INDEX		999–1016

REPORT.

DEPARTMENT OF THE INTERIOR, BUREAU OF EDUCATION,
Washington, D. C., November, 1875.

SIR: I have the honor to submit my sixth annual report. The appropriation for the Bureau for the fiscal year ending June 30, 1875, was $35,570; the same amount was appropriated for the year ending June 30, 1876. This is entirely inadequate to the demands of the country upon the Office. No private business firm carries on the correspondence and accomplishes the tasks imposed upon this Office with so small an expenditure; yet, in spite of the lack of adequate means, the increased skill of my assistants, the improvement in methods of business, and, above all, the hearty and universal coöperation of the educators of the country, have enabled the Office to accomplish more during the year now drawing to a close than in any previous year of its history.

WORK AND NEEDS OF THE OFFICE.

Attention is invited to its special needs, and in order to render the statement more effective, I beg to recall and submit a few illustrative facts. This Office was established on the petition and at the request of the educators of the country, a few years since, "for the purpose," as detailed in the law, "of collecting such statistics and facts as shall show the condition and progress of education in the several States and Territories, and of diffusing such information respecting the organization and management of schools and school systems, and methods of teaching, as shall aid the people of the United States in the establishment and maintenance of efficient school systems, and otherwise promote the cause of education throughout the country."

As a means of executing this purpose, the Commissioner is required—

1st. To collect statistics and information in regard to education;

2d. To prepare annual and special reports;

3d. To publish circulars of information.

It was hardly possible at that time to anticipate in detail the work that would be required in the administration of the law.

A Commissioner and three clerks were provided, and the experiment set on foot.

Subsequently, by law, the clerks were reduced to two, and for the year ending June 30, 1870, only $6,000 were appropriated for salaries and other expenses of the Office.

At first the fear was expressed that the officers of State and city educational systems, and those charged with the care of institutions of education, might naturally be suspicious of such an office, fearing that some governmental control or supervision was contemplated.

Indeed, it is not an uncommon declaration that all Americans are educated, and know enough most certainly to direct anything in regard to education. "Why," the question is asked, "should a national office be created or sustained to consider a subject on which additional information is altogether superfluous?"

The reply to this might have been found in the fact that the Office had been created at the request of those most familiar with educational needs. No opposition from State or other educational officers has been experienced; on the contrary, the Office has been largely indebted for its usefulness and efficiency to their cordial and constant cooperation.

These officers, engaged in the various grades and phases of instruction, from that of

the Kindergarten to that of the university, freely furnish the information in their possession, sometimes at the cost of considerable effort to themselves, and with no other return than the receipt of copies of the publications of the Office and the satisfaction of having in this manner contributed to the general progress of education. Only that information is sought which is deemed important in the field of education, and which educational officers wish to give.

When the work of collecting educational statistics was begun by the Office, it was found that there was no authentic list of the colleges in the United States, or of academies, or normal schools, or schools of science, law, or medicine, or of any other class of educational institutions. The lists of nearly all grades of schools are now nearly complete. Information on all other matters relating to educational systems was equally incomplete and difficult of access.

Starting with a nomenclature that well-nigh precluded the possibility of any satisfactory comparison, either for use in our own country or elsewhere, now, year by year, purely on the voluntary principle, these institutions and systems of education, numbering in all more than 6,000, report the facts most indicative of their success or failure in terms susceptible of substantially correct inference and comparison.

The work to be provided for, therefore, is no longer a matter of conjecture. It can be seen and described.

Work of the Commissioner.—It is the work of the Commissioner to supervise and direct the business of the Office; to keep himself informed of all details in the progress of education at home and abroad; to receive the constantly increasing number of visitors seeking information on particular phases of education; to visit educational institutions and to attend educational associations, and to read and answer all communications needing his personal attention. The work of answering the large and increasing number of the class of communications just mentioned cannot be performed without the aid of one skilful and well-informed stenographic clerk, and at times two are required.

Duties of the chief clerk.—Under the chief clerk comes the general work of the Office, such as the opening, recording, and answering of the mail matter; briefing and recording of the letters received; writing and recording of letters sent; distribution of the mail to the proper sections in the Office; keeping a record of all expenditures and duplicate vouchers of the same; folding, directing, and stamping parcels or documents sent, &c. During the year 1875 more than 4,000 letters were written; 3,500 acknowledgments were made, and a large number of printed letters on routine business sent out.

The four copyists allowed by the law are engaged in this work when not detailed to copy statistics or manuscript for the several divisions preparatory to printing.

So numerous have been the interruptions in this work, caused by the various details just mentioned, that it has been impossible to keep up the permanent record of letters sent or permanent record of briefs on letters received; and the regular work of the Office has been much delayed on this account. Only press copies of letters sent have been taken, and letters received have not been recorded in books, as is usual.

The number of documents sent out during the year 1875 numbered over 7,000 bound volumes, and 95,000 pamphlets on educational subjects, published by the Office. For the discharge of these duties, though absolutely essential to the administration of the Office in answering the demands of the public, there is no force specifically provided.

This Office occupies seventeen rooms: six in the basement, four on the first floor, six on the second floor, and one on the third floor. Four rooms in the basement are occupied by furnaces, which have to be attended to in winter. Twenty-six large windows must be washed, and the wood work of at least thirteen has to be kept clean. These rooms have also to be swept, dusted, &c. For this work the law makes no present provision, and the laborer to do it is requested in my estimates.

Division of abstracts.—In the division in which the annual abstract of education in the States and Territories is made out, so great an amount of matter is received that the one clerk to whom that work is assigned is overtasked with the labor of properly condensing it. From fifty to sixty thousand pages of printed matter additional to

thousands of written returns have here to be gone over in order to prepare 400 pages of annual abstract. In addition, 200 letters conveying information drawn from these sources, and answering inquiries not answerable directly by printed documents at the command of the Office, were written in this division during the past year. Of these letters a considerable number are quite extensive discussions of the subjects treated in them. Two additional clerks of class one are needed for this work.

Statistical division.—The value of the reports of the Office largely depends on the fulness, accuracy, and systematic arrangement of the statistical material embodied in them. Hence it is necessary that the force of the statistical branch should be sufficient to do its work well and thoroughly.

While no adequate idea of the extent and variety of this work can be conveyed by a mere statement of the number of educational institutions which directly report their statistics to the Bureau, a glance at the following figures may indicate in some measure the annual increase therein since my first report was issued, in 1870:

Statement of educational institutions in correspondence with the Bureau of Education in the years named.

	1870.	1871.	1872.	1873.	1874.	1875.
States and Territories	37	37	44	48	48	48
Cities	.....	249	325	533	127	241
Normal schools	53	65	98	114	124	140
Business colleges	26	60	53	112	126	144
Kindergärten	.....	.....	.....	42	55	95
Academies	.....	638	811	944	1,031	1,467
Preparatory schools	.....	.....	.....	86	91	105
Colleges for women	33	136	175	205	209	249
Colleges	266	290	298	323	343	385
Schools of science	17	41	70	70	72	76
Schools of theology	80	94	104	140	113	123
Schools of law	28	39	37	37	38	42
Schools of medicine	63	82	87	94	99	104
Libraries, (public)	156	180	306	377	676	2,200
Museums of natural history	.....	.....	50	43	44	53
Museums of art	.....	.....	.....	22	27	27
Art schools	.....	.....	.....	.....	26	29
Deaf and dumb asylums	34	36	37	40	40	42
Blind asylums	10	26	27	28	28	29
Orphan asylums	.....	.....	77	180	269	408
Reform schools	28	20	20	34	56	67
Schools for feeble-minded	.....	8	.....	7	9	9
Total	831	2,001	2,619	3,449	3,651	6,085

The above statement relates solely to the statistical labor on the annual report. There has been a like increase of work, not shown in the annual or special reports of the Office, in answer to special and individual demands for educational statistics. These requests come from all classes of educators and school officers and from all parts of the United States and from many foreign countries, and relate to every grade of instruction and to every class of institutions. The usefulness of the Office largely depends on its ability to meet these appeals, and is diminished by inability to do so as fully as their importance merits.

In a word, while the work of the statistical branch has increased more than fourfold since 1870, there has been no corresponding increase in its clerical force under the law. While the quantity of statistical work has necessarily increased so largely, its quality has also improved, as a comparison of the earlier with the later reports shows. As the sphere of statistics enlarges in the discussion of educational questions, the demand

for specific statements of results and experiences increases; and as the study of such knowledge becomes more thorough, all statistics are more closely and intelligently scrutinized and their conclusions challenged. To keep pace with the more rigorous requirements of the present, it is clearly necessary that the clerical force should be increased.

The law recognizing this branch of the service provides only for a statistician. I have added, by detail, a clerk of class two authorized by law. This work on no fair estimate can be performed with less than the addition of another second class clerk and two copyists.

Work of the translator.—The foreign correspondence and the documents received from foreign countries contain matters of very great interest, and this Office in the nature of the case is the only medium through which their contents become generally known among American educators. Over 32,000 pages of foreign periodicals, reports, and works on education have been examined by the translator, 500 printed pages were translated in full, as well as a large number of letters in German, French, Spanish, Italian, and other languages, in a single year. The law provides for only one translator for this work, with a salary of $1,600.

Publications.—It will appear from the above statement that the labor of editing and proof-reading demanded annually imposes no small task upon the Office. In this connection it should be remembered that the utmost exactness is required in the very nature of these publications. Each figure put down against the name of a place or institution or individual is liable to be questioned at once.

A librarian needed.—Nothing is more essential to the efficiency of the Office than a well ordered collection of all publications upon education, whether in the form of periodicals, reports, catalogues, or treatises relating to its various phases. By purchase and exchange, during the past five years, the library has attained a growth of 4,500 volumes and thrice that number of pamphlets. It is hardly necessary to add that it needs the services of an expert, or that, without the aid of a competent librarian, two-thirds of the usefulness of the library is lost. There is in this country no other collection similar in character of equal extent. It therefore affords the only opportunity within the reach of American citizens for investigating many phases of this subject. But the law provides no librarian, and the volumes, so far, are only put on the shelves, entered in a list, and used in the current work. There is no catalogue. The character of the works and subjects treated requires a librarian of special qualifications, familiar with educational topics, and competent to classify, catalogue, and index the additions as they are received.

This would save much time in all the departments of the work that require the use of the library, and greatly increase its usefulness to the country. The working value of such a technical library depends almost wholly on its classification and the efficiency of its librarian.

The collection and publication fund.—Recurring now to the extracts from the law, it will be seen that the only relief from these embarrassments is the temporary employment, as assistants, of persons paid to collect information and statistics.

I have found that, by using the information in my possession, (thus imposing additional demands on the increased skill of my trained assistants, but involving no expense,) I have been enabled, by employing clerks at moderate pay, to accomplish much more than would be possible with the same amount of money if only experts were employed, eminent for their qualifications in the special subjects investigated; both of which courses are understood to be authorized in the appropriation for collecting and publishing information.

If we have not the best methods, in every particular, for doing the work required by law with the means provided, it is simply because we have not been able to devise them, and others have not suggested them.

It should be noticed that while in this way only could the regular work of the Office proper be performed at all, much in addition has been accomplished in the way of special investigation and the treatment of particular subjects by persons specially qualified.

"The relation of education to labor," "The value of common school education to common labor," "Ignorance and pauperism," "Ignorance and crime," and "The constitutional provisions for education made by the several States," and numerous other subjects which have been treated in this way, in the reports and circulars of the Office, may be mentioned as instances.

I should state here that putting the $11,000 in a single item was not at my suggestion. But gentlemen in Congress overruled my specific requests, and preferred to include the whole amount of the estimates for the various details of the work in one sum.

It will be seen from these facts that experience has shown theirs to be the wiser plan, and that the Bureau has been enabled to expend this money far more effectively than if it had been limited to specific items, to be expended without any discretion on the part of the Commissioner. This will be appreciated when the character of the work is regarded; and it is seen that intelligence, accuracy, and culture are specially required.

The advisability of making the appropriation in one sum rather than in specific items, was inferred from the experience of the Department of Agriculture, where the sum of $15,000 appropriated in this way had been found necessary.

Never before has there been manifested such a spirit of inquiry and investigation in regard to every phase of education, or such a desire for specific and accurate knowledge of our educational condition. The Office is in almost daily receipt, from university and college professors, public school officials and teachers, and eminent private citizens, of suggestions for the preparation and dissemination of documents on important educational topics of present interest, which bear witness to this spirit, to the growing usefulness of the Office, and to the expediency of increasing its efficiency. Much material for such documents—which would be of the greatest value to educators were the means afforded to prepare and place it before them—has already been gathered; and there would seem to be no question of the expediency of so increasing the Office force that such material may be made available to the educators of the country. So deeply have I felt this, and so fully have I been confirmed in this view by all educators who have looked carefully into the work; so fully have I become aware that the Office could not accomplish what is reasonably expected of it without a larger sum for these special reports—subjects of earnest, widespread inquiry—that I have asked that this amount should not only be retained but increased, and the other items specified added.

RECORDS OF EDUCATION.

No person can at any time study any phase of social science and not be impressed with the need of greater accuracy and fulness of records. The lessons of ancient and medieval history are, on this account, largely lost to mankind. This is especially true in the field of education. Only here and there do we get glimpses of school life in ancient times; as, for example, that allusion by Aristophanes in his "Clouds," to the fixed attention and determination of youth under instruction in Athens, which Mitchell translates as follows:

> No babbling then was suffered in our schools:
> The scholar's test was silence. The whole group
> In orderly procession sallied forth
> Right onwards, without straggling, to attend
> Their teacher in harmonics. Though the snow
> Fell on them thick as meal, the hardy brood
> Breasted the storm uncloaked. Their harps were strung
> Not to ignoble strains, for they were taught
> A loftier key.

Or like the following direction to pupils on the road to school in Sparta:

When they were on the public roads to walk along in silence, not to look around in any direction, but to keep their eyes on what was before their feet. You would hear no more the sound of a voice from them than from stone statues. You would have as much difficulty in turning their eyes as if they were made of brass.

Thus, in literature, and occasionally on memorials, are found expressions descriptive of the principles and methods employed in caring for the young among those ancients who rose to eminence and live in history. The passages of this character in ancient literature have never been brought together and made available for general use. Although a collection of such references would necessarily be unsatisfactory from its incompleteness, the high character of the intellectual life to which some ancient states attained suggests the great value such a work would have.

How invaluable to us would be the essential facts in the child's family, school, and social life, which have determined the character and career of the adult among the Egyptians, the Hebrews, the Assyrians, the Chinese, the Greeks, and the Romans.

If we were living only for the lessons to be communicated to a remote future by our experience, full records would be due. But more than this, the current life of a republic cannot be guided aright without them. Nor is it sufficient to place the facts within the reach of the student only. There must be present to the minds of all citizens the fulness and correctness of view which guard each against misconduct and misgovernment, and inspire all with a choice and appreciation of what is good for themselves and their country, and a disposition to preserve and defend it.

RECORDS IMPROVED BY THE CENTENNIAL CELEBRATION.

The centennial commemorations are quickening the historical spirit. Anniversaries of battles or other important events in our national history are increasing in frequency. Orations and newspapers are full of history. We may expect histories, national and local, already published, to be revised; and records of families, societies, churches, institutions, towns, and states to be searched out, studied, and published. Amid all this, it would be most anomalous, as well as perversive of the relation of facts to individual and public weal, were the quarter of a million of teachers now engaged in training the nine millions of youth in the schools of the land to be forgotten and ignored. What could more certainly foreshadow a century of darkness and evil?

There is among the workers in the educational field a clear appreciation of the truth that the value of generalization respecting education depends upon the correctness and fulness with which all essential details are embraced. Institutions and localities enter into the work with a lively sense of the fact that they, in each case, are part of the whole, and seek to discharge their responsibility with the same fidelity which they expect from this Office in working up the general results.

All who attempt to compare 1776 with 1876 in matters pertaining to the intellectual and moral training of youth are made deeply sensible of the paucity of our records. Till recently there has been little opportunity for studying, year by year, our educational condition as a nation. The best effort of an institution or system, whether of a city or State, reached little beyond itself or the circle of those directly interested. Now, each may be studied as a part of a whole.

Fortunately, the approaching Centennial Exhibition is international, and we shall be called upon to compare ourselves, not with each other only, but with the rest of the world.

Our fathers, in their Declaration of Independence, "out of a decent respect to the opinions of mankind," submitted the facts in their case "to a candid world." Now that a century has passed, we, their children, invite the world to gather at the city where their declaration was made, to put to test the results of our experiment. Those engaged in the pursuit of art, science, education, manufactures, &c., will assemble to learn the lessons there taught relating to their several callings.

Other nations will come, but not merely to study what we have to present; they will show us their triumphs, in art, science, and education, and challenge ours. Attention will not be limited to the present; the past will come in for its share of consideration. It will be a study of cause and effect; of all the main forces which are shaping civilization. However much the instructors of the young in these United States may congratulate themselves upon their opportunities and the results of their labors, they are as yet prepared to furnish but little of the exact and detailed history of their profession. How

meagre is all that the fathers of 1776 have left of this record, thus greatly reducing the value of all comparisons between their period and ours! Shall we leave the students of our history at the close of the coming century in similar embarrassment? Rather should it be our especial endeavor to bring up to date all educational history so fully and correctly that no revision may be required in the future, either near or remote. The Office has especially addressed itself to this end. Gathering information from all available sources, it has sought, for the benefit of our descendants, to bring it within reach of those undertaking this task.

When we have traced the educational causes in the past to their personal, social, civil, and religious effects, we shall have the best clew to the future that human experience can furnish us in this field of inquiry.

LEARNING THE LESSON OF OUR OWN EDUCATIONAL EXPERIENCE.

In order to a correct appreciation of the lessons of our educational history, we need to study the contributions made thereto by the early colonists—the Spaniards and Portuguese, the English Churchmen at Jamestown, the English Puritans and Pilgrims in Massachusetts, the English Catholics in Maryland, the English Quakers in Pennsylvania, the Dutch in New York, and the Swedes on the Delaware. We need to trace the condition of instruction in its different methods and forms through the several nations that contributed most to our early settlements. The period of discovery and settlement was one of increasing activity of the intellectual forces, as is evidenced by the invention of printing, the multiplication of books, the increase in the facilities of commerce, the discoveries in geography, and the multiplication of the forms of industry, and articles of trade and comfort.

The great attainments made in civilization in the Iberian peninsula, from which important colonies came to sections now embraced in the United States, would lead us to look for large contributions from that quarter. From A. D. 912 to A. D. 976, the struggles for education and progress in science were specially marked. Medicine, natural science, mathematics, and astronomy were favorite studies.

The library of Alhakem II was said to contain 400,000 volumes. Education in all grades received encouragement. Abderrahman established high schools for girls which were taught by female teachers. In Andalusia, it has been affirmed that it was difficult to find a person who could not read and write. Alhakem is said to have established at his own expense 27 schools in Cordova, where the children of indigent parents were instructed free of charge. But the expulsion of the Jews, the introduction of the inquisition, and the internal struggles which followed, witnessed a general decadence before any contributions were made from Spain to our civilization. Schools had closed, the attendance upon the universities had diminished, and education was almost entirely in the control of the church, and was directed toward its ends as then and there understood by church leaders. These seemed to have no idea of the duty of enlightening the entire people, and education was limited in all its higher benefits to the priesthood organizations controlled by the church and the wealthy families. There are, therefore, few traces of culture or efforts at teaching, and books were rare among the early Spaniards in America, while the priesthood was most active in striving for the diffusion of their religious tenets among the natives.

Very different were the educational ideas and practices of the Swedes who settled on the Delaware.* The art of printing was introduced in Sweden in 1482.

* The Swedes who came over (even the very first) all brought their ministers with them.

May 31, 1693, the Swedes in America wrote a letter to John Thelin, postmaster at Gottenburg, Sweden, in which the following occurs:

"Further, it is our humble desire that you would be pleased to send us 3 books of sermons, 12 Bibles 42 psalm-books, 100 tracts, 200 catechisms, and 200 primers."

In 1696 a much larger number of books was sent from Sweden to America; among the rest, 400 primers and 500 catechisms.—(Swedish Annals, by Rev. John Curtis Clay, Philadelphia, 1835.)

Extract from Instructions given to John Printz, governor of New Sweden, Stockholm, August 15, 1642, "to urge instruction and virtuous education of youth and children." In 1693 the total number of Swedes on the Delaware was 945.—(History of the Original Settlements on the Delaware, &c., by Benjamin Ferris, Wilmington, 1846.)

Charles X, between 1604 and 1611, established a great many popular schools, especially in Wörmland, the central portion of Sweden. Gustavus Adolphus (1611–1632) decreed that the bishops should direct the work of royal schools and seminaries where needful in the kingdom, and what course of education was most desirable to be given, how good teachers might be obtained, and that one general method of instruction be introduced.*

Schmidt quotes an old chronicler as affirming in 1637 that "there was not in this province a single peasant's child unable to read and write." Queen Christina, in 1640, decreed that a school should be established in every town of the Swedish dominions. These schools, called "Pedagogia," were originally primary schools, each with an *a b c* class, but were in course of time either abolished or became higher schools.†

The distinctive ideas and practices in regard to education among the settlers in New Amsterdam‡ or on the Hudson were no less gratifying. The struggles over the principles of the Reformation in their mother country were an immense stimulus to thought on both sides, while the appeal to the word of God made more and more necessary a knowledge of letters. Here, as elsewhere in that period, the first steps are obscure; but we find the preacher always a teacher, and the school springing up by the church. In 1575, William established the University of Leyden as a reward of the unshaken perseverance of the city, and, as the letter of foundation says, "in order that not through the lack of good education of youth in the provinces of Holland and Zealand, all morality, science, and learning should be lost, thus decreasing the honor of God and injuring the commonwealth." Ten years later the University of Frankfort was established. So great was the zeal for learning that, in the midst of war, schools were founded at Groningen, Utrecht, Harderwijk, Deventer, and Amsterdam. Schools were known as higher and lower schools, Latin schools, public schools, or great and small schools. The records of the reform ecclesiastical authorities show the deep interest taken by these organizations. In 1574 one of these resolves "that good schools are very necessary; wicked schools do a great deal of harm; that the servants of the church shall determine when schools shall be established; the schoolmaster of these schools shall receive a fixed salary; the schoolmaster shall sign a pledge to submit to the discipline of the church and to teach children the catechism and all other knowledge which is useful to them."

Early after the union of Utrecht in 1579, it was resolved "that the inhabitants of towns and villages should within six weeks find good and competent schoolmasters; and that such towns and villages as should neglect to do this should be bound to receive the schoolmasters that were sent them, (1582,) and that as far as possible a sufficient annual salary shall be paid such schoolmasters," (1584.)

The states of Holland and Friesland showed no less zeal in the cause of education, as is seen from the resolutions of 1581 and 1589. As early as March, 1581, they discussed the school question, and, in the month of December following, it was resolved to order the appointment of schoolmasters. All, either men or women, before keeping school or teaching children, were to pass an examination to show that they were competent. In the Zealand school law of 1583, education is called "the foundation of the commonwealth," so that "for the building up of a good republic and for the general well-being of the country, it is of no little importance to educate young people from their infancy in the fear of God and all useful knowledge." The preliminary order regulating education became a law in 1590. One paragraph prescribed specially that no one, either man or woman, should be allowed to teach Latin, Greek, German, French, or any other language, without having been previously examined as to competency before the magistrate. The province of Utrecht was specially careful on these several points. Perhaps the fullest school law is that of 1612. Its first article affirms that "the authorities of the city and all the towns of Utrecht shall have special care that the public or primary schools are supplied with good teachers, and that they must give good instruction." In the province of Gelderland, in 1693, a law enacted

‡ History of Education and Instruction in the Netherlands, by D. Buddingh. The Hague, 1842.

that "no schoolmaster should be appointed unless he had been examined by the clergyman in the catechism, and God's Word, and primary knowledge, and is found to have a good moral character."

The Netherlands not only sent emigrants directly to America, taking their own institutions with them, but the founders of New England, who landed on Plymouth Rock, while they were English by birth, had, during the period of their residence in the Netherlands, been taking lessons of their Dutch brethren.

The charter of the West India Company of the Netherlands, with which the work of colonization commenced, bound itself to maintain good and fit preachers, schoolmasters, and comforters of the sick. In the contract made with Rev. Gideon Shaets, when engaged as minister of Rensselaerwick, he was "to use all proper zeal there to bring both heathens and their children in the Christian religion, to pay attention to the office of schoolmaster for old and young." Again we find in another colony, that of New Austel, that Evart Paetersen was approved, after examination before the classis as schoolmaster and *zieken-trooster*, to read God's word and lead in singing.

In 1633, Adam Roelansen is mentioned as the first schoolmaster at New Amsterdam. The first direct mention that we find in the history of this colony of a public tax for the support of schools occurs in the proposed articles for the colonization and trade of New Netherlands, 1638. "Each householder and inhabitant shall bear such tax and public charge as shall hereafter be considered proper for the maintenance of schoolmasters." As an evidence of the value set upon education, it should be noted that in 1642 it was common in marriage contracts for the parties to promise to bring up their children decently, according to their ability; to keep them at school; to let them learn reading, writing, and a good trade. A record of expense in 1644 mentions a schoolmaster who should also act as precentor and sexton, at 360 florins a year.

In 1647, Governor Stuyvesant calls the attention of the council to the state of public education, to the want of proper combinations, and the absence of a school during the last three months, (evidently of public schools, for private schools had already been established.) We find in numerous instances the civil authorities of these Dutch colonies acknowledging (1) the duty of educating the young, (2) the care for the qualification of the teacher, (3) provision for the payment of his services, and (4) the provision of the school-house. When in 1653 municipal privileges were granted to New Amsterdam, the support of schools was included. In the following year, in connection with the grant of municipal privileges to Dutch towns on Long Island, a superior district court was organized, with general authority to establish schools, giving clear evidence of the purpose of the people, although we have no knowledge that schools were established.

In the spring of 1656, the first survey of New Amsterdam, or New York, was made, and it was ascertained that there were 120 houses, and 1,000 souls, and the number of children attending public schools having greatly increased, further accommodations were allowed.

In compliance with the request of the colonies, the West India Company sent, in 1659, Alexander Carolus Curtius, a Latin schoolmaster, to open an academy. He was paid a salary from the city treasury, and allowed the use of a house and garden, and permitted to charge 6 guilders per quarter for each scholar.* Curtius became very

* The following singular agreement, cited from Thompson's History of Long Island, vol. I, pp. 285–286, made between the town of Flatbush and Johannes Van Eckkelen, accepted schoolmaster and chorister, is in many respects curious and interesting:

ART. 1. The school shall begin again at 8 o'clock, and go out at 11; shall begin again at 1 o'clock and end at 4. The bell shall be rung before the school commences.

ART. 2. When school begins, one of the children shall read the morning prayer as it stands in the catechism, and close with the prayer before dinner; and in the afternoon, the same. The evening school shall begin with the Lord's Prayer, and close by singing a psalm.

ART. 3. He shall instruct the children in the common prayers; and the questions and answers of the catechism, on Wednesdays and Saturdays, to enable them to say them better on Sunday in the church.

ART. 4. He shall be required to keep his school nine months in succession, from September to June, one year with another; and shall always be present himself.

ART. 5. He shall be chorister of the church, keep the church clean, ring the bell three times before

unpopular, but under his successor, Tuych, this high school, or academy, gained such reputation that children were sent to it from Virginia, Fort Orange, and the Delaware. It may be set down that, in the colony, elementary instruction was furnished at the public expense, free; that the public, as we have seen, aided, by furnishing salary and house for the high school, while tuition was also charged. In other parts of New Netherlands, the colonies regulated the qualifications of the teacher and shared in the support, allowing tuition to be charged.*

The foregoing action on the part of the governor and council seems to have fully settled and confirmed the policy of the Dutch administration in regard to free public schools supported solely by taxation, and which, but for the reconquest by the English, might, perhaps, have continued without interruption to this day. (Annals of Public Education in New York, pp. 60 and 61.) Prior to 1700, the license to teach school had uniformly been issued by the authority of the colonial officers, but, after 1700, the municipal officers began to issue these licenses.

The first indication of school legislation by the colony of New York bears date November 27, 1702, though there is no evidence that it resulted in any school.

The free school act of 1702 expired by limitation in 1709, and there appears but little, if any, colonial action in behalf of education from that time forward, till the revolutionary war. The Society for the Propagation of the Gospel in Foreign Parts, however, contributed a number of schoolmasters. The so-called Trinity School of New York City, it is believed, traces its origin to this society.

In 1732 a public school to teach Latin, Greek, and mathematics was established in the city of New York.

---

the people assemble, and read a chapter of the Bible in the church between the second and third ringing of the bell; after the third ringing, he shall read the ten commandments, and the twelve articles of our faith, and then set the psalm. In the afternoon, after the third ringing of the bell, he shall read a short chapter, or one of the psalms of David, as the congregation are assembling; afterwards he shall again sing a psalm or hymn.

ART. 6. When the minister shall preach at Brooklyn or Utrecht, he shall be bound to read twice before the congregation, from the book used for the purpose. He shall hear the children recite the questions and answers out of the catechism on Sunday, and instruct them therein.

ART. 7. He shall provide a basin of water for the administration of Holy Baptism, and furnish the minister with the name of the child to be baptized, for which he shall receive twelve stivers in wampum for every baptism, from the parents or sponsors. He shall furnish bread and wine for the communion, at the charge of the church. He shall also serve as messenger for the consistory.

ART. 8. He shall give the funeral invitations, dig the grave, and toll the bell; and for which he shall receive, for persons of fifteen years of age and upwards, twelve guilders; and for persons under fifteen, eight guilders; and if he shall cross the river to New York, he shall have four guilders more.

The school money.—1st. He shall receive, for a speller or reader, three guilders a quarter; and for a writer, four guilders, for the day school. In the evening, four guilders for a speller or reader, and five guilders for a writer, per quarter.

2d. The residue of his salary shall be four hundred guilders in wheat, (of wampum value,) deliverable at Brooklyn Ferry, with the dwelling, pasturage, and meadow appertaining to the school.

Done and agreed upon in consistory, under the inspection of the honorable constable and overseers, this 8th day of October, 1662. Signed by Casper Van Zuren and the consistory.

I agree to the above articles, and promise to observe them.

JOHANNES VAN ECKKELEN.

*The following action of the governor and council, during the temporary reoccupancy of the government of the province by the Dutch, indicates the purpose of the Dutch administration as regards the support of public schools.

At a council held in Fort William Hendrick, May 24, 1674, was considered a petition from the schout and magistrates of the town of Bergen, complaining that some of the inhabitants of their dependent hamlets "obstinately refuse to pay their quota to the support of the precentor and schoolmaster;" concerning which it was ordered that the schout "proceed to immediate execution against all unwilling debtors."

At a council held June 15, 1674, there was presented a petition from the inhabitants of Mingagquy and Pemrepogh, "requesting to be excused from contributing to the support of the schoolmaster at Bergen." In answer to this petition, the council issued the following: "* * * it is after due inquiry resolved and ordered, that the inhabitants of Pemrepogh and Mingagquy shall promptly pay their share for the support aforesaid, on pain of proceeding against them with immediate execution."

The opinions and practices prevalent in regard to education in England up to the time of English immigration to these shores are obscure or ill-defined. There was no general acknowledgment of the duty of universal education.

Oxford and Cambridge were chartered early in the thirteenth century. Eton was founded by Henry VI in 1440. During his reign and that of Elizabeth, many grammar schools were established; Rugby, by Lawrence, sheriff, in 1567, and Harrow, by John Lyon, in 1571. Nearly 2,000 parochial charity schools are said to have been founded, by the Society for the Promotion of Christian Knowledge, from 1698 to 1741. There was action, first, by the church; second, by the state; third, by the family; fourth, in large personal benefactions to education. The result is, first, family training here excellent, there indifferent, and again entirely wanting; second, church or parochial instruction; and, third, the magnificent work of the great foundations of various grades already mentioned, from which has come the perpetual flow of cultured minds that have given skill to English industry, scope to English commerce, learning to English statesmanship, and eminence to her literature and science. But with all this there was a noted limitation of culture to the few, no knowledge of even letters among the great masses, and no general belief in the idea of the obligation of the state to assume the universal education of its subjects. Taking the English colonists out of this condition of things at home and visiting them in Virginia, New England, Maryland, and Pennsylvania, we find their home ideas and practices undergoing certain modifications, and no two colonies, though coming from the same source, starting out on the work of education on exactly the same methods or precisely the same principles. There is more general accord in the characteristics exhibited in Virginia, Maryland, and Pennsylvania, at least so far as acknowledging in terms the importance of educating the young, and the action by the church and family, but in which there is wanting a comprehensive scheme, put in force by the civil power, embracing every child.

The earliest historical fragments relating to the settlement of Virginia at Jamestown indicate interest in education. Fifteen thousand acres were appropriated at the instance of Sir Edwin Sandys, president of the company, toward the endowment of a college at Henrico for the colonists and Indians. In 1619 collections in the churches of England amounted to £1,500 sterling. In 1621, persons homeward bound on the Royal James, from East India, gave over £70 toward founding a free school in Virginia, to be called the East India School.

Other benefactions followed, and Mr. George Thorpe came over as superintendent of the college, or East India School, which was situated at Charlotte. In 1621, carpenters were sent to erect buildings, and Rev. Patrick Copeland was placed at its head. But in March, 1622, the massacre followed, when Thorpe and nearly 350 men, women, and children were barbarously slain, and the efforts for the school terminated. The next movement of a general and public character was that of Rev. James Blair, D. D., which resulted in the establishment of the College of William and Mary.

In the Maryland settlement there were earnest friends of education, but they struggled against circumstances which rendered the full realization of the fruits of their efforts impossible. In April, 1671, thirty-seven years after the arrival of Lord Baltimore, the upper house of the assembly passed an act for the establishment of a school or college. This act was returned from the lower house with an amendment to the effect that the tutors or schoolmasters may be qualified according to the Reformed Church of England, or that there be two schoolmasters, one for Catholic and the other for the Protestant children, which was so unsatisfactory that twenty-three years elapsed before any further attempt at legislation was made.

In 1694 an effort was commenced which in seven years resulted in the establishment of a school near the site of the State House. It will be seen that the people began to rely almost entirely upon the private tuition of their children.

William Penn found the Swedes and their school already on the Delaware. His ideas were well expressed in his declaration, "That which makes a good constitution must keep it, viz, men of wisdom and virtue, qualities that, because they descend not

with worldly inheritance, must be carefully propagated by virtuous education of youth, for which spare no cost; for by such parsimony all that is saved is lost."

The reliance of the Quaker upon the inner light for guidance in life necessarily made the training of the young to act in accordance with that light of paramount importance. Education was confined chiefly to the family and the pay school; but history with hardly a dissenting voice accords to the English colonists of New England the credit of having developed those forms of action in reference to the education of children containing more distinct features to be adopted in the systems of the country than any others.

In Luther's robust treatment of the issues of his day, he placed great stress upon home government, the duty of the family, the duty of the church to children, criticizing the mistakes of the period as he understood them; and in his address to magistrates he brings up with conspicuous force the duty of the state to guarantee the care of the young. He observed: "Beloved rulers, if we find it necessary to expend such large sums as we do yearly upon artillery, roads, bridges, dikes, and a thousand other things of the sort in order that a city may be assured of continued order, peace, and tranquillity, ought we not to expend on the poor suffering youth therein at least enough to provide them with a schoolmaster?" We have seen how these remarkable words of Luther were wrought into the family, the church, and the state in Holland. Here the Pilgrims met them. They had left their homes for conscience' sake; for the sake of certain beliefs in which they differed from their neighbors. These opinions bore upon the destiny of the human soul. They were most concerned about God and mankind. Man created in the image of his God received for his descendants equal privileges. Each human soul was of infinite value, and all were guaranteed in their very nature equality of privileges. The state, the church, the family, the order of Providence, existed in their judgment to give to each soul an opportunity of eternal blessedness. Their Bible was the divine guide to that end. Nothing was more natural, therefore, than that they should seek the best way for the training of their children. They were themselves to a remarkable degree educated. They all were especially taught in the divine word and the idea of correct conduct, and an unusual proportion of their men were educated in the schools and universities of England. They were willing to find new things. It cannot be doubted that they got important suggestions in matters of education from Holland, but they did not imitate blindly. They adapted their action to their circumstances.

Sixteen years after the settlement of Boston, the colony of Massachusetts Bay appropriated £400 for the establishment of Harvard College, in which also the element of private benefactions appeared. In 1642 it was ordered "that the officers of every town should have a vigilant eye over their brethren that none of them should suffer so much barbarism in any of their families as not to endeavor to teach by themselves or others their children and apprentices perfectly to read the English tongue and knowledge of the capital laws." Here is civil action to secure universal education. Soon after they enacted, "To the end that learning may not be buried in the graves of our fathers, that every township increased to the number of fifty householders should bind one to teach the children;" and soon further, "that any town increased to one hundred families shall set up a grammar school, where youths can be fitted for the university." In case of neglect the penalty was affixed. Here is a philosophical recognition of the subdivision of instruction into elementary, secondary, and superior. The whole State or colony through its legislative power provides the method and makes the duty obligatory upon the town to sustain elementary and secondary instruction, while the State itself makes appropriation and requires proper aid for the university. The whole property is taxed for all the children in the different grades. It is not amiss here to note the wide effect of this action.

Maine, as is well known, was a part of Massachusetts until it became a State.

The methods of the colonies of Connecticut were closely in harmony with those of the Bay; and Roger Williams, though escaping to Rhode Island, did not leave behind

the excellencies of the institutions already founded; so that it is simply a statement of the truth to affirm that this action of Massachusetts colony substantially shaped the educational institutions of New England.

CONDITION OF EDUCATION AT THE TIME OF THE DECLARATION OF INDEPENDENCE.

Previously American institutions had been affected by (1) foreign legislation, (2) by continued immigration, and (3) general interchange of communication. Hereafter the power of direct legislation ceases. The effect of the Old World upon the New is to be that of one nation upon another, or of several upon each other: first, by immigration; second, by intercommunication.

What influence may have come from the Spanish peninsula at this period is sufficiently indicated by the following extract from a report made to the King by the minister of state, Marquis de Asinada. He affirms, "In the whole kingdom there is not a professorship of law, of natural sciences, of anatomy, and of botany. We have no good map of Spain and its provinces, and no man who could draw such a map, and we are obliged to use the very imperfect maps of Spain which we receive from the Netherlands and other provinces; so that we, to our great disgrace, do not know the right location and true distances of our cities."

Though Sweden had contributed such valuable ideas to the settlements on the Delaware, they had not fulfilled the expectations of progress.

In England, methods and administration had made little progress, and had certainly in no way kept pace with her literature and commerce. The sun of the Dutch republic was to set in darkness as that of the American republic arose.

The Huguenots, or French Pilgrims, escaping from persecution at home, brought most valuable contributions; so also the Scotch, who came bringing ideas, customs, and schools, so deeply impressed by the influence of John Knox.

Reviewing the period which elapsed between the time the colonists left their old for their new homes, to the date of the opening of the war with the mother country, and looking into the details of the condition of intelligence and the instrumentalities for education, it would be interesting to bring out fully the fragmentary records which remain. A careful study will, I think, leave the impression that, though the religious sentiments of the people made the interests of the Church prominent in education; though the interest in civil affairs encouraged the study of politics and statesmanship, so that at an early date it was declared in England that more copies of Blackstone were sold in the colonies than at home; though generally in the colonies there was felt a deep sense of the parental obligation to train up the child in the way he should go, and the home was made specially active to this end, and though there was a large number, comparatively speaking, eminent for their cultured minds, yet I think the most careful survey will leave the impression that the progress of educational improvement did not on the average keep pace with the increase of population, and that the intelligence of the generation at the opening of the War of Independence, so far as dependent upon books and schools, would not average so high as the intelligence of the first colonists. It should be remembered that church and state were substantially united in colonial action south of the Hudson.

The struggle for separation being the most severe in Virginia, and not ended until some time after the period of Independence, this union of church and state had no small effect upon the ideas and customs that prevailed in regard to training the young.

The changes in what remained of the Spanish colonies require no note. In Virginia, the successful establishment of William and Mary College exercised a most salutary influence in training the sons of the higher classes. The first building was planned by the great architect, Christopher Wren. The first commencement, in 1700, was a noted event. Several planters came in their coaches, others in sloops, from New York, Pennsylvania, and Maryland. Even Indians had the curiosity to visit Williamsburg. The College of William and Mary sent forth, together with many others prominent in the revolutionary movement, Peyton Randolph, Edmund Randolph, John Marshall, Thomas Jefferson, James Monroe, and John Tyler, governor of Virginia.

The Society for the Propagation of the Gospel was specially active in furnishing teachers in Virginia as elsewhere. The ignorance of the lowest classes was as extreme as in England. This was specially true of the several colonies in which the institutions more exactly accorded with those at home. In Maryland a statement signed by twenty-one clergymen in 1714 affirms that the case of schools is very bad. In 1717, there was an effort made to establish a school in every county. Taxes were to be levied chiefly upon furs, tobacco, and liquors; and in one law the following sources were specified: "For every Irish papist servant and every negro imported into the provinces, there were required to be paid 20 shillings each," in addition to what was paid before, to go to the establishment of such schools. Most meritorious efforts were made by individuals to found schools. Large benefactions were bestowed in lands and otherwise. In 1750, a charity work school was founded near Easton, in Talbot County, the first manual labor school in the State. In 1754, an order of the council requiring an oath of schoolmasters brought out some curious facts. For instance, in Prince George's County there were 13 teachers, one the rector of the parish, one register of wills, four convicted servants, and three indented servants. In 1763, a project to establish the college was revived without success, and among the items of revenue was to be a tax from 3 shillings to 20 shillings on bachelors. Amid these difficulties instruction was widely conducted by tutors in private families, or for the children of adjacent families. Sometimes the teachers were men of eminence and graduates of the best European universities. There was no absolute security against their ignorance, their incompetency or immorality, as is seen by an advertisement in the Maryland Gazette, of February 28, 1771:

"Ran away: a servant man from Dorchester County, who had followed the occupation of a schoolmaster; much given to drink and gambling."

And again in the same paper in February 17, 1774:

"To be sold, a schoolmaster and indented servant who has got two years to serve. Signed John Hammond, near Annapolis."

To which the following N. B. was added: "He is sold for no fault any more than we are done with him. He can learn bookkeeping, and is an excellent good scholar."

As an illustration of the pains and difficulties those encountered who sought culture for their children, I wish to instance the community at Dorchester, S. C. An act of the assembly was secured in 1724 for the establishment of a free school in the parish of St. George; and this act was transmitted to Great Britain for royal assent, some of the leading men of the colonies affirming that "the chief source of irreligion and immorality here is the want of schools; and we may justly be apprehensive that if our children continue longer to be deprived of being instructed, Christianity will of course decay insensibly, and we shall have a generation of our own as ignorant as the native Indians."

In 1776 there were 11 colleges that are still in existence. Harvard College, founded in 1638, had graduated 2,567 students. The College of William and Mary, founded in 1693, had graduated 496 students. Yale College, whose foundation dates back to 1701, had graduated, in 1776, 1,405 students. The College of New Jersey, founded in 1746, numbered its graduates up to the time of the Revolution at 567. Washington and Lee College, founded in 1749, had graduated 30; Columbia College, founded in 1754, had graduated 124; Brown University, founded in 1764, had sent out 54 graduates; Dartmouth College, founded in 1769, had graduated 43, and Rutgers, founded in 1770, numbered 13 graduates. The University of Pennsylvania was founded in 1747. Hampden Sidney College was founded in 1775.

Of the academies existing at that time there are at present nine: The Latin Grammar School, Boston, founded in 1635; the Hopkins Grammar School, New Haven, founded in 1660; Germantown Academy, 1760; Durham Academy, Byfield, Mass., 1763; Columbia Grammar School, New York, 1763; University Grammar School, Providence, 1764; Rutgers College Grammar School, 1770; Charlotte Hall School, Maryland, 1774; and Kingston Academy, 1774.

Before 1800 a dozen more colleges were founded that are still in existence, and also 28 academies.

The existence of 29 libraries in 1776 has been traced, containing 3,682 volumes.

In January, 1776, there were published the following newspapers in the thirteen colonies: In Massachusetts, 7; New Hampshire, 1; Rhode Island, 2; Connecticut, 4; New York, 4; Pennsylvania, 9—of these 2 were German and one German and English—Maryland, 2; Virginia, 2; North Carolina, 2; South Carolina, 3; Georgia, 1. There were no daily newspapers. In 1800 it is believed that 150 newspapers were published in the United States. In 1704 the Boston News-Letter, the first newspaper in the colony, was published by John Campbell, bookseller and postmaster.*

With reference to the development of principles and methods among ourselves, we must confess that the century has not been one of uninterrupted and universal progress. Unnatural parents, indifferent citizens and rulers, incompetent teachers, selfishness, vice, and crime, have here and there at times done effective work.

We cannot read the declaration of Washington, of Adams, of Jefferson, of Hamilton, and of others, their eminent compeers, without a profound impression of their thorough appreciation of the duty of education, and their conviction that the perpetuity of the blessings they sought for their country depended upon its success. We can never forget Washington's admonition to promote as an object of primary importance institutions for the general diffusion of knowledge. "In proportion as the structure of government gives force to public opinion, it is essential that public opinion should be enlightened." Jefferson sought for Virginia a system of education that should embrace, first, elementary schools; second, colleges; third, an ultimate grade for teaching the sciences in their highest degree. Though failing in part, he succeeded in the establishment of a university, which he cherished as one of the greatest honors to his name; while Hamilton, in addition to his emphatic words, was one of the first to participate in the organization of the board of regents for the State of New York, as a part of a scheme for the universal education of the people of New York.

The first great national educational act that we shall meet in the beginning of the century now closing, and the one that overshadows all others, is found in the ordinances of the Confederate Congress of 1785 to 1787. Liberty was decreed for that vast territory north of the Ohio River, the duty of education was enforced, and from the public domain sections were given for elementary and superior instruction, thus, in some measure, providing the means for the end proposed. On these acts, we may say, the history of the country turns as on a hinge. Had slavery gone into this territory and education been excluded, this last experiment in the interest of man as such, irrespective of all distinctions, free from all adventitious circumstances, would perhaps have proved a failure. The War of Independence had dealt harshly with education. The young men had been called to the field, as well as the old.† The seven years of conflict had deprived many of those who survived of all other culture save that of the march, the camp, and the battle in defence of their country. The most marked efforts observable in the early years of the century were put forth in the form and in the direction of existing instrumentalities. Before the close of the eighteenth century 23 colleges were founded, 37 academies were established, and 49 libraries, containing between 75,000 and 80,000 volumes. Slavery, which had generally existed in the country, in the more Northern States never succeeded

* It was continued by different publishers until 1776, or 72 years. It was the only paper published in Boston during the siege. In 1719 the Boston Gazette was published, and 1721 the New England Courant, by James Franklin.

† G. W. Nesmith, LL. D., an aged and eminent lawyer and friend of education, of Franklin, N. H., the well known confidential friend of Daniel Webster, furnishes the following interesting items in regard to a schoolmaster who served in the war of Independence: Daniel Parkinson, born in Ireland in 1741, landed in New York, graduated from Princeton College in 1765, went to New Hampshire and became a teacher; in 1765 enlisted in Colonel Stark's regiment and was promoted to quartermaster. His meritorious services were well known. After the war he resumed teaching, and died in Canterbury in 1820, a short time before his death preparing his own epitaph, which may still be seen on a slate head-stone and reads as follows:

"Hibernia me genuit. America nutrivit. Nassau Hall educavit. Docui, militavi, atque manibus laboravi. Sic cursum meum finivi. Nunc terra me occupavit, et quieto in pulvere dormio, quasi in gremio materno meo. Huc ades, amice mi! Aspice, et memento, ut moriendum quoque certe sit tibi. Ergo vale et cave."

in overcoming the belief that education is the duty and privilege of all men, and, on the more sterile soils, it gradually began to disappear. In the warmer climate and on the fertile soils of the South it was more profitable, and, gaining larger sway, soon began to be sensitive at the approach of intelligence to the slave. Facts and sentiments, however, remained much the same until between 1830 and 1840, when the series of State constitutional conventions occurred in which the guarantees of slavery secured stronger expression in the several constitutions, and then followed in a few decades the series of legislative enactments forbidding instruction to the slave and exerting the power of the state to keep him in darkness. While there were in these States individuals who struggled for the universal education of the white population, they labored at a disadvantage; and although here and there, in spite of untold adverse circumstances, systems of elementary instruction and schools of some efficiency were established, generally educational schemes were partially started, lacked efficiency, and resulted in schools known as pauper schools; those who had wealth relying upon instruction in the family, in the private or incorporated academy, in the college and university, for the education of their children. This supremacy of the influence of slavery seeking to strengthen and guard itself, became sensitive to any thought or action in the national councils which might, according to the judgment of its friends, in any way imperil its existence and progress. Therefore, for this period education was rarely broached in Congress, and this coöperative influence, save in the carrying out of the policy of land grants, was substantially shut off.

But while in the Southern States the educators were being put to disadvantage, in some of the Northern States a revival of education was beginning, destined to create a new era. There was a struggle to know the facts. Especially in New York and Massachusetts was it sought to secure reports from towns and cities. The national census in 1840 for the first time recognized the items of intelligence.* Something more than action by the church or the family, or legislation by the State, was seen to be necessary. That great force among us represented by voluntary organizations was brought into requisition. The subject of education was discussed in conventions and in the press. The Lancasterian impulse, which had so profoundly moved in behalf of the lower classes in England, reached to our shores, and Lancaster himself died among us, I regret to say, in poverty, and few even of our teachers know his resting place.

Light was sought from the experience of other peoples. The ideas and methods adopted in some German states had attracted attention. Prussia, that had been so terribly crushed, was seen to be rising in its rank among the nations. The secret was discovered to be education, taking to itself something of the military form, according to the ideas of the times. Every child was to be educated; every man was to be a soldier. Notable visits to Europe were made by Americans. Three reports, that by Mann, that by Bache, and that by Stowe, the one first published by Massachusetts, the other by Girard College, and the last by Ohio, have been much quoted. Another visit, however, which did not result in a report so often mentioned in our literature, yet one that had great effect upon the history of education in the country, was that of Dr. Henry Barnard, of Connecticut, especially as it enlarged his own views, and added important elements to their character and adaptation in his long course of educational labor. Not only did our own great reformers in education study foreign countries, and our teachers visit them, but our schools and colleges steadily drew on them for instructors. Germany furnished us many teachers. A marked change manifested itself in the organization of education. State supervision was inaugurated. Gideon Hawley became State superintendent of common schools for New York in 1813; Hon. Horace Mann, secretary of the board of education, Massachusetts, in 1837. Now the idea of State supervision is embodied in the educational administration of every State in the Union, some of them guarding it by the requirements of the constitution. And this idea has

*The items inquiring in regard to intelligence were inserted in the schedules by the Secretary of State on the suggestion of Hon. Henry Barnard, the first Commissioner of the United States Bureau of Education.

sought to perfect itself by adding here county supervision, there city supervision, and there town.

A second important element which manifested itself was the care for the qualification of teachers. The first State normal school was opened by Father Pierce, in Lexington, Mass., with three pupils. The normal school has been supplemented by teachers' institutes.

A third element to be noted is the attention to educational literature, school journals, and works on the philosophy and methods of education. Whatever literature we have on the subject of education has almost entirely sprung up in the last forty years.

A fourth important change is the introduction of high schools, organized, supported, and directed by civil action, which is in a certain sense going back to the original grammar school of the Massachusetts colonial education act, that had been allowed to pass measurably into desuetude, trusting to supply its place by the tuition of the academy.

Another element was the introduction of State colleges or universities. This, too, is only a return to the method adopted by Massachusetts in the establishment of Harvard College.

Another element is the introduction of technical, industrial, and scientific education. This has received an immense impulse from the act of Congress donating lands for the establishment of colleges of agriculture and the mechanic arts, the passage of which is largely due to the persistent efforts of Hon. Justin S. Morrill, of Vermont.

Still another element is the enlargement of the sphere of woman in education. Here the change is no less than a revolution, whether we consider the instruction she receives or the work she does in educational literature, or as instructor or officer.

In recounting these special elements contributive to the greater efficiency of education, we should not omit the private benefactions of our citizens to this cause.

Another and most effective element in the progress of education among us is the preparation of educational information, particularly of statistics, for use in the guidance of teachers and officers, institutions and systems. In towns, States, and the nation, we can be more certain what we are doing and what we are not doing, what we do well and what we do ill, what corrections are needed and how they are to be applied.

M. Buisson, an impartial and very competent judge, in a report to the French minister of public instruction on the educational features of the exhibition at Vienna, in 1873, observes that "the United States Bureau of Education commenced a few years ago the organization of educational statistics for the entire Union. Not one country in Europe has offered such complete and carefully prepared reports. America shows that all difficulties in preparing statistical works can be overcome by uniformity in the system."

Slavery, too, having been abolished, the slave has become both teacher and pupil. The barriers set up by slavery against universal intelligence are passing away. Statutes do not prohibit but enforce the education of colored children; the nation by the terms of the Constitution has committed its fortunes to universal male suffrage, and all national interests are now bound up with universal intelligence. Other interests, religious and patriotic, commercial and industrial, will see this fact more and more, and from sheer selfishness, if from no other motive, seek to devise the best educational measures. Constitutions may be amended, statutes enacted, officers changed, agencies for the promotion of intelligence abolished, funds perverted or cut off, teachers' salaries reduced, schools closed on the demand of ignorance, but universal education is the watchword of the party which, notwithstanding temporary drawbacks, must ultimately and completely triumph.

The voice of our country's history declares to any in these extremities, let no one despair, let no one doubt; all the success of ignorance will be temporary.

Education that a century ago in so many places was compelled to hide its head in the monastery, or under the shadow of the church, or could go only where there was wealth and was not considered in the reckoning of national forces, now is coming to the front in every progressive nation. True, the term is not always used to des-

ignate the same idea in all its fulness and robustness, naturally including every force and circumstance that unfolds, informs, nourishes, trains, directs, and strengthens the entire man from the cradle to the grave, and is, when normal and true, adapted to lift him up and draw him toward the divine and perfect, and to bring forward those customs and institutions coöperating to this result.

Considering the space in this report possible for such allusions to the past, and their necessary brevity and imperfection, the desire for completeness has constantly suggested that it would be better to omit than insert them in this unsatisfactory shape; but a sense of their possible good in any form has prevailed. Those who have time for research can omit them, or use them only as hints and complete the studies suggested by them, and thus, fully informed of the past in education, come to the examination of the condition of education in 1875.*

The provisions made for the education of the deaf and dumb and the blind, for the feeble-minded and for the reformatories for juvenile offenders are of comparatively recent origin.

SUMMARIES OF INFORMATION REPORTED TO THE BUREAU FOR THE YEAR 1875.

The plan of collecting and presenting this information is substantially the same as in previous years. The brief space already given for showing the growth of educational systems and institutions will necessarily exclude much matter usually presented in connection with the summaries drawn from the several tables in the appendix.

Statistical summary of institutions, instructors, and students, as collected by the United States Bureau of Education, for 1870, 1871, 1872, 1873, 1874, *and* 1875.

	1870.			1871.			1872.

a From 1870–'72, inclusive, this class of schools was included in the table of academies.

b Including schools of pharmacy and dentistry.

c In 177 cities.

* The abstracts for 1875 contained in the appendix were prepared in the abstract division: chief, Dr. A. Shiras; assistants, Mrs. J. A. Holmes and Mrs. E. H. Disbrow. They begin for each State with a statement of the constitutional and legal provisions of education in each State, with the hope that in the future all changes can be noted and the history of administration brought out, so that the continuation of these reports will furnish a complete outline history of education in each State and Territory. I hope also to include the progress of judicial decision in regard to education. The accomplishment of this purpose will depend upon the coöperation of school officers, so far so generously accorded in all parts of the country.

Statistical summary of institutions, instructors, and students, as collected by the United States Bureau of Education, for 1870, 1871, 1872, 1873, 1874, *and* 1875—Concluded.

a From 1870–'72, inclusive, this class of schools was included in the table of academies.

b Including schools of pharmacy and dentistry.

c In 177 cities.

So far as relates to the several classes of institutions embraced in the above summary, it can be seen at a glance how the character of the information has improved from year to year.

STATE SYSTEMS OF PUBLIC INSTRUCTION.

The diversity of ages embraced in the school censuses of the States and Territories as seen in the following table, introduces an element of uncertainty in all comparisons respecting the enrolment and the ratio of attendance in the public schools. A school census in all the States, substantially uniform in respect to ages of youth embraced therein, seems therefore eminently desirable, and it is hoped that efforts may be made to secure it.

Table showing the ages embraced in the school population of the several States and Territories.

States and Territories.	School age.	States and Territories.	School age.
Connecticut	4-16	Virginia	5-21
Utah	4-16	Colorado	5-21
Oregon	4-20	Dakota	5-21

a The number enrolled in public schools.
b In 1873.
c Estimated.
d In the country; in 26 cities it was 195 days.

A glance at these figures impresses one, first, with the magnitude of the interest involved; secondly, with an idea of the very different opportunities for education furnished by the different States and Territories. Only one State, Delaware, and three Territories, the Indian, New Mexico, and Wyoming, do not report their school population. In the other thirty-six States and eight Territories, there were 14,007,522 children

by their several laws entitled to instruction. All the States, either by actual count, or by estimate, report the pupils enrolled in the public school system, giving a total of 8,756,659. The following named States and Territories cannot report the average attendance in their schools, a truer measure of the educational work of the year, viz: Delaware, Illinois, Iowa, Louisiana, Nebraska, Oregon, South Carolina, and Wisconsin, and the Indian Territory, and that of Wyoming, Washington, New Mexico, Idaho, and Dakota. Texas can only estimate this item. The States of Connecticut, Iowa, Kansas, Ohio, South Carolina, and Virginia, and the District of Columbia, Montana, and Utah, are able to give the school population between 6 and 16 years of age. Rhode Island gives it by estimate, and New Hampshire by the number enrolled in the public schools. It is believed that all the States and Territories, however diverse the provisions of their laws in other respects, will soon be able to draw this line and show their school population, the enrolment in public and private schools, and the average daily attendance between 6 and 16. This result obtained and taken in connection with the additional column, the average duration of schools in days, will furnish an invaluable basis for just comparisons of the work accomplished under the several systems. Only Arkansas, Georgia, Illinois, Louisiana, Nevada, and Dakota, Idaho, Wyoming, and Indian Territories, are unable to report the duration of their schools. This is a most important fact in the showing of the work done under any system, and we may be assured that the determination of the friends of education to have the school business well done, will make sure of this item everywhere at an early date. The comparison between New Jersey, the highest reported, in which the average number of days taught equals 194, and North Carolina, the lowest reported, in which the average number of days taught equals only 50, is full of significance.

TABLE I.—PART 1.—*Summary* (B) *of school age, population, enrolment, attendance, &c.*

* Estimated by the Bureau.
a Number enrolled in public schools.
b In 1873.
c Estimated.
d In the country; in 26 cities it was 195 days.

Having given the facts as furnished, for the purpose of aiding many inquirers, the Bureau, using the ratio of the several States that report their school population between 6 and 16 to the whole school population of those several States and other data, has inserted here the estimates for the several States and Territories of the school population between 6 and 16. These figures will not only aid the investigation mentioned, but serve to illustrate the importance of this line of comparison. These extended generalizations bring out with great clearness the importance of including all facts not only in public schools, but in connection with all other instruction afforded.

TABLE I.—PART 1.—*Summary (C) of the number of teachers employed in the public schools, and the average salary of teachers per month, in the respective States and Territories.*

States and Territories.	Number of teachers employed in public schools.		Average salary of teachers per month.

Washington	(220)			

a There are also 45 teachers, sex not reported. *b* Estimated. *c* In the country. In the cities the average salaries are—males, $109; females, $39.40.

TABLE I.—PART I.—*Summary* (C) *of teachers in the public schools, &c.*—Concluded.

States and Territories.	Number of teachers employed in public schools.		Average salary of teachers per month.	
	Male.	Female.	Male.	Female.
Wyoming	7	16	.....	.....
Indian	.....	.....	.....	.....
Total number of teachers	(1,839)		.....	.....
Grand total	(249,262)		.....	.....

The State of Georgia, and the Indian Territory, and Idaho are unable to report the number of teachers employed in public schools. Texas gives only an estimate. All the other States and Territories except Delaware, Florida, North Carolina, Texas, and Wisconsin, and the Territory of Washington, are able to report both the number of men and women teachers in their public schools. The total number of teachers reported in the public schools is 249,262. But, large as this number is, it is 100,000 short of the number required to teach the entire school population reported, allowing 40 scholars on the average to the teacher. No figures are more indicative of woman's triumph in spheres outside of the family. It will be noticed that in the Southern States more men are employed than women; that in the Northern Central States, the number of women is greater than the number of men, while the excess of women teachers is much the greatest in New England, especially in Massachusetts, where some are already beginning to think the interests of education have suffered by the too exclusive surrender of the work of instruction to one sex. In Massachusetts it will be noticed that there are 1,169 men and 8,047 women teachers. It will be observed that some of the States, Alabama, Delaware, Kentucky, Nevada, and Texas, report the payment of the same salaries for the same work to men and women teachers.

Statement showing monthly compensation of teachers in public schools.

States and Territories.	Male.	Female.	States and Territories.	Male.	Female.
District of Columbia	$113 00	$75 00	Vermont	$45 62	$25 65
Nevada	(100 56)		Wisconsin	43 50	27 13
Arizona	100 00	100 00	New Hampshire	42 61	25 54
Massachusetts	88 37	35 35	Maryland	41 73	41 73
California	84 93	68 01	Minnesota	41 36	28 91
Connecticut	70 05	37 35	Pennsylvania	41 07	34 00
New Jersey	67 65	37 75	Nebraska	38 60	33 10
Montana	65 00	57 00	Missouri	38 00	29 50
Indiana	65 00	40 00	Louisiana	37 00	37 00
Colorado	60 00	48 00	Maine	37 00	18 00
Ohio	60 00	44 00	Iowa	36 68	28 33
Rhode Island	58 18	46 17	West Virginia	35 03	30 77
Mississippi	55 47	55 47	Dakota	35 00	25 00
Idaho	55 00	55 00	Kansas	33 98	27 25
Texas	(53 00)		Virginia	33 52	28 71
Oregon	51 45	45 50	South Carolina	31 64	29 21
Michigan	51 29	28 19	Tennessee	30 85	30 85
Florida	50 00	30 00	North Carolina	30 00	25 00
Kentucky	(49 40)		Delaware	(28 00)	
Illinois	48 21	33 32	Alabama	(27 20)	
Utah	47 00	23 00			

The fact that the District of Columbia gives the highest average in the preceding table, is due to the limited number of country schools; the teachers are nearly all in city schools, and, therefore, their compensation should be brought into comparison with that paid in other cities.

TABLE I.—PART 2.—*Summary* (A) *of annual income and expenditure, &c.*

a Value of school-houses.

In this summary is shown the large financial business transacted in connection with education in the country, representing a total income for the public schools of $88,648,950, and a total expenditure of $14,809,877 on account of buildings, furniture, libraries, and apparatus, $842,959 for supervision; for teachers' salaries, $47,927,474; for miscellaneous items, $11,988,122, and a grand total expenditure of $81,932,954, as far as can be reported; the total valuation of school property employed in this work is reported at $173,833,545. It will be noted that North Carolina has been unable to give school income for 1874 and 1875, and that Idaho, Washington, and Wyoming do not give it for 1875. The States of Delaware, Florida, Georgia, and Missouri, and the Territories of Idaho, New Mexico, Washington, Wyoming, and the Indian Territory, cannot give the expenditure for buildings; Delaware, Georgia, Illinois, Iowa, Kentucky, Massachusetts, Michigan, Minnesota, Missouri, Nevada, New Hampshire, New York, North Carolina, South Carolina, and the Territories of Arizona, Dakota, Idaho, New Mexico, Washington, Wyoming, and the Indian Territory, do not report the amount paid for supervision; and Delaware, Florida, Georgia, Kentucky, Massachusetts, Missouri, Oregon, and the Territories of Arizona and Idaho, and the Indian Territory, do not report the amount paid to teachers; while neither Delaware, Georgia, Missouri, nor Idaho, nor the Indian Territory, report the total expenditures; and Alabama, Connecticut, Florida, Georgia, Illinois, Maryland, North Carolina, Tennessee, Texas, the Indian Territory, and the Territories of Idaho, New Mexico, and Washington, neither report nor estimate the money value of sites, buildings, and other school property. This is the business of dollars and cents in which all are expected to keep an account for themselves or their employers. Can educators do their work well and do less? It should at this point be remembered that Delaware has had a State superintendent for only a single year, and that there are not a few communities that select their school officers with the notion that anybody knows enough to manage schools. The absurdity and evil consequences of this opinion become conspicuous from a glance at these generalizations,

if in view of no other consideration. But what shall we say of those who believe that these figures should not be collated, and school work thus corrected and stimulated throughout the land?

TABLE I.—PART 2.—*Summary* (B) *of per capita expenditure.*

States and Territories.	Expenditure in the year *per capita* of the school population.	Expenditure in the year *per capita* of pupils enrolled in public schools.	Expenditure in the year *per capita* of average attendance in public schools.	Expenditure in the year *per capita* of population between 6 and 16.	Expenditure in the year *per capita* of population between 6 and 16, including interest on the value of all school property.

a Per capita of population between 5 and 17.

It will be observed that Massachusetts expends $22, the highest sum, *per capita* to the school population, and Georgia $1.10, the lowest; that Arizona expends the most, or $42.41 *per capita* of pupils enrolled in the public schools, and Georgia, again, the least, $2.78. Here again it is seen that if we could fill out the two columns on the basis of population between 6 and 16, we should have a more satisfactory ground of comparison.

GENERALIZATIONS BY YEARS AND BY TOPICS WITHOUT REFERENCE TO STATES.

Statistical summary showing the school population, enrolment, attendance, income, expenditure, &c., for 1871, 1872, 1873, 1874, and 1875, as collected by the United States Bureau of Education.

	Year.	Number reporting.		In States.	In Territories.
		States.	Territories.		
School population	1871	29	.....	9,632,969	.....

	1875	28	3	81,486,158	323,236

In the above table we have summaries as reported by the Bureau for the last six years on ten items relating to public education throughout the country. They are worthy the attentive study of friends of education. Any one in possession of these facts stands on vantage ground in any study of our social or educational systems. To understand their full import we need follow them through the several reports to the last details, but, without elaboration, they carry their encouragement and admonition to every teacher and school officer in the country.

SUMMARY OF EDUCATIONAL CONDITION IN THE STATES AND TERRITORIES FOR 1875.

NEW ENGLAND STATES.

Maine, from some cause unexplained, shows a decline in both her school population and the enrolment and attendance in the public schools. There was, from 1874 to 1875, a decrease of 3,742 in the number of scholars between 4 and 21; of 4,637 in the number registered in summer schools; of 1,990 in the number registered in winter schools; and in the average attendance on the two a mean decrease of 3,269. In the estimated value of school property, also, there is a reported decrease of $59,762, although there were 104 new school-houses built in 1875, at a cost of $110,725. To offset this, however, there appear to have been 70 more teachers employed in the less attended summer schools than in 1874, and in the winter schools 164 more; while in the whole amount expended for schools, free high schools not included, there was an increase of $91,684—facts that imply fuller teaching and better support of schools, notwithstanding diminished numbers in them. Two Kindergärten show 45 children in attendance. The normal schools report 548 students and 34 graduates.

In 157 free high schools there were, for the year, 13,469 pupils, which number, with 1,249 in academies and preparatory schools or departments, gives 14,718 in secondary schools, besides 267 in business colleges, 71 in women's collegiate classes, 335 in regular collegiate classes, 115 in agricultural college classes, 65 in theological, and 97 in medical.

New Hampshire reports a decrease, from 1873 to 1875, of 1,123 in the number enrolled in public schools, and of 154 in the number of teachers for them; but an increase of 1,529 in the average attendance on public instruction, of $120,611 in the income for sustaining it, and of $243,537 in the expenditure upon it. One Kindergarten appears, with 14 attendants. In the State Normal School were 270 pupils, of whom 34 graduated. In secondary schools 10,514 students were reported, about one-half of them pursuing higher branches of study; while in Dartmouth College classes were 337, in her three schools of science, 113, and in her medical school, 84. The returns from the colleges for women are imperfect. In one business college were 333 students.

In *Vermont*, a comparison of the return for 1875 with the figures for 1874 shows an increase of 3,036 in the number of children of school age, and of 407 in the number enrolled in public schools, with an apparent decrease of 10,549* in the average daily attendance, of 396 in the number of teachers employed, and of $60,002.71 in expenditure for school purposes. The pupils in her normal schools in 1875 numbered 482; the graduates from them, 96. In 26 secondary schools 2,657 pupils were reported, 769 of them in higher studies, with no report from the State high schools. In regular collegiate classes appear 184 students; in women's college classes, 52; in agricultural college classes, 20; in those of the State medical school, 62.

In *Massachusetts*—except in the wages of teachers, which were in some places reduced—we find an advance along the whole line: 2,227 more persons of school age, 5,093 more enrolled in public schools, 6,613 more in average attendance, and 8,299 more over the school age attending the schools; all which is additional to 16,368 in evening schools and 16,650 in private schools. The number of public schools, too, increased by 126; the number of teachers by 501; the receipts for school purposes by $105,312.42; the expenditures on them, exclusive of those for erecting and repairing school houses, by

* This is the difference between the 50,023 reported total average attendance in 1874 and 39,474 reported for 1875; but in the former number may possibly have been included the attendance in private schools as well as public.

$134,918.80. Ten Kindergärten report 167 pupils. In five State normal schools there were 923 students, of whom 184 graduated, while in the normal art school 188 received instruction. In 63 incorporated academies were 7,594 pupils; and if the same ratio of attendance be allowed for 208 high schools reported, we get 25,064 more in these, making, with 2,426 in preparatory schools and preparatory departments of colleges, 36,642 in institutions for secondary training, not including 826 in business colleges. Then in regular collegiate classes were 1,618 students; in kindred classes for young women, 750, in the agricultural college, free institute of science, and institute of technology, 530; in theological studies, 326; in legal, the same number; in medical, 496; in charitable and reformatory schools, 1,952.

Rhode Island presents like encouraging statistics, showing, (if the same elements enter into the reports for 1874 and 1875,) an increase of 9,516 in school population; of 3,607 in the number enrolled in public schools; of 2,739 in average attendance; of 226 in the number of teachers employed, with a most gratifying augmentation of their monthly wages; while the receipts for the schools are $16,027 in advance of the preceding year and the expenditures upon them $73,792.21 in advance. The State Normal School had during the year 159 pupils, 26 of whom had previously taught. In secondary schools—the information in respect to which is exceedingly imperfect—there appear to have been about 2,000 pupils; in business colleges, 605; in regular collegiate classes, 255; in the State reformatory school, 197.

Connecticut holds nobly on her way, presenting an increase of 4,441 in the number enrolled in public schools, and of 4,334 in the number enrolled in schools of all kinds; though her school population was only 620 greater than in January, 1873. The percentage of enrolment in schools of all kinds reached, as respects school population, the extraordinary figure of 95.65, leaving only a percentage of 4.35 not enrolled in any school. Her receipts for public schools were $70,458 in advance of those for the school year 1873–'74; her expenditures upon them, $220,131 in advance. With six fewer public schools, there were yet forty new school houses erected, and 19 more than in the previous year reported to be in fair or good condition. Two Kindergärten report 92 children in attendance. The State Normal School had 175 pupils for the year and graduated 50. In the high schools of Hartford and New Haven—the only ones from which there are any clear statistics—were 937 pupils; in other secondary schools reported, 2,272. In the three colleges were 908 collegiate students; in Sheffield Scientific School, 224 besides; in theological schools, 155; in the Yale Law School, 84; in the medical school, 42; in charitable, industrial, and reform schools, 1,097.

MIDDLE STATES.

In *New York* we find, notwithstanding a decrease of 13,772 in school population, an enrolment of 14,874 more in public schools than in 1873–'74, with an increase of 16,610 in the average attendance; an increase also of 391 in the number of teachers, with a slight advance in wages paid them; the expenditures for schools (less the amount on hand) being $512,274, in advance of 1874, and the value of school property $712,477 in advance. In the normal departments of her eight State Normal Schools, and in that for the city of New York, were 4,021 students,* of whom 394 graduated; in teachers' classes in academies were 2,944. Respecting secondary schools information is less definite; but in the academies and union schools reporting to the regents, and in the various classes of secondary institutions reporting to this Bureau, there appear to have been 62,393 pupils, of whom perhaps 20,000 may be safely held to have prosecuted classical or higher English studies, besides 2,919 in business colleges. Then in regular college classes were reported to this Bureau 3,171; in other classes for superior instruction of women 1,179; in schools of science, 876; in schools of theology, 1,010; in schools of law, 678; in schools of medicine, 2,390; in special schools, 17,101.

New Jersey reports an increase of 14,694 in the number of children of school age (5–18) of 5,339 in the enrolment in the public schools, and of 5,907 in the enrolment in private schools. She has increased by 51 the number of her female teachers, diminishing by

* The statistics of the normal schools and teachers' classes are, for 1873–'74, covered by the reports of the State superintendent and regents of the university, available when the abstract was made out.

14 the number of males, the wages of male teachers going up $1,88 per month, those of females only 25 cents per month. She has 46 more school buildings, with a larger proportion reported good or very good, and rates the increase in the value of her school property at $286,535; while the total amount raised for maintaining her schools, exclusive of that for building school-houses, goes $71,436 beyond that raised in 1873–'74. In 12 Kindergarten schools were 510 pupils; in the State Normal School, 269; in the only city high school reported, that at Newark, 450 pupils; in other secondary institutions, 3,173, besides 706 in business colleges; in institutions for superior instruction of young women, 290; in regular collegiate classes, 718; in scientific schools of high grade, 192; in schools of theology, 294; in charitable and reformatory schools, 475.

Pennsylvania takes no annual census of her school population, and consequently cannot tell how great may be her advance from year to year in this respect nor how near she may come to overtaking this advance by the increased enrolment in her schools. She reports, however, an increase of 39,299 in the number of public school pupils, of 8,822 in the average attendance on her schools, of 553 in the roll of teachers, of 39 in the number of graded schools, and of $541,941 in expenditure for all school purposes, including cost of buildings, fuel, and contingencies, but not including a specially increased expenditure of $77,324 in Pittsburgh, nor $509,508 expended on normal schools and soldiers' orphan schools. Four Kindergärten report 88 pupils. Another State normal school, organized in 1875, brings up the number of these schools to 10, including the one in Philadelphia, the number of strictly normal students in all reaching 3,930, the number of graduates, including in these 135 in Philadelphia, 299. As far as can be judged from a collation of various reports, there were in every sort of secondary schools about 29,211 pupils, including 1,647 in business colleges. In the collegiate departments of institutions for superior instruction of young women appear 497 students; in those of the other colleges, 2,105; in scientific departments, 442; in schools of theology, 603; in schools of law, 65; in schools of medicine, 1,708; in charitable and reformatory schools, 4,707.

Delaware, now in line with other States in the possession of a new school law, a State board of education and State superintendent of free schools, presents for the first time distinct statistics of her educational condition, showing 19,881 enrolled in 369 public schools, under 430 teachers, the average salary of these teachers being $28.28 a month, and the income for the support of free schools, $192,735. In secondary schools 608 students are reported, and in her one college 41 collegiate and 34 scientific students.

In *Maryland*, as is said by the board of education, "the symptoms, on the whole, show healthy life and vigorous growth." A comparison of the statistics of 1874–'75 with those for the preceding year indicates that, without any reported increase of school population, there has been an augmentation of 7,118 in the enrolment in public schools, of 4,091 in average attendance, of 44 in the number of schools, of 34 in the number of teachers, of $37,148 in receipts for school purposes, and of $178,257 in expenditure on these, the expenditure for teachers' wages going considerably beyond the proportion of increase in their number, and indicating a gratifying augmentation of average pay. Three Kindergarten schools report 61 pupils. The State Normal School, now housed in an elegant new building, had 197 students on its roll; another, meant to train art and music teachers, had 25; a normal class connected with the Baltimore school system, 147. In high schools, academies, and preparatory schools or colleges were 5,922 pupils; in classes for superior instruction of young women, 384. In regular college classes, 558 students are reported; in scientific schools, 386; in theological, 366; in legal, 59; in medical, 380; in special, 1,114.

SOUTHERN STATES.*

Virginia, numbering 45,963 more in her school population, has enrolled, out of these, 10,611 more in her public schools, and secured an average attendance of 5,070 greater

* The trustees of the Peabody fund expend yearly on an average about $100,000 upon public schools in designated States. The effect of this aid is greatly increased by the educational efforts of the agent, Dr. Sears, and the conditions upon which it is bestowed.

than in 1873–'74; has increased by 300 the number of her teachers, and by 283 the number of her schools, retaining the same number of graded ones; has built 292 new school-houses, augmenting by $74,681 the value of her school property; and has, according to special returns from her State superintendent, increased her receipts for schools, including unexpended balances, by $210,364, her expenditures on them by $18,406. It is not claimed that the school system here has reached perfection, but the superintendent says that under it three times as many children are gathered into schools as ever were before the adoption of it. No State normal school for whites exists, but in the Hampton Institute for colored youth, to some extent aided by the State, 243 students are under training, and of 39 graduates in 1875, 36 engaged in teaching. In two other normal schools for colored people were 268 pupils. In the only public high school reported were 237 students; in other secondary schools, 1,740, including 47 in a business college. In institutions for superior instruction of young women, 1,112 students were reported, 674 in collegiate studies. College and university classes contained 1,263; collegiate scientific schools, 479; theological schools, 181; legal, 110; medical, 87; special, 171.

West Virginia has done herself credit by increasing her school enrolment and average attendance considerably beyond the increase in her school population, the figures being: increased number of children of school age, 6,435; increased enrolment, 6,944; increased average attendance, 10,705. She has added also 219 to the number of her teachers, $65,167 to the value of her school property, and $11,539 to her receipts for schools, diminishing by $16,504 her expenditure upon them. Her five normal schools had in them 557 students, of whom 85 graduated. Her schools for secondary instruction, no public high schools appearing, enrolled 1,021 students; her institutions for superior instruction of young women, 110, of whom 50 were collegiate; her three colleges, 215 in their collegiate classes.

North Carolina presents in 1875 her report of public schools for 1873–'74, exhibiting a school population of 369,960, an enrolment in her schools of 174,083, a gain in the former of 21,357, in the latter of 27,346 on 1872–'73. Then, too, she shows a gain of 709 in the number of her schools, and of 785 in the number of teachers in them; of $87,575 in her receipts for public schools, and of $105,919 in expenditures for their support.

In teachers' institutes and normal schools, about 600 were under training in 1874–'75; in secondary schools of different kinds, excluding public high schools, 2,076;* in institutions for superior instruction of young women, 580, of whom 250 were collegiate; in the collegiate classes of the newly opened State university and five colleges, 433; in the agricultural and mechanical department of the university, 10; in schools of theology, 71; in a school of law, 16; in special schools, 342.

In *South Carolina* the increase of enrolment, 9,697, has gone beyond the increase of school population, which was 9,162. The increase in school attendance was 5,678; that in the number of teachers, 228; that of the schools, 227, of which number, 118 had new school-houses. The income for schools rose $10,775 above that for 1873–'74, while the expenditures on them dropped $5,038 below the figures of the year before. The State normal school, imperfectly sustained, had in it 39 pupils; the secondary schools, 3,946; the schools for superior instruction of young women, 406, of whom 366 were in collegiate studies. The State university and five colleges numbered 357 in collegiate classes; the agricultural and mechanical college, 35; two schools of theology, 90 students; one of law, 24; one of medicine, 63.

Georgia,† with a school population reported the same as in 1874, claims to have en-

* On page 322 of the abstract, last line, there is an error of 243 in the figures for preparatory students of colleges, from one college reporting these quite late.

† Hon. Gustavus J. Orr, the State superintendent of public instruction for Georgia, has written and published in the Constitution newspaper a series of articles giving from his point of view the arguments in favor of universal education.

The friends of education in the South would find the newspaper press a most successful medium for conveying to a great number of people better ideas of education, of the injury and shame of ignorance, and the benefits of right instruction.

rolled in her public schools 47,976 more pupils, and to have secured an average attendance of 29,532 more than in that year, the attendance at private elementary schools diminishing by 294, and that at private high schools increasing by 422. An imperfect enumeration of normal pupils shows 334 in two institutions, with probably at least one-third as many more elsewhere. In different secondary institutions appear to have been, for 1874–'75, about 7,276 pupils,* besides 215 in a business college. In fifteen institutions for superior instruction of young women, were 1,364 students, of whom 894 were in collegiate studies; while in the State university and five colleges, were 536 collegiate students; in scientific institutions, 332; in theological classes, 70; in legal, 14; in medical, 256; in special, 252.

In *Florida*, from the imperfection of the returns for 1874, fourteen counties having failed then to make reports, comparison with the statistics of 1875 is difficult; but there appears to have been an augmentation of 11,175 in the enrolment of pupils in public schools and of 12,409 in the average daily attendance on these, 206 more teachers, and receipts $85,078 greater in 1875 than in 1874. The returns respecting secondary schools, imperfect in statistics, show only 520 pupils in such schools, probably not a third of the whole number, while as to superior, scientific, and special instruction information is wholly wanting.

Turning to *Alabama*,† we find, from the great imperfection of returns for 1873–'74 no basis of comparison between that year and 1874–'75, except in the matter of receipts and expenditures for public schools, those for the latter year being $159,962 in excess in the line of receipts, and $158,136 in excess in the line of expenditures. Comparing 1874–'75 with 1872–'73, we get an increase of 1,337 in the number of schools taught, of 1,311 in the number of teachers employed, of 41,347 in enrolment of pupils, and of 36,426 in average attendance, with a most refreshing improvement in the specification of the grades of schools and of the students pursuing in them different lines of study. In 1875, there were in three State normal schools and in five supported by societies, 659 students, of whom 533 are believed to be colored. Of the number of pupils in the 218 State high schools no report is made. In other secondary schools appear 495, with perhaps 131 additional; in institutions for superior instruction of young women, 946, of whom 623 were in collegiate studies. In the collegiate classes of the university and one college were 148 students; in the agricultural and mechanical college, 55, besides 33 in preparatory classes; in one school of theology, 14; in the law school of the university, 4; in the Medical College of Alabama, 50; in special schools, 202.

In *Mississippi* the report for 1875 indicates, notwithstanding a diminution of 31,354 in the number of children of school age, an enrolment of 15,432 more in the public schools; the average attendance, however, running down to 2,842 less than in 1874. The receipts for school purposes show an advance of $180,376, the expenditures going $197,997 beyond those of the preceding year. The two State normal schools for colored students had in them 351. In the absence of information respecting public high schools, only 1,292 pupils in secondary schools can be reported; 186 of them in preparatory schools of regular colleges, and 100 in a business college. In six chartered colleges for females, were 386 students; in the State university and two colleges, 177 collegiate undergraduates; in the two agricultural colleges, 22, besides 39 in preparatory classes; in one school of theology, 15 students; in two special schools, 94.

* Erroneously stated on p. 75 of abstract, last line in "Secondary Instruction," to be 6,662, from omitting 514 pupils in the high schools of Atlanta and Savannah.

† Alexander Hogg, M. A., superintendent city schools, Montgomery, Ala., has prepared and published an essay on practical education, in which he "sets forth the importance and value of physics, chemistry, geology, geography, and the study of human nature, notices the fundamental relation of mathematics, and dwells upon art and science."

"The great industrial problem to be solved by our statesmen, our educators, is this: How can we make the most of our natural resources, which, however varied and vast, are but the basis of our wealth? How can we manage to consume in home industries the larger part of our raw material, adding to its value by the magic touch of taste—of skill? This problem can only be solved by the teachers, by education for definite industrial purposes."

Louisiana appears nearly stationary, her school population being reported the same as in 1874, the enrolment in her public schools increased by only 527, that in both public and private diminished by 55; the State school receipts running $89,403 below those of the preceding year, and the expenditures going $25,946 above; the number of schools 7 less, the number of teachers 63 more. Increased efficiency is said, however, to have been attained through the organization of teachers' institutes. In public high schools only 582 pupils are reported; in other secondary schools, 1,397, including 363 in business colleges. In one woman's college were 45 students, 20 of them collegiate; in the collegiate classes of the university and three regular colleges were 62; in the State agricultural college, 68, besides 22 preparatory; while in a school of theology 15 students were reported; in one of law, 36; in three of medicine, 163; in special schools, 493.

In *Texas*, where the educational authorities had to contend against many discouragements during 1874-'75, only 97 counties out of 139 reported the statistics of the schools kept in them. There is no provision yet for the training of teachers for the State schools, nor any indication given of the existence of high schools under the State system. In other secondary schools 2,516 pupils are reported. In colleges for women were 536 students; in the collegiate classes of seven other reporting colleges, 635; in one school of theology, 12; in two medical schools, 36; and in two special schools, 99.

Arkansas, just starting afresh after a virtual suspension of her schools for 1874, begins with a new constitutional provision restricting taxation for free schools within somewhat narrow limits, and a new school law, which substitutes county examiners for circuit superintendents. She reports for 1875 an enrolment of 73,878 in her schools out of an estimated school population of 184,692; an average daily attendance in the schools of 42,630; a teaching corps of 2,322; receipts for schools amounting to $789,536, and expenditures upon them of $750,000. In the normal department of the State Industrial University, 58 students were being trained as teachers for the schools for whites; in another institution, sustained by a society, 156 were in training for the ones for colored children. Of public high school pupils no sufficient statistics are in hand, but in other secondary schools 632 are reported. In one female college 95 students are indicated, but whether collegiate or preparatory appears doubtful; in two other colleges and the university appear 74 collegiates; in two special schools, 104 pupils.

Tennessee, still struggling with great difficulties, appears, from comparison of the reports for 1874 and 1875, to have fallen behind her former self, her school population increasing by 6,228, but her school enrolment dropping from 258,577 to 199,058; the average attendance, from 161,089 to 136,805; the number of teachers, from 5,551 to 4,210; the receipts for schools, from $998,459 to $740,316, and the expenditures on them from $997,376 to $703,358. These things are to some extent explained in the report, but not sufficiently to remove the impression of a painful falling off. The school law has, however, been somewhat improved, the important element of State normal school instruction has been introduced, and some energetic superintendents have exerted themselves to train more fully the teachers of their counties, while additional normal instruction for colored teachers is being provided for by the Society of Friends. Of public high schools there is the customary lack of information; but in other secondary schools reporting to this Bureau appear 6,212, including 346 in business colleges. Seventeen institutions for superior instruction of young women report 1,467 students, 1,016 of them in collegiate studies; while in nineteen colleges and universities were 1,389 collegiates; in the agricultural college 44 students; in three schools of theology, 93; in three of law, 90; in two of medicine, 218; in special schools, 242.

In *Kentucky*, by careful sifting of figures, there appears to be an increase of 71,208 in the school population, by including for the first time the colored youth; a school enrollment increased by 36,888; an average attendance increased by 44,397; a corps of teachers greater by 1,957; school-houses numbering 1,876 more, with $909,265 advance in the value of school property. Receipts, $1,438,146, and expenditures, $1,559,452, seem also to be much increased, but there is no sure basis for comparison. The increase at

all points is due in some degree to the establishment of schools for colored children, these reaching to 340 in the year 1874-'75. There is yet no State normal school, but 140 normal pupils in two institutions, and 29 graduates from the city normal school at Louisville. In five public high schools were at least 889 pupils; in other secondary schools, 3,550. In institutions for superior instruction of young women were 637 students, apparently all in collegiate studies; in the State University and 13 colleges, 865 collegiates; in the State agricultural college, 140, with 40 preparatory; in schools of theology, 115; in schools of law, 20; in schools of medicine, 604; in special schools, 380.

NORTHWESTERN LAKE STATES.

Ohio, one of the great leaders of the West, presents for 1874–'75, through her new superintendent, an increase of 31,779 in the number of children of school age, of 4,186 in school enrolment, of 5,719 in average attendance in public schools, of 117 in the number of teachers, of 146 in the number of school-houses, of $1,046,918 in the value of these and their grounds, of $410,817 in her absolute receipts for schools, and of $98,792 in her total expenditures upon them. In private schools there appears to have been a decrease of 2,414 in the number of pupils and of 54 in the number of teachers; but the returns from these are greatly less complete, than those from public schools. Two Kindergärten report 33 pupils; eight normal schools, 3,154, of whom 530 graduated; four city training schools, 168, of whom 75 graduated. In public high schools, 27,348 pupils were reported, including 3,136 colored; in other secondary schools, including business colleges, 10,143; making 37,491 in academic studies. In thirteen colleges for women (so called) were 1,064 students, 847 of them collegiate; in thirty regular colleges, 2,432 collegiates; in three schools of science, 382 students; in thirteen schools of theology, 384; in two schools of law, 61; in twelve of medicine, 1,142; in eighteen special schools, 3,298.

Michigan, augmenting her school population by 12,090 in 1874–'75, has more than equalled this increase by an additional enrolment of 16,113 in her schools, securing an average attendance of 30,000 beyond that of 1873–'74; has employed 191 more teachers; increased by $1,250,003 the value of her school property; raised $78,775 more for the support of schools; and expended $462,163 more on them. Three Kindergärten report an attendance of 50 pupils. The State normal school enrolled 409 pupils in its normal classes and graduated 51. In public high schools 3,545 pupils were reported; in other secondary schools, 3,308; making 6,853, including 1,369 in business colleges. In two institutions for superior instruction of young women were 202 students, 156 of them collegiate; in the university and eight colleges, 756 collegiates; in the agricultural college, 156 students; in two schools of theology, 31; in one of law, 321; in five schools of medicine, 528; in nine special schools, 1,100.

In *Indiana*, Mr. Smart, successor to Mr. Hopkins, reports an advance of 12,997 in school population and a school enrolment going beyond this by reaching 13,318 above that of 1873–'74; an increase of 128 in the number of teachers, of 178 in the number of school-houses, of $854,944 in the value of school property, and of $2,830,189 in the receipts for schools, the only disappointing item being a decrease of 10,529 in average attendance. One Kindergarten school reports 25 attendants. Returns from normal schools show 2,555 pupils for 1874–'75, without classification of the strictly normal ones, except at the State normal school, where were 217, of whom 9 graduated. In public high schools at least 13,342 young persons were under training; in other secondary schools, 4,186, including 1,040 in business colleges. Two colleges for women had 115 students; nineteen other colleges, 1,533 in their collegiate classes. Two schools of science failed to report the number in their halls, but in one school of theology were 21; in one of law, 40; in three of medicine, 213; in nine special schools, 1,423.

From *Illinois* the new State superintendent, Mr. Etter, had the pleasure of returning an increased enrolment of 13,901 out of a school population 19,125 greater than in 1873–'74, (an advance of 489 in the number of teachers, and of 17 in the number of school-houses,) but the pain of showing a decrease of $33,037 in the receipts for schools

and of $476,473 in the expenditures for them. Only two Kindergarten schools appear, with 109 children. The State Normal University and five other normal schools taught 1,141 normal pupils and graduated 105. Allowing 30 pupils each to 116 public high schools reported, there must have been in them 3,480 youths, who, with 2,632 in business colleges, 2,785 in private academies, and 3,183 under secondary training elsewhere, make 12,080 academic students. Six institutions for superior instruction of young women report 348 collegiate students, with 200 unclassified; 24 colleges and universities, 1,696 collegiates; two schools of science, 413; while 486 students were engaged in theological studies in thirteen seminaries; 183 in legal ones in four law schools; 576 in medical ones in six schools of medicine; and 1,619 in ten special schools.

Wisconsin, quietly and steadily advancing, has increased her school population by 8,668; her school enrolment by 2,967; the number of her teachers by 119; the number of her school-houses by 147; her receipts for schools by $503,154, and the expenditures upon them by $170,290. Five Kindergarten schools have been established in the State and report an attendance of 290 children. Of the four State normal schools, three report 606 normal pupils. The attendance in public high schools is not given; but in other secondary schools of various kinds 4,783 academic students were reported, including 1,313 in business colleges. Three colleges for women report 228 pupils in collegiate studies; the university and nine other colleges, 749. In the scientific department of the university were 15 students; in two theological schools, 295; in one law school, 25; in seven special schools, 1,061.

Minnesota, with only 356 more children of school age in 1875 than in 1874, still succeeded in enrolling 1,278 more in her schools, added 194 more names to her list of teachers, raised for her school work $606,998 beyond 1874, and expended on that work $2,905 more. One Kindergarten reports 10 to 20 children; the three State normal schools, 688 students in normal departments and 70 graduates during the year. Different secondary schools make return of 1,542 academic students in 14 institutions. In two colleges for women were 149 students, 69 of them collegiate; in the University of the State and two colleges, 183 collegiate. The agricultural department of the university reports 7 students; three schools of theology, 77, and three special schools, 245.

MISSOURI RIVER STATES.

In *Missouri*, chief of this tier of States, the energetic superintendent is able to report an enrolment in the schools increased 23,340 from 1873 to 1875, out of a school population increased 32,614, with a school income augmented $895,933 in the same time. The average attendance in the schools appears to have diminished 17,788, notwithstanding the increased enrolment, the number of teachers also becoming 25 less, and the valuation of school property $3,343 less. The Kindergärten in St. Louis, increased to 11, report 150 pupils; the city normal school, 254; one of the State normal schools, 72 in its normal department; two others, 572 unclassified; the Lincoln Institute, for training colored teachers, an average attendance of 150 since its commencement. In two city high schools, 16 academic schools, four business colleges and the preparatory classes of nineteen other colleges, we find 4,652 secondary students. Eight institutions for superior instruction of young women report an attendance of 507, of whom 362 were in collegiate studies, the students in collegiate classes of seventeen other colleges numbering, as far as reported, 897. The kindred classes of the agricultural department of the University of Missouri, and of two other scientific schools, had in them 115; while in three schools of theology were 292; in two of law, 86; in nine of medicine, 429; in two State special schools and five orphan schools, 1,016.

Kansas, suffering greatly from a locust plague which has seriously discouraged immigration, has only advanced by 976 the number of children of school age; but has increased by 7,008 her school enrolment, by 8,194 the average attendance in State schools, by 340 the number of her teachers, and by $110,308 the estimated value of school property; showing, however, the effect of lessened prosperity by a decrease of $824,605 in receipts for school purposes, and of $303,897 in the expenditures for these.

One of her normal schools reports for 1875 a total of 250 normal pupils, with 12 graduates; two others report 473 enrolled atendants, not saying whether all are normal students or not. In her public high schools, still few and far between, 513 attendants are returned, with 196 in two business colleges, 93 in two academic schools, and 279 in preparatory schools of colleges; in all 1,081. One woman's college had 96 enrolled, while only three of eight much crippled colleges and universities report the collegiate attendance, amounting in the three to 139. The popularity of agricultural instruction, on the other hand, is shown by an enrolment of 237 students in the agricultural department of the university. The State schools for the blind and for the deaf and dumb report 140 pupils on their lists.

Iowa, not feeling as much as Kansas the effect of the locust flight, and having the advantage of a double river front, reports for 1875 a school population greater by 27,558 than in 1874; an enrolment in public schools 18,887 fuller; a force of teachers larger by 1,152; an income for school purposes $208,210 more complete, and an expenditure for schools $175,970 beyond that of the preceding year. The average attendance on the schools shows a decrease of 1,736; but the worth of her school property (according to the figures of her valued State superintendent, Abernethy, whom she is to lose) advanced $345,021. She still depends on normal classes in six colleges for training teachers for her schools, in the continued lack of a State normal school. In different secondary institutions, including eight business colleges, 8,246 youth pursued academic studies. In fifteen out of eighteen colleges, including the State university, 796 collegiate students were reported, and in similar classes of the agricultural department of the university, 306. Three schools of theology made return of 37 students; three law schools of 136; three medical of 278; seven special schools of 991.

Nebraska, a greater sufferer in some parts during 1875 than either Iowa or Kansas, still increased by 7,131 her school population, by 7,705 the enrolment in her schools, by 256 the number of her teachers, by $314,313 the value of her school property, and by $45,388 the expenditure upon her schools, though the income available for another year diminished by $542,120. Her State normal school is reported to have had an attendance of only 81 normal pupils; but in it and the State university preparatory classes were 300 secondary students; in other secondary institutions, including a business college, 295. The university and two colleges had but 46 collegiate students; the State agricultural college, 18; one school of theology, 2 attendants; two special schools, 51.

STATES ON THE PACIFIC SLOPE.*

California, the natural chief of these States, exhibits increase at all points, in school affairs, if not as much as might be hoped for from her great advantages, there being from 1874 to 1875 an advance in school population of 12,136; in school enrolment, of 13,060; in average attendance of 7,237; in the number of teachers, of 222; in the income for schools, of $1,337,755; in expenditure upon them, of $623,491; in the value of school property, of $623,538. Her State normal school had, for the year 1874–'75, an average enrolment of 237, and graduated 45. Her public schools of higher grade taught 3,253 pupils; twenty-three other secondary schools, including four business colleges and seven preparatory departments of true colleges, taught 2,702, making 5,955. Two colleges for women had 296 students, about half of them collegiate; the university and seven colleges, 775 in collegiate classes; the agricultural and mechanical department of the university, 154. Two schools of theology taught 15 students; three of medicine, 79; seventeen special schools, 2,950.

Nevada, making biennial reports, sends none for 1874–'75, and the few materials gathered from sources within reach amount to little as indications of her educational condition, except the fact that her State university has its foundations laid at Elko, and that 31 students are in training in a preparatory school for college studies.

In *Oregon* the statistics furnished indicate progress in everything but the income for

*Mrs. S. B. Cooper has rendered special aid in collecting information in regard to California, and Rev. G. H. Atkinson, D. D., in regard to Oregon and Washington Territory.

school purposes, this dropping from $204,760 to $86,673, a decrease of $118,087. The school population increased 3,763; the school enrolment, 838; the number of teachers, 93; the value of school property, $17,236. In ten secondary schools reporting were 1,143 pupils; in one institution for superior instruction of young women, 144; in the collegiate classes of four colleges, 166; in the agricultural college of the State, 150, besides 75 preparatory students; in a medical school, 23; in three special schools, 75.

THE TERRITORIES.

The following tabulated statement with respect to these exhibits at a glance their relative condition as to public schools, school population, and attendance:

Territory.	1873–'74.			1874–'75.		
	Schools.	School population.	Enrolment.	Schools.	School population.	Enrolment.
Arizona	11	2,584	343	11	2,508	560

* School rooms, exclusive of those used for recitation only.

† For the statistics of private schools I am indebted to Mr. T. C. Grey.

‡ This is the return respecting enrolment in public schools. In a table prepared under the auspices of the Indian Bureau, 4,400 Indian and half-breed children are said to be in schools maintained by the Cherokees, Chickasaws, Choctaws, Creeks, and Seminoles in the Indian Territory; 4,734 in schools maintained by the United States Government, and 412 in schools maintained by various religious denominations.

CITY SCHOOLS.

One hundred and seventy-seven cities have reported the above items in regard to their educational management with considerable fulness. I do not think any similar number of cities in any other country can report their educational condition so accurately, so much in detail. They present a study in city school management of rare value. In this summary are seen some of our triumphs and some of our greatest deficiencies in education. It shows with alarming emphasis how much remains to be done in some of our greatest centres of population before all the children of school age are brought under the elevating influence of instruction.

TABLE II.—*Summary of school statistics of*

Number.	Cities.	Estimated present population.	Legal school age.	School population.	Number of school buildings.	Number of sittings for study.	Number of teachers.	No. of days schools were taught.	Pupils.

c City census of 1875.
d These statistics are for white schools only.
e Includes $80,818 for colored schools.

TABLE III.—NORMAL SCHOOLS.

The following is a comparative summary of schools, instructors, and pupils, reported to the Bureau for the years 1870, 1871, 1872, 1873, 1874, and 1875.

	1870	1871.	1872.	1873.	1874.	1875.
Number of institutions	53	65	98	113	124	137
Number of instructors	178	445	773	887	966	1,031
Number of students	10,028	10,922	11,778	16,620	24,405	29,105

The increase from year to year in the number of teachers under training made apparent by this summary, is full of encouragement; yet all that is accomplished is but a small fraction of what is necessary to furnish well trained teachers to all our schools. It is to be regretted that in some quarters the normal school work is so feeble and has had so limited opportunity to demonstrate its benefits, that legislation treats its demands with indifference or opposition. These figures should be studied in connection with those already given which show the school population to be educated and the amount of money involved in carrying on the public schools.

a Receives some aid from the city.
b Also 390 in training school.
c There are also 206 preparatory students and 373 in the model schools.
d Also 86 in a model school.
e One of these schools is temporarily suspended.
f One school is not yet open.
g Also 215 in a model school.

This summary indicates that States maintain 70 normal schools, with 650 instructors, and 17,698 students; counties, 3, with 15 instructors and 422 students; cities, 8 normal schools with 81 instructors and 1,659 students; and all other agencies, 56 normal schools, with 283 teachers and 9,328 students. We see what diverse policy prevails in the different States and territories in respect to this branch of instruction.

a Sex not reported in all cases. *b* From four of these schools no statistics have been received.

In this table we have the distribution of the normal schools among the several States, the number of students of both sexes; the number of graduates in the last year; the number who engaged in teaching, and the aids possessed by these institutions in the way of libraries.

TABLE III.—*Summary of statistics of normal schools*—Concluded.

States.	Number of schools in which drawing is taught.	Number of collections of models, casts, apparatus, &c., for free-hand drawing.	Number of schools in which vocal music is taught.	Number in which instrumental music is taught.	Number possessing chemical laboratory.	Number possessing philosophical cabinet and apparatus.	Number possessing a museum of natural history.	Number possessing a gymnasium.	Number having model schools.	Number in which students receive diplomas or certificates on completion of course.

Here are presented some interesting special facts in regard to our normal schools which it was not possible to include in the previous tables. The deficiency of the several institutions in these particulars demands the most careful attention from the friends of education. This is an interesting showing of these particulars, yet we cannot describe here how unwillingly some and how liberally others of these appropria-

tions have been made. When twenty times this amount is bestowed and wisely expended on the training of teachers in the several States and Territories many of our most serious school problems will be solved and some of the most threatening evils of ignorance will be averted without further trouble.

a Some students are in both day and evening schools.

b The students in day and evening schools are not reported separately in all cases.

However severe the financial depression of the year, these institutions, generally directed by private individuals and supported by tuition fees, show considerable increase. It is charged in some quarters that they do inferior work; again, I am desired not to recognize them in the report. A considerable number are, however, it is believed, institutions of great merit and doing a thoroughly excellent work. Certainly the field is too important to be poorly worked, and I am confident that this gathering of the facts year by year will aid in time in securing some proper recognition of the instruction given in these institutions; when this just recognition comes, the public will deal with all shams as they deserve. Our public school systems will not do their whole duty until they supply the demand which this instruction is intended to meet. This is a kind of training which cannot be carried on properly without abundant apparatus and means of illustration. A teacher to furnish a business school thoroughly in this respect requires a fortune in his own right.

The increase in the number of these very interesting institutions is extremely gratifying. Miss E. P. Peabody, the great expounder of Fröbel's principles and methods, is finding many warm and able coadjutors in various parts of the country. Eminent educators, who at first doubted or opposed, are now cordial supporters. They see in Fröbel's Kindergarten a promise of aid in correcting the evils so long common in dealing with the earliest years of human life. No school officer, no mother, no teacher, should be satisfied without this simple but charming method of instruction for the child. I am surprised that the managers of a single orphan asylum should suffer their children to be deprived of its benefits.

Following is a comparative summary of the number of institutions for secondary instruction making returns from 1871 to 1875, inclusive:

TABLE VI.—SECONDARY INSTRUCTION.

	1870.	1871.	1872.	1873.	1874.	1875.
Number of institutions	.....	633	811	944	1,031	1,143
Number of instructors	.....	3,171	4,501	5,058	5,466	6,081
Number of students	.....	80,227	98,929	118,570	98,179	108,235

The country has a much more distinct idea of these institutions than five years ago; as a consequence, secondary instruction, long so feeble, is greatly increasing in strength. One would push it in the direction of academies; another exclusively in the direction of high schools; another would have them only preparatory to the college course; again, one would truncate the system of public schools below this grade; another would permit high schools in the graded systems, but require tuition from the sons of the wealthy, and introduce the invidious distinction based on the wealth of the parent, which the prevailing spirit of our institutions so seduously seeks to avoid. Yet limited to no one form of organization, but giving free play to all, the great body of intelligent people in the country are growing in their disposition to make more of this grade of instruction; and while they patronize the academy or private school or preparatory school, under whatever auspices of church or society it may be founded, it is manifest that the predominating tendency in all centres of population is toward the graded system which is crowned by the high school, which gives a good course of secondary instruction fitting for the college course, so called, or for active life, as the pupil may determine. The increasing disposition of college officers to connect their college curriculum more closely with the high school course is having a most salutary effect upon all grades of instruction—superior, secondary, and elementary. It gives to the whole unity and compactness, and, as a consequence, accords to each in its sphere greater consideration. Have not learning, science, and education a unity of methods and aims? Why should not all the adherents of each be in accord and render each other mutual support?

The opponents of the public high school should consider the fact that a republic like ours would be impossible with the forty-four millions of the present or the four hundred millions of the future without it and that the grade of intelligence and virtue required in such a republic could be secured by no public system limited to elementary instruction, whatever scope might be given to institutions of higher grades separated from civil administration. Whoever wants to sink the ship of state can do it effectually if he can knock the high school out of the system of public instruction. Recognizing this, the people, from the first, have put the provisions for the high school in the bond. State judiciaries find the general course of legislation on the subject constitutional. It is specially unfortunate that in different localities the grade of instruction is so dependent upon an occasional term, taught by any one who happens to be seeking such employment. Would it not be worth the while of such localities to inquire whether their interests do not demand a permanent organization by which a provision of this grade for instruction can be made constant and receive proper safeguards?

The report of State Superintendent Briggs, of Michigan, for 1873–'74, contained an important decision of Judge Cooley, in the supreme court of the State, confirmatory of a previous one of Judge Brown, in favor of the right of the school board at Kalamazoo to establish and maintain a high school for instruction in branches beyond the ordinary grades in grammar schools. And as this was meant to be a test case for the State, as to the general right to have such schools—as the ruling is, moreover, further confirmed by the decidedly expressed opinion of Chancellor Hammond, of Iowa, to much the same effect—it may be taken as, for the time, practically ending, at the West, the long debated question as to the right of high schools to a place in both State and city systems of instruction, a thing generally admitted at the East. Henceforth, then, these links between the teaching in the lower public schools and the advanced instruction given in the colleges are likely to take a conceded place in our school systems, with only occasional questionings respecting the proportion of the school funds to be spent on them and the extent to which the studies in them may be pushed. And if the friends of high schools are discreet enough to avoid any needless excitement of such questionings, conducting the schools with as moderate expense as is consistent with effective thoroughness and allowing a generous flexibility with reference to the studies in their course, there can hardly be a doubt as to their eventual very general establishment. Already they have in Michigan and Indiana a recognized position as the proper feeders of the freshman classes in the universities of these two States, and

several other of the Western States are making movements in the same direction; while generally throughout the eastern ones the public high school is supplying a demand which it is beyond the power of the endowed or tuition schools, generally known as academies, to meet. Academies, that have attained a reputation for great thoroughness, will survive and flourish, and others will be established. Still others may continue, through an alliance with the State and city systems, such as has been effected in New York and Maine, and is being attempted now in Texas. But unless some new and now unlooked for hinderance should arise, the public high school, from its greater openness and cheapness, and from the likelihood of full equipment and firm permanence which comes out of public wealth that lies behind it, must become the ordinary means of preparation alike for the more elevated walks of business and for the advanced culture of the scientific school or university. In proportion as it does become such, there ought to be full information given respecting the number of the pupils trained in it, the ratio of these that proceed to graduation, the course of study pursued within its walls, and the extent to which this course of study may be prosecuted. On these points there has been improvement in the last two years, in the reports of both State and city superintendents of instruction. But in many cases there is room for large improvement still. A glance at the abstracts from reports of secondary training for the greater portion of our States and Territories will show in how very few of these is there any definite general information respecting either the number of the public high schools, the attendance on them, or the studies prosecuted in them. Further light in these directions would be warmly welcomed, and would greatly help to round out a report which, fairly complete as to the lower and higher stages of instruction, is still deficient in the information needed as to this important link between the two

of these is not reported

Of the 1,143 institutions of this grade, it will be observed that 215 are exclusively for boys, 311 for girls, and 617 for girls and boys together. In those for boys there are 830 men and 152 women instructors; in those for girls, 510 men and 1,943 women instructors; in those for girls and boys, there are 1,239 men and 1,407 women teachers. Of the 108,235 students, the sex of 1,488 is not reported. The remaining number is nearly equally divided between the sexes, 53,111 being boys and 53,636 being girls. Sixty-nine thousand nine hundred and forty-three are reported in the English course; 16,190 in the classical; 19,029 in modern languages. Preparing for the classical course in college there are 2,174 in the schools for boys; 98 in the girls' schools, 4,019 in the mixed schools, or a total of 6,291. Preparing for the scientific course in colleges there are 900 in the boys' schools, 38 in the girls' schools, and 1,841 in the so-called mixed schools, or a total of 2,779. In 718 of these institutions drawing is taught, in 722 vocal music, and in 745 instrumental music. They have 504,017 volumes in libraries. The value of grounds, buildings, and apparatus is reported as $25,637,567, the amount of productive funds as only $3,241,943. Here is where wealth may find ample room to confer its aid, to bestow its benefactions. The income from tuition is reported at $2,841,831.

TABLE VII.—PREPARATORY SCHOOLS.

Detailed statistics of preparatory schools will be found in Table VII of the appendix. Prior to 1873 these schools were not separated from those for secondary instruction. The following is a comparative statement of the statistics of these schools as reported to the Bureau for 1873, 1874, and 1875:

	1873.	1874.	1875.
Number of institutions	86	91	102
Number of instructors	690	697	746
Number of students	12,487	11,414	12,954

These preparatory schools are another class also doing the work of secondary instruction, but having special reference to the preparation of students for admission to our colleges. In some cases they are a part of the college organization.

TABLE VII.—*Preparatory schools.*

Total	86,488	2,196	4,815,257	1,062,593	72,782	383,989

It will be noticed that there are in these preparatory schools 4,158 reported preparing for a classical course in college, and 786 for the scientific course. These, increased by the number in the other secondary institutions reported preparing for these courses in college, give 10,449 for the classical and 3,565 for the scientific, or a total of 14,014. The income of these preparatory schools is also chiefly from tuition. They are greatly in need of endowments.

TABLE VIII.—SUPERIOR INSTRUCTION OF WOMEN.

Statistics in detail of schools for the superior education of women will be found in Table VIII of the appendix. The following is a comparative summary of institutions, instructors, and pupils, from 1870 to 1875, inclusive:

	1870.	1871.	1872.	1873.	1874.	1875.
Number of institutions	33	136	175	205	209	222
Number of instructors	378	1,163	1,617	2,120	2,285	2,405
Number of students	5,337	12,841	11,288	24,613	23,445	23,795

Connected with these institutions are some of the marked features of our educational progress. The demand which creates them is significant. The manner of supporting them, though not always the best, we believe is steadily improving.

TABLE VIII.—*Superior instruction of women.*

a Classification not reported in all cases.

This table presents, in a considerable detail, the capacity and workings of these institutions for the superior instruction of women. Looking down the column of productive funds, it will be seen how feebly they are endowed. Observing the number of volumes in their libraries, we find how inadequately they are furnished with aids for research. The State of New York has the largest amount invested in grounds, buildings, and apparatus, the amount reported so invested being $2,119,200. Massachusetts is next in this particular, reporting $1,365,000, and is immediately to open two other important institutions of this character, the Smith College at Northampton, Mass., and Wellesley College at Wellesley, Mass.

Degrees conferred by institutions for the superior instruction of women.

States.	No. of degrees.	States.	No. of degrees.
Alabama	25	Nebraska	.....
Arkansas	.....	Nevada	.....
California	.....	New Hampshire	.....
Connecticut	.....	New Jersey	12

Minnesota	5		
Mississippi	23	Total	490
Missouri	.....		

By this statement of degrees reported, it appears that out of the 17,379 in attendance upon the collegiate departments of these institutions only 490 were graduated or given diplomas. This fact should be considered in all its bearings by the friends of woman's education.

TABLE IX.—UNIVERSITIES AND COLLEGES.

The following is a statement of the aggregate number of this class of institutions, with instructors and students, as reported to this Bureau each year from 1870 to 1875, inclusive.

	1870.	1871.	1872.	1873.	1874.	1875.
Number of institutions	266	290	298	323	343	355
Number of instructors	2,823	2,962	3,040	3,106	3,783	3,999
Number of students	49,163	49,827	45,617	52,053	56,692	58,894

In connection with these instructive summaries in regard to colleges and universities in the United States, the following quotations, having reference to Harvard College, the oldest and most renowned in the country, though dry in themselves, assume special interest, and are eminently fit to be recalled as we approach the close of the first century of our nation's history.

"The court agreed to give £400 towards a school or college, whereof £200 to be paid the next year, and £200 when the work is finished, and the next court to appoint where and what building."—(Records of Massachusetts Colony, vol. I. Proceedings of October 28, 1636.)

"The college is ordered to be at Newtown."—(Records of Massachusetts Colony, vol. I. Proceedings of November 15, 1637.)

"For the college, the governor, Mr. Winthrop, the deputy, Mr. Dudley, the treasurer, Mr. Bellingham, Mr. Humfrey, Mr. Herlakenden, M MStaughton, Mr. Cotton, Mr. Wilson, Mr. Damport, Mr. Wells, Mr. Sheopard, and Mr. Peters, these or the greater part

of them, whereof Mr. Winthrop, Mr. Dudley, or Mr. Bellingham, to be always one, to take order for a college at Newtown."—(Vol. I. Proceedings of November 20, 1637.)

"It is ordered, that the college agreed upon formerly to be built at Cambridge shall be called Harvard College."—(Vol. I. Proceedings of March 13, 1638-9.)

"The ferry between Boston and Charlestown is granted to the college."—(Vol. I. Proceedings of October 7, 1640.)

"It was ordered that a letter should be sent to Mr. Humfrey to send in the £100 which is in his hand to further the college.

"Mr. Endecot, Mr. Downing, and Mr. Hawthorne are to dispose of the house which Mr. Peters bought, as they can, and return the money for the college."—(Vol. I. Proceedings of June 6, 1639.)

Gradual elevation of standard.—The elevation of the standard for admission referred to in the report for 1873, as proposed by several of the leading colleges, has gone gradually forward in 1874 and 1875. Thus Yale, since 1874, has required the candidates for admission to her course to be prepared in algebra up to the table of logarithms, instead of merely to quadratic equations, as before. The University of Michigan has added to its previous requirements, which were substantially equivalent to those of Yale, a considerable knowledge of important matters in composition and rhetoric; in physical, political, and ancient geography; a full acquaintance with Olney's Complete School Algebra and the first two parts of his geometry, including plane, spherical, and solid; with an outline of Roman history down to the battle of Actium, and of the history of the United States to the close of the revolutionary war, as well as the chief points of Greek history. Harvard in 1874 added to her demands a reasonable knowledge of English composition, and in 1875 the elements of French or German, while in 1876 the rudiments of botany, physics, chemistry, and astronomy are also to be required. Brown also proposes to raise considerably her standard of admission for that year. These advances in the terms on which students may enter college classes—not confined to the institutions mentioned, but only prominent in them—imply a correspondent advance throughout the course, prepares for it, and naturally lead to it.

More freedom in study.—A gradual increase of liberty of choice as to the studies that shall be pursued is another noticeable feature in the colleges. The old inflexible curriculum, from the Procrustean rigidity of which no one could be allowed to vary, is now rarely found. Where it exists in some department of an institution it is generally either flanked by correlated courses, any one of which may be prosecuted by a student, or is to be held to only up to a certain stated point, beyond which some measure of election is allowed as respects the studies to be followed. In southern colleges, where certain schools go to make up a full collegiate course, an almost entire freedom of choice exists as to the schools to be attended, the only restriction being that the student must exhibit proficiency in the studies of a given number in order to secure a specified degree. In western colleges, different parallel courses, any one of which may be pursued, offer the same freedom. In eastern institutions, scientific and other schools, standing beside the colleges, often give a like liberty of choice, while into the college curriculum itself it enters more and more. At Harvard, for example, an effort has been on foot to get into the freshman year all the required studies of the course, and such progress has been made in this direction that the president, in his report for 1874-'75 of the sophomore, junior, and senior years, says, "Apart from exercises in writing there now remain in those years but a few fragments of required work, namely, bits of rhetoric, history, philosophy, and political economy." By certain anticipatory examinations, too, in studies of the freshman year, a freedom from further attention to these studies is secured, with liberty to devote the time thus gained to electives not in the ordinary course. And where Harvard leads in these directions other colleges are pretty sure to follow.

Intercollegiate contests.—Correspondent with these efforts on the part of collegiate authorities to elevate their standards and increase the freedom of their youthful charge,

is a matter set on foot by college students for the promotion of literary and oratoric culture among themselves. This is a holding of intercollegiate contests in oratory, involving comparisons of excellence in thought, composition, and delivery. The first of these contests occurred at Galesburg, Ill., February 27, 1874, under the auspices of the Adelphi Society, of Knox College, the representatives of five colleges, in Illinois, Wisconsin, and Iowa, competing for two prizes offered. The first prize here was assigned to Mr. T. B. Egbert, of the Chicago University, the second to Mr. G. T. Foster, of Beloit College, Wisconsin. The same day a permanent organization, with a view to annual contests of this kind among the western colleges, was formed, and under it, in May, 1875, representatives from the colleges of six States held a second competitive exhibition, at Indianapolis, Mr. M. J. Coultas, of Illinois, taking the first prize, and Mr. T. M. Graydon, of Iowa, the second.

A kindred association, aiming at improvement, not in oratory only, but in essay writing also, was formed among the students of some eastern colleges, and prizes of considerable value offered for excellence in either of these lines. The initial contest of this association was held at the Academy of Music in New York, January 7, 1875, eleven representatives, from Cornell, Lafayette, Princeton, Rutgers, and Williams Colleges, and the University of the City of New York, participating. Dr. John Hall presided, a brilliant audience was present, and six men of high literary distinction acted as judges of the excellence attained. Mr. John C. Tomlinson, of the New York University, was awarded the first prize in oratory for an oration on "The Cid," Walter D. Edmonds, of Williams College, taking the second; while in essays the successful contestants were Mr. Allen Marquand, of Princeton, and Mr. George H. Fitch, of Cornell, the former treating quite effectively the case of "Simeon Stylites." It was subsequently arranged that a wider field should be covered in the future, a competitive examination in mathematics preceding the contest in essay writing and in oratory, the place being again the city of New York, and the time for the public exercise the 4th of January, 1876. At that time Hamilton College took the first prize for oratory, in the person of Mr. Julian M. Elliot, while Cornell carried off the lion's share throughout, taking the second place in oratory, and the first in essay writing, in mathematics, and in Greek.

It may well be hoped, as Dr. Hall said, at the first of these exhibitions in New York, that out of such healthy literary rivalry between the colleges will come "wider and more comprehensive efforts on fields of exact study and culture, by which the intelligence of the country as well as the standard of the colleges will be advanced."

a Includes $1,000,000, total valuation of the property of Tufts College.

This table brings into a single conspicuous view leading generalizations drawn from a large number of details found in the statistics given elsewhere in reference to these institutions. Here we see whether they have or have not preparatory departments, students in the collegiate course, graduates, students, productive funds, apparatus libraries, or aid from the State. Three hundred and fifty-five institutions are reported. Those having preparatory courses have in them 613 instructors and 29,807 students. In collegiate departments there are reported 3,386 instructors, and 26,353 students. Among the whole there are 369 graduate students. Of these, 61 are in Connecticut, 37 in Illinois, 60 in Massachusetts, 15 in Michigan, 60 in New York, 35 in Tennessee, 23 in Ohio, and 20 in Pennsylvania. These institutions report $41,076,105 invested in buildings and apparatus; $33,252,585 in permanent funds. Their receipts from tuition fees, $2,136,062; their receipts from State aid, $667,521. They report in college libraries 1,806,173 volumes; in society libraries, 449,937 volumes. These institutions are in a special sense American. The church, the state, and private individuals have made them the object of their large benefactions to education. On them has been concentrated from the earliest times the labors of our ablest educators. They have imparted eminence to our scholarship, literature, science, and statesmanship. They have been centres of learning, honesty, patriotism, and piety. As a nation we owe them for the past a debt of gratitude that future generations alone can repay. Those at work in them, and those studying in them, profoundly know best their great needs. They should have more funds with less trammel; more students, larger and better libraries, more and better apparatus; especially should they be held responsible to revise and improve their methods of instruction. It should not be true of any professor in college that his methods are inferior to those of a well trained elementary teacher. Friends and managers of these institutions would do well to see to it that a public sentiment is created which will not permit a millionaire to die without making some suitable gift to some institution of this grade.

Statistical summary of number of students in institutions for superior instruction, (not including students in preparatory departments.)

States and Territories.	Number of students in colleges.	Number of students in schools of science.	Number of students in schools for the superior instruction of women.	Total number of students reported in these institutions.

a One was conditioned in German.

It will be noted that out of the 4,876 candidates here reported for admission to colleges, 2,775 were admitted without conditions; more were conditioned in Greek than Latin, and more in mathematics than in any other subject; while 545 were conditioned in history and geography. It is unfortunate that our English is not included in these examinations. The manner of conducting these examinations has much to do with the sympathy and coöperation of the preparatory school and college.

TABLE X.—SCHOOLS OF SCIENCE.

The following statement shows the number of institutions and departments of this class, with instructors and students, as reported to this Office, in each year from 1870 to 1875, inclusive. The numbers under 1873, 1874, and 1875 include the National Military and Naval Academies.

	1870.	1871.	1872.	1873.	1874.	1875.
Number of institutions	17	41	70	70	72	74

a Buildings not completed; classes not yet organized.
b Reported with classical department. (See Table IX.)

In studying this table, it should be observed how many items have been reported with the classical departments. Many blanks may thus be filled. So far as these institutions depend upon the grant made by Congress to establish colleges of agriculture and

mechanic arts, it would seem desirable that the conduct and manner of keeping accounts should enable its officers to present separately an exact statement, annually, with regard to the disposition and results of that grant. Could anything less meet their legal responsibility? They still need large funds; without them they can hardly attain their highest success; but what can be a better ground for securing more than clear and satisfactory evidence of the judgment with which the grants already made have been administered? There is a growing disposition to secure to these institutions abundant endowment; the great industries of the country, when clear sighted, will demand it.

Another agricultural college.—The report of the congressional Committee on Education and Labor, presented to the House in January, 1875, with reference to the agricultural colleges, bore fruit before the year was out. North Carolina—especially charged by the committee with bad faith to the Government in suffering the funds of her agricultural college to lie locked up in State securities, on which no interest was paid—in September, 1875, revived her university, and with it the long-dormant agricultural department. Ten students entered on its course of three years, in which the usual studies of such institutions are to be prosecuted. And doubtless other years will bring in successive classes, to be trained for a scientific and profitable development of the resources of that fine, but hitherto neglected, State.

The scientific schools in general.—The reports for the year indicate fair progress in most of the established scientific schools, including in these the agricultural colleges. All seem, at least, to hold their ground. Some have increased their apparatus and other means of illustration and of work. Several have added considerably to their lists of students. A few have been favored with considerable additions to their funds. Thus the Toledo University of Arts and Trades has had $2,000 given it to aid in founding a school of design for the instruction of its students. The mechanical department at Cornell University rejoices in an endowment of $30,000 from Hon. Hiram Sibley, of Rochester, for the support of the Sibley College of Mechanic Arts. The John C. Green School, Princeton, has received as a bequest from its liberal founder another $100,000 to endow a department of civil engineering. The Towne Scientific School of the University of Pennsylvania gets an assured $300,000 from the estate of the late John H. Towne for a general endowment, with a prospect of $600,000 to $700,000 more, and from Asa Whitney, esq., $50,000 to endow a Whitney professorship of dynamical engineering. And the Rose Polytechnic Institute at Terre Haute, Ind., reports the near completion of the building meant for it, which will enable it to enter fully on its work in 1876.

Summer instruction in science.—Good service was done during the summer of 1875, by professors connected with the scientific departments of Harvard, Cornell, and other colleges, in the institution of summer schools of science for the benefit of teachers and such others as could not well attend the winter schools. Harvard had three such in operation: one in chemistry, at Cambridge, under Prof. J. P. Cooke; one in botany, partly at Cambridge and partly at the sea-shore, under Assistant Professors Goodale and Farlow; and one in geology, at a camp near Cumberland Gap, in the mountains of Kentucky. Cornell, represented by Professors Comstock, Barnard, and Wilder, with the efficient aid of Dr. Wm. K. Brooks, Professor Alphonso Wood, the botanist, and others, had one at Cleveland, Ohio, called "The Kirtland School of Natural History," because the Kirtland Society of Natural Science, in Cleveland, looked after the expenses; one at Peoria, Ill., and one at Normal, in the same State, called, respectively, "The Peoria" and "Normal Summer Schools of Natural History." Each of these three was designed to give instruction in geology, botany, and zoölogy, and to illustrate the proper methods of studying such sciences. The idea carried out, with reference to this last, was that of Agassiz, that observation and analysis are the great doors to certain knowledge. Hence, while lectures were given daily on the sciences pursued, and every effort made to impart needed information on all points respecting them, reliance was especially based on careful study of specimens that illustrated each

particular line. The earths and rocks and minerals examined were subjected to the test not of the eye and hand alone, but of the microscope, the chemical bath, and the retort. Plants were analyzed from root and stalk to capsule, flower, and seed. And land and water animals were observed alike in their great general characteristic features and in their internal organizations, which only a thorough anatomy would show. The result was a hearty enthusiasm in the study on the part of all concerned, a great enlargement of existing knowledge, and the impartation of an insight into the means of improvement in that knowledge which may result in almost any measure of advance desired.

So great was the encouragement in nearly all these summer schools, that others in the same or other lines have been projected for the vacation months of 1876, though for most teachers the great school of that year must be the Centennial Exposition in Philadelphia.

SCHOOLS OF THEOLOGY.

The following is a comparative statement of the number of schools of theology (including theological departments) reporting to this Bureau each year from 1870 to 1875, inclusive, with the number of professors and number of students:

	1870.	1871.	1872.	1873.	1874.	1875.

TABLE XII.—SCHOOLS OF MEDICINE.

The following is a comparative statement of the number of schools of medicine, dentistry, and pharmacy reported to the Office each year from 1870 to 1875, inclusive, with the number of instructors and students:

	1870.	1871.	1872.	1873.	1874.	1875.
Number of institutions	63	82	87	94	99	106
Number of instructors	588	750	726	1,148	1,121	1,172
Number of students	6,943	7,045	5,995	8,681	9,095	9,971

The following extract from a report made to the French minister of public instruction a few years since deserves special attention:

"The time required for medical studies is nominally three years, but is in reality reduced to two; for the student must spend the third year in following the civil practice of some physician in good standing, and must bring proof, by a certificate from his preceptor, that he has complied with this formality. Besides this, the year is limited to the winter session of four months. During the course of his studies the student is

not subjected to any examination. To be admitted to the degree of doctor he must be 21 years of age, and transmit to the dean of the faculty a thesis written by himself. If the thesis is considered satisfactory, the student is examined by each professor separately. The examination is not public, and is often given during a *tête-à-tête* at the residence of the professor. When all the students have been interrogated in this way, the faculty assemble, and confer on all those that have received less than three black balls the diploma of doctor. The number of candidates rejected is insignificant."

A good step well taken.—While the professional schools in general have gone on in their accustomed way, doing good work with fair fidelity, those of three prominent institutions have set an example of a most desirable advance. The Boston University, since 1874, has required from candidates for admission to its schools of theology, medicine, and law either a collegiate degree, or such examination as shall satisfy the faculty that there is an educational preparation for profitable entrance on the studies of these schools; and then, to its honor, carries them through a three-years' course in each. The University of Michigan, after some years of previous debate upon the matter, takes now the same stand with reference to admission to both its medical and dental colleges, and requires three years of study from its students in these lines in order to a certificate of graduation. And Harvard—not wont to fall behind in such reforms, while often leading—announces that from and after the beginning of the academic year 1877–'78, all candidates for the degree of Bachelor of Laws or Doctor of Medicine, who have not a collegiate diploma, must submit to an entrance examination and give evidence of some academic training. The faculty of the dental school, too, with the approval of the corporation, decided in February, 1875, that the course of instruction in the school should be enlarged; that instruction should be given throughout the academic year; that the standard of the degree should be raised, and that every candidate for it must have spent at least one continuous year in this school. President Eliot, speaking of these changes, says, justly, "The university, in taking this action, is only doing its duty to the learned professions of law and medicine, which have been for fifty years in process of degradation, through the barbarous practice of admitting to them persons wholly destitute of academic culture."

It is refreshing to find institutions so well established as these three taking unitedly so desirable a stand. And it is greatly to be hoped that other professional schools throughout the country will follow, in this particular, the lead of these; for, as President Angell truly urges, if they alone take this action, they may shut the ignorant out of their halls, but cannot shut them out of the professions.

The training school for nurses of Bellevue Hospital, New York.—In their annual report for 1876, the managers claim that "the experiment begun in May, 1873, has proved a success, and that the hope then expressed, of training respectable, intelligent women into educated, skilful nurses, has grown into a reality." The school opened with but five pupils. The course of training requires two years, and few of the applicants were willing to give so much time to the acquisition of a profession. This, one of the most serious of the early difficulties, no longer exists. As the object of the school came gradually to be understood throughout the country, applications from women, deliberately choosing this profession, and desiring to learn it thoroughly, were more numerous than could be accepted. At the date of the report there were forty pupils in the school, and others waiting for vacancies to enter. During the year more than two hundred applications for admission have been received. In May, 1875, the first class of six was graduated. A second class of seven passed their medical and surgical examination, and was graduated January 31, 1876. From this time forth the school hopes to send out, every six months, a class of trained women, who will either establish themselves in private nursing or be added by the training school (as nurses) to its corps of pupils who, during their second year, are sent out to private cases. That one of the announced aims of the founders of the training school, *i. e.*, the improvement of nursing generally throughout the country, has been accomplished, would seem to be established by the fact that the managers are constantly in receipt of communications from other cities asking for advice and help, and that trained women from the school at Bellevue have already been sent to act as head nurses in hospitals in Boston, Brooklyn, and New York.

TABLE XIV.—UNITED STATES MILITARY AND NAVAL ACADEMIES.

In this table of the appendix will be found the statistics of examinations of candidates for admission to the United States Military and Naval Academies for the year 1875.

TABLE XV.—DEGREES.

The table of the appendix shows the number and kind of degrees conferred in course and *honoris causâ* by the universities, colleges, and professional schools in 1875. The following summary exhibits the number of degrees of each kind conferred by institutions in the several States, and the total of the same for all the States and the District of Columbia:

Classification of degrees.—The number of degrees of all classes conferred in course was 7,577; honorary, 398. These were distributed as follows: In letters, 2,858 in course, 146 honorary; in science, 785 in course, 11 honorary; in philosophy, 173 in course, 20 honorary; in art, 1 in course, 4 honorary; in theology, in course 158, honorary, 138; in medicine, 2,666 in course, 7 honorary; in law, 841 in course, 68 honorary.

Institutions and degrees.—The number of institutions of the several classes embraced in the summary, with the number of degrees conferred by each class, is as follows: Universities and colleges of the liberal arts, 238; degrees conferred in course, 3,262; *honoris causâ*, 393. Colleges of agriculture and the mechanic arts and schools of science, 20; degrees conferred in course, 160. Colleges, &c., for the superior instruction of women, 61; degrees conferred in course, 490; *honoris causâ*, none. Total number of degrees conferred on women in institutions embraced in Tables VIII and IX of the appendix, 821; *honoris causâ*, none. Schools and departments of theology, 63; degrees* and diplomas conferred in course, 651. Schools and departments of law, 26; degrees conferred in course, 841. Schools and departments of medicine and pharmacy, 82; degrees conferred in course, 2,666.

It is impossible to indicate here the courses of study upon the completion of which these degrees or diplomas are conferred. The great difference existing between these courses appears from year to year in other parts of these annual reports, and may be found for any year by consulting the several catalogues. The material is abundant for a treatise of no small size upon the degrees annually given by these institutions in the United States. This table has special value in showing how far the various courses of study offered to students in these institutions are completed. Taken in connection with the exhibit of the students admitted and in attendance, it shows how large a number fall out by the way. It should quicken among the friends of learning a public sentiment which will encourage and demand more thorough training before the duties are assumed or the honors enjoyed which these degrees confer.

*The number of *degrees* was 158.

TABLE XVI.—LIBRARIES.

The Special Report on Public Libraries in the United States which was announced in my last annual report as in preparation by this office is well advanced toward completion, and will soon be published and ready for distribution. The Centennial Commission having recognized the importance of libraries as a part of the educational representation at the International Exhibition at Philadelphia, and having designated them as a separate class, the original plan of the work was considerably enlarged, with a view of presenting as full a survey as time and means would permit of all classes of public libraries, from the time of the establishment of the first public library in the colonies to the present. It is believed that the additional historical and statistical matter which it has thus been possible to include will add much to the usefulness and permanent value of the work, and fully compensate for the consequent delay in its publication. The report will be issued in two parts: Part I will comprise the history and statistics of the several classes of public libraries, with essays and discussions on the more important questions of library economy and management, by eminent librarians and others interested in enhancing the usefulness of libraries; Part II constitutes a practical treatise on cataloguing, entitled "Rules for a Dictionary Catalogue," prepared expressly for the report by Mr. Charles A. Cutter, librarian of the Boston Athenæum.

It is deemed proper to present here an outline of the report, with some statistics drawn from the tables showing the growth of public libraries in the country during the last one hundred years.

Outline of the Special Report on Public Libraries.—The first chapter consists of an historical survey of American public or semi-public libraries, which were established in the colonial period down to the Revolution. It has been prepared after thorough investigation, and affords a striking contrast between the literary resources of the country a century ago and those of the present, and will be read with interest by all students of our history.

Libraries are next treated of as adjuncts of common schools; the history and fortunes of common school libraries in each State where they have been established are described, and the causes pointed out which in some of the States have operated to impair their usefulness as factors in the school systems.

Separate chapters are devoted to the libraries of colleges and professional schools—theological, law, medical, and scientific—the development of each class being traced, and individual sketches given of the principal collegiate and theological libraries in the country.

The history of the origin and growth of prison and reformatory libraries in the United States is sketched; their present number, means of support, regulations, character, and extent of use described, and facts presented which testify to their importance as auxiliaries in the moral and intellectual improvement of the unfortunate, and in the reclamation of the vicious and criminal.

The institution of professorships of books and reading in our colleges, for the systematic and scientific instruction of students in the art and methods of reading and in the choice and valuation of books, is discussed, and the creation of such professorships advocated as in accordance with the spirit of the present educational movement.

A chapter is given to the libraries of the General Government, the history and condition of the Library of Congress, or National Library, being fully described by its librarian, Mr. A. R. Spofford, and sketches presented of the libraries of the several Executive Departments, and of the system of libraries of military posts, national homes for disabled volunteer soldiers, and the American Seamen's Friend Society, followed by an outline of legislation respecting copyrights and duties on books imported for public use, the distribution of public documents, and exchange of publications with foreign governments, and a description of the Smithsonian system of foreign and domestic exchanges.

An interesting chapter on historical societies is next presented, treating of their

origin, history, and present condition, educational influence and aims, and including sketches of the libraries, publications, and work of individual societies.

Free public libraries, established under general laws and sustained by town or municipal taxation, are then considered, the relations of the citizen and the State and of special communities and classes to them discussed, and a description given of their history and development in each of the States in which such libraries have been formed.

A chapter is devoted to the discussion of the educational and industrial benefits which would undoubtedly result from the establishment of art museums in connection with our public libraries, on the plan of such museums in many of the free libraries in Great Britain.

Next in order will be found contributions by librarians of wide experience on leading topics relating to the economy and administration of public libraries. These are eminently practical in their bearings, and will, it is hoped, meet the frequent applications to this Office for information on many of the subjects discussed, and lead to the establishment of libraries in communities not at present enjoying these means of cultivation and intellectual improvement.

The following are the subjects treated of in this part of the report: (1) Library buildings, with plans and descriptions for a library of one million volumes' capacity; (2) The organization and management of public libraries; (3) College library administration; (4) Library catalogues, comprising an essay on the subject, by Mr. C. A. Cutter, of the Boston Athenæum, and a chronological table of printed catalogues of American libraries, followed by descriptions of the plan of indexing and arranging a library, devised by Mr. Melvil Dewey, and in use in Amherst College Library, and of the catalogues of the Brooklyn Mercantile and New York Apprentices' Libraries, which are now in press, and an outline of the system of classification adopted in the Public School Library of St. Louis; (5) Indexing periodical and miscellaneous literature; (6) Binding and preservation of books; (7) Periodical literature and society publications; (8) Works of reference for libraries; (9) Library memoranda; (10) Titles of books; (11) Book indexes; (12) Library bibliography.

Following the subject of library reports and statistics will be found a chapter comprising sketches, prepared in the main by resident librarians, of the more important libraries of Baltimore, Boston, Brooklyn, Charleston, Chicago, Cincinnati, New York, Philadelphia, St. Louis, and San Francisco. The paper on the libraries of Charleston also notices other important libraries in the Southern States, and that on the libraries of San Francisco is followed by notices of several flourishing libraries in other places on the Pacific coast.

Library reports and statistics.—Under this head will be presented (1) a table of public or semi-public libraries in the country in the years 1776, 1800, and 1876; (2) a table showing the number and extent of public libraries, which now contain 10,000 volumes or more, in the years 1836, 1846, 1856, 1857–'58, 1863, 1874, and 1875; (3) a table showing the increase in the number of public libraries during the last one hundred years, by periods of twenty-five years each, and the number of volumes they contained in 1875; (4) a table of libraries graded according to number of volumes, showing the number of libraries in each State and Territory numbering 500 volumes and upward, classified by sizes; (5) a summary table of all public libraries in the United States numbering 300 volumes and upward, by classes and States; besides tables respecting library funds, circulation of books, &c., &c.

Growth of public libraries.—The remarkable growth of public libraries in the country is strikingly illustrated by the following items gathered from the table already mentioned: In 1776 there were, so far as known, 29 public or semi-public libraries in the thirteen American colonies, numbering in the aggregate 45,623 volumes; in 1800 the number had increased to 49, numbering in all about 80,000 volumes; now there are, including students' society libraries in colleges, 3,682 public libraries, numbering in the aggregate 12,276,964 volumes.

It is to be noted that the above totals do not include (except in a few instances,

which do not materially modify the figures given) the libraries of common schools, which contain so far as reported, a total of 1,365,407* volumes, nor the libraries of churches and Sunday schools.†

It appears from the table showing the number of public libraries established in the country during the last one hundred years, by periods of twenty-five years each, that 20 libraries were established between 1775 and 1800; 179 between 1800 and 1825; 551 between 1825 and 1850; and 2,240 between 1850 and 1875. The date of organization of more than 600 libraries which furnished statistics was not given; but it is safe to assume that most of these were established within the last twenty-five years.

Gifts and benefactions to libraries.—An effort was made to ascertain the amount of gifts and bequests by individuals to public libraries in the last one hundred years. The returns were very incomplete, but about $15,000,000 of such gifts and bequests were reported, mostly from the Eastern and Middle States. It is estimated that the total amount of benefactions to libraries by individuals in the period named would not fall short of $30,000,000, not including the value of a great number of private collections of books which have been dedicated to the public.

Illustrations of library buildings.—The report will contain illustrations of the Loganian Library, the first building in the country devoted to the uses of a public library; of the Redwood Library at Newport, R. I., built between 1748–'50; of the Wellesley College Library, (interior,) at Wellesley, Mass.; of the new library building of the College of New Jersey; of the Public Library at Concord, Mass.; of the Roxbury Branch of the Boston Public Library; of the Public Library at Northampton, Mass.; of the Public Library at Worcester, Mass.; of the Cornell Library at Ithaca, N. Y.; of the Boston Public Library, (exterior); of Bates Hall and the Reading Room for Periodicals of the Boston Public Library; of the exterior and interior of the Cincinnati Public Library; of the Lenox Library at New York, recently completed; of the Library Company of Philadelphia; of the Ridgway Library at Philadelphia, now approaching completion; and of the Apprentices' Library at Philadelphia.

The following is the table of contents of Part I of the report:

Letter of the Commissioner of Education to the Secretary of the Interior. Introduction: Chapter I, Public libraries a hundred years ago, Horace E. Scudder; II, School and asylum libraries, editors; III, College libraries, editors; IV, Theological libraries in the United States—part 1, a librarian; 2, Prof. John S. Sumner, S. J.; 3, editors; V, Law libraries, Stephen B. Griswold, LL. B.; VI, Medical libraries in the United States, J. S. Billings, assistant surgeon, U. S. A.; VII, Scientific libraries in the United States, Prof. Theodore Gill, M. D., Ph. D.; VIII, Libraries in prisons and reformatories, editors; IX, Professorships of books and reading—part 1, F. B. Perkins; 2, William Mathews, A. M.; X, Libraries of the General Government, editors; XI, Copyright, distribution, exchanges, and duties, editors; XII, State and territorial libraries, Henry A. Homes, LL. D.; XIII, Historical societies in the United States—part 1, Henry A Homes, LL. D.; 2, W. I. Fletcher; 3, editors; XIV, Young men's mercantile libraries, F. B. Perkins; XV, Young Men's Christian Associations, Cephas Brainerd; XVI, Free libraries, J. P. Quincy; XVII, Public libraries in manufacturing communities, W. I. Fletcher; XVIII, Public libraries and the young, W. I. Fletcher; XIX, How to make town libraries successful, F. B. Perkins; XX, Reading in popular libraries, Justin Winsor; XXI, Art museums and their connection with public libraries, Prof. H. S. Frieze, LL. D.; XXII, Free town libraries, editors; XXIII, Free reading rooms, W. C. Todd; XXIV, Library buildings, Justin Winsor; XXV, The organization and management of public libraries, William F. Poole; XXVI, College library administration, Prof. Otis H. Robinson; XXVII, Library catalogues, C. A. Cutter; XXVIII, Catalogues

*The reports of the State superintendents of public instruction of California, Connecticut, and New Jersey do not give the number of volumes in school libraries, consequently the school libraries of those States are not included in the above total for this class.

†According to the United States census of 1870, the church and Sunday school libraries of the country contained in the aggregate about 10,000,000 volumes.

and cataloguing—part 1, Melvil Dewey; 2, S. B. Noyes; 3, Jacob Schwartz; 4, John J. Bailey; XXIX, On indexing periodical and miscellaneous literature, Prof. Otis H. Robinson; XXX, Binding and preservation of books, A. R. Spofford; XXXI, Periodical literature and society publications, A. R. Spofford; XXXII, Works of reference for libraries, A. R. Spofford; XXXIII, Library memoranda, Justin Winsor; XXXIV, Titles of books, Prof. Otis H. Robinson; XXXV, Book indexes, F. B. Perkins; XXXVI, Library bibliography, A. R. Spofford; XXXVII, Library reports and statistics, editors; XXXVIII, Public libraries of ten principal cities, several contributors; XXXIX, General statistics of all public libraries in the United States, editors; Index.

Rules for a Dictionary Catalogue.—Part II of the report, entitled "Rules for a Dictionary Catalogue," is designed especially for the use of librarians and cataloguers, and will be published in a separate volume.

The pages of the general statistical table of libraries included in the special library report having been preserved, it is deemed expedient to reproduce them in this my annual report, in order to give the information they embody a wider circulation than would otherwise be possible.

In preparing the table it was found advisable to combine in most instances the society libraries of each college and to make but one entry for all, so that the number of libraries is apparently though not really reduced from 3,682 to 3,647, a difference of 35. The omissions in the table are as follows: 653 libraries do not report the date of organization; 2,172 libraries do not report the average annual increase of books; 2,940 do not report the extent of yearly use of the library; 1,960 do not report whether they have a permanent fund or not; 2,852 do not report a yearly income; 2,913 do not report the yearly expenditure for books, periodicals, and binding; and 3,039 do not report the amount paid yearly for salaries and incidental expenses. The totals given below do not include the statistics of eight libraries embraced in the table from which reports were received after the summary was completed.

The following is a summary of the table:

Total number of volumes	12,276,964
Total yearly additions, (1,510 libraries reporting)	434,339
Total yearly use of books, (742 libraries reporting)	8,879,869
Total amount of permanent fund, (1,722 libraries reporting)	$6,105,581
Total amount of yearly income, (830 libraries reporting)	1,308,756
Total yearly expenditures for books, periodicals, and binding, (769 libraries reporting)	562,407
Total yearly expenditures for salaries and incidental expenses, (643 libraries reporting)	682,165

The number of pamphlets reported was over 1,500,000. It should be stated, however, that a large proportion of the libraries made no return of this item.

TABLE XVII.—MUSEUMS OF NATURAL HISTORY.

Forty-four of these important aids to culture are reported. A just balancing of studies, or proper use of Kindergarten methods in modifying the present abstract method of instruction, would greatly increase the demand upon these museums and the disposition on the part of persons of wealth to endow them. The establishment of zoölogical gardens by many of the larger cities is an important step, calculated to add new interest and value to the study of natural history. Those at Cincinnati have made excellent progress. The zoölogical garden at Philadelphia, now undoubtedly the best in the United States, will attract the attention of multitudes in attendance upon the International Centennial Exhibition and greatly increase the interest in these collections among the people throughout the country.*

* The board of directors, in their report of April 27, 1876, observe: "The anticipations of the directors in regard to the increase in the number of visitors at the society's garden have been fully realized. From the 1st of March, 1875, to the 1st of March, 1876, the very large number of 419,776 persons have passed through the gates; an increase of 63,972 over the preceding year. The very great

RELATION OF ART TO EDUCATION.

In Table XVIII, Part 1, will be found a list of the art museums and art collections of colleges, historical societies, &c., in the United States. A careful analysis of these collections was given in my last annual report, pages xciii–xcvii. The collections remain substantially as then reported.

In Table XVIII, Part 2, a list of the institutions affording instruction in art is given. An abstract of the statistics of these schools was also given in my last report.

The subject of the introduction of the systematic study of drawing into the public schools of the United States, with especial reference to its bearing upon industry, which was brought prominently before the educators of the country by the legislation of the State of Massachusetts in 1870, and subsequently by that of the State of New York, continues to attract attention.

In several of the States there is a movement toward legislation upon the subject similar to that of the States named. Besides, in some single cities and towns the systematic study of drawing has been successfully introduced as a required study in the public schools for a sufficient length of time to test its feasibility, and with highly satisfactory results. An examination of the following abstracts of the several State reports will show that the introduction of this study is rapidly extending and becoming quite general. In several of the State and city reports much space is given to its consideration, though in the limited space of this report it is impossible to do more than note the fact that drawing is taught in individual cities and towns. A marked increase of interest in all matters pertaining to art education is shown throughout the country; several already possessing museums of art are making valuable additions to them, and others are forming them, while some instruction in the history of art is now given in most of the higher institutions of learning. The value of art loan exhibitions is more generally recognized. Such exhibitions are beginning to form a regular feature in most of the larger cities, and it is to be hoped that they may be adopted by smaller cities and villages. The wealth of any community in art treasures, scattered as they are among many owners, is never realized until an effort is made to concentrate them in one collection. This was notably demonstrated in England at the time of the Manchester art loan exhibition in 1857, and similar surprise has been felt at every loan exhibition in this country.

The coming Centennial Exhibition at Philadelphia may be confidently relied on both to increase the general information upon the possible application of art to industries, and to demonstrate in the case of Great Britain, Russia, and other countries the great results to be obtained by systematic, intelligent art training. The direct relation between the systematic instruction of children and youth in elementary drawing and the

attractions of the garden and its collection, added to its immediate proximity to the main railroad approaches of our city, have caused its availability as a resort for excursions from adjacent counties to become generally recognized. To add to the accommodation of this class of visitors, a place of deposit for packages, bundles, &c., has been provided, and a handsome restaurant, under the society's control, has been erected. It is expected that a siding and station will shortly be erected on the junction railroad, directly at the southern entrance, so that excursionists can be landed directly at our gates." Dr. William Camac, secretary, remarks, in a private note, that " the success of our garden is unparalleled in the history of similar institutions, and shows how much such a resort was needed. The urgent demand of the public for the immediate opening of the garden in its very infancy, and the strain upon the managers to keep up with the increasing patronage by affording additional attractions and preparing the necessarily costly buildings to accommodate the rapidly accumulating stock, have rendered it almost impossible to give that attention to the scientific and educational features, which, after all, should be the main object of such an institution. We will, however, in a short time, I trust, be able to issue periodically a scientific journal, devoted to the announcement of matters of zoölogical interest, as noted in the garden and elsewhere, and to inaugurate a series of popular lectures on the same subject. In listening to conversation held at times by visitors, apparently otherwise well-informed people, I have been amazed at the ignorance displayed by them, not only as to the habits of the various animals, but as to their very existence. Many of these persons, I was glad to find, who came at first to be only amused, returned, and, buying a guide book, made a careful tour of the garden, and studied zoölogy and geography at the same time, gaining thus a degree of practical information which no extended course of reading could ever impart."

manufactures of a country can there be studied. If the collections there demonstrate the existence of such a connection, the economic question as to the value of the study of drawing will probably be affirmatively settled.

In Boston, it is expected that the new art museum will be ready to open in 1876. In Philadelphia, the Pennsylvania Academy expects to take possession of its new building and to reopen its art schools, so long closed while the new palace of art has been in process of construction. A new institution, modelled after the famous South Kensington Art Schools and Museum, is planned in Philadelphia, to succeed the great Centennial Exhibition, just as South Kensington was the outcome of the first World's Fair in Hyde Park. This project is in the hands of enthusiastic public spirited citizens of Philadelphia, and its success may be considered as certain. In New York, a beginning has been made in Central Park toward the permanent building that is to be the home of the Metropolitan Museum, which, it is to be hoped, will, in time, develop into a school similar to that of South Kensington. In Washington, the Corcoran Art Gallery already finds its spacious rooms too small, and the trustees are contemplating additional buildings. Here also it is hoped that art instruction will eventually be given to students.

In my last report the announcement was made that the circular relating to this subject already published (Circular No. 2, 1874) was to be followed by a similar publication. The scope of the proposed publication has been enlarged, and there is now in preparation a special report upon the subject of art in the United States and its relations to education.* This is intended to comprise a brief history of the progress of art in this country, together with special and historical accounts of all the public art collections and of the institutions affording instruction in art.

In addition, a survey of the action in other countries in this matter of art education in its relation to industries, and the influence of the various world's fairs upon these relations, is designed. It is hoped in this report to comprise a clear statement of the efforts made in the United States in the direction of high and industrial art education up to 1876, and also to show what has been attempted and what accomplished in this direction by the countries of Europe. This report will seek to place in the hands of its readers a statement of what industrial art education is, what part it bears to-day in the economy of European states, and how its advantages, if it has any, are to be secured to the citizens of the United States.

The publication of this special report may be expected soon after the close of the Centennial Exhibition.

TABLE XIX.—SCHOOLS FOR THE DEAF AND DUMB.

Under Table XIX of the appendix will be found the details from which the following summary is drawn.

These institutions are no more to be classed as charities than any others established for educational purposes. With a view to promoting this understanding of them they have been treated in the descriptive text like all others.

It will be observed that 36 of the 293½ present instructors in these institutions are known as semi-mutes, and that of the graduates, 233 have been teachers therein.

* The work is still in charge of I. Edwards Clarke, A. M., who, in the use of the facilities of the office, is receiving most valuable material for its completion.

TABLE XIX.—*Statistical summary of institutions for the instruction of the deaf and dumb.*

a For both departments.

b For salaries and contingent expenses $180 are allowed for each pupil in attendance.

c The State pays $175 annually for each pupil who is a resident of the State.

d Also $150 per annum for each pupil.

e For six months.

f Congressional appropriation.

The condition of these institutions, on the whole, is gratifying. The quality of instruction is not excelled. Originally founded as charities, the instruction they afford is coming to be acknowledged as a part of that debt owed by the present to future generations. It is an honor not to be forgotten that the National Congress, by the appropriation of public funds, established the first deaf-mute college in the world. The career of this college, under E. M. Gallaudet, its able and skilful president, fully deserves the universal commendation it receives.

The general efficiency of these institutions is greatly promoted by the publication of a journal in the interests of deaf-mutes, and an organization including the officers of institutions for their instruction in the United States and Canada.

It is unfortunate that the table indicates in any locality a deficiency in appropriation for this instruction. The facts brought out by these figures should suffice to bring any intelligent and fair-minded person to grant any just demand in this behalf.

TABLE XX.—SCHOOLS FOR THE BLIND.

Additional statistics in reference to blind asylums will be found in Table XX of the appendix, from which this summary is drawn.

TABLE XX.—*Statistical summary of schools for the blind.*

States.	Number in each State.	Number of instructors and other employés.	Number of blind employés and workmen.	Number of pupils.	Number of pupils admitted since opening.	Libraries.	
						Number of volumes.	Average annual increase.

a Reported with deaf and dumb department. (See Table XIX and summary.)
b Includes both departments of the Institution for the Colored Blind and Deaf-Mutes.
c Apparatus.
d For both departments.
e Sixty-one thousand dollars of this were for a new building.

These tables should be studied in connection with the preceding; the interests of the deaf and dumb and the blind are in so many cases considered as one, and treated together.

TABLE XXI.—ORPHANS' ASYLUMS, ETC.*

For further statistics concerning orphan asylums, soldiers' orphans' homes, infant asylums, miscellaneous charities, and industrial schools, reference is made to Table XXI of the appendix.

* Mrs. S. A. Martha Canfield has contined her labors with very satisfactory results in connection with the collection and dissemination of information in regard to reform schools, asylums for orphans and infants, for soldiers' and sailors' orphans, and in regard to industrial schools and miscellaneous charities. Circular No. 6, for the year, chiefly prepared by her, has been translated into French by Professor Wynen, of Antwerp, and published for the benefit of European students of its subjects.

a Sex not reported in all cases.

Orphan asylums are the most numerous of all the charitable institutions devoted to the care of children. Their object and work has been stated in previous reports. The following additional information has been received from institutions in the South and West since the issue of our last report, or the publication of Circular No. 6.

The Union Society, of Savannah, was organized in 1750. This, it is now believed, was the first orphan asylum established in this country. The name Bethesda was adopted by its founders, but it was better known as the Whitefield Orphan Home. The idea first existed in the minds of Oglethorpe and Wesley, but to Whitefield, in 1739, a grant of five hundred acres of land was formally made, upon which, a few years later, buildings were erected and opened to admit the orphans of Savannah. The early records of the institution were lost during the war of the Revolution, but the work continued, and is still in successful operation.

The Protestant Orphan Asylum Society, of Mobile, Ala., among the time-honored institutions of that city, was founded in 1829, and immediately received under its control 17 destitute orphans under the age of ten years.

D'Evereux Hall, a home for Catholic orphans at Natchez, Miss., is worthy of mention. Special attention is given to gardening and farming.

The Leath Orphan Asylum, of Memphis, Tenn., has admitted 700 children since 1852, and during the past year has expended $22,000 in the erection of an additional building.

The Oxford Orphan Home, North Carolina, is under the control of the Masonic Grand Lodge of that State, and is doing a good work.

The Roman Catholic Female Orphan Asylum, of San Francisco, and St. Vincent's Male Orphan Asylum, San Rafael, California, have, during the past year, cared for nearly 700 children; the former, since 1852, has admitted 3,161.

The Synod of Alabama have an Orphans' Home at Tuskegee, with 222 inmates.

The Savannah Female Orphan Asylum is an old institution, organized in 1801. All that are admitted are retained until they are eighteen years of age. This plan was adopted by many of the asylums of an early date, but the modern idea is to retain the child in the institution no longer than may be required to find for it a more suitable home.

The State Orphan Asylum, of Columbia, S. C., was established in 1868, in Charleston, for the benefit of colored orphan and destitute children. Previous to its removal a building and grounds were purchased with an appropriation of $20,000, made by the general assembly during the session of 1872-'73.

From the Indian Territory is reported the Cherokee Orphan Asylum, established by the Cherokee Nation in 1871, for all the tribes that choose to avail themselves of its privileges. Agriculture and the mechanic arts are taught, with female industries; as many as can be are prepared for teaching. All are taught to read and write both English and Cherokee.

Among the more recent organizations in the South are the Thornwell Orphanage, Clinton, S. C.; German Baptist Bethesda, Louisville, Ky.; Protestant Orphan Asylum, New Orleans, La.; St. Alphonsus' Orphan Asylum, New Orleans, La.; La Teche Asylum, St. Mary's, La.; the Orphan Home, Decatur, Georgia, and the Appleton Church Home, Macon, Ga. The last named home is under the care of several Protestant sisters, directed by the bishop of the diocese.

Soldiers' and sailors' orphan homes.—These institutions, as indicative of their true character, are called by the sacred name of "home." The schools connected with them still continue to be, as heretofore, the most important feature and principal attraction. The necessity for these institutions is rapidly diminishing, and the question arises as to the best use to make of the buildings and property now and heretofore appropriated to this use. It has been suggested that these homes be opened to the orphan poor generally. We quote from the Iowa report:

"We believe, by the natural love and sympathy we bear to the orphan child, that we would be recreant to our duty if we omitted at this time and in this manner to press the following subject upon your serious attention. The State of Iowa, above all the

States of the Union, mainly because of her freedom from debt, can well afford to provide for and foster her indigent orphan children. The sentiment is not claimed as new. The trustees, in their biennial report of 1874, called the attention of the last legislature to it.

"The true wealth of a community is not in its storehouses of wheat and corn, nor in its factories and mechanic arts alone, but in the proper culture of its children, and in their preparation for the real and useful duties of life. It will not be denied that truancy exists to a fearful extent everywhere, and that truancy begets idleness and crime.

"Let us ask ourselves the question, how can this condition of moral delinquency be stayed? Will the constituted authorities of the State take hold of it? We believe that they should, and that they will."

The Michigan State Public School is designed for the education of those children who would otherwise be sent to the county poorhouse, and is sustained by the public school funds of the State.

Infant asylums.—These institutions are increasing in numbers and usefulness. Some admit foundlings and young mothers with their infants, others receive the infant for the day, the mother returning for it at evening and paying a small compensation for the care of the child. Some are admitted for a longer time, the time and terms agreed upon by the parties interested. Nearly every institution has some feature peculiar to itself; the main object of each is to prevent the crime of infanticide and save the lives of the children to the world.

Miscellaneous charities.—Under this head are included institutions which cannot properly be classed with the other divisions. Many of them are important and efficient instrumentalities for the amelioration of the condition of the young, both pecuniarily and educationally. A majority of these, perhaps, are sustained by the various Christian churches, while others are supported by private charity and are undenominational. Among these miscellaneous societies, institutions, and schools not mentioned in the report of this Bureau for the year 1874, are women's Christian associations, which are to be found in almost every city and town of any considerable importance. Some of these associations confine themselves to the work of providing homes and employment for friendless women and children, while others add to this labor efforts to secure their intellectual and moral improvement. Another organization, known as "Boffin's Bower," in Boston, Mass., similar to the Workingwoman's Protective Union and kindred societies in New York and elsewhere, provides employment for workingwomen through the means of an employment office or exchange, to which resort both employer and those seeking employment. The Boston institution, however, adds to this an educational and a social feature, undertaking, as it does, to organize wholesome amusements and provide a free reading room for workingwomen and girls. During the winter months warm dinners are given to all who ask for them, the number varying from seventy-five to eighty-five at the noon meal. How wide a field is offered in Boston for the laborers in this important and very necessary work is apparent from the fact that there are in the city 30,000 shop girls—nearly one-tenth of the entire population—who are engaged in more than seventy different occupations. This work was originated by a lady, and has been successfully carried on under her direction for the past six years.

The Home of the Good Shepherd, in Chicago, like institutions of the same name in other cities, sustained by the Roman Catholic Church, includes a sisterhood, an industrial school, and a reformatory.

The Holy Communion Church Institute, at Charleston, S. C., an Episcopal asylum and school for orphan and destitute boys, has in the nine years of its quite remarkable history accomplished an excellent work.

Among the newsboys' lodging-houses, which now exist in various large cities of the country, is one at New Orleans, La., founded by the Protestant Episcopal Church. It reports that it furnishes on an average 6,500 lodgings every year to white boys under twenty-one years of age, who sustain themselves by selling newspapers and other kindred occupations.

The great work carried on in New York City by the Children's Aid Society,* C. L. Brace, esq., secretary, has continued to meet greater and greater demands, and has received new assurances of its great usefulness.

Industrial schools.—Many of the reform schools are called industrial, but there is still another class of institutions, known as industrial schools, in which worthy but poor children and young women are taught useful trades and various branches of industry, to enable them to be self-supporting.

The Industrial Relief Society and Home for the Friendless, in Savannah, Ga., affords a temporary home to friendless women and girls, where they are trained by the matron in all the branches of housework and sewing. They are also taught reading, writing, and arithmetic.

The Sisters of Mercy, at Greenbush, N. Y., have opened a free industrial school, in which they teach young girls, in a practical and scientific manner, useful trades and various branches of remunerative industry, such as vest, dress, and shirt making, ornamental needle work, embroidery, &c.

The Industrial School for Girls, Boston, removes children from their miserable homes, trains them to good personal habits, and instructs them in household labor. Its object is to provide channels through which the energies and capacities of these children may turn to the profit rather than to the injury of society, and to cut off some of the sources of supply to jails and houses of correction.

