-fourth of the population, and necessarily poor, and the additional fact that more than one-half of the property valuation of this District is owned by the Government and is not taxed, and the difficulties of maintaining our public schools in any tolerable condition are clearly apparent.

"Congress, which has exclusive jurisdiction over this District, though often importuned, has as yet failed to respond to this appeal in aid of the public schools of the District of Columbia, and that, too, when it has made liberal donations for educational purposes to every State and organized Territory in the Union. Extensive and valuable grants of land have been made to other sections for these purposes, but not a single acre for this District."—(Report of the board of trustees, 1875, pp. 5–8.)

PRESENT CONDITION.

By an order of the commissioners of the District of Columbia, dated August 8, 1874, the management of all the public schools was consolidated and placed in charge of one board of trustees. Since that time the white schools of Washington and Georgetown have been governed by the same rules and regulations, and the statistics of the two cities have for the most part been consolidated in this report. The legal school age includes the period between the sixth and seventeenth years, inclusive, and the number of school children reported by the United States census of 1870 was 19,489. No more recent census has been taken.

The increase in attendance for the past year was as follows: In the whole number of pupils enrolled, 577; in the average number of pupils enrolled, 505; and in the average daily attendance, 527. The table also shows that 11,241 pupils, 57.7 per cent. of the entire white school population, were enrolled in the public schools. Taking all the schools, the normal school included, for the whole year, we find the average number of pupils enrolled for each teacher to have been 54. The average number of pupils assigned to each teacher for the year 1873–'74 was 58; and, although the number for the last year was less, it is still quite too large an average.—(Superintendent Wilson's report, 1874–'75, pp. 102, 103.

CLASSIFICATION BY GRADES OF STUDY.

Our course of study is divided into nine grades, and each grade includes the work of one year; the first eight grades comprise the course ordinarily prescribed for elementary schools, and the ninth grade takes up work usually assigned to high schools. The classes engaged in this work are retained in the grammar schools, as we have not yet been able to establish a high school to receive them. Some of the studies of the eighth grade are continued, and the following, in addition thereto, are permitted: astronomy, book-keeping, botany, English literature, geometry, general history, physics, physiology, and rhetoric. The grade to which a pupil shall be assigned when admitted into school for the first time is determined by an examination made by the supervising principal. The subsequent promotions from grade to grade are made annually in the manner stated in the last report.

This system of *annual* promotions thus far has been a matter of necessity, for the seats in nearly all the school rooms, from the lowest grade up to the highest, are occupied before the end of September, and not many of them are found vacant before the year is well advanced toward its close. In the few instances where pupils signally fail to do the required work or are manifestly able to do the work of a higher grade, changes are made.

In the lower grades better progress could be made if the course of study were divided so as to give only a half year's work to each division, provided only one class was assigned to each teacher. The need of this change is especially manifest in the first grade, into which many pupils are admitted during the progress of the year. These schools, opening in September with 60 pupils, often receive accessions until at the end of four or five months the number is doubled, or nearly so, and the school is then taught upon the half day plan. In cases like this it is evident that at the end of the year many of the pupils must be reported to be continued another year in the first grade, as they are not qualified to take up the work assigned to the next higher grade. They have done about half of the work of the first year, and ought not to be placed in a class just beginning it. Such a division of the course of study, however, will not be practicable until more accommodations shall be provided for the schools.—(Report of Superintendent Wilson, 1874–'75, pp. 107, 108.)

COMPULSORY LAW.

Attendance at school in the District was made compulsory by an act of Congress approved June 25, 1864, but the statute has been a dead letter from the date of its enactment to the present hour, as during all this time the voluntary attendance has been in excess of the accommodations afforded by the schools. The attendance reported above, however, appears to indicate that the number of white children not attending any school during the year was quite small.

HALF DAY SCHOOLS.

Eight half day schools were in operation during the past year, and in September last three more were added to the number, making a total of eleven. In the first year of the school course the children in these schools progress as rapidly and accomplish as much as those in attendance the whole day. In the second year a daily session of four hours would be better than one of three. For the best teachers the latter number will answer, and the former gives all the time that may be desired by any. The work of instructing daily two half day classes, each having the full complement of 60 pupils, is more than one teacher should be required to perform. Three teachers, with ease, can

take charge of four full half day classes, and by this arrangement 25 per cent. of the usual cost of instruction can be saved.

The objections to half day schools come chiefly from those parents who desire to be relieved from the care of their children through the day and look upon the schools as the legitimate and proper nurseries for them. These objections must fail to have weight while our school fund continues so inadequate to supply more pressing wants. In fact, it is more than probable that there will be urgent necessity for greatly extending the half day system at the beginning of the next school year. The annual increase in the number of pupils belonging to the schools for whites of Washington and Georgetown requires the organization of some ten or twelve new schools each year. There is little prospect of obtaining additional buildings or school rooms for these schools, and hence it is quite certain that the alternative of increasing the number of half day schools or excluding five or six hundred children from school altogether will be presented to the board.—(Superintendent Wilson's report, pp. 104–107.)

DRAWING.

The results of the past year's work in drawing were very satisfactory.

Instruction was given to three classes of teachers. The first, composed of those who held no certificates in drawing, received instruction in free hand drawing, geometric definitions, drawing from memory and dictation, and elementary design. In the second class, composed of those who held primary certificates, the additional subjects taught were model drawing and the elements of perspective. In the third class, geometrical drawing was added.

As this instruction to teachers is the groundwork upon which the whole plan of instruction depends, it is gratifying to be able to say that the attendance was uniformly good, and the interest manifested in the subject was not only well sustained, but in advance of that of the previous year. The simple and gradually progressive system upon which the instruction was based commended itself to all those teachers who gave it a fair trial in their schools. Some found it difficult, with their limited time for practice, to attain to any great degree of manual skill; but, by careful study of the methods employed, even these were able to present the subject to their pupils in such a way as to interest them and produce results far beyond their expectations; thus proving beyond doubt to intelligent observers that the ability to imitate forms and to make pleasing combinations of such as are impressed upon the mind is the rule rather than the exception. This ability, however, requires wise development and guidance early in life.—(Report of Superintendent Wilson, pp. 113, 114.)

SCHOOLS FOR COLORED CHILDREN.

On the 21st of May, 1862, Congress passed an act requiring that 10 per cent. of taxes collected from persons of color in Washington and Georgetown should be set apart for the purpose of initiating a system of primary schools for the education of colored children residing in these cities. The administration of the trust was given to the board of trustees of public schools. In July of the same year it was transferred by Congress to a special board, denominated the "Board of trustees of colored schools for Washington and Georgetown." The inadequacy of provision given by the act did not permit the opening of a single school under it until 1864. In that year a teacher was employed at a salary of $400 per annum. In the two years next following that of the passage of the act less than $800 were received from the municipal authorities.

By another act of Congress in June, 1864, which provided that such a proportion of all school funds raised in Washington and Georgetown should be set apart for colored schools as the number of colored children between the ages of 6 and 17 bears to the whole number of children in said cities, greater provision was made. The construction placed upon this act by the municipal authorities was, however, adverse to the immediate availability of funds by the board and required the interposition of Congress by further legislation.

Prior to 1864 no school could be opened on account of the insufficiency of funds; and, for the same reason, but one from that time until 1866. In 1866–'67 there were five schools, with 7 teachers and 450 pupils. From 1867–'68, the year in which the last act of Congress became fully operative, to 1874–'75 inclusive, the number of schools and teachers and the whole number of pupils enrolled for the respective years stand as follows:

	1867–'68.	1868–'69.	1869–'70.	1870–'71.	1871–'72.	1872–'73.	1873–'74.	1874–'75.
Number of schools	41	52	62	64	71	76	74	75
Number of teachers	41	52	63	66	78	86	87	89
Number of pupils	2,300	3,000	3,430	4,964	4,413	5,188	5,280	5,489

—(Report of Superintendent Cook, in school commissioner's report, p. 94.)

PRIVATE AND CHURCH SCHOOLS.*

Statistical summary of private and denominational schools in the District of Columbia for 1875.

Number.	Name.	Principal.	Location.	Established.	Total number pupils.	Average attendance.	Ages of pupils.

SUMMARY OF PRIVATE SCHOOLS.

The number, character, and attendance of private schools, &c., in the District of Columbia in the years 1874 and 1875 are summarized in the following table:

Kind and location of school.	Number in 1874.	Attendance in 1874.	Number in 1875.	Attendance in 1875.
GEORGETOWN.				
Boys' schools	2	187	2	180
Girls' schools	2	155	3	147
Boys' and girls' schools	9	170	9	149
Colored day schools	1	56	0	0
Colored night schools	1	10	1	12
Total number of private schools in Georgetown	15	578	15	488
WASHINGTON.				
Boys' schools	9	885	11	1,015
Girls' schools	13	1,456	13	1,670
Boys' and girls' schools	34	1,702	33	1,093
Colored day schools	9	368	16	549
White night schools	2	55	4	71
Colored night schools	11	179	19	301
Total number of private schools in Washington	78	4,645	96	4,699
Institutions for secondary instruction in Washington and Georgetown	34	1,787	35	1,806
Kindergärten	3	137	7	155
Business colleges	1	196	1	175
Kindergarten normal school	0	0	1	7
Total number of secondary and other private schools	38	2,120	44	2,143
Total of all private schools in the District of Columbia	131	7,343	155	7,330

It will be seen by the foregoing table that, while the number of private schools of all kinds in the District of Columbia in 1875 was 24 more than in 1874, the aggregate attendance was a little less than during the latter year. About 40 new schools were established during the present year and about 17 were discontinued. Of the new schools established 4 were for whites and 14 night schools for colored pupils. The increased number and attendance of colored day and night schools, as compared with the year 1874, will be noted. The total number of pupils attending private schools of all kinds, as shown by the foregoing table, was 7,330. About 600 youth in the various charitable and reformatory institutions in the District of Columbia are under instruction in the elementary English branches; and, adding these to the number of pupils attending private schools, we have a grand total of 7,930 children who receive instruction outside of public schools. The above does not, of course, include students of universities, colleges, law schools, medical schools, &c., in the District of Columbia, nor does it include quite a number of private classes in music, the modern languages, &c.

There are 23 charitable institutions, including the asylum proper of the Washington Asylum, (an institution for the sick and destitute as well as for petty criminals,) with 2,430 inmates. Of these 1,630 are adults and about 800 are children.

There are 2 reformatory institutions, the Washington Asylum and the Boys' Reform School. The reformatory branch of the Washington Asylum contains about 165 inmates and the reform school usually averages about 150 refractory boys.

TRAINING OF TEACHERS.

THE NORMAL SCHOOL.

The second year's history of the normal school has added to the evidences of its usefulness. All its graduates have been needed and employed in our own schools. It is expected that these young ladies, on first appointment, will be assigned to duty in the lower primary grades, and therefore the methods of instruction required for this work have been made quite prominent in the normal school course. Thus far all have commenced teaching in schools of the first or second grade, but several members of the first class, which graduated in 1874, are now in charge of schools of the third and fourth grades.

Among the more important studies are object lessons and theory and art of teaching. In connection with the latter a text book is used, but material for topical recitation is gleaned from various sources and the peculiar needs of our own city are taken into account. Many hints are copied into note books for future reference. The course in object lessons embraces color, form, number, and conversational exercises. Written analyses of subjects are prepared by the pupils, while constant practice in presentation of such subjects is given them. Some opportunity for practice and observation in primary schools is allowed each student during the term.

Other studies pursued are botany, physics, geography—including special attention to map-drawing—English literature and composition, language lessons, reading with phonetics and phonetization, penmanship, and arithmetic. Three lessons a week in drawing were given during the year 1874–'75, with extremely gratifying results.

The regulations of the board provide that graduates from the normal school who have taught in the public schools of the city one year and given satisfactory evidence of their ability to govern and instruct a school shall be entitled to receive diplomas, which shall be equivalent to intermediate certificates. In accordance with this provision and the recommendation of the committee on teachers and of the superintendent, the diploma of the normal school was conferred on 11 graduates of one year's standing.

A normal class has been formed in connection with the colored high school, and, under the charge of Miss Mary J. Patterson, the efficient principal of that school, gives promise of usefulness in providing teachers for those schools.

There are also normal departments connected with Howard University and Wayland Seminary.

SECONDARY INSTRUCTION.

HIGHER PUPILS IN PUBLIC SCHOOLS.

The following table shows the number of pupils pursuing the studies authorized for the ninth grade in public schools:

Pupils pursuing high school studies.

Studies.	Male grammar schools.						Female grammar schools.						Grand total.
	First district.	Second district.	Third district.	Fourth district.	Fifth district.	Total.	First district.	Second district.	Third district.	Fourth district.	Fifth district.	Total.

PRIVATE SECONDARY SCHOOLS.

Thirty-seven schools of this class make report of 188 teachers and 1,892 scholars, of whom 320 were in classical studies and 700 in modern languages, 61 preparing for a classical course in college and 25 for a scientific course. In 27 of these schools drawing was taught; in 19, vocal music; in 21, instrumental music; 9 had chemical laboratories and 10 some philosophical apparatus, while 13 had libraries ranging from 100 to 3,500 volumes, the total number of volumes in the libraries being 8,205.—(Returns to Bureau of Education, 1875.

PREPARATORY DEPARTMENTS OF COLLEGES.

In these there are reported 304 students, 112 of whom are said to be preparing for a classical course in college and 1 for a scientific course, with 145 unclassified in this respect.—(Returns to the Bureau of Education, 1875.)

BUSINESS COLLEGE.

One such institution reports 4 teachers and 147 pupils, 93 in day classes and 54 in evening ones. Studies, commercial English and correspondence, penmanship, and book-keeping.—(Returns to the Bureau of Education, 1875.)

SUPERIOR INSTRUCTION.

GEORGETOWN COLLEGE, GEORGETOWN.

The course of study here includes classical, medical, and law departments. The classical course lasts seven years and includes preparatory classes. The college library, numbering 30,000 volumes, contains many rare and curious works. Among these are 100 volumes printed between the years 1472 and 1520, and three manuscripts anterior to the year 1400. The collections in the museum embrace an extensive cabinet of minerals, geological specimens, and shells, besides a valuable set of coins, medals, and miscellaneous objects. At a distance of about 400 yards from the college is an astronomical observatory, containing a first class meridian circle, by Troughton & Simms, of London; a fine transit instrument, by Ertel & Son, of Munich; and a well mounted equatorial telescope made by Troughton & Simms, and having a 4.8 inch object glass, giving powers from 25 to 400. There are also 5 portable astronomical instruments, and a library of 500 works on astronomy, mathematics, and the physical sciences.—(College catalogue, 1875–'76.)

HOWARD UNIVERSITY.

The departments of instruction in connection with this university are as follows: In the academical branch, normal, preparatory, collegiate; in the professional branch, medical, legal, and theological. These departments are separately constituted, but so connected as to secure to each other, as far as possible, all the advantages of the institution.

The full advantages of each department are offered to all, without regard to creed, race, or sex.

The general library contains about 7,000 volumes, many of them choice and select works. The professional departments have each a separate library.

The institution occupies a commanding and beautiful site just outside of the city. Its building is four stories in height, containing recitation and lecture rooms, chapel, library, philosophical rooms, museum, and offices. Minor Hall, set apart for ladies, will accommodate 140 students; Clarke Hall, for young men, 200.—(Catalogue of university, 1874–'76.)

COLUMBIAN UNIVERSITY.

The university provides collegiate, law, and medical departments. The regular course of instruction in the collegiate department is comprised in seven schools, as follows: (1) of English, (2) of Greek, (3) of Latin, (4) of modern languages, (5) of mathematics, (6) of natural science, and (7) of philosophy.

Students wishing to pursue a select course in any school or schools are permitted to do so under certain restrictions. The degree of bachelor of letters is conferred on students who obtain diplomas in the schools of English, Greek, Latin, modern languages, and philosophy, and who receive a certificate of proficiency in the school of mathematics or of natural science. The degree of bachelor of science is conferred on students who receive diplomas in the schools of English, modern languages, mathematics, natural science, and philosophy. The degree of bachelor of arts follows graduation in any six schools and a certificate of proficiency in the residuary school of the entire course. The degree of master of arts is conferred on students who after obtaining diplomas in all schools of the college shall sustain a final and satisfactory examination in review of all the studies pursued.—(Catalogue, 1875–'76.)

NATIONAL DEAF-MUTE COLLEGE.

This college was organized in the year 1864, with the object of affording to competent deaf-mutes and others who by reason of deafness cannot be educated elsewhere the opportunity to secure a thorough education in the studies usually pursued in American colleges. It has been found necessary to maintain a preparatory department, which is conducted by members of the college faculty.

To students from the States and Territories who have not the means of defraying all the expenses of the college course the board of directors renders such assistance as circumstances seem to require and as far as the means at its disposal for this object will allow.

The corporation is authorized by law to confer such degrees in the arts and sciences as are usually granted in colleges.—(Circular of college, 1875.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

Scientific training is to some extent provided for in the three principal colleges of the District, but no special scientific school exists.

THEOLOGY.

Theological instruction is given in Howard University (Congregational) and Wayland Seminary, (Baptist.) The complete course at Howard lasts three years. Instruction and rent of rooms are free. Students receive also, free of expense, instruction in the academical departments of the university. Wayland Seminary, under the direction of the American Baptist Home Missionary Society, was established more than ten years ago, its object being to assist in providing preachers and teachers for the South and at the same time to prepare the way for mission work in Africa.

LAW.

Students of law in Washington enjoy peculiar facilities, among which are the privilege of witnessing all the forms of judicial procedure, from those of the local courts up to the Supreme Court of the United States, and of consulting the law library of Congress, which contains a collection of law books unsurpassed in variety and extent, and is open for seven hours daily. The exercises of the law schools here are rendered available to a large class of young men who are engaged during the day in official duties by the adoption of evening hours for recitations and lectures. Columbian University Law School has a course of study lasting two years. Instruction is given by means of text books, lectures, and moot courts. The law school of Georgetown College also offers a two years' course of instruction, the plan of which embraces lectures, examinations, and recitations upon the several titles of law, together with illustrations of actual court proceedings through moot courts.

MEDICINE.

There is a medical department connected with Georgetown College, but situated on Tenth street, near the Government Medical Museum; one connected with Columbian University, located on H street, between Thirteenth and Fourteenth, in a building given by W. W. Corcoran, LL. D., and one belonging to Howard University. The lectures before the latter school have been made free; and the Freedmen's Hospital and Asylum, situated within the grounds of the institution, presents to the student unusual facilities for the study of practical medicine and surgery.

Government Hospital for the Insane *b*	Two miles south of Uniontown	1853	By Miss Dorothea Dix	C. H. Nichols, M. D	561	166	727
Reform School for Boys *c*	Mount Lincoln, three miles northeast of the Capitol.	1869	By act of Congress	Mr. John Bailey	163	------	163
United States Soldiers' Home *b*	Two miles north of Washington	1851	By act of Congress	General Pitcher, U. S. A.	273	------	273

* Many of the above institutions have schools attached, where the inmates, or a portion of them, receive instruction in the common English branches. Probably as many as 600 children are under instruction, and these are not included in the list of private schools in the District of Columbia, given elsewhere in this volume. Several of these institutions have industrial branches where girls and young women are taught to sew, to do housework, &c., and where employment for the worthy is found. A more extended account of the operations of these institutions will be found in the Report of the Commissioner of Education for 1872.

a Endowed and supported by Mr. W. W. Corcoran, of Washington, D. C.

b Wholly or in part supported by the General Government. A few thus designated have only received appropriations to aid them in building, being supported otherwise wholly by voluntary contributions; the larger number, however, are sustained by annual congressional appropriations.

c Supported by the authorities of the District of Columbia.

† This number includes 174 sick or paupers in the almshouse proper, the number in the workhouse being 165.

IDAHO.

SUMMARY OF SCHOOL STATISTICS.

SCHOOL POPULATION AND ATTENDANCE.

Number of persons of school age, (5–21 :) Males, 2,150; females, 1,870	4,020
Number enrolled in schools during school year	3,270

SCHOOLS.

Number of school rooms used for both study and recitation	53

TEACHERS AND THEIR PAY.

Number of teachers employed	Not reported
Average salary of teachers per month	$55 00

This summary, prepared by Hon. Joseph Perrault, territorial superintendent of public instruction, furnishes, he says, the only information available for 1875, the report for the Territory not being due till the close of the year 1876.

SCHOOL SYSTEM.

OFFICERS.

A territorial superintendent of public instruction, county superintendents, and district school trustees.

DUTIES OF THESE OFFICERS.

The territorial controller is *ex officio* superintendent of public instruction, and his duties are (1) to prepare, publish, and distribute to the county superintendents the necessary instructions and forms for the use of teachers and school officers; (2) to exercise a general supervision over the public schools; (3) to apportion the territorial school moneys to the counties on the basis of the number of white children of school age residing therein, keeping record and giving due notice of such apportionment; (4) to make report to the legislature, during the first week of each regular session, of the number and grade of schools in each county, the number of white children of school age, the number of such attending public schools, and everything relating to the receipt and expenditure of school moneys.

