The *State Reform School for Boys*, Lancaster, established in 1856, reports 11 schools, with an average enrolment of 50 to each school. After 4 or 5 hours' schooling each day, the boys go to the shops, bakery, out on the farm, or to learn telegraphy. Military drill is also reported. In November, 1880, there were 572 boys in this school.—(Report, 1880.)

The *House of Refuge and Correction*, Toledo, established in 1870, averaged 177 inmates for the year 1880, who were committed between the ages of 10 and 16. The ordinary branches, the science of government, farming, gardening, and manufacturing of brushes and stockings are taught.—(Return.)

HOMES AND ASYLUMS FOR ORPHAN OR DEPENDENT CHILDREN.

Information was received from 22 such institutions, representing an aggregate of 2,230 inmates, 593 of them in the Ohio Soldiers' and Sailors' Orphan Home at Xenia. Included in this number were the Franklin County Children's Home, Columbus, and the Knox Children's Home, Troy, which were first opened in 1880.—(Returns.)

For statistics of these and any other like institutions reporting, see Table XXII of the appendix, and a summary in the report of the Commissioner preceding.

EDUCATION IN ART.

Instruction in art in its various forms is given at Cincinnati in the School of Design of the University of Cincinnati, in connection with the Women's Art Museum Association, and at the School of Design of the Ohio Mechanics' Institute; at Columbus, in the Columbus Art School; and at Toledo, in the Toledo University of Arts and Trades. According to a newspaper report the School of Design at Cincinnati had 434 pupils, 243 of them women. They were distributed through the various departments as follows: In drawing, 256 men and 95 women; in sculpture, 13 men and 10 women; in woodwork, 138 women and 17 men. A private wood carving school was also reported at Cincinnati, which was said to be very successful; and the Pottery Club, consisting entirely of women, was largely attended. The Columbus Art School reported 250 members for the year ending June 19, 1880, and the Columbus Normal Art Institute, a summer school especially for the training of teachers, gave instruction in the different branches from the elements upwards. No information is at hand in regard to the school at Toledo. It is stated that the Art Museum in Cincinnati, to which Mr. Charles W. West offered $150,000 on condition that the citizens raise as much more, is assured of the receipt of his gift, as $163,532 have been so raised.—(Teachers' Institute, Educational Voice, The Watchman, Educational Weekly, Ohio Educational Monthly, and New-England Journal of Education.)

EDUCATION IN MUSIC.

The College of Music of Cincinnati reports an academic department and a general music school, the former for pupils desiring to become professionals and for amateurs who enter for graduation, the latter for general or special instruction for students entering for a number of terms. Elocution in all its branches is taught in the college, and lectures are given on hygiene of the throat, anatomy of the ear and larynx, the history of music, &c. Every opportunity for thorough and practical instruction in all departments of music seems to be furnished at this college, and this instruction is extended to a training school for the opera and concert stage.—(Circulars.)

## EDUCATIONAL CONVENTIONS.

STATE ASSOCIATION.

For the purpose of meeting in close connection with the National Educational Association the State Teachers' Association met at Chautauqua Lake, New York, July 7–9, 1880, the first instance of a State association holding its annual session in a State not

even adjacent to its own. The attendance reached 700 to 800 persons; the papers were fully up to the average. In the superintendents' section the opening address on industrial education was delivered by Superintendent C. W. Bennett, of Piqua, acting president. He spoke of the need of industrial training, not in the public schools, but in special technical schools established for the purpose. Many of the industries might be made a part of home training, yet certain elementary principles underlying industrial training should be a part of the child's school education. The subject was ably discussed by different members. Hon. J. J. Burns took for his theme "On supervision depends the success of our schools," and showed that with money to pay for the right kind of teachers there would be less need of supervision, but that until such provision is made one and possibly two superintendents for each county seem to be required. In discussing "The teacher's tenure of office," Prof. C. W. Super argued that nothing would conduce more to the elevation of the school than to give teachers generally a firmer hold on their positions. In the general association, after the usual preliminaries, the inaugural, &c., a lengthy paper on "Culture and character" was read by Prof. Judson Smith, of Oberlin. This was followed by "The place and time for elementary science in our schools," in which Prof. John Mickleborough advocated a course of lessons in elementary science for the common schools from the lower grades upwards, and urged teachers to aid children to use their senses, to state their observations in well chosen language; in short, to teach children to think. The work of normal schools and institutes was then discussed. The last day's sessions were occupied by discussions on "Literature for school youth" and "The Quincy method not new." Dr. John B. Peaslee objected to so much arithmetic in the public schools, and urged the need of more study of English literature and composition. Dr. Peaslee and E. S. Cox, of West Virginia, held that children should not alone be taught to read, but should be guided as to what they read. Resolutions were passed regarding the establishment of a thorough system of professional instruction and training for teachers of Ohio; that a committee be appointed to present a plan for institute and normal work which may obtain recognition from local associations, boards of education, and the general assembly; that the legislature add to the studies required for a common school certificate for 24 months United States history and physics or elements of natural philosophy, and for a 36 months' certificate, these two branches, together with physiology; also, that the general assembly authorize the respective counties of the State to employ superintendents of schools with definite duties and fixed salaries.

The ungraded school section held a meeting; officers for that and the main section were chosen, and the meeting adjourned.—(Ohio Educational Monthly.)

### OTHER TEACHERS' ASSOCIATIONS.

The several inter-county associations were held as follows: The Central Ohio, at Columbus; the Northwestern, at Sidney; the Tri-State, at Toledo; the Scioto Valley, at Chillicothe; the Eastern, at Zanesville; the Southeastern, at Parkersburg, W. Va.; the Southwestern, at Hamilton; and the Northeastern, holding bimonthly meetings, at Cleveland and elsewhere.—(State report.)

### COLLEGE ASSOCIATION.

The twelfth annual session of the association of the colleges of Ohio, held at Marietta December 27–28, 1880, was attended by 22 college presidents and professors, representing 13 colleges. The association aims to promote uniformity of requirement in the courses of study leading to the various degrees conferred by the colleges which are members of it, and to raise the standard in those which are now conferring degrees on insufficient grounds. Especial interest was taken in the discussion of papers relating to courses of study and degrees. In respect to elective studies the general opinion seemed to be that while they may be introduced to some extent their use should be restricted.—(Journal of Education, January 20, 1881.)

## OBITUARY RECORD.

### MRS. ESTHER RAYMOND SHIPHERD.

Born at Ballston, N. Y., September 10, 1797, and dying at Cleveland, Ohio, December 5, 1879, the good work of Mrs. Shipherd deserves the notice here she failed to receive in the report preceding this. She came to Ohio in 1830 with her husband, Mr. John J. Shipherd, under the auspices of the Congregational Home Missionary Association, to aid in doing missionary and educational work. In 1832, at the suggestion of Mr. P. P. Stewart, another agent of the board then assisting Mr. Shipherd, an effort was entered on by these three to establish a college for the students whom they had in training. The plan for such a college was marked out on the liberal basis which has since been substantially maintained; the title, Oberlin Collegiate Institute, afterwards made simply Oberlin College, in honor of the great Alsatian pastor, Oberlin, was chosen. A tract of 6,000 unoccupied acres of land to furnish a site and an endowment for it was secured the same year from its owner in Connecticut; and during the winter of 1832–'33 a colony was formed at the east by Mr. Shipherd, pledged under

what was called the "Oberlin covenant," to form on this land a Christian community in the interests of religion and education. The first settler pitched his tent April 19, 1833, and the school that was to form the nucleus of the college opened the next autumn with 44 pupils from 9 different States. The next year advantage was taken of a trouble about antislavery agitation at Lane Seminary, Cincinnati, to secure for the new school two excellent professors and about twenty students, whom the opponents of such agitation had virtually driven from the seminary, and they, with the Rev. Charles G. Finney, a noted revivalist of New York, went to Oberlin in 1835. Thenceforth its future was assured, and after laboring a few years longer to further its financial interests Mr. and Mrs. Shipherd turned their steps, with a newly collected colony from Oberlin, towards the wilderness of Michigan to found a second college on essentially the same principles. Hence, following Oberlin, came Olivet; the former the alma mater of nearly 20,000 students and about 2,000 graduates up to 1880; the latter with upwards of 200 students at the date of Mrs. Shipherd's death. In all the work of establishing both these institutions she was his active coadjutor, rendering cheerful aid often at the expense of great self-sacrifice.—(From material furnished by Rev. Charles T. Collins, Cleveland, Ohio.)