St. Mary's Industrial School for Boys, near Baltimore, receives orphans and other homeless boys, and trains them to industry on its farm; also in school studies, and in the business of printing, shoemaking, tailoring, baking, domestic service, and gardening.

TABLE XXII.—REFORM SCHOOLS.

For detailed statistics of these schools reference is made to Table XXII of the appendix.

* As this report goes to press the Office has received a circular letter addressed by Mr. Brace to Dr. Wines, secretary of the National Prison Association, calling attention to objections made at a meeting of the association to the sending of homeless children to the West, on the ground that, while it was relieving New York City of vicious elements, it was pouring them into the West. He states that by the aid of their agents and of the officers of the punitive and reformatory institutions in Illinois, Indiana and Michigan, where 15,000 poor children have been placed in the past twenty-four years, these institutions have been carefully examined. Only one child sent out by that society was found in Illinois, only five, beyond doubt, in Indiana, and by a similar examination and comparison of records West and East, none was found from the society in these institutions in Michigan. This is a most gratifying showing, and should effectually dispose of the charge made against the plan of the society.

TABLE XXII.—*Summary of reform schools.*

States.	Number in each State.	Number of teachers or officers.		Number committed during the year.	Number discharged during the year.	Present inmates.

The condition of these schools has not changed materially since our last report. The most notable circumstance that appears in relation to reform schools is the evident tendency on the part of many toward more liberal and humane methods of management and discipline. The Connecticut State Reform School, for example, has, during the last year, exchanged its close-locked cells for an open dormitory. No lad in it has been locked up for nearly a year, except for punishment, and none have tried to take advantage of this freedom, while the improvement in their feelings and conduct has been most marked and satisfactory.

The State Reform School at Lancaster, Ohio, offers the experience of eighteen years in proof of the superiority of the plan pursued in it, that of holding the inmates without walls, cells, and bars of iron, but by making them contented and satisfied with their surroundings. "They stay," it is said, "because they have nothing to gain by leaving."

TABLE XXIII.—SUMMARY OF SCHOOLS FOR THE FEEBLE-MINDED.

Table XXIII of the appendix presents statistics of schools for the instruction of feeble-minded youth, of which the following is a summary:

TABLE XXIII.—*Summary of schools for the feeble-minded.*

	Name.	Number of instructors and other employés.	No. of inmates.			Number dismissed or improved since opening.	Income.	Expenditure.
			Male.	Female.	Total.			
1	Connecticut School for Imbeciles	12	47	38	85	.....	.....	.....
2	Illinois Asylum for Feeble-Minded Children	26	79	47	126	170	$24, 500	$24, 500
3	Kentucky Institution for Feeble-Minded Children	9	56	56	112	*a*69	22, 500	22, 500
4	Private Institution for the Education of Feeble-Minded Youth, (Barre, Mass.)	50	59	21	80	*a*208	.....	38, 564
5	Massachusetts School for Idiotic and Feeble-Minded Youth.	27	72	52	124	423	27, 289	31, 071
6	Hillside School for Backward and Peculiar Children, (Mass.)	7	7	1	8	9	.....	.....
7	New York Asylum for Idiots	52	121	89	210	450	45, 911	45, 507
8	Ohio State Asylum for Idiots	74	242	160	402	301	65, 850	65, 169
9	Pennsylvania Training School for Feeble-Minded Children.	60	133	92	225	*b*372	56, 464	57, 537
	Total	317	816	556	1, 372	2, 007	242, 514	284, 848

a All improved. *b* Since 1864; 247 of these were improved and 49 self-supporting.

It will be observed there are nine of these institutions of this interesting class, employing 317 instructors, and having a total enrolment of 1,372, males 816 and females 556. The males, it may be noted, are considerably in excess of the females treated.

TABLE XXIV.—BENEFACTIONS.

For further details respecting educational benefactions for the year 1875, reference is made to Table XXIV of the appendix.

TABLE XXIV.—*Statistical summary of benefactions, by institutions, for* 1875.

Institutions.	Total.	Endowment and general purposes.	Grounds, buildings, and apparatus.	Professorships.	Fellowships, scholarships, and prizes.	Aid for indigent students.	Libraries and museums.	Object not specified.
Universities and colleges	$2, 703, 650	$1, 646, 173	$506, 583⅓	$102, 335⅓	$27, 000	$38, 500	$249, 960⅓	$133, 048

Every person of wealth before disposing of his money in aid of education should consult these tables. They indicate the localities where least is bestowed, and the class of institutions most in need.

In other countries the law of primogeniture renders possible the concentration of wealth upon a single line of descent, and traditions and customs unite to create a desire to perpetuate the family name. The absence of this law among us renders less feasible the perpetuation of family names upon any such basis as wealth. Family histories, however, among us indicate the possibility of great permanence on the condition of health of body and mind, of sound training, and wise occupation. Persons of great possessions, therefore, in seeking objects for their benefactions, not unfrequently selected institutions of learning to preserve their names to future generations. The examples of their wisdom are yearly multiplying. The effect of the hard times is seen in the reduction of the total amount of benefactions appropriated during the year now closing, the total being $4,126,562; that for 1874, $6,053,304; that for 1872, $11,226,977.

SUMMARY OF THE CONDITION OF EDUCATION IN OTHER COUNTRIES.*

A clearer conception of the progress of education in the several countries embraced in this summary may be obtained by noting a few prominent facts touching education in each at the beginning of the present century.

Portugal.—Pombal, the powerful prime minister in 1772, conceived the plan of establishing a primary school in every parish; 400 such schools were actually founded, but after his downfall these schools soon disappeared.

Russia.—Catharine II, in 1775, ordered the establishment of schools in all towns and villages, fixing the school fee at a minimum, but not making attendance compulsory. But as there were no teachers, no text books, no school-houses, no money, the order remained a dead letter.

Sweden.—In 1762 the clergy were urged to keep good teachers in their parishes, and in the 10 years following about 200 permanent schools were established.

Norway.—By a decree of 1741, the government urged all the parishes to establish schools, but nothing was done to enforce this decree.

Denmark.—Ever since the Reformation, numerous decrees have urged the establishment of schools by the parishes; many schools were really begun, but the general system only dates from the beginning of the nineteenth century.

Holland.—Holland had no general system of education till this century, but nearly every parish had a good primary school connected with the church.

Italy.—Italy did not exist as a nation, and in the numerous states then occupying the Italian peninsula primary education, if given at all, was almost entirely in the hands of the clergy.

* The issue of this report having been necessarily delayed, the opportunity has been improved to introduce the most recent educational intelligence from foreign countries, with a view of aiding students of education at the Centennial.

France had no system of primary education; all that was worthy of the name was given in convent or church schools.

Belgium belonged at that time to Austria.

Austria.—Maria Theresa and the reformer of Austrian education, Felbiger, waged an energetic warfare against ignorance. In 1770, 24 out of every 100 children attended school in Vienna, and 16 out of every 100 in the rest of the monarchy.

Great Britain and Ireland.—England had no public system of primary instruction, everything being left to individual effort.

Scotland had primary schools ever since the Reformation.

Prussia.—Frederick the Great took a deep interest in education, and established many primary schools and normal schools, especially in the conquered provinces.

Switzerland.—Most of the cantons possessed some sort of school system; great zeal in the cause of education was manifested, particularly in the Protestant cantons.

In this connection the two following quotations from trustworthy foreign journals are significant:

Comparative statistics of primary education in some of the states of Europe.

I.—Europe, Asia, and Africa.

Austria-Hungary.—*a.* Austria, constitutional monarchy: Area, 108,234 square miles; population, 20,394,980. Capital, Vienna; population, 833,855. Minister of worship and public instruction, C. von Stremayr.

The following data have been abstracted from the Allgemeine Deutsche Lehrerzeitung for 1876, Nos. 3 and 5, and from the Universitäts-Kalender for 1875–1876.

Public schools at Vienna.—The appropriation for education in the city of Vienna amounts to 2,109,790 florins in 1876, viz: 1,725,600 florins for primary education,

325,600 for middle class instruction, 48,830 for the training of teachers, and 9,750 for Kindergärten.

Superior education.—There are seven universities in the empire. Four of these, the so-called German universities, were attended as follows in 1875–1876: The University of Vienna, with 237 professors, had 3,800 students; the University of Innsbruck, 71 professors and 614 students; the University of Prague, 123 professors and 1,295 students; the University of Gräz, 78 professors and 881 students.

b. HUNGARY, constitutional monarchy: Area, 118,172 square miles; population, 15,509,455. Capital, Buda-Pesth; population, 276,476.

Number of communities, 11,552; population, 13,455,030; number of children between the ages of 6 and 15, 2,121,420; number of communal schools, 1,542; number of sectarian schools, 13,903; number of higher communal schools for boys, 6; number of higher communal schools for boys and girls, 9; number of higher burgher schools for boys, 29; number of higher burgher schools for girls, 8; number of communities without schools, 801; number of teachers of communal and burgher schools, 19,598; number of pupils in communal, burgher, middle class, and private schools, 1,443,266; number of children receiving no instruction, 678,154, or 32 per cent.

Normal schools.—Number of seminaries, 57; number of teachers, 510; number of pupils, 2,471, viz, 1,877 males and 494 females.

BAVARIA, constitutional monarchy: Area, 29,347 square miles; population, 4,863,450. Capital, Munich; population, 169,478. Minister of public instruction, Dr. von Lutz. Date of report, 1875.

PRIMARY EDUCATION.—*Deutsche Schulen:* Number of schools, 7,016; number of teachers, 10,599; number of pupils, 841,304; in this number are included pupils of Sunday and evening schools.

Common industrial schools for girls: Number of schools, 1,671; number of teachers, 1,837; number of pupils, 71,635.

Normal schools: Preparatory schools for higher normal courses: Number of schools, 35; number of students, 1,276.

Teachers' seminaries, (higher course:) Number of seminaries, 11; number of students, 786; number of professors, 94.

There are, besides, 1 seminary for Jewish candidates, 3 seminaries for the training of female teachers, and 1 seminary for the training of teachers of gymnastics.

Kindergärten and infant schools: Number, 249; of which 27 are Kindergärten: number of pupils, 24,215.

SECONDARY EDUCATION.—*Latin schools:* Number of schools, 75; number of teachers, 748; of which 553 are exclusively employed in Latin schools; number of pupils, 6,738.

Gymnasia: Number, 28; number of pupils, 2,640; number of professors, 438; of which 396 are exclusively employed in the Gymnasia.

Realgymnasia: Number, 6; number of pupils, 362; number of professors, 66.

SUPERIOR EDUCATION.—*University of Munich:* Number of professors in 1876, 116; number of stutents, winter semester 1875–'76, 1,232.

University of Würzburg: Number of professors in 1876, 67; number of students, winter semester 1875–'76, 1,019.

University of Erlangen: Number of professors, 54; number of students, winter semester 1875–'76, 429; total number of universities, 3; total number of professors, 237; total number of students, 2,680.

SPECIAL INSTRUCTION.—*Polytechnic school at Munich:* Number of professors, 49; number of students, 922.

Clerical seminaries: Number, 9; number of students, 449.

Royal lyceums: Number 8; number of professors, 67; number of students, 349.

Technological schools: Number, 36; number of students, 3,745; number of professors, 426.

Higher industrial schools: Number, 3; number of students, 189; number of professors, 46.

Central veterinary school at Munich: Number of professors, 11; number of students, 52.

Higher commercial schools: Number, 2; number of professors, 43; number of students, 553.

Schools of architecture: Number, 3; number of professors, 23; number of students, 130.

Professional evening and Sunday schools: Number, 260; number of teachers, 827; number of students, 14,501.

Schools of agriculture: Number, 4; number of professors, 76; number of students, 315.

Special agricultural courses: Number, 947; number of "hearers," 18,260.

Central school of forestry at Aschaffenburg: Number of professors, 6; number of students, 135.

Military academies and schools: Number, 4; number of instructors, 38; number of students, 246.

Schools of art: Number, 2; number of professors, 40; number of students, 475.

Miscellaneous schools for special education: Number, 102; number of pupils, 7,079.

MUSICAL INSTITUTIONS.—*Royal music school at Munich:* Number of professors, 23; number of pupils, 146.

Royal musical institute at Würzburg: Number of pupils, 184; number of professors, 12; number of musicians and singers, 180.

CHARITABLE INSTITUTIONS.—*Asylums for destitute children:* Number, 78; number of attendants, 268; number of inmates, 2,485.

Orphans' and foundlings' homes: Number, 53; number of attendants, 173; number of inmates, 1,962.

Deaf-mute asylums: Number, 12; number of teachers, 33; number of pupils, 361; viz, 192 males and 169 females.

Institutions for the blind: Number, 3; number of pupils, 129.

Institutions for cripples at Munich: Number of inmates, 33.

BELGIUM, constitutional monarchy: Area, 11,267 square miles; population, 5,087,105. Capital, Brussels; population, 400,000.

The official statistics, recently published, show that 42 per cent. of the inhabitants can neither read nor write, and that 50 per cent. of the conscripts had received no instruction whatever.—(Allgemeine Deutsche Lehrerzeitung, 1876, No. 23.)

DENMARK, constitutional monarchy: Area, 14,553 square miles; population, 1,784,741. Capital, Copenhagen; population, 180,866.

Education is widely diffused in Denmark, the attendance at school being obligatory from the age of seven to fourteen. Besides the University of Copenhagen, there are thirteen public Gymnasia or colleges in the principal towns of the kingdom, which afford a classical education, and under them are a large number of middle schools for the children of the trading and higher working classes.

Instruction at the public expense is given in the parochial schools spread all over the country, to the number, in August, 1869, of 2,940, namely, 28 in Copenhagen, 132 in the towns of Denmark, and 2,780 in the rural districts.—(Statesman's Year-Book for 1875.)

FRANCE, republic: Area, 201,900 square miles; population, 36,102,921. Capital, Paris; population, 1,851,792. Minister of worship and public instruction, Waddington.

Education in Paris.—Paris has at present 292,024 children between 2 and 14 years; registered in crèches and in public and private schools, 184,646 children; educated at home are 45,500 children; in Gymnasia and special schools are 11,147 children below the age of 14; number of children (not registered) attending school irregularly, 28,000; number of children receiving no education in 1876, 22,900; (in 1872 there were 67,500.) Of the 273 schools in Paris, 161 are conducted by secular and 112 by sectarian teachers.—(Schweizerische Lehrerzeitung, 1876, No. 31.)

GERMANY, constitutional monarchy, empire: Area, 212,091 square miles; population, 41,060,625. Capital, Berlin; population, 826,341.

Germany has no national system of education; each state manages its own educational affairs.

Technical schools in Germany and German provinces of Austria.—Schools of architecture, 34; mining schools, 25; schools of forestry, 17; schools of commerce, 108; military schools, 46; agricultural schools, 146; conservatories of music, 24; naval schools, 29; veterinary schools, 10; normal schools for gymnastics, 7; schools of surgery, 9; various technical schools, 86.—(Leipziger Illustrirter Kalender für 1877.)

Teachers' salaries in large German cities.—Munich, 1,629 mark, (one mark=25 cents, gold;) Stuttgart, 1,606 mark; Berlin, 1,560 mark; Leipzig, 1,350 mark; Danzig, 1,298 mark; Cologne, 1,230 mark; Breslau, 1,200 mark; Dresden, 1,200 mark; Königsberg, 900 mark. Nearly 12,000 male teachers in German elementary schools receive less than 700 mark.—(Allgemeine Pädagogische Rundschau, 1876, page 38.)

German universities.—The number of universities is 21, with 1,765 professors and 19,378 students, the largest being Berlin, with 3,298 students.

Secondary instruction in Prussia in 1874–'75.—Number of Gymnasia, 228; number of pupils, 74,606; number of teachers, assistants, and special teachers, 3,495. Number of Progymnasia, 33; number of pupils, 3,900. Number of Realschule, (first class,) 79; number of pupils, 31,249; number of teachers and assistants, 1,105. Number of Realschule, (second class,) 67; number of pupils, 5,902; number of teachers, 176. Total number of secondary schools, exclusive of burgher and higher burgher schools, 407; total number of pupils, 111,657.—(Allgemeine Schulzeitung, 1876, No. 14.)

Population of German States, December 1, 1875.

(Leipziger Illustrirter Kalender für 1877.)

	States.	Total population.	School population, (6–14 years.)		
			Total.	Boys.	Girls.

GREAT BRITAIN, constitutional monarchy: Area, 89,644 square miles; population, 33,098,400.—(Report of 1875.)

a. England and Wales.

Estimated school population, (2 to 15,) 7,183,538; number of schools inspected, 12,167; number of seats in schools, 2,861,319; number of pupils enrolled, 2,497,602; number of pupils present at examinations, 2,034,007; average attendance, 1,678,759; number of pupils qualified by attendance to earn grants, 1,457,075; number of pupils individually examined, 857,844; number of infants qualified by attendance to earn grants, 408,461; number of pupils individually examined in higher branches, 84,620; number of pupils who passed in one subject, 35,212; number of pupils who passed in two subjects, 26,474; number of certified teachers, 18,714; number of assistant teachers, 2,489; number of pupil teachers, 27,031.

b. Scotland.

Number of children between 5 and 13 years of age, 629,254; number of schools under school boards, 2,303; number of pupils on the rolls, 290,874; number of average attendance, 212,206; number of teachers and assistants, 3,113; number of pupil teachers, 2,475; number of sewing mistresses, 1,122.

GREECE, constitutional monarchy: Area, 19,941 square miles; population, 1,457,894. Capital, Athens; population, 44,510.

The following is an abstract of an article in the Archivo di Pedagogia, of Palermo:

Primary education in 1874.—Number of public free schools, 1,127; number of pupils, 74,561—viz, 63,156 boys and 11,405 girls; number of private schools for boys, 41; number of pupils, 3,558; number of private schools for girls, 26; number of pupils, 1,355.

Secondary education in 1874.—(Gymnasia and Hellenic schools.) Number of Hellenic schools, 136; number of teachers, 280; number of pupils, 7,646; number of Gymnasia, 18; number of professors, 120; number of pupils, 2,460.

Lycées and boarding schools.—Number of lycées and boarding schools for boys, 18; number of pupils, 748; number of boarding schools for girls, 15; number of pupils, 122.

The last named are private institutions, and subject to government inspection.

Superior education.—The university: Number of students in 1874, 1,352; number of professors, 53; number of tutors, 24.

Miscellaneous schools.—Naval schools, 5, military academy, 1; polytechnic school, 1; seminaries, 4; royal marine school, 1; total number, 12. Number professors, 85; number of students, 681.

Grand total of institutions of learning, 1,394; number of pupils and students, 93,588.

No mention is made of normal schools and educational journals.

ITALY, constitutional monarchy: Area, 112,677 square miles; population, 26,796,253. Capital, Rome; population, 244,484.

The following number of children do not attend school at present: province of Mantua, 10,868, or 31 per cent.; province of Ascoli-Picero, 11,648, or 40 per cent.; province of Bologna, 26,464, or 49 per cent.; provinces of the Campagna, 124,166, or 72 per cent.; provinces of Bari, Lecce, Potenza, and Calabria, 215,722, or 75 per cent. Number of lycées, 80; number of pupils, 5,532; number of Gymnasia, 104; number of pupils, 9,772; number of technical schools, 63; number of pupils, 6,501.—(Bolletino Ufficiale dell' Istruzione Pubblica.)

JAPAN, absolute monarchy: Area, 156,604 square miles; population, 33,579,909. Capital, Tokio, (Yedo;) population, 674,447. Acting minister of education, F. Tanaka. Date of report, 1874.

Population, (according to school report,) 33,579,909; middle school districts, 246; elementary school districts, 45,418; increase for the year, 2,967.

Schools: Public, 18,712; increase for the year, 10,710; private, 2,356.

Normal institutes: Governmental, 7; public, 45; increase for the year, 21.

Foreign language schools: Governmental, 10; public, 82; private, 21; government colleges, 21.

Whole number of colleges and schools, 20,608; increase for the year, 7,945.

Pupils of schools: Male, 1,303,300; increase for the year, 293,684; female, 421,807; increase for the year, 103,471; total, 1,725,107; increase for the year, 397,152; pupils of normal institutes, 5,022; increase for the year, 3,811.

Pupils of foreign language schools: Male, 4,969; increase for the year, 966; female, 350; increase for the year, 126; total, 5,319; increase for the year, 1,092; pupils in government colleges, 3,973; increase for the year, 62; whole number of pupils, 1,739,422; increase for the year, 402,118. Number of pupils per 100 of population, 5.18.

Teachers employed in schools.—Public: Male, 32,556; female, 457. Private: Male, 4,398; female, 210. Teachers in normal institutes, 285; teachers in foreign language schools, 247; teachers in government colleges, 245.

Foreign instructors.—English: Male, 91; female, 10. American: Male, 22; female, 2. German: Male, 23; female, 1. French: Male, 56; female, 2. Russian: Male, 1. Dutch: Male, 2. Swiss: Male, 1. Chinese: Male, 1.

Total number of foreign instructors: Male, 197; female, 15; total, 212.

Whole number of teachers: 38,365; increase for the year, 15,859.

Income.—From school fees, 301,603.32 yen; from voluntary contributions, 1,080,845.46 yen; from school district rates, 1,458,610.06 yen; from government, 272,330.17 yen; from interests of various sorts, 354,326.50 yen; from various sources, 326,407.50 yen; total annual income, 3,794,123.01 yen.

Expenditure.—Teachers' salaries, 1,295,686.63 yen; other salaries, 282,527.51 yen; expenses for inspecting and travelling, 28,269.64 yen; building and repairs, 643,536.01 yen; books and apparatus, 488,137.25 yen; fuel and lights, 170,832.56 yen; miscellaneous, 286,239.03 yen; total annual expenditure, 3,195,278.63 yen.

Expenses for government colleges and schools, 643,142.40.

Public school property.—Value of school-houses, 1,038,026.57 yen; value of school grounds, 124,580.39 yen; value of school apparatus, 413,595,61 yen; value of school books, 367,653.63 yen; amount of school funds, 3,796,392.07 yen; total, 5,740,248.27 yen.

JAVA, Dutch colony: Area, 51,336 square miles; population, 17,298,200.

Number of government schools, 53; number of pupils, 4,160, of which 2,352 receive instruction free; number of private schools, 29; number of pupils, 2,000. There are besides 73 government and 114 private schools for natives of which the number of pupils is not given.—(Allgemeine Deutsche Lehrerzeitung, 1876, No. 10.)

NETHERLANDS, constitutional monarchy: Area, 20,527 square miles; population, 3,767,263. Capital, The Hague; population, 97,565. Date of the report of the royal commissioner, 1876.

Elementary instruction.—Number of public elementary schools December 31, 1873, 2,669, viz, 2,215 ordinary elementary and 454 more extended elementary schools; number of subsidized private elementary schools, 143, viz, 30 ordinary elementary and 113 more extended elementary schools; number of non-subsidized elementary private schools, 978, viz, 406 ordinary elementary and 572 more extended elementary schools; total number of elementary schools, 3,790.

Number of pupils in public schools, 382,146, viz, 212,995 boys and 169,151 girls; number of pupils in subsidized private schools, 5,999, viz, 2,870 boys and 3,129 girls; number of pupils in non-subsidized private schools, 111,914, viz, 49,950 boys and 61,964 girls; total number of pupils, 500,059.

Number of public school teachers, assistants, and pupil teachers, 7,248, viz, 6,519 males and 729 females; number of private school teachers, assistants, and pupil teachers, 4,217, viz, 2,472 males and 1,745 females; total number of teachers, 11,465, viz, 8,991 males and 2,474 females.

Evening schools.—Number of pupils in public evening schools, 19,236; number of pupils in private evening schools, 4,555; total number, 23,791, viz, 17,736 boys and 6,055 girls; number of teachers, not given.

Repeating and Sunday schools.—Number of public schools, 102; number of subsidized private schools, 18; number of non-subsidized private schools, 121; total, 241.

Number of public school teachers, 219, viz, 215 males and 4 females; number of subsidized private school teachers, 41, viz, 40 males and 1 female; number of non-subsidized private school teachers, 313, viz, 186 males and 127 females; total number of teachers, 573, viz, 441 males and 132 females.

Number of pupils in public schools, 3,495, viz, 2,981 males and 514 females; number of pupils in subsidized private schools, 967, viz, 683 males and 284 females; number of pupils in non-subsidized private schools, 6,513, viz, 2,754 males and 3,759 females; total, 10,975, viz, 6,418 males and 4,557 females.

Total expenditures for elementary instruction in 1873, 6,558,519 florins.

Secondary instruction.—(In Holland, middle class schools.) For boys, number of day burgher schools, 5; number of evening burgher schools, 31; total, 36; number of teachers, 348; number of day school pupils, 356; number of evening school pupils, 4,148, of which 3,307 practised a trade; total, 4,504.

Industrial schools and drawing schools.—Number of schools, 32; number of teachers, 120; number of pupils, 2,500.

Higher burgher schools.—Number of schools, 49, of which 17 are government schools; number of pupils in December, 1874, 3,874, of which 73 are below 12 and 465 above 18 years of age. Number of professors in 1874, 573.

The royal polytechnic schools.—Number of professors and assistants, 25; number of students in 1874–75, 236; number of pupils in the preparatory class, 76.

There are several agricultural schools in Holland, of which the number of professors and pupils is not given.

Navigation schools.—Number of schools in 1874, 11; number of teachers, 23; number of pupils, 250.

Middle class schools for girls.—Number of schools, 7; number of pupils, 539; number of teachers, 82, viz, 41 males and 41 females.

Industrial school for girls at Amsterdam.—Number of pupils in 1874, 172; number of teachers, 15, viz, 7 males and 8 females; total annual expenditures, 12,000 florins. Total amount of expenditures for middle class schools, 1,461,400 florins.

No mention is made of superior instruction.

PORTUGAL, constitutional monarchy: Area, 36,510 square miles; population, 3,995,152. Capital, Lisbon; population, 224,063. Minister of public instruction, the minister of the interior, A. Rodrigues Sampaio. A full report on education in Portugal has kindly been transmitted to this Office by the Hon. B. Moran, United States minister at Lisbon. Date of report, December, 1875.

Primary instruction.—Number of schools, 2,244; *i. e.*, 1,910 for boys, and 334 for girls. Number of pupils, 113,097; 92,834 boys, and 2,062 girls. Number of teachers, 2,609; 2,114 males, and 495 females.

Secondary instruction.—Number of lyceums, 18, with 2,385 pupils. Number of other secondary schools, 123.

Superior instruction.—University of Coimbra, with 52 professors and 15 assistants, and 913 students, viz, theology, 39; law, 343; political economy, 6; medicine, 56; mathematics, 104; philosophy, 262; drawing, 103. Polytechnic school at Lisbon, with 174 students. Military academy, with 272 students. Polytechnic school at Oporto, with 109 students. Medico-surgical schools at Lisbon, Oporto, and Funchal, with 192 students.

Special instruction.—Academies of the fine arts at Lisbon and Oporto, with 277 students. Conservatory of Music, with 95 students. Industrial and Commercial Institution, with 388 students. Total annual expenditure for education, $1,200,000.

ROUMANIA, constitutional monarchy, (tributary to Turkey:) Area, 45,642 square miles; population, 3,864,848. Capital, Bucharest; population, 221,150.

On the 1st of September, 1875, Roumania had 2,413 public schools, of which 2,138 were supported by the state. The number of teachers was 873, of which 527 were regularly trained.

RUSSIA, absolute monarchy, empire: Area, 8,404,767 square miles; population 82,172,022. Capital, St. Petersburg; population 667,026.

Number of common schools in the European provinces, 20,376; number of pupils, 839,565, viz: 670,186 boys and 169,379 girls. Total number of children between the

ages of 6 and 14 years, 12,213,588, viz: 5,803,656 boys and 6,409,902 girls. Of these only six per cent. attended school. Number of schools in Siberia, 2,392; number of pupils, 102,922.—(Allgemeine Schulzeitung, 1876, No. 16.)

SAXONY, constitutional monarchy: Area, 6,777 square miles; population, 2,556,244. Capital, Dresden; population, 676,584. Minister of public instruction, Dr. von Gerber. Date of report, 1873.

Primary education.—(Elementary, extended elementary, and higher elementary schools. Number of public schools, 2,143 with 8,357 classes; number of teachers, 5,060, of which 233 are females; number of pupils, 429,679, viz, 212,732 boys and 216,947 girls; number of private schools, 124; number of teachers, 711; number of pupils, 4,267, viz, 4,178 boys and 4,089 girls.

Sunday and evening schools.—Number of schools, 182; number of pupils, 12,594; number of teachers, 626.

Kindergärten.—Total number, 91; number of teachers and pupils not mentioned.

Normal schools.—(Teachers' seminaries. Number of schools, 14, viz, 13 Protestant and 1 Catholic; number of teachers, 133; number of students, 1,595, of which 62 are females.

SECONDARY INSTRUCTION.—*Realschule:* Number of realschule, 20; number of teachers, 266; number of pupils, 4,144.

Gymnasia: Number of Gymnasia, 12, with 110 classes; number of professors, 225; number of pupils, 2,927.

SUPERIOR INSTRUCTION.—*The University of Leipzig:* number of professors and tutors, winter semester 1875–1876, 3,032, viz, 2,925 matriculated and 107 not matriculated.

MISCELLANEOUS INSTITUTIONS.—Saxony has excellent academies of fine arts, polytechnic, industrial, commercial, mining, drawing, agricultural, and evening schools, of which the number of teachers and pupils is not mentioned in the report.

SERVIA, principality, nominally belonging to Turkey, but semi-independent since 1856: Area, 12,600 square miles; population, 1,338,505. Capital, Belgrade; population, 26,674.

PRIMARY INSTRUCTION.—Number of schools, 507; number of teachers, 627; number of pupils, 22,756. There are besides, 15 free schools, of which the number of teachers and pupils is not mentioned.

SECONDARY INSTRUCTION.—*Gymnasia:* Number of Gymnasia, 17; number of teachers, 59; number of pupils, 546.

High school for girls: number of teachers, 26; number of pupils, 238.

SUPERIOR INSTRUCTION.—*University:* Number of professors, 17; number of students, 196.

Theological Seminary: Number of professors, 11; number of students, 279.

NORMAL SCHOOL.—Number of teachers, 11; number of pupils, 59. A library with 2,000 volumes is connected with the normal school.

INDUSTRIAL SCHOOLS.—Number of industrial schools, 11; number of teachers, 49; number of pupils, 546.

Only 15 per cent. of the conscripts examined before the war were able to read and write.—(Allgemeine Deutsche Lehrerzeitung, 1876, No. 39.)

SWEDEN, constitutional monarchy: Area, 171,749 square miles; population, 4,341,559. Capital, Stockholm, with a population of 150,446. Minister of education and ecclesiastical affairs, Gunnar Wennerberg. Date of hand-book from which these details were taken, February 19, 1876.—Swedish Handbook for the Centennial Exhibition at Philadelphia.

PRIMARY INSTRUCTION.—Total number of popular elementary schools, 8,127, of which 2,805 are stationary schools, 1,168 ambulatory schools, 4,143 infants' schools, and 11 higher elementary schools.

The total number of pupils between the ages of 9 and 14 is reported at 734,165, of which 371,622 are boys, and 562,543 girls. Of these 239,517 frequent popular stationary schools; 149,565 frequent popular ambulatory schools; 213,616 frequent popular in-

fants' schools; 288 frequent popular higher elementary schools; 29,405 frequent private schools; 9,293 frequent secondary schools; 68,682 are educated at home; total, 715,366. Number of children who, on account of natural defects and for other reasons, receive no instruction, 18,799.

The number of pupils in the popular elementary schools has increased during the last eight years by 126,743, or 26 per cent.

Total number of elementary teachers, 7,815, of which 5,039 are males and 2,776 females.

SECONDARY INSTRUCTION.—Number of preparatory schools, 96; number of pupils, 12,245; number of teachers, 967.

SUPERIOR EDUCATION.—University of Upsala, with 34 professors, 70 assistants, and 1,480 students, viz, 332 theology, 142 law, 151 medicine, 855 philosophy; University of Lund, with 29 professors and 40 assistants, and 523 students, viz, 112 theology, 54 law, 44 medicine, 313 philosophy, (the government grants for the Universities of Upsala and Lund are, for 1876, $111,000 gold;) Polytechnic School, at Stockholm, with 17 professors and 270 students; Chalmer Polytechnic School, at Göteborg, with 10 professors and 149 students; Royal Academy of Fine Arts, at Stockholm, with 22 professors and 255 students; Pharmaceutic Institute, at Stockholm, with 60 students; Royal Carolian Medico-Surgical Institute, at Stockholm, with 22 professors and 100 pupils; Forest Institute, at Stockholm, with 3 professors and 12 pupils; Veterinary Institute, at Stockholm, with 5 professors and 50 pupils; School for Midwives, at Stockholm, with 100 pupils.

SWITZERLAND, confederate republic: Area, 15,233 square miles; population, 2,669,147, (in 1870.) Capital, Berne; population, 36,001. Date of report, July, 1875.

Elementary education.—Number of schools, 5,083; number of pupils, 411,760, viz, 205,228 boys and 206,532 girls; number of teachers, 7,474, viz, 5,750 males and 1,724 females. There are besides 4,393 special female teachers for needlework, &c.

School libraries.—Number of libraries, 1,216; number of volumes, 327,297.

Normal schools.—Number of normal schools, 26; number of teachers, 182; number of students, 1,505.

Charities.—(From report of 1876,) Orphan asylums: Number, 33; number of inmates, 1,606. Institutions for destitute children: Number, 35; number of inmates, 1,209. Deaf-mute institutes: Number, 9; number of inmates, 328. Institutions for the blind and for the insane: Number, 9; number of inmates, 463.

Secondary education.—No report.

Superior education.—(From the Universitäts-Kalender,) University of Basle: Number of professors, 67; number of students, 1875–1876, 254. University of Berne: Number of professors, 70; number of students, 345, (1875–'76.) University of Zürich: Number of professors, 77; number of students, 364, (1875–'76.) Veterinary Academy at Berne: Professors, 7; students, 17, (1875–'76.)

WÜRTEMBERG, constitutional monarchy: Area, 7,675 square miles; inhabitants, 1,818,539. Capital, Stuttgart; population, 91,623. Minister of public instruction, Dr. von Gessler. Date of report, 1876, (sent in July.)

PRIMARY EDUCATION.—Number of schools not given. Number of teachers' places, 3,878, viz, 2,653 Protestant and 1,225 Catholic. Number of pupils not given.

SECONDARY EDUCATION.—*Public preparatory schools:* Number of schools, 13, with 42 classes and 2,001 pupils, viz, 1,901 natives and 100 foreigners; number of teachers not given.

Public Realschule: Number of public realschule, 81, with 234 classes; number of pupils, 7,482, viz, 5,932 Protestants, 1,184 Catholics, 355 Jews, and 11 of other denominations; number of teachers, 261.

Gymnasia and lyceums: Number of Gymnasia and lyceums, 91, with 273 classes; number of pupils, 7,482, viz, 5,593 Protestants, 1,611 Catholics, 271 Jews, and 6 of other denominations; number of teachers, 316.

SUPERIOR EDUCATION.—*University of Tübingen:* Number of students, 878, viz, 508 from Würtemberg and 370 from other countries; number of professors, 89; number of assistants, 7.

Academies of Agriculture, Forestry, &c.—Academy of Agriculture and Forestry at Hohenheim: Number of students: Winter semester 1874-'75, 84; summer semester 1875, 82; number of professors and assistants, 25.

Veterinary School at Stuttgart: Number of regular students, 26; number of students who studied anatomy only, 21; number of professors and assistants, 10.

Agricultural schools at Ellwagen, Kirchberg and Ochsenhausen: Number of pupils, 36; number of professors, 4.

School for the training of vine cultivators: Number of pupils, 13; number of teachers, 2.

Agricultural winter schools: Number of schools, 5; number of pupils, 75; number of teachers not given.

Agricultural evening schools and reading rooms for adults.—Number of schools, 983; number of pupils, 20,996. Th ese institutions have 620 libraries, with 84,438 volumes.

TECHNICAL EDUCATION.—*Polytechnic School at Stuttgart.*—Number of professors and assistants, 73; number of students, winter semester 1874-'75, 537, viz, 422 in the technical and 115 in the mathematical department. Summer semester 1875, 462 students, viz, 111 in the mathematical, and 351 in the technical department.

School of architecture at Stuttgart: Number of professors and assistants, 40; number of students, winter semester 1874-'75, 945; summer semester, 1875, 256.

Sunday and evening schools for adults: (Fortbildungsschulen). Number of schools, 153; number of pupils, 11,990; number of teachers, 644. Government contributes about $30,000 for the support of these schools.

School of fine arts at Stuttgart: Number of professors and assistants, 12; number of students, winter semester of 1874-'75, 85; summer semester of 1875, 71.

Conservatory of music at Stuttgart: Number of pupils, 576, of whom 79 were from America; number of teachers, 39; number of lessons given each week, 706.

CHARITABLE INSTITUTIONS.—*Orphan asylums:* Number of orphan asylums, 3, viz, 2 Protestant and 1 Catholic; number of inmates, 621; number of outsiders, 285; number of directors and assistants, 26; annual expenses about $61,480.

Institutions for the deaf and dumb: Number of deaf and dumb institutions, 6; number of pupils, 267.

Institutions for the blind: Number of institutions, 4; number of pupils, 96.

II.—NORTH AMERICA AND SOUTH AMERICA.

ARGENTINE CONFEDERATION, federal republic: Area, 515,700 square miles; population, 1,736,922. Capital, Buenos Ayres; population, 177,787. Minister of justice, public worship, and public instruction, Dr. D. Onesimo Leguizamon.

The last report is dated May 1, 1875, and forms one of a set kindly transmitted to this Office by the Argentine chargé d'affaires at Washington, Dr. G. Videla Dorna.

Primary instruction.—Number of children between the ages of 6 and 16, 468,937; number attending school, 112,223; proportion of children attending school to entire population, 1 in every 19.87.

Number of schools, 1,816, of which 1,327 were public, and 489 private. Number of public schools for boys, 705; for girls, 294. Number of private schools for boys, 167; for girls, 112. Number of mixed public schools, 328; number of mixed private schools, 210.

Number of pupils, 109,941, of whom 85,672 were in public schools, and 24,269 in private schools.

Number of teachers, 2,868, viz, men, 1,593, and women, 1,275. Of these, 1,828 were in public schools, and 1,040 in private schools.

Secondary instruction.—Number of colleges, 17; number of students, 453.

Superior instruction.—University: number of faculties, 5; number of students of law and political economy, 434; of medicine, 303; of mathematics, 93; of natural sciences, 100; of philosophy, 560.

Professional instruction.—1 school of agriculture, with 27 students; 1 business college, with 186 students; 2 industrial schools, with 98 students; 1 school of drawing and painting, with 50 students; 1 school of music and elocution, with 360 students; 4 normal schools, with 53 male and 321 female students.

Popular libraries.—Number of libraries, 156; number of readers in 76 of these, 77,019; number of volumes, 64,878; estimated value of books, $99,449.77; number of libraries established in 1874, 9.

BRAZIL, constitutional monarchy: Area, 3,275,326 square miles; population: 12,000,000, (estimate of the hand-book for 1876.) Capital: Rio de Janeiro; population, 274,972.

The following *résumé* has been prepared from the official hand-book published by the Brazilian government for the Exhibition at Philadelphia in 1876.

General remarks.—The organization of complete statistics relative to education throughout the empire of Brazil has been impeded by various causes, among which may be mentioned the absence of a general census, the sparseness of the population, and many others.

The results with regard to the number of schools and pupils are far from representing the truth. In the number of pupils given below, those children who receive primary instruction in industrial establishments at the expense of the proprietors are not included.

There are besides many planters, residing at a distance from towns, who prefer to have primary schools, and sometimes schools for higher branches, on their private estates, both for their own children and for their poor neighbors.

A comparison of the last statistics with those of 1872 shows an increase of 994 primary and secondary schools, and of 20,478 pupils.

The great zeal which is manifested in Brazil for the diffusion of knowledge is revealed by very striking facts, among which the following may be mentioned:

1. The establishment of night schools for adults in the capital and different provinces.
2. The arrangement of lectures on sciences, of popular courses, and of polytechnic clubs.
3. The establishment of mechanic schools for destitute children.
4. The establishment of normal schools for both sexes.
5. The establishment of popular libraries and reading rooms.
6. The large increase of the educational appropriations in the general and provincial budgets. The expenditures for education in some provinces amount to one-third of the revenue.

Compulsory attendance.—The regulations relating to compulsory attendance are only enforced in the capital of the empire and in a few provincial towns. The great distances of many dwellings from school-houses has made general compulsion hitherto impossible.

Separation of sexes.—The law forbids the admission of pupils of the two sexes into the same school. This law is strictly enforced.

Educational expenditures.—Total expenditures for public primary and secondary education, 5,252,814 milreis. (The milreis is equivalent to two shillings three pence English money.)

Primary and secondary education.—Number of primary and secondary schools, 5,890, (private schools included;) number of pupils, (those of private schools included,) 187,915; number of teachers not given in the hand-book. Teachers of public schools are examined, appointed, and paid by the general and provincial governments.

Higher religious education.—Number of (Roman Catholic) seminaries, 19; number of students, 1,368; government grants for the support of these seminaries, 115,000 milreis. (Brazilian.)

Military education.—Military subjects are taught in the following establishments, subordinate to the war department: Regimental schools, preparatory schools, the military school, the gunnery school of Campo Grande, and the depot of artillery apprentices. Number of pupils and professors not given.

Naval education.—In the marine department there are several establishments for naval education, in which a large number of young men receive a thorough training. Number of professors and pupils is not given.

Polytechnic education.—Number of polytechnic schools, 1, with one general and five special courses. Number of professors and assistants, 36; number of students, 399.

Medical education.—Number of medical faculties, 2; number of professors and assistants, 36; number of students in 1874, 950. Government grants for these two faculties annually the sum of 216,910 milreis. In 1874, 32 students of the medical school obtained the degree of doctor, and 64 of the pharmaceutical course received diplomas of capacity.

Faculties of law.—Number of faculties, 2; number of students in 1874, 406; viz: 260 at Recife and 145 at S. Paulo; number of graduates in 1874, 83; number of professors and assistants, 34; annual expenditures, 172,200 milreis.

Commercial schools.—There is one commercial institute at the capital of the empire, with a course of four years; branches of instruction are: French, English, German, arithmetic, algebra, geometry, commercial statistics, commercial law, and book-keeping. Number of students, 57; viz: 38 matriculated, and 19 not matriculated. Annual expenditures, 20,800 milreis.

Institutions for the blind.—Number of schools for the blind, 1; number of teachers and assistants, 10; number of pupils, 29; viz: 19 boys and 10 girls. Nearly all are educated at the expense of government. Annual expenditures, 63,770 milreis.

Institutions for the deaf and dumb.—Number of institutions, 1; number of pupils, 20; number of teachers and assistants, 6. Annual government grant, 54,000 milreis.

Academies of fine arts.—Number of academies, 1; number of professors, 27; number of pupils in 1875, 107; annual expenditures, 37,560 milreis.

Musical conservatory.—The conservatory is connected with the academy of fine arts, under a special director. Number of students in 1875, 108, viz, 52 males and 56 females; number of teachers not given.

Mining school.—A mining school has recently been established by government in the province of Minas Geraes, with a course of two years; number of professors and pupils not given.

Libraries.—Number of libraries, not given. Number of volumes, 460,272. Reading rooms, connected with libraries, were attended by 85,044 persons.

Museums of natural history.—Number of museums, 5; number of natural history cabinets, connected with institutions of higher learning, 7.

BRITISH COLUMBIA, British colony: Area, 213,000 square miles; population, 10,586. Capital, Victoria. Superintendent of education, John Jessop. Date of report, October 15, 1875, sent by Mr. Jessop.

School population between the ages of 5 and 16, 2,242; pupils between 5 and 16 attending school, 1,364; pupils of other ages attending school, 39; total number of pupils of all ages attending school, 1,403. Number of boys attending school, 781; number of girls attending school, 622; number of children not attending any school whatever, 289; average attendance of pupils, 862¾. Sum paid for teachers' salaries, $25,291.66; incidental expenses, $2,671.93; rent, $408; fitting up or building schoolhouses and furniture, $6,450.69; total sum expended in 1874–'75 for education, $34,822.28.

HAWAIIAN ISLANDS, constitutional monarchy: Population, 56,897. Capital, Honolulu; population, 14,852.

The following details are taken from the Hawaiian Guide-Book, published at Honolulu in 1875:

Schools.—Total number of schools, 242; total number of pupils, 7,755. Annual government expenditures for school purposes, $40,000.

The number of higher schools which have been established is not mentioned.

The Hawaiian Insane Asylum has from 25 to 40 inmates, and the reform school from 50 to 75.

Government schools throughout the islands are established chiefly for the natives, and the Hawaiian language is taught in them. In the principal towns there are good English schools, where tuition costs one dollar a week.

JAMAICA, British colony: Area, 6,400 square miles; population, 506,154. Capital, Kingston; population, 35,000. Inspector of schools, John Savage. Date of report, December 19, 1874.

Elementary schools.—Under government inspection, 500 schools with 43,135 pupils on books, and an average attendance of 25,160, and an income from government grants and school fees of £18,795. Not under government inspection, 15 schools with 579 pupils on books, and an average attendance of 382. Total of elementary schools, 515, with 43,714 pupils on books, and an average attendance of 25,542.

Government schools.—Two schools with 286 pupils on books and an average attendance of 156; income, £612; expenditure, £637.

Endowed schools.—Twenty-five schools with 1,643 pupils on books, and an average attendance of 1,188; income, £5,934; expenditure, £5,101.

Normal schools.—Seven schools, with 113 pupils on books, and average attendance of 112; income, £4,194; expenditure, £3,929.

Grand total.—Schools, 549; aggregate number of pupils on books, 45,756; average attendance of pupils, 26,998; total income, £29,555.

Estimate of the total cost of all the schools in Jamaica in 1874, £41,767.

MEXICO, Federal republic: Area, 1,030,442 square miles; population, 9,176,082. Capital, Mexico; population, 230,000.

There is no national system of public instruction, each state managing its own educational affairs. In 1875, however, the central government had (for the first time) a report prepared, giving an account, statistical and historical, of the schools in all the states. This report, as well as a manuscript abstract from it, has been transmitted to this Office by Hon. J. W. Foster, United States minister at Mexico. Date of report, March 18, 1875.

Primary schools sustained by the federal and state governments, 603; sustained by the municipalities, 5,240; by private corporations, 378; by religious associations, 117; private schools in which tuition is paid, 1,518; schools without classification, 184; total primary schools, 8,103; *i. e.*, about one primary school for each 1,110 inhabitants. Attendance during the year, 349,000, or somewhat less than one-fifth of all the children between the ages of 6 and 13. Total amount expended for primary instruction, $1,632,436, of which sum $1,042,000 was furnished by the municipalities, $417,000 by the general and state governments, and $173,000 by individuals and private corporations.

Secondary and professional schools.—Seventy-eight colleges, (54 civil and 24 ecclesiastical;) in 33 of these law is taught, medicine in 11, engineering in 9, agriculture in 2, and theology in 24; total number of students, 13,137; total expense of the government colleges, $1,100,000. Fifteen higher schools for girls, 1 school of mining, and 1 school of the fine arts.

NEW BRUNSWICK, British colony: Area, 27,105 square miles; population, 285,594. Capital, Fredericton. Chief superintendent of public instruction, Hon. Theodore H. Rand. Date of report, February 20, 1876.

Number of schools, teachers, pupils, &c.—Summer term, 1874: Number of schools, 1,052; number of teachers, 1,095; number of pupils attending, 45,561. Winter term, 1875; Number of schools, 1,053; number of teachers, 1,116; number of pupils attending, 46,039. School year ended April 30, 1875: pupils attending, 59,623.

Proportion of population at school, ages and sex of pupils, percentage of daily and full term attendance.—Summer term, 1874: Proportion of the whole population of the province attending the public schools was 1 in every 6.27. Pupils under 5 years of age,

702; between 5 and 15, 41,399; over 15, 2,960. Boys, 23,097; girls, 22,464. Grand total day's attendance registered, 2,434,791. Average monthly percentage of pupils daily present during the term, (5.65 months,) 72.88. Winter term, 1875: Proportion of the population of the province at school this term, 1 in every 6.21. Under 5 years of age, 271; between 5 and 15, 39,075; over 15, 6,693. Boys, 25,646; girls, 20,393. Grand total day's attendance registered, 2,603,972. Average monthly percentage of pupils daily present during the term, (5.9 months,) 74.84. Number of teachers and assistants, summer term, 1874, 1,095; number of teachers and assistants, winter term, 1875, 1,116.

Superior schools.—Summer term, 47 schools with 2,622 pupils; winter term, 50 schools with 3,053 pupils.

Grammar schools.—Summer term, 14 schools with 39 teachers and 1,776 pupils; winter term, 14 schools with 39 teachers and 2,027 pupils.

Provincial training and model school.—Summer term, 64 students; winter term, 66 students.

Total provincial grants in aid of public schools, $130,442.17.

NOVA SCOTIA, British colony: Area, 18,660 square miles; population, 387,800. Capital, Halifax; population, 29,582. Superintendent of education, A. S. Hunt. Date of report, March, 1875.

Number of school sections, 1,742; number of school sections having no school any part of the year, 183; schools in winter, 1,580; schools in summer, 1,733; teachers: in winter, 1,707, in summer, 1,843; number of pupils registered at school in winter, 76,349; number of pupils registered at school in summer, 81,898; number of children at school for some portion of the year, 96,029; proportion of present population at school for some portion of the year, 1 in 4; annual expenditure for primary schools, $594,038.39; number of county academies, 10, with 42 teachers and 2,239 students; number of special academies, 7, with 36 teachers and assistants, and 681 students; number of colleges, 6, with 31 professors and 197 undergraduates, and 100 in partial course; one normal school, with 4 teachers and 112 students; one model school, with 9 teachers and 700 pupils.

Total educational expenditure.—Public schools, $594,038.39; normal and model school, $4,740; special academies, $60,683; colleges, $48,008.76; total, $707,470.15.

ONTARIO, British colony: Area, 121,260 square miles; population, 1,620,851. Capital, Toronto; population, 46,092. Minister of public instruction, Hon. E. Ryerson; deputy superintendent, J. George Hodgins. Date of report, October, 1875.

Population between the ages of five and sixteen, 511,603; colleges in operation, 16; county high schools, 103; academies and private schools reported, 280; normal and model schools for Ontario, 3; total public schools in operation as reported, 4,592; total Roman Catholic separate schools, 166; grand total educational establishments in operation, 5,165; total students attending colleges and universities, 2,700; total pupils attending county high schools, 7,871; total pupils attending academies and private schools, 8,443; total students and pupils attending normal and model schools, 800; total pupils attending the public schools of Ontario, 441,261; total pupils attending the Roman Catholic separate schools, 22,786; grand total of students and pupils attending all the educational establishments, 483,861; total amount paid for the salaries of public and private school teachers, $1,647,750; total amount paid for the erection and repairs of public and separate school-houses, for libraries, apparatus, books, fuel, stationery, &c., $1,217,582; grand total paid for public and separate school teachers' salaries, the erection and repair of school-houses, and for libraries and apparatus, $2,865,332; total amount paid for high schoolmasters' salaries, $179,946; total amount paid for erection and repairs of high school houses, $63,684; amount received for other educational institutions, $478,989; grand total paid for educational purposes in Ontario, $3,587,951; total public school teachers in Ontario, 5,736; total male school teachers in Ontario, 2,601; total female school teachers in Ontario, 3,135; average number of months each public school has been kept open by a qualified teacher, including legal holidays, 11¼.

PRINCE EDWARD ISLAND, British colony: Area, 2,173 square miles; population, 94,021. Capital, Charlottetown; population, 8,807. Date of report, December, 1874.

Number of schools, 402; number of scholars in districts, the schools of which were examined, 11,248; number of boys registered, 8,545; number of girls registered, 8,019; total number of scholars registered, 16,564; total number of teachers, 365. One normal and model school, with 3 teachers, 129 students, (46 males and 83 females,) and 27 pupil teachers.

QUEBEC, British colony: Area, 210,020; population, 1,191,516. Capital, Quebec; population, 59,699. Minister of public instruction, Hon. C. B. De Boucherville. Date of report, November 19, 1875.

Number of primary schools, 4,115, with 4,561 teachers and 196,762 pupils; number of secondary schools, (colleges and academies,) 230, with 1,225 teachers and 30,448 pupils; number of universities, 3, with 76 professors and 610 students; number of special schools, 16, with 71 professors and 1,411 students; number of normal schools, 3, with 41 professors and 275 students; total sum levied for public instruction in 1874, $1,320,133.57; assessment to equal grant, $151,883.72; assessments over and above amount of grant and special assessments, $315,836.31; monthly fees, $803,113; assessments for the construction of buildings, $49,300.

UNITED STATES OF COLOMBIA, federal republic: Area, 432,400 square miles; population, 2,951,323. Capital, Bogotá; population, 50,000.

There is no federal system of education, but each of the nine states composing the union manages its own educational affairs. The minister of the interior, however, has an annual report published on the state of primary education in the whole union. From the report, dated February 15, 1876, transmitted to this Office by the Hon. William L. Scruggs, minister resident of the United States at Bogotá, the following statistics are taken:

States.	Population.	Schools for boys.	Male scholars.	Schools for girls.	Female scholars.	Total number of scholars.	Total number of schools.	Expenditure.	Percentage of population attending public schools.	Expenditure for every 100 of the population.
Antioquía	365,974	111	9,062	52	4,866	13,928	163	$66,030	3.805	$18 04

III.—AUSTRALASIA.

NEW SOUTH WALES, British colony: Area, 323,437 square miles; population, 503,981. Capital, Sidney; population, 134,755. President of the council of education, J. Smith; secretary of the council, W. Wilkins. Date of report, April 5, 1875.

Public schools, 420; provisional schools, 244; half-time schools, 122; denominational schools, 204; total number of schools, 990.

Pupils in public schools, 53,702; in provisional schools, 8,002; in half-time schools, 2,462; in denominational schools, 36,218; total number of pupils, 100,384.

Proportion of pupils in average attendance to the average number enrolled: In public schools, 65.7 per cent.; in certified denominational schools, 64 per cent.; in all schools, 65.6 per cent.

Amount of school fees: In public schools, £31,656; in provisional schools, £3,670; in half-time schools, £770; in denominational schools, £17,440; total, £53,536.

Teachers: Principal teachers, 1,002; assistant teachers, 158; pupil teachers, 304; total number of teachers, 1,464.

Annual school revenue: Balance from 1873, £12,239; parliamentary vote for 1874, 1874, £120,000; church and school estates revenue, £1,600; total, £133,839.

Annual school expenditure: Salaries of teachers, £94,573; buildings and repairs, £16,593; general management, £7,682; inspection, £7,525; training, £3,457; books, printing, and stationery, £3,136; total, £132,966.

NEW ZEALAND, British colony: Area, 102,000 square miles; population, 279,560. Capital, Auckland; population, 12,775. Superintendent of education, J. Williamson. Date of report, May 1, 1875. Date of education act, 1872, and amended act, 1874.

Number of school districts, 108; number of schools, 140; highest attendance on the roll, 8,284; average attendance, 4,929; number of teachers, 178; expenditure for educational purpeses, £20,531; annual average cost per pupil, £2 10s.; total value of school buildings, £6,000; Auckland College and Grammar School, number of teachers, 7; number of students, 164.

QUEENSLAND, British colony: Area, 673,600 square miles; population, 133,533. Capital, Brisbane; population, 19,413. Chairman of the board of education, Hon. Arthur Macalister; secretary of the board, E. Butterfield. Date of report, April 26, 1875.

Schools.—Number of schools in operation, 203; number of new schools opened, 45; number of schools closed in previous year, 5; number of applications dealt with for new schools or additions, 58; number of new vested schools completed, 40; increase in number of schools in operation, 40; number of vested schools in operation, 127; number of non-vested schools in operation, 36; number of provisional schools in operation, 40.

Teachers and pupils.—Number of teachers, including pupil teachers, 590; aggregate attendance of scholars, 29,012; average attendance, 15,045.

School finances.—Parliamentary vote for education, £72,000; local subscriptions toward school buildings, £3,117; salaries of officers of the department, £4,296; salaries of teachers, £44,606; buildings, furniture, and repairs, £29,086; total expenditure out of parliamentary vote, £77,474; total expenditure out of local subscriptions, £2,638.

SOUTH AUSTRALIA, British colony: Area, 760,000 square miles; population, 192,500. Capital, Adelaide; population, 27,208. Chairman of the board of education, John A. Hartley; secretary of the board, James Bath. Date of report, March 8, 1875.

Number of schools under control of the board, 320; number of scholars on the rolls during one month, 17,426; average attendance for one month, 13,774; average number on the rolls at each school, 54; average attendance at each school, 43; percentage of attendance to the number on the rolls during one month only, 79; number of licensed teachers: males 216, females 97, total 313; model school: average roll number of scholars for the year, 739; average daily attendance, 586; annual receipts, £33,336, annual expenditure, £31,477.

TASMANIA, British colony: Area, 26,215 square miles; population, 104,217. Capital, Hobart Town; population, 19,092. Chairman of the board of education, Henry Butler. Date of report, July 9, 1874.

Number of schools, 141; number of scholars on rolls during the year, 10,803; average number of scholars on rolls from month to month, 7,047; average attendance, 5,268; average number on rolls during the year at each school, 76.62; average number on the rolls from month to month at each school, 49.98; average attendance at each school, 37.36; percentage of attendance to the average number on rolls, 74.76; number of teachers and assistants, 154; annual income, £13,551 annual expenditure, £12,823.

VICTORIA, British colony: Area, 88,198 square miles; population in 1874, 808,437, viz, 439,159 males and 369,278 females. Capital, Melbourne; population, 54,993. Date of report, October 5, 1875. (Notes on the Colony of Victoria by Henry Heylyn Hayter, government statist of Victoria.)

PRIMARY EDUCATION.—*Number of schools:* Public, 1,111; private, 610; total, 1,721.

Number of pupils: Public, 216,144; private, 22,448; total, 238,592, viz, 122,060 boys and 116,532 girls.

Number of teachers: Public, 3,715; private, 1,509; total, 5,224.

SECONDARY EDUCATION.—(*Colleges, grammar schools, etc.*)—Number of schools, 5, (all connected with churches;) number of pupils, 1,024; number of teachers, 50; amount received from government for building, £32,493.

SUPERIOR EDUCATION.—*University of Melbourne:* Number of students in 1874, 177; number of professors not given; total expenditures in 1874, £16,393.

Industrial and art institutions: The School of Painting and Design: number of students in 1874, 196, viz, 57 males and 139 females; the Industrial and Technological Museum: number of students in 1874, 120, viz, 110 males and 10 females; the National Museum: number of visitors in 1874, 100,514.

LIBRARIES.—The Melbourne Public Library: number of volumes in 1874, 83,231; number of visitors in 1874, 239,188; the supreme court library: number of volumes in 1874, 11,365; miscellaneous libraries: number, 130; number of volumes in 1874, 174,103.

CHARITIES.—*Hospitals:* Number in 1874, 33; accommodation for 2,034 persons; total number of inmates during the year 1874, 15,047.

Asylums for aged and infirm persons: Number in 1874, 5; accommodation for 1,139 persons; total number of inmates in 1874, 1,656.

The Immigrants' Home, at Melbourne: Accommodation for 396 persons; total number of inmates during 1874, 9,436.

Orphan asylums: Number in 1874, 7; accommodation for 1,160 orphans; total number of inmates in 1874, 1,260.

Blind asylum: Accommodation for 99 persons; total number of inmates in 1874, 106.

Eye and ear asylum: Accommodation for 21 persons; total number of inmates in 1874, 143.

Deaf and dumb asylum: Accommodation for 63 persons; total number of inmates in 1874, 84.

Lunatic asylums: Number in 1874, 4; accommodation for 2,378 persons; total number of inmates in 1874, 2,914.

Industrial and reformatory schools: Number in 1874, 9; accommodation for 1,834 inmates; total number of inmates in 1874, 2,784.

Female refuges: Number in 1874, 4; accommodation for 182 persons; total number of inmates in 1874, 293.

Total receipts of the above named charities in 1874, £319,134, viz, £235,561 from government, and the remainder from private contributions and other sources; total expenditures in 1874, £319,891.

RELIGIOUS EDUCATION.—Since December 31, 1875, no monetary aid is given by the state to religious denominations. Number of clergy in 1874, 654; number of churches and other buildings of worship, 2,455; accommodation for 403,126 persons; usually attending, 285,601; number of services during the year, 199,166.

Sabbath schools: Number of Sabbath schools, 1,449; number of teachers, 12,384; number of pupils, 126,728.

General remarks on education.—The Melbourne University ranks with English universities, and its students enjoy the same privileges in the United Kingdom and in British colonies as students from universities in Great Britain.

Education act.—The education act now in existence dates from 1872. Education to be given under this act is to be purely secular and compulsory. Each child between six and fifteen years of age is required to attend at a state school for a period of sixty

days in each half year. Education in common school branches is to be free. Branches of higher instruction are allowed to be taught for the payment of one shilling per week for each branch.

EDUCATION AT THE INTERNATIONAL EXHIBITION.

The efforts of the Office to secure a proper representation of American education at the approaching Centennial International Exhibition at Philadelphia, of which mention was made in my last report, have been vigorously continued and with encouraging results. Inquiries from foreign and domestic sources have multiplied. With these many valuable suggestions have been received relating to the material for the exhibit, and the best methods to be pursued. In order to make available for the use of all the best information upon the subject, I caused to be prepared on the 15th of January, 1875, by the chief clerk of the Office, the accompanying synopsis of the proposed centennial history of American education for distribution among school officers and educators.

At the meeting of the Department of Superintendence of the National Educational Association, at Washington, D. C., January 27 and 28, 1875, an important step was taken. Hon. J. P. Wickersham, superintendent of common schools for the State of Pennsylvania, delivered an able and effective address upon American education at the Centennial Exhibition, and offered the following resolution; which was unanimously adopted:

Resolved, That a committee of five be appointed to act for this body, with the authorities of the Centennial, in perfecting a plan for the proper representation of the educational interests of the country at the approaching National Exposition at Philadelphia.

The United States Commissioner of Education, Hon. J. P. Wickersham, superintendent common schools of the State of Pennsylvania; Hon. J. D. Philbrick, of Boston, Mass.; Hon. Alonzo Abernethy, State superintendent public instruction of Iowa, and Hon. W. H. Ruffner, State superintendent public instruction of Virginia, were designated as the committee. This address and action were published in the first Circular of Information for the year. The appointment of this committee furnished greatly needed relief to the task imposed upon the Commissioner.

I immediately communicated the action of the Department of Superintendence to the Director-General, and received the following reply:

"INTERNATIONAL EXHIBITION—1876.

"UNITED STATES CENTENNIAL COMMISSION,
"OFFICE OF THE DIRECTOR-GENERAL,
"*Philadelphia, January 29*, 1875.

"MY DEAR SIR: Your note of 28th instant is received. I shall be pleased to confer with the committee of the National Educational Association any day next week you may name. Please advise me of the day and hour that will suit the convenience of the gentlemen.

"Yours, truly,

"A. T. GOSHORN,
"*Director-General.*

"Hon. JOHN EATON,
"*Commissioner of Education, Washington, D. C.*"

It was convenient for four members of the committee, namely, Messrs. Wickersham, Philbrick, Abernethy, and Eaton, to meet in Philadelphia Wednesday, February 3. After a discussion of the subject committed to them among themselves, they met Hon. Mr. Goshorn at the rooms of the Centennial Commission, and had a full, free, and very satisfactory conference upon the whole subject of the representation of education in the Exhibition.

The committee called attention to the action of the Department of Superintendence of the National Educational Association at the meeting a year ago, which recommended:

Synopsis of the proposed centennial history of American education—1776–1876.

Grade or kind of instruction.	The colonial period.		The homogeneous period—1776–1840.		The heterogeneous period—1840–1876.	
	Educational topics.	Influences and results.	Educational topics.	Influences and results.	Educational topics.	Influences and results.
Elementary	Tho early schools in tho colonies of Spain, England, France, and Holland briefly noticed; digest of the colonial laws respecting elementary schools; horn books; tho Now England primer; biographies of early pedagogues, &c.	Position, institutions, and attitude of the European nations which colonized North America; supremacy of Spain under Charles I and Philip II, (1516–1558;) of England under Elizabeth and James I, (1558–1632;) of France under Richelieu, (1622–1645;) of England under Cromwell, (1645–1658;) of France under Louis XIV, (1658–1704;) of England under Marlborough and Chatham, (1704–1776;) political, social, and religious institutions of the colonists; political and military events in the colonies, &c.	Tho Virginia territorial cession, and tho ordinance of 1787; history of the school land sales and of elementary schools; origin of free public schools under State authority; labors of Mann, Barnard, Sears, Emerson, and others; illiteracy of tho country in 1840, &c.; biography and bibliography.	Homogeneity of the population; comparatively small annual immigration; revolutionary war, (1775–1783;) migration to Kentucky, Indiana, Tennessee, Ohio, Mississippi, Illinois, and Alabama, (1775–1805;) Webster's spelling-book, (1783;) the Federal Constitution, (1787;) copyright law, (1790;) Whitney's cotton gin, (1793;) province of Louisiana acquired, (1803;) Oregon question, (1804–1846;) Fulton's steamer on the Hudson, (1807;) abolition of the slave trade, (1808;) War of 1812–1815; introduction of canals, (1817;) Florida acquired, (1819;) the Missouri compromise, (1820;) railroads introduced, (1827;) McCormick's reaper, (1831;) the Seminole war, (1835–1842.)	Tho progress and present condition of free elementary instruction; official supervision of public schools; improvement in school buildings, furniture, and apparatus; character and number of text books; the school reports of the country; illiteracy of the country in 1850, 1860, and 1870; instruction of the colored people and the Indians; Kindergärten; private elementary instruction.	Introduction of the electric telegraph, (1844;) Texas annexed, (1845;) war with Mexico, (1845–1848;) the Mexican cessions, (1846–1848;) the sewing machine, (1846;) the great Irish famine, (1846;) Mormon emigration to Utah, (1847;) discovery of gold in California, (1848;) emigration to the Pacific coast, (1848;) European revolutions, (1848;) great emigration from Europe, (1848 *et seq.*;) the London World's Fair, (1852;) the treaty with Japan, (1854;) the financial panic of 1857; the Atlantic telegraph, (1858;) the war and the abolition of slavery, (1861–1865;) the Austro-Prussian war, (1866;) acquisition of Alaska, (1867;) the Paris Exposition, (1867;) the Franco-German war, (1870–1871;) the Vienna Weltausstellung, (1873;) the financial panic of 1873; the heterogeneous character of the population since 1846; the character and intelligence of the immigrants; the progress of industries, of agriculture; the development of means for speedy transportation; international literature; the scientific spirit, &c.
Secondary	Early grammar schools, public and incorporate; text books; courses of instruction; biographies, bibliography; the clergy as trainers for college.		Tho progress and increase of grammar schools, academies, and seminaries; the text books, architecture; apparatus of instruction; biographies, bibliography, and statistics.		The progress of grammar schools, academies, and female schools; rise and progress of free public high schools; text books, courses of instruction, apparatus, and architecture; business colleges; bibliography, biographies, and statistics.	
Superior, *i. e.*, collegiate and professional.	Early colonial colleges, (*e. g.*, Harvard, William and Mary's, King's, Dartmouth, Princeton, Yale, &c.;) their foundation by colonial and individual action; discipline, text books, and courses of instruction in the classics, mathematics, theology, &c.; biographies and bibliography; connection of religious denominations with the colleges, &c. Early instruction in the professions, theological, legal, and medical; Ames' "Medulla."		Tho progress of collegiate instruction; text books and courses of instruction in the classics, astronomy, mathematics, physics, chemistry, political economy, mental and moral science, &c. Colleges in their denominational and public relations; libraries of colleges; bibliography, biographies, and statistics. The progress of theological, medical, and legal education; rise and progress of normal schools and of schools of dentistry and pharmacy; biographies, bibliography, and statistics.		The progress and present condition of collegiate training; rise of State universities and of colleges of agriculture and the mechanic arts; rise of colleges for women; text books and courses of instruction in mathematics, astronomy, physics, mechanics, geology, geography, zoölogy, botany, chemistry, mineralogy, agricultural science, technology, metallurgy, military and naval science, philology, political economy, social science, art, history, &c., (including in each case a history of the subject of instruction.) The progress and present condition of instruction in theology, jurisprudence, medicine, dentistry, pharmacy and pedagogies, engineering, &c.; women in the professions. Bibliography, biography, and statistics of collegiate and professional training.	
Miscellaneous	Notices of early libraries and of the bibliography of "Americana."		The progress of libraries; rise and progress of museums of science and art; instruction and care of orphans, of the blind and the deaf mute, &c. Sunday schools. Instruction in art and music. Reformatory and penal instruction. The American Institute of Instruction.		Progress and present condition of libraries; of art museums and science museums; of orphan asylums; of schools for the blind and for deaf-mutes; industrial and collegiate instruction of the unfortunate; schools for the feeble-minded, &c. Sunday schools. Schools of art and music; cheap reproductions of art-works; cheap music; &c. Progress in penology and in reformatory training. Associations for public benefit; churches; societies; the National Educational Association, &c. Tho National Bureau of Education.	
Illustrations	Engravings of early school and college buildings; portraits of educators; maps, &c.		Engravings of school and college buildings, portraits of educators; maps, charts of illiteracy in 1840, &c.		Pictures of buildings for schools, colleges, libraries, museums, asylums, &c.; portraits of educators and benefactors; maps; illiteracy charts of 1850, 1860, and 1870; diagrams of ventilating apparatus, furniture, &c.	

(1) That each State and Territory be invited to prepare a representation of its educational condition for the Centennial.
(2) That each State and Territory also be invited to prepare a historical record of its educational progress for the same purpose.
(3) That each city be invited to act with the State authorities in preparing such records, and that it present an exhibit of its own educational growth and condition.
(4) That each educational institution be invited to participate in the same way.
(5) That a census be taken in 1875. That the Commissioner of Education be requested, on behalf of the educators of this country, to correspond with the prominent educators of the world, and invite their coöperation in the matter of the Centennial.
(6) That an international educational congress be held in connection with the Centennial.

The committee expressed the satisfaction that had been felt by the different State and city educational authorities that an attempt was to be made to show the progress of education, and stated, so far as they knew, what had already been done to carry out the recommendations passed last year.

Referring to the resolution under which they were appointed, they stated to the Director-General the embarrassment now felt by the officers of the different State and city systems of education and the several institutions of learning, arising from the want of some definite plan and the need of some immediate and authoritative action.

State and city superintendents and officers of various institutions are inquiring, "What shall be the educational representation? What shall my State, my city, my institution do?"

No one now feels prepared to answer. It is a public, and not a private, interest. Its exhibition must be made largely from motives of public good, and only partially from any considerations of private profit, such as would arise from the manufacture of furniture and the publication of text books.

The plans adopted must accord with the methods of public educational action. The vast diversity of systems, institutions, and facts will require time to consider and arrange what shall be done by each and to harmonize the whole.

The committee consider themselves sent by the Department of Superintendence of the National Association only as a medium of communicating these facts and impressions from the different educational workers in the country to the Director-General, and of securing from him any communications he may wish to return to them.

The Director-General, in behalf of the commission, expressed an earnest desire that the influence of the Exhibition should be thoroughly educational, and especially that the growth of educational facilities in the United States, and their results, as shown in our country's progress, should be most successfully represented, and his gratification that this action had been taken by the Department of Superintendence of the National Educational Association. He had just written to the governors of the several States, calling attention to a class of subjects, of which education is one, and hoped that this committee would act provisionally, calling attention to the subject, gathering information, and forming plans for his consideration, until the meeting and formal action of the executive committee of the Centennial. The committee retired and agreed to act as suggested by the Director-General, Hon. A. T. Goshorn.

The act of Congress approved March 3, 1875, contained the following clause giving effect to the executive order issued January 23, 1874:

SEC. 5. To enable the Executive Departments of the Government and the Smithsonian Institution to participate in the International Exhibition of eighteen hundred and seventy-six, the following sums are hereby appropriated, namely: For the Interior Department, one hundred and fifteen thousand dollars; for the Treasury Department, five thousand dollars; for the Post-Office Department, five thousand dollars; for the Agricultural Department, fifty thousand dollars; for the Smithsonian Institution, sixty-seven thousand dollars; for the United States Commission of Food Fishes, five thousand dollars; for the War Department, one hundred and thirty-three thousand dollars; for the Navy Department, one hundred thousand dollars; for show cases, shelving, stationery, postage, telegrams, expressage, and other necessary incidental expenses, twenty-five thousand dollars; in all, five hundred and five thousand dollars; to be disbursed under the direction of the Board on Executive Departments, appointed in pursuance of the presidential order of January twenty-third, eighteen hundred and seventy-

four. And authority is hereby given to the heads of the several Executive Departments to display at the International Exhibition of eighteen hundred and seventy-six, under such conditions as they may prescribe, subject to the provisions of section seven of the act of June first, eighteen hundred and seventy-two, all such articles in store or under the control of said Departments as may be necessary or desirable to render such collection complete and exhaustive: *Provided*, That should it become necessary to erect any building or part of a building for said Exhibition, on the part of the Government, the same shall be paid for, *pro rata*, out of the sums appropriated to the several Departments, the United States Commission of Food Fishes and the Treasury and Post-Office Departments excepted, the cost of the building not to exceed one hundred and fifty thousand dollars; and at the close of the Exhibition said building shall be sold and the proceeds covered into the Treasury as miscellaneous receipts: *And provided further*, That the sums hereby appropriated shall cover the entire expense to which the United States Government shall be subjected on account of said Exhibition, except the sum appropriated in this act for printing the certificates of stock of said Exhibition; and the Board on Executive Departments is forbidden to expend any larger sum than is set down herein for each Department, or to enter into any contract or engagement that shall result in any such increased expenditure; and no money shall be taken by any Department for the purposes of this exhibition as aforesaid from any other appropriations except the one hereby made: *And further provided*, That of the sum hereby appropriated, the sum of two hundred thousand dollars shall be immediately available.

I, as Commissioner of Education, having been also designated as representative of the Department of the Interior, found my duties very greatly increased for the time. The provision of means was entirely inadequate to the end proposed. It was sought to use the funds available for the Bureau of Education in the Department exhibit, not so much to produce articles of its own for display, as to aid in appropriate ways the bringing out for view at the Exhibition the condition and appliances of education throughout the entire country. This was done, first, by gathering the most intelligent views of the plans and methods for such an exhibition; secondly, by widely disseminating among those interested Circular of Information No. 5, which contained suggestions respecting the educational exhibit at the International Centennial Exhibition, 1876. *

---

* The preface to this circular is given here as explaining somewhat the scope and character of these suggestions:

"DEPARTMENT OF THE INTERIOR,
"BUREAU OF EDUCATION,
"*Washington, July* 1, 1875.

"It is apparent that a representation of education for the century of our national history, now closing, at the International Centennial Exhibition at Philadelphia in 1876, can neither be adequate nor successful without the most extensive consultation in regard to the peculiarities and manifold phases of educational systems and institutions. The interest in this department of the Exhibition will be very great to all Americans and all visitors from other countries who attempt to study the causes of our national growth and peculiarities. It should be remembered that it is a public interest, and not a source of private profit, save in reference to its aids and appliances. The producers of these articles would naturally come forward to participate in the representation, as do all other producers of articles of profit. Yet it is plain that if the educational exhibit were limited to these appliances, the impression made would be most inadequate; indeed, the value of these aids to education is best seen in connection with the results obtained in systems and institutions, in respect to which the leading motive must necessarily be, not one of pecuniary profit, but of public benefit. For the attainment of this result in the exhibit there must be time for consultation, harmony of plans, and organization. This Office, as the central educational agency in the country, has from the first definite anticipation of the Exhibition naturally been addressed for plans and information. The recent rapidly increasing interest has greatly multiplied the demands for definite plans. Officers of institutions and systems in many parts of the country have already fully determined to go forward and make some preparation for the Exhibition, and are now only waiting to know definitely what to do in each case and how to do it. This Office could have promptly projected a theoretical reply to the various inquiries. There would have been a possibility of its being the plan fitted to the facts, to be worked out with facility and success. The object of the Office, however, has not been to direct, but to represent, to ascertain what could be done, to gather from every quarter the suggestions in reference to what should be done and how to do it. In pursuance of this idea, attention was called to the subject in the Reports of 1871, 1872, 1873, and 1874.

"Our attention must be turned necessarily in two directions: First, toward the Centennial Commission, which has entire charge of the classification, and which determines what plans of classification shall be adopted for this, as for all other departments of the Exhibition. Secondly, we must consult with all those who are to participate in the Exhibition with regard to the materials they are to present

Putting the greatest stress upon the historical aspects of the occasion, the Office sought to aid, first, in securing the fullest representation possible of education, with the hope, second, that all officers and agencies would aid in bringing out the fullest results in the way of (*a*) study, (*b*) reports, and (*c*) of permanent collections of educational appliances.

In all of the results of the Exhibition it was believed that the education of the United States would receive great advantages from comparison with that of other countries and from suggestions from foreign educators. The presentation of students' work was beset with many difficulties. It was important some plan should be devised in which all could coöperate. The whole subject of the educational exhibition for the country was taken up at the meeting of the National Educational Association, at Minneapolis, Minn., August 5, 1875.

The following resolutions, containing important suggestions, were offered by Hon. J.

---

and their plans of presentation. This Office has been in constant correspondence and communication with the officers of the Centennial Commission, and it is only due to say that they have from the first and always manifested a most earnest desire that everything possible should be done to render this department of the Exhibition thoroughly successful.

"With respect to the educators of the country, every means has been taken to gather full public and private expressions of interest, and to act solely and fully in coöperation with them. And while gathering these, whether from personal or organized sources, it has seemed appropriate to consult, as the special representative of them all, the National Educational Association. This association, at a meeting of its department of superintendence, in January, 1874, passed resolutions upon the subject, and, again, in January, 1875, appointed an executive committee to advise with and act through this Office. This committee has since had two meetings, at the request of the Director-General of the Exhibition, in Philadelphia, at which the plans of the Centennial Commission were carefully studied, and all indications of what could be done by the different institutions and systems of education, so far as known, were brought into consideration, and an earnest effort was made to answer the two great questions What to do? and How to do it? One thing has been manifest from the first, that, while certain outlines for a scheme could be laid down, the details must, in the necessity of the case, be announced only as the circumstances upon which they depended were more clearly unfolded in the action of the different sections interested. With a view to giving each institution and system information with regard to the purposes of other institutions and systems proposing to participate, and of putting before the eye a unified scheme to which fuller suggestions could be made, this Office prepared, in January, a 'Synopsis of the proposed centennial history of American education.' At the first meeting of the committee above mentioned with the Director-General of the Centennial in Philadelphia, it became manifest that a change in the classification there presented was essential for the unity of an educational exhibit. At the second meeting of the committee their views were given in a statement, at the request of the Director-General, and presented to the commission. The committee also agreed upon certain amplifications and specifications, which should be published as a further aid and guide to those wishing to participate in the educational exhibit, when the commission had given a final revision to its classification. The Centennial Commission have now issued their revised classification, and that part of it relating to education is herewith presented. The committee have added their embodiment of suggestions, and hereby submit it as a further step in the development of the work in hand. While in general the scheme must be executed as it is now established, it is desired that there may be the utmost freedom of suggestion with reference to the details. In the prosecution of this work it should be added that it will be impossible for this Office to perform the part assigned to it, save in and by the provision made by Congress at its last session for an exhibit by the Executive Departments. The law and executive orders connected with it are therefore published. The amount of money provided for this expenditure is a small share of the $115,000 assigned to the Interior Department. It will be obvious, on a moment's thought, how little of the vast work to be accomplished can be performed by this Office. It will be seen from what has been previously published, and, indeed, in all that has been done by this Office, how much more highly we prize the historical than the competitive elements of the Exhibition. We are thoroughly convinced that no institution, that no State or city system, can do better for itself, or can more efficiently work for the improvement of its instruction or its discipline, for the enlargement of its resources or for the increase of its attendance, than by seizing this occasion, when everybody is talking about the past of our country, to turn the attention of its constituents to the incidents of its establishment, growth, present condition, and the considerations which should determine its future plans. Moreover, we cannot fail to feel the obligation imposed upon the actors in this memorial year to leave all the facts in regard to their institutions and systems in the best possible shape for the benefit of education in the centuries of our Government which are to follow.

"Dr. Franklin B. Hough, of Lowville, N. Y., well known for his historical and statistical labors, who has already accumulated numerous and valuable data with regard to the origin and history of collegiate

H. Smart of Indiana, chairman of a special committee to draft resolutions in regard to the exhibition of educational development at the approaching Centennial at Philadelphia. They were discussed and adopted *seriatim:*

Whereas a communication has been received from the Hon. John Eaton, United States Commissioner of Education, in which the National Educational Association, now assembled, is requested to take into consideration the interests of the educational department of the coming Centennial Exposition and to make suggestions in relation thereto: Therefore,

Resolved, That we heartily second the efforts of the Commissioner to secure an adequate representation of our educational products at the Centennial, and that we will cooperate with him in every practicable way to make the enterprise a success.

Resolved, That, in accordance with the Commissioner's request, we make the following suggestions, viz:

(1) In our opinion, wall space of not less than 2,000 feet in length, with accompanying counter and floor space, will be needed for the proper display of our educational products.

(2) The amount of wall space occupied by each State should be limited to 100 feet in length.

(3) All products of the schools, executed by pupils, except such as may be classed as "special products," should be made during the month of January, 1876.

(4) We respectfully recommend that there be formed an Exposition committee, consisting of one agent appointed from each of the States and Territories represented at the Centennial, by the chief educational officer in conference with the national Commissioner of Education, whose duty it should be to coöperate with the Commissioner in the superintendence of the educational department at Philadelphia.

---

education, has been invited to coöperate with this Bureau in the preparation of the exhibit of collegiate and university instruction. The following special suggestions are hereby submitted; others will be added after consultation and agreement with the officers in charge of these institutions:

"The several officers in charge of the institution for deaf-mute instruction in the country have already appointed a committee to take charge of the preparation of the representation of this department of education. The chairman of the committee is Hon. E. M. Gallaudet, president of the National Deaf-Mute College, at Washington, D. C., who should be addressed on the subject.

"The necessity of extended personal intercourse between those familiar with exhibitions and the several officers of institutions and systems has rendered it necessary for the Bureau of Education to invite Hon. John D. Philbrick to confer specially with these gentlemen in New England, and Dr. J. W. Hoyt to perform a similar work, in connection especially with colleges of agriculture and the mechanic arts, in the Mississippi Valley. Dr. L. P. Brockett, of New York, whose historical writings on the subject of education are well known, has undertaken to aid in the preparation of a historical representation of text books.

"Two hundred and forty-eight institutions for the benefit of the young, such as reformatories, asylums, industrial schools, &c., have already been visited by an agent of this Bureau, and a large collection of facts gathered with reference to their history and administration, which is now ready for the printer, and which will be made to constitute a portion of the Centennial publications upon education by this Office.

"The progress of the medical art and medical education prior to the Revolution was the subject of a recent publication by this Bureau, the material having been collected by Dr. J. M. Toner, of this city. N. S. Davis, M. D., of Chicago, Ill., is now preparing an account of medical education in the United States during the century for this Office.

"This Office has also in course of preparation a work on libraries in the United States, past and present, which will shortly appear.

"The subject of art education in the United States during the past century is also receiving attention, with a view to early publication. The attention of all the officers of systems, institutions, and associations of an educational character is specially called (1) to the desirableness of making the graduating exercises of academies, normal schools, commencements of colleges, and the several annual gatherings of alumni, of teachers, and other promoters of education, in some form commemorative of the centennial anniversary of the foundation of the Republic; (2) that the donors of funds for educational purposes be invited to mark this year by the increase of their endowments and benefactions; (3) that a special effort be made to collect at institutions, offices, and other appropriate places, busts, portraits, and other fitting memorials of eminent educators and promoters of education, and that these also, as far as expedient, be made part of the educational exhibit at Philadelphia. Other outlines of the great forces of education in the country are under advisement, and all interested are generally invited to offer suggestions.

"A considerable number of inquiries having come to the Office with regard to the form of State organizations, the Commissioner of Education takes this opportunity to suggest that, where appropriations have been made by States, and commissioners appointed to prepare the State representation for the Centennial, a committee be designated by this commission, consisting of the State school officers and

Resolved, That a committee of three be appointed to prepare and submit to General Eaton rules and regulations by which pupils and students shall be governed in the preparation of such products as may be executed by them.

Resolved, That we recommend that an international educational congress be held at some time during the Centennial Exposition, and that we also recommend that arrangements therefor be made by the United States Commissioner of Education.

Resolved, That we respectfully recommend to the Commissioner of Education that the appointment of delegates to the international congress be made through the chief educational officers of the several States and Territories.

Under the resolution to appoint a committee to prepare plans for students' work, the following able school officers were named: Hon. A. J. Rickoff, superintendent of city schools, Cleveland, Ohio; Hon. J. L. Pickard, superintendent of city schools, Chicago, Ill.; Hon. J. H. Smart, State superintendent of public instruction, Indiana. These gentlemen, after due consideration, reported a plan which was promulgated in Circular of Information No. 8.

The following is the prefatory letter to this circular of information:

DEPARTMENT OF THE INTERIOR, BUREAU OF EDUCATION,
Washington, D. C., November 27, 1875.

SIR: The desire that specimens of the actual school work of students should be shown at Philadelphia has been expressed by many educators, and this work is included in the classification furnished by the Centennial Commission.

The difficulty has been to devise a uniform plan for the preparation of students' work.

The Department of Superintendence of the National Educational Association, in session at Minneapolis in August, 1875, considered the subject, and, after full discussion, referred to a committee the preparation of a suitable schedule, in accordance with the provisions of which all such specimens of scholars' work should be prepared. It was understood that the recommendations of this committee would be accepted as the standard. Many inquiries in reference to the methods of preparing school work have been addressed to this Office. As furnishing a satisfactory answer to these inquiries, and in accordance with the requests of members of the National Educational Association, I recommend the publication, by this Bureau, of the report of this committee, with the schedule as adopted by them.

Very respectfully, your obedient servant,

JOHN EATON,
Commissioner.

Hon. Z. CHANDLER,
Secretary of the Interior.

Approved and publication ordered.

Z. CHANDLER, *Secretary.*

It is confidently believed that these rules, wisely observed, will solve difficulties in regard to students' work, and secure that degree of uniformity in results necessary for just comparison.

---

others of well-known fitness, to take special charge of the State educational exhibit. This plan has already been adopted in several States with the happiest results.

"It is difficult to express in a classification or programme of arrangements all the details of the methods by which education will be illustrated; (1) as increasing the productiveness of industry; (2) as diminishing pauperism; (3) as diminishing vice and crime; (4) as increasing the public wealth; and (5) as specially qualifying man for the pursuits of life and the duties and privileges of citizenship. It is hoped that no one who has worked out any valuable material which would contribute to this end will hesitate to make it known.

"It is suggested that the several annual educational reports in the country may be made to have some special reference to the Centennial Exhibition, and so relieve other documentary statements, and that surplus copies should be furnished at the Centennial with a view to distribution.

"The duty of the educator in this matter is twofold: (1) to aid in the exhibit of educational facilities and (2) to use the material thus collected at the Centennial—nay, the Exhibition itself—for the purpose of future instruction.

"Among the further details already under special consideration are: (1) the manner of investigating and comparing the work of students so as to bring out the best results; (2) what attempts shall be made to provide special arrangements for formal visitation to the Exhibition by students of institutions of learning, under the guidance of experts, for special investigation and study of the Exhibition; (3) the arrangement of an educational congress.

"It is hoped that further special consideration will be given to these subjects at the meeting of the National Educational Association in August, at Minneapolis.

"JOHN EATON,
"*Commissioner.*"

A great obstacle was thrown in the way of the successful presentation of education by the effort of persons to control the methods of the educational exhibition who had no special acquaintance with educational affairs.

States that have become active in preparing to exhibit their products have created commissions to supervise their representations.

These commissions, though constituted of able men, skilled and competent to devise and arrange exhibitions of any or all the other products of the State, in no instance contained any one specially skilled in educational affairs. In some States the result will be no exhibition of education. In others the mistake has been discovered in season to apply the remedy, and the State commissions are inviting the coöperation of the proper school officers. In very few instances are the preparations of the exhibits of education receiving any aid from State appropriations.

Whatever is done, therefore, in most of the States will be the result of the skill and labor of the educators and the pecuniary aid of friends of education.

It is to be hoped that the next century will see some progress in dissipating the notion that persons without special training or experience in educational affairs can properly care for these important interests. No subject requires more special skill, and if the public would have the best education for its youth, public sentiment, while it encourages the participation of all concerned, according to their qualifications, must finally come to reject the idea that any one can play on the many stringed harp of the human mind, or organize or conduct institutions and systems in which it is attuned for harmony or discord for an immortal existence. Some hesitation has also been created in the preparation, by the fear which has arisen in some quarters that the Centennial Commission will not reserve sufficient space for the educational exhibit, or that they may put it in some out of the way place, (*e. g.*, a gallery,) or may break it into fragments, and thus destroy the logical effect of the exhibition. So fatal a step would seem impossible. The interest of foreign educators in what is to be accomplished is already manifested in many ways. Some foreign countries have their educational exhibits well prepared.

Dr. Lyon Playfair, M. P., late postmaster-general under Mr. Gladstone, having received from this Office the circular containing suggestions, writes commending the plan, and remarking that if it can be carried out the educational results will be greater than from any previous world's fair. M. Hippeau, a well-known French writer on education, on receipt of the circular of suggestions, published an extended communication in La République Française upon education at the Exhibition. He quotes the programme, and makes many observations worthy of special note by Americans. In reference to the Exhibition, he observes:

There will be many objects to attract the attention of foreign visitors, but we may boldly affirm that none will produce a deeper impression than the educational exhibit, and this from the following reasons: The United States have the right to feel proud of their public schools and institutions to produce enlightened and educated men for the honor and prosperity of their Republic. In direct opposition to the course pursued by countries which consider the progress of public instruction a peril to society, the Americans see in it the essential condition of their prosperity and the foundation of their country's grandeur.

And again he adds:

The idea has been suggested, and not without reason, that our workingmen should be furnished the means to go to Philadelphia, and study there the results of manufacturing industry. Have people also thought of letting our teachers derive some profit from this unique occasion to study everything the United States have done for education in the way of school organization, methods of instruction, educational apparatus, hygienic regulations, &c.? Would not the directors of our normal schools, the heads of our great institutions, find it greatly to their interest to make such studies? The government ought to understand this necessity, and the minister of public instruction at least ought to conceive this idea.

He gives his reason for expecting the success of our educational exhibit, and, explaining the agency of the Bureau of Education in promoting that success, remarks that those educators who have asked for its establishment based their request on Montesquieu's remark that "in a republic the influence of education is all powerful."

Commending the limitations of the Office, he says:

Limited though it be in its functions, the Bureau of Education nevertheless renders immense services, and in its capacity as a popularizer of the methods followed by the different States for furthering the cause of education it exercises a most beneficial influence.

Again, referring to its 8,000 special correspondents, he says:

The number of its special correspondents is not less than 8,000. When one thinks that in the United States there are more than 600,000 persons who, in the capacity of teachers, directors, inspectors, contributors to and superintendents of benevolent institutions, take a direct interest in the success of education, one will understand the difference between countries in which the citizens take care of their own affairs and those in which the government has this exclusive care. It would, no doubt, be difficult to transplant to France institutions so much opposed to our habits, and which would but little suit our national character. But nothing could be more desirable than to have established in connection with our ministry of public instruction a "bureau of education" similar to the one which renders such valuable services in the United States.

His excellency the acting minister of public instruction for Japan informs me that his government will undertake an educational exhibit. We have similar information from Ontario and other countries. The preliminary catalogue of the Belgian exhibit is received, and gives promise of great interest. Prof. Hermann Kinkelin, of Basel, who received such deserved commendation for his presentation of Swiss education at Vienna, has prepared a presentation of Swiss educational statistics for Philadelphia. The Swiss Teachers' Journal thus describes it:

These new Swiss educational statistics are given in the shape of a number of Dufour's maps of Switzerland, in which the position which each canton occupies with regard to education is illustrated by different colors in a very simple and at the same time clear and ingenious manner.

Part I of the work consists of 24 copies of a reduced Dufour map of Switzerland on the scale of 1 : 250,000.

The first seven maps, Nos. 1–7, show all the public secondary and superior schools at intervals of ten years, the last for the year 1875; and it is interesting to see how in most parts of Switzerland the colored dots increase in number from one decennial period to the next, while in other respects everything remains pretty much the same.

No. 8 shows the private schools and benevolent institutions.

No. 9 shows in different colors the time annually given to instruction in the primary schools in the various cantons, those having the shortest time being colored black and gradually getting lighter till those having the longest time are colored quite light. The lightest canton is Basel Town, which has 45½ weeks' instruction per annum. Next follow Glarus, Geneva, Zurich, and Schaffhausen, while Valais, Appenzell Interior, Grisons, and Uri are quite dark—27.5 and 24.2 weeks per annum.

No. 10 shows the total amount of time devoted to instruction during the period of school age. In this map Vaud is colored brightest, having a total of 385 weeks; while Uri is darkest, 152 weeks; (Basel Town 329 weeks, and Basel Country 300.)

No. 11 shows the arrangements regarding the separation of the sexes in the different cantons.

No. 12 shows the number of primary scholars to 1,000 inhabitants, Basel Country taking the lead with 195; (Basel Town, 66.)

No. 13 shows the average number of primary scholars to one teacher; first, Grisons, 32; Tessin, 36; Valais, 37; Basel Town, 55; Basel Country, 95; and, finally, Appenzell Exterior, 107.

No. 14 shows the number of scholars in the higher and lower secondary schools to every 10,000 inhabitants, Basel Town taking the lead with 457, the last being Appenzell Interior with 11.

No. 15 shows the number of primary teachers to every 10,000 inhabitants; first, Grisons with 48, and last Basel Town with 12.

No. 16 shows the sex of the primary teachers, giving the percentage of male teachers on the whole number of teachers; Glarus, Basel Town, and Appenzell Interior, 100 per cent.; Upper Unterwald, 25 per cent.

No. 17 shows the average annual salary of male primary teachers in francs. The lightest-colored canton is Basel Town with 2,480 francs, and the blackest Valais with 243 francs.

No. 18 shows the average annual salary of female primary teachers. Geneva, 993 francs; Valais, 220 francs.

No. 19 shows the average annual salary of all teachers, (male and female.) Basel Town, 2,199 francs; Valais, 234 francs.

No. 20 shows the average amount of school property to 1 scholar.

No. 21 shows the annual expenditure per scholar. Basel town, 54 francs 85 centimes; Uri, 5 francs 77 centimes.

No. 22 shows the annual amount expended per scholar for secondary education. Appenzell Interior, 308 francs; Lower Unterwald, 13 francs.

No. 23 shows the average annual sum expended for primary education per school. Basel Town, 3,000 francs; Valais, 228 francs.

No. 24 shows the annual sum expended for education of all grades *per capita* of the population. Basel Town, 12 francs 13 centimes; Appenzell Interior, 1 franc 30 centimes.

Part II consists of all the sheets of Dufour's great atlas of Switzerland, giving the exact location of every primary and secondary school in 1871–'72.

RESULTS TO BE DERIVED FROM THE EDUCATIONAL EXHIBIT.

I. I have mentioned among the educational results to be sought from the exhibition the establishment of educational museums or collections of educational appliances. Our deficiency in this respect is a source of constant embarrassment. Many of our teachers and school officers have no opportunity of knowing what these appliances are, or of keeping up with their improvements. It has been my desire, in conducting this Office, to secure as necessary aids to its work, and as special benefits to our systems and methods of education—

1st. An educational library, where publications upon the subject could be gathered from all quarters of the world, and such publications made available for American educators. A small sum has been annually appropriated by Congress for this purpose. The use of this, and the exchange of documents, have made the library already one of great value. I have purchased for it most of the private collection made by my predecessor, Dr. Henry Barnard. I have also desired to secure for the same purpose—

2dly. An educational museum or collection of educational appliances, but neither money nor space has been afforded for such a collection. As I have at different times mentioned, several foreign governments have invited exchange of these appliances—some have sent articles; but I have had none to return in exchange, and have not been able further to respond to that courtesy than to send the publications of the Office.

Since the announcement of the International Centennial Exhibition, I have hoped that it might afford the occasion for the organization, in connection with this Office, of a national educational museum. The cost would be slight and the benefits to our education invaluable.

The commencement of the Kensington Educational Museum under the auspices of the most enlightened English friends of education, in connection with one of the world's fairs at London, is well known. The effect upon English skill and intelligence has been incalculable.

In connection with the Vienna Exhibition, a somewhat similar movement was commenced in that city. A recent writer, referring to it as "the permanent educational exhibition," observes that "it receives universal approval, and its beneficial results surpass all expectation."

The first number of the Journal of the Educational Museum at Rome, Italy, has just been issued. From this the following remarks are translated:

This museum, as is well known, owes its origin to a visit to the World's Exposition at Vienna, made by the distinguished gentleman who now rules over the destinies of public instruction in the kingdom. It only dates its legal existence from November, 1874, called to life by the joint exertions of the minister of public instruction and the minister of industry and commerce.

* * * * * * *

It has already been likened to a permanent exhibition. This journal will now give it the character of a permanent and at the same time circulating exhibition.

* * * * * * *

To illustrate the collections which are in the museum and which are being formed is a much greater task than might seem at first sight. In the first place, there is no educational implement or apparatus which could not give rise to researches and observations, and form the subject of descriptions, examinations, comparisons, and manifold discussions.

* * * * * * *

It is by this not merely intended to make an appeal to teachers or superintendents. The museum, and the Journal, its representative before the public, would not think

that it had done all the work assigned to it if it did not likewise have the coöperation of those who in a less personal, direct, or official manner are interested in the cause of education. Through the school-house, apparatus, furniture, text books, maps, charts, and other scientific and literary aids, many persons are more or less interested in education, who do not devote all their efforts to it, but whose experience will nevertheless be of great value. The general condition of our country certainly justifies all this and easily explains it; for in this regard it has various sides, and, not always unjustly, has been blamed; but this must often be ascribed to these or those persons not having exerted themselves enough, while the case would be entirely different if the people would not with all the greater zeal seek to obtain the very best that could be obtained.

Many of our educators are familiar with the successful efforts of Dr. Ryerson and his deputy, Dr. Hodgins, of Ontario, to secure these great aids to education in that province. Their example would seem of itself sufficient to secure adequate action in the United States.

Among the noted and efficient organizations of this character should be mentioned the so-called Pedagogic Museum, under the direction of the Russian ministry of war. Founded in 1864, it has become one of the most effective agencies for the promotion of general as well as military education in that empire.

II. A second educational result sought from the exhibition is the preparation of full and accurate reports on the various phases of education in the country. The efforts made to quicken, increase, and render effective the collection and publication of educational history have already been mentioned. As a result, great activity is already reported in this work. The Office is doing all in its power to generalize these results and make them available for our country and the world, and hopes to gather rich fruit from the labors and publications of experts from our own and foreign countries after the display closes.

THE EDUCATIONAL EXHIBIT AT VIENNA IN 1873.

In my previous reports mention has been made of allusions in foreign reports on the Vienna Exhibition to education in the United States. These continue to appear. One interesting report on "Primary instruction in different countries" contains the following observations of F. Jeanmaire, teacher, of Angoulême: "The United States have in the very centre of Europe exhibited a magnificent specimen of their important educational productions. In the interior of the palace we admired their collection of educational works and treatises, drawings, and penmanship exercises by the pupils with the corrections of the teacher, all very splendidly bound and grouped according to States. In the grounds a primary school-house, furnished with all the necessary material, showed to the visitors the deep interest which the American Union takes in the fundamental element of its prosperity and grandeur." This school-house, with the Swedish, he pronounces the finest in the exhibition.

A very able report to the French minister of public instruction upon the educational exhibits at Vienna, by F. Buisson, who has been charged with the task of organizing the educational statistics of the republic, contains the following noteworthy remarks respecting the educational exhibit of the United States:

The Vienna Exposition had less a universal than an Austro-German character. Other European countries were with regard to education poorly represented.

The United States of America, which had a more complete exhibit, did not, however, furnish all the details, so indispensable to a thorough and instructive study of school systems and their results. They had two educational exhibits, a school-house in the park and a section in the exposition building. Here primary and secondary education were sufficiently and carefully represented. Besides the apparatus and text books, this exhibit contained the most complete and the most instructive collection of pupils' work at the exposition. But with reference to other grades of instruction the exhibit did not furnish other information than reports from different States and various scientific associations. The American district school-house satisfied the visitor's curiosity. The building contained a hall and a large and well lighted school-room with forty seats. The interior arrangement of the building was far from making a favorable impression upon the visitor. I was surprised to find nothing that indicated this great nation's intimacy with practical school life. Rich furniture was the only object of admiration. The maps and charts, of which several seemed to be in the collection entirely by chance, gave rather an idea of great variety of means of instruction than of regular methods in teaching and of a premeditated pedagogical plan.

Only a few American States and cities exhibited plans and photographs of school-houses; but unfortunately in too small a number, and without the necessary technical, financial, and pedagogical information. The plans and relief-model of the Franklin school-house at Washington show an extreme simplicity of architecture. The outside of the building lacks all elegance and æsthetic character. A yard or a recreation room, in the basement of the school-house, substitutes the school garden, for which the Americans seem to have no necessity.

But what makes the American school-house so valuable is the great care given to its hygienic condition. Nothing is neglected that furthers the physical development of the children. Ventilation is generally combined with steam heating, and has reached such a degree of perfection that its introduction must cause enormous expense. Cloak rooms and water closets are not only very comfortably arranged, but show a thorough study and a scrupulous observation of the rules of hygiene. The results of this system surpass by far all that has been obtained by European systems.

Drawing is one of the rare branches in which American schools have not yet reached the European standard. The exhibit of the United States proved sufficiently that her schools, in so many respects superior to the European, are still beginners in the art of drawing. In some cities the drawing lessons in several school-houses is intrusted to only one teacher, and in a certain city in Ohio one teacher has charge of 74 drawing classes.

There seems to be no systematical programme for drawing in America. In most cities this important department has still to be created.

The insufficient training of teachers has hitherto been one of the greatest deficiencies in the American school system. The continual change of teachers, and the short period during which the largest number of them remain in their profession, explain sufficiently why the results are not in proportion with the generous expenditures of the country.

America has given the most striking proof that difficulties in preparing uniform statistical school reports can be vanquished.

The Bureau of Education at Washington commenced a few years ago to organize school statistics for the whole extent of the United States, and not one of the great countries in Europe offers, at the present time, an equal representation of her institutions and better facilities for obtaining reliable information with reference to education. This is so much the more remarkable, as the centralization of school administrations does not exist in the United States. All the States of the Union are entirely independent, and organize their own school systems as they please, which must cause the Bureau an increase of complications and considerable delay.

Not satisfied with collecting and publishing the results of American institutions of learning, the Bureau of Education now collects and publishes the most complete reports on European education.

Through a series of circulars,* the publication of which was commenced recently, Americans will soon know European institutions as thoroughly, or rather more thoroughly, than Europeans themselves.

It would be very desirable to have in Europe an educational statistical centre, somewhat like the United States Bureau of Education, from which reliable information could be obtained regularly.

What is needed to realize this idea? Nothing but an energetic initiative, which will be infinitely easier, cheaper, and more advantageous than the step recently made toward the adoption of a uniform postal system between the two hemispheres.

Could not five or six European countries confer on this subject with the United States—far better prepared for that kind of work than we—in order to arrange some uniform basis for the preparation of school statistics? Much good would arise from this most important enterprise. It would enable all nations to compare the results of other countries with their own, and thus discover always new and better methods in the great work of education.

HEALTH AND EDUCATION.

This subject, of vital importance, yet greatly neglected, can hardly be more forcibly presented than by the following quotations from the opinions of well-known experts expressed since the last treatment of the subject in these reports.

At a late meeting of the Michigan State board of health, Dr. Kedzie reported the following facts, ascertained by personal examination:

* Indicating the appreciation of these occasional publications by the Office is the gratifying fact that Prof. P. Wynen, of Antwerp, has translated into French and published the substance of three of them for the benefit of European readers, viz: (1) The Theory of Education in the United States, prepared by Hon. Duane Doty, then superintendent of schools for Detroit, and Hon. W. T. Harris, superintendent of city schools, St. Louis, and extensively approved by the most eminent educators in the country; (2) Statements relating to Reformatory, Charitable, and Industrial Schools for the Young, prepared by Mrs. S. A. Martha Canfield; (3) The History of the Bureau of Education, by Dr. Alexander Shiras.

In a private letter Prof. Wynen remarks, "I beg you, honored sir, not to consider this as a literary task merely, but a tribute of gratitude which I do myself the honor to offer your country for all it has done toward the amelioration of the lower classes of society."

At the new State public school building in Coldwater, he found no ventilation in the dormitories. The air was very foul, containing 14 to 16 parts of carbonic acid in 10,000 parts of air. * * * The under-floor space had no ventilation, and the original opening for that purpose was closed. The timbers underneath were covered with mould. During the year, several deaths have occurred from diphtheria. * * * The hygienic conditions, on the whole, are not good.

In the asylum for the deaf and dumb and the blind, at Flint, he found exceedingly bad air in school-rooms and dormitories. On each side of the building, the two main sewers run, and the well from which the water supply is taken may be, perhaps, contaminated thereby. There are eight water-closets to ten teachers and superintendents; one water-closet to ninety-three boys, and one to seventy girls.

The ventilation at the reform school, in the old building, is passable, but in the new part and in the hospital it is bad.—(Detroit Review of Medicine, February, 1875, p. 125.)

Dr. Thomas F. Rochester, M. D., of Buffalo, N. Y., in an inaugural address delivered at the opening of the seventieth session of the Medical Society of the State of New York, June 20, 1876, said:

We are proud of our public schools; education is free to all; but it is not, in every instance, the unmixed blessing it seems. It is acquired at too great an individual risk.

On the proudest avenue of this city (Buffalo) is a three-storied brick building. The room is heated with coal stoves; the ceiling is low; the light is but moderate; and there is no provision for ventilation. The seats are short, narrow, and close together. * * * The principal of the school, in reply to inquiries, stated that the room was always full; that three children had to sit where there was only room for two; that they were packed so tightly that it would be impossible for the children all to rise upon their feet at once; that there was no place to hang up their outer garments, even if they were wet, and that when school was dismissed, if a boy should drop his cap, he could not stop to pick it up, so great was the rush and the crush.

On the 9th of February, 1869, the school committee of the common council, with the superintendent of schools, made a tour of inspection. I make a few extracts from the report of the same: No. 7, "The primary department was found to be running over with little children, who had hardly room to breathe and stretch out their little arms." No. 11, "It is a perfect hive of children." No. 31, "The primary department has 340 scholars, but was calculated only to hold 180. They sit everywhere." No. 15, "The primary department contained 320 scholars yesterday." From 800 to 1,200 cubic feet of air is the amount of space that is required to be allotted to each individual in the United States military hospitals. In British India, each jail prisoner has, by legal enactment, 648 cubic feet of air. In public school No. 15, each poor child has but 56 cubic feet of air. * * * No wonder that scarlet fever, diphtheria, typhoid fever, and blood poisons of every description are more or less prevalent. A large proportion of these dread disorders are generated in and propagated by our public schools. * * * But acute diseases are not the only results of this criminal crowding. Tuberculosis, scrofulous and brain affections, developed at various periods, may be traced but too often to the same source. Better for society, and better for themselves would it be, that these infants were not educated at all than at such a risk. The counterpart of this picture is to be found in every large city in our land. What is the remedy? No child under ten years of age should be sent to a public school, and every school district should have a competent and well-paid medical director, who should devote himself thoroughly and conscientiously to the many hygienic duties of the position.—(Buffalo Medical and Surgical Journal, pp. 408, 409.)

The following citations embrace a summary and remarks concerning the public schools of Philadelphia, based upon the answers of physicians to printed questions, upon several general reports, and upon a chemist's report:

Formal reports upon printed blanks are made as to forty-four schools. The examinations were made in the winter and early spring, at different hours and in various weather, by eleven different physicians.

The space allowed to each pupil is too small. The average of rooms reported is 143 cubic feet per pupil. The range is from 272 down to 66, in different schools. Even with efficient ventilation, the space should not fall short of 200 or 300 cubic feet.

The percentage of carbonic acid is stated in regard to thirty-one rooms. The ratio of 0.56 in 10,000, reported in one room, is very extreme. The average for thirty-one rooms is 0.18 per cent. The examination of ten schools by a professional chemist exhibits an average of 0.1315, and a range of from 0.06 to 0.21 per cent. In these last, and in nearly all the other cases, it is expressly stated that windows were open. Two analyses of external air showed the presence of 0.0288 and 0.03205 per cent. of CO_2, the proportion normally varying somewhat with the weather and other conditions.

The schools are very generally overheated. This in spite of the almost invariably open windows.

A score of the schools examined have no system of ventilation whatever. The others have various devices and appliances, variously described.

The general reports of several observers, and the report of the chemist, agree with the tabulated returns, in representing open windows as absolutely necessary to keep the air of the school-rooms tolerable.

The atmosphere of the school-rooms is terribly bad, except when windows are kept open. Practically, there is no other means of ventilation. When some pretence to a system exists, it is usually wretchedly inadequate or wholly inoperative. Concerning the use of shafts, inlets, outlets, and valves, the teachers are usually ignorant or careless. Openings are choked with rubbish, boarded up, or kept shut by rusted valves and broken cords. In one building, air-shafts were altered into closets. In several instances teachers and pupils were made "almost sick" by a temporary closure of windows for experiments.

The rooms examined by Mr. Thomson, the chemist, are said to be very favorable specimens of our schools, being all of recent construction. Even here windows were constantly open.

Although no question is designed to elicit information as to animal emanations in the close air of the schools, some expressions used by reporters are significant. "Foul," "intolerable," and "mephitic" are words suggestive of something more than carbonic acid gas.

The chemical report already mentioned, and one of the general reports, give clear expression to what we believe to be the true relation between carbonic acid and animal exhalations in their bearings upon the fitness of air to support respiration. As both impurities arise from the presence and the breathing of living beings, both will increase and diminish together, according as the air is repeatedly inspired or freely changed and renewed. If, then, in a crowded room we find twice as much CO_2 as in one less populous, we may infer the same proportionate difference in the organic emanations. Thus the first impurity serves, in ordinary circumstances, as a measure for the second.

Moreover, it is probably true that the carbonic acid is a less noxious contamination than is the animal matter, which it roughly measures. The broken down organic substance given off from lungs and skin, in minute particles, in gaseous form, or dissolved in watery vapor, becomes when concentrated a most potent poison.

Dr. Hammond, in his work on military hygiene, calls attention to the symptoms described as attending the decease of the victims of the "Black Hole of Calcutta." These were not at all the ones characteristic of carbonic acid poisoning, but rather of profound animal poisoning.

It is not, however, therefore to be inferred that carbonic acid gas is not injurious. In the proportion of 20 parts to 10,000, it undoubtedly is very hurtful, and to be dreaded even in half that amount.

In the Hancock primary school, we find 520 poor little innocents huddled together in three rooms, each 37 feet by 35 feet, and not 9 feet high. Windows, from five to seven in each room, were open from 8 to 12 inches, while the tests showed the percentage of CO_2 to be 0.30, 0.52, and 0.56. Space for each pupil, 66 cubic feet; outlet for foul air, none; system of ventilation, none.

One of the accompanying reports contains the following:

In Philadelphia, during ten months of the year, about four and a half hours of each school day are spent in the school rooms by 90,000 children, ranging from six to seventeen years, and about 2,000 teachers. Who can possibly estimate to what extent the laws of health are violated by compelling these 92,000 persons to breathe day in and day out an atmosphere surcharged to the extent of five, six, or seven times the sum of carbonic acid that normal air contains, and then superadded to this a sum of organic impurities which may be expressed by the same numbers as indicate the excess of carbonic acid? Who can, in numbers, express the degree of violence done to health, the sum of human suffering engendered, and to what extent life may be shortened by the respiration of the unnecessarily impure atmosphere of school rooms?—(Report of the committee appointed by the board of public education to inquire into the sanitary condition of the schools of the first school district of Pennsylvania, city of Philadelphia, pp. 30–35, and p. 19.)

From "The Perils of the School Room." Read before the American Public Health Association, Philadelphia, November 13, 1874, by A. N. Bell, M. D. Sanitarian, January, 1875.

The importance of air space rests upon the absolute necessity of pure air for healthy respiration. * * * For various practical purposes, the limits of space vary from 300 to 4,000 cubic feet. * * * And *no deviation should be made on account of children.* With regard to this point, Mr. John Simon well observes: "It is to be desired that laws and regulations as to overcrowding should not proceed on the assumption that children (to any measurable extent) require less breathing space than adults. Against any

such assumption two facts have been considered: First, that even healthy children, in proportion to their respective bodily weights, are about twice as powerful as adults in deteriorating the air which they breathe; secondly, that the children will almost invariably have certain eruptive and other febrile disorders to pass through, from which adult life is comparatively exempt, and in which the requirement of space is greatly increased. And, having regard to these two considerations, I think it best that children and adults should be deemed to require equal allowances of air and ventilation."

Moreover, it should be observed that the mere space allowance should in no case detract from the absolute necessity of means for renewal, and the smaller the space, so much the more certain should be this provision. If 300 cubic feet only be allowed, the air must be changed, at the least, every twenty minutes. To neutralize the deleterious properties of respired air, and to replenish it, every person requires 2,000 cubic feet of fresh air hourly, and with less provision than this contamination is sure to follow.

The epidemic influences or constitution which some authors are wont to describe as conditions precedent to the activity of epidemic diseases, and which are believed to be periods of predisposing receptivity of specific poisons, are due in no small degree to the prevailing condition of school rooms and their congeners. As a rule, the older these conditions, the longer the period of time in which they have been tolerated, the more depressed the vital powers of their occupants and the greater their predisposing receptivity. Besides, the depressed state of the organism under such conditions is not only predisposing to epidemic diseases, but the liability to and the danger of all diseases is thereby intensified; * * * and, doubtless, much that is attributed to the season of the year supposed to be predisposing to scarlet fever, measles, whooping cough, diphtheria, and some other common affections of children, is due to the same cause. It is, at any rate, very remarkable that the beginning of the autumnal school term should be simultaneous with or speedily followed by the sickly term. There is surely something more than a mere coincidence in these relations; they stand much more like cause and effect.

Besides the danger from active and fatal disease from exposure to the conditions which have been described, all physiologists recognize the influence of depressing agents on the human organization in blunting the sensibilities, obtunding the intellect, promoting stupidity, idiocy, and physical deformity. And in this relation, at least, the "survival of the fittest" often has a painful significance, not alone confined to the present generation, but, recognizing the accepted law of inheritance, well calculated to shock the sensibilities in anticipation of the future.

The following abstract of a report on the public schools of Brooklyn, in March, 1874, by the sanitary superintendent of the board of health, is submitted as an illustration of the conditions which have now been described:

"No. 6. Registered, 983; average, 94 per cent.; 514 in primary department. Ventilators have been provided, but many of them closed and beyond reach, the cords wanting and practically useless. The heat is introduced directly upon the children. The middle rooms upon the east side of the building are so poorly lighted as to require gas burning at midday. In these rooms the air was very oppressive, and the supply through other occupied rooms.

"No. 9. Average 1,300. * * * In one of the rooms there were 126 children, the windows all closed, the ventilating shaft closed, and the hot-air registers open. Each of these children had 50 cubic feet of space.

"No. 12. One room occupied by over 30 pupils that would not properly accommodate more than 15. * * * No ventilating appliances besides the windows.

"No. 15. Constructed for 800, has 1,900. Ceilings low, air renewed only through windows. In one room 67 children, 30 cubic feet to each child.

"No. 17. * * * A small room in the primary department has 50 children in 2,450 cubic feet of space, 49 to each child. The air in all the small rooms and in all the primary rooms was quite impure to the senses.

"No. 18. Five hundred and twenty-five children on ground floor; 823 on second floor, with an average of 63 cubic feet; on each of the floors above 400 scholars; in one of the rooms on the ground floor, 32 cubic feet for each scholar. * * * Another room, 75 by 20 by 6, numbers 150 pupils, and has two openings or windows, about 24 by 30 inches each; gas burning for light.

"No. 19. Wings on each side of the building cut off six class rooms from any direct opening upon the external air or light. * * * Says the inspector: 'My last visit to this school was made about the time of closing the afternoon session. I cannot describe the condition of the atmosphere; the children seemed completely depressed, and hardly had sufficient energy to leave their places.'

"No. 22. Overcrowded. The children suffer for want of pure air. One class room, 12 by 18, has 103 scholars.

"No 23. A room 12 by 20 = 240 square feet, has 56 scholars; about 4 square feet and 27 cubic feet only to each.

"No. 29. Four hundred and twenty in the primary department and 580 in the other two, illustrating the crowding of the young children; 130 more lives must be sustained in the same cubic space in one instance than in the other.

"No. 30. * * * One room affords 29 cubic feet, another 24 to each scholar. * * * A strong draught from the open windows blows upon the children.

"Primary, No. 3. * * * In one room are 140 small children; wood stoves heat the rooms, and open windows admit cold air. Temperature in range of seats next to stove was 90°; most remote, 64°."

In an examination of sixteen of the public school rooms, and, with two or three exceptions, the same as here reported upon, (but when they were less crowded than they are at the present time,) and seven private schools in 1869, the average proportion of carbonic acid present was 1.64 volume per 1,000, or 3.3 times its normal amount. Two only, and both of these were private schools, were perfectly ventilated. One of the public school rooms had eight times the normal proportion of carbonic acid present, and more than half of them four times the normal proportion.

It is very far from my purpose to show that the school rooms of Brooklyn are more perilous than the school rooms of other cities; indeed, they are not so. In New York, the plan of construction in some of the new buildings is believed to be an improvement over any of the Brooklyn buildings; but, taking them altogether, they are about equally perilous.

Philadelphia, I am sorry to believe, is no better. With an enviable amount of house room for all other purposes, and the banner city of America for the health of her people, her school-houses, notwithstanding, are a disgraceful exception. One of these, visited during a night session, was found "crowded to the extent of less than 100 cubic feet of air space to each person," and "an offensive odor pervaded the whole school." "On descending to the cellar, the sickening odor of carbonic acid and oxide was unbearable. The cellar had evidently never been cleansed, or even aerated, since the floors were laid above. And to this hotbed of disease and death—well stocked with coal, and most likely, at the time of storage rendered more certain to evolve its deleterious gases by wetting—every teacher and pupil of this school was exposed. Nor is this, bad as it is, an exceptional case. Indeed, the evil is so general in all of our cities as to fully justify the conclusion that the examples given are examples of American school-houses generally, and of no particular city. They are a disgrace to our civilization and a shame to our humanity.

From "Preventable Sickness," by Alfred L. Carroll, M. D. Sanitarian, December, 1875, pp. 403 and 404.

Each one of us, to get his necessary allowance of oxygen, inhales about 400 cubic feet of air a day; but, in exchange for this oxygen, we exhale carbonic acid gas at the rate of two-thirds of a cubic foot an hour, thus vitiating a very much larger body of air than we actually inspire. * * * One part of it in 1,000 of air is the maximum of admixture compatible with healthfulness. We emit every hour enough carbonic acid to destroy the wholesomeness of something more than 666 cubic feet of a perfectly pure atmosphere. But the atmosphere with which nature supplies us is not perfectly pure; it already contains about 5 parts of carbonic acid in every 10,000—a little more in towns, a little less in the open country—or one-half the permissible percentage, so that, for typical respiration, every pair of human lungs requires about 1,300 cubic feet of air an hour. In other words, if a person were confined to a room 10 feet square and 13 feet high, all the air in that room should be changed every hour. The popular disregard of this essential condition of health is responsible for a vast number of diseases of debility dependent on what might be called oxygen starvation, and lessens or destroys the chances of recovery from maladies otherwise caused. Consumption, if not originally induced, is, at all events, commonly called into action by breathing "prebreathed" air. It is unknown among the nomadic tribes, who live absolutely *al fresco*, and its frequency increases just in proportion as we find people spending a greater portion of their time in a confined atmosphere, devitalized by their own respiration or that of others. * * * Not only in private homes is this cause of ill health operative, but often, to a still greater extent, in schools, where insufficient cubic space and defective ventilation impair the constitutions of hundreds of children at an age when most they need the proper materials for nutrition, of which oxygen is the most important. In the absence of sanitary supervision of schools, the compulsory education act, enforcing still further overcrowding, must strike every hygienist as an iniquitous assault on public health.

From "Nervous System as Affected by School Life," by D. F. Lincoln, M. D. Sanitarian, August, 1875, pp. 196 and 198.

As regards fresh air and other hygienic essentials of schools, the attempt is sometimes made to excuse deficiencies by saying "that the scholars are better off in school than in their own wretched houses."

This excuse is apt to prove fallacious. It is our duty to ask, when such remarks are made, "How much better off are they when in school?" Is the air at home charged with fourteen parts of impurity, for example, and that in school with only twelve or thirteen parts? Such a comparison reflects no credit upon the school; if both places are

blamable, then our duty obviously begins at the school, which we build and furnish, and to which we compel the children to come.

There are three special faults in sanitary conditions which do harm to the nervous system of those in school rooms. These are, the means employed in lighting evening schools, the undue heat of school rooms, and the excessive dryness of their atmosphere, with other impurities.

School work, if performed in an unsuitable atmosphere, is peculiarly productive of nervous fatigue, irritability, and exhaustion.

By "unsuitable" is chiefly meant "close" air, or air that is hot enough to flush the face, or cold enough to chill the feet; or that is "burnt," or infected with noxious fumes of sulphur or carbonic oxide. Very few schools are free from these faults.

From "Brain Culture in relation to the School Room," by A. N. Bell, M. D. Read by invitation before the Department of Superintendence of the National Teachers' Association, Washington, January 27, 1875. Sanitarian, March, 1875.

While the brain has not usually more than one-fortieth of the weight of the body, it receives about one-fifth of the whole volume of the blood. It is scarcely necessary to state in this connection that every organ and tissue of the body is nourished by the blood, and that upon the supply of it and the condition of it nutrition and development, for weal or for woe, depend.

During the period of growth and change of structure, the modifying influence of external conditions is most strongly marked. The constitution of the individual adapts itself to the circumstances, and becomes fixed for the lifetime. So that if a child of originally healthy constitution be subject for a considerable length of time to such injurious physical conditions as produce a tendency to disease, unless the conditions are speedily changed, the effect is to establish a constitutional weakness or disease, not only during the life of the individual, but it may be a diathesis, with hereditary qualities for several generations. * * * Changes of growth and structure are all affected by and through the circulation of the blood; its condition depends upon the air we breathe. Air is the very first element of our bodily tissues, and breathing affords three-quarters of the nourishment of our bodies.

Carbonic acid, pure, is not respirable. If an attempt be made to inhale it, the glottis closes and prevents it from entering the lungs. When diluted with twice as much or more of air, it ceases to produce that effect upon the glottis, and is permitted to enter the lungs and the blood, and acts as a narcotic poison directly upon the brain.

Brain culture is environed by the school room. Upon the condition and management of the school room depends the quality of the brain, and the brain is the soil of subsequent endowments. * * * A fruitful harvest can never come of an impoverished soil. * * * A well-cultivated brain is unquestionably the true road to exalted virtues, and the union of a sound intellect and moral power the only stable foundation of true wisdom, by which health becomes, next to eternal salvation, the most important object of life. A pure atmosphere is the first need of the school room; without it none of the vital functions can be sustained in health.

From "School Room Stunting," by A. N. Bell, M. D. Sanitarian, December, 1875, pages 412-415.

It has been variously estimated by different authorities that in early childhood from one-fifth to one-fourth of all the blood in the body is directed to the brain. * * * If the blood, passing through the lungs, does not there obtain a supply of oxygen, it takes back to the brain and other tissues carbonic acid instead, and the consequence is an arrest of the changes necessary to life and growth. If, in passing through the lungs, the blood meets with only a small supply of oxygen, or that which amounts to the same thing, air surcharged with carbonic acid, a partial arrest of vitality takes place, the vigor of the organism is diminished, the functions are depressed, and there will be a gradually increasing torpor of the mental faculties, and ultimately a stunted intellect and premature death.

It is the object of every enlightened educator to promote the right exercise of that power by which each individual ultimately becomes the director of his own conduct, the arbiter of his own destinies. The first necessity in the accomplishment of this object is the preservation of health; and the problem of education yet to be worked out is: The balance of physical forces and intellectual faculties.

That the conditions of education, as ordinarily conducted, are in terrible conflict with this balance, no careful observer will attempt to gainsay.

Nature, in some respects, can be made to deviate from her ordinary course of procedure in order to be subservient to the purposes of men. * * *. The fruit trees of our gardens may be dwarfed, and, by grafting on hardier roots, under constant nursing, be made prolific in the perpetuation of their feeble species. But leave them alone for a time, and, like the hollow-eyed, bleached, and feeble progeny of a common school room, they have no stamina—hot-house plants, destined to perish on the very threshold of life.

For high culture, for the perfection of organic development, "other foundation can no man lay than that is laid."

If a child of originally healthy constitution be subjected for a sufficient length of time to an atmosphere surcharged with carbonic acid, if it be deprived of light, if it be restrained in the physical exercise necessary for the development of its organs, if the "wants of nature" be neglected, if, above all, the want of supervision which renders these conditions common to school rooms be extended to a negligence of the virtues of school children, what else can we expect but a generation of dwarfs, a stunted progeny?

A due supply of unadulterated air to the respiratory organs is recognized as among the most important conditions of health at all ages and under all circumstances; but at no age is this so essential as during childhood. Air vitiated by respiration is not only known to be among the most active influences in promoting the spread of many fatal diseases, but on young children who may escape these diseases it exercises a powerfully depressing influence. * * * If air * * * is not supplied with a due quantity of oxygen, functional activity is obstructed, nutrition is interfered with, and the sensibilities are blunted; the brain of the child is filled with impure blood, and is not only itself depressed, but through it the whole organism is deranged; and although life may not be speedily destroyed as in extreme cases, the intelligence is stunted and mental capabilities overthrown.

Physical education should go hand in hand with mental education for both sexes, and it is the more essential in the inverse ratio to the age of the pupil; and in all cases, where practicable, physical exercise should be taken in the open air. There should be more frequent sessions, shorter periods of confinement to school rooms, and more "play." It is too commonly the case that physical exercise is looked upon as a mere relief from mental exercise; it is not regarded, as it should be, as a contribution to mental culture, as well as bodily, increasing its vigor and promoting its power.

School room crowding continues to be an evil of the greatest magnitude, and in some of our cities both private and public schools are comparable with the most odious conditions of New York tenement houses. Examples of both might be cited giving less than 50 cubic feet of air space to the scholar; and with rooms thus crowded, so situated that the sun never shines upon them; with heating appliances without any provision for moisture in the atmosphere, and so badly constructed as to be constantly contributing, not only carbonic acid, but the more deadly poison, carbonic oxide. One such, in Brooklyn, I have visited, * * * where, to make amends for the deficiency of heat from four old hot-air furnaces, there were piled around their red-hot pots quantities of iron shavings, old hoop-iron, and tin scraps—all heated red hot, and giving out their mephitic gases to rooms crowded, one of them to the extent of one pupil to every 31 cubic feet of air space; and the whole structure, including a detached building, with a registry of 1,300 children, and generally full attendance, with an average of air space per pupil throughout of less than 50 cubic feet.

I might also cite some private schools with almost equally bad appointments. * * * I am satisfied, from inquiries, that the school-houses of Brooklyn, in general, will compare favorably with the school-houses of our other large cities, but none of them is fit to be compared with anything else than with another one, or with a tenement house. They are of a piece, and only equally disgraceful to our civilization; equally inconsistent with recognized principles for the promotion of health; and both alike should give place to smaller, and proportionately more numerous, better situated, and healthy buildings.

From a "Report on School Hygiene," submitted to the board of education of the city of Elmira, by Dr. William C. Wey. Sanitarian, April, 1875.

In the matter of the coëducation of the sexes in the higher grades of school life prescribed by the board, while admitting the average mental superiority of girls, I am compelled to recognize their diminished physical capability, by reason of the assumption of functions whose maintenance and perfection call for natural and healthful development, unembarrassed by forced or even crowded intellectual culture. It has frequently fallen under my professional observation to take note of functional derangement in school girls, in whom mental advancement and physical deterioration have gone on together, as if in disregard of a law which demands full and harmonious bodily growth before the graces and accomplishments of the intellect can be cultivated. Cases of serious ill health, growing out of violation of the plainest and most imperative laws of physical growth, are quite frequently presented in the grammar schools, and increase in number and gravity as the course of instruction is pursued in the academy, and so on through a still higher scale of application. The germs of disease thus generated, instead of being extinguished with the completion of the school course, in too many instances develop and make miserable the health of individuals, and are continued in an endless heritage of mental and physical imperfections.

From "Effects of School Life Upon the Eyes of School Children," by Dr. C. R. Agnew. Sanitarian, August, 1875, page 200.

Dr. Agnew states that Herman Cohn, of Breslau, published in 1867 the results of observations made upon the eyes of 10,060 school children. He established the fact that school life in his country was damaging the eyes of scholars to a most alarming degree. He was followed by Erismann, of St. Petersburg, and others, who showed that elsewhere the same results were being produced. The broad fact was evidently demonstrated that, wherever children were brought under observation, and the effects of the use of their eyes upon minute objects carefully noted, nearsightedness, a grave malady, was found to exist; that this malady was found less frequently, and then generally only in a mild form, in young children; but that it increased rapidly in frequency and gravity as these children were pushed forward in their education from the lowest to the highest schools. Cohn, for example, found that the nearsightedness rate in village schools was less than 2 per cent.; that it had increased, however, to more than 26 per cent. in the Gymnasium; and that in the Breslau University, out of 410 students examined, not one-third had normal eyes.

Observations were recently made upon 2,884 eyes in this country. The plan followed is essentially that of Cohn, so that the results might be compared with those of so industrious and careful an observer. The sources from which the data have been drawn are the district, intermediate, normal, and high schools of Cincinnati, Ohio; the Polytechnic School in Brooklyn, New York; and the College of the City of New York.

The following is the summary of tables accompanying this paper: In the Cincinnati schools, the number of eyes examined was 1,264; in the district schools, 13.27 per cent. of the scholars were nearsighted; in the intermediate schools, 13.8 were nearsighted; and in the normal and high schools, 22.75 were nearsighted. In the academic department of the Brooklyn Polytechnic School, 9.15 were nearsighted, while in the collegiate department of the same school, 21.83 were nearsighted. In the introductory class of the New York College 21.86 per cent. of the students were nearsighted; of the freshmen, 26.2 per cent. were nearsighted; and of the sophomores, 22.72. The summary of all is that, of 2,884 eyes examined, 1,886 eyes had normal refraction, 538 were nearsighted, 227 were oversighted, and 152 astigmatic; and of 81 the refraction was not noted. Acuity of vision: 2,300 eyes had vision equal 1; 226 equal $\frac{2}{3}$; 106 equal $\frac{1}{2}$; 43 equal $\frac{2}{5}$; 49 equal $\frac{2}{7}$; 40 equal $\frac{1}{5}$; 28 equal $\frac{3}{20}$; 19 equal $\frac{1}{20}$; 8 able only to count fingers; 1 with no perception of light; 4 vision not noted.

From an editorial, "Can the Increase of Insanity and Imbecility be Stopped?" in the Detroit Review of Medicine of February, 1875, pp. 122, 124.

The following statements are made by Dr. Henry Howard, medical superintendent of the Provincial Lunatic Asylum, Canada, in the Canada Medical Journal, December, 1874: "Insanity results from some abnormal state of a part or the entire organism, body or mind, one or both."

By adducing well known facts the doctor shows that "children are of such different mental and physical organization, that there can be no system of either physical or mental education applicable to all; in fact, that what is good and wholesome to one is death to the other."

"In all schools there is a general system of education, and the principal classification is that of age. It necessarily follows that this system is injurious to the physical and mental growth of the scholars. Hence the great number of youth of both sexes who grow up weak in body and weak in mind, to swell the multitudes of the insane."

After showing that our present system of education is one of the great causes in the increase of insanity, he suggests that there should be less study, less confinement in badly ventilated rooms, and more outdoor education.

"Physicians should have a direct connection with all schools. Who but the educated physician can safely undertake the supervision of large numbers of growing organisms, and so direct their growth as to enable them to reach a healthy mental and physical manhood and womanhood. We speak whereof we know, when we say that scarcely any of the conditions for a normal, healthy education are to be found even in the best of our schools. Those who devised these schools did as well as they knew, doubtless, but they were ignorant, totally, of the first principles of body or mind building. The sole remedy is to have our schools remodeled and ever supervised by physicians."

From "Physical Culture, the best means of securing it," by H. L. Bartlett, M. D. Sanitarian, March, 1875.

Gymnasiums, as at present managed, are far from being all that is required, even for students. The great defect in all the "manly sports," so called, is that they are too violent for delicate persons, and quite inapplicable for females. Besides, they cultivate certain muscles, or groups of muscles, to the neglect of others.

The popular idea that it is injurious to the students of our colleges and universities to join in athletic sports, even of a severe character, is not borne out by facts. On the contrary, experience proves that they who are the most successful ball-players and

oarsmen are, as a rule, the best students. It is reasonable to suppose that this should be so, since study is a great tax upon the physical strength and endurance of a man, and he who has the most stamina, other things being equal, will win.

There are other causes, also, which tend in the same direction. A student who is engaged and interested in manly exercise has less inclination and less time to spend in vicious and indolent habits than he who cares for none of these things. Elevate any men or women physically, and you elevate them intellectually and morally. * * * So far, therefore, from discouraging manly exercise in students, whether academic or collegiate, the opposite course should be strenuously followed by all who have their best good at heart. But in the selection of the right kind and amount of exercise for each particular student, great care and judgment are requisite.

Here is where the present system is defective. To put all boys through the same drill is not only unscientific, but often injurious.

The law of muscular growth demands that, to make a muscle stronger to-morrow, it must be taxed to its utmost to-day. Keeping this law in view, the so-called "light gymnastics," or "calisthenics," are almost worthless. Their object seems to be to produce celerity and precision of movement rather than to develop strength. As well might you expect the throw of the weaver's shuttle or the ceaseless ply of the seamstress's needle to produce muscular growth.

Conductors of academies and colleges, finding a popular demand for gymnasiums, at once erect a structure or appropriate a room suitably furnished with all the appliances for the same, and inaugurate gymnastic exercises, without knowing the first principles of the science of physical culture, or the rules by which they should be governed in order to prove beneficial to those who are engaged in them. In fact, I am inclined to the opinion that these institutions, as at present managed, do as much harm as they do good. They are frequently conducted in poorly ventilated rooms, continued to the point of exhaustion, at least on the part of the feebler members of the class, and at a period of the day when the bodily powers have been already overtaxed by prolonged mental exertions.

From "College Sports," by Nathan Allen, M. D., LL.D. Sanitarian, September, 1875, pp. 244–247.

It is now almost twenty years since the trustees of Amherst College, finding students breaking down with ill-health, and here and there one dying prematurely, cast around to see what could be done to prevent such a state of things. After much consideration it was decided to establish a distinct department of hygiene and physical culture, and place at the head of it a thoroughly educated physician, who should give lectures on these subjects, and take charge of all exercises connected with the gymnasium, as well as of the hygiene of the institution. The trustees decided to incorporate these exercises into the regular curriculum of college duties and make it obligatory upon all students to attend upon them as much as on instruction in the mathematics or classics.

It was said that nearly all gymnasiums connected with literary institutions, both in Europe and America, had failed to accomplish the results intended or expected, for the obvious reason that these exercises were generally voluntary, and the character given them did not correspond to their importance nor to the rank which was accorded to mental acquisitions. Instead of leaving the thing to take care of itself, for students to exercise or not, at their option or convenience, without any system or instruction, the trustees here determined to place the enterprise in the position which its importance and success demanded.

Since this department was fairly established fifteen classes have graduated from the college and more than three thousand students have taken part in these exercises. The experiment has now been continued long enough to show some results. Among the changes most obvious the following must be credited to this department rather than to any other source. Very few in the college course break down in health now compared to those who once did; there has been much less sickness and mortality in college than formerly; the average health of each class is found to improve from year to year; so that when its members come to graduate we find them possessing vigorous health, strong muscles, and a large amount of vitality laid up in store to meet the battles of life. These exercises, it is admitted, afford most essential aid in a variety of ways in enforcing the discipline of the college and also in raising higher the standard of scholarship.

Gymnastics in many respects have great advantages over any other kind of physical exercise. They can be carried on daily and systematically by all, with little loss of time or risk of injury of person or to good morals. They can be directed and controlled wholly by the laws of an institution and supervised by officers of the same. * * * While they are calculated to improve the general health by producing a well balanced organization, they aim to bring all the physical forces of the system into the most favorable condition for study and mental improvement.

When gymnastics were first started here (Amherst) the objection came up that the officers of an institution had no right to make laws that would compel students to go through with such exercises; or, in other words, whose main object was to direct the

movements of the body. * * * Such officers and teachers, however, have no hesitation in making rules that require of students regular attendance on set exercises, fixed hours of study and recitations, and also an exact amount of knowledge in the text books used. These rules are enforced, are made imperative; but to comply with them certain laws of the brain must be brought into play. Now if, in order to apply in the most efficient manner these very laws of the brain, it is found necessary to exercise systematically the muscles or tissues of the body, what should make the difference? * * * If it is found that all mental training and acquisition depend upon the brain, why should not physical training come into the account?

We venture this prediction, that in no department of education will there be greater improvement for the next fifty years than in a more perfect development of the human system and harmony of function between the laws that govern both mind and body. To accomplish this, gymnastics or some other physical exercises must be made of far greater account than they have hitherto been.

From the "Gymnastics for Schools," by S. S. Putnam, M. D. Sanitarian, August, 1875.

One way in which school children may be greatly benefited is by helping them perfect the process of respiration. This was demonstrated by the work done by Professor Monroe with the children of the Boston schools. Good breathing is by no means common, and the singing teacher has always much to accomplish in this respect. Instruction in this regard may not only give vastly increased power to healthy persons, but it may save many who are affected by lung disorders from early deaths.

Herr Raag, of Berlin, says that he has found gymnastics very useful in preventing spinal curvatures.

For proper school gymnastics it is only requisite that there should be space enough about the desks to enable the pupil to advance one step and to swing the arms freely. A large hall, with a few desirable pieces of apparatus, is all that is needed for further gymnastic exercise. * * * In Europe halls are now considered absolutely necessary for the use of scholars in the public schools.

CAUSE AND PREVENTION OF TYPHOID FEVER IN SCHOOLS.

Prof. John L. Le Conte, M. D., of Philadelphia, late medical inspector United States Army, makes the following communication to the Philadelphia Medical Times of May 29, 1875:

In the beginning of January, 1875, I was requested to inspect St. Mary's Hall, Burlington, N. J., (a justly renowned school for the education of young ladies,) in order to ascertain the cause of an outbreak of typhoid disease which had occurred some weeks before.

The cause, as is usual in such cases, was easily discovered, and the means for its removal and for the prevention of its recurrence readily determined. The suggestions which I made have been fully carried out by the trustees, and I in consequence gave a certificate stating that the necessary sanitary improvements had been made, and that there was no danger of a recurrence of typhoid disease.

These facts having come to the knowledge of several friends who are interested in sanitary science, I have been requested by them to prepare a short account of the causes which led to the development of the disease, and the results of the measures adopted for its suppression. By the kind permission of the board of trustees of the school I am now authorized to do this, and I hope that the lesson will not be lost upon other institutions which are liable to similar misfortunes.

At the time that the hall was built, the water supply was obtained from two cisterns, constructed of heavy wooden curbs, lined with brick and coated with cement. They were floored with timber, and descended below the level of subterranean drainage by which spring water would enter. In order to place the floor properly, a hole was cut in each to prevent the pressure of the spring water. After the timber floor was fixed permanently, these holes were plugged, the plugs rising above the masonry bottom of the cistern. The water supply was thus made to depend entirely upon the river; and had these arrangements continued without change, I am confident that no typhoid disease would have occurred.

A year later, without the knowledge of the authorities of the school, the plugs at the bottom of the cisterns were removed. This was a capital error, but would, perhaps, have been insignificant in its results had it not been supplemented by a second, the pernicious effects of which recently manifested themselves. A year or eighteen months afterward, (1871,) privy vaults were dug outside of the building for the reception of the excreta, which up to that time were received in boxes and removed every few days.

One of these privy vaults was most inconsiderately placed about 8 or 12 feet from the water cisterns, which, as is mentioned above, had been opened to the influence of subterranean drainage. This privy vault seems to have been constructed with all the care usually exercised in the building of such receptacles; bottom and sides 9-inch brick, laid in cement, heavily and carefully covered with cement, and arched over above.

The result was naturally what any student of sanitary science would have predicted. After a certain lapse of time, (in this instance three years,) the soil around the privy vault became poisoned with the effluvia and infiltrations, and the water supply in the cisterns thus became contaminated.

Having thus described the cause of the disease, the remedy was of course evident, and of easy application. I was glad to find that it had been already recommended by the physicians of the establishment, Drs. Pugh and Ganatt, who, with admirable judgment, had, on the 18th of December, 1874, advised the disuse of the cisterns. It is a significant fact, as showing the correctness of my view, that the contiguity of the privy vault to the cisterns was the sole cause of the disease; that ten days after the water had been, by the advice of the physicians, drawn directly from the river, the last case of typhoid fever occurred, and since that time (28th of December) the school has been quite free from all similar disease.

One or two interesting facts were developed during my examination which are worthy of mention. Although numerous cases of typhoid occurred among the girls, and a smaller proportion among the teachers, not a single one of the servants was affected. On inquiring of the latter whether they drank water, the reply was that they used only tea and coffee and almost never drank between meals. The girls, on the contrary, like all children, are frequently thirsty, and drink often at intermediate hours of the day. The water consumed by the servants was, therefore, boiled, by which process the molecular activity of the putrescent matter was checked and its power as a zymos was destroyed. No more admirable instance of the efficiency of this simple remedy for the purification of contaminated water can be found.

I asked the Rev. E. K. Smith, D. D., the principal of the school, what had been the fate of those pupils who did not use tea, coffee, or milk, but drank water exclusively. He told me that, after careful inquiry at the different tables in the refectory, he ascertained that of seven absolute water drinkers, six had been attacked with typhoid.

In conclusion, I would invite the attention of my colleagues in the medical profession, and the governing authorities of schools, both public and private, to the ease with which all similar outbreaks of disease may be prevented, or, as in the present instance, speedily removed, by seeking scientific advice.

The following recommendations, if adopted, would in most cases prove effective:

1. Before the plans of the buildings are fully matured, let an expert in sanitary studies be employed to give directions to the architect in all that relates to ventilation, drainage, and water supply.

2. After the building is completed, no alterations should be made affecting these three essentials of good hygienic condition, without the suggestion of a practiced sanitarian.

3. There should be stated inspections, say twice a year, of each institution by some sanitarian of acknowledged merit, who, after close examination and the correction of any defect, would give a certificate to be published in the circular or announcement of the school.

4. On the outbreak of any zymotic disease in the institution, the advice of a sanitarian expert should at once be obtained, in order that means may be taken for its restriction, suppression, and prevention.

I may be permitted to add, that at the last visit I made to St. Mary's Hall I found the sanitary condition perfect; and I cannot too highly commend the liberal manner in which the trustees have carried out the suggestions contained in my report, thus insuring, in my opinion, the health of the scholars confided to their care.

The Scotsman of Edinburgh, August 5, 1875, states that at the late meeting of the British Medical Association, at Edinburgh, Dr. A. Stewart "narrated the case of a friend of his who went to inspect a boarding school previous to sending his two daughters there. Everything he liked well but the drain, which passed within three feet and a half of the well. When he spoke of this he was informed that the water of the well had been drunk for years, and that no disease had ever occurred. To satisfy himself he twice had samples of the water taken and analyzed, and it was found to be perfectly pure. He sent his daughters to the school, but in two or three weeks typhoid fever broke out, and of four deaths which occurred one was that of his youngest daughter. The water of the well was then found to be putrid from the sewage which had found its way into it."

UNPUBLISHED INFORMATION.

The following are some of the subjects upon which special reports have been made during the year, but not published for general distribution:

(1) A statement of the provision (or rather lack of provision) made in different portions of the Union for the practical education of workingwomen.

(2) An exhibition of the appropriations and expenditures for education in the Southern States for 1873.

(3) A reply to questions respecting educational journals in eight Southern States, with the number of days that schools were kept in these, the number of teachers employed, the average price paid them, and the amount of State school funds.

(4) An account of the extent to which manual labor of students is made obligatory in the agricultural colleges.

(5) A sketch of the provision made for colored schools and institutions open to the colored people in the United States.

(6) One respecting schools for scientific study to which teachers may resort for improvement during the summer months.

(7) One respecting the relative amounts of State and local taxation for the public schools.

(8) Legal provisions respecting moral instruction in schools.

(9) Legal provisions respecting the colored race in schools.

MEDICAL JURISPRUDENCE.

The following view of the instruction given in medical jurisprudence in the United States has been compiled from answers received by the Bureau of Education in reply to inquiries sent out:

Table relating to instruction given in medical

Name of institution.	Location.	Extent of instruction.
Medical College of Alabama	Mobile, Ala	Limited; ten or twelve lectures yearly
Medical College of the Pacific	San Francisco, Cal	Weekly lectures in preliminary course
Medical College, University of California.	San Francisco, Cal	
Medical Institution of Yale College	New Haven, Conn	Brief courses of lectures at irregular intervals.
Medical College of Georgia	Augusta, Ga	One day of each week devoted to the discussion of medical jurisprudence.
Savannah Medical College	Savannah, Ga	Sixteen to twenty lectures annually. (Chair established in 1869.)
Chicago Medical College	Chicago, Ill	Lectures in second year of course
Rush Medical College	Chicago, Ill	Lectures irregularly
Woman's Hospital Medical College	Chicago, Ill	None
Medical College of Evansville	Evansville, Ind	Forty lectures yearly
College of Physicians and Surgeons	Indianapolis, Ind	Regular lectures. (Lectureship established in 1874.)
Indiana Medical College, (Indiana University.)	Indianapolis, Ind	
Medical department of Iowa State University.	Iowa City, Iowa	Twenty lectures yearly. (Established in 1870.)
College of Physicians and Surgeons	Keokuk, Iowa	Weekly lectures during the session. (Lectureship established in 1863.)
Hospital College of Medicine	Louisville, Ky	None
Medical department University of Louisville.	Louisville, Ky	Irregular; none last term. (Chair established in the law department of the university in 1873–'74.)
Medical department University of Louisiana.	New Orleans, La	None
Medical School of Maine, (Bowdoin College.)	Brunswick, Me	Twelve lectures annually. (Chair established in 1849.)
College of Physicians and Surgeons	Baltimore, Md	Forty lectures during the session of five months. (Chair established in 1872.)
School of Medicine, (University of Maryland.)	Baltimore, Md	None
School of Medicine, (Washington University.)	Baltimore, Md	Twenty lectures last year; formerly forty annually. (Established in 1867.)
Medical School of Harvard University.	Boston, Mass	
Detroit Medical College	Detroit, Mich	About twenty-four lectures yearly. (Established in 1869; temporarily discontinued in 1874.)
Medical College, (University of Missouri.)	Columbia, Mo	A full course of lectures
Kansas City College of Physicians and Surgeons.	Kansas City, Mo	None
St. Louis Medical College	St. Louis, Mo	A few lectures in toxicology; no regular course.
New Hampshire Medical Institution, (Dartmouth College.)	Hanover, N. H	Twelve lectures yearly. (Lecturer appointed in 1838; chair established in 1857.)

jurisprudence in the United States.

Instructor.	Text books used.
Jerome Cochrane, M. D., professor of public hygiene and medical jurisprudence.	Taylor's Medical Jurisprudence.
(a)	
G. A. Shurtleff, M. D., professor of mental diseases	Maudsley's Physiology and Pathology of the Brain, Bucknill and Tuke on Insanity, and Taylor's Medical Jurisprudence.
Robert C. Eve, M. D., professor of medical jurisprudence	Taylor's Medical Jurisprudence.
Chair vacant since death of Prof. S. Cohen in 1875	Taylor's Medical Jurisprudence
H. P. Merriman, A. M., M. D., professor of medical jurisprudence and hygiene.	
James H. Etheridge, M. D., professor of materia medica and medical jurisprudence.	Elwell, Taylor, Beck, Casper.
J. E. Harper, M. D., lecturer on medical jurisprudence	Beck, Taylor, Wharton, Stillé.
Hon. J. W. Gordon, lecturer	
W. Lockhart, M. D., professor of medical jurisprudence	
John F. Dillon, LL.D., professor of medical jurisprudence	Wharton and Stillé, Beck, Elwell.
John Fyffe, A. M., lecturer on medical jurisprudence	Dean, Taylor, Beck.
Thomas W. Gibson	
Charles W. Goddard, A. M.	Tyler, Ordronaux, Beck, Wharton, and Stillé.
P. Goolrick, M. D., professor of medical jurisprudence and toxicology.	Taylor, Beck, Tanner on Poisons.
George E. Nelson, A. M., lecturer on medical jurisprudence.	Wharton and Stillé, Taylor.
Charles E. Buckingham, M. D., professor of obstetrics and medical jurisprudence.	
Joseph G. Norwood, M. D., professor of medical jurisprudence, &c.	Wharton and Stillé, Beck, Taylor, Ordronaux.
G. Baumgarten, M. D., professor of physiology and medical jurisprudence.	Taylor, Beck, Elwell
John Ordronaux, M. D., LL.D., professor of medical jurisprudence.	Ordronaux, Taylor.

a A professorship of medical jurisprudence existed from 1858 to 1864.

Table relating to instruction given in medical

Name of institution.	Location.	Extent of instruction.
Bellevue Hospital Medical College	New York, N. Y.	About sixteen lectures yearly. (Established in 1875.)
College of Physicians and Surgeons, (Columbia College.)	New York, N. Y.	Lectures; number variable. (Chair established in 1813.)
New York Free Medical College for Women.	New York, N. Y.	Lectures in senior course. (Chair established in 1872.)
Woman's Medical College of the New York Infirmary.	New York, N. Y.	None
Medical College of Syracuse University.	Syracuse, N. Y.	Fifteen to twenty lectures yearly. (Established in 1872.)
Cincinnati College of Medicine and Surgery.	Cincinnati, Ohio	
Medical College of Ohio	Cincinnati, Ohio	Subject discussed by the professors of materia medica and chemistry and by the lecturer on pathology.
Miami Medical College	Cincinnati, Ohio	Three lectures a week on insanity and mental disorders.
Cleveland Medical College	Cleveland, Ohio	
Medical department, University of Wooster.	Cleveland, Ohio	One lecture per week for fifteen weeks. (Chair established in 1864.)
Starling Medical College	Columbus, Ohio	
Medical department Willamette University.	Salem, Oreg	Twenty lectures yearly. (Established in 1867.)
Jefferson Medical College	Philadelphia, Pa	Instruction given in connection with the subject of "institutes of medicine," and in the summer course with that of toxicology. *a*
Medical department University of Pennsylvania.	Philadelphia, Pa	About thirty-six lectures yearly. Attendance upon them is not necessary for the degree of M. D. (Chair established in 1865.)
Medical College of the State of South Carolina.	Charleston, S. C	None
Medical department University of South Carolina.	Columbia, S. C	None
Medical department University of Vermont.	Burlington, Vt	Fourteen lectures yearly
Medical School, University of Virginia.	University of Virginia, Va.	Lectures and oral examinations every other day, with written examinations twice during the course. (Chair established in 1827.)
Medical department Georgetown University.	Washington, D. C.	
Medical department, Howard University.	Washington, D. C.	Twenty lectures yearly. (Chair established in 1870.)
American College of Eclectic Medicine and Surgery.	Macon, Ga	About thirty lectures each session. (Chair established in 1856.)
Bennett College of Eclectic Medicine and Surgery.	Chicago, Ill	Twenty-two lectures yearly. (Chair established in 1868.)
Eclectic Medical College of the City of New York.	New York, N. Y.	
Hahnemann Medical College and Hospital.	Chicago, Ill	

a An endowment of $5,000 has been bequeathed to the college by the late Chief-Justice Ellis Lewis, for

jurisprudence in the United States—Continued.

Instructor.	Text books used.
John P. Gray, M. D., professor of psychological medicine and medical jurisprudence.	Bucknill and Tuke, Manual of Psychological Medicine.
Samuel St. John, M. D., professor of chemistry and medical jurisprudence.	Taylor's Medical Jurisprudence.
Frederic R. Marvin, M. D., professor of medical jurisprudence and psychological medicine.	Wharton and Stillé's Medical Jurisprudence, Taylor, Beck.
.....	
William T. Plant, M. D., lecturer on medical jurisprudence.	Guy, Taylor, Wharton and Stillé, Elwell.
J. W. Underhill, M. D., lecturer on medical jurisprudence	Taylor, Elwell.
.....	
No professor; lectures delivered by the assistant physician at Longview Asylum.	
Proctor Thayer, M. D., professor of medical jurisprudence.	Taylor.
Conway W. Noble, professor of medical jurisprudence.....	Beck's Medical Jurisprudence, Elwell's Malpractice and Medical Evidence.
Hon. J. W. Baldwin, M. A., professor of medical jurisprudence.	Taylor, Beck, Wormley.
Hon. Rufus Mallory, United States district attorney, professor of medical jurisprudence.	Beck, Wharton, Taylor, Stillé.
J. Aitken Meigs, M. D., professor of "institutes of medicine" and medical jurisprudence.

a In 1873–'74.

OMISSIONS.

It is impossible, in the space allowed for this annual report, to bring to mind so distinctly as may be desirable all the perils which threaten the well-being of education in different localities, or their preventions and remedies.

A most gratifying fact often noticeable is the interest, skill, and energy with which evils old and new are encountered. The great freedom of thought and action encourages truth in the encounter with evil. All are at liberty to follow the wisest course. Is too much money expended on buildings; are text books, or teachers, or superintendents, too frequently changed? the correction is speedily applied. Is there extravagance in dress* among pupils? good sense soon suggests the better way of economy and taste.

---

* *To the girls about to graduate:*

DEAR YOUNG FRIENDS: The time for you to finish your present school course of study is near at hand. We hope you are to graduate with honor and success. Our interest and sympathy have been with you in your efforts to perform faithfully the duties that belong to your position in the first classes of your schools. To-day, we are moved to speak to you upon a matter not directly affecting your studies, but directly and seriously affecting you as young girls, at the close of one of life's experiences, and about to enter on another and quite a different one. As graduating scholars, you will stand in a place demanding more dignity of character and bearing than, as school girls, you have ever before been called upon to show. On that day, you are to come bringing in your hands the fruits of your long study; and, in a certain sense, are to render account of the way in which you have done your work. We do not forget that the day is one of great joy and happiness to you, to your parents and teachers, and to all who take an interest in you. It is a true festival day, full of mirth and congratulations, and rejoicings. Work is over for the time, and vacation is at hand. But for all that, it is no gay dance, no mere frolic to which you are summoned. In scenes like those, gay apparel finds its place. But on a day devoted to honoring those whose scholarship, culture, and character have stood the test, it seems more fitting that the girl, soon to assume the greater responsibilities that belong to young womanhood, should be simply dressed; that she should recognize that what she is doing is no trifling nor frivolous thing, but a serious and dignified act, demanding her best efforts in the highest directions. Do you not think so?

There is also another reason, and a very strong one, why you should be simply dressed, on the graduation day. It is because so many cannot afford to spend money on needless or showy attire. This year is, as you know, a peculiarly trying one, in the business world. We are all suffering more or less from the "hard times;" and many, who in more prosperous years could spend freely, are now seriously pinched. But it is true in every year, that many of us cannot afford to spend money for dress, except for the needful articles. It is only more true this year than usual. Now, for the sake of those who cannot, or ought not, to afford needless expense, we ask you all to avoid it, and thus do your part to prevent distinctions that are often painful. You may not fully know what burdens the hard times are laying upon some of your classmates and their parents; but whatever they may be, your own kind hearts will prompt you all to wish to help one another; and your delicacy of feeling will tell you that the privations, which circumstances may be bringing, will be more easily borne, if all adopt a simple style, from a conviction that it is best and happiest for all to do so. The simple dresses that are suitable for church and other similar occasions are the ones that it will please the good and wise citizens of Boston to see you wear on the day of which we are speaking. You may think it strange that we speak of the opinion of the citizens of Boston, and may be surprised that in general they should have any thought about this matter. But we assure you that very many of them have a genuine interest in it, for they have known of hardships suffered by some of the best and brightest scholars, owing to the thoughtless acts of others—acts which would have been generously avoided in many instances if the matter had been fully understood. And as we all do and ought to value the good opinion of those whom we respect, so we feel sure that you will value the commendation that will sustain you in avoiding all expenses that might come under the head of needless or extravagant.

We think we have said enough to convey to you what we mean. We trust that your good sense will approve of our suggestions, and that your willing hearts and hands will carry out what your judgment has approved.

A year ago we made a similar request of the class about to graduate from the Girls' High School. They received it most kindly, and, with a few exceptions, carried it into execution; and the result was that they gained approbation on all sides for their simple, dignified appearance, as well as for their fine scholarship and behavior. For the sake of those who may be affected by your example in the future, as well as for your own sakes, we ask you to emulate that good example to-day, believing that all for whose good opinion you care will approve, and that your own consciences will commend.

We are truly your friends,

ABBY W. MAY,
CHARLES HUTCHINS,
LUCIA M. PEABODY,
In behalf of the school committee.

BOSTON, *June* 8, 1876.

PAYMENT FOR THE SCHOOL-HOUSE IN GEORGETOWN.

Congress, at the last session, appropriated $50,865 for the payment of bills due on a school-house in Georgetown, and required the United States Commissioner of Education to supervise its payment. I have to report that this duty has been performed. Accounts presented to the amount of $50,865, duly certified by the board of education, were carefully examined, and, being found correct, were paid. No specific disbursing officer was mentioned. R. Joseph, esq., the disbursing clerk of the Interior Department, greatly to my relief, consented to undertake the responsibility. One set of vouchers was passed into the Treasury, and the other I have retained in my possession.

I have the honor to renew my recommendations of last year:

First. An increase of the permanent force of the Office. The experience of the Office indicates clearly that the collection of educational information, and publication of the same, as required by the law regulating it, cannot be properly done with the present limited clerical force.

Secondly. The enactment of a law requiring that all facts in regard to national aid to education and all facts in regard to education in the Territories and the District of Columbia, necessary for the information of Congress, be presented through this Office. For the purpose of enabling the Government to meet its responsibilities with respect to the education of the people in the Territories, I recommend that the office of superintendent of public instruction for each Territory be created, to be filled by appointment by the President; his compensation to be fixed and paid as in the case of other Federal appointees for the Territories.

Thirdly. In view of the large number of children growing up in ignorance on account of the impoverished condition of portions of the country, and in view of the special difficulties in the way of establishing and maintaining therein schools for universal education, and in consideration of the imperative need of immediate action in this regard, I recommend that the whole or a portion of the net proceeds arising from the sale of public lands shall be set aside as a special fund, and its interest be divided annually, *pro rata*, between the people of the several States and Territories and the District of Columbia, under such provisions in regard to amount, allotment, expenditure, and supervision as Congress in its wisdom may deem fit and proper.

Fourthly. I respectfully recommend that such provision as may be deemed advisable be made for the publication of ten thousand copies of the Report of this Bureau immediately on its completion, to be put at the control of the Bureau for distribution among its correspondents, in addition to the number ordered for distribution by members of the Senate and House.

Fifthly. I also recommend that provision be made for the organization of an educational museum, and for the exchange of educational appliances.

CONCLUSION.

The year has furnished additional reasons to commend my assistants in the Office, the value of whose labors increases with their experience. Dr. Charles Warren, in addition to his duties as chief clerk, often acting in my place, has borne special responsibilities with fidelity and success.

I am under obligations to the honorable Secretary of State for aid in carrying on the correspondence of the Office with foreign countries; also to Prof. Joseph Henry, Secretary of the Smithsonian Institution, for the exchange of documents; also to the Congressional Printer; to the Chief of the Bureau of Statistics; to the Commissioner of Indian Affairs; and the Commissioner of Patents.

Acknowledging that the degree of success accorded to the labors of the Office could not have been attained without the hearty coöperation of your Department and of the President, and tendering my hearty thanks for the same,

I am, sir, very respectfully, your obedient servant,

JOHN EATON,
Commissioner.

Hon. Z. CHANDLER,
Secretary of the Interior.

ABSTRACTS

FROM THE

OFFICIAL REPORTS OF THE SCHOOL OFFICERS OF STATES, TERRITORIES, AND CITIES,

WITH

ADDITIONAL INFORMATION FROM VARIOUS SOURCES.

PREFATORY NOTE.

The following abstracts of education in the States and Territories are derived from a great variety of sources. First among these come reports of State officials, such as State boards of education and State superintendents of instruction; next, those of county and city superintendents, school committees, acting school visitors, and principals of State institutions. From these is derived nearly all the information given respecting elementary and special instruction, city school systems and normal schools, and much of that relating to secondary schools, as the high schools of the States and cities. What concerns private secondary schools is almost wholly from returns made by the principals of these to the Bureau of Education, supplemented by catalogues and other documents.

For the matter relating to universities, colleges, scientific and professional schools, dependence is based on the annual catalogues of these institutions, on occasional circulars issued by them, and on special returns, made usually in the autumnal and winter months, in reply to circulars of inquiry sent them by the Bureau.