The county school superintendents are elected by the people of the several counties at each general election; hold office for two years; apportion the public school moneys among the districts, two-thirds equally to the several districts and one-third *per capita* of school population; examine teachers as to their fitness for teaching and knowledge of the branches to be taught; license such as they find qualified; visit and inspect the schools at least once a year; distribute to school officers and teachers blank forms for their use; keep on file reports received from them; and make full report themselves to the territorial superintendent, annually, of all such items as he must embody in his report to the legislature. They also meet, at least once a year, with the board of trustees of each school district in their counties, and collect by process of law all penal fines not paid over by justices of the peace for the school fund. Compensation not to exceed $250 per annum, except in Boisé and Ada Counties, where it is $300.

School trustees, two for each school district, are elected by the voters of the district at each general election for terms of two years, the county superintendent being associated with them to form a board of three. They have charge of the school property, of the employment of teachers, of the visitation of the schools, and of the taking, through a marshal appointed by them, of a school census of their districts annually, as well as of the levying of a district school tax, when ordered.

SCHOOLS.

Spelling, reading, writing, arithmetic, geography, grammar, and history are to be taught in the schools; but no political or sectarian teaching is to be allowed.

SCHOOL FUNDS.

The general school fund of the Territory is to be formed of the principal of all moneys accruing from the sale of lands given by Congress for school purposes; of unclaimed moneys of the estates of deceased persons; of 1 per cent. of the gross proceeds of all franchises; and of 10 per cent. of the gross receipts of all moneys paid into the treasury of the Territory for territorial purposes. This is to be divided semi-annually among

the counties, in proportion to the number of white persons of school age, for the support of common schools.

A county fund for the same purpose is formed by levying in each county a tax of from one to five mills on the dollar on all taxable property, and from all fines for breach of penal laws, to be paid over by justices of the peace to the county treasurer.

Special taxes may also be levied for school purposes in the several school districts, on the vote of a majority of the voters of the district in favor of such taxes.—(School law of Idaho, 1871.)

LIST OF SCHOOL OFFICIALS IN IDAHO TERRITORY.

Hon. JOSEPH PERRAULT, *territorial superintendent of public instruction, Boisé City.*

COUNTY SUPERINTENDENTS.

MONTANA.

SUMMARY OF STATISTICS.

SCHOOL POPULATION AND ATTENDANCE.

Persons of school age, (4–21:) White males, 1,964; white females, 1,858; colored of both sexes, 29	3,851
Number enrolled in schools	2,215
Average monthly enrolment	1,875
Average daily attendance	1,710
Number attending private schools	292
Not attending any school	1,172

TEACHERS AND TEACHERS' PAY.

Number of teachers employed in public schools: Males, 43; females, 56	99
Number necessary to supply the schools	104
Number in private schools: Males, 14; females, 2	16
Average salary of male teachers per month	$65 00
Average salary of female teachers per month	57 00

SCHOOL DISTRICTS AND SCHOOLS.

Number of school districts in the Territory	96
Number of school-houses	76
Number of graded schools	6
Number of ungraded	90
Number using prescribed text books	79
Number using other than the prescribed series	17
Number teaching all the branches required	55
Number of private schools taught during the year	14
Value of school-houses in the Territory	$48,009 00
Value of sites, buildings, and all other school property	60,000 00

INCOME AND EXPENDITURE.

Receipts.

From county tax	30,011 01
From district tax	1,200 00
From other sources	610 67
Total receipts	31,821 68

Expenditure.

For salaries of superintendents	3,600 00
For salaries of teachers	31,821 68
For miscellaneous and contingent expenses	500 00
Total expenditures	35,921 68

The superintendent is disposed to add to the above the following items:

For erection of school buildings	48,000 00
For school apparatus	500 00

—(From biennial report of Hon. Cornelius Hedges, territorial superintendent of public instruction, for the years 1874–'75, collated with special report to Bureau of Education, December 27, 1875.)

SCHOOL SYSTEM.

OFFICERS.

The school system of the Territory embraces (1) a superintendent of public instruction, appointed by the governor with the concurrence of the legislative council and holding office for two years, his salary being $2,000; (2) county superintendents, elected in each organized county by the people and holding office for two years; compensation not less than $1 nor more than $2 for each census scholar in the county, with expenses; (3) boards of trustees for school districts, consisting of three members, elected by the people at the annual district meeting for terms of three years each, one to be changed each year; (4) district clerks, who keep the records of the boards and of the districts and make an annual census of the school population.

SCHOOLS.

The schools are to be taught in the English language and to be open for all children between 4 and 21 years of age resident in the districts where they exist. Separate schools are, however, to be provided for colored children.—(Montana school law, 1872.)

ELEMENTARY INSTRUCTION.

EDUCATIONAL PROGRESS.

There has been, during the past two years, an increase of 320 in the number of youth of school age, although the total population of the Territory is believed to have decreased during the same time. There has been a gain in the attendance of 8 per cent., or, if this attendance should be credited, as it fairly might, to those between the ages of 6 and 16, the rates of attendance would be raised to nearly 80 per cent., and would compare favorably with results attained in the most advanced and more densely settled States. There has been an increase in the average length of schools of ten days. The number attending private schools has doubled within two years, which item, while it may not be altogether complimentary to the public schools, shows the increased desire on the part of parents to provide in some way for the instruction of their children. The number not attending any school has been greatly reduced, showing that, when proper facilities shall be provided, there will be little or no cause to complain of non-attendance. The wide range of school age, from 4 to 21, will always tend to swell this item of the returns to an unreasonable degree; for, on the one extreme, it includes many of too tender years to leave home and, on the other, many of the younger married people, whose school days, in the ordinary acceptation of the term, are supposed to be over.

The total amount raised for school purposes is a little less than two years ago, yet the rate of taxation has in no instance been diminished and in two counties it has been increased. The average compensation of teachers has sensibly decreased; yet, owing to the reduced cost of living, teachers can now save of their wages as much as formerly or more. The most noticeable and encouraging feature is the great increase in the amount expended for building school-houses. Those erected during the year are worth four times as much as all the school-houses heretofore built in the Territory. This general and generous movement is not an outgrowth of overflowing prosperity, but—and this gives it increased significance—is freely offered by a diminishing population from their diminished revenues, as a proof of their faith in the future of Montana and of their appreciation of the true sources of wealth and empire.

AMOUNT PER CAPITA RAISED FOR SCHOOL PURPOSES.

Only 6 States and none of the Territories, unless the District of Columbia be so reckoned, surpass Montana in the amount of money raised *per capita* of school population, which, at the most moderate estimate of the expenditure, is $8.42, while for aid pupils enrolled it is $14.36; for average attendance, $18.60; and this without any derived from permanent funds, such as most of the older States possess. While in all the Southern States the large income of the Peabody fund goes to increase the amount raised by taxation and all the newer western States have magnificent funds derived from the sale of school lands donated by the General Government, only two of them, Ohio and Nebraska, raise as much *per capita* for the education of their school population.

CONDITION OF THE TERRITORIES IN RESPECT TO SCHOOL LANDS.

The superintendent has endeavored, by correspondence with the United States Commissioner of Education, with the National Teachers' Institute, and with the superintendents of other Territories, to bring about some concerted action that would command the attention of Congress to the treatment that the Territories are enduring in the matter of promised aid in establishing and maintaining schools, but thus far his efforts have not succeeded. If it be unreasonable, it is remarked, for the Territories to ask for the right to dispose of some portion of the school lands and use the proceeds or the interest thereof to sustain their schools when they most need help, surely the Government might, through its land officers, dispose of some portion of these lands, retaining the proceeds, but giving the interest to the Territories for their present necessities.

TRAINING OF TEACHERS.

TEACHERS' INSTITUTES.

Every complete school system must provide some means to train teachers for its schools. The expense of supporting a normal school places that means at present beyond the reach of the Territory, but it creates the greater necessity of providing for institutes, which, at little expense, may do immense good in teaching the best methods of imparting instruction and in kindling a spirit of emulation among teachers.

The attempt has been made, during the past two or three years, to cultivate teachers' institutes, relying upon the voluntary action of the teachers, and with good results. But it is found that those teachers who most need the practice and instruction afforded by institutes absent themselves, either through ill-timed modesty or some less worthy motive, and a law is needed to reach this class. It should be made the duty of the county superintendent in any county where there are 8 organized school districts to hold at least one such institute in every year, and of every teacher holding a certificate issued in the Territory to attend and participate in it under penalty of forfeiting the same. Such institutes should continue for at least two days, and for time lost by teachers in attendance no deduction should be allowed from their wages.

LIST OF SCHOOL OFFICIALS IN MONTANA TERRITORY.

NEW MEXICO.

EDUCATION IN NEW MEXICO.

THIRD ANNUAL REPORT OF HON. W. G. RITCH.

SECRETARY'S OFFICE, TERRITORY OF NEW MEXICO,
Santa Fé, February 1, 1876.

Hon. JOHN EATON,
Commissioner of Education:

In reply to your circular of December, 1875, asking for information as specific as may be on education and the school system of New Mexico as a contribution to your report for the year 1875 on the educational work of the country, I have the honor to submit the following:

APOLOGETIC.

In presenting a report on education in this Territory, it is not, in view of the situation, without some misgivings that we undertake the task; nor would we be doing justice to the Territory without first calling attention, as in a former report, to the conditions under which education first made its appearance and the circumstances under which it has since struggled for a place among the institutions of the Territory.

GENERAL CONDITION.

The Territory of New Mexico is part of the Far West, on the extreme frontier, settled to-day by a people nine-tenths of whom speak a foreign tongue, most of whom are illiterate, and the balance with little American literature. As a consequence, the inhabitants too often know little of the political and social institutions of our common country. Their habits and customs and modes of thought are generally rather of a past age than of the present. For centuries they have regarded obedience to the civil law as subordinate to the canonical law, the latter administered by an authoritative priesthood. With unimportant exceptions, the people have been without schools of any kind until nearly within the past decade. They have, too, been isolated by a thousand miles of wild, unsettled domain, through which lay the only highway of commerce and of the Army. This domain, too, has been swept by the aggressive movements of Indian nomads, only suppressed to any considerable degree during the past five years.

EDUCATIONAL PROGRESS.

It was under these circumstances and conditions that education in New Mexico had to make its start. It dates its first permanent establishment from the organization of the Academy of Our Lady of Light, (Sisters of Loretto,) in Santa Fé, in 1852, by Mother Magdalen Heyden, then, as now, mother superior, and under the patronage of the then Bishop, now Archbishop, John B. Lamy. This school started in small and unpretentious rented quarters with 7 boarders and a few day scholars, with 2 teachers. It now, according to the last annual report, numbers 10 teachers and 165 pupils, with an extended curriculum of English, Spanish, and classical studies, including music and fine arts, and occupying commodious buildings with broad grounds and delightful surroundings.

Since the organization of this school for home education, other private, academic, and parochial schools of various religious denominations, 25 in number, have been established in the various centers of population. These schools constitute the crowning feature of the education of our day in the Territory. A thirst for knowledge being thus induced, the people, through their legislative assembly of 1871–'72, reversed their decision at the polls of 10 years previous, when they had voted down a public school law by a nearly unanimous vote, for the reason that a tax for public schools was deemed oppressive. At the latter date they authorized by law the public school system in force to-day, giving one or more free schools in nearly every precinct, at least in the several counties reported.

PRESENT CONDITION.

The existing school law is crude in character as school laws are usually estimated. It is the best, however, that could be then or since obtained; certainly better than none. It leaves the details and management of the schools and of the school funds entirely to a "board of supervisors and directors of public schools," to be elected by each county respectively. The school system of each county is thus independent of any other, and may be as varied in character as the number and character of the several counties. Of course, the schools are efficient according to the degree of wisdom with which they are administered. Unfortunately, the school boards in most of the counties are composed of persons inexperienced in any school system whatever. All are without the instructions or advice of a central authority. Often they give but little personal attention to the schools. Not unfrequently they leave them under the

control of boards composed in part or in whole of priests, although under the requirements of law these are ineligible. The tendency of this priestly influence has been to gradually bring the public schools and the school fund, paid by persons of every shade of religious belief and of no religious belief, beneath the direction of a particular church. Thus, in a majority of the counties to-day, the school books and church catechism published by the Jesuits, and generally in Spanish, constitute the text books in use in the public schools; and, as announced by a newspaper friendly to the order, if not of it, "these are now being used in almost all the schools of New Mexico." In at least 5 counties public schools have been placed in direct charge of either the Jesuits or other religious orders, or members of orders kindred in character. The somewhat limited amount of the school fund, the disbursement of considerable portions of it for illegal or illegitimate purposes, and the attempt to meet the demand for schools in every neighborhood very naturally make the school term short, the compensation of teachers small, and the teachers, as a rule, comparatively poor. In aggravation of this condition of things, in some cases it has been charged in the public press and otherwise, and not denied, that the school authorities have employed relatives, dependents, or personal or political friends, and even debtors, to save an otherwise hopeless indebtedness, and with little or no regard to the fitness or qualification of the person thus employed as a teacher. The school fund in some counties, two of which report the fact, is illegally used to pay the $3 per diem of members of the school board, while among others money from the fund is appropriated to the salary of a secretary and other officers for slight or hypothetical services, and even, as we are assured, perverted to purposes entirely foreign to schools.

POPULAR INDIFFERENCE.

Among any people thoroughly imbued with the spirit and genius of our republican institutions, as is generally the case elsewhere in the United States, there comes a fixed appreciation of the patriotic duty of the citizen to watch and guard the public school and the school fund, and, as a matter of course, with it a sense of the duty of each to contribute his services gratuitously when called to assume the responsibilities of school commissioner, trustee, clerk, or other officer. But the imperfection and misdirection of the public schools in several counties will hardly be a matter of surprise among a people whose past history is so anomalous as that of the people of New Mexico. The outcome, however, is by no means all discouraging, notwithstanding this unfortunate condition of the public schools. The spirit of reform is abroad, and will eventually succeed. In my last annual report I took occasion to make several recommendations of legislation needed, with a view to guarding at once the interest of the pupil and of the school fund. Similar recommendations were also embodied in the very able message of Governor Axtell to the recent legislative assembly. The recommendations are so tersely stated and cover the ground so well that I have copied at length that portion referring to the school question.

RECOMMENDATIONS OF THE GOVERNOR.

In his last message the governor presented the following recommendations respecting common schools, female education, women as teachers, school districts, and graded schools:

Common schools.—"The foundation and corner stone of a republic rest upon the intelligence and virtue of the people; the people are the government. The system of common schools for the education of the people is the only method known to us by which the requisite intelligence for self-government can be obtained. These schools must have competent teachers, competent not only to teach the elementary branches, but competent to give moral instruction, both by example and precept, and to set such examples in manners and general deportment as children who learn quickly by the eye ought to follow; an incompetent school teacher is a public calamity. The public school fund is raised by taxation upon all religious denominations and upon persons of no religion; it is a fund which belongs to the state and must be strictly guarded against denominational influences. The state tolerates all religions but teaches none; so with the training school of the state, the common school. It admits within its walls every child of the Republic, but excludes every sectarian teacher. What is true of the common school is true of every dollar of the common school fund. It should be made a misdemeanor and punished by fine and imprisonment for any man or set of men to divert one dollar of this sacred fund to denominational or sectarian schools, and, if the territorial legislature is not willing to protect this fund, Congress will be called upon to do so. Not one dollar of this fund must be taken for any purpose except that of paying teachers, neither to pay school inspectors, nor rent, nor lights, nor other incidental expenses; all these must be provided for outside of this fund. It is but a poor compliment the men of this Territory pay to their enterprising, heroic, and renowned ancestors if they cannot supervise the ordinary affairs of a school in which their own children are taught without receiving $3 a day for it, and then abstract these $3 out of the meagre fund provided for the poor child's education."

Education of girls.—"The family is the highest type of the race. The father, mother, brothers, and sisters are the most perfect of all human societies. God's seal is set upon

these sacred relationships. As brothers and sisters are together in the family, equals in every respect, so should they be equal in the common school. I challenge the closest scrutiny into our common school system as to its influence upon female virtue, and I affirm, without fear of intelligent contradiction, that, where brothers and sisters, and whole neighborhoods and communities of such, have been educated together in the common school, the females compare favorably with any people on earth for personal purity. Intelligence is the strongest safeguard to virtue. If only one sex can have the advantage of the common school, let it be the females."

Women as teachers.—"Women are the best qualified to teach young children; wherever it is possible to do so, procure them, and pay them the same wages you would pay men for the same work. The importance of this subject must be my excuse for dwelling upon it at such length. There cannot possibly come before you anything of equal gravity. The state may lose treasure and regain it; may meet with reverses in the cabinet or on the field of battle, and win back the advantages lost; but when her youth are corrupted or cease to be intelligent and virtuous, all is gone."

School districts and graded schools.—"Special laws should be passed enabling all the large towns and villages to form themselves into one district, and levy a special tax upon that district to build a school-house large enough to accommodate all the children; then classify and grade the school, placing different ages in separate rooms, with one principal or head teacher. Also authorize such district, by a vote, to levy a special tax for the support of such school. There is money enough sent out of this Territory every year to educate children abroad, to do more than I have suggested."

LEGISLATION SOUGHT.

In accordance with these recommendations a bill was carefully prepared and submitted to and approved by the governor, secretary, and attorney-general, authorizing the organization of independent school districts, with power to raise additional school money and build school-houses where the population would warrant; abolishing all pay to school officers; restricting the disbursement of the general school fund to wages of qualified teachers; requiring teachers to be examined and hold certificates of qualification, without which disbursing officers were prohibited from paying their wages; providing that "the public schools of the Territory shall not be under the influence of any creed, religious society, or denomination whatever; that neither the Bible nor any sectarian book shall be used in the public schools, and that they shall be open to both boys and girls." The bill as drafted also required a system of reports and accountability to a central board; the taking of a school census, and that the whole question of the management of public schools, including the designation of school books and of all needful rules be under the supervision and governance of an *ex officio* board of commissioners of education, composed of the governor, attorney-general, and president of the council.

This bill was introduced in the council, where it passed without amendment by a vote of 9 to 4. In the house, however, it was first amended by striking out the non-sectarian clause, and then defeated by a vote of 14 to 10, 2 members being absent and not voting. It is fair to say that the members of the house voting for the amended bill would also have voted for it without the amendment. The opposition in the house had proved violent, owing to the organized efforts of a sectarian force. The friends of the bill made the amendment hoping to save the remainder. It may be noticed that on a joint vote of the two branches of the legislative assembly there was a majority of 1 in favor of the bill. It is significant that of the 20 members voting for the bill and 1 absent, also a friend of it, 15 were natives of the country, reared and educated under the old influences. The more intelligent and progressive citizens of the Territory generally gave evidence by their work or words, or both, that they can be counted among the friends of public schools as contemplated in the original bill. Manifestly liberal and efficient public schools are growing in favor with the people, with a strong hope that in the early future New Mexico will arise above its present inefficient and unsatisfactory school system, and fall into line with the other States and Territories in favor of a system and management looking to broad, liberal, and effective popular education.

THE GREAT NEED.

Tried by the standard that would be applied to the other States and Territories, the great need of New Mexico, beyond a peradventure, is good English public schools and educated and enterprising men in numbers and force sufficient to energize the whole people, and this before assuming greater responsibilities of government. To this end, so far as lays in her power, she must make the schools and men she needs.

THE SCHOOLS OF THE TERRITORY.

The following tabular statements are abstracts mainly from authoritative sources, and what is not authoritative is either from common repute or other reliable sources. Those relating to the public schools are from the school authorities of the respective counties and those relating to parochial schools are uniformly from the principals in charge.

County.	Number of public schools.	Number of children in attendance.	Number of teachers.	Average wages per month for teachers.	Number of months of school taught.	Languages taught—English or Spanish.	Male teachers.	Female teachers.	Schools for boys.	Schools for girls.	Mixed schools.	Schools known to be directly under religious societies or orders, and paid out of public school fund.	School-house owned or rented.	Value of school-house, if owned.	School fund from all sources.	Disbursed for teachers' wages.	For rent and school books.	For other purposes.

a $3,000 of school fund from surplus in county fund. *b* $'00 for per diem of commissioners. *c* Per diem of commissioners. *d* One to be discontinued in January.
e Includes for furniture. *f* With per cent. of assessor and collector deducted.

While in some particulars the preceding statement is incomplete and will not bear the full test of critical examination, it is quite sufficient to illustrate the present condition of the public school system. It is, without doubt, the most reliable specific information obtainable at this time, or that probably will be obtained so long as reliance has to be placed on reports by courtesy, with an apparent belief extant, in some instances at least, that local interests, ecclesiastical, political, or otherwise, are best served by silence or avoidance. I have this to say of the present report, as compared with either of my former reports—which to a certain extent, as stated, only approximated the facts—that I have succeeded in obtaining much more official information than ever before. Of the parochial schools, heretofore less than half has been authoritative. In this report all is believed to be reliable and with slight exceptions is authoritative.

OTHER STATISTICS.