DR. JAMES DASCOMB, M. D.

This thorough and conscientious teacher was born February 21, 1808, at Wilton, N. H., but moved to Oberlin in 1834, and connected himself as professor of chemistry with Oberlin College, then in its infancy. Educated at the common schools, with, perhaps, a term or two at an academy, he received his medical training at Dartmouth College, taking the degree of M. D. in 1833. An intensely earnest man and a thorough investigator in all matters pertaining to the laboratory and to his lectures, he conducted one class after another through the elements of the sciences for 44 years, while during the winters he lectured in the Ohio Agricultural College, in Hillsdale College, Michigan, and for 10 years held the chair of chemistry and toxicology in Charity Hospital Medical College, Cleveland. Lack of strength at last compelled him to relinquish this vacation work, and two years ago he closed his labors at Oberlin. He died in April, 1880.—(Cleveland Leader.)

PROF. WM. K. KEDZIE.

Professor Kedzie, who was the incumbent of the chair of chemistry and physiology at Oberlin at the time of his death, April 14, 1880, was born at Kalamazoo, Mich., July 5, 1851. A graduate of the Michigan State Agricultural College, he became assistant professor of chemistry at that institution when 19 years of age. In 1873 he received a call to the chair of chemistry and physics in the Kansas State Agricultural College, and in 1874 was elected chemist to the State board of agriculture. In 1875 he visited the principal laboratories of the continent and England, and on his return, by means of the ideas obtained in his travels, he made the laboratory of the Agricultural College one of the best equipped and most convenient for work in the West. From 1878 he was connected with Oberlin College, where, as elsewhere, his brilliant scholarly attainments and his manly traits of character were much admired. As a collector of birds and birds' eggs, as one of the originators of the Natural History Society of the Michigan Agricultural College, and as a writer on the geology of Kansas and on other scientific subjects, he was well known.—(Kansas City Review of Science and Industry.)

EDWARD D. MANSFIELD, LL. D.

This son of the distinguished mathematician and engineer, Col. Jared Mansfield, was born August 17, 1801; entered West Point, where his father was professor, in 1815, and graduated fourth in his class in 1819. Declining an appointment in the Army, he pursued a classical course at Princeton, graduating with honors in 1822; studied law at Litchfield, Conn., and was admitted to the bar in 1825. Removing to Ohio about that time, he practised law for a while and then became professor of constitutional law and history in the Cincinnati College in 1836, which position he held only for a short period, when he abandoned legal practice and became editor of the Cincinnati Chronicle. He filled this position 13 years, and was then for years a member of the staff of various newspapers in different sections of the country. He was commissioner of statistics for Ohio from 1857 to 1867, a member of the French Société de statistique universelle, author of treatises on American education, Political Grammar, the utility of mathematics, the legal rights of women, &c., and he printed numerous addresses on education, politics, and literature. He died in the latter part of October, 1880.—(Daily Evening Telegraph.)

## CHIEF STATE SCHOOL OFFICER.

Hon. JAMES J. BURNS, *State commissioner of common schools, Columbus.*[1]

[Term, January 14, 1878, to January 10, 1881.]

Other commissioners in the ten years were Hon. Wm. D. Henkle, 1869–1871; Hon. Thomas W. Harvey, 1871–1875; and Hon. Charles S. Smart, 1875–1878.

[1] Mr. Burns was succeeded in January, 1881, by Hon. D. F. De Wolf.

## SUMMARY OF EDUCATIONAL STATISTICS

| | 1870–'71. | 1871–'72. | 1872–'73. | 1873–'74. |

6 to 21; but school funds were ordered to be distributed on the basis of youth 4 to 20.

## STATE SCHOOL SYSTEM.

### OFFICERS.

The officials having general control of public school interests are a State superintendent of public instruction, elected by the legislature in 1872 and by the people every 4 years since 1874, and a State board of education, composed of the governor, secretary of state, and superintendent of public instruction since 1872.

Local school officers are county superintendents of common schools, elected by the people for 2 years, and district boards of 3 directors, elected by the qualified voters of districts for 3 years' terms, one going out each year.

### OTHER FEATURES OF THE SYSTEM.

The schools are supported by the interest of an irreducible school fund, a county tax of 3 mills on the dollar on taxable property, and a district tax on real and personal property, when a majority of the legal voters decide to levy one. Women liable to taxation may vote on the question of this levy. The income from the school fund is apportioned to the several counties in proportion to the children 4 to 20 years old therein, but the legal age for attendance has been 6 to 21 since 1878. Districts are not entitled to their proportion of this fund unless they make report to the county superintendent by the first Monday of March in each year nor unless they shall have had a school taught for 60 days in each year. Schools supported by a tax on the district are free to all residents therein 6 to 21 years old. Teachers may not receive pay from the public funds for services unless they have certificates of qualification from their county superintendent or from the State board of education. The latter is authorized to issue life diplomas, State certificates, and other certificates of the same force as those issued by county superintendents. In districts containing 1,000 persons 4 to 20 years old a high school must be taught at least 6 months during the year.

### GENERAL CONDITION.

The statistics show an increase since 1878–'79 of 3,151 (or 5½ per cent.) in the school population, of 4,815 (or 15 per cent.) in public school enrolment, and of 6,595 (or 31 per cent.) in the average daily attendance. There was a corresponding reduction in the per capita cost of education in the public schools; based on school population, it was 40 cents less; on the number enrolled, $1.44 less; on average attendance, $3.94 less. The average term of school was more than a day longer; estimated value of public school property, $46,900 more, and average monthly pay of men teaching, 29 cents more. The average monthly pay of women decreased by 42 cents, the receipts for public schools by $12,593, the expenditure for them by $9,587, and the number of pupils in private schools by 925. The decrease in receipts is ascribed by the State superintendent mainly to hard times, occasioned by a partial failure of crops. He thinks, too, that a reported decrease of 18 in the number of first grade certificates held by teachers indicates that there was a more rigid examination of applicants rather than that fewer teachers were well qualified. The increase of 55 in districts reporting (only 29 new ones having been organized) shows that 26 old ones that sustained no schools in 1879, and therefore did not report, had established schools in 1880.

Superintendent Powell visited many of the graded schools during the year, and found most of them doing good work, while in some it was excellent. Other evidences noted by him of the efficiency of the public schools were, that teachers were taking more interest in the work and were availing themselves of such means of improvement as educational journals and books and attendance on teachers' institutes; also, that county superintendents were giving more attention to the work of supervision. The first essential in further improvement of the schools he considers to be better teachers. While many of them were found to be excellent, a majority were far below the proper standard in qualifications and many lacked experience. To secure better teachers, he suggests the establishment of schools for their professional training and payment of higher wages.—(State report, 1880.)

### PROGRESS DURING TEN YEARS.

Since 1870–'71 the population of legal school age has increased by 25,560 and the total number enrolled in public schools by 16,533. The average monthly pay of women is $3.38 greater, the income for public schools $185,381 more, and the expenditure for them $236,933 more. The only item reported which shows material decrease is the average monthly pay of men engaged in teaching, which is $5.81 less than in 1870–'71.

### CHANGES IN SCHOOL LAWS.

The following are the principal amendments that have been made to the school law since 1870: In 1872 it was provided that a State superintendent of public instruction should be elected by the people every 4 years, that office having been previously

filled by the governor; a State board of education was established; the county tax increased from 2 mills on the dollar to 3; provision was made for the establishment under certain circumstances of German schools, for an annual State teachers' association to be held at the capital, and for a teachers' institute in each judicial district. In 1876 arrangements were made for the instruction of the deaf and dumb and the blind. In 1878 the schools were made free to all residents 6 to 21 years of age; provision was made for the establishment of high schools in districts with 1,000 or more inhabitants; and women, residents of the district, being 21 years old and owning taxable property, were made eligible to vote in district school meetings. Previous to this the privilege was restricted to resident women who were widows with children to educate and who owned taxable property. An amendment passed in 1880 increased the number on boards of directors in cities of 10,000 inhabitants, and made other regulations for city schools, including provision for the union of districts.