In every instance, official authority only is relied upon for statements distinctly and definitely made, though sometimes a piece of interesting information from other than official sources may be given, with a reference to the quarter from which it is derived. In such cases, however, the effort is always made to verify the statement before it is committed to the press.

The matter derived from the various sources above indicated is formulated, in the abstracts of education for each State, substantially in accordance with the schedule given below.

GENERAL PLAN OF ABSTRACT.

1. STATISTICAL SUMMARY	(*a*) School population and attendance.
	(*b*) Teachers and teachers' pay.
	(*c*) School districts and schools.
	(*d*) Income and expenditure.
2. STATE SCHOOL SYSTEM	(*a*) Constitutional provisions.
	(*b*) Provisions of the school law.
3. ELEMENTARY INSTRUCTION	(*a*) Public school systems, marking specially anything new and noteworthy.
4. CITY SCHOOL SYSTEMS.	
5. TRAINING OF TEACHERS	(*a*) Normal schools and normal departments.
	(*b*) Teachers' institutes.
	(*c*) Teachers' department of educational journals.
6. SECONDARY INSTRUCTION	(*a*) Academies.
	(*b*) High schools.
	(*c*) Preparatory schools.
	(*d*) Business colleges.
7 SUPERIOR INSTRUCTION	(*a*) Colleges for males, with universities.
	(*b*) Colleges for females.
	(*c*) Resident graduate courses.
8. SCIENTIFIC AND PROFESSIONAL INSTRUCTION	(*a*) Training in scientific schools and agricultural colleges.
	(*b*) Training in theology.
	(*c*) Training in law.
	(*d*) Training in medicine.
9. SPECIAL INSTRUCTION	(*a*) Deaf, dumb, blind, &c.
	(*b*) Musical conservatories.
	(*c*) Art training beyond that in schools.
10. EDUCATIONAL CONVENTIONS	(*a*) Meetings of State associations.
	(*b*) Special meetings of teachers, school principals and superintendents.
11. NOTEWORTHY BENEFACTIONS.	
12. OBITUARY RECORD	(*a*) Brief memorials of teachers, superintendents, and other promoters of education, deceased during the year.
13. LIST OF SCHOOL OFFICIALS	(*a*) State boards of education or State superintendents.
	(*b*) County, city or town superintendents.

The statistics furnished the Bureau in answer to its circulars of inquiry are, for convenience of reference and comparison, given in tables at the conclusion of this volume, while summaries of these statistics may be found under their appropriate heads in the preceding special report of the Commissioner.

For the general courtesy with which his circulars have been replied to, alike by State and city officials, by college presidents and heads of schools, as well as for documents additional to these replies, the Commissioner of Education herewith renders his cordial thanks to all concerned.

ALABAMA.

STATISTICAL SUMMARY.

ENROLMENT AND ATTENDANCE.

Average of pupils enrolled to teachers: White schools	34
Colored schools	42
Average attendance in schools: White, 67,024; colored, 43,229	110,253
Average length of schools in days: White, 6,270; colored, 5,786	12,056
General average	86

TEACHERS AND TEACHERS' PAY.

Number of teachers employed: White schools, males, 1,669; females, 1,006	2,675
Colored schools, males, 1,002; females, 284	1,286
Total number of teachers	3,961
Average pay of teachers per month in white schools, $26.50; in colored, $27.87	
General average	$27.20

SCHOOL DISTRICTS AND SCHOOLS.

Number of school districts in the State	1,696
School population, 5 to 21 years: White, 233,733; colored, 172,537	406,270
Number of schools taught: White, 2,610; colored, 1,288	3,898
Grades of schools: Primary, white, 550; colored, 831	1,381
Intermediate, white, 976; colored, 350	1,326
Grammar, white, 875; colored, 114	989
High, white, 215; colored, 3	218
Branches taught: Orthography, white, 50,121; colored, 77,442	127,563
Geography, white, 27,397; colored, 54,546	81,943
Arithmetic, white, 41,766; colored, 17,527	59,293
Writing, white, 34,653; colored, 14,379	49,032
Reading, white, 13,866; colored, 7,477	21,343
Grammar, white, 14,070; colored, 2,450	16,520

INCOME AND EXPENDITURE.

Receipts.

Interest on sixteenth section fund at 8 per cent	$139,216 02	
Interest on valueless sixteenth section fund at 8 per cent	7,767 30	
Interest on surplus revenue fund	53,526 94	
One-fifth of the aggregate State revenue for 1873–'74	209,887 44	
		$410,397 70
Poll tax collected during fiscal year 1872–'73		80,486 66
Unapportioned balance from fund of last scholastic year (1873–'74) brought forward		603 28
Poll tax collected during year and retained in the counties		73,555 30
Total school fund for the year		565,042 94

Expenditures.

Poll tax retained in the counties and cities, and apportioned by county superintendents	$73,555 30	
Apportioned to counties and cities	476,332 29	
Appropriated to normal schools	10,000 00	
Appropriated to pay clerk of department	1,500 00	
Appropriated to contingent fund of department	1,000 00	
Appropriated to department library fund	50 00	
		562,437 59
Leaving an unapportioned balance of		2,605 35

—(From report of Hon. John M. McKleroy, State superintendent of education for 1874-'75.)

SCHOOL SYSTEM OF THE STATE.

CONSTITUTIONAL PROVISIONS.

These, as given in article XII of the new constitution of 1875, superseding that of 1868, are as follows:

"SECTION 1. The general assembly shall establish, organize and maintain a system of public schools throughout the State, for the equal benefit of the children thereof between the ages of seven and twenty-one years; but separate schools shall be provided for the children of citizens of African descent.

"SEC. 2. The principal of all funds arising from the sale or other disposition of lands or other property, which has been or may hereafter be granted or intrusted to this State, or given by the United States, for educational purposes, shall be preserved inviolate and undiminished; and the income arising therefrom shall be faithfully applied to the specific objects of the original grants or appropriations.

"SEC. 3. All lands or other property given by individuals or appropriated by the State for educational purposes, and all estates of deceased persons who die without leaving a will or heir, shall be faithfully applied to the maintenance of the public schools.

"SEC. 4. The general assembly shall also provide for the levying and collection of an annual poll tax, not to exceed one dollar and fifty cents on each poll, which shall be applied to the support of the public schools in the counties in which it is levied and collected.

"SEC. 5. The income arising from the sixteenth section trust fund, the surplus revenue fund, until it is called for by the United States Government, and the funds enumerated in sections three and four of this article, with such other moneys, to be not less than one hundred thousand dollars per annum, as the general assembly shall provide by taxation or otherwise, shall be applied to the support and maintenance of the public schools, and it shall be the duty of the general assembly to increase, from time to time, the public school fund, as the condition of the treasury and the resources of the State will admit.

"SEC. 6. Not more than 4 per cent. of all moneys raised, or which may hereafter be appropriated for the support of public schools, shall be used or expended otherwise than for the payment of teachers employed in such schools: *Provided*, That the general assembly may, by a vote of two-thirds of each house, suspend the operation of this section.

"SEC. 7. The supervision of the public schools shall be vested in a superintendent of education, whose powers, duties, term of office, and compensation shall be fixed by law. The superintendent of education shall be elected by the qualified voters of the State in such manner and at such time as shall be provided by law.

"SEC. 8. No money raised for the support of the public schools of the State shall be appropriated to or used for the support of any sectarian or denominational school.

"SEC. 9. The State University and the Agricultural and Mechanical College shall each be under the management and control of a board of trustees. The board for the university shall consist of two members from the congressional district in which the university is located and one from each of the other congressional districts in the State. The board for the Agricultural and Mechanical College shall consist of two members from the congressional district in which the college is located and one from each of the other congressional districts in the State. Said trustees shall be appointed by the governor, by and with the advice and consent of the Senate, and shall hold office for a term of six years, and until their successors shall be appointed and qualified. After the first appointment, each board shall be divided into three classes as nearly equal as may be. The seats of the first class shall be vacated at the expiration of two years, and those of the second class in four years, and those of the third class at the end of six years from the date of appointment, so that one-third may be chosen biennially. No trustee shall receive any pay or emolument other than his actual expenses incurred in the discharge of his duties as such. The governor shall be *ex officio* president and the superintendent of education *ex officio* a member of each of said boards of trustees.

"SEC. 10. The general assembly shall have no power to change the location of the State University or the Agricultural and Mechanical College as now established by law, except upon a vote of two-thirds of the members of the general assembly, taken by yeas and nays and entered upon the journals.

"SEC. 11. The provisions of this article and of any act of the general assembly, passed in pursuance thereof, to establish, organize and maintain a system of public schools throughout the State, shall apply to Mobile County only so far as to authorize and require the authorities designated by law to draw the portion of the funds to which said county will be entitled for school purposes, and to make reports to the superintendent of education as may be prescribed by law. And all special incomes and powers of taxation as now authorized by law for the benefit of public schools in said county, shall remain undisturbed until otherwise provided by the general assembly: *Provided*, That separate schools for each race shall always be maintained by said school authorities."

This new constitution, which went into effect December 6, 1875, sweeps out of existence the State board of education; restricts (article 10, sections 4, 5, 7) the power of taxation (beyond the poll tax above mentioned) to three-fourths of 1 per cent. in a State levy and one-half of 1 per cent. in a county or city levy; withdraws the one-fifth of the aggregate annual revenue of the State from its previous appropriation to the public schools, and substitutes for this an annual appropriation of $100,000 by the general assembly, with as much more as the condition of the State finances may admit. An uncertainty is thus substituted for a certainty in the income from the State for public schools; and as the general assembly, in its session of 1874–'75, struck away a portion of the regular annual school income, there seems to be a danger that the schools may suffer from this cause, unless the legislature prove more liberal than one in an embarrassed condition of affairs can be supposed to prove.

The salary of the State superintendent of education is, by the new constitution, reduced 25 per cent., in common with that of the governor and those of other executive and judicial officers.

PROVISIONS OF THE SCHOOL LAW.

The school law of 1871, with the acts of the old State board of education, remains in force till repealed by a new school law.

SCHOOL OFFICERS.

The existing officers of the educational system of the State, as far as the public schools are concerned, appear to be a State superintendent and county superintendents of education, with two school directors for each county and three trustees of schools for each township.

For the higher education there are the boards of trustees of the State Agricultural and Mechanical College and State University, with the faculties of these; and, for special instruction, the officers of the State normal schools and of the State Institution for Deaf, Dumb, and Blind.

POWERS AND DUTIES OF PUBLIC SCHOOL OFFICERS.

The State superintendent of education—elected by the qualified voters of the State, heretofore, for four years—has the general supervision of the public schools, and is to devote his time to the care and improvement of them, and to the promotion of the general interests of education in the State. He must investigate the operation of the school laws, collect information as to the arrangement of school districts, visit as far as practicable each county annually in the discharge of the duties of his office, and make annual report to the governor of the number of school districts, number of schools taught, number of persons of school age, (white and colored, male and female,) and the whole number taught in the schools. This report must contain a statement of the condition of the common schools and of the other State educational institutions, and of the amount of school funds collected and expended each year from all sources, the amount from each source being specified. He is also to prepare and distribute blank forms for school returns; to publish and circulate the laws and regulations concerning common schools; to collect and preserve in his office school books, apparatus, and works on education; to apportion the school funds among the counties according to their school population; to certify this apportionment to the State auditor, and to notify each county superintendent of the amount apportioned to his county. He may require of all school officers copies of the reports made to them by subordinates and teachers, and all other information respecting the school funds and the condition of the schools which he may deem important. With a view to the proper performance of these duties, he is to have an office at the State capitol, to be in attendance there when not absent on official duties, and to keep there special account books for each county, and special debtor and creditor accounts with each township in the State. He is to give bond in the sum of $20,000 for the faithful discharge of the duties thus imposed; and, to aid him in the discharge of them, is allowed a clerk with a salary of $1,500.

County superintendents.—The superintendent of education in each county—elected every two years by the people—is charged with the duty of seeing that in every township of his county, (each township forming a school district,) is established at least one free school, in which shall be taught the elementary English studies. He is to visit at least once in each year every free school so established, with a view to examination into the condition of the school, the progress of the pupils, and the manner in which teachers and trustees discharge their duties. He is also to attend to the quarterly payment of the school teachers of his county, taking two receipts, one for himself and one as a voucher to the State superintendent; is, for this purpose, to receive and receipt for the annual State appropriation to his county, giving bond beforehand, with good security, for twice the amount to be received. It is further his duty to organize and hold annually conventions of the teachers of his county, providing beforehand for the delivery before them of lectures upon topics connected with schools and education; to examine into the condition of school lands and school funds in the county; to take the charge of all school moneys and dispose of them according to the

law; to seek out proper beneficiaries for the free places at the university and encourage them to become students thereof; to keep an office at the county seat for the performance of official duties; to have and retain there in a bound book a statement of the amounts received and disbursed by him for educational purposes, and to make at stated times reports of his work to the State superintendent. For the performance of these duties he is entitled to 5 per cent. on all moneys received and paid out by him, and to $3 per diem while actually engaged in visiting schools, provided that the pay for visitation does not exceed $100 annually, and that the whole pay shall not be less than $300 for his entire services.

County directors.—Two of these are chosen at the same time and for the same term as the county superintendent in each county, and form with him a county board for the examination and licensing of teachers; for the confirmation of engagements between township trustees and teachers licensed by the board; for the supervision of the general interests of the free schools of the county, and for the trusteeship of funds, buildings, and other property which may be given, by bequest or otherwise, for the benefit of free education.

Township boards of trustees.—In each township there are elected biennially, on the first Saturday in April, three trustees of the free public schools, who form a township board for the management and control of the educational interests of their townships, under the supervision of the county superintendent. They are to establish and maintain one or more free schools in their jurisdiction; are to engage duly licensed teachers for them, subject to the approval of the county board; are to visit these schools at least once in each term; are, every two years, to make an enumeration of the children of school age and to report the same to the county superintendent, with specification of white and colored, boys and girls; and also are to report all their transactions with respect to school funds and school lands.

SPECIAL SCHOOL DISTRICTS.

For the cities of Mobile, Montgomery, Selma, and some others, there are special laws, providing, in the case of the first named, for a board of school commissioners of twelve members, with the county superintendent as a thirteenth; in the case of the second, for a board of education of six members, with a city superintendent; and in the case of the third, for a board of trustees of nine members, with a city superintendent. The powers and duties of these boards appear to be essentially the same with those of county directors in the first case and of township trustees in the two others, with some additions.

SCHOOLS UNDER THE STATE SYSTEM.

The schools expressly put by law under the control of the various State officers referred to are four grades of township schools—primary, intermediate, grammar, and high—the schools for whites and blacks being separate. The studies in the first of these grades embrace spelling, reading, primary arithmetic, and the first lessons in geography; those in the second, the same, continued and expanded, with the beginnings of grammar and writing; those in the third include, with the others, composition, history, etymology, and elocution; and those of the fourth, intellectual and natural philosophy, elements of algebra, chemistry, and other branches usually taught in schools of higher grade.

Three State normal schools, one for white and two for colored pupils, besides a normal department at the State University, enter into the State system; and so, also, in some sense do the State Agricultural and Mechanical College, the State University, and the State Institution for the Instruction of Deaf, Dumb, and Blind.

SCHOOL FUNDS.

The provisions respecting the State school funds, permanent and annual, may be seen in article XII, sections 2–6, of the constitution above given.

Besides these funds, however, each county may raise, by special annual levy on all taxable property, an amount not exceeding ten cents on each hundred dollars, for the support of the common schools within it and for providing and equipping schoolhouses.

ELEMENTARY INSTRUCTION.

SCHOOL PRIVILEGES ENJOYED.

The report of Superintendent McKleroy for 1874–'75, p. 6, states that "in all the counties, and in nearly every school district, one or more schools have been in operation," and "that there are but few districts where schools for each race have not existed." In those districts which, from special causes, were exceptions to the rule, the youths desiring to be sent to school have been transferred by the trustees to the schools of an adjoining district, and a proportionate amount of the fund apportioned to their township and race has been paid to the teachers of the schools to which they were transferred. "It is therefore believed that every person in the State, of school age, has had

the opportunity of attending the free public schools during the scholastic year." The tables, indeed, show that of the 406,270 persons of school age, 145,797, or about 36 per cent. of the school population, have been in these schools.

SUMMARY OF SCHOOLS.

There were in operation, during the school year 1874–'75, a total of 2,610 schools for whites, which continued an average of 90 days, or 4½ scholastic months. The attendance on these schools amounted to 91,202; the teachers in them were 2,675; the sums paid for teaching reached $282,389.87.

For the colored children there were 1,288 schools, continued for an average of 83 days, or 4¼ scholastic months, with an attendance of 54,595 pupils under 1,286 teachers, and at an expense for tuition of $207,101.92.

COST AND TIME OF TUITION.

The average cost of tuition in the white schools has been $3.09 per pupil for the term of 90 days, or 69⅜ cents per school month. In the colored schools it has been $3.79 per pupil for the term of 83 days, or 91¼ cents per school month.

"It will be readily observed," says the superintendent, "that the tuition of these pupils in private schools would have been about seven times more than it has been under our free school system. It cannot be doubted that a large number of those who have enjoyed the advantages of this public education would not otherwise have been able to receive instruction in schools. It is also a fact that the schools have been kept in operation during the past year much longer than in any previous year since the constitution of 1868 has been in force."—(Report, p. 7.)

ECONOMY IN ADMINISTRATION.

In answer to the objections sometimes ignorantly made against the expenditure of such apparently large sums upon the schools, the report goes on, (p. 9:) "There are in the State 1,696 school districts, the area of each being six miles square, except in the case of fractional townships. In each of these districts there must be at least one school for each race, while in many of them more than one for each race is required to accommodate all the children. So that, though the school fund may, in the aggregate, seem large, it will be seen that the amount to each district, or to each school, is very small, when we consider among how many districts it is to be distributed, and then subdivided between the races in those districts. The whole fund of last year was only $1.39 per capita of the school population, and only $3.87½ per capita of those enrolled in the schools; while the statistical tables show the average cost of tuition per pupil to be only 81 cents a month. This is indeed cheap education, and it demonstrates the utility and economy of a general State system of free public instruction. But for the free schools a much larger sum of money would be annually expended for tuition by those who now pay the taxes, and the benefits and blessings flowing from such expenditure would fall far short of being so general."

SERIOUS FINANCIAL TROUBLE.

The superintendent (p. 34 of his report) calls the attention of the governor to the painful fact that the general assembly at its session in 1875 reduced the rate of interest on the sixteenth section fund held by the State from 8 to 4 per cent., making a reduction of $73,491.66 in the annual school fund; and that, by the same act, a still further diminution of $58,526.94, being all the interest on the surplus revenue fund, was caused to the school fund. This reduction of $127,018.60 in the already small annual income for schools is a serious thing; all the more serious from the fact of the new constitution substituting an annual appropriation, which may be only $100,000, for the one-fifth of the whole State revenue previously assigned to schools. The superintendent therefore urges the restoration of the interest on the sixteenth section fund to at least 6 per cent., which, at the time of taking charge of the sale of sixteenth section lands, the State "forever pledged" its faith and credit for the payment of; while he thinks that as the State is the trustee of this fund for the townships it ought to so dispose of it that it may yield the schools the legal rate of interest, which in Alabama is 8 per cent.

Nor is this all. The constitutional provision changing the allowance of one-fifth of the State revenue for schools to $100,000 annual appropriation has been made to have a retroactive influence, cutting off $211,568 collected during the fiscal year ending September 30, 1875. This, added to the former great reduction, is a fearful diminution of the means for supporting public schools and threatens very serious issues to them. Already, at the date of the report, three months of the scholastic year 1875–'76 had passed, and no school had been opened in the townships, nor could be, the superintendent said, until the general assembly should appropriate such an amount as was necessary to equalize and generalize the fund and carry on the schools throughout the State.

CITY SCHOOL SYSTEMS.

The cities of Birmingham, Eufaula, Huntsville, Montgomery, and Selma report as follows in the tables appended to the State report for 1874–'75:

Birmingham.—School population, 497; enrolled in schools, whites, 211; colored, 55; total enrolment, 266; average attendance in 5 white schools and 1 colored, 247. Number of teachers employed, 5; average monthly pay of teachers in white schools, $47.50; in colored, $30. Average number of white pupils to a teacher, 53; of colored, 55. Average cost of pupil per month, 62 cents.

Eufaula.—School population, 784; enrolled in schools, whites, 127; colored, 125; total, 252; average attendance in 4 white schools and 3 colored, 159. Number of teachers, 7; average pay of these in white schools, $37.50 a month; in colored schools, $33.33. Average number of white pupils to a teacher, 32; of colored, 41. Average cost of pupil a month, 73 cents.

Huntsville.—School population, 1,653; enrolled in white schools, 199; in colored, 256; total enrolment, 455; average attendance in 5 white schools and 4 colored, 403. Teachers employed, 10; average monthly pay of these in both classes of schools, $50. Average number of white pupils to a teacher, 30; of colored, 51. Average cost of pupil per month, $1.02.

Montgomery.—School population, 3,327; enrolment in white schools, 525; in colored, 595; total enrolment, 1,120; average attendance in 9 schools for whites and 9 for colored, 880. Teachers employed, 18; average pay of these in white schools, $68.90 a month; in colored, $56.67. Average number of pupils to a teacher in white schools, 58; in colored, 65. Average cost of pupil per month, $1.23.

Selma.—School population, 2,067; enrolment in white schools, 418; in colored, 412; total enrolment, 830. Average attendance in 9 schools for whites and 5 for colored, 582. Teachers employed, 17; average pay of these in white schools, $84.86; in colored, $69.43. Average number of white pupils to a teacher, 41; of colored, 59. Average cost of each pupil per month, $1.36.

Of these cities, Birmingham, Huntsville, and Montgomery have received from the Peabody fund, respectively, $700, $1,000, and $1,500; implying, in the first case, an average daily attendance of 85 per cent. on an enrolment of 225; in the second, a like attendance on an enrolment of 300; and, in the third, such an attendance on an enrolment of 450. Two other places, Roanoke and Wetumpka, come in for an allowance from the same fund for 1876 of $300 each; implying an enrolment of 100 pupils and an average attendance of 85. The rule of the trustees, in all cases where such aid is granted, is that the people are to grade the schools and provide a teacher for every 50 pupils; and in the five cities whose statistics were first given there appears to have been such grading and provision for the white schools at least.

Mobile presents, through her superintendent, E. R. Dickson, the following report, which includes, however, the schools of the county as well as of the city. School population, 25,400; enrolment in white schools, 2,855; in colored, 2,118; total enrolment, 4,973; average attendance in 45 white and 39 colored schools, 4,862. Number of teachers, 117; average pay of these per month in white schools, $61.76; in colored schools, the same. Average number of pupils to a teacher, in white schools, 36; in colored, 54. Average cost of pupil a month, $1.75.

The average number of days the schools were taught here was 126, all having been kept open for three months or more, except two, one of which was closed earlier from want of a suitable house and the other through a mistake of the teacher.

Prompt payment of teachers has done much towards giving general satisfaction and has helped to improve the schools by imparting life and animation to the teachers.—(State report, tables 2-4, and p. 93.)

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

There are now in operation three State normal schools. One of these, at Florence, is for the education of white male and female teachers; the other two, at Marion and Huntsville, for the training of colored ones. At Florence there were, for the year 1874–'75, teachers, 4; pupils, 126; a library valued at $3,000; furniture and apparatus valued at $5,000, and buildings estimated to be worth $30,000. At Marion, teachers, 3; pupils, 70; furniture and apparatus valued at $300, and buildings estimated to be worth $5,000. At Huntsville, teachers, 2; pupils, 84; no reported buildings, furniture, or apparatus. The State appropriation for these schools is: Florence, $5,000; Marion, $4,000; Huntsville, $1,000.

The report of the American Missionary Association for 1875, pp. 44, 49, and 50, shows that it had under its care in that year 46 normal pupils at Talladega College, Talladega; 39 in Trinity School, Athens; 158 in the Emerson School, Mobile, and 14 in the Burrell School, Selma; making, with those in the three State institutions before mentioned, 537 under preparation for the work of teaching.

The Rust Normal School, Huntsville, Methodist Episcopal, reports also 2 instructors, 122 students and 200 volumes in library. It is for the training of colored youths.

TEACHERS' INSTITUTES.

These valuable means of improving teachers already in the field seem at last to be fairly set on foot. In four counties some incipient steps have been taken towards the formation of them, and in six others they have been held once or oftener with good and encouraging results, in one instance quite a warm enthusiasm being awakened not only among the teachers, but also among the people at the place of meeting, these begging for another session at the same place and in the same year.

(County reports in that of State superintendent.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

Of these, 215 for white pupils and 3 for colored ones appear in the tables appended to the State report; but what are the studies pursued in them, or to what extent these may be carried, is not indicated, beyond what has been stated under the head of "schools," above.

PRIVATE SECONDARY SCHOOLS.

Of these, one school for boys in Tuskegee reports to the Bureau 65 pupils in an English course and 35 in a classical course, under two instructors; drawing and music not taught, no laboratory for chemical manipulations, and no philosophical cabinet or apparatus, but a library of 400 volumes. Four others, for boys and girls, at Dadeville, Collinsville, Greene Springs, and Talladega, report 280 in English courses, 50 in classical, and 25 in modern languages. Music, vocal or instrumental, is taught in all these, and the ones at Dadeville and Greene Springs have chemical laboratories and some philosophical apparatus; the latter reporting also a library of about 2,500 volumes, besides a society library of 1,500.

The one at Greene Springs sends, besides its report, a programme of daily recitations, which shows studies well up in French, Latin, Greek, mathematics and natural sciences.

PREPARATORY SCHOOL OF COLLEGE.

One college reports 25 male students in its preparatory department, 15 of them preparing for a classical and 10 for a scientific course.—(Return to Bureau of Education, 1875.)

SUPERIOR INSTRUCTION.

UNIVERSITY OF ALABAMA, TUSCALOOSA.

As at present organized, the university has two departments of instruction, the academic and professional. The academic department is arranged on the usual plan of the southern universities, in eight independent schools, of Latin, Greek, English language and literature, modern continental languages, chemistry and some related studies, natural philosophy, mathematics and astronomy, and mental and moral philosophy. These schools were all in working order in 1874–'75, but, the chair of Greek being vacant, instruction in that language had to be given by three other professors. The degrees given are those of graduate in a school, bachelor of arts, bachelor of philosophy, bachelor of science, bachelor of letters, and master of arts, all having specific conditions, based upon acquirements.

An important change in the academic department is reported, from the "college" or "close system," as it is sometimes called, to the "university" or "open system," a change which involves the grading of the courses of instruction in the several schools in such a way as to meet the wants of beginners in those schools, as well as of more advanced students. By this arrangement, any applicant over fifteen years old, who has received a common school education, may enter the schools of the university without examination in regard to any fixed standard of literary qualifications, and may elect not only any school or schools in which to study, but any grade of any school in which he can study to most advantage.

A military discipline is maintained, but so regulated as not to interfere with academic duties, while it helps to develop the manly form and bearing which mark the accomplished gentleman.

OTHER COLLEGES.

HOWARD COLLEGE, MARION.

This institution, under Baptist influences, claims, as its peculiarities: (1) A system of government which preserves order, secures good morals, stimulates to diligent study, and trains to habits of promptness, punctuality, and industry. (2) A system of rewards for the encouragement of scholarship. (3) No degrees, honors or promotions, except those based on attainments. (4) A course of study divided into ten distinct schools. (5) A mode of instruction which makes the student self-reliant, giving him

power to master and appropriate the facts and philosophy of books, and to make original investigations in any subject of thought. The degrees conferred are bachelor of science, bachelor of arts, master of arts, and civil engineer, for each of which a specific amount of preparation is presented.—(Catalogue for 1874–'75.)

SPRING HILL COLLEGE, MOBILE.

Here, under the auspices of the Society of Jesus, students are trained in a preparatory, a commercial and a classical course, this last being divided into a third, second and first grammar class, a belles-lettres class, a class in rhetoric and a graduating class. The first two of these classes seem to answer essentially to the preparatory departments of many of our colleges; the last four to our college classes proper.—(Catalogue for 1874–'75.)

SOUTHERN UNIVERSITY, GREENSBOROUGH.

(Methodist Episcopal.) Organized upon the plan of separate schools, in any one of which a student may graduate, while to obtain a degree, such as bachelor of arts, he must graduate in a prescribed number of schools. To get that of master of arts, he must go through all the schools and sustain an approved examination on a variety of designated studies.

TALLADEGA COLLEGE.

The report of the American Missionary Association, (Congregational,) by whose aid this college is largely sustained, gives the following statistics as indicative of the work it is effecting for the improvement of the colored race, of which mainly, if not wholly, its students are composed: Instructors, 12; students, college preparatory, 15; theological, 14; normal, 46; grammar, 25; intermediate, 72; primary, 75; total, 247. It may thus be seen that its collegiate classes remain yet to be formed, its operations thus far having been largely preparatory.—(Report for 1875, p. 44.)

COLLEGES FOR WOMEN.

Nine institutions for the superior instruction of young women, authorized by law to confer collegiate degrees, report, for 1875: Instructors, 80, (18 male and 62 female;) students in preparatory departments, 260; in regular collegiate classes, 530; in partial courses, 71; in post graduate courses, 22. One other claiming the same rank, but not authorized to confer degrees, reports 63 students, without any classification of them, except that one is post graduate.

These all teach music, drawing, and painting; all but one French, and 6 German also; 6 have laboratories for chemical experiments, and 7, cabinets of philosophical apparatus; 5, museums of natural history, 3, art galleries, and 4, some arrangement for physical exercise. The accomplishments are thus pretty fully provided for; the more substantial studies, to some considerable extent.—(Returns to Bureau of Education.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The Agricultural and Mechanical College of the State, at Auburn, presents, as organized, four courses, one each in agriculture, engineering, science and literature; this last embracing Latin and Greek, English in its linguistic elements and literature, philo-

sophic and historical studies, and mathematics and natural science. The other courses, as detailed in the report to the State superintendent, (pp. 130, 131,) appear to be all full and good.

LAW.

In the professional department of the State University, at Tuscaloosa, and in the Southern University, at Greensborough, are law schools, graduation in the former of which admits *ipso facto* to practice in the supreme court of the State.

MEDICINE.

In the schools of the Southern University a school of medicine is included, without any specific length of course, while the Medical College of Mobile has a two years' course.

THEOLOGY.

Theological training is, in some slight degree, provided for at Howard College, at the Southern University, and at Talladega College, in which last colored students receive such instruction as is possible to prepare them for preachers to their race.—(Catalogues of colleges for 1874–'75.)

SPECIAL INSTRUCTION.

ALABAMA INSTITUTION FOR THE DEAF AND DUMB AND BLIND, TALLADEGA.

In the deaf-mute department of this institution there are 4 instructors and 52 pupils, of whom 24 are males and 28 females. The branches taught are the "ordinary English studies and mathematics." There is a small museum of natural history and a library of 300 volumes to aid in the instruction of the pupils. Agriculture and gardening are taught.

In the department for the blind there are 2 instructors and 10 pupils, with a library of 40 volumes. No special employments taught.

The printed report for 1874 indicated the teaching of shoemaking and broom-making. Whether these are continued does not now appear.—(Report to Bureau for 1875.)

ARKANSAS.

STATISTICAL SUMMARY.

SCHOOL POPULATION AND ATTENDANCE.

Estimated number of persons of school age, (6 to 21)	184,692
Estimated number of males	96,096
Estimated number of females	88,596
Number enrolled in schools during school year	73,878
Average daily attendance in schools	42,680

TEACHERS AND TEACHERS' PAY.

Number of male teachers employed in 2,134 schools	1,582
Number of female teachers employed in 2,134 schools	740
Total number of teachers	2,322

Average pay of teachers not indicated.

SCHOOL SESSIONS.

The State superintendent writes: "There is no special time prescribed by law at which the schools shall commence. Those in the country usually begin about the 1st of July and close about the 1st of October, lasting three months. Some of the schools in towns open about the 1st of September, and continue nine or ten months, till the 1st of the succeeding May or June.

INCOME AND EXPENDITURE.

Receipts.

Income from two-mill State tax, $230,033; from poll tax, $122,646	$352,679 00
Income from local tax	428,997 00
Total income from State and local taxation	781,676 00
Interest on permanent fund, including rents of school lands	7,860 00
Total receipts	789,536 00

Expenditures.

On sites, buildings, and furniture	54,912 64
On salaries of superintendents	24,100 00
On salaries of teachers	259,747 08
On other things not specified	411,240 28
Total reported expenditure	750,000 00
Expenditure *per capita* of the school population	4 06
Expenditure *per capita* of pupils enrolled in schools	10 15
Expenditure *per capita* of average attendance	17 57

SCHOOL FUND AND SCHOOL PROPERTY.

Amount of available school fund	135,000 00
Amount, including portion not now available	1,222,500 00
Increase of permanent fund in the school year	68,153 00
Estimated value of sites, buildings, and other school property	355,000 00

—(From returns by Hon. George W. Hill, State superintendent, for 1875.)

SCHOOL SYSTEM OF THE STATE.

CONSTITUTIONAL PROVISIONS.

The provisions of the new State constitution of 1874, as far as they relate to education, were given in the report of this Bureau for that year, the chief one being that "the general assembly shall provide, by general laws, for the support of common schools by taxes, which shall never exceed, in any year, two mills on the dollar on all the taxable property of the State, and by a *per capita* tax of one dollar, to be annually assessed on every male inhabitant of the State over the age of twenty-one: *Provided*, That the general assembly may, by general law, authorize school districts to levy, by a vote of the qualified electors of the district, a tax not to exceed five mills on the dollar for any one year for school purposes."

PROVISIONS OF THE SCHOOL LAW.

"An act to maintain a system of free common schools for the State of Arkansas," approved December 7, 1875.

OFFICERS OF THE SCHOOL SYSTEM.

As respects the common schools, the only officers provided for under the new school law of December 7, 1875, are a board of commissioners of the school fund, a State superintendent of public instruction, county examiners, and district school directors. As respects a full system of instruction by the State, the officers of the State Industrial University and of the State institutions for deaf-mutes and for the blind, might perhaps be included, though not referred to in the school law.

POWERS AND DUTIES OF SCHOOL OFFICERS.

The board of commissioners of the school fund—composed of the governor, secretary of state and State superintendent of public instruction—is charged simply with the management and investment of the common school fund belonging to the State, and with a semi-annual settlement with the State treasurer of all accounts relating to this fund. It is required by law to invest all moneys belonging to the fund, as they accumulate, in bonds of the United States or of the State of Arkansas. The governor is president of the board and the State superintendent secretary.

The State superintendent—elected at first by a joint ballot of both branches of the general assembly—is, at the next general election, and every two years thereafter, to be elected by the qualified electors of the State. He has the general supervision of business relating to the free common schools; must have an office at the seat of government, and keep there all books, reports, documents, and other papers pertaining to his department; must furnish the county examiners with suitable questions for the examination of teachers and prepare forms for three grades of certificates to be issued by them; hold a teachers' institute annually in each judicial district of the State; arrange the programme of exercises for each of these institutes and preside thereat; prepare a list of text books to be recommended to teachers and school officers throughout the State; make annual report to the governor (on or before the first day of November in each year) of everything relating to the public schools and the school fund, with such plans as he may have matured for the improvement of both, appending to his report statistical tables, which shall show clearly the condition and results of the school system. These reports to the governor he is to have published and distributed among the various school officers, as also the acts of the general assembly relating to common schools, and the decisions of the courts respecting these. It is further his duty to make semi-annual apportionments of the moneys in the State treasury available for school purposes, distributing them to the several counties on the basis of the number of persons of school age (6 to 21) residing in these counties the first Monday of July preceding such apportionment. The law gives him power to grant State teachers' certificates, valid for life unless revoked, to any persons in the State who shall pass a thorough examination in all the branches required for a county certificate, with the addition of algebra, geometry, physics, natural history, rhetoric, mental philosophy, history, Latin, the Constitution of the United States and of the State of Arkansas, and the theory and art of teaching. His salary is $1,800, and travelling expenses not to exceed $250.

County examiners, one for a county, come in place of the former county superintendents; are to be appointed by the county court of each county at the first session after each general election; are to be of high moral character and scholastic attainments; and are to hold office till their successors are elected and qualified. Their duties are to examine and license teachers for the common schools, holding for this purpose quarterly, at the county seat, in a suitable room, to be provided by the county court, a public examination, of which at least twenty days' previous notice must be given. Persons who pass at such times a satisfactory examination in orthography, reading, writing, mental and written arithmetic, English grammar, modern geography, and history of the United States, and who are of good character and intend to teach, may receive from the examiner a certificate, ranking in grade as first, second or third, to correspond with the relative qualifications shown; the first grade holding for two years, the second for one and the third for six months in the county where given. A record is to be kept of the name, age, sex, post-office address and nativity of each person thus licensed to teach, with the date and grade of the certificate granted; and this record is to be annually reported to the State superintendent. Examiners are to encourage the inhabitants of their counties to form school districts, to establish public schools, to send their children to these, and to furnish suitable text books for their use in school. They are to direct the attention of teachers and parents to the best methods of intellectual and moral culture; to suggest feasible and improved plans for building and ventilating school-houses; to labor to excite among the people an interest in public schools; to receive the reports of subordinate school officers, and transmit to the State superintendent an abstract of these, with an annual report from themselves, which shall show

in tabular form a great variety of enumerated particulars respecting the schools. They are also to number the school districts in their counties from *one* upward; to keep in their offices a record and description of each district, and of the changes that may be made in the boundaries of each; to report to the superintendent the number of deaf-mutes, blind and insane in each district; and to appoint suitable persons to hold teachers' institutes and examine teachers in their respective counties, in case of inability to attend such institutes and examinations themselves.

District school directors—three for each school district—are directed by the new law to be elected at the first annual district meeting in August, after the passage of the act, to hold office for one, two, and three years, respectively, and afterwards one each year, to hold office for three years. Failure to accept office, in case of such election, involves for each elected director the forfeiture of $10 to the county treasury for the school fund of the district, and failure to attend to duty after acceptance involves a forfeiture of $25 to the treasury for the same purpose. The duties of directors are: (1) To have charge of the school affairs of the district, such as the care of school-houses, grounds, furniture, and other property, the purchasing or leasing of sites and hiring or erection of buildings, with the sale or exchange of school property, when so directed by a majority of the legal voters of the district; (2) to hire licensed teachers for the schools of their districts, making with them a written contract in duplicate, one to be kept by themselves and one by the teacher; (3) to procure from the county examiner, and furnish the teacher at the beginning of the term, a register for his school, requiring him to report in said register, at the close of the school term, the number of days of such term, the name and age of each pupil, the date at which each entered the school, the days that each attended, the studies each pursued, the total number of days all pupils attended, the daily average attendance, and the number of visits from directors during the term; (4) to visit the school at least once in each term, encourage the pupils in their studies, and give such advice to the teacher as may seem to be required; (5) to submit, at the annual district meeting an estimate of the expenses of the district for that year, including those of holding school for three months in the coming twelve, over and above the amount of State apportionment, and also an estimate of the expense per month of holding school beyond the term of three months, and of whatever else may be for the comfort and advancement of the school; (6) to appear for the district in all suits and actions at law brought by or against their district; (7) to draw orders on the county treasurer for the payment of wages due teachers, stating in each order the services for which it is drawn and the name of the person rendering such service; (8) to keep, through one of their number, who shall act as clerk, a record of the proceedings of all district meetings, and a book of accounts with the county treasurer and district, and have this, when approved, filed with the records of the district; (9) to report to the clerk of the county, within ten days after any school meeting, so much of its proceedings as pertains to the election of officers, and on or before the first of October in each year so much of their record, attested by the chairman of the meeting, as shows the amount of money voted for school purposes at the annual meeting; (10) to make annually, between the 1st and 10th days of September, a written report to the county examiner, verified by affidavit, of everything belonging to the school affairs of their district, failure to make such report involving liability to any damages the district may sustain from the neglect; (11) to settle, at the close of the school year, with the county treasurer; (12) to cause the public schools of their district to be closed on the days appointed for examination of teachers for their county and during the session of the teachers' institute. They have the power to suspend pupils from school for the term, at the instance of the teacher, for gross immorality, refractory conduct, insubordination or infectious disease; power also to permit persons over school age to attend school, under such regulations as they think proper; and power to permit a private school to be taught in the district school-house when it is not occupied as a public school. The only recompense provided for the performance of their duties, beyond the consciousness of well doing, appears to be that, in common with county examiners, they are exempted from working on the roads and serving on juries during their term of office.

SCHOOLS.

The minimum school term contemplated by the law is three months of twenty school days each. No State provision for grading the schools appears in the law, except it be in special city charters granted by the legislature before the passage of this act. A State industrial university now opens its doors to properly prepared pupils from the lower schools, and offers them opportunities for higher training, while special training for unfortunates is provided in State institutions for deaf-mutes and the blind.

SCHOOL FUNDS.

The common school fund of the State is derived from the sales of lands granted the State by the General Government; from money, stocks, bonds, lands, and other property now constituting the basis of any fund for purposes of education; from the proceeds of escheats, sales of estrays, unclaimed dividends or distributive shares of the

estates of deceased persons; proceeds of land sales paid over to the State by the United States with the consent of Congress; 10 per cent. of the net proceeds of the sales of all State lands; and all grants, gifts, or devises made or to be made to the State and not otherwise appropriated by the terms of the gift, grant or devise.

The annual income from this fund, with the proceeds of an annual poll tax of one dollar on each male inhabitant over twenty-one, and an appropriation from the public revenue, not to exceed two mills on the dollar of all taxable property, is to be each year apportioned to the counties for the support of public schools, and may be supplemented by an annual tax of not more than five mills on the dollar in each school district, and by the proceeds of the sale or lease of sixteenth section lands.

CITY SCHOOL SYSTEM.

LITTLE ROCK, 1874–'75.

Officers.—The board of school directors consists of six members, one-third retiring each year.

The year.—The schools opened this year under very adverse circumstances. In fact, it was long a question, with the debts against the several school funds, whether it would be sound policy to open the schools at all. But as it was necessary to maintain a school three months to enable the directors to levy a tax for their support and draw their *pro rata* from the State, they were finally opened and kept up for three months. They were then turned over to the teachers to be kept as private schools as long as there was patronage to maintain them.

Statistics.—Population, 18,000; children of school age, (5 to 21 years,) 8,079; number of buildings, 9; number of sittings, 1,420; number of children enrolled, 1,388; per cent. of attendance, 90; number of days schools were taught, 57; number of teachers employed, principals, 4; assistant teachers, 23; total, 27. The schools were not opened for the spring term; but it was determined to open them in September for a term of ten months and a corps of teachers, the equal of those of any preceding year, has been secured.—(School director's report for 1874–'75.)

TRAINING OF TEACHERS.

NORMAL DEPARTMENT OF UNIVERSITY.

As stated in the report of this Bureau for 1874, a department for the training of teachers exists in the Industrial University of the State at Fayetteville. It is designed to furnish a thorough course of instruction to all who desire to teach in the public schools. Applicants for admission must be of good moral character, and must, if males, be sixteen years of age, if females, fourteen. They must pass a satisfactory examination in common English studies, and on admission receive tuition free in a three years' course. The number of instructors is 2; of male students, 24; of female, 34; of graduates in the last scholastic year, 10, of whom 8 have engaged in teaching. Drawing and instrumental and vocal music are taught.

A training school exists in conjunction with the normal department and under the supervision of its principal, though under the immediate charge of a special preceptress. In this the students of the normal department have an opportunity to study methods and get some practice in teaching.—(Catalogue of university for 1874 and return to Bureau for 1875.)

PINE BLUFF NORMAL INSTITUTE.

This institution, at Pine Bluff, on the Arkansas River, is devoted mainly to the training of teachers for the colored schools, under the auspices of the American Missionary Society. It reports, at the close of 1875, resident instructors, 3; male students, 73; female, 83; instruction in drawing, vocal and instrumental music, and a model school to aid in instructing pupils in the art of teaching. Some of them are said by the principal to exhibit already much tact in teaching, while a number are out exercising their gifts in that line in the schools.—(Report of American Missionary Society for 1875, and return to Bureau, 1875.)

TEACHERS' INSTITUTES.

The county teachers' institutes provided for in the new school law, will afford to skilful county officers a means of steadily improving the teaching force already in the field. But as it will take some months to get the machinery of the new law in motion, notice of its working in this direction will have to be deferred to the report for 1876.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The only high schools known to be at present existent in the State are one at Van Buren and two at Little Rock. From the former no report has been received. From the latter there is a published report showing that the Sherman High School graduated its first class of 4 girls and 1 boy in 1873, gave diplomas of graduation to 3 others in 1874, and in 1874–'75 was unable, because of the political strife then agitating the city,

to carry forward to graduation the class of 6 which was preparing to come forth in 1875, the public schools having been closed December 4, 1874.

In 1872–'73 steps were taken to establish, also, a colored high school at Little Rock, and after a satisfactory examination by a special committee appointed for that purpose, 11 pupils were reported as having reached the necessary standard, and were formed into a high school class in the Union School. Of these, 9 are said to have entered in the fall and remained during the year. This high school department appears to have continued in operation till the closing of the schools, in December, 1874, but there is no record of any graduation.

PRIVATE SECONDARY SCHOOLS.

Four schools for boys and girls, claiming secondary rank, report, for 1875: Instructors, 9; pupils, 389; of whom 58 are in classical studies and 10 in modern languages, the remainder in English only. The prevailing poverty is sadly shown in the proportion of pupils to instructors, 389 to 9, a ratio of 43.2 pupils to 1 teacher. The same is indicated in the fact that in no one of these schools is drawing taught, and in only one both vocal and instrumental music. Of the other three, one gives instruction in vocal, one in instrumental, and one in neither. None of the four reports the possession of chemical or philosophical apparatus, or of a library. One, however, at Bentonville, sent 3 students to college in 1874, and had, at the date of its report, 10 preparing for a classical course at college and 5 for a scientific course.—(Returns to Bureau, 1875.)

One other apparently secondary school sends a brief circular, but no statistics and no description of its course.

PREPARATORY SCHOOLS OF COLLEGES.

In the preparatory departments of the several colleges there are reported, in all, 243 students, all supposed to be engaged in studies preliminary to a collegiate course, though only 23 are specifically so returned.—(Returns to Bureau of Education, 1875.)

SUPERIOR INSTRUCTION.

ARKANSAS INDUSTRIAL UNIVERSITY, FAYETTEVILLE.

This institution, meant to serve the purpose of both a State agricultural and mechanical college and a State university, is located in the hilly region toward the western border of the State, a situation eminently salubrious and beautiful. Still in its infancy, its preparatory students are all taught together till they reach the freshman year, after which those of the several departments continue to be taught together, so far as they pursue the same studies. The technical work only is done separately.

The grounds, buildings, and apparatus are valued at $140,000; the productive fund, at $130,000; the income from this, at $10,400; the receipts from tuition fees, at $2,000. Two hundred and nineteen State scholarships are provided for, with apparently as many in the normal department; but the number of students is not given, except 8 in the first year of the agricultural course and 3 in partial course. The number in the normal department was stated under the head of "Training of Teachers."—(Catalogue for 1874 and return for 1875.)

ARKANSAS COLLEGE, BATESVILLE,

(Presbyterian,) with 3 male instructors and 1 female, reports 54 male students and 34 female, in a course comprising a preparatory year and three collegiate years. Of these, 48 are pursuing an English course and 40 a classical one. The course seems well up, in respect to studies, though brief in its duration. Vocal and instrumental music are taught, and there is a small chemical laboratory, with some philosophical apparatus, and a library of 400 volumes.—(Catalogue and return for 1875.)

CANE HILL COLLEGE, BOONSBOROUGH.

(Cumberland Presbyterian.) Affected, like many other institutions of the State, by the financial and political embarrassments which have hindered progress, this college, chartered in 1852 and reorganized after the war, in 1868, seems rather to have retrograded than advanced during the year past, reporting only 73 preparatory students for 1874–'75, without any students in the collegiate course. Faculty, 4 in number.—(Return for 1875.)

ST. JOHN'S COLLEGE OF ARKANSAS, LITTLE ROCK.

(Masonic.) Organized on the military basis, which is popular in the Southern States, and aided by the influence of the masonic order, which has given it $5,000 in the past year, the effect of the prevailing embarrassments is still shown here, only 1 student being reported in the collegiate course, the remainder, 49, being in the preparatory course, 23 of them looking forward to collegiate studies. Faculty, 4 in number; income from productive fund, $1,800; from tuition, $600.—(Return for 1875.)

EVENING SHADE MALE AND FEMALE COLLEGE, EVENING SHADE.

This reports in its preparatory department 43 male and 52 female students, and in the freshman class of its collegiate course the same numbers of each sex, inducing the impression that the two sets are identical.—(Return for 1875.)

SPECIAL INSTRUCTION.

ARKANSAS INSTITUTE FOR EDUCATION OF THE BLIND, LITTLE ROCK.

Officers and teachers, 8; number of blind employés, 3; students, 35. Receipts for current expenses in State scrip, $18,500, netting in currency, $6,103.50. Receipts for salaries in State scrip, $4,962.60, making about $1,600 in currency.

The above statement tells its own tale as to the financial difficulties experienced. It means simply, as interpreted by the printed report for 1875, that the officers and employés have had to work on through the year at less than one-third their nominal salaries, from the depreciation of the State scrip in which these are paid. As the report says, "The salaries of the superintendent, steward, matron, assistant matron, teachers, and physician, allowing the highest market value for scrip at the time of its payment, have averaged, in currency, only about what we pay a cook; while some of the officers have realized less than $8 per month, the amount paid a young colored girl for waiting on table and washing dishes." The devotion to their good work which has led them to hold on in useful labor for the unfortunates beneath their charge, under such extremely trying circumstances, is worthy of all praise. A necessarily shortened session and a diminution of the number of pupils from absolute inability to carry all along, have, however, been the consequences of this lessened value of State scrip.

The usual employments—mattress making, broom making, chair seating, sewing, and bead work—have been continued, the regular instruction kept up as far as practicable and a library of 400 volumes in raised print and 250 in ink print is reported.—(Report and return for 1875.)

THE ARKANSAS DEAF-MUTE INSTITUTE, LITTLE ROCK.

Four instructors and 69 pupils are reported here for 1875, making the number of deaf-mutes who have received instruction since the foundation of the institute in 1868, 112. The average number of years spent in it by pupils has been about three. The branches taught are the sign language, penmanship, arithmetic, geography, and history. A library of 55 volumes is possessed; 92 acres of land are owned by the institution; and on this land the pupils are to some extent employed, receiving a partial training in agriculture.

The State appropriation for the past year was $6,000 for salaries and contingent expenses, with $180 for each pupil in attendance. Whether this is paid in State scrip or in currency is not stated; but the former being the ordinary rule, a reduction of nearly two-thirds must probably be made from the face value of the appropriation, involving the same financial difficulty and the same necessity for personal self-denial as at the institution for the blind.—(Return for 1875.)

Districts having suitable accommodation for all pupils	1,146	1,320
Districts not having suitable accommodation for all pupils	382	324
Districts whose schools have necessaries	1,217	1,295
Districts whose schools have not these	321	329
Districts with sufficient school grounds	1,370	1,509
Districts without sufficient grounds	118	112
Districts with grounds suitably improved	369	411
Districts with grounds not suitably improved	1,159	1,220
Districts whose schools are well ventilated	1,443	1,553
Districts whose schools are not well ventilated	86	66
Districts whose schools have good furniture	531	621
Districts whose schools have passable furniture	292	416
Districts whose schools have poor furniture	700	604
Districts whose schools are well supplied with apparatus	312	501
Districts whose schools are passably supplied with apparatus	312	501
Districts whose schools are poorly supplied with apparatus	924	763
Number of schools for colored children	23	19
Number of children attending these	448	339
Number of visits to schools made by county superintendents	2,969	3,621

SCHOOL SYSTEM OF THE STATE.

CONSTITUTIONAL PROVISIONS.

The constitution of 1849 required the legislature to provide for the election by the people of a superintendent of public instruction for the encouragement of intellectual, scientific, moral, and agricultural improvement; for the creation of a school fund; for a system of common schools by which a school should be kept in each district at least three months in every year; and for the endowment of a State university.

PROVISIONS OF THE SCHOOL LAW.*

OFFICERS.

A State board of education, State superintendent of public instruction, county superintendents, city boards of education and boards of trustees of school districts, with State, county, and city boards of examination, form the official staff of the State school system.

POWERS AND DUTIES OF THESE OFFICERS.

The State board of education consists of the governor, the State superintendent, the principal of the State Normal School, and the school superintendents of San Francisco, Sacramento, Santa Clara, Alameda, Sonoma, and San Joaquin Counties. The governor is president and the State superintendent secretary of the board. It meets at the call of the secretary, not less than twice each year, and has power to adopt rules and regulations, not inconsistent with the State laws, for its own government and that of the public schools and district school libraries; to prescribe rules for the examination of teachers and a standard of proficiency which will entitle to a State certificate; to prescribe and enforce a course of study for the public schools, with a uniform series of text books, except for the county and city of San Francisco; to adopt a list of books for district school libraries; to grant, or to revoke for cause, a life diploma to a teacher; and to review a case of such revocation on appeal.

* From School Laws of 1870 and 1874, published by department of public instruction.

The State superintendent is elected by the people; holds office for four years; apportions the State school moneys to counties, cities, and school districts; sees to the printing of all school laws and needed forms for officers charged with the administration of them; is trustee, *ex officio*, of State schools for special training, and visitor of all incorporated literary institutions; must visit the schools in the different counties and inquire into their condition; must make report to the controller, by August 10 of each year, of the number of children of school age; and biennially to the governor, by November 15, preceding a session of the legislature, must report the condition of the State Normal School, of other educational institutions supported by the State, and of the public schools.

The county superintendents are elected by the people for official terms of two years each; are charged with a quarterly distribution of school moneys to each district; must visit each school in their counties at least once in each year, or forfeit $10 for each one not visited; must hold and preside over teachers' institutes and secure the attendance of competent lecturers; must, in counties containing twenty thousand inhabitants or more, devote their whole time to supervision of schools, and if in the receipt of $1,500 salary, must not even turn aside from this to teach; must make full and correct report of all school matters to the State superintendent at fixed times, or have $100 of their salaries withheld for failure. In case of difficulty about the boundaries of school districts, they may fix or change these, endeavoring to harmonize all differences.

City boards of education are charged with a general oversight of the interests of city public schools, such as the management and control of the school property, the purchase of school furniture and apparatus, the renting, repairing, and insuring of school buildings, the purchase of school lots and erection of school-houses on them, the making and receiving conveyances of property sold or purchased by them for their constituents, the employment of teachers and janitors for schools, the suspension or expulsion of pupils for misconduct, the exclusion of children under age, the enforcement of the course of study and the use of the text books prescribed by the State board of education, the furnishing books for children unable to procure them, the examination, by personal visitation, of the management, condition, and wants of each school, and the making of an annual census of school population and report of schools.

Trustees of school districts have essentially the same duties to perform, together with the appointment of district librarians and the enforcement of the rules prescribed for the government of district libraries.

The State board of examiners, consisting of the State superintendent and four professional teachers (holders of State educational diplomas) appointed by him, is authorized to recommend the most highly approved teachers to the State board of education for life diplomas, and to grant to others, according to the measure of their ascertained qualifications, State educational diplomas, valid for six years; State certificates of the first grade, valid for four years; of the second grade, valid for three years; and of the third grade, valid for two years.

County and city boards may issue like grades to the three last mentioned, valid in the counties or cities for which they act—the third grade in the counties to females only. Those of cities may also grant high school certificates, valid for six years.

SCHOOLS.

The State schools are of three grades—first, second, third—and the course of study prescribed is liberal, including, for all grades, instruction in morals and manners, and for the higher grades, in addition to ordinary branches, physiology, natural philosophy, natural history, elements of form, vocal music, and industrial drawing, with provision for a grade still more advanced. The schools are open to all white children between five and seventeen years of age, and to colored or Indian children where no separate provision is made for them. A State normal school exists for the training of teachers for these schools, and a State university, with an agricultural college attached to it.

A law making education in these schools compulsory for children between eight and thirteen for two-thirds of the school year, except in certain specifically excepted cases, went into operation July 1, 1874.

SCHOOL FUNDS.

The State school fund, according to the State controller's report to Superintendent Bolander, March 3, 1874, appears to be derived from the proceeds of lands granted the State by the General Government, from interest bearing bonds to the amount of $1,417,500 given by the State for school purposes, and from a property tax of five cents and two mills on each hundred dollars. Amount in 1875, $1,737,500.

From this fund and from county funds $300 to $500 are annually apportioned to each school district for every teacher assigned it, provided that it has maintained a public school for at least six months of the next preceding school year, and provided, too, that the teacher or teachers employed in its schools hold legal certificates of fitness for teaching, in full force and effect.

ELEMENTARY INSTRUCTION.

GENERAL REVIEW.

State Superintendent Bolander, in a review of the last two years, says: "Since my last report 29,953 children have been added to our school population; 117 new school districts, supporting 322 schools, have been organized; 274 new school-houses have been built and furnished, and old school-houses refurnished, at a cost of $613,746.61; the school expenditures have been increased by $544,885.09; the school property has increased in worth $1,011,262.85; the average school terms have been lengthened 1.33 months, being now 7.47 months, as against 6.14 months in 1873. On the other hand, there is a decrease of .82 per cent. in the enrolment of census children in public schools; a decrease of 5.18 per cent. in the average number of such belonging to public schools; a decrease of 3.93 per cent. in the number in daily attendance at public schools; and an increase of .91 per cent. in the number who do not attend school during the school year. Again, while the total number of children, including those over 17 years of age, who have attended public schools at any time during the school year, is 23,337 more than in 1873, the average number who attend long enough to be properly considered pupils is increased by only 8,242 and the average daily attendance by only 8,566."

Mr. Bolander proceeds to note a great advance in the number of first grade schools; *i. e.*, high schools, grammar schools, and schools in which high school and grammar grade studies are taught, in addition to the lower grade studies; the greater number of teachers holding high grade certificates; better salaries paid to lady teachers; the greater amount of funds spent for school apparatus, one-half of the districts being now supplied, at least partly, with apparatus. He adds that, while the statistics show remarkable progress, there is a very general impression abroad that in the vital part of our school system—the education of our children—there is no progress, and that no progress is possible until a radical change has been made in the system of education. Mr. Bolander has, therefore, in this biennial report, devoted much space to the discussion of the changes which he deems necessary in the present system of instruction, viz: the internal economy of the schools; the qualifications of teachers; the subjects taught, and the manner of teaching them; the text books required; and the adapting of instruction to the everyday wants of life.—(Biennial report of Hon. H. N. Bolander for 1873–'74 and 1874–'75, pp. 5, 6.)

PROGRESS.

Up to June 30, 1874, districts whose number of census children fell below a certain figure—20 for some counties, up to as high as 30 for others—did not receive for any one school year sufficient funds to maintain a three months' school for that year. The last legislature, however, remedied this, and for the first time in the history of the State, every district received, during 1874–'75, sufficient funds for at least a six months' school. The progress thereby made in popular education can hardly be overestimated. In 1873 only 43.3 per cent. of all the districts maintained an eight months' school; in 1875 this percentage is raised to 49.53. In 1872 over 464 districts, or 31.74 per cent., did not keep a six months' school; in 1875 the number was diminished to 34, or 2.15 per cent. of all the districts in the State. This unprecedented advance in the popular education of the State is due not only to the munificence of the legislature in more than quadrupling the amount of school money to be raised by State tax, but also to the change made in the manner of apportioning the school fund among the districts. Previous to July, 1874, the larger districts have, at the expense of the smaller ones, enjoyed greater educational facilities than those to which their assessment roll entitled them, while the smaller districts, enjoying but meagre educational facilities, were taxed to support the schools of the larger districts. Mr. Bolander recommended to the last legislature a method for remedying these evils, and this method, in its most important features, was enacted into a law. Five hundred dollars were fixed as the minimum amount with which a district having a minimum number of census children can be expected to maintain an eight months' school, and Mr. Bolander suggests that the present legislature amend the law so as to apportion $600 instead of $500.—(Report, pp. 19, 20.)

SCHOOL ATTENDANCE.

Writing on this subject, the superintendent says he is sorry to see that, notwithstanding the compulsory law, there has been no appreciable abatement in the evils of non-attendance and truancy, and that, while steadily gaining for the public schools the support of those who were at first opposed or indifferent to them, there has still been a failure to impress that large class of people who, through self-interest, carelessness, or ignorance, ignore the claims of their children to the rights and benefits of at least a common school education.—(Report, pp. 32–34.)

TEXT BOOKS.

In a comprehensive discussion on the uses and abuses of text books, Mr. Bolander inveighs against the cramming, parrot drill, multiplicity of studies, and general paucity

and inadequacy of results, for which the public schools are becoming painfully notorious, and which he considers are the products of the improper character or improper use of text books in the schools. He says we have too many text books, and that our common school course is overcrowded with studies; and he contends that spelling, word analysis, grammar, and composition, if well taught without text books, would yield more satisfactory results. He further affirms that text books are not only too numerous, but too bulky; that the text book as now used is made to bolster up poor, inexperienced, and unskilled teachers, and form a substitute for their mental deficiencies, and that this radical defect can only be remedied by saying to every teacher, "Unless you feel competent to teach this school without the aid of a single text book, so far as mere instruction is concerned, you cannot have the school." He contends that the State should furnish each teacher with a manual of instruction, pointing out the course of culture and technical training needed to qualify him for his work, thus compelling teachers to assimilate some method of teaching, and become real teachers, instead of mere school keepers. Mr. Bolander closes his elaborate discussion on text books by inviting attention to the plan of "free text books." He sums up, in the words of Mr. Thomas Tash, of Lewiston, Me., the advantages offered by this system, thus: 1. Books are ready at the proper time. 2. Every child is supplied with all the books, &c., needed. 3. Uniformity in books. 4. Considerable latitude can be allowed in the selection of books without increasing the expense of them. 5. Books are more entirely under the control of the teacher. 6. Books furnished by the town or city are much more carefully used, and better kept than when owned by the children. 7. It leads parents to procure reference books, useful both to themselves and their children. 8. Convenience in making transfers. 9. The free supply of books increases school time.—(Report, pp. 36–55.)

HALF-TIME SYSTEM OF SCHOOLS.

This system is argued for on the grounds that it places school facilities within the reach of many children now deprived of them by the absolute necessity of devoting at least a part of each day to labor, and that it doubles the number of pupils instructed, with no addition to the cost. The half-time system has been introduced into the primary schools of Oakland. Eleven classes are taught on it, and the number of pupils taught by one teacher, in these classes, ranges from 90 to 170. Twenty per cent. is added to the salary of the teachers who are required to teach these classes. It is the unanimous opinion of principals and teachers that the half-time pupils progress equally with the full-time pupils. Whether the half-time system can be applied equally well to schools above the primary grade is not so easily determined.—(Report, pp. 72–75.)

THE KINDERGARTEN.

Mr. Bolander thinks the opinion is gradually gaining ground that our common school education would be materially benefited, if not perfected, by the introduction of the Kindergarten system. In response to many inquiries, he publishes, in an appendix to his report, an illustrated article on the Kindergarten toys and how to use them. He also embodies in his article on the Kindergarten copious extracts from the report of the committee of the National Educational Association on this subject.—(Report pp. 112–119.)

CITY SCHOOL SYSTEMS.

SAN FRANCISCO.

Organization.—The official staff of the city system consists of a board of education of 12 members, (of whom one-third are believed to be changed each year,) with a superintendent of schools, a deputy superintendent, a secretary, a clerk, a copyist, and messenger; also under a general school law, affecting all the cities, a city board of examination, consisting of the city and county superintendent, and of 4 teachers, residents of the city and holders of State diplomas, chosen by the board of education. The examining and licensing of teachers belong to this board of examination; the general care of the schools to the board of education; the special supervision of them, under the board, to the city superintendent and his deputy.

Statistics.—Estimated present population of the city, 234,000; number of children 5 to 17 years old, the school age, 41,029; number enrolled in public schools, 32,175; in private and parochial, 6,094; total enrolment, 38,269; average attendance in public schools, including evening schools, 21,014; percentage of the enrolment in all schools on the number of children of school age 65.9; percentage of the average number belonging to public schools on the whole number of school age, 59.9.

The whole number of teachers employed in the year has been 510; average number, 475. Of the 510, which number appears to be exclusive of principals, 22 have been teachers in high schools, 129 in grammar schools, and 325 in primary schools. Of the remainder, 13 have been teachers of German; 9 of French; 1 of Latin and Greek, and 11 special teachers. Salaries, $500 to $4,000 per annum; superintendent, $4,000; deputy, $3,000.

The total income for the year, including cash on hand June 30, 1874, has been $798,125.75; the total expenditures, $707,445.36. Estimated value of school buildings, sites, furniture, and libraries, $2,367,000.

Average expense of schools per capita, based on average daily attendance and including everything, $31.85.—(Twenty-second annual report by Superintendent James Denman, pp. 3–8, collated with return to Bureau for 1875.)

Disbursements.—While the whole number of pupils in attendance at the public schools has increased 1,697 during the year, the current expenses of the department for the same time have been $7,832.03 less than they were last year. Superintendent Denman reports a balance to the credit of the school fund, at the close of the fiscal year, of $90,680.39. This balance will be ample to provide school accommodations which are needed by the department. The total expense of conducting the department during the year is $40,527.14 less than the estimate of the finance committee, an evidence that the public funds have been wisely disbursed.—(Report for 1874–'75, pp. 9–10.)

New buildings erected during the year.—At the close of the last school year the board of education provided accommodations for 4,271 pupils, in 35 different rented buildings, with 80 class rooms, at an annual rental of $18,912. Many of these rooms were in low, dark, and damp basements, or in small and poorly ventilated apartments. To provide suitable accommodations for this large number of pupils in rented rooms, the last legislature authorized the board of supervisors to issue $200,000 of bonds, from the sale of which the city realized $188,250. With this sum new school buildings have been erected. During the term of the present board of education, 112 additional class rooms have been provided, capable of accommodating 6,700 grammar and primary pupils. Notwithstanding the large increase in the attendance on the public schools during the last two years, the board of education has, by wise and economical management, been enabled to defray this extra expense out of the income for current expenses, and to leave a large balance with which to erect other accommodations, including a new seventeen class building for the model school.—(Report, pp. 32, 39.)

Boys' High School.—Commendable progress has been made in this school during the past year. Whole number enrolled, 238; average daily attendance, 177.79. Whole number of teachers, 7. From the senior class, 16 pupils graduated with high honors at the close of the term. Of these, 5 entered the State University. Thirteen also entered the university from the middle class, the course of study of this school having been changed so as to prepare boys for the university in two years, and, in special cases, in one year, where the boys have the mental strength and physical vigor to do the work without endangering their health.—(Report, pp. 39, 40.)

Girls' High and Normal School.—Whole number enroled in this school during the year, 458; average daily attendance, 377.8; teachers employed, 15. Number of graduates, 88, a gain of 34 over the number of last year. Three young ladies of this graduating class have entered the university. Three-fourths of the young ladies of this school desire to become teachers. Mr. Denman thinks, however, that the theory and practice of teaching are a sealed book to the graduates of this school, and that the instruction imparted in the present course of study does not fit them for teaching the elementary branches of the primary classes, in which are more than 74 per cent. of the pupils of the public schools. But young misses, who are novices in the art of teaching, rob their pupils of much of their precious time during the first years of their experience, in experimenting and learning how to properly discharge the difficult duties of their profession. Hence, Mr. Denman recommends the immediate establishment of a school for the special training of teachers.—(Report, pp. 41, 42.)

Grammar schools.—Whole number of pupils enrolled in the grammar classes during the year, 6,055; average daily attendance, 4,857.2; whole number of teachers employed, 129; average number of pupils to each teacher, 39.4, a gain of 9 over the number of last year; average daily attendance to each teacher, 37.6, a gain of 8.6 over the number of last year.

Primary schools.—The whole number of pupils enrolled in the primary schools has been 22,158; average daily attendance, 14,928, a large increase over the attendance of last year. These figures show that over 71 per cent. of the pupils of the public schools are mainly dependent upon the primary classes for their instruction. Their importance should, therefore, command the highest regard of teachers and school officers. They are truly the people's colleges, in which the largest portion of the juvenile population receive their education. And yet the superintendent remarks: "It must be painfully apparent to any one visiting our lower grade classes that experience and fitness have been ignored in the selection of many of the instructors in our elementary schools. In many of the classes it will be difficult to distinguish, from the size, appearance, and character, between the teacher and the pupils. Under the plea that none but California girls, educated in our public schools, should be elected to any position, we have discouraged the immigration of the better class of experienced teachers from other sections of the country. This Chinese policy of exclusiveness, which shuts us out from the march of progress of the older institutions of other countries, is dwarfing our system of instruction and rendering us provincial and unprogressive. It is filling our

schools with young and inexperienced teachers, who should spend several years at some normal school to obtain the first rudiments of a professional training."—(Report pp. 52–55.)

Cosmopolitan schools and foreign languages.—The whole number of pupils attending the cosmopolitan schools for the purpose of receiving instruction in German and French was 3,913, of which 1,181 studied French and 2,750 studied German. In the boys' and girls' high schools 246 pupils studied French, 101 studied German, and 14 studied both German and French. In the boys' and girls' high schools 111 pupils studied Latin, 40 studied Greek, and 40 studied both Latin and Greek. To instruct these pupils, 13 teachers were employed to teach German, 9 to teach French, and 1 to teach Latin and Greek. These schools are doing as good work as can be expected under their present organization. The present system of instruction will fail to make good pupils in either French or German so long as the study of the English branches requires so much of the pupil's time and energy. Children should be required to study and recite their lessons in geography, arithmetic, &c., in the foreign language which they desire to learn. This would give them the ability to think and express their ideas in these languages as well as in their own tongue.—(Report, pp. 55–57.)

Evening schools.—Whole number of pupils enrolled in the evening schools, 2,213; average daily attendance, 686; teachers employed, 23; general average of classes, from 30 to 50 pupils. Regulations provide for keeping these schools open eight months—from September till May; but a sufficient number of classes is continued in session during ten months of the school year to accommodate all who desire to avail themselves of the advantages of evening school instruction. The four different evening schools are under the control of one principal, who has the general supervision of all the classes. These schools are composed of pupils of all nationalities and of all ages—from twelve years old to gray-haired men and women—many of whom here learn their first lessons in reading and writing. Their circumstances in life compel them to labor during the day, so that they are wearied with toil and unfit for hard study. It is, therefore, no easy task for the teacher to instruct and interest them so as make the school room attractive and pleasant. But in spite of such difficulties these evening schools have for several years accomplished great good in educating a large class of young men and women who have not the time and means to obtain a liberal education in the day schools.—(Report, pp. 57, 58.)

Colored schools.—There were two colored schools sustained during the year, with a total enrolment of 97 pupils and an average daily attendance of 49.4. Number of teachers employed, 3. Daily average attendance to each teacher, 16.2. On the 3d of August of this year these schools were abolished and the pupils admitted to the other public schools. This change has been effected without any conflict of races among the juvenile population. The pupils of different races and colors are now seated in the same school-room and pursue their studies as quietly together as if they were children of the same family.—(Report, pp. 58, 59.)

Annual examination.—The annual examination of the pupils of the public schools was conducted almost exclusively by means of written questions prepared by the superintendent and deputy superintendent. They were framed with the view of testing the modes of instruction and the pupils' practical knowledge of the subjects taught, rather than to exhibit the technical knowledge of the examiner. The percentage for promotion was fixed at 70 per cent. for the first, second, third, and fourth grades, and 75 per cent. for the fifth, sixth, seventh, and eighth grades. The large number of promotions shows that most of our teachers have done their work well and successfully.—(Report, p. 59.)

School libraries.—The law provides that a certain proportion of all the money received from the State apportionment, amounting in San Francisco to about $4,000, must be set apart for the purchase of school libraries. This money is now all expended for reference books for teachers and for text books for indigent pupils. These text books are all placed in the library, and loaned to pupils whose parents are too poor to furnish them. They are collected at the close of the year, or whenever the pupils leave the school. There were at the close of the schools in May last, 5,707 volumes of text books for indigent pupils; 3,961 volumes of reference books for teachers, and 9,531 volumes of miscellaneous reading books for the pupils.—(Report, pp. 93, 94.)

Private schools.—The number of private schools and colleges in San Francisco, according to Langley's City Directory for 1875, is about 100. In size and character these range through nearly every degree, from the little private family or home school of half a dozen pupils to the large and flourishing college, enrolling its pupils by hundreds. Of these the Roman Catholics maintain about one-fifth, while a considerable portion of the remainder either directly belong to or are managed in the especial interest of other denominations. The number of pupils attending private and church schools in June, 1874, as reported by the census marshals, was 6,181. This was a fraction less than one-tenth of the whole number of schoolable children in the city. The increase in the number of such pupils during the year, was 896, which was considerably greater, relatively, than was shown by the census and reports of public school attendance.

SAN JOSÉ.

Organization.—Here and in the other places named, there is believed to be, under the general State law in most cases, under special acts in others, a board of education for general care of schools, a city superintendent for special supervision of them, and a city board of examination for teachers.

Statistics.—Estimated present population, 14,000; children of school age, 4,136; enrolled in public schools, (besides 575 in private and parochial,) 2,958; average daily attendance, 1,302. School rooms used for study and recitation under charge of 1 teacher, in public primary schools, 22; in public grammar schools, 9; in public high school, 1; in private schools, 8; total, 40. Number of public school buildings, 8; of private, 3; sittings for study in public schools, 1,600. Teachers: males, 6; females, 27; total in public schools, 33; in private, not given. Wages of these: in primary schools, $75 a month; in grammar schools, $70 to $125; in high school, $100 to $150. Schools taught for 8 months. Receipts for public schools, $60,147.05; expenditures on them, $53,325.97. Estimated valuation of school property, $134,000.—(Special return to Bureau of Education, 1875, from Superintendent L. J. Chipman.)

OAKLAND.

Statistical summary.—Total number of census children, June, 1875, 4,749. The primary schools number 31 classes, taught by 31 female teachers, whose maximum salary is $100 and the minimum $62.50 per month. Total number of pupils enrolled, 2,173; average number belonging, 1,962; average daily attendance, 1,898.

The grammar schools number 23 classes, taught by 5 male and 18 female teachers. The high school has 4 classes, taught by 2 male teachers, who receive respectively $200 and $150; and 2 female teachers, who receive each $100. Total number enrolled, 145; average number belonging, 135; average daily attendance, 133. The evening school has but 1 class, taught by 1 male teacher, who receives $60 per month. Total number of pupils enrolled, 48; average number belonging, 29; average daily attendance, 21. There is no separate school maintained for colored children; they attend the schools for the white children. The schools are maintained ten months in the year, except the evening school, which is maintained only three months. The current expenses for the school year ending June 30, 1875, were $79,299.63; the expenditures for building and furniture, $28,746.06; total expenditures, $108,045.69.

Truancy.—Treating of truancy, Superintendent Campbell submits a brief outline of a plan for the correction and prevention of it, and also of other offences, which are now punished by suspension and expulsion; (1) that there be established in a convenient locality an ungraded school of one or more classes; (2) that the school be put in charge of some man of acknowledged ability as an instructor and disciplinarian; (3) that habitual truants and those whose conduct is such as to be subversive of good order shall be remanded to the ungraded school; (4) that those who, during a specified term, shall give unmistakable signs of reformation, may, at the end of that time, be reinstated in the graded schools; (5) that those who still prove incorrigible be handed over to the police magistrate, who may commit them to the industrial school; and (6) that for the better carrying out of the system, the police officers be also known as truant officers, and their duties as such definitely specified. Mr. Campbell also discusses the half-time system, reference to which has been made elsewhere.—(Report of City Superintendent F. M. Campbell.)

SACRAMENTO.

Summary of statistics.—Number of census children, June, 1875, 4,112. Number of classes in the primary schools, 16; number of female teachers, 16; pupils enrolled, 895; average number belonging, 817; average daily attendance, 693; maximum monthly salary of teachers, $80; minimum, $50. Total annual expense of maintaining schools, $17,098.80. In the intermediate or second grade schools there are 14 classes; number of female teachers, 14; pupils enrolled, 756; average number belonging, 714; average daily attendance, 603; maximum salary paid, $85; minimum, $55. Total annual expense of maintaining schools, $14,961.45. Number of classes in grammar schools, 18; male teachers, 2; female teachers, 16; pupils enrolled, 827; average number belonging, 753; average daily attendance, 687; maximum salary paid male teachers, $175; minimum, $100; maximum salary paid female teachers, $100; minimum, $80. Total annual expense of maintaining schools, $18,885.72. There are in the high school 4 classes. Number of male teachers, 2; female, 2; pupils enrolled, 105; average number belonging, 101; average daily attendance, 97; male teacher's salary, maximum, $240; minimum, $100; female teachers, $100. Total annual expense of maintaining schools, $6,000. The evening school has 2 classes and 2 male teachers, one receiving $50, the other $40. Pupils enrolled, 65; average number belonging, 60; average attendance, 47. Total annual expense of maintaining school, $600. The colored school has one class, taught by a female teacher, at a salary of $100. Pupils enrolled, 53; average number belonging, 48; average daily attendance, 38. Total annual expense

of maintaining school, $1,250. The ungraded schools have 2 classes, taught by 2 female teachers, who receive each $100. Pupils enrolled, 109; average number belonging, 97; average daily attendance, 85. Total annual expense of maintaining schools, $2,300. All the schools, except the evening school, are maintained ten months in the year. The evening school is maintained from six to seven months. The teachers are paid by the month, not by the year, but only for the time actually taught by them.—(Report of City Superintendent A. C. Hinkson.)

LOS ANGELES.

Statistics.—Total number of census children, June, 1875, 2,257. Primary schools, classes, 14; 2 male and 14 female teachers; maximum salary, $100; minimum, $80. Total annual expense of maintaining schools, $13,000. Intermediate and second grade schools, classes, 4; 1 male and 3 female teachers; salary, $100. Total annual expense of maintaining schools, $4,500. Grammar school, classes, 3; 1 male and 2 female teachers; salary, $100. Total annual expense of maintaining schools, $3,500. High school, classes, 3, taught by 1 male and 1 female teacher; salary of the former, $300 per month; of the latter, $125; total annual expense of maintaining schools, $4,500. Colored school, 1 class, taught by a male teacher; salary, $80 per month. Total annual expense of maintaining school, $1,000.

General notes.—All the schools are maintained ten months in the year. No evening school has as yet been established. Mr. Lucky says there is as large a percentage of non-attendance in Los Angeles as in any other incorporated city in California, perhaps larger. The reason for this is found in the character of the population. The general condition of the schools is good. There is co-education in all classes and all grades; and on this point the superintendent remarks: "After an experience of thirty-four years in teaching, thirty-one of which have been in mixed schools, I am fully convinced that the intellectual, moral, and social advancement of each sex is promoted by co-education." In regard to special schools for turbulent pupils, he says: "I do not believe such schools are necessary or practicable. I am fully convinced that any person competent to teach, can so interest pupils that they may be easily governed. Troubles in government arise more from incompetent teachers than from any other cause."—(Report of City Superintendent William T. Lucky.)

STOCKTON.

Statistics.—Number of census children, June, 1875, 2,053. Primary schools, 22 classes, taught by 15 female teachers; salary of each, $75 per month; annual expense of maintaining schools, $11,650. Intermediate or second grade schools, 5 classes, taught by 5 female teachers; salary, $80 per month; annual cost of schools, $4,400. Grammar schools, 6 classes, taught by 5 male and 3 female teachers; one male teacher receives $120 per month, the other teachers $90 per month; total cost of maintaining schools, $6,700. High school, 3 classes, taught by 2 male teachers, one receiving $200 per month, the other $170; annual cost of school, $3,800. Colored school, 3 classes, 1 female teacher; salary, $70 per month; annual cost of school, $725.

Notes.—All the schools are maintained ten months in the year. No evening school.—(Report of City Superintendent George S. Ladd.)

MARYSVILLE.

The evil of non-attendance is the greatest with which the public schools of Marysville have to contend. According to the report of the school census marshal, in June last, there were 431 children in the city who had not attended school at any time during the school year. Mr. Steel says: "The law enacted to enforce the educational rights of children so effectually guards against any encroachment upon the rights of parents that it utterly fails to accomplish the purpose for which it was enacted. In my opinion, the law should be so amended as to meet cases in which parents claim to be too poor to send their children to school. In such cases, I would have the State take possession of the children, feed, clothe, and educate them from 7 to 14 years of age.

"Notwithstanding the calamity by flood with which the city was visited, the people still continue to pay a liberal tax for the support of our city schools, and the popular interest in the cause of education has not in the least abated. Comparing the present condition of our schools with that of a year ago, the primary schools show the greatest advancement."

Statistics.—Total number of census children, June, 1875, 1,057; primary schools, classes 10, taught by 1 male and 5 female teachers. Salary of male teacher, $100; maximum of female teachers, $80, minimum, $50. Annual cost of schools, $5,171. Second grade schools, classes 4, taught by 1 male and 1 female teacher, the former receiving $120 a month, the latter $90. Cost of schools, $2,579. There are 4 classes in the grammar schools, taught by 1 male and 1 female teacher, whose salaries are $150 and $110. Cost of maintaining school, $3,249. There is one class in the high school, taught by a male teacher, at a monthly salary of $180. Cost of school, $2,298. The colored school has

3 classes, and 1 female teacher at $75 a month. Expense of school, $892. All the schools are maintained ten months. No evening school has yet been established.

Half-time schools.—Mr. Steel recommends half-time schools as the best remedy for the evil of overcrowded school rooms. He adds, "In primary schools, pupils should be promoted from grade to grade on oral examinations, and in the higher grades on oral and written examinations combined."—(Report of City Superintendent Thomas H. Steel.)

SANTA CLARA.

General condition of the schools, good. The deportment of the pupils generally very good. Boys and girls go to the same school and recite and study together, but have separate playgrounds. The co-education of the sexes works most favorably, cultivating a desirable emulation and conducing to good morals and manners. The State course of study gives satisfaction. Number of census children June, 1875, 614. The total annual expenses of maintaining all the schools of the city are $7,000. The schools are kept open ten months in the year. No separate school for colored children and no evening school.—(Report of City Superintendent A. Madan.)

VALLEJO.

The course of study followed in the primary and grammar schools is about the same as that adopted by the State board. The high school course varies somewhat. Many boys from 14 to 17 years of age leave school to become apprentices in the navy-yard at Mare Island, or to enter on other employments, and but few graduate. No need for special school for turbulent children; skilful teachers are able to preserve good discipline. Number of census children, June, 1875, 1,636. Total annual cost of schools, $22,206. Schools open ten months. No evening or colored school.—(Report of City Superintendent J. G. Lawton.)

PETALUMA.

Primary schools report 12 classes, taught by 6 female teachers, receiving $60 per month as the maximum and $50 as the minimum. Total cost of maintaining schools, $3,350. Intermediate, or second grade schools, 5 classes, taught by 4 female teachers, at $55 per month. Cost of schools, $2,200. Grammar schools, 2 classes, taught by 1 male and 1 female teacher, the former receiving $125 per month, the latter $70. High school, 3 classes, taught by 1 male and 1 female teacher, the former receiving $150 per month, the latter $90. Annual cost of school, $2,229. Colored school, 3 classes, taught by 1 female teacher, receiving $45 per month. Annual cost of school, $450. All the above schools are maintained ten months in the year. There is no evening school.—(Report of City Superintendent William Elder.)

TRAINING OF TEACHERS.

STATE NORMAL SCHOOL.

Board of instruction.—A principal, vice-principal, and seven teachers, of whom one is principal of the training school, one an assistant in the same, and one a teacher of vocal music.

Qualifications for admission.—For all, in order to enter the junior class, an age of 16 on the part of female applicants, of 17 on the part of males; for teachers, in addition, a valid certificate, State or county, of any grade; for those that have not taught, evidence of good moral character and of ability to pass an examination such as would be required to obtain a third grade certificate.

Statistics.—The average enrolment for the entire year has been 239; average attendance for the year, 234, over 98 per cent. of the average number enrolled. The graduating class numbered 45, the largest ever graduated in any one year, all having taken the full course of study and training required. Whole number of graduates, 378.

Of the school course, now occupying two years, the principal, Charles H. Allen, remarks: "The time allowed for our course of study is too short. Taking into consideration the large number of subjects upon which instruction must be given and the qualifications of those who come to us for instruction, it is impossible to secure as high a grade of scholarship as is desirable and at the same time to make them sufficiently familiar with methods of teaching to enable them to be successful in the highest degree." In view of these facts, he recommends that the time for the full course be extended to three years and that, to meet the great demand for teachers, an elementary course be established and an elementary diploma granted. A preparatory class has been kept up during the year, and has been nearly or quite self-sustaining. Mr. Allen thinks it should be continued and enlarged. The training school, also nearly self-sustaining, has been well patronized, and is of incalculable benefit to the pupils of the normal school. A considerable number of teachers have spent some time at the school for observation and instruction.

Apparatus and buildings.—The appropriation of $3,000 for apparatus and of $500 annually for library is being expended with great care. A very valuable collection of

shells, consisting of nearly 3,000 species, has been purchased. The school is now fairly organized and equipped in a fine building, large enough to furnish accommodations for all legitimate school exercises. The last annual commencement was held in the school building, with better accommodations than could be found elsewhere.

HOW TO OBTAIN TRAINED TEACHERS.

On this point, Mr. Bolander's recommendations are briefly these: That in the State University be established a school or faculty of education, with a four years' course of study; all students completing and passing a satisfactory examination in the first year's course, to obtain a life certificate, entitling them to teach any primary or third-grade school in the State; the second year's course entitling them to teach any school in the State not above the intermediate or second grade; the third year's course entitling them to teach not above the grammar or first grade; the four years' course, entitling them to teach in any school in the State, including high schools, normal and training schools, and the educational college of the university, and making them eligible to the office of State superintendent and instructor of normal institutes. Mr. Bolander further recommends, that the course of study of the State normal school be conformed to the one just sketched, and that any high school or college, private or public, be authorized to establish a normal school department, with a partial or full course of study as heretofore prescribed, with certain provisions which he states. Also, that any city board of education, or county board of supervisors be authorized to establish city or county normal schools, with certain provisions also stated. Mr. Bolander further suggests that teachers' institutes be changed into normal institutes.

PROPOSED NORMAL SCHOOL FOR SAN FRANCISCO.

During the year 1874–'75 the board of education elected 177 teachers to new classes, or to fill places made vacant by resignations or changes of teachers. During this same year 450 applicants for certificates to teach were examined by the city board of examination. Of this number, only 197 received certificates of qualification, and 250 failed; and of those obtaining certificates very few had ever received any instruction in the art of teaching or training in the practical duties of the school room. Until a successful normal school is established, there must needs be a great deal of indifferent work in the schools. It is not so much the fault of many young teachers that they do not do good work as it is that of the city in not providing them with the means of acquiring a professional education. Superintendent Denman recommends that the present board of education exercise the power intrusted to it by the authority of the State, and at once establish a normal school for the training of young ladies in the art of teaching. In connection with this normal school he also suggests a practice school for observation and for training teachers in the practical duties of the school room; the practice school being connected with and forming a part of the normal school, so that the theory of teaching imparted in the normal department shall be supplemented by the drill of the training classes.—(City report, pp. 43, 44.)

PRACTICAL SUGGESTIONS TO TEACHERS.

In his report, Superintendent Bolander devotes much space to some valuable suggestions for teaching the course of studies. He says: "The first care of a teacher must be, not to teach the contents of a text book the best way he can, but to winnow the chaff from the wheat. To do this his knowledge of the subject must be full and comprehensive, so that the text book shall be to him a book of reference only, to which he is never confined either in instructing or during recitation. By this means the pupils will soon come to know that the teacher's work is to teach and work with them. In the third grade the instruction should be all oral, and in all studies for which text books are provided oral instruction must almost constantly be employed to elucidate, amplify, and supplement the text book."—(Appendix to report on Course of Studies, &c., p. 15.

MENTAL DISCIPLINE.

Still addressing teachers, Mr. Bolander, speaking for the board of education, says: "The ultimate object of all education must be mental discipline, and not the mere acquisition of knowledge, which is simply the means by which the mental faculties and capacities are developed. Mental discipline depends upon mental labor. This labor may be of two widely different kinds; first, the pupil may be simply required to understand, or seem to understand, the statement of the text book and of the teacher in oral instruction; or, secondly, the pupil may be required to rediscover for himself the knowledge of the text book. The former is, unfortunately, most usually, if not almost universally, the only labor imposed upon the pupil; and yet the latter is the only labor which can give that mental discipline which will truly educate the child. The teacher must have a definite end in view in every lesson he assigns from a text book; he must thoroughly understand the connection between it and the preceding, and also the succeeding, esson; and he must well weigh the steps the pupil must

take in order to obtain the full mental discipline which the mastering of the lesson will give him. The capabilities of the pupil, the difficulties of the lessons, must be studied, and determine the measure of help the pupil may require. If solely by the constant and watchful assistance of the teacher, a pupil should at last really understand a lesson, the principal mental discipline—that of gaining strength by the overcoming of difficulties—has been sacrificed, and the child's mind weakened instead of developed. On the other hand, all assistance cannot be dispensed with; the problem is, to find how much assistance is absolutely required. No inflexible rule can be devised; the individual differences of pupils must be carefully considered. This is, perhaps, the most difficult portion of the teacher's work. The thoroughness of a teacher's culture and capacity will infallibly be tested here."—(Appendix to report, p. 18.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

In the State report for 1875, p. 15, the number of pupils in high schools, or schools of advanced grade, is given as 3,243; but what are the studies pursued in these schools, or how far the pupils are carried in such studies does not appear, a course which was formerly prescribed for them by the State board having been abolished.

The high schools of San Francisco may probably be taken as the most advanced specimens of this class in the State. The number of instructors in the boys' high school here is 7, including the principal; pupils, 238; average number of pupils to a teacher, 34. In the girls' high school, instructors 16, including principal; pupils, 458; average number of pupils to teacher, about 28.6. The course in both these schools is good, including, for those who pursue English studies only, a fair range of mathematics, history, natural sciences, English language and literature. For those who wish to go beyond this, there are optional studies in French and German, and a classical course running up, for the boys, from the elements of Latin and Greek through 4 books of Cæsar, 6 orations of Cicero, the Eclogues of Virgil, 2 books of the Georgics, and 5 of the Æneid, with the extracts from Xenophon and Herodotus in the Greek Reader, and the poets in the Second Greek Book. For the girls, from the same elements through Cornelius Nepos, 6 orations of Cicero, Virgil's Eclogues, and 6 books of the Æneid, with 3 books of Xenophon's Anabasis, and 2 of Homer's Iliad.

Of the graduates of the boys' school, 5 entered the State University in 1875, with 13 others from the middle class, and 3 young ladies from the graduating class of the girls' school.—(Report of Superintendent Denman, pp. 39-41.)

PRIVATE SECONDARY SCHOOLS.

Two private or denominational schools for boys, 6 for girls, and 5 for both boys and girls, make report to this Bureau of an aggregate of 92 teachers and 1,020 pupils, of whom 158 were, in 1875, engaged in the study of Latin or Greek, or both, and 431 in modern languages, the remainder in English studies only. Forty of these students were preparing for a scientific course in college, and 26 for a classical course. In 12 of the schools drawing was taught, with the addition of painting in one instance; in 11, vocal music; in 10, instrumental music; 2 had chemical laboratories; 4 some philosophical apparatus; and 7 libraries of 200 to 900 volumes.

PREPARATORY DEPARTMENTS OF COLLEGES.

The reports and catalogues from 7 colleges and universities show an aggregate of 682 students in the preparatory departments of these—130 being in preparation for a classical course in college, and 378 for a scientific course.

BUSINESS COLLEGES.

Four of these institutions—the Art and Business College, Sacramento, the Sacramento Business College, Heald's, and the Pacific in San Francisco—make return for 1875 of 37 instructors and 1,000 students, of whom 15 study phonography; 133, telegraphy; 23, German; 32, French; and 29, Spanish. The first named of these adds drawing and painting to the ordinary business branches, and its return is a model of beautiful penmanship, while Heald's embraces instruction in phonography, telegraphy, German, French, and Spanish.

SUPERIOR INSTRUCTION.

ST. IGNATIUS COLLEGE, SAN FRANCISCO,

Under the care of the Jesuit Fathers, is provided with all the appliances for a practical and scientific education; a laboratory for the assaying of metals; a telegraphic department; the Ignatian Literary Society, for exercise in debate; the Philhistorian Debating Society, to promote the knowledge of history; the Loyola Scientific Academy, for the cultivation of the sciences; a college band, and singing classes, for

the promotion of musical culture. Cost of building, independent of lot, $160,000. Library, 5,000 volumes. Number of students from July 1, 1874, to June 1, 1875, 748, with a corps of 24 professors and teachers.—(Catalogue and return for 1874–'75.)

SANTA CLARA COLLEGE, SANTA CLARA,

Also under the Jesuits, offers instruction in Latin, Greek, French, Spanish, Italian, and German, as well as English, mathematics, natural sciences, metaphysics, and all the ornate branches of a complete college course. The curriculum is divided into two regular courses—the classical and commercial—besides a preparatory department. The laboratories, museums, philosophical apparatus, and libraries, are complete and offer facilities for thorough education in all departments. Professors, 1874–'75, 29; students, 278.—(Catalogue for 1874–'75.)

PACIFIC METHODIST COLLEGE, SANTA ROSA.

In its fourteenth year. A. L. Fitzgerald, president. Eleven members in its faculty, with 274 pupils in attendance, of whom 58 are collegiate. Course of instruction full. Library, 490 volumes.—(Catalogue and return for 1874–'75.)

SANTA BARBARA COLLEGE, SANTA BARBARA,

Has been reorganized, and now offers all the advantages of a thorough academic course, comprising six departments. Modern languages receive special attention. The institution is not sectarian. Library, well assorted, of over 1,000 volumes. Preparatory and academic courses, $175 per annum.

UNIVERSITY OF THE PACIFIC, SANTA CLARA.

A. S. Gibbons, president. Primary and preparatory, classical and scientific departments. Professors and instructors, 10. Ladies admitted to all classes and entitled to the same honors as gentlemen. Boarding hall for ladies only. Yearly expenses, $275. Library, 1,025 volumes.—(Catalogue and return for 1875.)

COLLEGE OF ST. AUGUSTINE, BENICIA.

Incorporated, 1868. College site comprises 20 acres. Buildings commodious and inviting. Aim of the college, to give a thorough physical, mental, and religious training. It has a system of military drill connected with daily duties. Library, 600 volumes. A corps of 14 professors and teachers, with 27 preparatory and 62 collegiate students in 1874–'75.—(Catalogue and return for that year.)

FRANCISCAN COLLEGE, SANTA BARBARA.

Scholastic year of only one session. There is a classical, scientific, and business course of study, with facilities for studying Latin, Greek, Spanish, French, and Italian. Nine professors and assistants. It is conducted by the fathers of the Order of St. Francis.—(Catalogue for 1873–'74.)

OTHER COLLEGES.

The returns of other colleges will be found in the table further on, not, however, including two institutions for the superior instruction of young women, one of which, the Mills Seminary, Brooklyn, shows in its catalogue 23 instructors and 216 students, 21 of these being in Latin, 88 in French, 17 in German, 170 in instrumental, and 68 in vocal music, with 8 in painting and 29 in drawing. The other, the Young Ladies' Seminary, Benicia, reports 10 instructors and 80 students, of whom 50 are in its college classes. Music, drawing, painting, French, and German are taught, but the number of students in each is not specified. Both appear to possess every needed appliance for instruction and physical exercise.—(Catalogue and return to Bureau, 1875.)

UNIVERSITY OF CALIFORNIA.

From the last biennial report of the regents of the university for the years 1873–'75 we collate the following:

President Gilman resigns.—On the 2d of March, 1875, President Gilman presented his resignation, which was regretfully accepted by the board, and on the 31st of the same month his official connection with the University of California terminated. Resolutions of appreciation of the public and private character of Mr. Gilman and of his services to the cause of education were adopted, and entered on the records of the trustees and faculty. Professor John Le Conte was designated to perform such duties in relation to the instruction and discipline of the university as have hitherto devolved upon the president, and on the 29th of March, President Gilman formally presented Professor Le Conte to the faculty and students and many friends of the university who were present on the occasion.

Seventh year of university work.—The university commenced its seventh year of instruction and the third year of its work at Berkeley September 24, 1875. The colleges of

agriculture, chemistry, engineering, mining, and mechanics, and the college of letters all began work at that time. The whole number of students enrolled in the classes at Berkeley was 308, a gain of 80 over the previous year. Of this number, 40 were ladies.

Many changes have been made in the mode of conducting the business of the board since the last report to the Bureau. One of the most important has been the establishment of the secretary's office at the site of the university, where he can personally oversee the expenditures of money. At the close of his administration President Gilman, at the request of the regents of the university, prepared and submitted a clear and concise statement of the progress and condition of the university, from which some of the present material has been derived.

Residences for the professors.—One of the greatest difficulties in the management of the university arises from the fact that many of the professors and instructors are non-residents. The law requires the secretary to live at Berkeley, and he moved there soon after accepting the office. Three of the professors have built houses for themselves; two occupy cottages belonging to the university, paying rent for them; one has hired another cottage in the neighborhood. Several of the younger instructors have been allowed to occupy small rooms in the public buildings, but this is all. It is of the first importance that measures should be taken to provide homes at Berkeley for all the permanent staff of instructors.

Lodging houses for students.—There is much embarrassment about lodgings for resident students. The few rooms in and about the university buildings which have heretofore been occupied by students are now required for educational purposes, and the steady and large increase in the admissions each year is without any corresponding increase in dormitory accommodations. Many applicants seeking admission, and competent to pass the examination, will hence be compelled to defer or abandon entering the university for this reason, unless lodging and boarding places be provided.

Manual labor and pecuniary assistance.—In the University of California, as in other kindred institutions, the honors of literary and scientific distinction are bestowed upon the most meritorious, without any reference to their antecedent training. During four years of the history of the university, there were five scholarships, the incumbents of which received each an income of $500 per year from the beginning to the end of their course, and some of the most meritorious scholars here graduated owe their education to this timely assistance; but the change in the law, effected by the political code, abolished these scholarships, and no such aid is now given. The authorities of the university, however, have done all in their power to throw into the hands of those who wished it opportunities to earn money in various ways. Some have given private instruction to other students; some render assistance in various manual occupations on the grounds and elsewhere; some take care of the buildings; and some have added to their income by employment in the printing office. This printing office, primarily the gift of one of the ex-regents, has not only been found exceedingly convenient, but has been the means also of imparting to many of the students a knowledge of a useful art and of enabling many to add considerably to their income. The total amount earned by students, in various ways, is nearly six thousand dollars. The board has recently reaffirmed its policy of employing student assistants, and has made several appointments and reappointments for the next academic year. The board has also approved the policy of encouraging graduates of the university to prosecute advanced studies, and has granted leave of absence, for one year, to two of the post graduates who were acting as assistants in the college of chemistry, to enable them to pursue special study in Germany, without pay during the term of absence, but assuring them position and advanced salary upon resumption of service.

Improvements.—Work in the department of agriculture has been progressing vigorously. Two propagating houses have been constructed; a commodious and convenient building for work rooms; a well designed and convenient barn has been built, and the principal road which traverses the farming grounds has been marked out and partly graded, to facilitate the farm work. The entire domain belonging to the university includes two hundred acres, some forty of which are reserved for agricultural purposes and experiments, and the remainder to illustrate the principles and methods of landscape ornamentation, forestry, botany, and allied studies. The chair of agriculture has been filled by the appointment of Prof. Eugene W. Hilgard, Ph. D., recently of the University of Michigan.

In the college of mechanics two new instructors have recently been appointed: Professor Hesse and Professor Hoffmann; the former to give instructions in industrial mechanics and the latter in industrial drawing. An order has been sent to Darmstadt for a collection of Schröder's models illustrative of the elements of mechanism, to be purchased at an outlay of $1,000. Professor Hesse has undertaken to make an investigation which will undoubtedly have a very important bearing upon the industries of the State, viz, an investigation of the strength of the timbers which are grown upon the Pacific coast. The results of this work will be communicated to the legislature and will be published for the benefit of all who are engaged in any department of construction.

The College of Mining has recently been organized under the direction of Professor Ashburner, and its plans will be developed as rapidly as possible. During the coming year Dr. Becker will instruct in metallurgy and Professor Hilgard will form a class in mineralogy, and this will be in addition to the instructions given heretofore. The course of instruction occupies four years, leading to the degree of bachelor of philosophy in the college or course of mining. A prize of $50 is offered for proficiency in this department of study by the professor of mining.

The College of Chemistry is designed for those who wish to become professional chemists, either as teachers and investigators or as metallurgists, assayers, and manufacturers in chemical industries; and also for those who wish to become expert chemists preparatory to the pursuit of medicine, pharmacy, mining, &c.

The literary course is based upon history and the general scientific studies.

The classical course corresponds closely with that of classical colleges at the East.

As a part of the final examination for degrees, every candidate is required to prepare a thesis upon a subject closely related to his principal course of study. The object of this regulation is to encourage special original investigations upon important themes growing out of or suggested by the several courses of study in the university, and to afford a good opportunity for stating the results of such researches.

Library and museum.—Under the appropriation made by the legislature at its last session, extensive purchases have been made for the library, thus greatly enhancing its educational value to the students. There have been, also, many handsome private donations to the library. The collections belonging to the museum of the university, though still incomplete, are in many departments both large and valuable. The geological survey collection has been added to it. The specimens of all kinds are, by the act creating the survey, the property of the university, and will soon be opened and properly arranged.

Professor Soulé has made an elaborate report to the regents upon the water question, having in view not only the present necessities of the institution, but also the probability that a large neighborhood will require to be supplied from the springs which the university controls.

Oriental college.—By the terms of a gift of Mr. Tompkins to the university, the regents have come under obligations to establish and maintain a professorship of Oriental languages, especially of Chinese and Japanese.

At the opening of Congress in December, 1873, President Grant recommended that the Japanese indemnity fund be devoted to educational purposes. Subsequently, a bill was brought before the United States Senate, by Hon. A. A. Sargent, the purport of which is to bestow annually the income which shall be derived from the Japanese indemnity fund upon a board of seven trustees. These trustees, should the bill pass, are to maintain, in connection with the University of California, an Oriental college, which will have three objects: (1) to promote international acquaintance and good will, by assembling a body of learned teachers who shall inquire into and make known the languages, laws, religious and political institutions of the Orient; (2) to afford young Americans an opportunity to fit themselves for diplomatic, consular, mercantile, and scientific careers in Asia; and (3) to give to young Japanese an opportunity to become acquainted with the civilization of the western nations.

Instruction of young women.—When the University of California was organized its doors were freely opened to all properly qualified students above a certain age. Young ladies were admitted as well as young men. For the last six years the number taught has been respectively for each successive year, beginning with 1871, as follows: 8, 27, 39, 22, 39, and 40. One of these has graduated; 12 are members of regular courses of instruction, as candidates for degrees. But by far the larger number of these young ladies have been attendants upon special courses of instruction, especially upon the lessons of the professors of modern languages. The scholarship of those who have entered the regular courses of instruction has for the most part been excellent, and in some cases has been of the very highest rank.—(Report for 1875, included in State report.)

PROFESSIONAL INSTRUCTION.

MEDICAL DEPARTMENT OF THE UNIVERSITY.

The class in this department in the session of 1874–'75 was the largest ever assembled west of the Rocky Mountains. This extremely gratifying evidence of success has encouraged the faculty to renewed exertions and to provide improved facilities for teaching medicine in all its branches. The museum of the college has recently received large accessions to its collections in the various departments fitted for illustrating the lectures. It now contains some 4,000 different specimens. The library consists of 1,400 volumes. Students are admitted without regard to sex.—(Report included in the State report, pp. 381–384 of appendix.)

COLLEGE OF PHARMACY.

In accordance with the organic act of the university, the California College of Pharmacy is affiliated with the university, which confers the degree of graduate in pharmacy upon candidates recommended by the board of examiners of the college and approved by a committee designated by the regents. The reports of the officers show that the institution is in a very satisfactory condition. The several chairs of instruction are filled by able, practical men, with ample experience in the different departments over which they preside.—(Report included in State report, p. 385 of appendix.)

SAN FRANCISCO MEDICAL SOCIETY.

Organized, 1868. Object, the cultivation and advancement of the science, by united exertions for mutual improvement, and contributions to medical literature. Its chief aim is to elevate the standard of medical education. It has a large membership.

CALIFORNIA PHARMACEUTICAL SOCIETY.

Incorporated, 1871. Object, to improve the science and art of pharmacy, by diffusing knowledge among apothecaries and druggists, fostering pharmaceutical literature,

developing talent, stimulating discovery and invention, and encouraging home production and manufacture. It has 150 members, who meet monthly for business.—(Report of society for 1875.)

SAN FRANCISCO THEOLOGICAL SEMINARY.

Inaugurated by the synod of the Pacific of the Presbyterian Church in 1871, but open to students of all denominations. The qualifications for admission and the course of studies are the same as in the oldest and best theological schools of the East. Having been in active operation three years, this institution is now fully organized. It has a library of over 6,000 volumes, with free access to the Mercantile, Mechanics', and Odd Fellows' Libraries of the city. Each student receives tuition and the use of a furnished room free.—(Circular for 1874.)

PACIFIC THEOLOGICAL SEMINARY, OAKLAND.

Under the auspices of the Congregational Church, but open to all. No charge for tuition, rent of rooms, or use of furniture. The American Educational Society will render aid to the pupils of this seminary who are especially needy and who take the full course of three years. The amount bestowed will be $80 to $100 per year to each beneficiary.—(Circular for 1875.)

SPECIAL INSTRUCTION.

SCHOOL OF DESIGN, SAN FRANCISCO.

The School of Design was inaugurated in the beginning of the year 1873, and was the outgrowth of the San Francisco Art Association. During the first year the average number of pupils was 58; average daily attendance, 43. Second year, average number of pupils, 61; average daily attendance, 45. Number of drawings in the exhibition of the present year, 602; number of oil studies, 134. The expenses of the school for the first year, including furniture, advertising, salaries, &c., amounted to $1,229.80; second year, $3,184.84; total, $7,414.64; receipts, $6,487.53; leaving a deficit of $927.11, which was assumed by the Art Association. Both the Art Association and the School of Design are supported wholly by the voluntary subscription of the public. The exhibition of 1875 evidenced the high standing of this art school, and the talent of its pupils not less than the superior instruction afforded by the teacher in charge.—(Mrs. S. B. Cooper.)

SAN FRANCISCO ART ASSOCIATION.

The membership of this association during the four years of its existence has increased to 596 ordinary, 108 life, and 6 honorary members. In the promotion of the fine arts in San Francisco it has done noble service.—(Mrs. S. B. Cooper.)

MECHANICS' DELIBERATIVE ASSEMBLY, SAN FRANCISCO.

Organized, 1873. Object, to discuss and promote a system of labor schools, to enable boys and girls to learn trades as a part of their education in the common schools, and provide for the education and employment of all classes of children; to prepare bills to be presented to the legislature of the State for adoption looking to these ends, and take such steps as may be necessary to secure their passage.—(Mrs. S. B. Cooper.)

CALIFORNIA ACADEMY OF SCIENCES, SAN FRANCISCO.

This academy, organized in 1853, has now a membership of nearly 500, of whom 78 are life members. The society holds its stated semi-monthly meetings in the academy buildings, and they are of marked and increasing interest. The scientific progress of the academy has been satisfactory, and valuable additions have been made to the museum. Total expenditures for the year, $4,369.—(Mrs. S. B. Cooper.)

DURANT RHETORICAL SOCIETY, OAKLAND.

Organized, 1860, by the first freshman class of the College of California. All regular members of the university are eligible to membership. The exercises are of a purely literary character. The society assists in publishing a monthly paper called The Berkeleyan, devoted to science, literature, and university interests.—(Mrs. S. B. Cooper.)

OAKLAND HARMONIC SOCIETY.

Organized, 1870; object, the promotion of musical science. Society in a flourishing condition.—(Mrs. S. B. Cooper.)

HANDEL AND HAYDN SOCIETY, SAN FRANCISCO.

The leading musical society of the Pacific coast. Membership, 250. Musical concerts of a very high order are given under its auspices.—(Mrs. S. B. Cooper.)

EDUCATION OF THE CHINESE.

The State makes no provision for the education of the Chinese on the Pacific coast. The prejudice against the race is so strong that Chinese are not allowed a place in the public schools, with only a rare exception, here and there, in some lonely mountain district; and school directors, when petitioned to provide in some way for the education of Chinese children, pass the subject by, although the Chinese pay their full proportion of the taxes. As these people are already in great numbers on this coast; as they will continue to come so long as the country needs their labor; as they are beginning to purchase real estate, and will do so more and more; as year by year more Chinese children are born in this country, and as these must by and by become citizens, it is made not merely a matter of benevolence, not a matter of justice only, but also and emphatically a matter of policy and of self-preservation, to provide for their instruction, as for the children of all other people coming from foreign lands, and it might be a wise policy to adopt some plan of compulsory education in reference to them. The number of Chinese on the Pacific coast at the present time has been estimated to be about 120,000. There are said to be 19,000 in San Francisco. Probably fully one-third of those who come to this country are under the age of 21. Scarcely any of them bring their families, and all expect to return to their own land eventually; but as they become more firmly settled in business and become interested in real estate, more of them will remain here permanently. The matter of education, in view of all these facts, becomes one of most serious moment.—(Mrs. S. B. Cooper.)

CHINESE MISSION, (PRESBYTERIAN,) SAN FRANCISCO.

Mission established in 1853. Building 37 by 44 feet, two stories and a basement. The work now performed by this mission demands buildings of three times this capacity. Secular school held every evening of the week. Average attendance, 110. Studies from the alphabet to arithmetic, geography, grammar, history, together with classes in philosophy, chemistry, astronomy, algebra, and geometry. Ages of the scholars range from 8 to 30, and often men much older commence with the alphabet and press on with indomitable perseverance till they can read and write, and thus transact business with our own people with ease and accuracy. Among all the scholars the eagerness to learn is remarkable, and their progress in knowledge is, in many cases, quite astonishing. Besides the missionaries and their wives, three or four assistants are employed in teaching. The expenses of the mission are paid entirely by the Board of Foreign Missions of the Presbyterian Church, and no tuition is received from the scholars. There are also branch missions at San José and Sacramento, in each of which a lady teacher and a Chinese assistant are employed. These, likewise, are free schools, taught in the evening, the average attendance being thirty or forty. A goodly number in all these schools continue to attend for three, four, or five years; some for a much shorter period. Many Chinese youth who have received their education at our schools have been employed by their countrymen in teaching private classes, and hundreds find employment as interpreters.—(Mrs. S. B. Cooper.)

CALIFORNIA CHINESE MISSION, CONGREGATIONAL.

Eleven mission schools have been maintained during a portion or the whole of the year; three of them in San Francisco, and one in each of the towns of Antioch, Los Angeles, Oakland, Redwood, Sacramento, Santa Barbara, Santa Cruz, and Stockton. More than 1,800 Chinese have attended at some time during the year, and the close of the school year showed 483 enrolled members, and an average attendance of 300. At the close of last year but 73 were reported as having attended steadily for three months or more; this year the number under the same head is 159. Whole number of teachers employed in these schools, 16, 3 of whom are Chinese helpers. Total expenditures, $6,504.35. The progress made in studies has been highly encouraging, and the schools are in good condition. Rev. W. C. Pond is the superintendent in charge.—(Mrs. S. B. Cooper.)

CHINESE MISSION, (BAPTIST,) SAN FRANCISCO,

Has had a prosperous year of work in the education and evangelization of the Chinese. Connected with this mission is an evening school for teaching the Chinese in the English language. Marked progress has been made during the year. The mission has a good library of several hundred volumes.—(Mrs. S. B. Cooper.)

CHINESE MISSION, (METHODIST,) SAN FRANCISCO.

This mission employs two native teachers, besides several competent English teachers. The work is rapidly increasing, and is attracting the interest and energies not only of the Methodists upon this coast but those of the East. They have a fine school building, erected at a cost of $32,000, one-third of which was contributed by friends on this coast and the balance by the Missionary Society of the Methodist Episcopal Church. There are a well graded school and an asylum for Chinese women and girls, both of which are doing excellent work.—(Mrs. S. B. Cooper.)

CHINESE MISSION DAY SCHOOL.

This is a free day school for Chinese boys and girls, taught by an American lady, with a Chinese assistant. The teaching is both in English and Chinese, with singing and oral instruction, and lessons in needle work for the girls. The attendance ranges from 20 to 30. This school is supported by a society of ladies of different denominations, and has been in operation about seven years. They occupy rented rooms. Many of the early pupils have returned to China. Some of the boys, now grown to be young men, are finding ready employment as assistants and interpreters in Chinese business houses, and will advance into positions of wider influence and usefulness. This school is regarded as one of the most important auxiliaries in the work of education among the Chinese on the Pacific coast. It is a work that could be greatly enlarged in its scope of usefulness if more funds were at command.—(Mrs. S. B. Cooper.)

PROTESTANT ORPHAN ASYLUM.

This valuable charity has had in charge 244 children during the past year. Of this number 150 are now in the asylum, and 136 are receiving instruction in the well regulated school department. A spirit of increased emulation exists, and the advantages of the school were never so much prized by the children as now.—(Mrs. S. B. Cooper.)

LADIES' PROTECTION AND RELIEF SOCIETY, SAN FRANCISCO.

This society has provided for more destitute children during the past year than in any former year of its existence. The school connected with the institution has done good work, as was evinced by public exercises in 1875. Upwards of 200 children received instruction during the year. Girls under the age of 14 and over 2 years, and boys under 10 and over 3 years, are admitted to this home. Some of the children show remarkable proficiency. The instruction given prepares them to enter the public schools under favorable auspices.—(Mrs. S. B. Cooper.)

ROMAN CATHOLIC ORPHAN ASYLUM.

This institution has several branches. The asylum in San Francisco is a capacious brick building, valued at $45,000. The school numbers several hundred children. The St. Joseph's Infant Asylum comprises a farm of 53 acres in South San Francisco, where several hundred more children receive the best care and thorough educational training. This latter building accommodates 800 children. The Sisters of Charity have both schools in charge. They report unprecedented success for 1875.—(Mrs. S. B. Cooper.)

ST. BONIFACE ORPHAN ASYLUM.

This asylum receives destitute children of every nationality and religious belief. It instructs them in all the branches of a primary English education. The asylum has all the children it can accommodate, and the teachers report unusual advancement in study.—(Mrs. S. B. Cooper.)

LITTLE SISTERS' INFANT SHELTER.

Although scarcely two years old, this charity has become one of the important auxiliary aids in behalf of the protection and education of the young children of mothers who are compelled to go forth to labor for the support of their families. Children are left at this institution for the day and receive tender care and faithful instruction.—(Mrs. S. B. Cooper.)

BOYS AND GIRLS' AID SOCIETY.

This society furnishes lodgings, bath, reading, library, assembly rooms, and gymnasium to the neglected and friendless boys of the city. It is a valuable charity, and has done much toward the elevation of the "hoodlum" element of San Francisco.—(Mrs. S. B. Cooper.)

PACIFIC HEBREW ORPHAN ASYLUM, SAN FRANCISCO,

Has been doing active work the past year. Many orphan children of the Israelitish faith have been protected and educated. This society, though only in the fourth year of its existence, has done much toward the relief and education of destitute children and distressed persons of maturer years. It is well organized, and proposes to enlarge its work the coming year.—(Mrs. S. B. Cooper.)

SCANDINAVIAN LADIES' RELIEF SOCIETY.

Organized, 1874. The object of this society is the founding of a home for the needy, sick, and destitute, and for the care and education of the children who belong to the destitute of the Scandinavian race. It has started under most encouraging auspices. Already much good has been accomplished, although the society is still in its infancy.—(Mrs. S. B. Cooper.)

SOCIETY FOR CHRISTIAN WORK.

This society is connected with the First Unitarian Church, and is one of the most active agencies for good. It conducts a free sewing school for the education of poor children in this industry. Over 300 children avail themselves of the advantages offered. It also distributes to the prisons, jails, hospitals, and asylums contributions of reading matter, which are deposited in a box in the vestibule of the church. During the past year there have been distributed by this society 441 books, 2,859 magazines, 4,762 newspapers, among 15 public institutions. Besides carrying much of pleasure, these documents are promotive of enlightenment and profit.—(Mrs. S. B. Cooper.)

TEACHERS' MUTUAL AID SOCIETY.

This society, organized in 1873, has done good work in the relief of sick and disabled teachers. The board of directors meets semi-monthly, at the rooms of the board of education, and mutual assistance is pledged and rendered to any teacher in the San Francisco school department who may require it.—(Mrs. S. B. Cooper.)

ST. MARY'S LIBRARY ASSOCIATION.

This society was organized in 1874, for benevolent and literary purposes. It meets semi-monthly, and its object is to provide for the temporal welfare and literary advancement of needy members of the Catholic faith.—(Mrs. S. B. Cooper.)

LIBRARIES OF SAN FRANCISCO.

We now claim to have a population of upwards of 240,000, and the three principal libraries—the Mercantile, Mechanics' Institute, and Odd Fellows'—contain about 100,000 volumes of reading matter. The Mercantile Library has 40,000 volumes and the other two 30,000 each. In addition to these there are some smaller ones, each containing five or six thousand volumes, and several circulating libraries. From the three libraries named above during the past year about 240,000 volumes were drawn, or one volume for every one of our population, including men, women, and children. From the Mercantile Library were taken 84,763 books; from the Odd Fellows', 78,700 books. Each of these libraries has a large reading room well filled with all the daily and weekly papers and magazines, and well patronized by the members of each. The membership of the three libraries amounts to 7,364, divided as follows: Odd Fellows', 3,847; Mercantile, 2,041; Mechanics' Institute, 1,476. The aggregate income from the three libraries the past year was nearly $61,000; the expenditures $60,400, leaving a small balance in favor of the management. The Mercantile Library charges an initiation fee of $2 and quarterly dues of $2 each; the Mechanics' Institute charges $1.50 quarterly per member. The Mercantile Library is a large and massive edifice; library and chess room are on the second floor, and the reading room on the floor above. There is still a story above this. During the past year this society has printed a catalogue of its books at an expense of nearly $12,000 for 1,650 copies. These three institutions alone are sources of vast information to our community, and help greatly to

increase the intelligence of our people. And when we add to these all the well-stored private libraries, the circulating libraries of less pretension, the vast number of books purchased annually at all the bookstores, besides the numberless newspapers and magazines taken and read, we may truly consider our intellectual advantages the crown and glory of our American citizenship.

THE MILITARY LIBRARY

of San Francisco was organized in 1873. It is sustained by officers of the National Guard of the State of California. It contains 900 volumes and 150 maps. Any person may become a member by the payment of $5. There are no subsequent dues.

INSTITUTION FOR THE DEAF AND DUMB AND THE BLIND, NEAR OAKLAND.

On the 17th of January, 1875, this beautiful structure was destroyed by fire. Fortunately there was no accident to life or limb, though most of the teachers, employés, and children lost all their effects. The directors took immediate action, and arrangements were made for the temporary shelter of the children; the annual vacation was at once declared, in place of the usual midsummer one. A committee of leading citizens came forward and gave their personal notes for a sum sufficient to erect temporary buildings, until the legislature should convene in 1876, depending on an adequate appropriation by that body. With the greatest activity, it will take two years to put up a proper building, and in the mean time the natural increase of the deaf and dumb, augmented by the vast tide of immigration setting toward this favored land, goes steadily on. Statistics prove that there is 1 deaf-mute in every 2,000 of population; of blind, about 1 in 1,500.

The total receipts from all sources during the past two years are $101,923.22. The total expenditures have been $101,923.22. The number of pupils received in the same period, 113: deaf and dumb, 75; blind, 38. Of these, the number remaining in the institution July 30, 1875, was 94: deaf and dumb, 64; blind, 30. The health of the inmates has been uniformly good; their conduct has also been good, and, as a consequence, the educational department has progressed satisfactorily. The temporary abandonment of a portion of the mechanical department is a source of regret, but the only remedy lies in the early reconstruction of the institution, when the present building will be restored to the use for which it was designed. The loss of this splendid stone edifice, costing $150,000, together with all its valuable equipment, is directly traceable to its wooden roof. Besides this, the lives of its helpless inmates were imperiled, and all for the lack of the comparatively trifling outlay necessary to cover it with slate. The importance of constructing buildings intended for the care and protection of unfortunates in such a manner as to reduce the fire risk to a minimum can scarcely be overestimated.

For the last two years the discipline of this institution under its principal, Warring Wilkinson, M. A., has been maintained almost entirely by the stimulus of the roll of honor. The pupils study diligently, and are daily developing the better traits of manhood and womanhood.—(Mrs. S. B. Cooper, from appendix to State report, pp. 427–439.)

STATE PRISON SCHOOL.

The employment of the larger portion of the convicts in the workshops deprives them of the privilege of the school during the week, thus reducing the school days to Sundays. During the year the school days had an average attendance of 210, of which number 28 acted as assistant teachers. Of the 210, 156 were Caucasians, 23 Chinese, 26 Indians, 5 negroes. The different branches of study were distributed as follows: Reading and writing, 122; arithmetic, 35; English grammar, 20; German, 9; Spanish, 16; miscellaneous studies, 9. The progress made by the large majority of the pupils is satisfactory. The necessity for a rule compelling the convicts, or at least such as are without the rudiments of an education, to attend school is very apparent.

On this subject Mr. Smith, the instructor of the convicts, says: "Other things being equal, the community which is the best educated is the freest from crime. Our prison statistics show that our criminal population is generally illiterate. Many of the convicts can neither read nor write. If the State prison be a reformatory institution as well as a place of punishment, all reasonable measures should be taken to prepare the convict for a better life when his term of incarceration shall have expired; and surely to instruct him in the simpler branches of study will be a benefit to him, and indirectly to the community."

The library has 3,103 volumes, a large portion of which are historical, books of travel, and biographies. Number of prisoners who have drawn books from library, 600. Total number of books issued during the year, 17,400. A taste for reading has been developed in many of the prisoners, thus improving and benefiting them.

Mr. Smith remarks: "My observation leads me to believe that the average convict who can read is hardly less sensitive to good influences than is the average man who has never been tempted to commit a crime."—(Mrs. S. B. Cooper.)

CITY AND COUNTY INDUSTRIAL SCHOOL.

Number of inmates remaining in the institution July 1, 1875, 222. Of these, 166 were boys and 56 were girls. Twenty of the States of the Union were represented and 13 foreign countries; 194 of the inmates during the year being native born and 31 of foreign birth. During the past year, besides those granted leave of absence and discharged at the solicitation of parents and guardians, 58 boys have been placed with farmers and tradesmen; 17 have been shipped into the naval service of the United States and 5 on board merchant vessels. The band of the institution, consisting of 19 boys, has made great improvement during the year, and is a pleasing feature of the school, having an elevating and humanizing influence on the inmates. Some of these boys are developing into first class musicians, and will doubtless adopt music as a profession. The library numbers 800 volumes.

In the school department there are two sessions daily. Text books employed are similar to those used in the public schools of the State. There are eight grades in the school, classified as follows: the first, second, and third grades belong to the first class; the fourth and fifth, to the second; and the sixth, seventh, and eighth, to the third class. Total in first class, 45; total in second class, 57; total in third class, 60. Whole number attending school June 30, 1875, 162. The classes, during the past year, have been closely graded. All in all, the year has been one marked by constant improvement.—(Mrs. S. B. Cooper.)

SAN FRANCISCO TRAINING SHIP JAMESTOWN.

This vessel is established under authority contained in an act of Congress of June 20, 1874, to establish marine schools, and an act of the California legislature of February 15, 1876, to establish and maintain a training ship at the port of San Francisco.

The ship is furnished by the General Government equipped for service and officered by gentlemen selected from the Navy. The city of San Francisco bears all the expense of maintaining the vessel, the management being vested in the board of supervisors of the city and county. She will be stationed in the bay of San Francisco, except when cruising for the practical instruction of the pupils on board. About one-half the time will be thus employed. The object of the training ship is declared by law to be the instruction of boys in practical seamanship and navigation and nautical evolutions, in order to fit them for duty as sailors and officers of merchant vessels. It is intended to make a charge for the admission of pupils sufficient to defray the cost of their food and clothing simply, all books and instruction being free.

In order to give to all classes opportunity of taking advantage of the benefits of the school, the city will remit all charges in cases of poor but deserving boys. The only bar to admission is conviction for crime, and no one will be received on board as punishment or in commutation of punishment for crime. The studies pursued will be chiefly nautical, practical instruction predominating, but it is also intended to give as thorough instruction in English studies as the term of service will permit. The longest term of service will be two years, and for that time the city assumes all the duties and responsibilities of legal guardian of the boys on the vessel. When boys are found at any semi-annual examination to be qualified for duty afloat, they may, with their consent, be apprenticed to regular sea-going vessels, either of the Navy or mercantile marine.

The Jamestown will be fairly in operation early in April, 1876, and will be prepared to take on board about 250 boys, should so many apply for admission. It is believed that about 200 boys per annum will be instructed and sent to sea from the training ship after she is in operation.—(Mrs. S. B. Cooper.)

LIST OF SCHOOL OFFICIALS IN CALIFORNIA.

Hon. EZRA S. CARR, *State superintendent of public instruction, Sacramento.*

STATE BOARD OF EDUCATION.

Name.	Office.	Post-office.
His excellency William Irwin	*Ex officio* president	Sacramento.
Hon. Ezra S. Carr	State superintendent of public instruction, secretary.	Sacramento.
Henry N. Bolander	Superintendent of San Francisco County common schools.	San Francisco.

CONNECTICUT.

STATISTICAL SUMMARY.

SCHOOL POPULATION AND ATTENDANCE.

Number of children between 4 and 16 years of age, January, 1874	133,528
Number of pupils registered in winter schools	99,550
Increase for the year	4,351
Number of pupils registered in summer schools	89,674
Increase for the year	2,687
Number registered who were over 16 years of age	4,266
Whole number of different pupils registered in public schools	119,298
Increase for the year	4,441
Number in other than public schools	8,422
Decrease for the year	107
Number in schools of all kinds	127,720
Increase for the year	4,334
Number between 4 and 16 years in no school	13,030
Decrease for the year	2,804
Average attendance at winter schools	71,433
Increase for the year	4,261
Average attendance at summer schools	63,052
Increase for the year	2,147
Percentage of registration during the year on enumeration of January, 1874	89.34
Increase for the year	2.93
Percentage of children in schools of all kinds	95.65
Increase for the year	2.82
Percentage of winter registration on enumeration	74.55
Percentage of summer registration on enumeration	67.16
Percentage of average attendance in winter on registration	71.76
Increase for the year	1.20
Percentage of average attendance in summer, on registration	70.31
Increase for the year	.29
Percentage of average attendance in winter on enumeration	53.50
Increase for the year	2.97
Percentage of average attendance in summer on enumeration	47.22
Increase for the year	1.40

TEACHERS AND TEACHERS' PAY.

Number of teachers in winter: males, 704; females, 1,897	2,601
Decrease of males for the year, 7; increase of females for the year, 87; total increase of teachers	80
Number of teachers in summer: males, 258; females, 2,303	2,561
Increase for the year: males, 12; females, 57	69
Number of teachers continued in the same school	1,690
Increase for the year	116
Number of teachers who never taught before	539
Decrease for the year	79
Average wages per month of male teachers	$71 48
Increase for the year	2 45
Average wages per month of female teachers	36 67
Increase for the year	0 62

SCHOOL DISTRICTS AND SCHOOLS.

Number of towns in the State	166
Number of school districts in the State	1,495
Decrease for the year	7
Number of public schools	1,642
Decrease for the year	6
Number of departments in public schools	2,458
Number of schools of two departments	115
Number of schools of more than two departments	145
Whole number of graded schools	260
Increase for the year	24
Average length of public schools ..... days	176.29
Increase for the year ..... do	2.11

SCHOOL-HOUSES.

Number of new school-houses built in the year	40
Number of school-houses reported in good condition	934
Increase for the year	14
Number of school-houses reported in fair condition	504
Increase for the year	5
Number of school-houses reported in poor condition	218
Decrease for the year	22

INCOME AND EXPENDITURE.

Receipts.

Income from school fund		$133,528 00
Received from State school tax		200,292 00
Received from town deposit fund		46,003 03
Received from local funds		16,064 71
Received from town tax		669,856 88
Received from district tax		502,500 80
Received from voluntary contributions		6,637 89
Received from other sources		38,064 33
Total receipts for public schools		1,612,947 64
Increase for the year		70,458 44
Amount for each child enumerated		12 08

School fund.

Income of school fund distributed February 28, 1874	$133,528 00
Dividend per child from school fund 1874	1 00

—(From report of Hon. B. G. Northrop, secretary of State board of education, for 1874–'75, pp. 20–23.)

SCHOOL SYSTEM OF THE STATE.

CONSTITUTIONAL PROVISIONS.

The constitution of 1818, besides confirming the charter of Yale College, provided (Art. VIII, section 2,) that "The fund called the *school fund* shall remain a perpetual fund, the interest of which shall be inviolably appropriated to the support and encouragement of the public or common schools throughout the State, and for the equal benefit of all the people thereof, * * * * and no law shall ever be made authorizing said fund to be diverted to any other use than the encouragement and support of common schools."

PROVISIONS OF THE SCHOOL LAW.*

OFFICERS.

The educational officials are a State board of education, with a secretary, who is substantially superintendent of public instruction; town school visitors; district committees; district boards of education, and an agent of the State board for the enforcement of a compulsory school law.

POWERS AND DUTIES OF THESE OFFICERS.

The State board is composed of the governor and lieutenant-governor, as *ex officio* members, and four persons appointed by the general assembly from the four congressional

* From the revised Laws Relating to Education, 1872, with amendments, 1874.

districts, one in each year, who hold office for four years. This board has general supervision and control of the educational interests of the State; has power to direct what books shall be used in all the public schools; to prescribe the forms of registers to be kept and of returns to be made from these; and may hold, at convenient times and places, conventions of school officers and teachers, for the purpose of instruction in the best modes of administering, governing, and teaching public schools.

The secretary of the board is appointed by it, and is its main executive officer for supervision of the schools of the State, visiting them as its agent, collecting information respecting them from the school visitors, reporting annually all important matters in relation to their condition, and using every means within his power to awaken and guide public sentiment to consideration of the practical interests of education.

The town school visitors form in each township a board of six or nine members, elected by the people for three years, and divided into three classes, one of which goes out each year and is replaced by a newly elected one. These visitors are the delegates of the people in matters relating to public education; prescribe rules and regulations for the schools of the township; examine and license teachers for them; revoke the certificates of unfit teachers; present plans for new school-houses; and, through one or more of their own number, usually called acting school visitor, or visitors, make inspection of the schools at least twice in each term, reporting to the board the condition of them, with any needed suggestions as to improvements that may seem advisable. The board is to hold meetings at least once in each six months.

District committees, consisting of not more than three persons, with a clerk, treasurer, and collector, are chosen annually by the voters of each school district, or, in failure of such choice, are appointed by the school visitors of the town in which the district is situated. It is the duty of these committees to give due notice of all regular meetings of the district; to call special meetings on the written request of one-fifth of the voters, or of their own motion; to employ for the schools such teachers as may have been licensed by the visitors; to provide suitable school-rooms; to furnish these with fuel properly prepared; to visit the schools at least twice during each term; to provide books for pupils unable to procure them; to expel unruly scholars, and to give the school visitors such aid and information as they may require.

District boards of education perform in certain places, as successors to the old "school societies," essentially the same duties as school visitors, and may, like them, delegate their powers of visitation to an acting school visitor, who answers to the "superintendent" of other portions of the country.

SCHOOLS.

Besides the elementary schools—in which reading, writing, English grammar, geography, and arithmetic are to be taught, and which all well children* between 8 and 14 must (unless otherwise instructed) attend for at least three months of every year—provision is made for high schools and for a State normal school, with a primary model school attached, and for other special schools. To obtain State aid in addition to the local school funds, the schools must be held in each district for at least thirty weeks in the year, if the number of children between 4 and 16 be twenty-four or more; and for at least twenty-four weeks, if the number of such children be less than twenty-four. School-houses, with outbuildings, satisfactory to the board of school visitors, must also be provided, and the required report of the condition of the schools must have been made in due time.

Such a connection has existed between Yale College and the State government as to make that institution in some sense the State University, and the Sheffield Scientific School of that college receives now the income of the State Agricultural and Mechanical College fund, educating upon that basis a certain proportion of free pupils.

SCHOOL LIBRARIES.

Provision is made for the establishment and maintenance of libraries in every school district, and in every town maintaining a high school, the State paying one-half the expense of their first establishment and annual support, on condition that the district or town pay the other half; ten dollars at the first, and five annually thereafter, being, however, the ordinary limit of the State allowance. The board of school visitors have control of the selection, purchase, and management of such libraries, which may include philosophical and chemical apparatus.

SCHOOL FUND.

A State school fund of more than $2,000,000 enables the State board to supplement by grants aggregating upwards of $130,000 annually the amounts derived from local school funds or taxation for the support of public schools. It is proposed that the income from this fund be increased by investments at higher rates of interest, which may yield some $20,000 more per annum.

* No distinction as to race or color is made in the school law.

ELEMENTARY INSTRUCTION.

PROGRESS DURING THE LAST TEN YEARS.

Ten years having now elapsed since the board of education was constituted, this is considered "a fit occasion for reviewing the record of the past decade, and noting what changes have occurred." The following table, giving a comparative view of certain items from the reports of 1865 and 1875, shows some of these changes:

	1865.	1875.	Increase.
Number of children enumerated	112,098	133,528	21,430
Number of children registered, winter	77,126	99,550	22,324
Number of children registered, summer	69,057	89,674	20,617
Percentage of children registered, winter	68.80	74.55	5.75
Percentage of children registered, summer	61.60	67.16	5.56
Average attendance in winter	55,361	71,433	16,072
Average attendance in summer	47,771	63,052	15,281
Wages per month, male teachers	$33 00	$71 48	$ 8 48
Wages per month, female teachers	18 00	36 67	18 67
Amount of town tax for schools	87,704 00	669,857 00	582,153 00
Amount of district tax for schools	140,414 00	502,501 00	362,087 00
Total of receipts for schools	453,663 00	1,612,948 00	1,159,285 00
Expended for new school-houses and repairs	95,817 00	388,092 00	292,275 00

It appears from this table that, while the number of children has increased in ten years less than 20 per cent., the number in school has advanced nearly 30 per cent.; that the wages per month of teachers have more than doubled; that the amount raised for schools by district tax, as also the whole amount raised, is over three and a half times as great, and the amount raised by town tax nearly eight times as great now as ten years ago. The sum expended for building and repairing school-houses increased more than fourfold. In ten years there has been thus expended nearly $3,191,369, and the total of all expenditures has been considerably over $12,000,000. This is, doubtless, more than had been paid for maintaining public schools in this State during the previous half century.—(Report of board of education, p. 6.)

SCHOOL FUND.

The advance in the rate of interest on this fund from 6 to 7 per cent., under the law enacted in 1872, has so increased the income that the dividend per child for the current year is larger than for any year since 1868. As the number of children in the State continues to increase, however, the rate of dividend must ere long fall back to that of recent years. The relative importance of this fund is necessarily diminishing. One generation ago its income furnished the greater part of all that was paid for teachers' wages. At the present time seven-eighths of their compensation comes from other sources.—(Report of board of education, p. 14.)

SCHOOL LAW CONCERNING APPROPRIATIONS.

Every town now receives annually from the State treasury $1.50 for each child between 4 and 16 years of age. This is paid as well for those who seldom or never attend school as for those who attend constantly. This paying of money from the State treasury for the schooling of those who do not attend school is thought, however, unjust to towns and districts which make efforts to insure the full and regular attendance of their children. The board of education therefore recommend that a sum equal to $1.50 for each child enumerated, the amount now paid, be distributed among the several towns in proportion to their number of enumerated children who have been actually present in public schools the previous year not less than the full time of 20 weeks; that is, 100 school days. This would act as a reward for attendance, and a penalty for neglect.—(Report of board of education, p. 14.)

ATTENDANCE.

As the result of the various measures adopted for securing increased attendance, the proportion of children in the public schools has advanced from 80.38 per cent. in 1867–'68 to 89.34 per cent. in 1873–'74. The actual increase has been about 20,000, while the increase in enumeration in the same time was about 10,000. No State in the Union has a larger portion of its children in its public schools than Connecticut. The aggregate attendance last year was 95.65 per cent. of the whole number enumerated—the highest figures ever reached in the State.—(Report of board of education, p. 8; and report of secretary, p. 31.)

IRREGULARITY IN ATTENDANCE.

While the review of the past ten years shows a gratifying progress in nearly every particular, it reveals the fact that in *regularity* of attendance there has been no im-

provement. The proportion of those registered in any term who are present each day has for several years ranged usually between 70 and 73 per cent. for the whole State. In the different towns the range has been from a little over 50 to nearly 90 per cent.; and in some districts the attendance has been even less than 40 per cent. For this wide diversity no sufficient reason can be assigned, and there is nothing that explains the low rate for the entire State, nor the fact that certain towns usually report a large and others a small percentage. A partial explanation is afforded by the fact that many of the children whom the "compulsory attendance law" brings into school remain there no longer than the law requires, viz, three months. But school terms are frequently four or five months in length, and the withdrawing of a considerable number of scholars after three months' attendance renders the percentage for such term very low. Thus the great success which has been attained in gathering children into school has had the effect of diminishing, apparently, the regularity of attendance.

It is recommended, as the most direct means of securing greater regularity, that the school law be so modified as to require every town to print each year the report of its acting visitor, and to place a copy in every household within its limits. The people of each town would then have, what is now hardly attainable, some definite knowledge of their own school affairs, and of their standing as compared with other towns. Facts and arguments could be put before them which could not fail to promote their active interest in popular education, and especially would a clear and forcible presentation of the prevalence and the evils of irregular attendance conduce to the diminishing of that great wrong.—(Report of board of education, pp. 8, 9, 13.)

LEGAL PREVENTION OF ILLITERACY.

Public sentiment is steadily growing in favor of the legal prevention of illiteracy. Stringent as are the laws on this subject, they have awakened no public opposition. A few individual malcontents among recent immigrants, mostly from Canada, have complained because their children could not be continuously employed in factories. A few parents—not a dozen in all have been heard of—openly defied the law, but as soon as they found that the law was imperative and the school officers in earnest, and that legal complaints were made out against them, they were glad to stay proceedings by compliance with its provisions. The manufacturers have, as a rule, shown a degree of liberality and interest in education worthy of commendation. A courteous reminder from the agent or secretary of the board has been sufficient to remedy occasional instances of inadvertency. Both political parties favor the law. No suggestion for its repeal has been made in the legislature, nor, so far as is known, in any caucus or public meeting in the State.

The agent of the board has rendered valuable service in securing the observance of the law. He has devoted 116 days to this work, and the total amount expended in the service was $1,175.62.

Inquiries were made in about 500 establishments. Children under 14 years of age were employed in 232 of them, but only in 55 were such children found to have been illegally employed. Fifteen of these employed illegally but one child each, seven but two each, leaving but 33 establishments out of 232, that have employed more than two each; and a considerable number of these employed but three or four each when the returns were made. The whole number of children under 14 years of age employed in all these establishments was 2,292. Of this number 1,757 were said to have attended school some time during the preceding twelve months. Of the number that had not attended school, 174 were said to have been in the State less than nine months. The general result of the investigations is quite as favorable as could be expected.—(Report of secretary, pp. 27, 29, 31, 42, 46, 50.)

EDUCATION AND INVENTION.

The statistics of the Patent-Office demonstrate the money value of education. In the proportion of patents issued to the number of inhabitants, Connecticut still takes the lead. During the past year the number of patents granted to citizens of Connecticut was 1 to every 804. The nearest approach to this was in the District of Columbia, where there was 1 to every 901. The universal diffusion of education is the secret of the number, variety, and success of the manufacturing industries of the State, and of its long continued pre-eminence in invention.—(Report of secretary, p. 110.)

KINDERGÄRTEN.

Only two of these interesting schools for young children report themselves for 1875—one at Bridgeport, under Miss H. W. Terry and M. C. Terry, with 3 assistants, 80 pupils, and the occupations and apparatus of Fröbel; and one in New Haven, under Mrs. L. B. Newcomb, with 1 assistant and 12 pupils, this last conducted as a department of a family school for young ladies. Miss Terry speaks of another in Bridgeport, under Miss J. Baldwin, but nothing has been heard from it.

CITY SCHOOL SYSTEMS.

GREENWICH.

Town system.—A reduction of the board of visitors in this town from nine to six has reduced the cost of the school service, without impairing its efficiency, and a further reduction from six to three members may possibly be made.

Statistics.—The schools of the town are nineteen, and of these all but one were held, in 1874–'75, for 200 days, 16 of them opening simultaneously on the first Monday in September, and closing at the end of the following June. The enumeration in 1875 was 1,937; the registration for the year, 1,546; the average attendance 696, a number less by 47 than the year before. Teachers' wages have ranged from $20 to $50 per month for females, and from $45 to $120 for males. Total expense for schools, $14,250; average per child on the number enumerated, $7.24; on the registered number, $9.08; on the attendance, $20.12.—(Report of school visitors, 1875.)

MERIDEN.

City system.—The schools are controlled by a board of education composed of nine members, one of their number being the acting school visitor.

Statistics.—C. H. S. Davis, M. D., acting school visitor, gives the following general statistics: Population, 15,000; school population, 3,184; number enrolled in schools, 1,923; average attendance, 1,462; number of school-houses, 12; number of teachers, male, 7, female, 33, total, 40; number of days schools were taught, 200.

Financial summary.—Amount for fuel, janitors, repairs, &c., $6,070.70. Salaries of teachers, $23,662.25; salaries of school officers, $549. Amount for new houses and lots, $15,000; whole expense for schools, including cost of new houses, $45,281.95. Average cost per scholar for all schools, $15.17. Average salary of male teachers per month, $129; of females, $47.13. Average daily cost of schools in session, $150.38.

General review.—The acting visitor says that in some of the primary schools the children are too much crowded. He reports, however, a very gratifying improvement in the general government of the schools; also that written examinations will be required each term. He calls attention to the great need of a high school, and argues for the introduction of Dr. Leigh's phonetic system into the lower schools. He states that drawing has been taught in all the schools, and appends some very creditable specimens of pupils' work. The schools embrace a course of study extending from the primary through the high school in a fixed order.—(Acting visitor's report, 1875–'76.)

MIDDLETOWN.

City system.—There is here a board of education of nine members, and they have in their employ 24 teachers, including the city superintendent and two special teachers of drawing and singing, for a school population of 1,477. Whole registration in the schools, 1,326; average attendance, 668; neither absent nor late through the year, 18.

Evening school.—Acting under instructions from the districts in response to petitions for an evening school, the board opened such an one in room 14 of their Central School. Very little change in the arrangement of the room was required, as it had been previously arranged for those wishing to pursue a commercial course. This school was continued fourteen weeks, four evenings each week, with 2 teachers and 91 scholars, at an aggregate cost of $280. The winter evenings were thus made pleasant to many industrious young men. The brilliantly lighted room was compactly seated with earnest learners, hastening in after working hours, for an evening's help to learn. Little need was there of admonition. All wanted the entire time of their faithful teachers devoted to instruction, and the results showed that the school met a public need.

Studies and instruction.—The only important change in the arrangement of the course of study for the day schools has been the establishment of a commercial course. At the exhibition in June, 75 books filled with original entries wrought out to trial balances, showing the condition of affairs of imaginary firms, and over 300 business documents of various kinds, were exhibited. The books and specimens gave evidence of careful attention to penmanship.

In drawing there has been a gradual advance in the grade of work. At the annual exhibition in this department about 1,500 papers from different classes were shown in the halls, and more than 400 chalk crayons on the walls. These ranged from the straight lines and curves of the youngest grade to colored drawings of plants executed by the class in botany, and geometrical diagrams, and drawings of apparatus by the classes in geometry and chemistry.

In music, instruction has been given on the same plan as in previous years, and the standard of musical knowledge and ability is steadily rising.

The apparatus has been increased by the addition of a large terrestrial globe, an induction coil, an electric battery, a signal bell, and a considerable number of other articles. In addition to the use of the apparatus in connection with recitations, the

superintendent has illustrated by it thirty-five lectures on natural philosophy, physical geography, chemistry, and astronomy. The class in chemistry visited the gas works to observe the processes carried on there, and the class in botany spent a day in collecting specimens and examining plants in their native localities.

Needs.—The acting school visitor says: There is wanted a concise arithmetic with the rules of business and fitting problems; a system of geography, describing the important features of the earth's surface, which can be learned to the end before the first principles are forgotten; a grammar brief enough to be learned in two years; and a speller with words of constant use. He speaks of the great evil of irregular attendance, and the need of some remedy for this.—(Report of board of education, 1875.)

NEW HAVEN.

City system.—A board of education of 9 members, of whom 3 go out each year to give place to as many newly elected, and a city superintendent.

Statistics.—Whole population of the city, 58,566; number of school age, 12,936; number of school-houses occupied, 25; number of rooms, 163; number of sittings, 8,591; number of teachers in day schools, including teachers in music and drawing, males, 15; females, 185; total, 200; number of pupils registered, 7,595; average daily attendance, 7211.3; percentage of attendance, .949.

The superintendent says: "It is a somewhat remarkable exhibit that the record of attendance in all the schools of the district, during the past six years, shows a variation of less than half of 1 per cent.; 95 per cent. is the standard and attainable number. Favorable circumstances may carry the average higher, but too rigid exaction is not desirable above 95 per cent."

Studies.—The English language, as a distinct study, has been almost ignored in the graded schools, but with the introduction of language lessons a new departure has been undertaken which promises improvement.

The department of vocal music has made a steady advance during this, its decennial year, and "it is not enough to say that the scholars are simply interested in the study of music—they are enthusiastic."

Vocal music was recognized as a branch of school instruction in 1865, under the charge of Mr. Jepson. His first efforts were regarded as simply experimental, and were confined to a few of the higher rooms of the grammar schools. In 1869, the number of pupils had increased from about 500 to 3,500. In 1870, the primary department was included in the course, and from that time Mr. Jepson has had under his personal tuition all the pupils in the district, numbering now over 7,000.

Drawing, under the immediate supervision of Professor Ball, has likewise made very satisfactory progress. This is the second year he has devoted his whole time to the supervision and instruction of this branch of study. The wisdom of the board is fully justified by the greatly improved quality of the work done, and the increased amount of drawings completed.

Schools.—The main facts respecting the high school may be found under the head of secondary instruction. The city training schools, organized from the upper classes of the high school, are spoken of as a now assured success, forming, through the excellent system of instruction in them, an efficient source of supply for the thirty-five to forty vacancies annually occurring in the corps of teachers. The grammar schools, ten years ago conspicuous for their emptiness, are now well filled by frequent and regular promotions from the lower schools. These lower schools, the primaries, seem to be doing well, as they always have done. The truant school, however, once a salutary receptacle for the disorderly elements from the other schools, is reported to be retrograding, partly from the large number of truancies occurring among its inmates, partly from the reluctance of parents to have their children placed in such a school. A German-English school is maintained for children of German parentage. The attendance on the evening school, held at the high school building, was about the same during the past season as in previous winters. A new evening school was opened in the basement of the Woolsey School, in Fair Haven, under the charge of Mr. Walbridge, which was attended by over 100 members. An evening school for young women was opened in the neighborhood of Newhallville, under the care of Miss F. M. Bryant. There was an average attendance of 15 or 20 in the school, and it proved quite useful. The grammar, training, and truant schools are all said to have done well.

School houses.—In 1865 the district occupied 20 school buildings, furnished with 4,567 seats; in 1875, 24 buildings, 8,339 seats. In 1865, the district owned 11 buildings, containing 3,781 seats; in 1875, 19 buildings, with 7,414 seats.

Increased attendance.—The school census of January, 1866, gives the number of those of school age as 9,031. That of January, 1875, as 12,936. The increase is 30 per cent., while the increased attendance has been 46 per cent., or 16 per cent. greater than the increase of children in the district.

Other improvements.—The number of teachers has been increased from 95 to 200. "Time tables" have been adopted, specifying what exercises are required and the

number of minutes to be devoted to each, throughout the day, in order to secure steady and uniform employment of both teacher and pupils.

Written examinations, monthly, or at least twice in each of the long terms, promote efficiency in the instruction. Penmanship is now taught systematically by all the teachers, each one being held responsible for the attainments of the pupils in this as in all other branches. Instruction in morals and manners is also included among the duties of the teachers.

Truant and ungraded schools.—Previous to the establishment of the truant school in 1871, every teacher was authorized to suspend scholars from further connection from the schools, in case of ten instances of unexcused absence and tardiness, and for repeated truancy and pointed opposition to authority. Suspension meant throwing boys out of schools upon the streets, to roam at their own will wherever objects of interest might draw them. Few parents had power to control this class of children, consequently the "street school" was largely patronized, vagrants were abundant, and the company of apt learners of habits and devices of adult criminals was largely increased. A vicious boy, desiring to escape the confinement of the school room, found the way provided, and many were not slow to take advantage of the opportunity offered.

When the Whiting truant school was opened, September, 1871, the rule of suspension was repealed, and pupils were required to be transferred to it or to one of the ungraded schools for the causes named. About the same time the board appointed a special committee to investigate the subject and report the best methods of preventing truancy. The committee reported a series of resolutions, which the board adopted, recommending, in substance, (1) that the attention of the police commissioners and the police magistrate be called to the necessity for full enforcement of the truant laws; (2) that in cases of vagrancy, truancy, and like offenses, the name of the offender be given to an officer appointed for the purpose, whose duty it should be to see the parent or guardians of the offender, make himself acquainted with the circumstances of the case, and notify them of the consequences of such conduct if persisted in; (3) that for a repeated offense the name of the truant should be given to the police officers appointed by the police commissioners to enforce the truant law; (4) that whenever a pupil should prove incorrigible under the discipline of the schools, the police magistrate be notified of the same.

For a time the effect of this seemed salutary, but during the three years from 1873 to 1875, inclusive, there has been a retrogade movement, the number of truancies nearly doubling; partly from the fact that pupils whose parents object to their being put into the truant school cannot be forced to go there, and partly from the further fact that among the lawless elements there congregated, the effort to escape from the restraints of school is more frequent and more successful than elsewhere. Thus of 973 truancies in 1874, 183 were from the truant school; and of 1,046 in 1875, 338 were from the same.

In this dilemma the superintendent sees no remedy for the difficulty found but in some place of restraint to which unruly and truant boys can be sent, to be confined for a longer or shorter time, according to the circumstances of each case.—(Report of Superintendent Ariel Parish, for 1874–'75.)

NEW LONDON.

City system.—A board of education of 9 members, of whom 3 go out each year to give place for new material. The secretary of the board serves as acting school visitor.

Statistics.—Whole number of children from 4 to 16 years old, 2,201; registered in common schools, 1,893; average daily attendance in these, 1,193; in Bulkeley School and Young Ladies' High School, 128; average daily attendance in high schools, 104; whole number in common and high schools, 1,961; average daily attendance in both, 1,297; number in evening schools, 246; average attendance in these, 146; number in private schools, 40.

It is refreshing to read that while the number of children enumerated has increased little, if at all, the average number attending school is much larger, the average school term of greater length, the accommodations in the schools enlarged and improved; that teachers are more permanent, the number of experienced and accomplished ones greater, the instruction consequently more thorough, and the standard of scholarship higher. The schools are 9 in number, with 24 departments, 16 assistants' rooms, and 40 regular teachers at salaries ranging from $150 to $1,200. The income for schools has been $28,104.98; the expenditure on them $128.82 more than this.

The ordinary studies seem to have been well attended to; music has been taught faithfully and successfully by a special teacher, and great progress made; drawing has not yet been introduced. Of four graduates from the Bulkeley School two entered college.—(Report of board and school visitor, 1875.)

TRAINING OF TEACHERS.

STATE NORMAL SCHOOL, NEW BRITAIN.

The design of this school is strictly professional, that is, to prepare pupils for the work of organizing, governing, and instructing the schools of the State. To this end,

while instruction is given, to some extent, in the branches of study required to be taught, the main aim is to train students in the best methods of teaching those branches.

Applicants for admission must be at least sixteen years of age; must declare their full intention of teaching in the public schools of Connecticut; and must pass a satisfactory examination in reading, writing, arithmetic, geography, English grammar, and the history of the United States. Each candidate is also expected to present a certificate of good moral, and intellectual character from the acting school visitor of the town in which his home has been.

The course of study includes reading, with analysis of sounds and vocal gymnastics; spelling, with derivations and definitions; writing and drawing; punctuation; grammar and analysis of sentences; arithmetic, algebra, and geometry; political and physical geography, with map drawing; physiology, botany, chemistry, natural philosophy and astronomy; rhetoric, mental and moral philosophy; school laws; theory and art of teaching; English literature, and vocal music.

A library of 1,000 volumes is accessible to the pupils, and the institution is furnished with philosophical and chemical apparatus for illustration and practice, as well as with a large collection of minerals and fossils.

Resident instructors, 8; years in course, 2; students during the school year of 1874–'75, males, 24, females, 151; graduates, 50; number of these who have engaged in teaching, 40.—(Catalogue and circular for 1873–'74, with return for 1874–'75.)

TEACHERS' INSTITUTES.

Nine teachers' institutes have been held during the last year. The attendance at the first was diminished by a violent storm continuing through the session. The aggregate attendance (1,088) was, however, larger than in any other year of the last decade. The experience of the year shows that these agencies are highly appreciated and need no special advocacy.

In the nearly fifty local meetings held in different parts of the State, the secretary has frequently been assisted by some one of the institute instructors. In these shorter sessions it is impossible to count the number of teachers in attendance, but at the lowest estimate it must aggregate over 500.

The institutes have been conducted with the strictest economy consistent with usefulness. The usual amount paid lecturers has been $10 a lecture and travelling expenses. The whole amount expended for institutes during the year was $2,533.07.—(Report of secretary, pp. 129, 130, 250.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

Secretary Northrop says in his report, p. 16: "High schools have not become as numerous as is desirable. The highest departments of several of the large graded schools are virtually high schools for the surrounding regions. But tuition fees exclude many non-residents who would gladly attend, and too often an active, earnest scholar, eager to press on in the pursuit of knowledge, finds every avenue to further progress barred against him by the want of any accessible school in which the higher branches may be pursued. * * * And since the number who desire to be thus educated is, in the aggregate very large, the enactment of a law requiring every town of sufficient population to maintain a high school would be an important step toward supplying an urgent want. A larger number of schools of higher grade would be for the credit and benefit of the State."

To the same effect, the acting visitors of Meriden say, (appendix to State report, p. 206:) "Without a high school, the educational expenses of Meriden are increased several thousand dollars every year, and some of our best scholars are under the necessity of going out of town to fit for college, or to pursue higher branches that are not taught in our grammar schools. Some of the self-sacrificing poor, and more of the wealthy have sent their children abroad to seek the advantages which they should obtain at home. In this way, enough money must have been carried from the town to have secured a high school for a year, to say nothing of the probability that many of those thus educated abroad, who might prove valuable citizens, may find a permanent residence elsewhere." Nearly the same thing is said at Reading, p. 225.

On the other hand, we find that "in the grammar school at Thompsonville"—which must, from the description given of its studies, be much above the ordinary grade of grammar schools—"pupils of thoroughly studious habits and application have received instruction which previously many sought in the academies of Wilbraham and Suffield, or the high schools of Springfield and Hartford. Four boys are fitting for college at this school, one of them having already finished the required amount of mathematics."

Of the two main high schools in the State—the ones at Hartford and New Haven—the most distinct information comes this year from the latter. The acting school visitor,

indeed, says in the State report, p. 195, respecting the Hartford school, that it occupies, among the other schools, much the position that a governor does in a steam-engine, giving steadiness, precision, and efficiency both to the power applied and the machinery by which this produces its effects; that "in all the schools, teachers and scholars keep it constantly in view, and regulate the standard of scholarship, as well as many other things, by that which governs at the High School;" and that "its numbers are constantly increasing, this year showing larger accessions than ever before." And then we have from the principal, besides a circular giving its history and general course, a return showing 15 instructors and 450 pupils, of whom 100 are preparing for a classical course in college, 11 having entered college, or a scientific school, from last year's class, all interesting matter with respect to it. But from Mr. Parish, at New Haven, we get the still more full and definite statements: (1) That "at the April examination of the incoming class, 135 candidates were admitted to the High School, chiefly from the grammar schools;" (2) that these were found so advanced in their studies as to be qualified to overleap the fifth class of the High School and pass directly into the fourth, enabling the board to dispense with the fifth class, which has been only a preparatory one; and, (3) that the pupils in the different studies for the year have been distributed thus: In arithmetic, 190; algebra, 78; bookkeeping, 122; geometry, 64; German, 113; Latin, 127; English grammar, 86; English literature, 56; rhetoric, 63; astronomy, 20; botany, 61; chemistry, 67; geology, 20; natural philosophy, 67; physiology, 61; physical geography, 60; ancient history, 173; modern history, 104. The senior class, too, is said to have occupied the last half of the year 1874–'75 in reviewing the studies of the entire course—an excellent arrangement. Both schools possess good libraries and apparatus, and rejoice in valuable additions to these in the year.—(Reports for 1874–'75.)

PRIVATE SECONDARY SCHOOLS.

Ten schools for boys and eight for girls, with seventeen in which both sexes are instructed, present, for 1875, a total of 140 teachers and 1,595 pupils. Of these pupils, 334 are reported as engaged in the study of the ancient and 249 in the study of modern languages; 131 to be preparing for a classical course in college, and 40 for a scientific course. Drawing is taught in 23 of the schools thus reporting; vocal and instrumental music in 22; in 10 there is a more or less complete chemical laboratory; in 11, philosophical apparatus; and in 16, libraries containing from 50 to 1,100 volumes.

Some of these schools may possibly be public schools; but in the uncertainty respecting this, arising from the want of any definite indication, they are classed with private seminaries. The returns of some are quite defective. In two of them the number of teachers is given, but not the number of students. In 5 there is no designation of the studies in which the pupils are engaged. In all, only a portion of the students appear to be really of secondary class, the proportion of these being about one-third of the whole, as far as the statistics enable one to judge. One principal modestly doubts whether his school should be ranked among the secondaries, though in the 83 pupils whom he reports, 38 appear to be engaged in secondary studies.

The Morgan School, at Clinton, one of the schools thus reporting, founded by Chas. Morgan, esq., of New York, is the munificent gift of a merchant prince to his native place, which he left when a boy, more than sixty years ago, and has cost him from $80,000 to $170,000, according to different authorities. It is housed in a noble building on high ground in the centre of a large lot; is made free by an appropriation from the town; is well provided with maps and reference books, and affords the youth of Clinton opportunity for a complete school course, from primary through high school studies. The latter are arranged in two principal departments, the English and classical, and the classical. Those preparing for college take the latter. All others are expected to pursue the former.

Two bronze statues, one of Mr. Morgan, founder of the school, the other of President Pierson, of Yale, who taught at this spot the first classes of Yale College, stand in front of the school, having been unveiled with appropriate ceremonies June 23, 1875. The statues are the gift of Mr. Morgan and the work of Launt Thompson, of New York. —(Circular of Morgan School for 1875–'76, and New England Journal of Education, June 5 and July 3, 1875.)

PREPARATORY SCHOOLS.

Besides the institutions included under the two preceding heads, 4, especially though not exclusively, devoted to the work of preparing students for college, report 27 teachers and 527 students, 210 of whom are in preparation for a classical course in college and 51 for a scientific course. From these schools 49 entered the classical departments of colleges the preceding year, and 17 entered scientific institutions. Another of the same class makes return, through its catalogue, of 15 instructors and 117 pupils, but without any specific designation of the studies in which these are engaged; and still another shows in its catalogue 101 in its 4 higher classes, under 7 instructors.

The well known Hopkins Grammar School, at New Haven, and the Free Academy, Norwich, are included in the above reporting institutions—the former existent since

1660, the latter incorporated in 1854, and endowed by the citizens of Norwich with a building costing $50,000 and a reserve fund of $50,000 for the maintenance of the school; Mrs. H. Peck Williams giving it a library costing $7,000 and Mrs. Wm. P. Greene a house and lot for the residence of the principal valued at $8,000. A further endowment fund of $50,000 was in process of collection in 1875.—(New England Journal of Education, July 24, 1875, p. 59.)

The Episcopal Academy of Connecticut, at Cheshire, one of the oldest academies in the State, established in 1796, is not among those reporting, either by return or catalogue, but is said by the New England Journal of Education, October 23, 1875, to have had in that year about 150 students on its roll.

SUPERIOR INSTRUCTION.

TRINITY COLLEGE, HARTFORD, PROTESTANT EPISCOPAL.

College system.—The system here embodies, in addition to the regular four years' course of collegiate study, (1) The now common plan of elective studies, these being, in the last year of the course, in Greek, Aristotle and Plato; in Latin, Quintilian and choice works of the Latin fathers; in ethics and metaphysics, Mansel's Philosophy of the Conditioned, Berkeley's Principles of Knowledge, and McCosh's Intuitions of the Mind; in mathematics and natural philosophy, Loomis's Practical Astronomy and Smyth's Differential and Integral Calculus; in English, Abbott's Shakesperian Grammar; in Spanish, Don Quijote; and in Oriental languages, Green's Elementary Hebrew Grammar, with parts of the Pentateuch, and Sanskrit Grammar. (2) A series of lectures delivered each year to the different classes on a variety of designated subjects, with others to the whole college on the laws of health. (3) A set of annual prizes in money or medals, for special excellence in certain specified lines of study, composition, declamation, &c.

Aid to students.—A fund of $15,000, with apparently 47 scholarships, some entitling to free tuition only, some rising to the value of $300 a year, enables the faculty to lighten greatly the expenses of needy and deserving students; while others of $100 each are available to such as are preparing for holy orders.