In addition to the tabular statement previously given, we glean that in eleven counties there are 132 male and 15 female teachers; that there are 97 schools for boys, and 8 for girls exclusively, and 33 mixed schools. Ten public schools are under ecclesiastical control, paid in part or whole out of the public school fund. Mora and Doña Ana are the counties officially reporting public schools under ecclesiastical control. In the counties of Taos, Santa Ana, and Valencia there are 37 schools for boys, 1 for girls, and no mixed schools. It will be noticed by comparing the footings that, while there has been an increase in the number of school months taught and of teachers, the aggregate school fund for 1875 is $1,637.53 less than that of 1874. It will also be noticed there is an increase of 25 schools in which the Spanish is taught, an increase of only 1 in which the English is taught, and a decrease of 7 of the exclusively English schools. Eight counties report $4,320.73 received from the poll tax of one dollar *per capita* assessed by law for school purposes; while the whole number of votes cast in the same counties, as appears from the record in the secretary's office, was 11,576. Balance of school fund, 1874, $4,920.37. Balance on hand December 31, 1875, $11,503.19. Bernalillo and Doña Ana counties, in violation of law, pay the per diem of the school board out of the school fund. Valencia pays a secretary of the school board and other officers not designated the sum of $189. Average teachers' wages, computed from the whole number of months taught and the amount disbursed for teachers' wages, $16.58 per month. From the report of the auditor of the Territory for the year ended November 15, 1875, we learn that, of the property tax of one-half of 1 per cent. due the Territory on the 1st day of October, a fraction less than one-half has been paid into the treasury, and that the assessed value of the property of the Territory is $7,808,084; being about $200,000 greater than the assessment of 1874. The annual tax levy on property for school purposes is one-quarter of 1 per cent.

EDUCATION UNDER DIFFICULTIES.

Judge Gallegos, the president of the school board of Rio Arriba, writes of the extreme solicitude of parents to have their children attend school. Some who are quite poor and living at a distance make great sacrifices in order to provide maintenance for their children near the school, in order that they may attend. Others, so poor as to be unable even to purchase school books, send their children provided with stray leaves of old books from which to glean some of the elements of education. Under the rule of his county school books are not provided at public expense, the fund being utilized as far as possible to pay teachers. He very justly suggests that, where there is so deep an interest in education among the masses, there should be some more efficient means for meeting the demand.

SENTIMENTS ESSENTIALLY AMERICAN.

Charles E. Wesche, one of the commissioners and secretary of the school board of San Miguel County, and withal one of the foremost and most outspoken friends of public schools in the Territory, writes, in transmitting the report of his county: "You are no doubt aware that in many counties of New Mexico sectarianism has great influence, and in some even full control over the public schools. These pernicious tendencies ought to be cut short by *congressional legislation*. No public school and no money raised by taxation for the support of public schools should ever be allowed to come under the control of any religious sect."

Of San Miguel County, where the predecessors of the present school board adopted into the public schools of that county the Roman catechism and the school books published by the Jesuit order, and voted to place one or more of the public schools under the immediate control of the Jesuits, the present board, as noted in the press, "passed a resolution, by unanimous vote, declaring against the teaching of religion in the public schools of the county, and that the schools should be essentially American in character." The school board is composed of three Mexicans and one American.

PUBLIC SCHOOLS VS. PAROCHIAL SCHOOLS.

We have referred to sectarian influence in the public schools and the perversion of

the public school funds to schools of a parochial character. To avoid any misunderstanding as to the position of the liberal friends of education through the public schools, it should be said that they distinctly disclaim any exceptions to parochial schools as such. They concede the right of any religious denomination to establish their schools wherever and whenever they like, and the right of parents to send their children to the same wherever and whenever they incline to do it, so long as they do not interfere with public moneys or the benefits accruing therefrom to people of all shades of theology and religion. They do except, however, to pupils whose tuition is paid for out of public funds being taught either a sectarian catechism or that the highest public duty of man is to the ecclesiastical head of any church; that our republican government is in any degree whatever subordinate to the church, or that pupils are to be required or taught to go down on their knees at the approach to the school room of any mortal man in clerical robes, as is known to be the case in this Territory. Such obsequiousness to men they hold to be inconsistent with the dignity of a freeman, as well as humiliating to the liberty transmitted to us by the patriot fathers.

Morality in its relations to parents and the home circle, to patriotism and love of country, to industry, integrity, personal rights, temperance, and society in general is a legitimate part of the curriculum of the American school system. Sectarianism is not.

While the parochial schools are without doubt the best schools we now have in New Mexico, there is rather more than a suspicion that the advocates and promoters of some of them have a special interest in paralyzing the efficiency of the public schools and in keeping them in bad repute, as a means of maintaining their own superiority. But in this free country any system of sectarianism must in the end (like merchandising or manufacturing in the individual relations of proprietors) take an even chance with all other systems of sectarianism, and flourish or decline on the reasonableness, consistency, or merit of the system, judged by intelligent manhood. Make the public school system of New Mexico all it is practicable to be made at this time, and the result will be preparatory schools, not only for the State, but for higher education. The present denominational schools would then, under the free push of these preparatory schools, be forced, like the sects they represent, to stand on their merits, to enlarge and liberalize their curriculum of study, and brush up their diction and scholarship. They may thus, in an exalted sense, be made the promoters of higher education, first as academic, eventually as colleges. There is room for all, and to spare, and will be for years to come, under the greatest possible harmony of action. This is what all liberal friends of education in New Mexico, without regard to sect or religion, are working for, are expecting and demanding, and, by the merits and justice of their cause, will have. If private sources fail to provide higher education, then the latter will of necessity the sooner become part of the public school system.

PAROCHIAL AND OTHER SCHOOLS.

A table giving the statistics of these may be found on the two following pages.

Parochial and private schools, 1875.

PAROCHIAL AND PRIVATE SCHOOLS.

From the various reports under this head we glean a few items which are suggestive of some of the difficulties to be surmounted in the work of bringing order out of chaos.

WORDS FROM EXPERIENCE.

The sister in charge of the Loretto School at Mora writes: "I think it would be a good idea if parents would not take their children from school so soon, but leave them at least two or three years. The generality of people here think education is not necessary for women, and therefore leave them in the school sometimes only two or three months, with irregular attendance, and then, if they do not learn, charge the fault on the teacher. It is rather disheartening to have so many beginners every year. This is the reason why we have so few in the higher classes this year."

RELIGIOUS INSTRUCTION NOT OBLIGATORY FOR NON-CATHOLICS.

The sister in charge of the Loretto School at Las Vegas writes: "Religious instruction not obligatory for non-Catholics."

The school of the Sisters of Charity at Santa Fé is "for girls—orphan and destitute."

Brother Botolph, president of St. Michael's College, writes: "When the Christian Brothers established St. Michael's College, in 1859, they opened at the same time a *free department* for the poorer classes, which has been attended by a yearly average of 180 male pupils. In 1872, the school commissioners deemed it proper to make an annual appropriation of $700 to the members of the society as a token of appreciation of their charitable services."

"In addition to the ordinary school hours, half an hour is devoted to the religious instruction of Catholic children attending the college and the free school. A similar custom is observed in our schools at Mora and Bernalillo. This instruction being given after the regular class labor is terminated, non-Catholic children are at liberty to return to their homes before its commencement, thus losing none of the usual school exercises." Actual attendance, 45 boarders, 47 day scholars, and 143 free school.

Father Vito Tromby, S. J., in charge of the Jesuit school at Albuquerque, writes: "The apartments for school purposes are small and incommodious; we are desirous of building a new and commodious edifice, intending to apply the income derived from salaries of teachers as a part of the funds, and to ask the school authorities of Bernalillo County for a donation out of the surplus in their treasury in aid of the undertaking."

CONGRESS SHOULD ENACT A GENERAL SCHOOL LAW.

George G. Smith, principal of the English and classical school at Santa Fé, says: "Now that one branch of the legislative assembly have shown themselves such slaves to sectarian influence that they dare not adopt a wise and admirable bill for the regulation of the schools of the Territory, Congress should enact a general law requiring, as a condition of territorial authority, the establishment of good public schools, such as any person might send his children to without violating religious examples, rather than to engage in the passage or consideration of an enabling act to confer on New Mexico the sovereignty of a State."

We learn incidentally, on good authority, that the school represented by Mr. Smith has several thousand dollars assured, with prospects of other thousands, sufficient for the purpose of erecting commodious quarters for recitation rooms, apparatus, and a boarding house, and on a plane with the academic schools of the country at large.

Professor Annin, of the Presbyterian Mission School at Las Vegas, writes: "While our curriculum of study is confined to the primary and common branches, with music, we are prepared to extend it into the higher English and classical studies, according to demand.

"We are much interested here in the school law under discussion in the legislature. We would like a good law to be passed making the schools entirely non-sectarian, of course, and making effective provisions for a stringent accountability of the school fund. The school interest is much improving in our town, and we can see clearly that our private mission school has been a powerful stimulus."

Professor Roberts, of the Presbyterian school at Taos, says: "It is, in my opinion, better to teach the English first. In so doing, the pupils learn correctly all the different sounds used in English, which they are not apt to do if they have first learned Spanish. As there is usually but one sound given to each letter in Spanish, having first learned all the sounds in the more difficult language, with essentially the same alphabet in use in both, the pupil learns to read correctly in Spanish in a few weeks. * * * To induce my pupils to use what English they know, in common conversation, is an unfinished problem in my experience with these children."

Professor Harwood, of the La Junta Mission Institute, and superintendent of the Methodist Episcopal missions in New Mexico, writes: "We have in the Territory five

schools in operation. Our school-house doors are never closed against poor children. If parents are able to pay full price or part, we ask them to do so; but if not, as is the case with many of the Mexican parents, their children are permitted to attend free."

THE PROTESTANT SCHOOLS RELIGIOUS BUT NOT SECTARIAN.

"We teach, in school," says Professor Harwood, "the general principles of religion, such as honesty, truthfulness, love to each other, obedience to parents, reverence to their Creator; but sectarian differences are not touched."

And it may be remarked that this, with reference to admission of pupils and moral precepts, expresses the substance of the reports of the respective mission schools of the Presbyterian Church as well.

NORMAL SCHOOLS AND INDEPENDENT DISTRICTS.

Professor Ronguillo, of Lemitar Academy of Progress, thinks a normal school in each county, with independent school districts in cities, villages, and towns, under a local board, essential to secure qualified teachers and to educational reform.

PUEBLO INDIAN SCHOOLS.

OFFICE PUEBLO INDIAN AGENCY, TERRITORY OF NEW MEXICO.
Santa Fé, January 29, 1876.

SIR: In compliance with your request, I have the pleasure of giving the following information in regard to the work done in the year 1875 for the education of the Pueblo Indians:

Since May last there have been 7 day schools in operation; prior to that time there were only 2. In these schools there were enrolled at the close of the year 242 scholars, and of this number 180 were in daily attendance; but during the summer months the attendance was less than half that number. The number of scholars who can read and write is 47, and 15 work in the first four rules of arithmetic, while spelling, reading, writing, arithmetic, and geography are all successfully taught in English.

But few of the children understand English, and on that account it is necessary to use numerous devices to get them started in acquiring the language. The Indian children are able to make as rapid progress, apparently, as any other class of children, and, but for certain superstitions and the carelessness of the parents, very rapid advance would be made in their education.

It is very difficult to secure teachers of proper energy and conscientiousness to accomplish the greatest amount of good possible at these pueblos. If the agent were allowed to pay higher salaries for teachers or if he were even properly supported on all occasions in the best use of the funds already at his disposal, much more might be accomplished in this work than is now possible. Still, there is much encouragement in education actually accomplished, and I hope much from the present year.

Very respectfully,

B. M. THOMAS,
United States Agent Pueblo Indians.

Hon. W. G. RITCH,
Secretary of New Mexico.

IMPRESSIONS OF A PUEBLO INDIAN.

In addition to the above we give an incident which tells its own story: The governor of the Indian pueblo of San Juan, situate on the Rio Grande 30 miles northwest of Santa Fé, was one of a party of this semi-civilized village of Indians who made a trip to Washington last fall. A few weeks since he called on Governor Axtell and voluntarily called attention to the fact of his having been east, and that he had seen and realized the advantages of education to the American people; that he then resolved he would have his people educated. The Indian governor has shown his faith by his works. The Government school, which had only 6 pupils when he returned, now, through his influence, has a daily attendance of 60.

Respectfully,

W. G. RITCH.

UTAH.

SUMMARY OF STATISTICS.

SCHOOL POPULATION AND ATTENDANCE.

Number of boys in the Territory 4–16 years of age	18,094
Number of girls in the Territory 4–16 years of age	17,602
Total	35,696
Total enrolment: Boys, 9,870; girls, 9,408	19,278
Percentage of enrolment to whole number	54
Average daily attendance	13,462
Percentage of school population actually attending	38

Raised by district tax for building purposes		49,568 87
Grand total for public schools		180,368 85

Expenditures.

For salaries of superintendents	3,450 00
For salaries of teachers	130,799 98
For school buildings, sites, and furniture	49,568 87
Total expenditure for public schools	183,818 85

PER CAPITA EXPENDITURE.

Expenditure *per capita* of school population	5 15
Expenditure *per capita* of pupils enrolled	9 53
Expenditure *per capita* of average attendance	13 69
Expenditure *per capita* of population between 6 and 16	6 18
Expenditure *per capita* of population between 6 and 16, including interest on school property	7 63

—(Report of territorial superintendent, Hon. O. H. Riggs, for 1874 and 1875, pp. 30, 31.)

SCHOOLS OTHER THAN PUBLIC.

Number of church schools: Methodist, 5; Presbyterian, 5; Protestant Episcopal, 2	12
Number of private and select schools	13
Total number of schools other than public	25

Number of teachers in these schools: Male, 25; female, 52	77
Number of enrolled pupils: Boys, 1,744; girls, 1,798	3,542
Average daily attendance	2,437
Number studying the higher branches in these schools	592
Number of free pupils enrolled	273
Whole amount paid teachers	$50,345
Value of school property	72,850

The above summary includes the University of Deseret and the Timpanogos branch at Provo.—(Report of territorial superintendent, p. 22.)

SCHOOL SYSTEM.

OFFICERS.

According to a new school law presented in the report of the territorial superintendent for 1874-'75, a law understood to have been approved February 18, 1876, the school officers of the Territory are to be in the future, as they have been in the past, a territorial superintendent of district schools, county superintendents of the same, and district school trustees, with county boards of examination.

DUTIES OF THESE OFFICERS.

The *territorial superintendent*, to be elected by the people every two years, is to have the general supervision of school affairs; to furnish blanks for the use of school officers; to provide for printing and distributing the school laws; to keep a record of the district schools throughout the Territory, and of course to make regular report respecting them, though this, somewhat singularly, is not called for in the law. He is also to apportion the school moneys to the counties and districts, according to the number of children in the districts between 6 and 16 years of age, and, with the county superintendents and president of the University of Deseret, is to decide what text books shall be used in the schools.

County superintendents, elected by the people at the general election every two years, are to take the general supervision of the schools of their counties; to visit them at least twice a year; to examine and audit the trustees' books; to see that they are diligent in the discharge of duty; to keep account with the county treasurer and the trustees as to all funds received and disbursed for school purposes in the county; to audit school accounts against the county treasurer, and draw warrants in favor of the districts for the payment of them, annually, by the first Monday in November, making full report to the territorial superintendent of all matters relating to the schools.

School district trustees, three in number for each district, are elected by the people at a called district meeting for terms of two years, and are to provide suitable school-houses for their districts; keep the same in repair; employ teachers; furnish maps, charts, fuel, and other necessaries for them, and may, at their option, collect tuition fees. They are also empowered to assess and collect, annually, a tax of one-fourth of 1 per cent. on all taxable property within their districts for school purposes, as well as to remit taxes; to prescribe the manner in which schools shall be conducted, and to establish outhouses and play-grounds for them.

County boards of examination are to be appointed in each county by the county court, and are to consist of three persons competent to examine and judge of the qualifications of school teachers applying for schools. To all applicants of good moral character, considered competent, they are to give suitable certificates signed by the board, without which certificate no person shall be eligible to employment as teacher by the district trustees.

SCHOOLS.

All schools organized under the direction of the trustees in the respective school districts of the Territory are to be known, in law, by the name and title of district schools, and are to be entitled to a just and equitable apportionment of any public school fund arising from the General Government or from a legislative act of the Territory. Tuition in them may be charged for, and generally is.

Provision is made for a normal department in the University of Deseret to train teachers for these schools. Teachers' institutes—which are substantially brief normal training classes—are held in several counties.

SCHOOL FUNDS.

The territorial fund for the support of schools has been, for two years past, a legislative appropriation of $15,000 annually. It is to be, hereafter, $25,000 annually; $5,000 to go to the support of the normal department of the University of Deseret, on condition of its receiving 40 free pupils to be trained as teachers for the Territory.

Local taxes are sometimes raised in the districts to eke out the territorial apportionment, but the main dependence—the superintendent says—is on tuition fees collected by the teachers.

ELEMENTARY INSTRUCTION.

ATTENDANCE.

The reported school population for the year 1875, of 35,696, is an increase of 2,399 over that of the previous year and of 7,973 over that of the year before. Of the 35,696 children, 19,278, or 54 per cent., are enrolled in the common schools, and this, increased by 3,542, or 10 per cent., enrolled in the private, select, and mission schools, gives a total enrolment of 22,820 pupils, or 64 per cent. of the school population. This is the highest percentage of enrolment ever secured in the Territory. It is believed that the enrolment would have been greater if admittance into the schools could have been gained. There are 296 schools, and, if the entire school population was admitted, there would be an average of about 130 pupils in each, whereas they are not calculated to accommodate an average of more than 65 pupils, the 54 per cent. of pupils attending making them, in the majority of cases, entirely too crowded. The result of this overcrowding is that many drop out, and this, with lack of comfort in the seats and other causes, brings the average attendance down to 13,462, or 5,816 less than the the enrolment. This 13,462, or 38 per cent. average daily attendance in the common schools, increased by 2,437, or 7 per cent. average daily attendance in the private, select, and mission schools, gives a total average daily attendance of 15,899 pupils, or 45 per cent. of the school population.—(Report of superintendent, p. 4.)

EXPENDITURES.

The expenditure in the common schools of $183,818.85, increased by $50,345 salaries paid teachers in the private, select, and mission schools, gives a total expenditure for educational purposes of $234,163.85 in the Territory. The value of the common school property and that of the private, select, and mission schools give a total of $511,515 for all school property in the Territory.—(Report of superintendent, pp. 4, 5.)

SCHOOL-HOUSES.

Several school-houses have been erected during the past two years that reflect much credit on the trustees, but others have been built at great expense, apparently without an object or design. More attention should be paid to school architecture and to the providing of furniture adapted to the children's comfort, also to the temperature, proper ventilation, and especially to the capacity of the buildings. In some districts heavy taxes have been raised and very substantial houses built that will not admit half the school population, whereas the same means would have erected houses capable of accommodating all. The adoption of the graded system in all the cities, towns, villages, and settlements of the Territory, wherever consistent with the school population, is earnestly recommended, as a matter of economy as well as of efficiency.—(Report of superintendent, pp. 5, 6.)

GOVERNMENT AID TO SCHOOLS.

In this Territory, as well as others, is felt the need for aid from the National Government in the support of the schools and also the injustice of being deprived of the benefit of those public school lands which the older and less needy States enjoy. The territorial superintendent expresses this feeling as follows:

"During the past year 1,698 acres of our Utah land have been given away to build agricultural colleges in the old and wealthy States, while not an acre or a dollar comes to benefit us in the days of our infancy and poverty, when we most need it. * * * We want a system of public free schools, to continue for nine months in the year, but the people are too poor to tax themselves to that extent at present. It has always seemed to me that, if ever there was a time when the Territories needed help, it is in the days of their poverty and weakness, and, if ever there was a time when they deserved help, it is when engaged in reclaiming the wilderness for the residence of civilization and industry and laying the foundation of a future State."—(Report of superintendent, pp. 13, 14.)

TERRITORIAL APPROPRIATION.

The act of 1874 appropriating to the public schools $15,000 yearly for the two years just past has accomplished much good. Though but a small amount, it proved to be a spark from which a flame of interest has been kindled that has never before been felt in the Territory. County superintendents have been enabled to get correct lists of the school population and to procure school reports from nearly all the districts in the Territory, which before was almost impossible.—(Report of superintendent, pp. 15, 16.)

CITY SYSTEM.

SALT LAKE CITY.

In Salt Lake City there are 19 common schools with an enrolment of 1,739 pupils—916 boys and 823 girls—and an average daily attendance in them of 1,301 pupils,

instructed by 18 male and 16 female teachers. There are also 10 select schools, taught by 48 teachers—9 male and 39 female—with an enrolment of 2,172 pupils—boys, 1,032; girls, 1,140—and an average daily attendance of 1,277. This gives a total average daily attendance in all the schools of 2,578 pupils, while the number in the city of school age (4 to 16 years) is 5,167, making a per cent. of attendance upon all schools of only 49.7, 25 per cent. of whom attend the common and 24.7 the select schools.

The amount of taxes appropriated to the common schools was $1,600; the amount of territorial appropriation apportioned was $2,254; amount of building funds raised, $9,057. The salaries paid teachers in these schools amounted to $15,167.50; the amount paid teachers in the select schools reached $31,195. The estimated real value of school grounds, buildings, furniture, and other property belonging to the common schools in the city is $113,200; that owned by the select schools is $51,850.—(Report of territorial superintendent, 1875, pp. 25, 26.)

TRAINING OF TEACHERS.

A NEW NORMAL SCHOOL.

With but few exceptions the teachers of the Territory are illy qualified for their work. Nearly all the county superintendents complain that, although the standard has been raised very materially by the introduction of examinations, still the principal want is of qualified teachers. A normal department was established in connection with the University of Deseret in August, 1875, for the special training of students who design to teach in the common schools. Since that time it has been in successful operation, with an average daily attendance of about 30 students, who have entered for one year's course and are doing excellent work. The institution was established to continue one year, and is supported by appropriations made by the various county courts. In order to meet the demand for qualified teachers throughout the Territory, the superintendent advises that a permanent chair of education be established in the University of Deseret by legislative enactment.—(Report of superintendent, pp. 8, 9.)