## CITY SCHOOL SYSTEMS.

### OFFICERS.

An amendment to the school law adopted in 1880 increased the number of directors in cities of 10,000 and more inhabitants from 3 to 7, the mayor of the city to be chairman of the board, which is to employ a city superintendent. There is also to be a board of examiners for the examination of teachers, of which the city superintendent is to be a member and the county superintendent ex officio chairman.

### STATISTICS OF PORTLAND SCHOOLS.

In 4 public school buildings 8 schools were taught during 1879–'80, of which 4 were primary, 3 grammar, and 1 high. There were enrolled in public schools 2,513, out of a school population of 4,302, or about 58 per cent., and it is estimated that about 500 attended private or parochial schools. The average number belonging in public schools was 1,859; the average daily attendance, 1,775, or 95.4 per cent. In the high school, taught by 2 men and 3 women, 140 pupils were enrolled (86 boys and 54 girls), the average number belonging being 123 and the average daily attendance 120. The teachers in all the public schools were 41 women and 4 men, including the superintendent and a teacher of drawing. The total expenditure on public schools during the year was $68,412. There were 57 cases of corporal punishment and 18 of suspension. During the year a school building was erected to replace one destroyed by fire in May, 1879. The new building cost $18,695, will accommodate 600 pupils, is handsomely finished in Oregon ash, well lighted, and thoroughly ventilated. The completion of this building gives 46 rooms for the public schools, of which all but 2 were at once occupied, and the rapid growth of the city was expected soon to fill these. Four years ago 27 rooms accommodated the whole school-going population, the average daily attendance being 1,186. The rooms in 1880 had increased nearly 59 per cent. and the pupils nearly 50 per cent. A correspondent notes a steady improvement in the school buildings in respect to methods of heating, lighting, and other points; the side lighting from large windows makes desks and blackboards plainly visible without injuriously taxing the eyesight.—(Return and report, 1880, with letter from Rev. G. H. Atkinson.)

## TRAINING OF TEACHERS.

### NORMAL SCHOOLS.

*Ashland College and Normal School*, Ashland, organized in 1878, has a 3 years' course of study for normal pupils, and had 48 in attendance in 1879–'80, of whom 22 were men and 26 women.—(Return.)

*Oregon Normal School*, which is a department of Christian College, Monmouth, organized in 1879, reported a 4 years' course of study in that year, but sends no report for 1880.

### NORMAL COURSES OR DEPARTMENTS.

The University of Oregon had in 1879–'80 a 2 years' normal course in its collegiate department; Blue Mountain University, La Grande, had a course of normal lectures in its preparatory department; and Willamette University, Salem, gave in its academical department a 3 years' teachers' course to those not wishing to take a college course but desiring to fit themselves for teaching in the public schools.—(Catalogues.)

### TEACHERS' INSTITUTES.

In pursuance of the law which makes it the duty of the State superintendent to hold institutes in the judicial districts, 15 were held by him during 1880, with 740 teachers in attendance, against 314 the previous year. The institutes were generally characterized by great earnestness on the part of teachers attending and by a lively interest on the part of the community. Superintendent Powell regards the institute

as an important factor in the educational system of Oregon, since it must, as far as possible, supply the place of a State normal school. The enactment of a law is therefore recommended authorizing county institutes of from 1 to 4 weeks, to be held under the supervision of the State board of education or of county superintendents and under the tuition of competent conductors, all the teachers being required to attend under penalty of having their certificates revoked.—(State biennial report, 1879, 1880.)

## SECONDARY INSTRUCTION.

### PUBLIC HIGH SCHOOLS.

As already stated, the high school became by legal enactment a part of the public school system in 1878. In that year 22 such schools were reported, an increase of 5 on the number given in the previous biennial report. The number taught in 1880 is not given in the report for that year, but there were 45 graded schools, an increase of 9 over the number taught in 1879, with 7,824 pupils attending, against 6,967 in 1879.

The establishment of these schools will be greatly facilitated, according to an opinion expressed by an active educator of the State, by an amendment to the school laws adopted in 1880 providing for the union of school districts in all cities of 10,000 and more inhabitants. The Portland high school, having 140 pupils enrolled, is reported to be gaining in power and value. Special facilities are afforded by the large building recently erected for its use, mentioned elsewhere.

### OTHER SECONDARY SCHOOLS.

For statistics of private secondary schools reporting and preparatory departments of colleges, see Tables VI and IX of the appendix, and summaries of them in the report of the Commissioner preceding.

## SUPERIOR INSTRUCTION.

### COLLEGES AND UNIVERSITIES FOR BOTH SEXES.

Seven institutions for the superior instruction alike of young men and women report for 1879–'80. Three of these claim to be non-sectarian in management; 2 of the remaining 4 were under the influence of the Methodist Episcopal Church, and one each under that of the Christians and United Brethren. All report preparatory, classical, and scientific courses, the latter extending over the full 4 years' collegiate term, in all except one institution, the Pacific University. In this, as in Philomath College, ladies' courses of 3 years are arranged for those who prefer them, while Willamette University has established a new department, "the Woman's College;" this movement, it is said, being a modification but not a surrender of the principle of coeducation. The plan embraces training in social and æsthetic directions, decorative art and design, and music, in addition to the collegiate studies. A teachers' course of 3 years is provided in the University Academy. In 3 other colleges more or less provision is made for the training of teachers, either in their preparatory or collegiate departments; 1 reports a theological course, 1 a commercial, and 1 a college of medicine.

The *University of Oregon*, Eugene City, included in the above summary, was organized in 1876, and offers in its collegiate department classical, scientific, and normal courses. Its appropriation from the State for the year 1879–'80 was $2,500; income from tuition fees, $4,150. There are 113 free scholarships offered, 1 for each county and 1 for each member of the legislative assembly. In the collegiate department there were 114 students enrolled, of whom 40 were women; and 9 degrees of A. B. and B. S. were conferred in June, 1880, 6 on men and 3 on women. In the preparatory department, having an attendance of 69, the number of young men and women was about equal.—(Catalogue and returns.)

*McMinnville College*, McMinnville (Baptist), not included in the above summary, reports to the State superintendent 102 pupils in primary and academic studies, but none in collegiate.—(State report.)

For statistics of all the colleges reporting, see Table IX of the appendix, and for a summary of them, a corresponding table in the report of the Commissioner preceding.

### INSTITUTIONS FOR THE SUPERIOR INSTRUCTION OF WOMEN.

Women enjoy equal privileges with men in all the collegiate institutions of this State, and only one institution for their exclusive instruction (St. Helen's Hall, Portland) has been established. For statistics of this seminary, see Table VIII of the appendix, and a summary of it in the report of the Commissioner preceding.

## SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

### SCIENTIFIC.

Besides the scientific courses belonging to the curricula of the collegiate institutions already mentioned, the only provision made in the State for scientific study is that afforded by the State Agricultural College, Corvallis, a department of Corvallis College, organized in 1872. The law provides for the free tuition of 60 young men over 16 years of age, who may be admitted into all the departments of Corvallis College. The course of study covers 4 to 6 years, embracing among other branches the general principles of agriculture, mineralogy, geology, and zoölogy.—(Catalogue and return.)

### PROFESSIONAL.

For *theological* study no provision appears to be made, except in McMinnville College (Baptist), which presents in its catalogue for 1879 a course of study covering 1 to 5 years, for the benefit of students who wish to prepare for the ministry, but it does not appear whether any are engaged in the course or not.

*Medical* instruction is given in the medical department of Willamette University, Portland, first opened in 1867. The regular course of study required by the American Medical College Association (3 years under a medical practitioner and 2 full lecture courses of at least 20 weeks each) is the one provided here, and the requirements for graduation are such as are insisted on by that association. The annual term of lectures extends over the minimum 20 weeks. Candidates for admission, unless matriculates of the university or graduates of a college, academy, or high school, must pass an examination to test their acquaintance with the fundamental branches of an English education, their general intelligence, and their capacity to profit by professional instruction. Women are admitted to this, as to other departments of the university, on equal terms with men. There were 33 students attending during 1880 and 13 graduates who received the degree of M. D.—(Catalogue and return.)