New buildings.—On commencement day, July 1, 1875, ground was broken for the buildings to be erected on the new and elegant site purchased for the purpose two years ago, about a mile south of the old one. The ones to be erected before the summer of 1877—when those remaining in the city must be vacated—are the chapel, library, students' dormitories, lecture rooms, and professors' houses. The buildings begun are to form the western side of a great central quadrangle, the other erections for completing which and for forming two other quadrangles on the north and south will be proceeded with as the increase of the college calls for them and the funds for their erection may be secured. The trustees have voted $300,000 for the completion of those to be now erected, which of themselves will form a seemingly perfect whole, though the addition of the others which are in the plan, will finally add much to their beauty and adaptation to collegiate use.—(Catalogue for 1875–'76, with other sources.)

WESLEYAN UNIVERSITY, MIDDLETOWN, METHODIST EPISCOPAL.

College system.—Undergraduate students have here (according to the catalogue) the choice of three regular courses of study, each extending through four years, and named, respectively, the classical course, the Latin scientific course, and the scientific course. The first embraces the usual range of studies in a collegiate curriculum. The others are designed to secure to those whose circumstances or inclinations do not permit an extended study of the classics, an opportunity to acquire a sound mental training and liberal culture, as well as a good preparation for advanced courses of scientific or technical study.

In each of the above courses, all studies are required throughout the freshman year. In the scientific course, all studies of the sophomore year are also required; but in the last two years of this course, and the last three of the classical and Latin scientific, the student is allowed to make up his quota of work by selecting from a wide range of elective studies, with some guidance from the faculty.

Co-education.—Lady students are admitted to the same privileges with young men, but very few have thus far availed themselves of this advantage, and the number of such does not seem to increase.—(Catalogue of 1874–'75.)

A new department.—The legislature of Connecticut has appropriated $2,800 a year for the purpose of establishing an agricultural experiment station at Orange Judd Hall, Wesleyan University, where there are already very complete arrangements for carrying out the plans of those gentlemen who urged this appropriation. Great benefits are anticipated from their researches, and it is claimed that the small sum expended will save the State $100,000 a year.—(New England Journal of Education, September 4.)

Change of head.—Wesleyan has changed its president, the Rev. Joseph Cummings, D.D., having resigned at the close of the year 1874–'75, and the Rev. Cyrus D. Foss,

D.D., a graduate of the university and a preacher of high repute, having been chosen to succeed him.

Speech of new president.—Dr. Foss is credited by the Philadelphia Evening Telegraph, of October 27, 1875, with having given at his inauguration, October 26, the following excellent advice to his students upon the subject of physical exercise: "The scholar needs brawn as well as brain, because, in order to be a scholar, he must pay the inevitable tax levied on every perpetual hard student, and also because the supreme practicable mental exertion, which is the business of his life, is directly contingent on the fineness and fulness of his physical forces. Let the student, then, give earnest heed to the care and culture of his body. It is the home, the instrument, the mould, and the eternal companion of his soul. Let him know that sipping gruel and languidly lounging over books until his midnight lamp burns low, can never make him either a scholar or a man. Let him eat beef and mutton in generous slices. Let him leap into every day as into a new paradise over the wall of eight hours' solid sleep. Let him not cross his arms behind him, drop his head, and mope along the pavement, inwardly saying, 'I am walking for exercise.' Let him stretch away over the breezy hills with fit companions, in utter forgetfulness of lessons and essays and sermons, until every drop of blood in his veins tingles with the delight of mere animal existence. Let him hurl the ball, or pitch the quoit, or tug at the oar, or poise the rifle. I would I might see our gymnasium thronged every day at suitable hours with earnest devotees to physical culture. Only let all these things be done with the distinct recognition that we have a higher nature, and in such manner and measure as to do no harm to what is best and noblest in this loftier realm."

YALE COLLEGE, NEW HAVEN.

College system.—The departments of instruction are comprehended under four divisions, as follows: the faculty of theology, faculty of law, faculty of medicine, and faculty of philosophy and the arts. Under the last named are included the courses for graduate instruction, the undergraduate academical department, the undergraduate section of the Sheffield Scientific School, and the School of the Fine Arts, each having a distinct organization.

Courses of study.—The course of instruction in the undergraduate academical department occupies four years; consists of the usual curriculum of collegiate study in institutions of high grade; is prosecuted not only through text book recitations, but also through lecture courses in each year, especially in the senior year; and entitles to the degree of bachelor of arts on the full completion of it, with the approval of the faculty and the payment of all college dues.

That in the scientific school, and those in the schools of theology, law, and medicine, may be found under the subsequent head of scientific and professional instruction.

That in the school of the fine arts covers three years, and consists of studies in drawing and painting, anatomy, composition of colors, &c., with lectures on the elements of form, the principles of perspective and proportion, and the history, theory, and practice of art. Instruction in sculpture and architecture is not yet provided for.

The course of instruction for graduates and special students is arranged for such as have passed reputably through this or other colleges, and for other persons of liberal education, not less than eighteen years of age. It is under the direction of an executive committee designated by the faculty, and may be prosecuted for a longer or shorter time, with or without reference to the attainment of a degree. Instruction is given partly by lectures, partly by recitations and by oral and written discussions, partly by directing courses of reading, and partly by work in the laboratories and with instruments. The terms and vacations correspond with those in the undergraduate departments. The courses of instruction given here are grouped at present under the following four heads: (1) Political science, history, philosophy, and English literature; (2) philology in various branches; (3) mathematical and physical science, supplemental to the course of the Scientific School; (4) fine arts, supplemental to the studies of the Art School.

Degrees.—The lower degrees are bestowed here, as elsewhere, on the passing of a successful examination at the close of the academic or scientific course. The higher ones of master of arts and doctor of philosophy are to be given henceforth only on proof of qualification for them, either in the shape of printed productions, or of work done under the eye of the faculty in a post graduate course, or of examinations well sustained.—(Catalogue for 1875-'76.)

Graduates.—As an illustration of the influence exerted by such a college, the New York School Journal of June 5, 1875, page 357, says that "Yale boasts of having educated 146 Congressmen, 43 United States Senators, 56 college presidents, 9 bishops, 14 ministers to foreign courts, 33 governors, 23 lieutenant-governors, 143 judges, and 10 members of the President's cabinet."

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

AGRICULTURAL AND SCIENTIFIC.

The Sheffield Scientific School of Yale College, begun in 1847, and reorganized upon a broader scale in 1860, received in 1864, by act of the Connecticut legislature, the national grant for the promotion of scientific education, under the congressional enactment of July 2, 1862. It thus became substantially the "college of agriculture and the mechanic arts" for Connecticut. Its courses of instruction for undergraduates cover three years, the first or freshman year including studies that are introductory to eight special courses, any one of which may be selected by a student after the first year. These special courses are the following: (*a*) in chemistry; (*b*) in civil engineering; (*c*) in dynamic (or mechanical) engineering; (*d*) in agriculture; (*e*) in natural history; (*f*) in studies preparatory to medical study; (*g*) in studies preparatory to mining and metallurgy; (*h*) in select studies preparatory to other higher studies. There is also a post graduate course for advanced or special scientific study.—(Catalogue for 1875–'76.)

Popular lectures for the benefit chiefly of mechanics are delivered each winter by the professors in this school, and so highly have they been appreciated, not only by the workmen in the shops, but by the townspeople generally, that every available seat is occupied each season.—(New England Journal of Education, February 6, 1876, p. 71.)

THEOLOGICAL.

The course of instruction in the theological department of Yale College (Congregational) occupies three years, including a training in Hebrew; in the exegetical study of the Greek New Testament; in systematic theology, church history and polity; sacred rhetoric and kindred themes; with optional studies in German and Sanskrit, and access to lectures in the college, the Scientific School, and the medical department. Special courses of lectures by Drs. Hall and Taylor, of New York, and by Ex-President Hopkins, of Williams College, have also added greatly to the ordinary advantages of the school in the past year.—(Catalogue for 1875–'76 and other sources.)

Library, 2,000, with means for a small annual increase. Eighty-six of its 99 students are college graduates.

The Theological Institute of Connecticut, Hartford, (also Congregational,) has a three years' course, with essentially the same studies, and six annual lectures from its three resident professors, or from others specially engaged. Library, 7,000 volumes, with $350 for annual increase.—(Return for 1875.)

The Berkeley Divinity School, Middletown, (Protestant Episcopal,) course three years, mingles lectures with recitations in the instruction of its students; requires of candidates for admission an ability to read the Hebrew text of the Old Testament; carries them on in Hebrew throughout the course; instructs them also in the exegesis of the the Greek Pentateuch and New Testament; with readings in doctrinal and pastoral theology, ecclesiastical history, evidences of Christianity, history and interpretation of the prayer book, &c. Library, 16,000. Thirty-four of its 39 students have received degrees in letters and science.—(Catalogue for 1874–'75 and return for 1875.)

LEGAL.

The law department of Yale has a course of two years, embracing the various forms of legal study, forensic composition, pleading, medical jurisprudence, &c., the aim being to make the instruction such as will not only qualify the students to become successful practising lawyers, but also contribute to make law a science worthy the study of any educated man. On every Wednesday a moot court is held, at which one of the professors sits as judge, while the students act as counsel. The lectures in other departments are open to the students, generally without additional charge. The special library of the department contains between 7,000 and 8,000 volumes, while the consulting room is kept supplied with the leading legal periodicals. The students can also draw books from the general college library.—(Catalogue for 1875–'76.)

MEDICAL.

In the medical department of Yale the course of each of the three ordinary years of study is divided into a spring and winter term. In the former the instruction is by recitations and lectures combined; in the latter, by lectures mainly, with daily examinations, hospital illustration, medical and surgical clinics, and anatomical dissections. Microscopy, histology, and pathology are illustrated by a sufficient number of compound microscopes and a large collection of the best preparations. To encourage collegiate preparation for the course, a difference of a year is allowed in the period of study required for a medical diploma in favor of those who are graduates of colleges, making two years for such and three for others.

SPECIAL INSTRUCTION.

HARTFORD ORPHAN ASYLUM.

Children of from 3 to 12 years of age, deprived of the guardianship of their natural protectors are here sheltered, and trained in reading, writing, arithmetic, vocal music, and household industries. At 12 years of age they are indentured in families to serve till 21. Of the 60 inmates, 9 are absolute orphans, 38 half orphans, and the remainder made dependent by other means upon the care of the institution. Teachers and officers, 7.—(Return for 1875.)

CONNECTICUT INDUSTRIAL SCHOOL FOR GIRLS, MIDDLETOWN.

Stubborn and unruly girls that refuse to obey those who have the proper charge of them, truants, vagrants, beggars, those found in manifest danger of falling into habits

of vice and immorality, with such as have committed offenses punishable by fine and imprisonment, short of imprisonment for life, are put by the State under industrial and reformatory training at this institution. Ninety-eight pupils of this character, from 8 to 16 years of age, (85 white and 13 colored,) under 12 instructors, were thus in training in 1875, being taught reading, writing, arithmetic, geography, grammar, and history, with housework, sewing, laundry work, paper box making, dairy work and gardening. Of those so trained in the past, 78 per cent. are said to have become useful members of society.—(Return for 1875.)

CONNECTICUT STATE REFORM SCHOOL, WEST MERIDEN.

A change of principal at this school has resulted in a change of system. The old plan of close confinement and coercion has yielded to one of larger liberty and greater trust. The cells in which boys were locked at night have been torn away, and a light and airy dormitory formed in place of them. Fewer bolts and bars, and more appeals to a sense of honor and desire for approbation, seem now to mark the place. And thus far the system seems to be working well; the boys, in common with most human beings, loving to have confidence placed in them, and often trying to show themselves worthy of its exercise.

Training in various industries still goes forward in connection with the ordinary studies of a school, it being felt that nothing is so much needed by boys of the class here gathered as that they should go out knowing how to work, and with a capacity to sustain themselves by their exertions. Tailoring, cane seating, machine knitting, farm work, and assistance in repairs and improvements of the buildings have given useful occupation to the inmates, and with good results.

Six teachers, besides the principal, with 10 superintendents and assistants in different departments, have had under them in the past year 294 boys, 140 of whom could read books generally, 110 others read in easy books, while 40 have been in the merest elements. Arithmetic, grammar, geography, natural philosophy, and even elementary algebra have been studied, in addition to reading and writing, and in view of the material to work upon fair progress seems to have been made.—(Report for 1875.)

AMERICAN ASYLUM FOR INSTRUCTION OF THE DEAF AND DUMB, HARTFORD.

Pupils from all the New England States are received and instructed here, the number present May 1, 1875, being 218; the total number under instruction during the year preceding that date, 270; the average attendance during the year, 222. Officers, a principal and 17 instructors, besides the attending physician, steward, assistant steward, matron, and 2 assistant matrons, with a master of the cabinet shop, master of the shoe shop and mistress of the tailor shop. The employment of the pupils in these shops is considered one important means of educating them to respectable industries and preparing them for eventual self-support. Ten of the boys, after some years' instruction for three hours daily in the shoe shop, are said to be able to earn for themselves two dollars a day at shoemaking, and as many more have acquired in the cabinet shop sufficient skill at cabinet making to be able to go into a shop and support themselves. With training in these industries is combined instruction in ordinary English studies through a course of seven years, in the language of signs, and in articulation, Mr. Bell's method of "visible speech" being used in teaching this last. Forty pupils in all have been instructed in this branch one hour daily; experience, the principal says, confirming a previously expressed opinion that few except the semi-mutes and semi-deaf can be advantageously taught articulation.—(Report for 1874–'75.)

WHIPPLE HOME SCHOOL FOR DEAF-MUTES, MYSTIC RIVER.

This school was founded by Jonathan Whipple, who claimed to be the first in this country to show that deaf-mutes may be taught to talk with the organs of speech and to understand conversation by watching the motions of the mouth. This manner of communicating with the deaf is made the basis of instruction in the school. The present principal, a grandson of the founder of it, receives and instructs with the aid of two lady teachers a limited number of deaf-mutes.—(Circular and return for 1875–'76.)

EDUCATIONAL CONVENTION.

STATE TEACHERS' ASSOCIATION.

This association held its twenty-ninth annual meeting in Hartford, October 21 and 22. The Rev. Dr. R. S. Dennen, of New Haven, delivered an able address on "True culture," and papers were read on "The school room versus health," by C. C. Dudley, of Bridgeport; "The course of study in lower grades," by Superintendent S. Crosby, of Waterbury; "Detention of the pupils after school hours," by James D. Whittemore, of New Haven High School; "The science of teaching," by O. P. Ames, of Waterbury; "The prerequisites for success in teaching," by Prof. I. N. Carlton, of the Normal School at New Britain; "Our public schools," by Dr. Judah Wechsler, pastor of the Jewish congrega-

tion in New Haven; "Future education," by Superintendent Ariel Parish, of New Haven; and "Co-education of the sexes," by Prof. Homer B. Sprague, of Brooklyn, N. Y. Hon. B. G. Northrop spoke on the question "Shall we have Kindergarten schools?" and Henry Bergh, of New York, on "Superior and inferior animals." The advocacy by the Jewish pastor of the reading of the Psalms of David rather than any other portion of the Scriptures called forth a discussion characterized by very great and decided diversity of opinions.—(National Teacher, November, p. 471.)

DELAWARE.

STATISTICAL SUMMARY.

SCHOOL POPULATION AND ATTENDANCE.

Number of children of school age, (5–21)	Not given.
Number enrolled in school during the school year	19,881
Average daily attendance in schools	Not given.

SCHOOLS, TEACHERS, AND TEACHERS' PAY.

Number of schools in the State	369
Number of teachers employed in public schools	430
Number of teachers necessary to supply public schools	456
Average salary of teachers in public schools per month	$28 28

SCHOOL INCOME AND EXPENDITURE.

Total income from taxation for schools	159,733 68
Total income from funds	33,001 37
Total from all sources	192,735 05
Expenditure *per capita* of average attendance in public schools	9 64

—(From return by Hon. J. H. Groves, State superintendent of free schools, 1875.)

SCHOOL SYSTEM OF THE STATE.

CONSTITUTIONAL PROVISIONS.

The constitution of 1831 continued (Art. VII., section 11,) the provision of that of 1792, viz: "The legislature shall, as soon as conveniently may be, provide by law for * * * establishing schools and promoting arts and sciences."

PROVISIONS OF THE SCHOOL LAW.

From "Revised edition of the law relating to free schools," 1868, and "An act in relation to free schools," 1875.

OFFICERS.

Until 1875, the legal officers of the Delaware free school system consisted only of a superintendent for each county, a committee (called also commissioners) for each school district, and commissioners specially appointed by a county levy court, at the request of twelve or more freeholders, for the formation of new school districts and location of new schools. By an act passed March 25, 1875, a State board of education was created, and the appointment of a superintendent of free schools for the State was authorized.

POWERS AND DUTIES OF THESE OFFICERS.

The State board consists of the president of Delaware College, the secretary of state, the State auditor, and the State superintendent of free schools. It is to hold annual meetings in the capitol, at Dover, on the first Tuesday of January in each year, the president of Delaware College acting as chairman and the State auditor as secretary. Its duties are to hear appeals and determine finally all matters of controversy between the superintendent and teachers or commissioners and between school commissioners and teachers; to determine what text books are to be used in the free schools, and to issue a uniform series of blanks for the use of teachers, requiring all records to be kept and returns to be made according to these forms.

The State superintendent, who must be of good moral character and mental attainments adequate to his position, is to be appointed and commissioned by the governor on the second Tuesday in April of each year, holding his office for one year, and until his successor shall in like manner be appointed. He is to visit each school once in the year, and to note, in a book kept for that purpose, the number of scholars, the condition of the school building with its grounds and appurtenances, the qualification and efficiency of the teachers, the conduct and standing of the scholars, the methods of instruction, and the discipline and government of the schools. He has power to suspend or withdraw the certificate of teachers on their refusal to comply with reasonable directions, subject, however, to an appeal to the State board; is to examine and license other teachers, keeping an accurate list of certificates granted by him, with the date thereof, and names of persons to whom they may be granted; is to give his entire

time to his supervisory duties, and not engage in any other business; and is annually, on the first Tuesday in December, to report in writing to the governor the condition of the schools, with such recommendations and suggestions as he may think proper.

As to county superintendents, the old law, apparently not yet repealed, says: "The governor shall, yearly, before the first of March, appoint a superintendent of schools in each county, whose term of office shall continue until a successor is duly commissioned." Their duties, as defined, are simply to "correspond" with committeemen and teachers, "to aid them with advice, to supply proper forms, to collect information, and report to the general assembly the state of the districts and such matters as they shall deem proper."

The school committeemen, or commissioners, (three for each school district,) are elected by the people for a term of three years, these terms, however, being so arranged that one member of the committee shall go out of office on the first Saturday of April in each year, and a successor be chosen at the same date to fill the vacancy thus created. Their duties are to assess and levy the annual school tax; to determine the site for a school building for the district, lease or purchase the necessary ground, and build or procure a suitable house as near the centre of the district as possible; to keep this house in good repair and supply it with the needed furniture and fuel; to bring actions for any injury to it; to provide a school for the district when, and as long as, their funds will enable them; and to employ teachers; none, however, to be employed who do not hold certificates from the State superintendent. They may dismiss a teacher, may make regulations for the government of the school, and by these may provide for the expulsion of a scholar for obstinate misbehavior.

SCHOOLS.

The elementary schools thus established are made "free to all the white children of the district over five years old."* High schools do not seem to enter, thus far, into the view of the State system, though they exist, under special legislation, in the chief towns of the State. Normal, classical, and scientific instruction has been provided for by adopting Delaware College, Newark, as the State college, and instituting normal and agricultural departments in connection with it.

SCHOOL FUND.

A permanent school fund of considerable amount, with an annual revenue derived from marriage and tavern licenses and various other sources, enables the State government to supplement quite liberally the sums raised by local taxation for the support of free schools.

INSTITUTES.

Under the new law the holding of a teachers' institute in each county, at least once a year, for three days, is made the duty of the State superintendent—all the teachers of the county to attend.

CITY SCHOOL SYSTEMS.

WILMINGTON.

School officers, a board of education of 30 members, of whom one-third are changed each year, with a city superintendent.

Statistics.—Number of school-houses, 17; number of rooms, 98; number of sittings for study in day schools, 4,932; number of schools, 21; whole number of teachers in day schools, 98; number of pupils enrolled, 6,033; average number belonging, 3,813; average daily attendance, 3,505; average number of pupils to teacher based on the number belonging: in high schools, 20; in grammar schools, 36; in primary schools, 42.

Grammar and high schools.—Superintendent Harlan says these schools are centres of interest. The long established policy of promoting the best teachers to them, and of making for them liberal provisions otherwise, has made them the pride of the city. In them is a corps of teachers who work early and late and who spend time and money freely for their own intellectual improvement. These schools put a thorough English education within the reach of every boy and girl in the city, with the addition of the elements of Latin for the boys. The high schools graduated their first classes July, 1875.

Promotion of pupils.—Examinations for promotion are held twice each year, during the last week of each of the two terms. The last third of the terms is spent in reviewing what was gone over the first two-thirds of the terms. The questions are prepared by the superintendent and sent to the schools in sealed envelopes, the envelopes not to be opened until the pupils are ready to begin the examination. Pupils while under examination are not to have any communication among themselves or with other pupils, nor to be assisted in any way; nor are they to be permitted to use any book or

*On the petition of the colored population of the State, provision was made by an act passed March 24, 1875, for the taxation of colored citizens and the establishment of schools for colored children from the proceeds of such taxation through the Delaware Association for the Education of Colored People.

anything else from which they can get information. All the pupils of a class have the same questions. The written answers are given to the teachers, who mark them according to a scale previously agreed upon. These examination marks and the marks during the last four weeks of the review, the number of absences and age of each pupil examined, are sent to the superintendent, who makes up the list of those to be promoted. In case of doubt of the scholarship of a pupil, he consults the teacher. To prevent overwork in school hours, the superintendent recommends that the children of the primary schools learn all their lessons at school, except that the older ones learn their reading lessons at home, where they can practise them aloud.

Teachers' institute.—The teachers of the public schools, organized into an institute under the presidency of the principal of the boys' high school, were instructed by a series of lectures on such topics as Kindergarten schools, teaching, methods of instruction, higher education, &c. This organization, the superintendent says, has been one of the most important agencies in improving the schools.—(Report of Superintendent D. W. Harlan for 1874–'75.)

TRAINING OF TEACHERS.

The preparation of teachers for the free schools is attended to in the normal department of Delaware College, Newark. By an act of the legislature, the conditions of which have been accepted by the trustees of the college, the faculty are required to furnish free instruction of a suitable character to ten students from each of the three counties of the State, whenever such students, on presenting themselves for admission, shall bind themselves to teach in the free schools of the State for not less than one year.

The members of the legislature are authorized to make the appointments to the scholarships thus established, each member being entitled to make one.

The course of study in this department extends through three years, embracing the branches of a good English education and the most approved methods of teaching these.

Candidates must be at least 16 years of age, must bring satisfactory evidences of good moral character, and must sustain an examination in the rudiments of primary English studies.

A diploma is to be given to such students as complete, with approval, the full three years' course, and a certificate of merit proportioned to the progress made to such as remain for less than the full time, but not less than one year.—(Circular of Delaware College.)

TEACHERS' INSTITUTES.

These means of improving teachers already in the schools are required by the new school law to be held by the superintendent in each of the counties of the State at least once a year, with at least a three days' session, and all the teachers of the county in which the session may be held are to attend unless unavoidably detained.

The institute in Wilmington, for teachers of the city schools, has been already mentioned.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The only high schools respecting which distinct information comes for 1875 are those of Wilmington, one of which is for boys and one for girls. The former reports 6 teachers, including the principal, with 77 pupils; the latter, 5 teachers, including also the principal, with 44 pupils. The course of study in the boys' school is given, including a very fair selection of secondary English branches, with Latin, from the grammar into Virgil, at least the first two books of the Æneid being read. The examination questions indicate considerable thoroughness. The course in the girls' schools is said by the superintendent to be "nearly the same," probably omitting the Latin.—(Reports of principals in city report.)

OTHER SECONDARY SCHOOLS.

The private and denominational schools of this class reporting themselves include 2 for boys, 1 for girls, and 4 for the two sexes together. These present the following statistics: Teachers, 36; pupils, 487, an average of about 13½ pupils to a teacher; in classical studies, 166; in modern languages, 105; preparing for classical course in college, 59; preparing for a scientific course, 32. All but 1 of the 7 schools give some instruction in drawing; all but 2, in vocal music; 6, in instrumental music. One has the aid of a laboratory in its chemical training and 2 of a philosophical cabinet in their teaching of natural philosophy. Four have libraries, numbering, respectively, 150, 400, 500, and 1,000 volumes.

This summary includes some schools specially named in that for 1874.—(Returns to Bureau for 1874–'75.)

SUPERIOR INSTRUCTION.

DELAWARE COLLEGE, NEWARK.

The classical course here requires that the candidate for admission be at least 14 years of age, give satisfactory evidence of good moral character, and sustain an examination in arithmetic, geography, English grammar, history of the United States, elements of algebra, Latin—from the grammar through the reader, Cæsar or Sallust, and Cicero's select orations, into Virgil; but how far is not said—and Greek, from the grammar through the reader and two books of Xenophon's Anabasis.

The course of study after admission extends through four years and leads to the degree of bachelor of arts.

A literary course for ladies extends through three years, omitting the higher mathematics and substituting one of the modern languages for Greek.—(Circular of college.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC DEPARTMENT OF DELAWARE COLLEGE.

The scientific course of this college omits the Latin and Greek from its requisites for admission, examining the applicant only on English studies. Latin and French or German are embraced in the course after admission, scientific studies, however, seeming to predominate. The course is three years, and, when completed with approval, entitles to the degree of bachelor of philosophy.

The agricultural course, also of three years, is largely devoted to instruction in practical agriculture and horticulture, with the mathematical and scientific studies related to these. French or German is optional in this course.—(Circular of college.)

EDUCATIONAL CONVENTIONS.

DELAWARE STATE TEACHERS' ASSOCIATON.

At a county teachers' institute, held at Middletown, Del., in October of the present year, a committee was appointed to call a meeting during the winter, for the purpose of organizing a State Teachers' Association. In response to the call, a number of gentlemen and ladies met in the High School building, in Wilmington, on Thursday, December 30, 1875.

There are about three hundred teachers employed in this State, but in consequence of unfavorable weather, and perhaps other causes, the attendance was small. A temporary organization was made, a committee appointed to prepare a constitution and by-laws, and a recess voted in order. The committee, during the recess, prepared a plan of organization, which was adopted by the meeting with little discussion, and the machinery of an association was in working order. Sixteen persons enrolled themselves as members. The following officers were elected: President, Prof. E. D. Porter, of Newark College; vice-president, City Superintendent D. W. Harlan, of Wilmington, for New Castle County; (as there were no members from Kent and Sussex Counties, no other vice-presidents were elected;) secretary, William Reynolds, of Wilmington;

treasurer, Miss E. D. Frazer, of Wilmington. The officers of the association, consisting of the president, three vice-presidents, (one from each county,) the secretary, and the treasurer are to constitute the executive board. The by-laws provide that the annual meeting shall be held at such time during the summer vacation as the executive board shall select, and continue not more than three days.

Remarks on the advantages of an association of this character, and its influence upon the cause of education, were made by different members, and the meeting was adjourned.—(New England Journal of Education, January 15, 1876.)

—(Return from Hon. William Watkin Hicks, State superintendent of public instruction, for 1875.)

SCHOOL SYSTEM OF THE STATE.

CONSTITUTIONAL PROVISIONS.

From 1845 the constitutions of the State have contained provisions for retaining as a separate fund for the use of schools the proceeds of all lands granted for that purpose; those of 1861 and 1865 requiring further that the general assembly should take such measures as might be necessary to preserve from waste or damage lands so granted or appropriated for educational purposes.

The constitution of 1868, article IV, section 22, directed the legislature to provide by general law for incorporating educational and other useful associations, and in article V, sections 17, 19, 20, placed a superintendent of public instruction on the list of executive cabinet officers, county superintendents of common schools among the county officers, and made the governor and cabinet a board of commissioners of State institutions. In article VII, section 7, it gave to the superintendent of public instruction "the administrative supervision of all matters pertaining to public instruction, the supervision of buildings devoted to educational purposes, and of the libraries belonging to the university and common schools." Article VIII, on education, declared it "the paramount duty of the State to make ample provision for the education of all children residing within its borders, without distinction or preference," directed the legislature to "provide a uniform system of common schools and a university, and provide for the liberal maintenance of the same," instruction in them to be free; made the official term of the superintendent of public instruction four years; designated the sources from which the common school fund should be derived; made the interest of this exclusively applicable to the support and maintenance of common schools and the purchase of suitable libraries and apparatus therefor; devoted a special State tax of not less than one mill on the dollar annually to the same purpose; required each county to raise annually by tax for the support of common schools a sum not less than half the amount apportioned to it that year from the income of the school fund; and made the superintendent of public instruction, secretary of state, and attorney-general a board of education for the State, the superintendent to be president.

PROVISIONS OF THE SCHOOL LAW.

From School Law of the State of Florida, revised by Charles Beecher, superintendent of public instruction, 1872.

OFFICERS.

The officers of the department of public instruction are a State board of education, with a State superintendent of public instruction as president, boards of public instruction, and superintendents of schools for each county, and local school trustees, with treasurers and agents. Term of office, not exceeding four years, during good behavior.

POWERS AND DUTIES OF SCHOOL OFFICERS.

The State board of education embraces the superintendent of public instruction, the secretary of state, and the attorney-general. Its duties are: (1) To hold and manage all lands granted to or held by the State for educational purposes; to fix the terms of sale, rental, or use of such lands, and to do whatever may be necessary for the preservation and improvement of them. (2) To have the direction, management, safe keeping, and expenditure of the educational funds of the State. (3) To audit the accounts of the superintendent of public instruction. (4) To entertain and decide upon questions and appeals respecting school matters referred to it by him. (5) To remove any subordinate officer in the department of instruction for incompetence or neglect of duty. (6) To use the available income of the university or seminary fund of the State in establishing, at such place as may offer the best inducements, one or more departments of the contemplated State university, beginning with a normal and preparatory department. (7) To keep in view the establishment, on a liberal basis, of a university to instruct youth in the professions of teaching, medicine, and law; in the knowledge of the natural sciences; in the theory and practice of agriculture, horticulture, mining, engineering, and the mechanic arts; in the ancient and modern languages; in the higher range of mathematics and literature, and in useful and ornamental branches not taught in the common schools.* (8) To co-operate with the superintendent of public instruction in the organization of the department of instruction and in the diffusion of knowledge in the State.

The superintendent of public instruction has "the oversight, charge and management of all matters pertaining to public schools, school buildings, grounds, furniture, libraries, text books, and apparatus."

It is his duty (1) to prepare and cause to be distributed among school officers and teachers the needful number of copies of school laws, forms, instructions, &c.; (2) to provide plans and specifications for the construction of school buildings, with directions concerning furniture, apparatus, &c.; (3) to call meetings of county superintendents and other officers, for obtaining and imparting information on the practical workings of the school system and the means of promoting its efficiency and usefulness; (4) to assemble teachers in institutes and employ competent instructors to impart information on improved methods of teaching and conducting schools; (5) to grant certificates to graduates of the normal school of the university and to successful teachers, as well as fix the grades and standards of qualification of teachers generally; (6) to annually apportion the interest on the common school fund and the fund raised by a one mill tax on property among the several counties of the State according to the number of persons between the ages of 4 and 21 residing therein; with such other things as properly belong to his position.

The county boards of instruction, each of which has the county superintendent of schools for its secretary and agent, have the titles of the school property of the counties vested in them and their successors in office.

Their duties are to obtain possession of all such property and manage it for the promotion of the best interests of education; to locate and maintain, in every locality in the county where they may be needed, schools to accommodate, if possible, all the children of school age; to appoint, on the recommendation of the patrons, trustees for these schools, and employ such teachers as may be satisfactory to the trustees; to provide for each school a dry, airy, healthful, pleasant, and conveniently central site, of not less than one acre in the rural districts and as nearly that amount as practicable in villages and cities; to do whatever they may deem expedient with regard to constructing, repairing, furnishing, warming, ventilating, and improving the schoolhouses; procuring for the schools the proper apparatus and text books, with books and stationery for the teachers' use; grading and classifying the pupils, and providing separate schools for the different classes in such manner as will secure the largest attendance and promote harmony and advancement among those that may attend. They are also to establish schools of higher grades where the advancement and number of pupils require them, and establish and maintain school libraries. The examining and licensing of teachers for the county schools belong to them, as well as the settlement of the salary of the county superintendent and the performance of all acts necessary for the promotion of the educational interests of the county.

* Such a university is provided for in the constitution of 1868.

The county superintendent of each county is to make timely inspection of the county with a view to the selection of localities for schools, the ascertainment of the number of children to attend them, and the aid for them that may be looked for from the citizens. He is to present to the board of public instruction plans and estimates for the construction of school buildings and improvements. He is to visit each school at least once in each term and make thorough examination of its condition, of the progress of the pupils, of the discipline maintained, and everything affecting its efficiency, giving such advice as he may deem proper; is to do all in his power to promote an interest in education; to select and frequently confer with proper school trustees; to keep a record of all schools established; to notify the State superintendent of the names and addresses of county school officers and teachers; to examine candidates for teaching when authorized to do so by the county board; and, where that board proves neglectful of its duty in respect to the establishment of schools, is to endeavor to remedy the neglect.

School trustees have, for the districts in which they are appointed, essentially the same duties to perform as to the schools with the county superintendents, only that their inspection of schools is to be once a month instead of once a term, and that they are to report quarterly to the superintendent of their county. They have also the whole management and oversight of the school property, the supply of text books and apparatus for the schools, and the power of expelling or suspending refractory pupils.

SCHOOLS.

The schools established under the State law appear to be of the primary, intermediate, grammar, and high school grades; the studies in them to be spelling, reading, writing, arithmetic, geography, and history in the lower grades, with such others in the higher as are "usually taught in high schools." The school day is of six hours; the school month, twenty-two days; the school term, three school months; and the school year, three terms. School age, 6–21.

The State Agricultural College, provided for by legislative action in February, 1872, and located in Alachua County in 1873, is meant to be supplementary to the system of common schools and to afford means for free higher education.

SCHOOL FUNDS.

The permanent school fund is derived from the proceeds of lands granted by the United States for educational purposes, from donations by individuals for such purposes, from appropriations by the State, from the proceeds of escheats or forfeitures and property granted to the State the purpose of which is not specified, from moneys paid for exemption from military service, from fines collected under the penal laws, from such portion of the *per capita* tax as may be prescribed by law, and from 25 per cent. of the sales of public lands owned by the State.

In aid of the interest from this, a special tax of not less than one mill on the dollar of taxable property is levied and apportioned annually for the support and maintenance of common schools, each county getting its share in proportion to the number of residents between 4 and 21 years of age, on condition of its raising not less than half the amount of what is to come to it and of keeping open its schools for at least three months in each year.

ELEMENTARY INSTRUCTION.

SCHOOL CENSUS.

No report of schools in this State having been printed for 1875, in consequence of the legislature to which such report is referred having now biennial sessions instead of annual, the following letter, received from the State superintendent, as the report of the Bureau goes to the press, embodies the only information to be had respecting the school population beyond what is contained in the general statistical summary before given.

"A general census of the State was taken last year, in accordance with a statutory enactment, and from it we find that the number of persons in the several counties between 4 and 21 years of age is as follows: Alachua, 7,860; Baker, 870; Bradford, 1,495; Brevard, 276; Calhoun, 576; Clay, 871; Columbia, 2,773; Dade, 50; Duval, 7,013; Escambia, 4,751; Franklin, 555; Gadsden, 4,663; Hamilton, 1,574; Hernando, 1,273; Hillsborough, 1,986; Holmes, 940; Jackson, 4,242; Jefferson, 6,370; Lafayette, 1,109; Leon, 8,642; Levy, 1,000; Liberty, 321; Madison, 5,562; Manatee, 1,216; Marion, 5,002; Monroe, 4,934; Nassau, 2,156; Orange, 1,342; Polk, 977; Putnam, 2,091; St. John's, 1,146; Santa Rosa, 2,984; Sumter, 1,456; Suwannee, 2,039; Taylor, 718; Volusia, 945; Wakulla, 980; Walton, 1,566; Washington, 1,014.

"The total number on register in the several counties is as follows: Alachua, 1,982; Baker, —; Bradford, 508; Brevard, —; Calhoun, —; Clay, —; Columbia, 195; Dade, —; Duval, 1,929; Escambia, 587; Franklin, 187; Gadsden, 1,785; Hamilton, 538; Hernando, 564; Hillsborough, 848; Holmes, 228; Jackson, 1,403; Jefferson, 2,396;

Lafayette, 518; Leon 3,604; Levy, 556; Liberty, 178; Madison, 1,753; Manatee, 490; Marion, 1,982; Monroe, 956; Nassau, 1,008; Orange, 576; Polk, 227; Putnam, 663; St. John's, 414; Santa Rosa, 1,029; Sumter, 350; Suwannee, 724; Taylor, 264; Volusia, —; Wakulla, 336; Walton, 607; Washington, 331."

The superintendent writes further: "We are at present engaged in taking a special census from which we shall obtain the number of deaf-mutes, of blind, of orphans and half-orphans, and the grade of scholarship of each person taken. When these returns are all in and digested, I shall be happy to send you the result."

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The law requires the establishment of "schools of higher grades of instruction where the advancement and number of pupils require them," and the State superintendent kindly furnishes the following list of such schools at present existing, thus: "The high schools of the State are the Douglas (colored) and Sears (white) High Schools at Key West; the Duval (white) and Stanton (colored) High Schools at Jacksonville; the Peabody (white) High School at St. Augustine; the Madison High School at Madison; the Lincoln Academy (colored) at Tallahassee; the Midway, near Miccosukee, in Leon County; the Quincy Academy at Quincy; the Jefferson High School at Monticello; the Franklin High School at Apalachicola, and the Pensacola High School at Pensacola. These are all high schools in the sense that their curriculum of studies embraces Greek, Latin, chemistry, natural philosophy, astronomy, physiology, botany, and all the higher branches of arithmetic. The East and West Florida Seminaries, situated at Gainesville and Tallahassee, are not included in this list and rank as distinct institutions." Whether all the above are strictly public high schools does not quite appear.

OTHER SECONDARY SCHOOLS.

A Roman Catholic school for girls at Jacksonville reports to the Bureau of Education 8 teachers, without either the number of scholars in it or the classification of these. Drawing and vocal and instrumental music taught. Another, at Key West, reports 14 teachers and 353 scholars, of whom 40 were in a classical course and 153 in modern languages. Drawing and vocal and instrumental music are attended to, and there is a library of 900 volumes.

Three schools for boys and girls—the Cookman Institute, Jacksonville; the Masonic Academy, Milton; and Christ Church School, Pensacola—report a total of 8 teachers and 167 pupils, 39 of whom were in a classical course and 13 in modern languages. In the last named school the course marked out is abundantly full, reaching up not only to Latin but Hebrew, though how far it is prosecuted is not told. The Cookman Institute has a library of 50 volumes and the Masonic Academy one of 1,000. Other appliances for instruction appear to be yet incomplete.

SUPERIOR, SCIENTIFIC, AND SPECIAL INSTRUCTION.

Respecting these various forms of instruction matters are yet in their infancy in this State, and information as to the measures on foot for the promotion of them has to be waited for till the publication of the State report for 1875 and 1876.

GEORGIA.

STATISTICAL SUMMARY.

SCHOOL POPULATION AND ATTENDANCE.

Number white children of school age, (6–18)	218,733
Number colored children of school age	175,304
Total	394,037
Number of confederate soldiers under 30 years of age	6,854
Number white pupils enrolled: Males, 54,458; females, 44,292	98,750
Number colored pupils enrolled: Males, 22,131; females, 21,847	43,978
Estimate for 13 counties not reported in the above: White, 15,898; black, 11,290.	
Total number enrolled: Whites, 114,648; colored, 55,268	169,916
Average attendance	105,766

TEACHERS AND TEACHERS' PAY.

Neither of these items is included in the State report, nor do they appear in the return to the Bureau of Education.

SCHOOLS.

Number public schools for white children	2,790
Number public schools for colored children	879
Average monthly cost of tuition per pupil in public schools	$1 73
Amount of the same paid by the State	88

Private elementary schools.

Number of private elementary schools	820
Number of instructors in same	903
Number of pupils: White males, 11,786; females, 10,089; colored males, 2,118; females, 2,058	25,451
Average number of months taught	3¾
Average monthly cost of tuition per scholar	$1 88

Private high schools.

Number of private high schools	104
Number of instructors in same	171
Number of young men attending	3,087
Number of young women attending	2,292
Total	5,379
Average monthly cost of tuition per scholar	$3 13

Colleges from which reports were received.

Number colleges reporting statistics	17
Number of instructors in same	96
Number of young men attending	845
Number of young women attending	1,184
Total	2,029
Average monthly cost of tuition per scholar	$4 71

INCOME AND EXPENDITURE.

Receipts from July 1, 1874, to July 1, 1875, at the treasury.

Poll tax	$3,792 83
Tax on shows and exhibitions	2,069 50
Half rental Western and Atlantic Railroad	150,000 00
Poll tax 1875 will be	140,015 00
Total available fund from State	295,877 33

Expenditures for the same period.

Amount apportioned among counties from the treasury	$151,304 00
Poll tax retained in counties	140,015 00
Expenses of office, salaries, postage, printing, &c	4,828 22
Paid printing for 1874, (bills presented 1875)	635 19
	296,782 41
Raised in cities and counties under local laws for support of public schools in their limits, and expended on same	$144,000 00
Sum actually expended by State on public schools	291,319 00
Total sum expended in State on public schools	435,319 00

—(From report of Hon. Gustavus J. Orr, State school commissioner, for 1874–'75.)

SCHOOL SYSTEM OF THE STATE.

CONSTITUTIONAL PROVISIONS.

The constitution of 1777 provided for the erection of schools in each county, to be supported at the general expense of the State; but this was not continued in subsequent revisions.

That for 1798, article IV, section 13, said: "The arts and sciences shall be promoted in one or more seminaries of learning, and the legislature shall, as soon as conveniently may be, give such further donations and privileges to those already established as may be necessary to secure the objects of their institution."

It was not until 1868 that the legislature was required to provide, at its first session after the adoption of the constitution of that year, for "a thorough system of general education, to be forever free to all children of the State," the expense to be provided for by taxation or otherwise.

PROVISIONS OF THE SCHOOL LAW.

From the Public School Laws of Georgia, of general operation and now in force, 1875.

OFFICERS.

The official staff is composed of a State board of education, State school commissioner,* county boards, and county commissioners of education.

POWERS AND DUTIES OF THESE OFFICERS.

The State board is composed of the governor, attorney-general, secretary of state, comptroller-general, and State school commissioner. Its main duties appear to be to hold in trust the educational funds of the State; to authenticate by seal its acts and all important acts of the State school commissioner; to advise with him when he is in doubt as to his official duty; to hear appeals from his decisions on questions touching the construction or administration of the school law, and to render a judgment which shall be final and conclusive upon the matter in issue.

The State school commissioner is the chief executive officer of the board; is appointed by the governor and confirmed by the senate; is charged with the administration of the system of public instruction and a general superintendence of business relating to the common schools of the State. He apportions the school funds; he prescribes suitable forms and regulations for school reports; he issues these to the local school officers, with such instructions as may seem necessary for the organization and government of schools. As often as possible he must visit the several counties of the State, to examine into the administration of the school law, to counsel with school officers, and to do what else may best subserve the interests of popular education. And annually he must make report of all school matters to the general assembly, with such statement of plans for managing and improving them as he may think important. His salary, originally $2,000, has recently been reduced, it is said, to but $800, though faithful and able service has been done by the incumbent.

The county boards of education are composed of five freeholders, selected by the grand jury of each county, and hold office for four years, but with the arrangement that every two years the seats of two or three are filled by new elections, intermediate vacancies, if they occur, being filled by the judges of the superior courts. They hold regular sessions every three months; must lay off their counties into school districts, and establish in these primary or graded schools up to a high school, according to circumstances; must locate these in the most convenient and economical position. They are empowered to employ teachers for the schools, making contracts with them in writing; to purchase, lease, or rent school sites; to build, repair, or rent school-houses; to pur-

* The office of State school commissioner was created by the constitution of 1868.

chase maps, globes, and school furniture; and make all other arrangements of this kind necessary to the efficient operation of the schools. They are invested with the custody of all school property in the districts under their care; may receive gifts, grants, donations, and devises made for the use of public schools within their respective counties; must make arrangements for the instruction of the white and colored children in separate schools, but as far as possible provide the same facilities for both races as respects attainments and ability of teachers and length of school term; must prescribe text books and books of reference for the schools, not excluding the Bible, and act as a court of local appeal in school matters. The only compensation allowed for the performance of their duties is exemption from road, jury, and militia duty.

The county commissioners are elected by the county boards from their own number, or from other citizens of the county, for terms of four years; act as secretaries of the boards; have the examination and licensing of teachers for their counties, and may revoke licenses, for such causes as incompetency, immorality, cruelty, or neglect of the business of the school; must keep records of all such proceedings, and report them annually to the State school commissioner; must visit the schools of their counties at least twice in each year, with a view to the increase of their usefulness and the elevation of their standard; must take or cause to be taken quadriennially a census of the school population of their districts, at such times as may be designated by the State commissioner, noting separately whites and blacks, males and females; and must make report to the State commissioner of this census, and all other needful information respecting private schools, high schools, colleges, and other institutions of learning within their counties, in order to a full view of educational facilities. They also apportion the school fund to the districts, disbursing it upon the order of the county board, and act as agents of the county board in procuring school furniture and apparatus. Compensation not over $3 a day for all time actually employed in the discharge of official duties.

SCHOOLS.

The schools of the State, under this system, are "primary or graded schools, up to a high school," the last, however, being mainly limited to the cities. The studies rise from the elements of orthography, reading, writing, arithmetic, English grammar, and geography, up to a fair range of commercial and classical instruction. Separate schools for whites and blacks are required by law, the same facilities, however, to be provided, as far as practicable, for both races. Provision is also made for evening schools for such as cannot attend the day schools, and for one or more self-sustaining manual labor schools in each county. Admission is free to all the children residing in the subdistricts where the schools are located. The school year is required to be at least three months, and in ordinary cases six. The school age is from 6 to 18 years.

No normal schools have yet been provided by State authority, but a normal department exists at Atlanta University, a private normal school with 165 pupils at Waynesborough, two others, with small attendance, for members of the colored race, and a few normal classes in schools.

A State University exists at Athens, with a State Agricultural College connected with it, but without any special link of connection with the lower schools. A branch of the agricultural college has been established at Dahlonega. There is also a State institution for the deaf and dumb at Cave Spring and a State academy for the blind at Macon.

SCHOOL FUNDS.

The annual State school fund is derived from a poll tax, a special tax on shows and exhibitions, and on sales of spirituous liquors; a charge on exemption from military service; endowments, gifts, devises and bequests to the State or State board of education; educational funds and incomes not belonging to the State university, and one-half the net earnings of the Western and Atlantic Railroad; aggregate yield, nearly $300,000. This is used to supplement the means derived from local subscriptions for the support of schools, being apportioned to the several counties and school districts on the basis of the number of youths in each between 6 and 18 years of age.

No permanent school fund seems to have survived the war, beyond the interest of the State in the Western and Atlantic Railroad.

ELEMENTARY INSTRUCTION.

PROGRESS.

The commissioner says: "Since the inauguration of public schools in this State, there has been a constant increase in the number of children reached by the system. In the year 1871, there were enrolled in the schools as follows: White pupils, 42,914; colored pupils, 6,664; total, 49,578. In the year 1872, there were no public schools in the State, except those under local laws, in consequence of a misapplication of school funds, which occurred previously to that date. In 1873, the attendance was as follows: Whites, 63,922; colored, 19,755; total, 83,677; being an increase over the attendance of

1871 of 34,099. The enrolment in 1874 was as follows: Whites, 93,167; colored, 42,374; total, 135,541; increase over former year, 51,864. For the year 1875 the attendance, exclusive of fourteen counties not reported, has been as follows: Whites, 105,990; colored, 50,359; total, 156,349; increase over the attendance of 1874, 20,808. The figures above given, though far from being satisfactory, afford much ground for encouragement."—(From State school commissioner's report, 1875, p. 5.)

AID FROM PEABODY FUND.

The commissioner further says: "I take pleasure in again expressing the obligations of the people of Georgia to the trustees of the Peabody fund for substantial aid rendered to our public schools. The report of Rev. B. Sears, D. D., general agent, shows the following contributions to schools in Georgia, for the year ending July, 1875: Griffin, $2,000; Columbus, $900; Savannah, $800; Atlanta Normal School, (colored,) $800; Dalton, (colored,) $300; Rabun Gap, $300; Grove Level, $300; nine hundred and fifty-sixth military district, $300; Brown Institute, $300; Cedar Town, $300; Liberty County, (colored,) $300; eight hundred and seventy-fourth military district, $300; total, $6,900.

Donations not included in the statement above were made to other schools in the State of Georgia during the year 1875, the statement coming down, as mentioned, to July of that year."—(From State school commissioner's report, 1875, p. 14.)

CITY SCHOOL SYSTEMS.

ATLANTA.

City system.—The board of education consists of twelve members elected by the mayor and common council, one-third retiring every two years. The mayor is *ex officio* a a member of the board, and the city superintendent is *ex officio* its secretary.

General statistics.—Population, 32,000; children of school age, (6–18:) White, 7,238; colored, 3,124; total, 10,362. Number enrolled in white schools, 2,358; in colored schools, 1,269; total number enrolled, 3,627. Enrolled in high schools, 277; in grammar schools, 3,350. Number of teachers in high schools, 6; in grammar schools, 51; total, 57. Average number of pupils to teachers, 44. Number of high schools, 2; of grammar schools, white 5, colored 3; total number of schools, 10. Total cost of schools for the year, $49.458.10; cost per scholar, based on total enrolment, for tuition, $10.54; on average attendance, $15.21. Cost per scholar, including all expenses, on total enrolment, $13.63; on average attendance, $19.67.

The superintendent says: "There are five grammar schools for white and three for colored children. Some of these, in the lower grades, have been much crowded, and another year's progress will render increased accommodations necessary." He therefore recommends that the present buildings be enlarged. He says that of the 57 teachers now in the schools, 36 have been employed since the opening in February, 1872, and have shown great ability both in instruction and discipline. The normal class of public school teachers meets every Saturday morning. Their work for the past year has been unusually interesting and profitable. In addition to the usual essays, lectures, and discussions, they have taken as regular studies physical geography, botany, and geology.

Three examinations of applicants for teachers' positions have been held during the year; number of applicants, 65.

Written examinations are held each month on the work of that month, the teachers preparing the questions. These examinations determine the monthly scholarship of the pupils, which is reported to their parents or guardians. Written examinations are held at the close of each of the three terms, for which the superintendent prepares the questions. Public oral examinations are held at the end of the first term in December and at the end of the school year in June.

Pupils.—Of the 10,362 pupils enrolled in the schools during the year, 32 were nonresident, and, in accordance with the rules of the board, were required to pay a tuition fee of $25 per annum in the grammar schools and of $40 in the high school.

The graduating class of the girls' high school numbered 18 and that of the boys' high school, 9.

Colored schools.—During the year the number of pupils in the colored public schools has been 1,269. From two to three hundred have had to be refused admission for want of room. The superintendent recommends that as soon as practicable a new house be built in the western part of the city to meet this want.—(Annual report of Superintendent B. Mallon, 1875.)

SAVANNAH.

City system.—There is here a board of public education composed of twelve members, who have the control of the public schools of the city of Savannah and the county of Chatham, with a city superintendent under them.

Statistics.—The number of children enrolled in the city public school during the year was 3,577; the average attendance, 2,745. Number of teachers, including teachers of modern languages and calisthenics, males, 11; females, 50; total, 61. Average enrolment of pupils to teacher, 61; average attendance, 47. Number of buildings under control of the board, 7. These buildings are divided into apartments, affording accommodations for 19 primary, 16 intermediate, 15 grammar, and 8 high school classes. These school-rooms are well furnished and, with a few exceptions, well adapted to the end for which they are used. The total expenses of schools during the year have been $48,350.94; cost per scholar, on total enrolment, $11.15; on average attendance, $15.12.

Review.—The organization of the schools remains the same, with the exception of an additional class in the boys' primary school and the extension of the colored schools by renting six more rooms, which furnish accommodations for 675 pupils.

Out of an enrolment of 4,572 children in the city and county public schools, only 3 have died.

The normal class, the primary object of which is instruction in theory and practice of teaching, was kept up during the year. The weekly meetings of this class were attended by the regular public school teachers, and also by a number of ladies, who were desirous of qualifying themselves for teaching.

The usual oral and written examinations were held. At the end of each term the various classes were subjected to written examinations. The superintendent says: "With a view of ascertaining the relative progress of corresponding grades in different schools, most of the questions for the examination in July were prepared by myself. The results, although unequal, were, in the main, satisfactory. The examination papers, as a general thing, were remarkably neat in their execution and correct in their scholarship."

Two classes, consisting of 19 girls and 8 boys, having finished the prescribed course of study, were graduated at the close of the year. The course embraces the work generally covered by city school systems.

The superintendent recommends the admission of non-resident pupils to the high schools, which are never full, upon the payment of tuition fees.—(Annual report of Superintendent W. H. Baker, 1875.)

NORMAL TRAINING.

MEANS TO MORE EFFICIENT TEACHING.

On this topic Mr. Orr writes: "There is great lack of efficient, well qualified teachers for our public schools. It is needless to say that money paid to an incompetent teacher is poorly expended. In extreme cases of incompetency, the money so expended is absolutely wasted, and this is not the worst part of the evil. Mental habits are sometimes formed by pupils under such instructors which result in absolute and often permanent damage. Besides, modes of teaching and discipline have been much studied of late years, and every intelligent educator knows that great advances have been made in these respects. It is but a truism to say that a teacher without the requisite knowledge cannot instruct. It is not so evident, but nevertheless it is just as true, that one with the requisite knowledge, but without professional training, acquired either in a school for teachers or in the actual labor of the school-room, cannot do the most efficient work. A good corps of well trained, thoroughly efficient teachers would do more, perhaps, to popularize our public schools and to render our school operations efficient than any single cause. The want of well qualified teachers for our white schools has been much felt.

"The want of the white schools in this respect, however, is small in comparison to that of the colored schools. It has been impracticable to put colored schools in operation at all, in some places, in consequence of the lack of competent instructors. We shall not succeed in commending our public schools to the confidence of an intelligent public till the State takes some steps to supply the want of which I have been speaking. I therefore recommend that an annual appropriation of $10,000 be made for establishing two normal schools for whites, one to be located in the northern and the other in the southern portion of the State, and that the law making an appropriation of $8,000 to the Atlanta University be repealed, and that, in lieu thereof, $10,000 be annually appropriated for establishing a normal school for colored pupils."—(From State school commissioner's report, 1875, pp. 8 and 9.)

NORMAL SCHOOLS AND CLASSES.

As was said under the head of schools, a normal department exists in Atlanta University, with 169 pupils in 1874–'75, and a normal school with 165 pupils at Waynesborough. Teachers for colored schools are also in training at the Storrs School at Atlanta and in the preparatory school of Clark University, number not known.

The county superintendent of public schools in Bibb County reports the existence of three distinct normal classes in the public schools, during the years 1874–'75, viz:

A class for teachers in the Macon city schools, a class for white teachers of country schools, and a class for colored teachers of country schools; the first holding weekly, and the other two, monthly meetings. At these meetings reports are rendered, school difficulties discussed, and methods of instruction illustrated.—(Educational Journal of Virginia, May, p. 318.)

SECONDARY INSTRUCTION.

HIGH SCHOOLS.

The only facts respecting schools for secondary instruction to be obtained from the report of the State school commissioner refer to private high schools. There were 174 such schools kept in 1875, having 171 instructors and a total attendance of 5,379 students, of whom 3,087 are young men and 2,292 young women. The average monthly cost of tuition was $3.13.

In 77 of these schools the course embraces Latin or Greek, or both; in 9, modern languages; while in several, "languages" are mentioned without more specific designation; and in others the course is said to be "academical," or "usual high school course." "Mathematics" and "sciences" are generally reported as a portion of the course.—(Statistical table No. 5, pp. xxiii–xxvi, of State report.)

The public high schools at Atlanta contained, in 1875, 277 pupils, under 6 instructors, and graduated 27 in the summer of that year. Those of Savannah had 8 high school classes, with 7 teachers and 237 pupils. The course here is three years for boys, embracing Latin, French, and German, and four years for girls, embracing the same. The boys may also study Greek.

OTHER SECONDARY SCHOOLS.

Besides the above, 12 institutions, devoted largely to secondary training, report 28 instructors, with 653 pupils. Of these pupils, 246 are reported to have been engaged in classical studies and 14 in modern languages, 135 to have been preparing for a classical course in college, and 27 for a scientific course. In 4 of the 12 schools drawing is taught; in 6, vocal music; in 5, instrumental music; while 5 report chemical laboratories and 4 some philosophical apparatus. Only 3 of the 12 report libraries, of 150 to 3,000 volumes.

In the preparatory schools of colleges for males and females, there are reported 630 students additional to both the previously mentioned classes, making 6,662 in secondary schools.—(Returns to Bureau of Education, 1875.) 7,276

SUPERIOR INSTRUCTION.

UNIVERSITY OF GEORGIA, ATHENS.

The university comprises five departments: the academic, the State College, law, medical, and North Agricultural College, at Dahlonega. The academic department is divided into 8 schools: (1) of Latin languages and literature; (2) of Greek language and literature; (3) of modern languages; (4) of belles-lettres, including rhetoric, criticism, and æsthetics; (5) of metaphysics and ethics; (6) of mathematics; (7) of natural history and astronomy; (8) of chemistry, geology, and mineralogy. The separate schools are so arranged as to be combined into several departments, which thus offer systematic courses of education of different types of culture. The State college department embraces schools of agriculture, engineering, and applied chemistry. State scholarships in this department (entitling the student to free tuition) are granted to as many students, residents of the State, as there are members of the house of representatives and senators in the general assembly.—(Catalogue, 1875.)

OTHER COLLEGES.

Atlanta University.—This university admits to its advantages both sexes, without regard to race, color, or nationality. It was founded by the American Missionary Association in the South, and the association, the Freedmen's Bureau, and the State of Georgia have furnished the means for its support. The last session of the legislature (1875?) passed an act appropriating $8,000 annually to the uses of the university, (to be paid upon the approval of its expenditures by the board of visitors of the State University,) upon condition that the institution shall educate free of tuition one pupil for every member of the house of representatives, to be nominated by the members. The curriculum embraces college, preparatory, normal, and higher normal courses, with a theological class.—(Catalogue, 1874–'75.)

Bowdon College, Bowdon, (non-sectarian,) is for both sexes; has preparatory, collegiate, irregular business, and normal courses.—(Catalogue, 1873–'74.)

Of *Clark University*, Atlanta, still in its infancy, the only report reaching the Bureau for 1875 is one presented to the Georgia conference, under whose care it is. This report indicates in general terms, without statistics, an increase of both teachers and students,

an improvement in the buildings, and a prospect of the early initiation of college classes proper.—(The Methodist, October 27, 1875.)

Emory College, Oxford, has classical, mathematical, and scientific courses; also a full course in English literature. There were, in 1875, 152 pupils, with 8 instructors. (Report of State school commissioner, 1875, p. xxvii.)

Mercer University, Macon, has at present three departments: the college of liberal arts, the department of theology, and the school of law. The scheme of instruction in the college of liberal arts includes two courses of study, viz, the classical and the scientific. Each of these courses has a carefully arranged curriculum, between which applicants have an election.—(Catalogue, 1875.)

Pio Nono College, Macon, (Roman Catholic,) opened in 1874, under the supervision of Rt. Rev. Bishop Gross. The plan of instruction consists of three courses: a preparatory, lasting one year; a classical, lasting six; and a commercial, supposed to last three years, but the time may vary according to the talents and progress of the student. —(College catalogue, 1874–'75.)

COLLEGES FOR WOMEN.

Fifteen institutions claiming this rank report to the Bureau 93 instructors and 1,364 students. Of the instructors, 23 are in preparatory departments, and of the students 470 are in the same. Of the students in the college courses proper, 863 are regular, 20 special, and 11 post graduate. For fuller statistics, see Table VIII of the appendix.—(Returns to Bureau of Education, 1875.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

The State College department of the University of Georgia, at Athens, is the State Agricultural College, and at present includes departments of agriculture, engineering, and applied chemistry. Other departments, it is expected, will be organized as soon as means are provided for them. Students are required to take one of the several courses prescribed, or a partial course, with the addition of any of the schools of the university for which they may be prepared. An appropriation of $15,000 was made by the legislature in 1875 for the purchase of apparatus for this college. It was to be paid in three annual instalments of $5,000 each. The first of these has been received and expended for the purpose intended, greatly increasing the advantages for study and illustration. North Georgia Agricultural College, located in Northern Georgia, at Dahlonega, was opened in January, 1873. A portion of the annual income derived from the national land grant is set apart to aid in the support of this institution, thus rendering it a department of the University of Georgia.—(Catalogue of University of Georgia, 1875.)

PROFESSIONAL SCHOOLS.

The law department of the University of Georgia offers a course of study embracing common and statute law as it existed before July, 1776, and also as it is now in force in England and the United States; constitutional law, equity, medical jurisprudence,

parliamentary law, rhetoric and metaphysics, and commercial jurisprudence. The course is completed in one year. No examination and no previous course of study are necessary for admission.—(Catalogue University of Georgia, 1875.)

The law school connected with Mercer University offers instruction in equity jurisprudence, pleading and practice, international and constitutional law, and common and statute law. Law students whose opportunities have been limited may take up some of the studies in the regular college curriculum, and the hours of recitation are so arranged that the regular students in the university may carry on the law and collegiate courses together.—(Catalogue Mercer University, 1875.)

The medical department of the University of Georgia claims superior facilities for the study of medicine. These comprise a faculty of 11 professors and instructors, a rich museum, a library of about 5,000 volumes, and a complete chemical laboratory and cabinet of *materia medica*, with ample clinical resources. The course of instruction only lasts one year. The Atlanta and Savannah Medical Colleges have a course of two years.

Theology is taught to some extent in Mercer University, Macon; in Atlanta University, Atlanta; and in the Clark Theological Seminary; in the last two, mainly to students of the colored race.

SPECIAL INSTRUCTION.

INDUSTRIAL TRAINING FOR WOMEN.

Mrs. Maria J. Westmoreland, of Atlanta, proposes to establish at that place an industrial and educational school, wherein may be taught certain industries in which women may engage, and for many of which they show particular aptitude, often excelling men who follow the same employments. She aims to teach therein not only such industries as plain sewing, cutting and fitting by measurement, tapestry, wax-work, hair-work, lace-making, cooking, &c., but also drawing, painting, including house and decorative painting, designing in wood, &c., as well as several branches that come under the head of employments, such as printing, telegraphy, book-keeping, phonography, and hygiene; her object being to open to the women of the South, in their present impoverished condition, the means to independent self-support.—(Letters from Mrs. Westmoreland to Bureau of Education.)

GEORGIA INSTITUTION FOR THE DEAF AND DUMB, CAVE SPRING.

Instructors, 5, 1 a semi-mute; pupils, 60; studies: English language, geography, arithmetic, history, grammar, and penmanship. Students also receive instruction in

type setting, printing, and shoemaking, with a view to a future ability for self-support. A newspaper called the Cave Spring Enterprise has been printed mainly through the labor of the pupils and has had 400 subscribers, with a respectable advertising patronage. Library, about 1,000 volumes.

A department for colored deaf-mutes is still wanting, and the creation of it is strongly urged.—(Report for 1874–'75, and return to Bureau of Education.)

GEORGIA ACADEMY FOR THE BLIND, MACON.

Instructors and other employés, 11, of whom 3 are blind; pupils, 54; library, 300 volumes in raised print and 500 in ink print; employments taught: Broom-making, cane-seating, mattress-making, sewing, knitting, housework, &c. Receipts froma ll sources for the year, $13,130; expenditures, $12,601.63.—(Return to Bureau of Education, 1875.)

EDUCATIONAL CONVENTIONS.

GEORGIA TEACHERS' ASSOCIATION.

The ninth annual meeting of this association was held in Griffin on the 4th, 5th, and 6th of May, 1875. The attendance was not so large as had been expected, the number of delegates present being scarcely more than half that of the previous year. Several causes combined to bring about such a result. Prominent among them is the widespread financial distress, preventing many from assuming the expense of a journey. Many, too, thought it inexpedient for them to take any respite from school work at the time when the association held its meeting. It is also believed that a large proportion of the teachers of Georgia do not fully appreciate the real objects to be attained by these annual meetings. They do not yet see the necessity for organization and frequent communication among members of the profession in order to keep up its influence and develop and preserve an *esprit de corps* among the teachers.

Despite the small attendance, however, and the unavoidable absence of three who had prepared papers, the exercises were full of interest; there was no difficulty in occupying every hour, and much spirited debate was elicited. Among the topics considered by the association may be mentioned "The teacher's resources, outside of texts, routine, or rule," presented by Hon. David W. Lewis; "What are the most important elements of success in teaching?" by Mr. B. Mallon; the "Present duties and opportunities of southern teachers," by Mr. B. M. Zettler; "Science education," by Prof. W. L. Broun, of the State University. The evening of the first day was occupied with a powerful address on public education, by Dr. Sears, agent of the Peabody fund. In the afternoon of the second day Mr. Alexander H. Stephens spoke for an hour on "The nature of the teacher's work" before a large audience, which filled every available yard of space in the ample hall where the association had convened. Immediately upon the close of Mr. Stephens's speech, in accordance with the request of a committee of teachers, Professor Broun explained the causes of the recent cyclones which have spread so much devastation in the upper parts of the State. He was followed by Mr. Stephens, who, though not a professed scientist, has been a careful observer of atmospheric phenomena during the past forty years, and who added his explanation of some points which Professor Broun, for fear of occupying too much time, had left unnoticed.

A series of resolutions submitted by the association's committee on publication was adopted, one of which provided that for the next twelve months the Educational Journal of Virginia should be the organ of the Georgia Teachers' Association. It was provided that the subscription price of the Journal for a year to members should be, to gentlemen, including their annual fee for membership, $2, and to ladies only $1.25.

To encourage and stimulate the teachers of Georgia, Dr. Sears offered to the association the sum of $200, to be used in defraying its expenses, as soon as a subscription list of two hundred readers should be obtained.—(Virginia Educational Journal, June, pp. 359–363.)

LIST OF SCHOOL OFFICIALS IN GEORGIA.

STATE BOARD OF EDUCATION.

Name.	Post-office.
His excellency James M. Smith, president; term expires January, 1877	Atlanta.
N. C. Barnett, secretary of state; term expires January, 1877	Atlanta.
W. L. Goldsmith, comptroller-general; term expires January, 1877	Atlanta.
N. J. Hammond, attorney-general; term expires January, 1877	Atlanta.
Gustavus J. Orr, State school commissioner	Atlanta.
Henry T. Lewis, clerk	Atlanta.

Expenditure for sites, buildings, and furniture	864,934 20
Expenditure for libraries and apparatus	225,640 10
Expenditure for salaries of teachers	5,326,780 29
Expenditure for fuel, lights, rents, repairs, &c	971,854 60
Total expenditure	7,389,209 10

—(From return of Hon. S. M. Etter, State superintendent of public instruction, for 1874–'75.)

SCHOOL SYSTEM OF THE STATE.

CONSTITUTIONAL PROVISIONS.

The convention which formed the original constitution of the State in 1818 accepted by an ordinance the offer from the General Government of the sixteenth section lands in every township for the use of schools; of thirty-six sections, or one entire township, for "a seminary of learning;" and of three-fifths of 5 per cent. of the proceeds of sales of public lands "for the encouragement of learning," with special reference to "a college or university."

It was not, however, until 1870 that distinct constitutional provision appears to have been made for the perpetuation of the school system which had been inaugurated in 1823 and gradually improved up to 1856. The article on "education," 1870, directs, in section 1, that "the general assembly shall provide a thorough and efficient system of free schools, whereby all the children of this State may receive a good common school education;" in section 2, that "lands, moneys, or other property donated, granted, or received for school, college, seminary, or university purposes, and the proceeds thereof, shall be faithfully applied to the objects for which such gifts or grants were made;" in section 3, that aid shall not be given from any public fund or by appropriation to sectarian schools of any class; in section 4, that no teacher or school officer shall be interested in the sale or profits of any book, apparatus, or furniture used or to be used in the schools; and, in section 5, that "there may be a county superintendent of schools in each county, whose qualifications, powers, duties, compensation, and time and manner of election and term of office shall be prescribed by law."

PROVISIONS OF THE SCHOOL LAW.

From the Illinois School Law, including the latest amendments, 1872–1874.

OFFICERS.

The officers now existent are a State superintendent of public instruction,* county superintendents of schools, township trustees of schools, and district school directors, with boards of education for the State Normal University, for the control of county normal schools, and for districts having 2,000 or more inhabitants.

POWERS AND DUTIES OF THESE OFFICERS.

The State superintendent is elected by the people of the State, holds office for four years, gives bond in $25,000 for prompt discharge of duties and faithful application of school moneys, keeps record of all school matters, advises with experienced practical teachers as to the best methods of conducting common schools, has the supervision of all the public schools in the State, is the general adviser of county superintendents and other school officers, and must make to the governor biennially, on or before December 15 preceding a regular session of the legislature, a report of everything relating to the public schools, with any needed suggestions respecting school laws, schools, and the means of promoting education.

The county superintendents are elected by the people of the counties in which they are to serve; hold office for four years; give bonds in $12,000 for the faithful performance of their duties; apportion the school moneys granted their counties to the several townships and parts of townships that have kept schools in accordance with law; must visit, at least once in each year, every school in their counties, to note the methods of instruction, the branches taught, the text-books used, and the discipline, government, and general condition of the schools; must give, where necessary, directions in the science and art of teaching, and must encourage and assist in managing county teachers' institutes, with a view to elevate the standard of teaching and improve the condition of the common schools

The trustees of schools, three for a township, are elected by the legal voters of the township from among the residents, 21 years old or upwards; serve each for three years, one, however, going out each year and being replaced by an annual election. They hold in trust the school property of their townships; must lay off these townships into school districts to suit the wishes and convenience of the inhabitants; must change these districts, if petitioned to do so by a majority in those to be affected by the change; must apportion the school moneys to the respective districts in proportion to the number of residents under 21 years of age in each; must, on a vote of the inhabitants in favor of it, establish a high school for the township, in addition to the ones of lower grade; and must, on or before the second Monday in October preceding each regular session of the legislature, make report of the condition of the schools to the superintendent of the county in which their township may be situated, giving full details of various required particulars.

The district school directors, three for each district, are elected by the legal voters of the district, and, like the township trustees, hold office for three years, one vacancy occurring annually by retirement, which is filled by an annual election. The directors have the supervision and control of schools in their respective districts; must establish a sufficient number of them for the accommodation of all the children between 6 and 21 years of age; must keep these open at least five months in each year; and, for this purpose and for the building, repairing, and furnishing of proper school-houses, may levy taxes on the property of their district or borrow funds. They may adopt rules for the schools, appoint teachers, assign pupils to them, suspend or expel for incorrigibly bad conduct, direct what branches shall be taught and what text books and apparatus must be used, provided that text books be not changed oftener than once in four years.

The boards of education are as follows: State board, so called, having charge of the interests of the Illinois Normal University;† county boards, for a like charge of county normal schools; and school district boards, for districts where the growth of population, from the number or size of towns, imposes duties more onerous and responsible than can be well performed by the ordinary school directors. The lowest limit of population for such districts is 2,000. The supervision of the schools contained in them is generally intrusted to city superintendents.

SCHOOL FUNDS.

The permanent school fund of the State is derived from sales of public lands donated to the State by the General Government; from the State's share of the "surplus rev-

* The office of State superintendent is put beyond the possibility of legislative interference by being placed among the executive offices in the constitution of 1870, and the incumbent is made in it ineligible to any other office during the period for which he is elected.

† The Southern Illinois Normal University has a "board of trustees," instead of a "board of education."

enue" distributed by act of Congress of 1836 and made a part of the common school fund by legislative action, March 4, 1837; and from "county funds" created by the legislature February 7, 1835. The total amount from these and other sources was, in 1875, $7,860,554.32. The basis for the distribution of the proceeds from the fund is the number of children in each county under 21 years of age. The distributable school fund is composed of the interest on the above permanent fund and of the proceeds of a two mill tax on every dollar's worth of property.

SCHOOLS.

The schools under the control of the State are of the usual elementary, intermediate, grammar, and high school grades, with two State normal schools for the training of teachers, and a newly organized State Industrial University. There are also institutions for the deaf and dumb, for the blind, and for the training to right principles such as need reform. The school year for sessions is "at least five months;" for reports and accounts, it begins on the first day of October and ends on the last day of September. The school month is "twenty-two school days actually taught." The schools are open to all, without distinction of color, and by an act approved March 24, 1874, school officers are prohibited from excluding, directly or indirectly, any colored child from 6 to 21 years of age from entering any of the public schools on account of color; penalty for such offense, $5 to $100.

ELEMENTARY INSTRUCTION.

KINDERGARTEN SCHOOLS.

Special reports have been received from 5 Kindergarten schools, all located in Chicago, and having a total attendance of 109 pupils. The ages of these children range, in one school, from 3 to 8 years; in another, from 3 to 9; in two, from 3 to 7; and, in one, from 4 to 8. The day's session in one school lasts 4 hours, in all the rest only 3. In addition to Fröbel's 18 Kindergarten "gifts," these schools are nearly all furnished with pianos and plants, and ornamented with children's work.

THE PUBLIC SCHOOLS.

The reports upon the working of the school system in this State being made biennially, no full official account of the schools for 1874–'75 can be presented. It will be included in the report for 1875–'76. The statistical summary given on a preceding page and the reports respecting school systems in the cities embody all that is available for 1875.

CITY SCHOOL SYSTEMS.

BELLEVILLE.

City system.—A board of education of six members, two of whom go out every year, and a city superintendent, who is *ex officio* secretary of the board.

Statistics.—Number of pupils enrolled, 1,601; average daily attendance, 1,450; number of teachers, 39; average number of pupils taught by one teacher on the number enrolled, 46; on average number belonging, 44; cost per pupil for the year, $19.62; cost of tuition per pupil in vocal music, 62 cents; total amount expended for schools, $32,140.98.

Studies.—Object lessons have been found of great benefit in the improvement of the pupils. Great stress has been laid upon the composition exercises in all the grades, and the examinations show great improvement. Satisfactory progress has been made in drawing; zoölogy, botany, and natural philosophy have been taught, but, owing to want of apparatus, only to a limited extent. An extension of German to the first and second school years has proved a very wholesome measure. Teachers have practised exercises in vocal music with zeal; scholars love to sing; and the results obtained in the year have been very satisfactory. A full and excellent course of study for the schools is given in the report, embracing, in many instances, the text books used.—(Report of Superintendent Henry Raab, 1875.)

CHICAGO.

City system.—The schools here are managed by a superintendent and assistant superintendent, and a board of education of fifteen members, who hold office three years, one-third of them going out each year.

Statistics.—The entire population of the city in 1874 was 395,408. The school census for the same year was 102,555, its increase since 1872 having been 14,336. The enrolment of pupils in public schools during 1874–'75 was 49,121, an increase for the year of 1,158. The average number belonging was 34,983, and average daily attendance, 32,998. The percentage of punctual attendance in 1873–'74 was 94.6; in 1874–'75, it was 94.5. Number of schools in the city: High school, 1; normal, 1; district, 21; grammar, 3; primary, 15; total, 41. Number of teachers: Gentlemen, 34; ladies, 666; total, 700. Of

these, 12 ladies and 12 gentlemen teach in the high school and 1 gentleman and 4 ladies in the normal. Adding the attendance in private schools, 16,645, to the enrolment in the public schools, gives a total of 53,061. Receipts for school purposes: From school tax fund, $765,968.21; from State fund, $109,044.40; from rents, interest, &c., $91,684.58; total, $966,697.19. Total expenditures, $814,838.48.

School accommodations.—In spite of all the effort made within the past nine years to provide sufficient accommodations for the children, the schools are further behind the demand in this respect than at any time for the past twelve years. The growth of the city has far exceeded the supply provided. Sittings can be furnished now for only about 34 per cent. of the school population. Of the remaining 66 per cent., 28 per cent. are reported as enrolled in private schools, 16 per cent. are engaged at regular employment, leaving 22 per cent. unprovided for, except as provision is made for half-day attendance in the case of about 10 per cent.

School attendance.—There has been a gratifying increase in regular and constant attendance. The percentage of daily attendance, based upon the number enrolled, is this year more than 2 per cent. larger than last year. The average number of days' attendance is also more than 3 per cent. in advance of that of last year, although the number who have been perfect in attendance for the year is smaller by more than 11 per cent. The efforts which were made for several years so strenuously in the direction of a high degree of punctual attendance have of late been slackened, and wisely so, the superintendent thinks. What has been apparently lost in this direction has been gained in others. It is considered not wise to press the average daily attendance beyond its present limit, but it may be maintained where it is without injury to other interests.

Scholarship.—The increase in good scholarship is marked. The table of promotions shows an increase of nearly 10 per cent.

Deportment.—The number of suspensions for misconduct is far less than in any previous year, and the general order of the schools has been at least equal to that of any previous year. Suspensions for misconduct are far less frequent than in the years when corporal punishment was in vogue.

Extravagance in dress.—The superintendent has aimed to discourage among the pupils a display of fine clothing upon graduation day, partly because of the pecuniary burden it entails upon many poor people and partly because of the influence of such display upon the habits of extravagance already too much encouraged. The exhibitions in the grammar schools have been very largely modified in this respect, but in the high school tyrant fashion still holds sway. It is the ambition of parents to have their daughters appear respectable, and the measure of respectability is the dress of the wealthy. In one case, a daughter's graduating expenses required a full month's earnings of the father; in others, worthy girls, who have struggled over almost insurmountable obstacles to the completion of their education, have not appeared upon the stage with their classmates, lest their plainer dress should mar the harmony of the scene. "Such displays of dress," says the superintendent, "may be well for such as have nothing better to show; but our public schools, the schools for the people, should display more sense and less silk, more training and less trimming."

Drawing.—At the commencement of the year, Walter Smith's system of free hand drawing was introduced into the schools. Arrangements were made for giving instruction to the school teachers, who were called together twice a week for that purpose, and to all the classes in the normal school. The teachers took a deep interest in the work of preparation, and the success of the system is established beyond a doubt.

Music.—Satisfactory progress has been made in the study of music. Instruction in this branch is given almost entirely by the regular teachers; the superintendent of music giving his instructions to the teachers and superintending the instruction given by them.

German.—The instruction in German is assuming a more profitable form; the pupils have come to feel that the study is not a pastime, but that it requires close attention and as earnest efforts as any other branch.

High schools.—A measure of the greatest possible good has been the establishment of division high schools, one in each division of the city, having a course of study of two years complete in itself, of the most positive, direct, and lasting value. The necessity existing for this class of schools is apparent from the fact that for years more than 50 per cent. of those who annually enter the high school course of four years leave at the expiration of the second year, while many were deterred by the length of the course from entering at all. The regular course of four years at the high school is continued, with some changes.

School for deaf-mutes.—At the close of the year 1874 the school board established a free public day school for deaf-mute children residing in the city.—(From the twenty-first annual report of the board of education, 1875.)

JACKSONVILLE.

City system.—There is here a board of education composed of one member from each of the four wards of the city. The mayor is *ex officio* president of the board, and the city clerk and treasurer are *ex officio* clerk and treasurer of it.

Statistics.—Estimated population, 11,000; number of school age, 3,633; number of pupils enrolled, 1,679; average number of pupils belonging, 1,230; attending, 1,147; percentage of attendance on total enrolment, 68 3; number of days schools were taught, 183; number of teachers employed, including the city superintendent, 34.

Schools.—The schools are divided into ward and high schools; the ward schools have six grades and the high school four. The high school this year, 1875, graduated a class of 13, 2 of whom had been neither absent nor tardy during the four years of the course.

Normal class.—The superintendent says an attempt was made to do away with the normal class, as it was thought that the time spent in the instruction of the class could be more profitably employed in grading, examining, and more thorough supervision of the schools; but the difficulty of obtaining trained and efficient teachers to act as substitutes in cases of sickness or absence of regular teachers necessitated its continuance. The number of the class was 18 and the average attendance larger than in previous years. Besides the regular studies, a thorough course was pursued in the science of pedagogics.

An excellent feature of this year's report is a full schedule of the course of instruction in the schools from primary to high, with the text books used.—(Annual report of Superintendent D. H. Harris.)

PEORIA.

City system.—The management of the city schools is vested in a "board of school inspectors," consisting of the mayor and two members from each ward, who hold office for two years each and are divided into two classes, that one-half may be elected annually. A city superintendent of schools was formerly employed, but under the pressure of a heavy debt the board have endeavored to economize by dispensing with the services of that officer. They claim that they have saved $2,000 by the change, and that the schools are still in as good condition as when the office was filled. But, of course, the end is not yet, and those acquainted with the usual issue of efforts at economy in that direction may well fear for the result. Already there is a proposal to depute to the secretary of the board a portion of the duties of the superintendent, with an increase of compensation for the performance of these, and another proposal to employ a competent lady teacher to pass on the examination papers, the visitorial duties of the superintendent even then remaining unprovided for.

Statistics.—Number of persons of legal school age, (6–21,) 8,749; number enrolled in public schools, 4,013; average number belonging, 2,714; average daily attendance, 2,513; percentage of attendance on number belonging, 94; pupils attending other schools, 1,928.

There appear to be nine school buildings, with ten grades of schools below the high school, and an evening school. Teachers, including 1 music teacher, 67, with salaries of $350 to $2,000 per year.

Studies.—A schedule is given of a full course of studies running through eight years in the lower schools and through four more years in the high school, the latter embracing both a classical and scientific course. Candidates for admission to the high school are required to make an average of 70 per cent. in arithmetic, geography, English grammar, United States history, reading, and spelling.—(Report of inspectors for 1875.)

QUINCY.

City system.—This city has a board of education with six members, one for each ward, appointed by the city council for terms of one year, and a city superintendent, who is *ex officio* a member and treasurer of the board.

Statistics.—The whole number of pupils registered during the year was 3,250; average number belonging, 2,119; average daily attendance, 1,951; per cent. of attendance on the number enrolled, 60, and of the average number belonging attending, 92. Total cost of schools for the year, $44,892.46, which is $8,162.17 less than for the year preceding. The cost per year for each scholar, based on the number admitted, was $10.65; on average number belonging, $16.34; on average daily attendance, $17.74. Number of teachers employed, including two special teachers, 47.

Teachers' institute.—Eleven meetings of the teachers were held during the year, in which the method of instructing classes in different studies was explained, and class exercises in reading, history, &c., were attended to. These meetings are esteemed an important means of improvement.

Studies.—A full course of study is given in the report, which course has not been changed for several years save by the addition of vocal music, with manifest advantage. In one school, half day sessions have been tried, with a measure of success. In others,

the youngest pupils are dismissed at recess in the morning and afternoon. The examinations of all grades above the second intermediate are both oral and written. At the end of each year all the classes are examined for promotion.

Remarks.—The superintendent speaks of the great evil of irregularity of attendance. He says, "We had a much less number of cases of truancy to deal with this year than in any previous one since my connection with the schools." He adds, "There may have been two or three light cases of corporal punishment, but they were not formally reported."

The rolls of honor in the different schools contain the names of 6 pupils who have not been absent during the year, of 150 not tardy, and of 18 neither absent nor tardy. These rolls have done much towards stimulating pupils to the performance of their duty in respect to regularity of attendance.—(Report of board of education, 1875.)

ROCK ISLAND.

City system.—A board of education of 5 members, and a city superintendent, who is the clerk of the board.

Statistics.—Number of pupils enrolled, 1,882; average number belonging, 1,332; average number attending, 1,246. Percentage of attendance, 93½; number promoted by examination, 1,072; number of cases of tardiness, 991. The total amount paid for schools during the year was $23,588.52.

The schools.—The elementary schools embrace nine grades: 3 primary, 2 intermediate, and 4 grammar. The high school is divided into two departments—the English and the classical—the former requiring three and the latter four years to complete the prescribed studies.—(Report of the board of education, 1874–'75.)

SPRINGFIELD.

Officers of city school system.—A board of education of nine members, and a city superintendent.

Statistics.—The whole number of children enrolled in the schools, 2,530; average number belonging, 1,931; the average number attending, 1,876.5, or 97.1 per cent.; monthly cost of tuition alone per scholar, $1.40. The superintendent compares the cost and attendance of the schools of Springfield with those of various other cities having like schools, and makes a highly creditable showing for the schools under his charge.

Studies.—Natural science and composition have been taught by oral lessons, so that those not studying the subjects might learn facts from the remarks of the teachers. The grades of the schools have been reduced from ten to eight, partly with a view to comparison with other city systems. Leigh's phonetic edition of the Primer and First Reader have been used during the year, and the teachers are enthusiastic in its praise. Penmanship, drawing, and music have been taught as a part of the regular studies of the course. The results have been highly gratifying and the prospects are very encouraging for great improvement during the ensuing year. A full course of study for all the schools is given in the report, with a list of the text books used.

Teachers' institute.—The teachers in the city schools convened regularly at the times fixed by the rules, for the discussion of topics connected with their work, and it is evident from the list of topics discussed that the meetings must have been anything but formal ones.—(Annual report of Superintendent Andrew M. Brooks.)

TRAINING OF TEACHERS.

ILLINOIS STATE NORMAL UNIVERSITY, NORMAL.

This institution was established by the State at Normal, McLean County, in 1857, for the training of men and women as teachers for the State. The course of study covers three years, or four if the Latin and Greek languages are included.

At the commencement in July, 1875, the university graduated, from its normal department, 19 students, 14 young men, and 5 young women, and from the high school department, 4. The attendance, during the fall term of 1875, was, in the normal department, 158 women and 99 men, 257; in the high school department there were 64 pupils; in the grammar, 71; primary, 28; total in the university, 420.—(Illinois Schoolmaster, 1875, January, pp. 27–28, May, p. 175, August, p. 283, October, p. 353.)

The total number in attendance during the school year was, according to official report, 394 males and 385 females; total, 779; of whom 467 were in the normal department and 312 in the model school. Drawing and vocal music are taught, and students have the aid of a chemical laboratory, of a fair collection of philosophical apparatus, and of a museum of natural history, with a library of 1,400 volumes.—(Return to Bureau of Education, 1875.)

The report of the board of education in charge of the institution states that in the winter of 1874–'75 an examination as careful as could be made showed 695 of the pupils to be teaching or superintending schools in eighty-four counties of the State. This,

however, is believed to be much below the true number so engaged, while 82 are known to be teaching in other States and foreign countries, making the whole known number 777.

SOUTHERN ILLINOIS NORMAL UNIVERSITY.

This university was chartered by the general assembly of the State, April 29, 1869. It was located in Carbondale, Jackson County, during the autumn of that year, and the foundation was begun early in 1870. After various vicissitudes in building and many delays, the building was dedicated July 1, 1874. The following day it was opened for students, and a normal institute begun. On the 7th day of September of that year, the first regular session commenced, with 117 students, and the number increased from week to week and by terms, till in May there were enrolled 253 students in all the departments. The total entered during the year was 403, a degree of success which seems fully to justify the wisdom of the people of the State in establishing it in what many have regarded as an extreme southern location. The fall term (1875) commenced with 210 students.

The building is in the form of a parallelogram for the main part, with a smaller parallelogram at each end, running at right angles to the main one. The first is 105 feet by 80, the others each 55 by 110, projecting 10 feet in front and 15 feet in the rear of the main one. It has a basement 14 feet high in the clear, two stories, one 18 and the other 22 feet, and a Mansard story finished 19 feet. Its internal arrangement is admirable, with ample halls running the entire length and width of the building; 4 large and easy stairways leading from the bottom to the top; 8 large furnaces for heating, with study, recitation, and reception rooms, and, in the upper story, is the magnificent normal hall, 101 feet by 76, and 22 feet high, with a capacity for seating 504 students.—(Illinois Schoolmaster, November, pp. 378, 379.)

The number in attendance during the school year 1874–'75 was 201 males and 202 females—total, 403—distributed as follows: In the model school, 61; in the preparatory school, 206; in the normal department, 136. Drawing and vocal music, a chemical laboratory, philosophical apparatus, and a museum of natural history are reported, with a library of 1,444 volumes.—(Official return for 1874–'75.)

NORMAL TRAINING SCHOOL, WHITESIDE COUNTY.

The Illinois Schoolmaster (September, 1875) quotes from the Whiteside Sentinel to the effect that the attendance at the training school was at that time very large, a majority being ladies and very earnest in the pursuit of knowledge. The work done was said to be of the most thorough kind, the common branches receiving a prominent position in the daily work of the school.

OTHER NORMAL SCHOOLS.

The German Evangelical-Lutheran Normal School at Addison; the Chicago Normal School; the Northwestern German-English Normal School, Galena; and the Peoria County Normal School, Peoria, report, altogether, 18 instructors and 538 pupils, 281 of whom were males and 257 females. The course in these schools is from 2 to 5 years; the libraries from 100 to 5,000 volumes, the highest numbers in each case belonging to the first named. The graduates in the past year numbered 86, all but one of whom seemed to have engaged in teaching. Vocal music is taught in all these schools, drawing in 2. One has a chemical laboratory and 2 have philosophical apparatus, with the beginnings of a museum of natural history. Into the Chicago Normal School none but high school graduates are admitted, and the training is hence strictly professional. It furnishes some of the best teachers for the city schools.—(Returns to Bureau of Education for 1875.)

Normal departments to aid students in preparing for teaching are formed annually at several of the colleges of the State—as at Abingdon, Eureka, Lincoln, Monmouth, Rock River, and Westfield—but the returns respecting these are not easily separable from the general statistics of the colleges.

SCHOOL JOURNALS.

The Illinois Schoolmaster continues still to be an important aid in the improvement of teachers, and was followed, with no unequal steps, by the Western Journal of Education, published at Chicago during 1875.

SCHOOL AND COLLEGE ASSOCIATION OF NATURAL HISTORY.

A meeting of this association was held at Normal, Ill., commencing July 14 and continuing until August 11, for the study of botany and zoölogy. The course of study was arranged systematically and with sole reference to the needs of teachers. Instructors in special departments were employed and unusual facilities provided for detailed and thorough study. Teachers not belonging to the association were admitted, up to the number of 53, which was as many as could be accommodated conveniently. The instructors were Professor Thomas, State entomologist; Professor Burrill, of the

chair of botany at the Industrial University; Prof. W. S. Barnard, of Cornell University; Prof. S. A. Forbes, curator of the museum at Normal; and Dr. J. A. Sewall, professor of chemistry in the Normal School.

While the leading idea in the course of study pursued was to give practise in the peculiar processes of scientific investigation, it was not forgotten that to the average teacher a general knowledge of the whole is of more value than a special knowledge of a very little. The specimens selected for study were, therefore, typical ones, and the dissections and examinations were so planned and conducted that the chief facts demonstrated were true, not of the species or genus only, but of whole classes or subkingdoms, or else furnished notable exceptions to general statements about these larger groups. The material for dissection was abundant, varied, and extremely well selected. The fresh water specimens were obtained from Lake Michigan and the Illinois River and the marine animals were collected as needed along the New England coast. Of the latter, it was asserted by former students of the school of Agassiz that a greater variety was furnished at Normal than was to be had at Penikese itself. The laboratory work was made throughout the basis of the course, and the lectures were designed chiefly to explain and complete the knowledge gained with the scalpel and the microscope. The lectures, thirty in number, were delivered one and two a day, and nearly all were brought into close relation to the laboratory work. All were profusely illustrated by specimens, charts, diagrams, and blackboard drawings. All specimens for dissection and study were furnished at the expense of the museum of the State Natural History Society at Normal.

The class separated delighted with the result of the work and anxious to continue it in the future, and unless some unlooked for hindrances arise, a class of a hundred will be organized in the summer of 1876, when the studies of geology and chemistry will be added to the list and the session will be extended to six weeks instead of four.—(Illinois Schoolmaster, May, p. 168; June, p. 209; August, p. 278; September, pp. 311–313.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The number of these reported in 1874 was 116. No note respecting increase of their number or change in their course of study has been received for 1875, except that in Chicago several division high schools have been established with a course of study covering only two years. Natural science, language, mathematics, history, and civil government are the chief themes in these schools; while German, music, and drawing are optional. At the main high school, the regular course of four years is continued, with some changes, graduates of the grammar schools being given the choice of either a two years' or a four years' course, and a rigid test examination for graduation and promotion being substituted for the former public examination at the close of the school year, with good results.

High schools with well arranged courses appear also in the reports from Belleville, Jacksonville, Peoria, Quincy, and Springfield.—(Reports of school boards, 1875.)

OTHER SECONDARY SCHOOLS.

Twenty-three private academies and seminaries, the full returns from which may be found in Table VI, make report to this Bureau of 154 teachers and 2,785 pupils, 677 of whom are in classical courses and 844 in modern languages, 357 preparing for a classical course in college, and 72 for a scientific course. Drawing is taught in 14 of these schools, with the addition of painting in 2; vocal music in 16; instrumental music in 18. Eleven have chemical laboratories; 13, philosophical apparatus; and 13, libraries, in most instances of some hundreds of volumes and in one case of 3,000.—(Returns to Bureau for 1875.)

Besides these, there appear, in the reports of colleges and universities, 2,707 students in their preparatory departments, 562 of whom are reported to be preparing for a classical course in these institutions and 740 for a scientific course.

BUSINESS COLLEGES.

Thirteen of these report 61 teachers and 2,362 students, of whom 22 are in German, 63 in French, 42 in "modern languages," without further specification, 60 in telegraphy, and 66 in phonography. The principal of one of these at Jacksonville is also head of the Illinois Conservatory of Music, an institution with 5 professors and 200 pupils.—(Returns for 1875.)

SUPERIOR INSTRUCTION.

REGULAR COLLEGES.

There are in the State, according to a statement in the Illinois Schoolmaster for January, 1875, pp. 23–24, 24 universities and colleges, besides 7 colleges for women. Among this number the following have forwarded to this Office their catalogue reports:

Abingdon College, Abingdon, (Disciples,) is for both sexes, and has preparatory, classical, scientific, normal, and commercial courses. The latter has been incorporated in the college proper, and hereafter book-keeping and Spencerian penmanship will be taught without extra charge. Hebrew, modern languages, and phonography have also been included in these gratuitous studies.—(Catalogue, 1875.)

Augustana College and Theological Seminary, Paxton, (Swedish Evangelical-Lutheran,) is exclusively for young men, and appears to embrace collegiate and theological courses.—(Circular. 1873–'74.)

Eureka College, Eureka, (Christian,) is for both sexes, and embraces in its course college, Bible, normal, commercial, and music departments. The college department comprises three prominent courses of study, the baccalaureate, scientific, and academic, with the preparatory course which precedes each.—(Catalogue, 1875.)

Ewing College, Ewing, (undenominational,) is for both sexes; its course includes a preparatory, an academical, and a collegiate department, the whole extending through a period of seven years. In the collegiate department there are a classical course of four and a scientific course of three years.—(Catalogue, 1874–75.)

Illinois Wesleyan University, Bloomington, (Methodist Episcopal,) admits both sexes to all its departments. Four years of experience in co-education have given no occasion to doubt its beneficial results. A lady has also been admitted into the faculty here, Jennie F. Willing, A. M., as professor of English language and literature. The claims of physical culture have been recognized by the establishment of a gymnasium, and by lectures delivered by competent professors on the laws of health, in addition to the text books studied on anatomy, physiology, and hygiene. The university offers in its collegiate department three regular courses of study, classical, scientific, and philosophical. There is a post graduate course the completion of which entitles the student to the degree of Master of Arts. There are also preparatory and law departments.—(Catalogue, 1874.)

Knox College, Galesburgh, had the pleasure of welcoming back to it as president, in 1875, Hon. Newton Bateman, late State superintendent of public instruction in Illinois. He was installed June 22, in presence of a large audience, by Ex-Chief Justice Lawrence.—(Western Journal of Education, July, 1875.)

Lincoln University, Lincoln, (Cumberland Presbyterian,) is open to both sexes, and comprises collegiate, theological, law, and painting departments, and a conservatory of music. The collegiate department comprises classical, Latin-scientific, and scientific courses, with a selected course for those who do not wish to graduate.—(Catalogue, 1874–'75.)

McKendree College, Lebanon, (Methodist Episcopal,) is open to both sexes, and comprises preparatory, academical, collegiate, commercial, and law departments.—(Catalogue, 1874–'75.) By the will of the late Mrs. E. Riggen this college receives $13,000, and in the event of her son's death an additional $10,000.—(American Educational Monthly, October, p. 471.)

Monmouth College, Monmouth, (United Presbyterian,) is for both sexes, and offers a collegiate department, with classical and scientific courses, an academical, with preparatory and high and normal courses, musical, and an art department.—(Catalogue, 1875.) A professorship of philosophy has been established here, to embrace metaphysics, logic, political economy, and the Constitution of the United States.

Northwestern College, Naperville, (Evangelical,) admits both sexes; has preparatory, collegiate, commercial, and art departments; the courses in the collegiate department are classical and scientific, English scientific, German, and English-German. Union Biblical Institute, a school for instruction in theology, seems to be connected with the college.—(Catalogue, 1874–'75.)

Northwestern University, Evanston, (Methodist Episcopal.)—The location of this university is eleven miles from Chicago; its grounds consist of about thirty acres of land on the shore of Lake Michigan, shaded by a native grove. Its various colleges and departments are (1) of literature and science, (2) of technology, (3) woman's college of literature and art, (4) college of theology, (5) college of law, (6) college of medicine, (7) preparatory school, and (8) conservatory of music. The courses of instruction in the college of literature and science and in the woman's college of literature and art are identical; elective courses are provided for those not able to take a full course. The woman's college has only recently become the property of the university, having formerly been known as the Northwestern Female College and later as the Evanston College for Ladies. In July, 1873, it was passed over to the university, which elected five women to its board of trustees, one on its executive committee, and one in its faculty. Here young women have equal privileges with the young men in all respects, and, at the same time, a home where they may be constantly under the special care of women. Aid to a limited extent has been provided for girls unable to make their own way, through a fund donated by Rev. O. Huse, I. R. Ritt, and others.—(Catalogue, 1874.)

Rock River University, Dixon, (unsectarian,) admits both sexes to its course of study, which, in addition to collegiate, includes normal, commercial, art, and music departments.—(Prospectus of the University, 1875.)

St. Ignatius College, Chicago, (Roman Catholic,) for males exclusively, is conducted by members of the Society of Jesus. It is intended for day scholars only, and offers two distinct courses of study, classical and commercial.—(Catalogue, 1875.)

St. Joseph's Ecclesiastical College, Teutopolis, (Roman Catholic,) admits only Catholic boys; the course is collegiate and preparatory, with classes in philosophy and theology for those who intend to become priests.—(Catalogue, 1873–'74.)

Shurtleff College, Alton, (Baptist.)—Its course at present consists of an academic and preparatory department, Kendall Institute for young ladies, the college, and the theological department. Ladies are admitted to the college, the academic and preparatory departments.—(Catalogue, 1874–'75.)

Swedish-American Ansgari College, Knoxville, was founded in 1875, by a gift of $10,000 from Hon. James Knox, and $5,000 from the citizens of Knoxville. The departments of instruction are preparatory and collegiate.—(College circular.)

University of Chicago, (Baptist.)—This university includes, in addition to its collegiate department, Rush Medical College and Union College of Law. Young women are admitted to the collegiate and preparatory classes on the same terms and conditions as are young men. The college buildings contain no dormitories for them, but accommodations are furnished by private families.—(Catalogue, 1874–'75.)

Westfield College, Westfield, (United Brethren,) admits both sexes to its departments of instruction, embracing preparatory, classical, scientific, ladies', and teachers' classes.—(Catalogue, 1874–'75.)

COLLEGES FOR WOMEN.

Six out of 8 institutions for the superior instruction of young women report 66 instructors, of whom 9 are males and 57 females. Five of the 6 classify their students, returning 211 in preparatory departments, 209 in the regular course, 136 in partial courses, and 3 in a post graduate course. The remaining 1 returns a total of 200 students, without classification of them. Five have libraries, numbering respectively 300, 300, 1,950, 2,090, and 3,000 volumes.

One of these institutions, the Rockford Female Seminary, besides sending a sketch of its course, which is full and good, sends, as a specimen of its work, a magazine conducted by a literary association connected with the seminary exhibiting a very creditable amount of ability, culture, and good taste.—(Returns for 1875 to Bureau of Education.)

INTERCOLLEGIATE CONTEST.

The intercollege contest of this State, which was arranged for by the Intercollegiate Association in April, 1874, took place in November of that year. Chicago University, the Northwestern, the Illinois Wesleyan, the Industrial, Illinois College, Knox, Shurtleff, and Monmouth were represented. The first prize was awarded to Thomas I. Coultas, of the Illinois Wesleyan, and the second to J. Frank Stout, of the Northwestern.—(Illinois Schoolmaster, January, p. 21.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

Illinois Industrial University.—The university at Urbana includes schools of civil, mechanical, and mining engineering, architecture, chemistry, agriculture, and literature, science, and art. Tuition here is free; the State appropriation for the past year (1875) was $7,500. The number of students in attendance was 332, of whom 75 were ladies; the number of resident professors and instructors, 23. No degrees are conferred, but the university gives a certificate of actual attainments in a "full" or "partial" course. The value of grounds, buildings, and apparatus is estimated at $359,411.46. The library now numbers 10,600 volumes, besides a large collection of unbound pamphlets.—(Special report from the president, J. M. Gregory, LL. D.)

The university was first opened for students in 1868, in a large five-storied edifice, donated by the county. The institution speedily outgrew this building, and a new one has lately been erected for it by the State at a cost, exclusive of heating apparatus and furniture, of about $150,000. It is massive in proportions, having a length of 214 feet and a depth of wings of 124. The style may, perhaps, be called the American renaissance, and presents a sufficiently fine appearance, but the chief excellence of the building is in its interior arrangement. This was planned first with much care and study on the part of the faculty; the ground plans being placed in the hands of an architect whose part was to fit them with a suitable exterior. The problem was to furnish under one roof the public rooms needed for the instruction of a thousand students, a number which it is believed the university will reach within five or six years. The building

occupies three sides of a square, giving an inner court, in which the well, cistern, coal, &c., are partly concealed, also making it possible to have rooms lighted on three sides for library, cabinet, and laboratory purposes. The front is 214 feet in length, the corridors and stairways wide and well lighted; there are 30 large, well lighted, and beautiful class rooms, varying in capacity from 40 to 80 seats. The wing containing the library is fire-proof, and affords five large halls, each 61 by 77 feet; the basement, which is nearly all above ground and well-lighted, is a natural history laboratory.—(New England Journal of Education, March 27, p. 149; New York School Journal, March 27, p. 195; advertisement in Illinois Schoolmaster, April.)

PROFESSIONAL.

Theology.—Four independent institutions for theological instruction are reported, namely, the Baptist Union Theological Seminary, Chicago; Chicago Theological Seminary, (congregational;) Presbyterian Theological Seminary of the Northwest; Garrett Biblical Institute, Evanston, (Methodist Episcopal.) Provision is also made for theological instruction in Augustana, Eureka, St. Joseph's, Shurtleff, and Northwestern Colleges, and in the Illinois Wesleyan and Northwestern Universities.

Medicine.—Catalogue reports have been received from Hahnemann Medical College and Hospital, Bennett Medical College, and the Woman's Medical College of Chicago. The first admits both men and women to its privileges, and furnishes two courses, one (which is advised) of three years, the other (permitted) of two. The Woman's Hospital College is exclusively for women. Length of course not given here or at Bennett; but in the catalogues of both it is stated that candidates for graduation must show that they have studied medicine three full years and have attended at least two full courses of lectures. Medical instruction is also given in departments of the Northwestern University at Evanston and the Chicago University.

Chicago College of Pharmacy.—The ninth annual announcement, 1875–'76, refers to several important additions to and changes in the course of instruction for the approaching session. The chairs of pharmacy, chemistry, and materia medica were to be more fully supplied than ever before with appliances, specimens, charts, &c. The course of instruction consists of forty lectures in each department, viz: of pharmacy, chemistry, materia medica, and botany, which last includes the analysis of plants, with the use of the microscope in illustration.—(The Pharmacist, October, p. 3.)

Law.—Law departments exist in connection with the Illinois Wesleyan, Lincoln, Chicago, and Northwestern Universities, and McKendree College

SPECIAL INSTRUCTION.

PEORIA AND NORMAL SUMMER SCHOOLS OF NATURAL HISTORY.

A summer school of natural history of four weeks' duration was held in Peoria, beginning July 5. Its object, as stated by Hon. S. H. White, in Illinois Schoolmaster for September, p. 313, was to assist the members of the recently organized scientific association of the city to a clearer conception of the work they could do, the methods by which they could most successfully do it, and to stimulate a taste for the study of science on the part of the community in general. The school was a venture on the part of the association, that body assuming all the risks and obligating itself to make up all financial deficits. The enterprise was a success, not only financially but also in the direction for which the school was established. One important fact was impressed upon all, viz, that the scope of natural science is very broad. After attempting for a few days to study all three of the departments of botany, zoölogy of vertebrates, and entomology, a goodly

portion of the class limited their work to one or two studies, while the majority confined themselves in their laboratory work to only one, listening to and taking notes of all lectures. The instructors were Professors Wilder and Comstock, of Cornell University, in zoölogy and entomology, and Professor Wood, the eminent botanist, in his especial line.

The daily programme was about as follows: Work in botany began at 8 o'clock, generally by a lecture, and was continued by the arrangement of notes, by questions and answers, and by examination and analysis of plants, till 9½. At that time the lecture on entomology came in, and at 11 that on zoölogy. The method of work in each of these was similar to that in botany. Some one of the professors gave a lecture each evening. A course of six lectures in chemistry was given by Professor Hyatt. The afternoons were given to laboratory and field work, to which occasionally a whole day was devoted.—(Illinois Schoolmaster, September, pp. 313, 314.)

A school essentially similar to the above, but intended more for the benefit of teachers, was held in the latter part of July and the early part of August by some of the same instructors, with the aid of others, at Normal, not far from Peoria, under the auspices of the State Natural History Society. It appears, from the accounts published of it, to have been admirably conducted and fruitful of good results. For details see Illinois Schoolmaster, August, 1875, p. 278, and September, pp. 311–313.

INSTITUTION FOR THE EDUCATION OF FEEBLE-MINDED CHILDREN.

This institution has been located at Jacksonville in cheap frame buildings, unsafe, in case of a fire, as well as entirely inadequate in size to the accommodation of the large numbers of children who are brought to it. A bill has passed the legislature recently appropriating $175,000 for a new building equal to the accommodation of 250 pupils, and $10,000 more for land, providing also for the appointment by the governor of commissioners to select a site and farm for the buildings. It is estimated that there are in Illinois about 3,000 idiots, one-third of whom are of school age. The applications for admission to the school have increased during the last few years, but owing to lack of room many have had to be rejected. During the last ten years 421 applicants were refused admission, principally on account of want of accommodations.—(Report, 1874.)

ILLINOIS INSTITUTION FOR THE EDUCATION OF THE DEAF AND DUMB.

In addition to the sign language, instruction in articulation has been given here for six years past to those likely to profit by it, and with great success. Within a few years past a disease which appears to have become endemic—cerebro-spinal meningitis—has added largely to the number of deaf mutes in the State; 24 per cent. of those admitted in 1874 having been made deaf by this cause. A large proportion of these were once able to talk, and it is a matter of great importance to preserve the capacity. The studies are the common English branches, natural philosophy, physiology, chemistry, and drawing. Special attention has been given to the latter branch, and some cases of quite marked talent have been found among the students. Instruction in some of the mechanic arts is also imparted, as an aid to usefulness and self-support.

The number of pupils who received instruction here during 1875 is 423; 240 of them were boys, 183 girls. There were 19 professors and instructors. The average number of years spent by the pupils in the institution is 7; ten of its graduates have become teachers in similar institutions. Since the foundation of the institution in 1839, 1,073 pupils have received instruction there.—(From special report to the Bureau of Superintendent Phillip G. Gillett, for the year 1875, and from the thirty-fourth annual report of the institution for 1874.)

ILLINOIS INSTITUTION FOR THE EDUCATION OF THE BLIND, JACKSONVILLE.

This important special school, in the same neighborhood with that for the deaf and dumb, reports, through its principal, F. W. Phillips, 8 instructors and 21 other employés, 10 of these being blind. The present number of students is 93; the number instructed since the opening of the school in 1849, 506. In connection with the literary instruction given, and that in music, always an important element in the teaching of the blind, the pupils are taught broom and brush making, caning of chairs, carpet-weaving, bead work, knitting, crocheting, and sewing. The library contains 961 volumes. How many of these are in raised print is not stated.—(Return to Bureau of Education, 1875.)

EDUCATIONAL CONVENTIONS.

STATE TEACHERS' ASSOCIATION.

The twenty-second annual meeting was held at Rock Island December 29, 1875. After the address of welcome by the President, W. B. Powell, and one making a plea for more supervision in the schools, State Superintendent Etter presented the subject of the representation of the educational interests of the State at the Cen-

tennial Exhibition. Dr. Gregory, of the Illinois Industrial University, made an enthusiastic appeal for help in money, work, and interest, in order that a creditable exhibit be made of the educational work of Illinois. Papers were read by J. H. Blodgett, of Rockford, and Dr. Sewall, of the State Normal School, on the subjects of "Country schools," and "Uses and abuses of the laboratory method of instruction in natural sciences." Upon motion of S. H. White, the association instructed the president to appoint a State executive committee, consisting of five members, for the purpose of assisting to perfect and carry out plans for the educational exhibit of Illinois at the Centennial Exhibition. The committee appointed were Hon. S. M. Etter, Springfield; Dr. J. M. Gregory, Champaign; Hon. J. L. Pickard, Chicago; Dr. D. A. Wallace, Monmouth; and Dr. J. A. Sewall, Normal.

Dr. Wallace read a valuable paper before the college and high school section on "The work of the college, as distinguished from that of high schools and academies on the one hand and that of universities on the other." The work of the college, he thought, should be (1) one of inspiration, (2) of instruction, (3) of development, (4) of discipline, and (5), of investigation. Henry L. Boltwood read a paper on "Co-operation of high school and college," whose scope was to bring these two wings of the educational army into closer relations. He advocated the acceptance of quality rather than quantity in entering examinations, and of adopting a system of equivalents, by which a scholar from the high school could be credited with the work actually done and be classed accordingly. After considerable discussion of this subject a committee was appointed, consisting of Dr. Bateman, Dr. Wallace, Dr. Gregory, Dr. Allyn, Professors De Motte, Brooks, Frost, Everett, Boltwood, and Clark, with Superintendent Etter as chairman, to devise measures whereby closer relations can be established between the college and the high school, and to prepare a scheme of equivalents to be published, if possible, before the close of the present school year. A paper was read by S. H. White on "Education and crime," and one by C. C. Snyder, of Freeport, on "How to secure good teachers," which were discussed by C. I. Parker, of Danville, and E. P. Frost, of Peoria. A paper by E. A. Haight, of Alton, on "What is practical for graded schools?" was discussed by Messrs. Finney, Hanford, Andrews, Smith, Lewis, Forbes, Piper, Powell, and Barge.

The meeting was a most interesting one, with only a moderate attendance, but a very good representation of the leading teachers of the State. The spirit of all the sessions was admirable and the general character of the exercises of a high order.—(Illinois Schoolmaster, February, 1876, pp. 70–72.)

COUNTY SUPERINTENDENTS' ASSOCIATION.

The annual session of this association was held at Rock Island, December 27, 28, and 29, 1875, when many valuable papers were read and discussed. The first paper was by James H. Seaton, of Putnam County, on "How to make school visitation all it should be." James B. Donnell, of Warren County, next presented a paper upon "Plans for village and country school-houses," which was followed by a general discussion on the means of heating and ventilating. Owen Scott, of Effingham County, took up the subject of "County and township institutes: should they be made by law a necessity, and teachers be required to attend them?" The paper led to the offering of a resolution expressing the affirmative, which was voted down by the association, for the reason that the majority believed that the passage of such a law would do little good without additional legislative action. Mrs. Mary L. Carpenter, of Winnebago County, read a paper upon the "Best method of bringing directors up to their duty." John Gore, of Cass County, followed with a paper on "Qualifications of an examiner." James P. Slade, of St. Clair County, read a paper on "Character: its development in the public schools," claiming that such development depends more upon the manner in which school work is done than upon the particular subjects taught. The time of the last day's session was consumed in discussing questions pertaining to school law.—(Illinois Schoolmaster, February, 1876, pp. 68–70.)

ILLINOIS SOCIETY OF SCHOOL PRINCIPALS.

This society met at Champaign, in the Industrial University building, July 6, 7, and 8. About 45 principals were in attendance, besides county superintendents and others interested in school work. After the address of welcome by Professor Burrill, of the university, and response by the president of the association, J. S. McClung, the society witnessed an entertaining and instructive display of the powers of the magic lantern, by Professor Robinson, of the university. A committee of three was appointed to report a revision of the scheme of school reports adopted by the society at their meeting in Chicago, July 8, 1870. Papers were read and afterward discussed by the association on "Tact," by Prof. E. E. Haight, of Alton; on "Promotions," by Miss S. E. Raymond, of Bloomington; on "Narcotics of the school room," by E. C. Delano, of Chicago; on "Music," by Mrs. J. Humphreys, of Bloomington; and on "The competent teacher: how shall we secure him?" by Professor Hannan, of Chicago.

Among the topics discussed, that of "Recesses" awakened much interest. Many

were surprised to learn that in some of the largest graded schools in the State there is no such thing as an out-door recess during the morning or afternoon. At the close of each recitation an intermission of five minutes is taken, during which time the pupils are not permitted to pass from the room, except by special permission. Those who have given this plan a faithful trial enthusiastically declare that under no conditions would they return to the old way. The gains are said to be very marked in the matter of morals and manners.—(Illinois Schoolmaster, August, 272–277.)

OBITUARY RECORD.

MR. EDWARD C. WHITTEMORE,

For ten years a teacher of music in the schools of Chicago, died in that city January 26, 1876. Mr. Whittemore was a born musician of unusual capacity and power. A student of Lang on the piano and of Buck on the organ and harmony, he brought to his work in the schools large musical culture, as well as native ability, and left on them an impression which will be likely to abide for years. He threw his whole soul into his teachings, and by the ardor of his enthusiasm in it swept others along with him, in spite of great physical infirmity, which finally compelled his retirement in 1875. A noble man, he has made a noble record.—(Chicago Teacher, June, 1875, and Western Journal of Education, February, 1876.)

INDIANA.

STATISTICAL SUMMARY.

ENUMERATION OF ATTENDANCE.

Number of whites of school age, (6–21:) Males, 340,514; females, 317,434	657,948
Number of colored of school age, (6–21:) Males, 4,940; females, 4,848	9,788
Total enumeration	667,736
Increase over 1874	13,372
Number enrolled in the schools: White males, 264,041; white females, 231,670	495,711
Number enrolled in the schools: Colored males, 3,422; colored females, 3,229	6,651
Whole enrolment for the year ending September 1, 1875	502,362
Percentage of children enumerated over 15 years of age	23
Percentage of children enrolled in public schools over 15 years of age	15
Hence, number of children enumerated under 15 years of age	480,770
Hence, number enrolled in public schools under 15 years of age	427,008
Estimated number in private schools	30,000
Total number between 6 and 15 receiving school training	457,008

TEACHERS AND TEACHERS' PAY.

Number of teachers employed in public schools: Males, 7,670; females, 5,463	13,133
Average salary of male teachers per month	$65 00
Average salary of female teachers per month	40 00

SCHOOLS AND SCHOOL HOUSES.

Average duration of schools in days, 1874–'75	120
Number of school-houses erected during the year	382
Whole number September 1, 1875	9,307
Number of township and district graded schools	396

INCOME AND EXPENDITURE.

Receipts.

From State tax for public schools	$1,577,533 00	
From local tax for public schools	2,650,622 00	
Total from taxation for public schools		4,228,155 00
Interest on permanent fund, including rents of school lands		607,717 00
From other sources		205,645 00
Total receipts for public schools		5,041,517 00

Expenditures.

For sites, buildings, and furniture	$700,000 00
For salaries of superintendents	50,000 00
For salaries of teachers	2,830,747 05
For miscellaneous and contingent expenses	949,457 49
Total expenditure for public schools	4,530,204 54

EXPENDITURE PER CAPITA.

Rate of expenditure in the year *per capita* of school population	$6 78
Rate of expenditure in the year *per capita* of pupils enrolled	9 01
Rate of expenditure in the year *per capita* of average attendance	15 06

ADDITIONS TO THE SCHOOL FUNDS.

1.—*Common school fund.*

Amount of funds held by counties in June, 1874	$2,408,393 04	
Amount since added from fines and other sources	50,014 77	
Total amount held by counties June, 1875	2,458,407 81	
Non-negotiable bonds	3,904,783 21	
		6,363,191 02

2.—*Congressional township school fund.*

Amount held by counties June, 1874	$2,295,778 66	
Amount since added from sale of lands, &c	35,044 71	
Amount held by counties June, 1875	2,330,823 37	
Estimated value of 11,567 acres of unsold school lands	105,177 25	
Total congressional township school fund	2,436,000 62	
Grand total of common school and congressional township funds		$8,799,191 64
Increase for the year		87,943 33
Valuation of all school property		10,870,338 18

—(From report of Hon. James H. Smart, State superintendent of public instruction, to the governor, January 21, 1876, with extracts from special return to Bureau of Education.)

SCHOOL SYSTEM OF THE STATE.

CONSTITUTIONAL PROVISIONS.

The original constitution of 1816 provided (article IX, section 1) for the improvement of lands granted by the United States for the use of schools, and the application of all funds raised from such lands, or from any other quarter, to the accomplishment of the great object for which they were intended, and (section 2) made it the duty of the general assembly, as soon as circumstances should permit, to "provide by law for a general system of education, ascending in regular gradation from township schools to State University, wherein tuition shall be gratis and equally open to all."

The constitution of 1851 (article VIII, section 1) ordained, in the same spirit and nearly in the same words, that "knowledge and learning generally diffused throughout a community being essential to the preservation of a free government, it shall be the duty of the general assembly to encourage, by all suitable means, moral, intellectual, scientific, and agricultural improvement, and to provide by law for a general and universal system of common schools, wherein tuition shall be without charge and equally open to all." It went on to provide for the creation and safe investment of a common school fund, the principal of which might be increased but never diminished, the income to be inviolably devoted to the support of common schools, and to no other purpose whatever. Provision for the election of a State superintendent of public instruction was also made a duty of the general assembly, said superintendent to hold office for two years.

PROVISIONS OF THE SCHOOL LAW.

New School Law of Indiana, with opinions, instructions, &c., prepared by the superintendent of public instruction, 1873.

OFFICERS.

The chief school officers are a State board of education, State superintendent of public instruction, county superintendents, school trustees for cities, towns, and townships, county boards of education, city superintendents, and school directors.

POWERS AND DUTIES OF SCHOOL OFFICERS.

The State board of education is composed of the governor of the State, the State superintendent of public instruction, the president of the State University, president of the State normal school, and the superintendents of common schools in the three largest cities of the State. The State superintendent is president *ex officio*. The main duties of the board appear to be (1) to grant State certificates of qualification to such teachers as it finds, upon examination, to possess eminent scholarship and professional ability, as well as good moral character; (2) to take cognizance of such questions arising in the administration of the school system as are not otherwise provided for; (3) to make regulations for the purchase of township libraries, issue warrants for the payment of said purchase, and cause the distribution of the libraries to the several townships of the State.

The State superintendent is elected by the qualified voters of the State at a general election, takes office on the 15th day of March succeeding, and holds it for two years. He is charged with the administration of the system of public instruction, and a general superintendence of the business relating to the common schools of the State, and of the school-funds and school revenues set apart and appropriated for their support; must exercise such supervision over these funds and revenues as may be necessary to ascertain their safety and secure the preservation and application of them to their proper objects; must publish the school laws, with necessary forms and instructions, for distribution among the townships; must render an opinion, in writing, to any school officer asking the same, as to the administration or construction of the

school law; must, in January of each year in which there is no session of the general assembly, make brief written report to the governor of the prime matters relating to common schools, and at each regular session of the assembly, on or before January 15, make a full biennial report of his administration of the system of public instruction, with a brief exhibit of his labors; of the results of his observations as to the operation of the school system; of the amount and condition of the permanent school fund; of the revenue derived from it and from other sources, with estimates for the following two years; and of such plans as he may have matured for the better organization of the schools, and for the increase, safe investment, and profitable management of school funds. He must also present a comparison of the results of the years then closing with those of the year next preceding, and, if deemed expedient, of the years preceding that, so as to indicate the progress made in public instruction, adding such other information as to the system of instruction as he may think will be of interest, with statistical tables showing the working of that system at all points. His salary is $2,000 a year, with $1,800 for clerk hire and $600 for traveling expenses.

The county superintendents (who come into the place of the former county examiners) are appointed by the assembled township trustees from the several townships of their respective counties, on the first Monday of June every two years, beginning from 1873. Their duties are: (1) to hold monthly, public written examinations of persons desiring license to teach in the public schools; to license for six months, twelve months, eighteen months, or two years, according to the ratio of correct answers at these examinations, such applicants as may be found qualified to teach, if they furnish evidence of good moral character; to keep in a book, provided for the purpose, minutes of their proceedings, (at these examinations,) with written lists of those to whom they may grant licenses, distinguishing between the different grades; to report annually to the State superintendent who and how many have been licensed by them, marking the grade and sex of each, with the number, but not the names, of those rejected, and the number of licenses revoked; (2) to exercise a general superintendence of the schools of their respective counties; to attend each township teachers' institute at least once in each year, and visit each school of the county as often; to encourage teachers' institutes and associations, and labor in every practicable way to elevate the standard of teaching, and improve the condition of the schools; (3) to make annual report to the State superintendent of the school population of their counties, with statistical report of the number of school districts, schools taught, and grades; length of school term in days; teachers, male and female; average compensation of these in each grade; amount of funds received from county treasurer and expended for the schools, and the balance on hand; number and cost of school-houses erected during the year; number, kind, and value of preceding erections; account and estimate of other school property; number of volumes in township libraries, number used during the year, and number added; amount of general tax assessments for schools, and special for school-houses; amount of this last received, expended, and on hand; number of acres of unsold congressional school lands, with the value of and income from these; together with such information respecting the condition of the schools and the progress of education in their counties as the State superintendent may call for. The compensation for the performance of these duties is $4 per day for all time actually employed in the discharge of school duty, or about $800 per year.

The school trustees (three in number for each city,* town, or township) are elected, one each year, by the common councils of the cities and the boards of trustees of the towns or townships at their first regular meeting in April; hold office for three years from the date of election in each case; constitute, together, the school board of the city or town; receive such compensation from the special school revenue as the elective authorities may deem just; have general charge of school affairs in their districts; receive, pay out, and account for the school revenues; employ teachers; establish schools; provide school furniture, apparatus, and fuel; and have power to assess and levy local taxes for these ends. They can establish graded schools and assign scholars to them, or combine with other districts in a joint graded school, and must report to the county superintendent the particulars mentioned under the third head above, for his report to the State superintendent. Neglect to do this involves the withholding of $25 from the State apportionment for the city, town, or township, (which sum a delinquent trustee must make up from his own funds,) while the remainder of the State apportionment cannot be paid over till the report of the delinquent is duly made and filed.

The county boards of education are composed of the county superintendent, the trustees of the townships, and the school trustees of the towns and cities in each county They meet semi-annually at the office of the county superintendent, he presiding, with a right to vote on all questions. Their duties are to consider the general wants of the schools and school property of which they have the charge, and all matters relating to the purchase of school furniture, books, maps, charts, &c. The change of text books, except in cities, is under their direction, with the proviso that no book be

* In cities of 30,000 or more inhabitants a school commissioner for each ward is elected, instead of a trustee, by the people, on the second Saturday in June, and these form a board of school commissioners.

changed within three years from the date of its adoption, except by a unanimous vote of all the members of the board.

The school directors are officers elected, one in each school district, by the voters in that district, annually on the first Saturday in October, to preside at school meetings; to take charge of the school-house; to make needful repairs; to provide the necessary fuel; to expel, in case of need, a refractory pupil; and to act as a medium of communication between the inhabitants of the district and the township trustees.

City superintendents are the executive officers of boards of school commissioners in cities, are appointed by them for definite terms, and perform such duties as the appointing power may direct.

SCHOOLS.

The schools of the State are largely elementary, but out of the 9,105 reported as taught in 1874 there were 271 graded schools. How many of these included high school grades does not appear; but 350 teachers in high schools were represented in the report for that year as having under them 13,342 pupils.

A State Normal School for the training of teachers, and township institutes, to be held for the improvement of teachers at least one Saturday in each month while the schools are in session, form also a portion of the school system of the State; while a State University, receiving freely the certificated graduates of approved high schools and giving them opportunities for superior instruction without charge for tuition, carries out the original constitutional provision that there should be provided by law "a general system of education, ascending in regular gradation from township schools to State University, wherein tuition shall be gratis and equally open to all."

The only departure from the letter of this last provision is a requirement in the school law that "the trustee or trustees of each township, town, or city shall organize the colored children into separate schools," which schools, however, are to have all the rights and privileges of other schools.

SCHOOL FUNDS.

A State school fund of nearly $9,000,000, composed at first of the proceeds of lands donated to the State by the General Government, and increased at the rate of many thousands every year from fines and forfeitures, enables the State, by annual distribution of the interest of this among the districts, to greatly aid the local provisions for the support of public schools. An annual appropriation is also made for the support of the State Normal School and in aid of the State University, as also for the benefit of certain special schools.

REMARKS UPON THE SYSTEM.

Of the school system above sketched, Superintendent Smart, in his report to the governor, January, 1875, remarks: "Our school system has become a vast and complicated machine. It employs nearly 2,000 officers to manage it. It educates more than half a million children and costs four millions of dollars annually. It extends its influence into every community, into every household. The welfare of every member of the Commonwealth is involved in its proper management. It is doing a work of incalculable benefit to us all. It would be worth supporting if it should cost far more than it now costs. That there is opportunity for great waste in its management, and that it is capable of doing much more good than it is now doing, there can be no reasonable doubt. The funds may be mismanaged, the revenues may be misapplied, extravagant buildings may be erected, and ignorance and incompetency may rule in our school rooms; these things will make the system weak. The people have a right to demand economy in all things; they will permit extravagance in nothing. They have the right, also, to demand that the best teaching talent which the money will buy shall be placed in charge of the children of the Commonwealth. Intelligent economy does not require that our system cost less, but that it produce more. Let every school officer, then, have a care how he executes the trust which the State imposes on him; let every person who assumes the important and dignified office of teacher realize in himself all that is pure and noble and good, so that he may teach by example as well as by precept; then will our schools become so strong that no man will dare attempt to destroy them."—(Report, pp. 15, 16.)

ELEMENTARY INSTRUCTION.

RECOMMENDATION RESPECTING GRADES IN SCHOOLS.

At a meeting of superintendents of city schools in the State held in Indianapolis April 7, 8, and 9, 1875, it was unanimously recommended that the same system of nomenclature of grades in public schools be adopted in all the cities and towns of the State that was adopted by a meeting of western superintendents of schools held in Chicago in December, 1874. It was there resolved that the instruction given during the first eight years be called elementary, the schools in which it is given to be styled district schools; these to consist of two departments, to be named, respectively, primary and grammar, the former to include the work of the first four years, the latter that of the last four, and those schools in which secondary instruction is given to be called high schools. The division into elementary and secondary instruction corresponds with

that made in the school systems of Europe, and the term grammar, in place of intermediate, was adopted in order to conform to the usage throughout the Eastern States.—(Indiana School Journal, May, 1875, p. 222.)

DECISION AFFECTING LADY SUPERINTENDENTS.

The Indiana School Journal of July, 1875, states that the attorney-general has decided, on constitutional grounds, that a lady appointed by the school commissioners of Lake County to be county superintendent cannot hold the office.

TOWNSHIP LIBRARIES.

The deterioration of these great aids to general intelligence has been made in one of the counties of the State a reason for petitioning the legislature to do away with them entirely. This, the Indiana School Journal remarks, is a step in the wrong direction. Admitting that the libraries have been greatly abused, in many cases almost ruined, it still argues that something better can be done with them than to break them up; that by putting them into fair condition, adding annually a few valuable books, taking care for their proper preservation and due distribution among the teachers and the people, an immense amount of good can be effected by them. Fifty new volumes a year added to each library would give new life and interest, and would have the effect to cause the old books to be read as well as new; and such an addition could be easily secured by a tax so slight as hardly to be felt by any one. Indianapolis, by a tax of 5 mills on the hundred dollars, secures $12,000 a year to be expended on its library, and is building up by this means one that is an honor to the city and an agent of immeasurable good.

CITY LIBRARIES.

After the passage by the legislature in 1852 of the law authorizing the establishment of public libraries, Indianapolis was the first city in the State to establish one under the control of the board of education, and now sustains this at an annual cost of $12,000. Evansville has lately opened one with a purchase of $4,800 worth of new books and about 4,000 old ones donated by the city library association. It is conducted by the trustees of the city schools, who have fitted up for its use the best building for library purposes in the city. The town of Muncie has in like manner taken advanced ground in this matter.—(Indiana School Journal, May, p. 229.)

KINDERGARTEN SCHOOLS.

One of these, in the high school building at Indianapolis, reports 25 children in attendance in its first term, with sessions of 3 hours per day for 5 days in the week and 40 such weeks in the school year; all the pure Kindergarten occupations, including the use of Fröbel's 20 gifts, with care of plants, beautiful grounds for play, and a mineralogical cabinet. These occupations are said to form the basis of all the training in the school by giving clear impressions and accurate knowledge, as well as securing obedience, kindness, and gentleness, and making the children self-helpful. Results thus far very marked happiness and facility in all school work.—(Return to Bureau for 1875.)

A kindred school is reported by the Northern Indiana Teacher for July, 1875, as connected with the normal department of the Fort Wayne High School, and is securing excellent results in intelligence, tractability, and interest in study.

CITY SCHOOL SYSTEMS.

HUNTINGTON.

Officers of the city school system.—A board of trustees, 3 in number, and a superintendent of schools.

Statistics.—The superintendent gives the following statistics concerning the schools: School census, 1,202; whole number of pupils enrolled, 551, an increase of 57 over that of last year; per cent. of enrolment on enumeration, 45.8; average number belonging, 404; per cent. of belonging on enrolment, 73.3; average daily attendance, 380; per cent. of attendance, 94; number of school days, 200, an increase over last year of 20 days; number of teachers, 8; whole amount paid for tuition, $3,758; cost of tuition per pupil, $6.82; total amount expended for schools during the year, $6,200.50; entire cost per pupil, $11.25. The superintendent says: "To account for the small per cent. of the scholastic population enrolled in the city schools, it must be remembered that the Catholics maintain a very large school, while perhaps more than a hundred pupils attend two schools controlled by the Lutherans and the German Reformed Church. From all that I can learn, I am satisfied that at least 80 per cent. of all the children of school age have been in attendance on some school within the past year. Of those attending the city schools 6.4 per cent. have been in attendance on the High School, the remainder have been in the seven grades of the primary schools.

Work of the schools.—An excellent summary of school studies, with some happy illustrative remarks respecting the best methods of instruction in these, adds value to the report and evinces thoroughness.—(Report of Superintendent James Baldwin for 1874-'75.)

INDIANAPOLIS.

Organization.—A board of school commissioners of 12 members, one-third changed each year, and a city superintendent of schools with 4 assistant superintendents, 2 men and 2 women.

Statistics.—Estimated present population, 100,000; children of school age, 20,723; enrolled in public schools, 11,013; average daily attendance, 7,210; school buildings, 22; sittings for study, 7,907; rooms used for both study and recitation, including normal and evening schools, 182; used for recitation only, 20. Teachers at the close of 1875, including principals, 180; salaries paid these, $450 to $2,400; salary of superintendent, $3,000. Two special teachers of music and penmanship receive $1,800 each; 2 of drawing, $1,000 and $500. Total receipts for public schools, $304,729.12; expenditures on them, $269,145.57; average expenses per capita, $23.66.

Kindergarten school proposed.—The board of education approve the Kindergarten system but doubt the legality of applying the tuition fund for the instruction of children under 6 years of age. They therefore try to harmonize the matter by authorizing the superintendent to furnish any unoccupied school room for such purpose, whenever the teacher can be paid by private subscriptions.

Private and other pupils.—The number estimated to be enrolled in private and parochial schools for the year was 1,500; of those enrolled in German classes in the public schools, 987; of those in night schools under the public school board, 457.

City normal school.—A training school for teachers, wherein instruction in theory is given for five months, and practice in teaching, under the direction of competent instructors, for another five months, has been in successful operation for several years, and has afforded a partial supply of competent instructors for primary and intermediate schools.—(Report of Superintendent George P. Brown for 1875, Indiana School Journal, and State report for 1874.)

RICHMOND.

Officers of city school system.—A board of education of 3 members with a city superintendent of schools.

Statistics.—Population of the city, 13,202; legal school age, 6–21; school population, 4,104; number of school days in the year, 180; number of schools, 33, including high school, 12 grammar schools, 18 primary, and 2 colored schools. Number of schoolrooms, 35; number of sittings for study, 1,783; number of pupils enrolled, 1,812; average number belonging, 1,564; average number in daily attendance, 1,468; average number enrolled in each room, 52; total number of teachers, 37, of whom a large number had several years' experience.

Methods.—The work of each month is carefully tested by written examinations. A record of these examinations is made, and the promotions governed by this record. "These examinations," says the superintendent, "test not only the ability of the pupil, but also the work of the teacher. The rule of the board requiring that no teacher, while conducting a recitation in geography, arithmetic, physiology, or history, shall be allowed to use a text book, while it has involved much careful study on the part of many teachers, has done much to make the instruction uniform and efficient." Music and drawing seem to be taught with great success in these schools, and a full course of study in all the branches is given, with the methods to be pursued in each.

The High School.—This school graduated sixteen at the end of the year, out of 138 pupils enrolled and a per cent. of attendance of 96 on the average number belonging.—(Report of Superintendent John Cooper for 1874–'75.)

SHELBYVILLE.

Officers of city system.—A board of trustees of 3 members, with a superintendent of schools, under whom are 16 teachers.

Statistics.—Population, 4,000; number of school age enumerated: white, 965; colored, 25; total, 990. Enrolled: white, 636; colored, 35; total, 671; per cent. of enrolment 67.7. The average number belonging has been: white, 487; colored, 25; total, 512; average daily attendance: 418 white, 20 colored; total, 438; per cent. of daily attendance, 85.5; average attendance to a teacher: white, 35; colored, 20.

The schools are: a high school, with principal and 2 assistants; grammar, with 3 teachers; intermediate, with 2; primary, with 5; German, with 1; colored, with 1.

Method in spelling.—In all the classes special attention has been paid to spelling, on the following plan: (1) the words, in the order of the book, were written on the blackboard phonically, rejecting all silent letters, and using Webster's notation. (2) With this list before them the pupils prepared their lessons from their books, by study and writing. (3) Daily exercises in spelling were conducted by each pronouncing from the board, spelling and repronouncing ten or less words, with corrections, if necessary, from other members of the class. (4) Daily written exercises were also used, the pupils writing the whole lesson, or different portions of it, from the board. The results were greatly increased interest on the part of the pupils, relief to the teacher from the fatigue of pronouncing words, more than double the usual amount of spelling in the same time, a corresponding improvement in excellence, an acquaintance with the

use of the notation marks of the dictionary, and a nicer perception of the value of the sounds of the language.—(Report of Superintendent W. A. Bolles for 1874–'75.)

TERRE HAUTE.

Organization.—A board of trustees of three members, one of whom is changed each year, a city superintendent of schools, and an assistant superintendent.

Statistics for 1874–'75.—Population, 20,000; children of school age, (6-21,) 6,598; enrolled in public schools, 3,647; average daily attendance, 2,556; percentage of attendance on total enrollment, 70.4; on average enrollment, 93.4. Number of teachers in charge of session rooms, 55; assistants in high school, 3; teachers of German, 5; of music and drawing, 2; supply teacher and clerk, 1; total, 66. Salaries of teachers, $525 to $1,100; salary of superintendent, $2,500; of assistant superintendent, $750; receipts for public schools, $117,903; expenditures on them, $103,592; total valuation of all school property, $167,550.

History.—School trustees of Terre Haute first sworn in January 21, 1853; schools opened September 12, 1853, with 7 or 8 teachers, subsequently increased to 12 or 13; cost of schools for 1853–'54, $4,448, including $764 for services of superintendent. Schools reorganized 1860–'61, with 18 teachers, 2 departments in third and fourth districts, and 4 in first and fifth, including in these last the subjects of algebra, drawing, vocal music, Latin, and Greek. The services of a superintendent, for some time dispensed with, were resumed, his duties distinctly defined, and a salary of $500 given him. Since then the departments have been enlarged from year to year, and the names of grades changed every two or three years until the present time. The following table shows the progress of the schools.—(Report of Superintendent William H. Wiley for 1874–'75.)

Growth in 21 *years.*

	1854.	1860.	1865.	1870.	1875.	1876.*

TRAINING OF TEACHERS.

STATE NORMAL SCHOOL, TERRE HAUTE.

At the commencement for 1875, 9 students in the regular normal classes were graduated. The diploma of the institution was conferred on 24 young men and women who had completed the elementary course and had served two years in the public schools of the State since graduation. This institution is held strictly to *normal* work. Only those preparing to teach are admitted. Of the 45 new students who were present at the opening in September, 12 entered for the entire term, 24 for one year or more, and not one for less than two terms, an unusual circumstance, indicating the development of a professional spirit. Heretofore nine-tenths have entered for a term and afterward concluded to continue longer. The quality of the entering classes is good, above the average.—(Indiana School Journal, June, 1875, p. 295; September, p. 445; October, p. 494.)

Of this school Superintendent Smart writes, in his report to the governor, (p. 15:)

"The greatest need of the schools is thoroughly trained teachers. They need men and women who are not only right minded, pure hearted, and intelligent, but who have been prepared for their work by a course of systematic study and practice. I think our normal school affords superior advantages for this needed preparation. This school educates, of course, but a small proportion of the teachers required for the State, but its influence reaches hundreds of teachers who never enter its walls. It is sending out into our cities and larger towns students, who, through the influence of better methods and by normal work in township and county institutes, lead their associates to a higher standard of excellence. Thus there is established a secondary normal school in almost every County in the State."

NORTHERN INDIANA NORMAL SCHOOL, VALPARAISO.

The principal of this institution writes, under date of December 15, 1875:

"The Northern Indiana Normal School and Business Institute was organized September 16, 1873. The enrolment was 61 the first term; second term, 90; third term, 172; first term, second year, 299; second term, 325; third term, 560; fourth term, 691; first term, third year, 860; second term, 945. The annual enrolment this year will

exceed 2,000 different students. These select their own studies and advance as rapidly as they may desire. There is much individual instruction.

"The institution is private. I have expended more than $75,000 in improvements since the organization of the school, and $50,000 to $60,000 will be expended the coming year in erecting boarding houses."

How many of the students above mentioned are engaged in preparation for teaching does not appear. A return from the principal gives 13 as the number of graduates the past year, of whom 12 have engaged in teaching. One reason for the rapid increase of students is doubtless to be found in the fact that "$125 pay for board, tuition, and room rent for a school year of 44 weeks." There are 15 instructors, 3 years in the full course, 3,000 volumes in the library, 150 of which are pedagogical, while 23 educational journals and magazines are taken. Drawing and music are taught, and there is a chemical laboratory, a philosophical cabinet and apparatus, and a museum of natural history.—(Return for 1875.)

OTHER NORMAL SCHOOLS.

The Northern Indiana Teacher, for October, 1875, states that the normal and classical school at Goshen reopened with nearly 100 pupils, not saying how many of these are normal students; that the one in DeKalb County (which is properly a normal institute, held for ten weeks each fall to assist teachers in preparing for the winter term) had an enrolment, for 1875, of 67, while about 81 teachers in the county were attending school to fit themselves for better work, and that the one at LaGrange, which is of the same character as the DeKalb County school, had an enrolment at the opening of 67, increased the next day to 75. A return to this Bureau gives the whole number in attendance as 110, and the superintendent who conducts it expresses the hope that it may grow into a permanent school for training teachers.

The Northwestern Normal, Kentland, which is a department of the large public school at that place, reports for 1875 two resident instructors, 30 male and 31 female students, and courses of two and three years. Drawing and vocal music are taught. The other departments of the school afford opportunity for practice.

TEACHERS' INSTITUTES.

The various county institutes seem to have been well attended and to have done, in many instances, good work. One in Jefferson County, continuing five days, enrolled 182 teachers; one in Perry County, 100; one in Henry County, 113; one in Owen County, 102; in Greene County, 133; and in Fountain County, 100. Such subjects as the theory and practice of teaching; the cultivation of good morals and good manners; the proper methods of teaching arithmetic, grammar, geography, map drawing, the natural sciences, and history, were discussed, and much good can hardly have failed to come from such discussion. The Indiana School Journal, organ of the State Teachers' Association and of the State superintendent, has many interesting notices of such institutes in its monthly issues for the year.

EDUCATIONAL JOURNALS.

The Indiana School Journal, published at Indianapolis, has done good service during 1875 by its diffusion of educational information and by articles adapted to aid teachers in their work, and has had in these lines an able coadjutor in the Northern Indiana Teacher, published at South Bend. Both have had in them full descriptions of the Kindergarten system, one by Heinrich Hoffman and the other by Miss Blow.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

Of the probably 200 or more high schools in the State, the information is, as usual, but slender. As before mentioned, the State report for 1874, gave 350 as the number of teachers in high schools and 13,342 as the number of pupils in them. No indication is given, however, of the precise number of such schools, nor does it seem that there is yet any uniform course prescribed for them. Indeed, here, as in most of the States, the only means we have of judging of the high school courses is from the schedules given of them in the published reports from cities and larger towns. These show generally a course of four years, in most instances including Latin, with higher English studies, and in some adding German and even Greek as elective studies.

From towns and cities the information is as follows for 1874 and 1875:

Fort Wayne, high school enrolment, 100; graduates of high school, 14.
Evansville, high school enrolment, 113; graduates of high school, 9.
Huntington, high school enrolment, 56; graduates of high school, 0.
Indianapolis, high school enrolment, 468; graduates of high school, 22.
Jeffersonville, high school enrolment, 63; graduates of high school, 5.
La Fayette, high school enrolment, 107; graduates of high school, 6.
La Porte, high school enrolment, 87; graduates of high school, 6.
Logansport, high school enrolment, 107; graduates of high school, 7.
Richmond, high school enrolment, 138; graduates of high school, 16.
Shelbyville, high school enrolment, 44; graduates of high school, 4.

South Bend, high school enrolment, 133; graduates of high school, 5.
Terre Haute, high school enrolment, 120; graduates of high school, 10.
Vincennes, high school enrolment, 113; graduates of high school, 7.

The Terre Haute high school, founded in 1863, has since that time had 606 pupils enrolled in it, and has graduated 101 at the close of a four years' course.—(City school reports and Indiana School Journal, June, 1875, p. 295.)

All high schools in the State which are prepared to teach orthography, arithmetic, geography, English grammar, algebra, geometry, physiology, history of the United States, Latin grammar, reader, prose composition, two books of Cæsar and two of Virgil, or their equivalents in Latin, and possess the other qualifications indicated by the State board of education, are entitled to a commission to prepare students for the State University, and to grant certificates of proficiency in the above studies which shall entitle the holder to admission to the freshman class of the university without further examination.—(Indiana School Journal, July, 1875, p. 343.)

The same journal, for the same month, is our authority for stating that the Indianapolis school board adopted, in 1875, a two years' course for their high school for the benefit of such as may be unable to complete the full four years' course.

OTHER SECONDARY SCHOOLS.

Ten private academies report to the Bureau 43 teachers and 1,646 pupils. Two of these do not in any way classify their pupils; the remaining 8 show 64 in classical studies and 53 in modern languages, 21 being engaged in preparing for a classical course in college and 23 for a scientific course. Only two of the schools teach drawing, 3, vocal music; 3, instrumental music; 3 have more or less chemical apparatus, and 5, philosophical, while 4 have libraries of 100 to 1,000 volumes.

Returns from 14 colleges and universities give 44 instructors in their preparatory departments, exclusive of those in the colleges, with 1,490 students, of whom 556 are preparing for a classical collegiate course and 316 for a scientific course.—(Returns for 1875.)

SUPERIOR INSTRUCTION.

STATE UNIVERSITY.

The Indiana School Journal for October, 1875, says the State University opened with a fair prospect of a successful and prosperous year. The enrolment the first week was 230, of whom 114 were in college classes, with a large number of old students to come in.

The new president, Dr. Lemuel Moss was on the ground. He is about 45 years of age, is a man of broad and exact learning, an able and clear writer and speaker, has a fine physique and undoubted strength of character.

The completion of a new laboratory for the use of the scientific classes gives great additional facilities for instruction here. The department occupies three floors, a basement, and two above ground. The first affords room for storing dangerous material and for the heating and distilling apparatus; the other floors for all laboratory work. Forty-seven students can work here at a time, each operator having his own table and closet; his own gas jets, one for heating and one for light; his own tubes, filters, funnels, lamps, reagents, crucibles, retorts, and other apparatus necessary for analysis, either quantitative or qualitative.

The proportion of students pursuing a classical course is said to have considerably increased since the free opening of the university to the graduates of high schools, while the fact that there are said to be 15 post graduate students for the session of 1874–'75 shows an increasing tendency to more advanced and thorough study. The graduates for 1875 were, according to official returns, 12 bachelors of arts and 15 bachelors of science, while 3 persons received the honorary degree of A. M. and 2 that of LL. D.

DENOMINATIONAL AND OTHER COLLEGES.

Bedford Male and Female College, Bedford, (Christian.)—A classical, a scientific, a ladies', a normal, and a commercial course. No new report for 1874–'75.

Bourbon College, Bourbon.—This institution for sometime suspended was reopened under a new organization and with a new president, August 30, 1875. The president is Dr. J. A. Reubelt, from Ghent College, Kentucky.

Concordia College, Fort Wayne, (Evangelical Lutheran.)—Six full years in the complete course. Largely German. Ten young students from the father-land came to it in 1875. Library, 4,000 volumes.

Fort Wayne College, Fort Wayne, (Methodist Episcopal.)—A collegiate department with classical and scientific courses; a normal, a commercial, an art, a music, and an academical department. Astronomical, chemical, philosophical, and pharmaceutical apparatus, with globes, maps, and charts. Library, 600 volumes. Males and females both admitted.

Franklin College, Franklin, (Baptist.)—For both sexes. Same departments as the last, except the normal and commercial, and, like it, has both males and females in the faculty. Library, 2,000 volumes. Received $30,000 in gifts the past year.

Indiana Asbury University, Greencastle, (Methodist Episcopal,) admits ladies as well as gentlemen, but the latter only to the faculty. Courses, a classical, a scientific, a biblical, a normal, and a legal; the last comprising two years, with some vacation studies. Some internal troubles existing in the past year seem to have been healed and a new president, Rev. Alexander Martin, D. D., is reported to have been enthusiastically received. Library, 10,000 volumes.

Hanover College, Hanover, (Presbyterian.)—For male students only. Courses, classical, scientific, and preparatory. Graduates in June, 1875, 13.

Hartsville University, Hartsville, (United Brethren.)—For both males and females. Courses, classical, scientific, preparatory, theological, commercial, and musical. Library, 775 volumes.

Northwestern Christian University, Irvington, (Christian.)—For both sexes. A lady professor in special charge of lady students. Departments: a literary college, a college of business, and a college of law. This university has changed its location from Indianapolis to Irvington, a suburban village four miles eastward of the city, securing by the change an excellent new building and a large present addition to its endowment from sale of its city property, with the prospect of still further increase of it from future sales. Library, 4,000 volumes.

Union Christian College, Merom, (Christian.)—Courses, academic or preparatory, classical, scientific, and musical. Open to both sexes on the same terms.

Smithson College, Logansport, (Universalist.)—Courses, preparatory, commercial, philosophical, and collegiate. Musical instruction is also given. Library, 300 volumes.

Moore's Hill College, Moore's Hill, (Methodist Episcopal.)—For both sexes. Courses, preparatory, collegiate classical and collegiate scientific, normal, and musical. Library, "several hundred volumes."

University of Notre Dame du Lac, Notre Dame, (Roman Catholic.)—For males only. Courses, the same as the above, except that, in place of the normal and musical, there is a course in modern languages and one in law. A post graduate course has also been arranged. "Some few hundred volumes have been added to the library."

Earlham College, Richmond, (Friends.)—Both sexes here admitted to equal privileges and equal degrees. Preparatory, classical, and scientific courses, with special attention to modern languages and English literature. Large additions have been made to the cabinet, by the president, from collections made by him in the Sandwich Islands and California. Library, 2,000 volumes. An observatory, with good telescope and apparatus, is possessed.

Ridgeville College, Ridgeville, (Free Baptist.)—For both sexes. A ladies' collegiate course is here added to the classical and scientific courses. There is also a department of music. Library, 300 volumes.

St. Meinrad's College, St. Meinrad, (Roman Catholic.)—For males only. Courses, preparatory and classical collegiate. Library, 6,000 volumes.

St. Bonaventure's College, Terre Haute, (Roman Catholic.)—For males only. A preparatory and a classical and scientific collegiate course.

Wabash College, Crawfordsville, (Presbyterian.)—An English and mercantile course, a collegiate preparatory, collegiate classical, and collegiate scientific. Library, 8,000 volumes, with 5,000 more in society libraries. Military drill for students.—(Catalogues and returns for 1874–'75 and 1875–'76.)

A NEW FREE COLLEGE.

The Philadelphia Evening Telegraph of October 4, 1875, contained the following statement, and although no distinct information from other sources has been received in confirmation of it, the paragraph is given for what it may be worth and in the hope that the facts may be as stated:

"In April last it was announced that Mr. Willard Carpenter, of Evansville, Ind., had decided upon a step which will place him among the great philanthropists of the world. He proposed to give $1,000,000 to found a free college for poor students; clothing, tuition, and food to be furnished for nothing. Provision was to be made for the support of a faculty of instructors, and the whole fund to be placed in the hands of ten trustees, five of them to be residents of Indiana and five of adjoining States. A recent dispatch from Evansville announces that on the 30th ultimo Mr. Carpenter filed the articles of association for the endowment of the institution. The deeds will settle $500,000 on the institution, and Mr. Carpenter declares that after it shall have been established he will make a further gift of $200,000. The institution will be open to the poor alone, and will not be connected with any religious sect. Mr. Carpenter is 72 years of age, was born in Vermont, and began life traveling over the New England States and New York with a pack on his shoulder. His children have already had their share of his estate of $2,000,000, and there still remains enough to carry his project to success."

COLLEGES FOR WOMEN.

Two institutions for the superior instruction of young women, the Presbyterian Female College of Indiana, Greencastle, and the Moravian Seminary for Young Ladies,

Hope, report for 1875, the former, 2 instructors and 30 pupils in the preparatory department and 4 instructors and 40 students in the collegiate; the latter, 8 instructors and 75 students, 1 in post graduate studies. Four years' course in the former, three in the latter.

INTERSTATE COLLEGIATE ORATORICAL CONTEST.

Representatives from the colleges of six States, Ohio, Indiana, Illinois, Wisconsin, Iowa, and Missouri, each of whom had won the first position in similar trials previously held in their own States, met at Indianapolis in May, 1875, and contested for the prize in oratory. One of the editors of the Wisconsin Journal of Education, who was present, says: "The six orations presented by the contestants were, upon the whole, good, judged by the proper standard of comparison. Young gentlemen of 20 are not expected to display the intellectual power of twice that age. As young men, they nearly all did well. The one who took the prize, Mr. I. M. Coultas, of Illinois, showed remarkable skill and power in declamation. Coming last on the list, appearing at a late hour before a partially exhausted audience, he banished every feeling of weariness, aroused the attention and interest of all, provoked applause at intervals during his speech, and at its close such a spontaneous and hearty manifestation of approval as showed he had cast over his auditors the spell of a master, albeit a youthful one." The second prize was awarded to T. M. Graydon, of Iowa, though, in the opinion of the Wisconsin judge, it should have been given Mr. McLeod, of Indiana, who made a very vigorous and manly speech.—(Wisconsin Journal of Education, June, 1875, pp. 263, 264,)

The Indiana School Journal, June, 1875, p. 294, says of this contest: "The performances were good of the kind, and the kind just what might have been expected under the circumstances. The subjects were of the old college style, entirely beyond the limits of a ten or fifteen minutes' oration, and mostly beyond the capacity of the orators. The style of composition was florid, and, in some cases, fulsome. The delivery was of the usual spread-eagle type." The Wisconsin editor speaks much more favorably of it.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

Purdue University, La Fayette, is the State College of Agriculture and the Mechanic Arts. Opened in full for students September 16, 1874, after a partial opening March 2; it has (1) a school of natural science, (2) a school of engineering, (3) a school of agricul-

ture, (4) a school of military science, with courses for special and post graduate students in engineering, in natural history, in chemistry, in metallurgy, and in physics. Its location is on a tract of 185½ acres one mile west of La Fayette, on an elevated plateau overlooking the valley of the Wabash. The buildings erected and in use are a boarding house, dormitory, laboratory, boiler and gas house, all of brick, and a military hall, gymnasium, stable, and workshop of wood. The university building proper is yet to be erected, the funds for it gradually accumulating.

At the first annual commencement, June, 1875, one student graduated in the school of chemistry. The attendance at the opening of the autumnal session of 1875 was considerably in advance of that of 1874, both in numbers and scholarship; and as graduates of the State high schools are hereafter to be admitted to its classes, as they now are to the State University, there is likely to be a steady increase of students, especially if Hon. E. E. White, of Ohio, called to the presidency, should bring his matured powers to the fuller organization of its work.—(Report of trustees for 1874 and return to Bureau, 1875.)

Rose Polytechnic Institute, Terre Haute.—This institution, originally styled the Terre Haute School of Industrial Science, has been established and endowed by Chauncey Rose, esq., of Terre Haute, "to prepare young men for any of the activities of life by practical education." The amount donated by Mr. Rose for the endowment is $450,000, with a lot of ten acres within the limits of the city for a site. "The cornerstone of the building," says the Terre Haute Express, "was laid on Saturday, September 11, 1875, with imposing ceremonies," and the secretary of the institute writes at the close of the year, "The academic building is now about inclosed, and will be completed July next, according to contract. Then the course of instruction, based on mathematics, sciences, &c., will begin."—(Return to Bureau, 1875.)

The several professional schools appear by their returns in the following table, and more fully in Tables XII and XIII at the close of this volume.

Statistics of schools for scientific and professional instruction, 1875.

SPECIAL INSTRUCTION.

INDIANA INSTITUTE FOR EDUCATION OF THE BLIND, INDIANAPOLIS.

This institution reports, for 1875: Instructors, 25; students, 103; value of grounds, buildings, and apparatus, $525,000; receipts from all sources, $34,262.28; expenditures, $34,182.78; employments taught, broom making, chair seating, piano tuning, sewing, knitting, bead work, fancy work, &c. Library, 2,500 volumes. Since the opening in 1847, there have been 521 pupils.—(Return to Bureau, December 18, 1875.)

INDIANA INSTITUTION FOR THE DEAF AND DUMB, INDIANAPOLIS.

Founded in 1844, there have been here, since that time, 1,096 pupils. At present there are 15 instructors and 340 pupils. The studies are the ordinary ones of a common school and academic course. The value of grounds, buildings, and apparatus is put at $650,000; the income for the year, $63,000 from State appropriation and $6,314 from the shops in which the students work; expenditures, $62,569. Library, 3,025 volumes.—(Return to Bureau, December 18, 1875.)

INDIANA REFORMATORY INSTITUTION FOR WOMEN AND GIRLS, INDIANAPOLIS.

Incorrigible conduct, needing both restraint and instruction, forms the ground of commitment here. The teachers reported number 6; the girls and women committed during the year, 52; those discharged, 17; remaining, 134. Only 61 could read when committed, and only 59 could write, as well as read. Of these 48 have learned to read since their commitment and 30 to write. All the branches of a common school training are taught, together with household duties, dress making, and laundry work. Three-fourths of those discharged are said to have become orderly members of society.—(Return to Bureau, 1875.)

INDIANA HOUSE OF REFUGE, PLAINFIELD.

Instructors, 20; inmates, 328, of whom 153 have been received during the year, either because of youthful crimes or at the request of parents. Only 289 could read when committed and only 109 read and write. The inmates are taught reading, writing, arithmetic, geography, grammar, and spelling, with farming, gardening, floriculture, caning of chairs, tailoring, printing, and shoemaking. Total received since establishment of school, 733, of whom three fourths are thought to have been reformed.—(Return to Bureau, January 4, 1876.)

EDUCATIONAL CONVENTIONS.

STATE TEACHERS' ASSOCIATION.

The twenty-first anniversary and twenty-second meeting of the State Teachers' Association was held at Indianapolis, December 28, 1875. M. R. Barnard, esq., chairman of the school board of that city, welcomed the association cordially and response was made by President Jones, of the State Normal School. The president elect, Superintendent George P. Brown, of Indianapolis, delivered his inaugural address, taking for a topic education in Indiana. During the sessions of the next two days papers were read as follows: "Objects and methods of school government," by Superintendent Thomas, of Wabash; "Language culture," by Miss Bruce, of the State Normal; "Reciprocal duties of parents and teachers," Superintendent Todd, of Delaware County; "The district school," Superintendent McPherson, of Wayne County; "Drawing in public schools," Professor Brown, of Purdue University; "Poverty of ideas in high schools and the remedy," Miss Lyon, of the La Porte High School; "Superintendents' meetings," Superintendent Butler, of Attica; "History of public schools in Indiana," Professor Olcott, of Indianapolis; "A plea for the practical in common school education," Professor Smith, of Rockport. A powerful address was given on Thursday, by Dr. Martin, the new president of Asbury University, on "Mental science as a study for teachers." Wednesday evening was occupied by Professor Hunter, of Bloomington, with his sketch of the history of the association, and by a banquet at the Grand Hotel, in which over 300 participated. The next evening Dr. Moss, of the State University, pronounced an address upon higher education. On Thursday a centennial meeting was held, which was addressed by State Superintendent Smart, State Agent Green, and others, when resolutions were adopted pledging co-operation with the efforts of the centennial committee. Resolutions were also passed in honor to the memory of the late President Nutt, and others upon miscellaneous topics at some length. The total enrolment of members was 402.—(Northern Indiana Teacher, January, 1876, p. 38.)

MEETINGS OF COUNTY AND CITY SUPERINTENDENTS.

The county superintendents of the State met in convention at Indianapolis on the 15th and 16th of July, 1875. Papers were read on the mode of conducting teachers' examinations and of marking papers, on township institutes, on teachers' associations, and other topics of practical interest to the schools.—(Ibid., August, p. 317.)

A State convention of city superintendents was held in Indianapolis, April 7-9. The system of grading and nomenclature of the schools, (referred to elsewhere,) approved by a meeting of western superintendents, was unanimously adopted.—(Ibid., May, p. 193.)

OBITUARY RECORD.

DR. H. W. CLOUD.

The death of Dr. H. W. Cloud, of Evansville, is noticed by the Indiana School Journal for June, 1875, as a great loss to the cause of education. Dr. Cloud pursued his college studies at Asbury University, to the senior year, and then, passing to the State University, graduated in 1857. He became first a teacher, and found in that occupation so

much delight that he afterwards regretted he had not continued in it to the end. Pursuing medical studies and becoming finally one of the best chemists in his region, he still kept his love for the cause of education always warm. He was for some time a trustee of the State University and a member of the school board of Evansville. In the latter capacity he labored earnestly to secure a library for the city schools, and ad the happiness of seeing this cherished enterprise established, crowning the labors of a life well spent. That library will be his monument.

REV. CYRUS NUTT, D. D.,

Died August 23, at his home in Bloomington, after long and faithful service in educational work in Indiana. Born in Trumbull County, Ohio, September 4, 1814; he graduated at Allegheny College, Meadville, Pa., in 1836, and in the same year became principal of the preparatory department of that college. Called shortly after to a similar position at Asbury University, Greenville, Ind., he went thither, received a license to preach the Gospel, and so commended himself to favor by his work and character that in 1837 he was made professor of languages, and in 1841 professor of the Greek language and literature and instructor in Hebrew. Resigning this post in 1843, he entered upon pastoral work at Bloomington and Salem, but was recalled to his professorship at Asbury in 1848; served there for another year, and was then made president of the Ft. Wayne Female College; the next year, president of Whitewater Female College. Laboring here faithfully for five years, he, at the end of that time, again resumed the work of the ministry, becoming in 1855 presiding elder of the Richmond district. Once more elected to a professorship at Asbury, he went back there in 1857, and served for two years as professor of mathematics and acting president, till the inauguration of President Bowman relieved him of the latter duty. In 1859, his alma mater made him doctor of divinity, and in 1860 he was honored with the presidency of the Indiana University at Bloomington. It was at that time not much more than a grammar school; but grew gradually, beneath the good doctor's genial care, into an important State university, the head and crown of the school system of the State; and when, at the close of the session of 1874–75, he ceased to be its president, its able faculty and handsome revenue entitled it to rank among the first of such institutions in the Ohio River States, if not the very first.

EDWIN W. THOMPSON,

A teacher of much repute in the Indianapolis high school, died August 19, of consumption, at the Mountain Sanitarium, N. C., aged 27, leaving behind him the reputation of being not only an excellent Christian gentleman, but also one of the best scholars in the State, especially in natural science.