NORMAL INSTITUTE.

In August, 1875, the teachers of the Territory met together in the capacity of a normal institute, the session lasting two weeks. There were present 137 members, nearly all of whom were active teachers, and represented 11 counties of the Territory. A lively interest was exhibited and a season of much benefit enjoyed. The course included the entire curriculum of common school studies. The instructors were the best in the Territory, and their services were gratuitous.—(Report of superintendent, pp. 11, 12.)

SECONDARY INSTRUCTION.

UNIVERSITY OF DESERET, SALT LAKE.

This institution is open to both sexes. Its courses of instruction are preliminary, scientific, and classical preparatory. The classical preparatory course includes an amount of instruction in the Latin and Greek languages sufficient to prepare the student for entering the freshman year of the best classical institutions. A full course is given in mathematics and history, which exceeds the requisites for admission to college. The scientific course is designed to be essentially practical, so that, whatever profession or trade may be selected by the student after completing his course, he will be prepared to pursue it intelligently. This course includes instruction in literature, history, politics, mathematics, natural history, and science. Up to the date of the last report there were no students beyond the preparatory school.—(Circular of the academical department of the university, 1874–'75.)

BRIGHAM YOUNG ACADEMY.

This branch of the university, situated in Provo, held two terms during the past year, with a daily attendance of about 200 students. President Brigham Young, proprietor of the university buildings and grounds, has executed a deed of the property (valued at $15,000) to 7 trustees, who are to hold the same for the establishment and support of an academy to be known by the above title.—(Report of territorial superintendent, p. 18.)

OTHER SCHOOLS.

Various schools are sustained throughout the Territory by different religious denominations, in all of which a part of the pupils are pursuing the higher branches. The schools under the charge of the Methodist Church, having a total enrolment of 480 pupils, number 30 in higher or secondary branches; those of the Episcopal, with 750 enrolment, number 75 in secondary studies; the Presbyterian schools, with 255 enrolled, number 31 in secondary studies; and the Catholic schools, enrolling 127, number 50 pursuing the higher branches; making in all 186 pupils of church schools in academic

classes. The private and select schools numbered 62 in secondary studies, the University of Deseret 294 at the date of the superintendent's report, and the Timpanogos branch, or Brigham Young Academy, 50; which, added to the number in sectarian schools, give a total of 592 pupils engaged in secondary studies.—(Report of territorial superintendent, p. 22.)

Expenditure.

Amount paid teachers	54,720
Increase since 1872	10,713

—(From report of Hon. John P. Judson, territorial superintendent of common schools, for 1874-'75.)

SCHOOL SYSTEM.

OFFICERS.

These are a territorial superintendent of common schools, county superintendents, and directors of school districts.

DUTIES OF THESE OFFICERS.

The *territorial superintendent*, appointed by the governor, with consent of the council, for a term of two years, is to disseminate intelligence in relation to the value and methods of education, to examine and license teachers, to prepare and forward to county superintendents the needful school blanks, to recommend text books for the schools, and to make report of the condition of the schools to the legislature at each regular session. His salary, $300, includes office rent and other expenses, leaving him only about $258 in currency.

County superintendents are elected by the legal voters of their counties for terms of two years, and are to district their counties, examine teachers, visit the schools, receive and file reports from districts, make apportionment of school funds to the districts on the basis of school population, and report regularly to the territorial superintendent. Salary, $25 to $500.

School directors for districts, 3 in number for each district, are elected by the voters of the district at the annual meetings for terms of three years, one member being changed each year. They are to call special meetings of the district; make out tax lists; warrant the clerk of the district to collect the taxes assessed; build, hire, or purchase school-houses; contract with and employ duly licensed teachers; and, through their clerk, make annual report to the county superintendent of all things relating to to the schools.

SCHOOLS.

The schools are generally elementary in character. Graded ones are now proposed.

SCHOOL FUNDS.

The permanent school fund of the Territory is locked up in the school lands, which cannot be sold till it becomes a State. They will then give ample means for aiding local efforts to establish schools. The annual fund is derived from a territorial tax of 4 mills, a county tax not exceeding 8 mills, and a district tax of 3 mills on the dollar. There is also power in districts to levy a tax of 10 mills for repairing and building school-houses.—(School law of 1871, with subsequent amendments.)

ELEMENTARY INSTRUCTION.

PROGRESS.

There is evidence here, says the superintendent, of marked progress and steady advancement, especially in the attendance. It would appear, at first glance, that not much more than one-half of the school population attend the public schools. But it should be remembered that the legal school age extends from 4 to 21 years, and the enumeration is based upon that age; were the age from 6 to 16, a much better proportion would appear to be in attendance. Also, it must be remembered that the Territory extends over a vast area of country; that settlers have penetrated to the utmost parts of it; that many of them live where the population is not sufficient to form a school district, who, nevertheless, are included in the school census and embraced in school districts, though the school-house may be 20 miles from their homes. In each of these districts there has been at least one term of school. Although the average length of term throughout the Territory is only about three months, in the towns and villages schools are kept open generally eight months. The schools are supported by taxation, fines under criminal statutes, and by private contribution. The school fund of the county is apportioned to each district, according to its population. It follows, therefore, that the rich and populous districts retain nearly all the money they contribute to the school fund and the poor ones, where population is scarce, are left to take care of themselves. The superintendent recommends that a law be passed fixing the length of the school term in each school district and apportioning the school fund among the districts, so that all can pay their teachers.—(Superintendent's report, p. 9.)

GOVERNMENT AID TO EDUCATION IN THE TERRITORIES.

The Territory is too poor to sustain schools such as the people wish during a term of sufficient length, and it is recommended that Washington, as well as other Territories, should appeal to the General Government for aid. People, it is urged, who are converting the wilderness into a garden and increasing the wealth of the Government are entitled to some assistance from that Government in the education of their children. It is true that by the organic act certain lands are reserved for school purposes, but these lands are of no benefit to the Territories now. They can only be made available when the Territory is admitted as a State, and when, perhaps, it may want no help. If ever the people of the Territories need help to found and foster schools, it is surely in the days of their weakness and poverty, when there are so many demands upon their scanty earnings, and when, under many disadvantages, they are compelled to labor for the benefit of those who will reap the harvests they have sown. Let the Government, it is suggested, through its own officers, dispose of a portion of their school lands. Let it invest the proceeds in its own bonds, paying over the annual interest to be devoted to the support of schools. Or let it appropriate a special fund, to be at once available, taking security for repayment when the school lands can be advantageously sold.—(Superintendent's report, pp. 18, 19.)

MULTIPLICITY OF TEXT BOOKS.

The law makes it the duty of the territorial superintendent to report what school books seem to be most popular in the Territory and to recommend some series of books to be introduced. The reports of county superintendents show that there are not four counties which use the same kind of books, and it is impossible to say which seems most popular. The worst feature attaching to this great multiplicity of books is that in the same county, district, and school the books of different authors are used on the same subjects, making the labor of the teacher double what it would otherwise be. While this promiscuous use of text books should not continue, the superintendent does not, for many reasons, recommend the adoption by law of one uniform series, but thinks the matter of choice ought to be left with the territorial superintendent.—(Report of superintendent, pp. 29–38.)

COMPULSORY EDUCATION.

In 1871 the legislature passed a law compelling all parents and guardians to send children to school at least three months in the year, which provision was repealed in 1873. There is no occasion, it is thought, for such a law; in fact, its enactment would be premature until schools shall be established of such grade and character as to insure public confidence.—(Report of superintendent, pp. 46, 47.)

SECONDARY AND SUPERIOR INSTRUCTION.

Information as to both these classes of instruction is almost wholly wanting. The territorial university, unaided by the legislature, has been struggling to maintain itself as a preparatory school, but finds it difficult to do even this, reporting only 4 instructors, 21 students in its preparatory department and 3 in collegiate studies. The following is what is said of it in a circular sent with return for 1875:

WASHINGTON TERRITORIAL UNIVERSITY.

The university is located at Seattle, on Elliott Bay, Washington Territory, and is of easy access from all parts of the Territory. Seattle is noted for beauty of situation and the healthfulness of its climate. The university buildings are fine and commodious; the grounds spacious.

Boarding pupils will be constantly under the care of the president. Young ladies will have their rooms at his residence and be part of his family. Competent assistants, both male and female, will be employed as the wants of the institution demand.

WYOMING.

The territorial superintendent, Hon. John Slaughter, unable to forward a regular report, kindly furnishes the following brief summary of the chief school statistics for 1875:

Number of public school-houses	13
Number of teachers employed	23
Number of male teachers employed	7
Number of female teachers employed	16
Number of scholars enrolled	1,222
Length of school year, in months	10
Highest wages paid per annum	$2,000
Lowest wages paid per annum	600
Whole amount paid for teaching, (1875)	16,400
Total value of public school-houses and furniture, (not including land)	32,500

SCHOOL SYSTEM.

OFFICERS.

Here, as elsewhere, these are a territorial superintendent of public instruction, county superintendents, and boards of directors of school districts.

DUTIES OF THESE OFFICERS.

The *territorial superintendent* has general supervision of all the school districts of the Territory; apportions school funds among the counties, according to the aggregate days of attendance on the common schools; recommends text books for use in the schools; files in his office all school documents; furnishes to subordinate school officers the necessary forms for use; distributes to them copies of the school laws; and makes report to the legislative assembly on the first day of each regular session, exhibiting the condition of public schools and such other matters relating to the affairs of his office as he may think proper to communicate.

County superintendents determine the boundaries of school districts, apportion school moneys among them, examine and license teachers, visit the schools, keep account of the receipts and expenditures for them, distribute to the district officers the forms received from the territorial superintendent, and on the first Monday of November in each year must report to him an abstract of the particulars received from district clerks, and a statement of the financial affairs of their respective offices, number of days of such attendance, with a kindred and yet fuller report as to the affairs of the district in various specified particulars.

Boards of directors for districts consist of a director, clerk, and treasurer, chosen by the qualified voters of the district at a regularly called meeting. They determine, by delegation of the district meeting, the number of schools for their districts; fix the sites of school-houses; purchase or lease such sites; build, rent, or purchase school-houses; keep them in repair and furnish them with fuel; employ teachers; determine what branches of learning shall be taught; levy such taxes for school purposes as the district may direct; and transact generally such business as may tend to promote the cause of education and the efficiency of the common schools.

The director presides at meetings of the board and of the district; signs orders on the treasurer for money; draws drafts upon the county superintendent for money apportioned to his district; and appears in behalf of it in all suits brought against it.

The clerk records the proceedings of the district meetings and of the board; preserves copies of reports made to the county superintendent; files papers transmitted to him by other school officers; countersigns drafts, warrants, and orders drawn by the director; keeps account of expenses incurred by the district; presents the same to be audited and paid; gives notice of district meetings; and on the first Monday of October in each year submits to the county superintendent a report of the number of schools taught in the district, the number of days each scholar attended, and the aggregate.

The treasurer has the custody of all school moneys of the district; pays them out on the order of the director, countersigned by the clerk, and keeps account of the receipts and expenditures thereof in a book provided for the purpose.

SCHOOLS.

The schools of a wide and sparsely settled Territory are necessarily, in the larger proportion of instances, elementary in character; but the law allows the county superintendent, in conjunction with the district board of directors, to determine whether a school of higher grade shall be established in any district, the number of teachers to be employed, and the course of instruction to be pursued therein.

Where there are 15 or more colored children within the bounds of any district, the board of directors, with the approval of the county superintendent, may provide a separate school for such children.—(School law of 1870, with amendments.)

EDUCATION AMONG THE INDIANS.

The following statistics, prepared with great care by the educational department of the Indian Bureau, are believed to embody fuller and more accurate information respecting schools among the Indians than has ever previously been attainable.

ARIZONA.

The Moquis Pueblo Indians have 1 boarding school, with 2 male teachers and 33 male Indian scholars, 29 of whom are boarders. Five of these read and write English understandingly. Allowance for salaries of 2 teachers, $2,100. Control, Presbyterian.

The Papagos have 1 day school, with 4 female teachers, 89 Indian pupils, (46 male, 43 female,) and 23 half-breed pupils, (10 male, 13 female.) The average attendance of these is 65 Indians and 16 half-breeds. Of the former, 35 read and write English, and of the latter, 11. Twenty-eight of the Indians and 9 of the half-breeds work in the first four rules of arithmetic. Allowance for salaries of 4 teachers, $2,400. Control, Roman Catholic.

The Pimas and Maricopas have 1 day school, with 1 male teacher and 1 female, 51 Indian scholars, (33 male and 18 female;) average attendance, 39. Three read and write English. Allowance for salary of male teacher, $1,000; of female $200. Control, Reformed Church.

CALIFORNIA.

The Indians of Round Valley have 1 day school, with 1 male teacher, 68 Indian scholars, (43 male and 25 female,) and 14 half-breeds, (7 male and 7 female.) The average attendance of these is 58 Indians and 12 half-breeds. Eighteen of the Indians and 2 of the half-breeds read and write English. Eight of the Indians and 1 of the half-breeds work in the first four rules of arithmetic. Allowance for salary of 1 teacher, $720. Control, Methodist.

Those of Tule River have 1 day school, with 1 female teacher and 23 Indian scholars. The average attendance of these is 16 Indians. Eighteen of them read and write English. Eleven work in the first four rules of arithmetic. Allowance for salary of 1 teacher, $530. Control, Methodist.

COLORADO.

The White River Indians have 1 boarding school, with 1 female teacher and 11 Indian scholars. The average attendance of these is 8 Indian boarders and 2 day scholars. Four of these read and write English. Allowance for salary of 1 teacher, $900. Control, Unitarian.

DAKOTA.

The three Indian settlements of Cheyenne River have among them 3 day schools, with 1 male and 4 female teachers and 150 Indian scholars, (51 male and 99 female.) Average attendance, 90. Only 1 scholar in these reads and writes English; only 2 work in the first four rules of arithmetic. No salary mentioned in the report. Control in one case, Episcopal; in another, Presbyterian. There is also 1 boarding school, with 2 male teachers and 1 female, 34 Indian scholars, (16 male and 18 female,) and 26 half-breeds, (16 male and 10 female.) The boarding pupils here number 11 Indians, the day scholars, 23 Indians and 21 half-breeds. Nine of the Indians and 11 of the half-breeds read and write English, while 9 of the former and 8 of the latter are in the first four rules of arithmetic. The control of the boarding school is Episcopal. It is taught under contract for $800, the remaining expenses being supplied by a society.

Those of Crow Creek have 2 day schools, with 2 male teachers and 1 female, 54 Indian scholars, (29 male and 25 female,) and 15 half-breeds, (9 male and 6 female.) The average attendance of these is 31 Indians and 7 half-breeds. The 2 schools are taught under contract for $600 each, the remaining expenses being furnished by a society. Control, Episcopal. There is also among the Crow Creeks 1 boarding school, with 2 female teachers, 7 Indians, and 5 half-breeds; 5 of the Indians and 4 half-breeds are boarders; 3 of the former and 4 of the latter read and write English. It is taught under contract for $800, the remaining expenses being furnished by the society of the Protestant Episcopal Church, under whose control it is.

Those of Devil's Lake have boarding 1 school, with 1 male teacher and 3 female and 41 Indians, (18 male and 23 female,) all of whom are boarding scholars. Besides these there are 36 Indian day scholars, (17 male and 19 female;) 3 Indians read and write English; 8 Indians work in first four rules of arithmetic. Government allowance, $840. Control, Roman Catholic.

Those of Flandreau have 1 day school, with 1 male teacher and 33 Indians, (19 male

and 14 female.) The average attendance is 21. Ten of these read and write English. Allowance for salary of 1 teacher, $600. Control, Episcopal. All speak, read, and spell in the Sioux language.

Those of Fort Berthold have 1 day school, with 1 male teacher, 55 Indian children, (35 male and 20 female,) and 10 half-breeds, (5 male and 5 female.) The average attendance of these is 14 Indians and 6 half-breeds. Three of the former read and write English. Allowance for salary of 1 teacher, $900. Control, Congregational.

Those of Standing Rock have 1 day school, with 1 female teacher. The average attendance is 3 Indians (male) and 5 half-breeds, (3 male and 2 female.) No salary mentioned in the report. Control, Roman Catholic.

The Poncas have 1 day school, with 1 male teacher, 69 Indians, (33 male and 36 female,) and 38 half-breeds. The average attendance of these is 63 Indians (28 male and 35 female) and 40 half-breeds, (24 male and 16 female.) Six of the former read and write English. Government allowance, $600. Control, Episcopal.

The Sissetons have 1 boarding school, with 1 male teacher and 2 females, 39 Indian (21 male and 18 female) and 6 half-breed scholars. The boarding pupils include 36 of the Indians (19 male and 17 female) and the 6 half-breeds, (3 male and 3 female.) Nine of the Indians and 2 of the half-breeds work in first four rules of arithmetic. Allowance for salaries of 3 teachers, $1,440. Control, Congregational. There was also 1 day school, with 1 male teacher, 2 Indian children, (1 male and 1 female,) and 8 half-breeds, (4 male and 4 female.) The average attendance was 2 Indians and 5 half-breeds. Allowance for salary of 1 male teacher, $600.

The Spotted Tail band have 1 day school, with 1 male teacher and 2 females, 29 Indian children, (16 male and 13 female,) and 104 half-breeds, (47 male and 57 female.) The average attendance is 14 Indians and 63 half-breeds. Two of the former and 55 of the latter read and write English. No salary mentioned in the report. Government allowance, $1,000. Control, Episcopal.

The Lower Brûlés have 1 day school, with 1 male teacher and 29 Indian children. The average attendance is 15 Indians. No salary mentioned, and no other particulars given. Government allowance, $600. Control, Episcopal.

The Yanktons have 1 boarding school, with 1 male teacher and 1 female and 15 Indian children (3 male and 12 female) and 1 half-breed on its register. The boarding scholars appear to be 12 Indians and 5 half-breeds, with 3 Indian day scholars, making 3 more than the registered number. Of these, 12 read and write English. No salary mentioned in the report. Government allowance, $1,000. Control, Episcopal.

There are also 6 day schools, with 7 male teachers and 3 females, 191 Indians, (102 male and 89 female,) and 21 half-breeds, (12 male and 9 female.) The average attendance is 91 Indians (49 male and 42 female) and 12 half-breeds, (7 male and 5 female.) Thirty-seven of the Indians and 9 of the half-breeds read and write English. Eighteen of the former and 2 of the latter work in first four rules of arithmetic. No salaries mentioned in report. Government allowance, $1,800. Control, Presbyterian.

IDAHO.

The Indians of Fort Hall have 1 boarding school, with 1 male teacher, 22 Indian children, (18 male and 4 female,) and 1 half-breed boy. The boarding pupils are the same. Twelve of the Indians read and write English and 12 work in first four rules of arithmetic. Government allowance for salary of 1 teacher, $900; for other employés, $1,480. Control, Methodist.

The Nez Percés have 2 boarding schools, with 3 male teachers and 2 females, 47 Indian children, (29 male and 18 female,) and 5 half-breeds, (4 male and 1 female.) Of these, 45 Indians and the 5 half-breeds are boarding scholars, Thirty-four of the Indians and 3 of the half-breeds read and write English. Fifteen of the former and 2 of the latter work in first four rules of arithmetic. Government allowance for salary of male teacher, $1,950; female, $900. Control, Presbyterian. There is also 1 day school, with 1 female teacher, 5 Indian children, (females,) and 5 half-breeds, (females.) Five of the Indians read and write English, and 5 also work in first four rules of arithmetic. Government allowance for salary of teacher, $650. Control, Presbyterian.

INDIAN TERRITORY.

The Cheyennes and Arapahoes have 1 boarding school, (no teachers mentioned,) with 73 Indians (40 male and 33 female) and 11 half-breeds, (8 male and 3 female.) The boarding scholars are the same, viz, 73 Indians (40 male and 33 female) and 11 half-breeds, (8 male and 3 female.) Fourteen of the Indians and 7 of the half-breeds read and write English. Five of the Indians and 3 of the half-breeds work in first four rules of arithmetic. Government allowance, $3,000. Control, Orthodox Friends.

The Kiowas and Comanches have 1 boarding school, (no teachers mentioned in report,) with 58 Indian children (31 male and 27 female) and 3 half-breeds, all of whom appear to be boarding pupils. The 3 half-breeds read and write English. Government allowance, $3,500. Control, Orthodox Friends.

The Osages have 1 boarding school, (no teachers mentioned in report,) with 71 Indian children (55 male and 16 female) and 12 half-breeds. There are 52 Indian boarders (40 male and 12 female) and 7 half-breeds, (5 male and 2 female.) Thirty-six of the Indians and 9 of the half-breeds read and write English. Forty-two of the Indians and 9 of the half-breeds work in first four rules of arithmetic. Government allowance, $1,996.88. Control, Orthodox Friends.

The Kansas Osages have 1 boarding school, with 2 male teachers, 23 Indian children, (21 male and 2 female,) and 26 half-breeds, (15 male and 11 female.) The boarding scholars are 16 Indians (14 male and 2 female) and 12 half-breeds, (6 male and 6 female.), Nine of the Indians and 17 of the half-breeds read and write English. Seven of the former and 20 of the latter work in first four rules of arithmetic. Allowance for salaries of 2 male teachers, $840; for other employés, $990. Control, Orthodox Friends.