## SPECIAL INSTRUCTION.

### EDUCATION OF THE DEAF AND DUMB.

The Oregon School for Deaf-Mutes, Salem, founded in 1870, is still but partially organized, having no lands, buildings, library, or apparatus. It is under State control and received from the State an appropriation of $6,000 for the two years 1879 and 1880. There were 15 pupils under instruction during 1880, and since the beginning of the school 43 have been taught there. The studies comprise the common English branches only, and there is as yet "no settled system of employments."—(Return, 1880.)

### EDUCATION OF THE BLIND.

The Oregon Institute for the Blind, Salem, was closed in 1879; no later information concerning it has reached this Office.

## EDUCATIONAL CONVENTIONS.

### STATE ASSOCIATION.

As has been already mentioned, the law requires that a State teachers' institute be held by the superintendent at least once in each year, as well as an institute in each judicial district. The State institute or association was held in Salem, August 25, 1880, but no account of its proceedings has reached this Bureau.

## CHIEF STATE SCHOOL OFFICER.

Hon. L. J. POWELL, *State superintendent of public instruction, Salem.*

[Term, September 1, 1878, to September 13, 1882.]

The first State superintendent, Hon. Sylvester C. Simpson, was chosen for a 2 years' term by the legislature in 1872, when the office of superintendent was detached from that of governor. Following superintendents were elected by the people for terms of 4 years. Dr. L. L. Rowland, the first in this new line, was so elected in 1874.

*b* Not including Philadelphia.

## STATE SCHOOL SYSTEM.

### OFFICERS.

There is in Pennsylvania no State board of education. The schools have been from 1834 under the general charge of an officer called, till 1857, superintendent of public schools; then, till 1873, superintendent of common schools, and since that year superintendent of public instruction. During the first period the secretary of state acted as superintendent. Since 1857 a separate officer has been appointed by the governor, with consent of senate, at first for a term of 3 years, but made 4 years by the constitution of 1873. He is allowed to devolve his duties upon one of his clerks, who acts as deputy superintendent when necessary, and for full security a second deputy superintendent has been for some years designated to act in case of need.

The schools of each county, except Philadelphia, are under the supervision of a county superintendent chosen every third year since 1854 by a convention of the subordinate county school officers, which officers are boards of 3 or 6 directors[1] for each school district, elected by the people of the districts for 3 years' terms, one-third to be changed or reëlected annually. The boards of cities and boroughs with more than 7,000 inhabitants since 1871 have been authorized to appoint superintendents for their schools; before that year only those with more than 10,000 inhabitants could do so; a still further reduction of the required number is said to be contemplated. City, borough, and county superintendents are all required to be of literary and scientific attainments and of skill and experience in the art of teaching. By the constitution of 1873 women are made eligible to any office of control or management under the school laws of the State.

### OTHER FEATURES OF THE SYSTEM.

There is no permanent State school fund, but the constitution of 1873 directs that an appropriation of not less than $1,000,000 annually shall be made by the legislature for the maintenance of public schools; and this since 1874 has been regularly made, but not exceeded up to 1881. To meet the excess of the cost of public instruction over the $1,000,000 appropriated, there must be an annual district tax, which, under legal decisions, must be at least 13 mills on $1, and must equal in each county the county's share of the State appropriation. With the State and district funds united, the schools are to be kept open from 5 to 10 months each school year, and are to be free to all resident youth 6 to 21 years of age.[2] Those intending to teach in them must offer evidence of legal qualification before they can be engaged, and while engaged must file monthly, with their directors, reports of pupils attending, books used, and studies pursued. The directors (who prescribe the books and studies) must exercise a general supervision over the schools of their district, and, by one or more of their number, visit each school at least once a month, entering their observations on the books of the board. A system of State normal instruction prepares teachers for the public schools, and a system of district and county institutes continues this instruction in practical directions. Philadelphia and Pittsburgh, as independent city districts, have special normal school and institute systems of their own. Separate schools for colored children have been required to be established whenever such schools could be so placed as to accommodate 20 or more pupils; such schools to have ordinarily the same term as those for whites, but from July 4, 1881, all distinctions of race or color in the public school system are to end. A school for a remnant of an Indian tribe, maintained by the State at an annual cost of $300, is, however, for special reasons to be continued at least till 1885. Night schools and half-time schools are authorized, as well as schools for deaf-mutes, these last in any school district having 20,000 inhabitants and 8 or more deaf-mute children of proper age for attending school.

### GENERAL CONDITION.

In many important things the schools of the State in 1880 stood in advance of those in 1879. The number open was greater by 269, 219 of this increase being graded; nearly 500 more had teachers trained in normal schools; 600 more had uniform text books; 991 more gave instruction in drawing; 5 more taught vocal music, and 58 more included some higher branches than the elements required by law in all.

The schools thus increased in number employed 152 more teachers, or about 1 for every 10 of the 1,570 additional pupils enrolled, while from the increased advantages and the improved quality of the teaching there were 13,955 more in average daily attendance. This advance was effected in spite of the fact that many districts failed to come up to the standard of the previous year in taxation for their schools, the receipts

[1] There are some old districts in which the board is of 2 members only, elected for 3 years; in certain cities, for 4 years.

[2] Youth 13 to 16 may not be employed in factory work without 3 months' preceding attendance at school within the year.

falling off $163,968, and the expenditure more than $266,000. As usual, the teachers had to pay the penalty of the reduction in receipts, their pay being cut down, on an average, nearly $1.27 a month.

### RÉSUMÉ FOR TEN YEARS.

The record for the decade covered by the table given, while not as good proportionally as that for the last year of it, or for 1877–'78, is good in the main, showing an increase of 170 organized school districts (largely through growth of cities and fuller settlement of the mountainous sections of the State); of 2,955 State schools, 333 of them graded, 1,832 more of them with uniform text books, and 1,561 more opening with Bible reading, while some 3,000 more taught drawing and vocal music, and nearly 1,000 more some higher branches. In the same period the school buildings were so greatly multiplied and their quality so much improved that the estimated value of public school property went up $8,577,473. Then, more than 2,000 graduates of the State and city normal schools, with many besides that had studied in these schools without waiting to graduate, came in to improve the teaching force during the decade, almost the whole of that body, moreover, being brought under substantial normal training annually or oftener in the county and district institutes. The additional efficiency thus imparted to the teaching must have been very great. The increase in number of teachers (3,354) was fairly proportionate to the increase of enrolment (102,696), being about 1 teacher to every 30 new pupils on the rolls. The school term was lengthened, on an average, 7 days within the 10 years. Upon the whole, then, the quantity of instruction was increased and extended, its quality considerably improved, and it was given towards the close in better school-houses, with much ampler means of illustration and attraction. An increase of 34,439 in average attendance during the decade was one visible result of these increased advantages, and probably a higher standard of scholarship in the graduates from every graded school system in the State was also a result from them, although less easily made visible. Yet, with all the increase of enrolment and average attendance reached and with all the improvements in the teaching given, less money was spent on the State schools at the close than at the beginning of these ten years, the expenditure in 1880 being $1,110,236 under that of 1870–'71.

### CHANGES OF SCHOOL LAW.

In 1871 changes of text books in a school or district, previously unrestricted, were required to be limited to once in 3 years. In 1872 the limits of the annual public school term were made 5 to 10 months, instead of the former 4 to 10. In 1873, by the new constitution of that year, school districts were forbidden to incur a debt for building beyond 7 per cent. of the valuation of taxable property within them, except cities already owing 7 per cent., which might raise this to 10, if so authorized by law, the people in each case to have a free vote on the question. The term of the superintendent of public instruction was made 4 years, instead of 3, and the State appropriation for public schools, which had been indeterminate, was required to be at least $1,000,000 annually. In 1874 property owned by any school authorities and in use for school purposes was exempted from taxation; provision was made for a partial biennial change in the school boards of cities with 12 or more wards, and all city school authorities were required to make arrangements for liquidation of bonds and funded debts. In 1875 modifications of the laws respecting the governing bodies of State normal schools were enacted with a view to improving their management. School homes for friendless children, not denominational nor sectarian, were in the same year allowed to become participants of county school funds on specified conditions, and were then to become instructors for the county of such children 4–16 years of age as should be committed to them. In 1878 the salaries of county superintendents were made $800 to $2,000 a year, with liberty of increase if the electing county school conventions should vote such increase from their school funds. In 1879 an early provisional election of county superintendents for each new county was directed to be made; in the same year high buildings used for school and other purposes in their upper stories were ordered to be provided with permanent, safe, external means of escape from such stories in case of fire, on penalty of $300 fine.