LIST OF SCHOOL OFFICIALS IN INDIANA.

STATE BOARD OF EDUCATION.

Hon. JAMES H. SMART. *State superintendent of public instruction, ex officio*, president.

Superintendent.	Post-office.
His excellency Thomas A. Hendricks, governor	Indianapolis.

IOWA.

STATISTICAL SUMMARY.

SCHOOL POPULATION AND ATTENDANCE.

Population of school age, (5–21:) Boys, 274,631; girls, 259,272	533,903
Number under 6 years of age, (estimated)	66,740
Number over 16 years of age, (estimated)	125,450
Number between 6 and 16 years of age, (estimated)	341,713
Number enrolled in public schools, 1874–'75	384,012
Percentage of enrolment on enumeration	72
Total average attendance	225,415
Increase of average attendance in two years	21,211
Percentage of attendance on enrolment	59
Percentage of attendance on enumeration	42

TEACHERS AND TEACHERS' PAY.

Number of teachers in 1874–'75: Males, 6,500; females, 11,645	18,145
Average monthly pay of male teachers	$36 68
Average monthly pay of female teachers	28 34
Increase in pay of the former in two years	40
Increase in pay of the latter in two years	66

SCHOOLS AND SCHOOL HOUSES.

Number of ungraded public schools	9,203
Increase in two years	806
Number of graded schools	407
Whole number	9,610
Average duration of school in months	6.8
Number of private schools	131
Teachers employed in private schools	459
Aggregate attendance of scholars in these	13,350
Number of school-houses: Frame, 8,498; brick, 650; stone, 259; log, 121.	9,528
Increase in two years	672
Estimated value of sites, buildings, furniture, and apparatus	$8,617,956 00
Increase in value in two years	453,631 00

INCOME AND EXPENDITURE.

Receipts.

From local tax	4,226,975 98
Interest on permanent fund and rent of lands	318,997 72
From other sources	489,524 32
Total receipts	5,035,498 02

Expenditures.

For sites, buildings, and furniture	1,087,983 30
For libraries and apparatus	26,700 55
For salaries of teachers	2,598,439 81
For miscellaneous and contingent matters	892,625 73
Total expenditures	4,605,749 39

EXPENDITURE PER CAPITA.

Rate of expenditure *per capita* of school population	6 75
Rate of expenditure *per capita* of pupils enrolled	9 38
Rate of expenditure *per capita* of average attendance	15 99
Rate of expenditure *per capita* of population 6–16 years old	10 53
Rate of expenditure *per capita* of population 6–16 years old, including interest on school property	13 67

SCHOOL FUND.

Amount of school fund, permanent and available	3,363,960 66

—(From report of Hon. A. Abernethy, State superintendent of public instruction, for 1874 and 1875, and return from the same to the Bureau of Education for the school year 1874–'75.)

SCHOOL SYSTEM OF THE STATE.

CONSTITUTIONAL PROVISIONS.

The first constitution of the State, adopted in 1846, required the general assembly to provide for the election, by the people, of a superintendent of public instruction, to hold office for three years, his duties to be prescribed by law and his compensation to be such as the general assembly might direct. It also required the assembly to encourage, by all suitable means, the promotion of intellectual, scientific, moral, and agricultural improvement; to form a school fund; to provide for a system of common schools, by which a school should be kept up and supported in each school district at least three months in every year; and to take measures for the protection, improvement, or other disposition of lands for the use of a university.

That of 1857 provided for a general management of the educational interests of the State by a State board of education, to consist of the lieutenant-governor and of one member to be elected from each judicial district in the State. This board, under a permissive clause in the constitution, was abolished March 19, 1864, and a superintendency of public instruction re-established.

PROVISIONS OF THE SCHOOL LAW.

Code of Iowa, 1873, title XII, pp. 294–352, and school laws of Iowa, 1874, from the code of 1873, as amended by the fifteenth general assembly, with forms, notes, and decisions, by Hon. A. Abernethy.

OFFICERS.

A State superintendent of public instruction, county superintendents, boards of directors for district townships, and subdirectors for subdistricts form the present official staff of the school system.

POWERS AND DUTIES OF THESE OFFICERS.

State superintendent.—The State superintendency provided for in the constitution of 1846 was supplanted by a State board of education in that of 1857, and again restored by act of March 19, 1864, in accordance with a constitutional clause allowing such change after 1863. The incumbent of this office, elected by the people, holds it for a term of two years; is charged with the general supervision of all the county superintendents and all the common schools of the State; files in his office at the seat of government all papers, reports, and public documents transmitted to him; is to keep a fair record of all things belonging to his official work; is to co-operate with county superintendents in organizing and holding normal institutes for the instruction of teachers and those who may desire to teach; is to see to the publication and distribution of acts amendatory of the school laws, after each session of the legislature, if deemed necessary; is to report annually to the State auditor, on the 1st of January, the number of persons of school age (5–21) in each county; and at each regular session of the State legislature is to report the condition of the common schools of the State, the number of district townships and subdistricts; the number of teachers, of schools, of school-houses and their value, of persons of school age, of attendants on schools in each county, of books in district libraries, together with the value of apparatus in the schools, and such other statistical information as he may deem important; this report to be accompanied with a detail of any plans he may have matured for the more perfect organization and efficiency of common schools.

County superintendents.—These officers are also elected by the people for terms of two years. They have charge of the examining and licensing of teachers for the schools of their respective counties and of making proper record of the name, residence, age, and date of examination of all persons examined and licensed by them, any certificate being revocable for such cause as would have justified the withholding it when given. They must visit the several schools of the county at least once in each term, and spend at least half a day in every such visitation; must act as organs of communication between the State superintendent and township or district authorities; must report to the superintendents of the State institutions for the deaf and dumb and blind the name, age, and post-office address of all such unfortunates within their counties, and must hold annually, at such times as the schools are generally closed, with such assistance as may be necessary, normal institutes, of not less than six days each, for the instruction of teachers and those who may desire to teach, aiding in defraying the expenses of such institutes by charging a registration fee of $1 for each attendant, and of the same sum for each certificate issued, and transmitting to the county treasurer all moneys so received, to be designated, together with the State appropriation for institutes, the "institute fund," this transmission to be accompanied with a list of the names of all persons so contributing and the amount from each. They are also to act as presidents of county boards of trustees for high schools; to conform in all respects to the directions of the State superintendent in matters within his jurisdiction; to transmit to the lower officers the school blanks, circulars, and other communications directed to them; and on the first Tuesday of October in each year they

must make to the State superintendent a report containing a full abstract of all the reports made to them by the district secretaries, with such other matters as may be called for or as may seem essential to a true exhibition of the condition of the schools. They must also at the same time make report to the county auditor of the number of persons of school age (5–21) in each school district within their respective counties.

Failure to make either of these reports incurs a forfeiture of $50 to the school fund of the county, with further liability to all damages caused by such neglect.

Boards of directors of township districts.—The subdirectors of the several subdistricts in any township compose the township district board, while if there are no subdistricts three are chosen for the township. This board has general charge of school matters in the township, such as the purchase of school sites, the erection of school buildings, the determination of the boundaries of school districts, and, hence, the decision where pupils shall attend school. It may establish graded or union schools wherever necessary, and may select a person to have the general supervision of the schools, subject to the rules and regulations of the board. It may select text books for use in the schools, not changing them oftener than once in three years, except on a vote of the people for such change. Out of any unappropriated fund in the treasury the board may purchase records, dictionaries, maps, charts, and apparatus for the schools, but may not contract a debt for this purpose. It elects for itself a president, who, besides presiding at its meetings, draws all its drafts upon the county treasury for money apportioned to the schools within the township, signs all orders on that treasury for funds, and signs, too, all contracts made by the board. It also chooses a secretary, whose duty it is to keep record of the proceedings of the board, preserve copies of reports made by it and files of all documents sent to it, countersign orders and drafts drawn by the president, make a register of all orders drawn on the treasury, and furnish the treasurer with a transcript of the same. He is to give due notice of the district township meeting; keep an account of all expenses incurred by the district; notify the county superintendent when each school term in the district begins and ends, and make to him, between the 15th and 20th of September in each year, a report containing the following items: (1) the number of persons of school age in his district, male and female; (2) the number of schools and the branches taught; (3) the number of pupils and average attendance in each school; (4) the number of teachers, male and female, and average weekly pay of each sex; (5) the length of school in days and average weekly cost of each pupil; (6) the amount of teachers' fund held over, received, paid out, and on hand in his district; (7) the amount of contingent fund held over, &c.; (8) the amount of school house fund held over, &c.; (9) the text books used, number of volumes in district library, and value of apparatus belonging to the district; (10) the number of school houses and their estimated value; (11) the name, age, and post-office address of each person of school age so far deaf and dumb or blind as to be incapable of instruction in the common schools.

Twenty-five dollars' forfeiture, with liability for all losses resulting from failure, is the penalty for neglect to make this report.

The treasurer of the board holds all moneys belonging to the district; pays them out on orders of the president, countersigned by the secretary; registers such orders, showing in each case the number of the order, its date, the name of the person in whose favor it was drawn, the purpose for which it was given, and the amount; receives all moneys apportioned to the district by the county auditor and all collected from it on district school tax by the county treasurer; keeps account of expenses and receipts in a book provided for the purpose; and renders from time to time a financial statement to the board.

Subdirectors.—Subdirectors are annually chosen at the yearly district meeting in the independent districts of townships organized before the passage of the present school code. They serve for terms of one year, or until their successors are duly elected and qualified; and have charge, under the township district board, of all school matters in their districts, such as employing teachers, repairing and furnishing school-houses, making contracts for supplying fuel for schools, and doing whatever may be necessary for promoting their comfort and prosperity. Each one is required to take a school census of his district between the 1st and 10th of September in each year, giving the names of heads of families and number and sex of children of school age, and reporting the latter to the secretary of the township board.

SCHOOLS.

In each subdistrict is to be taught at least one school for not less than twenty-four weeks, of five school days each. Graded schools and high schools are also provided for, with normal schools, normal institutes for the fuller training of teachers, schools for soldiers' orphans, for the blind, the deaf and dumb, and the youth that need reformatory training; while beyond all these come a State agricultural and mechanical college and a State university at the head of the school system.

Industrial expositions, to be held in each school once a term or oftener, and to consist of useful articles made by the pupils, are also here an interesting feature authorized and encouraged by school law.

SCHOOL FUNDS.

The State permanent school fund is derived (1) from 5 per cent. on the net proceeds of the public lands within it, (2) the proceeds of the sales of 500,000 acres granted it by the General Government in 1841, (3) the proceeds of escheated estates, and (4) the proceeds of sales of the sixteenth section in each township, or of lands selected in lieu thereof. Amount, 1875, $3,363,961.

A temporary fund for school purposes, to be received and appropriated annually in the same manner as the interest on the permanent fund, is derived from (1) all forfeitures of 10 per cent. authorized to be made for the benefit of the school fund, (2) fines collected for violation of the penal laws, (3) fines collected for non-performance of military duty, and (4) sales of lost goods and estrays. Amount, 1874, $92,768.

A local tax for school purposes, not to exceed 5 mills on the dollar annually, is also authorized.

ELEMENTARY INSTRUCTION.

ORGANIZATION OF THE SCHOOL SYSTEM.

Iowa became a Territory on the 4th day of July, 1838, and the territorial legislature on January 1, 1839, passed an act for the establishment of public schools, the first section providing that "there shall be established a common school, or schools, in each of the counties of this Territory, which shall be open and free for every class of white citizens between the ages of 5 and 21 years;" the second section providing that "the county board shall, from time to time, form such districts in their respective counties whenever a petition may be presented for that purpose by a majority of the voters resident within such contemplated district." Among the earlier enactments of the territorial legislature were those requiring that each district maintain at least three months' school every year, and that the expenses for the same be raised by taxes levied upon the property of said district. Among the later enactments was that providing for a county school tax to be levied to pay teachers, and that whatever additional sum might be required for this purpose should be assessed upon the parents sending, in proportion to the length of time sent. The rate bill was thus adopted near the close of the territorial period.

The first legislative assembly of the Territory addressed itself to the task of providing a system of common schools. The second assembly enacted in 1840 a much more comprehensive law, which was, however, in advance of the existing public sentiment, making ample provision for free public schools. It was not until 1848, and after much agitation of the subject by eminent men, that the people were ready for a system of schools wholly free and supported by taxation. A comprehensive bill prepared by Horace Mann, of Massachusetts, was adopted by the general assembly March 12, 1858. It made a radical change in the school system. Small districts were replaced by large ones; the rate-bill system by free schools, to be taught in every subdistrict for at least four months each year, and as much longer as the board of directors might determine. The office of county superintendent was created, and provision was made for the examination of teachers, the supervision of schools, and the establishment and support of graded and high schools. The management of the permanent school fund was removed from school officers and placed in the hands of those not otherwise officially connected with the public schools. This law awakened enthusiasm among the people and gave a grand impetus to the cause of popular education.—(State report for 1874–'75, pp. 15, 23, 32.)

SCHOOL FINANCES.

The constant and rapid increase in the amount of money expended for school purposes is indisputable evidence of the appreciation of the public schools on the part of the people of the State. In the year 1849 the total expenditures for school purposes were $44,738; in 1859, $617,632; in 1869, $3,434,822; in 1875, $4,605,749. With the exception of the semi-annual apportionment, derived largely from the interest on the permanent school fund, these sums were raised by voluntary tax.

ATTENDANCE.

The number of persons who attended school during any year is considerably less than the whole number between the ages of 5 and 21 years. In a State with an area of more than 50,000 square miles and a school population of half a million, especially when unevenly distributed, a large number of children will reside so far from any school as practically to prevent their attendance. There is also a growing tendency to defer sending children to school till they are beyond the lowest limit of school age, and an undue haste in withdrawing them before the highest limit of that age is approached. Then, too, a small percentage of the youth of the State receive instruction in private schools. These facts largely account for the difference between the number enrolled in the schools and the whole number of legal school age. Still, after making these allowances, there are in the State thousands of youth between the ages of 8 and 16 who ought to be at school, though the relative number whose education is thus

neglected is slowly diminishing from year to year. The 384,012 youth 5-21 years of age attending public schools in 1875, added to the 13,350 attending private schools, makes 397,362 pupils of all ages attending school, a number which exceeds by 42,512 that of the children in the State between 6 and 16; which is regarded as a creditable showing.—(Report for 1875, pp. 45-47.)

SCHOOL-HOUSES.

From the year 1833 to 1853 the log school-houses prevailed and continued to increase until 1861, when 893 were reported. Since then the number of this class of houses has egularly diminished, there being: in 1865, 796; in 1870, 336; and, in 1875, 121. From 1854 to 1856 school-houses increased rapidly in number and improved greatly in character; the larger and better frame house replacing the log, and brick houses of more imposing appearance becoming more common in the cities and larger towns. The greatest annual increase in the number of school-houses occurred in 1871, when the number added was 730, since which time the annual increase has steadily lessened, that of 1875 being 303. While, however, the number built diminishes, the cost of building increases, that for 1875 being $1,153,339 against $935,617 for the year 1871, when the number built was more than twice as great. The present number of school houses is 9,528, which is one to every 140 inhabitants of the State.—(State superintendent's report, 1875, pp. 47, 48.)

TEACHERS.

The first report containing statistics of the number of teachers employed in the public schools and their compensation is that for November 1, 1848. Six only of the 34 counties then organized reported these items. The average pay reported was $15.43 per month for gentlemen and $8.20 for ladies. In the more complete report of 1849 the average pay was given as $14.83 for gentlemen, $7.64 for ladies. One county reported 2 ladies teaching for $4.29 per month, and another 3 gentlemen teaching for $8.72, these salaries being the lowest reported. In 1850, 549 male and 250 female teachers were reported as having, respectively, an average salary of $14.76 and $8.78 per month. The number of male teachers remained in excess of the number of females till 1862, when many young men enlisted in the United States service and their places were supplied by young women; the number reported for that year being 3,618 and 4,187, respectively. During the next year the number of male teachers diminished nearly 7,000, while that of females increased nearly 1,500. Since 1865 there has been a gradual increase in the number of both sexes teaching, the present number being 6,500 gentlemen and 11,645 ladies.

The average compensation of teachers per month has steadily advanced. The advance in the wages paid to women for teaching has been very marked and satisfactory, and shows a better appreciation of the value of their services in the work of education as they gradually become better qualified. The rule is becoming more general everywhere throughout the State from year to year to pay men and women the same salaries for the same grades of work. It has become common to determine the compensation first, making the question of sex in the selection of teachers subsidiary to that of qualification to teach and to govern, women being quite as often preferred as men. —(Report of superintendent, 1875, pp. 43-45.)

GRADED SCHOOLS.

The school law adopted January 15, 1849, contained a provision authorizing the establishment of graded schools. The same provision was embodied in the law of 1858, and yet, notwithstanding the repeated recommendations of superintendents, the formation of graded schools proceeded slowly. During the twenty years intervening between the passage of the law authorizing their formation and the collection of the first statistics in October, 1868, only 212 had been established. In all, 289 were reported in 1871 and 407 in 1875. Graded schools are now established in all the cities, larger towns, and villages. Schools in which more than one teacher is employed are universally graded.—(State report, 1875, pp. 36, 37.)

CITY SCHOOL SYSTEMS.

DUBUQUE.

The officers of the city school system are a board of directors of 6 members, of whom 2 are changed each year, and a secretary, not of their number.

Statistics.—Population, 8,379; schools: colored, 1; ungraded, 1; graded, 7; high school, 1; total, 10; enrolled pupils in colored school, 20; in ungraded school, 38; in graded schools, 2,714; in high school, 83; total enrolment, 2,855; teachers, 67, including a teacher of German. Other statistics not given.

Studies.—A course of studies running through 16 classes in the lower schools and four years in the high school, with a good list of text books, shows the possession of ample opportunities for advancement.—(Report for 1874-'75.)

JEFFERSON.

Officers.—A board of directors of 6 members, of whom 2 are changed each year, and a superintendent of schools.

Schools.—First primary, second primary, intermediate, grammar, and high schools, the first four having two grades each and the English course of the high school four grades.

Studies.—A full and well considered course of studies is presented, extending in English studies from the first primary through the high school, with an additional course for the last three years of the latter school, intended to prepare students for college or the university, and including Latin, German, and Greek, with mathematics, natural sciences, rhetoric, history, and politics.—(Public schools of Jefferson, 1875.)

WEST DES MOINES.

Officers.—A board of education of 6 members, 2 of whom are changed each year, and a city superintendent of schools.

Statistics.—Population, 10,000; enumeration of those of school age, 2,848; number registered in public schools, 1,831; number in average attendance, 1,097; per cent. of attendance, 60; average cost of tuition per pupil, $10.64; number of weeks in school year, 38. Number of schools: 1 high, 9 grammar, 15 primary; total, 25. Number of teachers in high school, 3; in grammar schools, 9; in primary schools, 15; total, 28, of whom 4 were males and 24 females.

School arrangements.—The course of study (fully given in the report) occupies 12 years, 4 in the primary, 4 in the grammar, and 4 in the high school. The studies in the primary and grammar grades are essentially the same, the main difference being that in the primary no text book is used except the speller and reader. Music and drawing are taught throughout the course, and in the high school Latin, mathematics, and the natural sciences are added to the ordinary English studies, with some attention to English literature.

Industrial exposition.—At the end of the first term last year, instead of the usual reunion and literary exercises, there was an exposition of school handiwork, which proved a source of much interest. The articles exhibited included almost everything that could be hewed, whittled, kneaded, or sewed. Many of the articles were extremely well made and some represented the labor of months. Others were rudely constructed, but evinced ability which might be directed to useful purposes. Several hundred specimens of drawings by the pupils were among the things exhibited.—(Report of Superintendent J. H. Thompson, for 1874–'75.)

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

A law was passed in 1848 to establish at Andrew, Oskaloosa, and Mt. Pleasant normal schools for the education of common school teachers and others. By the provisions of this act, the superintendent of public instruction was required to divide the State into three normal school districts, and the board of trustees of the State University to appoint, for each district, a board of seven trustees whose duty it was to provide for the erection of suitable buildings, the employment of teachers, and the government of the schools. The sum of $500 annually was appropriated to each school, to be drawn from the university fund. Two of these schools were organized, one in 1849, the other in 1852; but, no aid having been received from the university fund for their support, they were soon discontinued, and subsequent efforts to revive them have proved unsuccessful. In 1858 a normal department was established in the State University and maintained until 1872, when it was made to coalesce, in the main, with the academical department; since which time the chair of didactics has been maintained in the university for the purpose of allowing academical juniors who intend to become teachers, and special students who may be qualified to be classed with them, to pursue normal studies, to prepare them to teach in advanced schools.—(Report, 1875, pp. 104, 105.)

From an examination of the college catalogues at hand it appears that normal classes or departments are sustained also in Iowa, Cornell, Oskaloosa, Penn, Tabor, and Whittier Colleges, thus meeting, to some extent, the need for a due training of teachers for the schools.

TEACHERS' INSTITUTES.

The first official mention in Iowa educational records of teachers' institutes is made by Superintendent Thomas H. Benton, in his report to the legislature dated December 2, 1850, in which he briefly reviews their origin and objects, speaks of a few efforts which had been made in the State toward sustaining these instrumentalities, which he regarded as "the most effectual means that we can at present adopt to advance the prosperity of our schools," and recommends the appropriation of $150 annually for three years toward sustaining three institutes. In 1858 the legislature passed an act

appropriating $100 for the expenses of each institute in the State which should embrace a membership of not less than 30 teachers and remain in session not less than six days. In 1860 the law was changed, appropriating "a sum not exceeding $50 annually for one such institute, held as provided by law in each county." In 1861 it was made by law the duty of all teachers and persons desiring teachers' certificates to attend such institutes, and providing that during their sessions the schools of the county should be closed.—(Report, 1875, pp. 68–72.)

NORMAL INSTITUTES.

In March, 1874, a law was passed establishing normal institutes, to afford to those intending to teach in public schools an opportunity for specific preparation. It provided that county superintendents shall hold annually one of these institutes for the instruction of teachers and those who may desire to teach, and, with the concurrence of the superintendent of public instruction, procure such assistance as may be necessary to conduct the same at such time as the schools in the county are generally closed. A uniform course of instruction for these institutes was prepared by the superintendent in 1874, and sent to all the county superintendents, and, during that year, institutes were held in 89 counties, 35 of them continuing in session 4 weeks, 26 for 3 weeks, 20 for 2 weeks, and 8 for 1 week. Three months previous to this they had been held, under the old law, in 5 counties. During 1875, normal institutes were held in all the counties except 2. They were held at a season of the year when the best instructors could be secured, and generally remained in session long enough to afford a fair opportunity for giving instruction in methods of teaching and illustrating the same by actual practice. Classes were formed and work was assigned with a view to secure the greatest amount of study in the given time. The attendance, though voluntary on the part of teachers, was unexpectedly large, being, in the aggregate, in 1874 nearly 7,000 and in 1875 a still larger number. While a number of these institutes have been so poorly conducted as to be comparatively worthless, as a whole they have been successful, awakening much enthusiasm among teachers and giving a great impetus to the school work in the State.—(Report, pp. 73, 102, 103.)

SECONDARY INSTRUCTION.

COUNTY HIGH SCHOOLS.

The law of March, 1858, provided for the establishment, under certain conditions, of county high schools, but the measure was in advance of public sentiment, and the revised law of December 28, 1858, discontinued it. No further efforts were made to establish county high schools until 1870, when a bill was passed providing that each county having a population of 2,000 or over may establish a county high school. The law required the board of supervisors, on petition of one-third of the electors of the county, to submit to the people the question of establishing a high school at the place named in the petition. This provision was modified in 1873 so as to authorize the board to order an election for this purpose without the petition. The question has been submitted in several counties, but generally voted down. In 1874 the people of Guthrie County decided to establish a county high school, which will soon be in operation. It is believed that, with a fair trial, these schools will prove to be a valuable and popular auxiliary to the common schools of the county.—(Report for 1875, pp. 39, 40.)

The number of high schools existing in the State is not given, but a large number of departments deserving this rank evidently exists in graded schools. In 61 of the 407 graded schools of the State Latin is taught, and in 87, Latin or German, or both.—(Superintendent's report, pp. 230–237.) And yet, *per contra*, Rev. George Thacher, chairman of a committee on unification of the school system, read at the meeting of the State Teachers' Association, December 29, 1875, a paper in which he said: "Of all the high schools of the State, there are only 15 which make any pretence of teaching the studies necessary for the university freshman class, and there is no evidence that even those few give sufficient attention to them to enable the pupils to make adequate preparation for that class."—(See report in The Common School for February, 1876, pp. 29, 30.)

SEMINARY FOR YOUNG LADIES.

Ottumwa Seminary for Young Ladies, at Ottumwa, (undenominational,) reports 50 students and 4 instructors. The course of instruction is not indicated. Both vocal and instrumental music and drawing are taught. The seminary is a private institution of not quite three years' standing.

ACADEMIES AND SEMINARIES FOR BOTH SEXES.

Special reports have been received from 26 of these schools. In all there are engaged 112 instructors, the attendance of students being 3,618; 1,733 of these were young men, 1,710 young women, and of the remaining 105 the sex is not reported. A

classical course is pursued by 403 of these students and modern languages by 183; preparing for a classical course in college, 215; for a scientific course, 124. Music, either vocal or instrumental, or both, is taught in 21 of these schools; drawing, in 13; 6 have chemical laboratories; 10, philosophical apparatus, and 12, libraries, ranging in size from 7 to 1,700 volumes, the total number of volumes being 4,611.—(Returns to Bureau of Education, 1875.)

PREPARATORY DEPARTMENTS OF COLLEGES.

In these were, during the year, 2,939 students, of whom 640 were preparing for a classical collegiate course and 462 for a scientific course.

BUSINESS COLLEGES.

Eight business colleges and commercial schools, 1 of them being the commercial department of Upper Iowa University, report a total attendance of students in day and evening classes of 1,639, of whom 198 were young women. The branches pursued in addition to the common English studies were book-keeping, penmanship, commercial arithmetic, commercial law and commercial correspondence, telegraphy, German, and phonography. The length of course in 4 of these schools is 1 year; in 1, six months; in 1, from six months to a year; in 1 it is optional, and in the return from the remaining college no mention is made of this point.—(Returns to Bureau of Education, 1875.)

SUPERIOR INSTRUCTION.

IOWA STATE UNIVERSITY, IOWA CITY.

The university comprises three separate departments: the academical—which claims to afford the largest facilities for liberal culture in both letters and science—the department of law, and that of medicine. The academical department includes in its curriculum four elective courses of study, viz: classical, philosophical, scientific, and civil engineering. Provision is also made for irregular and special students. Both sexes are admitted. The number of students during 1874–'75 was: in collegiate classes, 146; in subfreshman classes, 187; pupils not in regular course, 90; in the law department, 106; in the medical department, 94; counted twice, 3; total, 620. These figures show an increase of 50 in all departments over the number of students for the previous year.—(Catalogue of university, 1874–'75.)

DENOMINATIONAL AND OTHER COLLEGES.

Information through catalogues or circulars has been received from colleges and universities in the State as follows:

Central University, Pella, (Baptist,) embraces collegiate, theological, classical academic, English academic, and music departments. Both sexes are admitted.—(Catalogue, 1875.)

Cornell College, Mt. Vernon, (Methodist Episcopal,) admits both sexes. The departments are preparatory, normal, and collegiate, the latter embracing classical and scientific courses. Special attention is given to physical training. There is a professorship of military science filled by a graduate of West Point, and all the young men, except those excused for special reasons, are required to drill. A gymnasium has been provided for the ladies, who are required to take regular exercise under the care of the teacher of physical training. Superior facilities are afforded for the study of vocal and instrumental music.—(College catalogue, 1874–'75.)

Humboldt College, Humboldt, (non-sectarian,) was organized in 1869 "for the education of youth in literature, science, and enlightened Christian morality, without regard to sex, race, or religious sect." The college edifice is a beautiful one, built of marble, at a cost of over $40,000. The courses of instruction are preparatory, partial, and English. —(Catalogue, 1874–'75)

Iowa College, Grinnell, (Congregational,) embraces the regular collegiate course of four years, with classical and scientific departments, a ladies' course of three, a preparatory of two years, and a normal and English department.—(College catalogue, 1873–'74.)

Oskaloosa College, Oskaloosa, (Christian,) affords classical, preparatory, ladies', special, and commercial courses, with Bible and normal departments. Both sexes are admitted. —(College catalogue, 1875–'76.)

Parsons College, Fairfield, (Presbyterian,) for both sexes, is recently organized, with collegiate and preparatory departments. The buildings are ample to accommodate several hundred students.—(College circular, July, 1875.)

Penn College, Oskaloosa, (Friends,) was opened in 1873; admits all, without regard to sex or religious denomination. There are collegiate, preparatory, and commercial departments, and a normal course.—(Prospectus, 1873–'74.)

Simpson Centenary College, Indianola, (Methodist Episcopal,) embraces the usual collegiate and preparatory departments, with a special course for those who desire it,

and a law department, just organized. Both sexes are admitted.—(College catalogue, 1874-'75.)

Tabor College, Tabor, (Congregational,) is open to both sexes; has both collegiate and preparatory departments, with classical and scientific courses; also a teachers' department with a two years' course of study.—(College catalogue, 1873-'74.)

Upper Iowa University, Fayette, (Methodist Episcopal,) offers to both sexes a course of study divided into eight departments, as follows: (1) literature and science, (2) preparatory, (3) grammar school, (4) commercial, (5) telegraphy, (6) music, (7) fine arts, and (8) Sunday school normal.—(Catalogue, 1874-'75, and circular, 1875.)

Whittier College, Salem, (Friends,) was organized in 1868, is for both sexes, and embraces, in addition to the collegiate, normal and commercial departments.—(Catalogue, 1874-'75.)

Western College, Western, (United Brethren,) embraces in its collegiate department classical, scientific, and ladies' courses. There are also preparatory and commercial departments, and instruction is given in music, drawing, and German.—(College catalogue, 1875.)

Special reports to the United States Bureau of Education give statistics of the following additional colleges:

German College, Mt. Pleasant, (Methodist Episcopal,) for both sexes, seems to be mostly devoted to preparatory studies, having but two students in college classes.

Algona College, Algona, (Methodist Episcopal,) organized in 1870.

Norwegian Luther College, (Lutheran,) for young men only.

Iowa Wesleyan University, Mt. Pleasant, (Methodist,) for both sexes.

The principal points in the returns from these may be found in the appended table; the full returns, in Table IX.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

State Agricultural College, Ames.—Here is provided a thorough system of scientific and industrial education for both sexes, with courses of study in agriculture, horticulture, and forestry; stock-raising; mechanical, civil, and mining engineering; military tactics; and general science and literature. Manual labor is a prominent and

popular feature, each student being required to spend at least two hours a day in manual labor, either in the college building or on the farm.—(Report of National Commissioner of Education, 1874.)

THEOLOGY.

Theological instruction is given in departments of Iowa Wesleyan University, Central University, Oskaloosa College, the German Presbyterian Theological School of the Northwest, and in the Swedish Lutheran Mission Institute.

LAW.

Law departments exist in the Iowa State University, Iowa Wesleyan, and Simpson Centenary College. The latter was organized in 1875, and is styled the Iowa College of Law.

MEDICINE.

Medical instruction is given in the medical department of the Iowa State University and of the Iowa Wesleyan University; also in the College of Physicians and Surgeons.

SPECIAL INSTRUCTION.

IOWA COLLEGE FOR THE BLIND, VINTON.

It is now nearly a quarter of a century since, through the labors of Samuel Bacon, the legislature of the State was induced to provide for the establishment of this institution. From that time the school has steadily advanced, but in no period has had a more marked prosperity than during the past two years. A larger number of pupils is reported for the two years 1874 and 1875 than has been present at any previous time; and the completion of the north wing has so increased the capacity of the build-

ing that when the rooms are properly furnished there will, perhaps, be sufficient accommodation for all the blind youth in the State capable of education, who may present themselves during the next two years. But the records of the institution show that there are not less than 600 partially or totally blind in Iowa. The attendance during 1874 and 1875 was 128 against 112 during the previous two years.

The literary department embraces all branches necessary to an English education, including the higher mathematics, English and American history and literature, mental and moral philosophy, rhetoric, logic, geology, chemistry, and botany. Music is made a special feature, and, besides careful vocal training, instruction is given on the piano, organ, and violin.

The making of corn brooms is the principal trade taught, and it has advantages over every other form of handicraft taught to the blind. The manufacture of mattresses is carried on to a limited extent. In the industrial department for women, fancy bead and worsted work and knitting are successfully taught. These three branches are under the charge of three graduates of the college who are totally blind and who have proved themselves most efficient instructors.—(Twelfth biennial report of the college, 1874–'75.)

INSTITUTION FOR THE EDUCATION OF THE DEAF AND DUMB, COUNCIL BLUFFS.

The increase in attendance at this institution averaged fully 20 each year during the past three years. The aggregate attendance during the two years 1874 and 1875 was 183, of whom 95 were males and 88 females. The advancement of the pupils in their various studies has been, on the whole, satisfactory.

The records of the institution show a marked increase, of late, in the number of pupils whose deafness has been caused by accident or disease; the most marked increase being of those in whom it resulted from diseases affecting the nervous system, especially from cerebro-spinal meningitis. This rapid increase of induced deafness has an important bearing on the question of teaching articulation, in order to preserve the faculty of speech where it exists.

The course of instruction embraces the elementary English branches, special attention being given to written language.

An industrial department has been organized, including dress-making, cabinet-work, and shoemaking. School is held in the earlier part of the day, and the afternoon devoted to work, the apprentices being in the shop, the younger boys on the farm, and the girls engaged in sewing and domestic duties.—(Report of the institution for 1874–'75.)

SOLDIERS' ORPHANS' HOMES.

The two State Soldiers' Orphans' Homes, located at Davenport and Cedar Falls, report to the State superintendent for the year 1875 a total attendance of 410 pupils. The home at Davenport reports 4 instructors; the other reports only the attendance of pupils.—(Report of superintendent, 1875, p. 238.)

STATE REFORM SCHOOLS.

The State Reform School at Eldora reports an attendance of 146 pupils, with 3 instructors; that at Salem, 11 pupils and 2 instructors.—(Report of superintendent, 1875, p. 238.)

EDUCATIONAL CONVENTIONS.

STATE TEACHER'S ASSOCIATION.

After several ineffectual attempts to form an association of teachers in the State, a permanent organization was effected at Iowa City in June, 1856, under the name of the Iowa State Teachers' Association. Its officers are a president, five vice-presidents, a recording and a corresponding secretary, and treasurer, elected annually, and an executive committee of three, elected for three years, one member retiring each year; the president of the association being a member *ex officio* of the executive committee. Membership is secured by the payment of a fee of $1 and retained by the annual payment of the same sum. The association has held, since its organization, four semiannual and eighteen annual meetings.—(Report of superintendent of public instruction, 1875, pp. 127–129.)

IOWA STATE TEACHERS' ASSOCIATION AND SOUTHEASTERN ASSOCIATION OF PRINCIPALS AND SUPERINTENDENTS.

These associations met in joint convention December 28–30, 1875, at Burlington. The address of welcome by Mayor Bell was responded to by Superintendent Thompson, of Des Moines, president of the State Teachers' Association, on behalf of that body, and by Professor Eldridge, of Grandview, on behalf of the Superintendents and Principals' Association. Subsequently addresses were delivered by Professor Thompson, Rev. Dr. Wm. Slater, of Burlington, and others. Hon. Charles Beardsley responded to the sentiment "The educational interests of Iowa." Rev. J. C. W. Coxe responded

to "The teachers of the State the custodians of her most important interests." Professor M. Hummel, of Burlington, read a paper upon "Reading in the grammar schools," after which followed papers and discussions upon "Our boys," "Elementary education," "Care and culture of primary schools," "Responsibility of the school in the personal development and culture of its pupils," "Normal institutes," "Science in the common schools," and other topics. Professor W. F. Phelps, Winona, Minnesota, delivered an address upon "The American common school and American citizenship," for which he received the thanks of the association. A report was read by Deputy State Superintendent Stewart on the "Centennial school interests." A letter was read from State Superintendent Abernethy, who was to have presented the centennial report, stating his inability to be preesnt. Papers were read by Superintendent Jenkins, of Davis County, on "County superintendency;" on "Requisites for admission to the freshman class," by Professor Hugh Boyd, of Mt. Vernon; on the "Unification of our school system," by Dr. Thacher, of the State University. The latter paper was discussed by several gentlemen, and a committee was appointed to consider the subject. Among the resolutions passed was one consolidating the two associations.

The meeting was highly successful in most respects. It was quite exceptional in the fact that the persons invited to report upon topics designated by the executive committee and those to deliver addresses were present and prepared for the occasion, with but two or three exceptions. The weak point of the meeting, perhaps, was in the great number of addresses and papers presented and the small time afforded for discussion and exchange of views, a matter to be the more regretted as there were a manifest and unusual degree of interest and a readiness on the part of many to participate. —(Common School and Iowa Journal of Education, December, 1875, and January, 1876.)

COUNTY SUPERINTENDENTS' CONVENTIONS.

During the month of May, 1874, county superintendents' conventions were held at Charles City, Cedar Rapids, Fairfield, Des Moines, Council Bluffs, and Cherokee, the superintendent of public instruction attending and presiding at each. The meetings were in session two days at each place, and in the aggregate were attended by 82 of the 99 superintendents in the State. The principal topics discussed were normal institutes, examination of teachers, school inspection, teachers' associations, appeals, and annual reports.—(Report of superintendent, 1875, p. 105.)

KANSAS.

STATISTICAL SUMMARY.

SCHOOL POPULATION AND ATTENDANCE.

Number of males of school age, (5 to 21 years)	103,551
Increase for the year	1,679
Number of females of school age	96,435
Decrease for the year	703
Total number of both sexes	199,986
Increase for the year	976
Number of boys enrolled in public schools	73,078
Increase for the year	4,100
Number of girls enrolled	69,528
Increase for the year	2,908
Total number enrolled	142,606
Average daily attendance	85,580
Increase for the year	8,194

TEACHERS AND TEACHERS' PAY.

Number of male teachers employed	2,448
Increase for the year	88
Number of female teachers employed	2,935
Increase for the year	252
Total number employed	5,383
Increase for the year	340
Average monthly wages paid male teachers	$33 98
Decrease for the year	3 26
Average monthly wages paid female teachers	27 25
Decrease for the year	1 44

SCHOOL DISTRICTS AND SCHOOLS.

Number of school districts in the State	4,560
Increase for the year	165
Number of reports from district clerks	4,280
Increase for the year	99
Average length of school term in months	5.1
Decrease for the year	.4
Number of school-houses: Log, 239; frame, 2,096; brick, 269; stone, 511	3,715
Increase for the year	172
Value of school-houses	$4,096,527 00
Increase for the year	107,441 33
Value of apparatus	43,563 00
Increase for the year	2,865 94
Number of district schools having unabridged dictionaries	541
Number of district schools having record books	3,306
Number of schools graded and having a course of study	352
Number having a uniform series of text books	1,357
Number of schools owning the text books	33[illegible]

INCOME AND EXPENDITURE.

Receipts.

From State annual school fund	$264,683 30
Increase for the year	2,730 68
From district taxes	685,162 27
Decrease for the year	209,931 58

Expenditures.

Amount paid for teachers' wages	689,906 65
Decrease for the year	33,671 98
For repairs and incidentals	113,208 41
State annual school fund disbursed	264,683 30
Total disbursements from all sources for public schools	1,478,998 64
Decrease for the year	159,979 35

—(Report of Hon. John Frazer, State superintendent of public instruction, 1875, pp. 4 and 5.)

SCHOOL SYSTEM OF THE STATE.

CONSTITUTIONAL PROVISIONS.

The constitution of 1859, under which Kansas came into the Union, provided (article VI, section 2) that the legislature should "encourage the promotion of intellectual, moral, scientific, and agricultural improvement, by establishing a uniform system of common schools and schools of higher grade, embracing normal, preparatory, collegiate, and university departments." Provision was also made in the same article for the election of a chief school officer, the creation of a school fund, the formation of a board for the management of this, the severance of all State school funds from the control of any religious sect or sects, and the establishment of a State university.

PROVISIONS OF THE SCHOOL LAW.

From the School Laws of 1873 with amendments of 1874 and constitution of 1859.

OFFICERS.

The official agents of the State, in matters relating to the public schools, are a State board of education, a State superintendent of public instruction, county superintendents of the same, county examiners, district boards, and boards of education for cities, with a board of commissioners for the management of the permanent school and university funds.

POWERS AND DUTIES OF THESE OFFICERS.

The State board of education, created in 1873, is composed of the State superintendent of public instruction, the chancellor of the State university, the president of the State agricultural college, and the principals of the State normal schools at Emporia and Leavenworth. Its one duty is simply to issue State diplomas and State certificates of high qualification to such teachers as may be found, upon examination, deserving of them; the diplomas, however, only to those who have taught two years in the State; the certificates to be of force for three or five years, and each to be valid in any county, city, town, or school district in the State.

State superintendency.—This office, with a view to its removal from the danger of hasty legislation, was made, by the constitution of 1859, one of the regular executive offices of the State, and its incumbent, who should hold his place for two years, was charged with the general supervision of the common school funds and educational interests of the State. His duties, as defined by law, are to visit each county at least once in two years for the purpose of awakening an interest in the cause of education; to file and preserve in his office the official reports made to him by minor school officers; to recommend the most approved text books for the common schools; to prescribe and cause to be prepared and forwarded to county superintendents all forms and blanks necessary in the details of the common school system; to give his opinion, upon a written statement of the facts, on all questions arising out of diverse interpretations of the school laws in their relation to the powers, rights, and duties of school officers; to keep a record of such decisions, when made; to see to the publication and proper distribution of the school laws; to apportion the income of the State school fund and annual State taxes for the support of schools among the counties from which he shall have received reports,* and to certify such apportionment to the State treasurer. He is also to certify to the treasurer and county superintendent of each county the amount apportioned to the county, and to draw his order on the State treasurer, in favor of the county treasurer, for that amount. In each year he is to prepare, for submission to the legislature, a report bearing date on the last day of December, embodying: (1) A statement of the number of public and private schools in the State, with the number of scholars attending them, their sex, and the branches taught, as well as the number of normal schools, academies, and colleges, with the number of their students and such other matters from the reports sent into him as he may deem expedient; (2) a statement of the condition of the common school fund and other property held in trust by the State for the support of common schools; (3) estimates and accounts of the receipts and expenditures for the current year; and (4) a statement of plans for the management and improvement of common schools, and such other information relating to the educational interests of the State as he may deem important.

Copies of papers filed in his office may be certified by him, and when so certified may be accepted in evidence in like manner as the original papers.

County superintendency.—Superintendents of public instruction in each county, to be elected by the people for terms of two years, are provided for in the constitution of 1859, as well as a State superintendent. They have charge of the common school interests of their respective counties, and are bound to divide these into a convenient number of school districts, as well as alter the same when the interests of the inhabitants require it. They are also, on the third Monday in March and in July, or as soon there-

*This apportionment must be in proportion to the number of children of school age (5 to 21) in each county, and is made twice in the year.

after as circumstances will permit, to apportion to the several districts, in proportion to the number of children of school age, the amount appropriated to their counties from the State treasury, and to draw their orders on the county treasurer in favor of the district treasurers for the amount apportioned to each district, provided that a common school has been taught in it at least three months during the year. They are to visit each common school within their jurisdiction at least once a term, noting the course and method of instruction, with a view to securing uniformity in schools of the same grade; are to acquaint themselves, as far as practicable, with the character and condition of each school, and make, in private, to the teachers such suggestions as may seem necessary respecting government, classification, and methods of instruction; are to note, too, the condition of the school-houses and furniture, and make to the district boards such suggestions as may promote the comfort and progress of pupils; are to aid teachers in efforts to improve themselves in their profession, and to this end are to encourage the formation of teachers' associations for mutual improvement; are to attend the meetings of such associations, and give whatever advice and instruction may seem needed to increase their efficiency; are to deliver, each year, a lecture to the people of each district for the purpose of elevating the standard of education and increasing the people's interest in the schools; are to give fifteen days' notice, in at least five public places, of the formation and boundaries of new school districts, and, if there should be no appeal, give like notice of the time and place for the first district meeting; are to furnish the county clerk with a description of the boundaries of each school district on or before the first Monday in August of each year; and, on or before the 15th of October in each year, are to transmit to the State superintendent of instruction a report showing how many school districts or parts of districts are in their respective counties, how many children of school age are residents in each, distinguishing those of each sex, how many schools of every sort there are, distinguishing district schools, graded schools, private schools, academies, normal schools and colleges, and showing the number and sex of pupils attendant on them, the number and sex of teachers, and the courses of study in the lower schools. This report is also to embody a statement of the amount of public money received in each district or part of a district and how much went toward the support of graded schools; of the amount raised in each district by tax and paid for teachers' wages, in addition to the public money paid therefor; of the amount raised by tax or otherwise for purchasing school sites, for building, hiring, purchasing, furnishing, repairing, or insuring school-houses; with such other information as the State superintendent may require. Failure to render such report in due season makes the county superintendent liable for any loss sustained by the county through neglect of the duty thus imposed.*

County examiners.—The county superintendent and two competent persons appointed by the county commissioners constitute a county board of examiners, who, giving ten days' previous notice of time and place, publicly examine candidates proposing to teach in the county schools; and, if satisfied as to the competency of such candidates to teach and govern such schools, and of their being of good moral character, license them to teach by giving a certificate, the county superintendent keeping a register of all those to whom certificates are awarded stating the character and grade of the certificate and the time when issued. Such certificates are of force only in the county in which they may be issued and for one year from the date of issue, unless earlier revoked for cause.

District boards are composed of a director, clerk, and treasurer, who are elected by the people of the district for triennial terms, who take oath faithfully to perform their duties, and who, in case of refusal to accept office when elected or to perform the legal duties of it, forfeit $10 in each case. The duties of the board are to purchase or lease such a site for a school-house as may have been designated by the voters at a district meeting; to build, purchase, or hire such a school-house as these voters may have agreed upon, out of the funds provided for that purpose; to make sale and conveyance of any school property when directed to do so by the voters; and to carry into effect all lawful orders of the district. They have also the care of all school property belonging to the district and power to make regulations respecting the district library, to appoint a librarian, to admit scholars from adjoining districts, to engage on written contracts teachers for the schools, to dismiss such for incompetency or other sufficient cause, to provide the necessary appendages for the school-house during the time a school is taught therein, to suspend pupils guilty of immorality or persistent insubordination, to furnish each teacher with a suitable daily register, to establish graded schools when called for, and to visit the schools of their district once a term or oftener, examining the teacher's register and seeing that it is duly kept, as well as attending to all other matters relating to the condition and well-keeping of the school, including the requirement of a uniform series of text books and the providing of such books for indigent scholars at the expense of the district. Certain special duties are prescribed for each individual member of the board.

* The pay of county superintendents is graduated according to the number of children of school age within the county, and reaches from $3 per diem for actual duty to $1,500 per annum.

City boards of education have, for their cities, much the same powers with those of district boards, with the additional powers of acting as a board of examiners for teachers and of providing separate schools for white and colored children.

SCHOOLS.

The schools under this system are of all grades up to high schools, and are free to all children of the districts or cities where they exist from 5 to 21 years of age. The course of study in them has been published, and is admirably arranged and full. The branches taught are mentioned further on. The two State normal schools are also free to one pupil from each representative and senatorial district, and the State Agricultural College and State University are free to all properly prepared pupils resident in the State.

Nor are the public schools merely free to all pupils. All children from 8 to 14 years of age, not otherwise under instruction, or not excused by the proper authorities because of want of clothing or ill health of body or mind, must attend school for at least twelve weeks of each year, (six of such weeks to be consecutive,) unless it can be shown that they have already acquired the ordinary branches required by law or that there is no school taught within two miles by the nearest travelled road.

SCHOOL FUND.

The available permanent school fund of the State amounts to about $1,163,000, with resources for increase which will probably make it $3,000,000. In addition to the income from this fund there is for the support of schools, besides the local taxes, an annual State tax of 1 mill upon the dollar of all taxable property.

ELEMENTARY INSTRUCTION.

EDUCATIONAL PROGRESS.

During the year which has just closed, and especially during the early part of the year, it was feared by even the most sanguine friends of the public school system of the State that, in consequence of the calamitous destruction of crops, the people in many districts would be compelled to close their schools, and that the school reports for the year would, in diminished figures, tell a sad, but fitting sequel to the story of lost crops and prostrate industries. These fears were not realized. Instead of retrograding, the educational interests of the State during the past year have decidedly advanced, especially in elements most vitally affecting the usefulness of the common schools.

Although the school population of the State has remained nearly stationary during the past two years, having increased only by 976, the report for 1875, as compared with that for 1874, shows an increase of 7,008 in the number of pupils enrolled in the common schools; an increase of 8,196 in the average daily attendance; of 340 in the number of the teachers, of 172 in number of school-houses; of $2,865.96 in value of school apparatus; of 107,441.33 in the value of school buildings, notwithstanding the great shrinkage that has taken place in the value of real estate; with a decrease of $159,979.35 in the amount disbursed during the year for common school purposes; also a slight decrease in the pay of teachers and in the average length of school term. In other words, the people slightly cut down the length of the school term and the amount of their expenditures for school purposes for the year to suit their diminished resources, but sent their children to school in greater numbers and kept them there in more regular daily attendance than in any previous year.—(Report of State superintendent, 1875, pp. 2, 3.)

REPORTS OF COUNTY SUPERINTENDENTS.

Of the 76 counties in the State, 71 have forwarded to the State superintendent the annual reports required by law. These reports are, in several respects, an improvement on those of former years. For fulness, correctness, and neatness of reports, and for the success with which they have managed to get fuller and more correct reports than usual from their respective district clerks, three county superintendents—two of whom, by the way, are ladies—receive honorable mention in the superintendent's report.—(Report, p. 8.)

BRANCHES TAUGHT.

In all the common schools of the State, instruction is given in reading, writing, orthography, English grammar, and arithmetic. In many of the better class, instruction is also given in some or all of the following branches, viz: United States history, physiology, natural philosophy, botany, algebra, geometry, drawing, vocal music, and the elements of book-keeping.—(Report, p. 8.)

METHODS OF INSTRUCTION AND DISCIPLINE.

In June, last year, blank forms containing questions in reference to the methods of instruction and discipline pursued in the schools were sent to teachers of common

schools throughout the State, and from the answers received the following valuable information has been obtained:

Grades of teachers.—Of the 5,383 teachers employed in the public schools of the State, 24 per cent. hold the first grade certificate, 46 the second, and 30 the third grade. Of those reporting, 52 per cent. hold the first grade, 39 the second, and only 9 per cent. the third. Of the teachers reporting, 57 per cent. are men, 43 per cent. women.

Percentage of excellence attained.—Estimating the reports that give evidences of the best methods of instruction or management at 100 per cent. and those that give evidence of almost total ignorance at zero, the following averages are arrived at: discipline, 79 per cent.; general management, 74; reading, 69; writing, 73; book-keeping, 53; geography, 74; composition, 45; grammar, 69; average of all branches, 62 per cent.

Course of study.—A prescribed course of study is followed by 53 per cent. of those reporting. According to this course, 21 per cent. of the schools teach history, with an average of 6 pupils in each class; 8 per cent. teach natural philosophy, and average 3 pupils each; 8 per cent. teach physiology, and average 7; 9 per cent. teach algebra, and average 4; 13 per cent. teach physical geography, averaging 6; while 41 per cent. teach none of the above branches.

Reasons for failure.—Of the teachers, 25 per cent. complain that they are unable to be thorough, because parents are too anxious that their children go through text books rapidly; while 75 per cent. experience no difficulty in this direction; 56 per cent. complain of irregular attendance; 9 per cent., that parents interfere with their authority. In the whole number, 15 per cent. sometimes inflict painful punishment; 54 per cent. seldom do this, and 31 per cent. never; 58 per cent. are satisfied with their method of discipline and 42 per cent. are not.

Classes.—In 16 per cent. of the schools there is an average of 10 classes or less; 68 per cent. of them average between 10 and 20 and 16 per cent. between 20 and 30 classes. The reason given by 54 per cent. for the existence of so many classes is diversity of text books; that given by 46 per cent. is diversity of the grade of pupils.

Methods and results.—In teaching spelling, 36 per cent. use the oral method, 5 per cent. the written method, while 59 per cent. use both. Of these teachers 67 per cent. express themselves as satisfied with their methods of teaching this study and 33 per cent. are not satisfied with either their methods or results. About 53 per cent. are satisfied with their method of teaching reading and 47 per cent. are not. In the teaching of writing, 53 per cent. are satisfied with their method and results and 47 per cent. are not. In arithmetic, 62 per cent. are satisfied and 38 per cent. are not; 7 per cent. usually fail to interest their pupils in this study, while 41 per cent. never fail, and 52 per cent. seldom fail to do so. Geography is taught by 66 per cent. orally, before using a text book. Map drawing is taught by 66 per cent. usually; by 22 per cent. sometimes, and by 12 per cent. never; 55 per cent. are satisfied with their method of teaching this study and 45 per cent. are not; 17 per cent. fail to interest their pupils in it, while 83 per cent. seldom fail in this respect.—(Report, 1875, pp. 105–115.)

County teachers' institutes and associations were as regularly held and as largely attended throughout the State, notwithstanding the hard times, as in any former year.

NEEDED IMPROVEMENTS IN THE SCHOOL ECONOMY.

The State superintendent recommends several changes which he thinks ought to be made in the school law, among which are: (1) The adoption of a provision for the purchase of text books by each school district, a plan which would result, it is estimated, in a saving of about $75,000 a year, the economy resulting from the purchase of books at wholesale instead of retail prices. In 338 districts of the State the text books are owned by the district, and the plan works acceptably where it has been fairly tried. (2) That the list of studies required to be taught by law be increased by the addition of geography, United States history, elements of natural science, book-keeping, elements of industrial drawing, and such other branches as may be determined by the district board. Geography was formerly a required study, but by act of 1874 it was dropped, it is thought, inadvertently. Some knowledge of United States history is essential to good citizenship, and it is, therefore, a part of a good common education. Many of the applications of the sciences so intimately and widely affect everyday life that a knowledge of their principles is rapidly receiving recognition as a part of a good common education. Industrial drawing is regarded as so important to the industries of the State that it should be taught in the common schools. The time required for the added branches, it is suggested, can be found by restraining, within proper limits, arithmetic, English grammar, and geography.—(Report, pp. 14–17.)

CITY SCHOOL SYSTEMS.

CITY OF LAWRENCE.

Officers.—A board of education, composed of 2 members from each ward of the city, one-half retiring each year, and a superintendent, W. H. Cole.

Statistics.—Population of school age: white, 1,724; colored, 464; total, 2,188. Whole

number enrolled: white, 1,341; colored, 245; total, 1,586. Percentage of enrolment on population, 72. Number of buildings occupied by the schools, 11; number of rooms, 27. Number of teachers employed: regular, 27; special, German, 1; total number of teachers, 28. Number of sittings, 1,352. The superintendent says that during the months when the attendance is the largest these sittings will not accommodate all the children in some of the schools at the same time, which compels half day sessions in the lowest grades. This may work well with the younger children, but the older ones could be profitably employed all day in school.

Promotions.—The basis for promotion to higher classes has been made during the past year, not on the result of a single examination, but upon the combined averages of the daily recitations, the monthly examinations, and the semiannual or annual examination.

Book-keeping has not hitherto been taught in the public schools, but has now been incorporated in the revised course of study in two grades, the fourth and second. —(Report of city superintendent, W. H. Cole, for 1874–'75.)

ATCHISON.

Officers.—A board of education, consisting of 2 members from each ward, 1 of them elected annually and holding office two years, with a city superintendent.

Statistics.—Population, 10,927; persons of school age, 3,001; enrolled in public schools, 1,428; in private and parochial, 325; average daily attendance, not given. Teachers employed, 9 primary, 6 grammar school, and 3 high. Wages of these: in primary schools, $40 to $60; in grammar schools, $50 to $75; in high schools, $60. Salary of superintendent, $1,500. The school property is put down at $78,260; the income for schools, at $18,280.76; the expenditure on them, at $18,275.83.

No sectarian doctrine may be taught or inculcated in the schools of the city, but the Holy Scriptures, without note or comment, may be used therein.—(Return to Bureau of Education, 1875.)

LEAVENWORTH.

The superintendent of Leavenworth County says of the schools of Leavenworth City: "The schools are under the very efficient management of Superintendent P. J. Williams, assisted by a corps of 40 teachers. An attempt to describe this splendid system of schools would be useless. Beginning at the *tenth grade*, they number upward like the steps of a ladder, until the culminating point is reached, which is the Leavenworth High School, the only one in the State that can be so called. It contains over one hundred and thirty pupils, with a full corps of teachers, and is in every particular a high school. The students of this school are thoroughly prepared to enter any of the eastern colleges and universities. Several of the graduates have entered Harvard University, and are now attending that institution.—(State report for 1875, p. 74.)

TRAINING OF TEACHERS.

EMPORIA NORMAL SCHOOL.

This school has shown, by an increased attendance, the influence of the return of agricultural prosperity to the State. The whole number of students during the year was 302. The steady increase in numbers marks a healthful growth in the school. At the same time with each term there has been a corresponding progress in the professional work of the school. The course of study, as rearranged, called for increased instruction in what may be denominated especially professional studies. At present the candidates for graduation in the elementary course are required to complete in the senior year the study of school economy, of methods of instruction, and of methods of culture, together with the school laws of the State. During two terms they observe in the training school, and for three terms teach, for one division per day, such classes as may be assigned them. This work is under the careful supervision of a critic teacher, and is subject to thorough revision and correction. Candidates for graduation in the normal course pursue, in addition to other studies, the history and philosophy of education, and observe one term and practise two terms in either the training school or the preparatory department of the normal. The result of this professional drill has been very satisfactory.—(Report, 1875, pp. 195–200.)

LEAVENWORTH NORMAL SCHOOL.

The enrolment of pupils during the year in the normal school was 420; in the training schools, 836. The average attendance of normal pupils was about 250. Thirty-three counties of the State were represented by the students. Having had an increased number of teachers during the year, it has been possible to carry out the plan of the school more completely than before, but still more teachers are needed. The graduating class for 1875, consisting of 12—8 ladies and 4 gentlemen—are all teaching, most of them having secured remunerative positions before graduation.

This school aims to supply the wants only of the district schools of the State. The

faculty have left Greek and Latin out of their course of instruction, and direct attention to the English studies only, and the modes of teaching these. An eight weeks' normal course has been incorporated into the curriculum, which is proving of great assistance to district school teachers.—(Report, 1875, pp. 203–209.)

CONCORDIA NORMAL SCHOOL.

The necessity for the establishment of this school in the northwestern portion of the State is evident from the patronage it receives. There were enrolled during the year 171 normal students, (90 gentlemen and 81 ladies,) and in the model and training department there were 83. The average age of pupils in the normal department is 19 years. All have pledged themselves to become teachers in the State. The building, a fine stone structure, has recently been enlarged, and has undergone extensive improvements. It is now of sufficient capacity to accommodate 300 students.—(Report, 1875, pp. 210–216.)

TEACHERS' INSTITUTES.

During the year the superintendent held judicial district institutes at fifteen different places throughout the State, in all of which he received the hearty co-operation of county superintendents, and also of members of the legal profession, who conducted exercises in State constitution and in elements of commercial law.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

From Table X, p. 50, of the report of the superintendent, it appears that 11 towns and cities of the State have in them one or more public high schools and that the number of pupils in attendance is 513. No further statistics in respect to these schools are given. This number of pupils, however, being trained under an admirable course of instruction, such as here exists—sketched in the report of this Office for 1874—would indicate that a fair degree of preparation for higher studies is being made.

PREPARATORY SCHOOLS OF COLLEGES.

In these were reported for 1875 a total of 279 students: Males, 151; females, 128. Of that number 5 were preparing for a classical course in college and 84 for a scientific course.—(Returns to Bureau of Education.)

OTHER SECONDARY SCHOOLS.

One school for girls and 1 for boys and girls report respectively 17 teachers and 76 pupils in the former case, and 2 teachers with 17 pupils in the latter. The former, which includes 6 Osage children, teaches grammar, arithmetic, algebra, book-keeping, philosophy, history, chemistry, astronomy, botany, logic, and rhetoric, in its English course; has 50 students in its classical course and 8 in modern languages. The latter reports 16 in its English course, without specifying studies; 3 in its classical course, and 2 in modern languages. In the former, drawing and painting are taught and in both vocal and instrumental music. The latter reports both a chemical laboratory and chemical apparatus, with a library of 100 volumes; the former "a small apparatus," but no laboratory or library.—(Returns to Bureau of Education, 1875.)

BUSINESS COLLEGES.

Two of these institutions, 1 at Leavenworth and 1 at Topeka, report, the former 3 instructors and 126 pupils; the latter, 1 instructor and 70 pupils. Book-keeping, commercial law, arithmetic, penmanship, phonography, and telegraphy are in the course of study.—(Returns to Bureau of Education, 1875.)

SUPERIOR INSTRUCTION.

UNIVERSITY OF KANSAS.

The action of the legislature in a time of great financial depression so reduced the allowance for salaries of instructors that it was feared the school could not be kept open during the year, but the faculty met the emergency by accepting for the time being lower salaries and an increase of labor; the number of students was greater instead of less than in previous years; a fine class of 7 was graduated in the summer of 1875; and at the meeting of the regents in November they found a list of 207 students' names, representing some 40 counties of the State and 5 other States, a faculty overworked but resolute, and a growing popular interest in the university.

There are now fully organized six courses of study, viz: classical, general scientific, modern literature, civil and topographical engineering, a special course in natural history, and a special course in chemistry. An opportunity for selection from a wide range of studies is given in the several courses of instruction, and yet these courses are so

adjusted to each other as to economize to the best possible advantage the professional teaching. Many of the students are pursuing special studies. Natural history, chemistry, English literature, and civil engineering are eagerly sought by the mass of students. Many students, from want of time or means, pursue a partial course of study. While graduates are desirable and the regular course of study to be preferred, it is considered that the richest benefactions the university can confer may come from aiding those who cannot complete in school any prescribed course of study.—(Report of superintendent, 1875, pp. 127–135.)

DENOMINATIONAL COLLEGES.

Baker University, Baldwin City, (Methodist Episcopal,) has a preparatory department, with a college of liberal arts beyond it, in which are both classical and scientific courses, and into which both male and female students are admitted. Library, 200 volumes, with 60 additional ones in a society library.

College of the Sisters of Bethany, Topeka, (Protestant Episcopal,) designed for the higher education of women, has both primary and preparatory departments as feeders for its college classes.

Ottawa University, Ottawa, (Baptist,) has arrangements for both preparatory and collegiate departments; but only the former appears to be yet in active operation.

St. Benedict's College, Atchison, (Roman Catholic,) presented as a preparatory school in the report for 1874, now has its collegiate course arranged and 50 students in it. The course is framed on the southern European method, with a different nomenclature for the classes from that which is common in America.

St. Mary's College, St. Mary's, (Roman Catholic,) reports only a collegiate department with a three years' course, and this still new, with only the beginnings of advantages which it is hoped may be eventually possessed.

Washburn College, Topeka, (Congregational,) is under the general auspices of the Congregational churches of the State, but opens its doors to all without distinction of race, color, or religion. It has an English and business course, a college preparatory, and a collegiate. Its location is a choice one, on an elevation a mile and a half southwest of the State house, overlooking the city, its grounds of 40 acres enclosed with an Osage orange hedge, and planted with nearly a thousand forest trees. A new building costing $60,000 has been recently erected for it.—(Circulars and returns to Bureau of Education, 1875.)

SCIENTIFIC AND AGRICULTURAL.

KANSAS AGRICULTURAL COLLEGE.

The enrolment of students during the year 1875 was 237, a gain of 30 over that of the year 1874. Of these, 154 were young men and 83, or 35 per cent., young women.

The course of instruction, though aiming to be distinctively "industrial," embraces those literary and scientific branches usually pursued in agricultural colleges, as political economy, mathematics, chemistry and physics, French, German, botany, entomology, geology, and music. The industries taught are phonography, telegraphy, printing, dress-making, millinery, and various mechanical trades, such as carpentering, black-

smithing, wood-turning, iron-turning, cabinet-making, and scroll-sawing, besides the various branches of farming, including the cultivation of fruit and the care and breeding of stock. In the instruction of the class in practical agriculture, the discussion of all doubtful theories was avoided, and such topics taken up only as are recognized among practical men as "the best experience of the best farmers." In this department, a course of lectures in dairy practice was delivered to an advanced class of young ladies. In the department of chemistry and physics, a course of lectures in household chemistry was delivered to a class of 20 of the most advanced young ladies in the college. This first attempt at the introduction of such a series of lectures has resulted so profitably that it will be continued and extended as a regular feature of the course. These lectures embraced a consideration of the composition and properties of food; the manufacture of bread by a great variety of processes; cause and prevention of sour and heavy bread; the preservation and cooking of meats; the mineral elements of food, including the uses and importance of common salt; the composition and treatment of milk, butter, and cheese; the value of fish as food; the composition and uses of eggs as food; the composition, properties, and preparation of coffee, tea, and chocolate; the ripening and preservation of fruits and manufacture of jellies, together with a large number of other topics in which chemical principles are applied in the various practices of household economy.—(Report of superintendent of public instruction, pp. 150–191.)

Statistics of a school for scientific and professional instruction, 1875.

School for professional instruction.	Corps of instruction.	Endowed professorships.	Number of students.	Number of years in course.	Property, income, &c.				Number of volumes in library.
					Value of grounds, buildings, and apparatus.	Amount of productive funds.	Income from productive funds.	Receipts for the last year from tuition fees.

SPECIAL INSTRUCTION.

KANSAS INSTITUTION FOR INSTRUCTION OF THE BLIND, WYANDOTTE.

Officers: A superintendent, matron, 3 teachers, (including 1 teacher of music,) a master of handicraft, and a physician. Pupils in attendance at the close of November, 1875, 39. Receipts for the fiscal year ending at the same time, $8,988.54; expenditures, the same.

Pupils received instruction during 1875 in reading in New York point and Boston type, writing in New York point, writing with grooved cards, spelling, geography, grammar, arithmetic, algebra, United States history, modern history, ancient history, botany, rhetoric, natural philosophy, and vocal and instrumental music.

The boys are also taught broom-making, in which industry such progress has been made that they now turn out 40 dozen finished brooms per month, in place of the 8 dozen of the preceding year. The girls receive instruction in knitting, plain sewing, bead and fancy work, and make, it is said, daily progress in these branches.—(Report for 1875.)

EDUCATIONAL ASSOCIATIONS.

STATE TEACHERS' ASSOCIATION.

This purely voluntary organization of teachers and other friends of education held its thirteenth annual meeting at Topeka on the 24th, 25th, and 26th of August, 1875. Important and practical questions relating to the improvement of the common school system were discussed at this meeting with an ability and earnestness creditable to the association and the State.—(Report of superintendent public instruction, 1875, p. 10.)

Of an address by President Anderson, of the State Agricultural College, the American Journal of Education for October says: "It rather startled the people of the State and country by the facts presented." Dr. Anderson gave at the meeting a detailed statement of the investment and expenditure of $17,820,182.60 for school purposes in Kansas within the last ten years, and from the magnitude of this expenditure, wrung as often from the hands of toiling poverty as from the stores of accumulated wealth, argued for the most faithful use of the means thus furnished, for the employ-

ment of the best officers and teachers that can be had, for the furnishing of the most practical and useful training possible to pupils, and for such conscientious effort to make the most of the whole fund for the purposes for which it was designed as may be reasonably expected from the holders of a sacred trust.

LIST OF SCHOOL OFFICIALS IN KANSAS.

Hon. JOHN FRAZER, *State superintendent of public instruction, Topeka.*

COUNTY SUPERINTENDENTS, *for two years from second Monday in January.*

County.	Superintendent.	Post-office.
Allen	J. E. Bryan	Humboldt.
Anderson	L. H. Osborn	Garnett.
Atchison	J. E. Remsburg	Atchison.
Barbour	S. B. Douglas	Sun City.
Barton	H. A. Brundige	Great Bend.
Bourbon	Joseph H. Lawhead	Fort Scott.
Brown	R. C. Chase	Hiawatha.
Butler	John Blevins	El Dorado.
Chase	F. B. Hunt	Cottonwood Falls.
Cherokee	H. W. Sandusky	Sherman City.
Clay	J. S. Dodson	Clay Centre.
Cloud	Samuel Doran	Concordia.
Coffey	Miss M. P. Wright	Burlington.
Cowley	Thomas A. Wilkinson	Winfield.
Crawford	A. J. Georgia	Girard.
Davis	J. A. Truex	Junction City.
Dickinson	A. M. Crary	Abilene.
Doniphan	D. D. Rose	Troy.
Douglas	D. Shuck	Lecompton.
Edwards	W. C. Knight	Kinsley.
Ellis	De Witt C. Smith	Hays City.
Ellsworth	John Connor	Ellsworth.
Ford	Thomas L. McCarty	Dodge City.
Franklin	A. C. Peck	Ottawa.
Greenwood	H. T. Johns	Eureka.
Harvey	F. L. Faatz	Newton.
Howard	J. N. Young	Paw Paw.
Jackson	T. W. Ramey	Holton.
Jefferson	Charles Smith	Perry.
Jewell	T. J. Patterson	Jewell Centre.
Johnson	Andrew Renwick	Olathe.
Labette	Mary A. Higbey	Oswego.

Wilson	W. B. Shirley	Fredonia.
Woodson	A. F. Palmer	Defiance.
Wyandotte	W. W. Dickinson	Wyandotte.

KENTUCKY.

STATISTICAL SUMMARY.

SCHOOL POPULATION AND ATTENDANCE.

Number of children reported in the census, (whites)	437,100
Highest number enrolled, (approximate)	228,000
Average number at school, (approximate)	159,000
Increase of enrolment on previous year	37,888
Increase of average attendance	47,397

TEACHERS AND TEACHERS' PAY.

Number of white teachers: Men, 4,020; women, 1,610	5,630
Number of colored teachers: Men, 216; women, 122	338
Average salary paid white teachers a month	$49 40

SCHOOL DISTRICTS AND SCHOOLS.

Number of districts for white schools	5,963
Number of districts for colored schools	494
Number of schools for white children taught	5,627
Number of schools for colored children taught	340
Average time schools for the whites were taught	5 months.

SCHOOL-HOUSES.

Number of school-houses for whites	4,739
Number of school-houses for colored	155
Number of districts without houses for colored	954
Value of school-houses for whites	$1,608,000
Value of school-houses for colored, (not including cities)	16,000
Number of houses built in 1875 for colored	33
Increase for the year of schools for whites	18

SCHOOLS' OTHER THAN PUBLIC.

Number of private schools in the State	70
Number of academies in the State	6
Number of colleges in the State	0
Approximate number attending colleges, academies, and private schools	40,00

INCOME AND EXPENDITURE.

Receipts.

From local tax for schools for white children	$426,500 00
From local tax for schools for colored children	3,141 50
Raised by other means for schools for whites	128,500 00
Raised by other means for schools for colored	9,855 00
Total raised by local enterprise for both	567,996 60
Apportioned by State to pay teachers for white schools	848,490 00
Apportioned by State to pay teachers for colored schools	21,660 00
Total receipts	1,438,146 60

Expenditures.

Salary of commissioners and other expenses of schools for whites	44,456 19
Cost of new school-houses built in 1875	111,406 00
State apportionment for pay of teachers	870,150 00
Local pay of teachers and incidental expenses	533,440 00
Total expenditures	1,559,452 19

—(Report of Hon. H. A. M. Henderson, State superintendent of public instruction, for school year ending June 30, 1875, p. 253.)

SCHOOL SYSTEM OF THE STATE.

CONSTITUTIONAL PROVISIONS.

The early constitutions of the State neglected to provide for education. That for 1850 made provision for the conservation and increase of the then existing common

school fund; for the distribution of the revenue from this, with any sum to be raised for that purpose by taxation or otherwise in aid of common schools, and for the election of a superintendent of public instruction, to hold office for four years.

PROVISIONS OF THE SCHOOL LAW.

From school laws of 1873, bound with the report of the State superintendent for 1874, and "An act to establish a uniform system of common schools for the colored children of this Commonwealth," approved February 23, 1874.

OFFICERS.

The official staff consists of a State board of education, a State superintendent of public instruction, county commissioners, county and State boards of examination, and district trustees.

POWERS AND DUTIES OF THESE OFFICERS.

The State board of education includes the State superintendent, the secretary of state, the attorney-general, and two professional teachers elected by them. These form a body politic and corporate, with power to take, hold, and dispose of real or personal estate for the benefit of the common schools of the State. The State superintendent is *ex officio* president, and he and the two professional teachers constitute a standing committee to prepare rules, by-laws, and regulations for the government of common schools, and, from time to time, determine and recommend a proper course of study* and select a suitable series of text books for the schools,† as well as recommend works suitable for district libraries, with such standard works and professional aids for teachers as they may deem proper.

The board have power to require reports from commissioners and trustees of common schools, and to organize and keep in existence a State teachers' association, with a State teachers' institute held annually at the same time and place for the instruction of members in attendance.

The State superintendent—term, four years; salary, $3,000, with an office at the seat of government and clerk—is to keep account of all orders drawn or countersigned by him on the auditor, of all returns of settlement, and of all changes in the office of county commissioner, which must be furnished to the auditor when required. He must annually, by October 15, make report of the condition, progress, and prospects of the common schools; the amount and condition of the school fund; the distribution of the revenue from it the previous year; the amount produced and expended for common school purposes from local taxation or other sources; the details and objects of such expenditure, and the practical workings of the common school system of the State; with an abstract of the reports of county commissioners and any suggestions that may be required as to alterations of the school system.

In this report he is to set forth the objects of the various eleemosynary institutions of the State, with the methods of admission to them, and, to aid him in this, may require from the superintendents of these institutions an annual report, to be made before the 1st of September.

He is to prepare suitable blanks for school reports, registers, certificates, notices, &c., and cause them to be transmitted to the proper officers and persons with the information and instruction needful for an understanding and right use of them; is to report to the proper county judge any habitual neglect of duty or misappropriation of school funds on the part of a school officer; and is to have published, for annual distribution, the general school laws of the State, with the decisions of the attorney-general on any doubtful points thereof; with information and instructions as to application of the law and management of schools under it and with plates, illustrations, and descriptions of appropriate school architecture, important periods of the school year, and such other facts as may be of interest.

Copies of records and papers in his office, certified by him, are evidence equally with the originals; and to insure the due preservation of such originals, &c., he is, on retirement from office, to turn over to his successor all books, papers, and effects belonging to his office, on pain of suffering a fine of $100 to $500 for failure to do so.

County commissioners.—In each county of the State the presiding judge and justices of the peace, meeting as a court of claims, elect every two years for the county a commissioner of common schools, who must be of moral character, of sufficient ability to manage the school interests efficiently, and of a good English education. He must give bond, with sufficient security, to be approved by the court, for the faithful performance of his duties. The maximum compensation allowed him for such performance is $100 from the distributable school fund due his county, 1 per cent. additional on the whole

* The instruction prescribed by the board—according to article 3, section 6, of the school law—shall embrace the elements of a plain education in English, including grammar, arithmetic, geography, and history; but the teaching of any other language or science shall not be prohibited.

† The adoption of these text books is discretionary with the school trustee of each district, but any series once adopted must be held for two school years.

amount thus due, $3 for each school district reported by him in the county, and $3 for each colored common school taught in it and visited by him.

The commissioner has power to lay off, alter, or abolish districts, and, if necessary, may lay off anew the districts throughout the county. He may also administer the oath of office to school trustees and teachers, and use his private seal in lieu of a corporate seal.

His duties are to visit, at least once a year, each district school in his county; to investigate and direct the operations of the common school system; to promote, by addresses or otherwise, the cause of common school education; to prepare and mail to the State superintendent, on or before the 1st day of June in each year, a sworn report of the number of children of school age in his county, (6–20 for whites, 6–16 for colored,) as well as of the number in each district; to prepare and transmit, on or before the 10th day of January, February, and May, and the 1st day of July, in each year, a like sworn report, showing the districts in which schools have been taught for a full session and those in which they have been taught for half a session; to pay the teachers in proportion to the amounts they are entitled to; to hold in trust any devise, gift, or donation in aid of the common schools of his county; to make settlements with the county judge in regard thereto, as in regard to moneys received from the school fund, and to forward a copy of all settlements, certified by the county clerk, to the superintendent. He is to attend in his office at the county seat on the first Saturday in January, February, May, and July, and at such other times as may be necessary, to receive the reports of district trustees and to transact the business required of him. He is also to be there on the first Friday in July to administer the oath of office to trustees; to make a record of the names, the districts, and the post-offices of those thus qualified; to deliver them the blanks needed for the current school year; and to give them such information respecting their duties as may be desired.

Before the 1st day of September in each year he must prepare and transmit to the State superintendent his official report for the year, showing the number of school districts in his county, the ones in which schools were taught and the length of time taught, as well as those in which no schools were taught; the highest, lowest, and average number of children at school; the cost of tuition for each child per session and per month; the number of private schools, academies, and colleges in the county, and the length of their sessions; the number of teachers—male, female, and total—in the common schools; the average wages of each class and of the whole; the amount raised for the schools by local tax or otherwise, and the disbursement of this; the number and kind of school-houses, and the value of each; the number built and value of each; the number of district libraries, volumes in each, and increase for the year; and the amount he has received for official compensation and expenses.

For failure to perform these duties he is liable to a fine of $50, and, for false returns in his report, to one of $200 to $500, with imprisonment for six months.

Boards of examiners.—The county commissioner in each county, with two competent and well-educated persons appointed by him, constitute a board of examiners for the county, and at stated times examine all persons proposing to teach in the common schools of the county, giving a certificate of qualification to such as stand the tests applied and show evidence of good moral character and capacity to teach and govern. The superintendent of public instruction and two professional educators appointed by him form a State board, who examine all teachers applying for State certificates, and certify such as they find qualified. The county certificates are of two classes, and are valid in the county where given for two to four years. The State certificates are valid for five years throughout the State, entitling the holder to teach in the first grades of common schools without a county examination.

Trustees of school districts.—In each school district there is annually elected for the white schools a trustee,* who has charge and oversight of all matters relating to the common schools in it, such as the securing and holding of property for them, the erection and renewal of school-houses, the supplying them with furniture, the engagement of teachers, the levying of district taxes, and collecting contributions for their support; the visitation of the schools each month; the taking of a census of children of school age, and the making annual report to the county commissioner.

SCHOOLS AND SCHOOL TERMS.

The schools for white and colored children are separate, and separate provision is made for their support, that for the latter class being derived from taxation of the colored people only. The school term is from three to five months, of twenty-two school days in each. An agricultural college and State university supplement the State system.

SCHOOL FUNDS.

The permanent school fund, the interest of which goes to aid the common schools throughout the State, amounts to about $1,327,000, with 755 shares of Bank of Kentucky stock.

The annual school revenue is about $1,000,000, derived from the interest and dividends on these, from fines and forfeitures, and from a State tax of 20 cents on $100.

* For each colored school district three colored trustees are appointed by the county commissioner.

ELEMENTARY INSTRUCTION.

STATISTICAL SUMMARY.

The summary of statistics given, being prepared from a mass of imperfect statistics, Dr. Henderson says, only approximates correctness. He believes, however, that a perfect showing would exhibit more satisfactory results than does this. He thinks that there is a gratifying progress. The result with regard to local taxation has surpassed his most sanguine hopes. Commissioners complain that a majority of the districts voted down the tax; that the people are against the principle recommending a return to the "rate." But looking at the theatre of action from his more commanding position, the superintendent regards the returns as indicative of substantial victory. An average of two districts to a county voting for the tax the first year would have fully met his expectations. The facts prove that the public school system is not going backward, but forward, and that all the education being obtained by eight-ninths of the children of the Commonwealth is through the agency of its common schools.—(Report of superintendent, p. 252.)

SIGNS OF ADVANCE.

During the year 1875 the schools were taught by better teachers; the institutes, in most cases, were successful; a considerable number of new school-houses was built; a larger proportion of the children reported in the census were in attendance: about 800 districts voted the local tax for the year ending June 30, 1876, against 400 voting it for 1875; and graded schools were successfully established in several of the larger towns. Many of the representative public men of the State, upon the invitation of the teachers, addressed the institutes and the community in which they were held, awakening an interest which prophesies a healthier sentiment concerning popular education. The press, metropolitan and country, has greatly aided by judicious editorials, by the publication of the proceedings of the teachers' institutes, and by accounts of the official visitations of the commissioners to the district schools. The superintendent has delivered more than one hundred addresses upon education to large audiences, and has been listened to with a decorous attention which has made him feel that there is in the hearts of the people a lively concern for the betterment of citizenship through the agency of education. Professors in colleges, principals of seminaries and academies, and teachers in private schools have aided in the conduct of institutes, and many of them have spoken brave words in behalf of the common school system. The session of the State Teachers' Association at Glasgow was attended by three times as many teachers as ever convened before, and the exercises never for one moment flagged in interest. The general tone of the correspondence with the superintendent has been far more cheering than that of any previous year during his incumbency of the office.

Many of the wealthier citizens of the State have been among the foremost in advocating the taxation of property for the schooling of the children. Old prejudices are giving way, and even passion is quietly yielding to the pressure of the inevitable.

With all these causes for encouragement, progress must necessarily be slow. Delay in the development of the system is unavoidable. The most admirable systems of other States cannot be adjusted to the varied geographical peculiarities of Kentucky and to large districts of sparse and scattered population. A distinct problem is to be worked out here, and many of its details are very perplexing to statesmanship.—(Report, pp. 5–8.)

SCHOOLS FOR COLORED CHILDREN.

After one year of experiment, the results have fully justified the wisdom of the establishment of these schools. In many localities the colored people have received aid by voluntary subscriptions from the whites, the wisdom of farmers suggesting that, schools being at hand, labor is rendered more permanent and reliable. In many other districts the colored people themselves have rallied around the nucleus supplied by the law, and so supplemented the public fund by tuition fees as to secure most efficient schools. About 600 of these schools have been taught during the year, and about 18,000 colored children have enjoyed their advantages. The superintendent learns, from numerous sources, that the schools are starting off in the year 1875–'76 with increased interest. It may be safely said that the experiment of the first year has far surpassed in results those accomplished for the first few years succeeding the inauguration of the system of public schools for whites.

In consideration of the inability of the colored people to sustain their own schools, the superintendent suggests that the Federal Congress would do well to appropriate from the proceeds of the sales of public lands a sufficient sum annually to each of the States containing a large colored population for the education of the children of those whom it has freed. In anticipation of such a measure, the legislature has dedicated such a fund to this purpose.—(Report of superintendent, pp. 105–107.)

VISITS OF PARENTS.

Frequent visits of parents to the schools will result in great encouragement to the teacher and practical benefit to the pupils. Such a course promotes studious-

ness, punctuality, confidence, and good behavior. It excites the ambition of the teacher and his scholars. It convinces the child that there is an interest in his educational advancement at home and puts him upon his best efforts to gratify parental pride. Moreover, in the presence of others besides the instructor and his companions, children learn to overcome timidity and acquire ease of manners and freedom of expression, both essential to success when they front life upon the field of its trials and triumphs.—(State report, p. 16.)

ABSENTEEISM.

This forms one of the greatest obstacles in the way of educational progress. Many of the pupils enrolled are absent from one to three days in every week, and then the parents of such children complain that their children are learning nothing, and the fault is laid at the door of the teacher or of the school system. There is no adequate reason to justify such absenteeism, for the larger proportion of these absentees are too young to be of use at home. Many school officers and teachers, witnessing the evil results of irregular attendance and of non-attendance, have advised and advocated absolute compulsion by law. "It is," says the superintendent, "a problem worthy of the most patient and exhaustive attention of statesmanship, whether any measures not repugnant to republican institutions can be devised for the rescue of truant, vagrant, and neglected children, and for the protection of society from illiteracy and unrestrained passions and debauching habits, productive of bribery, demagoguery, and crime. Even in the city of Louisville, where there is established a system of schools so magnificent as to rival eastern cities, it is believed that there are at least 15,000 children of pupil age, or one-third of the school population, who are not in attendance upon either the public or private schools. Probably a close scrutiny throughout the State would reveal the fact that the condition of affairs in this respect is still worse in the rural districts. It probably would be no exaggeration to allege that 150,000 of the children reported in the census are growing up in absolute ignorance of the elements of an English education. What becomes of this immense population of ignorance? They reach maturity to repeat the sad spectacle of bookless homes, of purchasable voters, of shiftless poverty, and unblushing crime. They entail additional burdens upon wealth in defraying the expenses of good government; they swell the census of prisons and alms-houses, and furnish the material with which demagogues debauch the franchises of citizenship. In a country where every man is a sovereign, it is appalling to reflect that now one-third of the entire voting population of Kentucky cannot read the ticket they vote."

Superintendent Henderson does not, however, advocate the plan of compulsory attendance by law as a remedy for the evils he points out. After an investigation of the results attained by those countries and States where such a law has prevailed, he concludes that Kentucky should devise other measures. A compulsory statute, he argues, even when strenuously enforced by all the pains and penalties that can be attached to it, cannot bring into the schools pauper children suffering from privation of food, clothing, and shelter, children without the care of parents and guardians, and who are shut up to a choice between working or stealing for a bare subsistence; and a considerable number of those growing up in ignorance belong to this class. A sentiment, too, pervades large districts that such a law is tyrannical, and this would render nugatory any attempts at its rigid enforcement. The primary move in this direction, he thinks, should be to secure comfortable school-houses and efficient teachers, that shall be magnets of influence to attract parental attention and draw patronage. The voluntary system might be re-enforced by the enactment of a judicious truant law, a well-considered law forbidding the employment of children in manufactories and mines and on farms without some provision for their elementary education. Every effort should be made to establish in the public mind the sentiment that ignorance is a vice and that those parents who encourage it by neglect of their children's education incur a fearful moral responsibility. Teachers should visit those families who fail to send their children, and urge upon them the proper motives to induce them to do so.—(Report of superintendent, pp. 12–15.)

KINDERGÄRTEN.

Two of these interesting schools, both in Louisville—one conducted by Mrs. M. W. Graham, the other by Miss Bertha Lauber, in connection with a German and English academy—make report, respectively, of 3 teachers and 18 children, and of 1 teacher with 30 to 40 children. In the former case, the children are admitted at from 4 to 9 years of age, and have sessions of 3 hours daily; in the latter, they are admitted at from 4 to 7 years, and the schools are in session 5 hours daily. Both use Fröbel's gifts and occupations.—(Returns to Bureau of Education, 1875.)

CITY SCHOOL SYSTEMS.

COVINGTON.

Officers.—The board of education consists of 5 members, including the city superintendent of schools.

Statistics.—There are employed in the system 5 principals, 52 teachers, and 5 jan-

itors. The classification of studies is excellent. There is a high school taught by a principal and 4 assistants, in which were enrolled 174 pupils, with an average of 143.7 belonging, the attendance being 95.7 per cent. The total enrolment in all the schools was 3,513; average number belonging, 2,523; per cent. of attendance, 93.8.

Funds.—The funds for the support of the school are derived from a tax of one mill upon the dollar, a capitation tax, and the apportionment annually received from the State, with such other sources as the city council shall designate.—(Report of Superintendent Henderson, 1875, p. 149.)

FRANKFORT.

Officers.—The Frankfort public school is managed by a board of 3 trustees, elected for terms of two years each by the qualified voters of the city. One of their number is chosen president and one secretary.

Statistics.—The school embraces 4 departments—primary, intermediate, grammar, and high—divided into 13 grades. It is supported by a tax of 25 cents on each $100 of taxable property in real estate, a tax which yields $5,500 annually; by $2,000 a year from the State apportionment; and by receipts of tuition from non-residents, amounting to $500 or $900. The enrolment is nearly 500; the average attendance, about 450. There are 12 assistant teachers, thoroughly trained. All are qualified to teach music, and the pupils above the seventh grade read it with ease through all the keys. Salaries of assistants, $350 to $800. Average cost per pupil, $20.—(Report of State superintendent, 1875, pp. 153, 154.)

HENDERSON.

Officers.—A school board and superintendent of city schools, M. Kirby.

Statistics.—Population, about 5,000; enrolled in public schools, 785: in primary department, 499; in intermediate, 225; in high, 61. Average number remaining each month, 637; average daily attendance, 587; percentage of attendance, 92. Number of teachers, exclusive of principal, 14; salaries of these, $400 to $800. Salary of principal of high school, $1,200; of the city superintendent, $2,000. Average cost per pupil $15.22.

Notes.—Henderson, with a population wealthy and refined, is remarkable for having absorbed into her public schools all the school going population; a result attributed by Dr. Henderson to the skilful organization of the schools by Professor Kirby, and his steadfast adherence to a settled plan when formed. The sexes are classed together in the schools, by which more even grades and better classification are secured, while government is made easier and emulation healthier and less passionate. Each teacher, except in the high school, has charge of one grade, and promotions are annual.—(Report of State superintendent, 1875, pp. 155, 156.)

LEXINGTON.

Officers.—Apparently a school board of 3 trustees, as the city is divided into three school districts, with a superintendent, Hon. J. O. Harrison. There is also an advisory board for colored schools.

Statistics.—There is in each of the three districts into which the city is divided a public school in charge of a principal and 4 assistants, making 15 instructors. The aggregate enrolment in these schools for 1874–'75 was 642; the average daily attendance, 581. Besides these there are two Roman Catholic schools, to which the city contributes $100 a month during a session of ten months, on condition of their being free to any children of the city that may enter them, and that the course of instruction shall be substantially the same as in the public schools. In addition to these 5 schools for the education of white children, there are 4 for the colored children of the city, under the charge of 11 teachers chosen by the city school committee and paid monthly out of the city treasury on the certificate of the superintendent. For the incidental expenses of these four schools $500 annually is allowed by the city, in addition to the payment of teachers' salaries. The enrolment in them has been 565; the average daily attendance, 479.—(Report of State superintendent, pp. 156, 157.)

LOUISVILLE.

Officers.—A city board, number of members not indicated, a city superintendent and assistant superintendent, and a board of visitors of colored schools.

Statistics.—Population, 120,000; children of school age, (6–20,) 44,827; enrolled in public schools, 17,593; average daily attendance in such schools, 11,551; average of pupils per teacher, 42 in lower grades, 27 in high schools. Number of different school buildings, 23 primary and grammar schools, 2 high schools, and 1 normal school. Number of teachers employed, 317, of whom 27 were teachers of German and 4 of music. Salaries of teachers, $400 to $2,500. Salary of superintendent, $3,000; of assistant superintendent, $1,650. Receipts for public schools, $279,919.88; expenditures on them, $269,263.51. Average expenses *per capita*, based on average daily attendance, $22.04.

Notes.—An increasing interest in the schools upon the part of citizens, a very general fidelity and enthusiasm on the part of teachers, and studiousness and good order on the part of pupils are noted by the superintendent.

The attendance on the ward schools has somewhat diminished during the year past, perhaps from the fact that they have been greatly overcrowded, an evil which it is proposed to remedy by building a number of new school-houses and improving and enlarging some of the old ones. The attendance at the colored schools, however, has increased 253, and to meet this increase a beautiful and substantial building is being erected, containing 12 rooms, making the third of its kind for this class of citizens, who now have school accommodations surpassed by those of no other city in the country.

The night schools, an important branch of city public school instruction, employed 18 teachers, enrolled 1,355 pupils, and had an average attendance of 610.

The German language is taught in all the ward schools but 2, the aggregate number of children receiving instruction in it being 5,481, of whom 1,159 are of American parentage.

The city normal school graduated 29 students in the year past, and now furnishes a fair supply of well-trained teachers for the public schools.—(Report of State superintendent, pp. 157–162, and return to Bureau of Education from Superintendent George H. Tingley, jr., 1875.)

NEWPORT.

Officers.—The supervision of the schools is intrusted to a board of education of 12 members, 2 from each of the 6 wards, and a president from the city at large, with a city superintendent.

Statistics.—The increase in population since 1868 has been 35 per. cent. and the increase in school attendance 91 per cent. The number of pupils enrolled in 1868 was 1,456, and in 1875, 2,545; showing an increase of 1,089. Average number belonging, 1,965; average daily attendance, 1,880; average daily absence, 85. The teachers employed, exclusive of the superintendent, were: high school, 2; intermediate 3; primary, 32; special teachers: German, 3; penmanship, 1; drawing 1; total number of teachers, 42. Average enrolment of pupils to each teacher, 69; average belonging, 53; average attendance, 51.

Night school.—A night school was held for four months, the average enrolment in which was: Males, 465; females, 174; total, 639; average attendance: males, 225; females, 88; total 313. Seven classes were formed, in all of which reading, spelling, arithmetic, and penmanship were taught. In addition to these subjects, a little time was devoted to grammar, geography, and United States history in two or three of the most advanced classes. The time of one class was devoted exclusively to arithmetic and book-keeping. The general conduct of the pupils was most exemplary.

Special school.—The report of the committee on German says, "We only say our hopes were not realized in beholding a very decided increase in the number of pupils in this department. The whole number enrolled has only been 360. Two examinations were conducted during the year, the first in February, the second in June. The results so far as examined by the committee are satisfactory.

Economy.—The schools have been conducted with as much economy as possible, the report showing that the average salary per teacher was only $545 against $615 to $865 in several neighboring cities; and the average cost per pupil only $11.56 against $13.40 to $20.33 elsewhere.—(Report of board and Superintendent W. H. Jones for 1874–'75.)

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

No normal school has as yet been established in the State, though the need for such a provision for the training of teachers is very much felt. The State superintendent advises the establishment of a normal department in the State Agricultural College, and in the mean time the establishment of normal professorships in several graded schools throughout the State. The cost of five such professorships, he thinks, would not exceed $10,000, while they would result in adding annually probably 200 trained teachers to the force.

The training school for teachers at Louisville is doing some good work. There were 29 graduates during the year, some of whom, at date of the superintendent's report, had obtained situations, teaching in Louisville or elsewhere, while all the graduates of the previous year, except one, had obtained eligible situations and had been successful in their labors.—(State report, pp. 36–38, 159.)

The normal department of Berea College reports 16 students in training during the last year under the instructors of the preparatory school and faculty of the college. The Kentucky Normal School, Carlisle, reports 3 instructors and 124 students. Vocal and instrumental music are taught in both these, and in both the students have access to practice schools.—(Returns to Bureau of Education, 1875.)

COUNTY TEACHERS' INSTITUTES.

During the last year institutes were held in nearly every county of the State. The aggregate of teachers in attendance was 5,012. The commissioners and teachers have learned the object of these institutes and the proper manner of conducting them. During the day, the best methods of teaching the branches prescribed for the common

schools are illustrated and discussed; also, the most successful way of governing a school, of securing parental co-operation, &c. At night, popular lectures upon subjects related to teaching are delivered by representative men. During the past several years in which the institutes have been doing their work, it is believed that the quality of teachers has risen 50 per cent. The superintendent makes it a point to attend as many institutes as his office duties will allow, to assist in the illustration of methods by day, and to deliver addresses upon popular education, the pedagogic art, and cognate subjects by night.—(Report of superintendent, p. 39.)

COUNTY ASSOCIATIONS.

County associations of teachers have been formed in many counties, meeting monthly and itinerating the sessions from one section of the county to another. They have been found of great profit, in connection with the annual institute, elevating the teachers' profession in public opinion and improving those who engage in the exercises. A programme is arranged for each meeting a month in advance. It includes, among other exercises, the reading of essays, the exhibition of select pupils trained in different methods, the interchange of opinions and communication of facts, visits to each other's schools, the production or description of new apparatus, new books, &c.—(Superintendent's report, 1875, pp. 38–39.)

EXAMINATION OF TEACHERS.

The superintendent earnestly enjoins upon commissioners, as a measure just to those who are best informed and best capacitated to teach, and as the only reliable stimulus to those who are defective in the knowledge of the branches to be taught, in the ability to govern, and in general intelligence, to never grant a first class, first grade certificate except to one who is so manifestly entitled to it as to leave no possible doubt in the minds of the examiners.—(State report, p. 26.)

QUALIFICATIONS OF A GOOD TEACHER.

(1) Good common sense; a knowledge of human nature, as it is developed and modified by circumstances in the ordinary walks of life.

(2) A fair acquaintance with the branches upon which he proposes to give instruction. To conduct and instruct a school efficiently, a teacher must be so familiar with the studies pursued in it as to be able to determine at a glance the results and their value, and to correct mistakes upon the spur of the moment.

(3) Aptness to teach. However opulent he may be in knowledge, it will be comparatively valueless to his pupils unless he has a ready facility to communicate it to their minds.

(4) Perfect self-control. He cannot successfully govern others who is incapable of self-government.

(5) Love for his profession. All work is easily done which is prompted by love.

(6) Correct moral principles and a moral character free from stain or suspicion. If the teacher is a man of high moral principle, his pupils will soon discover and admire it, and they will be ready to adopt whatever sentiment he utters, because they esteem and admire him.—(State report, pp. 32, 33.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

It appears from the account given of the school systems of cities, in the report of Superintendent Henderson for 1875, that there are 8 cities of the State which have high schools, or else high school departments, forming a part of the graded school system. One of these cities, Louisville, has 2 high schools for the separate instruction of boys and girls, with a total enrolment of 645 pupils and an average attendance of 573. The total enrolment in all the schools, as far as it is given, reaches 1,135; 1 school only, viz, the higher department of the Frankfort school, failing to report this item. The average attendance, which is given by 5 out of the 8 schools, amounts to 889.—(Report of superintendent, pp. 149–169.)

OTHER SECONDARY SCHOOLS.

Thirty private or denominational academies—5 for boys, 11 for girls, and 14 for both sexes—report for the past year 161 teachers, 2,569 pupils, 561 of whom were in classical studies and 572 in one or more modern languages; 102 preparing for a classical course in college and 55 for a scientific course. In 16 of these schools drawing is taught, with the addition of painting in a few cases. In all those for girls, in most of those for both sexes, and in 1 for boys, vocal and instrumental music are taught. Ten have some sort of a chemical laboratory; 12, some philosophical apparatus; and 14 report libraries ranging from 90 to 3,500 volumes.

Besides these, the preparatory departments of 8 colleges report 12 instructors additional to those in the college proper, with 719 pupils, 143 in preparation for a classical and 193 in preparation for a scientific course.—(Returns to Bureau of Education, 1875.)

BUSINESS COLLEGES.

Two of these schools—1 at Lexington and 1 at Louisville—report 8 instructors and 362 pupils. Book-keeping, penmanship, arithmetic, commercial law, correspondence, and business practice appear to constitute the studies of the course, no special studies beyond these being indicated.—(Returns for 1875.)

SUPERIOR INSTRUCTION.

Kentucky University, Lexington, (undenominational.) The university embraces 7 independent colleges, each divided into several schools or departments of study, which are under the immediate government and instruction of a competent professor. The colleges are: (1) the college of arts; (2) the agricultural and mechanical college of Kentucky; (3) the college of the Bible; (4) the normal college, (not yet organized;) (5) the commercial college; (6) the college of law; (7) the college of medicine. While the course of study in each college is complete, yet the four first named are so associated that a student regularly matriculated in any one of them may have the benefit of instruction in the others without additional charge for tuition. Graduation in all the schools of the college of arts, except that of modern languages, is required for admission to the regular degree of bachelor of arts; the candidate, however, may substitute, with the consent of the faculty, the course in French, German, Spanish, or Italian for the calculus, or the senior Latin, or the junior and senior Greek.

There are good law, medical, and miscellaneous libraries belonging to the university and open to all the students, comprising about 10,000 volumes of valuable books. There is also a considerable collection of chemical, philosophical, and astronomical apparatus, with a museum of natural history, created through the energy and liberality of Regent Bowman, and containing already about 20,000 specimens. The anatomical museum is large, and contains many valuable wax models, skeletons, &c.—(Catalogue of university, 1874.

OTHER UNIVERSITIES AND COLLEGES.

The following institutions for superior instruction present themselves by catalogue or circular as occupying a collegiate rank and doing really collegiate work:

Berea College, Berea, (Congregational,) embraces collegiate, normal, and preparatory departments. Both sexes are admitted and recite together when their studies are the same.—(Catalogue, 1875.)

Bethel College, Russellville, (Baptist,) is exclusively for young men. There are 8 independent schools, including 1 of theology. Students may choose their course of study, subject to the advice of the faculty, but graduation in 6 schools is required in order to the attainment of the degree of A. B.—(College catalogue, 1874–'75.)

Cecilian College, Elizabethtown, (Roman Catholic,) is for young men only; was founded in 1860 and chartered in 1867; confers diplomas in classical and commercial departments.—(Catalogue, 1874.)

Central University, Richmond, (Southern Presbyterian,) was established in 1873. To the collegiate and preparatory departments are added colleges of law and of medicine. —(Catalogue for 1874–'75.)

Centre College, Danville, (Assembly Presbyterian,) is only for young men. There are classical, scientific, and preparatory departments. Opportunity is given for the study of four modern languages, special attention being bestowed on German.—(College catalogue, 1874–'75.)

Concord College, New Liberty, (Baptist,) admits both sexes, and young ladies may take the same course of study and share the same honors as young men. There is a preparatory as well as collegiate department.—(College catalogue, 1874–'75.)

Eminence College, Eminence, (Disciples of Christ,) admits both sexes, and embraces preparatory and collegiate departments. French and German, with music, painting, drawing, embroidery, and wax work are taught. The sexes do not recite together, but are in distinct departments.—(College catalogue, 1875–'76.)

Georgetown College, Georgetown, (Baptist,) claims to afford full and thorough instruction in eight distinct departments, viz: English, Latin, Greek, modern languages, mathematics, physical sciences, history and political economy, and mental and moral philosophy.—(Circular of college.)

Kentucky Military Institute, Frankfort, (non-sectarian,) chartered in 1847, includes, with its regular collegiate department, a special commercial course and one in civil engineering; also a resident graduate course. The design of the military feature, which is made quite prominent here, is to aid in securing good discipline and physical culture, as well as to confer a knowledge of military tactics.—(Catalogue for 1875.)

Kentucky Wesleyan University, Millersburg, (Methodist Church South,) offers a regular collegiate course of four years, with classical and scientific departments.—(Catalogue, 1873–'74.)

Murray Institute, Murray, (non-sectarian,) is for both sexes, and embraces preparatory, ornamental, and collegiate studies. It has authority to confer "any or all of the diplomas or degrees conferred by the best colleges of this State."—(Catalogue, 1875–'76.)

St. Joseph's College, Bardstown, (Roman Catholic,) for young men only, was chartered in 1824. Its object is to afford a thorough religious and literary education. None but Catholic students are admitted. There is a classical course for those students who wish to prepare themselves for the ministry or the learned professions, and a commercial one which prepares for mercantile pursuits.—(Catalogue, 1873–'74.)

COLLEGES AND SEMINARIES FOR WOMEN.

Reports have been received from the following named colleges and seminaries for the superior instruction of women: (1) Bethel Female College, Hopkinsville, (Baptist;) (2) Bowling Green Female College, Bowling Green, (Presbyterian;) (3) Daughters' College, Harrodsburg, established in 1856; (4) Franklin Female College, Franklin, (non-sectarian;) (5) Georgetown Female Seminary, Georgetown, (Baptist;) (6) Hocker Female College, Lexington, (Christian;) (7) Kentucky College, for young ladies, Pewee Valley, ("undenominational, but evangelical;") (8) Lexington Female College, Lexington, (Baptist;) (9) Logan Female College, Russellville, (Methodist Episcopal Church South;) (10) Shelbyville Female College, Shelbyville, (Southern Presbyterian;) and (11) Stanford Female College, Stanford, (non-sectarian.)

These present in their collegiate departments a total of 71 instructors and 737 students. Of the students, 461 are in the regular course and 276 in special or partial courses. For fuller statistics of these institutions see Table VIII of the Appendix.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

AGRICULTURAL AND MECHANICAL COLLEGE.

Located at Lexington, this is one of the colleges of Kentucky University. It is an institution belonging to the State, with an endowment fund given by the Government, and, with the splendid estate of Ashland, the homestead of Henry Clay, donated chiefly by citizens of Fayette County, as a site for its operations. It has a full corps of able professors and a liberal course of study, embracing the literary and scientific branches usually pursued in colleges, with modern languages and military science. Those students wishing to pursue the Latin and Greek languages have access to the classes in these and other branches in the college of arts, free of cost for tuition.

The institution is emphatically for the masses of the people. Under the charter each county or legislative district is entitled to send to it three properly prepared students, free of charge for tuition. Other expenses need not exceed $150 for the col-

legiate year, and such young men as desire it can defray a portion of these by laboring four hours a day on the farm or in the shops.—(Report of Superintendent Henderson, 1875, pp. 277, 278.)

THEOLOGY.

Theological instruction is given in the College of the Bible, University of Kentucky, (Christian,) the Theological Seminary at Danville, (Presbyterian,) the Western Baptist Theological Institute, in Bethel College, (Baptist,) and in St. Joseph's College, Bardstown, (Roman Catholic.)

LAW.

The law college of Kentucky University claims to provide a complete and very thorough course of instruction for young men preparing for the bar in any part of the United States.

MEDICINE.

The medical schools of the State are the Transylvania Medical College, Lexington, a department of the State University, with three years of study in its course and two of lectures; the Louisville Medical College; the Louisville Hospital Medical College, with a course of two years; the medical department of the University of Louisville, and the Louisville College of Pharmacy.

For full statistics respecting such of these professional schools as report themselves, see Tables XI, XII, and XIII of the Appendix.

SPECIAL INSTRUCTION.

INSTITUTION FOR THE BLIND, LOUISVILLE.

This institution is not an asylum nor a hospital for the treatment of diseased eyes, but one of the public schools which the State has provided. Here every child in the State whose eyesight is so defective that it cannot obtain an education in the ordinary schools may receive appropriate instruction free. The State charges the parents of the pupils nothing for board or tuition, and, in cases of destitution, provides clothing. Children are permitted to receive instruction for seven years, and in the case of meritorious pupils the time may be extended if the trustees see fit. The course of instruction embraces everything taught in the common schools; and, in addition, special tuition in music and in various branches of handicraft. The boys are taught to make brooms and various kinds of mattresses, to cane chairs, and to do general upholstering work. The girls are taught to knit, sew, do various kinds of fancy work, and use the sewing machine.

The proper age for admission is from 6 to 16 years, but, as it is the wish to exclude none who desire to learn, persons over 16 years of age will be received upon presenting the proper testimonials of character and fitness to associate with children. There are probably 400 children in the State who should be in the school, but less than one-fourth of them are there, the remainder growing up in a darkness that is made doubly intense by ignorance.—(Report of State superintendent, pp. 95, 96.)

INSTITUTION FOR THE DEAF AND DUMB, DANVILLE.

This school was established by legislative enactment in 1823, and has been in successful operation for 53 years. Every deaf-mute in Kentucky, of sound mind and body, is privileged to receive all the benefits of the institution, without charge for board or tuition, for a term of 7 years. The branches of study pursued are reading, writing, arithmetic, grammar, geography, history, natural history, physiology, the Bible, &c. A spicy little periodical, The Deaf-Mute, is published by the pupils.—(Report of State superintendent, pp. 97, 98.)

INSTITUTION FOR THE EDUCATION OF FEEBLE-MINDED CHILDREN.

This institution, located at Frankfort, was reconstructed in 1874. Its purpose is defined in the words of the law as follows: "It is distinctly avowed in this act that said institution is not an asylum for the custodial care of unimprovable idiots, but a school for the education of feeble-minded children." Children of this character, between the ages of 6 and 18 years, are entitled to board and tuition without charge, and for all children who have not the means of transportation the expense is defrayed by the State. The superintendent speaks of the management of the school in terms of unqualified approbation. Its utility and success in cultivating the dormant intellectual powers of the children sent to it are beyond doubt. Physical training forms an important part of the plan. It having been found frequently that the mental imbecility was connected with bodily weakness, special attention is paid to gymnastic training. Calisthenic exercises of the most graceful character, and to the measure of the sweetest music, are daily engaged in. Every muscle of the body is brought into play; and as vigor of body is imparted it is frequently accompanied by activity of mind.—(State report, pp. 99–101.)

EDUCATIONAL ASSOCIATIONS.

STATE TEACHERS' ASSOCIATION.

This body convened in Glasgow, July 13, 1875, and held its closing session in the Gothic Chapel of the Mammoth Cave, on July 15. It was attended by 200 teachers of Kentucky and quite a number of professional visitors from Tennessee, Indiana, and Ohio. Among these were Hon. W. D. Henkle, formerly superintendent of public instruction of Ohio; Hon. John Hancock, of Dayton, Ohio, who delivered an address upon graded schools; Prof. J. R. Ridge, of Cincinnati, who delighted the audience with superior elocutionary readings, and Hon. Leon. Trousdale, superintendent of public instruction for Tennessee. The citizens of Glasgow extended the most cordial hospitality, and made the stay of the teachers so pleasant that every one was reluctant to leave.

The following papers were ordered to be printed by the association, and, consequently, appear in the report of the State superintendent for 1875:

"Special advantages of college training," by President J. G. Wilson, of Warren College; "Common sense in teaching," by William J. Davis, editor of Home and School; "The recitation," by Principal George A. Chase, of the Female High School, Louisville; and "Graded schools," by Hon. John Hancock, of Ohio.

The exploration of the Mammoth Cave was fraught with more than usual interest, for, in addition to the customary curiosity which prompts the underground pilgrimage, there were present the spirit of scientific inquiry and that preliminary culture which give zest to a review of the wonders of nature in a company of congenial minds.

In the Gothic Chapel a grand halt was made, and the president of the association, mounted upon a huge stalagmite, delivered a short address. A fine quartette of instruments discoursed delightful strains; a solo was sung by Kentucky's sweetest cantatrice, and a chorus of well trained voices sent a harmony sounding down those dark and mystic corridors such as never before woke its grotesque carvings into listening attention.—(State superintendent's report, 1875, pp. 40–67.)

SOCIETY FOR THE ADVANCEMENT OF EDUCATION IN KENTUCKY.

The object of this society is the encouragement of higher, technical, and normal education. In conjunction with the State Teachers' Association, it held a meeting at Mammoth Cave, July 15, 1875. Superintendent Henderson, its president, Major William J. Davis, secretary, and Professor Chenault made addresses explanatory of the objects of the organization. Reports were referred to the several permanent committees, which were instructed to report at a meeting to be called by the president during the session of the legislature.—(State report, 1875, p. 68.)

LIST OF SCHOOL OFFICIALS IN KENTUCKY.

Hon. H. A. M. HENDERSON, *State superintendent of public instruction, Frankfort.*

STATE BOARD OF EDUCATION. [Term, 1875–'79, four years.]

Name.	Post-office.
Hon. H. A. M. Henderson, superintendent of public instruction and *ex officio* president.	Frankfort.
Hon. J. Stoddard Johnston, secretary of state	Frankfort.
Hon. Thomas E. Moss, attorney-general	Frankfort.
R. D. Allen	Farmdale.
W. H. Bartholomew	Louisville.

COUNTY COMMISSIONERS. [Term, 1875–'76.]

County.	Commissioner.	Post-office.
Adair	M. H. Rohrer	Columbia.
Allen	M. A. Alexander	Scottsville.

LOUISIANA.

STATISTICAL SUMMARY.

SCHOOL POPULATION AND ATTENDANCE.

Number of children in the State 6–21 years of age	280,387
Number enrolled in public schools	74,846
Increase since 1874	737
Number attending private schools	21,711

TEACHERS AND TEACHERS' PAY.

Number of teachers employed: Men, 797; women, 760	1,557
Gain over 1874	63
Average salary of teachers per month	$37 00

SCHOOLS.

Number of public schools	1,032
Decrease since 1874	9
Average number of months each school has been taught	3½
Decrease since 1874, in months	1
Whole number of months schools have been taught	5,231
Gain over 1874	270
Number of school-houses built in the State	35
Estimated value of all school property	$896,100 00

INCOME AND EXPENDITURE.

Receipts.

From parish treasurers and tax collectors	$14,659 32
From State apportionments	207,406 20
From corporate authorities	313,358 31
From interest due from the free school fund	33,051 23
From appropriation for salaries of officers, contingent expenses, &c	35,300 00
Balance on hand September 1, 1874	95,890 14
Total receipts	699,665 20

Expenditures.

For previous indebtedness	$33,214 75
For salaries of teachers	573,144 44
For rent and repair of school-houses, purchase of furniture, apparatus, &c.	76,529 43
For school buildings and sites	5,985 95
For salaries of officers, office-contingent, and expenses	35,300 00
To balance in hands of school board treasurers	139,217 29
Total disbursements for 1875	863,391 86
Amount paid in school certificates by New Orleans school board	163,726 66
Total cash disbursements for 1875	699,665 20

—(From report, for 1875, of State Superintendent Hon. William G. Brown, pp. 6–9.)

SCHOOL SYSTEM OF THE STATE.

CONSTITUTIONAL PROVISIONS.

The constitutions of 1845, 1852, 1864, and 1868 agreed substantially with one another in providing for free public schools throughout the State, to be supported by taxation or otherwise; for the appointment or election of a State superintendent of public education, to hold office for two or four years; for the formation of a permanent school fund from the proceeds of lands granted by the United States, or of property granted, bequeathed, or escheated to the State by any person; and for the establishment and maintenance of a State university in New Orleans.

That for 1868 went further than preceding ones by explicitly requiring the general assembly to establish "at least one free public school in every parish;" by making such schools and other State institutions of learning free to all children of the State between 6 and 21, "without distinction of race, color, or previous condition;" by forbidding the establishment of separate schools or institutions of learning exclusively

for any race by the State; by forbidding, also, appropriations by the general assembly for any private school or institution; and by providing that institutions for the insane, the blind, and the deaf and dumb should always be fostered by the State.

PROVISIONS OF THE SCHOOL LAW.

From School Law of 1870, with amendments of 1871, 1873, and 1874, and constitution of 1868.

OFFICERS.

The chief school officers are a State board of education, State superintendent of public education, division superintendents, parish boards of school directors, and a special board for the city of New Orleans.

POWERS AND DUTIES OF OFFICERS.

State board.—The six division superintendents in the State, with the State superintendent as president, constitute the State board of education, which holds a regular annual meeting at the office of the superintendent, in New Orleans, each January, and may hold special meetings at his call, at other times. Its duties are to appoint boards of school directors in each parish and a special one for New Orleans; to report to the general assembly the names of all such who may fail to serve; to provide for the enumeration of children of school age, (6–21;) to make all needful rules and regulations for the public schools, especially a general regulation opening them to all children of the proper age within the State, without distinction of race, color, or previous condition, according to constitutional provision; and to select text books for their use.

It has power to sue delinquent officers; to employ counsel in case of any suit; to remove parish directors for negligence, incompetency, or violation of law, after fair trial; to establish academies, normal schools, and teachers' institutes; and to provide for the government and control of them.

State superintendent.—This officer, provided for in each successive constitution of the State from 1845, is, according to that of 1868, eligible by the people; holds office for four years; receives a salary of $5,000; and appoints for himself a secretary with a salary of $3,000, whose duties he prescribes. He has his office at the seat of government; files there all documents and reports submitted by school officers; is charged with the general supervision of all the division superintendents and all the common, high, and normal schools under the State system; and is to see that this system is put into effect and carried on in uniform operation. With a general view to these duties he is to meet the division superintendents at least once in each year in each division, giving due previous notice of the time and place of meeting, and is to compare views with them, discuss principles, and listen to all suggestions made as to school matters. He is to visit also such schools as he can, and witness the manner in which they are conducted; is to cause the school laws and necessary forms and blanks to be printed and distributed; is to make quarterly apportionments of the State school funds, according to the number of children of school age, to each school board; is to cause notice of annual district meetings to be published thirty days in advance in each parish; and at each session of the general assembly and State board of education is to make them a report showing (1) the condition of the common school divisions of the State, the number of schools, number of children of school age, number in each parish who have attended school, number of books in division libraries, and value of all apparatus in the schools; (2) such plans as he may have matured for the management and improvement of the school fund and the more perfect organization and efficiency of the schools; and (3) all such other matters relating to his office and to the common schools as he may deem it expedient to communicate.

He may also provide for holding teachers' institutes in the divisions on receiving assurance from the division superintendent that not less than thirty teachers desire to assemble for this purpose.

Division superintendents.—For school purposes the State has six divisions, of which the city of New Orleans is one. A superintendent for each division is appointed by the governor on the nomination of the State superintendent, with the consent of the State senate, for a term of three years. He has general supervision of all public schools in his division, subject to the rules of the State board; examines* and licenses teachers, (and, if need be, revokes a license,) except where certificates are held from the State superintendent; receives and transmits to the latter all reports from parish school boards, serves as a medium of communication between the State board and State superintendent and these lower boards; transmits to them or to teachers all blanks, circulars, and other communications from the higher powers; entertains and decides appeals from the decisions of the parish boards, and has it laid upon him as his duty to organize and conduct, once in each year, in his division, a teachers' institute at some central and accessible locality, aided by a professor from the normal school or some practical teacher appointed by the State superintendent. He is also to encourage and

* In New Orleans a committee on teachers aids in this.

assist at teachers' associations to be convened in each parish or in a union of parishes four times each year; is to make before the 5th of October, annually, a report to the State board, containing a digest of the reports made to him by the secretaries of the lower boards in his division and showing the condition of each school in it; is also, at the same time, to file with the recorder of each parish an abstract of the number of youth of school age in each ward or school district of the parish, and is to report the number of private schools, academies, and colleges in his division, number of pupils, male and female, with such other information and in such form as the State superintendent may prescribe. By a later law he is further, on or before October 5, each year, to visit the several parishes in his division, examine the accounts of each school treasurer, and certify the correctness of such as he may find to be correct; and without such certificate from either the division or State superintendent, no treasurer's accounts shall be held to be finally adjusted.

The superintendent of the sixth division, composed of the city of New Orleans, has the aid of an assistant superintendent, at a salary of $2,500. His own salary is $4,000; that of other division superintendents, $2,500.

Parish boards.—These, answering to the county boards of other States, consist of five or more persons; are appointed by the State board; hold office for two years; elect from among their members a president, secretary, and treasurer, the last of whom gives bond in $5,000, and may have this increased. They are to visit and examine the schools of the parish, to report to the State board and State superintendent any deficiencies in them, or neglect of duty on the part of teachers or other officers; to receive from the State tax collector all proceeds of any parish school tax levied, and apportion the same among the several districts in proportion to the number of persons of school age within it, the treasurer acting as the agent of the board in such payments, keeping an account of receipts and disbursements in books provided for the purpose, which must be always open for inspection, and making a monthly report to the board and an annual one to the division superintendent. The boards make contracts for school buildings, consulting with the State superintendent as to plans; fix the site for each schoolhouse; determine the number of schools to be established and the time each one shall be taught, as well as the branches for study in them; establish graded or union schools where necessary, and may select persons to have the general supervision of schools under them. Through their secretary, they report each year, on or before the 20th of September, to the division superintendent, the number of persons of school age in each district; the number of schools and the branches taught; the number of teachers, male and female, and the average compensation of each per week; the length of school in days, and the average cost per week for each scholar; the aggregate amount paid teachers during the year, and the balance of teachers' fund in the treasury; the text books used in the schools, the number of volumes in district libraries, and the value of apparatus possessed; the number of school-houses, and their estimated value; the amount raised within the year by tax for school purposes, giving all particulars; and the amount of public fund received, with such other information as may be deemed useful, $25 to be forfeited for failure to make such report, and all losses resulting from the failure to be made up.

SCHOOLS.

The schools of all grades under this system are to be taught each year for at least twelve weeks of five days each, one or more in each school district, by a regularly certified teacher; and from none of them is the Bible to be excluded, though no pupil must be required to read it contrary to the wishes of his parent or guardian.

A State normal school, military academy, agricultural and mechanical college, and State university are contemplated as parts of the State system. The first and second, however, do not now exist, and the third is only in its infancy.

SCHOOL FUNDS.

For school purposes, the law authorizes the levying and collecting of an annual State school tax of two mills upon the dollar, with a parish school tax of the same amount.

ELEMENTARY INSTRUCTION.

REMARKS UPON STATISTICS.

The amount of disbursements in excess of the receipts—$163,726.66—is represented by certificates of indebtedness, commonly called school certificates, issued principally in New Orleans to the teachers, but also to persons to whom the bureau of education (represented by the New Orleans city board of school directors) has become indebted. The corps of teachers, as a class, are too poor to wait for their pay; hence they are compelled to sell their certificates for whatever price the broker will allow. At the close of the fiscal year in 1874 the amount of outstanding school certificates was $110,595.43; but this year it reaches, as before mentioned, $163,726.66, an increase of indebtedness of $53,131.23. If the revenues for school purposes are to be restricted to their

present amount, and if those sums which have been alienated therefrom cannot be restored, it is believed that it will become necessary to close about one-third of the schools.—(Report of State superintendent for 1875, pp. 4–6.)

PROSPECTS OF THE PUBLIC SCHOOL SYSTEM.

The fair prospects for the success of the public school work of the State, noted in the last report of the superintendent, (1874,) were suddenly darkened by the unfriendly alienation of a considerable part of the school revenue, nearly $200,000. Of this, $50,000—paid out of the current school fund—were interest due by the State from the free school fund; $40,000 of the amount were revenue received by the State as a license from the Louisiana State Lottery Company; and $15,000 were derived from the poll tax.

Notwithstanding this severe blow, the loss of nearly one-third of the school revenue, the amount of work accomplished during the year is nearly as much as that of 1874, and in some particulars it is more. The reasons given for this satisfactory result are that the school board find it possible to secure good teachers at more moderate salaries than before, while the certainty of prompt payment for school buildings and the confidence reposed in the integrity of the school boards make them desirable lessees. Then, the vigilant superintendence of school officers and the faithful returns made of work performed, in connection with the increased interest manifested by the people in all matters pertaining to the cause of public education, are no mean factors in accomplishing these results. The hostile agencies at work to subvert and overthrow the school interests of the State are becoming more and more puerile every year, and every attack upon the school system but establishes it on a broader and surer foundation.—(State report, pp. 1–3.)

M'DONOGH EDUCATION FUND.

Six school-houses have been recently erected from the munificent donation made by John McDonogh for the gratuitous education of the poor children of the city, of all races and colors, and named in honor of his memory in the order of their erection. This remarkable man spent a laborious and self-denying life in the hope of leaving behind him money enough to educate to the knowledge of the Lord and in the ordinary elements of an English education, if possible, every poor child in the States of Louisiana and Maryland. Had his directions been carried into effect the revenues of his estates would ultimately have been several millions annually, and his great expectations would have been eventually realized. But large portions of his estate have been lost by the indifference of officials and the rapacity of relatives and lawyers, so that today what should amount to millions is but a mere moiety.—(State report, pp. 53–59.)

CITY SCHOOL SYSTEMS.

NEW ORLEANS.

Organization.—A board of school directors, consisting of twenty members, viz: one from each representative district, one additional for each municipal district, the administrator of finance of the city, who is *ex officio* a member, and the superintendent of the sixth division, who is also a member *ex officio*, with the right to speak, but not vote in the board. The members from the districts are appointed by the State board of education for terms of three years, one-third to retire annually.

This board of school directors appoints a committee on teachers, which, with the superintendent of the sixth division, examines applicants for employment in the schools.

Statistics.—Number of children 6 to 21 years of age, 70,093; number of public schools, 76; pupils enrolled, 26,251; teachers employed, 450; average salary per month, $67.82: estimated value of school property, $775,000; receipts for school purposes, $373,847.99; expenditures, including certificates issued, $460,128.83.

Remarks.—A majority of the schools appear to be in a prosperous condition, although in many of them various causes are operating which are calculated to retard their progress, prominent among these being irregularity of attendance, caused by poverty and often indifference of parents. The three high schools are in good condition, having, apparently, rid themselves of the elements of discord, and entirely recovered from the effects of the lawlessness which culminated in open rebellion in 1874. The course of instruction in the central high school (for boys) embraces English studies, mathematics, natural sciences, classics, French, book-keeping, &c.; that of the two girls' high schools is similar, but with the omission of book-keeping and the classics.—(Superintendent's report, 1875, pp. 148–158.)

TRAINING OF TEACHERS.

LOCAL TEACHERS' INSTITUTES.

A beginning was made about two years ago in the organization of local teachers' institutes at points where six or more could readily be convened. As soon as the bene-

fits to be derived from these associations began to be appreciated, all earnest and faithful teachers became ardent supporters of the effort. Many discouragements were encountered, but only to be gradually yet surely overcome. Complete success has at last rewarded faithful and persistent effort. A work has been accomplished that no other power could have so speedily and effectually wrought. The schools are improved in efficiency more than 100 per cent. Five institutes have been organized, four of which have become permanently established.—(Report, 1876, p. 85.)

The foregoing appear to be the only efforts made by the public school system in the direction of securing professional training for teachers. A normal department exists in connection with New Orleans University; one in connection with Straight University, and one in the Minden High School, while at New Orleans is the Peabody Normal Seminary in and for Louisiana, sustained by local subscriptions of $1,800 and by an allowance of $1,600 from the Peabody fund. This last reports, for 1875, 4 resident instructors with 2 lecturers and 95 female students, of whom 45 were in the senior course.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

Neither the number of public high schools in the State nor the statistics of attendance upon them is given in the superintendent's report for 1875. It appears, however, from a table of general statistics that such schools exist at least in New Orleans, East Baton Rouge, and the parish of Iberville. There are three in New Orleans, the upper girls' high school, lower girls' high school, and the central high school for boys. The number of pupils enrolled in 1875 in these three schools was 465; average attendance, 490; teachers, including principals, 18; average of pupils to a teacher, about 26. The course of study in these schools is not given.

PREPARATORY DEPARTMENTS OF COLLEGES.

Reports from these show, for 1875, a total of 294 students in these departments, 44 of whom were preparing for a classical collegiate course and 82 for a scientific course.—(Returns to Bureau of Education.)

OTHER SECONDARY SCHOOLS.

Four private schools for boys, as many for girls, and two for both sexes make report for 1875 of 62 instructors and 882 pupils, 111 of whom are said to have been in a classical course, and 532 in modern languages, mainly German and French. Ninety-three were preparing for a classical course in college and 82 for a scientific course. In 6 of the 10 schools, drawing was taught; in 9, vocal music; in 7, instrumental music also. None reports either chemical laboratory or philosophical apparatus, and only half the whole number have libraries, these ranging from 500 to 2,000 volumes.—(Returns to Bureau of Education, 1875.)

BUSINESS COLLEGES.

Two of these useful institutions, both in New Orleans, report a total of 13 instructors and 363 students in courses which comprise penmanship, book-keeping, mathematics, telegraphy, and modern languages; 3 students being in telegraphy, 18 in German, and 47 in French. One of the two schools has connected with it a literary institute, with a course of four years, and 164 of the students reported are in this branch of the college. Latin and Greek are in its course.—(Returns to Bureau, 1875.)

SUPERIOR INSTRUCTION.

LOUISIANA STATE UNIVERSITY, BATON ROUGE.

The university was founded in 1855, from grants of land made in 1806 by the General Government for establishing a seminary of learning, and was opened in 1860. It occupied, from 1859 to 1860, buildings erected for it in Rapides Parish, near Alexandria, and on the burning of these, in October of the latter year, was removed to temporary quarters at Baton Rouge, where it still is, in the building belonging to the Louisiana Institution for the Deaf and Dumb. The course of instruction embraces at present preparatory and academic departments, with commercial and civil engineering schools. Its fifteenth annual session closed June 30, 1875. There were no titled graduates, and so discouraging were its prospects that its able superintendent, Col. D. F. Boyd, who has done for it all that man could do for several years, accepted from the Khédive of Egypt an offer of the headship of his military school, and retired from the superintendency.—(Report and catalogue for 1873–'74 and special papers from Colonel Boyd, 1875.)

OTHER COLLEGES.

Centenary College, (Methodist Episcopal Church South.—This college for young men, located in the village of Jackson, was established by the State of Louisiana in 1825,

and was taken under the patronage of the Methodist Episcopal Church South in 1845, since which it has been growing in importance and usefulness. The number of students in 1874–'75 was 88, of whom 59 belonged to the preparatory department.—(College catalogue, 1872–'75.) At the date of return to Bureau, December 29, 1875, it was as given in the table below. The library contains 1,500 volumes, the students' society libraries 1,000 more.

Leland University, (Baptist.)—Pleasantly situated in New Orleans, at the corner of Charles and Chestnut streets, five miles from the more central portion of the city. Incorporated in 1870, it does not seem to have yet passed its preparatory stage. No pupil can ever be excluded from its privileges on account of race, color, sex, or sect. The courses of instruction pursued are preparatory, academic, collegiate, and theological. A system of manual labor is pursued on a tract of ten acres belonging to the college and in a workshop under its control.—(Catalogue 1874–'75 and return to Bureau.)

New Orleans University.—This institution, at the corner of Camp and Race streets, New Orleans, belongs to the Louisiana Annual Conference of the Methodist Episcopal Church. It is organized into four departments, namely, classical, scientific, normal, and theological. Both sexes are admitted.—(Report of State superintendent, 1875, p. 390.)

St. Charles College, Grand Côteau, (Roman Catholic,) has a preparatory department and a collegiate, both apparently devoted to instruction in the old classical course, without any present admixture of the scientific.—(Return to Bureau of Education, 1875.) It has forty-three weeks in its scholastic year, six years in its collegiate course, and 5,000 volumes in its library.

St. Mary Jefferson College, (Roman Catholic.)—This college, situated at College Point, is under the Maurist Fathers, is exclusively for young men, and embraces classical, commercial, and preparatory courses. It confers the usual collegiate degrees. Great care is taken to promote the physical as well as the intellectual development of students.—(Catalogue, 1874–'75.)

Straight University, (New Orleans.)—Incorporated June 25, 1869, with "power to confer all such degrees and honors as are conferred by universities in the United States." At present there are three departments organized, the theological, law, and academic. The theological department is open to members of all denominations. The academic department embraces two courses, classical and common English, the former including Latin, French, higher mathematics, algebra, geometry, astronomy, natural sciences, mental and moral philosophy. Graduates from this course receive a diploma.—(Report of superintendent for 1875, p. 391.)

COLLEGE FOR WOMEN.

The Silliman Female Collegiate Institute at Clinton, Presbyterian, appears to be the only institution in the State exclusively for the superior instruction of women. It reports for the year 1875, in its collegiate department, an attendance of 20 pupils; preparatory, 25; number of professors and instructors, 3. The course of instruction embraces music—vocal and instrumental—drawing, painting, French, and Spanish.—(Special report to United States Bureau of Education.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

The Agricultural and Mechanical College of Louisiana, which was mentioned in the last report as to be probably located on a site owned by the State, in the immediate vicinity of New Orleans, has been advertised as occupying the University Buildings, corner of Common and Baronne streets, New Orleans, and to have a preparatory department under the supervision of the faculty, with a collegiate course embracing, as a leading object, the study of the arts and sciences as bearing on the progress and improvement of agriculture and the mechanic arts, not neglecting the literary branches.

LEGAL.

A law department is connected with Straight University, which is instructed by members of the city bar. Graduates are entitled to admission into all the courts of the State.—(Circular of university, and report of American Missionary Association, 1875.)

MEDICAL.

Training in medicine is attended to in the medical department of the University of Louisiana at New Orleans and in the Charity Hospital Medical College, of the same city, each having a three years' course. The latter is a revival, under another name, of the New Orleans School of Medicine, which went down with the war, was reorganized 1874, and now claims "a system of instruction unknown in this country outside of New Orleans, viz, daily bedside teaching of every student by the corps of professors, who visit their wards every morning." "Amphitheatric clinics are altogether secondary."—(Returns to Bureau of Education, 1875.)

THEOLOGICAL.

Instruction in theology is given in Leland University, (Baptist,) in New Orleans University, (Methodist,) and in Straight University, (Congregational,) mainly to members of the colored race. The last named institution most liberally receives and supports members of any Christian denomination desiring to study within it. The class of last year was composed of Congregationalists, Baptists, and Methodists. There is a ten thousand dollar endowment for this department, which is presided over by Rev. W. S. Alexander, a graduate of Yale and Andover, with assistance from other members of the faculty. Some of the students in it already have churches or are preaching.—(Circulars of these institutions and report of American Missionary Association, 1875.)

SPECIAL INSTRUCTION.

INSTITUTION FOR THE EDUCATION OF THE DEAF AND DUMB.

The institution, at the beginning of the year 1875, contained in its hall at Baton Rouge, 39 pupils. During the year the number increased to 47—28 males and 19 females—and it would have been much larger but for the interruption of the school in 1874 for more than a month, and the total suspension in May, 1875, of the school until December, on account of the failure of the legislature to appropriate a sufficient amount to sustain it throughout the year. None but white youth have thus far applied for admission to the institution, although the law gives the colored an equal privilege. It is supposed that poverty in nearly every case, as well as in many cases among the whites, prevents their coming. The course of study lasts seven years, and is designed to afford the opportunity for acquiring a good and substantial education.—(Annual report of the trustees, 1876.)

LOUISIANA INSTITUTION FOR THE EDUCATION OF THE BLIND.

This institution comprises academic, musical, and mechanical departments. Pupils admitted between the ages of 8 and 14 years are allowed to continue nine years. All admitted between 14 and 17 remain six years, and those who are over 17 years of age when admitted remain only four years. An Industrial Home for adult blind persons is attached to the institution. The inmates of this home are provided with board and lodging, and are furnished with employment.—(Report of the trustees, 1874.)

LIST OF SCHOOL OFFICIALS IN LOUISIANA.

Hon. WILLIAM G. BROWN, *New Orleans, State superintendent of public instruction and ex officio president of State board of education.*

DIVISION SUPERINTENDENTS AND EX OFFICIO MEMBERS OF STATE BOARD OF EDUCATION.

—(Report of Hon. Warren Johnson, State superintendent, for 1874–'75.)

SCHOOL SYSTEM OF THE STATE.

CONSTITUTIONAL PROVISIONS.

Maine, long a dependency on Massachusetts, did not come into existence as a State till 1820. Her constitution, adopted in that year, authorized the legislature, and made it a duty, to require the several towns (a New England term for townships) to make suitable provision for the support of public schools. It also made it a further duty of the legislature to encourage and suitably endow, from time to time, as circumstances might authorize, academies, colleges, and seminaries of learning. Out of this constitutional provision has come, by gradual growth, a State school system, of which the following are the chief existent features: (1) A general supervision of schools by an officer of the State government; (2) a local supervision by officers elected at the annual town meetings, as representatives either of the town at large or of the districts into which it is divided; (3) local taxation by the towns for the erection and support of schools within them; and (4) encouragement by the State of such local action, through an apportionment of State school funds.

PROVISIONS OF THE SCHOOL LAW.

Laws of Maine relating to public schools, compiled by the State superintendent, 1873, with amendments and additions of 1874.

OFFICERS.

The State officers under this system are a State superintendent of common schools, the local officers, superintending school committees or a supervisor for the towns, and school agents for the school districts within these; cities often having city superintendents of schools.

POWERS AND DUTIES OF SCHOOL OFFICERS.

State superintendent.—This officer is appointed by the governor and council for a term of three years, or during the pleasure of the executive, and receives an annual salary of $1,800, with his necessary expenses.

His duties are (1) to exercise a general supervision of all the public schools and to advise and direct the town committees in their supervision of the districts under them; (2) to obtain information as to the school systems of other States and countries; to disseminate this, with practical hints derived from it, by addresses, circulars, &c., and to do all in his power to awaken and sustain an interest in education among the people and teachers of the State; (3) to take measures for holding a State educational convention once in each year, with a view to better acquaintance and mutual consultation among teachers and school officers; (4) to hold in each county where sufficient encouragement is offered an annual public meeting or institute for teachers and educators;* (5) to prepare and cause to be printed and distributed such portion of the proceedings at these county and State meetings as may further the interests of education; (6) to prescribe the studies that shall be pursued in the schools of the State, reserving to town committees the right to prescribe additional studies; (7) to act as superintendent and as a member of the board of trustees of the State normal schools; (8) to make to the governor and council annually, prior to the meeting of the legislature, a report of the result of his educational investigations, of the facts obtained from the school returns, and of the things which, in his judgment, will best promote the improvement of the common schools. He is also to prepare and distribute by the 1st of March in each year blank forms for the annual school returns and registers for the school year commencing on the 1st of April following; is to notify, June 1, school committees whose returns were not received at his office in May; and is annually to

* In consequence of a discouragingly small attendance of teachers on these institutes, the State appropriation for them was, on the recommendation of Governor Dingley, withdrawn in 1875, and the holding of the institutes abandoned. Instead of attending them, the State superintendent was recommended to visit each county, hold meetings of school committees, confer with friends of education, address the people on educational topics, and by every means in his power endeavor to awaken new interest in the common schools.

ascertain the number of children of school age (4–21) in the towns from which returns are received, and furnish a list to the State treasurer.

Superintending school committees.—These have been a part of the State system from the beginning, and when, in 1872, the county supervision of schools, which had existed from 1869, was abolished, they remained as the prime agency for local supervision. They consist of 3 members each, elected at the annual town meeting, for an official term of three years, but so arranged that one goes out each year and is replaced by a new election, unless the town choose a supervisor of schools, in which case his election terminates the office of all existing members of the committee, and he enters upon its powers and duties.

These duties are to examine, after at least three weeks' public notice, all persons proposing to teach in the public schools of the town; to license by certificate, or by endorsement of previous certificates, such as are found qualified to teach and govern; to employ for the schools, unless the town vote otherwise, duly certified teachers, and give notice to the several district agents of the teachers employed and the compensation agreed upon; to direct the general course of instruction for the schools, and select a uniform series of text books, not to be changed for five years without a vote of the town; to examine the regulations and discipline of the several schools, and the proficiency of the scholars, at least twice in summer and twice in winter; to endeavor to secure the regular attendance of the youth of the town at school; to dismiss, after due notice and investigation, any teacher found to be incapable or unfit to teach, immediately notifying the district agent of such dismissal; to expel from school any obstinately disobedient and disorderly scholar, and restore him on satisfactory evidence of his repentance; to exclude from the public schools, if deemed expedient, any unvaccinated children; to direct or approve in writing the expenditure of school money apportioned to inhabitants not included in any district; to prescribe the sum on payment of which persons of school age on territory ceded to the United States near a school district may attend school in that district; to determine what description of scholars shall attend each school, classify them, and transfer them from school to school, when necessary.

The committee, or supervisor, are further to make, at the annual town meeting, a written report of the condition of the schools for the year past, of the proficiency shown by the pupils, and of the success attained by teachers in their modes of instruction and government. A copy of this report is to be transmitted to the State superintendent, to whom also they are to make, on or before the 1st of May in each year, a statement of (1) the amount of money raised and expended in the town for public schools, designating what part is raised by taxes and what from other funds; (2) the number of school districts and parts of districts in their town; (3) the number of children of school age in each district on the 1st of April preceding; (4) the number of such on islands or other parts of the town not included in any district; (5) the whole number and average number of scholars attending the summer schools, the same as regards the winter schools, and the number of different scholars attending school two weeks or more in the preceding year, as shall appear from the teachers' registers returnable to the committee; (6) the average length of summer schools and winter schools in weeks, and the same for all the schools for the year; (7) the number of male and of female teachers employed during any part of the year in public schools; (8) the wages of male teachers per month and of female teachers per week, exclusive of board; (9) the number of scholars existent on the 1st day of April preceding this return.

For the performance of these duties, committee men and supervisors are allowed $1.50 per day and necessary traveling expenses.

School agents.—Elected at the annual town or district meeting for terms of one year each, the school agent has, in his school district, the oversight of school buildings; provides them with fuel; sees that they are kept in due repair; procures insurance on them, if the district so direct; returns to the assessors and to the town school committee, in the month of April, a certified list of the resident children of school age; and by authority from the town, at its annual meeting, may employ the teachers for the district schools, instead of the superintending school committee. Before the expiration of his term of service, he must return to the municipal authorities an account of his official expenditures, with the necessary vouchers therefor.

SCHOOLS.

The schools of the State are of every grade, from primary to high, about 200 free high schools being sustained, together with two State normal schools, two others aided by the State, and an agricultural and mechanical college. In 1875, the superintendent reported 4,180 school houses in 3,953 school districts and 368 parts of districts, with an average attendance of 100,641.

SCHOOL FUNDS.

The permanent school fund of the State, derived mainly from the sale of school lands, amounted in 1875 to $400,558. The interest of this fund, at the rate of 6 per cent., is annually appropriated to the support of common schools among the towns, according

to the number of school children therein between 4 and 21 years of age who have been enrolled in schools and have attended for at least two consecutive weeks during the year.

An additional annual income for this purpose is derived from a tax of a quarter of 1 per cent. on the deposits in savings banks, from a State tax of 1 mill on the dollar of all property, from fines and forfeitures for infraction of the school laws, from local taxes of not less than eighty cents for each inhabitant, from pay for the tuition of non-resident school children, and from the interest of certain local funds. The amount from these various sources aggregates over $1,300,000.

ELEMENTARY INSTRUCTION.

EDUCATIONAL PROGRESS IN TWENTY YEARS.

A letter from State Superintendent Johnson in the New England Journal of Education for March 21, 1875, gives the educational statistics of the State for the years 1854 and 1874, from which he makes the deductions of progress for twenty years: (1) A substantial increase in the sinews of educational warfare, the funds for schools; (2) increased co-operation of town and State in providing school revenues; (3) better as well as more numerous school houses, value $870,000 against $3,000,000; (4) wages of teachers doubled; (5) local supervision trebled; (6) the normal school element gradually working upward; (7) an extension of academic privileges to the producing classes at the expense of towns and of the State; (8) popular judgment inclining to favor the town system, discarding the district system; also inclining to favor free text books on the town plan.

County supervision and teachers' institutes, he admits, have been abolished; but accounts for these backward steps thus: "The former, through inefficiency of a few of 'the sixteen' and political apprehensions; the latter, through non-attendance of teachers." Maine, he thinks, still believes in efficient supervision and professional training of teachers, though without two important means to these.

COMPULSORY LAW.

The compulsory school law enacted by the legislature of 1874–'75, Mr. Johnson in the same letter says, was not a forced measure, but originated in the senate and passed to its third reading by a majority surprising to friends and astonishing to opponents, indicating that the people of Maine subscribe to the doctrine that, if the State compels them to *pay* for the education of youth, the State is under obligation to fulfil her duty and *secure* that education to every child.

RIGHTS OF PARENTS AND TEACHERS.

The supreme court of Maine has decided, in a case where a teacher punished a boy for throwing stones at a teamster while on his way home from school, that either a teacher or parent may correct a child for misconduct on the way between home and school. In school the teacher's authority is absolute; at home, the parents'; to and from school the jurisdiction is concurrent, and both teacher and parents must keep punishment within reasonable limits as to severity.—(Wisconsin Journal of Education, July, p. 311.)

ADORNMENT OF A SCHOOL ROOM.

A specimen of what may be done to make a school attractive is shown in the change that has been wrought in the appearance of the grammar school-room in Augusta. Four or five years ago its walls were bare and uninviting. Now the room, by its attractiveness, makes study a delight and the hours spent in the school-room pleasurable as well as profitable. Besides a fine-toned piano, pictures, flowers, and plants unlock the door to a new avenue of thought and feeling. Over the entrance doors of the school-room are black-walnut shelves, supported by fancy brackets, on which rest, respectively, large busts of Washington and Lincoln. Over the clock above the door of the principal's room is a horseman, in bronze, with a fiery, untamed steed. On the wall, back of the desk, are illuminated mottoes, "Lost time can never be found again" and "God bless our school." On opposite corner brackets stand "The Harvesters," in bronze. On the side walls of the room are large and elegant steel engravings representing "The Departure of the Pilgrims," "The Landing of the Pilgrims," "Pharaoh's Horses," "Saved from the Wreck," "Washington Crossing the Delaware," "Full Practice." On the easterly end of the room hang chromos artistically arranged and representative of some of our most interesting scenes. Taste is thus cultivated by good models, and eye and intellect alike receive impressions likely to abide.—(New England Journal of Education, June 26, 1875, p. 209.)

KINDERGÄRTEN.

Two of these, both in Bates street, Lewiston, make return for the session of 1875–'76, presenting, in each case, a conductor without assistants, and in one instance 20, in the

other 25, children in attendance. Both have the usual Kindergarten apparatus and occupations; both receive children of from 4 to 7 years of age and hold daily sessions of five hours, weekly ones of five days, and semi-annual ones of twenty-six weeks. Both claim, too, that the children are strengthened physically and mentally by the Kindergarten exercises; that ideas of order, time, beauty, and neatness are developed; that the ability to express their own thoughts and to understand the thoughts of others as expressed to them is increased; and that when admitted to schools of higher grade, they get on better and more quickly than other children.—(Returns to Bureau of Education, February, 1876.)

CITY SCHOOL SYSTEMS.

PORTLAND.

Officers.—A superintending school committee or board of education and a superintendent of city schools.

Statistics.—Estimated present population, 36,000; number of school age, (4–21,) 10,101; number enrolled in public schools, 5,275; in private and parochial, 1,337; average daily attendance, 4,268. Number of days that schools were taught, 230 in the high school, 210 in primary and grammar schools; sittings for study, 5,695. Number of teachers employed: males, 9; females, 102; total, 111; wages of these, from $400, in primary schools, to $900, $1,800, and $2,500 in high school. Special teachers of music, drawing, and penmanship, $1,000 to $1,200.

The receipts for city schools have been: from State apportionment, $17,925.90; from local tax, $83,155; total, $101,080.90. Expenditures: for furniture and apparatus, $50; for supervision, $2,500; for teaching, $59,150; for supplies and current expenses, $21,505; total, $83,155. Expenditure *per capita* of average daily attendance, $18.28.—(Return to Bureau from Superintendent E. Hunt. No printed report.)

TRAINING OF TEACHERS.

FUNCTIONS OF THE NORMAL SCHOOLS.

The act establishing normal schools in Maine prescribes that they shall be thoroughly devoted to the work of training teachers for their professional labors; that the course of study shall include the common English branches, in thorough reviews, and such higher branches as are especially adapted to prepare teachers to conduct the mental, moral, and physical education of their pupils; that the art of school management, including the best methods of government and instruction, shall have a prominent place in the daily exercises of the school.—(New England Journal of Education, February 6, 1861.)

EASTERN NORMAL SCHOOL, CASTINE.

The instructors at this school in the fall of 1875 were 7 resident and 9 non-resident; the students attendant for 1874–'75: males, 100; females, 150; the graduates for that year, 12, all of whom engaged in teaching. Principal Fletcher, in his report of the progress of the school at the close of the eighth year, stated that it had registered more than 800 pupils and graduated 100, of whom 96 had become teachers, while of the whole 800 it was believed that 600 were or had been such. For several years 40 per cent. of the pupils attendant had been males, a proportion much larger than is customary in New England normal schools. Drawing and vocal music are taught, and students have the aid of a model school in their training for their future profession. The apparatus and library have been somewhat increased, the latter now numbering 1,200 volumes, of which 75 are pedagogical. One educational journal only is taken. The course is three years.—(New England Journal of Education, June 5, 1875, and return to Bureau of Education.)

WESTERN NORMAL SCHOOL, FARMINGTON.

Instructors here, 7, all resident; students for 1874–'75: males, 60; females, 174; graduates, 12; all engaged in teaching. Drawing and vocal music form a part of the course of instruction, which extends through two years, while students in chemistry have the aid of a laboratory, and students in natural philosophy the means of illustration by apparatus. The library contains about 1,000 volumes, 65 of which are pedagogical. Five educational journals are taken, and practice in teaching is secured by means of a model school, in which those about to graduate take occasional classes during the last term of their school life, exercising upon them the theories of teaching they have received. During the closing examination, also, the students both here and at Castine have to give public exhibitions of their ability as teachers by drilling classes in the model schools.—(Return to Bureau of Education and New England Journal of Education, May 29, 1875, p. 261.)

OTHER NORMAL SCHOOLS.

The normal department of the Maine Central Institute, at Pittsfield, reports 2 resident instructors in that department; 2 male and 22 female students in a two years'

course; no graduates yet. Drawing is taught, with instrumental music, and there is a small chemical laboratory, but no philosophical apparatus. The only library is a comparatively small one, belonging to the seminary in general. The teachers take two educational journals and have several works on pedagogics.

The aim here is said to be (1) to give thorough instruction in the common branches and, to a limited extent, in such other branches as are deemed best adapted to mental discipline, and (2) to fit young men and women to teach by requiring them at each recitation to express in appropriate language what they have learned, and by requiring each student to conduct recitations, subject to the criticisms of classmates and teacher.

The normal department of the Oak Grove Seminary, Vassalborough, reports 1 resident and 2 non-resident instructors; 15 male and 25 female students in a three years' course; 10 graduates in 1875, of whom 8 engaged in teaching; drawing and vocal music taught, and a chemical laboratory, a philosophical apparatus and a gymnasium possessed. No model school.—(Returns to Bureau of Education and catalogue of Maine Central Institute for 1875.)

TEACHERS' ASSOCIATIONS.

A letter from Hon. Warren Johnson, in the New-England Journal of Education, February 20, 1875, says the teachers in the city of Augusta have formed a teachers' association, and hold meetings on the first Tuesday evening of each month, and special meetings subject to the call of the president or secretary. The several branches taught in the schools, the methods of instruction, school government, and kindred matters are made subjects of discussion.

The report of the school committee of the town of Orono states that such meetings were held there also for some time, but that the attendance grew less and less, till finally these gatherings—almost indispensable to the success of young teachers, and valuable to all—were discontinued. The hope is expressed, however, that the next corps of teachers will be able to re-establish and maintain them at least once a month.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The Maine department of the New-England Journal of Education for January 22, 1876, contains the following statement respecting these schools in the various towns: "The State superintendent of schools has received returns from 143 towns, in which nearly 160 free high schools have been held the past year, and there will probably be returns from 10 or 15 more, making about 160 against 142 last year. The towns thus far reported will receive about $37,000 from the State treasury and will pay about $50,000 on their own account. The whole amount paid by the State will be about the same as last year, $45,000. Reports indicate an increasing interest in the free high school system and a growing conviction of its great value to the State."

The report of Superintendent Johnson furnishes the following additional facts on this subject: The free high school system has been in operation three years. During that time such schools have been held in 210 of the 421 towns in the State. There have been 937 terms aggregating 9,973 weeks, with an attendance of 38,389 pupils, at an entire cost of $320,112. Of this cost the State has paid $107,237. During the year ending December 1, 1875, there have been kept 345 terms and 3,646 weeks of such schools in 156 different towns, during which terms 13,275 pupils have been in attendance. The cost for the year has been $116,308, of which the State has paid $38,133. The influence of these schools cannot be easily estimated. Besides their direct effect upon the pupils attending, in opening to them sources of culture not otherwise attainable, they have exerted a powerful influence upon the common schools. They have furnished these schools better teachers, and have served to inspire the pupils with new zeal in their work, in their strife to prepare themselves for admission to these schools of higher grade.

One city high school, that of Portland, stands prominently forth among the public schools, having had, according to a report in the New-England Journal of Education for February 27, 1876, an attendance of 416 pupils during the winter of 1874–'75; average attendance, 406; per cent. of attendance on enrolment, 98. On a scale of marking from 0 to 10, the average scholarship was 8.891, that for girls being 9.217 and that for boys 8.455.

OTHER SECONDARY SCHOOLS.

One private school for boys, 2 for girls, and 21 for both sexes, 24 in all, report for the year past 79 instructors and 951 pupils, 329 of whom were in classical studies and 256 in modern languages, 112 specifically preparing for a classical course in college and 7 for a scientific course. In 12 of these schools drawing was taught, vocal music in as many, though not in all cases the same; instrumental music in 14, while in 11 there was some apparatus for chemical experiments and in 18 some for illustration of natural philosophy. In 12 there were libraries of 150 to 2,270 volumes and in two others collections of books numbering 20 and 50.

Three other schools with advanced departments for the preparation of youth for college report 12 instructors and 250 pupils, of whom 82 were in classical studies preparatory to college and 3 in scientific, making a total in all these institutions of 91 teachers and 1,201 pupils, of whom not less than 670 are engaged in studies which lead up toward the highest class of culture. For further details see Tables VI and VII in the Appendix.—(Returns to Bureau of Education, 1875.)

DENOMINATIONAL ACADEMIES.

Among the above mentioned schools is the East Maine Conference Seminary, an influential institution with 6 teachers and 173 pupils. Then from other sources we have information of the Westbrook Seminary, Deering, under control of the Universalists, for both sexes, giving not only a good foundation for a collegiate course, but also a fair practical education for any ordinary business; of a new Congregational school at Hallowell, meant to act as a feeder to Bowdoin College; of the four schools which the Baptists are endeavoring to endow for preparing young men and women for Colby; and of the Maine Wesleyan Seminary, at Kent's Hill, with property to the amount of $157,000, and with a normal and a theological department in addition to the academical. This, as elsewhere mentioned, reports, in a return for 1875–'76, 760 pupils in all departments, and in its catalogue for 1874–'75 shows 57 in its classical course and 62 in a scientific course, both courses being of four years and both including Latin to a fair extent, while the classical course adds Greek and the scientific adds French and German to the Latin.

PREPARATORY DEPARTMENTS OF COLLEGES.

Forty-eight students in the preparatory department of Bates College are reported in the college return for 1875, the report stating that 43 were preparing for a classical collegiate course and 5 for a scientific course.

SUPERIOR INSTRUCTION.

REGULAR COLLEGES.

Bowdoin College, Brunswick, (Congregational,) the oldest of the colleges of Maine, having succeeded in arranging with her rebellious students the difficulty of 1874 respecting military drill, seems to have proceeded quietly through the session of 1874–'75. The close of that session was made memorable by the celebration of the fiftieth anniversary of the notable class of 1825, and by the recital by Henry W. Longfellow, one of its members, of his noble poem "*Morituri salutamus*," written for the occasion.

At the meeting of the boards several important changes were made in the positions of different members of the faculty and one new professor was elected.

An effort made during the year to raise by subscription an additional $100,000 for the fuller endowment of the college is said to have been successful, and about $30,000 on endowment and scholarship account to have been paid in.

The library now amounts to 18,760 volumes, with 4,400 unbound pamphlets; those of the two students' societies to 13,100 volumes.—(Various numbers of New-England Journal of Education and other sources, with return from the college for 1875–'76.)

Bates College, Lewiston, (Free Will Baptist,) has, like Bowdoin, been endeavoring to increase its endowment fund, Mr. B. E. Bates, of Boston, after whom it is named, and who had given it $200,000, having offered it another $100,000 on condition that other subscribers should meet this with a like amount. The college return shows that at least $87,000 of this conditional sum has been pledged, and its friends will surely not let the effort fail when within $13,000 of complete accomplishment.

A course of lectures on English history, by Professor C. Howard Malcom, D. D., was among the additions to the course for 1874–'75.

A high standard of admission prevails here, the requirements, additional to English studies, being 9 books of the Æneid, Sallust's Catiline, 6 orations of Cicero, Harkness's Latin Prose Composition and Latin Grammar, with 3 books of the Anabasis, 2 of the Iliad, and Goodwin's or Hadley's Greek Grammar. Nine New England academies act as preparatory schools for the college, the chief being the Nichols Latin School, of Lewiston, owned and managed by the college authorities, and preparing students of both sexes for the freshman class in a course of study covering three years.

The library of the college contains 3,685 volumes and 1,000 pamphlets, and is increased at an average yearly rate of 300 books and 200 pamphlets from a library fund of $6,000. Two students' society libraries have 560 and 490 volumes, and increase about 50 volumes annually.—(Catalogue of 1874–'75 and return for 1875–'76.)

Colby University, Waterville, (Regular Baptist,) reports an addition of $1,500 to its funds, $1,000 being for general purposes and $500 for its library. This has already 11,100 bound volumes, with 5,200 unbound pamphlets, and increases at an average yearly rate of 500 volumes and 300 pamphlets, mainly from the interest of a fund of $2,000 and an annual gift of $500 from Gardiner Colby, esq. A commodious reading room, well supplied with papers and magazines, is open to all the students.

An excellent feature in the instruction here is that a course of reading germane to the course of study is recommended and in part prescribed to the students, each professor preparing from time to time for his department a list of books, monographs, and essays, and supervising the reading of the students therein. "The object of this is to save the students the loss resulting from aimless and desultory reading, to train them in habits of exact investigation, to broaden their views, and inform them respecting the literature of the subjects which may be occupying their attention in the class room." A written analysis is required from each student of the prescribed part of this course of reading.

The Waterville Classical Institute, under the control of the trustees of the university, serves as a preparatory department to Colby, graduates of the institute being admitted to the university on the certificate of the principal that they have completed the course and attained an average scholarship of at least 70 per cent. in each study.

Colby, as well as Bates, admits young ladies.—(Catalogue for 1875–'76 and return for the same.)

COLLEGES FOR WOMEN.

The Maine Wesleyan Seminary, Kent's Hill, besides a seminary scientific course, a seminary classical course, a normal course, a department of drawing and painting, a commercial department, and a music department, has a college course for ladies, from which 5 young ladies appear to have graduated in 1875. It reports, in all, 14 instructors and 760 students, of whom 19, according to the catalogue, belonged to the collegiate department in 1874–'75. The course in this department is of 4 years. To enter it, candidates must pass a satisfactory examination in English grammar, geography, outlines of history, arithmetic, algebra, Latin grammar, 2 books of Cæsar's Commentaries, 6 of the Æneid of Virgil, and Cicero's select orations. Being in, they study Latin, with other things, in the first two years, and French for the same period, then German till near the conclusion of the course. For French and German, however, Greek may be substituted, and be carried through the Anabasis and Iliad, Plato's Apology and Crito.—(Catalogue for 1874–'75 and return for 1875–'76.)

There is also, in connection with the Waterville Classical Institute, a four years' collegiate course for young ladies, in which appear 52 students. The course here, however, does not reach the standard of that at Kent's Hill, ending, in Latin, only a little beyond where the other begins.—(Catalogue of 1874–'75.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

Maine State Agricultural College, Orono.—"While the course of study here is especially adapted to prepare the student for agricultural and mechanical pursuits, it is designed that it shall be also sufficiently comprehensive to secure the discipline of mind and practical experience necessary for entering on other callings or professions. Five full courses are provided: a course in agriculture, a course in civil engineering, a course in mechanical engineering, a course in chemistry, and an elective course. Students in the elective course will pursue the required studies common to all the other courses, and may select from other courses and the elective studies to make up their full course."—(Catalogue for 1874–'75.)

Scientific department of Bowdoin College, Brunswick.—Applicants for admission here are examined in mathematics, geography, history, Latin, and English. The studies of the first two years are common throughout the department, and are intended to lay a broad and substantial foundation for all branches of subsequent study. In the last

two years they are arranged in distinct courses, in accordance with certain leading objects, such as the preparation for civil or mechanical engineering, for chemical pursuits, for banking and finance, &c.—(Catalogue.)

PROFESSIONAL.

Theology is taught in the Bangor Theological Seminary, Bangor, and in the theological school of Bates College, Lewiston, the former Congregational, the latter Free Baptist; three years in each course; the former an old and well-endowed institution, with a library of 15,000 volumes; the latter connected with a growing college and partaking somewhat of its life.

Medicine has its field of instruction in the Medical School of Maine in connection with Bowdoin College. Candidates for the degree of doctor of medicine here must have devoted three years to their professional studies under the direction of a regular physician and have attended two full courses of medical lectures in some incorporated medical institution, the last course previous to graduation being at this school. They must also present evidence of good moral character and of having prosecuted their medical studies for the required term; must pass a satisfactory examination in all the branches of study in the school; must read and defend before the faculty a thesis or dissertation on some medical subject; and, if without collegiate education, must satisfy the faculty of their proficiency in Latin and in natural philosophy.—(Catalogue of college.)

SPECIAL INSTRUCTION.

STATE INDUSTRIAL SCHOOL, HALLOWELL.

The New-England Journal of February 6, 1875, contained a statement from State Superintendent Johnson that "the new industrial school building at Hallowell was dedicated Wednesday, January 27, with appropriate exercises. Ex-Governor Perham presided and gave an interesting historical address in relation to the institution. Addresses were also made by Governor Dingley, Speaker Thomas, Hon. J. L. Stevens, Judges Kingsbury and Baker, and others."

The board of managers elected Mrs. W. Currier, of New Sharon, as housekeeper, with a board of lady visitors from the chief towns of the State, and threw open the school for the admission of pupils, asking, however, for $1,000 more to complete the furnishing of the home.

PRISON TEACHING.

The same correspondent, in the same journal for February 27, wrote: "The educational effort at the prison"—what prison is not stated, but probably the State penitentiary—"under the charge of Mr. D. J. Stannett, proves very successful. Many convicts who three months ago could neither read, write, nor cipher can now do all. This is the more strange as Mr. Stannett sees each convict but once or twice a week, and then in the evening. The influence on the discipline of the prison is very great."

EDUCATIONAL CONVENTIONS.

STATE TEACHERS' ASSOCIATION.

The ninth annual session of the State Teachers' Association was held at Augusta Monday, Tuesday, and Wednesday, November 22, 23, and 24, 1875. There was a good attendance at Representatives' Hall at the opening exercises on Monday evening, when addresses of welcome greeted the teachers and an address on "The teacher's responsibilities, lights, and shadows" was given by Rev. George Forsythe, of Bucksport.

Tuesday the attendance was large, and the papers, 16 in number, awakened deep interest from the careful study and ability manifested in them. Mr. Mulcher's essay on "The present plan of study for graded schools" severely criticised the elaborate scheme of study laid down for model schools. In the lower grades of our schools such studies should be pursued as would give the child the most useful knowledge, as the greater number of pupils leave school before reaching the high school, and the object of the latter school should be to discipline the mind. His plan of study would be to attend to the perceptive faculties of the child in the earliest years, when liveliest, and cultivate the reflective later. The plan would give the child some knowledge of the principles of our State government and would reduce arithmetic to those matters which are practical only. Grammar would be confined to a few pages and leave out the rules of syntax. Drawing would have a place.