The Roman Catholic Osages have 1 boarding school; no teachers mentioned in report. Sixty Indian children (43 male and 17 female) and 22 half-breeds (11 male and 11 female) are on the register, and of these there are 58 Indians and 12 half-breed boarding scholars. Twenty-eight of the Indians read and write English. Twenty-one Indians and 37 half-breeds work in first four rules of arithmetic. Government allowance about $5,500. Control, Roman Catholic.

The Quapaw Indians have 3 boarding schools, with 2 male teachers and 1 female. 137 Indian children, (75 male and 62 female,) and 32 half-breeds, (17 male and 15 female;) 99 of the Indians (50 male and 49 female) and 17 of the half-breeds (9 male and 8 female) are boarding scholars: 79 of the Indians and 21 half-breeds read and write English; 48 of the Indians and 21 of the half-breeds work in first four rules of arithmetic. Government allowance, for salaries of two male teachers, $1,100; of 1 female, $250; for the whole working of one school, $5,000. Control, Orthodox Friends. There are also 2 day schools, with 2 male teachers, 36 Indian children, (20 male and 16 female,) and 5 half-breeds. The average attendance is 30 Indians (17 male and 13 female) and 3 half-breeds. Of these, 22 Indians and 2 half-breeds read and write English. Nine of the former and 2 of the latter work in first four rules of arithmetic. Government allowance for salaries of 2 teachers, $1,200. Control, Orthodox Friends.

The Sac and Fox Indians have 2 boarding schools, with 2 female teachers, 51 Indian children, (34 male and 17 female,) and 9 half-breeds, (4 male and 5 female.) There are 32 Indian boarding scholars (18 male and 14 female) and 5 half-breeds, (3 male and 2 female,) while 29 Indians (21 male and 8 female) and 4 half-breeds (1 male and 3 female) attend the boarding school as day scholars. Twenty Indians and 4 half-breeds read and write English. Nine of the former and 4 of the latter work in first four rules of arithmetic. Government allowance for 2 teachers, $750; for other employés, $1,000. Control, Orthodox Friends. There are also 4 day schools, with 2 male teachers and 2 females and 71 Indian children, (30 male and 41 female.) The average attendance is 58 Indians, (23 male and 35 female.) Office Indian Affairs, July, 1876.

SCHOOLS OF THE INDIAN TERRITORY.

The preceding information does not include, except in the brief recapitulation, the schools of the several nations inhabiting this Territory. These for the different nations are as follows, according to official authorities:

SCHOOLS AMONG THE CHEROKEES.

For educational purposes the 9 judicial districts of this nation are divided into 3 educational districts, known as first, second, and third, each of which is under the supervision of a commissioner. The 3 districts are again subdivided into 3 each.

Examinations of applicants for the position of teacher are held at the close of each school term by a board composed of the three school commissioners. No person is deemed

* Two boarding schools at Santee agency, Nebraska, are maintained entirely by the American board of commissioners for foreign missions, (Congregational,) at a cost during the past year of $4,247, and with an aggregate of 50 boarders, besides day scholars.

qualified to teach without a certificate in force from this examining board. These examinations are held at the close of each school term, are written, and extend through the common branches of an English education, arithmetic, grammar, history, geography, theory and practice of teaching, penmanship, general information, &c. Testimonials of good character are required from strangers.

Teachers' salaries.—Teachers are divided into three classes, according to qualifications as shown by their examination, and are paid accordingly. First-class teachers, $50; second class, $40; third class, $30 per month. Teachers in the seminaries and asylum receive from $50 to $60 per month, with living, furnished rooms, &c.

School term.—The school year consists of two terms of twenty weeks each, the first commencing the first Monday in September, the second beginning the second Monday in February.

High schools.—The Cherokee Male Seminary, boarding school: teachers, 4; pupils, 75; in primary department, 50; advanced department, 25.

The Female Seminary, boarding school: teachers, 4; pupils, 94; in primary department, 64; in advanced department, 30.

The Cherokee Orphan Asylum and Manual Labor School: teachers, 5; pupils, 117, (40 males and 77 females:) in primary department, 97; in advanced department, 26. Total in high schools: teachers, 13; pupils, 286, males, (115, and females, 171;) in primary department, 205; in advanced department, 81.

Common schools.—Number of schools, 71; teachers, 74; aggregate attendance, 2,286; Cherokee-speaking, 654; English-speaking, 1,631; males, 1,080; females, 1,206. With these are included 6 schools for colored children. Number of native teachers, 59; number of white teachers, 28.

Separate schools are established for colored children.

SCHOOLS AMONG THE CHOCTAWS.

The Choctaw Nation is divided into three districts. Each district has a school trustee and there is one general superintendent of schools. These four constitute the board of trustees of the nation. At various points in the Choctaw Nation there are 52 day schools. A few of these were organized in 1844, but the most of them since the late war. Length of annual session, 10 months. Two dollars per scholar is paid the teachers. The average attendance is 1,200. Studies, English. There are also 2 boarding schools. One, the Spencer Academy, for boys, a manual labor school, 12 miles north of Doaksville, first organized in 1844. Length of annual session, 9 months. There are 3 teachers; number on rolls, 60; average attendance, the same. Studies, English. The New Hope Academy, for girls, is 1 mile from Scullyville. It was also established in 1844. Length of annual session, 9 months. Three teachers; number on rolls, 50; average attendance, the same. Studies, English. The Spencer Academy has annually $6,000 from the nation and the Presbyterian board of missions pay the salaries of the teachers and superintendent and other expenses necessary to sustain the school. The New Hope Seminary has annually $5,000 from the nation and the Methodist board of home missions pay the salaries of superintendent and teachers.

SCHOOLS AMONG THE CHICKASAWS.

The Chickasaws have 9 day schools and 3 boarding schools in various parts of the nation. One of the boarding schools is for boys, the other for girls. In these schools there are 5 teachers. The number in the day schools is not given. Average salaries of teachers per month, $45. The number on the rolls of the boys' school is 45; average attendance, the same; on rolls of the 2 girls' schools, 75; average attendance, the same. In each day school the average attendance is 30. In all the schools the session is 10 months.

There is 1 orphan asylum, for which the nation pay $200 per scholar per session of 10 months, the pupils of which are boarded and clothed.

The amount of educational fund of the Chickasaws is $40,000 per annum.

One of the seminaries for women above cost $22,000 and the other $7,000, each put up at the expense of the nation. The seminary for men and one of the seminaries for women are taught under contract, for each of which the nation pay the superintendents $5,750 annually. The other seminary for women is also taught under contract, for which the nation pay $165 per scholar for session of 10 months.

SCHOOLS AMONG THE CREEKS.

The Creeks have 2 manual labor schools: one the Tallahassee Mission, north of the Arkansas River, the other the Asbury Mission, south of North Fork River. Both these were founded in 1844. There are for these schools, in each case, 1 male teacher and 4 females. The number on the rolls of each is 80; the average attendance, the same. There is 1 boarding school for girls, Muskogee Female Institute, near Eufaula, founded in 1873. It has 1 male teacher and 2 females. Registered number of attendants,

40. There are also 33 day schools in different parts of the nation, with 15 male teachers and 18 females. Scholars on register, 700; attendance, 500. Salaries paid day school teachers, $40 per month. Eight of the 33 schools are for colored children. Length of annual session of all the schools, 10 months. Studies, English.

Tallahassee Mission is conducted under the auspices of the Presbyterian board of missions, who pay the salaries of the superintendent and teachers.

Asbury Mission is conducted on a like plan by the Methodist board. The total amount expended by the Creeks is $30,000 annually.

SCHOOLS AMONG THE SEMINOLES.

The Seminole Nation have 5 day schools located at different points, all organized in 1867. Length of annual session, 10 months. Three male teachers and 2 females. Number of children on rolls, 138. The average attendance is 105. Studies, English. Average salaries of teachers, $40 per month.

EDUCATIONAL CONVENTIONS AND ASSOCIATIONS.

AMERICAN GEOGRAPHICAL SOCIETY.

At the meeting of the American Geographical Society, held February 25, 1875, the annual address was delivered by Chief Justice Daly, the president of the society. Beginning with a brief survey of the remarkable physical phenomena of the year, including great falls of rain and snow, extreme and widely distributed cold, earthquakes, volcanic disturbances, floods, cyclones, &c., he alluded, in passing, to the geography of the sea bottom as made known by the recent examinations of the Challenger expedition, and then took up the geographical work in our own country, as carried on by the United States Engineer Corps and other explorers. The explorations of Lieutenant Wheeler show that every State and Territory west of the plains is crowded with the products of volcanic action, ancient and modern, the connected beds of lava in Arizona and New Mexico covering an area of twenty thousand square miles; and the conclusions of the geologists of the expedition are that volcanic disturbances and eruptions in our western territory will be resumed and may occur at any day. They have occurred so recently, geologically speaking, that it is extraordinary there is no human record of them. In the department of the Platte a new route to the Yellowstone Park has been discovered by Captain Jones's exploring party. The Black Hills country was penetrated by General Custer's military expedition and explored by Captain Ludlow. Professor Hayden's geographical survey has confirmed the discovery of 1872, that Colorado is the great center of elevation in the United States, having fifty peaks that are about 14,000 feet high. In the Pacific Ocean soundings have been made for ascertaining a practical route for a telegraph cable between Japan and Puget Sound and for one from San Francisco to the Hawaiian Islands.

The separate researches and explorations of M. Pinvart and Mr. W. H. Dall, in Alaska and the Aleutian Islands, were next reviewed. M. Pinvart is of the opinion that the Esquimaux of this region are of the same stock as those of Greenland and Baffin's Bay, and concludes from their legends and traditions that they came originally from Asia across Behring's Straits. The probability of this conclusion is doubted by Mr. Dall; moreover, many American ethnologists think that Greenland and vicinity were peopled from Europe.

Professor F. W. Putnam, of Salem, Mass., has been engaged in researches respecting the ancient inhabitants of North America. He believes that the Southern Indians (the Mound Builders of Ohio, Indiana, and other parts of the West) were not connected with the northern or eastern tribes, but were of the same stock as the ancient inhabitants of Mexico, though diversified by immigration and by mixing with other races.

In Central and South America specialists have carried on explorations in Costa Rica, Nicaragua, and the lower part of South America. A French expedition has been exploring Terra del Fuego.

The Arctic event of the year has been the return of the officers and crew of the Tegethof, of the Austrian expedition, and the important discoveries made by them. This expedition, in the difficulties it encountered, the perseverance displayed, the discipline maintained, and the success achieved, is about as heroic as anything that has occurred in the history of Arctic exploration. The ship was frozen in off the coast of Nova Zembla from August till October, 1872, when the ice broke up, and they found themselves fixed upon an ice floe, helplessly *drifting*, but, strangely enough, to the *northward*. Drifting fourteen months in this way, mere passengers on an ice floe, they were at last driven ashore and frozen in on a coast which they had discovered, but were unable to reach, two months before. This was in 79° 43′ north latitude and 60° 23′ east longitude. It was now November, 1873, and they had passed the eightieth parallel. The long polar winter of 175 days set in, and the cold was so severe that the quicksilver remained frozen for weeks, and the darkness in midwinter was intense. The land, to which they gave the name of Franz-Joseph Land, was a most desolate region. In April, 1874, they set out in sledges and reached 81° 57′ north latitude, coming upon a country which they called Crown-Prince Land, whose cliffs were covered with thousands of ducks and auks; seals lay upon the ice and there were traces of bears, hares, and foxes. Here, over a sea comparatively free from ice, they saw land in the distance, which seemed to stretch beyond the eighty-third parallel of north latitude. Their return journey was one of over three months' hardship, made in sledges and boats.—(Popular Science Monthly.)

NEW ENGLAND SCHOOL SUPERINTENDENTS.

The New England Association of School Superintendents held its semiannual meeting at the City Hall, Boston, on the 7th of May, 1875. The papers and discussions occupied the day and were unusually interesting.

At the morning session, which began at 9.30 o'clock, Mr. E. A. Hubbard, of Fitchburg, presided, with Mr. A. D. Small, of Salem, as secretary.

Health and comfort in schools.—Mr. J. W. Allard, superintendent of schools at Gloucester, Mass., opened the discussion upon "Physical health and comfort."

The subject of school architecture was first touched upon, and the hope expressed that the day of spending vast sums of money upon showy and useless ornamentation of the exteriors of our school buildings was rapidly passing. The statement was made that one-fourth of the amount was absolutely needed for the comfortable fitting up and proper equipment of the class rooms. The modern four story school-house, with class rooms in the fourth story, was emphatically condemned as destructive to the comfort and health, both of pupils and teachers. He thought that if this style of architecture must prevail, then the buildings should be furnished with steam-elevators, like that of the city hall.

The important topics of lighting, heating, and ventilating were fully discussed and a history given of the improvements which have been made during the last thirty years in the material arrangements of school rooms with regard to dressing rooms, blackboards, tables, desks, and single seats.

The diversion of gymnastic exercises from their legitimate object of physical rest and culture to purposes of show was condemned in the severest language.

Kindergarten instruction and reports.—A paper on the subject of "Kindergarten instruction" was read by Superintendent Thomas Tash, of Lewiston, Me.

After a short recess, "The usefulness of monthly or occasional reports of pupils to their parents, and the manner of preparing these reports," was discussed by Mr. Waterman, of Taunton, who took the ground that occasional reports would be more advisable than any of the present systems of weekly or monthly reports. He gave an interesting account of the various methods which had been tried in Taunton, the amount of interest felt by parents in the matter, and presented an interesting *résumé* of the results.

Practical education.—Mr. John D. Philbrick, of Boston, then presented a paper on the subject "How to make common school education practical." While he opposed the introduction of the workshop into the school, he favored a more practical use of its opportunities than is generally enjoyed. Mr. Philbrick's plan is, first, to discard the theory of aiming at mental discipline primarily, and adopt in its stead the theory of imparting the greatest amount of the most useful information; second, to introduce the following subjects of instruction: elementary geometry, natural philosophy, drawing, and elements of chemistry, as lying at the foundation of all industrial education; third, make room for these subjects by lopping off the more useless parts of the old branches, which, through the influence of rival bookmakers, have grown out of their due proportion; fourth, facilitate the acquirement of the needed practical knowledge by the adoption of better methods of teaching. He did not believe in teaching a child the names of all the branches of the Amazon and leaving him in ignorance of the principle by which water rises in a pump. After some debate on the best way in which to make a census of children between 5 and 15 years of age, it was voted that the matter be referred to a committee to report at the next meeting.

United States Bureau of Education.—The work of the National Bureau of Education was then presented to the meeting, and its importance recognized in the unanimous passage of the following resolutions, the first offered by Mr. Philbrick, of Massachusetts; the second, by State Superintendent Simonds, of New Hampshire; the third, by Superintendent Stone, of Springfield, Mass.:

"*Resolved*, That the National Bureau of Education, in its work of collecting and distributing annually, through printed reports and circulars, a vast amount of reliable and useful information, respecting the condition and progress of education both in our own and in foreign countries, has accomplished in the most satisfactory manner, so far as the limits of its means will permit, the objects for which it was established, and that we regard it as an indispensable instrumentality for the promotion of education throughout the country.

"*Resolved*, That, in the opinion of this body, the labors of the United States Commissioner of Education, General John Eaton, in promoting the educational interests of all sections of our country through the agency of the Bureau of Education, have been eminently wise and efficient, and that they merit and receive our cordial approbation.

"*Resolved*, That a committee be appointed, consisting of one from each State represented in this body, to memorialize Congress in behalf of the continuance and liberal support of the National Bureau of Education."

The afternoon session was devoted to a discussion of the subjects so ably presented in the morning. Superintendent Harrington, of New Bedford, thought that the condition of most of our school-houses, as regards ventilation and conveniences, is abominable. He was tired of hearing praises on our perfect school system, even though it is centennial year, and thought it quite time that the facts should be known, however disagreeable they may be. But very few primary schools in the districts, the very places which should receive most careful attention, have a proper system of ventilation. The condition of the outhouses in too many of the schools is indescribably bad;

and, though the subject is distasteful, it needs immediate attention. There is need of a great reform.

Ventilation.—The secretary, Mr. Small, of Salem, made reference to the subject of ventilation; whereupon, Mr. T. B. Stockwell, of Providence, gave an account of a system which produced excellent results in Providence. Mr. Marble, of Worcester, spoke of the objection in the mind of the public to the great expense attendant upon elaborate schemes of ventilation, and advocated a plan which has worked with complete success in the Asylum for the Insane at Worcester. Here, in the basement, a large fan is kept in slow but steady motion by an engine supplied by the steam in the building, keeping up in every part of the structure a steady current of warm, fresh air. By applying this arrangement, or a modification of it, to our school-houses and providing each room with an outlet, we can safely "trust to Providence" to clear out the foul air and give place to the fresh current continually ascending. Mr. Marble suggested the use of a sash with double windows directly connected, as doing away, to some extent, with the objectionable draughts of air inseparable from window ventilation.

Kindergärten.—Taking up Fröbel's, system Mr. Philbrick argued that the Kindergarten ought not to be a fixed institution, but should rather be considered an improved system of infant instruction. Viewed in this light, he was happy to report the Boston Kindergärten as doing splendid work. It is, however, the teacher far more than the system which makes the Kindergarten so great a success, as, indeed, in all grades of schools success depends very largely upon the instructor.

Mr. Stone, of Springfield, spoke of the advantages of a course of training which makes the child, at an early age, properly inquisitive and self-reliant. Mr. Tash explained some of the advantages of Fröbel's system of gifts, object and alphabet teaching; after which the subject of reports of scholars to their parents was further discussed by Messrs. Small of Salem, Harrington of New Bedford, and others.

"Practical education" resumed.—The final subject of discussion was Mr. Philbrick's paper on "Practical education." Messrs. Harrington of New Bedford and Hunt of Portland, Hood of Lawrence, and others talked over the subject. The matter of parsing, reading, spelling, and drawing was debated. Mr. Philbrick said that, in these things, too much attention was given to unimportant details. Reading is taught, for instance, in some of our schools as a fine art, and half the time thus used might give the scholar a knowledge of the French language. So in arithmetic. It may be "splendid" to train a girl to add in a minute a long column of figures, but it is splendid waste of time. So in spelling. President Felton, when rallied on account of his numerous blunders in spelling, would say, "Spelling isn't my business; take up Greek, and I am ready for you." In something of this spirit, the mere mechanical acquisition of the orthography of a hundred difficult words ought to be as nothing when compared with weightier matters.

The matter of drawing elicited some discussion. Mr. Morrill, of Lowell, thought that the dissatisfaction with the system there was no greater than elsewhere in the State; while Mr. Waterman, of Taunton, said that drawing was the most popular branch of instruction in that city, because it had not been ridden as a hobby. There had been no wholesale purchases of drawing books; no exalting of this department to the dignity of an exhibition, while other branches of study are neglected. In a word, the study had not been pushed; and he did not doubt that the few objections raised against its use would disappear as quickly as those made against the introduction of music.

The committee on nominations reported for president, W. W. Waterman, of Taunton; for secretary, Augustus D. Small, of Salem; committee of arrangements, Ephraim Hunt of Portland, T. B. Stockwell of Providence, Edward Conant of Vermont; committee on nominations, A. P. Marble of Worcester, H. T. Hoyt, S. H. Marvel. The report was adopted and the nominations confirmed.—(New-England Journal of Education, May 15 and 22, 1875, pp. 235, 247.)

AMERICAN SOCIAL SCIENCE ASSOCIATION.

The annual meeting of this association was held, for 1875, at Detroit, Mich., from the 11th to the 15th of May. The sessions were opened by an address from the president, Hon. David A. Wells, on the larger life to be secured by such investigations as those prosecuted by the association. Among the papers read were important ones from Dr. D. F Lincoln, of Boston, secretary of the health department, on "A project of a law for a medical inspection of public schools, on "Care of the eyes in school and elsewhere," and on "Health in the public schools;" from Dr. S. S. Putnam, on "Gymnastics in schools," and from Superintendent W. T. Harris, of St. Louis, on "Ideal education." The limited space at our command admits of only a few extracts from the papers of Drs. Lincoln and Putnam, bearing on the improvement of the sanitary condition of our schools. Dr. Lincoln, for instance, presented, as follows:

(1) A PROJECT OF A LAW TO ESTABLISH THE OFFICE OF MEDICAL INSPECTOR OF SCHOOLS.

(1) He shall be appointed by the head of the department of public instruction.
(2) Term of office, three years.

(3) Must be a physician.
(4) Is expected to devote his entire time to the duties of his office.
(5) Salary, $3,000, payable quarterly, plus necessary expenses for clerical labor and travel.
(6) He shall take cognizance of the interests of health among the teachers and children of the public schools.
(7) He shall make sanitary investigations in respect to school-houses and grounds, and to all circumstances connected with the management and instruction of schools which may appear to influence the health of scholars or teachers.
(8) He shall make himself acquainted with the means employed in other States for preserving the health of the inmates of schools.
(9) He shall seek to trace the origin and mode of extension of epidemic or other diseases among inmates of schools, and to point out measures for the arrest or prevention of such diseases.
(10) He shall from time to time inform the department of public instruction of the results of the aforesaid investigations, and shall suggest to the said department such modifications of the system of instruction and management existing in the schools of this State as, in his opinion, would conduce to the improvement of the health of teachers and scholars.
(11) He shall further, in the month of January of every year, present to the department of public instruction a written report of his doings and investigations in the line of his duty as aforesaid for the year ending with the 31st of December next preceding.
(12) He shall gather and, from time to time, shall present to the department such information in respect to the interests of the public schools as he may deem proper for diffusion among the people.