### KINDERGÄRTEN.

Although the State authorities have not adopted Fröbel's methods of instruction for the public schools, these methods have, within the decade, found much favor with the people. From 2 schools in 1873, the number reached 22 in 1878 and 35 in 1880, with fair prospects of continuous increase. For those reporting in the year last mentioned, see Table V of the appendix, and for a summary of their statistics, see a corresponding table in the report of the Commissioner preceding.

## CITY SCHOOL SYSTEMS.

### OFFICERS.

Cities and boroughs with 7,500 or more inhabitants had, with few exceptions, in 1880, as previously, boards of school controllers composed of 1, 2, or 3 directors chosen by the people in each ward or district. The chief exceptions were Philadelphia and Pittsburgh, where were central boards termed "boards of education," not including the ward boards; in the former case chosen by the judges of two city courts, in the latter by the subboards. In all the boards there is a partial annual change of membership. The ward boards generally choose the teachers; the central or composite ones direct the course of study, select text books, and, except in Danville, Philadelphia, and Wilkes-Barre, appoint superintendents for their schools.—(School laws, 1879, and State report, 1880.)

### STATISTICS. *a*

*a* The figures here, except for population, are taken from the State report for 1880.

*b* The schools (which here come in place of youth of school age, not given in Pennsylvania) are believed to be in all cases exclusive of evening schools, of which Philadelphia had 220, Pittsburg, apparently, 32.

### ADDITIONAL PARTICULARS.

*Allegheny* reported 21 school buildings, 17 of which were brick or stone first class houses, well supplied with suitable furniture and apparatus. There were 185 well classified schools, including 1 for colored children, in all which books were uniform, the Bible read, and music taught, while in 50 drawing was taught, and in 8 the higher branches. Of the 202 teachers employed, 187 were females. The per cent. of average attendance on enrolment was 88; on population, 18. School property valuation, $927,855; estimated enrolment in private and parochial schools, 3,500.—(State report and city return.)

*Allentown* classed its schools as primary, advanced primary, secondary, grammar, and high; had 8 brick or stone buildings, with 3,200 sittings, on well improved grounds, with suitable furniture and apparatus, holding in them 53 graded and well classified schools, in 8 of which the higher branches were taught. The per cent. of average attendance on enrolment was 90; on population, 24. School property valuation, $415,000; estimated enrolment in private and parochial schools, 500.—(State report and city return.)

*Altoona* had 8 frame and 6 brick or stone school buildings, 1 built during the year and 5 reported as first class, affording in all 2,675 sittings. In all the schools books were uniform and drawing was taught, and in 43 the Bible was read. The per cent. of average attendance on enrolment was 84; on population, 27. Schools were classed as primary, grammar, and high, and were in session 188 days. School property valuation, $101,620; estimated enrolment in private and parochial schools, 900.—(State report and city return.)

*Carbondale* had 8 frame school buildings, in 4 of which there was suitable furniture, while in the other 4 it was unsatisfactory. In these buildings there were 20 graded rooms or schools and 10 well classified, affording 1,350 sittings. Text books were uniform throughout, while in none of the schools was the Bible read or either music or drawing taught. The per cent. of average attendance on enrolment was 84; on population, 19. Schools were in session 196 days. School property valuation, $25,000. In private and parochial schools there were enrolled 200, held in 2 rooms with 200 sittings.—(State report and city return.)

*Chester* valued its school property at $100,000; had 8 first class brick or stone school buildings on grounds of sufficient size and suitably improved; 7 were well supplied with furniture and apparatus. In these buildings were held 47 graded and well classified schools; in all, books were uniform, the Bible was read, and drawing and higher branches were taught. The per cent. of average attendance on enrolment was 92. Night schools were held in 6 rooms, while private and parochial schools occupied 6 houses, with an estimated enrolment of 350.—(State report and city return.)

*Columbia* reported 23 graded schools, taught in 3 first class brick or stone buildings, surrounded by suitably improved grounds, and in all the text books were uniform, the Bible was read, and drawing, music, and higher branches were taught, while 3 houses were supplied with apparatus, 2 with suitable furniture, and 1 with a library. The per cent. of average attendance on enrolment was 93; 200 children attended no school. School property was valued at $26,100. There was an enrolment of 50 in 1 ungraded private school.—(State report and city return.)

*Danville* reported 7 school buildings, with 27 rooms for study, 1 of which had been used for a night school; employed 27 teachers, 23 of whom were females; had a per cent. of average attendance on enrolment of 77; had school property valued at $60,000, and private ungraded schools taught in 2 rooms, with an enrolment of 75.—(State report and city return.)

*Easton* reported 7 stone or brick school buildings and 2 frame, all well furnished and 4 ranked as first class. Of these 6 had grounds of sufficient size and 4 grounds suitably improved. There were 45 graded and well classified schools; in all a uniform series of text books and Bible reading; in 14 drawing was taught, and in 2 instruction was given in higher branches. The per cent. of average attendance on enrolment was 87; on population, 20. School property was valued at $182,380.—(State report.)

The school system of *Erie* had the usual course of graded schools in cities, with German in every grade as an optional study, which, under special teachers, was taken by nearly 60 per cent. of the pupils. The high school, with its 3 courses, fits for the most exacting college. There was also a special school for deaf-mutes, in which the articulation method was used. There were 95 well classified schools in which text books were uniform, in 18 the Bible was read, music and drawing taught, and in 4 the higher branches; the schools occupied 14 first class stone or brick houses and 5 frame ones, all supplied with suitable furniture, and 18 with apparatus. Of the 95 teachers employed, 86 were females, 50 had taught more than five years, and 90 intended to teach as a permanent business. The per cent. of average attendance on enrolment was 93; income, $67,152; value of school property, $293,200; enrolment in private and parochial schools, 1,500.—(State report, letter, and city return.)

*Harrisburg* reported 2 high schools, 9 grammar, 12 intermediate, 22 secondary, and 2 ungraded German schools, 8 of which were for colored pupils, 1 in the grammar, 1 in the intermediate, 2 in the secondary, and 4 in the primary grades. Of the 107 teachers employed, 79 were females, while 65 had taught more than 5 years. Within the last few years large additions to the school rooms have been made, and during the last year a new building with rooms for 12 schools was completed, which, with other recent improvements, largely increased the average attendance and the efficiency of school work. There were 90 graded and well classified schools, in all which there was a uniform series of text books, the Bible was read, and music was taught, while drawing and the higher branches were taught in 75. There were 17 stone or brick school buildings and 6 frame ones, all well furnished. The per cent. of average attendance on enrolment was 81; income, $83,065; value of school property, $413,195; enrolment in private and parochial schools, 425.—(State report, letter, and city return.)

*Lancaster* had 65 schools open, an average session of 220 days, with 67 teachers, 58 of them women, paid an average of $35.38 a month, men being paid $72.78. Per cent. of average attendance on enrolment, 86; on population, 17. Income for public schools, $46,213; value of school property, $143,750.—(State report.)

*Lebanon* had 8 brick or stone buildings, with 30 rooms for study, all well supplied with furniture valued at $75,250. There were 30 graded and well classified schools, in which text books were uniform and the Bible was read; in 10 music was taught and in 2 the higher branches. There were 10 male and 20 female teachers; 12 had taught more than 5 years, while 27 intended to make teaching a permanent business. The per cent. of average attendance on enrolment was 91; on population, 22. There

were 3 private ungraded schools, with 6 teachers and 300 pupils.—(State report and city return.)