Mr. D. D. Patten, principal of the Portland High School, read a paper on "School hygiene," in which the necessity of proper ventilation and the means of securing it were referred to, and also the general inadequacy or the entire lack of means to secure it. The teacher in charge of the school-room should, especially in the colder months, exercise the utmost care that the resort to opening windows—often the only means at hand to obtain pure air in the room—does not cause more harm than the fault it is intended to remedy. Dr. Angus Smith has said "though foul air is a poison, we must not forget that a blast of cold air may slay like a sword." Occasionally, in the cold winter months, it may become impossible to secure warmth in the school-room sufficient for the comfort of the scholars. In such cases no considerate man will condemn the dismissal of the school rather than that the health of the pupil be imperilled. The hinderances to the pupils maintaining proper positions at desks, so as to avoid a rigidly upright and, on the other hand, a loose, lounging position at the desk, were briefly alluded to, as was also the apparent prevalence, among architects and committees of school buildings, of the impression that the pupil should be made for the school furniture, not the furniture for the pupil. The comfort of the scholar needful for successful study requires frequent change of position, involving of course more or less noise that may interrupt the quiet of the room; but the judicious teacher, careful for the health as for the mental improvement of the victims of others' stupidity, will submit to the inconveniences rather than endanger their physical well being. Preferences were expressed for exercises unrestrained by exact rules and out of doors to any system of school gymnastics.

The third essay was delivered by President Allen, of the State College, on "Practical education." To a certain extent a good education for every student demands a general knowledge of all studies, that the mind may be systematically developed; yet the field of knowledge is so widely extended that it is impossible to be proficient in every branch of study. Some discrimination is necessary: all studies are not equally important and the same studies are not of equal value to all students. There are two ways of procedure in the work of education. The one seeks to discipline the faculties by directing the mind to abstract truth without regard to useful application. The other course seeks for the attainment of knowledge which is available for good in the duties of life. A practical education is not confined to those studies that have an exchange or money value, but embraces anything that fits the individual to be useful to himself or others and makes him fruitful in good works. Knowledge is to be sought not for its own sake, but for the good it will do to ourselves or to others. Practical education is not a mere business or professional culture. Sharpening one's faculties in a one-sided development, without any broad basis of general intelligence, has a tendency to produce narrow, sharp men. The great mass of the people must be educated for the industries of life. The studies should be those which will prepare one most fully for productive employment. In the method of study, that course is to be adopted which will best secure good results. From the object lessons of the Kindergarten, through all the exercises of public schools, to the tasks assigned by the college professor in the laboratory, all successful teaching of science is practical. In literature there is need of practice, that grammar may not be a judge of words alone and that rhetoric may not be confined to names of tropes and definitions of style and taste. In natural history we can hardly imagine live teachers listening to memoriter recitations from a learned text book. They place the objects themselves, and not the description, in the hands of the pupils, training the perceptions to notice the exact outlines, the minute peculiarity, the full details; training the judgment to compare, to arrange, to classify; to train

the reason to infer with certainty; to train the imagination by steady flight; to read the very thoughts of the Creator.

Mr. R. Woodbury, of the Farmington Normal School, read an excellent paper on "Why have we so many poor teachers?" He very soon told the audience why, as is shown by the following: In an examination of 50 teachers it was found that 12 per cent. of the number began to teach under 15 years of age, 24 per cent. less than 16 years of age, 64 per cent. less than 17, and 74 per cent. under 18 years of age. Nearly half of the 50 never attended any other school than the town school and but 5 had read any work on practical teaching. To remedy the evil of bad teachers, he would have no person allowed to teach who was not 18 years of age. He would have them obliged to take a course of special training. Second, he would have a rigorous system of examination and certification of teachers. Mr. Woodbury both criticised and satirized the present practice of examining and certificating teachers. It was the bane of our schools. A few did the work well, but most in so wretched a manner as not to save the whole from bad odor. He favored a county board, chosen by town committees, who shall examine all the teachers. He would have longer sessions of schools, which could be done by the abolition of the district system or the consolidation of districts.

The fifth paper was read by Mr. J. M. Hawkes, of the Pembroke High School, on "Drawing in the public schools." The essay was of interest and practical value.

Professor Carmichael next addressed the association on "Science-teaching." He said that the text books are imperfect. The only way to teach natural sciences profitably is to teach practically, by illustrations. He then called attention to a circular issued by himself and Professor Robinson, of Bowdoin College, in which it is proposed to give a course in chemistry and mineralogy, extending through six weeks, beginning July 17, 1876, at a cost of about $20. Those who take this course will have the advantages of laboratory instruction.

N. A. Luce was elected State editor of the New-England Journal of Education, and the president of the association a member of the advisory board. State Superintendent Johnson urged the claims of the Journal, and a hand vote showed that most of those present patronized it.

In the afternoon a paper of interest on "School discipline" was read by A. F. Richardson, principal of the high school in Bridgton, who claimed that the teacher ought to be able to govern himself and keep himself pure from all defilement. Then the discipline of the school-room will be easy.

Perhaps the most entertaining and interesting paper of the series was then read by Professor A. H. Davis, of Bowdoin College, on "Juvenile reading." He took the ground that English literature was not properly taught in our schools; that a portion of the time could properly be given up to the best English classics without interfering with the regular studies.

Professor M. C. Fernald, of the State College of Agriculture, read a paper on the "Relation of education to labor," showing the necessity of training those who are to work with their hands; that education is as much a help to these as to those who crowd the learned professions. The afternoon session closed with a brief paper by Mr. A. H. Kelley, of Belfast, on the "Relation of the teacher to his employer."

The evening's exercises began by the reading of a practical and argumentative paper on "The qualification of teachers," by D. L. Smith, principal of the Johnson School in Topsham. He took high ground, and held up an exalted standard for the teachers to follow.

Rev. Thomas Hill, D. D., of Portland, advocated, in an able and scholarly paper, the teaching of natural history in the primary schools, and even to the youngest scholars. Teaching through the eye, as form, color, and substance, is the most effective teaching. He asserted that children should be taught strictly scientific truths.

A. P. Marble, superintendent of schools in Worcester, Mass., presented as the essay of the evening "Thoughts in regard to the representation of Maine's educational work at the Centennial."

At the close Mr. Johnson, State superintendent of schools, gave a reception to the members of the association at his house.

The closing session of the association was held at the Representatives' Hall, Wednesday morning, November 24. The following officers were chosen for the ensuing year: President, Samuel W. Libby, of Orono; vice-president, Albro E. Chase, of Portland; secretary and treasurer, W. O. Fletcher, of Warren; executive committee, Thomas Tash of Lewiston, D. D. Patten of Portland, Burleigh Pease of Bangor.

Resolutions were adopted as follows:

Acknowledging encouragement in the work, as attested by the large attendance, showing substantial progress.

Favoring the establishment of a teachers' exchange under the supervision of the State superintendent, where application for teachers may be made.

That the approching Centennial should excite every educator to personal effort, so that the State may be well represented.

Recognizing the value of the services of the National Bureau of Education and asking for the establishment of an independent Department.

That the nation should assume the authority in educational matters so far as to order a free public school system in all the States.

Superintendent Johnson, chairman of the committee on Centennial, reported a plan for the educational exhibit from the State, of which the following is a synopsis: First. A brief statement of the present public school system. Second. Brief history of the growth of the same. Third. An educational map of Maine, which will be a map of the State surrounded by two margins, the outer for the representation of the public school system and the inner for academies, seminaries, colleges, and all that relates to superior education. In these margins will be pictorial representations of the towns and institutions contributing to the exposition. Under each representation will be brief statements and references to cabinets and albums exhibited. Fourth. A series of municipal exhibits in cabinets 2 by 3 feet, embracing courses of study, methods of instruction, text books, pupils' work, such as drawing, writing, examination papers, and graphic representations, numbered so as to correspond with the pictorial representation on the map. Fifth. Photographs of public school buildings, public school educators and teachers, in folios and albums, with foot notes, &c. Sixth. Same of higher seminaries and colleges, presidents, and professors, same as above. Seventh. Miscellaneous drawings, school literature, plans for warming, lighting, ventilating, hygienic regulations, &c.

The subject of "Industrial art education" was discussed in an interesting paper by B. W. Putnam, of Jamaica Plain, Mass., followed by a paper on "School-house ventilation," by W. H. Pennell, of Portland. The association then adjourned to such time and place as the executive committee may determine.

This was the most fully attended and most profitable session ever held by the association. Every part of the State was represented by leading teachers and educators, who returned to their labors with new zeal and courage. A special feature of the session was an exhibition of drawings, maps, &c., executed in the schools of Augusta, Lewiston, Eastport, and Pembroke, in the normal school at Castine, and the engineering department of Bowdoin College. This exhibition gave new interest to the able papers on "Drawing" and "Industrial art education," read before the association by Messrs. Hawkes and Putnam.

CHIEF SCHOOL OFFICIAL IN MAINE.

Hon. WARREN JOHNSON, *State superintendent of common schools, Augusta.*

MARYLAND.

SUMMARY OF STATISTICS.

SCHOOL POPULATION AND ATTENDANCE.

Number of youth between 5 and 20 years of age	276,120
Number of boys of legal school age, (5–20)	138,813
Number of girls of legal school age	137,307
Number of pupils enrolled in schools	142,992
Average monthly enrolment	99,382
Average daily attendance	69,259

TEACHERS AND TEACHERS' PAY.

Number of men teaching public schools	1,129
Number of women teaching public schools	1,594
Total	2,723
Number necessary to supply the schools	2,603
Average salary of teachers per month, (men and women)	$41 73

SCHOOLS.

Number of schools in Baltimore City, 125; in the counties, 1,721	1,846
Increase on the preceding year	44
Average duration of school in days	187

INCOME AND EXPENDITURE.

Income.

Income from State tax	$499,563 96	
Income from local tax	808,350 75	
Total from taxation		1,307,914 71
Interest on permanent fund		53,131 84
Income from other sources		15,000 00
Total income		1,376,046 55

Expenditure.

Paid for sites, buildings, and furniture	272,539 43
For salaries of superintendents	25,440 00
For salaries of teachers	1,035,754 82
For miscellaneous or contingent expenses	307,313 52
Total	1,641,047 77

PER CAPITA EXPENDITURE.

Expenditure in the year *per capita* of school population	$5 01
Expenditure in the year *per capita* of school pupils enrolled	9 68
Expenditure in the year *per capita* of average attendance	19 99

—(Special report from Hon. M. A. Newell, State commissioner of schools, for 1874–'75, and printed report for the same period.)

The State board give, in their report for 1875, a comparison of the statistics of 1866, the first year of the present school system, and of 1875, the tenth year, thus:

RESULTS ACHIEVED IN TEN YEARS.

ATTENDANCE.

	1866.	1875.
Total number of different pupils	64,793	100,414
Per cent. of increase, (nearly)		55
Highest number enrolled in one term	48,395	81,043
Per cent. of increase		67

SCHOOL INCOME.

Received from State, as State school tax, free school fund, and academic fund	$369,193 34	$336,110 11
Per cent. of decrease, (nearly)		9

	1866.	1875.
Amount received from county school tax	$107,534 93	$368,962 39
Per cent. of increase		2.43
Total receipts of public school moneys from all sources	596,025 86	922,000 17
Per cent. of increase, (nearly)		54.7
EXPENDITURES.		
For teachers' salaries	388,239 54	609,035 07
Per cent. of increase		57
For building, repairing, and furnishing school-houses	20,078 41	105,175 65
Per cent. of increase		423
Total expenditures for public school purposes	566,866 60	924,108 95
Per cent. of increase		63.7

—(From report of State board of education, 1875, p. 8.)

Remarking upon these comparative statistics, the board say: "The increase in the number of pupils attending school is much greater than the increase of population during the decade; and the increased expenditure is out of all proportion to the increase of wealth of the State. Taken together, they are an indication of the popularity, and, indirectly, of the efficiency of the public school system. The year 1875 was marked by stagnation and depression in almost every department of business, but the schools do not seem to have suffered, except, perhaps, in having made less of an advance over the previous year than they might have done under more favorable circumstances. The symptoms, on the whole, show healthy life and vigorous growth, with prospects of continued progress. With only two exceptions, there has been an increase in every item of both receipts and expenditures."

SCHOOL SYSTEM OF THE STATE.

CONSTITUTIONAL PROVISIONS, ETC.*

Neither the charter granted by Charles I to Lord Baltimore, in 1682, nor the State constitution of 1776, nor its amendments in 1812 and 1835, made any provision for free schools. Such schools were, however, by act of the colonial general assembly in 1694 directed to be established, and in a few districts were, to some extent, sustained for nearly thirty years by an export duty on furs, beef, bacon, and tobacco, and an import duty on liquors. In 1723, these schools having practically come to nothing, an act was passed directing the establishment of a school for each county, to be governed by a board of trustees in each case, and to have each a hundred acres of land attached for the use of the schoolmaster. They were to be further sustained by an impost on pork, pitch, and tar imported by non-residents, and on tobacco exported, the masters to receive £20 a year. In 1728 it was ordered that these masters should teach gratuitously as many poor children as the visitors should see fit to direct. How long and how far this was enforced does not appear. Other attempts in the same line were made at different periods, and in 1823 it was made a rule that each school, academy, or college receiving money from the State should, for each $100 received, afford tuition and school books free of charge to at least one poor child. A subsequent examination showing that this had been imperfectly complied with, the State allowance was withdrawn from these schools and colleges in 1825, and a system of public instruction, meant to include all the youth of the State, was inaugurated. This system—providing for a State superintendent, 9 county commissioners, and 18 inspectors of schools, to be appointed by the levy courts—formed the basis of all subsequent ones; but, as it was made dependent upon somewhat uncertain revenues, and was to be operative in any county only on the vote of the people, it had the elements of a fatal weakness in itself, and went to destroy existing schools without assurance of others in their stead. Such as it was, however, it worked, with some modifications, till 1864, when a new State constitution was adopted, providing for a good free school system, uniform throughout the State, with schools kept open in each school district for at least six months in the year, with arrangements for their support by an annual tax of not less than 10 cents on the hundred dollars, and for the formation of a permanent school fund by a further annual tax of 5 cents on the hundred dollars. A State superintendent of instruction, State board of education, and county school commissioners were to have the general oversight of schools under this system. With some changes as to officers and their titles, as to the grades of schools, schools for colored children, and the amount of taxation for the schools, the system thus outlined has continued till the present time.

PROVISIONS OF THE SCHOOL LAW.

The public school law of Maryland, passed at the January session, 1872, as amended at the January session, 1874. By authority of the State board of education.

* Constitutions of 1776–1867; Rev. Ethan Allen's Compend of Early Acts.

OFFICERS.

Educational matters affecting the State at large are intrusted to a State board of education. Such as affect a county are under the control of a board of county school commissioners. Such as affect only a school district are under the supervision of a board of district school trustees.

The State board consists of the principal of the State Normal School, the governor of the State for the time being, and four persons appointed by him with the concurrence of the senate at every regular session of the general assembly. The county boards are composed of three persons, or, in counties having more than a hundred schools, of five persons, appointed by the judges of the circuit courts and serving for two years from the 1st day of January next succeeding their appointment. The district school boards are also composed of three members, who are appointed by the county school commissioners at their first meeting in May of each year.

POWERS AND DUTIES OF SCHOOL OFFICERS.

These, as defined by the present school law, are as follows:

The State board has the general care and supervision of the public schools; is the official adviser of the county school boards; enacts by-laws for the administration of the public school system; interprets the school law; decides controversies and disputes that arise under it; examines candidates for the office of county examiner, when asked to do so by a county school board, and gives a certificate of qualification when satisfied that it is deserved. It is required to hold regular meetings four times a year and special meetings as occasion may require; and, for expenses incurred in attending these meetings and obtaining any needed clerical assistance, may draw, through its president, from the State treasury, a sum not exceeding $1,000 annually. It may grant to teachers of long experience and established reputation professional certificates, to be valid until revoked for cause; and may suspend or remove any examiner or teacher connected with the public school system for inefficiency, incompetency, or such moral delinquency as unfits him for his place. To insure uniformity in the statistical reports of the public schools, the board is required to issue blanks for the use of teachers and county boards and to demand that accounts be kept and returns made according to these forms. All schools and colleges receiving any State donation are to make report to the board by the 15th of November in each year, on such matters and in such form as it may require, for publication in the annual school report. The members of the board are *ex officio* the trustees of the State Normal School, and hold their meetings in its building. The principal of the normal school is *ex officio* a trustee of the State Agricultural College; acts as president of the board of education; to some extent performs the field duties of a State superintendent, and prepares and issues the annual report of the condition and progress of public schools.

The board of county school commissioners has the general supervision and control of the public schools within the county; builds, repairs, and furnishes school-houses; fixes the salaries of teachers; adopts, purchases, and distributes text books for the schools, which must contain nothing of a partisan or sectarian character; and performs such other duties as may be necessary to secure an efficient administration of the public school system; is *ex officio* trustee of all property, estates, effects, money, funds, claims, and State donations devoted to the use and benefit of the county public schools of every class. In case the apportionment of the State school tax and free school fund should not prove sufficient to meet the necessary expenses of the schools in any county, the county school board may have levied and collected within the county a local tax sufficient to make up the deficiency. In any instance in which the county has not been properly divided into school districts and full records of the boundaries of these have not been filed, the county board may appoint a committee and employ a surveyor to make such a division and duly describe the boundaries. It may also revise and alter an existing division, in case of need, making full description and record of such changes. Annually, by the 15th of November in each year, the board must make report to the State board, in such form as may be prescribed by the latter, of all matters relating to the schools and the educational interests of the county, and also, in the same month, must publish a statement of their receipts and disbursements for school purposes, with the amount of indebtedness remaining at the end of the fiscal year, and forward a copy of this to the State board.

The secretary of the county board, who also acts as its treasurer and as county examiner, is elected by it from outside of its own membership. It is his duty to examine candidates for the position of teacher in the public schools, in presence of at least one county school commissioner or district trustee, and to give to such as are found qualified, morally and intellectually, a certificate of the branches they are competent to teach. He must number and register such certificates according to their grade; may revoke any one at the expiration of six months, unless satisfied of the candidate's ability to teach and govern; and may, if satisfied on these points, issue a certificate available for three years from the date of issue. Of his examinations of teachers, due public notice must be given, and for the certificates issued no fee may be charged. At least three

times a year he must visit the schools in his county, if there are not more than 50, and twice a year if there should be more than that number, observing the methods of the teacher and giving him such practical suggestions as the circumstances may require; and also must, whenever possible, attend the public examinations of the schools, reporting quarterly to the county board the results of his observations. As secretary and treasurer, he must be present at each meeting of the board; must keep its minutes, conduct its correspondence, prepare its annual report, make strict account of all moneys received and disbursed by him, preserving and delivering over to his successor his minutes, accounts, and vouchers; may debate, but not vote on, any question before the board; and must devote his whole time to the duties of his office, reporting at the expiration of each year to the county comptroller how many months the schools of his county have been kept open.

The boards of district school trustees have the care of the houses and lands within their districts devoted to school purposes, attend to the preservation and repair of these under a certain degree of control by the county board; employ properly certified teachers, subject to confirmation by the county board; exercise a general supervision over the schools; visit them as often as may be; and cause instruction to be given in them for ten months in the year, if possible. They are to see that every school-house is provided with suitable outbuildings, and that it is not used for any other than public school purposes, unless by consent of the county board.

SCHOOLS.

The schools of the State system are numbered one, two, three, &c., of their respective election districts; are kept open six days of each week, and, if possible, ten months in each year; and are free to all white youths over 6 and under 21 years of age, special schools being held for colored children, which are to be kept open as long as the others, and are to be free to colored youth between 6 and 20 years of age within their respective districts.

In every district school must be taught orthography, reading, writing, English grammar, geography, arithmetic, history of the United States, and good behavior. Whenever deemed expedient by the trustees, algebra, book-keeping, natural philosophy, the Constitution of the United States, the constitution of the State of Maryland, and the history of the State, with vocal music, drawing, physiology, the laws of health and domestic economy, or any one or more of these, may be added. German may also be introduced, under order of the county board, where there is a considerable German population. Schools of different grades may be established in any district where more than a hundred children are attendant. High schools are yet few.

A normal school for white students of both sexes, as well as one for colored students, exists in Baltimore, and furnishes trained teachers for the State schools. There is also a State agricultural and mechanical college, free to all youth of the State qualified for it, while St. John's College, Annapolis, answers somewhat the purposes of a State college, and receives grants as such.

SCHOOL FUND.

The amount of the permanent school fund is stated by the president of the State board of education to be $350,370, all available.

ELEMENTARY INSTRUCTION.

ATTENDANCE.

The average attendance for 1874–'75, though larger than it has yet been, in proportion to the number of pupils, is still much smaller than it ought to be. In making comparisons, however, with the attendance in other States, it should be borne in mind that every name placed on the register remains there until the end of the quarterly term. If the register were corrected from week to week by the removal of the names of pupils not "belonging" the "average attendance" would be denoted by a higher figure, but the amount of instruction given would not be increased. From a somewhat similar cause the number of enrolled pupils appears small when compared with the number of legal school age. "School age" is an ambiguous term. In Maryland it may mean the ages between which children may enter school, viz, 6 and 21, or it may mean the ages according to which the school tax is distributed, (5 to 20,) or the age at which children, under ordinary circumstances, are expected to be at school, say from 6 to 15. "This last," it is remarked, "is the only proper standard of comparison in educational statistics; for it is absurd to assume, as is often done, that all young persons between 5 and 20 or between 6 and 21 ought to be in school, and to estimate the amount of preventable non-attendance on that basis."—(State report, pp. 10, 11.)

SCHOOL CENSUS.

It is much regretted that no accurate knowledge exists, either of the number of children in the State who are at school or the number who ought to be there. The

number who are enrolled on the registers of the public schools is known with reasonable accuracy; but it is neither known how many go to private and denominational schools nor how many attend none. It is suggested and recommended that a school census should be taken annually in the city of Baltimore, and biennally in the several counties, for the purpose of ascertaining the number of children between certain specified ages who do not attend school and the number who go to other than public schools.—(State report, p. 11.)

GENERAL VIEW OF EDUCATIONAL PROGRESS IN THE STATE.

The scholastic year may be regarded as one of satisfactory progress and of hopeful promise. As usual, the city of Baltimore leads the way. The county schools are following, with unequal steps, it may be, but in the right direction, and with a patient energy that will finally insure success. Some school-houses have been built during the year which for size, beauty, and convenience will rank with what were the best of city schools a few years ago. The addition of geometry and physiology to the studies in which all teachers must be examined before receiving a certificate has stirred up many old teachers to renew their acquaintance with the friends of their youth, and will have the effect of repressing the youthful ardor of immature candidates for teachers' salaries. There is a promise that some counties which have heretofore been able to keep the schools open but seven months and a half in a year will soon be able to make a full annual session of ten months. The closing of schools for four and a half months in summer is a severe loss to young children who cannot brave the severe weather of winter.

Finally, it is remarked that, "while the schools have done remarkably well, considering the time they have been organized and the money that is expended on them, yet, speaking absolutely, there is a large number of schools in the State that are very far behind the demands of modern scientific education, and even behind the necessary requirements of practical life."—(State report, pp. 30, 31.)

CITY SCHOOL SYSTEM.

BALTIMORE CITY.

Officers.—A board of public school commissioners of 20 members, 1 from each ward of the city, with a secretary, city superintendent, and assistant superintendent, not of their number.

Statistics.—Number of schools, 125, of which 4 are evening schools for colored pupils, 11 day schools for the same, 3 English-German schools, 6 evening schools for whites, 30 female primaries, 28 male primaries, 20 female grammar schools and 19 for males, 1 Saturday normal school, 2 high schools for young women, and a city college meant to serve at once the purposes of a high school and college for young men. Number of teachers, 706; of whom 6 are teachers of drawing; 5 of music; 16 in evening colored schools; 52 in other colored schools; 36 in English-German schools; 13 in evening schools for whites; 160 in female primary school and the same number in male primaries; 112 in female grammar schools; 107 in male grammar school; 5 in the Saturday normal school; 23 in the female high schools; and 11 in the city college. Number of pupils, 31,356; of whom 12,801, were pay pupils and 18,555 free; average attendance, 24,920; whole number of different pupils in school during the year, 42,589, exclusive of 2,487 promoted to the grammar schools and 489 promoted to the city college and high schools. Irregular attendance is said to be a matter of annoyance and regret, and the board see no effective remedy for it but in the adoption and enforcement of a compulsory system.

The total appropriation for the schools amounted to $773,526.15; the total expenditure on them $716,938.82; of which $577,005.19 went for current expenses and $139,933.63 for erection and repair of buildings, leaving an unexpended balance of $56,587.33, which will be applied to the completion of unfinished buildings.

School-houses.—The completion and dedication of the new building for the use of the city college during the year covered by the report is noted as a grand era in the history of the public schools of the city, the new edifice affording better and more elegant quarters than have ever been previously enjoyed. Another building for the use of grammar schools 3 and 14 and primary school 23, commodious, well-lighted, and ventilated, has also been finished during the year; while still another of like character has been nearly completed and will furnish accommodations for 1,000 pupils. Several others have been commenced and far advanced toward completion, going to meet the needs of important schools with facilities of which they have been too long deprived. But 7 other buildings are said to be still so overcrowded, so unfavorably situated, or so little under control of the board as to require many new erections to meet existent and prospective needs.

Schools.—Three English-German schools were opened during the year in rented buildings, and soon had in them 1,500 pupils, of whom all but 5 were pay pupils from

choice. Under teachers qualified to give instruction in both languages, they are said to be accomplishing excellent results. The 15 schools for colored children, under 68 white teachers, have had in them 3,562 pupils, classified in the same manner as in the primary and grammar schools for whites and taught in the same studies, as far as possible. In the primary and grammar schools generally there appear to be the usual success in arithmetic, something of the too frequent deficiency in spelling and other elementary studies, a fair success in music, and some advance in drawing. The female high schools and city college seem to be working well; but improvements in their course are suggested by the new superintendent, Professor H. E. Shepherd, who succeeds Mr. Creery, deceased. The nautical school proposed last year is still in the future. The Saturday normal class is said to be fruitful in good to the teachers and in promise to the schools, 147 pupils, mainly primary teachers, receiving in it regular weekly instruction in the theory and practice of teaching.

Public school library.—A decided addition to the means of improvement previously enjoyed is the establishment of a free library for the use of teachers and pupils in the public schools. Three rooms in the city college have been appropriated to the purpose, and $1,500 applied in the purchase of books. Around this small nucleus it is hoped that there may gather such aggregations of literary material as have brought up a kindred library in St. Louis from 1,500 to 40,000 volumes in a few years, and put large amounts of educational and general reading within the reach of scholars and teachers.—(Report of board and Superintendent Shepherd for 1874–'75.)

KINDERGÄRTEN.

Three of these schools, not apparently connected with the city school system in either case, report themselves from Baltimore. All have the Kindergarten gifts and occupations; have the children from three to four hours daily in the schools for five days of the week; admitting them in one case at from 3 to 8 years of age, in another from 4 to 8, and in the third from 3 to 7, and retaining them, in either one continuous session or in four successive ones, from 37 to 48 weeks. The teachers have respectively 20, 11, and 30 pupils each under them; and each school claims, as the results of its instruction, a harmonious development of the physical and mental capacities, a great quickening of the intellect, and an improvement of the taste for beauty, order, &c.—(Returns to Bureau of Education, 1875.)

TRAINING OF TEACHERS.

STATE NORMAL SCHOOL.

This school was established under the school law of 1865, and was opened in January, 1866. On the first day there were 10 students; at the close of the session the number was 48. In the nine following years the enrolment was 129, 137, 144, 170, 163, 162, 146, 174, 207, respectively. The whole number enrolled during the ten years is 993. Of these, 197 are on the roll of the present scholastic year. Of the 796 remaining, 511 have fulfilled or are now fulfilling their contract to teach in the public schools of the State. The remainder, about 28 per cent. of the whole, consists chiefly of those who, having entered without suitable preparation, were unable to keep up with the work of the school, and showed no capacity for teaching and very little for learning. As a rule, with hardly an exception, every student who attended school as long as one year and was possessed of fair abilities afterward became a teacher. The whole number of graduates is 194, of whom 169 are ladies and 25 gentlemen. All the ladies became teachers but 3 and all the gentlemen but 2.

The course of study has been somewhat enlarged and the qualifications of graduates have been slightly raised from year to year. During the first four years there were two classes of graduates, primary and grammar school, but in 1870 the primary grade was dropped and all graduates were required to take the advanced course. The further extension of the curriculum will depend on the preparation of students for entrance. It was not and is not thought advisable to make the course larger or higher than what an ordinarily well prepared and industrious student can accomplish in two years. Nothing is required from candidates for admission beyond what every district school professes to teach, but a large number of them have given evidence of having been very badly taught. The normal school has done much to raise the standard of education in the primary schools of the State, and now they are beginning to react on the normal school. Not until the former do their whole work well can the latter do the best service of which it is capable.

The new building will probably be ready for occupation in March, and the school will feel in September the good effects of the additional facilities thus provided. The house is of an L shape, fronting 120 feet on Carrollton avenue and 105 on Lafayette avenue, with a tower 170 feet high, at the intersection of the two streets. It contains two class rooms, reception, assembly, apparatus, lecture, laboratory, library, cabinet, gymnasium, cloak, and retiring rooms, an office for the State board of education, and a residence for the principal of the school.—(Report of principal, in State report, pp. 16–19.)

TEACHERS' INSTITUTES.

Since the date of the last annual report, teachers' institutes were held in 14 counties, in one of which teachers of another county joined. The institute was omitted in one county on account of the meeting of the State Teachers' Association there; in another, on account of the sickness of the examiner; and in other counties, for reasons not reported. In Baltimore County there are four meetings of the Teachers' Association in the year, which more than make up for the annual institute.

The good results of these institutes have been as marked in Maryland as in any other State of the Union; and so long as two-thirds of the new teachers every year are selected from those who have had no experience and no training and who can show no fitness for the work except a knowledge of the branches taught sufficient to entitle them, in the judgment of charity, to a low grade certificate, the institutes must be a necessity.—(Report of principal of normal school in State report, pp. 19, 20.)

EDUCATIONAL JOURNAL.

The Maryland School Journal, published at Baltimore and edited by the State superintendent, has been a useful medium of communication between his office and the teachers of the State, enabling him to present in its monthly issues whatever he might desire to say to them respecting defects which it seemed to him should be remedied or improvements which it seemed to him should be made in methods of teaching, of classification, or of management.

SECONDARY INSTRUCTION.

HIGH SCHOOLS.

The State superintendent reports having visited high schools in five different towns of the State during the year 1875, but does not give the number of such schools existing in the State. Table F, however, gives the number of public school pupils engaged in studies above the sixth grade as 1,757; the number studying book-keeping was 1,263; algebra, 1,649; philosophy, 1,920; drawing, 555; geometry, 206; physiology, 251; Latin, 697. It is expected that the State board of education will, during the year, define more explicitly the functions of the county high schools and arrange specifically their programme of studies, as they have already done for the primary schools. The Baltimore City College and the two female high schools of that city had in them, according to the report of the school commissioners, 1,621 students, under 34 instructors. An additional year has been secured for the course of the city college, to enable its pupils to receive advanced instruction and be prepared for entering the Johns Hopkins University.

ACADEMIES.

The old academies of the State are in an anomalous condition. Some have been converted into public high schools; some have disappeared entirely and the donations allowed them have been added to the primary school fund; some are nothing but public primary schools, the principal receiving the academic donation in addition to his regular salary; some are operating alongside of the district school, and taking the same class of pupils, of whom there are not enough for both; so that each helps to injure the other. The condition on which the academic donation is granted, viz, that the academy should educate one pupil free of charge for every $100 received from the State, was imposed at a time when public free schools were not in existence. The object was twofold: to encourage the academies and to provide for the education of a few of the most deserving poor. The first object, the superintendent says, has failed; the second has been rendered unnecessary by the establishment of the public school system. So far, then, from its being an object now to encourage the academies, they should, he thinks, with one or two notable exceptions, be allowed to die with all convenient speed and the donations which now go to them be given to any teachers of public schools who can show the required results, or else each academy should be required to do strictly academic work.—(State report, pp. 21, 22.)

PRIVATE SECONDARY SCHOOLS.

Fourteen schools for boys, as many for girls, and 8 for both report, in all, 222 teachers, with 2,774 pupils under them. Of these pupils, 600 are said to be in classical courses and 1,598 in modern languages, mainly French and German; 167 to be preparing for a classical course in college and 87 for a scientific course. Twenty-two of the 36 schools teach drawing; 15, vocal music, and 16, instrumental music. Fourteen have some sort of chemical laboratory and 20 have some philosophical apparatus. Fifteen report libraries which have, with one exception, from 300 to 11,000 volumes each; less than half being provided with these important aids to instruction, but those which have them presenting rather larger libraries than is common.

The McDonogh Institute, noticed elsewhere, is not included among these schools, being somewhat *sui generis*.—(Returns to Bureau of Education, 1875.)

Two others, largely engaged in elementary instruction, but with academic departments, report a total of 10 instructors and 305 students, 19 of whom are preparing for a classical course in college and 2 for a scientific course.

PREPARATORY DEPARTMENTS OF COLLEGES.

In these departments the returns show 359 students, 195 of whom are said to have been in preparation for a classical collegiate course and 97 for a scientific one.—(Returns to Bureau of Education, 1875.)

BUSINESS COLLEGE.

Only 1 business college in Maryland reports itself for 1875, and this presents quite imperfect returns, stating that it had, for the fall term of that year, 6 instructors and a course of from 6 months to a year, embracing the "regular curriculum of business study," but giving no list of studies pursued and no number of students in these studies.—(For other details see Table IV.)

SUPERIOR INSTRUCTION.

THE COLLEGES.

If the academies have been doing elementary work at academic prices, remarks the State superintendent, the colleges have been doing academic work, and even lower, at collegiate rates. And as the academies have injured the neighboring district schools by trenching on their province, so the colleges have helped to kill the academies by undertaking to do their work. If one class of institutions should be restricted to their own department, so should the other. It seems absurd that the State of Maryland should pay $100 a year for having children taught to read, write, and cipher in a chartered institution called a college. Whatever money is paid to these colleges should be paid for instruction which is higher than academic. It is suggested that the colleges be restricted to such a curriculum as shall be intermediate between the academy or high school and the university. At first sight this would seem to be lowering the position of the college; in reality it would have the opposite effect. Not even St. John's need be ashamed to occupy, in relation to a first class university, the position which Eton and Rugby hold with regard to Oxford and Cambridge.

The superintendent gives a table embracing statistics of 7 colleges, including the agricultural college and the State normal school, all having received from the State the amount of $45,090. There was an attendance of 670 pupils, of whom 325 were gentlemen and 345 ladies. The number of free scholarships belonging to all these was 461, nearly half pertaining to the normal school.

JOHNS HOPKINS UNIVERSITY.

This university will receive students October 3, 1876. The inauguration of its first president, Dr. D. C. Gilman, which occurred on February 22, 1876, was an occasion of great interest, his excellency the governor of Maryland and many other distinguished men being present. The congratulatory address was delivered by President Eliot, of Harvard.

It has been resolved by the trustees "that the university now taking shape should forever be free from the influences of ecclesiasticism or partisanship, as those terms are used in narrow and controversial senses; that all departments of learning—mathematical, scientific, literary, historical, philosophical—should be promoted, as far as the funds at command will permit, the new departments of research receiving full attention, while the traditional are not slighted; that the instruction should be as thorough, as advanced, and as special as the intellectual condition of the country will permit; that the glory of the university should rest upon the character of the teachers and scholars here brought together, and not upon their number, nor upon the buildings constructed for their use; * * * and that, among the professional departments, special attention should be first given to the sciences bearing upon medicine, surgery, and hygiene, for which some provision has been made in the establishment of the Johns Hopkins Hospital."

The faculties of medicine and law will not be organized at present, nor will all the proposed chairs in the faculty of philosophy be filled at first. Freedom of choice in courses of study will be permitted, but the diplomas of the university will be bestowed on those alone who shall have pursued a liberal course of instruction and given evidence of high attainments.—(Circulars of the trustees.)

REGULAR COLLEGES.

St. John's College, founded in 1784, and endowed by the State, is situated at Annapolis, on the banks of the Severn, a few miles from the Chesapeake Bay, which is in full view. The college has a preparatory and a collegiate department, the latter presenting three courses, viz, the regular academic, select, and post graduate. There are

121 students here, of whom 52 are in the preparatory department and 69 in the collegiate.—(Catalogue, 1874-'75.)

Western Maryland College is under the special patronage of the Maryland Annual Conference of the Methodist Protestant Church. The peculiar advantage claimed for it is that parents can have their sons and daughters educated in the same institution and under the same instruction. The course of study, however, is not the same for both sexes, the young ladies completing theirs in three years and the gentlemen theirs in four. Although both sexes have the same instructors, the two departments are kept entirely separate, the students meeting only at chapel service and in the dining room. Total attendance, 113: collegiate department, 47; preparatory, 66.—(Catalogue 1874-'75.)

St. Charles College, near Ellicott City, Md., (Roman Catholic,) is intended to give a religious and clerical education. The course of instruction includes six years, and is a full classical one to those who follow the entire course, embracing all the branches preparatory to the higher ecclesiastical studies.—(Prospectus, 1873.)

Washington College.—This college reports to the State board of education an attendance of 30 pupils in college classes. Additions have been made to the library of 250 volumes of standard works and extensive and valuable ones to the philosophical and chemical apparatus of the college, which is now in excellent condition.—(Report State board of education, p. 29.)

COLLEGES FOR WOMEN.

Six institutions for the superior instruction of young women report a total of 56 instructors, (11 male and 45 female,) with 384 students under them. Of these students, 102 were in preparatory departments, 227 in the regular course, and the remainder in partial courses.

Two only of these institutions—the Baltimore Female College and the Frederick Female Seminary—are authorized by charter to confer degrees. The courses in the 6 range from three to eight years. Four report libraries of 500, 700, 3,875, and 4,178 volumes. In 6, drawing, painting, and music are taught; in 5, French; in 4, German; in 1, Italian. Three have laboratories for chemical experiments; 4, some philosophical apparatus; 2, an art gallery; 2, a gymnasium for exercise, and 1, an observatory.—(Returns to Bureau of Education, 1875.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

AGRICULTURAL COLLEGE.

"The decline in the Agricultural College, which was mentioned in the last report," says Superintendent Newell, "continued to the end of the past scholastic year. The college has now passed into new hands; of the old officers and professors but one is left; a

new programme has been laid down, and the public are expected to believe that under the new *régime* the errors of the past will be retrieved and the promises of the past redeemed. Were this the first time that a similar confidence has been invited, these promises would readily be accepted without discount. But, as the college has now had six different presidents in nine years and has been reorganized by each successive president, it is impossible to avoid the conviction that even reconstruction may fail to produce the long wished for result."

The new president of the college, Capt. William H. Parker, gives it as his opinion that the principal cause of the past failure has been a want of unanimity and permanence in the governing board of trustees. In addition to the feature of annual change in the individual members of the board, its constitution is such that there may be a change of policy every quarter without there being any change in the opinions of individual members. The board consists of 11 members, of whom 5 make a legal quorum; 3 members, or a majority of these, may determine on a certain policy, and 3 other members may reverse such decision at the next meeting. This has actually happened.

To remedy this condition of things, he suggests that the State, which now owns one-half the property of the college and pays directly or indirectly the whole expense of maintaining it, should become entire owner of it; that the trustees should consist of 5 members, to be appointed by the governor of the State, 3 from the State board of education and 2 from among the practical farmers of the State.—(State report, pp. 23-25.)

THEOLOGICAL SCHOOLS.

Theology is taught in the Centenary Biblical Institute of the Methodist Episcopal Church of Baltimore and in the Roman Catholic seminaries of Mt. St. Clement, Ilchester, and Woodstock College, Woodstock, Baltimore County. The first, which is "for the education of colored preachers," reports a preparatory course of 6 years and a regular biblical course of 3 years; the 2 last report, respectively, courses of 11 and of 7 years, which include the literary as well as the theological. The libraries of these 2 number 9,000 and 18,000 volumes.—(Return for 1875.)

SCHOOL OF LAW.

"The faculty of law of the University of Maryland," in Baltimore, "was organized at an early period after the incorporation, (1812,) and the school opened under David Hoffman, LL. D., a single professor. After some years it was suspended, and reorganized under its present management February 1, 1870." It reports "Hon. George W. Dobbin, dean," with 3 resident professors, a two years' course, and 59 students, of whom 27 have had a degree in letters or science.—(Return for 1875.)

SCHOOLS OF MEDICINE.

Three medical schools exist in Baltimore, the College of Physicians and Surgeons, the School of Medicine of the University of Maryland, and the Washington University School of Medicine. Courses, in each case, 2 years.

The chemical department of the Maryland Institute provides a course of 25 lectures for instruction in elementary, analytical, and applied chemistry.

SPECIAL INSTRUCTION.

M'DONOGH INSTITUTE.

This school, located in Baltimore County, for poor boys of good character and respectable associations in life, sustained by a bequest from John McDonogh, reports an attendance during 1875 of 68 pupils. Of these 5 were withdrawn at the request of the authorities of the school, 3 were taken away by parents, 8 ran away, 1 left on sick leave, and 1 was removed on account of permanent bad health, leaving an attendance of 50 boys. The fund for the support of the school amounts to $817,008.48, of which, at present, only the interest is used, but the trustees have the matter under consideration whether it would not be better to devote, as the ordinance permits, all the surplus over the sum of $500,000 to the uses of the school, and thus secure provision for a greater number of boys. The object of the institution is, according to the will of Mr. McDonogh, to afford instruction in the Christian religion, a plain English education, music, and the art of husbandry. In the literary course of instruction the practical mastery of the English language is considered of the first importance; after that a thorough training in arithmetic is thought essential, with such further progress in mathematics as may be possible in the time allotted. To these are added geography, history, the elements of chemistry and natural philosophy, vocal music, book-keeping, and map drawing.—(Report of board of trustees, 1875.)

PEABODY INSTITUTE, BALTIMORE.

This important aid to the improvement of intelligence and culture in the chief city of the State continued, during 1874–'75, to afford the citizens its usual advantages of library, lectures, conservatory of music, and gallery of art. Its reading room, supplied with newspapers and periodicals, formed a pleasant and useful resort for multitudes

who might otherwise have been idle loungers at home or in the streets; its library, of which the reading room is part, reached, at the close of the year, 57,458 volumes, kept very largely in active use, for reference or full perusal; its lectures opened a means of entertainment and instruction to considerable audiences gathered from every portion of the city and its neighborhood; and its conservatory of music and gallery of art added their instructive and refining influences to all the rest, making the institute both a center of attraction and a radiator of pleasure and of good.

MARYLAND INSTITUTION FOR INSTRUCTION OF THE BLIND, BALTIMORE.

Incorporated in 1853, organized the same year, and opened to its first pupil December, 1854, this institution has had under its charge from that date a total of 171 pupils. All these are said to have received benefit from the instruction given them; many have been raised from almost absolute dependence to a position of comparative helpfulness and cheerfulness, while some have been qualified to obtain for themselves an independent support. It holds a valuable piece of property in Baltimore County, on the northern border of the city, improved by a handsome, well-warmed, and well-ventilated building, capable of accommodating 100 pupils, and has also under its care a workshop and salesroom in the city to assist the adult blind who are laboring to support themselves.

It reported, December 1, 1875, a body of 51 pupils, of whom 7 were from the District of Columbia and 44 from Maryland, with a superintendent, 2 teachers of literary branches, 1 of music, a matron, a governess, a mistress of handicraft, and a teacher of piano tuning and repairing. This last matter is being taught with special thoroughness, and it is thought may become one of the most useful and profitable occupations for the blind. Then, for further aid in self-support, mattress-making and chair-caning are taught the boys, while the girls learn sewing, knitting, crocheting, bead work, and the use of sewing machines.—(Thirteenth report of directors and superintendent.)

MARYLAND INSTITUTION FOR EDUCATION OF THE DEAF AND DUMB, FREDERICK.

The seventh report of this interesting school gives 107 as the whole number of pupils for 1875, of whom 71 were males and 36 females, under a principal, 7 literary teachers, a teacher of articulation, a matron, a housekeeper, and foreman of shoe-shop; the other employés being a steward, assistant steward, engineer, and watchman—a physician looking after the health of all.

At the date of the report, 91 pupils were in attendance, of whom 16 had been admitted at the opening of the fall session of 1875.

The progress of students in their ordinary English studies for the year is said to have been generally satisfactory, and their conduct, with few exceptions, orderly and submissive. A class in articulation has contained twenty-eight members, most of whom have made good progress, while some have very greatly advanced. Others, who had only lately entered, promised well.

The work of the shoe-shop has been carried forward without material change, and to this means of useful industry a cabinet shop has been added, increasing the opportunities of the pupils for earning a livelihood when they go forth again into the world.

The whole number of pupils enrolled since the opening of the school has been 164, representing 147 families, 22 of which have had 54 deaf and dumb children. Far the larger part are shown to have either been born deaf or to have become so in their earliest years.—(Seventh report for 1875.)

INSTITUTION FOR COLORED DEAF-MUTES AND BLIND, BALTIMORE.

This has arisen under the joint patronage and control of the two before mentioned, and has been in operation for four years. With a total appropriation of $40,000, received in equal portions during these four years, the joint committee of management has secured the ownership of an excellent dwelling house on South Broadway; has built a roomy and well arranged school-room and dormitory; has paid all the expenses of the establishment; and held in hand, at the date of report, sufficient funds to carry on the work till July, 1876, when another payment from the State was looked for.

There have been 40 pupils since the opening, and 31, under 4 teachers and a matron, were receiving care and instruction December 1, 1875. The work performed is similar to that in the parent institutions for white children, including ordinary education in the school room and instruction in different handicrafts.—(Report for 1875.)

EDUCATIONAL CONVENTIONS.

STATE TEACHERS' ASSOCIATION.

The eighth annual meeting of this association was held at Cumberland, August 25, 1875. The attendance was quite as large as could have been expected at so late a period of the vacation and at a point so remote from the center of the State. Eighteen of the 23 counties were represented, some of them by large and influential delegations. After the inaugural address by President Elliott, essays and addresses were read and delivered on the following subjects: "The qualifications of a teacher," "Latin," "American oratory," "The teacher's responsibilities," "Natural science as a school study," "Memoriter work in education," "The Teutonic languages," "Celestial weights

and distances," "The relation of the people to the public schools," and "Report of the committee on defense."

There was less discussion of topics of living interest, according to editorial remarks in the Maryland School Journal, than could have been wished. Such as was has seemed to turn into one channel: the comparative merits of language and science as instruments of education.—(Maryland School Journal, September, 1875, pp. 36–38.)

OBITUARY RECORD.

WILLIAM R. CREERY.

Mr. William Rufus Creery, for over seven years superintendent of public schools in Baltimore, died at his residence in that city on Saturday, May 1, 1875, after thirty years of faithful service in the cause of education. Born in Baltimore May 9, 1824, he graduated at Dickinson College, Pa.; became, soon after, assistant in the Baltimore Male Grammar School No. 6, and subsequently principal of the same. After some service in that capacity he accepted the principalship of the Lutherville Female Seminary, and continued there three years. He then returned to Baltimore, was made principal of Grammar School No. 12, and also of the Saturday normal class for the teachers of the city. Resigning the former position, but continuing the latter, he for some time served as professor of literature in the Baltimore City College. The dates of these various official services are not given in the authorities at hand. In January, 1868, on the resignation of Dr. J. N. Jilton as superintendent of the schools of Baltimore, Mr. Creery was elected to that honorable office and served in it till his death. The school board of the city attribute to him "much of the success of the schools during the past few years," and say that "he was eminently qualified for his position, combining in himself the special qualities which are necessary for success in teaching, while his great ability was evidenced by the happy issues of his labors."

Besides performing zealously his duties as teacher and superintendent, Mr. Creery, in conjunction with State Superintendent Newell, issued several volumes of spellers and readers, a Catechism of the History of the United States, and Questions on the Constitution of Maryland. During the last few months of his life he also edited, with Mr. Newell, the Maryland School Journal.—(Baltimore American and Baltimore Sun of May 3, 1875, with report of the city school board for that year.)

LIST OF SCHOOL OFFICIALS IN MARYLAND.

SUMMARY OF STATISTICS.

SCHOOL POPULATION AND ATTENDANCE.

Number of persons in the State May 1, 1874, between 5 and 15 years of age	294,708
Increase for the year	2,227
Number of pupils of all ages in all the public schools	302,118
Increase for the year	5,093
Average attendance in all the public schools during the year	216,861
Increase for the year	6,613
Number of children under 5 years attending public schools	2,383
Decrease for the year	169
Number of persons over 15 attending public schools	32,986
Increase for the year	8,299
Number of towns which report that they have made provision for truants	130

TEACHERS AND TEACHERS' PAY.

Number of persons employed as teachers: Men, 1,169; women, 8,047	9,216
Total increase	501
Number of teachers who have attended a normal school	1,792
Average monthly wages of men teaching, (including salaries of high school teachers)	$88 37
Decrease for the year	5 96
Average wages of women teaching	35 35
Increase from last year	1 01

PUBLIC SCHOOLS.

Number of public schools	5,551
Increase for the year	126
Number of schools returned as high schools	208
Number of evening schools kept in 32 cities and towns	99
Number of teachers in evening schools	525
Attendance in evening schools: Men 12,594; women, 3,774	16,368
Average attendance	6,474

PRIVATE SCHOOLS AND ACADEMIES.

Number of incorporated academies returned	63
Average number of scholars	7,594
Aggregate tuition paid	$161,215 63
Number of private schools and academies	369
Estimated average attendance	16,650
Estimated amount of tuition paid	$436,938 48

SCHOOLS FOR SPECIAL INSTRUCTION.

Number of State charitable and reformatory schools	12
Number of different pupils attending	1,240
Average attendance during the year	812
Number of pupils under 5 years of age	22
Number over 15 years	431
Number between 5 and 15 years, August 1, 1875	457
Number of teachers: Men, 3; women, 16	19
Wages per month of men	$50
Wages per month of women	25

INCOME AND EXPENDITURE.

Receipts.

From taxation, for wages of teachers, fuel, care of fires and school-rooms	$4,358,523 59
Increase for the year	105,312 42
Income of funds appropriated for public schools at the option of towns	4,734 19
Voluntary contributions for board, fuel, apparatus, &c., for public schools	30,787 32

Income of local funds appropriated for schools and academies	$120,286 32
Increase for the year	21,325 74
Income of State school fund paid to cities and towns in aid of public schools	88,613 45

Expenditures.

For salaries of superintendents of public schools	$66,608 25
Total expended on public schools, exclusive of school-houses and books.	4,668,472 09
Increase for the year	134,918 80
Amount expended for erecting and repairing school-houses	1,533,142 54
Total expenditures	6,201,614 63

—(From report of board of education for 1874–'75. Hon. Joseph White, secretary.)

SCHOOL SYSTEM OF THE STATE.

GENERAL CONSTITUTIONAL PROVISIONS.

The State constitution of 1780 contained, from the pen of the elder Adams, then recently returned from his European mission, the following important article on "the encouragement of literature:" "Wisdom and knowledge, as well as virtue, diffused generally among the body of the people, being necessary for the preservation of their rights and liberties, and these depending on spreading the opportunities and advantages of education in the various parts of the country and among the different orders of the people, it shall be the duty of the legislatures and magistrates in all future periods of this Commonwealth to cherish the interests of literature and the sciences, and all seminaries of them, especially the University at Cambridge, public schools, and grammar schools in the towns; to encourage private societies and public institutions by rewards and immunities for the promotion of agriculture, arts, sciences, commerce, trades, manufactures, and a natural history of the country; to countenance and inculcate the principles of humanity and general benevolence, public and private charity, industry and frugality, honesty and punctuality in dealings, sincerity, good humor, and all social affections and generous sentiments among the people."

An amendment adopted in 1857 precludes from voting and from eligibility to office all that cannot read the Constitution in the English language and write their names, the only exceptions made being in cases of physical disability, of an age over 60 at the time of the adoption of the amendment, or of an existing right to vote.

PROVISIONS OF THE SCHOOL LAWS.

School laws of Massachusetts, edition of 1875.

OFFICERS.

For the State at large, a State board of education, whose secretary performs the office duties of a State superintendent, with some visitorial ones; a general agent for the visitation of the towns and cities, a special agent for the western counties, with two others for the same kind of work, and a State director of art education. For the towns—which term in New England generally means townships—school committees, with prudential committees in such as are divided into school districts. For the cities, usually a superintendent of schools, in addition to the committees.

POWERS AND DUTIES OF SCHOOL OFFICERS.

The State board has the chief authority in school concerns. It consists of the governor, lieutenant-governor, and eight other persons, appointed by the governor with the concurrence of the council, each to hold office for eight years, but one retiring each year in the order of appointment. It is the trustee for the Commonwealth of all grants, devises, donations, and bequests for educational purposes, the State treasurer acting as its agent for the investment and safe custody of these. It prescribes the form of registers to be kept in the schools and that of the blanks and inquiries for the returns to be made by school committees; and annually, on or before the third Wednesday of January, must lay before the legislature a report containing a printed abstract of said returns, a detailed statement of its own doings, and such observations and suggestions respecting the school system as need may require or occasion seem to call for. Its members receive no salary as such, but are allowed compensation for expenses incurred in the discharge of their duties.

The secretary of the State board is appointed by it, with no express limitation as to term, and under its direction makes the required abstract of school returns; collects information respecting the condition and efficiency of the public schools; diffuses intelligence of the best systems of study and instruction; suggests to the board and legislature improvements in the school system; visits, as often as possible, different parts of the State, to arouse and guide public sentiment in relation to education; collects in his office such school-books, apparatus, maps, and charts as can be obtained without ex-

pense to the State; receives and arranges the reports and returns of school committees; and receives, preserves, or distributes the State documents in relation to the public school system. He is also expected to give notice of and attend meetings of teachers, superintendents, and friends of education throughout the State, collecting at these meetings all available information as to the condition of the schools, with a view to its presentation in the annual report of the board. The blank forms of inquiry, school registers, and annual report are sent out by him to the clerks of the several towns and cities for proper distribution. For the discharge of these duties the secretary receives an annual salary of $3,000, with $400 additional for travelling expenses, and also the necessary postage of his office.*

The general agent of the board is appointed by it to visit the towns and cities with a view to inquiry into the condition of the schools, conference with teachers and committees, lecturing on educational subjects, and performing such other duties as the secretary might do if present. An agent for the western counties is now also in the field, with two additional for special fields.

The director of art education has it as his duty to superintend the State Normal Art School, and to aid by deputy or in person in training the public school teachers of cities having more than 10,000 inhabitants to such a knowledge of drawing as will enable them to instruct pupils in the same.

The school committees are chosen by written ballots at the annual town meetings; consist of any number divisible by 3, and are kept at once fresh and experienced by one-third going out annually and being replaced by new elections, while the full term of each member is three years. Women are eligible as well as men. The committee of each town or city appoints its own secretary, and keeps through him a permanent record of its votes, orders, and proceedings. It selects and contracts with teachers for the public schools, requiring full evidence of the good moral character of those chosen and subjecting them to such examination as may determine their qualifications for both governing and teaching school. It gives to each approved teacher a certificate in duplicate of his qualifications, one copy of which, deposited with the selectmen, is their warrant for recognizing him as engaged to teach and for paying him in due time for his services. The committee may also dismiss a teacher whenever they think proper, in which case his pay ceases from the date of dismissal. In the first and last weeks of the school term the members, in whole or in part, are to visit statedly all the public schools, and make another visit, without previous notification, once a month, to aid in organizing the schools at the beginning, and to inquire afterward as to their methods, discipline, progress in study, &c. They are to direct what books shall be used in these schools; are to purchase a sufficient supply for them; to give notice where they may be obtained; to furnish them to pupils at cost price; to supply needy scholars with them at the expense of the town, and to do the same for all in case of a change of books.† They may also procure, at the town expense, such apparatus, books of reference, and other means of illustration as they deem necessary for the schools, in accordance with appropriations previously made for that purpose.

Prudential committees.—In towns in which the school district system does not exist the school committees have the general charge of school-houses as well as of the schools; but in the districted towns a prudential committee, composed ordinarily of one person for each district, attends to this duty, and may, by vote of the town, contract with and engage instructors for the schools. The school committees or prudential committees also receive from the town clerk and distribute to the teachers the registers furnished by the State board, see that these are faithfully kept, annually before the last of April transmit the proper returns to the secretary of the State board, with a certified census of the children of school age, and publish yearly a detailed report of the condition and progress of the schools under their charge.

Superintendents of public schools are appointed annually by the school committees in such towns as require this by a legal vote and in such cities as direct it by an ordinance of the city council. Two or more towns are allowed to unite for the election of a superintendent. These superintendents, under the direction and control of the committee, have the care and supervision of the schools, with such salary as the city government or town may determine, in which case the members of the committee no longer receive the dollar or dollar and a half per diem for the discharge of the duties of their office to which they would be otherwise entitled.

SCHOOLS.

Every town is required to maintain at the public expense, for at least six months in each year, under teachers of competent ability and good morals, a sufficient number of schools, properly furnished and conveniently located, for the instruction of all the children who may legally attend school therein in orthography, reading, writing, English grammar, geography, arithmetic, drawing, the history of the United States, and

* The office of secretary of the board has been filled successively by Hon. Horace Mann, Dr. Barnas Sears, and Hon. George S. Boutwell before the present incumbent, Hon. Joseph White.

† Parents able to pay have this expense afterward collected from them by the tax-gatherers.

good behavior. Algebra, vocal music, agriculture, physiology, and hygiene are also to be taught by lectures or otherwise in any public schools in which the committee deem it expedient. Provision is made, too, for giving free instruction in industrial or mechanical drawing, in day or evening schools,* to persons over 15 years of age, in any town where the committee may think it best, and in all where the population is upward of 10,000, as well as for maintaining, in towns with over 500 families or householders, a school in which general history, book-keeping, surveying, geometry, natural philosophy, chemistry, botany, the civil polity of Massachusetts and of the United States, and the Latin language shall be added to the studies mentioned above. In every town containing over 4,000 inhabitants, the teacher or teachers must further be competent to give instruction in the Greek and French languages, astronomy, geology, rhetoric, logic, intellectual and moral science, and political economy.

The public schools are open to all children of school age, without distinction of race, color, or religious opinions, and all children from 8 to 14 years of age, not elsewhere taught, are required to be sent to them for at least twenty weeks in each year, in two terms of ten consecutive weeks each. Unvaccinated children may, however, be excluded.

Five normal schools, with a normal art school, form also a part of the school system of the State, which has, besides, an agricultural and mechanical college at Amherst, open to all qualified students among its citizens. In consideration of a grant of $50,000 to the Worcester County Free Institute of Science, that school, too, receives annually 20 State scholars, to be instructed, free of tuition, throughout the entire course; while in the State charitable and reformatory institutions, 18 schools, with upward of 1,200 pupils, are maintained.

Teachers' institutes, for the fuller training of those already engaged in teaching, are provided for by the school law. They are to be appointed by the State board of education, whenever assurance is given that 50 teachers of common schools desire to assemble for instruction, and an amount not to exceed $4,000 may be used to defray necessary expenses and procure teachers and lecturers for the institutes, of which sum not more than $350 may be used for any single institute. More than 240 such institutes have been held in the State since 1845.—(School law of 1875.)

LIBRARIES.

Although school libraries are not made expressly a part of the State school system, encouragement is given in the school law to the formation and extension of these aids to intelligence and culture in all the towns and cities of the State.

STATE SCHOOL FUND.

A fund for aiding public schools, first formed from the sale of lands in Maine when it belonged to Massachusetts, now amounts to upward of $2,000,000. One moiety of the annual interest on this, amounting to nearly $90,000, is distributed among the towns and cities, in proportion to their school population, to supplement and encourage local appropriations to the schools, while another moiety is appropriated to the support of State normal schools and teachers' institutes.

ELEMENTARY INSTRUCTION.

EDUCATIONAL PROGRESS.

Remarking upon the many respects in which the schools have improved during the past thirty years, the superiority of their buildings, locations, furniture, and other needful appliances, grading, course of study, length of term, and increased teachers' wages, Mr. Phipps, general agent of the board, expresses the opinion that there has not been, during this period, a corresponding improvement in respect to the qualifications of teachers for their work. Excellent and often very costly school buildings have been erected and thoroughly equipped; schools have been graded; courses of study, carefully and wisely matured, have been prepared; and yet not infrequently all this has been of little avail through lack of that which is more important than either or all of them combined: thoroughly qualified teachers. A large proportion of the 8,000 or more teachers who were employed in the public schools of the State in 1873–'74 never taught before, and, as the graduates of the normal schools during the year numbered less than 200, comparatively few of these new teachers had the benefit of thorough, systematic, special training for their work. Most commence teaching with no well defined plan of the work to be accomplished. They are placed in charge of 50 or 60 children of different ages, habits, and attainments. They are unacquainted with the best methods of teaching, and too often with any method, and the wonder is that many accomplish so much as they do and achieve even a measure of success, when entire failure might reasonably have been expected.—(Report of board of education, 1873–'74, pp. 92, 93.)

*In 32 cities and towns 99 evening schools were maintained in 1874–'75, containing 12,594 pupils, and employing 525 teachers at an expense of $68,442.

The report for 1873–'74 of George A. Walton, agent for the western portion of the State, who, during the year, visited 391 schools in 74 towns and cities, notes, among other signs of progress in public sentiment, the approval by committees and people of rational methods of teaching. This is shown by the demand for good teachers and the effort to retain those who have proved themselves competent to teach. It is shown in the increased attention bestowed, especially in the larger places, upon the arrangement of courses of study, in all of which more time is given to object teaching and illustrations and to general exercises. In many towns, evening schools are established and meetings of teachers are held regularly. Provision is made for the attendance of teachers upon teachers' institutes and upon the State and county associations, and teachers gladly avail themselves of the privileges thus offered. Drawing is coming to be recognized as a useful and necessary branch of education, and is receiving considerable attention in many of the schools. Evening classes of adults for the practice of mechanical drawing have been started in some of the larger manufacturing places, and are attended by operatives, book-keepers, and overseers in the mills, tradesmen, and mechanics of all trades. Another sign of progress in this portion of the State is the disposition to abolish the district system, which, in some sections, has had a particularly firm hold. One result which uniformly follows the abolition is better school-houses; and in many places the necessity for better houses is forcing abolition upon the town.—(Report of board of education, 1873–'74, pp. 79, 80.)

HINDERANCES STILL EXISTING.

On the other hand, the agent notices certain obstacles to progress, resulting, he believes, mainly from the want of enlightened public sentiment. The first specified is the need of more efficient supervision. In some instances the towns grudgingly pay the pittance charged for the too infrequent visits of the committee to the schools, and in many the task of superintending the schools has come to be so thankless that those best fitted for the duties refuse to accept the office of school committee. The worst possible form of supervision is that which results from the district system, where the selection of the teachers is left to a prudential committee and the oversight of their work, perhaps, to a subcommittee. Again, many persons are employed to teach who have neither zeal nor fitness for their calling, while even well qualified teachers are sometimes compelled to pursue traditional and often irrational methods in the schools. In very many, the time is spent in brief recitations of mere words; and even where something more is attempted than committing to memory meaningless expressions, the facts learned are so dissociated as to be of little or no use to the learner. To secure the best results in the schools the needs are an enlightened public sentiment, a careful supervision, and knowledge, skill, and enthusiasm in the teachers.—(Report of board of education, 1873–'74, pp. 81–84.)

REMARKS UPON STATISTICS FOR 1874–'75.

Attendance.—The statistics of attendance offer gratifying proofs of progress, in that they show a large increase in the number of pupils over 15 years of age attending school. It is a cheering indication of some check to the practice of crowding the education of the young into the shortest period.—(Report for 1874–'75, p. 122.)

Frequent changes of teachers.—Another phase of the practical working of the schools as presented by these statistics, namely, the increase of the number of different teachers, furnishes ground for some apprehension. This increase during 1874–'75 was 501, 91 being men and 410 women. While a considerable proportion of the excess in the number of teachers over that of schools may be due to various other causes, it is believed that a larger part must be charged to the unfortunate custom of changing the teacher with every term of the school, towns having thus sometimes three successive teachers in a year.—(Report for 1874–'75, p. 123.)

Truants.—The number of towns which report having made the provision required by law concerning truants is only 130, less than one-half the whole number. The early law relating to truancy simply authorized the towns to make needful by-laws concerning habitual truants; that of 1862 *required* them to make such by-laws, and in 1873 an important amendment was made to the law, requiring the school committee to appoint truant officers and fix their compensation. This duty is not contingent upon the action of the town, but is an actual command to the committee.—(Report of board of education, 1874–'75, p. 124.)

Prompt obedience to this feature of the law is urged.

MUSIC AND DRAWING.

The public schools of the State, in the opinion of Mr. Phipps, are generally doing a great and good work, highly creditable to them and to the State; but in order to bring them all up to a uniform standard of excellence and secure the best possible results, existing deficiencies and faults must not be ignored. He therefore calls attention to the unsatisfactory results witnessed outside of the cities and large towns in respect to singing and drawing. In many of the rural towns of the State, the teachers them-

selves know very little of these subjects; consequently can teach little of any real value. When the agent expresses a wish, in such schools, to hear the children sing, they repeat by rote and mechanically the words of a few songs, often with harsh and discordant voices, and without the slightest appreciation of the sentiment or its proper musical expression; and this is called singing. When he asks what attention has been paid to drawing he is shown a multitude of little books, often mere scraps of paper, covered with a great many strange objects that bear no resemblance to anything in the heavens above, or in the earth beneath, or in the waters that cover the earth; and this is called drawing. He advises, as a remedy for this state of things, that it be made an indispensable requirement of every applicant to teach that she shall know something, theoretically if not practically, of the science of singing and drawing, (for some persons very successfully teach these subjects without being able to sing or draw to their own satisfaction or that of others;) that she be furnished with suitable musical charts and aids in drawing, and then required to exhibit as satisfactory results in these branches as in others.—(Report of board of education, 1873–'74, pp. 99, 100.)

INDUSTRIAL ART EDUCATION.

Every town in the State, except one, having a population of over 10,000 inhabitants had, in 1874, complied with the law of 1870 relating to industrial drawing. Director Smith again urges upon the board of education that the statute should be amended to include all towns of 5,000 inhabitants and upward, believing that a greater number of mechanics would receive instruction in the 50 towns so included than are now receiving it in the 23 at present influenced by the statute. There is as much need of industrial art education in the smaller as in the larger centers of population, and in Europe it is not unusual to find the most successful classes in quite small towns.

The tendency of the work carried on in the free industrial drawing classes is toward mechanical and architectural drawing, and few take up free hand subjects. Where, however, this has been done, there is a manifest increase of interest displayed by the students. The difficulties in the way of making these classes successful have been very great, and are not yet overcome. More than half of these, Director Smith remarks, are removable at will, and until they are so removed the classes will be inefficient and in danger of being discontinued from want of pupils. He sums up the conditions necessary to carry on a free industrial drawing class successfully as follows: There must be (1) suitable class rooms, lighted by day and night, adapted to the character of work carried on in them; (2) proper examples to be used as copies and illustrations of the subjects studied, in line, color, light, and shade, with models of solid forms and natural objects; (3) a qualified teacher who is familiar with the general subject of art education, theoretically and practically, supported by subordinates who can teach special departments. Without these requirements it has been impossible to achieve absolute success, though even while working under such disadvantages many teachers have attained comparative success.

Exhibitions of drawings by the free industrial evening classes have been made annually for three years past, have been visited by many thousands of persons, and have attracted much attention. The progress made during these three years, says Director Smith, is remarkable, and their suggestiveness even more marked. In conclusion he declares that rapid and sound progress is being made in the subject of industrial drawing in all directions, more than he could have believed possible in the short period of time elapsed since the act of 1870 was passed.—(Report for 1873–'74, pp. 39, 44, 50.)

EMPLOYMENT OF NORMAL SCHOOL TEACHERS.

Secretary White presents a table collated from the returns for 1873–'74, showing the number of normal school teachers employed in the several counties of the State during that year, from which it appears that in only one county was there none employed. In 268 of the 340 towns of the State, 1,666, or nearly 20 per cent. of the whole number of different persons employed as teachers, were from the normal schools, and the demand for such is rapidly and constantly increasing. "Thus," he remarks, "we are slowly but, I believe, surely approaching the fulfilment of the purpose for which Levi Lincoln, as governor, and Dwight Foster, William B. Calhoun, and Henry Dwight Marsh, as legislators, nearly fifty years ago urged the establishment of the Massachusetts school fund, to wit, "That teachers' seminaries might be established in every county in the Commonwealth."—(Report for 1873–'74, p. 125.)

TEACHERS' MEETINGS.

Besides the larger and more public gatherings of teachers at national, State, and county associations, and at teachers' institutes, it is becoming a very general custom, in the cities and larger towns especially, for all the teachers in the town to meet at stated periods, generally once a month, for a half day or an evening, to discuss educational topics, to give and receive counsel in matters relating to their individual experience in teaching and governing their schools, and in various other ways to promote the interests of education. In some places the teachers are allowed a half day in each

month, or once in two months, expressly to attend such meetings, and then are required to attend them. In others they are expected to give a half holiday or an evening for this purpose, and a frequent neglect to do so is regarded as showing a want of interest in their vocation which often results in their failure to secure a re-election.—(Report for 1873-'74, p. 96.)

KINDERGARTEN SCHOOLS.

Ten Kindergärten, 5 of them located in Boston and the others in Newton, New Bedford, Northampton, Worcester, and Yarmouthport, report a total of 16 instructors and 167 pupils. Three of these schools were established in 1874 and 1 each in 1875, 1876, 1871, and 1870. The remaining school does not report its date of organization. In a majority of these schools the number of hours for daily study is 3, only 1 exacting 4, and 2, 3½. The age of admission ranges from 2½ to 3 years.—(Special reports to the United States Bureau of Education, 1875. For further particulars see Table V.)

CITY SCHOOL SYSTEMS.

BOSTON.

Officers.—The public schools of Boston are under the control of a board of education, consisting, since its recent reorganization, of 24 members, with a city superintendent and 6 assistant supervisors. The powers of the board are to supervise and direct the public schools of the city; elect teachers and other school officers, fix their compensation, and discharge them if there be cause; arrange the courses of study in schools and determine such rules as may seem necessary; elect a superintendent of schools and 6 supervisors and the head masters of the Latin, normal, high, and grammar schools. Women are not excluded, and are actually in the board, the only qualification demanded being residence in the city.—(New-England Journal of Education, May 29, 1875, p. 258.)

Statistics.—Number of children between 5 and 15 years of age, 60,255, an increase of 3,571 during the year; average number of pupils belonging to day schools of all grades, 44,984; average daily attendance, 41,606. Number of day schools, 477, of which 9 are high schools, 50 grammar, 114 primary, 2 for licensed minors, 1 Kindergarten, and 1 for deaf-mutes; number of evening, including 6 drawing schools, 21; making a grand total of 498 schools. There were 203 men engaged in teaching these schools and 1,093 women; total, 1,292; of whom 1,245 are regular and 51 special teachers. In the evening high school there was an average attendance of 330 pupils, of whom 124 were young women. In the 9 day high schools the average number of pupils was 2,091; teachers, 81; 455 pupils in these schools—382 girls and 73 boys—received diplomas of graduation at the close of the school year. The number of promotions among the 24,413 grammar school pupils was 1,245, of whom 625 were boys and 620 girls. The expenditure for school purposes during the year was $2,081,043.35.—(Statistical report, for 1875, of the statistical clerk, Phineas Bates, esq.)

Drawing.—The work of the primary schools of Boston shown at the fourth annual exhibition of industrial drawings of the schools of the State held at Horticultural Hall, in June, 1875, was considered to be very full and fine. It consisted of free hand drawing from cards, blackboard dictation exercises, memory drawing, and model drawings from the blackboard, and original designs by children from 6 to 10 or 11 years of age. While the copy work of this class of pupils shows excellent practical skill, it is said that the cards of model and original drawings far surpass in execution any work of the kind ever before exhibited in America. Art critics are amazed at the results of the primary schools, and claim that they surpass in real merit the more finished work of the higher classes.—(New-England Journal of Education, June 12, 1875, p. 282.)

About two-thirds of the whole number of the public school teachers of this city have been examined by Professor Walter Smith and received from him certificates of ability to teach drawing according to the requirements of the drawing course.—(Same journal, May 29, 1875.)

Normal school.—The number of pupils who entered the Boston Normal School in the fall of 1875 was 76, all except 13 being graduates of the various high schools of the city. The average age was 19 years.—(Report for 1874-'75 of statistical clerk of school board, p. 18.)

CONCORD.

Officers.—A school committee of 8 members and a superintendent of schools, Dr. E. W. Emerson.

Statistics.—Whole number of schools 13, including a high school; whole number of pupils in three terms, 1,294; average enrolment each term, 431; average attendance, 349. Teachers employed, 18; wages of these, $100 to $500 a year.

Notes.—Want of moral tone, a low standard of teaching, and consequent superficiality, lack of system, and want of support from parents are evils complained of by the

superintendent, and for which he suggests some appropriate remedies. Drawing is practised as a required study in all the schools except the primaries, while in music surprising and gratifying progress has been made. Ventilation has been secured in winter by the simple device of narrow boards placed under the lower sash across the whole breadth of the window, thus throwing a current of fresh air upward toward the ceiling.—(Report of superintendent for 1875–'76.)

FITCHBURG.

Officers.—A board of education of 18 members, 3 from each ward, of whom one-third go out each year, with the president of the common council as *ex officio* member, and the mayor of the city as *ex officio* chairman, and a superintendent of schools.

Statistics.—Whole number of schools, apparently, 36, including 8 ungraded ones, 15 primary and secondary, 8 intermediate, 3 grammar, and 1 high school. An evening drawing school has also been maintained. Enrolment in the schools for the year, 2,473; average number belonging, 1,944; average daily attendance, 1,750. Teachers employed December, 1875, 54, besides 3 special teachers; wages of teachers, $350 to $2,250 per annum.

A good and well arranged course of study accompanies the report, but the superintendent, having been in office only a few months, speaks only in a general way of the manner in which this is carried out.—(Report of Superintendent J. G. Edgerly for 1875.)

HAVERHILL.

Officers.—A school board of 18 members, 3 from each ward, one-third going out each year, the mayor of the city as chairman *ex officio*, and 3 truant officers.

Statistics.—Whole number of schools, including high, grammar, primary, and union schools, apparently, 51, besides an evening drawing school and an evening school for instruction in ordinary studies. Number of different pupils registered, 2,887; average number belonging, 2,260; average attendance, 2,013. Number in evening schools, 386; average number, 310; average attendance, 177. Percentage of attendance in all the schools, 85.24.

The schools of the city have been for 1874–'75, as previously, under the dissociated charge of subcommittees of the school board. These different committees being differently conditioned as respected disposable time, experience, and qualifications, some schools have had the benefit of careful and judicious superintendence, while others have suffered from partial or complete neglect, and all have felt the lack of one central controlling influence, harmonizing all their varied work and guiding it by a thoroughly balanced system, step by step, from the lowest to the highest grade. By having, as in some other cities, a supervisory board, serving, like the city council, without pay, and establishing a superintendent, with suitable salary, to attend to the detail work and general control, there would be, the committee think, with a slight increase of expense, a much more fruitful result from the outlay now made.—(Report of school committee for 1874–'75.)

HOLYOKE.

Officers.—A school committee of 9 members, 1 from each ward and 2 at large, with the mayor of the city as chairman and a superintendent of schools as secretary.

Statistics.—Number of schools, not distinctly given. Teachers, including 3 in high school, 4 in grammar schools, 3 in intermediate, 15 in primary, and 5 in mixed schools, 31. Pupils enrolled, 1,557; average number belonging, 1,003; average attendance, 860; number of tardinesses for the year, 7,349; number of pupils neither absent nor tardy, 11.

It is worthy of remark that while 1,557 have been enrolled in the public schools "about as many more" are said by the superintendent to have been enrolled "in the parochial schools connected with St. Jerome's parish." "Not less than 200 have been enrolled twice, once in public school and once in the parochial school." Still "more than 1,000 children of legal age daily absent themselves from school." This truancy, however, it is hoped, may be checked by enforcement of the truant ordinance, as now the name, age, and residence of every absentee from school are known, and the truant officers can thus act efficiently.

The committee on music report considerable progress made, and one on evening schools says that these schools were opened December 2, 1874; continued three months for 2 hours of 4 evenings each week, and had an attendance nightly of 450 eager pupils. The evening drawing school was taught in a room poorly lighted and not centrally located; consequently the attendance was not as large as might have been secured.—(Report of school committee and Superintendent L. H. Marvel, for 1874–'75.)

LAWRENCE.

Officers.—A school committee of 2 members from each of the six wards of the city, with the mayor as chairman *ex officio* and a superintendent of city schools acting as secretary. One-third of the committee go out each year.

Statistics.—Number of school buildings occupied by public schools, 18; single rooms for both study and recitation in primary, middle, and grammar schools, 51; double rooms in these, 12; in high school, 2 rooms for studies and 5 for recitations. Pupils enrolled in public schools, 4,749; average monthly enrolment, 3,713. Enrolled in St. Mary's Roman Catholic schools, 1,029. No summary of average attendance. Teachers in public schools, 83, with three additional special teachers of drawing, writing, and music; wages of teachers, $425 a year to $2,500.

Under the operation of a truant law, with efficient truant officers, truancy has been reduced from 488 cases to none, not a single case of habitual truancy being known by the officers at the date of the report. In the schools the custom of daily marking each pupil in each recitation has almost entirely given place to a monthly examination in each study. Free evening schools have been maintained from October to March, 1 for men and boys and 1 for girls, with a total attendance of 419 and an average attendance of 287, under 23 teachers.—(Report of Superintendent G. E. Hood for 1875.)

NEWBURYPORT.

Officers.—A school committee of 9 members, with a chairman, secretary, and agent. One-third of the committee is changed annually.

Statistics.—Public schools, 23; number of sittings, 2,476; scholars enrolled during the year, 2,142; average attendance in winter, 1,468; in summer, 1,414. Teachers employed, 46; salaries of these, $350 to $1,900. Evening school for women: enrolment, 103; average attendance, 60; evening school for men: enrolment, 109; average attendance, 90.—(Report of school committee for 1875.)

SALEM.

Officers.—A school committee of 18 members from 6 wards, with the president of common council as member *ex officio* and the mayor as chairman *ex officio*, a superintendent of schools, and a secretary of the board.

Statistics.—Number of children of school age, 4,688; enrolled in public schools, 4,148; in private or parochial schools, 764. Average daily attendance in public schools, 2,960. Teachers employed, 83, of whom 42 were graduates of normal schools and 9 others had studied in them; salaries not given.

The study of vocal music is pursued in all the public schools, with marked improvement in its quality. Drawing also has been prosecuted with success. An evening school for boys enrolled 170, with an average attendance of 83; an evening school for girls, 105, with an average attendance of 57.

An interesting history of the school system of the city is given by the superintendent, beginning with the first free school in 1637 and coming down to 1875, and showing in succession, first, the individual school, then, the growth of a system of schools, and then, from the need of agents to regulate and inspect the schools, the appointment of a school committee and a superintendent, the last not till 1866.—(Report of school committee and of Superintendent A. D. Small for 1874–'75.)

SPRINGFIELD.

Officers.—A school committee of 8 from the wards with 1 at large and a superintendent of schools, A. P. Stone, esq., who is also secretary of the board.

Statistics.—Population of the city, 31,026; children of school age, 5,668; enrolled in day schools, of this age, 5,234; whole enrolment, 5,690; average daily attendance, 3,944. Pupils in evening schools, 404; in draughting schools, 178; in all schools, 6,272.

The schools generally are reported to have been in good condition and to have made gratifying progress during the year; grading improved and discipline satisfactory.—(Report for 1874–'75.)

TAUNTON.

Officers.—A school committee of 9, with the president of common council as member *ex officio* and the mayor as chairman. Superintendent of schools, W. W. Waterman, esq.

Statistics.—Population of the city, 20,429; children of school age, 3,846; enrolled in public day schools, 3,647; in 3 free evening schools, 187; in 3 private schools, 216. Average daily attendance in the city day schools, 2,567. Teachers in these, 74; wages, $200 to $1,600.

Some important remarks are made in the report on the proper method of securing good ventilation of a school-building.—(Report for 1874–'75.)

WOBURN.

Officers.—A school committee of 7 men and 2 women, with a superintendent of schools, E. H. Davis, esq.

Statistics.—Population of the town, 9,599; children of school age, 2,122; enrolled in public schools, 1,977; average daily attendance, 1,498. Schools, 37; school-houses, 13. Teachers, 51; wages of these, $350 to $2,000.—(Report of committee and superintendent for 1874–'75.)

A valuable historical sketch of the schools from 1673 accompanies the report

WORCESTER.

Officers.—A school committee of 24 members, one-third changed yearly, with the mayor as president, and a city superintendent, who is also secretary.

Statistics.—Population of city, 49,317; children of school age, 7,988; registered in day schools, 8,896; in evening schools, 615; in free evening drawing schools, 155; total, 9,665; besides 1,200 in private and parochial schools. Average daily attendance in public day schools, 6,204; teachers in day schools, 164; in evening schools, 18; wages, $450 to $3,000.

The schools appear to be thoroughly organized, and the report respecting them is an excellent one throughout, a brief historical sketch of the school system of the city forming a part of it.—(Report of school committee and Superintendent A. P. Marble for 1875.)

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

Secretary White states that at no time since his official connection with them have the State normal schools been in a more satisfactory condition than now. The school-buildings of the four older schools have been enlarged and greatly improved, so that 200 pupils can be accommodated in each, instead of 120 as before, thus allowing, at comparatively small cost, an increase of 320 pupils. The schools are rapidly filling. The Salem school is already full, having more than 230 pupils. The classes entering the schools at the beginning of the school year in September last were larger than ever before, notwithstanding the fact that nearly 100 offered themselves for admission at the new school in Worcester, of whom nearly 80 were admitted. This school was opened for pupils on Tuesday, the 15th of September, 1873. The building stands on a beautiful eminence in the easterly part of the city, and within five minutes' walk of the new station for the use of all the railroads which enter the city. It is built of stone, quarried near by, with granite facings. In its simple but grand proportions, and especially in its well-nigh perfect adaptation to its high purposes, it is alike an ornament to the city and an honor to the Commonwealth. It will easily accommodate 250 pupils. The enlargement of the boarding house at Bridgewater was completed early in 1874, and the house at the date of the report was occupied by nearly 130 pupils. A new boarding house at Westfield was completed in July, 1874, and is admirably adapted to its purpose. It has a capacity for 130 pupils. The five schools have now a capacity for 1,050 pupils. When these are filled, others will be called for and one after another established, until—and that at no very distant day—not less than 2,000 pupils will be found in them.—(Report for 1873-'74, pp. 123, 124.)

STATISTICS OF NORMAL SCHOOLS.

Framingham.—Opened at Lexington 1839. Attendance during the year, 142; graduates, 35, of whom 6 were from the advanced course. Of 657 graduates of this school heard from, 95 per cent. were found to have engaged in teaching for an average period of 6.33 years.

Westfield.—Opened 1844. Number of different pupils in attendance, 176; number who completed the course of study, 42. Since the opening of this school, in 1839, there have been 2,610 pupils, and 816 have received diplomas. Most of these have taught or are teaching in the schools of the State, the average period of their service being upward of five years.

Bridgewater.—Opened 1840. Number of different pupils during the year, 210; graduates from the regular course, 43; from advanced class, 6; total, 49. Number admitted since the beginning of the school, 2,275; graduates in that time, 1,337.

Salem.—Opened 1854. Number in attendance during the year, 273; graduates from the regular course, 55; from advanced class, 3; total, 58. Whole number of pupils since the opening of the school, 1,848; number of graduates, 868.

Worcester.—The number of pupils admitted since the beginning of this school in September, 1874, has been 122. Of these 29 have withdrawn, leaving 93, divided into 3 classes of 28, 18, and 47.

The library here has been increased by the purchase of 592 volumes of text books and 457 volumes of reference books. Some illustrative apparatus for teaching drawing, physiology, &c., has been supplied. A chemical laboratory, accommodating 18 working pupils, has been fitted up and supplied at a cost of $800, and about $300 more has been expended for philosophical apparatus.—(State report for 1874-'75, pp. 27-52.)

NORMAL ART SCHOOL.

"The progress made by this school since its first establishment," says Mr. Walter Smith, State director of art education, "has been a subject of astonishment to many experienced educators." When the school was first established, Mr. Smith's estimate that 100 students might be expected was, he says, regarded as visionary. But before

it had been opened three months 107 students had been admitted and nearly as many more refused admission on various grounds, want of accommodation being the principal. At the close of the year 1874, there were on the books and in attendance at the school 188 students, and more than that number were refused admission or their admission postponed. The school, which can only seat 72 students, has been made to accommodate 188 by giving to each of the classes an average of about one-third of the instruction applied for. This has been done in order to give as many individuals as possible a little instruction by way of a beginning. "It has been," says Mr. Smith, "almost impossible to do otherwise than this. Parents have brought their sons and daughters, who have chosen to adopt the vocation of the art teacher, and claimed admission to the school, offering to pay anything that might be charged for the instruction or bear all the inconvenience of crowding and confusion, if only they might be allowed to attend even for one or two days a week. Nearly one hundred pupils from other States, offering to pay the fee of $50 per annum if they could come, have been refused on the ground that there was no room even for residents of this State. I judge that if a normal art school could be built in Boston, thoroughly adapted in plan and arrangements for the purpose and capable of accommodating as many students as applied for admission, it might be opened with 500 students." He therefore recommended very strongly in his report for 1873–'74 the erection by the board of education of a building capable of holding as many students as would be likely to need such instruction as the school could give, in which provision should be made for a four years' course of study. This was not secured, but in the fall of 1875 additional and more commodious rooms were leased and fitted for the uses of the school, and are now occupied.—(Report for 1874–'75, pp. 56, 57.)

Director Smith remarks that one of the most gratifying signs of the progress that is being made in the study of drawing is the great improvement in it which is found in the normal schools. During the year they were all examined in drawing more thoroughly than ever they had been before, and the result showed that every student who graduated from the schools would be able to teach drawing in some of its phases, and a large majority in all the elementary subjects. This advancement, he says, if continued, will make industrial art education both possible and permanent in the public schools, where, to be successful elsewhere, it must be commenced. He indorses a suggestion made by Mrs. Dickinson, who has charge of the drawing in the Westfield Normal School, that some students, who have a great love for drawing and intend to become teachers of it, could be prepared for the normal art school examinations and prepare the diploma works while studying in the normal schools. This he thinks a valuable suggestion, for thus the art school course could be shortened by a year.—(Report for 1873–'74, p. 42.)

EDUCATIONAL JOURNALS.

The New-England Journal of Education, which grew out of the union of the State educational journals of New England together with the College Courant of New Haven, started at the beginning of the year 1875 under most favorable auspices. Each State association appoints its State editor, and thus each weekly issue brings tidings from all parts of New England. It is also becoming national in its character and circulation, already counting among its contributors many of the prominent educators of the country.—(Report of secretary of State board in Connecticut, pp. 131, 132.)

TEACHERS' INSTITUTES.

During the year 1873–'74 8 sessions of teachers' institutes were held, with an attendance ranging from 40 to 130 and aggregating about 700. These institutes were conducted on a plan differing from that which has heretofore been followed, in respect to the time devoted to each and the number of instructors employed. Owing to the failure of the legislature to furnish the means required by law to be furnished, it was decided to employ only the agents of the board and the principals of the normal schools and to reduce the time of each institute to two full days and three evenings. Secretary White declared himself, on the whole, so well satisfied with the result of the experiment as to advise a further trial of it. Heretofore a serious obstacle in the way of the highest degree of success has been the failure to secure the constant attendance of a class during the week usually devoted to a session. The effect of holding the institute for a shorter time has been to give to the class a degree of uniformity highly favorable to successful work. Secretary White states, moreover, that he has found himself gradually coming to the conclusion that teachers' institutes must, at no distant date, give place to other agencies. In addition to the State normal schools, training schools or classes for teachers in high schools are existent in many of the cities and larger towns, and such schools, the secretary thinks, are doing far more efficient and thorough work in the education of teachers than the institutes can be expected to do. He believes, too, that the time has come when more labor and care should be expended on the supervision of schools, even to a remission of labor in the institutes, if there must be a choice between the two.—(Report for 1873–'74, p. 122.)

Eight of these institutes were held in 1874–'75, 6 in the western counties, by Special Agents Walton and Hubbard, and 2 in the eastern, by the general agent, A. J. Phipps.—(Report for 1874–'75, pp. 142, 143.)

SECONDARY INSTRUCTION.

HIGH SCHOOLS.

The general agent, Mr. Phipps, reports the whole number of high schools in the State, according to his latest returns, (1873–'74,) as 209. These were maintained in 187 cities and towns—more than one half the number in the Commonwealth—many towns having such schools, though not required to by the statute, and a number having more than one. Of a large number of these schools the agent speaks in terms of the highest commendation, as being well supplied with apparatus for illustrating natural philosophy, chemistry, and such other subjects in the course of study as require illustration, with mural maps, classical and modern; with encyclopedias, dictionaries, and other books of reference, and with the very best teachers that liberal salaries can command. Not only can a most excellent English education be obtained in them, equal, and sometimes superior, to that obtained in many so-called colleges, but from many of these schools young men go to college with as thorough a preparation as the best New England academies can give. About one-third of the high schools, he thinks, are of this class. Another third embraces schools of much excellence, giving a fair English education and a passable preparation for college. The remaining third is of a much lower order, being but little in advance of the average grammar school. Even such as these, however, it is believed, are doing a good work, and are of great value to the towns maintaining them.—(Report of board of education, 1873–'74, pp. 90, 92.)

The report for 1874–'75 appears to show only 203 high schools, 162 in towns required to keep them and 41 in towns not so required; but reference is made to places holding them for short terms, which may include still others.—(Report for 1873–'74, pp. 90, 92; report for 1874–'75, pp. 137, 138.)

No report is made of the number of pupils enrolled in the high schools, nor of the comparative numbers engaged in English studies only, in classical courses, or in modern languages. For such returns the country still waits, in hope that they may yet be given.

ACADEMIES AND SEMINARIES.

Reports have been received from 49 schools of the above class, 5 of them for boys, 14 for girls, and 30 for both sexes. A majority of all these schools report themselves unsectarian, while 3 are under the influence of the Protestant Episcopal Church, and 6 under that of the Congregational. The Unitarian, Baptist, and Roman Catholic Churches have each 2, and the Universalist, New Jerusalem, and Methodist Episcopal Churches 1 each. Ten do not report on this point.

In 28 of these schools were libraries ranging from 36 to 3,409 volumes, the total number of volumes being 20,479. Some philosophical apparatus was possessed by 28, and at least the beginnings of a chemical laboratory by 15. Instrumental music was taught in 27, vocal in 30, drawing in 37.

The 5 schools for boys reported an attendance of 181 pupils under 19 teachers, 71 of the boys pursuing classical studies and 14 studying modern languages. The 14 schools for girls report 109 teachers and 578 pupils, 101 of them apparently engaged in classical and 352 in modern language studies, with 20 unclassified; while in the 30 schools for both sexes there was an attendance of 101 teachers and 3,394 pupils, (1,812 boys and 1,582 girls,) of whom 527 were pursuing classical studies and 417 in modern languages, making a grand total of 4,153 pupils (1,993 boys and 2,160 girls) instructed by 229 teachers, 699 of the pupils in Latin and Greek and 783 in modern European tongues.—(Returns to Bureau of Education, 1875.)

PREPARATORY SCHOOLS.

Twenty-two schools of this class, devoted, with one exception, exclusively or mainly to the preparation of students for colleges and scientific schools, report for 1875 a total of 1,142 students in training for a collegiate and 211 for a scientific course, besides 868 other students. Of these schools the Phillips Andover Academy shows 140 pupils in its classical department, with 99 scientific and general; the Public Latin School, Boston, 373 in classical studies, with no note of any others; the Adams Academy, Quincy, standing next to these, and showing the influence of an old family by reporting 130 in the classics; while Williston Seminary gives 110 in classical, 30 in scientific studies, and 100 others.—(Returns to Bureau of Education for 1875.)

Then 205 students are reported in the preparatory departments of Boston College, Boston, and the College of the Holy Cross, Worcester, all preparing for a classical collegiate course.—(Returns, &c.)

NEW SECONDARY SCHOOL.

A valuable addition has been made to the means of secondary education for this State by the founding of the Cushing Academy, Ashburnham, opened in 1875. This school is the fruit mainly of the liberality of Mr. Thomas Cushing, late of Boston, who devoted to it over $80,000 of endowment, with a legacy of $25,000 more, to come to it on the

death of Mrs. Cushing. The original sum was to remain at interest till enough should accrue to defray the expense of building, to facilitate which Mr. George C. Winchester gave a site of several acres, pleasantly improved. The academy building, completed in the summer of 1875 at a cost of about $90,000, is said to be a fine specimen of school architecture, and was opened in September with 80 pupils of both sexes.—(New-England Journal of Education, July 31 and September 18, 1875.)

BUSINESS COLLEGES.

Five business colleges and commercial schools, 4 of them located in Boston, the other in Pittsfield, report a total attendance of 826 pupils in 1875, of whom 108 were young women. Penmanship, book-keeping, and commercial correspondence enter into the course, and in some cases nautical studies. In one, Comer's, Boston, engineering, surveying, mechanical and architectural drawing, French, German, and Spanish are also taught.—(Returns to Bureau of Education for 1875.)

SUPERIOR INSTRUCTION.

AMHERST.

The courses of instruction pursued here are classical, scientific, and partial, the latter being for the benefit of students who, from ill-health or other causes, may be unable to pursue the full course. Candidates for the degree of master of arts in course must be graduates of at least three years' standing and must have spent at least two years in professional and other liberal studies.

Special attention is paid to physical education. A professorship of hygiene and physical education is filled by a competent physician, under whose direction the students are required to exercise at an appointed hour each day. A prize of $100, given by John H. Washburn, of New York, is offered to the class which shall most faithfully discharge its duties in the gymnasium and carry out most fully the instructions of the professor of hygiene. Great improvement in health has been secured during the last thirteen years by these provisions for physical education.—(College catalogue, 1874-'75, and Amherst Student.)

BOSTON UNIVERSITY.

The facilities for instruction in connection with the university were greatly increased and diversified during the year 1874-'75. At the close of that academic year the number of officers of instruction and government, exclusive of those in the preparatory departments and in co-operating faculties abroad, was 102 against 87 the preceding year. The number of students in attendance in 1874-'75, exclusive of those in preparatory departments, was 478, of whom 82 belonged to the colleges of liberal arts and of music and 402 were in the professional schools. Of the 478 in all the colleges and schools, 102 were young women, an excess of 38 over the number present the preceding year. No other university in the world, it is asserted, with possibly one exception, has admitted so large a number of young women to studies of the same grade. The number of graduates from the professional schools was 126, against 42 the previous year, an increase of 300 per cent. The collegiate departments, having been organized in 1872 and 1873, have not yet presented classes for graduation.

The financial resources of the university are classified as follows: (1) the real estate and funds of the school of theology, estimated, when received in June, 1871, at $242,736 36; (2) a guarantee fund, subscribed in 1872, to meet anticipated deficits of the law school for the period of five years; (3) the real estate and funds of the school of medicine, valued at about $150,000, part raised by subscription and part received from the trustees of the New England Female Medical College; (4) real estate and funds not restricted as to use, valued at a little over $2,000; (5) the annual income from tuition in the different schools and colleges, not far from $25,000; and (6, prospective) three payments from the trustees of the Rich estate, prior to its final transfer in 1882.—(President's annual report, 1874-'75.)

COLLEGE OF THE HOLY CROSS.

This college, located near Worcester, is under the control of the Roman Catholic Church. The course of study embraces seven years, three of which are preparatory. It is for male students only. Improvements involving an expense of nearly $50,000 have been undertaken to enable the college to accommodate 230 students, with a new chapel, study hall and dormitories, and gymnasium.

The graduates in 1875 numbered 16; volumes in library, 11,000.—(College catalogue for 1875.)

HARVARD.

Two new professorships were established in the college during the year 1874-'75, one of music and one of the history of art. The theory and history of music were first made a subject of regular college teaching in the year 1871-'72. It has commended itself to

the faculty as a serious and difficult study and a fit part of liberal training, and last year it was made one of the subjects in which honors may be given at graduation. The history of art was first offered to the choice of the students as a college elective in the spring of 1874, and was immediately chosen by a considerable number of persons. The subject proved to have a double value, for, while it had to do mainly with art, it had also close relations with history and literature.

The experiment of voluntary attendance at recitations and lectures on the part of seniors, which has been in progress since the beginning of the year 1874–'75, has resulted satisfactorily. It has shown that, as a general rule—and taking due account of special reasons for absence—seniors absent themselves most from the least profitable exercises. The attitude of the students toward the university, their relations with their instructors, and their conception of their privileges and responsibilities are gradually undergoing a propitious change. Scholarship, as tested by the examinations, does not seem to have been affected either favorably or unfavorably by the voluntary attendance.

In the spring of 1875 the hours of recitations and lectures were arranged upon the plan of having a midday lunch, a free hour for exercise before dinner, and a late dinner; an arrangement which secures all the hours of daylight in winter for mental work, leaves a perfectly free hour for exercise after all lectures and recitations are finished, and dispenses with lectures and recitations by gaslight in winter. A trial of three months has developed no defects in this plan to counterbalance its merits.

The average age of the young men admitted has been gradually rising during the whole of this century, until, as the president of the college believes, it has now reached a limit which had better not be exceeded, namely, 18 years and 6⅔ months.

The college library received four considerable funds for the purchase of books during the year 1874–'75: the proceeds of one-half of the residue of the estate of Charles Sumner, $29,005; a bequest of $15,000 from the late President Walker and of $3,000 from Ichabod Tucker, the time of payment of which was anticipated by a lady of Mr. Tucker's family, who also added $2,000 to the gift; while $5,000 was received from the estate of the late Harriet J. G. Denny, paid by her children at her request—a total amount of $54,005. The library has now an annual income of more than $10,000 exclusively devoted to the purchase of books, and as the increase is far beyond the present accommodations for the books, an enlargement of Gore Hall has become a necessity.

Summer courses in botany, chemistry, and geology were given in 1875 with good results. The number of students, 98, was larger than ever before, and 64 of them were teachers. The course in field geology was a novel experiment, the object being to promote good teaching of elementary science in schools by giving teachers opportunities for laboratory and field work. The course was given in a camp at Cumberland Gap, Ky., and, although the season was unusually rainy, the measure of success attained was sufficient to encourage a repetition of the course upon the same ground in the summer of 1876.—(Report of the president of the college, 1874–'75.)

TUFTS COLLEGE.

This college, located near Boston, is under the influence of the Universalists, and is for the education of young men only. It has a classical, a philosophical, and an engineering course, the last extending through three years. The standard of admission to the classical course is a high one.

The degree of master of arts, subsequently to 1876, is to be conferred on graduates who shall pursue, under the direction of the faculty, a prescribed course for one year in at least two departments, and on graduates of other colleges whose courses of study have been equivalent to those required of the graduates of Tufts.— (College catalogue for 1875–'76 and special report to the United States Bureau of Education.)

WILLIAMS COLLEGE, WILLIAMSTOWN.

The catalogue for 1875–'76 shows that in this college the means of illustration in physics, chemistry, astronomy, and the other scientific branches are ample. The college library, open to students for two hours each day, contains 17,000 volumes. Physical training receives special attention.

The custom of hazing is dead here, a pledge to refrain from this and all similar practices being exacted by the faculty from all members of the sophomore class.—(College catalogue 1875–'76 and New-England Journal of Education, September 18, p. 131.)

COLLEGES FOR WOMEN.

Eleven institutions for the superior instruction of women report their statistics for 1875, as follows: number of instructors, 179; number of students, 1,318; of whom 789 were pursuing collegiate studies. Music, both vocal and instrumental, and drawing are taught in all, and painting and modern languages in all but 1; 9 report the possession of chemical laboratories; 10, that of philosophical apparatus; 6, museums of natural history; 3, astronomical observatories; 5, at least the beginnings of art galleries; 9, gymnasia; and 10, libraries ranging in size from 300 to 12,000 volumes. Eight of these colleges are non-sectarian in their influence; 2 are under control of the Congregational and 1 of the Methodist Church.

Smith College, at Northampton, was dedicated July 14, 1875. The requisites for admission are equal to those in colleges for men, and the length of the course and its requirements the same as those of Yale, Harvard, or Amherst. It is meant that what is done shall be done well.

Wellesley College already numbers 300 students, 60 of whom are pursuing collegiate studies. The building is represented as being one of unequalled beauty, convenience, and adaptation to its destined uses. Everything in the way of costly apparatus, fine working libraries, with charts, maps, and illustrations of all kinds, has been provided. A large corps of accomplished teachers has been engaged, selected almost at the will of the founder, who, by offering high salaries, has been able to call to his aid some of the highest talent.—(Replies to inquiries and New-England Journal of Education, February 6, 1875, p. 70.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

Massachusetts Agricultural College.—This college, incorporated in 1863 and located at Amherst in 1864, owns property worth about $265,000, (including buildings, farm stock, books, apparatus, &c.,) in addition to its endowment from the congressional land grant of 360,000 acres of land, making in all a sum estimated at $518,000 for value for educational uses of the college.

The number of students admitted on examination since the beginning is 398, of whom 95 have completed the four years' course and received the degree of bachelor of science. It is a noteworthy fact that nearly all who enter the college become desirous of graduation. There is also a steadily increasing tendency to return after obtaining a degree for post graduate study. The number of post graduates in attendance during the fall term of 1875 was 6, all of whom devoted themselves to chemistry, 4 of them pursuing botany in addition, and 1 veterinary science.

Nothing has so severely checked the growth of this college as the high rate of tuition and the total want of means for the pecuniary assistance of students. If it could be more intimately connected with the educational system of the State by the establishment of a free scholarship in every representative district, which should be open to competition among pupils of the public schools, the results, it is believed, would amply compensate for the expense.—(Catalogue of college, 1875.)

Worcester Free Institute of Industrial Science.—The fifth annual commencement of this institute was attended by a large concourse of representative men from Worcester and some distinguished gentlemen from abroad. The examination and theses of the 19 graduates exhibited a thorough training in the rudiments of technical knowledge and a comprehension of the principles underlying the structures or appliances which were discussed. Students here have the very best facilities for learning the practical as well as the theoretical part of civil and mechanical engineering, as the instruction is given by practical teachers and experienced machinists, having drawings, models,

apparatus, and tools for illustration and practice.—(American Artisan, August, 1875, p. 214.)

This institution has heretofore given its graduates a simple diploma, while other similar ones confer the degree of B. S. upon pupils having the same attainments. Thus, the graduates of this school have been deprived of a recognition of merit, which is not only a recommendation, but a necessary prerequisite for future honors. Therefore the trustees decided to bestow the degree of B. S. on graduates of the institute, in addition to the certificate of attainments. It was conferred on the graduates of the institute for the four preceding years, as well as on those for 1875.—(Worcester Daily Spy, July 8, 1875.)

THEOLOGY.

Harvard Divinity School, (mainly, but not exclusively, Unitarian,) Cambridge.—Within six years two professorships have been added, and the amount of instruction given in the school has quite doubled. The school, since 1872, has offered greater advantages than ever before; yet the number of its students does not increase, but the contrary. The attendance in 1871–'72 was 30, while that in 1874–'75 was but 15. The causes of this condition are, it is stated, many and complex, but the unsettled condition of the clerical profession is a principal one.—(Report of president of the university, 1874–'75.)

Boston University School of Theology, (Methodist Episcopal,) Boston.—This school graduated, in 1875, the largest class it has ever sent out. The entire membership of the school was 90; senior class, 33; middle, 23; junior, 26; unclassified, 8; graduates, 27.

The late Mr. Samuel Stevens, a wealthy merchant of Baltimore, has left a legacy of $40,000 to be used in founding a theological professorship in the university.—(Report of president of university, 1874–'75, and New-England Journal of Education, January 23, p. 46.)

Andover Theological Seminary, (Congregational,) Andover.—Mr. Nathan Durfee has given $25,000 for the erection of a chapel in this seminary; a subscription to obtain $25,000 more is being made up in the town, and work on the building is to commence at once.—(New-England Journal of Education, January 23, 1875, p. 46.)

All candidates for admission here are required to express their purpose to complete, at some place of instruction, three full years of theological study, unless prevented by some unforeseen and unavoidable necessity. Admission to the class of resident licentiates can only be obtained after the completion of such course or its equivalent.—(Catalogue, 1875–'76.)

Divinity School of Tufts College, (Universalist.)—The regular course of instruction occupies three years for bachelors of arts; for all others, four years. Instruction in elocution is given throughout the whole course. Students are also permitted to elect French and attend lectures in the academical department. Special courses are provided of one, two, and three years. Important facilities for general improvement are offered to students by the proximity of the school to such intellectual centers as Boston and Cambridge.—(Advertisement in Tufts Collegian, November, 1875.)

Newton Theological Seminary, (Baptist,) Newton Centre.—This old and well-established institution published, in 1875, a general catalogue showing its lists of officers from 1825 to 1875 and of students from 1826 to the latter date. Among the officers stand such honored names as those of Dr. Barnas Sears, Dr. Alvah Hovey, and Dr. H. B. Hackett, men of whom any institution might be proud; while the list of students embraces 606, great numbers of whom have done honor to their profession and to the alma mater by which they were trained. The course is three years.—(Catalogue, 1875.)

New Church Theological Seminary, Waltham, for the instruction of students in the doctrines and principles of the disciples of Swedenborg. One annual term of five months. No specified length of course.—(Return to Bureau of Education, 1875.)

Episcopal Theological School, Cambridge, for instructing students according to the doctrines, principles, and polity of the Protestant Episcopal Church. Course, three years, the studies of the first year introducing to a knowledge of the Hebrew language, of the origin, contents, antiquities, and canonicity of the books of the Old and New Testament, of the principles of scriptural interpretation, and of the evidences of Christianity; those of the second year applying the principles of interpretation to the Holy Scriptures, developing their doctrinal system, and tracing the history—sacred and secular—of the divine dispensations; those of the third devoted mainly to the Scriptures as the record of revealed theology and of the divine order of church affairs.—(Catalogue for 1874–'75.)

LAW.

Harvard Law School.—Two events of importance happened in the law school during the year 1874–'75. An additional professorship was established named the Story professorship, in memory of distinguished services rendered the university by Joseph Story, from 1825 to 1845, alike as a member of the corporation and as Dane professor of law. The instruction given by the new professor relates chiefly to mercantile law. The other important event was the establishment of an admission examination appli-

cable, from and after the beginning of the academic year, 1877–'78, to all candidates for the degree of the school who are not already bachelors of arts, science, or philosophy. Similar action was taken almost simultaneously by the medical faculty, although the particular requisitions were not identical with those determined upon by the law faculty. Indeed the precise nature of the new requisitions is regarded as not material, as they will probably undergo a gradual and progressive change. The important fact is that the university proposes to demand of all candidates for its degree of bachelor of laws or doctor of medicine evidence of some academic training, not so much for the sake of the knowledge which that training imparts as of the mental power which it develops. In this action the university recognizes a duty it owes to the professions of law and medicine, which have been for fifty years in process of degradation through the practice of admitting to them persons wholly destitute of academic culture. The schools of law and medicine which have sprung up all over the country during the last forty years have held no examinations for admission, nor have they required of candidates any particular previous course of study. Such schools are responsible for the present degraded state of professional education.—(Report of President Eliot for 1874–'75.)

Law School of Boston University.—The president of the university, 1874–'75, reports a decided success in this department, 23 different colleges being represented among the students, Harvard heading the list with 22, Darmouth sending 12, and Brown 10. The degree of LL. B. was bestowed on 54. The total attendance was 131 against 81 the previous year. The full course is three years, but the degree of bachelor of laws is made attainable at the end of the second year, and attendance the third year is entirely optional.—(Year book of the university, vol. 2, 1875.)

MEDICINE.

Harvard Medical School.—The occurrences of most importance in the history of this school during the year are the requirements of examination for admission, already referred to, the establishment of a professorship of clinical surgery, and the subscription of $134,885 toward the required sum of $200,000 for the erection of a fire-proof building in which the Warren Museum may be secured from fire.

The course of instruction in the dental school was also enlarged during the year and the standard of the degree raised, and it was provided that every candidate for graduation must have spent at least one continuous year in the school.

Boston University Medical School.—This school enrolled during the year 146 students, a gain of 64 over the previous year. There were 27 graduates, 20 men and 7 women, 5 of the latter being married. The subject of co-education has almost ceased to be a topic of special interest in the school. It presents no difficulties, and subjects neither teachers nor students to any embarrassments, while the moral tone of the whole school is unquestionably elevated by the united presence of the two sexes.

During the summer of 1874, in anticipation of the large increase of students, a new lecture room was erected above the amphitheatre built the year before, the microscopical room greatly enlarged, the chemical apparatus improved, and other improvements made. The new building of the Massachusetts homœopathic hospital, in close proximity to the college, is in process of erection, and when completed will add very greatly to both the quantity and quality of the clinical instruction, by affording opportunities for the study of diseases at the patient's bedside.

Through the liberality of the friends of the school, the library has been nearly doubled in size and very greatly improved in character during the year. A legacy of $1,000 has been received from the estate of Dr. Harriot K. Hunt, the interest of which is to be applied to the purchase of books for the use of indigent female students.

Here, as at Harvard, there is an endeavor to advance the standard of medical study by requiring all candidates who have not taken a degree in arts to satisfy the faculty that they possess such an English education and such a knowledge of Latin as will enable them to prosecute the study of medicine with profit.—(University year-book, vol. 2.)

ORATORY.

School of oratory, Boston University.—This seems to have shared in the prosperity of the other professional schools of the new university. The whole number of students belonging to the school since its opening in 1873 was 62, of whom 32 were gentlemen and 30 ladies; 22 being clergymen, 29 teachers, 4 lawyers, 2 public readers, and 6 unprofessional. The number in attendance during the year 1874–'75, was 43; gentlemen 17, ladies 26. Of this number, 15 graduated and received the diploma of the school, 12 of whom were ladies. The majority of graduates expect to devote themselves to teaching elocution and oratory as a profession. The full course is two years. All candidates for admission must possess a good English education and present satisfactory evidence of good moral character.—(Year book of university, vol. 2.)

d Also one-fourth interest in a fund of $413,092.

SPECIAL INSTRUCTION.

EDUCATION OF DEAF AND DUMB AT THE AMERICAN ASYLUM.

The principal of the American Asylum, Mr. Stone, gives the results of attempts made in the institution during the year to teach articulation by means of visible speech, according to Mr. Bell's method, which was first introduced into the asylum in 1872. The attempt was not made to give instruction by this means, but articulation and reading from the lips in connection with it were taught as accomplishments to 46 pupils, of whom 18 had received no previous instruction in speech, 14 had belonged to the articulation classes of the previous year, and 14 others were semi-mute and semi-deaf. In selecting the class, preference was given to those who, from various causes, were thought most likely to improve. Although two years is thought too short a time to see the full workings of visible speech in teaching articulation, yet the results accomplished have been estimated, and an opinion has been formed as to the value of the method. The improvement made by the semi-mutes and semi-deaf in articulation has been decided. Visible speech has proved a powerful aid in their instruction. The results obtained are superior to those of former years by the method of imitation. Certain sounds which are made in the back part of the mouth, and are necessarily obscure, have always been learned by the deaf with great difficulty and uncertainty, if at all, because they have been imperfectly understood. These sounds can be clearly expressed by the symbols and taught from them. Errors of pronunciation can be shown and the correct pronunciation indicated. In respect, however, to that portion of the pupils under this instruction who were congenital mutes, and all that have had no previous knowledge of speech, the experiment has been but partially successful, and it is be-

lieved that the expectation of giving speech to deaf-mutes as a class is not likely to be in many cases realized. A part of the classes referred to learned much language which they will be able to use in the ordinary affairs of life, and would continue to improve with further instruction, but a large majority of them have not gained sufficient practical benefit to compensate for the time and labor bestowed on them. The speech of some is so imperfect and disagreeable that communication by writing, by the finger alphabet, or by ready and expressive pantomime is far preferable, while others have utterly failed to derive benefit, and to instruct them further would be a waste of time. The possibility of imparting correct speech to a considerable extent to selected cases of deaf-mutes has been established, but it seems equally true that certain deaf mutes cannot learn to speak with any reasonable amount of instruction. "At the same time," it is remarked, "the value of visible speech should not be underrated. If a knowledge of the symbols is gained and the power of combining them acquired, they seem invaluable wherever correct spoken language is to be taught to either congenital or semi-mutes. Visible speech, however, is a new method. Earnest and able teachers are laboring to perfect it, and the future will determine what it can accomplish. In its present stage of development it seems likely to benefit the few rather than the many."—(Report of State board of education, pp. 114–116.)

CLARKE INSTITUTION.

Here the system of Mr. Bell has been carried on successfully during the past year, and is still regarded as a very valuable auxiliary to the method of instruction. The progress of the school in mental culture and articulation, though without any marked characteristics, is believed to compare favorably with that of former years.

The cabinet shop has been in operation the whole year. Twelve of the older boys have spent three hours there each day and have made great progress; 7 younger boys have worked an hour and a half each day. The work in the shop makes a part of the training of the boys.—(Report of State board, 1873–'74, pp. 120, 121.)

The whole number of pupils for the year 1874–'75 was 62. Of these 18 were semi-mutes, some of whom retained very little language, scarcely more than disconnected words, while half of them could neither read nor write when they entered school. Six pupils were semi-deaf, only 1 of whom, however, could use connected language or could read. The other 5 would never have learned to talk without special instruction in articulation. The year 1874–'75 was one of peculiar interest, since at its close there went out the first class that ever graduated from the institution a class of 6 pupils, who completed its high school course. This course embraces articulation and elocutionary exercises, arithmetic, (completed,) algebra, geometry, physiology, zoölogy, botany, geology, physical geography, astronomy, natural philosophy, chemistry, history, (ancient and modern,) grammar, rhetoric, English literature, political economy, psychology, and drawing.—(Annual report for 1875 of Clarke Institution.)

BOSTON SCHOOL FOR DEAF-MUTES.

The committee of the Boston day school for deaf-mutes states that the school has accomplished all that its most earnest friends reasonably expect and believe; and that, to meet the just demands of the parents and friends of deaf children, it is desirable to establish day schools for them in every large city, so that they can be at home rather than be sent to boarding schools, where they are shut out from the cheering influences of home life. The method of teaching articulation by means of visible speech, which was introduced into this school by Professor A. Graham Bell in April, 1871, has been successfully used, and with the most satisfactory results.—(Report of secretary of board of education for 1873–'74, pp. 118, 119.)

INSTRUCTION OF THE BLIND.

The Perkins Institution and Massachusetts Asylum for the Blind made its forty-fourth annual report (1875) through its late secretary, Dr. Samuel G. Howe.

The institution is not intended to be an asylum, but a school for the blind, where they may obtain facilities for a thorough practical education, which will enable them to become self-supporting. The course of instruction in the intellectual department embraces all the branches taught in the best common schools, and most of the pupils give as close attention and understand their lesson as well as scholars of the same age possessed of sight. In addition to the studies of the school-room, the course of instruction includes lessons and practice in vocal and instrumental music, thorough practical training in tuning and repairing piano-fortes, with study of their mechanism, instruction in some simple trade, and work at some domestic or mechanical occupation.

Great attention has continued to be paid during the past year to the study of music, both in its practice as an art and in its theory as a science. Instruction has been given to a large number of the pupils by a corps of five talented and able resident teachers, assisted by a few of the advanced scholars, and great facilities for musical culture have been afforded. The services of eminent professors in the city have been employed whenever special instruction on some particular instrument was required, and one of the best vocal teachers in Boston gives lessons in singing to an advanced class.

The system of training pursued in the art of tuning and repairing pianos is both

thorough and comprehensive. The lessons are accompanied by a constant examination and study of the mechanism of the piano, which renders the pupils familiar with the principles upon which the instrument is constructed and enables them to acquire a thorough knowledge of its parts and workings. The graduates of this department generally meet with favor and encouragement from the public, and are, as a whole, successful. Most of them earn a good livelihood by tuning and repairing piano-fortes for private families, while a few are employed in factories.

The institution possesses an extensive library, containing all the important books printed for the use of the blind in this country and in Europe, as well as a large collection of globes, relief and dissected maps, ciphering boards and types, tablets for point-writing, &c.—(Report of the institution, 1875.)

CONVICT SCHOOL.

After the fire which destroyed several of the workshops in the Charlestown State prison, so many of the convicts were thrown out of employment that the warden established a day school for the convicts. It was taught by a convict, a man of education, who, but for strong drink, would not have been there. The teaching was excellent, the pupils manifesting great interest in their studies, and what was begun as a temporary expedient to occupy the time of those out of employment will probably be made a permanent and prominent feature in the prison discipline.—(New-England Journal of Education, January 2, 1875, p. 10.)

EVENING DRAWING CLASSES.

In Charlestown rooms have been fitted up for evening classes in drawing. About 50 adults, chiefly mechanics, are in the mechanical drawing class, some 40 in free hand drawing and about 20 in ship-draughting. The school reports show kindred clas es in most of the cities of the State.

STATE REFORM SCHOOL, WESTBOROUGH.

In this school there are 133 lads. In the two advanced classes 41 out of 60 could not write when sent to the school. All now receive regular and careful instruction. Arrangements have been made with certain gentleman to give the boys a series of practical and familiar talks on "glass," on "coal," and on "the four useful metals, iron, copper, silver, gold," each using specimens and illustrations.—(New England Journal of Education, March 6, 1875, p. 118.)

BOSTON WOMAN'S EDUCATIONAL ASSOCIATION.

This association represents, among other interests, the Harvard examinations for women, a school for teaching the art of cooking, the training school for nurses, the diet kitchen, the Kindergarten, and the language classes for teachers. The second annual report, issued in 1875, states that the committee on industrial education found the opportunity of instituting a small diet kitchen for furnishing food to the sick poor at the dispensary of the New England hospitals for women and children, money having been subscribed to carry it on for several months. The success of the experiment was such as to lead to the opening of a kitchen on a large scale at the north end, which physicians say has already been of service in promoting the recovery of a large number of their patients.

The training school for nurses started by this association had at the date of the report 17 pupils, who were doing excellent work at the Massachusetts General Hospital under the direction of a matron admirably fitted to instruct them.

The committee on intellectual education report an encouraging success for the Harvard examinations for women, and make a very strong appeal to all who seek some practical means of helping on the better education of woman in behalf of these examinations.—(New-England Journal of Education, February 20, 1865, pp. 90, 91.)

SOCIETY FOR PROMOTING STUDY AT HOME.

A society of ladies to encourage studies at home has been in quiet operation in Boston for about twenty months. Its purpose is to induce girls who have left school to form the habit of devoting some part of every day to study of a systematic and thorough kind. Its mode of operation is through the exercise of an oversight by experienced and educated ladies of the home work of younger ladies, and this mainly by means of correspondence. For example, if a girl of 17 or over desires to join the society, she gives her name to the secretary; pays a small initiation fee to cover expenses of postage, printing, &c., and receives in return a programme of the several courses open in history, literature, art, science, German, and French; she selects the department of study which she desires to pursue, and is put in communication with the member of the committee who has charge of the department. She is expected to devote some portion of every day or every week to careful reading and study, order and system being substantial elements in the plan, and, at least once a month, to report progress to her officer, who, in return, gives advice, makes suggestions, and encourages or stimulates the student. Once a year a meeting is held of such as can come together, and a general report is made, with special essays by students, and diplomas are given.—(Philadelphia Evening Telegraph, September 9, 1875, p. 2.)

EDUCATIONAL CONVENTIONS.

STATE TEACHERS' ASSOCIATION.

This association held its thirty-first annual meeting in Boston in January, 1876, upon which occasion addresses and papers of great value were delivered and presented, of which, however, but the briefest mention can be made here.

President Angell, in an address on "The prevention of crime," estimated the annual cost of the criminal class to the country as $200,000,000. The only remedy, in the speaker's opinion, was the public school, free and unsectarian. President Porter's address on "Science and sentiment" sought to show that only harmony should exist between these two activities of the mind. President Marble, in his address of welcome on the second day, enumerated certain questions which he thought should come up for solution at these conventions, namely: "Should cheap teachers shape the destinies of the next generation? Can the public be trusted to elect its educational rulers? Can good school officers be elected by political intrigue? Is Horace Mann's theory correct, that the property of the State should educate the people of the State? Do we have in the school-room too much study of books and too little instruction? Have dull boys any rights which teachers are bound to respect?"

Rev. Thomas Hill, D.D., formerly president of Harvard University, read a paper on "The culture of the imagination," which he thought is in these days too much neglected. Professor B. F. Tweed, of Charlestown, read a paper on "Principles and methods," and Professor Benjamin W. Putnam one on "Decorative art."

In the afternoon three separate meetings were held, those composing the high, grammar, and primary school sections, respectively, coming together in different places. In the high school section "The moral element in education" was treated of in a paper by Mr. A. H. Thompson, principal of the high school at Newburyport, and "The lack of true culture among teachers," by Mr. E. G. Coy, of Phillips Academy, Andover. In the grammar school section papers on "The study of arithmetic" and "The practical value of arithmetic" were presented by Mr. W. E. Eaton, principal of the Harvard School, Charlestown, and Mr. H. C. Hardon, master of the Shurtleff School, South Boston. T. W. Higginson, of Newport, R. I., addressed the association upon "Common sense in teaching history." The general result of his observations relative to the methods of teaching history had been disappointment. The teacher should not attempt to cram the utmost amount possible of facts and dates without reference to the principles and philosophy which underlie them. The child's mind should not be overburdened with a long list of disconnected dates. "The problem of primary school instruction" was presented to the primary school section in a paper prepared by Miss Thayer, of Bridgewater, and read by Miss Lincoln, of Hingham, when Rev. A. D. Mayo, of Springfield, read a paper on "Morals and manners in the recitation room."

At the evening session, Henry F. Durant, esq., founder of Wellesley College, spoke on the "Higher education of women," and Professor Peabody, of Harvard, made an address on "Popular education in its relation to our form of government," in which he spoke of the great danger that threatens the Republic from the fact that the intelligent, cultivated voter was often absent from the ballot-box, while the uneducated, the drift, and the masses were always present, and said that in the education of the people would be the safety of the Republic, and that this education must be obtained in the public schools.

On the third and last day, after the election of officers for the ensuing year, a resolution was adopted approving the action of the committee which had been appointed the previous year to present a memorial to Congress urging the continued support of the United States Bureau of Education, and re-affirming the statements contained in the memorial of the previous year on that subject. Papers were then presented on "The study of history as a means of culture," by Rev. Henry Blanchard, of Worcester, and "The relation of the grammar to the high school," by A. D. Small, superintendent of schools, Salem. The subject of "Education at the Centennial" was discussed by Mr. Philbrick, Mr. Hubbard, and Mr. Walter Smith, who spoke of the facility of exhibiting drawings. After a short lecture by Mr. James F. Blackinton on "Silent forces in education," the meeting adjourned.—(New-England Journal of Education, January 8, 1876, pp. 19, 22, 23.)

BOSTON SOCIETY OF NATURAL HISTORY.

At the meetings of this society on February 17, 1875, and subsequently, Dr. Kneeland gave a very interesting account of his visit to the geysers of Iceland, in August, 1874, Mr. S. H. Scudder gave an account of the structure and transformation of a West Indian butterfly, Dr. Wislow read an article respecting physics and biology, and President Bové showed a fine specimen of quite a rare mineral called "samarskite," from North Carolina. Two Indian skeletons, obtained by Mr. Trouvelot, from Westport, near Fall River, Mass., were examined. Professor N. S. Shaler made some remarks on "Erosion phenomena on sea-shores" and Dr. B. Joy Jeffries on "The comparative accommodation of the eye in man, birds, and fishes." Professor N. S. Shaler, of Harvard, spoke on "The movement of continental glaciers," Dr. Burt, of Wilder, on "A fœtal

dugong and manatee," and Mr. J. A. Allen made some remarks upon the migration of birds and the Signal Service observations.—(New-England Journal of Education, February 27, March 27, and May 8, pp. 103, 151, 220.)

MASSACHUSETTS CONVENTION OF CLASSICAL AND HIGH SCHOOL TEACHERS.

This association held its annual meeting in Boston, April 9 and 10, 1875. Between 75 and 100 teachers were present, including several ladies. Among the topics discussed were "The metric system of weights and measures," "The study of Greek," "The pronunciation of Latin," "Morals and manners in schools," and "The Bible as a text book.—(New-England Journal of Education, April 17, p. 187.)

MASSACHUSETTS ART TEACHERS' ASSOCIATION.

The objects of this association are the advancement of art education by means of lectures, readings, exhibitions of drawings, paintings, &c., and the promotion of social intercourse among members. The names of 60 teachers of drawing and art students are already upon the books of the secretary, and every member is expected to deliver at least one lecture to students upon some subject related to the school studies.—(New-England Journal of Education, March 6, p. 115)

OBITUARY RECORD.

DR. H. B. HACKETT.

The death of this eminent servant of God removes one who had long stood in the front rank of biblical scholars. Dr. Hackett in New Testament Greek and Dr. Conant in Hebrew have each occupied superior positions.

Dr. Hackett was born in Amesbury, Mass., in 1808, and prepared for college at Phillips Academy, Andover. In a delightful reminiscence of school days, in the Atlantic Monthly for 1869, Dr. O. W. Holmes says:

"Of the boys who were at school with me at Andover, one has acquired great distinction among the scholars of the land. One day I observed a new boy in a seat not very far from my own. He was a little fellow, as I recollect him, with black hair and very bright black eyes, when at length I got a chance to look at them. Of all the newcomers during my whole year, he was the only one whom the first glance fixed in my memory; but there he is now, at this moment, just as he caught my eye on the morning of his entrance. His head was between his hands, and his eyes were fastened to his book as if he had been reading a will that made him heir to a million. I feel sure that Professor Horatio Balch Hackett will not find fault with me for writing his name under this inoffensive portrait. Thousands of faces that I have known more or less familiarly have faded from my remembrance; but this presentment of the youthful student, sitting there entranced over the page of his text book—the child-father of the distinguished scholar that was to be—is not a picture framed and hung up in my mind's gallery, but a fresco on its walls, there to remain so long as they hold together."

He graduated at Amherst College, in 1830, and in 1834 at Andover Theological Seminary. After studying at Halle and Berlin, he became assistant professor of Latin and Greek at Brown University. This position he held from 1835 to 1839. In the latter year, he became professor of sacred literature at Newton Theological Institution, and was followed thither by several of his former pupils, among whom was E. G. Robinson. During the twenty-nine years of Dr. Hackett's professorship at Newton, he achieved the work of his life. It is impossible to measure the extent of his benign influence in imparting knowledge and in creating inspiration.

Delightful in the lecture room, he was not less so in the chapel. In his reading of Scripture and in his prayers, one heard a great soul communing with God. And when the professors' conference fell to his turn, it was an event to be remembered.

As an illustration of his disciplined powers, we recall the fact that he conducted the examination in New Testament exegesis without a book. We recall also, as an instance of his intense and wide interest in literature, that when Macaulay's England came out he began reading it of an evening and did not lay it aside till morning.

In 1868 Dr. Hackett became professor in the Rochester Theological Seminary; and this position he retained up to the time of his death.

As an author, Dr. Hackett was great, not in the *number* of his books, but in their character. His earliest work was an edition of Plutarch on The Delay of God in Punishing the Wicked. This was followed by a translation of Winer's Chaldee Grammar, and by the Hebrew Reader, an admirable work for beginners. His most popular work was Illustrations of Scripture, a delightful book, enriched by the results of his own wide travel and keen observation. His greatest work was his Commentary on the Acts, published in 1851, and again enlarged and greatly improved in 1858.

Of late years Dr. Hackett has been engaged in the revision of the English Scriptures, under the auspices of the Bible Union. He has all through life been a frequent and valued contributor to the quarterlies devoted to sacred learning. We notice in the index to the Bibliotheca Sacra the titles of nineteen articles and six book notices written by him.—(National Baptist, November 11, 1875.)

PROFESSOR JOEL PARKER,

Of Harvard College, an eminent lawyer and jurist, died at his residence in Cambridge Mass., August 17, 1875. Born at Jaffrey, N. H., January 25, 1795, he graduated from Dartmouth 1811; practised law in Keene, N. H., for seventeen years; served two years in the State legislature; and was appointed associate judge of the supreme court of the State in 1833 and chief justice five years later. His maturer years were devoted to researches in scientific and theoretical jurisprudence, by which he prepared himself for teaching others. From 1847 to 1857 he occupied the chair of medical jurisprudence at Dartmouth College, and from that time to his death served as Royall professor of law in Harvard University.—(American Educational Monthly, October, 1875, p. 466.)

DR. SAMUEL GRIDLEY HOWE

Was born November 10, 1801, in Pleasant street, Boston, Mass. He was a pupil of the Boston Latin School; was fitted for college by Rev. John Richardson, of Hingham, Mass., and entered Brown University, Providence, 1818, graduating thence in 1821. He subsequently studied medicine in Boston. In 1824 he embarked for Greece, intent on giving such assistance as might be in his power to the cause of Greek independence, which had then come to the issue of arms. Dr. Howe was made surgeon of the Greek fleet, but he also made several campaigns with the army, sharing its dangers and severe privations. While the war was still in progress, he returned to the United States to raise contributions of money and provisions, without which the Greeks would have been unable to continue their military operations. With great effort he succeeded in collecting some $70,000 for this object, together with a great quantity of clothing, and returned to Greece to distribute these gifts of American liberality.

Returning home in 1830, he undertook, at the instance of friends, a journey to Paris, to study there the methods pursued in the education of the blind as first commenced by the Abbé Haüy. Being about to visit Berlin in 1831, in the same educational interest, he undertook, at the request of General Lafayette, to carry supplies to the Polish insurgents collected within the Prussian frontier. In consequence of this undertaking he was arrested and imprisoned *au secret* for six weeks, after which time he was liberated through the efforts of A. Brisbane and on the requisition of Hon. William C. Rives, at that time American minister at the court of France. Returning to Boston in 1832, Dr. Howe gathered together a small number of blind children and began to teach them at his father's house. At a public exhibition of these pupils, given somewhat later, Colonel Perkins, of Boston, became so much interested in the education of the blind as to bestow his own house and some $10,000 in money on the enterprise, then in its infancy. Thus originated the Perkins Institution for the Blind, which was removed to South Boston in 1840. On the 4th of October, in 1837, Dr. Howe had begun the education of Laura Bridgman, a child 7 years of age, blind, deaf, dumb, and deficient in taste and smell. His wonderful success in this experiment, the first of the kind ever made, gave him at once a world-wide reputation. The result, so important in the history of philanthropy and in that of education, was arrived at by the patient and repeated use of the finger alphabet, in conjunction with the objects which the letters used were intended to represent. After many repeated spellings of the words "*pin*" and "*pen*," after each of which the object was presented to the touch of the child, she at length perceived the relation of the words to the things signified, and the difference of one letter between the words themselves. From this small but momentous beginning, Laura soon acquired an understanding and command of language which enabled her to receive a liberal education. In 1843 Dr. Howe married Miss Julia Ward, of New York, a daughter of Mr. Samuel Ward, of that city, of the well known firm of Prime, Ward & King. In 1849 he began the experiment of the teaching and training of idiots, a limited appropriation for this purpose having been obtained from the legislature of Massachusetts. As superintendent of the Perkins Institution, he made great efforts to obtain funds for printing works in raised letters for the use of the blind. He also made improvements in the shape of the raised type, by which the expense of printing and the size of the volumes were greatly diminished. Dr. Howe became chairman of the Massachusetts board of State charities in 1865, and held this important office until 1874, when he found his strength no longer equal to its duties.

In 1864–'66, Dr. Howe, in conjunction, with Mr. Gardiner G. Hubbard, of Boston, and others, labored earnestly to obtain a charter for a deaf-mute school, to be established in Massachusetts, in which the pupils should be taught by articulation, and not by signs. In 1866, Mr. John Clarke, of Northampton, offered to endow a school of this description with a large part of his estate. In consequence of the efforts made and of this offer, the Massachusetts legislature passed an act to incorporate a school for deaf-mutes at Northampton. This school is now known as the Clarke Institute.

In 1867, Dr. Howe visited Europe, carrying to Greece the funds contributed in America in aid of the Cretan insurgents. In 1870, he was appointed a member of the commission charged with visiting the island of San Domingo, to report upon its natural features and the character and disposition of its inhabitants. In the years 1872 and

1874, he revisited the island, partly in the interests of the Samana Bay Company and partly for the restoration of his health, which had become somewhat impaired by labors and exposures, as well as by the lapse of years. He returned from both voyages with improved health, and resumed his accustomed work with joy and alacrity. But during the summer of 1875 it became evident to all about him that his bodily strength was declining. On the 4th of January, 1876, he was attacked by a fatal disease, and breathed his last on January 9, surrounded by his family, and within sight of the asylum, whose head he had been for forty-four years. The grief of his pupils and employés at his death rivalled that of his nearest relatives; and at the funeral service held for him in the hall of the blind asylum, at the Church of the Disciples, and a month later, in the Boston Music Hall, many distinguished persons bore witness to the philanthropic genius and varied usefulness of the lamented hero.

Among many tributes to his great excellence may be mentioned several interesting letters received on behalf of the government and people of Greece and from influential associations in the city of Athens.

In conclusion, it may be said that Dr. Howe was a man of special and peculiar genius, of large and comprehensive benevolence, and of untiring industry. Although ardent in temperament, he was not hasty in judgment, and was rarely deceived by the superficial aspect of things, when this was at variance with their real character. Although so long and so thoroughly a servant of the public, he disliked publicity, and did not seek reputation, but was satisfied with the approbation of his conscience and the regard of his friends. He was faithful and affectionate in the relations of private life, and has left behind him only sorrow for the termination of a career which, full as it was of usefulness and labor, was too short for the needs of mankind and the wishes of loving friends.—(Prepared by Mrs. Julia Ward Howe.)

LIST OF SCHOOL OFFICIALS IN MASSACHUSETTS.

Hon. JOSEPH WHITE, *secretary of State board of education, Boston.*

STATE BOARD OF EDUCATION.

Name.	Post-office.
His excellency Alexander H. Rice, governor, *ex officio*	Boston.
His honor H. G. Knight, lieutenant-governor, *ex officio*	Boston.
Phillips Brooks	Boston.
Henry Chapin	Worcester.
Alonzo A. Miner	Boston.
Gardiner G. Hubbard	Cambridge.
William W. Rice	Worcester.
C. C. Esty	Framingham.
Edward B. Gillett	Westfield.
C. C. Hussey	

GENERAL AND SPECIAL AGENTS.

Abner J. Phipps, esq., general agent of the board of education	Boston.
George A. Walton, esq., special agent of the board of education	Boston.
E. A. Hubbard, esq., special agent of the board of education	Boston.
John Kneeland, esq., special agent of the board of education	Boston.

CITY SUPERINTENDENTS.

City.	Superintendent.	Post-office.
Boston	J. D. Philbrick	Boston.

STATISTICAL SUMMARY.

SCHOOL POPULATION AND ATTENDANCE.

	1873.	1874.
Number of children between 5 and 20 years	421,322	436,694
Number of children between 8 and 14 years, (compulsory age)	181,604	186,774
Number of children attending public schools	324,615	327,506
Number of children attending graded schools	.....	121,914
Number of months schools were sustained	7	7
Number of months' teaching by males	13,202	14,061
Number of months' teaching by females	39,777	43,573

TEACHERS AND TEACHERS' PAY.

Amount of wages paid male teachers	$685,720 64	$737,470 99
Amount of wages paid female teachers	1,079,348 95	1,179,540 11
Average monthly wages, for men	51 94	52 45
Average monthly wages, for women	27 13	27 01

SCHOOL DISTRICTS AND SCHOOL PROPERTY.

Number of school districts	5,521	5,571
Number of school-houses, frame	4,246	4,390
Number of school-houses, brick	641	682
Number of school-houses, log	605	549
Number of school-houses, stone	80	81
Total number of school-houses	5,572	5,702
Total number of seats in school-houses	399,067	407,072
Number of ungraded schools	5,210	5,244
Number of graded schools	311	327
Estimated value of school-houses and sites	$8,105,391 00	$8,912,698 00

DISTRICT AND TOWNSHIP LIBRARIES.

Number of volumes in district libraries	115,331	120,577
Number of volumes added to district libraries	10,434	10,315
Number of volumes in township libraries	49,291	49,872
Number of volumes added to township libraries	4,731	4,521
Volumes in township and district libraries	164,622	170,449

INCOME AND EXPENDITURE.

Receipts.

Agricultural college fund	215,785 63
Normal school fund	69,284 54
Total of the four funds	3,977,269 34

—(From report of Hon. D. B. Briggs, State superintendent of public instruction, for 1873–'74.)

STATISTICS FOR ANOTHER YEAR.

McCracken's Educational Statistics of the State, prepared under authority of the governor, give the following figures for 1874–'75: Townships, 987; school districts, 5,706; volumes in town libraries, 54,605; in district libraries, 132,335; teachers in public schools, 12,478; average wages of these, $51.29 for men, $28.19 for women; total wages paid teachers for the year, $1,952,674.19; value of school property, $9,115,350; number of school-houses, 5,787; sittings for pupils, 414,060; children of school age, 449,181; whole number attending school, 343,931.

SCHOOL SYSTEM OF THE STATE.

CONSTITUTIONAL PROVISIONS.*

The staple provisions respecting education introduced into the several constitutions proposed or adopted from 1835 to 1875 have been: (1) That there should be a State superintendent of public instruction, who should have the general supervision of educational concerns and whose duties should be prescribed by law; (2) that there should be a system of public schools sufficiently extensive to secure for each school district at least one school three months in the year; (3) that, to aid in the support of such schools, there should be created out of the proceeds of lands granted by the General Government to Michigan, as well as from others falling to it by escheat, a permanent fund, the interest of which should be inviolably appropriated to the support of schools throughout the State; (4) that, for the further promotion of intelligence among the people, the legislature should provide for the establishment of libraries at least in every township, appropriating to their support the fines imposed in the several counties for breaches of the penal laws; (5) that by all suitable means the legislature should encourage intellectual, scientific, and agricultural improvement, and especially should provide an agricultural school or college; (6) that, to supplement the system of common schools, there should be sustained, out of the proceeds of lands given by the United States for that purpose, a State university, controlled by a board of regents elected by vote of the people, of which university the agricultural school or college above mentioned might be made a branch.

The constitution of 1850 provided also for the election of a State board of education, the members of which should have the supervision of the State normal school. This board has been since continued.

PROVISIONS OF THE SCHOOL LAW.

School laws of Michigan for 1873, with amendments of 1875; published by authority.

OFFICERS.

These are (1) a State superintendent of instruction, elected by the people for a term of two years; (2) a board of regents of the State university, composed of 8 members, elected by the people for terms of eight years each, with the president of the university as member *ex officio;* (3) a board of visitors of the university, consisting of 3 persons appointed every two years by the State superintendent, to inspect and report on the condition of the institution; (4) a State board of education, comprising 3 members chosen by the people for terms of six years each, with the State superintendent as *ex officio* secretary; (5) township boards, embracing (*a*) the supervisor, the two justices of the peace whose terms will soonest expire, and the township clerk, for hearing of appeals, and (*b*) the township superintendent, clerk, and school inspector, for the determination of various matters relating to the schools and libraries; (6) township superintendents of schools, replacing the former county superintendents, and elected at the annual township meetings for terms of one year; (7) district boards, composed ordinarily of a moderator, a director, and an assessor, elected for terms of three years each, to look after the general interests of the schools of the district.

POWERS AND DUTIES OF THESE SCHOOL OFFICERS.

As far as these can be ascertained from laws which have been subjected to frequent modifications, they are substantially thus distributed:

The State superintendent, with the general supervision of public instruction, has the power to appoint a deputy and to revoke such appointment at his pleasure; to act

*The constitutions of 1837 and 1850, with amendment of 1861; proposed ones of 1867 and 1873.

ex officio as a member and secretary of the State board of education; to visit and examine in person, or through a board appointed by him, any institution of learning incorporated by the State; to appoint biennially a board of visitors to examine and report annually to him the condition of the university; to personally inspect the State normal school at least once in each term, with a view to report upon it to the legislature; and to grant to teachers duly qualified a license to teach in any of the primary or graded schools of the State. It is his duty to cause the school laws to be printed, with all needful forms, regulations, and instructions for conducting proceedings under them; to annex to these in pamphlet form for distribution a list of such books as he thinks best adapted for use in the primary schools, with a kindred list for township libraries and rules for the government of such; to apportion annually the interest of the primary school fund among the several townships and cities of the State, and to make annual report to the governor of the condition of the university, of all incorporated literary institutions, of the State normal school, and of the primary schools, with estimates and amounts of expenditure of the school money, and plans for the better organization of the educational system, if it seem to him desirable.

The board of regents of the university have the general supervision of all its interests committed to them, including the choice of president and professors, with the direction and control of all expenditures.

The board of visitors have simply the annual inspection of the condition of the university to attend to and report upon.

The State board of education, more limited in its range than in many of the States, is charged with the supervision of the State normal school alone.

The township board first mentioned (*a*) is constituted to hear and decide upon appeals from any 5 tax payers in a school district who think that they have been aggrieved by action of the school inspectors with reference to the formation, division, or consolidation of their district. The second (*b*) is for the division of the township into proper school districts; for attaching to a school district any person residing in the township, but not within the bounds of any district; for the purchase of books and needful appendages for the township library, and making rules for the preservation and proper use of these; for the determination of the amount due to a new school district from an older one or more out of which it has been formed, and for the making of annual reports as to the number of school districts in the township, the amount of money received for township and district libraries, the taxes assessed upon the districts for school purposes, with specification of the purposes and of the receipts and expenditures in each case.

The township superintendent of schools is charged with the duty of doing for a township what was done for a county by the county superintendent from 1867 to 1875. His work is to examine persons wishing to teach in the township schools; to license such as pass a satisfactory examination, with the privilege of revoking any license given on the discovery of such incompetency, immorality, or neglect of duty as would have prevented the giving it if known, and to keep a record of all certificates granted or annulled by him, showing to whom they were issued, with the date, grade, and duration of certificate in each case, and with the reason for annulling, when requested by the teacher; such record to be delivered to his successor, with all other books and papers belonging to his office. He is also to visit, at least twice a year, each school in his township; to examine the discipline, the mode of instruction, and the progress and proficiency of pupils, making record of the same; to counsel with the teachers and district boards as to the courses of study to be pursued, and as to improvement in discipline and instruction in the schools; to note the condition of the school-houses and their appurtenances; to suggest plans for any new ones that may have to be erected, as well as for warming and ventilating these, and improving both school-houses and grounds; to inquire into the condition of district and township libraries, and advise, if necessary, for their better management; to promote, by such means as he may devise, an advance in the efficiency of both the schools and teachers; to consult with teachers and school boards as to the best method of securing a general and regular attendance of the children of the township on the schools; to receive from the State superintendent all blanks and communications, and dispose of them as directed; to be subject to such rules and instructions as the State superintendent may prescribe, and to make to him such reports and in such manner and time as he may direct. He is *ex officio* chairman of the township board of school inspectors, and receives as compensation $2 a day for each day necessarily given to the duties of his office, with such stationery, postage, and printing as may be required.

The district board contracts with and hires such licensed teachers as may be required for the school of its district; reports in writing to the supervisor of the township all taxes voted by the district during the preceding year and all which it is authorized to impose; has the general care of the district school; may establish needful regulations for its management; may purchase text books for pupils whose parents cannot furnish them; must prescribe a uniform series of such books for use in the school; must look after the providing of a proper school-house; must take the care and custody of this,

except where the district gives it into the hands of the director only; and must make to the district, at its annual meeting, a written report of all district moneys received and disbursed during the year, with the items of such receipts and disbursements.

Special duties are also prescribed for the different members of this board. Thus, the moderator is to preside at all meetings of the district, and to see that they are conducted with due decorum; to countersign all orders on the assessor for moneys to be disbursed by the district, and all warrants of the director on the township treasurer for moneys raised for district purposes or apportioned for such purposes by the township clerk. The assessor is to pay all orders of the director countersigned by the moderator. The director is to act as clerk of the district board and of all district meetings at which he may be present; is to keep a record of the proceedings of these meetings in a book held for that purpose; is to take an annual census of the children of school age; is to report this, under affidavit, to the township clerk; is to provide the necessary appendages for the school-house, and care for the school-house itself if directed by the district; is to give notice of the annual and special district meetings; is to draw from the township library the proportion of books to which his district may be entitled; is to distribute these for the time and under the regulations prescribed by the school inspectors; is to draw and sign warrants on the township treasurer for moneys for district purposes and present them to the moderator for his countersign; and is, at the end of each school year, to report to the board of school inspectors the number of children of school age in the district, the number that have attended school during the year, (including those under or over age,) the length of time the school has been taught, the name of the teacher, and the wages paid, with other specified particulars.

SCHOOLS UNDER THIS SYSTEM.

The schools thus officered are of every grade, from the lowest district school, in which are taught only orthography, reading, writing, grammar, geography, and arithmetic, up to union and high schools, which give a thorough preparation for the classes of the university. In districts having over 800 children of school age, (5–20,) a school must be kept for 9 months in each year; in districts having over 30 and less than 800, for 5 months; in all other districts, 3 months.

A State normal school, State agricultural and mechanical college, and State university lie beyond the other schools, ready to afford to properly prepared pupils the full advantages of their higher training, without charge for tuition, if resident within the State; while for children dependent on the Commonwealth for support, and for juvenile criminals, there are a State public school and State reform school, in which a good practical instruction is combined with healthful home influences and some training in domestic and mechanical occupations.

A compulsory law requires all children between the ages of 8 and 14, not instructed in the common branches of education or attending other schools, to attend the public schools at least 12 weeks in each year, unless some good reason exists to prevent such attendance.

Township and district libraries and teachers' institutes for the further training of actually engaged teachers enter also into the idea of the State system.

SCHOOL FUNDS.

The available educational funds of the State, according to the report of the State superintendent of instruction, for 1874, were at the date of September 30, in that year, as follows: Primary school fund, $3,148,230.96; university fund, $543,968.21; agricultural college fund, $215,785.63; normal school fund, $69,284.54; total $3,977,269.34. In addition to the interest derived from the first of these ($205,430.14) there was received, in the year ending with the above date, from State and local taxes and tuition of non-resident pupils, $2,897,002.04 for the support of common schools; making $3,102,432.18, exclusive of what was raised for buildings, apparatus, repairs, &c.

ELEMENTARY INSTRUCTION.

ABSTRACT OF COUNTY REPORTS.

In Allegan County, winter schools a marked success, summer schools well taught; 272 visits to schools; schools of eight and nine months increasing; 4 new school-houses; one institute, 80 teachers present. In Antrim, compulsory law a failure; want of uniformity of text books; the "aids to instruction" few, though all schools have blackboards; interest in libraries continues. In Barry, schools generally prosperous; ample supply of teachers; wages decreased; increased interest and efficiency in schools; advanced standard among teachers. In Benzie, comfortable school-houses few, all but one without apparatus, Benzonia college school burned; no uniformity of text books; compulsory law generally ignored. In Berrien, five school-houses built—four brick, completely furnished, others remodelled; schools to be graded; general advancement of school interests. In Calhoun, 67 schools visited; uniformity of text books needed. In Cass, most schools in session a fair proportion of time, and managed with good

degree of ability; 121 school-houses—24 brick, 96 frame, 1 log; 87 per cent. of children attending schools. In Charlevoix, people discarding log houses and erecting good sized and well arranged frame ones. In Cheboygan, schools generally not so prosperous as last year, but six schools furnished with new furniture and apparatus of the best kind; graded school in operation for six months; no attention paid to compulsory law; same series of text books used in most schools. In Clinton, notwithstanding some apathy of school patrons, considerable attention given to furniture and fixtures; little want of uniformity in text books; log school-houses have given place to commodious frame ones; institute held at St. John's, with much benefit. In Eaton, seven new frame school-houses; every school visited once, 132 twice; schools as a whole signally advanced in thoroughness of culture. In Genesee, a knowledge of the science of government, of United States history, and of Michigan school laws is required of all teachers, and works well. In Grand Traverse, all schools but 4 visited twice; teachers' institute, held in Traverse City, September 28, continued five days; nearly 100 teachers present; four school-houses erected in the county, and 9 school rooms furnished with best patent furniture. In Gratiot, public sentiment favorable; two meetings of teachers' association; 3 graded schools organized; practically a uniformity of text books. In Houghton, marked improvement in standard of teachers, new buildings erected at Calumet, Hancock, and Osceola, that at Calumet to accommodate 2,500 pupils; the great evil is irregularity of attendance, the average attendance being only one-half the number enrolled. In Huron, schools generally in favorable condition; five new buildings, but great lack of apparatus; irregularity of attendance a great hindrance; a visit paid to each school every term. In Ionia, 147 visits to schools; 5 new school houses; others repaired; demand for good teachers greater than the supply. In Iosco, 4 graded schools; considerable improvement in district schools; interest among patrons awakened. In Isabella, educational prospects brightening; full supply of teachers; number of school districts increased and school-houses improved; generally a uniformity of text books. In Jackson, attendance in winter better than ever before; 60 schools supplied with outline maps, over 100 with dictionaries, 20 with globes, and a like number with charts; 5 new school-houses; graded schools, 10. In Kalamazoo, 1 brick school-house built; State institute held at Galesburg, continuing 5 days; 67 teachers present; special attention to grading schools; district schools usually prosperous. In Kent, schools prosperous; 11 graded. In Lake, schools prosperous; in 3 districts, uniformity of text books prescribed. In Lapeer, still a lack of uniformity of text books; no attention paid compulsory law; 2 school-houses built during the year. In Leelenaw, schools small and conveniences few, but commendable progress everywhere noticeable. In Lenawee, want of uniform text books a great hindrance. In Livingston, compulsory law a dead letter; too many changes of teachers; all schools visited once, some twice. In Macomb, 3 new school-houses; standing of teachers averages 15 per cent. better; general advancement in the art of teaching. In Manistee, great want of teachers; 2 new buildings; prospects tolerably encouraging. In Mason, teaching ability 50 per cent. greater than last year; schools in process of supply with record books and apparatus; 2 schools taught in districts where there was none before. In Mecosta, nearly all the districts have adopted a uniform series of text books; compulsory law inoperative. In Midland, people too poor to obtain necessary books; great irregularity of attendance at summer schools, but a healthy and creditable advance over last year. In Monroe, a gain of 6 per cent. in average attendance, and in school months a gain of over 28 per cent.; great deficiency in school apparatus; quite a deficiency of first class teachers. In Montcalm, schools not averaged as well as usual, on account of young and inexperienced teachers. In Muskegon, no abatement of the great interest; demand for teachers of high order increasing; the city of Muskegon erecting a brick school-house to cost $50,000; one institute held, 42 teachers present. In Newaygo, substantial progress. In Oakland, advanced scholarship in teachers and pupils; one institute, with two sessions daily, for four weeks; 200 teachers present. No attempt to execute the compulsory law. In Oceana, marked improvement in schools; monthly reports an excellent stimulant; all but a few schools visited twice; 4 new houses built; 9 teachers' institutes held, with great interest. In Osceola, general improvement; teachers more alive and practical; about 78 per cent. of all the children of the county attending; compulsory law increases attendance. In Ottawa, increased prosperity in schools, and strict uniformity of text books secured in a few districts. In Saginaw, schools more successful than ever before; great number of teachers using the word-method of teaching. In Sanilac, improvement in schools and greater interest of the people in educational affairs; 175 visits to schools; 5 meetings of teachers' associations. In Shiwassee, 27 winter schools visited; 3 comparative failures; 113 summer schools visited; 1 a failure; 5 graded schools. In St. Clair, the percentage of attendance is 62 of the whole number of children in the county. In St. Joseph, 5 new school-houses; 8,767 children between 5 and 20 years of age enrolled; 9 graded schools. In Tuscola, opposition to schools gradually dying away; 191 visits to schools. In Van Buren, schools in prosperous condition; teachers, in culture, compare favorably with any in the counties of the State; possess high literary at-

tainments and skill in school discipline; 12 graded schools. In Washtenaw, slow, but certain improvement; 227 schools visited; 7 districts and all cities and villages have graded schools; want of uniform series of text books a great hindrance. Teachers' association at Dexter in March; 150 teachers present; great interest. Literary societies formed by teachers in the districts. In Wayne, all the schools except one visited once and most of them twice; as a whole, the schools are prosperous; compulsory law of no effect. In Wexford, schools new, but flourishing; considerable interest in educational matters; want of good teachers a great hindrance.—(Reports of county superintendents, accompanying State report, 1874.)

KINDERGÄRTEN.

Three schools of this class report themselves for 1875: 1 at Detroit, 1 at Flint, and 1 at Grand Rapids. The first had 50 children in attendance, under 2 teachers; the second, 12 children, under 2 teachers; the third, 18 children, under 1 teacher. Ages of admission, 4–7, 3–7, and 3–8. Daily attendance, 3 to 4 hours for 5 days of the week; in the first, for 2 sessions of 22 weeks each in the year; in the second and third, for 4 sessions of 10 weeks each. Fröbel's gifts and occupations are reported in all these schools, with improvement of the deportment, the health, and the mind; children thus trained being better prepared than others for performance of school work and for submission to school discipline. Miss Conover's school at Kalamazoo was given up in 1874 from ill health of the principal.—(Returns to Bureau of Education, 1875.)

CITY SCHOOL SYSTEMS.

ANN ARBOR.

Officers.—A board of education of 9 members, of whom 3 are changed each year, and a city superintendent of public schools.

Statistics for 1874–'75.—Population, 8,000; children of school age, (5 to 20,) 2,398; enrolled in public schools, 1,794; average number belonging, 1,337; average daily attendance, 1,281; teachers: male, 3; female, 32; total, 35, of whom 3 are special. Pupils to each teacher, primary grade, 43; grammar grade, 39; high school, 40. Valuation of school buildings, grounds, libraries, apparatus, &c., $140,000; cost of superintendence and instruction, $18,228.50; cost of incidentals, $5,279.10; cost for each pupil, including instruction, incidentals, and interest on permanent investment: primary grade, $21.78; grammar grade, $27 23; high school, $32.08; average, $25.

The high school here is the banner school of the State and the chief feeder of the university, to which it is adjacent. It numbered, during the year: boys, 245; girls, 135; total, 380: and received for tuition of non-resident pupils $4,029, these pupils constituting half the whole number in the school. It graduated in June, 1875, from its full classical course, 26; from its Latin course, 11; from its scientific, 20; from its English, 4; commercial, 4; German and French, 1; total, 66. Eight more were expected to complete their work in time to receive diplomas before the opening of the university semester, making 76, of whom about 50 were to enter the university.—(Report of Superintendent W. S. Perry for 1874–'75.)

DETROIT.

Officers.—A board of education of 2 members for each ward, 22 in all, called "inspectors," with power "to organize school districts, appoint teachers and a superintendent, and do such other acts as the public good may require." Executive of the board, a city superintendent of schools, J. M. B. Sill.

Statistics.—School population, 34,593; enrolled in public schools, 13,739; average daily attendance, 8,759; attending high schools, 630; grammar schools, 2,748; primary, 6,040; schools, 26; sittings for pupils, 11,620. Teachers, 9 men and 212 women, at salaries of $300 to $2,000. Monthly cost of tuition per pupil, based on enrolment, $1.01; based on average number belonging, $1.41. Present value of school property, $735,192, an increase of $70,557 during 1875. Expenses for repairs, $5,010.31.

The evening schools had an enrolment of 278 pupils, with 88 per cent. of attendance. The library now contains 25,000 volumes.—(Report in Michigan Teacher, March, 1876.)

EAST SAGINAW.

Officers.—A board of education of 8 members, with a secretary and treasurer not from their own number, and a city superintendent of public schools.

Statistics for 1874–'75.—Population, 17,084; school census, 4,995; children between 8 and 14, inclusive of those years, 3,107; enrolled in public schools, 3,266; average daily attendance, 2,143; cost of tuition for each pupil on total enrolment, $8.65; on average attendance, $20.69. Valuation of all school property, $177,586.65; expenses of schools for 1874–'75, $44,392.85, of which $22,671.13 were for teachers' salaries, exclusive, apparently, of that of the superintendent.

Schools and studies.—The schools of the city are 10, containing 33 classes of primary

grades, 3 of intermediate and third primary, 4 intermediate, 3 grammar classes, and the high school. Music has been taught in all the schools without interruption of other studies. Penmanship has been attended to, under a special teacher, for half the year. A German-English department numbered during the year, on an average, 491 pupils, or about one-fourth of all the first seven grades. These pupils were instructed by 10 teachers, in as many rooms, 4 of these teachers giving instruction in German and 6 in English. Lessons in drawing have been given by special teachers, and hereafter a capacity to teach drawing is to be required for a first grade teacher's certificate. The grades of the schools are accordant with the recommendations of the National Educational Association and the course of study essentially that adopted by the Michigan Association of City Superintendents in 1875.—(Report of board and Superintendent H. S. Tarbell, for 1874–'75.)

PONTIAC.

Officers.—A board of education and city superintendent of schools, J. C. Jones.

Statistics.—Children between 5 and 20 years of age, 1,100; resident children enrolled in public schools, 872; non-resident, 97; total enrolment, 694; average daily attendance, 670; per cent. of attendance on number belonging, 96.5; days in school year, 200; average number of days pupils attended schools, 143; teachers employed, males 2, females 15; total, 17; amount of tuition received from non-resident pupils, $1,000.71. The enrolment and attendance have been larger than for 1873–'74, though the number of children of school age was less by 77.

A bright example.—The roll of honor, containing the names of those pupils who have been neither absent nor tardy for one year or more, is headed with the name of a young lady who has been neither absent nor tardy for five years, and the same may be said of 3 girls and 1 boy for three years.

Studies and grades.—Lessons in penmanship are given daily. The superintendent argues strongly for the introduction of music and drawing into the course of study. He also announces that hereafter the schools, in accordance with the plan of the National Educational Association, will be divided into three departments of four years each. The first four years or grades will be known as the primary department, the second four the grammar, and the last four the high school. The course of study, as given, is excellent.—(Report of Superintendent J. C. Jones for 1874–'75.)

PORT HURON.

Officers.—A board of education of 12 members, 2 for each ward, elected by the common council for terms of 4 years, one-fourth going out each year; the mayor of the city acting *ex officio* as president of the board and the treasurer and clerk of the city as its treasurer and clerk. The board elects annually a city superintendent of schools not of its own number.

Statistics.—Population of the city, 8,240; children of school age, (5–20,) 2,900; enrolled in public schools, 1,827; average attendance, 1,104. Schools, primary, secondary, intermediate, and grammar, embracing 2 years each, and a high school, embracing 4 years, making the full school course 12 years. Teachers employed: males, 4; females, 20. Average salary paid male teachers, $775; paid females, $420. Total salaries paid teachers, $11,450. The school year consists of 40 weeks, beginning with the first Monday in September, and is divided into three terms, fall, winter, and spring, of which the winter term is 14 weeks, the others 13 each.

Notes.—The schools are free to all resident pupils between the ages of 5 and 20 years, inclusive. Residents under 5 and over 20 and non-residents may be admitted to any of the schools not already full, on payment in advance of tuition fees, ranging from $3 to $7 a term, according to the grade. Classes are passed in regular order from the lowest to the highest grade, after examination for promotion at the close of the spring term; but pupils of any class may be promoted at any time if found, on examination, competent to do the work of a higher class. An excellent course of study for the various grades of schools is included in the published report; that for the high school having provision for a commercial course of one year, besides the general course of four years, which last may include either Greek and Latin, German, or French, at the option of the student.—(Report of board and Superintendent B. Bigsby for 1874–'75.)

EVENING SCHOOLS IN CITIES.

In view of the wise and liberal expenditures that are made for the education of the children in the cities it is truly surprising that no efforts have been made, so far as known, in any of them looking to the establishment of evening schools. A comparison of figures discloses the startling fact that the entire school enrolment for the year is hardly 58 per cent. of the number of resident children of school age, while that of the State exceeds 74 per cent. The percentage of children between 5 and 20 years of age residing in the cities in attendance at the public schools is even less than the low percentage given above, as the figures showing the school enrolment include non-residents and those past the school age.

It is true that a considerable number not enrolled in the public schools are attending private and denominational schools, yet the number receiving no education from schools of any sort must be large. How about that class, by no means small in these cities, who, by the force of circumstances, are prevented from receiving the school advantages which are so liberally furnished and are enjoyed by those more fortunate? These are in the manufactories, workshops, and stores; boys and girls, young men and young women, whose busy life, whose physical wants, and the wants of those dependent upon their labor prevent them from improving the opportunities which at a first glance seem to be within the reach of all. This class certainly is entitled to, and should receive, all the advantages which can be offered by evening elementary schools, the legitimate work of which is to furnish instruction in the common English branches to those above the ages of 12 or 14 who are denied the privilege of attending the day schools. There is no question as to the direct benefits resulting from such schools or the patronage they would be likely to receive if established in the larger cities of the State.—(State superintendent's report, p. 71.)

TRAINING OF TEACHERS.

STATE NORMAL SCHOOL.