RULES FOR THE CARE OF THE EYES

Were submitted by Dr. D. F. Lincoln, secretary of the department of health, A. S. S. A.

When writing, reading, drawing, sewing, &c., always take care that (*a*) the room is comfortably cool and the feet warm; (*b*) there is nothing tight about the neck; (*c*) there is plenty of light without dazzling the eyes; (*d*) the sun does not shine directly on the object we are at work upon; (*e*) the light does not come from in front—it is best when it comes from over the left shoulder; (*f*) the head is not very much bent over the work; (*g*) the page is nearly perpendicular to the line of sight—that is, that the eye is nearly opposite the middle of the page, for an object held slanting is not seen so clearly; and (*h*) that the page or other object is not less than fifteen inches from the eye.

Nearsightedness is apt to increase rapidly when a person wears, in reading, the glasses intended to enable him to see distant objects.

In any case when the eyes have any defect, avoid fine needlework, drawing of fine maps, and all such work, except for very short tasks, not exceeding half an hour each; and in the morning never study or write before breakfast by candle-light. Do not lie down when reading. If your eyes are aching from fire light, from looking at the snow, from overwork, or other causes, a pair of colored glasses may be advised, to be used for a while. Light blue or grayish blue is the best shade, but these glasses are likely to be abused, and usually are not to be worn except under medical advice. Almost all those persons who continue to wear colored glasses, having perhaps first received advice to wear them from medical men, would be better without them. Travelling venders of spectacles are not to be trusted; their wares are apt to be recommended as ignorantly and indiscriminately as in the times of the Vicar of Wakefield.

SCHOOL HYGIENE.

Dr. Lincoln subsequently summed up thus the most conspicuous results of the investigation into this important matter:

(1) School work, if done in an unsuitable atmosphere, is peculiarly productive of nervous fatigue, irritability, and exhaustion.
(2) By "unsuitable" is chiefly meant "close" air, or air that is warm enough to flush the face, or cold enough to chill the feet, or that is "burned," or infected with noxious fumes of sulphur or carbonic oxide.
(3) Very few schools are quite free from these faults.
(4) Anxiety and stress of mind, dependent mostly on needless formalities in discipline or unwise appeals to ambition, are capable of doing vast harm.
(5) The amount of study required has not often been found so great as would harm scholars whose health is otherwise well cared for.
(6) Teachers who neglect exercise and the rules of health seem to be almost certain to become sickly or to "break down."
(7) Gymnastics are peculiarly needed by girls in large cities, but, with the present fashion of dresses, gymnastics are impracticable for larger girls. * * *
(9) One of the greatest sources of harm is found in circumstances lying outside of school life. The social habits of many older children are equally inconsistent with good health and a good education.

A PAPER UPON SCHOOL GYMNASTICS

Was then read by Dr. S. S. Putnam, of Boston, who divided his subject into three inquiries:

(1) In what way and to what extent may gymnastic training be made useful in the education of school children?

(2) What means of securing it have been adopted and with what results?

(3) What means will be likely to insure the best results in our schools?

As to the first matter, Dr. Putnam suggested that gymnastic training could not fail to be of use in regard to training children who are not naturally strong, and therefore not inclined to take part in out-door sports, which are, of course, beneficial to the healthy and vigorous among our children. * * * *

It is not necessary that very great muscular power should be developed, as that is not necessarily conducive to good health, nor does it always accompany it. One way in which school children may be greatly benefited is by helping them perfect the process of respiration. This was demonstrated by the work done by Professor Monroe with the children of the Boston schools. Good breathing is by no means common, and the singing teacher has always much to accomplish in this respect. Instruction in this regard may not only give vastly increased power to healthy persons, but it may save many who are affected by lung disorders from early deaths. * * *

Proper physical instruction in our schools would also relate to the sitting of the scholars, to proper methods of studying or of mental application, to proper means of ventilation, &c. It is a notorious fact that many cases of injury to the spinal column arise from improper postures while sitting. Among 731 pupils at Neufchâtel, 62 cases of this sort were observed among 350 boys and 156 cases among 381 girls. The curvature of the spine occasioned was mostly to the right, caused no doubt largely by writing at unsuitable desks. * * Herr Raag, of Berlin, says that he has found gymnastics very useful in preventing these spinal curvatures. * * *

For proper school gymnastics it is only requisite that there should be space enough about the desks to enable the pupil to advance one step and to swing the arms freely. A large hall with a few desirable pieces of apparatus is all that is needed for further gymnastic exercise, which is to give to the scholars special accomplishments in this matter. In Europe, halls are now considered absolutely necessary for the use of scholars in the public schools.

SANITARY REQUIREMENTS OF SCHOOL BUILDINGS.

Under this head an important paper was presented by Dr. Lincoln, containing the following suggestions:

(1) *The yard* should be placed by preference toward the sides where other buildings are standing, or may hereafter be erected, rather than toward the street; should contain at least 32 square feet of surface for each scholar, in order to serve as playground; should be situated so high as never to be overflowed with water; should be paved, so as to be quickly dried after rain; should be fenced, in certain cases, toward all thoroughfares and alleys, in order to shield from the gaze of passers by.

(2) *The site* should be elevated rather than low. Dampness of soil should condemn any site. The sun should have free access to the house on three sides at least. Many trees near the house are to be avoided, except in quite warm climates. Should not be near factories, railroads, &c.

(3) *The cellar* must be drained dry. A cellar, or else an air space of two feet, must extend under the entire lower floor of the house, except in situations where the soil is very dry.

(4) *Basement.*—The ceiling of the basement must be at least six feet above the ground. The height of such a room should not be less than ten feet, and it must be thoroughly lighted. Basements of which any portion is under ground should not be used for school work of any description except gymnastics, and the latter are to be assigned by preference to a loftier room, above ground, when this is possible. Basements may serve for space for clothes closets, if thought fit.

(5) *Entries* should be always warmed and ventilated; lighted sufficiently from out of doors.

(6) *Stairs* must be fire-proof, as also the walls inclosing them; straight, never spiral; height of steps, 4½ to 5 inches, and proportion of breadth considerable, the breadth being made at least six feet in large schools; it must have no well; not more than two runs in a stair.

(7) *Fire escape* to be provided for every school-house of three stories.

(8) *Hall.*—A large hall for assembling the whole school at once is a desirable feature, and if included in the plan it should have a floor space, in feet, equal to the whole number of scholars multiplied by 6, (for younger scholars,) or 7, (for older,) and should be not less than 14 feet high. The ventilating arrangements for such a hall must be such that 1,000 cubic feet of air per hour can be taken out for every one of the scholars as aforesaid. * * * * * *

(9) The *gymnasium* may be built, if thought proper, as a separate structure. If so, a covered and inclosed way must connect it with the school-house.

(10) *Rooms.*—Those for study ("school rooms") must contain a floor space of at least 15 square feet per scholar in primary schools and 20 square feet in schools for children over 11 years of age. They must have a cubical capacity of at least 200 and 250 cubic feet per caput for these two classes of scholars respectively, or a height of, say, 14 feet. When a portion of the scholars are expected to be constantly absent from the study room for recitation, the requirements as to capacity for the study room may be diminished; but rooms for recitation only require no more than two-thirds of the floor space per scholar above prescribed; the height remaining the same, say, 14 feet. Each room, whether for study, recitation, or the general hall, must open into the entry by a door and by a window eighteen inches high over the door. The walls of rooms are to be of a light, neutral tint, colored, but never papered. Blackboards never placed on the side of a room where windows are. Any columns required in the room must be of iron, in order to avoid darkening the room.

(11) *Windows* must never be in front of the pupils. They must contain a total of at least 30 square inches glass (excluding sash) for every square foot of floor surface in the room. The lower sill should be at least 3½ or 4 feet above the floor and the upper should be within a foot or less of the ceiling. Arched and gothic tops are inadmissible. Windows not opening into the outer air directly are not to be considered as such in fulfilling the above requirements.

(13) *Water-closets, &c.*, separated for the two sexes. Screens when out of doors; in this case, to be also connected with the main building by a covered way, dry, clean, and ventilated. Those indoors to be lighted and warmed, and ventilated by an outward draught of air. For girls, sufficient accommodation must be provided indoors; and if the house is three stories high, a third of the girls' closets should be placed on the third story. Should never be placed under any school room.

(14) *Drains* should be protected from rats and precautions taken against the danger of fouling the drinking-water.

(15) *Ventilation* must furnish the means of renewing the air of study rooms and recitation rooms, gymnasiums, and singing rooms at the rate of 500 cubic feet per hour for each one of the average number of inmates intended for such rooms. For entries, one-third of this ventilation is sufficient. In water closets and clothes closets the current must always set in—never outward into an entry or room. They cannot be safely ventilated by windows, as rain or snow might enter during the school session when the doors are closed. For water closets a double door, with interspace of three feet, is good, the interspace to be kept well ventilated. The method of exhaustion by a shaft of air tubes is recommended, for large buildings especially.

(16) *Heating.*—If by stoves or radiators exclusively, there should be also a proper system of ventilation added. In large schools it is best to provide a single source of heat for all the buildings.

Miscellaneous.—Two stories are better than three or more. The main façade should not be to the south; it is best when the corners of the house are set to the four cardinal points of the compass. The north side is a suitable place for stairways, library, gymnasium, closets, and any rooms for transient use; the front entrance may be placed on the north. The roof must not extend out so as to cut off light from the windows.—(School Bulletin, June, 1875, and Detroit Tribune, May 12–16, 1875.)

INTERSTATE EDUCATIONAL CONVENTION.

The Interstate Educational Convention, which assembled in Chattanooga June 30 and July 1, was in all respects a most important meeting. The States of Tennessee, Kentucky, Georgia, Alabama, Missouri, Illinois, and Virginia were represented. The meeting lasted only a day and a half, and but four regular addresses, of about an hour's length each, were delivered, the remaining time being taken up in interchanging ideas on the topics presented by the chosen orators. The speakers and essayists were Dr. W. T. Harris, superintendent St. Louis schools; Professor S. E. Pickett, superintendent Memphis schools; Dr. M. C. Briggs, Illinois; and Maj. William J. Davis, of Louisville. Dr. Harris's essay treated of the resources of the States in the valley of the Mississippi and indicated their place in the educational economy of the Republic. Professor Picket discoursed of school government. Dr. Briggs, one of the most popular orators of the Northwest, spoke on the subject of "Common school education: universal in opportunities, thorough in rudiments, compulsory within definite limits, and English in all things." Major Davis's address was entitled "Common sense in the school-room," and showed the defects of that training whereby children grow up in ignorance of the commonest things, a course of instruction adapted to develop the child's nature being placed on a blackboard and the scheme illustrated by facts and anecdotes. The discussion was participated in by most of the delegates, and the best thoughts on these interesting questions were presented. The body was a representative one, composed of the most distinguished members of the profession in the South and West. A permanent organization was effected by the election of the following officers: B. Mallon,

president; Z. C. Graves, W. T. Harris, M. C. Briggs, G. A. Woodward, William J. Davis, and A. S. Townes, vice-presidents; W. R. Garrett, secretary. The next regular meeting will be held in Memphis in June, 1876; and since membership in the association is open to all teachers and friends of education throughout the country, it is expected the second convention will equal in enthusiasm and consequence this first meeting of the Interstate Educational Association.—(Home and School Journal, August, 1875, p. 377.)

AMERICAN PHILOLOGICAL SOCIETY.

The session of the philologists for 1875 was held at Newport, R. I., in the month of July, under the presidency of J. Hammond Trumbull, LL. D., of Hartford, Conn., noted for his knowledge of the Indian tongue.

At the opening session the guests were welcomed by Hon. Samuel Powel, and no one among Newport's scholars could do this service more gracefully or eloquently. His reference to "our beautiful island Aquidneck, with the fair island of Conanicut upon the sunset side, the gray hill of Miantonomoh on the southwest, Sachuset Point toward the rising sun, Naushon and Nashawena in the farther east, and Mount Hope, the royal residence of Philip, in the northern waters," would have been worthy of a descendant of Massasoit himself. Nor can we forbear a single quotation from his address: "While we know full well that your profound studies belong chiefly to the deep problems of the diversity of tongues and to the wonderful analogies of their roots, whether or not those tongues sprang from the ban which divine wisdom saw fit to decree against Babylonian arrogance or whether they were pent up meanings, inborn and bursting the lips of man as he was first molded in his great Creator's hand, in the shadowy days of oldest time, far behind the dawn of the age of stone, still we know that a cherished part of your task is to rescue what you may of the language of our land's early people. Remembering this, I bid you again welcome to the family home of one of your most illustrious scholars in the Indian languages."

Dr. Trumbull's reply was well fitted to the compliments of Senator Powel, and opened new themes for philological research. He said: "So long as we are here, under the *genius loci*, we accept as established history all that has been told us of the visits of the Northmen to your Vinland—Leif and Thorwald Erieson and Thorfinn Karlsefne—and of the coming of Verazzano in 1524. In the very names your island has borne—Vinland, Monachunte, Aquidnay, Rood Eylant, the Isle of Rhodes—there is work for the philologist as well as for the historical antiquary. And the philologist has peculiar obligations to honor the memory of the founder of your State, he who directed the course of Coddington to this island. For it was Roger Williams who gave his countrymen the first 'key into the language of the natives'—'A little key,' he said, 'may open a great box'—and while he was in England, laboring for the establishment of the colony he had planted and for the promotion of civil and religious freedom in Old and New England, he found time, amid the distractions of London and the burden of many cares, to study ancient and modern languages, and, in exchange for lessons in Hebrew, to teach a little Dutch to John Milton."

The first paper, by Professor Haldeman, the learned Pennsylvania German, was suited to the most fastidious philologic ear and taste, on "The mutations of a consonant," as in the change from *proof* to *prove; cliff, cleave; gilt, gild*, &c., the professor citing 114 pairs of words with a similar change. The professor mentioned the curious fact that the vulgar pronunciation of "holt" for *hold* is at least as old as Chaucer, who uses *holte* for a stronghold or castle.

Professor March thought that where the verb was sonant and the noun surd, the verb had its final consonant between the two vowels. The tendency was to change this consonant, because it was easier for the vocal organs and natural to approximate it by softening to the nearest sound on either side. The organs of speech tend to their use in the direction of the least exertion.

"How many words does a writer use?" was the theme of a paper by Professor E. S. Holden, of the United States Naval Observatory. It discussed the question of the number of words used in speaking and writing by individuals. Professor Holden made a count of the number of words beginning with each letter of the alphabet, and noted the order of frequency of initial letters in Webster's Dictionary. He found the latter as follows: S, C, P, A, D, R, B, T, F, M, I, E, H, L, G, U, W, O, V, N, J, Q, K, Y, Z, X. He estimated that his own vocabulary was 33,456 words. A friend in the Patent-Office, Mr. Farquhar, assistant librarian, tested his own writing, and concluded that he must have a still larger vocabulary. In this estimate he disagrees with Professor March, who states that an intelligent person, in writing and speaking, uses less than 10,000 words. The discussion on this paper was brief and interesting, calling out Professor March, Colonel Higginson, and Professor Haldeman.

Dr. Trumbull's evening address on "The American language" was a valuable contribution to his previous rich and almost exhaustive researches in this direction.

The second day's session opened with a paper on a comparative view of the language of Deuteronomy and Jeremiah, by Rev. Dr. George R. Euther, of New York, showing the differences and parallelisms of these sacred books of the Old Testament.

Professor A. Harkness, of Providence, discussed with his usual clearness and scholarly accuracy, the difficult question of the origin of Latin reflects in *ui*, *vi*, and *i*, in a paper which is the complement of the paper read last year on the origin of the perfect in *si*.

Professor Richardson, of Kentucky, gave the results of his tabulation of the pronunciation of Latin in 249 American colleges. The figures obtained are essentially different from previous estimates. The Catholic institutions, as a rule, employ the European pronunciation. The percentage is as follows: 37 use the English, 32 the Continental, and 31 the Roman pronunciation.

Mr. Alonzo Williams, of Providence, a student of Sanskrit, as well as of Greek and Latin, read a paper on "Verb reduplication as a means of expressing completed action," in which he showed from the history of the rise, prosperity, and decay of the different forms in language that the reduplication of a sound or syllable is intended to give intensity to expression by the force of repetition. The primitive Aryan people used this to give emphasis. The Sanskrit recognizes this principle frequently; the Greek has a few late formations of like character. As instances of intensified and reduplicated verbs in the present tense, there is the Sanskrit *jajanmi*, Greek *gignomai*, Latin *gigno*. Applied to verbs in the present tense, it gave them not only force, but the significance of completed action. The mere repetition may itself suggest that the action has been already performed. The reduplication had taken the form of the perfect before the separation of the Indo-European people, and has been inherited by the Indian, Persian, Grecian, Latin, German, and Celtic branches. The Letto-Slavic has alone lost all traces of it. In the Rig Veda the form is still preserved, but subsequently it became a mere past narrative tense. In the classical period of Sanskrit it became an aorist.

The afternoon session was opened by Mr. O'Keefe, of Brooklyn, who took for his text "The first sentence of Cæsar's Commentaries."

Mr. Higginson read a paper of Mr. A. C. Merriam, of Columbia College, upon the relation of the recent discoveries of Dr. Schliemann at the site of Troy and the Cesnola collection. Professor March continued on "Dissimilated germinations," which would attract our readers by its popular title; and Professor Goodwin sandwiched a juicy treatise of "Juise," between Professor March's word changes and "Ists that grow out of isms," by Professor Brewer, of South Carolina. Professor March followed with a paper of a more popular charater, on "The evidences of the immaturity of Shakspere in Hamlet," and the session closed with a paper on the analysis of the old poem, the "Owl and the Nightingale," by Dr. L. A. Sherman, of New Haven.

The great movement of this meeting was the appointment of a committee on spelling reform, consisting of Professor W. D. Whitney, of Yale; Dr. J. H. Trumbull, of Hartford; Professor F. J. Child, of Harvard University; Professor F. A. March, of Lafayette College, and Professor S. S. Haldeman, of the University of Pennsylvania. Whether they will succeed in having all the silent letters dropped from our printed language is, to say the least of it, a question of the future. There was no debate on the subject, which is certainly a strange fact. What these wise men think and will propose on so great a matter as the dropping of all silent letters from our English vocabulary, we are interested to know, and shall learn in due season.

Professor Albert Harkness, of Providence, is honored with the presidency for the ensuing year. The next place of meeting is to be New York, July 18, 1876.—(New-England Journal of Education, July 31, 1875.)

AMERICAN INSTITUTE OF INSTRUCTION.

The forty-sixth annual meeting commenced at Music Hall, Providence, R. I., on Wednesday evening, July 7, 1875. Prior to the public meeting in the large hall, a business meeting of the board of directors was held in the committee room, at which Merrick Lyon, LL. D., president of the institute, presided. At 8 p. m. a large audience was present to listen to the opening exercises of the institute. The first welcome was one of song by the pupils of the Providence Grammar Schools, under the charge of B. W. Hood, esq., director of music in the public schools of the city. The singing was very effective, reflecting much credit both upon the pupils and teacher. The singers occupied the rising seats in the rear of the platform and portions of each balcony.

President Lyon introduced Rev. E. G. Robinson, LL. D., president of Brown University, who delivered the introductory lecture. Subject, "Teaching as related to the other professions." He said:

"A profession is any particular branch of business a man thinks himself fitted to engage in and does his best in; but the learned professions are commonly known as theology, law, and medicine. A clergyman must be educated in ancient languages, acquainted with mental and moral philosophy, to be comparatively well fitted for his work; a lawyer must know common organic law and be able to read men's minds; while a doctor must have a thorough knowledge of physiology, anatomy, and chemistry in order to succeed. Many succeed in these professions without a knowledge of these branches, but they are not learned men, and in an emergency cannot be depended upon. Many of this class, including even clergymen, practise upon the credulity of

the public. There are some successful teachers who have not much learning; but they are the exception, and not the rule. A teacher should know the English tongue perfectly, so as to set an example for the children to follow, and a thorough knowledge of the language is not possible without a knowledge of other dialects. Teachers are born as much as poets, and teaching is really an art. Put your child under the best possible instructor while he is young, for the early impressions are never effaced. Many young men have come to college completely ruined because the teacher of their early days was incompetent. Put the great educators in the primary schools, if you have to take them from a college. Let the teacher know the mind of the pupil, which once done never fails of ultimate success. Study minds. Learn the thoughts of children, and accommodate yourself to them. The teacher's profession is not only one of the learned professions, but even the fundamental one; for the teachers make the men; they sow seed and start the mental qualities which develop and make the great men of any profession. If a crime of any kind be committed by a scholar, let the lesson go, stop everything, and then and there let the scholars see the enormity of the act and reason out among themselves the evils of it. Teach morality; let that never be lost sight of. Study to learn how to apply the association of ideas to a child's mind. The moral power of a teacher must be exerted to show the better nature of the child and to instruct him that honesty and morality are to be his great stand-bys."