*Meadville*, in 3 brick or stone school-houses and 1 frame building, had 32 graded and well classified schools, including 1 for colored children. The higher branches were taught in 4 schools, while in all drawing was taught, the Bible was read, and text books were uniform. Of the 32 teachers, all women, 30 had taught more than 5 years, while all intended to make teaching a permanent business. Per cent. of average attendance on enrolment, 95; school property valuation, $20,614. There were 6 private ungraded schools, with 6 teachers and 250 pupils.—(State report.)

*New Castle* reported 2 private ungraded schools, with 3 teachers and 60 pupils, an increase of 1 school, 1 teacher, and 25 pupils over the previous year. There were 25 graded and well classified rooms, 2 used for high school studies, while in all the Bible was read and text books were uniform. There were 4 brick or stone buildings and 1 frame, all well furnished, valued with their sites at $45,000. Per cent. of average attendance on enrolment, 92; on population, 25.—(State report.)

*Norristown*, by the completion during the year of a first class three story high school building, had fully supplied the wants of the borough for school room, making 6 brick or stone buildings, well supplied with furniture and apparatus, with 2,260 sittings, and affording rooms for 23 graded and well classified schools. In all these there was a uniform series of text books, the Bible was read, and music and drawing were taught. The only change in the course of study from previous year was in giving more attention to recitations, declamation, and select readings. Of the 43 teachers employed, 39 were females, 36 had taught more than 5 years, and 35 were teaching as a permanent business. The monthly institutes were doing a good work, increasing in the teachers a professional interest in their work and an ambition to keep pace with the spirit of the age. There was an increase of 73 in enrolment and of 53 in average attendance over the previous year. Monthly reports to parents were doing much to check the evil of truancy. School property was valued at $125,000.

*Philadelphia* reported progress in the grading of its schools, advancing the standard of scholarship for the higher grades and of qualification of teachers and improving its school buildings. Of these last there were 471—5 built during the year and 3 nearly completed, at a cost of $122,742—the entire school property being valued at $6,033,303. These houses afforded rooms for 2,078 day schools, classed as primary, secondary, grammar, boys' high, and girls' normal high and training school combined. There were also numerous consolidated schools embodying several grades and having an average attendance of 5,794. Then in 220 night schools for children, taught by 25 male and 195 female teachers at the same average pay of $7.50 a week, the enrolment reached 8,617. In addition to these there was an advanced night school for artisans prosecuting any of the numerous industries of the city, where special instruction was given in arithmetic, geometry, mensuration, penmanship, mechanical drawing, and natural philosophy, with an average attendance during 30 nights of 161. A number of the men were present every evening and others were absent only one or two nights during the session. None under 18 were admitted to this school, and it is said that there are no scholars who better repay their instruction than those who attend it. In the schools at large a new step was taken regarding the industrial art training adopted as a part of the revised school course in 1878. It consisted in subjecting teachers of all grades to the special instruction of an expert from Boston in the elements of drawing, designing, and decoration. This instruction given throughout 1879–'80 was to be continued in 1880–'81, and thereafter it is proposed that no certificate of competency to teach be given to any one who cannot present evidence of ability to instruct in drawing in the grade or grades for which such certificate is to be allowed. Additional to this effort to improve the drawing, there was instruction in sewing in 39 schools, and the reports of the committees on that subject as to its beneficial results made so favorable an impression as to make the continuance of this teaching probable. The city employed in its day schools 2,075 teachers, of whom 1,998 were women. In enrolment there was a decrease of 1,801, but in average attendance an increase of 627. The per cent. of average attendance on enrolment was 55, on school population 21, at this point falling 4 per cent. below that of the previous year. The population of the city increases annually at the rate of 25,000, and owing to the want of school accommodations during the year there were 8,000 children of school age in no school or in rented rooms so bad as to be little better than no school. The central boys' school had so much increased in number and importance that additional rooms were needed, while the girls' normal school called for a new building for the accommodation of its practice classes. This school began in January, 1880, with 975 pupils; in September there were 1,013, and 776 of these remained December 31, while during the year 108 received certificates and 131 were appointed teachers. Under the revised course of studies extending to all the grades, pupils whose acquirements were sufficient passed at any time from one grade to another in any of the departments without being obliged to wait for the slower ones to come up. Colored schools are mentioned in connection with night schools, but in regard to them and pri-

vate schools no statistics were given. The amount of tax levied for school and building purposes was $1,469,808; total income, $1,641,540.—(State and city reports and return.)

*Pittsburgh* reported 43 brick or stone and 12 frame school buildings, accommodating 468 well classified schools, with uniform series of text books throughout; in 467 schools the Bible was read and drawing and music were taught, and in 20 instruction was given in the higher grade of studies. Of the 467 teachers employed, 416 were women, at an average monthly salary of $48.50; pay of men, $121. There was an increase of 1,128 in enrolment and of 410 in average attendance; per cent. of average daily attendance on enrolment, 84; on population, 28. The school income was $341,000, being $215,267 less than the previous year; value of school property, including furniture, $2,000,000. The schools made healthy progress under some changes in methods of teaching, the main idea being to teach the children to understand principles instead of memorizing facts. Written recitations by the topical method were found to be a valuable aid in teaching spelling, penmanship, composition, and grammar, extending the exercise to letter writing and business forms. Examination by questions and answers was abandoned and the topical method adopted; in addition to these changes, teachers had entered upon the work of teaching not only *how* but *what* to read—one of the most important changes made. For the high school the year had been one of extraordinary success, there having been an average monthly enrolment of 484 and an average daily attendance of 445 in the academic, normal, commercial, and industrial departments. The study of literature, under the title of "authors' day," recently added to the course in all the schools, gave promise of the most satisfactory results, each alternate Friday afternoon being devoted to the reading and study of the writings of some standard author designated in a circular from the superintendent. Evening schools were taught 65 nights, with an average attendance of 470, at a cost for salaries of $2,022. Their discontinuance was advised, as they were accomplishing little, while the evening mechanical schools were doing a good work. It was recommended that provision be made for the establishment of 5 of these schools, with a term of 6 months each year. In accordance with law, the teachers' institute held its annual session in this city under the direction of the city superintendent. The law provides that the funds necessary for its support be drawn from the treasury of the county.—(State report.)

*Pottsville* in 1879–'80 built a two story school-house at a cost of $5,155, with four spacious rooms, each having its own separate entrance and opening on a level with the ground. This gives the city 11 well furnished school buildings, 9 of them of brick or stone and 2 of frame. There were 47 well graded and classified schools, in all of which text books were uniform, the Bible was read, and drawing was taught, while in 10 music was taught, and in 1 the higher branches. Of the 48 teachers 41 were women. A change which relieved the superintendent from teaching in the high school gave great satisfaction, while another experiment was made in doing away with the district institutes for one year. At the end of the year all were convinced that it was a mistake, and they were resumed. School income, $55,414; value of school property, $186,000. In 3 private schools there were 200 pupils.—(State report.)

*Reading*, under a new superintendent, in 1879–'80 erected 3 school-houses, divided a number of rooms in each of which heretofore 2 schools had been taught, and abandoned 2 houses as no longer fit for use. The city now has 24 brick or stone school buildings, well supplied with suitable furniture, affording rooms for 142 well graded and classified schools, in all which text books were uniform and the Bible was read; in 8 drawing and the higher branches were taught. By increasing the number of rooms a reduction in the number of pupils under one teacher was effected, the result of which was gratifying progress in all the grades, especially the primary. In the lowest grades writing on paper took the place of printing on slates. In the high school, mechanical drawing, book-keeping, and study of the United States Constitution were introduced. The per cent. of average attendance on the enrolment was increased from 80 to 87 over previous year. There were 2 private schools and 6 academies, with 12 teachers and 542 pupils.—(State report.)