This school is located at Ypsilanti, thirty miles west of Detroit, on the Central Railroad. The buildings occupy an elevated site in the northwestern portion of the city, about 90 feet above the level of the Huron River, and overlooking the entire town. The grounds, five acres in extent, are terraced and ornamented with abundant shrubbery. Organized in 1853, the school has instructed in its normal department about 6,300 students, 472 of whom have completed some one of the courses of study and received diplomas. The total attendance in 1874 was 486, of whom 364 were in the normal department. The graduates for that year were 51, of whom 43 were understood to have engaged in teaching. The total enrolment for the school year ending July 1, 1875, was 609, of which number 409 belonged to the normal department and 200 to the experimental or model school

The courses of study at the normal school are: common school course, 2 years; full English course, 3 years; course in modern languages, 4 years; classical course, 4 years; higher English course, 2 years; higher language courses, 2 years.

The experimental or model department comprises the three grades of primary, intermediate, and grammar that prevail in the graded schools of the State. The object of this department is to afford to normal pupils means of observing the practical working of the graded schools from the youngest class in the primary to the most advanced in the grammar department.—(McCracken's Sketch of Michigan, compiled under authority of the governor.)

STATE TEACHERS' INSTITUTES.

Thirteen teachers' institutes were held in as many counties during the year 1873–'74. Each institute began on the day appointed and remained in session five days. The total number enrolled as members at these institutes was 890. No one was received into membership except teachers and such as were fitting themselves for the work of teaching. The prompt and regular attendance at all the sessions by the members and the interest manifested by the citizens in the work as it was going on were very encouraging. A very generous hospitality was commonly extended.

The superintendents of the several counties discharged efficiently and well the duty that devolved upon them of distributing circulars, giving timely notice of the arrangements and impressing upon the attention of teachers the importance and benefit of the institute and the necessity of their attendance. In conducting the institutes it was the aim to adhere to the legitimate work of a teachers' institute, and make them as practical and useful as possible. To this end professional instructors were employed; class drills were had; modes of imparting instruction in the various branches pursued in the primary schools were illustrated; principles to be observed in the management of schools and all those subjects connected with school discipline which should be considered of especial importance by teachers were discussed.—(State superintendent's report, p. 38.)

EDUCATIONAL JOURNALS.

In the Michigan Teacher, published at Kalamazoo, and in The School, published at Ypsilanti, such topics as those referred to in the close of the article on "Teachers' institutes" were abundantly discussed during 1875, the monthly issues of these papers aiding greatly the efforts of the State superintendent and the normal school to prepare the teachers of the State for full efficiency in their school work.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

From statistics of union and graded schools, gathered with much labor by the State superintendent for his report of 1874–'75, the following interesting items are given in McCracken's Sketches of Michigan:

Number of pupils belonging to high schools during the year, 3,545; number of graduates at the close of the year, 330; number of pupils studying languages, (Latin, Greek, and German,) 2,880; number studying United States history, 4,701; studying civil government, 551.

The Michigan Teacher, for June, 1875, is authority for the statement that the high schools at Battle Creek and Pontiac, after inspection from a committee of professors of the university, have been placed among those whose graduates are to be received, without further examination, into the freshman class; and for the further statement that Professor Olney declares this class of students to be ready for more advanced work than those entering the university from other schools.

PRIVATE SECONDARY SCHOOLS.

Two schools for girls and 2 for boys and girls report for 1875 a total of 24 teachers and 529 pupils, of whom only 7 are in a classical course, while 281 are in modern languages. Vocal music is taught in all these schools, instrumental music and drawing in all but 1; 1 has a chemical laboratory and philosophical apparatus; 1 other has the latter, but not the former; and 3 have libraries numbering respectively 100, 500, and 610 volumes.—(Returns to Bureau of Education. For further details, see Table VI.)

PREPARATORY SCHOOLS.

The preparatory departments of 7 colleges show, in their returns, 21 instructors additional to those in the colleges, with 1,410 students, of whom 737 are males and 673 females. Out of this number, 177 are said to be preparing for a classical and 193 for a scientific course in college.—(Returns to Bureau of Education, 1875.)

BUSINESS COLLEGES.

These seem to flourish in Michigan, and 8 of them—at Battle Creek, Detroit, Grand Rapids, Hillsdale College, Jackson, Kalamazoo, and Lansing—report a total of 29 instructors and 1,369 students in day and evening schools, 1,209 of these being males and 160 females. No special length of course appears to prevail in them, students being received at any time and taught for such periods as they may please to continue. The ordinary branches of instruction appear to be arithmetic, book-keeping, penmanship, and business practice. One, in Detroit, under the former State superintendent, Mr. Mayhew, adds to these commercial law, political economy, moral science, life insurance, and governmental accounts. The one at Hillsdale also adds political economy, and this one, with that at Kalamazoo and that at Grand Rapids, reports students in telegraphy, the Grand Rapids one teaching, too, French, German, and phonography.

In the high school at Port Huron there is taught, by the superintendent of schools there, a class in book-keeping and general business usages.—(Returns to Bureau of Education for 1875.)

SUPERIOR INSTRUCTION.

UNIVERSITY OF MICHIGAN.

The university is located at Ann Arbor, forty miles west of Detroit, on the line of the Central Railroad; was founded in 1837; conferred its first degrees in 1845; organized its department of medicine in 1850 and its department of law in 1859. Its site is a tract of forty acres of land donated by citizens of Ann Arbor, within five minutes' walk of the principal business portion of the city, improved with a grand main building for the department of literature, science, and arts, and two others of respectable proportions for those of medicine and law, with some minor buildings, and houses for the president and professors. An astronomical observatory, under the control of the university, occupies an eminence not far distant, and has done excellent work under the direction of Professor Watson.

The main departments of the university are the ones, above mentioned, of literature, science, and arts; of medicine and surgery, and of law. To the first of these has been added, in 1875, a school of mines, metallurgy, architecture, and engineering; and to the second have been appended, as independent schools, without any direct connection with the medical faculty, a homœopathic college, a college of dentistry, and it is said also a State hospital.

There are about 45 professors, assistant professors and other instructors. The number of students has been for some years past as follows: 1869–'70, 1,126; 1870–'71, 1,110; 1871–'72, 1,224; 1872–'73, 1,136; 1873–'74, 1,112; 1874–'75, 1,193. The number of female students included in the foregoing was, in 1870–'71, 34; in 1871–'72, 64; in 1872–'73, 88; in 1873–'74, 94; and in 1874–'75, 122. Professor M. Coit Tyler says of these, "Neither good order nor scholarship in the university has suffered any harm from the presence of ladies in the class rooms, while the physical disasters which an eminent

medical authority has of late clearly demonstrated to be the penal consequences of feminine toil at university study have thus far strangely failed to make their appearance in this neighborhood."—(McCracken's Sketches, Professor Tyler, in Scribner for February, 1876, and calendar of university for 1875–'76.)

DENOMINATIONAL COLLEGES.

Albion College, Albion, (Methodist Episcopal,) is in the central portion of the State on the line of the Central Railroad, has three college buildings, and occupies grounds about fifteen acres in extent. It admits females to its privileges in common with males; has regular collegiate courses in letters and science, and gives to those who wish it a course of thorough instruction in the theory and practice of music, as well as in penmanship and book-keeping.

Adrian College, Adrian, (Methodist,) is in the southeastern portion of the State, on the line of the Lake Shore and Michigan Southern Railroad; receives both sexes; has four buildings on grounds containing about twenty acres; has two distinct courses of instruction, the classical and the scientific; gives to its students in these courses considerable liberty of election after the sophomore year; organizes at the opening of each fall term a normal class for the benefit of those who wish to review the branches taught in common schools; presents in this class the best methods of teaching the ordinary studies; and, like Albion, has a school of music, vocal as well as instrumental.

Battle Creek College, Battle Creek, (Seventh Day Adventists,) is on the Michigan Central Railroad, nearly midway between Detroit and Chicago, on a pleasant eminence overlooking the valley of the Kalamazoo. It is open to both sexes; has a classical course of 5 years, an English course of 3, and a special course of 2; while below this are primary, intermediate, and grammar courses of 1 year each. The special object is to keep the children of the denomination in schools where its principles are taught and its forms of religious influence may be maintained in connection with good courses of study.

Grand Traverse College, Benzonia, at the head of Crystal Lake, on an elevation between this and Lake Michigan, is a new institution; has a real estate of 2,000 acres, including four quarter sections in village lots, and started with fair prospects in 1873, but had the misfortune to lose its main building by fire in the following spring. It bravely persevered, however, in its work; secured new accommodations for its students; set instantly about preparations for a brick building in place of the one burned; and has organized three courses, classical, scientific, and normal, the last one appearing to be at present uppermost, the others to be grown into in due time.

Hillsdale College, Hillsdale, (Free Will Baptist,) is on the southern border of the State, at the junction of the Michigan Southern Railroad with the Detroit, Hillsdale and Indiana Road, 180 miles east of Chicago, 80 west of Toledo, and 80 south of Detroit. It is on a hill overlooking the city, and has four good buildings, three of them new erections after a fire from which it suffered in March, 1874. It admits both sexes, and has preparatory, literary, classical and scientific collegiate, and theological departments, with one devoted to commercial and telegraphic training, a school of music, and a school of art.

Hope College, Holland, (Dutch Reformed,) is an outgrowth of the settlement of Hollanders in Ottawa County, near the shore of Lake Michigan. It has three departments, preparatory, academic or collegiate, and theological. It has graduated 95 from its preparatory department, beginning in 1863; 53 from the collegiate, beginning in 1866; and 24 from the theological, beginning with 1869.

Kalamazoo College, Kalamazoo, (Baptist,) is in the second tier of counties east of Lake Michigan and north of the Ohio line; has a site of about five acres, with good buildings; admits ladies; and presents to students entering it three collegiate courses beyond the preparatory: a classical course, which includes Latin and Greek and all ordinary college studies; a Latin and scientific course, including all the studies of the classical course, except Greek, with liberty to substitute this for Latin; and a scientific course, which omits both Latin and Greek.

Olivet College, Olivet, (Presbyterian and Congregational,) is in the central portion of the lower peninsula, near the line of the Chicago and Lake Huron Railroad, and has five departments: a preparatory; a collegiate, embracing classical, scientific, and ladies' courses; a normal; a musical, conducted under the title of the Michigan Conservatory of Music; and an art department.—(McCracken's Sketches, pp. 103–113, and catalogues of colleges for 1874–'75 and 1875–'76.)

FEMALE COLLEGES.

The Michigan Female Seminary at Kalamazoo, and the Young Ladies' Collegiate Institute at Monroe, both chartered institutions, report for 1875: Instructors, 17, of whom 2 are men and 15 women; students in preparatory department, 46; in regular collegiate course, 129; in partial course, 18; in post graduate studies, 9; music, vocal and instrumental, drawing, painting, French, and German are taught in both. Each has a library of about 500 volumes; each a chemical laboratory or chemical apparatus, and both report the possession of philosophical cabinets and at least the beginnings of a museum of natural history.—(Returns to Bureau of Education.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

As a rule, the colleges of Michigan, in common with most in the Northwest, have scientific as well as classical courses of instruction. But also, as a rule, these differ little from the classical except in a slight enlargement of the English studies and the substitution of French and German for Latin and Greek.

The first main exception to this rule is the university, which has for years given advanced instruction in the mathematical, physical, and natural sciences, and thorough courses in the practical application of these sciences to the arts. The addition of a school of mines in the past year has led the university authorities to give to the different scientific branches taught a closer grouping, a more compact organization, and an ampler development, and to recognize by name what they have for some time had in fact, the polytechnic school. This forms a portion of the department of literature, science, and the arts, and its work is arranged with reference: (1) To those pursuing the study of civil or mining engineering or the study of pharmacy (including chemistry) with a view to graduation; (2) to graduates of colleges and other persons qualified for advanced study of mineralogy, geology, zoölogy, botany, civil or mining engineering, physics, analytical and applied chemistry, pharmacy, or metallurgy.—(Calendar of the university, 1875–'76.)

Another prominent exception is the Agricultural College of the State, "the design of which," according to the law creating it, "is to afford thorough instruction in agriculture and the natural sciences connected therewith," and the course of instruction in which is to embrace "the English language and literature, mathematics, civil engineering, agricultural chemistry, animal and vegetable anatomy and physiology, the veterinary art, entomology, geology, and such other natural sciences as may be prescribed, technology, political, rural, and household economy, horticulture, moral philosophy, history, book-keeping, and especially the application of science and the mechanic arts to practical agriculture in the field." The full course is four years.—(President Abbott's address on agricultural education.)

The nineteenth annual catalogue of the college states that of the 676 acre farm 300 acres are under scientific cultivation; that the museum contains fine scientific collections, and five thousand models from the Patent Office; that the average expenses of a four years' course, above earnings at the college, are, as shown by statistics of the last senior class, $741.33, or $185.35 per year; and that there have been valuable additions made to the philosophical and chemical apparatus.

PROFESSIONAL.

Theology.

Theological instruction is provided for in Adrian, Hillsdale, and Hope Colleges according to the Methodist, the Free Will Baptist, and the Reformed systems. The course at Hillsdale is for three years, embraces a fair range of study, and is open to any duly qualified Christian who wishes to pursue such studies.

Medicine.

The department of medicine and surgery at the university deserves commendation for its effort, in common with Harvard and Boston University medical schools, to elevate the standard of medical training. To this end it requires every candidate for admission (unless already a matriculant of the university, a graduate of a college, academy, or high school) to undergo an examination as to his fitness for entering on and appreciating the technical study of medicine. This examination is in writing, and covers at present English education only, with general mental capacity, but is to be made more rigid and extended in future years. Carrying out the same idea, 10 out of 73 applicants for a degree were rejected in 1875, according to the New England Journal of Education of April 10. Of the remaining 63 who graduated, 12 were ladies.

As before stated, a homœopathic medical college and a college of dental surgery were annexed to the university in 1875. The two present in the calendar for 1875–'76 quite respectable lists of students, and both conform to the rule above mentioned as to proof of candidates for admission.

Law.

The effort in the law department of the university is to make the instruction imparted and the advantages afforded equal to any attainable elsewhere in this country, and fit students for practice in any part of the United States.—(Catalogues of colleges and calendar of the university.)

SPECIAL INSTRUCTION.

REFORM SCHOOL.

The Michigan Teacher for October, 1875, quotes from the State Republican, at Lansing, the statement that there are at this school 220 boys, and that there is no reason to regret the removal of the high board fence and the locks and bolts which at first made the institution a prison in all its practical workings, as not a boy has tried to escape on account of the removal of the fence. Employment for boys in the shops was reduced by the panic, and a large force was kept at work on the farm, in clearing up 80 acres of land and in leveling and improving the grounds in front of the school. The boys here work half a day and attend school the other half.

STATE PUBLIC SCHOOL, COLDWATER.

This school, for neglected and dependent children over 4 and under 16, closed in 1875 its first year with tolerable satisfaction. It contained then over 160 children, of 6 to

16 years. Of 150 received, 145 could not write, 64 could not read, only two could read a newspaper intelligently, 97 could not count to 100, but 1 knew the multiplication table, and nearly all were ignorant of geography. At the end of the first year, 27 could read primary charts, 40 the primer, 20 the first reader, 22 the second, 25 the third, and 16 the fourth; 30 can write letters, 28 know the multiplication table, and 140 can count 100; 108 study geography, and 12 read newspapers understandingly. The children are in good health. A hospital building, to cost $5,000, is to go up by December 1. When the new cottages are finished, children under 4 years will be received, and very young children will have the preference above those over 12.—(Michigan Teacher, October, 1875, p. 379.)

INSTITUTION FOR EDUCATING THE DEAF AND DUMB AND THE BLIND.

This school of the State is located at Flint, Genesee County, 60 miles north by west from Detroit. Tuition and board are free in it to all residents who need its teachings, and the trustees are authorized to assist indigent pupils to clothe themselves to the amount of $40 per annum.

Including the principal, there are 10 teachers employed in the deaf and dumb department and 4 in that for the blind. Pupils in 1874, 191; in 1875, 225.

The deaf-mute boys are taught cabinet making, shoemaking, and printing, and the girls sewing, knitting, printing, and kitchen and laundry work. The blind boys are taught basket making, and some of the girls sewing, knitting, and bead work.—(McCracken's Sketches.)

SANITARY CONDITION OF STATE SCHOOL BUILDINGS.

The Detroit Review of Medicine for February, 1875, presents a statement made by Dr. Kedzie, at a late meeting of the Michigan State board of health, in respect to the ventilation and general sanitary condition in certain public buildings personally visited and examined by him. From this statement it appears that in the new State public school building at Coldwater, the State prison, and the house of correction at Detroit, there was found a total absence of provision for ventilation. The air was consequently very foul, containing, in the school, from 14 to 16 parts of carbonic acid, and in the prison 32 parts to 10,000 of air. The water also in some of these institutions was impure, and in two the practice prevailed of using wooden buckets for the removal of excrements. The condition of the asylum at Flint, for the deaf and dumb and the blind, was not found to be quite as bad as that of those above mentioned, but it was far from being what it should be, the air being exceedingly impure in school rooms and dormitories. The ventilation at the reform school in the old building is reported as passable, but in the new part and in the hospital it is bad.

EDUCATIONAL CONVENTIONS.

STATE TEACHERS' ASSOCIATION.

The twenty-fifth annual session of the Michigan State Teachers' Association was held in Grand Rapids, December 28–30, 1875. An address of welcome was given by Mr. Fralick, president of the city board of education, and was suitably responded to by President Tarbell. The address of the evening was by Professor C. A. Kent, of the law department of Michigan University, on "The origin and extent of the duty of the State to educate." The proceedings of the second day were opened with music from the pupils of the high school, led by Professor Herrick, director of music in the city schools, after which Superintendent Tarbell pronounced the president's address, which embodied a forcible and comprehensive presentation of the claims of education, with a sketch of what seemed to the speaker a suitable public school system for the State. The address was referred to two committees of three members each. Hon. John J. Bagley, governor of the State, addressed the association in behalf of the representation of education in Michigan at the Centennial Exposition, calling attention to several features of the exhibit that ought to be made. He was followed on the same subject by Rev. D. C. Jacokes, of Pontiac, State commissioner for the educational exhibit, after which Mr. Ford, of Kalamazoo, read a paper on "The relations of social science and education," which was discussed by Professor E. A. Strong, of Grand Rapids, and President Angell, of the State University. Miss S. J. Pyne, of Grand Rapids, read an essay on "Preparation for teaching," which was discussed by Superintendent George, of Kalamazoo, Superintendent Ewing, of Ionia, Professor Putnam, of the State Normal School, and others. Professor Pease, of the State Normal School, then read an essay on "Teaching music to children," and Mr. Charles K. Backus, of the Detroit Tribune, delivered an address, giving "An outside view of the public schools," in which he discussed briefly certain criticisms upon the average free school which are sometimes heard in friendly quarters, as, that the public schools cost too much and that their courses of study are clogged with unnecessary branches. In his experience as a journalist the speaker had found no question upon which the public mind is more aroused and restless than upon this. The suggestions made by some that higher and secondary education at the public expense should be abolished and the wages of teachers generally reduced, the speaker regarded as extremely unwise. He suggested, however, that the studies of the earlier

years should be fewer and more fundamental; that, even with trained teachers, there should be a vigilant supervision of methods, the text books of the simplest kind and seldom changed, and, finally, that the disposition to erect expensive school edifices, with elaborate ornamentation and rich furnishing, be restrained.

CITY SUPERINTENDENTS' ASSOCIATION.

The State Association of City Superintendents held an important semi-annual session in Jackson on the 13th and 14th of May, 1875. This association comprises only superintendents who have at least 15 teachers in charge. The chief subject of discussion was the course of study for graded schools, which has been referred to under elementary instruction. It was the sense of the association that a high school course should be adopted that would be general and thorough and prepare the student for the scientific course in the university; and a committee was appointed to confer with the university faculty in regard to such a course as they might accept. The superintendents were recommended to conform themselves, in their reports in regard to the designation of grades, &c., to the blanks furnished by the United States Commissioner of Education. The practice of keeping pupils after school was generally disapproved.—(Michigan Teacher, June, 1875, p. 223.)

MICHIGAN STATE MEDICAL SOCIETY.

The ninth annual meeting of this society was held in Detroit June 9 and 10, 1875. The annual address of President Kedzie, instead of taking up any general topics, treated a specific one: ozone. The relations of this mysterious agent to health and disease were considered, the history of its discovery given, and the proportions of its existence in different portions of the country stated.

A resolution disapproving of the action of the regents of the university in establishing a homœopathic medical college in connection with it was offered by a member, but laid on the table by the society.—(Detroit Review of Medicine, July, 1875, p. 413.)

OBITUARY RECORD.

MISS MARTHA M. BREWSTER,

An esteemed teacher in the schools of Detroit, died October 18, 1875. Miss Brewster received her first appointment in the Detroit public schools in August, 1860. She was one of the most faithful and earnest teachers in the employ of the board; giving her whole life and energy to her school work, and never sparing her strength in its service and improvement. She continued her labors long after her own safety required complete cessation from them, and was a teacher who studied and knew the individual character and wants of her pupils, and labored conscientiously and earnestly to meet these wants.—(Detroit school report.)

REV. SPENCER J. FOWLER, A. M.,

Professor of physics in Hillsdale College, died in Saco, Me., August 29, 1875. He had gone East for his health some time before, having suffered from consumption of the blood, but the change brought no relief, and the disease reached its fatal termination at the time above indicated. Further particulars respecting him are wanting.

SCHOOL OFFICIALS IN MICHIGAN.

Hon. D. B. BRIGGS, *State superintendent of public instruction, Lansing.*

[Term, January, 1875, to January, 1877.]

STATE BOARD OF EDUCATION.

REGENTS OF THE UNIVERSITY.

Joseph Estabrook	Ypsilanti	December 31, 1877.
J. H. McGowan	Coldwater	December 31, 1877.
Charles Rynd	Adrian	December 31, 1879.
C. B. Grant	Houghton	December 31, 1879.
Andrew Climie	Leonidas	December 31, 1881.
E. C. Walker	Detroit	December 31, 1881.
B. M. Cutcheon	Manistee	December 31, 1883.
Samuel S. Walker	St. John's	December 31, 1883.
James B. Angell, president, regent *ex officio*		

MINNESOTA.

STATISTICAL SUMMARY.

SCHOOL POPULATION AND ATTENDANCE.

Number of youth of legal school age, (5 to 21 years)	210,550
Number enrolled in schools during the year	130,280
Average monthly enrolment	12,819
Average daily attendance	71,292

TEACHERS AND TEACHERS' PAY.

Whole number of teachers employed in the public schools during the year: Male, 1,372; female, 1,591	2,963
Number teachers necessary to supply public schools	3,362
Average monthly salary of teachers in public schools, male	$41 36
Average monthly salary of teachers in public schools, female	28 91

SCHOOLS.

Number of school rooms, exclusive of those used for recitation rooms	3,085
Number of rooms used exclusively for recitations	25
Average duration of school, in days	150
Schools corresponding to public schools below high schools: Male, 48,367; female, 47,605	95,972
Schools corresponding to public high schools	34,308
Teachers in said schools: Male, 120; female, 444	564

PERMANENT SCHOOL FUND.*

Amount of available school fund	$3,200,000
Increase of permanent fund in the school year	200,000
Amount of permanent fund including portion not now available, ten to twelve millions.	

INCOME AND EXPENDITURE.

Receipts.

From local tax	$659,427
Total from taxation	876,427
Interest on permanent fund, including rents of school lands	191,578
Revenue from other funds	48,870
From other sources	84,856
Total	1,861,158

Expenditures.

Sites, buildings, and furniture	$2,600,125
Salaries of teachers	702,662
Miscellaneous or contingent: fuel, light, rent, repairs	247,755
Total	3,550,542
Expenditure *per capita* by school population	$5 74
Expenditure *per capita* on enrolment	9 29
Expenditure *per capita* on average attendance	16 98

SCHOOL SYSTEM OF THE STATE.

CONSTITUTIONAL PROVISIONS.

Minnesota still maintains the constitution adopted at her admission into the Union in 1858. Article VIII of this, section first, provides that, "The stability of a republican form of government depending mainly on the intelligence of the people, it shall be the duty of the legislature to establish a general and uniform system of public schools." Section second, that the proceeds of lands granted by the United States for the use of schools shall remain a perpetual school fund for the State, the principal being preserved inviolate, and the income distributed to the different townships in proportion

* These figures are copied from the superintendent's report, without any change in them.

to the number of scholars in each township between the ages of 5 and 21. Section third, that "the legislature shall make such provisions, by taxation or otherwise, as, with the income arising from the school fund, will secure a thorough and efficient system of public schools in each township of the State." Section fourth, that the location of the university, as established by existing laws, is confirmed; that it is declared to be the University of the State of Minnesota; and that all rights, immunities, franchises, and endowments previously granted it are perpetuated, with all lands to be subsequently granted or other donations for university purposes.—(School law of 1873, with amendments of 1875.)

PROVISIONS OF THE SCHOOL LAW.

School laws of 1873, with amendments of 1875.

OFFICERS.

(1) A State superintendent appointed by the governor, with the consent of the senate, and holding office for two years from the first Tuesday in April following his appointment; (2) a board of regents of the university, consisting of the governor, State superintendent, president of the university, and of eight others holding office in three different classes for a fixed term; (3) a State normal school board, consisting of six directors, appointed by the governor, with the consent of the senate, for terms of four years each, with the State superintendent as secretary; (4) county superintendents appointed by the county commissioners for terms of two years; (5) district boards of trustees, composed of a director, treasurer, and clerk, elected at the annual district meeting in October, for terms of three years each, one going out each year and being replaced by new election; (6) boards of education for independent school districts, (consisting, for the most part, of towns or cities,) chosen by the qualified electors at the annual town meeting, and embracing ordinarily six members, who serve each for three years, two going out each year to give place for new material. These boards may elect a superintendent of schools.

POWERS AND DUTIES OF THESE OFFICERS.

The State superintendent, who is *ex officio* a regent of the university, has the power to grant to such persons as may be found worthy, by himself or by a committee of teachers appointed by him, State certificates of eminent qualifications as teachers, valid in any county or school district in the State for seven years. It is his duty to meet in council the county superintendents of each judicial district, or of two or more districts combined, at such time and place as he may appoint, for the discussion of all matters relating to the well-being of the schools; to hold annually State teachers' institutes, of a week each at least in the sparsely settled counties, and in the more densely settled ones normal training schools, of four to six weeks each, with a view to aiding teachers, or such as wish to teach, in acquiring a knowledge of the best methods of managing and teaching schools. He is also to apportion the available current school funds among the several counties on the first Monday of March and October in each year, according to their school population; to recommend, in conjunction with the president of the university and secretary of state, text books for the common schools; and to prepare and transmit to the legislature, on or before the 5th day of December, in each year, a report showing: (1) The number of organized school districts in the State, the number of schools taught, the number of persons of school age, male and female, the number between 15 and 21, and the number taught in the public schools; (2) the condition of the public schools and of all other educational institutions that may report to him; (3) the amount of school moneys collected and expended, specifying the amounts from all sources; (4) all matters relating to his office, the public schools of the State, and the school fund, the number and character of teachers, and whatever else he may deem expedient. Salary, $2,500.

The regents of the university have the usual duties belonging to such bodies, such as care of the general interests of the institution, a looking after its finances, and an appointment of its officers.

The State normal school board has the general supervision and management of the State normal schools and of all their property. It has power to contract for the erection of buildings, to appoint professors and teachers in the schools, to fix the salaries of these, to prescribe the courses of study and conditions of admission, with all needful rules and regulations. It is made a duty to visit and inspect the grounds, buildings, modes of instruction, and the discipline and management of each school at least once in each term; and to report to the governor, on or before the 1st day of December in each year, through the president, the condition of each school, its receipts and disbursements, its wants and prospects, together with such recommendations for its improvement as are thought proper. The board organize, in connection with each normal school, model schools for the illustration of the best methods of teaching and government. No compensation but for expenses incurred.

The county superintendents, who are to be of high moral character and literary attainments, and to hold a first class certificate from the State superintendent or president of the university, are to examine and license teachers; to visit and instruct the schools

once at least in each term, giving the teachers such advice as may seem necessary; to organize and conduct a teachers' institute once a year; to encourage teachers' associations; to introduce to teachers and people the best modes of instruction and plans for building and ventilating school-houses and ornamenting their grounds; to stimulate school officers to prompt and proper performance of their duties; to receive the reports of the school district clerks and transmit an abstract of them to the State superintendent, with the report which each one has to make for himself of the condition of the county schools. This last report is to embody the particulars above mentioned for the State superintendent's report to the legislature, with the number of private schools, high schools, colleges, and universities in the county of each one, their condition and resources, and the number of teachers and pupils therein. Penalty for failing to make such report, $50. The county superintendents are also the agents of the State superintendent for the distribution of blanks, reports, and circulars to the clerks of their several school districts. Compensation, not less than $10 for each organized school district in their respective counties, unless the number of such exceeds one hundred, in which case the sum is to be $1,000 to $1,250.

The boards of trustees for school districts have the general charge of schools and school-houses in their districts, such as leasing or purchasing of sites; building, hiring, or purchasing of school-houses; opening of new schools, when required by the district, and grading such schools, assigning to each its proper grade of scholars. Each member of the board is to visit the schools once in each term, and give such advice to the teachers as may be for the good of the school, while the board, as such, must submit to the annual district meeting an estimate of the school expenses for the coming year, with a view to proper provision for supply of means. It belongs to them also to contract with and hire teachers for the district schools, and provide all things necessary for the school-house.

Specific duties are also assigned to the treasurer and clerk of the district board, not unlike those mentioned as belonging to the assessor and clerk in Michigan, the last being held in a penalty of $50 for failure to make full annual report of the schools to county superintendents.

The boards of education in independent school districts have nearly the same powers with those of district trustees; but the duty of visitation and grading of schools is generally performed for them by the superintendents whom they are authorized to elect, and a board of examiners whom they appoint.

SCHOOLS UNDER THIS SYSTEM.

The public schools have, as their minimum of time, 3 months; minimum of studies orthography, reading in English, penmanship, arithmetic, grammar, modern geography, and the history of the United States, rising from these to studies which prepare for the university. They are free to all persons of school age (5–21) resident in the districts where they exist; but persons over age or non-residents pay such rates of tuition as may be determined by the school board. Instruction in them is required to be given in the English language, except that a board of trustees may provide for one hour of instruction daily in any foreign language.

Three normal schools, under State direction, supply teachers for the public schools; while teachers' classes in academies, brief teachers' institutes in the slightly settled counties, and training schools of some weeks' continuance in more populous ones aid in bringing up the teaching force to a higher grade of efficiency than might otherwise be reached. The university and its colleges of agriculture and mechanic arts form also, as has been stated, a portion of the State system, though the link of connection between them and the schools is not yet definitely settled. There is also a State institution for deaf, dumb, and blind.

SCHOOL FUNDS.

A State school fund derived from the sales of lands granted by the Government amounts now to about $3,200,000, with a possibility of its increase to ten or twelve millions more. The interest of this fund goes to encourage and aid local taxation for the schools, which may be levied in each county at the annual rate of one-tenth of one per cent. on the regular assessment, and may be supplemented also by the proceeds of fines for penal offenses, of licenses for selling liquors, and of unclaimed moneys from sale of estrays, making an annual revenue of nearly $2,000,000 for the schools.

ELEMENTARY INSTRUCTION.

EQUALIZATION IN POPULAR EDUCATION.

Discussing this subject the State superintendent lays down two principles:

(1) Taxation for the support of primary schools must be upon the property of citizens as a whole, regardless of the question whether or not they have children of their own to be educated. The rich bachelor, the unmarried woman holding property, the childless married man, whatever the extent of the possessions of each one, must pay their

quota of special taxes for schools, and thus help educate the children of the poor and penniless. It is not yet determined to what extent this principle should be carried into higher education. Some would apply it to high schools, academies, and even colleges; others would limit its application to common schools for primary education.

(2) Allied to this principle is the axiom that educational privileges, secured by such taxation, must be equalized, as nearly as possible, among all our children without regard to the accidents of nationality, color, poverty, wealth, or social conditions of their parents. While no man of wealth or high moral culture is forced to send his children to school with the children of low-bred parents, the principle must be maintained that the children of the poorer and lower classes shall be provided with good schools of sufficient length to educate them into the duties and possibilities of good citizens. The distribution of State funds for popular education must also be regulated by this fundamental principle of equalization. It must be so made that the benefit shall acrue impartially to all the children receiving education in the public schools. No just claim can be made by any church, or sect, or party to a share of this income from school funds, to be used under special plans for itself, because the condition on which such funds were created is that their proceeds shall go to the support of public schools, impartial, broad, and free, as defined in the foregoing statements.—(State report, 1875, pp. 6 and 7.)

GRADED AND UNGRADED SCHOOLS.

In some statistics, meant to show the relative cost of these two kinds of schools, the State superintendent gives a list of 35 towns and cities in which the principal graded schools exist. In some of these the enrolment in the public schools runs into the thousands, while in most it is from about 100 to 900. The total number of the graded schools is elsewhere stated to be 222. In the ungraded class, the superintendent says, "are included all the schools in the rural portions of the State and in the small towns with too few pupils for more than one teacher. Many of the newer counties have no other kind of school. In counties having graded schools, like Winona and Olmstead, more than two-thirds of the pupils are in the ungraded schools. In Hennepin County the proportion is more than one-half. Only in Ramsey County do we find a majority of the children in the graded schools. In the State, as a whole, about three-fourths of the children are in ungraded schools."—(Report of 1875, p. 47.)

In the interest of these lower schools and with a view to an increase of their advantages, the superintendent discusses as follows the equalization of taxation for the schools and of distribution of the proceeds of the taxes:

TERRITORIAL BASIS FOR EQUALIZATION.

The superintendent complains that the adoption of narrow geographical limits or the division of the State into small portions by arbitrary lines prevents the children of the poor and sparsely settled districts from enjoying equal educational advantages with those of the more thickly settled and prosperous ones, and this renders unequal the raising and distribution of the money for the support of schools. To remedy this inequality, he says that the territorial basis of taxation for the support of schools must be common to the largest number of children possible, and that the units of territory on which we can secure this result must be subdivisions of the State, probably counties. It is impossible to secure an equality of educational privileges with petty districts as the units of operation, apportioning to each only the tax that can be raised in its limited territory, with the share of the income from the State proportional to the number of its children, and requiring each to build its own school-houses. The next step would be to let every man within these districts, rich or poor, educate, without public help, his own children. Of this proposition a ruinous illiteracy would be the inevitable result. "We should, therefore," he says, "return to the principle of the two-mill tax, with the improvement of dividing the amount of such taxation upon a county, so as to give discriminating help to the weakest schools. We must bestow equal primary educational advantages upon all children, whether they belong to large or small, rich or poor districts. This, and nothing less than this, is equalization in popular education."—(State report, pp. 7–13.)

TEXT BOOKS.

The superintendent, speaking of the great evil of such a variety of text books being used in the schools, concludes by saying: "This whole question now rests with city boards of education and district trustees. Superintendents, city and county, have, however, an advisory duty to perform; and it is earnestly recommended that they consult with their leading teachers and trustees, and in each county come to a general agreement for that county. The economy and convenience of county uniformity are such that they render the wisdom of this recommendation evident. The city schools should, if possible, be included in the plan. It is very desirable that the graded schools of the cities use the same books that are used in the rural districts. The friends of education in each county should make an effort to regulate this matter before the diversity of books becomes too great for control."—(Superintendent's report, 1875, p. 34.)

SALARIES OF COUNTY SUPERINTENDENTS.

"The school law provides that the compensation of a county superintendent shall not be less than at the rate of $10 for each organized district in any county. This requirement, in some counties, is disregarded. Candidates have been allowed to bid for the office, and persons underbidding the legal rates have been appointed. With equal propriety might the office of county auditor or treasurer be sold to the lowest bidder. The fact that such shaving is practised only upon an educational office is one of sad significance. It indicates a disregard of popular education, an indifference to the condition of our schools and the welfare of our children, foreboding degeneracy and evil to coming generations. A county may be suffering temporarily from a loss of its crops, but why should retrenchment fall upon an interest as vital as that of the schools? Men may be out of employment and desperately in want of money, but one in such a condition should not attempt to relieve himself at the expense of the cause of education. To underbid the stipulated salary is to depreciate the popular idea, already too low, respecting the importance and value of school supervision. To render such service for less than it is really worth will inevitably lead the popular mind to the inference that the price asked is the measure of the value of the service rendered." —(Report of State superintendent, 1875, p. 23.)

GOOD COUNTY SUPERINTENDENCY.

The State superintendent has placed in his report an earnest argument for the continuance of the county superintendency of schools. He admits that there are difficulties in the way of its efficiency. The best men, for instance, cannot do everything that may be wished, and in many cases the best men are not attainable. Schools languish, hence, in some counties, from want of visitation; in others, from want of a due skill in it. The remedy for such difficulties, however, is not an abolition of the system, but an amendment of it in some points.

In populous counties, with very many schools, the superintendent, good as he may be, cannot visit all the schools at the best time. The earlier in the school term the visitation can be made the better in most cases, especially for young teachers. But in populous counties certain schools must wait till past the middle or near the conclusion of the term. Visits at that late period may do much good, but not the full good that is desirable. This defect, however, is not an insuperable one. It may be remedied by giving superintendents in such counties some help in the work of visitation. Let them be allowed to select assistants for themselves, or let county commissioners appoint assistants, to be paid by the county, with a view to securing a visitation of all schools in season to confer the greatest benefit. The additional advantage would pay for the increase of cost.

In sparsely settled counties, with few schools, a first rate superintendent cannot generally be had, because of the necessarily small salary. The difficulty here, Mr. Burt thinks, may be met by a provision already made in some western school laws, viz, the allowance that in counties with under thirty schools superintendents shall be eligible to office on certificates of lower grades than in counties with more wealth and population. The only guard he asks for is that the State superintendent shall approve the choice made by the county officers. With that guard, men of good sense, good character, and very fair possibilities for work, he thinks, may be obtained for even the poor counties.

Then, for the wealthier portions of the State, a full system of county supervision, with its best forces and conditions, may exist; while, for poorer portions, there may be one which, if not all that could be wished, may yet grow up to eventual completeness with the growth of population and consequently of wealth.—(Report, 1875, pp. 17-22.)

KINDERGÄRTEN.

One of these schools, located in Minneapolis, and conducted by Mrs. E. R. Holbrook, reports an attendance of from 10 to 26 pupils, who are kept at Kindergarten plays and employments three hours a day during five days of the week. The ages of the children admitted are from 3 to 7.—(Special report to United States Bureau of Education, 1875.)

CITY SCHOOL SYSTEM.

ST. PAUL.

The officers here are a board of education of 18 members, of whom one-third are changed each year, and a city superintendent of public schools, appointed by the board.

Statistics of schools.—Population, 33,000; children between 5 and 21 years old, 15,114; enrolled in public schools, 4,941; average daily attendance on these, 2,503; enrolled in schools other than public, 2,100. Teachers in the public schools, 18 males and 68 females; in private and parochial, 20 males and 40 females. Average monthly pay of teachers in public schools: males, $105; females, $54. School-houses occupied under the

public school system, 14; rooms, exclusive of recitation rooms, 68; recitation rooms, 15; sittings for pupils, 3,625. The schools are divided into primary, intermediate, grammar, and high; the expenses for the year, (including $20,200 for sites, buildings, libraries, and apparatus,) were $78,635; the cost *per capita* of pupils enrolled, $13; *per capita* of average attendance, $21. The superintendent accounts for the comparatively small enrolment and attendance by the unprecedented severity of the winter of 1874–'75 and the prevalence of several infectious diseases.

Details respecting the high school may be found under the head of secondary instruction.

Ventilation of the schools.—This important matter has not escaped the attention of the board. In their new Lincoln school building, beautifully situated on the heights overlooking the Mississippi, provision has been made for it by brick shafts, 26 by 36 inches in the clear. Through the entire length of these pass galvanized iron pipes, 10 inches in diameter, of No. 18 iron. These, heated by the exhaust smoke from the furnaces, create a strong upward current, carrying off the foul air from the rooms during the time that fires are in operation. In warmer weather the windows have to be depended on.—(Report of board and of Superintendent L. M. Burrington for 1874–'75.)

Free night school.—The Wisconsin Journal of Education for April, 1875, gives an account of the free night school at St. Paul, taken from the St. Paul Daily Pioneer. A representative of that paper, on visiting the school, found about 130 pupils present, representing many nationalities, as Germans, Scandinavians, French, Bohemians, Irish, English, Africans, and Americans, ranging in age from 12 to 40 years. Four sessions are held each week; there are upon the rolls about 180 names; the average attendance, 125. The pupils were represented as making very satisfactory progress, all carefully preparing their lessons before the school hour. The small expenses of the school, it was stated, had thus far been paid by the subscription of liberal gentlemen. The teachers, except the principal, give their services, and all enter upon their work with the greatest zeal.

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

The State normal school board report a gratifying increase in attendance at these schools, affording, it is remarked, "good evidence that they are rapidly gaining in favor with the public." The total enrolment in the three schools was 979, of whom 688 were in the normal departments; average attendance, 412; graduates during the year, 70; total number of graduates, 415.

The principal of the State normal school at Winona reports, for the year 1875, an increase of the "unexampled prosperity referred to in the report for the previous year." This encouraging state of things, he says, is shown no less in the higher qualifications than in the increased numbers of the persons admitted and in the growing demand for the services of the graduates and pupils of the school in all parts of the State. There were engaged in the studies of the normal department 75 men and 226 women—total, 301—an increase of 46 on the number of the preceding year. The average number belonging was 195, an increase for 1875 of 47.

The influence of the graduates of this school upon the institutes, and through them upon the mass of teachers, has already become a power in the State. Many of them have acquired an enviable reputation as institute conductors and workers, and it is conceded that they rank with the best in Minnesota. Special instruction in this kind of work is now given to the graduating class, from which at least 10 or 12 may be relied upon as being qualified to teach in the institutes during the coming year.

The principal of the State normal school at Mankato reports an attendance in the normal department greater than that of any previous year since the organization of the school, and this notwithstanding the fact that the territory patronizing the school has been devastated for three successive years. The enrolment of men was 63; of women, 150; total, 213; average attendance, 59. This small average attendance is explained by the fact that two-thirds of the pupils procure the means to attend the normal school by teaching, and leave about the 1st of April to secure summer schools. The departure of so large a number six weeks before the close of the term greatly reduces the average attendance for the year.

The principal of the State normal school at St. Cloud reports his school in an excellent condition. The new building, which has been occupied one year, fully meets the expectations of those who planned it and those who use it. The increase in attendance has been beyond all anticipation, the enrolment being 75 per cent. greater than a year ago. The patronage of the school is very largely from among the agricultural classes. Enrolment in the normal department: Men, 50; women, 124; both, 174. Average attendance of men, 28; of women, 64; of both, 92.—(Report of superintendent of public instruction, pp. 195–223.)

INSTITUTE WORK.

At the meeting of the normal board in May, 1875, a resolution was offered by the super-

intendent of public instruction asking the board to engage its teachers subject to calls for a certain amount of service annually in the State institutes and training schools, for which their salaries as normal teachers shall be deemed compensation; whereupon the following resolutions were adopted:

"*Resolved*, * * * That the services of the principals and teachers of the normal schools from the 1st of April until the third Wednesday of May be given to institute work under the direction of the State superintendent of public instruction.

"*Resolved*, That the superintendent of public instruction be authorized to call on the principals and teachers of the normal schools for such services in the institutes of the autumn as can be rendered without detriment to the schools."

In accordance with this plan the normal schools assisted the superintendent of public instruction in the institutes of last autumn. This employment of principals and teachers of normal schools in these institutes has produced good results. Their methods have commanded almost universal approbation, and they have, in every instance, worked in perfect harmony with county superintendents as the presiding officers of the institutes.—(State superintendent's report, 1875, pp. 39–42.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

How many schools exist in the State prepared to conduct their students up to the doors of the university or of the colleges does not distinctly appear. In a table appended to the report of the State superintendent 222 graded schools are enumerated, with 34,308 pupils on their rolls and 18,808 in daily attendance. But this list includes the lower grades as well as the higher ones, and affords no means of determining the number of high schools, the number of pupils in them, or the extent of the high school course. A set of interesting reports of 22 graded schools, appended to his own report, fails, likewise, to supply such definite information, except that 7 high schools out of the 22 appear to prepare students for a university or college course. Yet, of these 7 only 2 (those at St. Paul and Winona) present, in the State report or otherwise, such a schedule of the course pursued as to show them to be true preparatory schools, the former having a four years' course in Latin and Greek and the latter one of three years in Greek and four in Latin, besides other courses. The missing link for perfecting the desired connection between the State schools and the university would thus seem not to exist; nor can it, until a definite course, satisfactory to the university authorities, shall be adopted by the high schools as a rule. Such a course has been sketched by the university, embracing, for admission to the classical curriculum, four books of Cæsar's Commentaries, the first oration of Cicero, the Greek grammar and reader, and eight chapters in the first book of Xenophon's Anabasis, in addition to English grammar and composition, rhetoric, outlines of general history, arithmetic complete, and algebra through quadratic equations. For admission to the scientific curriculum there must be, in addition to these last named studies, an examination in physical geography, natural philosophy, physiology, free hand drawing, history of England, study of English words, and elementary astronomy, or, in lieu of the last three, the Latin or Greek of the classical requirements. It now remains to be seen whether the high schools generally, or to any great extent, will adopt the course thus sketched. Of this the State superintendent seems to be in doubt.—(See State report, p. 44.)

ACADEMIES AND SEMINARIES.

Eleven schools of the above class report an attendance of 1,026 pupils instructed by 50 teachers; classical studies were pursued by 57 and the modern languages by 230. Four of these schools are under the patronage of the Roman Catholic Church, 3 are non-sectarian, 3 are under the influence respectively of Protestant Episcopal, Lutheran, and Wesleyan Methodist Churches, and 1 makes no report upon this point. Drawing is taught in 6 of these schools and vocal and instrumental music in 9. Three report the possession of some kind of philosophical apparatus and 8 have libraries ranging in size from 75 to 450 volumes. For names of schools and further details see Table VI at the end of this volume.—(Special reports to the United States Bureau of Education, 1875.)

Of the following schools of this class a description is given in the State report: The Shattuck School at Faribault, under the management of the Protestant Episcopal Church, prepares boys for college or business life, and the course extends to the junior year. It has a military organization under the charge of an experienced officer of the United States Army. The school is beautifully located on 65 acres of land, has three large and commodious halls, a beautiful chapel, and a fire-proof library, which have cost over $80,000.

The St. Croix Valley Academy, incorporated in 1867, has two departments, musical and literary, instructing in all the common and higher English branches, Latin, and German, fitting pupils for the collegiate course. It has also fitted a large number of teachers who are satisfactorily employed in the district schools.

Wesleyan Seminary, Wasioja, (Wesleyan Methodist,) has an endowment of $10,000 nearly completed. Its object is to prepare students for college and to give them a thorough practical education. Although it has been in progress but two years it is rapidly growing in importance and usefulness. During the year 98 students were enrolled, all of whom were influenced to good conduct by a sense of duty and honor.

Taylor's Select Graded School, St. Paul, aims to prepare pupils for teachers for the high school or for college. The course of study embraces the common and higher English branches and the classics. The methods of this school are molded somewhat upon the conviction that in some schools much precious time is wasted in needless details, especially with those whose opportunities are limited.—(Report of superintendent of public instruction, pp. 57–70.)

PREPARATORY DEPARTMENTS OF COLLEGES.

The colleges of the Northwest have often to prepare the students for their collegiate classes, and in this State 303 such students are reported, 96 of them in preparation for a classical course in college and 123 for a scientific course.—(Return to Bureau of Education, 1875.)

BUSINESS COLLEGES.

The International Business College and Telegraphic Institute, at St. Paul, organized in 1865, has graduated about 200 students. The length of course is from two-thirds of a year to a year; the studies pursued, besides the English branches, are book-keeping, commercial arithmetic, common law, penmanship, and telegraphy. There were in the day school in 1875, 186 pupils, 11 of whom were young women; in the evening school, 27, 3 of them young women; the total attendance was 213. The students in telegraphy numbered 23.—(Special report to the United States Bureau of Education, 1875.)

The Minneapolis Business College offers to both sexes a course of study embracing commercial arithmetic, mercantile law, the customs of trade, book-keeping in all its applications, business correspondence, English grammar, spelling, and penmanship.—(Report of superintendent of public instruction, 1875.)

SUPERIOR INSTRUCTION.

THE UNIVERSITY OF MINNESOTA, MINNEAPOLIS.

This university was chartered in 1868, is undenominational, and admits both sexes on equal terms. From the necessity of the case it has hitherto been largely engaged in preparing students for itself in what are called the fourth and third classes of its collegiate department, or what would elsewhere generally be called lower and higher classes of its preparatory school. It feels now strong enough to leave a portion of this preparatory work to the high schools and graded schools throughout the State, and after the year 1875–'76 proposes to dispense with its lowest class and add the branches now studied in that class to the requirements for admission to the next above. The lowest then remaining will be the third, or subfreshman, full standing in which can only be secured by passing a satisfactory examination in specified studies about equivalent to those of good high schools.

The third annual commencement of the university was held in its new audience hall June 24, 1875, on which occasion 3 of its students were made bachelors in arts, 2 in science, 1 in literature, and 3 in civil engineering.—(Report of the president in State report of 1875, pp. 179–191.)

OTHER COLLEGIATE INSTITUTIONS.

Carleton College, Northfield.—This college offers its privileges to all alike, irrespective of race, sex, nationality, or denominational preferences. Though receiving the special patronage of the Congregational churches, it is not under any ecclesiastical control, nor is it sectarian in methods or influences. The young women reside with the lady teachers in a separate building, but both sexes meet in all general exercises, are instructed in the same classes, and may take the same degrees. The courses of study are English, preparatory, academic, and collegiate.—(College catalogue, 1874–'75, and report of superintendent of public instruction, 1875.)

Hamline University was organized under the auspices of the Methodist Episcopal Church in 1854, and located at Red Wing, but owing to financial reverses was discontinued in 1869. It is to be opened again in the fall of 1876. A new location has been chosen between the cities of St. Paul and Minneapolis, those cities having contributed largely toward a university building which is now in process of erection at a cost of $60,000.—(Report of superintendent of public instruction, 1875, p. 61.)

St. John's College, near St. Joseph, (Roman Catholic,) is conducted by the Benedictine Fathers. The course of study is conformable to the most recent progressive methods, aiming at the highest standards. There are elementary, scientific, commercial, and

classical courses, the latter extending over a term of 5 years, and including advanced studies in mathematics, belles-lettres, rhetoric, and poetry, the English, German, Latin, and Greek languages. French, Italian, Spanish, and Hebrew, with music, painting, and other studies, are optional. The situation of the college is said to be delightful and the faculty large and highly trained.—(Report of superintendent of public instruction, 1875, pp. 57, 58.)

COLLEGES FOR WOMEN.

St. Mary's Hall, at Faribault, (Protestant Episcopal,) and the Minneapolis Female Seminary (non-sectarian) report a total of 16 professors and instructors, 4 ladies and 12 gentlemen, and 149 students, of whom 69 were pursuing the regular college course. The Minneapolis Seminary is authorized by law to confer collegiate degrees and has a library of 600 volumes. There are two courses of instruction, the English (scientific and literary) and the classical, including a full course in Latin and French or German. The departments of music, drawing, and painting are conducted by the ablest teachers.—(From special reports to the United States Bureau of Education and report of State superintendent, 1875, pp. 60, 67.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The College of Agriculture of the State University presents two courses of study, the regular undergraduate course, of equal rank with the courses in the other colleges, and the elementary, coinciding in the main with the scientific course of the collegiate department. Students who complete either of these courses are admitted to the advanced course without further examination. A new building was expected to be ready in the fall of 1875, but further accounts of it are wanting.

In the College of the Mechanic Arts there are three undergraduate courses of study leading to appropriate degrees, a course in civil engineering, one in mechanical engineering, and one in architecture. Only 9 students are reported as in attendance in 1875 on these two colleges, 7 of them belonging to the college of mechanic arts, and the other 2 being engaged in an elementary course in the agricultural college.—(State superintendent's reports for 1873–'74 and 1874–'75.)

THEOLOGY.

The Seabury Divinity School, Faribault, (Protestant Episcopal,) offers a thorough course of instruction. Its buildings, which cost over $50,000, will accommodate 35 students. The school is unendowed, depending on the offerings of the church for its support. It has a library of 4,500 volumes.

The theological department of Augsburg Seminary, at Minneapolis, (Evangelical Lutheran,) is intended to prepare students for preaching, especially the older ones, "that they may be earnest advocates for the truth." It is sustained by donations from congregations belonging to the conference for the Norwegian-Danish Lutheran Church in America. Number of students, 16.—(Programme of the seminary, 1874, and special report to the United States Bureau of Education, 1875.)

St. John's Seminary, St. Joseph, Minnesota, (Roman Catholic,) reports an attendance of 26 students. The ecclesiastical course, which embraces philosophical and theological studies, is completed in three years.—(Catalogue, 1874–'75, and report to the United States Bureau of Education, 1874.)

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF AND DUMB AND THE BLIND.

In common with the older States in the Union, Minnesota has made special provision for the education of her deaf and dumb and blind children. For thirteen years the institution at Faribault has been in active operation, dispensing the blessings of a common school education to those who otherwise would have grown up in ignorance. During the past year 109 deaf-mutes and 21 blind children have been in attendance for a longer or shorter time during the term of forty weeks. Five and a half hours daily, Sunday excepted, are devoted to study and recitations, and three and one-half hours to work in one of the shops. Coopering, shoemaking, and tailoring are the trades taught the boys. A few of the younger lads, instead of attending to shop work, are occupied one hour in the afternoon receiving instruction in drawing or some light exercise.

For various reasons only about two-thirds of these children within the limits of the State have been reached. The provision made has been generous, but never sufficient for all in the State; still, none of suitable age and capacity who have applied have been rejected. It is expected that upon the completion of the main building, now in process of erection, all in the State can be accommodated, and also that as the advantages of the school and shops become more generally known, greater demands will be made upon the institution.—(Report of superintendent of public instruction, 1874–'75, pp. 177, 178.)

* The superintendents for these counties are to be elected by the people from November, 1876; the thers are appointed biennially by the board of commissioners in each county.

MISSISSIPPI.

STATISTICAL SUMMARY.

SCHOOL POPULATION AND ATTENDANCE.

Number of white children of legal school age, 5–21 years	141,514
Number of colored children of legal school age	176,945
Total number of children of school age	318,459
Number of white children attending school	78,404
Number of colored children attending school	89,813
Total	168,217
Average monthly enrolment of white children	65,065
Average monthly enrolment of colored children	68,265
Average monthly enrolment of males of both races	67,630
Average monthly enrolment of females of both races	65,700
Average daily attendance of males of both races	55,743
Average daily attendance of females of both races	51,152
Average daily attendance of white children	40,381
Average daily attendance of colored children	66,514
Total average daily attendance	106,895
Average number of pupils to each teacher	22

TEACHERS AND THEIR PAY.

Number of white teachers: Males, 1,826; females, 1,033	2,859
Number of colored teachers: Males, 1,163; females, 946	2,109
Total number: Males, 2,989; females, 1,979	4,968
Average monthly salary paid white teachers of first grade	$68 40
Average paid to colored teachers of first grade	65 50
Average paid to white teachers of second grade	46 61
Average paid to colored teachers of second grade	41 40
Average monthly salary regardless of races and grades	55 47

SCHOOL BUILDINGS AND SCHOOLS.

Number of school buildings in the State, (about)	2,275
Number of school-rooms	6,838
Number used exclusively for recitations	5,550
Estimated value of school sites, buildings, and other property	$1,000,000
Average number of days taught in cities	200
Average number taught in towns of over 2,000 inhabitants	120
Average number taught in counties outside of towns and cities	100
Average number taught throughout the State	140

INCOME AND EXPENDITURE.

Receipts.

From State tax, (about)	$489,443 83
From county tax, (about)	354,872 40
Interest on Chickasaw school fund	63,466 08
Rent from school lands, (about)	50,000 00
Aid from Peabody fund	9,500 00
Total receipts from other sources than State and county tax, (about)	142,966 63
Total from all sources	1,110,248 94

Expenditures.

For teachers' salaries	856,950 44
Amount paid county superintendents	48,650 00
Miscellaneous expenditures	80,000 00
For permanent improvements	55,000 00
Total for all purposes	1,040,600 44

STATE SCHOOL FUND.

Amount available, including Chickasaw fund	$1,068,358 56
Amount of permanent fund, including that due from the State	1,000,000 00

—(From report for 1875 of the superintendent of public education, Hon. T. W. Cardozo, pp. 5–17.)

SCHOOL SYSTEM OF THE STATE.

CONSTITUTIONAL PROVISIONS.

The earlier State constitutions, from 1817 to 1865, contained a declaration that "Religion, morality, and knowledge being necessary to good government, the preservation of liberty, and the happiness of mankind, schools and the means of education shall forever be encouraged." It was not, however, until 1868 that encouragement was given to any general system of public schools meant to embrace the whole youthful population. The constitution adopted in that year, article VIII, made it the duty of the legislature to establish a uniform system of free public schools for all children between the ages of 5 and 21, and as soon as practicable schools of higher grade, one or more schools to be maintained in each school district at least four months in every year. It also provided the machinery for such a system by ordaining (1) that there should be a superintendent of public education, elected at the same time and manner as the governor, who should hold office for four years; (2) that there should be a board of education, consisting of the secretary of state, the attorney-general, and the superintendent of public education; (3) that there should be a superintendent of public education in each county, appointed by the board of education, with the concurrence of the senate, to hold office for two years; (4) that there should be established a common school fund, to consist of the proceeds of lands granted to the State by the General Government, of others known as "swamp lands," of fines for breach of the penal laws, of moneys received for liquor licenses and for exemption from military duty, of congressional township funds and lands, and of all moneys donated to the State for school purposes.

The legislature was also authorized to levy a poll tax, not to exceed $2 a head, in aid of the school fund, and was directed from time to time, as might be necessary, to provide for the levy and collection of such other taxes as should be required to properly support the system of free schools; all school funds to be divided *pro rata* among the children of school age.

As soon as practicable the establishment of an agricultural college or colleges was also to be provided for.

PROVISIONS OF THE SCHOOL LAW.

School Laws of 1873 to 1876, published by Thomas S. Gathright, State superintendent of public education.

SCHOOL OFFICERS.

A State board of education, State superintendent of public education, county superintendents, county and city boards, and trustees of schools constitute the official educational staff.

POWERS AND DUTIES OF SCHOOL OFFICERS.

The State board of education, besides the power of appointing county superintendents, has given to it by the constitution the management and investment of the school funds, with certain exceptions specified in the school law, and is to make annual report to the superintendent, and through him to the legislature, of everything relating to these funds. They give bonds in $20,000 each for faithful performance of their duties.

The State superintendent of education has the general supervision of the public schools, prescribes rules and regulations for them, and is directed to make such annual visits to the schools in each congressional district as the board of education may direct; is to provide for holding a teachers' institute in each of these districts annually; to decide all controversies respecting school management, and on or before the 15th of January in each year is to make report to the legislature of all matters relating to his office and to the educational interests. He presides at all meetings of the board of education, disburses the amounts which they appropriate for the support of free schools, and prepares editions of the school laws, with the necessary forms, regulations, and instructions for conducting all proceedings under them. He has the privilege of appointing a clerk, with $1,200 annual salary, to aid him; receives 5 cents per mile for the distances actually travelled in the performance of his official duties, and all necessary contingent expenses, with a salary not stated in the law; and gives bond, like the members of the board of education, in $20,000, for the faithful discharge of his duties and for the safe-keeping and proper disbursement of the school funds passing through his hands.

The county superintendents have the general supervision of the public schools of their several counties, with the duty of visiting them once at least each term; examine candidates for the position of teachers in them; give certificates, valid for twelve months, to such as are found qualified to teach; examine and verify the accounts of teachers for their monthly salary, and, when they find them correct, issue pay certificates to that effect, to be cashed by the clerk of the board of supervisors or city clerk, as the case may be. They are to establish schools where needed; to appoint trustees for newly established ones; to classify the schools as first grade or second grade; to fix the rate of salary to be paid to the teachers of each grade; to make arrangements for equaliz-

ing the sessions of all schools, and to present annually, on or before the first Monday in July, to the supervisors of their counties and the mayors and councils of cities in them an estimate of the contingent school expenses for the ensuing school year, reporting also to the county or city treasurer the probable number of schools to be provided for and the total monthly cost of their support. They are also annually, on or before the 1st of September, to make written report to the board of county supervisors and the board of mayor and aldermen or selectmen of each city of 2,000 inhabitants, showing the names of teachers employed during the preceding school year, the number of months taught by each, the rate of salary paid, and the aggregate amount certified to be due each teacher. Then, on or before the 15th day of September in each year, they are to report to the State superintendent the condition and statistics of the schools; to the auditor of public accounts, an enumeration of the educable children of their counties; and to the board of education, "as soon as practicable," the amount and condition of school lands and school funds within their counties.

For the faithful performance of all these duties they are required to give bond in the sum of $2,000 to $5,000. Before entering on them they are to submit to an examination by a board of examiners, appointed in each county for the purpose, as to educational qualifications, as to habits and moral character, and as to executive ability, and only on satisfying the examiners on these points can they receive appointment from the State board. Their compensation, after appointment, is fixed by law at from $45 to $270, one-fifth of what it was in 1874.

County and city boards for school purposes are constituted of the board of supervisors of a county and of the mayor and aldermen or selectmen of any city or town having more than 2,000 inhabitants. They cause publication to be made of the reports of county superintendents presented to them respecting the pay of teachers and other expenses of the schools; make allowances for meeting expenditures which the superintendents indicate are to be provided for; and levy taxes for school-house purposes, for the superintendent's salary, and for any deficit in the teachers' fund which may arise.

Trustees of schools, 3 for each school in the rural districts, are elected annually by the patrons of the schools who are qualified electors; employ teachers for their schools; look after the local interests of these; visit them, by one or more of their number, at least once each month, to see that fuel is provided, to protect school property and care for the same during vacation, to arbitrate between teachers and pupils in case of difficulties or disputes, and to make such provision for the comfort of the pupils as may from time to time appear desirable. Trustees for towns and cities are elected by the voters there, two for each ward, and have the same duties.

SCHOOLS.

The State public schools, formerly of several grades, are now directed to be classified annually in each county as first and second grade. They are to be held for five months in the year; and in the second grade are to be taught orthography, reading, penmanship, the rudiments of arithmetic, English grammar, geography, history of the United States, and English composition. For the first grade, the studies are not prescribed in the latest law. The schools are to be kept ordinarily for at least five months in the year; for four, if the school boards are embarrassed with debt. The county superintendents, with the approval of the county and city school boards, may prescribe for them a uniform series of text books, not to be changed within five years from the date of adoption. Local boards may regulate the daily school hours.

Two normal schools, 2 agricultural and mechanical colleges or departments of such, a well organized State university, with institutions for instruction of the deaf and dumb and of the blind, also enter into the State system.

A teachers' institute of at least two weeks' continuance, to be held annually in each congressional district, under the control of the State superintendent, but under the working of an experienced and skilled educator and assistant, is provided for in the law.

SCHOOL FUNDS.

A State school fund of nearly $700,000 helps to supplement the proceeds of State and local taxation for schools; the interest of this fund, with the rent of unsold school lands and the income from some special funds, adding enough to the receipts from taxes to bring up the annual school income to nearly $1,000,000.

ELEMENTARY INSTRUCTION.

EDUCATIONAL PROGRESS.

In the opinion of the superintendent, the progress made by the public schools of the State during the year 1874–'75 has been sufficient to furnish cause for congratulation. It is no longer a partisan question whether public schools for the masses shall be maintained, but it is the desire of the whole people that every child in the State shall enjoy their advantages. There has been an increased attendance upon the schools, the qual-

ifications of teachers are better, and the interest manifested by trustees, parents, and people generally has been greater than heretofore. While the defects to be remedied and excellences to be attained are still great, it is remarked that a term of five years is a very brief period in which to bring the schools up to their proper standard.—(Report, p. 23.)

COUNTY SUPERINTENDENTS.

The State superintendent notices with regret a disposition on the part of some to underrate the services of county superintendents of schools. While it may be true that some of these officers are negligent of duty, he thinks they are, upon the whole, faithful, and render their counties and the State more valuable service for the amount received than any other officers. He strongly disapproves the effort which is made at every session of the legislature to make this office elective, and is confident that, whatever may be the case in other States where the common school system has been in operation for many years and the masses of the people are generally educated and the desire for office is not so great as in this State, such a plan would certainly prove disastrous, as it would too often result in selecting the very poorest men for the position.—(Report of superintendent, p. 24.)

TEACHERS' SALARIES.

From the commencement of the public school system of the State, a large number of the teachers have been compelled to lose a portion of their salaries on account of the depreciation of school warrants, but during the past two years there has been no necessity for this, as the State teachers' tax has been collected in currency, and has been in the hands of the tax collectors in season for the payment of teachers. It seems, however, that certain county officers have kept back the teachers' fund, thus forcing them still to sell their warrants at a discount. Such a change in the law is recommended as will make it impossible that this advantage should be taken of the teachers.

The superintendent remarks, in respect to his statistics of teachers' salaries, that the law makes no distinction as to this point in favor of race or sex, and that the difference in salary is due to the fact that a greater number of white men are teaching first grade schools for both races than of colored men, while the same is the case with women teachers of the different races.—(Report, pp. 13,25.)

COMPULSORY EDUCATION.

In the opinion of the superintendent, the legislature of the State should enact a compulsory education law as a matter of economy, in view of the fact that the State expends a large amount of money for school purposes—enough to educate all—while only about one-half the number of educable children are enrolled and only about one-third attend, on an average. Moreover, as a matter of justice to the rising generation, such a step, he thinks, should be taken; that, if it is the duty of the State to educate one of her children, it is her duty to educate all; and, if parents and guardians do not sufficiently appreciate the advantages of the common schools, the State should not allow their children (for whom it is wholly responsible in this matter) to grow up in ignorance. In a few years the children of the present day will have become citizens of the State, intelligent or ignorant. Will the people, asks the superintendent, suffer their property to become depreciated on account of having an ignorant community; shall a wall of ignorance be built around the State to impede immigration; or shall parents and guardians be compelled to send their children to the school provided for them?—(Report, p. 27.)

PEABODY FUND.

Every application made through the superintendent for aid from this fund was granted, until the amount set apart for the State, $9,500, was exhausted, and every school that applied for aid, except one, kept its terms. Twelve towns and cities received assistance in amounts ranging from $300 to $2,000. Aid has been promised for the current year to the amount of $11,800.—(Report, pp. 29, 30.)

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

The schools at Holly Springs and Tougaloo are making excellent progress and are rapidly preparing teachers for the public schools, their only difficulty being the small amount of funds appropriated. Colored students exclusively attend both these schools, and the superintendent earnestly recommends the establishment of another for white students. The white teachers have had only such preparation as they could obtain in high schools and academies. The amount appropriated by the State for the two schools was $9,000, $4,500 each. In addition to this, the Holly Springs school received $300 from the Peabody fund. There was an enrolment during the year of 351 students in both schools, Holly Springs having 134 and Tougaloo 217. Average attendance: Holly Springs, 84; Tougaloo, 92; total, 176.—(Report of superintendent, pp. 21, 22, 30.)

SECONDARY INSTRUCTION.

PRIVATE HIGH SCHOOLS AND ACADEMIES.

A list of 27 private high schools and academies was forwarded to this Office by the superintendent of public instruction, Mr. Cardozo, but without any further information respecting them. In response to the circulars of inquiry sent them by the United States Bureau of Education, 13 schools of this class have forwarded their statistics for 1875. Two of these are exclusively for the education of boys; they are undenominational in religious influence, and have, with 5 instructors, a total attendance of 127 students, 32 of whom were pursuing a classical course and 48 preparing for college. Three schools are exclusively for girls, 1 being under the influence of the Methodist Episcopal Church, the others undenominational, all 3 having, with 12 teachers, an attendance of 146 pupils, only 16 of whom are pursuing a classical course. The remaining 8 schools are for both sexes, and report an aggregate attendance of 733 students—372 boys and 361 girls—taught by 24 instructors; 5 of these schools are unsectarian in their influence, 1 is under the control of the Methodist Episcopal Church South, and 1 each of the Baptist and Presbyterian; 67 of the students were pursuing classical studies, 30 modern languages, and 96 were preparing for either the classical or scientific course in college; making a grand total attendance of 1,006 pupils—499 boys and 507 girls—taught by 41 instructors, the aggregate of those pursuing classical studies being 115 and of those preparing for college 144.

No report of any public high schools has reached the Bureau, not even Vicksburg making return of such.

PREPARATORY DEPARTMENTS OF COLLEGES.

The colleges report in their preparatory classes 151 male students and 35 females, 186 in all; 78 of them being engaged in preparation for a classical collegiate course and 17 for a scientific.—(Returns to Bureau of Education, 1875.)

BUSINESS COLLEGE.

St. Stanislaus Commercial College at Bay St. Louis, organized in 1855, reports an attendance in 1875 of 100 students, (all young men,) instructed by 8 teachers, and a course of four years, including commercial and mathematical branches, telegraphy, and the modern languages. Ten students were engaged in the study of telegraphy, 14 in German, 60 in French, and 5 in Spanish.—(Special report to the United States Bureau of Education, 1875.)

SUPERIOR INSTRUCTION.

UNIVERSITY OF MISSISSIPPI, OXFORD.

This university is on the line of the Mississippi Central Railroad, about a mile southwest of Oxford. The principal buildings are gathered about a common centre, octagonal in form, with sufficient space between each to make them tolerably secure from conflagration. There are, in all, 13 edifices; 8 being for the use of the faculty as residences, 3 for dormitories and other college purposes, 1 for a lyceum, and 1 for an observatory.—(Letter in Mississippi Pilot.)

The general departments of study are three: One of preparatory education, one of science, literature, and the arts, and one of professional education. That of science, literature, and the arts includes six courses of study, four of which are undergraduate parallel courses leading to the degrees of A. B., Sci. B., Ph. B., and C. E. The other two are post graduate, and lead to the degrees of A. M. and Ph. D.

The institution is well officered and possesses very rich and full appliances for illustration of the studies pursued, especially in the natural sciences, claiming to be in physical and chemical apparatus, and in cabinets of minerals, rocks, shells, and other fossils, inferior to none in the country, save the specially scientific schools.—(Catalogue for 1875.)

OTHER COLLEGIATE INSTITUTIONS.

Alcorn University, on the site of the old Oaklands College, near Rodney, is for either race, enjoys the benefit of the library and collections of the Oaklands College, and shares with the University of Mississippi the appropriation for agricultural college purposes. It has for these purposes a farm of 375 acres.

Tougaloo University, on the Mississippi Central Railroad, about nine miles north of the State capital, open also to both whites and blacks, is practically for the benefit of the latter, and had not, in 1875, reached proper collegiate rank, its departments being still only normal, intermediate, and primary. A farm of 500 acres gives employment to those who desire to liquidate one-half their expenses by laboring two hours for five days of the week and four and a half on Saturday, while females have the same opportunity in the domestic department.

Madison College, Sharon, (non-sectarian,) which reported in 1874, having then 3 in-

structors and 75 preparatory students, has not since been heard from, and has probably failed to reach collegiate rank.

Mississippi College, Clinton, (Baptist,) presents three courses: a classical, literary, and scientific collegiate course of four years, leading to the degree of A. B.; a literary and scientific course of three years, with or without ancient and modern languages, leading to the degree of Sci. B.; and an eclectic course, which secures only a certificate of proficiency in the studies successfully pursued.

Pass Christian College, under the care of the Christian Brothers, (Roman Catholic,) at Pass Christian, has suffered the loss of its buildings by fire, and is said to have been closed.

Shaw University, Holly Springs, makes return as in the following table, but furnishes no printed information as to itself for 1875.—(Catalogues of institutions, and report of American Missionary Association for 1875.)

COLLEGES FOR WOMEN.

Six institutions for the superior instruction of young ladies, all authorized by law to confer degrees, report a total of 40 instructors, of whom 12 are male and 28 female; 375 students in the regular collegiate course, 9 in special or partial courses, and 2 in post graduate studies. The length of the course in 3 of these institutions is four years, in 2 it is three years, and in 1 is five. All are under the influence of some religious denomination; 2 each Presbyterian or Baptist, and 1 each Protestant Episcopal or Methodist Episcopal Church South. Drawing is taught in all and painting also in all but 1. All teach vocal and instrumental music and French; 3 teach German, and 2, Latin and Greek. All report chemical laboratories and philosophical apparatus; 2 have museums of natural history, and 4 have art galleries. One reports also a gymnasium, and 4 have libraries of 200 to 2,000 volumes.—(Returns to Bureau of Education for 1875.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The school of agriculture, a department of the University of Mississippi, was established in accordance with an act of the State legislature assigning two-fifths of the congressional donation for this purpose to the university. In accordance with the terms of the act of donation, the course is intended not to turn out mere apprentices to the art of agriculture, but to teach it as a profession, requiring varied knowledge and a liberal education. The conditions of the congressional grant will be fully complied with by the organization of the mechanical and military courses so soon as the requisite funds shall have been provided.—(Catalogue, 1875, University of Mississippi.)

Since the appropriation by the legislature of the State in 1871 of three-fifths of the proceeds of the sale of the agricultural college land scrip to Alcorn University, an agricultural department has been embraced in the curriculum of that institution. The late State superintendent of education, however, in his report for 1875, p. 31, speaks slightingly of the results attained, though it had from the State an appropriation of $23,750.

THEOLOGY.

A special report to the United States Bureau of Education from the Bishop Green Associate Mission and Training School, at Dry Grove, under the charge of the Protestant

Episcopal Church, gives an attendance of 15 pupils, instructed by 3 teachers. No degrees are conferred here, the graduates being simply admitted to deacon's orders.

A large and interesting class in theology was reported at Tougaloo University by the American Missionary Association in 1873, but nothing is said of such a class in the report for 1875.

There is a partial theological course at Mississippi College, Clinton, designed to meet the wants of students who cannot go elsewhere.

LAW.

The law school of the University of Mississippi provides a course of instruction lasting one year and comprising all the branches usually pursued in such schools. Text books are the chief means of instruction; law is regarded as too abstruse a subject to be taught advantageously by lectures. The diploma obtained by graduation is made by statute a license to practice law in any court in Mississippi.

SPECIAL INSTRUCTION.

EDUCATION OF THE BLIND.

The Institute for the Blind at Jackson reports for the year 1874 an improved financial condition and an increased attendance of pupils, whose advancement in every department was commendable. In that year, for the first time, the colored blind of the State availed themselves of the advantages of the institution.—(Report of the institution, 1874.)

EDUCATION OF THE DEAF AND DUMB.

The Institute for the Deaf and Dumb at Jackson reports (1874) that the department of instruction is in a better condition than ever before; that the pupils are under better control and are more contented in school; that the discipline is better and wiser, and the teachers more efficient and earnest. The sign method of instruction is used.

There is a mandatory statute that requires the male pupils in the institution to be instructed in some useful trade, but to carry out this provision means are lacking, and are asked for, to erect shops. The matron teaches the girls all kinds of needle-work, including a knowledge of the use of sewing machines.—(Report of the institute, 1874.)

LIST OF SCHOOL OFFICIALS IN MISSISSIPPI.

THOMAS S. GATHRIGHT, *State superintendent of public education, Jackson.*

STATE BOARD OF EDUCATION.

[Term, to January, 1878.]

Name.	Post-office.
James Hill, secretary of state	Jackson.
George E. Harris, attorney-general	Jackson.
Thomas S. Gathright, superintendent of public education	Jackson.

SCHOOL FUNDS AND SCHOOL PROPERTY.

Township, swamp land, county, and State school funds	7,248,535 33
Value of school property in the State	6,771,163 27

—(From the report for 1875 (pp. 14, 17) of the State superintendent of public schools, Hon. R. D. Shannon.)

SCHOOL SYSTEM OF THE STATE.

EDUCATIONAL PROVISIONS OF THE CONSTITUTION.

The constitution of 1875 provides (section 1 of article 11) that, as a general diffusion of knowledge and intelligence is essential to the preservation of the rights and liberties of the people, "the general assembly shall establish and maintain free public schools for the gratuitous instruction of all persons in the State between the ages of 6 and 20 years;" (section 2) that "the income of all the funds provided by the State for the support of free public schools shall be paid annually to the several county treasurers, to be disbursed according to law; but no school district in which a free public school has not been maintained at least three months in the year for which the distribution is made shall be entitled to receive any portion of such funds;" (section 3) that "separate free public schools shall be established for the education of children of African descent;" (section 4) that "the supervision of instruction in the public schools shall be vested in a board of education, whose powers and duties shall be prescribed by law. The superintendent of public schools shall be president of the board. The governor, secretary of state, and attorney-general shall be *ex officiis* members, and, with the superintendent, compose said board of education;" (section 5) that "the general assembly shall, whenever the public school fund will permit and the actual necessity of the same may require, aid and maintain the State university now established, with its present departments;" the government of the university to be vested in a board of curators, of 9 members, to be appointed by the governor, by and with the consent of the senate.

Section 6 provides for setting apart, investing, and preserving as a public school fund the proceeds of all land grants from the United States to this State, and not otherwise appropriated; of all moneys and other property belonging to any State fund

for purposes of education, and of the proceeds of escheats, grants, gifts, or devises to the State; section 7, that if the fund thus set apart be not sufficient to sustain a free school in each school district for at least four months in every year, the general assembly may provide for such deficiency by setting apart annually for the support of the public schools not less than 25 per cent. of the State revenue, exclusive of the interest and sinking fund. Section 8 provides for the formation of county school funds from the existent funds of this class, from sale of estrays, from fines and forfeitures, and from payments for exemption from military duty. Section 9 forbids the investment of the public school funds in bonds of other States or in the stocks, bonds, or other obligations of a county, city, town, or corporation, and gives a preference to bonds of the State of Missouri or of the United States. Section 10 directs that county school funds shall be loaned only on unincumbered real estate security of double the value of the loan, with personal security in addition. Section 11 forbids the appropriation or payment from any public fund whatever of anything in aid of any sectarian school or purpose.

PROVISIONS OF THE SCHOOL LAW.

School laws of the State of Missouri, edition of 1875; published according to law by the State superintendent of common schools.

SCHOOL OFFICERS.

The special school officers provided for in the constitution and the school law, in addition to others utilized for school purposes, are the State board of education and State superintendent of public schools above spoken of, with county commissioners in place of former county superintendents, boards of directors for school districts, district clerks, and boards of education for cities, towns, and villages.

POWERS AND DUTIES OF THESE OFFICERS.

The State board of education has committed to it the general supervision of educational interests; is to direct the investment of all moneys received by the State for educational funds, and to see that such funds have their interest applied to the purposes for which they were originally intended.

The State superintendent, who holds office for four years from the 1st of January following his election by the people, and gives bond in $10,000, with two securities, for faithful performance of his duties, has the presidency of the board of education, and with it the supervision of the educational funds of the State. He may require from all officers in charge of schools and school funds the needful information as to the condition and management of these; must look after the printing and distribution of the school laws, with the necessary instructions and papers for school officers; may examine teachers and grant certificates of qualification, which shall warrant admission to teach in any public school without further examination of the holders; and must make, on or before the first Wednesday in January of every year, to the general assembly when in session, otherwise to the governor, a report embracing every required particular in relation to the public schools and school funds; such report, however, not to exceed two hundred printed pages of ordinary book form. He is, further, to spend at least five days annually in each congressional district of the State, conferring with educational officers, counselling teachers, visiting schools, and by lectures and other means endeavoring to elevate the standard of instruction in these. He may receive, besides an annual salary of $3,000, an additional $500 for the expenses of these journeys, and may employ a chief clerk to aid him in his office, at a salary of $1,500.

The county commissioners, elected by the qualified voters of the counties at the annual district school meetings in April, in every second year, have it as their duty to examine and license teachers for the public schools within the county of each one, said license to be valid for from one to two years; to revoke such license for proven incompetency or immorality; to keep a record of all certificates thus granted or revoked, with full particulars of the number, date, grade, and duration of certificate in each case, and the name, age, sex, and nativity of the receiver; to see that subordinate school officers are supplied with copies of the school laws and with the necessary blanks for making their reports; and from these reports to condense and forward to the State superintendent the educational statistics of the county. For keeping the records and making the reports thus required they receive from $20 to $40, according to the population of the county, with $1.50 for each teacher examined.

On the petition of any one hundred freeholders in a county, the county court is to refer to the voters at a general election the question of employing the whole time of the commissioner in school duties; and if the majority of the electors vote for this, the commissioner is to add to the duties before mentioned a visitation of the schools of the county, holding of normal institutes, delivering lectures on educational and scientific subjects, and such other work as may be recommended by the State superintendent; in which case he is to receive either a salary agreed upon beforehand or an allowance from the county court not to exceed $12 for each organized school district in the county.

The boards of school directors, three for each district, each elected for a term of three years and one going out each year, have the care of the school house and other property belonging to their districts, except such as may be especially confided to the district clerk. They are to provide globes, maps, and other necessaries for the school room; to keep the house, outbuildings, and grounds in good condition; to see that due provision is made for warmth and comfort; to make all needful regulations for grading, organizing, and governing the schools; to contract with and employ legally qualified teachers; to visit and examine the schools, consult with teachers, and exercise a general supervision; and to forward to the county clerk, on or before the 1st of May in each year, an estimate of the amount of funds needed to sustain the schools of their districts for the ensuing school term, with such other amounts for building, purchasing site, &c., as may have been ordered. It is also their duty to have an annual census made of the children of school age (6-20) within their districts, specifying separately and by name the males and females, whites and blacks; and also an alphabetical list of resident tax-payers.

The district clerk, elected at the district meeting or appointed by the district board, keeps the records of the district meetings and of the board of directors; gives notices of special meetings; accounts to the township or county treasurer for all receipts and expenditures for school purposes; furnishes to teachers the proper forms for a school register; draws warrants on the treasurer for payment of their salaries and other school expenses; and must submit to the annual district meeting a full account of everything relating to school population, attendance, terms, teachers, receipts, expenditures, value of school property, and amount of school tax.

The boards of education for cities and villages, 6 in number in each ordinary case, are elected by the qualified voters of the place on the second Saturday in September, in sets of 2 each year for terms of 3 years, and have nearly the same powers and duties as the boards of school directors in rural districts. St. Louis has a board of 24 members, 2 for each ward, with a city superintendent, 2 assistant superintendents, and other officers.

SCHOOLS UNDER THIS SYSTEM.

The qualification required of every teacher in order to a license to teach in the State schools—ability to instruct in "orthography, reading, penmanship, arithmetic, English grammar, modern geography, the history of the United States, and civil government"—indicates what may be supposed to be the ordinary course in the lower schools. In the higher the courses are such as to prepare for the university, or for advantageous prosecution of the studies in the State normal schools, which number three, besides a city normal school at St. Louis. Teachers' normal institutes in each county in which a commissioner's whole time is employed, are also part of the State system, and attendance on them when held is required of teachers in the public schools. But they at present amount to little, only one county having so employed a commissioner in 1875. Separate schools for colored children are the rule under the constitution, but the schools are to afford the same advantages with others of the same grade for whites.

Connected with the university, besides the college proper, are a normal college, an agricultural and mechanical college, a school of mines and metallurgy at Rolla, a law college, a medical college, and a department of chemistry.

Special schools for the blind and for the deaf and dumb are supported by the State, and an industrial school is proposed.

SCHOOL FUNDS.

The whole State school fund, including portion not now available and current funds in treasury, is reported at $7,248,535 in the past year. The interest of the available portion of this fund, including that from county funds, $545,776.05 in all, with 25 per cent. of the State revenue, $312.009.32, went to supplement in 1874–'75 a local taxation of $2,155,810.09 for public schools, making the whole receipts for schools in that year $3,013,595.66.

ELEMENTARY INSTRUCTION.

GENERAL CONDITION OF EDUCATION IN MISSOURI.

On assuming control of the school affairs of the State the superintendent found, as he states, what was by courtesy called a "system" of public schools. It was, however, in reality, no system, but merely a plan. There was no definitely established and fixed order of management throughout, no strong ligaments binding the different parts together. This unsatisfactory condition of the school interests he considers is due, in the first place, to defects in the school law, occasioned chiefly by frequent changes, rather than by lack of ability in the law givers. Next, apathy of the people, bred by a want of familiarity with and an incertitude of the meaning of the law itself, rather than from a lack of interest in the subject of public education. Lastly, too great laxity in the administration of law and too loose a management of the fragments of the system. From an acquaintance with the temper and disposition of the people, the superintendent is convinced that by diligence and perseverance he will be able to kin-

dle the popular desire into a zeal that will override all obstacles and give to Missouri a school system inferior to none in the Union.—(Report, 1875, pp. 6, 7.)

In this connection it may be said that the new State superintendent seems to have done good work in not only stirring up school officers to more faithful performance of the duties required of them by the law, especially the duty of making accurate and punctual returns of school statistics, but also in stimulating the grand juries to indict delinquent officers, and thus make sure a compliance with the law.

IMPROVEMENTS SEEN AND HOPED FOR.

The public schools, it is stated, are growing better. A more general interest is being manifested in their success. Prejudice is gradually disappearing; and, while much remains to be done, commendable progress is being made.

An evidence of increasing interest in the public schools is found in the greater fulness of official reports. In 1874 McDonald County made no report and received no part of the distribution in March, 1875. The present year (1875) she reported 24 schools in operation and 2,370 school population. Jasper in 1874 returned an enumeration of only 2,947 children, while for 1873 she had reported 8,412, losing, in consequence, about $3,500 which would have been given her under a correct enumeration, but for the year 1875 she reports 9,683 children of legal school age. There was, also, in Livingston County an increase of 4,671 in the enumeration returns over 1874. In the State at large there was, according to official returns, an increase of the school population in the year 1873–'74 of only 140, while for the last year the increase of enumeration was 31,251 over that of the year preceding. These figures show the effectiveness of a correct application of the law; but the returns are yet very unsatisfactory, and, it is believed, grossly incomplete in many instances.

In order to know, if possible, what is needed to promote the best interests of the system, the superintendent has conferred freely with teachers, teachers' associations, superintendents of city schools, other school and county officials, and directly with the people. The workings of the law, the defects of the system, the difficulties of putting into operation, under varied circumstances, the strong points of the law, and its generally recognized good features have all been carefully observed. He has also labored zealously, by public addresses, by social intercourse with the people, by visiting schools, and enlisting teachers and others in the same work, and by other means, to remove the apathy too generally existing in respect to the public school interests. In these efforts he had the cordial co-operation of a large majority of the county commissioners of schools and of the public press as well, not half a dozen journals in the State being found in opposition to the public school system. There is now an apparent manifestation of popular sentiment in favor of public schools in many localities where worse than indifference prevailed. There are strong prejudices yet to be removed and determined opposition to be overcome; but it is the fight of the many with the few: the interests and the desires of the State as against the imagined interests of individuals and a few denominational and private enterprises.—(Superintendent's report, 1875, pp. 10, 11, 15.)

SCHOOL FUNDS.

The township swamp land and county school funds are under the control of the various county courts, and as a general rule have been badly managed, having, to a great extent been lost, squandered, or stolen. This was more particularly true during the war. There is now a disposition to guard more faithfully these interests, though still in some cases a looseness of management that amounts to culpable neglect; and it is believed that the indictment and punishment of some county officials may become necessary in order to entirely eradicate the evil.—(State report, 1875, p. 13.)

COLORED SCHOOLS.

The laws in relation to the establishment and maintenance of schools for colored children are so different from the provisions in reference to those for white children as to create a distinct system. Schools for whites are supported by the districts with the help of State aid, while the whole township in which a colored school is located is taxed for its support. No district in the State can be compelled to maintain a school for white children, but if there are a sufficient number of colored children for a school, the law compels the local authorities to establish it; or, in the event of their failure to do so, directs the State superintendent to levy a sufficient tax for this purpose. Generally, it is only necessary to explain this law to the local officials to secure the establishment of schools, and in only a few cases has it been necessary for the superintendent to resort to such summary proceedings as the law provides. It is mentioned as a significant fact that Callaway County, the most strongly southern county in the State during the late war, evinces the greatest readiness to provide good schools for her very large colored population. This, it is thought, augurs well for the future of colored schools, since it indicates the kindly disposition of the intensely southern element of the State toward them. There are good schools for colored children in St. Louis, Kansas City, St. Joseph, and in nearly all the towns of the State in which there is a

sufficient colored school population (16) to permit of their establishment by law.—(Superintendent's report, 1875, p. 12.)

KINDERGÄRTEN.

Special reports have been received from 11 Kindergärten, all located in St. Louis. Nine of these were organized in 1875, one in 1874, and one in 1873. The number of pupils in attendance was 461; teachers, 46. The age for admission in 8 of these schools was from 5 to 7; in 3, it was 4 to 7. The length of session was three or more hours in most of them, school being kept five days in the week.

A number of these schools belong to the public school system, having been organized by the board as an experiment, which proved successful beyond expectation. The primary difficulty in the way of engrafting the Kindergarten on the system of public schools is its expensiveness. This objection was overcome to some extent in St. Louis by the fact that sufficient assistant teachers volunteered their services without pay. In one of the schools, too, an afternoon as well as a morning session was held, each accommodating different sets of children, thus utilizing the room and apparatus to twice the extent.

Superintendent Harris does not doubt the success of these schools, under reasonably competent teachers, in producing the following results: Quickness of invention and fertility of imagination; good physical development; a keen sense of symmetry and harmony; great mechanical skill in the use of the hands, ability to form rapid judgments in number, measure, and size at a glance of the eye, and initiation into the conventionalities of polite society in their demeanor toward their fellows, and in the matters of eating, drinking, and personal cleanliness.—(Report of board of St. Louis public schools, 1874–'75, and special reports to the United States Bureau of Education.)

CITY SCHOOL SYSTEMS.

CALIFORNIA.

Official staff.—A board of education of 6 members, elected for terms of 3 years each, one-third being changed each year, and a superintendent of schools.

Statistics of schools.—Population of the place, 1,800; whites between 5 and 21 years, 520; colored 67; total of school age, 587. Enrolled in public schools: whites, 385; colored, 64; total enrolment, including 26 from outside the district, 449; per cent. of enrolment from the district on the number eligible, 72. Teachers besides the superintendent, 7, including 1 teacher of German. Teachers' wages, $40 to $50 per month; salary of superintendent, $1,200.

School building.—An excellent school building two stories high, of tasteful outlines, contains eight rooms, 36 by 30, in which the schools are accommodated. These rooms are supplied with good blackboards and excellent school furniture, and are made comfortably warm with three wood furnaces. It is creditable to the town that all this has been paid for, so that California has no school debt to hamper operations.

Teachers' meetings.—In addition to the supervision of the schools, the superintendent has held twice a month, or oftener, meetings of teachers, at which, besides conferring as to the working of the schools, some branch of study or method of instruction usually received attention.

Methods.—In orthography no spelling book is used until about the fourth year in school, the exercises previous to this being confined to words found in the readers and introduced in object lessons and oral instruction. The aim is to make the pupil fully acquainted with words in common use, both as to their sense, form, and composition. In arithmetic, written and mental processes are combined, without the use of text books, till the third or fourth year, with practical examples and steady reference to principles. Composition writing is begun, with the simple combination of words at the beginning, and continued through the whole course, English grammar being reserved for the last two years. Drawing is combined with writing, map drawing and map study with history, and pictures of German life and scenery, with instruction and conversation in the German language—all good things.—(Report of Superintendent E. P. Lamkin for 1874–'75.)

JEFFERSON CITY.

Official staff.—A board of education of 6 members, and a city superintendent of schools, F. A. Nitchy.

Statistics of schools.—Number of children of school age, (5–21,) 2,286; number enrolled in public schools, 744, of whom 588 were white and 156 colored. Average number belonging, 507; average daily attendance, 465; percentage of attendance on average number belonging, 91. Number of teachers employed, including superintendent, 11; salaries of teachers, $50 to $100 a month; salary of superintendent, $150 a month. Total expenditure for the schools, $17,554.04; cost per pupil on average number belonging, including cost of special instruction in German and penmanship, $19.38.

Branches taught.—Besides the more common English studies, instruction has been given in book-keeping, algebra, geometry, trigonometry, astronomy, geology, German, Latin, etymology, synonyms, and rhetoric. Writing, for two and a half months, was taught by a special teacher with satisfactory results. A regular course of study was adopted in September, 1874, and has been since adhered to, with classification of the pupils according to the studies pursued and their proficiency in these. The schools were in session 40 weeks; 3 pupils, 1 boy and 2 girls, were neither absent nor tardy for that time, and 3 pupils graduated from the high school at the close of the year, being the first that had completed the full course.—(Report of board and of of retiring superintendent, A. E. Werdner, for 1874–'75.)

KANSAS CITY.

Officers.—A board of education of 3 members, with a city superintendent of schools appointed by the board.

Statistics of schools.—Estimated population of the city, 40,000; whites of school age, (5–21,) 7,187; colored, 957; total, 8,144. Enrolment in public schools, 4,262; average number belonging, 2,643; average daily attendance, 2,442; percentage of attendance, 91.85; number of pupils not absent nor tardy during the year, 149. Number of schools, 9; of rooms, 61; of teachers, 58. Amount paid teachers, $41,136; cost of tuition per pupil attending, $15.56.

Studies and school course.—An excellent schedule and syllabus of a course of study for the schools is given, including drawing from the first year, physiology from the second, botany from the third, natural history from the fourth, physics from the fifth, history and physical geography from the sixth, and review of other studies in the seventh, with a four years' general and classical course for the high school, the latter reaching into Virgil and Homer.

For promotion from grade to grade, a system similar to that of St. Louis is pursued, pupils being subjected to written examinations every fifth week, while a record of daily recitations and deportment is kept. If the mean average of the written examination, the recitation record, and the deportment record reaches 70 per cent., the pupil is permitted to go up higher. Excellent results, alike in scholarship and behavior, are said to have been secured by this means, pupils having constantly before them the hope of advancement according to the progress made and the character developed.—(Report of Superintendent J. M. Greenwood for 1874–'75.)

ST. LOUIS.

Officers.—The city schools are under the control of a board of president and directors, of 26 members, 2 from each ward of the city. There is a city superintendent and 2 assistants who are elected by the board of directors annually. Members of the board must be free white males at least 21 years of age, and have resided in the city at least 12 months previous to their election. They are elected by qualified voters of the city (free white males over 21 years and tax-payers) for the term of 3 years and until their successors shall be duly elected and qualified, one-third going out of office at the end of every year.

The officers of the board are a president and vice-president, elected by them from among their own number, and a secretary, treasurer, attorney, superintendent, bailiff, and architect, who hold office for one year and until their successors are duly elected and qualified, unless sooner removed by the board.

Statistics.—The number of children 5 to 21 years of age drawing State money was 153,128; number of pupils enrolled in 1874–'75: boys, 17,692; girls, 18,249; total, 35,941; average number belonging, 26,183; average daily attendance, 24,438; per cent. of attendance, 93; average number of pupils to each teacher, 46; average number of teachers, including German, 954; cost per scholar on average number belonging, $21.74. Total expenditures, $835,846.62; receipts, $845,382.46.

Courses of study.—Four courses of study are provided for by the board: the normal school, the high school, and the district school course, and the O'Fallon Polytechnic Institute. The course of study for the normal school covers a period of two years, and is divided into four classes, each occupying half a year, as at present arranged. The high school course covers a period of four years and constitutes a general and classical course. The district school course is divided into eight grades, each grade including an average year's work, as nearly as may be, and embracing, in addition to the elementary English branches, the history and Constitution of the United States, composition, and outlines of physics, and natural history. German is elective in such district schools as are designated by the board from time to time, but is actually taught in all. The O'Fallon Polytechnic Institute is a system of evening schools, and includes, first, an elementary course in the ordinary branches—reading, writing, industrial drawing spelling, arithmetic, and geography—conducted in schools established by the board from year to year for the benefit of such of the industrial population of the city as, have no facilities for availing themselves of the day schools; secondly, a higher course, including line drawing, higher arithmetic, algebra, geometry, chemistry, natural phi-

losophy, English grammar, and such other branches of technical instruction as may be required by a sufficient number of pupils to form a class.

In St. Louis there is no attempt to bring all classes within the same grade to one standard of advancement. At all times there are new classes just beginning the work of a grade, or a year's work, in some one of the schools. The classes are not separated by intervals of one year in their work, but by irregular intervals, varying from six to twenty weeks. It is considered desirable to have these intervals small, so that reclassification may be more easily managed. Pupils who fall behind their class for any reason, such as absence, lack of physical strength or of mental ability, may be reclassified with the next lower class without falling back a year and thereby becoming discouraged, and those who are unusually bright or mature may be promoted to the class above or form new classes with the slower pupils of the class above who need to review their work.

Half time schools.—The policy of half time schools is under trial in a few schools whose accommodations are inadequate to the wants of their districts. This is tried only in the first year of the primary school. One set of pupils comes in the morning and another one in the afternoon. In this way the capacity of the school is greatly increased without much additional expense to the board. An extra teacher is employed to assist the regular ones in instructing the new classes formed.

Kindergarten schools.—During the past two years an important experiment has been initiated, through the voluntary assistance of Miss Susie E. Blow, to ascertain what is available in the Kindergarten system for use in connection with public schools. Under the impulse of Miss Blow's enthusiasm, great practical ability, and insight, there has been a degree of success in this experiment which has surprised all. The school established in 1872–'73 in South St. Louis having succeeded beyond expectations, two others were established near the centre of the town, and were equally successful under the management of teachers who had been trained by Miss Blow the previous year. In the fall of 1875 the number of Kindergärten was 13. From 2 to 5 assistants have been allowed each director or manager. No compensation has yet been necessary in order to secure the services of able assistants. They volunteer in large numbers to teach for one year gratuitously, for the sake of the opportunity of learning how to conduct a Kindergarten.

O'Fallon Polytechnic Institute Evening Schools.—The average age of students in these evening schools is 16 years, and none are admitted under 12. There were in attendance, during the winter, 852 of the age of 21 and upwards. Many foreign born adults visit these schools to learn English. These are usually placed in a separate room, and taught by one of the corps of German-English teachers. The length of session of the evening schools is 16 weeks. The higher course of the Polytechnic Institute is held one month longer, or 80 evenings altogether. The number of pupils enrolled in evening schools in 1875 was 5,751: males, 4,999; females, 752; in 1867 it was only 1,553. The chief cause of their rapid growth is their connection with the public school library. Each pupil of the evening schools who attends punctually not less than 60 evenings of the course, and is satisfactory in scholarship and deportment, receives a certificate of membership, entitling its holder to the privilege of the library for one year, and counting as one-third payment of life membership. Over a thousand pupils acquire certificates of membership annually.

German-English instruction.—The increase in the German classes of the present year over the year previous is 859 German-Americans and 542 Anglo-Americans. The Anglo-American pupils commence in the lowest grade in the same classes with the German-Americans, and continue in them in the second, third, fourth, and even as far as the fifth year or grade. There seems now to be no room for doubt that this may be carried out in all the grades of the district schools. This arrangement requires one-third less classes than the old system and saves much of the confusion that was occasioned in the English classes by the absence of a part of their pupils to attend German recitations.

Normal school.—The normal school is intended exclusively for the education of young ladies who intend to teach in the St. Louis public schools, but is open to persons from any section of the country. Tuition is free, and all text books are furnished for use free of charge. The increase of the school in numbers is noticeable. The number enrolled the past year is 254, being 77 more than the previous year and 115 more than the number enrolled in 1871–'72. The standard of admission was raised in 1871, and more recently it has been raised still higher, and the length of the course increased to two and a half years. The number of graduates is now about 70 each year, a number nearly sufficient to supply all vacancies occurring in the corps of teachers.

High school.—An unusually prosperous condition of this school is reported. The number of pupils for 1874–'75 is 396, or 54 more than for 1873–'74. A class of 56 pupils was graduated, whose average age was 18.1 years.—(Annual report of the board and of Superintendent W. T. Harris, for 1874–'75.)

TRAINING OF TEACHERS.

STATE NORMAL SCHOOLS.

Superintendent Shannon says that the normal schools are in better condition and are doing better work than ever before. Their largely increased attendance, under the adverse circumstances surrounding them for the past two years, he regards as marvelous.

The North Missouri School, at Kirksville, reports through its principal a more advanced class of students and a much larger average attendance than ever before, and that great harmony and earnestness have characterized the workings of the school. The attendance during the year was: ladies, 270; gentlemen, 439; total, 709. The attendance in the normal department was 72 against 40 the previous year. It is estimated, says the principal, that over 400 of the students of last year are now teaching, mostly in the public schools of Missouri, graduates being generally employed in the graded schools, while the mass of those who teach before graduation are engaged in the rural districts, from which nine-tenths of them come. The demand for normal teachers is constantly increasing.

The South Missouri School, at Warrensburg, had an enrolment during the year of 408 pupils, 198 ladies and 210 gentlemen; 57 diplomas were granted, 49 of them being in the elementary course. This course comprises two years, while the advanced gives four with an additional professional course of half a year.

The Southeast Normal School, at Cape Girardeau, had its new building completed in April, 1875, but was not occupied till June. The enrolment during the year was 164—77 ladies and 87 gentlemen—an increase of 107 over the attendance of the previous year. Three ladies and four gentlemen completed the elementary course of study and received diplomas at the close of the year.—(Report of superintendent, 1875, pp. 13, 185–193.)

ST. LOUIS NORMAL SCHOOL.

This school, a part of the public school system of St. Louis, has sent out, since its foundation in 1857, almost 500 teachers, and upward of 15,000 children have been taught by them. In consequence of the large number of admissions into the senior class last year, most of whom were graduates of the high school, the number of teachers graduated by the school in 1875 was sufficient, for the first time in the history of the school, to fill all the vacancies in the public schools. The enrolment of pupils was 254, the average attendance 97 per cent., the best ever reported.—(Report of the board of St. Louis public schools, 1874–'75.)

LINCOLN INSTITUTE.

Lincoln Institute, Jefferson City, is said to be a most efficient instrumentality for the training of colored men and women for the profession of teaching. Its principal is a colored man, who prosecutes his work with energy and ability. Its graduates are teaching colored schools in a large number of counties and are giving general satisfaction. The institution, however, is sadly in lack of means and is heavily in debt.—(Report of superintendent, 1875, p. 13.)

About 150 young men and young women have, on an average, attended this institute since its commencement. The closing exercises in 1875 were attended by the governor, the superintendent of public instruction, and others, who all expressed the opinion that the students had done well. Besides the usual course of studies in normal schools, the students are instructed in the laws of the State, and thoroughly familiarized with the school law, so as to enable them not only to instruct but also to organize and carry forward the school work and make due reports respecting it.—(American Journal of Education, September, 1875, p. 11.)

NORMAL DEPARTMENTS IN COLLEGES.

Departments for instructing students in the art of teaching exist in at least three colleges of the State: the State University, Drury College, and La Grange College. That in the university provides both a regular academic and a professional course of two years. Since its organization in 1868 it has graduated 7 classes, numbering in all 49, while not less than 400 students have received instruction in the theory and practice of teaching.

TEACHERS' INSTITUTES.

The practice of holding teachers' institutes has been comparatively abandoned. The law does not now require them, except in counties which employ the whole time of the commissioner, and Jasper is the only county in the State which so employs him. The superintendent thinks there have not been over a score of institutes held in the State during the past year, while there should have been at least 228, exclusive of those held in the larger towns and cities. He regards these institutes as efficient instruments for the training and improvement of teachers, and also as an important means of overcoming the lethargy of the people in the localities where they are held, and of impart-

ing new zest to their support of the public schools. Hence he is maturing a plan in which the faculties of the normal schools, the superintendents of the city schools, and other prominent educators will co-operate to restore these valuable aids.—(Superintendent's report, p. 10.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

No records of this class of schools appear in either the report of the State superintendent or in those of the county commissioners to him. One at California is said by the school board to have completed the course of the first year and to contain 20 pupils. One at Jefferson is reported by the school board to have graduated its first class of 3 in June, 1875. One at Kansas City presents a good course of study extending through four years, but gives no statistics beyond the fact of its having 5 teachers. That at St. Louis presents a general and a classical course, each of four years, with a total enrolment for 1874–'75 of 396, an average attendance of 329.9, and a graduating class of 56. Latin is required of all pupils for the first two years.

ACADEMIES AND SEMINARIES.

Special reports have been received from 16 schools of the above class, 9 of which are for the education of both sexes, while 4 are exclusively for boys and 3 for girls. Six of these schools are non-sectarian in their religious influence, 2 are under the control of the Protestant Episcopal and 2 of the Methodist Episcopal churches, while the Methodist, Baptist, Presbyterian, Methodist Episcopal South, and Roman Catholic churches each controls 1, and 1 makes no report upon this point. The attendance of pupils was 1,345, of whom 760 were boys and 585 girls; number of instructors, 81. There were engaged in classical studies 176 and in modern languages 211. Drawing was taught in 6, and music, both vocal and instrumental, in 11; chemical laboratories and philosophical apparatus are reported in 5 and libraries in 10, ranging in size from 50 to 2,000 volumes.—(Special reports to the United States Bureau of Education, 1875.)

PREPARATORY DEPARTMENTS OF COLLEGES.

In the colleges of the State 1,956 pupils have been engaged in secondary studies under 47 instructors, additional to those of the colleges proper. Of these, 694 are reported to have been in preparation for a classical course in college and 143 for a scientific course.—(Returns to Bureau of Education, 1875.)

BUSINESS COLLEGES.

Four business colleges, one located in St. Joseph, the others in St. Louis, one of which is the commercial school in St. Louis University, report a total of 27 instructors and 892 students, of whom 49 were young women. Of the 3 which report their course of study, 1 embraces purely the business branches, 1 other, in addition to these, the ordinary English branches, with algebra, natural philosophy, chemistry, German and French; the other adds to its English and business course, political economy, and detection of counterfeit money and telegraphy. There were in all 58 students pursuing German, 6 French, and 35 telegraphy.—(Special reports to United States Bureau of Education.)

SUPERIOR INSTRUCTION.

UNIVERSITY OF THE STATE OF MISSOURI, JEFFERSON CITY.

The existence of the university was originally due to the liberal policy adopted by the Congress of the United States in regard to the new States upon their admission into the Union. Its enlargement by the addition of the College of Agriculture and Mechanic Arts, and the establishment of the School of Mines at Rolla, is due to the congressional land grant of 1862.

Upon the admission of Missouri as a State, in 1820, Congress granted two townships of land for the support of a seminary of learning, which were sold by the State legislature in 1832; only $70,000 having been realized for land worth half a million. In 1839 an act was passed making provision for selecting a site for the university. Boone County, in consequence of offering a bonus of $117,500, received the preference, and on July 4, 1840, the corner stone of the university was laid. The first class was graduated in 1843.

The general plan adopted in 1867, and since pursued, was intended to meet the actual wants of the people of Missouri, and embraced (1) substantially the usual college curriculum for those who desire that; (2) an enlarged and perfected scientific course; (3) the College of Agriculture and the Mechanic Arts, comprising schools of engineering, analytical chemistry, mining, and metallurgy; (4) a normal school; (5) a law school, and (6) a preparatory school. Others were to be added as the means of the university should permit or the wants of the State demand. The studies of the col-

legiate department are adjusted in four courses, those of arts, science, letters, and philosophy. The professional schools now forming a part of the university are the normal, opened in 1868; the agricultural and mechanical college, 1870; the school of mines and metallurgy at Rolla, 1871; the college of law, 1872; medical college and the department of analytical and applied chemistry, 1873.

Young women are received upon the same terms as young men, and several young ladies are at present in advanced classes in university courses. The remarkable success which has thus far attended the opening of the university to women has encouraged the board to enlarge the facilities for their accommodation.—(Report of curators, 1874–'75.)

OTHER COLLEGES.

Central College, Fayette, affords preparatory and collegiate courses, the latter comprising schools of mathematics, moral philosophy, English literature, Latin language and literature, Greek language and literature, modern languages, natural philosophy, and physical science. In the latter school, throughout the whole course, the relation of the sciences to medicine, agriculture, and the mechanic arts is carefully pointed out, and the instruction given in the first part of the senior year in anatomy and physiology has reference to a preparation of the student for medical studies.—(Catalogue, 1874–'75.)

Drury College, Springfield, was organized in 1873, with preparatory, normal, and ladies' departments, in addition to the regular collegiate, and aims to furnish a thorough education in the classics, mathematics, and sciences. Lady students enjoy the same advantages as young men, and in general they recite in the same classes, pursue the same course of study, and obtain the same degrees. At the same time, a less severe and extended ladies' course is arranged for those whose health and circumstances may require it. A commodious hall for the accommodation of lady students from abroad is being erected.—(Catalogue, 1874–'75.)

La Grange College, La Grange, was chartered in 1859; the building was completed in 1866, since which date about 1,400 pupils have matriculated. Both sexes are admitted. There are courses in preparatory scientific and normal studies, also in modern languages and music.

Pritchett Institute, Glasgow, offers preparatory, collegiate, and post graduate courses in arts, sciences, and literature, and confers on graduates the degrees of A. B., B. S., and B. L. Graduates of the school of arts, upon their completion of a prescribed course of two years, receive the degree of A. M.

Thayer College, Kidder, embraces preparatory, collegiate, and scientific departments, with a ladies' course for such as may not wish to pursue in full the studies of the collegiate course.

Washington University, St. Louis, was incorporated as a university in 1853, and embraces the whole range of university studies except theology. According to the constitution, "No instruction either sectarian in religion or partisan in politics is allowed in any department of the university." Its organization at present comprehends the academy or preparatory school, Mary Institute, the college, and the polytechnic and law schools. Mary Institute, a seminary for ladies, established under the university charter in 1858, secures to ladies all the means of high intellectual culture accessible to young men. The buildings and grounds are distinct from those of the university, but the classification, course of study, and general management are identical. Graduates of the polytechnic school and of Mary Institute are allowed free admission to the college classes, either as regular or partial students; others must show proficiency in four books of Cæsar, six of Virgil, and in Cicero's select orations, as well as a due acquaintance with grammar and with Greek through the reader. The studies of the freshman and of the first term of the sophomore year are all required, but certain studies are elective during the second term of the sophomore year and during the junior and senior years. The aim is to secure a high standard of scholarship rather than a large number of students.—(Catalogue, 1875–'76.)

Westminster College, Fulton, offers preparatory and collegiate courses of study, the latter comprising, besides the classical, a scientific course, arranged for the benefit of those who, having only one, two, or three years at command for study, wish to devote themselves to those branches bearing directly on the practical business of life.—(College catalogue, 1875.)

William Jewell College, Liberty, is under the control of the Baptists in Missouri. The course embraces preparatory and collegiate departments, the latter being divided into eight schools, viz: Latin, Greek, mathematics, natural science, modern languages, English and history, moral philosophy, and theology. Each student is required to select as many of these schools as shall occupy three recitations daily. The degrees conferred are, B. L., B. S., A. B., and graduate of a school; the degree of A. M. is given those who are graduates of the 7 collegiate schools. The course in theology is so arranged as to be pursued in connection with a literary course, and parts of it are taken in lieu of proportionate parts of the literary course.—(Catalogue, 1874–'75.)

COLLEGES FOR WOMEN.

Eight institutions for the superior instruction of women report a total of 73 professors and instructors, and 507 students, of whom 362 were pursuing collegiate studies, 5 were in special or partial courses, and 8 in post graduate studies. Two of these colleges claim to be non-sectarian in their influence, two are under the control of the Methodist Episcopal Church South, and one each under the Christian, Baptist, and Roman Catholic churches; the remaining college making no report upon this point. Six are authorized by law to confer collegiate degrees, 5 provide a four years' course, and 5 have libraries, the largest numbering 2,000 volumes, the smallest 200. All teach vocal and instrumental music; 6 teach French and German; 1, Latin and Greek; 7, drawing and painting; while 1 reports chemical laboratory, museum, art gallery, and gymnasium, and 3, philosophical apparatus.—(Special reports to the United States Bureau of Education.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The Agricultural and Mechanical College of the State is a department of the State University. It was opened in 1871 with a class of 6 pupils, which gradually increased to 29 during that year, and the year following to 138. The college is open to both young men and women. A horticultural course has been organized for the benefit of the young women, graduation in which entitles the student to a diploma. A completion of the regular four years' course commands the degree of bachelor of agriculture.—(Report of the university, 1875, pp. 76–78.)

The School of Mines and Metallurgy, at Rolla, is also a department of the State University, and is sustained in part by the congressional grant for agricultural and mechanical instruction. The course of instruction lasts three years and embraces mathematics—pure and applied—metallurgy, physics, geology and mineralogy, civil engineering, graphics, mining engineering, and German.—(Report of the university, 1875, and special report to the United States Bureau of Education.)

The Polytechnic School, Washington University, is intended to prepare students for professional work, either as engineers, chemists, or architects. The regular courses of study extend through four years, and embrace (1) civil engineering, (2) mechanical engineering, (3) chemistry, (4) mining and metallurgy, (5) building and architecture, and (6) a general course.

THEOLOGY.

The Jeremiah Vardeman School of Theology, at William Jewell College, offers a regular course of two years in theology to those who are prepared to enter upon it, and also partial courses to suit the wants of those who have not a classical education or who may wish to study this profession in connection with a literary course.

LAW.

Law department of the University of Missouri.—The full course of study here is two years, and no special preparation is required for admission. The various branches of the common law and of equity, commercial, international, and American and English constitutional law, criminal and Federal jurisprudence, are embraced in the course. The mode of instruction is by daily examinations upon the text books, by daily lectures upon special titles, and by the exercise of a moot court. The law faculty are more and more satisfied that the highest results cannot be reached by lectures alone, however clear and thorough they may be; but that the student should be required to study the text books, and be subjected to a daily examination upon their contents.

The law school of Washington University, also known as the St. Louis Law School, is designed, it is claimed, to prepare young men for the profession to a degree far above the ordinary standards of admission to the bar. The course embraces instruction in the principles of international, constitutional, and admiralty law; the jurisdiction and practice of United States courts; real property law, including a special course of lectures on conveyancing, equity jurisprudence, evidence, pleading and practice at common law, in equity, and under the code; mercantile law and contracts; corporations; insurance; domestic relations; torts, and some elements of criminal jurisprudence. Instruction is given by daily examinations upon assigned portions of standard treatises, as well as by lectures upon practical topics. Moot courts are regularly held every week during the term. The law library has been increased during the past year to upwards of 2,500 volumes, selected with great care. The full course includes two annual terms, each of six months.—(Catalogue of university for 1875–'76.)

MEDICINE.

The medical department of the University of Missouri was formally opened for instruction February 17, 1873. It is designed to be a primary and theoretical school of a high order, in which the student will be thoroughly indoctrinated in the principles of medicine and surgery. The course will be made as full and complete as is given in any school in this country, with the exception of clinical or bedside instruction. Opportunities for studying diseases and witnessing treatment will be afforded at the county hospital and the asylum for the insane. The length of the session is nine months. Among the advantages offered by this school is the privilege granted to all its students of pursuing such studies as they may wish in the academic course. They may also be academic students and take one or two branches in the medical course preparatory to entering on the full medical course after graduating in the arts and sciences.—(Report of the curators of the university for 1874–'75.)

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF AND DUMB AND THE BLIND.

The board of commissioners of the Missouri Institution for the Education of the Deaf and Dumb, at Fulton, state that in its buildings, its furniture, its corps of teachers, and outfit generally, it is now more thoroughly prepared for the work for which it was created than ever before. Both the French and German methods of instruction are used here. It is believed possible by long and careful training in articulation to teach some to pronounce a sufficient number of words for ordinary intercourse; and if such success should be attained only in respect to the semi-mutes, it will be considered that the efforts have been amply repaid.

At present shoemaking is the only trade taught, but it is hoped that others may soon be added. The girls are instructed in plain and ornamental needlework, and in cutting and making garments for themselves and the younger pupils. A number of the boys find suitable employment in gardening and in keeping the grounds in order, or in the workshop.—(Report of the institution for the years 1873 and 1874.)

The State superintendent, in his report for 1875, says, "The institution for the education of deaf-mutes, located at Fulton, and the institution for the education of the blind, located at St. Louis, are well managed and prosperous." The report of the latter institution has not been received at the Bureau.

SCHOOLS FOR ORPHANS.

Four of these schools, all in St. Louis, report an aggregate of 41 officers and teachers, and 457 children under training; 101 boys and 356 girls. In three of the four, reading, writing, and arithmetic were taught, and in one of these three singing was added; in the remaining one only reading and writing were attended to. In all the four there was some training in industries, such as needlework, washing, ironing, and housework for the girls, and gardening or some other occupation for the boys.

One other institution made report of 74 inmates, but without any mention of teachers or any indication of instruction given in either literary or industrial lines.—(Returns to Bureau of Education for 1875.)

EDUCATIONAL CONVENTIONS.

STATE TEACHERS' ASSOCIATION.

The annual meeting of this association was held during the last week of December, 1875, at Mexico. In his address of welcome President Terrill, of Hardin College, said: "We welcome you because, if the great State of Missouri has a future grand and glorious, the teacher must make it. The legislator may make the laws, the judge interpret those laws, and the executive carry them into effect, but it is the teacher who makes the citizen, and the citizen who makes the State. * * * I care not what political party controls, our Government is safe; but destroy our free public schools, and you destroy every vestige of republicanism. * * * Nothing but the education of the masses will do; nothing but a universal education, free as the air we breathe."

Governor Hardin spoke in eloquent terms of the determination of the State to furnish all the best possible facilities for education. The addresses and papers were unusually able and pointed, and the discussions searching, but, for the most part, good in spirit. Superintendent Shannon delivered several valuable addresses, and did much to give practical direction to all the discussions. The attendance was large, the interest intense, and the session was characterized by ability, enthusiasm, and practical work. Among the important measures adopted, the association pledged its best efforts to co-operate with and sustain the State superintendent; recommended that public libraries should be encouraged; recognized county supervision as a necessity; and authorized the State superintendent to appoint a committee of one from each congressional district to co-operate with him in holding a normal institute during the months of July and August in each congressional district of the State.—(American Journal of Education, February, 1876, p. 10.)

CONVENTION OF COUNTY SCHOOL COMMISSIONERS.

At this convention, held at Mexico, in close connection with the preceding one, it was resolved that in order to secure uniform results from the examination of teachers in the various counties of the State, all examinations hereafter should be public, and held quarterly; also, that the State superintendent should designate the times for holding said examinations, and should, in conjunction with the principals of the three normal schools, prepare quarterly, and send to the various commissioners, lists of examination questions.

Among other valuable measures agreed upon may be mentioned: (1) The gradual perfection of the present school law, and additional opposition to frequent changes; (2) the necessary increase of the duties and compensation of county commissioners, the abolition of the county superintendency being believed to have resulted in great injury; (3) the re-establishment of county and normal institutes; and (4) an annual meeting of the commissioners to be held as a section of the State association.—(American Journal of Education, February, 1876, p. 10.)

NORMAL CONVENTION.

The faculties of the several normal schools, with the State superintendent as chairman, met also in convention at Mexico, in December, 1875, and adopted a uniform plan of work to be submitted to the respective boards of regents. Among the features embraced in it are a uniform course of study; the same standard for admission; the conditions of graduation to be the same; the candidates to be examined by the State superintendent and presidents of each school; the diploma for the advanced course to include a State certificate.—(American Journal of Education, February, p. 10.)

NEBRASKA.

SUMMARY OF STATISTICS.

SCHOOL POPULATION AND ATTENDANCE.

Number of youth in State 5–21 years of age: Boys, 41,980; girls, 38,142	80,122
Number between 7 and 16 years of age	49,196
Number enrolled in schools during the year	55,423

SCHOOLS.

Number of school-houses in the State	1,805
Number of other school-rooms, (about)	100
Average duration of school in days, (about)	96

TEACHERS AND THEIR PAY.

Number of teachers employed: Men, 1,504; women, 1,587	3,091
Number necessary to supply the schools, (about)	2,500
Average salary of male teachers per month	$38 60
Average salary of female teachers per month	33 10

FINANCIAL STATEMENT.

Income.

From State tax	$164,388 86
From interest on permanent fund	95,230 11
From other sources	32,856 17
Total income	292,475 14

Expenditure.

For sites, buildings, and furniture	316,596 01
For libraries and apparatus	10,810 35
For salaries of superintendents	18,916 35
For salaries of teachers	414,827 50
For miscellaneous expenses	167,038 68
Total	928,188 89
Expenditure in the year *per capita* of school population	$7 769
Expenditure *per capita* of pupils enrolled in public schools	11 42

SCHOOL FUND.

Amount of available school fund, (except tax)	$121,228 70
Permanent school fund, excluding value of unsold land	1,212,287 70
Permanent school fund, including value of unsold land, (about)	15,000,000 00
Value of school property	1,848,239 84

—(From special report to the United States Bureau of Education, by Hon. J. M. McKenzie, State superintendent of public instruction, for 1875.)

SCHOOL SYSTEM OF THE STATE.

CONSTITUTIONAL PROVISIONS.

The new constitution of 1875, superseding that of 1867, makes the governor, secretary of state, treasurer, attorney-general, and commissioner of public lands and buildings a board of commissioners for the sale and management of lands and funds set apart for educational purposes, and for the investment of school funds in such manner as may be prescribed by law; declares that lands, money, and other property conveyed in any manner to the State for educational purposes shall be used and expended in accordance with the terms of such conveyance, and defines as perpetual funds for common school purposes, the annual income from which alone can be appropriated, (1) such per centum as has been or may be granted by Congress on the sale of lands in the State; (2) moneys arising from the sale or lease of sixteenth and thirty-sixth section lands in each township, or lands selected in lieu of these; (3) the proceeds of all lands granted or to be granted to the State, and not otherwise appropriated; (4) the net proceeds of all property coming to the State by escheat or forfeiture, from unclaimed dividends, or distributive shares of the estates of deceased persons; (5) all moneys, stocks, bonds, lands, and other property already belonging to the common school fund.

It says that all other grants, gifts, and devises made or to be made to the State, and not otherwise appropriated by the terms of the conveyance, as well as the interest of

the funds above mentioned, the rents of unsold school lands, and such other means as the legislature may provide, shall be exclusively appropriated to the maintenance of common schools in each school district of the State.

It gives for common school purposes to the several counties all fines, penalties, and license moneys levied within them under the general laws of the State, and to cities, villages, and other subdivisions of a county, all such arising under their especial rules, by-laws, or ordinances, the same to be appropriated exclusively to the common schools in the counties or subdivisions where they accrue.

It then goes on to require that the legislature shall provide for the free instruction in the common schools of all persons between 5 and 21 years old; and that provision shall be made by general law for an equitable distribution of the income of the common school fund among the several school districts, except those in which school is not maintained for at least three months; while it forbids the sale for less than $7 per acre, or less than the appraised value, of university, agricultural college, common school, or other lands, held or to be acquired by the State for educational purposes.

It declares that all funds belonging to the State for such purposes the interest and income of which only may be used, shall be held to be trust funds forever inviolate, losses on which shall be supplied, that they may remain forever undiminished; and, in order to this, forbids the investment of them in any securities but those of the United States, or of the State, or the registered bonds of counties in the State; and equally forbids the transfer of them to any other fund or use than that for which they have been set apart.

It says that the general government of the State University shall be, under the direction of the legislature, vested in a board of six regents elected by the voters of the State at large, for terms of six years, except that the first board shall be so arranged as to have two members go out at the end of two years and two more at the end of other two years, with a view to the introduction of fresh material.

The two last sections of the article on education forbid the introduction of sectarian teaching into any school or institution supported in whole or part from public educational funds, as well as the acceptance by the State of any property or moneys to be used for sectarian purposes; but allow the legislature to provide a State school for the moral, intellectual, and industrial training of children who, from any cause, are growing up in mendicancy and crime.

PROVISIONS OF THE SCHOOL LAW.

School Laws of Nebraska, 1873–'75, as amended; published by authority.

OFFICERS.

A State superintendent of public instruction, six regents of the State University, a State board of commissioners, county superintendents of public instruction, district boards, and boards of education for cities form the regular official staff of the school system, other officers having, however, certain duties to perform that interlink them with these.

POWERS AND DUTIES OF SCHOOL OFFICERS.

The State superintendent, elected by the people at a general election every four years, from the one in 1870, and entering on duty on the 1st day of January succeeding his election, is entitled to an office at the seat of government, to a salary of $2,000 per annum, and to a general headship of the educational interests of the State. His duties are (1) to organize, attend, and lecture at State teachers' institutes in different districts of the State, counselling with the county superintendents who are required to meet him there, on all matters connected with the school system; (2) to visit such schools as he can, and advise with teachers on the manner in which they are conducted; (3) to visit county institutes and lecture before them on topics that may subserve the interests of education; (4) to define the text books to be used in the public schools; (5) to prescribe the forms and regulations for reports and proceedings under the school laws; (6) to attend to the printing and distribution of these laws, forms, and regulations; (7) to submit annually, on the 1st day of January, to the governor, a full report of the operations of his office during the year, embracing in such report everything relating to the working of the school system; (8) to cause his report to be printed and properly distributed; (9) to apportion semi-annually the income from the State school funds and school moneys from other sources, according to the enumeration of youth reported to him by the county superintendents. He has the power to require of county superintendents and other subordinate officers copies of the reports required to be made by them, and such other information as may be necessary to the conduct of his department, and may grant State certificates to qualified teachers.

The regents of the university have the general supervision of its interests, appointment of officers, &c.; but are entitled to no compensation beyond a reimbursement of expenses incurred in the discharge of their duty.

The State board of commissioners has the charge of the sale, leasing, and general man-

agement of all lands and funds set apart for educational purposes, and of the investment of school funds in the manner prescribed by law.

County superintendents of instruction are chosen by the people at the October elections every two years since the one in October, 1869, and enter on duty the 1st day of November following. They are entitled to from $3 to $5 for each day actually employed in the performance of their duties, these duties being to hold, four times in each year at the county seat, an examination of all persons offering themselves as teachers for the public schools, with other such examinations at pleasure; to grant certificates to those whom they find qualified in respect to character, learning, and ability to instruct and govern schools; to make record of the certificates thus given, with the date, grade, and duration of each; to visit each of the schools in their respective counties at least once in each year; to note the condition of the school-houses, methods of discipline and instruction; to make record of their observations, and counsel with teachers and district boards as to improvements; to promote, by public lectures, teachers' institutes, and other means, the improvement of both schools and teachers; to receive from the State superintendent and distribute to district officers and teachers school blanks, forms, &c.; to examine into the correctness of the reports of district boards, indorse approval on such as are found right, and require others to be amended; to transmit the approved reports to the State superintendent; and to report annually to him their own official labors and the condition and management of the schools under their charge. They also apportion the school funds to districts, one-fourth equally among all that have kept school the legal time and three-fourths according to the school population.

The district boards are composed of a moderator, director, and treasurer,* elected at the annual district meetings for terms of three years each, one going out each year to allow of new elections. They have the general care of the district schools; may establish rules for management of these; may purchase or lease sites for school-houses, and erect, hire, or purchase the needful buildings; have the care and custody of these and of all the school property connected with them; engage and pay certified teachers; fill vacancies occurring in their own number, and make annual report to the county clerk of taxes voted by the district the preceding year, and of those which they are authorized to impose.

Specific duties are assigned also to the several members, as, that the moderator shall preside at the district meetings and countersign warrants and orders for money; that the treasurer shall receive and pay over these on the order of the director, countersigned by the moderator; and that the director shall act as clerk of the board and of district meetings, and be the special agent for contracts with teachers, for taking an annual school census, for care of the school-house, and for making reports of school matters to the county superintendent in several specified particulars.

The boards of education for cities are composed ordinarily of four members, two of whom are elected each year for terms of two years. They serve nearly the same purposes as the district boards, and have a kindred distribution of offices and duties among themselves.

SCHOOLS UNDER THIS SYSTEM.

From the report for 1874 it appears that the whole number of public schools in that year was about 1,500, of which 32 were graded. In the lower elementary schools spelling, reading, writing, grammar, geography, and arithmetic are taught; in higher grades, the history of the United States and elementary drawing are added: in still higher, algebra, geometry, physiology, botany, and natural philosophy, while a few high schools prepare pupils for the university, the agricultural college connected with it, or the State normal school.

SCHOOL FUNDS.

Permanent common school fund, 1875, excluding value of unsold school lands, $1,212,287.70; annual income, from interest, taxation, &c., $292,475.

ELEMENTARY INSTRUCTION.

GENERAL EDUCATIONAL CONDITION.

The past two years have been exceedingly unpropitious for Nebraska in all her material interests. The drought and locusts have impoverished the people, and education has deeply felt their depressing influence.

Still, about 69 per cent. of the youth between 5 and 21 years of age attended school or were enrolled on the school register.

Of the 2,405 school districts in the State, 2,100 had school and some 809 sustained school six months or more during the year. The length of time school was sustained on an average in each school district was 96 days, and the average number of days each enrolled pupil attended school during the year was 65 days; but as one-fifth of all the scholars in the State, or 16,000, are found in 52 school districts which sustain nine

* In districts containing more than 150 children of school age, the board may be composed of 6 trustees.

months' school during the year, it may not be too much to say that not more than half of the enrolled pupils attended school to exceed two months.

The cost of tuition per each enrolled pupil, counting teachers' wages, incidental expenses, and 10 per cent. on the value of school property, was about $11.42.—(Address of State superintendent at State Teachers' Association, March 30, 1876.)

SCHOOL BUILDINGS AND APPURTENANCES.

There are 1,805 school buildings in the State: 41 stone, 59 brick, 1,492 frame, and 213 log, sod, or dug-out, valued, including sites, at $1,748,239.80. Of these 1 is valued at more than $200,000, another at $50,000, 6 others between $20,000 and $40,000, 10 between $10,000 and $20,000, 29 between $3,000 and $10,000, 332 at over $1,000 and less than $3,000, 680 at between $500 and $1,000.—(Same address.)

One thousand one hundred and thirty-three school houses are furnished with patent seats and desks, and 632 have some apparatus, though but $10,810.35 were expended in the State during the year for apparatus; 312 school houses have no blackboard, and 693 are entirely without outhouses. While many of our school buildings make a fine external appearance, too many of them are deficient in proper internal arrangement, comfort and convenience being sacrificed for show. Little regard has been paid to ventilation, and rarely has any effort been put forth to fence and improve the grounds.—(Superintendent's address.)

GRADED SCHOOLS.

There are 21 districts which have 200 pupils and upwards; 22 have more than 100 each, and there are about 10 that nearly reach 100 each. There are, then, in the State the nuclei of at least 50 graded schools. In the 21 districts with 200 pupils, schools should be established with at least four departments and such a course of study adopted as will afford preparation for at least the scientific department of the State university.

TEACHERS' CERTIFICATES.

During the year there were 2,948 certificates issued by the county superintendent—95 first grade, 1,345 second grade, and 1,508 third grade—besides quite a number holding certificates from the State normal school.

Number of certificates annulled, 6, a fact that speaks well for the teachers.—(Superintendent's address.)

SCHOOL SUPERVISION.

The 60 county superintendents were employed in the duties of their office during the past year 5,119 days, making 2,497 school visits in the 2,100 districts having schools. Their compensation, as far as reported, amounted to $18,916.35, less than twenty-five cents tax on every $1,000 valuation. The number of school directors' visits amounted to 5,274 during the year.—(Address of State superintendent.)

GENERAL VIEW OF SCHOOL AFFAIRS.

A county superintendent, writing to the Bureau of Education in 1875, says of the State:

"We have a good school system; but as this country is new and thinly settled, we are deprived of many of the advantages of the Eastern States, such as lectures and well filled libraries, whereby the teachers may find access to such information as is necessary to keep them up to the times. I am satisfied that the people of the Great American Desert are wide awake in the cause of education. Our bountiful State school fund is one great incentive to this interest in education. Our school-houses are larger, more convenient, and better furnished, in comparison to our needs, than they are in most of the States east of the Mississippi River. Our teachers, on the whole, are earnest workers in the school-room."

PUBLIC SCHOOLS OF LINCOLN.

In this city there are 5 schools, 1 only of which is graded. The others are situated from one to two miles from the central building. They are all nominally under the superintendence of Professor W. W. Jones, city superintendent; but, as he is compelled to spend the most of his time in teaching classes in the high school, they are practically without supervision.

TRAINING OF TEACHERS.

STATE NORMAL SCHOOL.

This institution the State superintendent reports in a flourishing condition. The buildings are commodious and in good repair, and are ample for the accommodation of from three to four hundred pupils. There are 7 regular teachers besides the principal, 4 of whom receive a salary of $1,200 per annum each; the other teachers receive much less. The principal's salary is $2,000 per annum.

The course of study in the normal school is nearly equivalent to the amount necessary to enable the student to enter the junior class in the university scientific course.

The institution had a landed endowment of twenty sections of land. Of this, 2,800 acres were sold at something more than $20,000. This gave a regular income up to the present year of about $2,000 per annum. But the hard times have caused much of this land to revert again to the school, so that now it must depend almost wholly on appropriations.

But as the land is all situated in Lancaster County, it will not be long before it can all be sold, and thus put the school on a firm foundation, independent to a great extent of State aid.—(Address of the State superintendent before the State Teachers' Association, March 30, 1876.)

A letter from the school, dated December 5, 1874, published in the Nebraska Teacher of January, 1875, (p. 17,) states that the partial failure of the crops had not, as had been anticipated, reduced the attendance, but, on the contrary, it had increased. There was also a larger number of students in the higher classes of the normal course than ever before.

The Nebraska Teacher for February, 1875, page 45, says, editorially: "Bills have been introduced into the legislature for the establishment of normal schools at Fremont and Tekama. The time is near at hand, if it has not already arrived, when the State will need another normal school. If this had been an average year, the present one, even with its new building, would have been filled to overflowing."

SECONDARY INSTRUCTION.

INSTITUTIONS OF HIGH SCHOOL GRADE.

There are but few schools in the State in which pupils can obtain proper instruction in any except the common branches. Assuming that but 1 scholar in 50 will desire a fair education such as a good high school can afford, there are then in Nebraska more than 1,600 young people desiring such opportunities. The State University and State Normal School provide for 300 of these, the private institutions in the State for 200 more, leaving 1,100 to find their education elsewhere or not at all. The only source left, says the State superintendent in his address to the Teachers' Association, must be through the higher departments of the graded schools.

A special report from Brownell Hall, a school for the secondary instruction of girls, at Omaha, under the charge of the Protestant Episcopal Church, shows an attendance of 70 pupils, instructed by 7 teachers. Drawing and music, both vocal and instrumental, are taught. The school has an indifferent chemical laboratory and philosophical apparatus and a library of 1,500 volumes.

PREPARATORY DEPARTMENTS OF COLLEGES.

In the preparatory classes of the colleges of the State 260 students were engaged in secondary studies during 1875, of whom 73 were in preparation for a classical collegiate and 58 for a scientific collegiate course.—(Returns to Bureau of Education.)

BUSINESS COLLEGE.

The great Western Business College at Omaha reports an attendance of 75 students—50 young men and 25 young women—engaged in the study of orthography, reading, penmanship, grammar, arithmetic, history of the United States, book-keeping, commercial law, telegraphy, and phonography. Since the organization of the school, in 1873, there have been 33 graduates, 3 of whom were women. Five students were studying phonography and 10 telegraphy.—(Special report to the United States Bureau of Education, 1875.)

SUPERIOR INSTRUCTION.

STATE UNIVERSITY.

The university is at present in a very good condition. The number of professors now actually engaged in the work of instruction is 6 besides the chancellor. Four of these receive $2,000 per annum, 1, $1,000, and 1, $600. The chancellor's salary is now $3,000 per annum, but at the last meeting the board raised it again to $4,000. The institution has a well selected library of more than 1,500 volumes, valued at $3,000 at least. The cabinet and apparatus are also creditable for so young an institution.—(Address of State superintendent.)

OTHER COLLEGES.

Doane College is located in Crete, and is under the control of the Congregational Church. Mr. Thomas Doane gave the institution $12,000 and a name. The present assets, besides the building, amount to about $20,000 in notes, 600 acres of land in Crete, 200 more in Polk County. About 50 pupils were in attendance last year.

Nebraska College is situated in Nebraska City, and is for young men only. "It supports itself entirely by its current patronage." The number of pupils usually in attendance is about 70. Young men can here be prepared to enter the junior year of the university. The annual expenses of the pupils boarding in the institution are $280.

Recently a theological school has been opened near the college for the benefit of the young men studying for the ministry.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The agricultural department of the State university is growing in efficiency and importance. During the past fall and winter a neat substantial house was erected on the farm at a cost of about $4,000.

There are now good accommodations on the farm for from 20 to 30 students.

Some start is also made in the best breeds of cattle and hogs. One hundred and seventy-one acres were cultivated during the past year, and the crops were among the finest in the State.

Could 134,800 acres of land belonging to the university and agricultural college be made available by sale or lease, the success of the institution would be assured. Until that can be made available it must depend on the fostering care of the State.—(Address of State superintendent.)

THEOLOGY.

The divinity school of Nebraska College is intended to prepare for the ministry of the Protestant Episcopal Church such young men as desire to enter on that sacred office. The bishop of the diocese is professor of pastoral theology.

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF AND DUMB.

The asylum for the deaf and dumb is located near Omaha. It has very good grounds and buildings. Fifty-three pupils have been admitted into the institution since its organization in 1869.

The running expenses of the school are about $15,000 per annum.

Mute children, whose parents live in the State, of good moral habits, suitable age, and sound minds, are admitted to all the privileges of the institution free. A course of eight years is allowed. Parents who are unable to clothe their children may, under certain regulations, obtain aid from the State. There are, it is stated, over a hundred deaf-mutes in the State; but, notwithstanding the liberal provision for their education, only 37 are in the institute.—(Address of State superintendent before State Teachers' Association, March, 1876, and Nebraska Teacher, March, 1875, p. 76.)

EDUCATION OF THE BLIND.

During the past year a fine brick building has been erected a little north of Nebraska City as an asylum for the blind.

For the amount of money expended—about $10,000—it is one of the best buildings in the State. The institution is in charge of Professor Bacon, a blind man himself, who has shown great perseverance and energy in planning, superintending, and pushing forward the work.

There are now about 14 pupils in the asylum receiving instruction.—(Address of superintendent before the State Teachers' Association, 1876.)

EDUCATIONAL CONVENTIONS.

STATE TEACHERS' ASSOCIATION.

The ninth annual session of the association met at Omaha, March 31. The president and vice-president both being absent, Professor Kellom was elected president *pro tempore*. The address of welcome was delivered by Hon. B. E. B. Kennedy, vice-president of the Omaha board of education. Addresses were afterward delivered by Hon. J. M. McKenzie, State superintendent of public instruction, on "The present condition of education in the State;" by Mrs. Fannie J. Ebright, on "The influence of Music;" by Chancellor A. R. Benton, of the State University, on "Moral education;" by Professor S. R. Thompson, dean of the Agricultural College, on "The industrial education of women." Hon. Alonzo Abernethy, State superintendent of Iowa, delivered an able and interesting lecture on the general topic of public school education, among other points urging the importance of moral training and insisting upon equal educational advantages for boys and girls. A paper on industrial drawing was presented by Professor G. E. Bailey of the State University, one on oral instruction, by Professor J. H. Worthen, principal of the Nebraska City high school, and one on the duties of county superintendents, by F. M. Williams, county superintendent of Richardson County.

This meeting was, in many respects, says the Nebraska Teacher, the best ever held in the State. The attendance was large, notwithstanding unpleasant weather, and several of the papers were marked with more than ordinary ability.—(Nebraska Teacher, May and June, 1875.)

NEVADA.

SCHOOL SYSTEM OF THE STATE.

EDUCATIONAL PROVISIONS OF THE CONSTITUTION.

The constitution of 1864, under which the State came into the Union, directs, article XI, section 1, that "the legislature shall encourage by all suitable means the promotion of intellectual, literary, scientific, mining, mechanical, agricultural, and moral improvement, and also provide for the election by the people, at the general election, of a superintendent of public instruction," whose term of office should be 2 years, (since lengthened to 4 years;) section 2, that "the legislature shall provide for a uniform system of public schools by which a school shall be established and maintained in each school district at least six months in every year;" section 3, that the proceeds of lands given by the General Government, of escheats, of fines for penal offences, and of property given or bequeathed to the State for educational purposes shall be made the basis of a school fund, the interest of which only shall go to aid the schools and a State University; section 4, that provision for the establishment of said university, to embrace departments for agriculture, mechanic arts, and mining, shall be made by the legislature; section 5, that the legislature shall have power to establish normal schools and such different grades of schools, from the primary department to the university, as shall be deemed necessary; section 6, that a special tax of half a mill on the dollar of all taxable property for ten years and afterward of a quarter of a mill on the dollar, at least, shall be levied in aid of other means for the support of the university and common schools; section 7, that there shall be a board of regents of the university, to consist, for four years, of the governor, secretary of state, and superintendent of public instruction, and afterward of their elected and qualified successors; section 8, that these regents shall, out of the first funds coming into their hands, organize a mining department, preserving, however, intact, for the agricultural and mechanical department, all proceeds of the congressional land grant of 1862; section 9, that no sectarian instruction shall be imparted or tolerated in any school or university established under this constitution.

PROVISIONS OF THE SCHOOL LAW.

Laws Relating to the Public School System of the State of Nevada, compiled and published by the superintendent of public instruction, 1873.

OFFICERS.

A State board of education, State superintendent of public instruction, three regents of the university, county superintendents of public schools, county boards of examiners, boards of school trustees for districts, and district census marshals are the school officers recognized by law.

POWERS AND DUTIES OF THESE OFFICERS.

The State board, composed of the governor, State superintendent of public instruction, and surveyor-general of the State, with the governor for president and superintendent as secretary, is the supreme advisory council in school affairs, and, at its semi-annual and special sessions, devises plans for the better organization of the public schools and the improvement and management of the public school funds; has a power of supervision over the apportionment of these, power to act with the superintendent in providing for a State teachers' institute, and to prescribe and cause to be adopted a uniform series of text books for the principal studies pursued in the public schools, not to be changed under four years.

The regents have the general care of establishing and providing for the organization and maintenance of the State university, which is thus far still in embryo.

The State superintendent—who is elected by the people at the general fall election in every four years, beginning with 1866, and enters upon duty the first Monday of January following—has it as his duty to apportion the State school moneys to the counties in proportion to their school population; to furnish to the proper officers an abstract of such apportionment, with the needful orders, under seal of the State board, for the same; to prescribe and distribute forms and regulations for school reports, with copies of the school laws, to all local school officers; to convene, preside over, and provide for the exercises and expenses of an annual State teachers' institute; to visit once a year each county in the State, with a view to the inspection of schools, consultation with county superintendents, and addressing public assemblies on educational themes; to report to the governor biennially, on or before the 1st of December preceding the legislative session, everything relating to school affairs; and to attend to the proper distribution of this report when printed.

The county superintendents are chosen by the people of their respective counties every two years, beginning with 1866, at the general election, and take office on the first Monday in January following. It is their duty (1) to apportion to the several school districts, in proportion to their school population, the moneys for school purposes in the county treasury, and to forthwith notify the treasurer and school trustees of the details of such apportionment; (2) to draw warrants on the county treasurer in favor of the trustees of any school district in their counties for the amount of any duly authenticated bill attended with an itemized account, and for the purchase of school books for indigent children; (3) to visit and exercise a general supervision over each public school in their counties, said visits to be once a year or once a term, according to the distance of the schools; (4) to distribute promptly to trustees, teachers, &c., the forms, laws, instructions, and reports received from the State superintendent; (5) to keep on file in their offices all reports received from subordinate officers and full records of their own official acts, to be delivered to successors at the conclusion of their terms; (6) to make annually to the State superintendent, by September 15, on pain of forfeiting $200, a full report of the matters reported by subordinate officers respecting school affairs for the year preceding; (7) to preside over, regulate, and conduct county teachers' institutes; (8) to appoint school trustees in districts where the voters fail to elect, and to fill vacancies occurring in the board; (9) to subscribe annually for a sufficient number of copies of an educational journal to furnish one to each school officer and teacher in their counties and pay for the same out of the county school fund. The compensation for performing these duties is "such as shall be allowed by the board of commissioners of each county, at least sufficient to pay all necessary travelling expenses" incurred in the discharge of legal duty.

The county boards of examination consist of the county superintendent and two competent persons appointed by him. They are constituted for the purpose of examining persons wishing to teach in the public schools, and may give certificates of two grades of qualification to such as stand the tests for them.

School trustees.—Boards of trustees for school districts consist ordinarily of 3 persons; but in districts polling 1,500 votes, of 5. They are elected by the people, at the general elections, for terms of 4 and 2 years, and enter upon office on the first Monday of January following. They have the care and custody of all public school property within their districts; the building, purchasing, or hiring of school-houses and the erection of needful outhouses; the employment of teachers and dismission of them for cause; the providing of school-houses with furniture and apparatus, as well as books for indigent children; the division of schools into primary, grammar, and high school departments; the expulsion of incorrigibly disorderly children; the proper apportionment of school funds among the schools; and the making of annual reports to the county superintendent as to the number of children of school age, (6 to 18,) the number of schools, of teachers, of children in attendance, and average attendance, with other particulars showing the educational condition of their districts.

The district census marshals are officers appointed by the school trustees of each district, on or before the 1st of May in each year, to take a specific census of all the children of school age, with full particulars as to sex, residence, parentage, and school connection, to be reported to the county superintendent or board of education in their respective districts, towns, or cities.

SCHOOLS.

The schools of the State, as above indicated, are divided into primary, grammar, and high. In the first are to be taught spelling, reading, writing, arithmetic, the elements of natural philosophy, and geography; in the second are to be added English grammar, history of the United States, physiology, hygiene, and chemistry; and in higher schools, algebra, geometry, drawing, natural philosophy, astronomy, or the elements of bookkeeping. These schools are free to all residents of school age for six months of the year. After that, rate bills may be imposed on all who send children to them. A compulsory law requires attendance at school for at least sixteen weeks each year. The State University exists thus far only in its preparatory department.

ELEMENTARY INSTRUCTION.

NO REPORT.

The report on school affairs in this State is made biennially, as before stated, and is not due till the close of 1876. The only information available meanwhile is the following abstract of the first semiannual apportionment of school moneys for 1876, which is made by the superintendent at the rate of $3.740015+ per census child:

Table showing the first semiannual apportionment of school moneys for 1876.

Name of county.	Number of children between 6 and 18 years of age.	Amount.	Name of county.	Number of children between 6 and 18 years of age.	Amount.
Churchill	247	$175 78	Lyon	373	$1,395 03
Douglas	253	946 22	Nye	184	688 16
Elko	479	1,791 47	Ormsby	767	2,868 59

Lander	330	1,234 21			
Lincoln	589	2,202 87	Total	7,510	28,087 52

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

In the absence of a report from the State superintendent for 1874–'75, no reliable information respecting high schools in the State school system can be presented.

OTHER SECONDARY SCHOOLS.

The only one of these making direct return to the Bureau of Education for 1875 is the preparatory department of the State University, at Elko, which reports 1 instructor, with 15 male and 16 female students.

SUPERIOR INSTRUCTION.

STATE UNIVERSITY, ELKO.

This, as before stated, exists thus far only in its preparatory department, the university proper waiting for a fuller preparation of students for its classes and for an increase of its funds by sale of lands belonging to it. The principal of the preparatory department writes, with his return, "This school, just started, you may say, has its foundation of land grants from the General Government, as others in other of the new States. Several of my pupils are pursuing a university course, but the most are of about high school grade, and may be prepared for college at short notice."

—(From the twenty-ninth annual report of public schools of New Hampshire, for the school year 1874–'75, by Hon. J. W. Simonds, State superintendent of public instruction.

Mr. Simonds has used 1873 for the comparison of increase or decrease in these tables because the returns for 1874 were less complete.)

SCHOOL SYSTEM OF THE STATE.

CONSTITUTIONAL PROVISIONS.

The constitution, as amended in 1874 and since continued, declares that as knowledge and learning generally diffused through a community are essential to the preservation of a free government, and as a spreading of the opportunities and advantages of education is highly conducive to this end, "it is the duty of the legislators and magistrates in all future periods of this government to cherish the interest of literature and the sciences, and all seminaries and public schools; to encourage private and public institutions, rewards and immunities for the promotion of agriculture, arts, sciences," &c.

PROVISIONS OF THE SCHOOL LAW.

Digest of School Laws, by C. R. Morrison, 1869, with amendments and additions to 1875.

OFFICERS.

The principal officers are a State superintendent of public instruction, trustees of the State normal school, school committees for towns, and prudential committees for districts.

POWERS AND DUTIES OF THESE OFFICERS.

The State superintendent—who is appointed by the governor and council and holds his office for two years—has a general supervision and control of the educational interests of the State. He prescribes the form of school registers and of blanks for the returns to be made by school committees; sends these to the clerks of the several towns and cities for distribution; receives and arranges all reports and returns of school committees; distributes State documents in regard to public schools or other forms of education; investigates the condition and efficiency of the school system; and is to pursue such a course as to him seems best fitted to excite an interest in education, and guide such interest in the best channels when aroused. He is also annually, on or before the first Wednesday in June, to lay before the general court a printed report, containing abstracts of the reports of school committees, details of his own acts as superintendent of instruction, a like detail of the condition and progress of popular education in the State, and such suggestions as to improvement in it as his information and judgment may dictate. His salary is $1,200, with allowance for postage, stationery, and other office expenses.

The trustees of the State Normal School are appointed by the governor, by and with the consent and advice of the council; consist of fifteen persons besides himself and the superintendent of instruction, not more than two from one county; hold office for two years, part going out each year and being replaced by new appointees; have the general management of the normal school and the appointment of the principal; and are, at their annual meeting, to appoint committees of their number for the oversight of the several departments of their work.

The school committees for towns are elected ordinarily by ballot at the annual town meeting, but may be chosen for such terms as the town thinks proper; consist of any number the town may choose; may include female members; and have it as their duty to examine and license teachers, to visit the schools twice in each term, to prescribe suitable rules for managing and grading them, to make regulations respecting attendance on them, to furnish to each teacher a blank register for keeping a school record, and to make annual report (under penalty of $50 for failure) to the town meeting and the State superintendent of all matters relating to the schools, with an enumeration of the school population of each sex and the number between 5 and 15 years of age that have not attended school. They may dismiss teachers, after twenty-four hours' notice and a hearing, if requested to do so by a majority of the legal voters, and may, of their own motion, do the same without a hearing, if they find any teacher incapable or unfit to teach or disobedient to the rules made by them. Text books introduced by them into schools must continue in use for three years from the time of introduction, and not more than one such book or series of books on one subject, used in each class of schools, may be changed in any year; but no sectarian or partisan work may be introduced. For the performance of their duties committee men receive "such reasonable compensation as the town may determine."

Prudential committees, not to exceed three persons, elected by the voters at a school district meeting, are required to call meetings of their districts, giving fourteen days' public notice; to select and hire teachers for the district, provide them board, furnish necessary fuel, make such repairs to the school-house as may be required, notify the

superintending school committee of the commencement and close of schools, and give them such information and assistance as may be necessary for the performance of their duties. In case the school-house should be out of repair or not of sufficient size to accommodate the scholars, the prudential committee, with the consent of the school committee, may provide suitable rooms and conveniences for the use of the scholars, at the expense of the district.

SCHOOLS.

The schools under the State system vary in character from the primary district school, in which are taught only reading, spelling, writing, English grammar, arithmetic, and the elements of geography and history, to union and high schools in which students may be prepared for college. Of all kinds there were 2,599 reported in 1875, among which 403 were graded and 39 were high schools of either united districts or towns. A compulsory law requires that all children from 8 to 14 shall attend school for at least twelve weeks in each year.

The existence of a State normal school has been noticed. There is also a State Agricultural College, sustained from the congressional land grant of 1862, in connection with Dartmouth College.

SCHOOL FUNDS.

A permanent school fund of nearly $500,000 enables the State to supplement the amounts raised by local taxation and other means, bringing the annual school revenue up to $621,649 in 1875.

ELEMENTARY INSTRUCTION.

CIRCULARS OF SUPERINTENDENT SIMONDS.

For the purpose of awakening and guiding public sentiment in relation to the practical interests of education, it seemed advisable to the superintendent to institute an official correspondence with the supervising school officers, and submit for their consideration information and suggestions calculated to assist them in the discharge of their duty. The results accomplished by these efforts have been very encouraging.

Circular No. 1, directed to town school committees, called their attention to "An act to compel children to attend school," and urged them to secure an impartial and systematic execution of its provisions. Circular No. 2 contained a *résumé* of the duties of school committees, accompanied with suggestions. Circular No. 3 contained inquiries concerning the progress of the school, competency of teachers, the practicability of holding town teachers' meetings, the re-establishment or teachers' institutes, and the supervision of the schools. Circular No. 4 called attention to the law allowing towns to elect school committees for different periods of one, two, and three years, and after the first election one member annually for three years. Circular No. 5 contained questions concerning elementary instruction, system and unity of effort, value of merit marks of teachers' institutes, worth of State school report, how many copies the State should distribute, and the effect of establishing a State board of education. Circular No. 6 invited attention of selectmen of each town and assessors of each city to their duty "to make an enumeration of the children of each sex between the ages of 4 and 17 in their respective towns and cities." Circular No. 7 was addressed to town school committees, respecting examinations of applicants for teachers' positions. Circular No. 8 called attention to the same points as No. 6, and, in addition, to the number of children between 5 and 15 that have not attended schools.—(Appendix to twenty-ninth annual report.)

ABSTRACT OF TOWN REPORTS.

The thirty-ninth annual report is largely made up of the reports from superintending school committees. Some of these state facts; some discuss principles or practices. As far as can be gathered from the former class, the following appear to be the facts concerning the condition of the schools:

Disadvantages.—Complaint is made in many of the reports of there being an excessive number of school districts, and, as a natural consequence of this, short schools, low standards, imperfect classification of pupils, a lack of illustrative apparatus, poorly paid teachers, and comparatively slight results. Rural districts that once sustained a large population are now sometimes almost deserted, and instead of 25 or 30 scholars attendant on the schools, there may be found, it is said, not more than 4, 5, 10, or 12. The tax raised in such districts is, of course, generally small. Cheap teachers and poor teaching too often come of this, and instead of good school rooms, with ample apparatus, lively classes, and rapid upward strides, there is apt to be a neglected building, in which classes, too small to awaken the enthusiasm of a teacher, study as they best can, with almost no means of geographical, arithmetical, or philosophical illustration.

Thus, as to the districts, one committee says: "Districts formerly having large and flourishing schools are now almost destitute of children of school age." Another, "There has been a time when there were 40 to 60 scholars in many of the districts; now the largest one contains only 26, and the four smallest an aggregate of only 23;"

and still another, "Many of the districts have become nearly depopulated, and nothing remains but the old cellars to tell the stranger that once a flourishing farm house stood there, which was the home of numerous children. Instead of 25, 30, or 40 scholars, we now find 4, 5, in very few instances more than 12. In such small schools there is but very little interest manifested on the part of either teacher, scholars, or parents."

As to school houses, it is said by one, "The school houses are, in many cases, unfit for the use they were designed for, and the few farmers left in the district hardly feel able to incur the expense of furnishing a better house for so few scholars;" by another, "We have several districts with few scholars, little school money, and bad houses;" by a third, "I speak with candor when I say that several of the school houses are no longer fit for school purposes, especially in winter;" by a fourth, "One school-house has no shed nor entry way, and two others, which have, are left with large openings, with no provisions for closing. The doors and windows are so impaired that the snow blows in, and so much cold air enters that it would seem almost as wise to attempt to warm the atmosphere outside as within. Then the arrangements for warming these houses are mere shams; stoves small, pipe old and nearly burned or bursted out, and so disconnected that the smoke as easily escapes by way of the doors and windows as by the chimney."

As to illustrative apparatus, a chairman of a school committee in a fairly prosperous town writes: "Our schools are almost destitute of this great desideratum. There is hardly a district in town but needs a globe, maps, and a dictionary." A second says: "In nearly all the school rooms in town there is a want of proper and necessary implements for the teacher to work with." A third puts into his report the statement: "We find some schools sadly destitute of illustrative apparatus, not possessing so much as a blackboard;" a lady elsewhere seconding this with a like account: "Our blackboards are fast becoming whiteboards, and some are almost useless;" and a committee man saying, "In no school in town did I find even the cheapest kind of a dictionary belonging to the school; maps and charts are minus, or nearly so."

Improvements.—Happily, against such statements we are able to set others more encouraging, such as "The schools have had able instructors and scholars that took hold of their studies with a determination to accomplish the tasks set before them. Perhaps in no former year has the standard of our schools been higher or the work that has been done more thorough. *'Not how much, but how well,'* has been the motto of both teachers and scholars." And again, "During the three years past there has been a gradual but marked improvement in teachers, teaching, and taught;" and still again, "Our schools will, it is thought, bear a favorable comparison with those of former years. Many of our teachers are abandoning the blind devotion to the text book which has so long obtained, and are disposed to seek methods of explanation from all available sources. Scholars are not content with the mere statement of a fact, but wish to know not only what is true, but why it is true."

As to school-houses, we have from one town the pleasant statement that "The town never had so good school-houses as at the present time. They are built and furnished with great care and expense, and indicate the interest and pride which the people feel in education. The people in the north district last year ornamented the school grounds with trees, this year have dug a well, and next year intend to improve the fences. In the south district they have built two school houses, and will doubtless improve the grounds so as to render them pleasant and attractive to the children." In another we read of a high school building, commodious and well furnished, though not yet fenced in and shaded as it ought to be.

As to apparatus, we read of one school that has obtained for itself a fine globe; as to teachers, that in one case their "instruction has been eminently practical;" that in another they have been faithful; that in a third they have "attained a high success;" and that in a fourth "they have fully met all expectations," though these expectations seem to have been high.—(State report, pp. 4–102.)

KINDERGARTEN.

There is in Nashua a private Kindergarten, established in 1874, and conducted by Anna Held, having 14 children from 3 to 7 years of age engaged, during 5 days of the week, three hours each day, in the usual Kindergarten occupations.—(Special report to the United States Bureau of Education.)

CITY SCHOOL SYSTEMS.

DOVER.

School officers.—The schools are governed by a board of school committee, elected by qualified voters of the town for the term of two years, one-half of them going out of office each year. The chairman, who is elected by the board, appoints all committees, has authority to call special meetings, and is *ex officio* chairman of the committee for examining teachers.

Statistics.—The number of children from 4 to 16 years of age is 1,806; the number attending school two weeks during the year, 1,864; average attendance, 1,191; average amount expended for each scholar, $12.06; receipts and expenditures for school purposes, $22,400.55.

Course of study.—The schools are divided into primary, grammar, and high, with some of mixed grades in those portions of the city where it is impracticable to adopt a system of gradation. Drawing has formed a part of the regular course of study for several years, but only in the grammar schools has it received a systematic course of teaching.

The high school has maintained for another year its high standing. Three objects are held in view here: the securing of a tolerably wide course of academic study, a plan specially adapted to a business life, and the preparation of boys for college.—(Report of school committee, 1875.)

NASHUA.

Officers.—The school committee is composed of as many members from each ward as the said ward is entitled to aldermen in the city council. The mayor of the city is *ex officio* chairman. The committee thus constituted have the care and superintendence of the schools, and may, if deemed expedient, and in fact do at present, appoint a superintendent, who, under the direction of the committee, manages and superintends the schools.

Statistics.—Number of children in the city from 6 to 16 years of age, 1,549; number from 16 to 21 years of age, 602; number from 4 to 21 years, 2,755; number of pupils, 2,238; average number belonging, 1,629; average daily attendance, 1,492; number admitted to high school, 51; number of graduates of high school, 21; number of teachers in all the schools, 54; expenditures for school purposes, $32,049.08.

New school building.—In school-houses and school accommodations Nashua now compares favorably with any city in the State. The high school building, recently completed and occupied, is not only the most costly, but is the largest and best constructed school edifice in New Hampshire. It is strongly, as well as neatly finished. The entrance halls are spacious, affording ample means of ingress and egress. The supply of air is pure, not forced from the basement, but taken directly from the open atmosphere. The course of study is liberal and comprehensive.

Evening schools.—The two evening schools were never more serviceable than during the past winter; the total attendance in both was 137; average attendance, 80.

Attendance.—The daily school attendance in the city, though 20 per cent. less than it ought to be, is higher than the average in the State and vastly higher than that of the country. The school population of the United States is 12,000,000, while the average daily attendance is only four and a half millions. Provision is made in this city for the education of the entire school population, and it would not add to the cost of the department if every child, instead of three-fourths of all, were in constant attendance.—(Nashua school report for 1875.)

THE CITIES GENERALLY.

Extracts from the school reports of Concord, Dover, Keene, Manchester, and Nashua are given by the State superintendent, and show, in general, a greatly better state of things than is indicated in reports from country towns. In all these cities music and drawing are receiving a considerable measure of attention, the former for its refining and animating influence, the latter for its effect in the improvement of all industries.

In all, too, the graded system for the schools appears to reign, with a specific course of study for the grades, promotions from one grade to another being made in most cases after careful testing of qualification by means of written examinations. In Manchester these examinations take place every month, and promotions based on the results of them are made twice in each year.—(State report, pp. 102–140.)

TRAINING OF TEACHERS.

STATE NORMAL SCHOOL.

The attendance of students during 1875, amounting to 270 in the normal department, has been larger than for any preceding year. There were 34 graduates, 3 of them from the second course and 31 from the first.

The acts of the legislature establishing and controlling the State normal school prescribe and limit its work of instruction and drill to branches and methods designed to qualify its members for an efficient and successful discharge of the duties of the common school teacher. The normal school, thus established and managed by a board of trustees appointed according to the laws of the State, is in reality a professional school. It has already furnished the State many excellent teachers whose services and improved methods of instruction are working marked improvements in school management, according to the reports and testimony of town school committees where the normal graduates have been employed.—(State report, 1875, pp. 176, 177.)

SECONDARY INSTRUCTION.

SCHOOLS OF HIGHER GRADE.