On Thursday, July 8, the members of the institute met at Music Hall at 9 a. m., the president, Merrick Lyon, LL. D., in the chair. The exercises were opened by the reading of Scriptures and prayer by Rev. Dr. E. G. Taylor, pastor of the First Baptist Church. At the conclusion of the devotional exercises, D. W. Hoyt, A. M., president of the Rhode Island Institute of Instruction, was introduced, and, in behalf of the State organization and the State itself, welcomed the visiting body with appropriate and cordial remarks.

President Robinson, of Brown University, was then introduced, who alluded to the fact that the university has furnished a large proportion of the teachers for New England and other portions of the country in the past, and said it would not be untrue to its mission as an educator of teachers in the future. Good teachers are in demand, and probably the want of them to-day is as urgent as the need of good men in the other professions. Dr. Robinson then most cordially, in the name of Brown University, welcomed the institute.

J. A. Shaw, A. M., principal of the Highland Military Academy, of Worcester, Mass., subsequently read a practical essay upon "English pronunciation: what have teachers to do about it?" He considered the subject of more than ordinary importance, and that pronunciation is at the foundation of the language. The Anglo-Saxon race is to be the reigning power, not only on the western continent, but throughout the Old World and the islands of the sea, and this before many years. Therefore well it is that we see to it that we keep our language pure; that we have no corrupt pronunciation, or "pigeon English." The essayist then declared himself a humble advocate of the dictionary and its constant use in the school. Webster and Worcester speak as tho e having authority. Their varied scholarship in general and study of words in particular rightly grant to them the respect and honor we are always willing to grant to experts. When asked what dictionary we should use, his answer would be both Worcester and Webster; but if you cannot have both, be thankful if you can have either.

A very lively and interesting discussion followed the reading of the paper. All the speakers indorsed the essay, and felt the great need of a better system of pronunciation in the school.

Mr. A. C. Perkins, principal of Phillips Academy, Exeter, believed it very important that a correct pronunciation of the dead and foreign languages should be secured, and if it is important here, much more is it important that we should pronounce our own language. The training in pronunciation should be made a very important portion of the work of the primary school teachers. Pronunciation should be made an essential study at the outset.

Mr. J. D. Philbrick, of Boston, agreed with Mr. Perkins as to the prime importance of correct pronunciation, but took exceptions to his point that pronunciation should be rigidly insisted upon in the primary school. There should be a fair amount of training in pronunciation there, perhaps, but, as for drawing the nicest lines, the primary school is not the place.

Mr. Ladd, of the State Normal School of New Hampshire, insisted strongly upon it that the primary school is the place for pronunciation to be taught.

Mr. David Crosby, of Nashua, N. H., agreed with the preceding speaker as to the high importance of a correct pronunciation of the vernacular, and hoped to see the time when more attention shall be paid to the subject.

Mr. B. G. Northrop, secretary of the State board of education of Connecticut, took grounds in favor of training in pronunciation in the primary school; "and," said he, "when you begin to train them in accuracy in one instance, train them in every instance. In this respect our schools are inferior to those of England. Both in pronunciation and felicity in expression are the points of our greatest weakness."

"The teacher an educator" was the subject of a paper by A. G. Boyden, A. M., principal of the State Normal School, Bridgewater, Mass. The speaker considered the teacher of far more importance than any other requisite to education; better a pine school-house and board seats with a good teacher, than a costly edifice and a man of no power. How to teach, what to teach, are the great questions that monopolize the thoughts of every good instructor. They demand the attention of every thoughtful man. Unity in education is most essential. Teachers are continually vexed over questions that should not trouble them in the least. These questions are of vital importance. What is the ultimate end for which you are striving? What principle of education guides your effort? Teachers do not work for the end in view. They work to get over a certain number of pages in the text book in a given number of days, and then gauge both their efforts and the scholar's progress by a certain rate per cent., making the record the same as of so much stock. Means and methods monopolize so much time that the end of all education is lost sight of. Make sure of the end in view and then use the best methods. Study the nature of the child and learn how to meet its wants. Only by studying the nature of the child can the end aimed at be attained, and, when once the child's thoughts are known, then the work of education is comparatively easy.

AFTERNOON SESSION.

The first paper of the afternoon was read by Dr. Samuel Eliot, head master of the Girls' High School of Boston. He spoke upon "The organization of school faculties." Without attempting to give a synopsis of Dr. Eliot's paper, we give a few points in his plan of organizing a school faculty. There is an organization under which the schools might be kept closely together and be managed educationally with far more efficiency than they now are. Let the teachers as a body nominate some of their number as their representatives, from whom the school committee shall elect not less than ten nor more than twenty to form a school faculty. Wherever the annual election of teachers is dispensed with, the members of the faculty might be elected to serve three years, one-third retiring each year.

This would insure permanence to the faculty and allow the calling in of new members. The faculty could bear to the school committee the same relation as a college faculty bears to its trustees. If the superintendent of schools were its chairman, he could assist its work and connect it with that of the committee. It would have authority over instruction and discipline; would decide upon the introduction of new branches and the lopping off of old ones; the expansion and contraction of studies, choice of books and methods; the standards of admission and promotion; rewards and punishments; hours, sessions, holidays, all the daily life of school; subject at each point to the supervision of the committee and responsible for executing their rules. The faculty would not have a supreme, but coördinate authority, not disturbing the higher powers of the committee.

On motion of Mr. Ladd, of New Hampshire State Normal School, a committee, consisting of Messrs. C. Northend, of Middletown, Conn.; A. P. Stone, of Springfield, Mass., and H. O. Ladd, of New Hampshire, was appointed to report next year upon the subject of Dr. Eliot's address.

At the close of the discussion upon this paper, Mr. E. G. Coy, of Andover, Mass., read a paper entitled, "Inconsistency of theory with practice the chief ground of opposition to classical study." It was a forcible plea for the continuance of classical studies.

Professors Lincoln and Harkness followed with extemporaneous but able speeches in support of Mr. Coy's views.

The last paper of the afternoon was by Mr. J. F. Blackinton, of Boston, upon "Silent forces in education," and was in every respect admirable. The speaker paid an eloquent tribute to Dr. Wayland, whose life, he said, was better than any lesson in moral philosophy that he ever gave.

A very large audience assembled in the evening to listen to a lecture by President Gregory, of the Illinois Industrial University, upon the subject of "The real problems in modern education," which were: (1) Is our educational system wide enough, active enough, advanced enough, to keep its hold upon the people and the age? Are we up to the times? (2) Is this educational system fitted to help the great minds of the age to promote the scientific, political, social, and religious progress of mankind? (3) Is our educational system strong enough, wise enough, and pure enough to serve as a safe leader of the age?

On Friday morning Rev. Daniel Leach presented the report of the committee on nominations for the officers for the ensuing year. T. W. Bicknell suggested that the list presented ignored entirely a large working force of the teachers of New England—viz: the lady teachers—and he moved that the report be recommitted, with instructions to place the names of ladies on the list of vice-presidents; which was passed.

Mr. William H. Ladd, of Boston, moved that the report be recommitted, with instructions to report a list of five vice-presidents, two of whom should be women.

Mr. Philbrick objected to this strongly, and it was withdrawn, and the list recommitted under the motion of Mr. Bicknell; but for lack of time, no changes were made.

The nominees elected were as follows: President, Merrick Lyon, Providence, R. I.; secretary, J. W. Webster, Boston, Mass.; treasurer, George A. Walton, Westfield, Mass.

The report of the treasurer, G. A. Walton, of Westfield, showing a balance in the treasury of $212.50, was presented, read, and accepted.

This finished the business of the institute, and attention was turned to the papers to be presented. Miss Anna C. Brackett, of New York, read the first paper of the day, on "The relation of the medical and the teachers' professions," arguing that education is so broad a theme as to include everything, the body as well as the mind; the exercises of the physical as well as the mental powers; combating to some extent the positions taken by Dr. E. H. Clark at Detroit.

After a recess of ten minutes, Professor Greene, of Brown University, spoke upon "The place and work of academies in our system of education." He adduced cogent reasons for the continued support of such institutions. Rev. A. D. Mayo, of Springfield, Mass., then read a paper entitled: "What next in the common schools?" Its main points are that our national arrangements for education are inadequate to the needs of the masses, and should be so reorganized that the children who attend school but five or six years shall be first provided for; that the Kindergarten will not be adopted as a portion of common school, but its methods will be taken into elementary schools, the best place for little children being in their homes, the mother needing the education of the Kindergarten, in order successfully to train her little ones. The chief aim of this school will be to impart the elements of English education by most approved methods, to awaken and direct the imagination. No foreign tongue should be taught in these schools. The elementary school teacher should be converted from an amateur to a professional character, the incompetency of mulitudes of teachers being a frightful fault at present. Every university should establish a department of instruction in which the principles of pedagogics may be expounded. Lastly, the funds of our schools should be supplemented by private beneficence, and a high standard of attainment be exacted from all who aspire to teach in them.

At 12 o'clock a paper was read by President Porter, of Yale College, upon "Classical study and instruction." It is now conceded that to a certain class of educated men classical study is indispensable, and that provision should be made for instruction in it in all the schools of higher education. A great diversity of opinion prevails, however, in respect to two questions, viz: For what class of pupils should classical study be prescribed as a necessary or very desirable element in education? and What are the best methods in which classical education can be imparted? One of these questions, in fact, involves the other. The answer to the first must necessarily determine the second. If classical learning is to be confined to the few who may be expected to become eminent proficients in its grammar and dialects, then the present system may be well enough; but if classical education is to be given to a mass of pupils, few of whom can be expected to become familiar with its philosophy or minute details, then a different course is to be followed.

Four distinct reasons may be urged why the study of the classics should be prosecuted in our schools and colleges. First, the study of the grammar of two of the most refined and finished languages that have ever been spoken is the most philosophical method of learning grammar. Secondly, a most valuable knowledge of the etymologies of English words is gained by the student. Thirdly, this study brings the mind into intimate acquaintance with the literature, the history, and the life of the most cultivated of ancient nations—with whom the most cultivated of modern nations are most closely allied. Lastly, this study is an excellent instrument of intellectual gymnastics, which would be worth all, and more than all, of the labor it involves if this were the only result which should remain.

At 1 p. m. the institute adjourned to the steamer Canonicus, and nearly all of the members, with invited guests, embarked for a trip down Narragansett Bay, stopping at Rocky Point for a clambake.

When dinner was finished, Dr. Lyon called the meeting to order and the report of the committee on resolutions was read and adopted. Among the resolutions were the following:

"Whereas some misapprehension has existed as to the true sphere and work of the National Bureau of Education:

"*Resolved*, That the American Institute of Instruction, while regarding the maintenance and management of public schools as solely the work and duty of the several States, regards the National Bureau of Education as a most important and efficient agency for the improvement of public schools and the advancement of education throughout the whole country. Though assuming no authority and exercising no dictation in any State, simply as an advisory agency, as a common medium of communication and a source of information, it has already proved to be of great practical utility to the whole country. Besides its extensive correspondence with the friends of education in all parts of the land, its prompt and judicious answers to the manifold ques-

tions of teachers and school officers of every State and city and almost every large town of the country, its circulars, papers, and reports have supplied the information greatly needed by the friends of education. Familiar with the wants of each State and with the results of various methods and systems, the Commissioner has become their valued counselor.

"*Resolved*, That education should hold a prominent place in the Centennial Exposition, as it did at the Expositions of Paris and Vienna, and that the efficient supervision of the National Bureau of Education is indispensable to the successful representation of our American educational systems and institutions at Philadelphia. Though American schools have been our pride and boast, we shall meet in this respect with humiliating disappointment and failure, without such thoroughly organized preparation and supervision of the educational department at the Exposition as the National Bureau only can secure.

"*Resolved*, That a committee of this body, consisting of one member from each State here represented, be appointed to memorialize Congress in favor of the liberal and continued support of the National Bureau of Education."

Others, of respect for the memory of Mr. James E. Parker, late master of the Harvard School, Brighton, Mass., and Hon. John Kingsbury, LL. D., one of the founders of the institute, were also passed, and so the business exercises terminated.

The afternoon passed off pleasantly in the enjoyment of the scenery of the beautiful bay, in conversation, and singing, and 9 o'clock found the members of the institute again at the Providence wharf, unanimous in their expression of delight in this enjoyable occasion.—(New-England Journal of Education, July 17, pp. 43-47.)

THE NATIONAL EDUCATIONAL ASSOCIATION.

The opening session of this association at Minneapolis, August 3, was claimed by President Harris to have the largest attendance of any in its history. Over five hundred delegates, from all parts of the United States, put in an early appearance. Addresses of welcome, delivered by Mayor Merriman and Governor Davis, and a response by the president introduced the exercises. President Harris outlined the work of the convention, which he resolved into three separate departments: the normal, the elementary, and the higher. Professor Phelps, of the Winona Normal School, Minnesota, was assigned the presidency of the normal section; Superintendent Harrington, of New Bedford, Mass., that of the elementary; and President Noah Porter, of Yale College, that of the higher education.

In the normal department a paper was read by Miss Lathrop, of Cincinnati, on "Professional education of public school teachers," which favored a post graduate course in high schools for normal training and urged the feasibility of normal institutes and didactic professorships in colleges. A general discussion ensued on the normal schools of Minnesota, Nebraska, Wisconsin, Michigan, Iowa, and Illinois, participated in by President Allen of Illinois, Professor Albee of Wisconsin, and a number of others. Forty-five minutes of discussion were given to each of the following topics: "What are we doing for the development of social culture?" "What for moral character?" "What for the establishment of social economy?"

In the elementary department, Mr. Harrington read a paper on "Language-teaching," in which, drawing a line between solid, substantial education and that of mere words, he advocated a teaching of the former rather than of the latter. "That marvelous thing, the modern newspaper," said the speaker, "must be taken into account as a coworker with the schools in the great field of American education." Superintendent J. L. Pickard; Mr. Rolf, of Chicago; Professor Olney, of Michigan; Mr. Warner, of Philadelphia, and others took issue with the speaker.

Professor Olney thinks that teachers, like preachers, are more successful in portraying sin than virtue. A broadside was leveled at the present system of introducing new text books, not at all agreeable to the school book agents. A paper by Superintendent J. L. Pickard, "What shall we do with our boys?" elicited considerable attention. The author gave a humorously scientific description of the boy "as a member of the animal kingdom, subkingdom vertebrata, class mammalia, an animal with a backbone more or less flexible, and deriving support from his mother, often far into manhood, and having two hands fitted for grasping, climbing, fighting, &c. He is endowed with a fickle disposition, permitting him to be good, bad, and indifferent in the same day; an ambition and desire to go and see as much as other boys; a faith, love, and sense of justice; a partisanship so intense as never to allow him to climb up on a fence until he grows older and begins to reason. Boy life must be studied and individuality encouraged. Troublesome boys may be divided into two classes, those guilty of fault and those guilty of crime. Crime includes fault, but fault does not necessarily include crime. There is a great difference between fault and crime. Whispering and inattention are faults; profanity and obscenity are crimes. Faults need correction, crime requires punishment. Many a poor, neglected boy is not to be personally blamed for his faults, and kindness and care are the true corrections for such a child. If he does wrong he does it from ignorance, and he is not the boy to be made a frightful example of. The feeble boys and those of a nervous temperament must be treated

according to their physical and mental deficiencies. Children must be cultivated and nurtured as are plants; if deformed and neglected when young, they will grow up so.

"The sensitive boy and the stubborn boy are two direct opposites. Their treatment must be entirely different. The former must be encouraged and the latter humbled.

"Some who are driven into the class which must be called criminal are forced to this stage by injudicious manipulation. Reasoning will not reach them. They will decide to reform, but will find it impossible. Encourage innocent amusements. Make life so pleasant for them that they shall have no incentive to crime. Parents should make it a study to embellish their homes and make them attractive, so that the boys may not desire to leave the old homestead for the scenes of the city. Show the boy that it is better to be good and gentlemanly than rude and bad. Give the boys something to do and attach to the achievement a suitable reward. The bad boy must have something to do and somebody to love him. He loves to fight his way back to respectability and has a keen sense of justice. He cannot be driven back to virtue, but must be wrought upon by kindness and love. But without the aid of divine intervention nothing can be accomplished. The teacher must approach his work with a full trust in divine power."

The subject was now open to discussion.

Superintendent MacAlister said it often happened that boys became mischievous more from the lack of will than from wilfulness. It is weakness which often causes the boy to be bad. If the teacher will encourage the child instead of punishing him, in most cases his conduct will improve. The graded system works much against a bad boy. His grade is injured by absence and bad conduct, and he is thus kept back among children younger and less advanced in study than he. It has been proposed in Milwaukee to establish an ungraded room, where such boys could make up to the grade where they should be. There were objections to the design, the worst of which was the herding of a large class of bad boys.

Mr. Gove said the bad boy was the same in all places. He was always ready to love, to please, and to work for his friends. Hence the way to manage such is to get near their hearts. What we want is boyish men among the boys. When we become jolly, good, funny fellows with the boys, they will do anything for us.

Mr. Warner, of Philadelphia, said we should find the good which is in the bad boys. To make a boy trustworthy you must trust him. You will find something good and lovable in every boy. It was the old, gray headed boy who loved his pupils the best.

Mr. Rolfe said it is not always the bad boy who causes mischief. The blame must lie about evenly divided between him and his teacher. He must not be allowed time to be wicked, but must be kept at work. He urged the great value of home influence. The school and the home must not be so greatly separated. Home should control all education, physical, mental, and moral.

In the elementary department, a paper on "The relation of the teacher to the reforms of the day" was presented by Miss Frances Willard, formerly dean of the Woman's College of Northwestern University. Her position was that reform is gospel doctrine. Rum must be abolished and schools established. The issues of the hour, reforms of the day, and all questions agitating the public mind must be explained to the children. The child is the text book of the age, and to establish reforms we need his help as much as he needs ours. She said, "The teacher should be a former rather than a reformer, using the 'golden rule,' realizing the poet's dream. Reform is only the gospel doctrine of 'Put yourself in his place.' Humanity moves on to realize this rule. Dorothea Dix, Florence Nightingale, Abraham Lincoln, and John Brown have been the vanguard in this war against selfishness. While it is the duty of every teacher to help on all reforms, yet there is one reform more needed than all others. Where is the rendezvous of hard men of the baser sort? The reply is, the rum-shop, supported at an expense of fifteen times the expense of our schools, and more, annually. A large part of the insanity and crime is laid at that door of the gateway of hell.

"Children should be taught what are the reforms which agitate the public mind. Books should be placed in the school libraries, and story books by the score, as helps in this reform. Fröbel's Return to Nature has set the world to thinking, and "From the Kindergarten of the intellect we are going on to the Kindergarten of the heart."

In reference to this paper, both ladies and gentlemen participated in a discussion, which, however, was not confined to the essayist's theme, but touched upon temperance, obscene literature, and the Bible in the public schools.

Leon. Trousdale, State superintendent of public instruction in the State of Tennessee, then read a paper on "Education at the South," taking the ground that education can properly exhibit as its chief aim the advancement of the people and civilization, and urging the importance of self government. The great question to settle was whether intelligence should precede citizenship or citizenship precede intelligence. The speaker dwelt at length on the difficulties surrounding the educational problems in the Southern States, but generally took a hopeful view of the future, notwithstanding the undeniable poverty of the people and their inability to appropriate the requisite means for the establishment of educational institutions or the encouragement of

educational projects. The war has destroyed their fields, and temporarily their prosperity. The people are doing all they can in this direction, and difficulties are being rapidly overcome, and good schools will soon make their own party and partisans. Out of the small pittance at command, everything possible is being done for the cause of education in the Southern States. The speaker then paid a glowing tribute to the educational systems of Massachusetts and other northern States, and especially the donation of Mr. Peabody for the glorious cause in the South, and the judicious manner in which the great trust has been discharged. After showing that the people of the South are unable to keep pace with the schools of the North, the speaker urged that something should be done to prepare the youth of the South for intelligent citizenship and self government. He referred to the munificent governmental appropriations of public lands for the endowment of agricultural colleges, embracing literary, scientific, and mechanical culture, and asked whether the proceeds of the remaining Government lands might not go for education.

Under the lead of a paper from Professor Phelps, of Minnesota, on "The country school problem," the merits and demerits of country schools were then considered, and much information was contributed by different speakers.

"Education in the South" was then resumed, George W. Warner, of Germantown, Pa., initiating it with a desire to come under the five-minute rule and urging the appointment of a committee to devise means for assisting the people of the South in their educational project.

Professor Pickett, superintendent of schools at Memphis, Tenn., indorsed the views of the speaker in regard to the improvement of the work, and mentioned some of the more hopeful movements in the schools under his charge. The point was to induce pupils to struggle in securing education, and blessed are they who search for it in earnest. In the South they are not in any rut, and will keep out if possible.

Miss Helen M. Nash, of Little Rock, Ark., gave an interesting sketch of the schools in her locality, which she declared in the main to be lamentable—sand and pointed sticks being used instead of blackboards and chalk in illustrations. A good system was now established at Little Rock, but difficulty was encountered because pupils were not inclined to depend sufficiently upon themselves.