*Scranton* in 1879–'80 built 1 frame and 2 brick school-houses, at a cost of $12,050, making in all 29 structures, 17 brick or stone and 12 frame, affording in all 8,000 sittings. These buildings were well supplied with furniture and apparatus and gave ample room for 82 well graded and classified schools, all having a uniform series of text books and special instruction in drawing; in 60 the Bible was read, in 4 music was taught, and in 7 instruction was given in the higher branches. There were 15 evening schools, with an enrolment of 1,328 and an average attendance of 939. Under a new grading, the schools were classed as high, preparatory, grammar, intermediate, and primary. Special instruction was given in elocution in the third grammar, preparatory, and high schools, and also to the teachers at their semimonthly institutes. Instead of continuing to hold these institutes separately in each of the 4 districts, one district comprising all the teachers was organized, and both institute and school work have been carried on with a harmony and efficiency hitherto unknown. In 12 private schools and 3 academies, taught by 30 teachers, there was an estimated enrolment of from 800 to 1,500. Per cent. of average attendance on enrol-

ment, 88; school income, $118,031; value of school property, $300,000.—(State report and city return.)

*Shamokin* in 1879–'80 reported general improvement in its public schools beyond any previous year, chiefly due to an improved system of grading and uniformity of text books. During the year there was built one brick structure, making in all 5 brick or stone school buildings. In these there were 21 graded and classified schools, with a uniform series of text books, daily Bible reading, and special instruction in drawing and music; in 1 school the higher branches were taught. During parts of the year 1 night school was held, attended by 20 young men who work through the day. The teachers' institute was well attended by both teachers and citizens. There were 10 male and 14 female teachers employed at an average monthly pay for men of $39; for women, $31.07. There were 2 private ungraded schools taught by 7 women teachers, with from 300 to 350 pupils. School income, $13,230; value of school property, $40,000.—(State report and city return.)

*Shenandoah* reported, for 1879–'80, unusual progress in the presence of great difficulties. The schools had awakened an interest among all the good citizens. There were 25 well classified schools, with uniform text books throughout, while in 24 instruction was given in drawing and in 1 in the higher branches. There were 5 school-houses with suitable furniture, one of which, a frame two story building, was erected during the year for the high school at a cost, exclusive of ground, of $9,500. In this the high school had reached a creditable position, having graduated and given diplomas to its second class. In enrolment there was an increase of 509 and in average attendance of 330 over previous year, while the per cent. of average daily attendance on enrolment was 84. Much importance was attached to the night schools, as a majority of the boys over 8 years of age were compelled to work during the day. There were taught during some parts of the year 4 of these schools, with an enrolment of 430 boys. School income, $32,279; value of school property, $61,500.—(State report and city return.)

*Titusville* estimated its 3 frame and 2 brick or stone school buildings as worth, exclusive of grounds and furnishings, $80,000. In the 28 well classified schools instruction was given in drawing and music and text books were uniform; in 1 the higher branches were taught. There was an increase of 345 in enrolment; per cent. of average attendance on enrolment, 87; on population, 21. No private or evening schools reported; school income, $30,006.—(State report.)

*Wilkes-Barre* reported 32 schools in 1879–'80, being a gain of 2, and an increase of 61 in enrolment, while in attendance there was a decrease of 64. Percentage of average attendance on enrolment, 93; on population, 17. The 32 schools were in session 220 days. Of the 32 teachers employed, 25 were women, whose average monthly salary was $46.96; pay of men, $77.35. Estimated value of school property, $59,000; total receipts for school purposes, $29,957.—(State report.)

*Williamsport* completed a new three story brick building, the third floor affording the high school a well furnished room with seats for 150 and 3 large recitation rooms. Although for 10 years suffering for want of suitable rooms, this school had nevertheless graduated 71, more than one-third of whom had been employed as teachers in the city schools, while during the last 2 years it had an attendance of 130. With the completion of this building the city had supplied its population with school room, having 12 houses with 3,490 sittings, supplying 61 well classified schools. Value of school property, $140,000, free of debt; per cent. of attendance on enrolment, 89. Six private schools and 1 academy enrolled 690 pupils.—(State report and return.)

*York* records with pride the progress of its school system in the last decade. Ten years ago its school buildings were poor, schools ungraded, no course of study adopted, no high school in existence, and no superintendency established. In 1879–'80, 4 new structures had supplanted 4 old ones, giving to the city 9 brick or stone buildings, with ample and well furnished rooms for its 41 schools, classified as high, 2 grammar grades, secondary, and 3 primary grades. In all these special instruction was given in music and drawing, the Bible was read, and text books were uniform. In all the grades there was an increase of 127 in enrolment; per cent. of average daily attendance on enrolment, 88; on population, 21. With a liberal course of study gradually revised to meet the wants of the schools, the advance of the last two years was unprecedented. Special efforts to prevent truancy had reformed 40 truants and secured the regular attendance of 86 who had attended less than half the days in any previous year. The usefulness of the semimonthly institutes, which all the teachers are required to attend, was steadily increasing. There was 1 colored school, with 66 pupils; 3 night schools; and 5 private schools and 2 academies, with an enrolment of from 200 to 250. School income, $34,486; value of school property, $125,000.—(State report and city return.)

## TRAINING OF TEACHERS.

### STATE NORMAL SCHOOLS.

The 10 State normal schools reported for 1879–'80 an attendance of 2,900 in normal studies (1,734 of them men) and 262 graduates from the elementary course of study,

of whom 145 were men. The scientific course had only 1 graduate. State aid was given to 1,978 students, 258 also receiving aid as graduates, of whom 115 were women. This assistance is given students who agree to teach in the common schools, the amount in ordinary cases being 50 cents a week. Students who upon graduating will sign an agreement to teach in the State schools 2 full school years receive $50. Nearly all the graduates, as well as many who do not complete the course of study, enter the schools as teachers. In the 7 schools which report on this point for 1879–'80, out of 196 graduates, 186 immediately engaged in teaching. The principal of the West Chester school says the demand for experienced graduates is always greater than the supply and is increasing from year to year as the merits of trained teachers become better known.

Uniform courses of study are arranged for all the State schools, the law providing that meetings of the principals shall be held in Harrisburg from time to time to decide on such modifications as may be considered necessary. At the last one, held January 27, 1880, some additions were made in the elementary course to the study of English literature and classics, and the outlines of mental philosophy were introduced, the scientific course remaining substantially as arranged at the revision made in 1878.

Five of these schools have been established since 1870; of the remaining 5, the first was recognized by the State in 1859, and the other 4 within the succeeding 10 years. Since their organization 43,156 pupils have attended the 10 schools and 2,026 have been graduated from them (1,125 men and 901 women), of whom 1,952 pursued the elementary course, 71 the scientific, and 3 the classical.

### OTHER NORMAL TRAINING.

The Philadelphia Normal School for Girls, organized in 1848, had 1,015 pupils in 1879–'80 and graduated 201, of whom 135 engaged in teaching. The course of study covers 4 years. Its students are the cream of the city schools, who here enjoy large advantages for thorough and effective training.

Three county normal schools or institutes, 2 in Lycoming County and 1 in Snyder, report 142 students attending. A letter from Deputy State Superintendent Houck says there are probably 15 or 20 of these county schools in the State, but that they are not required to report to the school department; that in nearly all cases they are made up of young teachers or those preparing to teach, numbering from 20 to 75; are conducted by the county superintendent, and remain in session from 4 weeks to 2 months. The State superintendent has decided that county superintendents can have no pecuniary interest in these classes, and in some counties school directors have demanded that they shall have nothing to do with them, it having been charged that in some cases superintendents were partial to their own students in the examinations.

Three private normal schools reporting are Pine Grove Normal Academy, Pine Grove; Sheakleyville Normal Academy, Sheakleyville; and the Institute for Colored Youth, Philadelphia, with a total attendance of 400 pupils, 230 men and 170 women. Only one of these was organized during the past decade, the academy at Sheakleyville in 1878, which has no course marked out yet. The institute at Philadelphia has a 5 years' course; the academy at Pine Grove, one of 4 years.

There are 2 Kindergarten training schools in Philadelphia, one organized in 1878, the other in 1876; the latter reported 15 students for 1879–'80 and 13 graduates from its 1 year's course.

### TEACHERS' INSTITUTES.

Each county superintendent is required by law to hold an annual institute in his county of at least 5 days' duration. District institutes, to be held on 2 Saturdays of each month, are authorized, each city being considered a district. These are optional with boards of directors, but when held the 2 days are to be counted in to make the teacher's month. The cities of Philadelphia, Pittsburgh, and Altoona have special laws on the subject of institutes, and in 12 counties teachers are allowed by special laws the time spent in them without reduction of salary.