In March, 1875, Superintendent Simonds addressed to the principals of the various secondary schools, public and private, a circular, requesting returns of their statistics for the current school year. Sixty-eight schools were embraced in this request, of which 21 were public high schools, 28 were chartered academies and private schools, 1 the State normal school, 1 a business college, and 3 recognized as preparatory schools. Out of the 68 addressed, 67 made more or less complete returns, showing an aggregate of 96 male teachers and 113 female; 3,276 male pupils and 3,239 female; 3,745 engaged in higher branches of study, of whom 1,952 were in ancient languages and 646 in modern. Thirty-one reported libraries ranging from 12 volumes to 4,000, and making a total of 21,569 books. The number of weeks in the school year of the 67 reporting schools was generally from 30 up to 52, though 1 reported only 10 weeks; 2, 12; and 3 24. The aggregate of the estimated value of grounds, buildings, and apparatus was $1,147,325.—(State report for 1874–'75, pp. 345–349.)

Besides the above mentioned, the Bureau has reports for 1875 of 38 schools of kindred grade, 3 of these being for girls, 29 for boys and girls, and 1 for boys, with 5 preparatory schools, some of them admitting both sexes.

The 33 academies and seminaries report 63 male teachers, 67 female; 1,709 male pupils and 1,548 female; 663 of whom are engaged in classical branches, 527 in modern languages. Music is taught in 18; drawing, in 15; 14 report chemical laboratories; 21, philosophical apparatus. There are libraries of 75 to 4,000 volumes in 18 of these, the total number of books being 14,212.

These schools are under the influence of the following denominations: Congregationalists, 8; Christian, Swedenborgian, Baptist, Methodist Episcopal, and Protestant Episcopal, 1 each; while 15 are non-sectarian and 5 do not report on this point.

The 5 preparatory schools report an attendance of 742 pupils taught by 40 instructors The course of instruction in 2 lasts 4 years; in 2 others, 3, and in 1, 6. All report libraries, the smallest numbering 100 volumes, the largest 1,700. Three report chemical laboratories, and 4, philosophical apparatus and gymnasia. The continental system of pronunciation is used in all but 1 of these schools; in that, the English method is used in respect to the Latin language, while the Greek is taught according to the continental method.

BUSINESS COLLEGE.

Gaskell's Business College at Manchester, organized in 1865, reports a total attendance of 333 students, taught by 2 instructors. The number of weeks in the scholastic year is 50; average age of students, 18 years.

SUPERIOR INSTRUCTION.

DARTMOUTH COLLEGE.

The departments of instruction in connection with this institution are as follows: (1) The academic department, with its four years' curriculum, including Latin, Greek, and the modern languages, with the privilege of a partial course and a number of particular options; (2) the scientific department, with a regular course chronologically parallel with that of the academic, and having, with the option of a partial course through all the years, several elective lines of study in the last year, while Latin and Greek are omitted, French and German included, and scientific branches made most prominent; (3) the agricultural department, so called, or the New Hampshire College of Agriculture and the Mechanic Arts; (4) the engineering department, or the Thayer School of Civil Engineering; and (5) the medical department, or the New Hampshire Medical College.

There are 10 college buildings, 3 of them recently erected. Of the others, the scientific and medical buildings have lately been enlarged and renovated, and various improvements have been made in the rest, particularly in the lecture rooms, and the college buildings are now lighted with gas.

The college has been, during 1874–'75, favored with a gift or bequest from Hon. Tappan Wentworth, of Lowell, Mass., amounting to about $300,000 in stocks and real estate, for the general fund of the institution, and of another amounting to $112,000 from Hon. Joel Parker, of Cambridge, Mass., to found and endow a law department, and for a library fund. Only the income of the Wentworth fund is to be used, and this not till the principal shall reach $500,000, so that some years must elapse before it can become available.—(College advertisement in The Dartmouth for September, 1875, and return to Bureau for that year.)

NEW ENGLAND UNIVERSITY OF ARTS AND SCIENCES, MANCHESTER.

A written scheme of this institution, "chartered by the State of New Hampshire," has been sent to the Bureau, in which it is stated that "this university was founded

for the purpose of giving a thorough practical and technical education to those who propose to engage in the following pursuits, viz: engineering, civil, mechanical, dynamical, and mining; chemistry, with its many applications to the arts; geology; metallurgy and assaying; mining; mechanical drawing; architecture; law; medicine, and dentistry."

It is said, further, that "the educational work of the university is carried on in 6 distinct yet closely related departments:" (1) The theological, (2) that of general literature and science, (3) that of engineering and applied science, (4) that of law, (5) that of medicine, and (6) that of dentistry. The work of all these departments is thoroughly mapped out. How far it has been reduced to practice does not yet appear.

COLLEGES FOR WOMEN.

There are 3 schools for the superior instruction of women, having, in all, 26 teachers, and in 2 of them an attendance of 177 students. One reports 41 students in its regular course; another, 17 post graduate students, and 23 in special or partial course. Two of them have a four years' course, and are authorized by law to confer collegiate degrees; all report libraries, numbering 310, 500, and 1,100 volumes respectively. In respect to religious preference, 1 reports itself as "orthodox;" the other 2, "non-sectarian."—(Returns to Bureau of Education, 1875.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The New Hampshire College of Agriculture and the Mechanic Arts, a department of Dartmouth College, is based on the congressional land grant. It has a regular three years' course of study, with an option, after the first year, of either an agricultural or a mechanical line of study.

Thayer School of Civil Engineering is substantially, though not formally, a post graduate or professional department, with a two years' course. The requisites for admission are, in some important branches, even more than a college curriculum commonly embraces, and it is designed to carry the study of civil engineering to the highest point.—(College advertisement in The Dartmouth.)

MEDICINE.

The medical department of Dartmouth College, or the New Hampshire Medical College, was established in 1797, has had a long and prosperous career, and ranks now with the best medical institutions in the country. There is connected with it, in addition to the lectures, a good course of private instruction.—(The Dartmouth, April 6, 1876.)

EDUCATIONAL CONVENTIONS.

STATE TEACHERS' ASSOCIATION.

The association met at Wolfborough October 14 and 15, 1875. After short addresses by Mr. Hall and Mr. Simonds, the president read a paper on "The duty of teachers to themselves and their pupils." A committee of three was appointed by the president to nominate committees on various topics. Mr. S. W. Clarke, of Portsmouth, read a paper on "The duty of the teacher to the parent;" Mr. J. Warren Thynge, of Salem, Mass., gave a lecture on drawing; Mr. Philbrick, of Boston, spoke on "How to make our common schools practical;" and Mr. C. C. Chatfield on "The New-England Journal of Education." A paper was read by Mr. B. F. Dame, of Manchester, on "Reading," after which Messrs. Powers and Edgerly, of Manchester, and others, discussed "What studies should be pursued in our common schools, and to what extent should the State educate?" Papers were read by State Superintendent Simonds on "The progress of education;" by A. C. Hardy, of Fisherville, on "The common sense school;" and by Superintendent Dearborn, of Manchester, on "New Hampshire at the Centennial."

Among the resolutions adopted was one indorsing the New-England Journal of Education as worthy of patronage, and one expressing, as the sense of the association, that "The work performed by the National Bureau of Education, in collecting and disseminating useful educational information, has established the practical value of that Bureau," and asking the influence of Congress to sustain it.—(New-England Journal of Education, October 23, 1875.)

—(Report of Hon. Ellis A. Apgar, State superintendent of public instruction, for 1875.)

SCHOOL SYSTEM OF THE STATE.

EDUCATIONAL PROVISIONS OF THE CONSTITUTION.

Section 6, article VII of the constitution as amended in 1844, provides that the fund for the support of free schools, and all money, stocks, and other property which may hereafter be appropriated for that purpose, or received into the treasury under the provisions of any law passed to augment the said fund, shall be securely invested and remain a perpetual fund, and it shall not be competent for the legislature to borrow, appropriate, or use the said fund, or any part thereof, for any other purpose, under any pretext; the income of this fund, except so much as it may be judged expedient to apply to an increase of the capital, to be annually appropriated for the support of public schools.

In 1875 amendments were adopted (1) forbidding donations of land or appropriations of money by the State or any municipal corporation to or for the use of any society, association, or corporation; (2) requiring the legislature to provide for the maintenance and support of a thorough and efficient system of free public schools for the instruction of all the children in the State between the ages of 5 and 18 years; (3) restricting it from passing private, local, or special laws providing for the management and support of free public schools.

PROVISIONS OF THE SCHOOL LAW.

New Jersey school law, with notes, blanks, and forms for the use and government of school officers, prepared by the State superintendent of public instruction, 1875.

OFFICERS.

A State board of education, State superintendent of public instruction, county superintendents, district school trustees, district clerks, State, city, and county boards of examiners, trustees of the State normal school, and trustees of the fund for the support of public schools are the officers recognized by law.

POWERS AND DUTIES OF THESE OFFICERS.

The State board of education, consisting of the trustees of the school fund and the trustees of the State normal school—these two boards being appointed and constituted as hereafter mentioned—has the power and duty of making suitable by-laws for its own government; of considering the necessities of the public schools and recommending such amendments to the laws as are deemed necessary for perfecting the school system; of appointing the State and county superintendents, the latter subject to approval of the freeholders; of prescribing rules and regulations for teachers' institutes; of ordering repairs to the grounds, buildings, and furniture of the State normal school; of authorizing the payment by the State treasurer, on warrant of the State comptroller, of the incidental official expenses of the State superintendent; and of deciding all appeals from the decision of the State superintendent of public instruction. They are required to make an annual report to the legislature of all matters committed to their care.

The trustees of the school fund—composed of the governor, the president of the senate, the speaker of the house of the assembly, the attorney-general, the secretary of state, (who is *ex officio* secretary of the board,) and the comptroller—are the custodians of the fund for the support of public schools. They are required to appropriate $40,000 annually for the support of the schools, from the proceeds of the school fund, with $60,000 from the revenue of the State. The State treasurer is required by law to report to this board the condition of the school fund on the first day of the meeting of the legislature, and at such other times as they may require.

The State superintendent of public instruction is elected by the State board of education, and holds during the pleasure of the same, provided that no term of office shall exceed three years. He is *ex officio* secretary of the State board of education, president of the Association of School Superintendents, and a member of the State board of examiners, as well as of all county and city boards. It is his duty to supervise all the schools of the State; to be the general adviser and assistant of the county superintendents; to apportion State school moneys to the counties according to their school population; to furnish to the State comptroller, county superintendents, and county collectors an abstract of such apportionment; to forbid the payment of the same to any district in which the school or schools have not been kept according to law; to furnish school officers with a copy of the school laws, with instructions and forms for making reports and conducting school business annexed thereto; to decide, subject to an appeal to the State board, all controversies that may arise under the school laws of the State or under the rules and regulations of the State board of education; to preserve in his office such school books, maps, apparatus, works on education, plans for school buildings, and other articles of interest to school officers and teachers, as may be procured without expense to the State; to file all school reports sent to his office, keep a record of all his official acts, and pre-

serve copies of all his decisions; to report to the State board of education, at its annual meeting in December, a statement of the condition of the public schools and of all educational institutions receiving aid from the State, together with such plans and suggestions for the improvement of the schools and the advancement of public instruction as he may deem expedient. He is empowered and directed to cause county collectors to withhold from delinquent county superintendents any portions of their salaries till their duties are fully performed; to cause county superintendents to do the same by delinquent teachers; and to suspend or revoke the license of any teacher on report of the county superintendent that he is incompetent or inefficient. His salary is $2,000 per annum.

The State board of examiners—composed of the State superintendent and principal of State normal school—has the power of granting certificates to teachers valid in any portion of the State for the grade mentioned, or of revoking the same.

The trustees of the normal school—appointed by the governor, two from each congressional district, the term of one expiring each year—have the control and management of the normal school. The State superintendent is *ex officio* a member of the board. They receive no compensation except for necessary expenses.

The county superintendents are appointed by the State board of education, subject to the approval of a board of chosen freeholders in the counties, and for the same term as the State superintendent of public instruction. It is their duty to apportion school moneys to townships, cities, and districts in the ratio of the number of children of school age; to issue orders on the county school collectors for school moneys; to examine and license teachers; to fix the boundaries of school districts; to appoint trustees for districts which do not elect them; to provide for graded schools; to have a general supervision over the schools; to visit each at least twice a year; to hold county institutes; to appoint students to State scholarships in the agricultural college; to give advice in all controversies under school laws; to constitute, with other county and city superintendents, the State Association of School Superintendents; and to make an annual report, on or before the 1st of October, to the State superintendent, in manner and form prescribed by him.* Their compensation is to be at the rate of ten cents for each child of school age in the county, but in no case less than five hundred nor more than twelve hundred dollars per annum with necessary expenses.

County boards of examiners—consisting of the county superintendent and a number of teachers, not exceeding three, holding first grade certificates—examine all applicants for teachers' certificates. Those receiving the first grade certificates will be allowed to teach in any of the schools of the State, without further examination; those below that grade good only for the county. Their compensation not to exceed $3 and traveling expenses for each quarterly session of the board, with the right to charge each applicant for special examination at other times a fee of $2.

City boards of examiners—composed of a portion of the members of the boards of education—have the power to grant certificates valid in the schools of their respective cities or to recognize the certificates of other cities and issue corresponding ones to the holders.

The school trustees—3 for a district—are elected by the legal voters of the districts for a term of three years. The term of one expires each year, and his successor is elected on the first Monday in September. Women are eligible as well as men. It is their duty to employ teachers, janitors, &c., and fix their pay; to rent, erect, enlarge, repair, or improve school-houses; to prescribe text books in connection with the county superintendent; to suspend or expel pupils; to provide books for indigent children, and to see that the rules of the State board of education are carried out in the schools under their charge. They shall make an annual report to the county superintendent.

The district trustees of each township constitute together an association called the township board of trustees, forming with the county superintendent a sort of township council in respect to school affairs.

District clerks—elected by the school trustees within ten days after their own election, or, in default thereof, appointed by the county superintendent from their number—keep a record of the proceedings and expenditures of the school trustees; annually make a census of all children in their respective districts, and make an annual report to the county superintendent. It is their duty to keep the school buildings in repair and provide necessary fuel and supplies. Their compensation is such as the trustees may allow.

Special laws provide for boards of education in cities.

THE SCHOOLS.

Each district must provide a suitable school building and outhouses, and maintain one school at least five months during the year, to enable such district to draw its apportionment of State school moneys. Two or more districts may establish a graded school, and such school shall be entitled to its *pro rata* share of the school fund. Instruction in these schools must be free to all persons of school age residing in the dis-

* City superintendents are to make like annual reports.

tricts in which the schools are situated. Not more than $20, except such moneys as may be raised in the districts, shall be used for any other purposes than the payment of teachers and the purchase of fuel. School libraries are provided for as well as school apparatus. The system also embraces a normal school, to which each county is entitled to send three times as many pupils as it has representatives in the legislature. The applicants must give a written declaration that it is their intention to qualify themselves for public school teachers and to engage in that employment for two years in this State.

A compulsory law, approved March 27, 1874, requires all parents and guardians, on pain of $20, to cause children under their control, unless incapacitated by their mental or physical condition or prevented by extreme poverty, to attend some public school for at least twelve weeks during the year, six of which must be consecutive, or to be instructed in some private school or at home for the same period.

The State agricultural college forms a department of Rutgers College, New Brunswick. There is no State university.

SCHOOL FUNDS.

A permanent school fund of about $800,000, affords a revenue in aid of public schools. This, amounting to about $40,000, is supplemented by an annual State appropriation of $60,000, and by the proceeds of a State tax of two mills on the dollar of all taxable property, making about $1,240,000 annually in aid of township, district, and city taxes for public schools.

ELEMENTARY INSTRUCTION.

EDUCATIONAL PROGRESS.

The wonderful progress made during the last decade, in matters of education and educational facilities, is due to the wise provisions of the school law enacted in 1867, and made still better by the amendments of 1870. The State board of education, composed of earnest, judicious men, has exercised a thorough and careful supervision over the educational interests of the State. The work of the county superintendents has been carefully made out for them and a strict account required of its performance. The constituting of a State board of education has been the means of unifying the school work of the State and making it greatly more effective.

The county superintendents have, as a body, been earnest, faithful men, have worked up an enthusiasm in the minds of the people, and have secured a far better class of teachers for the children. To their constant, persistent efforts may be traced the wonderful improvement in the character of the school-houses, most of the unsightly, dilapidated structures having disappeared, and neat, pleasant, comfortable ones having taken their places.

To the people themselves great credit is due. As soon as legal barriers were taken out of their way, they came forward nobly, and by vote determined to raise the necessary means to obtain better facilities for the instruction of the children. Good, approved, properly educated teachers became in demand, and good houses with proper furniture and educational appliances were soon in course of construction.—(Report of Superintendent Apgar for 1875, p. 20.)

SCHOOLS.

An increase of 520 schools, kept open for nine months or more during the year, is one of the most gratifying results of the decade. Most of the schools that kept open for only a few months were in the rural and sparsely settled districts. This was, however, as disadvantageous to the inhabitants of those districts as the want of educational facilities to the agricultural population of England. It is a well known fact that it is among this class of England's population that the greatest ignorance prevails, and that the efforts of her great reformers have been turned, the last few years, mainly toward the educational improvement of this class. The school law of New Jersey, enacted in 1867 and amended in 1870, has secured for the numerous rural districts of the State an open school for nine months and a good public school education for every child, thus guaranteeing immunity from ignorance and its train of evils.—(Report of Superintendent Apgar for 1875, p. 19.)

SCHOOL REVENUES.

The total amount for maintaining the schools, from the State appropriation, township tax, tuition fees, and other sources in 1865, was $646,398.06. The total amount from State appropriation, township tax, district tax, and surplus revenue in 1875 is $1,762,596.35, an increase of $1,116,198.29. The total amount for building and repairing in 1865 was $47,096.17. The total amount for the same purposes in 1875 was $916,252.18, an increase of $869,156.01. Thus it will be seen that, when the people were permitted to raise what they believed to be necessary for the support of public schools, they will-

ingly taxed themselves double, treble, even twenty times as much for certain school purposes. Although the State appropriation, including the two mill tax, is now twice as great as the sum then raised from State appropriation, township tax, tuition fees, and other sources, the citizens tax themselves, in addition, by district and city tax, for the maintenance of the schools, to an amount nearly equal to the entire township tax of that year, besides raising $548,869.17 for building and repairing purposes.—(Report of Superintendent Apgar for 1875, p. 18.)

SCHOOL-HOUSES.

The improvement in the condition of school property since 1865 may be seen from the statement that the number of school-houses classed as "very poor" has decreased 77; the number of "poor," 234, and the number of "medium," 53; while the number of "good" has increased 148, and of "very good," 216. Moreover, as greater exactness is now required in reporting the condition of school property, it is fair to believe that the change is even greater than is exhibited, many of those heretofore classed as medium, or even good, being now classed as poor, or very poor.

During the year, 40 new school-houses have been erected, 11 less than last year, and 73 old buildings have been repaired, 9 less than last year. The amount of money expended for building and repairing has been $613,237.84, and the amount ordered to be raised for the same purpose next year is $548,869.17. The total valuation of the school property is $6,287,267, an increase of $286,535 over that of last year.

The number of school-houses denominated very poor decreases again this year, being 101, 11 less than last year; those denominated poor, 116, a decrease of 31; medium, 285, a decrease of 14; good, 473, an increase of 44; and very good, 372, an increase of 19. —(Report of Superintendent Apgar for 1875, p. 11.)

TEACHERS.

The increase in the number of teachers in the ten years is equal to one-half of the total number in 1865. The number of female teachers has increased much more than that of males. This is owing to the fact, recognized all through this land, that special endowments are given by the Creator to women for the training of the young. While the number of female teachers has increased in greater proportion than that of the males, their compensation has not made the same proportionate advance, the increase of salary per month paid to them being $13.50, against that of $27.82 to males.—(Report of Superintendent Apgar for 1875, p. 20.)

TEACHERS' CERTIFICATES.

Of first grade county certificates, 75 have been issued to male teachers and 37 to females; of the second, 94 to males and 127 to females, and of the third, 531 to males and 1,071 to females.

It is gratifying to note the increase in the number of first and second grade certificates, being an increase of 16 of the former over the number last year, and 55 of the latter. The excellent effect of the examinations required to be passed in order to obtain these certificates is manifest through the whole State. Teachers are stimulated to study and to prepare themselves more thoroughly for their work.—(Report of Superintendent Apgar for 1875, p. 10.)

ENROLMENT AND ATTENDANCE.

The percentage of total enrolment has decreased this year, being 1 per cent. less than last; the attendance for ten months shows a decrease of 2 per cent.; the attendance between eight and ten months and between six and eight months, an increase each of 1 per cent. The percentage of attendance varies but little from that of last year. If the number attending private schools be added to the number attending public schools, it will be seen that 75 per cent. of the total school census attended school last year. Taking away the number of children between the ages of 5 and 7 years, often considered by parents too young to go to school, and the number between the ages of 16 and 18 years, generally considered old enough to work all the year round, it will be seen that nearly all the children between 7 and 16 years of age attend school part of the year. That is true for the greater part of the State. It is only in the manufacturing centres where the exception occurs.—(Report of Superintendent Apgar for 1875, p. 13.)

KINDERGÄRTEN.

Reports have been received from 13 Kindergärten, 4 of them located in Hoboken, 4 in Newark, and 1 each in Carlstadt, Hackensack, Montclair, New Brunswick, and Plainfield. Four of these were organized in 1875, 2 each in 1874 and 1872, 3 in 1871, and 1 each in 1870 and 1873. In the 13 schools there were 28 teachers, 12 of whom report a total attendance of 510 pupils. The one in Carlstadt is a department of the public school, preparatory to the elementary one. It has proved a valuable preparation, especially in the development of the perceptive faculties, correct speaking, writing

and drawing, sense of order, &c. The plan of studies in the Kindergarten has been made out with special reference to the above-mentioned purpose. "It is gratifying," says the principal, "to perceive the politeness and civility, even gracefulness, of the Kindergarten pupils; their cleanliness, ready use of their senses, and quickness in expressing ideas."—(Reports to the United States Bureau of Education, 1875.)

CITY SCHOOL SYSTEMS.

CAMDEN.

Organization.—A board of education and city superintendent of schools.

Statistics.—Estimated present population, 36,000; children of school age, (5-18,) 9,000; enrolled in public schools, 5,000; estimated enrolment in private and parochial schools, 1,000. Number of days the schools were taught, 230; average daily attendance, 4,500. Number of teachers in public schools, 100; salaries of teachers, $400 to $1,600; salary of superintendent, $900; receipts for public schools, $152,373.37; expenditures on them, $138,059.02.—(Report of Superintendent H. L. Bonsall, for 1875.)

ELIZABETH.

Organization.—A board of education and city superintendent of schools.

Statistics.—Present population, 25,000; children of school age, (5-18,) 7,145; enrolled in public schools, day and evening, 4,639; average attendance, 3,987; teachers employed, 123; salaries of these, $400 to $1,600 in day schools; $160 to $240 in evening schools; salary of superintendent, $350. Number of school buildings under public school system, 13; of rooms for both study and recitation, 41; for recitation only, 5. Value of grounds, buildings, and furniture, $116,500; total receipts for public schools, $46,176.90; total expenditures on them, $42,552.68; cost per capita on average daily attendance, $18.92; days schools were taught, 201.

Estimated enrolment in schools other than public, 2,300; buildings for such schools, 19, with 46 rooms used for both study and recitation, and 12 used for recitation only. —(Report of Superintendent E. D. Smith, for 1875.)

JERSEY CITY.

Organization.—A board of education and city superintendent of schools.

Statistics.—Population, 116,883; children of school age, (5 to 18,) 38,068; enrolled in public schools, 18,827; average daily attendance, 9,583. Teachers in public schools, 263; salaries of these, $260 to $2,316; salary of superintendent, $3,500. School buildings, 20; rooms used for both study and recitation, 233; for recitation only, 0. Sittings for study, 11,133. Total receipts for public schools, $235,150; total expenditures on them, $262,310; average expense *per capita* on attendance, $27.26. Number of days schools were taught, 199.

Estimated enrolment in private and parochial schools during the year past, 7,530.—(Report of Superintendent W. L. Dickinson, for 1875.)

NEWARK.

Official staff.—A board of education of 30 members, 2 for each ward, and city superintendent of schools.

Statistics of schools.—Population, 120,000; children of school age, (5 to 18,) 35,125; enrolled in public schools, including evening and normal schools, but taking in none under 6 years old, 18,197; average daily attendance, 10,940; number of sittings for study, 12,400; number of rooms used for both study and recitation, 263; used for recitation only, 236; total, 499. Number of teachers, including principals, 280; salaries of these, $250 to $2,400; salary of superintendent, $2,500. Total receipts for public schools, $209,677; total expenditure on them, $261,616; average expense *per capita* on attendance, $18.97. Number of days the schools were taught, 206.

Estimated enrolment in private and parochial schools, 7,056.—(Report of Superintendent George B. Sears for 1875.)

NEW BRUNSWICK.

Organization, as in the other cases, a board of education and superintendent of city schools.

Statistics.—Estimated population, 18,000; children of school age, 5,075; enrolled in public schools, 2,395; average daily attendance, 1,562. Teachers in public schools, 41; salaries of these, including principal, $300 to $2,500, the latter being that of the superintendent, who is principal of all the public schools. His male vice-principal in the high school gets $1,400; female, $1,000. Number of school buildings, 6; rooms in these for both study and recitation, 39; for recitation only, 1. Total receipts for public schools, $38,993; expenditures on them, the same; cost *per capita* on attendance, $16.25. School days, 206.

Estimated enrolment in private and parochial schools, 1,234; school buildings for

these, 12; school rooms, 30; teachers, 30.—(Report of Superintendent H. B. Pierce for 1875.)

In the report of the board, it is said that heating by steam has been found on trial to be the most economical and efficient mode. The "course of study" pursued since 1867 is gently criticised. Increased regularity in school attendance is noted, from 1866, when 2 pupils did not miss a day, to June, 1875, when a list was published giving the names of 195 who had been present every day during the school year. One of these had been 7 years without loss of a day; 4, for 6 years; 12, for 5 years; 17, for 4 years; 20, for 3 years; and 44, for 2 years. A better attendance on the higher grades and an increased disposition to complete the full course of study are also declared in the report.

PATERSON.

Organization, a board of education of 16 members, 2 for each ward, (one-half going out each year,) with a city superintendent of schools.

Statistics.—Population, 39,000; children of school age, 14,028; enrolment in public schools, 8,949; average enrolment, 5,621; average attendance, 4,281; per cent. of attendance on enrolment, 78.8. Teachers, including principals, 100; salaries of these, $375 to $1,500. Salary of superintendent, $2,000. School buildings, 10; schools and departments, 22; rooms for both study and recitation, 88; for recitation only, 3. Receipts for public schools, $94,957; expenditures on them, the same. Expense *per capita* on average attendance, $17.50. Days schools were taught, 214.

Estimated enrolment in private and parochial schools, 1,200. Number of buildings and teachers not given.

Special instruction.—Two teachers of music were employed by the board, with results said to be commendable, but not yet all that could be desired. Five evening schools have been maintained, with an enrolment of 1,106, somewhat less than the preceding year, but with an average attendance of 548, somewhat better than then. A city normal school has also been kept up, which all teachers employed by the board, below principals of grammar schools, were required to attend, and to which a number of other persons desiring to qualify themselves for teaching were admitted. This has been a source of supply for the schools, as well as a means of improvement to those already employed in them. The attendance on this school and the interest in its exercises are said to have been more satisfactory than in any previous year.—(Report of board of education and of Superintendent W. J. Rogers, for 1874–'75.)

TRAINING OF TEACHERS.

STATE NORMAL SCHOOL, TRENTON.

This school offers a thorough three years' course of instruction, upon completion of which certificates are granted that authorize students to teach in the common schools of the State without further examination. Drawing is taught here very extensively. Vocal music is taught thoroughly, and is obligatory. Instrumental music is optional. The school has connected with it a model school and boarding houses, erected by the State, where cheap board can be secured by those who desire it. There is a cabinet and apparatus for illustration of natural philosophy, a chemical laboratory, and a library of 2,500 volumes. Tuition is free, and there are State scholarships of $100 each for specially qualified students. The amount of State appropriation for 1875 was $15,000. The number of students in attendance was 269, of whom 39 were young men and 230 women.—(Return to Bureau of Education, 1875, and report of trustees.)

FARNUM PREPARATORY SCHOOL, BEVERLY.

In this school, a feeder of the State Normal School, the average enrolment for the year was 125.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The information in respect to the public high schools of the State is not as full as could be wished. Some note is made of the existence of such schools, or of higher departments of graded schools corresponding to them, in the reports of city superintendents. According to these, such schools exist in Atlantic City, Gloucester, Hoboken, Newark, Orange, Passaic City, and Phillipsburgh. In some of these the course of instruction is partially indicated. In the higher department at Gloucester City instruction is given in all the higher English branches, and students are fitted for business. In Hoboken there are two high classes engaged in the study of the higher English branches, including ancient history, rhetoric, and English literature. The classical course in the high school at Phillipsburgh prepares young men to enter the freshman class in full standing in any American college. The board of education at Newark, in 1875, made the terms of admission from the grammar schools to the high

more difficult than formerly, the minimum per cent. on examination being fixed at 70 instead of 66⅔ per cent. The attendance, however, has been greater than at any former period of its history, numbering about 450 pupils.—(Report of State superintendent, 1875, pp. 3–24.)

ACADEMIES AND SEMINARIES.

Forty-one out of 50 such schools for secondary training report 332 teachers and 2,907 scholars, of whom 419 are in classical courses, 404 in modern languages, 282 preparing for a classical course in college, and 118 for a scientific course. Drawing is taught in 31 of these schools, vocal music in 29, instrumental music in 32. Eleven have chemical laboratories, 19 philosophical apparatus; and 15 report libraries of 100 to 4,000 volumes, the total number of books in the 15 libraries being 13,950.

One of these schools has furnished 15 teachers to the public school system of New Jersey and 10 to that of New York.—(Returns to Bureau of Education, 1875.)

PREPARATORY SCHOOLS.

Four schools for the preparation of pupils for college report a total of 24 instructors and 266 pupils, of whom 110 were preparing for a classical and 32 for a scientific course in college. Three report chemical laboratories; 2, apparatus for the illustration of natural philosophy, and 1 uses the cabinet and apparatus of the Stevens Institute of Technology. Two have a gymnasium, but only 1—Princeton Preparatory School—reports even the beginning of a library. This was commenced in 1874, and now numbers 30 volumes. In this school the continental method of pronunciation is used in both the Greek and Latin languages, the accents being observed in the pronunciation of the former. The same method, nearly, is used in Rutgers College Grammar School, the Greek pronunciation taught there being the same as that given in Goodwin's Greek Grammar. In the two remaining schools the ordinary English pronunciation is used in the Latin, and the Continental in the Greek. For other particulars see Table VII.

To the above may be added 93 pupils in the preparatory departments of colleges, 42 of them preparing for a classical collegiate course and 38 for a scientific course.—(Returns to Bureau of Education, 1875.)

BUSINESS COLLEGES.

Three business colleges, located respectively in Elizabeth, Newark, and Trenton, report a total of 20 instructors and 706 pupils. In addition to the usual English and business branches, phonography, German, French, and Spanish were taught in one of these colleges, and German in another. For further particulars see Table IV.—(Reports to the United States Bureau of Education.)

SUPERIOR INSTRUCTION.

COLLEGE OF NEW JERSEY, PRINCETON.

This oldest college of the State, among the oldest of the country, has thoroughly renewed its youth within a few years past. A visit to it in 1875 showed that, besides the beautiful new buildings of the John C. Green Scientific School and the magnificent new library hall, unsurpassed in all the country, the old buildings had been so thoroughly repaired and beautified as almost to seem new ones, and in respect of comfort to be such. New window and door casings, new windows and new doors, large renewal of the flooring, addition of closets and other conveniences, with a fresh pointing of all dilapidated masonry, were among the improvements noticeable in the old halls, making them harmonize in general appearance quite fairly with the plainer one of the Green school buildings, which is comparatively simple in its ornamentation, though built substantially of good brown stone. The other Green school building, Norman in its style, with a fine tower and rich adornments, furnishes as beautiful a college lecture room as well may be, the seats rising in amphitheatric form, each with a little note table or arm attached, and each giving the student seated in it a full view of the lecturer, of his table, and of the chemical, philosophical, or other illustrations he may present. In the rear of the lecture room, and thus again in full view of the students, is the splendid apparatus of the school, the glass inclosure of the large room in which it is contained, allowing opportunity for study of it without exposing it to handling or to dust. The old college has reason to rejoice indeed at the favor it has found and at the liberal gifts bestowed on it since the entrance of Dr. McCosh upon the presidency. In its buildings, in the aspect of its grounds, in its well appointed and splendidly housed library, and in the mingled air of modern freshness and grave age which it presents, it comes now very near our ideal of what a high class college ought to be.

According to the catalogue of 1874–'75, the faculty of the college, with Dr. McCosh at the head, consisted then of 18 professors and tutors and 1 lecturer, with 1 vacant chair. The list of students contained the names of representatives from 28 States and 2 Territories, Syria and Japan helping also to swell the list. One specially interesting

feature is the existence of 6 fellowships, meant to reward students of unusual merit and afford them an opportunity for prosecuting studies beyond those of the college course. These fellowships are in 4 cases of the value of $600 and in 2 others of $250 each for the year during which they may be held. They are awarded after special examination in certain lines of study to which each is devoted, and are conferred under the conditions that no student shall compete for more than one and that the successful student shall pursue, under direction of the college faculty for one year, the line of study from which the fellowship takes its name. During this time he may reside at the college or elsewhere; but if elsewhere in the United States must personally report himself at Princeton from time to time, and, if in a foreign country, must furnish, at regular intervals, written reports of what he is doing. From the return of statistics for 1875 it appears that there were then six post graduate students, probably the ones on these fellowship foundations.

RUTGERS COLLEGE, NEW BRUNSWICK.

The standard of admission at Rutgers has for years been high, and the instruction generally thorough; but the eminently conservative spirit of the denomination by which it is controlled (the Reformed) has been unfavorable to any extensive change in either the entrance examinations or the collegiate course. Now, however, it not only shows signs of sympathy with the progressive movements of the day, allowing considerable freedom of selection of its studies and showing some partial students on its roll, but is also said to have in contemplation an increase of the demands for admission to its classes and an arrangement of post graduate studies for such as have completed the old course. The movements in these directions have not yet taken such definite shape as to be published, but it seems probable that such publication may be made in season for the report of 1876.

At present the college has four courses, the ordinary classical collegiate; the partial course of two years for the scientific school, the groundwork of which is a thorough English course, with French, mathematics, and political science; then the full scientific course, which after two years becomes elective, one branch being chemistry, the other engineering; and, finally, a post graduate scientific course in chemistry, which doubtless will have its students in due time, but does not present any in it yet.—(College catalogue and return for 1875.)

ST. BENEDICT'S COLLEGE, NEWARK.

This is a comparatively new institution, founded in 1869, under the auspices of Most Reverend Archbishop Bailey, now of Baltimore, then Roman Catholic bishop of Newark. It is conducted by the Benedictine Fathers, and is designed to give young men a classical or commercial education, to prepare for which it has a preparatory department.—(Catalogue for 1874–'75.)

SETON HALL COLLEGE, SOUTH ORANGE.

This institution, also Roman Catholic, owes its origin, like St. Benedict's, to Archbishop Bailey, by whom it was first established, at Madison, in 1856. After four years of residence there it was removed to its present location at South Orange, 16½ miles from New York and 6½ from Newark. Here it has buildings of great architectural beauty on an elevated and commanding site, overlooking a beautiful country. The college is under the immediate supervision of the Roman Catholic bishop of Newark, and is conducted by secular priests, assisted by lay professors. The domestic arrangements are under the care of the Sisters of Charity, by whom every needed attention is paid to the neatness and cleanliness of the establishment, as well as to the nursing of the sick. The aim is to train at once the moral, intellectual, and physical being of the students, health, manners, and morals receiving constant attention. In close connection with the scholarly training given, all pupils are instructed in the doctrines of the Roman Catholic Church, as well as in its practices; while in a large gymnasium, well provided with the necessary apparatus, they are drilled in calisthenics and gymnastics.—(Catalogue of the college and return for 1875.)

BURLINGTON COLLEGE, BURLINGTON.

Founded many years ago, under promising auspices, by Right Reverend G. W Doane, then the Protestant Episcopal bishop of New Jersey, this institution has for some reason failed to reach a true collegiate rank, and, though well conducted and well officered, still exists only in a preparatory department, with 9 instructors and 58 male students. In a return for 1875 these numbers are increased to 39 and 233 by adding in the teachers and students of St. Mary's Hall, adjoining, which is under the same general oversight, but which appears under another head in Table VIII, among institutions for superior instruction of young women.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

Rutgers Scientific School, a department of Rutgers College, was founded upon the congressional grant for the benefit of agriculture and the mechanic arts. The course of study lasts four years. Tuition is $75 per annum, but there are 40 State scholarships entitling the possessors to the privileges of the school free. As the number of students attending is but 46, and the income from tuition fees as reported about $1,200, it would appear that only 30 of the State scholarships are at present filled.—(Report to the United States Bureau of Education, 1875.)

The course of study in this department, having been referred to under the college, does not need further notice here.

The scientific department of Princeton College was established for the purpose of giving a thorough scientific training, together with a liberal education, to those who may not choose to devote such attention to classical and philosophical studies as is required in the academic course. The students in this school are regularly engaged in laboratory, museum, and field work. A great improvement was made in the year 1874–'75, the second building for this school having been completed in time for the opening of the college in that year. This building, a beautiful structure, stands on the eastern portion of the grounds, facing the campus, and no expense or labor has been spared to make the accommodations complete in every respect.—(Philadelphia Evening Telegraph, June 30, 1875.)

Additional to all its previous large indebtedness to Mr. John C. Green, for buildings, apparatus, and endowment fund, this department has in the last year fallen heir to a legacy of $100,000, left it by the will of Mr. Green, for the endowment of a subdepartment of civil engineering.—(Return to Bureau of Education for 1875.)

The Stevens Institute of Technology, at Hoboken, was organized in 1871. Besides the regular course of four years, there is a post graduate course of study. There are 12 scholarships established by the city, and 20 other free scholarships are provided for. The library numbers about 5,000 bound volumes besides 2,000 unbound pamphlets.—(Report to United States Bureau of Education.)

The Philotechnic Institute of Camden, N. J., offers a comprehensive course of instruction in the sciences, languages, and the principles of the arts. The technical department affords opportunities for acquiring skill in several mechanic arts without the drudgery imposed on learners in ordinary workshops. Among the studies are botany, zoölogy, mineralogy, drawing, Greek, Latin, French, and German.—(Advertisement in Evening Visitor, published and printed at the institute.)

THEOLOGY.

Drew Theological Seminary, at Madison, (Methodist Episcopal,) has a regular course of three years and a preliminary one of two for those who have not received a collegiate training. Students who have the degree of A. B. or its equivalent in classical and scientific culture, and who complete the seminary course of three years and pass a satisfactory examination, receive the degree of B. D. Elocution is taught systematically and by progressive courses. Special instruction is given to those desiring it in the Arabic, Syriac, and Sanskrit, also in German, French, Italian, and Spanish.—(Catalogue, 1874–'75.)

The German Theological School, Newark, (Presbyterian,) has a course of study divided into two departments, theological and academic, of five years' duration, designed to furnish a compact course of studies usually taught in the academy, the college, and the seminary.—(Catalogue, 1874–'75.)

Theological Seminary, Princeton, (Presbyterian,) offers to college graduates a very thorough four years course of instruction, embracing a careful study of the Scriptures, both of the Old and New Testament, including a comprehensive survey of the various books in their individual plan and contents and in their relations to one another and to the general scheme of which they form a part. Hebrew is taught throughout the course, but the grammatical study of the language as such is confined mainly to the first year. The course also comprises exegetical theology; biblical and ecclesiastical history; ecclesiastical, homiletical, and pastoral theology; Christian ethics and apologetics, and rhetorical exercise and sermonizing. Special instruction is given in the art of elocution. The Chaldee, Syriac, Arabic, and Sanskrit languages are optional studies.—(Catalogue 1875–'76.)

The renewal previously mentioned as noticeable in the college buildings, is observable in those of the seminary also. The old halls were in process of repair in 1875, so complete as to make them substantially equal to new buildings, adding greatly to the comfort of accommodation for the students, as well as to the attractiveness of these buildings to the eye. And then, as evident success attracts attention and secures an increase and continuance of gifts, two liberal friends of the seminary in New York are said to have since offered to put up for it a new hall, to cost $100,000, and to meet all needs as to accommodation for some years, while $45,000 additional comes to it from the late John C. Green, esq., the great benefactor of the college, and other friends.—(Return to Bureau, 1875.)

The Theological Seminary of the Reformed Church in America, at New Brunswick, is under the control of the general synod of that church. Tuition is free. The library numbers more than 20,000 volumes, and is housed in an elegant and spacious fire-proof building. The seminary building, erected in 1856, with moneys amounting to $30,700 donated by Mrs. Anna Hertzog, of Philadelphia, contains a chapel, library, reading room, study rooms, dormitories, dining rooms, laundry, and bath room. Students from every denomination of Christians are admitted. The course of instruction lasts three years.—(Catalogue, 1875–'76.)

a College farm for experimental purposes.

SPECIAL INSTRUCTION.

NEW JERSEY STATE REFORM SCHOOL, JAMESBURGH.

In 1865 the legislature of New Jersey enacted a law providing for the establishment of a reform farm school for juvenile delinquents, to which boys between the ages of 8 and 16 were to be sent, with a view to their instruction and amendment. A farm

of 490 acres was purchased in 1866, near Jamesburgh, in Middlesex County. Buildings were erected and the school opened by the reception of the first pupil, July 6, 1867. There are now nearly 200 scholars, who are instructed in the elementary branches of learning, and accustomed to agriculture and other varieties of labor, with an allowance of time for youthful recreation. October 31, 1875, there were 192 in the institution, the highest number during the year preceding having been 202, and the average number for the year 186¾.

When considered to be fitted for removal, (in not less than a year after admission to the school,) good homes are sought for the boys, either with their friends or by indenture to proper persons, the board of trustees continuing to be their guardians during their minority.

The deportment of the pupils is said to be good, the gentle though strict discipline of the officers being found sufficient to secure orderly conduct. A refusal to obey proper commands is almost unknown, and the opinion is expressed that the steady enforcement of rightful authority from the cradle would save many parents the anguish of having children in such institutions.—(Report for 1875.)

STATE INDUSTRIAL SCHOOL FOR GIRLS.

The discipline here, too, is mild but firm, punishment of any kind beyond confinement in the dormitory being rarely found necessary. The uniform kindness with which the girls are treated wins them to cheerful submission, and begets in hearts but little accustomed to such kindness a frequent genuine warmth of love. The girls take turns in the different departments of housework; make their own clothes and keep them in repair; do such plain sewing as is sent in from without, and are taught, each afternoon, such branches of study as will be of practical use to them through life.

At the close of 1873–'74 there were 19 inmates of the school. Ten have been admitted during 1874–'75, 9 indentured, and 2 discharged; remaining, 20. Satisfactory accounts are received from most of those who have been indentured, and the managers feel that in the record of their established virtuous lives there is evidence that the care bestowed upon them in the school has not been without some blessed fruit.—(Report for 1875.)

EDUCATIONAL CONVENTION.

STATE TEACHERS' ASSOCIATION.

The twenty-second annual meeting of the New Jersey State Teachers' Association was held in the hall of the Normal School, at Trenton, August 24 and 25, 1875. After the usual words of welcome and responses thereto, the president, Rev. F. R. Brace, delivered an address on "The relation of the State to education," and Prof. J. A. Lippincott, of Dickinson College, one entitled "Method of limits." Addresses were also delivered by Prof. J. W. Dickinson, of the Massachusetts Normal School, on "Method in teaching;" by Dr. Alexander Shiras, of the Bureau of Education, Washington, and Hon. J. P. Wickersham, State superintendent of schools, Pennsylvania, on "Preparation for the Centennial;" by Prof. F. D. March, of Lafayette College, on "Reform in spelling;" by Dr. Hunt, of Metuchin, on "Physiology and sanitary laws;" and by Miss Julia M. Thomas.

The meeting was well attended by an intelligent looking set of teachers; the arrangements were good, and the exercises interesting. The officers elected for 1875–'76 were M. H. Martin, of Trenton, president; John M. Enright, of Freehold, first vice-president; Miss Clara Hall, of Trenton, second vice-president; H. B. Pierce, of New Brunswick, corresponding secretary; G. O. T. Taylor, of Essex, recording secretary; and William N. Barringer, of Newark, treasurer.—(Trenton Daily State Gazette, August 25, 26, 1875.)

OBITUARY RECORD.

MR. E. A. STILES.

For the first time since the enactment of the law creating the office of county superintendent, death has entered this corps of school officers and taken one of their number. Mr. Stiles was elected to office in 1869. He performed its duties faithfully, was beloved by all who knew him, and his death occasioned profound regret.

The parents of Mr. Stiles moved from Morris County into Vernon Township when he was but two years old. Nine years later, in 1819, they settled on the farm where Mr. Stiles died, and where he spent the greater part of his active years as principal of Mount Retirement Seminary. This school arose from the humblest beginning. In 1833 a half dozen boys were instructed in a room of the farm house. But the teacher had found his calling, and as he developed with his work his school rapidly increased to a size and reputation far beyond his early hopes. For many years there was an average of 75 pupils under his tuition, and it was in full vigor when he relinquished its control in 1865. In 1869 he was appointed to the superintendency of Sussex County, and the constant growth in all matters material pertaining to the educational system of the county, the gradual elevation of public sentiment, the increased efficiency of teachers, all bear witness to the success of his administration. For more than forty years he has been devoted to the work of education, and, whether

estimated by his capability or his devotion or ample success, he well deserves the title of educator. He had excellent common sense, and a most reliable judgment, and behind all his words and actions was a character so far beyond reproach that his purity of motive was never questioned.—(Report of State superintendent, 1875, pp. 85, 86.)

LIST OF SCHOOL OFFICIALS IN NEW JERSEY.

ELLIS A. APGAR, *State superintendent of public instruction, Trenton.*

MEMBERS OF THE STATE BOARD OF EDUCATION, 1875–'76.

Name.	Post-office.
Joseph D. Bedle, governor	Jersey City.

SCHOOL SYSTEM OF THE STATE.

CONSTITUTIONAL PROVISIONS.

Article IX, section 1 of the constitution, as amended in 1846, provides that "the capital of the common school fund, the capital of the literature fund, and the capital of the United States deposit fund shall be respectively preserved inviolate. The revenues of the said common school fund shall be applied to the support of common schools; the revenues of the said literature fund shall be applied to the support of academies; and the sum of $25,000 of the revenues of the United States deposit fund shall each year be appropriated to and made a part of the capital of the said common school fund." Subsequent amendments have not affected these arrangements.

PROVISIONS OF THE SCHOOL LAW.

General School Law of the State of New York, 1875, with amendments of June 29 of that year, and Randall's History of the Common School System of New York.

OFFICERS.

A board of regents of the university, a State superintendent of public instruction, a deputy superintendent, school commissioners for counties and parts of counties, boards of education for cities and superintendents of city schools, town clerks, with district trustees, clerks, and librarians, form the official staff of the State system.

POWERS AND DUTIES OF THESE OFFICERS.

The board of regents of the university—instituted in 1787—was at first empowered to incorporate academies and colleges, and now has, in addition, a general supervision of the education given in the literary and medical colleges of the State, which together form the university, and of that in academies and academical departments of union schools, which all are preparatory schools for it. Both these classes of institutions are subject to the visitation of the regents, and must make to them annual reports of their property and their systems of instruction and discipline. The board has also supervision of the State museum of natural history and of the State library, as ideal parts of the university; of the instruction of common school teachers in academies; of the distribution of the literature fund to these for such instruction; of appropriations for the purchase of books and apparatus for their use, and of preliminary academic examinations to determine who of the pupils entering the academies and academic departments of free schools are most worthy of assistance. The tenure of office of the regents is for life. They number 23 in all, 19 being elective by joint ballot of the two branches of the legislature, and the remaining 4 being the governor, lieutenant-governor, secretary of state, and superintendent of public instruction, who are members *ex officiis*.

The State superintendent of public instruction is elected like the regents, by joint ballot of both houses of the legislature; holds office for three years; has a general supervision of the schools of the State, with advisory control of their management, discipline, and course of instruction; and determines finally, on appeal, all controversies arising under their local administration. He apportions and distributes the public school money; examines its supplementary apportionment among the several districts by the commissioners, and supervises its application to its legitimate purposes, through the several officers charged with its disbursement. He issues, upon examination instituted by himself, certificates of qualification to approved teachers, valid until revoked, in all the counties of the State; and may issue temporary licenses to teach, limited to any school commissioner district or school district; or revoke, for cause, licenses granted by himself or others. It is his duty to visit, as often as is consistent with his other duties, the common schools of the State, to inquire into their course of instruction, management, and discipline, and advise and encourage pupils, teachers, and school officers, though he may delegate to citizens of a county this duty of visitation for the schools of that county, they reporting to him the result. He is charged, too, with the general control, visitation, and management of teachers' institutes in the several counties, the employment of teachers and lecturers therein, and the payment of the expenses incurred by the district commissioners in conducting the exercises of them; with the

appointment of State pupils to the institutions for the instruction of the deaf, dumb, and blind, upon the certificates of the proper local officers; with the selection and appointment of pupils for the several State normal schools, and the general supervision, direction, and management of these; with the charge of the several schools for Indian children within the State; with the compilation of full abstracts of the reports of trustees and commissioners of the several school districts; and with the preparation of an annual report to the legislature of the condition of the schools and institutions subject to his supervision, said report to contain recommendations of such measures as will, in his judgment, contribute to their welfare and efficiency. He is *ex officio* a regent of the State university and chairman of the regents' committee on teachers' classes in academies, a member of the board of trustees of the State Asylum for Idiots at Syracuse, the People's College at Havana, and the Cornell University at Ithaca. For the performance of his duties he receives an annual salary of $5,000, and is allowed $3,000 annually for a deputy and $9,000 for such clerks as he may need, with $500 for traveling expenses.

School commissioners.—These, to the number of 112, are elected triennially by the people at the general election in November, and hold office for three years from the 1st day of January next after their election. They have supervision over the schools of districts which in some cases include a county, in others only the half or third of one. They are to ascertain, and if need be rectify, the boundaries of school districts within their jurisdiction; to visit and examine the schools as often in each year as shall be practicable; to inquire into their management, course of study, mode of instruction, text books, and discipline, as well as the condition of the school-houses, grounds, and outbuildings; to examine the district libraries; advise with and counsel the trustees; recommend text books and courses of study; direct repairs or alterations of school-houses, or condemn these if unfit for use; examine and license teachers for their districts, or revoke such licenses for proven cause; take affidavits in matters relating to schools; report testimony in any case of appeal to the superintendent; apportion among the school districts within their supervision the amount of public money belonging to each one; report to the superintendent up to October in each year all needed information in relation to the schools; and in general use their utmost influence and efforts to promote sound education, elevate the character and qualifications of teachers, improve the means of instruction, and advance the interests of the schools under their care. Their salaries are $800 annually, with $200 more for expenses.

Boards of education in cities and the city superintendents who act as executive officers for these have essentially the same duties for the cities they represent as school commissioners for their districts.

Town clerks of each town have it as a portion of their duties to keep carefully all books, maps, papers, and records of their office touching common schools; to report to the supervisor any loss or injury of these; to receive from him the certificates of the apportionment of school moneys to their towns, and record them in a book kept for the purpose; to notify forthwith the trustees of the school districts and separate neighborhoods of the filing of each such certificate; to see that the trustees deposit with them their annual reports within the time prescribed by law, and to deliver these to the school commissioner; to furnish to the commissioner the names and addresses of school district officers; to distribute to the trustees all blanks and circulars forwarded to them by the superintendent or commissioner; to receive, record, and copy, for the State superintendent, the supervisors' annual account of the receipts and disbursements of school moneys for their towns, and the descriptions of school districts and neighborhoods within the town; to act, when legally required, in the erection or alteration of a school district, and to receive and preserve the books, papers, and records of dissolved school districts, ordered to be deposited in their offices.

School district officers.—The territory of the State has been divided into upward of 11,000 districts, each averaging about four square miles. In these districts, at the annual district meetings, on the second Tuesday of October, the legal voters elect a trustee of the district schools, a district clerk, a collector, and a librarian.

The trustee may be elected for a term of one year or three, in which last case he forms one of a board of three trustees, one-third of whose *personnel* is changed by the annual election. The duties of the trustees are to call special meetings of their district; to give due notice of special, annual, or adjourned meetings; to make out tax lists for every district tax voted at such meetings, with warrants to the collector for the collection of the same; to purchase or lease sites, and build, hire, or purchase school-houses; to have the custody of these, with the charge of keeping them in repair, and furnishing them, as well as of insuring them and the district library, when so ordered; to contract with and employ teachers, excluding unlicensed ones and relations to themselves within two degrees by blood or marr age, and to pay these teachers each term. Between the first and second Tuesdays of October in each year they are to make and direct to the school commissioner a written report, bearing date October 1, setting forth the time during which the schools of their districts have been taught the preceding year by qualified teachers, the sums paid for the wages of such teachers,

and for school books and apparatus, out of the State money; the number of children taught and the sum of the days of their attendance; the number of school age (5–21) residing in the district, with the names of their parents or guardians, and the amount paid for teachers' wages out of district taxes, additional to the State allowance, as well as the taxes levied in the district for the purchase of school-house sites or the erection, purchase, hire, repair, or insurance of school-houses, for fuel, for district libraries, or for any other purpose allowed by law.

The district clerk keeps the records of the trustees and of the district, and acts as the agent of the trustees in giving notice of meetings; the collector attends to the collection of the district taxes, giving bond with one or more sureties for faithful care and disbursement of them; and the district librarian has charge of the district library.

Four *neighborhoods* within the State have the character of school districts and the same officers as these.

SCHOOLS.

The common schools in the several school districts of the State are free to all persons over 5 and under 21 years of age residing in the district. Non-residents, otherwise competent, may be admitted with the written consent of the trustees, and on such terms as they prescribe. Teachers in them must have diplomas from a State normal school or certificates of qualification, given after examination by either the commissioner of their district or the State superintendent. Separate schools are provided for Indian children, and in many cases for colored children also, though these last are not required by law.

Children between 8 and 14 are required to attend some school at least fourteen weeks in each year, eight of which weeks must be consecutive, unless they are taught at home spelling, reading, writing, English grammar, geography, and arithmetic, or unless the physical or mental condition of the child is such as to render such attendance or instruction inexpedient or impracticable.

In the poorer country districts the schools are largely primary, including little beyond the above necessary elements of study; but in the larger towns and cities schools of all grades, and often of high excellence, are found, some of the high schools and academic departments of union schools ranking with the best preparatory schools for colleges. Eight State normal schools, besides a great normal college in New York, prepare teachers for the public schools, and 113 incorporated academies are utilized for the same purpose, receiving an allowance from the literary fund for training teachers' classes. Cornell University receives from these academies and from the higher departments of the public schools one student from each assembly district in the State, free of all charge for instruction in any of its departments, as a reward for proven superior ability in such students, thus making the highest instruction open to any class. Two State institutions for the blind and two for the deaf and dumb provide special instruction for these unfortunates.

SCHOOL FUNDS.

The several sources from which the schools are sustained are (1) the common school fund, amounting to about $3,080,000 and yielding an income of about $170,000 for the schools; (2) the United States deposit fund, yielding for them an income of $165,000; (3) a general State tax of 1¼ mills on the dollar, yielding over $2,500,000; (4) some local funds, yielding, with sales of school land, $36,000; and (5) district, village, and city taxation for building, repairing, and furnishing schools, yielding, in 1874, $7,864,705.51, the total from all sources in that year being $12,298,729.36.

ELEMENTARY INSTRUCTION.

SCHOOL-HOUSES.

The reports of district commissioners, contained in the report of the State superintendent, contain often interesting details as to school houses, which can be found nowhere else. Thus one says, "Five new school-houses have been built during the year, and many others have been thoroughly repaired. The number of the 'ragged beggars' is hopefully diminishing." Another: "The houses are generally good; but there are a few that are not fit for use. Strange to say, these miserable shells are not in poor and thinly settled districts, but in those well able to build comfortable houses." A third: "It seems to have been the design of some districts to locate their buildings in the most forlorn and out of the way place possible, perchance covering nearly the whole site, on highways without one vestige of shade tree. This is not as it should be, for the places where children spend the greatest share of their time should be as pleasant and inviting as possible." The districts spoken of are in a wealthy county, and a like statement comes from one just out of New York. *Per contra*, another writes: "Several of the schools have much improved their surroundings during the past year, making attendance more attractive to the scholars. In one district especially several flower beds have been planted in the school grounds as an experiment, with the hap-

piest effect. Not only have the flowers not been injured, but the children take pleasure in weeding the beds and keeping them in order. They are thus learning, out of school, some valuable lessons, such as to respect the property and rights of others and to care for their own. And they are unconsciously acquiring, through their love of flowers, a love of what is beautiful generally and a refined taste which they will be likely to carry with them through life."—(State report, pp. 283, 295, 321, 361, 423.)

DISTRICT LIBRARIES.

Mr. Gilmour says that "under the law the sum of $55,000 is annually apportioned to the school districts of the State for library purposes; that the number of volumes in the libraries has, however, diminished from 1,286,536 in 1864 to 831.554 in 1874, a decrease of 454,982 volumes, notwithstanding the annual appropriation. He hence declares that he is satisfied that the day of the usefulness of the district libraries is past; that (as is elsewhere said) the people of the districts now take little if any interest in them; that in some places many of the inhabitants are ignorant of the existence of a library, and that in others, though they know there is one, they cannot tell where it is. He therefore recommends either that the annual appropriations for such purposes be abandoned or that such action be taken by the legislature as will render the system more effective. He submits for the consideration of the legislature whether a system of town libraries would not be preferable to that now in existence, the books of the district libraries (nearly all of which belong to the State) being gathered together to form one library for the whole town, to be under the charge of the town clerk, as librarian, or some other person designated for that purpose."—(Superintendent's report, 1875, page 27.)

SCHOOLS FOR COLORED CHILDREN.

The amount expended in the towns of the State for the instruction of this class of children during the year covered by the report is given as $7,668.37; that expended in the cities, as $58,458.18; that in all the State, as $66,126.55.—(Report of superintendent, 1875, pp. 90, 92.)

INDIAN SCHOOLS.

From the figures given, it would appear that the attendance of Indian children at the schools provided for them by the State has been smaller than for some years past. The superintendent says he is not, however, satisfied that the reports made to his department by the local superintendents of Indian schools are altogether accurate. The census of children residing on the several reservations is not taken with sufficient care, nor are the teachers' registers kept with proper accuracy. Of the financial statements made to him by the seven local superintendents, only one stated correctly the amount of money received from the State during the year. It is hence his purpose to require greater care and accuracy on the part of the local superintendents hereafter, and to have the schools under their charge oftener visited. Something must be done to make the schools more attractive, to improve the quality of the instruction given in them, and to increase the attendance; otherwise the funds of the State appropriated for the support of the Indian schools cannot be said to be judiciously expended.

During the year the superintendent personally visited the schools on the Cattaraugus, Tonawanda, and Tuscarora reservations, and caused those on the St. Regis and Shinnecock reservations to be visited and inspected by competent persons.—(Superintendent's report, 1875, pp. 32–34.)

THE COMPULSORY LAW.

Speaking of the act passed May 11, 1874, to secure to children the benefits of elementary education, the superintendent says that, while not believing a compulsory law to be unconstitutional or unnecessary in some cases, he is convinced it will take some years of co-operation between the legislature and school officers, in preparing ample accommodations, in improving the course of instruction, and in making proper provisions for truants and vagrants, before it can be put into successful operation. He therefore thinks that if the results of this law can be approximated by a voluntary system it would be far preferable. He urges that, if the law is to remain, it be amended by striking out the defective and especially obnoxious provisions. He points out the following defects in the present law: (1) The first and second sections of the act require that all children between the ages of 8 and 14 years be instructed in "spelling, reading, writing, English grammar, geography, and arithmetic," while some of the children between 8 and 14 years do not know the alphabet, so that it must be impossible to comply with the law in teaching the branches required. (2) The second section also prohibits the employment of any child who has not a certificate of having attended school at least fourteen weeks out of the fifty-two preceding weeks, which he thinks would be a great hardship in the case of orphans and children compelled to earn their own support, and ought to be supplemented with a discretionary power to excuse such absences as the school trustees deem proper. (3) The law, too, makes it the duty of school trustees and boards of education to see that the provisions of it are

complied with, yet makes no provision for compensating these officers. Hence the need of an amendment giving them compensation. (4) The eighth section directs the school trustees of each town and the board of education of each city "to provide suitable places for the discipline and instruction and confinement of habitual truants and vagrants when necessary." He says that cities might comply with this section, but that the expense of erecting and maintaining a house of correction in each town would be too great. He therefore recommends that the law be so amended as to require one house of correction in each county and each town to pay for the support of its own truants and vagrants thereat. He finally recommends that, if the compulsory law is to be repealed, the free school system be supplemented by a practical truancy and vagrancy act; and that steps be taken to encourage the establishment and maintenance of night schools in cities and manufacturing villages.—(Superintendent's report, 1874-'75, pp. 61-66.)

SUPERVISION.

The success of any educational system depends greatly on the manner of its supervision. The present plan of supervision by school commissioners was inaugurated in 1856. Time sufficient has elapsed to enable us to judge of the merits of the system. That it is perfect, no one claims. That it is, however, the best method yet tried in the State and preferable to any yet suggested, the superintendent expresses his firm belief. That the office of school commissioner is an important one, he thinks is generally admitted. He therefore asks the favorable consideration of the legislature to former recommendations from the school department urging the necessity of having the law so amended that school commissioners shall be required to give their whole time and attention to the duties of the office, and that engaging in other business shall work a forfeiture thereof.—(State superintendent's report, 1874-'75, p. 51.)

KINDERGÄRTEN.

Special reports have been received from 17 Kindergärten in this State, of which 7 are located in New York City, 4 in Brooklyn, and 1 each in Albany, Glens Falls, Irvington, Staten Island, Rochester, and Syracuse. Five of these schools were organized in 1875; 2 each in 1874, 1873, and 1870; 4 in 1872; 1 in 1866, and 1 in 1860. The aggregate number of pupils in attendance in 1875 was 444, instructed by 34 teachers. The number of hours of attendance each day varies from 2 to 5, only 1 session being as short as 2 hours and 3 as long as 5. The ages for admission range from 3 to 8 years, the greatest in a majority of cases being 7.—(Returns to Bureau of Education for 1875.)

CITY SCHOOL SYSTEMS.

ALBANY.

Officers.—A board of education of 12 members; a city superintendent, J. O. Cole, who is *ex officio* secretary of the board; and a superintendent of buildings and repairs.

Statistics.—Number of pupils enrolled, 12,773; average daily attendance, 7,340; number of schools, 25. Two new primary school-houses have been built during the year, and a building for the high school commenced, which is expected to be completed by May, 1876.

The seating capacity of all the schools is 9,313, and the superintendent says this is evidently insufficient when compared to the registered number, 12,773. At some seasons of the year, especially during the winter, many applicants for seats are turned away, and are compelled either to wander through the streets or to pay tuition at other schools.

Examinations.—The committee on examinations report that the annual examination of the public schools, required by the manual, has, in general, been highly satisfactory. In most of the schools there has been a decided improvement manifested; in a few there has been none; and in one or two the results have been unsatisfactory as compared with former years.

The result of the examinations has shown that the course of study adopted by the board is too extensive. In very few of the schools are the teachers able to get their classes up to the grade, and it becomes a question whether the board would not do well to change some features in the course of study. As it now stands, the conscientious teacher is in danger of imposing too great a burden upon his pupils in a well meant endeavor to keep up to a standard which has been unfortunately set too high.

Music.—Vocal music is taught in an excellent manner in all the senior departments by a special teacher. In many of the primary schools it receives some attention from the regular teachers and in two or three it has made quite a notable progress. The committee think it would be well to require candidates for teaching to possess sufficient knowledge of music to be able to instruct the children in the rudiments of the science. They also recommend that a training school for those wishing to teach be established in the new high school building, when completed.

Abolition of race distinctions.—The committee report that the abolition of the Wilberforce School as a school for colored children, and the reception of the children into the schools on the same terms as white children, according to the law of April 9, 1873, works well. The committee say that they are treated in all respects as other pupils, and if there was, at first, a reluctance on the part of some white children to associate with them, this reluctance seems to have disappeared as the result of familiarity and custom."—(From report of board of education for 1874–'75.)

NEW YORK CITY.

Organization.—A board of education composed of 21 commissioners of common schools, of whom one-third are changed each year, with 5 school trustees for each ward, of whom 1 is changed yearly. The board appoint the executive staff, consisting of a city superintendent and 7 assistant superintendents of schools, a superintendent of school buildings, and an engineer, with such special teachers as are to be employed; while the trustees, with a general oversight of the schools of their wards, have the nomination of principals and vice-principals for these, subject to confirmation by the board.

Schools and teachers.—The whole number of schools under the care of the board is 397, including 45 grammar schools for males, as many for females, and 13 for both sexes; 65 primary departments, 46 separate primary schools; 8 schools for colored children; 46 corporate schools; 35 evening schools, including an evening high school; 1 nautical school; 1 normal college for young women, and 1 training school connected with the same. In addition to these, the Saturday sessions of the normal college provide a normal school for the fuller instruction of teachers employed in the primary and grammar schools.

The number of teachers in all the schools is 3,257, of which number 424 are males and 2,833 females. Of the males, 183 are employed in evening schools.—(Returns to the Bureau of Education, 1875.)

Attendance.—The average attendance of pupils in all the schools for the year ending at the date of this report was 120,958 and the whole number of pupils enrolled and taught during any portion of the year is reported at 254,722; thus showing an increase over the corresponding returns of last year of 3,719 in the average attendance and 3,177 in the aggregate enrolment.

The average attendance in the grammar and primary schools, exclusive of the colored schools, was 99,090, against 96,249 last year, showing an increase of 2,841, or about 3 per cent. during this year.

The average enrolment for the year has been 109,899, or about 69 per cent. of the total enrolment; and the average attendance nearly 91 per cent of the average enrolment, showing that of all the pupils on the registers only 9 per cent were absentees. This shows an improvement over last year, when the rate of absenteeism, based on the average enrolment, was about 11 per cent.

Course of instruction.—Mr. Kiddle says: "The changes made in the course of instruction last year, in the direction of a simplification or reduction of studies, have been followed by good results. In some of the grades of the grammar school course, it seems advisable, from the experience of this year, to make a still further reduction of the prescribed branches for simultaneous study. It is, in my opinion, very desirable to retain in the course whatever tends to train and develop the intelligence of the pupils, as well as to see that the children have the time, opportunity, and instruction needed for their thorough proficiency in reading, writing, and arithmetic."

Examinations.—An examination has been held at least once in every school under the care of the board, and every class that failed at the time of the regular annual visit of the superintendent has been re-examined. By these examinations much good is effected. Each teacher, being aware that during the year the class under his or her instruction will be carefully and minutely inspected, and that not only the methods of instruction employed, but the results of the same, will be carefully scrutinized and reported on, necessarily feels solicitous that every child in the class should make the necessary improvement. A perfunctory discharge of duty will not accomplish the object; the results must be looked into at every step, and care taken that due progress is made. The principal, too, is much more anxious that the school, in all its grades and in all respects, should be efficiently taught and conducted. Besides, a constant comparison of the methods and results of different classes and schools with a common standard tends to produce that uniformity so desirable in a large system like this. A published table shows the general results of the examinations in each class of schools, as to the efficiency of the instruction imparted; from which it may be seen that of 2,219 classes examined the instruction in 1,222 was found to have been *excellent*, in 850 *good*, in 134 *fair*, in 11 *indifferent*, and in 2 *bad*.

Of 2 242 classes either inspected or examined in detail, the discipline, as manifested by the order, attention, &c., of the pupils while under examination, was *excellent* in 1,698, *good* in 447, *fair* in 89, and *indifferent* in 8.

These results show a considerable improvement over those of the preceding year, both as to instruction and discipline. In 1874, the number of classes found to be ex-

cellent in instruction was 49 per cent.; this year it is 55 per cent.; while the number of deficient classes this year is only 6½ per cent., against 9 per cent. the year previous. In discipline, the number of excellent classes this year is 75 per cent. of the whole and the number of deficient classes about 4 per cent., against 69 per cent. and 6 per cent., respectively, last year.

Details of results.—The results of the examinations indicate improvement in reading in every class of schools, the average amount of this improvement being about 2 per cent. Still the general condition of the reading is by no means satisfactory as respects correctness of utterance, expression of emotional sentiments, pronunciation, and accentuation. Penmanship stands at 83½ per cent. against 82½ last year. In geography, of 728 classes examined, 335 are reported excellent, 320 good, 66 fair, and 7 indifferent. In English grammar, of 360 classes examined, the instruction in 140 is reported excellent, in 137 good, in 73 fair, and in 10 indifferent. In history, of 259 classes, 153 have been returned as excellent, 87 good, 15 fair, and 4 indifferent. Of 1,752 classes in elementary science, 873 proved excellent, 721 good, 145 fair, and 13 indifferent, an average result of 85 per cent. In addition to this, 59 classes were examined in astronomy, of which 27 were excellent, 21 good, and 11 fair or indifferent. Of 63 classes in algebra, 43 were excellent, 11 good, 8 fair, and 1 indifferent, an average of nearly 90 per cent. During the year 431 classes were examined in German, 254 proving excellent, 134 good, 40 fair, and 3 indifferent, the proficiency among the females here being much in advance of that among the males. In French, 4 classes out of 25 were reported as excellent, 16 good, and 5 fair. Few had passed in this beyond the rudiments.

In the evening schools, of 278 classes examined, the instruction in 123 was found to have been excellent, in 126 good, in 27 fair, and in 2 indifferent. In all these, with 8 others inspected without minute examination, the discipline was reported as either excellent or good, except 14.

Evening school statistics.—Pupils enrolled: Males, 16,709; females, 5,506; colored, 333; total enrolment, 22,548. Largest attendance at any session: Males, 9,283; females, 4,088; colored, 156; total, 13,527. Average attendance for the term: Males, 6,022; females, 3,215; colored, 105; total, 9,342.

Evening high school.—This institution is not included in the statements of the preceding sections of this report. In compliance with the general requirements of law and under special direction of the board, the school was examined near the close of the term of 1874–'75. The largest number enrolled at any one time during the term was 1,594 and the largest attendance 1,563. Toward the close of the term the attendance had fallen off more than 50 per cent.

Excellent instruction, and to large numbers of pupils, was given in arithmetic, bookkeeping, penmanship, drawing, and English grammar; besides which there were classes in astronomy, natural philosophy, chemistry, physiology, algebra, geometry and trigonometry, municipal law, Latin, German, French, Spanish, and phonography. These classes were not, however, so well attended as those in the more useful elementary branches.

In the department of languages there were 197 pupils at the time of the examination, distributed as follows: German, 4 classes and 99 pupils; French, 4 classes and 64 pupils; Spanish, 2 classes and 34 pupils. The largest aggregate attendance in this department was 536 and the number enrolled 639.

The school commenced its sessions for the term of 1875–'76 in October, with an enrolment of 1,935 pupils and an attendance of 1,544, doing excellent service in a very important line. It is recommended that other evening schools, of a grade above the ordinary schools, be established in other parts of the city.

Drawing.—About $20,000 is paid annually to special teachers for instruction in this useful art, this instruction being given mainly to the classes of the higher grades, with some supervision of the work of the lower ones. The results have varied much in different schools, and, under the impression that the system pursued is not sufficiently uniform and progressive, the superintendent recommends that the course be revised and the system reorganized on the industrial basis now popular in Massachusetts and elsewhere. The kindred art, music, is also said to be made too much a matter of rote and of display, and to be in need of such revision as shall teach to read at sight and make the ability to sing a useful and permanent accomplishment.

Law to enforce the educational rights of children.—Of the working of this law Mr. Kiddle says that the provisions with regard to truancy and vagrancy have been to some extent enforced, but not those requiring parents and guardians to send children to school or have them taught at home. Truancy has been thus diminished and attendance on the schools somewhat increased, but the full intended effect of the enactment of the law not reached.—(Report of Hon. Henry Kiddle for 1875.)

ROCHESTER.

School officers.—A board of education of 16 members—1 from each ward of the city—and a superintendent of instruction, who is clerk of the board and curator of the central library.

Attendance.—The number of pupils registered for the year 1874–'75 was 11,213, an increase of 414 over the registration of the previous year, while the average number belonging was 7,446, an increase of 543. The average daily attendance was 6,969, against 6,096 the year before, an increase of 873. This relative increase of 414 on the registration list, of 543 in the average number belonging, and of 873 in daily attendance shows a decided improvement in attendance.

Compulsory law.—It was at first hoped that the law passed May 11, 1874, might lessen somewhat the amount of truancy and secure to young children confined in stores and workshops the means of limited instruction in common English studies. Experience has shown, however, that many provisions of the law could not be carried out under the existing system of education, and it thus remains substantially a dead letter on the statute books, awaiting such amendments as may make it available.

Music in the schools.—At the beginning of the school year in September, 1874, vocal music was, by order of the board, incorporated into the course of study. It had to contend against many obstacles, such as a divided sentiment in the board and among the teachers in regard to its value, a want of charts and music books in the schools, and a lack of practical knowledge of the subject on the part of many that must teach it; still, the results of the year's labors have greatly disarmed opposition, and are held to indicate a decided success, upon the whole.

German.—The work in this department the past year has strengthened the conviction previously expressed, that the introduction of German into the course of study was a wise measure; for, although the teachers have had to labor with comparatively slight facilities and under numerous disadvantages, the success attained has been most gratifying. At first the interruption to the teachers in the English department, losing them half an hour two or three times a week, proved a serious obstacle; but, as the loss of time by the pupils in the English course has not seemed to interfere with their progress or promotion, all serious objections to the study of German seem to have ceased.

Drawing and penmanship.—While much attention has been given to penmanship and very considerable improvement in it secured, drawing is said to have had to fight its way to a position in the course of study. Under the new State law, passed May 14, 1875, it must, from October, 1875, hold a recognized place and be prosecuted as a means to industrial improvement.

The free academy.—This school, now housed in an elegant new building, completed for it in 1874, is substantially the high school of the city. It has a classical and a scientific course of 3 years each and a business course of 1 year. To enter it, pupils must be at least 12 years of age and must have passed a satisfactory examination in spelling, penmanship, arithmetic, geography, grammar, analysis of the Constitution, composition, and United States history. To graduate from it, they must have been regularly attendant; must have completed the course of study in which they have been engaged, and have passed a written examination in the different branches, reaching 75 per cent. on an average and not falling below 60 in any branch. Graduates may remain one year pursuing optional studies. At the examination in 1874 the pupils secured 54 regents' certificates of proficiency, the largest number obtained that year by any school in the State; but in 1875 the school excelled itself, carrying off 118 such certificates. It should be mentioned that it is a school for both sexes, and that the superintendent says: "Even those who question the plan of educating the sexes together have never uttered a complaint" respecting it.

Shortened hours.—The school hours were shortened last year throughout all the grades without any loss in the amount of work accomplished.—(Report of board and of Superintendent S. A. Ellis for 1874–'75 and School Bulletin, August, 1875.)

SCHENECTADY.

School officers.—A board of education, composed of 2 members from each of the five wards of the city, with a superintendent, who is *ex officio* secretary and librarian, as executive officer.

General statistics.—Population of the city, 12,807; number of school age, 4,431; percentage on population, 34.60; number of school-rooms, 26; number of sittings, 1,744; number of school buildings, 8; number of teachers employed during the year, 37; number of pupils registered, 2,155; increase from last year, 63; average number belonging, 1,479; average daily attendance, 1,371; average percentage of attendance, 92.7; average number of pupils registered to a teacher, 65.4; average attendance to a teacher, 41.1.

Total expenditure for schools, $27 708.74. Total cost per pupil, on number registered, $10.29; on number belonging, $15; on average daily attendance, $16.18.

School accommodations.—Superintendent Howe says there is a pressing need of increased school accommodations. Give us more ample school room, and so distribute the buildings that they shall be very easy of access to the pupils, and not only the whole number registered, but also the average attendance, will be very materially increased.

Attendance.—The superintendent explains the falling off in attendance from last year by the unusually severe winter and the great amount of sickness prevailing. By act-

ual count, it was ascertained that over 600 pupils were absent from the various departments on account of catarrh and other disorders caused by the intense cold.

Promotions.—An effort is being made to make a pupil's promotion depend more upon his standing during the year than upon any one examination at the close of the year. The usual examinations were held at the close of the school year, and, notwithstanding the many interruptions in the attendance, were fully up to the mark of preceding years. The total number of regents' certificates received was 32, or 8 more than the year previous.—(Report of Superintendent S. B. Howe, for 1874–'75.)

SYRACUSE.

School officers.—The board of education consists of 8 commissioners, 1 from each ward, whose term of office is one year. The superintendent of schools is the clerk of the board.

School accommodations.—The school accommodations have been increased during the year by building 1 and enlarging 2 school-houses, thereby adding to the sittings nearly 800. The Salina school-house, which was burned in April, is being rebuilt and is expected to be ready for occupation at the opening of the school year, 1875–'76.

Enrolment and attendance.—Besides the enrolment of 8,193 in the graded schools, there have been 245 in the ungraded schools and 225 in the evening school. These make an enrolment of 8,663 pupils in the schools under the direction of the board of education, being an increase over last year of 534. The entire enrolment is 52 per cent. upon the school census. The average daily attendance was 6,214, being 75 per cent. of the number enrolled.

Evening school.—The whole number registered was 225, the average number belonging 95, and the average daily attendance 76. Pupils of all ages, from 10 years old to gray-haired men and women, are gathered in the school five nights in the week. They do not all come regularly. Many are able to attend only three evenings in the week, and some have engagements for one evening each week.

Drawing.—In this department more satisfactory work has been done than ever before in the schools. During the past year every class has been properly organized and its specific work laid out, and in nearly all the classes the work has been accomplished.

Music.—The great advancement in this study is the grading of it in all the schools. The pupil, in going from a lower to a higher grade, is now prepared for the advanced course presented. An extensive examination of the papers reveals the fact that very many are acquiring a valuable fund of information upon this subject.

Course of study.—The reduction of the time allowed for preparation for the high school from nine to eight years has been found to work well and to fully vindicate the wisdom of the change.—(Annual report of Superintendent Edward Smith, for 1874–'75.)

TROY.

Organization.—The public schools of Troy are under the management and control of a board of school commissioners whose term of office is for three years, the term of one-third expiring each year. They have a clerk of the board and a city superintendent in their employ, as executive officers.

Statistics of schools.—The number of public free schools in the city for the year was 16; the number of children who attended public schools during some portion of the year, 8,049; average number belonging, 5,006; average daily attendance, 4,616; cost of tuition per pupil, estimated on number belonging, $13.98; cost for each in average daily attendance, $15.17; number of licensed teachers employed sometime during the year, 11 males, 127 females; total, 138; number of children over 5 and under 21 attending private schools, not including colleges, incorporated academies, or seminaries, 2,013; number of such schools, 14; the whole time public schools were taught, forty-one weeks and three days; amount paid for teachers' salaries, $70,002; total expenditures for schools, $115,541.50.

School buildings.—The superintendent takes up *seriatim* each school-house and shows its defects, among the chief of which is the want of proper ventilation, of grounds for recreation, and of proper sites. He thus concludes this subject: "Our school houses are far from being a credit to the city, and some of them are blots and a positive disgrace to our spirit of progress and our material development."

Studies.—Penmanship receives care and attention, and is on the whole well and creditably taught. A system of tracing books has been used very successfully in the lower grades. Music has made regular and substantial progress in the schools. The superintendent says of drawing: "The amount and character of the work accomplished in the high school course can only be appreciated by those who have frequently observed the progress of the several classes. Drawing is not taught as a mere accomplishment, but with industrial purposes constantly before us. I have seen a series of drawings of plans of houses, accompanied by ideal cabinet perspective views of the different floors and rooms, prepared by our high school pupils during the last year, which would do credit to professional architects." Drawing will hereafter be taught in all the schools. —(Report of Superintendent D. Beattie, 1875.)

UTICA.

School officers.—A board of school commissioners of 6 members, with a city superintendent of schools.

Statistics.—The city owns 18 school-houses, valued, with their sites, furniture, &c., at $417,971.73. The schools are 30, besides an evening school; the teachers, 87; the sittings for pupils, 4,038. The total enrolment in public schools for the year was 4,711; the average number belonging, 3,155; the average daily attendance, 3,066; the per cent. of attendance on number belonging, 96.5. The receipts for schools during the year, including a balance of $26,274.20 on hand from preceding year, were $108,183.20; the expenditures on them, $78,818.61, leaving a remainder of $29,364.59.

City Library.—A library owned by the city in connection with its schools now numbers 6,055 volumes of biographical, historical, and descriptive works, voyages and travels, novels, tales, with many books on scientific, political, and dramatic subjects. It is open daily from 3 to 8 p. m.

New building.—A new and fine building has been prepared for the advanced school, the provisions for warming and ventilating of which seem worthy of notice. Fresh air is taken in through large boxes, in which are placed coils of steam pipes, heated from a non-explosive sectional boiler. The air passing over these pipes is conducted into flues leading to all parts of the building. In all cases where it could be so arranged, this pure warm air is introduced into the rooms through registers near the ceiling, thus forcing the impure air near the floor out through openings into flues leading to the basement and attic, avoiding the currents that must necessarily arise when the warm air is taken in through registers in the floor. Provision is also made for warming by direct radiation, should the weather be cold enough to require it.

Year's progress.—The result of the annual examinations is said to have shown that the pupils generally had made commendable progress in their studies, while general good health has proved that they were not overworked. The advancement made in the departments of penmanship, music, and drawing, each under the direction of a special teacher, has been unusually satisfactory, demonstrating the wisdom of assigning the care of these branches to teachers who are eminently qualified by native talent, culture, and large experience for their special vocation.—(Report of Superintendent A. McMillan for 1874-'75.)

WATERTOWN.

School officers.—A board of education of 11 members and a superintendent, who is *ex officio* clerk of the board.

Statistics.—Number of children of school age registered during the year, 2,032; average number belonging, 1,410; average daily attendance, 1,229; number of teachers employed during the year, 47; total expenditures for schools, $36,996.35.

The schools.—The public schools are divided into primary, junior, and senior departments, and a high school. Each department or school requires three years to complete its course of studies. The high school, under the charge of a principal and five assistants, graduated 16, at the end of the year, out of an average number of 294.8 belonging, and an average daily attendance of 261.8. The full course of instruction of this school, together with the text books used, is given in the report. There is a well selected library of 2,815 volumes belonging to the schools.—(Report of Superintendent D. G. Griffin, 1875.)

TRAINING OF TEACHERS.

STATE NORMAL SCHOOLS.

There are in the State at present, and in a flourishing condition, 8 normal schools, established by the State for the purpose of preparing young men and women to enter the common schools well qualified as teachers. The best evidence that these schools are succeeding in the work for which they were established is to be found in the fact that they have overcome the determined opposition which they had to encounter, and that to-day they are towers of strength in the educational system of the State. The State superintendent bears testimony, from observation and personal examination, to the good which they are accomplishing. Although the whole number who attend these schools is small compared with the number of teachers required in the common schools, yet, after graduating or partly completing the course prescribed, they are scattered throughout the State, and the influence which they exert is powerful for good. Many who are opposed to the normal schools urge as an objection to them their great expense to the State; but, when it is remembered that the eight schools are a part of the great educational system and that their cost is less than $150,000 of the nearly $12,000,000 annually expended, it will be seen that the amount invested gives good returns in the number of young men and women devoted to teaching, and sent forth prepared for their life work.

Albany Normal School.—In 1826, some years before any school for the professional training of teachers was put into operation in this country, De Witt Clinton, then governor, in his annual message recommended "a seminary for the education of

teachers." By an act of the legislature passed May 7, 1844, "a normal school for the instruction and practice of teachers of common schools in the science of education and in the art of teaching, to be located in the county of Albany," was established as an experiment, and $10,000 per annum was appropriated from the revenue of the literature fund. That the experiment was successful is proved by a history of thirty years. The school was opened December 18, 1844, with 29 pupils, and registered, during its first term of 12 weeks, 98. The second term was attended by 200, and at its close 34 graduated. A building for the school was provided gratuitously by the city of Albany. David Perkins Page, of New Hampshire, was the first principal. Col. Samuel Young, State superintendent of common schools, with Gideon Hawley, Alonzo Potter, Francis Dwight, and William H. Campbell, constituted the first executive committee, and with their coadjutors laid the foundation for the 8 prosperous State normal schools. The Albany school has graduated 2,041 students, 759 young men and 1,282 young women, among whom are to be found some of the leading educators of the State and nation. Unlike any other normal school of the State, the regents of the university have the supervision and management of this, in conjunction with the superintendent of public instruction, who is *ex officio* a member of the executive committee. The value of the school property is set at $84,000.

Brockport Normal School was established under the provisions of the legislative act of April 7, 1866, and went into operation in 1867. The grounds, embracing more than six acres, are graded and adorned with shade trees, gravelled walks, and drives. These, with the buildings, became the property of the State in April, 1869. During its seven years of existence the school has graduated 105 students, 31 young men and 74 women, and now holds property, in buildings, apparatus, &c., valued at $140,000.

Buffalo Normal School.—A special act establishing this school was passed by the legislature in 1867. The sum of $90.000, equally divided between Erie County and the city, was appropriated for the erection of a suitable building, which was completed in 1870, and the school opened in 1871. During these three years 57 students were graduated, 54 of whom were ladies. The property is now valued at $127,000.

Cortland Normal School was established under the general law of April, 1866, the town of Cortland having, under an act passed in 1867, proceeded to raise money and erect and furnish suitable buildings for its accommodation at an expense of about $98,000, and in two years thereafter the school was opened. During the succeeding five years 120 students were graduated, 19 of whom were young men. The local board rate the property at $104,616.

Fredonia Normal School was also established under the general law of 1866. Buildings were erected by the village of Fredonia at a cost of about $100,000, and in 1868 the school was opened. Since 1869 there have been graduated 133 students, of whom 9 were young men. Present value of school buildings and property, $107,750.

Geneseo Normal School, conditionally authorized in 1867, was opened in 1871, and has graduated 26 students, 6 of whom are young men. It is located on a lot of seven acres and its property is valued at $93,430.

Oswego Normal School was established by the city of Oswego in 1861 for the training of its primary teachers. The methods of instruction adopted soon attracted public attention, and pupils from other parts of the State sought admission to it. In 1863 the legislature provided for an annual appropriation of $3,000 for ten years for its support, conditioned upon the free tuition of not less than 50 teachers, and in 1865 this sum was increased to $6,000 on condition that the city should provide a suitable building for the school. In 1867 the building, grounds, and appurtenances were accepted, and the school admitted to the privileges of State normal schools. The graduates of this school number 587, of whom 48 are young men. Estimated value of the school property, $84,500.

Potsdam Normal School was established in accordance with an act passed in 1867, and opened in 1869, since which time 59 students have been graduated, of whom 13 were young men. Its buildings, valued, with their furniture and apparatus, at $95,000, front the public park of Potsdam, the use of which is granted to the pupils of the school.

The total attendance in all the schools during 1874, including those in normal, model, and all other departments, was 6,515; in normal departments, 2,875; total average attendance, 3,609; graduates, 233, of whom 46 were young men. Whole number of graduates from all the schools, 3,128.—(Report of superintendent, pp. 41–47, 102, 103.

Each county is entitled to send to the State normal schools twice as many pupils as it has representatives in the assembly. To gain admission, pupils must be at least 16 years of age and possess good health, good moral character, and average abilities. They must pass a fair examination in reading, spelling, geography, and arithmetic as far as the roots, and be able to analyze and parse simple sentences. All appointments for admission are made by the State superintendent of public instruction, subject to the required examination, upon the recommendation of the several school commissioners or city superintendents of schools, whose duty it is to use every reasonable means to secure the selection of suitable candidates. Tuition and the use of all text books are free.

There are three courses of instruction: the elementary English, advanced English, and classical. Students who satisfactorily complete either of these receive corresponding diplomas, which serve as licenses to teach in the public schools of the State.—(Report of State superintendent, pp. 268–272.)

TEACHERS' CLASSES IN ACADEMIES.

By the laws of 1855, chap. 410; 1864, chap. 556; 1873, chap. 642, the regents of the university are authorized to pay for instruction in academies and the academic departments of union schools, selected by them for that purpose, "in the science of common school teaching," a certain amount of tuition. This tuition is fixed by the laws of 1873 at $15 per pupil for each term of 13 weeks; and for any number of pupils pursuing the course of study prescribed by them, tuition at the same rate for not less than 10 nor more than 20 weeks.

Under these provisions, 92 of these institutions during the calendar year 1874 have maintained teachers' classes. During the academic year 1873–'74, the attendance upon these classes was 644 males and 1,400 females—in all, 2,044—as compared with 1,661 reported last year. The amount paid in tuition was $29,337.62.—(Superintendent's report 1875, p. 50.)

TEACHERS' INSTITUTES.

These important agencies for directing and stimulating the educational forces of the State have been sustained during the year covered by the superintendent's report with no diminution in numbers, interest, or usefulness. They have been held in 58 of the 60 counties of the State, a number unprecedented in their history. The only exceptions are New York County, with its 2,657 teachers, and Hamilton County, with only 34 teachers. These do not hold teachers' institutes. Besides these, a session of one week was held for the teachers of the Indian schools on the Allegany and Cattaraugus reservations.

In 47 counties, sessions of two weeks each were held, while in 11, a larger number than usual, they were held for only one week each. The aggregate number of weeks was 105, 1 more than in 1873.

The whole attendance reached 11,478, a larger number than we find registered in any former year. Of these, 3,726 were males and 7,752 were females. This gives an average of 198 to each institute and county. But it is to be observed that the average daily attendance was only 113, or 57 per cent. of the whole attendance.

In the counties in which these 58 institutes were held, there are reported, for 1874, 15,904 teachers employed for the full term of 28 weeks. Compared with these, a little more than 72 per cent. attended the institutes. The teachers in a few institutes had their attention called to free hand drawing. This subject, now receiving much consideration, is deemed worthy of further attention.

The expense to the State of the institutes for 1874 was $16,319.39, or $1.42 for each teacher in attendance.

The superintendent visited as many of the institutes as possible, and testifies to the generally excellent and practical character of the instruction, to the judicious management of the commissioners, and the earnest attention of the teachers.—(Superintendent's report, 1875, pp. 28, 29.)

SCHOOL JOURNALS.

The New York School Journal, The American Educational Monthly, and The National Teachers' Monthly, all published in New York City, and The School Bulletin, published first at Albany and afterward at Syracuse, did good service in the educational field during 1875, by a variety of valuable papers published and important and interesting news conveyed. The Brooklyn Journal of Education, subsequently removed to New York and made simply The Journal of Education, labored efficiently in the same field, while aid was also rendered by an occasional paper called The Educational Reporter, published by Ivison, Blakeman, Taylor & Co.

SECONDARY INSTRUCTION.

ACADEMIES AND UNION SCHOOLS.

These two represent substantially, for New York, what are commonly known elsewhere as the high schools of the State systems; the former receiving into academic classes pupils from the public grammar schools on consideration of a certain State allowance for tuition of them, the latter being public graded schools, with academic departments answering to high schools. The thirty-eighth annual report of the regents of the university, transmitted to the legislature February 9, 1875, presents abstracts from the reports of 113 academies and 109 academic departments of union schools. The whole number of different students in these during the year covered by the report was 31,463; the number claimed to have pursued classical or higher English studies, or both, for four months or more of said year, 8,012. Of this number, 951 are said to intend to make teaching a profession and 1,659 to be preparing for college.

Adding to the above 8,012 the introductory and freshman classes of the College of the City of New York, exclusive of the commercial part, with a proportionate number from the Normal College, which is also a girls' high school, we have about 9,272 as the total of those known to be engaged in the secondary studies of this class of schools. To this total, however, may probably be added nearly a fourth of the 6,515 students in the 8 State normal schools, as engaged in the classical courses of those schools. In that case, we have the total raised to about 11,000; still rather a small number for so large and populous a State, without the following

PREPARATORY SCHOOLS.

Special reports have been received from 16 schools in this State for the preparation of students for colleges or scientific schools. Out of an aggregate attendance of 2,445 pupils in these schools, 523 were preparing for the classical and 198 for the scientific course. The age for admission ranges from 6 to 13 years, while in some it is limited only by capacity to perform the work. The course of instruction lasts 3, 4, 5, 6, 10, and even 12 years. All but 3 of these schools report libraries ranging in size from 80 to 3,000 volumes, and aggregating 14,464. Eleven have chemical laboratories and philosophical apparatus and 8 have gymnasia. Six use the continental pronunciation in Latin, 5 the Roman, 3 the English, and 1 the "ancient." In Greek, the continental method is used by 9, the Erasmian by 3, the ancient by 1, Hadley's by 1, and Goodwin's by 1. Eight report themselves not under control of any religious denomination, while 2 are under the influence of the Protestant Episcopal Church; 2, of the Baptist; 1, of the Methodist Episcopal; 1, of the Methodist; and 1, of the Independents.

Besides the above number of preparatory pupils, there were reported for the same year in the preparatory departments of colleges (exclusive of the College of the City of New York, before given) 2,370 students, of whom 1,301 were in preparation for a classical collegiate course and 491 for a scientific course.—(Returns to Bureau of Education, 1875.)

BUSINESS COLLEGES.

There are 15 business colleges, which report a total attendance for 1875 of 2,919 pupils, taught by 72 instructors. One of these is located in Albany, 4 are in Brooklyn, 2 in Buffalo, and 1 each in Elmira, Hudson, New York, Poughkeepsie, Rochester, Syracuse, Troy, and Utica. In addition to the English and business branches, some of these schools embrace in their course of study phonography, telegraphy, German, French, and Spanish. As far as reported, 25 students were pursuing phonography, 95 telegraphy, 187 German, 140 French, and 27 Spanish.—(Returns to Bureau of Education for 1875.)

SUPERIOR INSTRUCTION.

CORNELL UNIVERSITY.

The existence of Cornell University is due to the combined bounty of the United States Government and of Ezra Cornell. New York's share of the congressional land grant for the benefit of agriculture and the mechanic arts, amounting to 990,000 acres, was transferred to the university upon its compliance with certain conditions, the most important of which were that Ezra Cornell should give to the institution $500,000 and that provision should be made for the education, free of all charge for tuition, of one student from each assembly district of the State. The trustees of the university have decided that this exemption from payment of the usual dues shall continue in the case of each student for four years. This makes the number educated free of all expense for tuition 512, which is equivalent, when all the scholarships are full, to a remission of fees to the amount of $30,720 per annum. These students are selected from the various public schools and academies of the State by yearly competitive examinations, which are open to both sexes.

Among the special features of this university are liberty in the choice of studies, the prominence given to practically useful studies, the absence of a marking system determining the relative rank of each student in his class, and its unsectarian character. Several courses carefully arranged are presented, from which the student may make selection. He may also, from among the various branches pursued at the university, form for himself an entirely independent course, subject to the approval of the faculty; or he is permitted, upon proper representations to the faculty, to devote himself, as a special student, to a single department of study. Particular attention is paid to the modern classics, especially those of our own language. Among the subjects which are carefully treated are history and the various historical studies, political and social science, the natural sciences, the application of science to the arts, human anatomy, physiology, and the laws of health.

The general courses of the university are: (1) The course in arts, leading to the degree of bachelor of arts. This extends through four years. It includes the Greek and Latin languages, and is similar to the usual academic course in the other colleges and universities of the country. (2) The course in literature, leading to the degree of

bachelor of literature, also extends through four years. It differs from the course in arts in requiring no Greek, and is characterized by a larger amount of attention to the modern languages and English literature. (3) The course in science, extending through four years, includes five hours a week during the last year devoted to some one science as a specialty. Its peculiar features are the study of mathematics, of the French and German languages, and of the historical, physical, moral, and political sciences. (4) The course in philosophy, which is designed to be a scientific course of a higher grade than the preceding.

By an act of the trustees, passed in 1872, women are to be admitted on the same terms and conditions as men, except that they must be 18 years old. A separate building, the Sage College for Women, has been provided by the munificence of Hon. Henry W. Sage. It will accommodate about 100 pupils, and, besides the dormitories, contains lecture and recitation rooms, a museum, laboratories for students in botany, with greenhouses, forcing houses, and other necessary facilities for the pursuit of floriculture and ornamental gardening.—(Cornell University register for 1874–'75.)

OTHER COLLEGES.

Alfred University, Alfred Centre, (Seventh Day Baptist,) has two general departments: an academic and a collegiate. These have each a male and a female department, with equal powers and privileges. As subdivisions of these general departments, the following courses of study have been established: (1) A classical course, (2) a scientific course, (3) a normal and teachers' course, (4) an industrial mechanics' course, and (5) a theological course.

The first two are separate for the freshman and sophomore years and are combined in the junior and senior. The fourth has three different divisions, the first being a course in mechanical drawing, continuing through one year and open to all students without restriction; the second, a course extending through two years, followed by a diploma bearing the seal of the university; the third, a course extending through three years, followed by the degree of Sci. B.—(Report to the regents of the university, 1874.)

Brooklyn Collegiate and Polytechnic Institute, incorporated in 1854, has academic and collegiate departments The pupils are distributed into eight grades, corresponding to successive yearly stages in the course of study. Provision is made for all the essential branches of a classical, scientific, liberal, or commercial education, the plan embracing ten distinct departments of instruction.—(Catalogue, 1874.)

Canisius College, Buffalo, (Roman Catholic,) conducted by the Fathers of the Society of Jesus, opened in 1870, embraces in its course of instruction classical and commercial branches.

College of St. Francis Xavier, New York City, (Roman Catholic,) conducted by the Fathers of the Society of Jesus, affords a collegiate and commercial education. There are in it 5 distinct departments, viz: post graduate, undergraduate, grammar, commercial, and preparatory.—(Catalogue, 1875–'76.)

College of the City of New York, (non-sectarian.)—Two courses of instruction, ancient and modern, are provided here, differing only in the languages studied. There is a library of 18,000 volumes of well selected works, their value being estimated at about $44,000. The repository contains 9,500 text books, valued at $16,000.—(Annual report, 1874.)

Columbia College, (Protestant Episcopal.)—The course of instruction here is divided into nine departments, viz: (1) Greek language and literature; (2) German language and literature; (3) chemistry; (4) mathematics and astronomy; (5) mathematics; (6) philosophy, history, political economy, and belles-lettres; (7) physics; (8) Latin language and literature; (9) botany. Free tuition is given to all industrious students of good character who may be unable to pay for it; various associations are entitled to free scholarships; every religious denomination in the city of New York is entitled to have at the college all the time one free student who may intend to enter the ministry, and every school from which there shall be admitted in any one year into the college four students who pay their matriculation fee has the privilege of sending one scholar to the college to be educated free.—(College catalogue, 1874–'75.)

Elmira Female College, (Presbyterian.)—The collegiate course here is equivalent to that in other colleges, and comprises a thorough course in Latin, modern languages, mathematics, sciences, literature, and esthetics. There is also a department of the fine arts, embracing schools of design and of music, also preparatory and eclectic departments. The college has by law the right to confer degrees, both academic and honorary. Careful attention is paid to health and physical culture.—(Catalogue, 1873–'74.)

Hamilton College, (Presbyterian) offers two regular collegiate courses of four years, classical and scientific, and a law department. The libraries amount to 12,000 volumes and are housed in a new building erected by funds received from Hon. Perry H. Smith. A legacy of $5,000 has also been received from Hon. Peter B. Porter, as an endowment for the care and increase of the library.—(Catalogue, 1874–'75.)

Hobart College, Geneva, (Protestant Episcopal,) is the college of the five dioceses of

the State of New York, and was projected by Bishop Hobart in 1822. There is a classical course of four years, a scientific one of two, and a three years' course for those who wish, without taking the entire classical course, to secure the full benefit of the English, scientific, and philosophical studies pursued in the college.—(Catalogue, 1874–'75.)

Ingham University, Le Roy, (Presbyterian,) for ladies, offers a classical department of four years, a literary one of three, and a school of drawing, painting, and design. There is also a school of music and a commercial school, aiming to qualify young ladies for book-keeping and the transaction of any business to which they may be called. Careful attention is given to physical culture.—(Catalogue, 1875–'76, and report to regents.)

Madison University, Hamilton, (Baptist,) was chartered in 1846. Besides the usual college course, the university provides for such as desire scientific and special courses. The libraries contain 11,000 volumes, well chosen and in good order, 9,000 of them being volumes of choice works, selected mainly with reference to the aid which they directly render to both teacher and pupil in the course of study. There is an extensive cabinet of minerals and of geological specimens, chemical and philosophical apparatus, and a fine natural history collection valued at $13,000.—(Catalogue of university, 1875.)

Manhattan College, New York, (Roman Catholic,) embraces two courses for undergraduates, one classical, the other scientific. Both extend through four years, the first giving prominence to the usual Greek and Latin studies of the old college curriculum with fair attention to mathematics, modern languages, &c.; the second making mathematics, modern languages, and the natural and physical sciences prominent, and giving fuller room for English studies than the first.—(Report to regents, 1874.)

Rutgers Female College, New York, (non-sectarian,) presents a subcollegiate and a regular college course of four years, graduated to meet the needs of female students, with an art school and a school of instrumental music. The mode of instruction is a combination of the text book, as a basis, with constant addition and elucidation from the professor; while courses of weekly lectures to the junior and senior classes extend through the greater portion of the year. These, for the year embraced in the report, were on art, theology, the evidences of revealed religion, moral science as developed in law, rhetoric, modern history, and law in its connection with the rights and relations of women.—(Report to regents, 1874.)

Syracuse University, Syracuse, (Methodist Episcopal,) has in its university department (1) a college of the liberal arts, (2) a college of the fine arts, and (3) a college of physicians and surgeons. In the first of these there are the now common divisions of a classical and a scientific, with a Latin scientific course. In the second, painting and drawing are made prominent studies, and are carried to a much higher point than is customary in colleges.—(Report to regents, 1874.)

St. Bonaventure's College, Allegany, conducted by the Franciscan Fathers, was founded in 1859, and in 1875 was chartered and empowered to confer academic and honorary degrees. The course of study is ecclesiastical, classical, scientific, and commercial. The classical and scientific course lasts six years, the commercial four.

St. John's College, Brooklyn, (Roman Catholic,) is conducted by the priests of the congregation of the mission. There are classes in Christian doctrine, reading, writing, spelling, defining, English grammar and composition, geography, arithmetic, history, declamation, algebra, geometry, trigonometry, natural philosophy, astronomy, book-keeping, Latin, Latin composition, Greek, German, and French.—(Catalogue, 1874–'75.)

St. John's College, Fordham, (Roman Catholic.)—The instruction furnished here is of two kinds, classical and commercial. In the former line there are preparatory studies extending through 3 grammar classes, an undergradnate course of four years in classics, belles-lettres, rhetoric, and philosophy, and a post graduate course of one year in ethics and civil, political, and international law. The commercial course embraces all the branches of a good English education and is completed in four years.—(Report to regents, 1874.)

St. Joseph's College, Buffalo, (Roman Catholic,) under the direction of the Christian Brothers, includes in its course of study, besides the common and higher English branches usually taught, phonography, commercial correspondence, metaphysics, ethics, with the Greek, Latin, German, and French languages.—(Catalogue, 1873–'74.)

St. Lawrence University, Canton, (Universalist,) as at present organized embraces two departments, the college of letters and science and the theological school. Both sexes are admitted. A number of scholarships, amounting to 11 annually, are awarded by the university to high schools in St. Lawrence County. These are open to either sex, are competed for on the ground of scholarship, and are awarded on examination.—(Catalogue, 1875–'76.)

St. Stephen's College, Annandale, (Protestant Episcopal,) was chartered in 1859, and opened as a college the following year. It is designed especially for the training of such young men as are looking forward to the ministry. Its growth in its resources and in the number of its students has been steady and sure. A good classical course of four years is supplemented with careful instruction in ecclesiastical music.—(Catalogue, 1873–'74.)

University of the City of New York, (non-sectarian.)—This university embraces departments of arts, of sciences, law, and medicine. In the two former the instruction is free, the course occupies four years. In the school of art connected with the department of science, instruction is given in drawing and painting from nature and from living models, with attention to the general principles of composition, ornament, and the arts of design, and the application of these to the mechanic arts.—(Report to the regents, 1874.)

University of Rochester, Rochester, (Baptist,) has a plan of instruction so adjusted that two courses of systematic study are open to the students, one being the usual classical and scientific course, and the other a scientific course in which modern languages replace the Greek and Latin of the ordinary university curriculum. The regular course for all students extends through four years.—(Report to regents, 1874.)

Union College, Schenectady, (non-sectarian,) has three courses of study: classical, scientific, and engineering. The general mode of instruction is by analysis and recitation from text books, with occasional lectures on subjects connected with the daily recitations. Prizes are awarded annually for excellence in oratory, general good standing, and essays on English literature and history.—(Report to regents, 1874.)

Vassar College, Poughkeepsie, (non-sectarian, for young women.)—The course here embraces both preparatory and collegiate studies, the latter extending through four years and including the ordinary subjects of a good collegiate course, with rather more attention to French and German and apparently rather less to mathematics, Latin, and Greek than in some of the older colleges. Instruction in painting and drawing and in music is given both to the classes in the regular collegiate course and to individuals in extra-collegiate and optional lessons. All students receive regular drill in light gymnastics four or five times a week during the year and many take other exercise as members of a floral society or of boating clubs.—(Report to regents. 1874.)

Wells College, Aurora, (non-sectarian,) also for young women, has, like Vassar, preparatory and collegiate courses, the latter of four years. Mathematics are studied with special regard to their value as a means of intellectual discipline. In ancient languages, close syntactical criticisms on construction, with double translations, from the original into pure English and the reverse, are required; while modern languages receive a full share of attention and rhetoric and English literature are made important branches in the course. The natural and physical sciences, music, and art are also duly attended to.—(Report to regents, 1874.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The agricultural department of Cornell University offers two courses of study, one of which requires four years for its completion and leads to the degree of bachelor of agriculture. The other is an abridged course of three years, comprising all the purely agricultural instruction given in the full course. It is recommended to all who enter the school to take one of these courses of study, but students who have a limited amount of time at their disposal are at liberty, as in other departments of the university, to select and follow any studies from these courses that they may be qualified to pursue with advantage. In practical agriculture, five hours weekly during the senior year are devoted to technical instruction, this time being divided between lectures, reviews, agricultural calculations, and farm accounts, besides which students are required to spend three hours a day two days in each week in field practice, and in the handling and feeding of domestic animals, and if this amount of practice does not prove sufficient to make the student expert in the various operations of the farm, enough additional time will be required of him to accomplish the desired object. The

instruction is given by lectures and recitations, and illustrated with the aid of the Auzoux models of plants and domestic animals and parts of animals, and various other collections belonging to this and other departments of the university. Tuition is free.—(University register, 1874–'75.)

Cornell also provides various scientific and mechanical courses of study, as architecture, chemistry and physics, civil engineering, mathematics, and astronomy, military science, natural history, geology and paleontology, and mechanic arts.

The school of mechanic arts is one of the departments for which the university is bound by the land grant to make special provision, and professorships of industrial mechanics, civil engineering, mathematics, and practical mechanics were early established and filled. But in 1870, Hon. Hiram Sibley provided for the erection of a special building for this department. He also gave $10,000 for increasing its furniture, and has since enlarged his gift by a further donation of $30,000 for the school. This department has been thus placed in a condition to do its work in the most satisfactory manner. There are in it three courses of instruction: a four years', or full course, leading to the degree of bachelor of mechanical engineering; an optional course, under the direction of the dean, and a special course for such young men as have a fair knowledge of the machinist's or pattern-maker's trade, who desire to fit themselves for foremen or leading positions in their business.

The instruction given in the school of chemistry is embraced in a full course of 12 terms and in special courses.

The full course of civil engineering extends through four years, and includes free-hand drawing, machine-shop practice, blow-pipe analysis of minerals, geology, elementary and structural metallurgy, and astronomy.

The studies in the department of natural history are arranged with special reference to the needs of those intending to become naturalists or physicians.—(University register, 1874–'75.)

The school of mines of Columbia College was established in 1864 for the purpose of furnishing a thorough knowledge of those branches of science which form the basis of industrial pursuits, and includes courses in civil engineering, mining engineering, metallurgy, geology, and natural history, and analytical and applied chemistry.—(Columbia College catalogue 1874–'75.)

In Hamilton College the senior class in chemistry received a thorough course of instruction in the science as applied to agriculture. Through the munificence of the late Silas D. Childs, of Utica, the chemical laboratory has recently undergone extensive alterations, and is supplied with new and valuable apparatus. The department of natural philosophy has recently been established upon an independent footing, and is being supplied with the most approved apparatus.—(Catalogue of college, 1874–'75.)

THEOLOGY.

Hamilton Theological Seminary offers a regular course of two years to graduates of colleges or those who have attained an equivalent culture, the completion of which commands a certificate of graduation. For others it has a special course in biblical interpretation, church history, systematic theology, pastoral duties, and homiletics. Students for the ministry in the university study Hebrew and the evidences of revealed religion as a part of their college course. A course of instruction embracing an additional year is provided for such as desire to pursue further theological study. The seminary is not a department of Madison University, the two institutions having distinct boards of government and instruction, yet working harmoniously together and affording advantages to students which could not be secured in an institution without such connections.—(Catalogue of Madison University, 1875.)

Hartwick Seminary, near Cooperstown, is at once a classical and theological school, under the charge of the Lutheran Church. The theological department embraces a course of three years.—(Catalogue of seminary, 1875.)

The theological school of St. Lawrence University (Universalist) provides a three years' course of instruction, commanding the diploma of the school, and a partial course for those who do not wish to complete the regular one.—(Catalogue of university, 1875–'76.)

The ecclesiastical course of St. Bonaventure's College, (Roman Catholic,) which is completed in three years, embraces dogmatic and moral theology, canon law, scripture, ecclesiastical history, hermeneutics, and liturgy.—(College prospectus.)

Auburn Theological Seminary, (Presbyterian.)—The regular course of theological study in the seminary occupies three full years. A regular collegiate education is required for matriculation, though exceptions to a complete collegiate education may be made in some cases. But in all these evidence is required of such scholarship as will enable the student successfully to pursue all the studies of the theological course.—(Catalogue of seminary, 1873–'74.)

The Tabernacle Lay College, Brooklyn, Rev. DeWitt Talmage, D. D., president, is a training institution for laymen and women intended to prepare for Christian work, without regard to denominations. Since its first opening in 1872, there have been 700 students

enrolled. They are engaged in various forms of Christian work, in teaching, in missions, in visitation, and in preaching the Gospel. The course of studies extends over those branches of knowledge taught in theological seminaries, adapted to laymen, with the exception of Hebrew and Greek, and these may bes tudied privately. Students are divided into four classes: preparatory, junior, senior, and theological.—(Circular of Lay College.)

St. Stephen's College, Annandale, was organized by the Protestant Episcopal Church as a church training school. Its classical course is arranged with special reference to a subsequent study of theology in one of the church seminaries. A special course in theology is offered to such as do not intend to pursue the regular course for a degree, but to become candidates for orders by a shorter road.—(Catalogue for 1875–'76.)

The General Theological Seminary of the Protestant Episcopal Church in the United States of America furnishes a course of theological study lasting three years and embracing Hebrew, scriptural exegesis, ecclesiastical history, systematic divinity, pastoral theology, ecclesiastical polity and law. Every student in the seminary must be a member of one of the classes and engage in all the studies which appertain to his class. Students are examined by the professors at the close of the session in every year, in the presence of a committee appointed for that purpose.—(Catalogue of seminary, 1875–'76.)

Union Theological Seminary, New York, (Presbyterian,) was founded in 1836, and has now 1,032 alumni. The regular course of theological study occupies three full years. The library contains 33,500 volumes, chiefly rare and valuable works. The seminary edifice contains a chapel, library, reading room, lecture rooms, and rooms for 60 students.—(Catalogue, 1875–'76.)

Rochester Theological Seminary offers a course of study lasting three years and embracing biblical literature, ecclesiastical history, theology, homiletics, and pastoral theology. The course is designed for graduates of colleges, but there is a partial course for those whose circumstances require it.—(Catalogue of seminary, 1874–'75.)

LAW.

The law school of the University of New York provides a full course of two years, and an elective one which prepares for mercantile life, but does not command a degree. The subjects in the course of instruction are classified as follows: (1) persons and remedies, (2) property, (3) obligations, and (4) succession. The methods are by approved text books, read and recited in class, with exposition; by lectures by the professor on topics not treated in the text books or requiring fuller or more practical treatment; by lectures by leading members of the bar; by moot courts, and by drawing pleadings and papers.—(University catalogue, 1873–'74.)

Columbia College School of Law has a course of study lasting two years and including the various branches of common law, equity, commercial, international, and constitutional law. Especial attention is given to all topics embraced within the rule of the supreme court of New York, prescribing the studies requisite for admission to the bar. It is expected that a third or post graduate course will soon be organized.—(Catalogue of college, 1874–'75.)

Hamilton College law department provides a course of instruction which is completed by college graduates in one year. For others, it requires one year and a third. It includes the thorough and careful study of the most approved text books, and familiar oral lectures are connected with each recitation.—(College catalogue, 1874–'75.)

Albany Law School, now a department of Union University, offers a course of instruction divided into three terms and lasting one year. The means of instruction are mainly by lecture and examination. All the lectures are oral and are expositions of legal principles, with illustrations and applications. Moot courts are an important feature in the course, two being held each week, the class discussing and deciding the case in each instance, and then the presiding professor giving his views on the question involved and on the correctness or incorrectness of the decision.—(Catalogue of law school, 1874–'75, and report to regents.)

MEDICINE.

The Long Island College Hospital reports a continued growth and success of the institution, owing, it is believed, to the advantages offered in practically combining clinical with elementary instruction. The courses of instruction are given within the hospital buildings, and clinical teaching is thus made a reality. Among the requirements for graduation it is mentioned that the candidate must have studied medicine for three years with a physician and surgeon duly authorized by law to practise; must have attended two full courses of lectures, the last of which must have been in this institution; and must pass a satisfactory examination.—(Announcement and circular, 1875–'76.)

Albany Medical College since 1873 has constituted one of the departments of Union University. The course of instruction lasts one year. It claims to be practical, combining with didactic lectures clinical lectures, recitations, practical work in the laboratory and dissecting room, and the examination and diagnosis of cases.—(Circular of college, 1875.)

Medical department of the University of Buffalo.—In the plan of instruction adopted here clinical teaching occupies a prominent position, all the practical subjects presented in the didactic course being fully illustrated at the bedside. For graduation it is required that the student should have studied medicine for three years under the tuition of a regular practitioner, that he should have dissected during the course, and attended two full courses of lectures, and he must pass a satisfactory examination.—(Announcement, 1875–'76, of the medical department.)

Bellevue Hospital Medical College claims for 1874–'75 the greatest number of matriculants and the largest graduating class of any medical college in America. This prosperity is ascribed to the system of thoroughly combining clinical with didactic teaching, and the prompt introduction into the curriculum of such special courses as seemed necessary. Recently a chair of psychological medicine and medical jurisprudence has been established, and filled by Dr. John P. Gray, also one of gynecology, filled by Prof. E. R. Peaslee. In order to keep pace with the constant advancement of medical science and to present in New York City those opportunities for the study of special departments for which students and practitioners have been compelled to resort to European schools, the faculty have established special courses of lectures, which are being extended, and it is claimed that at present the advantages offered by this college are not surpassed, if equalled, in any of the capitals of Europe. The requirements for graduation are three years' pupilage, after 18 years of age, with a regular physician in good standing, inclusive of the time of attendance upon medical lectures; attendance on two full courses of lectures, the last being in this college; certificates of at least one course of practical anatomy or dissections; proper testimonials of character; an acceptable thesis composed by and in the handwriting of the candidate, and a satisfactory examination in each of the seven departments of instruction, viz, practice of medicine, surgery, obstetrics, materia medica, physiology, anatomy, and chemistry.—(Circular of college, 1875–'76.)

College of Physicians and Surgeons, New York, a department of Columbia College, affords instruction by lectures and by clinical teaching, recitations, and personal instruction in subjects involving physical manipulation. Ten clinics are held weekly during the year in the college building, covering all departments of medicine and surgery. During the year, 5,600 cases were registered.—(Catalogue of College of Physicians and Surgeons, 1875–'76.)

New York Free Medical College for Women was established for the purpose of affording women the best opportunities for acquiring medical education. All instruction is free, and, it is claimed, is as broad and liberal as can be obtained in any other institution in the world.—(Catalogue of college, 1875–'76.)

Woman's Medical College of the New York Infirmary.—The plan of instruction in this school is arranged to secure a gradation of studies through the three years of the student's course. During the first year they are principally occupied with the elementary branches of anatomy, physiology, materia medica, and chemistry, with practical work in the anatomical rooms and pharmacy. In the second year, instruction in medicine, surgery, and obstetrics is added to these. In the third year the students engage in practical medical work, under the direction of their teachers. Hygiene is taught through the three years.—(Catalogue of the college, 1875.)

College of Medicine of Syracuse University.—This department was organized in 1872. The course is a graded one, and covers three years of collegiate instruction. First year, anatomy, physiology, and general chemistry; second year, added to these, medical chemistry, materia medica and therapeutics, pathology, principles and practice of medicine, surgery, and clinical medicine and surgery; third year, added to these, are obstetrics, medical jurisprudence, gynecology, dermatology, ophthalmology, &c.—(Catalogue, 1875–'76.)

The medical department of the College of the City of New York embraces in its course of instruction anatomy, surgery, and hygiene, materia medica and therapeutics, institutes and practice of medicine, obstetrics, physiology, and clinical lectures on physical diagnosis. Clinical instruction constitutes a prominent feature in the plan of education.—(Catalogue of college, 1873–'74.)

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF AND DUMB.

The New York Institution for the Instruction of the Deaf and Dumb has had a legal existence of nearly fifty-eight years, having been incorporated by the legislature of New York on the 15th of April, 1817, and been in active operation for nearly fifty-seven years. It was opened as a school on the 20th of May, 1818, since which time it has educated 2,443 deaf-mutes, and has been signally successful in developing their minds. Within the year closing September, 1874, there were under instruction here 584 pupils, of whom 337 were males and 247 females. Of these, 355 were supported by the State of New York, 162 by the counties, 47 by the State of New Jersey, 1 by the Frizzell fund, and 19 by their friends. For several years past the State has made appropriation for 370 pupils at the rate of $300 each, which has been ascertained by careful experience to be the average price at which the institution can afford, without loss, to support and educate them.

In two of the classes, composed of semi-mute and semi-deaf pupils, special attention is devoted to the cultivation of articulate speech and lip-reading; and with these the recitations are conducted by means of oral speech as well as by writing. In the case of others, a professor, appointed for the purpose, gives lessons from hour to hour in this specialty. The number thus receiving instruction at present is 50.

Linear drawing and shading are taught to all the pupils by a special teacher. This is regarded as of peculiar advantage to the deaf and dumb, being in itself an agreeable resource for leisure hours, and furnishing a means of self interpretation and an enhancement of their value as artisans, while in many cases it becomes a means of self support. A number of the graduates of the institution have secured an independent livelihood as lithographers, wood engravers, or artists.

The physical education of the pupils, while extended to all matters relating to cleanliness, propriety of conduct, health, and the like, has special reference to their training in some handicraft whereby they may support themselves when they leave the institution. The boys are taught gardening, shoemaking, tailoring, cabinet-making, carpentry, painting, and glazing. The girls learn the different branches of needlework, including tailoring, dress making, and the use of the sewing machine, and are instructed in various household duties. The amount of time daily devoted to this training in manual labor is limited to three hours, and that devoted to direct instruction in the school to four hours, so that the pupil may not be subjected to too great a strain of either body or mind.—(Report of Superintendent, 1874–'75, pp. 111–115.)

The New York Institution for the Improved Instruction of Deaf-Mutes differs from others of its kind in its system of instruction. In the elementary department the pupils are taught to speak as hearing persons, and to understand what is said to them by watching the motions of the speaker's lips. In the higher departments they are instructed in all the branches taught in ordinary schools by means of oral language. The results attained by this method have been most gratifying to the parents and guardians of a majority of the children who have been under instruction. Several of the graduates who have returned to their homes are so thoroughly restored that they can not only understand their friends, and make themselves understood by them, but are also able to converse with strangers.

The whole number of pupils connected with the institution during the year ending September 30, 1874, was 103, of whom 55 were males and 48 females. At the close of the year 92 pupils were receiving instruction. During the year 1874, as formerly, the board of trustees were compelled to refuse admission to many applicants on account of lack of proper accommodations, and they urge the legislature to assist them in the erection of a larger building.—(State report, pp. 38, 39.)

Le Couteulx St. Mary's Institution for the Improved Instruction of Deaf-Mutes, located in Buffalo, was first opened for the reception of pupils in 1859, and from that time until 1872 was supported entirely by the voluntary contributions of friends. In the latter year it was recognized by the legislature and was authorized to receive State and county pupils, and there were in 1874, 32 of the former and 20 of the latter class in the institution.—(State report, p. 39.)

EDUCATION OF THE BLIND.

New York Institution for the Education of the Blind, at New York City, had, in December, 1874, 173 pupils under instruction, of whom 147 were State pupils. There are departments of instruction, literary, musical, and mechanical. In the first of these, the pupils are instructed in all the branches essential to a thorough English education, instruction being facilitated by the use of suitable apparatus, including slates, writing tablets, and cards. Dissected maps and books, both written and printed in raised letters, are also much used. The course of music includes elementary and chorus singing, instruction upon the piano and organ, and piano tuning. The instruction in this department is intended to prepare the pupils for teaching music and to serve as organists and piano tuners. The industrial department is essential from a purely educational point of view; but, beyond this, the instruction here given is cal-

culated to enable some to earn a livelihood who could not succeed in other pursuits. Mattress making, cane-seating, knitting, sewing, the operation of the sewing machine, and many varieties of fancy work are taught.—(Report of State superintendent, pp. 40, 41.)

THOMAS ASYLUM FOR ORPHAN AND DESTITUTE INDIAN CHILDREN.

This institution, established for the education of orphan and destitute Indian children, for twenty years has faithfully pursued that work, rescuing, meanwhile, from death, or something worse, several hundred children. At the date of the last report of the trustees, there were 104 children in the asylum, who would be friendless and homeless if the institution were, from any cause, to be closed. The children received are mostly of the poorer and pagan class of Indians, and, unless they were taken charge of by the asylum authorities, would grow up, if they arrived at maturity at all, ignorant, idle, and vicious. The care and training which they receive at the asylum transform them into persons of intelligence, and, in the end, make them good and useful members of the community in which they live.

The school is, however, in danger of abandonment from not being under State control, and the superintendent advises that, to avoid this danger, it be placed under a board of trustees appointed by the State. It may then continue to receive the appropriations previously made to it, and go still onward in its useful work.—(Superintendent's report, 1875, pp. 35, 36.)

NEW YORK NAUTICAL SCHOOL.

This school was opened, on board the ship St. Mary's, at the foot of East Twenty-third street, on the 11th of January, 1875, and 70 pupils were admitted. The school, however, was not fully organized and ready for operation until the 2d of February. Since that time instruction has been given to the pupils in the common branches—reading, spelling, arithmetic, geography, English grammar and penmanship—besides the instruction in seamanship. The average attendance for the year has been 97; and the whole number enrolled during any part of the year, 185. The ages of the pupils range from 15 to 20 years.

The main object of the school is to educate American boys to be good seamen for the merchant service. With this view, instruction in all points of seamanship forms an important portion of the course.—(Report of Hon. Henry Kiddle for 1875 and New York School Journal, February 6, 1875.)

It is believed that the instruction on board the school ship Mercury also still continues, though no report has been received respecting it for 1875. It is under the care of the commissioners of charities and correction, and, like that on the St. Mary's, is designed to train the homeless youth thrown on the hands of the commissioners for intelligent performance of the duties of merchant seamen or of the naval service.

EDUCATIONAL CONVENTIONS.

STATE CONVENTION OF COMMISSIONERS AND SUPERINTENDENTS.

The annual meeting of this association for 1875, held at Rochester, December 28–30, though not large, was successful. State Superintendent Gilmour was present and took a somewhat active part. Several good papers were presented, and two of them provoked discussion which left every one present better informed upon their subjects.

Professor Gilmour, of Rochester University, for instance, read a paper upon the regents' examinations, in which he contended that the purpose of this organization has lamentably failed of fulfilment. The examinations, he believed, do not cover sufficient ground, the tests applied are too minute and technical, and not such as to develop attainments which will be of practical advantage. The views presented by the paper were indorsed by Commissioners Selden and Andrews, and opposed by Mr. Bardeen and Superintendents Smith and Snow.

Then Superintendent Ellis read a paper by Principal Buckham upon teachers' institutes, suggesting certain changes which in his opinion are necessary to the usefulness and efficiency of institute work. The paper was discussed by several gentlemen, most of whom agreed with the views expressed; after which followed papers on school supervision, by Superintendent Smith; upon drawing, by Mrs. Hicks; upon country schools, by Commissioner Hooper; upon public schools, by Commissioner Morehouse; upon reading, by Superintendent Farnham, and an address by Charles E. Fitch upon church and state.—(School Bulletin, February, 1876, p. 86.)

NEW YORK STATE TEACHERS' ASSOCIATION.

The thirtieth annual meeting of this association was held, July 27–29, at Fredonia. The attendance of teachers was quite as good as the average for the past seven years. Nearly 400 reported to the treasurer and paid the annual dues, and 258 members cast ballots in the election for president. Not a few teachers were, doubtless, present who did not

care to enroll their names or cast their votes, and these, with the throngs of Fredonia and Dunkirk people who were interested to attend the sessions, made the meetings large and sometimes even crowded. The weather was invariably propitious. The citizens of Fredonia opened their houses to their guests with the most honorable and large hearted hospitality. Satisfactory as were the numbers in attendance, the provision for private entertainment of teachers was not exhausted. The villagers made the occasion a holiday, and succeeded in rendering the visit of many a teacher as memorable for its social pleasures as for its educational profit.

President Sanford opened the meetings with an address which was evidently prepared with much labor and care and whose sentiments were, without exception, praiseworthy. He drew a picture of the evils against which American education has to contend, and if he left an impression somewhat unnecessarily gloomy of the dangers to which the country is exposed from the great vices of the day, he certainly aroused in every teacher who heard him a fitting sense of duty toward the South, which is exposed to such fearful risks.

The address of Professor Wells, of Union University, was listened to with the avidity with which an uncritical audience always hears a fluent speech that abounds in apt illustration and anecdote. His subject was the "Discipline of the family," a theme which he illustrated and enforced with a fertility of resource that was in itself very admirable. The moral of Professor Wells's address was excellent. Touching upon the paucity of children in American families, he spoke with a frankness that was greatly to his credit. We were surprised to hear from a professor of modern languages a reiteration of the stale and senseless slur upon the French nation that the French language has no word for home, and the usual inference that the French people have no homes. But the morality of Professor Wells's address was so satisfactory that criticisms of his rhetoric and his illustrations seem out of place.

The "fourteen minutes'" talk of Dr. Steele, of Elmira, on German schools, and the address of Chancellor Havens, of Syracuse University, on American civilization, were important and interesting features of the meetings. Dr. Steele showed the interior of a German school in a way to rectify some of our preconceived ideas of those famed institutions. Evidently Dr. Steele had not been blinded to the weaknesses and the faults of German education.

The subject of drawing, which is now engaging general attention, was presented by Mrs. Louise Cruttenden, of Yonkers, in a paper on "Industrial drawing." She showed its value in education and its necessity to the State by quoting the opinions of distinguished educators, and by referring to the result of the competition of England with the continental nations in skilled labor when England had no schools of design. She also adduced statistics which showed how alarmingly great is the excess of the importation of manufactured material which requires skilled labor from nations where workmen are educated in industrial drawing over the export of raw material. She concluded by speaking of the place which drawing should take in a general scheme of education, giving special prominence to it as a means of culture.

The paper of Dr. Daniel J. Pratt, of Albany, on the "Matter, scope, and aim of test examinations," being directed to a definite and practical theme, interesting to all teachers, went far to relieve the meetings of spreading themselves too vaguely over all sorts of generalities.

The forenoons of Wednesday and Thursday were occupied with the meetings of the four sections in separate rooms. In section A, common and graded schools, Principal Stowits, of Buffalo, chairman, considerable interest was aroused by a paper presented by a Buffalo editor, who showed what language of censure can be used about the common schools without leaving in anybody's mind any other feeling than that of having been amused. Section D, supervision, Commissioner Selden, chairman, discussed the question of its relation to the State association, and adopted finally the following resolution:

"Whereas experience has taught us that the best time for holding such meetings as these is in connection with the meeting of the State Teachers' Association, we, the commissioners and superintendents here assembled, hereby form ourselves into a society which shall be known as The Commissioners and Superintendents Association, auxiliary to the New York State Association, and that a president and vice-presidents, a secretary and treasurer, be elected to-day to hold office for one year, or until their successors are elected; said officers shall prepare the programme for the next annual meeting; and that a committee of three be appointed to-day to present a constitution and by-laws at the next annual meeting."

UNIVERSITY CONVOCATION.

The association called by this name, composed of members of the board of regents and officers of the colleges, normal schools, academies, and union free schools in the State, held its twelfth annual meeting at Albany, July 6–8, 1875. The papers presented and discussions held were on the following important topics:

"The threatened revolution in philosophy," Professor Ransom B. Welch, D. D., LL. D.,

Union University; "The education of women," Trustee S. Irenæus Prime, D. D., Wells College: "A method of teaching gesture in elocution," Principal Homer B. Sprague, A. M., Adelphi Academy, Brooklyn; "A plea for elocution in the academy," Miss Kate M. Thomas, Fort Plain Seminary; "A higher standard of rhetorical excellence in our academies," Principal George R. Cutting, A. B., Waterville Union School; "The relation of public high schools to colleges," Principal Samuel Thurber, A. M., Syracuse High School; "The National Bureau of Education," Hon. John Eaton, United States Commissioner of Education, Washington, D. C.; "Rural æsthetics in the higher education," Trustee Horatio Seymour, LL. D., L. H. D., Hamilton College; "Practical education," Principal Samuel G. Love, A. M., Jamestown Collegiate Institute: "The Cypriote inscriptions," Trustee Isaac H. Hall, A. M., Rutgers Female College; "The pronunciation of Latin practically considered," Professor Tracy Peck, A. M., Cornell University; "The pronunciation of ancient Greek," Professor Jesse A. Spencer, D. D., College of the City of New York; "Oral instruction," Principal E. W. Rogers, Bainbridge Union School; "Spelling books," Principal Charles Kelsey, A. M., Cayuga Lake Academy; "The English subjunctive," Principal John G. Wight, A. M., Cooperstown Union School; "Mental philosophy in common schools," Principal William H. Rogers, A. M., Nunda Academy; "Preliminary observations on deep-sea soundings by the United States Navy," Professor Hamilton L. Smith, LL. D., Hobart College: "Field studies and scientific Excursions," Professor Darwin R. Ford, D. D., Elmira Female College; "School incentives," Principal John E. Bradley, A. M., Albany High School.

Besides these, to fill blanks in the programme, papers were read on "Systematic nomenclature of decimal numeration," by Dr. Lambert; on "Some points of scholastic philosophy in relation to modern science," by Professor O'Leary, of Manhattan College; and on "Drawing in the public schools," by Mrs. Mary D. Hicks, of Syracuse. This last subject was given some prominence. A gentleman representing the system of Professor Walter Smith had displayed about the assembly chamber specimens of remarkable results achieved by the pupils of the schools of Newton and Boston, Mass., and Secretary Woolworth read the act passed by the last legislature requiring that drawing be taught in the normal, city, and incorporated schools.

The most animated discussions were on the teaching of elocution and on co-education, while no little attention was given to the Centennial.—(The School Bulletin, July and August, 1875.)

OBITUARY RECORD.

PROFESSOR BENJAMIN STANTON.

The death of this distinguished teacher was mentioned in the report for 1874, but fuller particulars of his life and labors, then wanting, have been since supplied by his family, and are now given. He was born at West Lebanon, Me., October 20, 1816; prepared himself, largely by his own efforts, for college study; entered Dartmouth at an early age, and took there a high position. Compelled, after a year's study, to leave college, he went to the Bangor Theological Seminary, where intense application soon broke down his strength and compelled a temporary rest. Then entering Bowdoin College as sophomore, he completed his collegiate course, was graduated with high distinction, and for some time devoted himself to the study of law.

He was, however, to be a teacher, and Providence forced him into positions he was destined to adorn, first as principal of academies at Laconia and New Hampton, N. H., for three years; then, for two more, as head of the Brown High School of Newburyport, Mass.; and, finally, as head master of the Union School, Schenectady, N. Y., with 25 subordinate teachers and 1,200 pupils. Although a mathematician of unusual powers, it was to the classics that he here especially gave his attention, raising the standard of scholarship in Greek and Latin to a perfection equalled in few schools and probably surpassed in none throughout the country. No pupil was regarded as having prepared his lesson so long as he was unable to answer any question relating to it, whether as to grammar, etymology, historical allusion, geography, or mythology; while he himself was so familiar with the authors gone over that he could conduct his recitations almost independently of book, with the utmost accuracy. And as his pupils were required to study with nearly equal thoroughness, those of them who possessed any considerable ability were able, after being for a time under his tuition, to repeat almost verbatim the substance of both the Greek and Latin grammars and to know nearly by heart whatever classics they had read. Those trained by him, in consequence, took most of the scholarships at Union College, near at hand, and held distinguished rank in any other institutions which they entered. Professor Stanton continued in this department from 1857 to 1860, when he succeeded Professor Bennett as superintendent, and remained such till 1863. At that date he was made professor of Latin language and literature in Union College, to which was added at a later day the professorship of political economy, in which positions nine honorable and useful years were spent. The imperfect preparation of many students who came here under his instruction troubled, however, his accurate and thorough scholarship, and in 1872 he secured the establish-

ment, in connection with the college, of a new classical school of high grade, of which he took the charge and made it at once an eminent success.

But long years of hard work were already telling on him, and ere long his health gave way under the labors and responsibilities of his new charge. Unable or unwilling to give himself the needed leisure for recovery, he finally succumbed to the influence of his disease, and on Saturday, July 18, 1874, surrounded by his family, the earnest toiler bade adieu to earth, and passed, according to his friends' belief and hope, into the rest of heaven.

ASA D. LORD, M. D.

Dr. Asa D. Lord was born in Madrid, St. Lawrence County, New York, June 17, 1816, and died, after a brief illness, in Batavia, N. Y., March 7, 1875.

The death of his father when he was 2 years of age left him to the care and education of his mother, a gifted woman and experienced teacher, who imparted to her son a love of study and a taste for teaching.

He lived on the farm until he was 16, attending the district school in the winter after he had attained the requisite age, taught his first school at the age of 17, and subsequently pursued a course of study in the Potsdam Academy, then in charge of Rev. Asa Brainerd.

In the fall of 1837 he opened a private school in Willoughby, Ohio; in September, 1838, was admitted to the sophomore class in Western Reserve College; and in the following year was chosen principal of the Western Reserve Teachers' Seminary, at Kirtland, an institution founded in 1838 by Rev. Mr. Slater, one of the first normal schools in the United States, if not the first. He filled the position with marked ability and success. In the eight years of his connection with the institution it sent out hundreds of teachers with advanced ideas and improved methods. Several of these teachers, including Hon. Thomas W. Harvey, M. F. Cowdery, and General M. D. Leggett, have filled responsible positions.

In the fall of 1843 Dr. Lord formed a teachers' class, composed of his pupils intending to teach and teachers in the vicinity, and devoted two weeks to special instruction in teaching and school management. This was in reality, though not in name, what is now called a teachers' institute—the first in Ohio and one of the first in the country.

In 1847 the doctor accepted the position of superintendent of the public schools of Columbus, Ohio, entering on the duties of the office—the first of its kind in the State—May 15. The schools were at once divided into three departments or grades and classified, and in a few weeks the high school was organized. In 1850–'51 evening schools were opened, and in 1853 a school for colored youth. Dr. Lord's administration was marked by great efficiency and public appreciation. He resigned at the close of 1853 to accept the position of agent for the Ohio Teachers' Association, but in July, 1855, was again elected superintendent of the Columbus schools. He filled the position one year, and resigned to accept the superintendency of the Ohio Institution for the Blind, May, 1856. Here he not only enlarged the course of instruction and adopted better methods, but also introduced the plan of teaching each pupil *some trade or art by which to earn a living.*

In 1858 he was invited to take charge of the New York State Institution for the Blind in Batavia. A magnificent building was in process of erection for the Ohio institution, and an opportunity of larger success and usefulness was assured, but he felt it to be his duty to give the new institution in New York the benefit of his experience and ability as an organizer. In six years he made it second to no similar institution in the country. In his death the institution met with a loss that seemed to its friends calamitous and irreparable.

Dr. Lord was always a student. While principal of the Western Reserve Teachers' Seminary he studied medicine, attending lectures at the Willoughby Medical College, from which he received a diploma. While connected with the Ohio Institution for the Blind he studied theology, and in 1863 was licensed to preach by the Presbytery of Franklin.

He took a prominent part in those movements which resulted in the organization of the new school system of Ohio in 1853. He was an instructor and lecturer in the first institutes held in the State, and was one of the organizers and leading members of the Ohio Teachers' Association. In 1846 he started the Ohio School Journal, publishing the first volume in Kirtland and the remaining three volumes in Columbus. In 1850 his journal was united with the School Friend, published by W. B. Smith & Co., Cincinnati, and he was made the chief editor. In this and the following year he published The Public School Advocate, and in 1852 was appointed editor of the Ohio Journal of Education, a new paper published by the State Teachers' Association. He edited four volumes. His practical wisdom in school affairs is indicated by the fact that the great measures of school reform which he early advocated have either been substantially embodied in the Ohio school system or their adoption is still urged by educators.

Dr. Lord did all his work so well that it is difficult to say in what he was most successful. His greatest excellence as a teacher was doubtless in the direction of moral training. Every pupil that came under his influence felt a new impulse to right and

manly endeavor. His crowning honor as a man was his noble Christian life and character, and his memory will ever be precious to all who knew him.—(President E. E. White.)

JAMES W. FARR

Was born in Chenango County, in the State of New York. He spent many years in active labor in New York City, and in 1857 was elected a trustee of common schools in the ninth ward. Two years afterward he was chosen to represent the same ward in the board of education, and was re-elected commissioner of schools several times, continuing in the board until 1868. In 1873 he was again appointed a commissioner by Mayor Havemeyer, having in the interim served as local trustee.

As a school officer no person could have manifested greater zeal and earnestness in duty than Mr. Farr; not only in the immediate business of the board transacted at its meetings and through its committees, but also in a constant personal visitation of the schools of his ward. By this direct supervision of the operations of the system, and by familiarizing himself with the character and qualifications of the teachers, he was always enabled to exercise a sound and accurate judgment in relation to the wants and interests of the schools.

Intelligence and unswerving integrity, as well as devotion to the interests of the schools, were marked characteristics of his career both as trustee and commissioner. He allowed no personal considerations to interfere with the proper and disinterested discharge of his public duties, and was always ready to take an impartial view of every question that arose.

In connection with the normal school for teachers he continued until 1868, when he retired from the board of education, and during the last two years was chairman of the committee on the normal college.

In the decease of Mr. Farr the common schools have lost a well tried friend, and the commonality at large one of its most public spirited and exemplary citizens.

The funeral was attended by a large number of the teachers of the schools, members of the board of education, and a circle of warm, personal and political friends.—(New York School Journal, May 1, 1875.)

HENRY JAMES ANDERSON.

Professor Henry James Anderson, one of the most distinguished of American scientists, died at Lahore, in the East Indies, on the 19th of last October, in the seventy-seventh year of his age. A private letter from Calcutta, dated October 25, states that he succumbed to an attack of diarrhœa, induced by the climate, after a short illness of three days. The subject of this sketch was born in New York on the 6th of February, 1799. At the very early age of 15 he was graduated with the highest honors from Columbia College, with which institution he remained connected, either as professor or trustee, almost to the time of his death. He had a peculiar genius for mathematics, and on the retirement of Dr. Adrien, Dr. Anderson, who had studied physics and surgery and had taken the degree of doctor of medicine, was appointed professor of mathematics and astronomy. He retained this position till the year 1843, when, on account of the illness of his wife, he had to resign his chair and go abroad, where his wife soon after died. Professor Anderson, while in Europe, formed an intimate acquaintance with Arago, the great astronomer, and also became a convert to the Roman Catholic faith, in which communion he remained till the end of his life. He was made a trustee of Columbia College on his return to New York in 1851. During the term of his professorship he was extremely popular with all the students, and it is related of him that he performed his duties with such punctuality that he never lost an hour in his attention to the classes under his charge. He accompanied Captain Lynch in his exploration of the Dead Sea and wrote the geological report of the expedition. His ardent desire to witness the transit of Venus impelled him, though over 75 years of age, to make a second visit to the Old World last year. He was in Australia at the time of the transit, and proceeded thence to India, where he was overtaken by death. Prior to his demise, however, he ascended one of the peaks of the Himalaya Mountains. Professor Anderson was familiar with all the exact sciences, and was also an excellent linguist. His amiability, the gentleness of his disposition, the modesty of his demeanor and his well known charity endeared him to all with whom he came in contact.—(Philadelphia Evening Telegraph, December 14, 1875.

* For term ending December 31, 1877.

NORTH CAROLINA.

STATISTICAL SUMMARY.

SCHOOL POPULATION AND ATTENDANCE.

Number of children 6–21 years: White, 242,768; colored, 127,192	369,960
Number of children enrolled in school: White, 119,083; colored, 55,000	174,083

TEACHERS.

Number of white teachers examined and approved: Males, 1,495; females, 613	2,108
Number of colored teachers examined and approved: Males, 515; females, 252	767
Total	2,875

SCHOOLS.

Number of schools for white children	2,820
Number of schools for colored children	1,200
Total	4,020

INCOME AND EXPENDITURE.

Receipts.

From the State treasurer	$236,230 67
Capitation tax	148,609 92
Property tax	109,434 94
Balance on hand	202,129 70
Total	496,405 23

Expenditures.

To teachers of white schools	182,646 53
To teachers of colored schools	77,615 25
For school houses	22,676 46
Paid to county examiners	2,854 55
County treasurer's commissions	11,802 06
Total	297,594 85

—(Report for 1874 of superintendent of public instruction, Hon. Alexander McIver, pp. 2-4.)

SCHOOL SYSTEM OF THE STATE.

CONSTITUTIONAL PROVISIONS.

The constitution of 1868, section 7, article I, declares that "the people have a right to the privilege of education," and that "it is the duty of the State to guard and maintain that right."

Article 3, section 1, places the superintendent of public instruction among the executive officers who shall be elected for a term of four years by the qualified electors of the State, at the same time and places and in the same manner as members of the general assembly, their term of office commencing on the 1st day of January next after their election, and continuing till their successors are elected and qualified. Section 7 requires them to report annually to the governor, at least five days previous to each regular session of the general assembly. Section 13 directs that their duties shall be prescribed by law. Section 14, that they shall constitute, *ex officio*, the council of the State. Section 15, that they shall receive for their services a compensation, to be established by law, and not increased or diminished during the term for which they may have been elected, and have no other emolument or allowance whatever.

Article IX, on "Education," provides, section 1, that "religion, morality, and knowledge being essential to good government and the happiness of mankind, schools and the means of education shall forever be encouraged;" section 2, that "the general assembly shall provide, by taxation or otherwise, for a general system of public schools wherein tuition shall be free of charge to all the children of the State between the ages of 6 and 21;" section 3, that "each county of the State shall be divided into a convenient number of districts, in which one or more public schools shall be maintained at least four months in every year;" and that "if the commissioners of any county fail to comply with the aforesaid requirements, they shall be liable to indictment."

Section 4 provides for the formation of an irreducible educational fund, the annual income of which, with so much of the ordinary revenue of the State as may be necessary, shall be appropriated for establishing and perpetuating in the State a system of free public schools, and for no other purposes or uses whatsoever.

Section 5 puts the University of North Carolina, with its lands, emoluments, and

franchises, under the control of the State, to be held to an inseparable connection with the free public school system of the State.

Section 6 directs the general assembly to provide that the benefits of the university, as far as practicable, be extended to the youth of the State free of expense for tuition, and that all property accrued or to accrue to the State from escheats, unclaimed dividends, or distributive shares of the estates of deceased persons be appropriated to the use of the university.

Sections 7–12 provide for a State board of education, to be composed of the executive officers of the State, with the governor as president and the superintendent of public instruction as secretary; this board to succeed to all the powers and trusts of the president and directors of the literature fund of North Carolina, and to have full power to legislate and make all needful rules in relation to free public schools and the educational fund of the State, subject to amendment or repeal by the general assembly.

Sections 13–15 direct the board of education to elect trustees for the university, one for each county, to hold office for eight years, the members of the board of education and the president of the university to be *ex officiis* trustees, and with three other trustees, appointed by the board of trustees, to constitute the executive committee of the trustees of the university. The governor is to be, *ex officio*, president of the board of trustees and chairman of this executive committee.

Section 16 requires the general assembly, as soon as possible after the adoption of the constitution, to establish and maintain, in connection with the university, a department of agriculture, of mechanics, of mining and of normal instruction.

Section 17 empowers the general assembly to enact that every child of sufficient mental and physical ability shall attend the public schools, during the period between the ages of 6 and 18 years, for a term of not less than sixteen months, unless educated by other means.

PROVISIONS OF THE SCHOOL LAW.

School Law and Instructions to School Officers; Stone & Rizzell, State printers, Raleigh, 1873.

OFFICERS.

These, besides the State board of education, State superintendent of public instruction, and trustees of the university, mentioned in the constitution, consist of a board of education and board of examiners for each county, and of a school committee for each township, other State and county officers being also utilized for certain purposes relating to the schools.

POWERS AND DUTIES OF THESE OFFICERS.

The State board of education—composed as before stated—has it as its duty to meet at such times as a majority of its members may appoint, or the governor may call a meeting; to look after the investment of the public school fund; to prescribe a course of studies and text books for the public schools, and the manner of examining and approbating teachers; to decide controversies on school matters referred to it by appeal from the decisions of county boards; to apportion, on January 1, of each year, the school funds to be distributed among the counties, and to draw its order for the share to which each county shall be deemed entitled, as well as to legislate for the schools and elect trustees for the university. The State treasurer acts as its treasurer, and the State auditor keeps for it a special account of the public school fund and the income thereof, and of other moneys raised for school purposes, and draws his warrant on the State treasurer in favor of any county treasurer on presentation by him of an order from the State board.

The State superintendent of public instruction is to act as secretary of the State board; to have the school laws of the State published in pamphlet form and distributed to school officers, as well as all forms necessary for officers and teachers; to look after the school interests of the State at large; to keep his office at the seat of government; to sign all requisitions on the auditor for the payment of money out of the State treasury for school purposes; and to report to the governor, on or before the third Monday of November in every year, giving information and statistics of the public schools and such recommendations as to improvements in the school law as may occur to him.

The boards of education for counties are composed of the county commissioners of each county, the chairman of the commissioners being chairman of the board, the register of deeds secretary, and the county treasurer treasurer also of the board. These boards have supervision of the public schools of their respective counties, levy special school taxes, apportion annually the school funds among the townships, and decide all controversies relating to the boundaries of school districts, or the construction of the school law, subject to appeal to the State board. They hold two regular meetings every year, on the first Mondays of February and August, but may be called together by the chairman at other times, and at each regular meeting have it as their duty to examine the books and vouchers of the county treasurer, audit his accounts, and report to the State superintendent of instruction a full account of all school funds received and disbursed.

The secretary of each county board is to record all its proceedings, to issue all notices and orders pertaining to the schools, school-houses, sites, or districts within its jurisdic-

tion, for service by the sheriff, and to insert in a book, to be furnished by the county commissioners for the purpose, all school statistics reported to him by school committees and board of county examiners. In cases of appeal to the State board from the decision of the county board, he is to send up to the State board a transcript of the proceedings and evidence in each case, together with the written statements of the parties.

The boards of examiners for counties are composed in each county of three residents appointed by the county board of education. They are to be of good moral character and suitable attainments, are to hold office for a year and until their successors are appointed, and are, on the first Thursdays of January and July of every year, to examine, at the court house, applicants for teachers' certificates, continuing the examination from day to day till all applicants are examined. To such as are found to be of sufficient moral and mental qualification, they are to grant certificates: of the first grade to those qualified to teach the higher English branches; of the second grade to those qualified to teach only the ordinary English branches; and of the third grade to those qualified to teach primary classes only. These certificates may be revoked for cause, notice of such revocation being given to the secretary of the county board of education. A list of all to whom certificates have been given during their year of service is to be delivered by the examiners to the secretary of the county board of education by the 1st of October in each year, with an abstract statement of the number, race, and sex of the teachers certificated, and a report of the same is to be made to the State superintendent of instruction.

Two dollars a day for every day actually occupied in the examination of teachers at the regular semi-annual times are the stated compensation for each member of the board of examiners. For examinations at other times a fee of $1 from each applicant may be required.

Township school committees, numbering three persons, are biennially elected by the qualified voters in each township, or, in case of failure to elect, are appointed by the county boards of education. They form a body corporate, capable of purchasing and holding real and personal estate, and of selling and transferring the same for school, as well as of presenting and defending suit for and against them as a corporation. They are to lay off their respective townships into convenient school districts and to designate these by number, making the schools of the white and colored residents separate, and designating them by different numbers, though the districts may be the same. These school committees may receive for school purposes any property by gift, grant, donation, devise, or purchase; may dispose of school-house sites or buildings when they have become unnecessary; may employ and dismiss teachers, and, within certain limits, may determine their pay per month, as well as have the care and custody of the school-houses, sites, grounds, books, and apparatus, with full power to control the same. They are annually to make an estimate of the amount of money necessary for maintaining the schools within their jurisdiction for not less than four months, and deliver a certified report of said estimate to the county commissioners on or before their regular meeting in February, that the needful tax for schools may be assessed, and are to apportion their proportion of the school fund among the several school districts, keeping that for white and that for colored schools separate.

The school committees have, as their compensation for services, exemption from working the public roads, from serving on juries, and from military duty.

SCHOOLS.

All schools to which aid is given under the school law are to be public schools, free to children between the ages of 6 and 21, with only the restriction that those for white children are to be separate from those for colored ones. Instruction in English branches only is provided for in the school law. The minimum school term recognized by law is four months in a year, and at the middle and end of each four months' term the teacher or principal of a school is to exhibit to the school committee a statement of the number of pupils, their average attendance, the length of term, and the time taught. The grades in scholarship, numbered downward from 1 to 5, and the grades in deportment in the same numbers and order, are to be recorded daily for each pupil; and at the end of every term the teacher is to deliver to the county treasurer a statement of the length of the school term; of the race, number, sex, and average attendance of the pupils, and the name of the district and township in which the school was taught. The number of schools reported in 1873–'74 was 4,020; the number of teachers, 2,875, many teachers teaching more than one term.

SCHOOL FUNDS.

The permanent school fund—composed of the proceeds of lands granted by the United States; of old school funds; of receipts for estrays, fines, penalties, forfeitures, and exemptions from military duty, and of grants, gifts and devises to the State—is nominally $2,187,564, but the sum reported as received from it ($3,600.55) appears to indicate that only about $60,000 of it is now available.

To supplement the interest from this, the law appropriates annually 75 per cent. of the entire State and county capitation taxes, a property tax of 8⅓ cents on the hundred dollars' worth of all property and credits in the State, with all taxes on auction-

eers and licenses to retail spirituous liquors, for the support and maintenance of free public schools. If the proceeds from these sources, with any balance remaining in the hands of the county treasurer, be insufficient to maintain in any county schools for four months, the county commissioners are to submit to a vote of the electors of the county the question of levying an additional special tax for this purpose, and if authorized to do so are to proceed to levy and collect such tax.—(School law of 1873.*)

ELEMENTARY INSTRUCTION.

EDUCATIONAL SENTIMENT.

The superintendent, in his report for 1874, expressed the belief that public sentiment was becoming more favorable to public education. The people in many counties were organizing educational associations and taking more interest in public schools than formerly. He thought that if the schools could be better organized and better conducted; if there could be a stricter supervision of them: if there could be a scheme for educating and employing a better class of teachers; if there could be fewer schools and better schools, every obstacle in the way would disappear. There would be no complaint about taxes if the law would provide the right kind of schools.—(Report, p. 2.)

RECOMMENDATIONS.

Among other amendments to the school law, Mr. McIver recommends the appointment of a county superintendent of schools in every county in the State, the office to be filled by practical teachers of high standing. Much stress is laid on this as a means of improving the school system. It is recommended, also, that some provision be made for the education of teachers. One or more normal schools, he remarks, should be at once provided. A State normal school should be established in connection with an agricultural and mechanical college, which should be established in the university for the education of the industrial classes.—(Report, pp. 57–59.)

THE SCHOOL SYSTEM IN THE PAST.

An interesting sketch of the progress of popular education in the State, from the beginning to the present time—quite valuable for reference—is given in the State report, pp. 10–44. From this it appears that in the constitution of 1776 it was ordained that a school or schools should be established by the legislature for the convenient instruction of youth and that all useful learning should be encouraged in one or more universities. Nothing was done, however, in this direction, till 1816, when Governor Miller called attention to the matter in his message to the general assembly. A committee was then appointed in the legislature, and recommended the institution of an educational system, including a regular gradation of schools from the one in which the first rudiments should be taught to that in which the highest branches should be cultivated, with county superintendents to manage the concerns of the sectional schools, to designate the children to be taught in them, and to apply to proper uses the funds consecrated to these schools. A subsequently appointed committee digested and reported, in 1817, a scheme for such a school system, which was favorably received, but failed of full adoption for the want of funds.

In 1825 the subject was revived and measures taken for the establishment of a "literary fund," with a board of directors for its management. In 1837 it was made by the legislature the duty of the president and directors of this fund to digest a plan for common schools suited to the condition and resources of the State, and report at the next session of the assembly. The report presented proposed to divide the State into 1,250 school districts, erect a school-house in each, establish a normal department at the university to prepare the teachers, and put the whole system under State, county, and district supervision. A school law embodying these features was passed in 1840 and continued in force till 1868, when the new constitution and new school system previously sketched came into their embryo existence.

TRAINING OF TEACHERS.

TEACHERS' INSTITUTES.

Reports were received in 1874 from the following teachers' institutes held during the year:

The Ellendale Institute was organized in August, 1872, 22 teachers being present, and a session of one month was held for the instruction of teachers at Ellendale Academy. This was repeated in 1873 and again in 1874. The institute is now a permanent organization, and numbers 44 members, most of whom are working teachers. The library contains about 50 volumes of standard normal and educational works, and about 30 others of general interest to teachers. Meetings of the institute are held on the second Saturday of each month, at which educational topics and subjects pertaining to teaching are discussed. The close of each annual normal session is numerously attended by citizens and friends of education.

*A new State constitution, doubtless to be followed by a new school law, is to be voted on November, 1876.

The Davidson County Teachers' Association was organized, under the school law of 1872, in July, 1872, and three annual normal sessions of one month each were held at Pinewood's Academy. The number of teachers attending in 1872 was 36; in 1873, it was 55; and in 1874, 43. At each of these sessions lectures were given by prominent teachers and other distinguished gentlemen from abroad, and much interest was manifested by the popular gatherings to witness the exercises.

The Ashborough Normal School.—This school is conducted under the auspices of the Randolph County Educational Association, which was organized in 1873. The school was held during one month in 1873 and one month in 1874, 100 teachers being present in 1873 and 75 in 1874. Much interest in public education has been awakened by the school and much valuable service rendered in its training of qualified teachers for the public schools.

The Lexington Normal School.—This school was organized by the county board of education of Davidson County, under a special act of the legislature, August, 1874, and continued in session 25 days. In this school 71 teachers were instructed, 36 of whom were white and 35 colored. The white and colored teachers were instructed separately.

The Cape Fear Teachers' Association was organized in 1872 in Wilmington, and a normal school of one month was held under its auspices by Superintendent Blake, of the city schools. Superintendent Blake has also met the teachers of the public schools in different parts of the county, on stated days, to instruct them in the modes of teaching.

Several other teachers' schools were organized under the school law of 1872, but as that law was repealed in 1873 all were discontinued except those just mentioned. Dr. Sears, agent of the Peabody educational fund, has in every instance assisted these normal schools.—(Report of Superintendent McIver, 1874, pp. 45–49.)

NORMAL SCHOOLS.

At Ray's Normal Institute, Kernersville, 24 pupils, 22 male and 2 female, are reported to have been under instruction in 1875, the course embracing English studies and vocal and instrumental music.

At Shaw University, Raleigh, (Baptist,) 123 male and 70 female students were under training in a three years' course, mainly with a view of teaching, the school outside of the theological department being thus far little more than a normal school for the preparation of teachers for the colored schools. Drawing, with vocal and instrumental music, is included in the course. In St. Augustine's normal school, also at Raleigh, under Protestant Episcopal influence, the same aim prevails, and essentially the same course is pursued. Instructors, 4; students, 127. It is somewhat the same in the Tilesston Normal School, Wilmington, supported by a lady of Boston, in which 66 male and 114 female pupils were taught in the last year.—(Returns to Bureau of Education for 1875.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The present school law makes no explicit reference to the establishment of high schools as a part of the State system, and the report of Superintendent McIver for 1874 does not indicate the existence of any such, except the New Berne Academy, supported in part by an endowment fund and in part by the public school and Peabody funds. It states, however, that in the session of the general assembly of 1872–'73 a bill was introduced in the State senate, making provision for graded schools in all cities and towns in the State of more than 2,000 inhabitants. For a time this bill met favorable consideration, but, in consequence of the agitation of the civil rights bill in Congress, was dropped by its friends in the session of 1873–'74. As a school law which makes no provision for city schools is wanting in the most valuable and effective part of a school system, Mr. McIver recommends that the bill of 1872–'73, or a similar one, be again taken up and passed. In that case, high schools in cities, if not elsewhere, may enter into future reports.

OTHER SECONDARY SCHOOLS.

Nine schools for boys, 4 for girls, and 14 for both sexes, 27 in all, out of a total of 34 or more of these classes believed to be existent, make report for 1875 of 84 teachers and 1,638 scholars. Of these, 478 were in classical studies, 201 in modern languages, 217 preparing for a classical course in college, and 53 for a scientific course. Drawing was taught in 10 of these schools, vocal music in 14, instrumental music in 12, while in 8 were chemical laboratories and in 10 philosophical apparatus. Four of the schools for boys report libraries of 1,000 to 2,000 volumes, the total number being 5,700; two of those for girls report libraries of 100 to 300 volumes; and 4 of those for both sexes report 200 to 2,200 volumes each, the total number in this class being 5,600, and the total for all the schools 11,700.

In the preparatory schools of colleges are reported 426 preparatory students.—(Returns to Bureau of Education, 1875.)

BUSINESS COLLEGE.

The commercial department of Wake Forest College reports 1 instructor with 12 pupils, the course of study embracing book-keeping, by single and double entry in various lines, and commercial arithmetic in its application to commission, stock and banking business, life insurance, custom-house transactions, partnership concerns, &c.—(Return and college catalogue, 1875.)

SUPERIOR INSTRUCTION.

UNIVERSITY OF NORTH CAROLINA.

This institution was reopened in September, 1875, after a thorough repair of the building. The course of instruction embraces the arts, sciences, and agriculture. There is an "optional course," the completion of which will entitle the student to a certificate of proficiency, but not to a degree. The degree of A. M. will be conferred upon examination, not as an honorary distinction, as heretofore. Instruction in the Bible and in military tactics is given in all the courses.

OTHER COLLEGES.

Davidson College, Mecklenburg, embraces classical, scientific, and elective courses. The institution is controlled by Presbyterians, yet the instruction, it is claimed, is not sectarian.

North Carolina College, Mt. Pleasant, (Lutheran.)—The course here embraces primary, academic, preparatory, collegiate, and theological departments.

Rutherford College (non-sectarian) is a college for young men, with a ladies' department. The sexes recite together in those classes in which the courses of study are the same. Children of ministers of all denominations, and also indigent orphans, receive tuition free.

Trinity College, (Methodist Episcopal South.)—The course here embraces 11 schools, including 1 of theology and 1 of law, from which the pupils may select their studies. The degrees conferred are A. B., S. B., and A. M.

Wake Forest College, (Baptist.)—The course of study here is arranged in 6 different schools. The degrees conferred are B. A., B. S., B. L., and M. A., the latter being bestowed on graduates of all the 6 schools.

Wilson Collegiate Institute, Wilson, (non-sectarian.)—This institution is for the education of both sexes in primary, preparatory, commercial, mathematical, philological, musical, ornamental, higher English, normal, and agricultural branches of studies.

COLLEGES FOR WOMEN.

Six institutions for the superior instruction of young women, all chartered, report for 1875 instructors 70; pupils, 580. Of these, 250 were in the regular collegiate course, 47 in partial courses, and 4 in post graduate studies. Drawing, painting, vocal, and instrumental music and French were taught in all the 6, German also in 5, and Spanish in 1. Five had some sort of chemical laboratory; 4, apparatus for philosophical illustration; and 1, a gymnasium, while 3 report libraries of 500, 1,000, and 3,500 volumes.—(Returns to Bureau of Education, 1875.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The agricultural department of the reopened University of North Carolina provides a course of three years, in which, by proper diligence, the student may obtain the degree of bachelor of agriculture. Instruction will be given in theoretical and practical agriculture, English language and literature, botany, zoölogy, chemistry, mineralogy and geology, mathematics, engineering, political economy, constitutional law, &c.

The scientific course of the same university will lead to the degree of Sci. B.—(Catalogue for 1875.)