In the department of higher instruction, presided over by President Porter, several papers were presented, chief among which was the one by Professor Sawyer, entitled "Comparative orthoëphy." Professors Sawyer, Shepard, and Hinkle were appointed a committee on comparative philology, to report at the next annual meeting on the condition and prospects of phonetic science, coöperating as far as possible with a similar committee of the American Philological Association. Also a lengthy address was delivered by W. W. Folwell, of the University of Minnesota, on "Agricultural and polytechnic institutions," arguing for the introduction of more practical branches of education in our college courses. "Full orbed education," by Dr. J. R. Buchanan, of Kentucky, and "The duties of education to crime," by J. B. Bittinger, D. D., of Pennsylvania, were two very elaborate efforts. Lieutenant Schenck, United States Army, of Iowa, presented an essay on "Military science and tactics in our universities and colleges," favoring compulsory military training in colleges and arguing for its adoption in all institutions, the points of which paper were sustained in the discussion which followed by Dr. Read, Professor Rollins, Lieutenant Coleman, Professor Clapp, and Professor Sawyer, and as ably opposed by Professor Campbell, of the Minnesota State University.

In the general sessions, "Families, past and present," was the subject of an essay written by Lewis Felméri, professor of pedagogics at Klausenburg University, Austria, in which the causes of the unhappiness of married life were pointed out and the way in which the education of children is apt to be onesided. A paper on "Caste in education," by Professor A. P. Marble, of Massachusetts, claimed that schools should be free, but systematically governed, the same as a nation. The power of the State must be supreme. The folly of people who refuse to help educate their neighbors' children in the common schools, when their own are trained at individual expense, was shown. Universal taxation is the guiding star of the nation. No dividing line can be drawn, save that the pupil who evinces the most genius and talent should receive the most attention, not to the neglect of duller scholars, however. A very entertaining but highly idealistic essay, "The relation of art to education," was read by Miss Grace C. Bibb, of St. Louis Normal School.

Resolutions of respect to the memory of Dr. J. W. McJilton, of New York; Superintendent Gibbs, of Florida; and Superintendent W. R. Creery, of Baltimore, were offered and adopted.

Hon. E. E. White, of Ohio, then made a report, in behalf of the committee on the United States Bureau of Education. He remarked that the Bureau of Education was established in response to the wishes of the educators of the country, and, from its establishment to the present time, has received the increasing appreciation and coöperation of all who are trusted with the management of schools in all parts of the

country. It was created by the votes of members of Congress of both parties and has been supported by men of both parties.

The opposition to the Bureau arises from three sources:

(1) There is a comparatively small number of statesmen who hold that the Bureau has no warrant in the Constitution. It is a sufficient answer to this view to say that the weight of opinion is not only against it, but the practice of the Government from its organization to the present time; and this may be accepted as a practical interpretation of our fundamental law.

(2) The Bureau is opposed as an interference on the part of the General Government with reserved rights of the States. This objection is based on an entire misapprehension of the functions of the Bureau. It has no authority whatever to interfere with the management of the school systems of the several States. The law organizing the Bureau and its administration fully answer this objection. It is simply a central agency, supported by the Government, for the collection and dissemination of important information respecting the condition and progress of education in the several States and Territories and in other countries, and it has not even authority to demand an item of information from any school officer. It is a fact that the Bureau has the support of the school officers of both political parties in the several States.

It is also urged that the Bureau, having no authority in school affairs, cannot be sufficiently useful to justify its support by the General Government. The Bureau has already answered this objection. It has given an impulse to education which is felt throughout the country, and its great usefulness is recognized and appreciated by all who take an intelligent action in educational progress.

In conclusion Mr. White complimented Commissioner Eaton on his wise and efficient administration of the Bureau, and then submitted the following resolution, which was unanimously adopted:

"*Resolved*, That the good already accomplished by the National Bureau of Education is a complete vindication of the wisdom of its establishment, and we earnestly request Congress to increase the usefulness of the Bureau by providing ampler facilities for the prosecution of its important work."

The following were the officers elected: President, W. F. Phelps; secretary, W. D. Hinkle; treasurer, A. P. Marble; vice-presidents, D. B. Hagar and 32 others.

This convention may be regarded as a success. The topics chosen were of practical interest and, as a general thing, ably treated. The daily press, however, and the public generally, both East and West, have not given the usual prominence to this annual gathering of American educators; a result which can be accounted for only, perhaps, by the remoteness of the place of meeting and by the fact that not the usual number of distinguished names graced the programme.—(The Common School, September, 1875, pp. 126–132; American Educational Monthly, 1875, pp. 419–422; and official report of the association.)

AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

This association closed on the evening of the 17th of August its session for 1875, held for a week at Detroit, Mich.

This annual gathering of scientific men exhibited about the usual features of these meetings for the last ten years. So far as the different departments of science are concerned, there has been a more decided attention given to geology and paleontology at this than at most of the previous meetings, from the institution of this organization as well as in the association which preceded it.

The more definite exposition of the old red sandstone and the other Devonian rocks in the State of New York, as brought out by recent surveys under the superintendence of Professor James Hall in the Catskill and adjacent regions, is one example of good geological work.

The announcement of the discovery by Professor Hitchcock, chief of the New Hampshire survey, of evidences that the great glacier once covered Mount Washington was received by non-geologists with some degree of incredulity; but Professor Hitchcock is too careful and too experienced in his science to be likely to be mistaken; nor is there a single improbability to a geologist in this announcement. It had before been settled that evidences of glacial action are unmistakable more than 5,000 feet up from the tide level on this mountain, so that a few hundred feet more only are added to the reach upward of the great ice cover in the glacial epoch.

Professor Winchell, formerly of the Michigan survey, cleared up, at this meeting, some of the obscure points in the geological structure of that State; but was obliged to admit the great obstacles which are presented there to an investigation of the rocks in the rarity of rock exposures. A thick layer of drift in the lower peninsula hides the rocks from view, and the uniformity and horizontality of the strata increase the difficulty. Around Lake Superior, however, all this is fully compensated for in the universality of rock exposures.

Professors Andrews, Newberry, and Whittlesey were present at this meeting, and gave interesting particulars of the progress of research in the geology of Ohio. The very

singular character of the glacial markings on Kelley's Island were referred to, as well as the discovery of new fossils in the coal measures. Dr. Newberry brought out some additional facts in regard to the properly named "terrible fish," *Dinicthys*, the nearly complete remains of which he has discovered, and which was the dominant fish of its period. It was more thoroughly armor plated than a modern iron clad ship of war, and quite as effectively provided with the means of destruction against its coinhabitants of those early seas. The relations, also, of this fish to other *ganoids* were traced. This brought out some sharp passages between Cope, of Philadelphia, and Wilder, of Cornell University, as well as a close rejoinder from Dr. Newberry. Cope, eminent as a comparative anatomist in the study of bones, and Wilder, a close student of the soft animal structures, including the nervous system, and especially the brain, were entirely at variance with regard to the division of ganoid fishes, the former claiming that no such division can be derived from the natural structure of their bones, and the latter, that the division of ganoids is thoroughly established through resemblances in their brains and other soft parts.

No more interesting matters were presented than those discussed by Dr. Dawson, of Montreal. He has thoroughly wrought out the structure and the history of the *Eözoön Canadense*, that early and abundant fossil of the lowest stratified rocks; so that there is no longer any room for doubt as to its history, and very little obscurity as to its structure and functions. In other respects Dr. Dawson's recent discoveries, as narrated at Detroit, are valuable, while his objections to every phase of the special evolution theory are strongly and shrewdly urged.

The most directly practical, in some respects, of all the matters presented at Detroit related to the predatory insects. Messrs. Riley, of St. Louis; Le Conte, of Philadelphia; Grote, of Buffalo, and others discussed matters in this relation that concern immediately the productiveness and the well being of the whole country. The various suggestions of Professor Riley were most important as to the Rocky Mountain locusts, which descend upon the fertile fields of Missouri, Kansas, Iowa, &c., and destroy every trace of the verdure which they can eat, leaving nothing of the crops and only the animals and the reserves of dry grain. He insists that these pests shall be attacked in their original breeding places; that their whole history shall be studied out and the warfare upon them directed accordingly; that the destruction of the various harmless and useful animals that prey upon them, like the prairie hen and others, shall cease; and that in this country, as on the eastern continent, the military power shall be brought to deal with them, since a few regiments of soldiers would be well able to cope with them. He suggests to the farmers that the young locusts bred in their midst cannot pass a perpendicularly sided ditch with cross section two feet square; that poultry and pigs may be fattened on the locusts, and that these locusts are susceptible of being cooked and eaten by man as an agreeable and wholesome food. The locusts, he shows, cannot maintain themselves permanently in the regions which they devastate, but must come there from their original breeding places on the flanks of the mountains; neither can they ever pass eastward beyond the Mississippi.

In chemistry, at this meeting, many interesting things were brought forward. One of the most notable was the exhibition of half a pound or more of coesium alum, by Professor J. L. Smith, of Louisville, extracted by him from lepidolite, or lithia mica. This alum is remarkably soluble in hot water and very slightly soluble in cold water. Professor Smith's exhibition of Clamond's thermo-electric pile, as an instrument requiring no acids and capable of furnishing, at an unobjectionable cost, a permanent force for electro-plating, &c., was another interesting dissertation. Kirkwood's discussions on the groupings of the asteroids and various abstract mathematical papers were brought out in this department of science.

Ethnology and archæology received some interesting contributions from the searches in the western mounds, and especially from the long abandoned dwellings seen in our southwestern regions. The stone houses, found by hundreds, perched on the crests of the rocks in New Mexico, as reported by Professor Cope, whence perpendicular precipices descend on one side for a thousand feet or more, with a steep slope on the other of an equal descent, show a population which protected itself in this way from incursions of an otherwise overpowering enemy. These residences most likely were temporarily resorted to or else great physical changes have intervened, for no water supply is now to be found within many miles of this region. The study of insectivorous plants and of leaf structures, brought up at this meeting by Professor Beal, of the Michigan Agricultural College, and that of the flowering season of plants, by Professor James Hyatt, of New York, were the only botanical matters presented.—(American Artisan, September, 1875.)

EDUCATION IN SUNDAY SCHOOLS AND MISSION SCHOOLS.

SUNDAY SCHOOLS.

The following statistics of Sunday schools in the United States were collected under the auspices of the international Sunday school convention held at Baltimore, Md., May 11, 12, 13, 1875. Thirty States, with at least one Territory, have so organized their Sunday school systems as to furnish reports to this association. The greater part of the statistics given, however, with reference to even these States, are only partly from direct reports, partly from estimates:

States and Territories.	Sunday schools.	Teachers and officers.	Sunday school scholars.	Total Sunday school membership.	Population.
Alabama	1,000	6,300	77,000	83,300	1,002,000
Alaska	27	161	1,179	1,340	67,000
Arizona	4	23	170	193	9,658
Arkansas	505	4,542	33,312	37,854	473,174
California	633	3,040	38,000	41,040	549,808
Colorado	40	238	1,746	1,984	39,681
Connecticut	944	15,899	117,870	133,769	537,417
Dakota	48	230	1,685	1,915	14,181
Delaware	200	3,090	22,003	25,093	125,015
Florida	247	3,423	25,079	28,502	189,995
Georgia	2,323	20,907	153,317	174,224	1,174,832
Idaho	6	36	261	297	14,882
Illinois	5,967	60,601	425,710	486,311	2,141,510
Indian Territory	34	206	1,513	1,719	56,312

Wisconsin	2,454	18,094	165,925	184,019	1,055,501
Wyoming	4	23	171	194	9,118
Total	69,871	753,060	5,790,683	6,543,708	.....

*Report of East Tennessee Sunday School Association, with estimate added for the western portion of State.

MISSION SCHOOLS.

It was hoped that statistics on this point, kindred with those presented respecting Sunday schools, might be presented with this report. Efforts have been made to collect these, and some of the more important missionary societies have very kindly given the information sought. Others have failed to furnish it; and the statistics, although interesting, are hence too incomplete to warrant publication of them as a fair showing of educational missionary work abroad.

STATISTICAL TABLES

RELATING TO

EDUCATION IN THE UNITED STATES.

TABLE I.—PART 1.—*Statistics of the school systems of the States and Territories, showing States Bureau*

	States and Territories.	Report for the year.	SCHOOL YEAR.		SCHOOL POPULATION.	
			Begins—	Ends—	Between what ages?	Total number between said ages.
	1	2	3	4	5	6
1	Alabama	1874-'75	Oct. 1	Sept. 30	5-21	406,270

* From Report of Commissioner of Education for 1874.

to inquiries by the United States Bureau of Education.

Number of school days in the week.	Number of weeks in the session.	Number of sessions in the year.	Occupations of pupils.	Apparatus and appliances.	Effect of the system.
9	10	11	12	13	14
5	.....	2	Block building, weaving, sewing, object lessons, &c.	The usual appliances.....	Quickens mental development.
5	10	4	Fröbel's occupations.....	Those appointed by Fröbel.	Very satisfactory.
5	12	3	.....	.....	Excellent.
5	10	4	Fröbel's Kindergarten occupations.	Fröbel's 18 Kindergarten "gifts."	Satisfactory in every respect.
5	10	4	Fröbel's "gifts" and occupations.	Narrow, low tables, plants, piano, pictures, Fröbel's "gifts," &c.	Excellent; the powers of observation are cultivated, and children learn *how* to think.
5	10	4	Sewing, weaving, stick laying, drawing, pricking, folding paper, modelling in clay, and Fröbel's games.	Low tables, marked off into inch squares, piano, blackboards, ruled slates, and "occupation material."	It strengthens the body, exercises the senses, and employs the awakening mind.
5	10	4	Fröbel's "gifts," also reading and German.	All the "gifts" and a piano.	Very good indeed.
5	10	4	Building blocks, sewing, perforating, laying sticks, weaving, laying rings, paper cutting and folding, drawing, tablets, wire, and peas-work, &c.	Fröbel's "gifts," ruled tables, piano, plants, and chairs.	Harmonious growth of the physical, mental, and spiritual natures, and a love of work, order, and law.
5	20	2	All the pure Kindergarten occupations.	Fröbel's twenty "gifts" and occupations, plants, playgrounds, and mineralogical cabinet.	Increased happiness and facility for work.
5	40	1	.....	Kindergarten "gifts" and aids for object teaching.	Perfect.
5	4	10	Those found in Fröbel's system.	Fröbel's "gifts."	A blessing for the children.
5	26	2	Sewing, weaving, drawing, peas-work, paper folding, &c.	Cubes, oblongs, staves, triangular and square tablets, wires, &c.	It gives strength of body, ideas of order, time, and beauty, and ability to express the thoughts.
5	26	2	Building, laying figures, weaving, sewing, peas-work, slat-work, drawing, marching, singing, &c.	Tables, chairs, and materials for occupations.	Ideas of time, order, regularity, and neatness are developed, and also strength and agility.
5	37	1	Weaving, plaiting, drawing, modelling, sewing, singing, object lessons, games, calisthenics, and instruction in German.	Fröbel's "gifts," Prang's chromos, natural history charts, blocks, clay, slates, paper, plants, &c.	It promotes physical and mental development, and the happiness of the children.
5	12	4	All true Kindergarten occupations.	Kindergarten "gifts".....	Harmonious development, physically and mentally.
5	9	4	Fröbel's exercises with cubes and balls, drawing, sewing, peas-work, folding, weaving, modelling, object lessons, and lessons in botany, &c.	Fröbel's Kindergarten "gifts."	Harmonious physical and mental development.
5	10	4	Modelling, weaving, sewing, staff laying, games, &c.	Fröbel's "gifts," plants, gardens, &c.	Satisfactory.
	52	1	The usual Kindergarten occupations.	The usual appliances.	Very satisfactory.
5	9	4	Building, modelling, drawing, singing, braiding in various colors, games, &c.	Blocks, clay, colored yarns, prepared papers, drawing implements, &c.	It makes the children healthy and happy.
5	36	....	Block building, card sewing, weaving, drawing, pricking, modelling, object lessons, &c.	Fröbel's "gifts," natural objects, &c.	Excellent.
6	20	2	Building, sewing, staff-laying, drawing, pricking, weaving, modelling, &c.	Everything needed for Fröbel's system in a primary Kindergarten.	Mind and body are strengthened.

* From Report of Commissioner of Education for 1874.

a Partially endowed; 13 of these are in the college proper.

b The four classes are called the "First Humanities," "Poetry," "Rhetoric," and "Philosophy" classes.

c Includes 35 special students.

d The classical and Latin scientific students are reported together.

e Includes 14 students in modern course.

f For students in scientific department, see Table X.

* From Report of Commissioner of Education for 1874.
a For students in scientific department, see Table X.
b Classical and scientific.
c Includes students in special course.
d Includes 7 special students.
e One for each county.
f Each county of Ohio may send 1 student free.
g Includes students in elective studies.

* From Report of Commissioner of Education for 1874.

a Board and tuition.

b These figures are for the entire university, including the law and medical departments.

c Exclusive of preparatory department.

d Not all paid in.

e Includes $30,000 scholarship funds.

f Includes $1,090, annual appropriation out of academic fund for Carroll County.

g Cost, not including museums and collections.

h Not all productive at present.

i Scholarship and fellowship funds. There is in addition an annual rent of $5,000 from a building.

j Total valuation of college property; the income is about $40,000.

TABLE IX.—*Statistics of universities and colleges for* 1875, *&c.*—Continued.

* From Report of Commissioner of Education for 1874.

a Taxes on college lands refunded.

b This is the sinking fund. The college opened in October, 1875, with its lowest preparatory class, and it is intended to add one class annually.

c City tax.

d Total income for the year was $5,439.

e Board and tuition.

f Apparatus; buildings rented.

g For classical and scientific departments.

h Includes $7,960 from scholarship funds for tuition fees of scholarship students.

i Appropriated by State.

TABLE IX.—*Statistics of universities and colleges for* 1875, *&c.*—Continued.

Number.	Name.	Cost of—		Libraries.						Property, income, &c.						Date of next commencement.
				College library.				Society libraries.								
		Tuition per annum.	Board per month.	Number of volumes.	Number of pamphlets.	Average annual increase in books.	Amount of fund.	Number of volumes.	Average annual increase.	Value of grounds, buildings, and apparatus.	Amount of productive funds.	Income from productive funds.	Receipts for the last year from tuition fees.	Receipts for the last year from State appropriation.	Aggregate amount of scholarship funds.

Colleges from which no information has been received.

Name.	Location.	Name.	Location.
La Grange College	La Grange, Ala.	Martin Luther College	Buffalo, N. Y.
Christian College of State of California.	Santa Rosa, Cal.	St. John's College	Fordham, N. Y.
Blackburn University	Carlinville, Ill.	Weaverville College	Weaverville, N. C.
Highland University	Highland, Kans.	Capital University	Columbus, Ohio.
Lane University	Lecompton, Kans.	Oregon State University	Eugene City, Oreg.
Warren College	Bowling Green, Ky.	Wilbur College	Wilbur, Oreg.
College of the Immaculate Conception.	New Orleans, La.	Bradyville College	Bradyville, Tenn.
Straight University	New Orleans, La.	West Tennessee College	Jackson, Tenn.
Frederick College	Frederick, Md.	Franklin College	Nashville, Tenn.
Grand Traverse College	Benzonia, Mich.	Burritt College	Spencer, Tenn.
Jefferson College	Washington, Miss.	Gonzaga College	Washington, D. C.
		University of Idaho	Boisé City, Idaho.

TABLE IX.—*Memoranda.*

Name.	Location.	Remarks.
Talladega College	Talladega, Ala	See Table VII.
Petaluma College	Petaluma, Cal	Not found.
San Rafael College	San Rafael, Cal	Not found.
Franciscan College	Santa Barbara, Cal	See Table VII.
Christ's College	Montpelier, Ga	Not in existence.
Mendota College	Mendota, Ill	Removed to Carthage, Ill.
Augustana College	Paxton, Ill	Removed to Rock Island, Ill.
North Western Christian University	Indianapolis, Ind	Removed to Irvington, Ind.
Burlington University	Burlington, Iowa	See Burlington Collegiate Institute, Table VII.
Borromeo College	Pikesville, Md	Discontinued.
Newburyport College of Modern Languages	Newburyport, Mass	Not found.
Pass Christian College	Pass Christian, Miss	Closed.
Tougaloo University	Tougaloo, Miss	See Table III.
McGee College	College Mound, Mo	Suspended.
Burlington College	Burlington, N. J	Suspended.
Mt. St. Mary's Seminary of the West	Cincinnati, Ohio	See Table XI.
Harlem Springs College	Harlem Springs, Ohio	See Table VI.
St. Louis College	Louisville, Ohio	Not found.
Maimonides College	Philadelphia, Pa	Not found.
Claflin University	Orangeburg, S. C	See Table VII.
Mt. Zion College	Winnsboro', S. C	See Table VII.
Stewart College	Clarksville, Tenn	Name changed to South Western Presbyterian University.
University of Nashville	Nashville, Tenn	Buildings lent to the State for two years for a State Normal School.
Texas University	Georgetown, Tex	Name changed to Southwestern University.
St. Mary's College	San Antonio, Tex	See St. Mary's Institute, Table VII, identical.
Washington Territorial University	Seattle, Wash	See Table VI.

TABLE X.—PART 1.—*Statistics of schools of science (mining, engineering, agriculture, &c.) endowed by the national land grant for 1875; from replies to inquiries by the United States Bureau of Education.*

Number.	Name.	Location.	Date of charter.	Date of organization.	President.	Preparatory department.			Scientific department.