Besides 60 district institutes held in 14 cities and boroughs, county institutes were held in the 69 counties of the State, with sessions of from 4 to 15 days, the whole number of days being 347, an average of about 5 for each institute. There were 16,847 actual members present, of whom 13,398 were employed in the common schools of the counties in which they were held. The average attendance was 12,573; lecturers and instructors, 450; amount expended, $22,222, of which $10,835 were received from county treasuries, the remainder from members and other sources.

### EDUCATIONAL JOURNALS.

The Pennsylvania School Journal, the recognized organ of the department of education, was in its twenty-eighth volume in 1879–'80, giving in its monthly issues a large amount of valuable instruction for the teachers of the State, much general educational information, and full reports of the State association, with announcements of official decisions and new laws. The Allegheny Teacher and the Educational Voice,

monthly organs of the educational authorities of Allegheny City and Pittsburgh, were in their second and fifth volumes; the Teachers' Advocate[1] (Mercer), Teachers' Journal (Wilkes-Barre and Pittston), and The Teacher (Philadelphia), all private enterprises, were in their first and second volumes, the Teachers' Journal apparently expiring with number 6 of volume 2.

## SECONDARY INSTRUCTION.

### PUBLIC HIGH SCHOOLS.

The higher branches were taught in 2,158 public schools outside of Philadelphia, an increase since 1878–'79 of 58. Of these 117 were in the schools of cities and boroughs. Extracts from reports of city superintendents found in the State report give favorable accounts of the condition and progress of the high schools of those cities. At Hazleton a higher standard for admission and graduation was adopted during the year; at Reading and at Corry a business course was added to the others; in Shenandoah and Williamsport efficiency was increased by the erection of new buildings; the Altoona high school was becoming a great power in the system; at Easton the number attending the high school was over 8 per cent. of the entire enrolment. The superintendent of Meadville says, in reply to the objection that high schools are for the benefit of the rich rather than the poor, that of 118 families represented in the high school of that city, 72 paid a tax less than $2 each, 15 paid from $2 to $10 each, while only 26 paid more than $10. The president of the Philadelphia school board reports of the 2 schools in that city ranked as high (the boys' central and the girls' normal) that they have stimulated and infused vigor into the other departments and thus more than repaid their annual cost. In the boys' central there was an average attendance during the year of 502 pupils, with 71 graduates; in the girls' normal, a total attendance of 1,015.

### OTHER SECONDARY SCHOOLS.

For statistics of business colleges, private academic schools, and preparatory departments of colleges, see Tables IV, VI, VII, and IX of the appendix, and summaries of them in the report of the Commissioner preceding.

## SUPERIOR INSTRUCTION.

### COLLEGES FOR YOUNG MEN OR FOR BOTH SEXES.

Of 28 colleges and universities reporting for 1879–'80, all but 3 had preparatory departments; all had classical courses of 4 years, though 1 (St. Joseph's College, Philadelphia) had no students above the preparatory; all but 9 had scientific courses of 3 or 4 years, 4 adding engineering, military science, and other technical branches; 5 report normal, 7 commercial, 11 theological or biblical, 2 legal, 1 a medical, and 2 graduate courses; 11 gave instruction in music, 9 in painting or drawing, 22 in German, 16 in French, 12 in Hebrew, 6 in Anglo-Saxon, 3 in Spanish, 1 in Italian, and 1 in Bohemian. Women are admitted to 7 of the 28 colleges; 2 provide special courses for them; 1 (the University at Lewisburg) has an institute for them under the same board, but with different teachers; and in another (the University of Pennsylvania), while women cannot be regular matriculates, they are admitted to certain courses of the Towne Scientific School and to the department of music. Palatinate, New Castle, and Waynesburg Colleges send no report for 1879–'80, and are not included in the above summary. Two of the 28 are reported this year for the first time under this head, one, the Pittsburgh Catholic College (organized in 1878), having preparatory, classical, and commercial courses, and the other, Pennsylvania State College (State College P. O.), which, besides a number of technical courses (including agriculture and civil engineering), presents 2 regular collegiate courses of 4 years in classical studies as well as in the general scientific branches that have been mentioned under the head of scientific instruction for some years.

Gifts and bequests amounting to $2,135,800 were announced during 1879–'80 to 8 of the colleges reporting, namely, Muhlenberg College ($30,000), Haverford College ($7,500), Lincoln University ($70,000), Allegheny College ($5,000), Mercersburg College ($2,200), Westminster College ($15,000), Lehigh University ($2,000,000), and Swarthmore College ($6,100). The purpose of these gifts was, in most cases, to erect buildings and defray general expenses, but the bequest to Lehigh University from its founder, Hon. Asa Packer, was to go towards endowment and library, and the larger portion of the gift to Lincoln University was for the purpose of founding 2 professorships.

The *University of Pennsylvania* (successor of the College of Philadelphia, which was established in 1757) now offers 7 different departments of instruction, that of the arts, organized in the beginning; those of medicine and law, in 1765 and 1789, respectively; the auxiliary faculty of medicine, in 1865; the Towne Scientific School, in 1872; the de-

[1] This and the two preceding were consolidated as the Educational Review, Pittsburgh, 1881.

partment of music, in 1877; and the dental school, in 1878. The department of arts comprises a course of 4 years, that in the Towne Scientific School has been recently extended from 4 to 5 years, while the age for admission has been lowered from 16 to 15. The number of pupils in regular undergraduate courses was 245, against 160 for 1870–'71; of these, 127 were in classical and 108 in scientific courses of study, whereas ten years ago the classical students numbered 125 and the scientific only 35.

*Lafayette College*, Easton, organized in 1832, had 464 pupils in 1879–'80, against 232 in 1870–'71. The greater proportion of this increase (of 100 per cent.) was in pupils studying scientific branches, only 177 of the 464 pupils for 1880 belonging to the classical course. The efficient scientific department of this college was organized in 1866, and was due to a munificent donation from Ario Pardee, esq., of Hazleton, Pa., after whom it was named. Further donations from Mr. Pardee increased the endowment to $200,000 and provided for the erection of a building, which was completed in 1873 at a cost of about $300,000. This was burned in June, 1879, but was immediately rebuilt on the same site and of the same dimensions, the new building being ready for use in November, 1880. A general scientific course of 4 years is provided in this department, besides 5 technical courses. The college also offers a classical course of 4 years, courses for graduate study, and a law department.

*Lehigh University*, South Bethlehem, was organized in 1866, through the generosity of Hon. Asa Packer, of Mauch Chunk, who gave $500,000 and a site of 115 acres. In 1880, by his last will, he bequeathed $1,500,000 more for endowment, besides $500,000 for the library. With the ample endowment the trustees were able, in 1871, to declare tuition free. The university is open to young men of suitable ability and training from any part of the world. No preparatory department is provided, but there are classical and general scientific courses of 4 years, besides courses in mining and metallurgy, civil and mechanical engineering, and several graduate courses. The number of students in 1879–'80 was 75; the number in 1872–'73, the earliest date for which statistics are obtainable, was 73.

### INSTITUTIONS FOR THE SUPERIOR INSTRUCTION OF WOMEN.

Seven of the colleges and universities reporting for 1880 admitted women on equal terms with men, and 2 others, which do not now report, were open to them when last heard from. There are also a large number of collegiate institutions exclusively for women, about half of which are authorized to confer collegiate degrees. For statistics of these, see Table VIII of the appendix, and for a summary of their statistics, see the report of the Commissioner preceding.

## SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

### SCIENTIFIC.

The *Pennsylvania State College*, State College P. O., formerly called the Agricultural College of Pennsylvania, was organized in 1859. Being one of the colleges receiving aid from the congressional land grant of 1862, its leading object is the promotion of the liberal and practical education of the industrial classes. The courses of study are (1) agricultural, (2) classical, (3) scientific, and (4) graduate. The college has a farm of 24 acres, besides 3 experimental farms of about 100 acres each in different sections of the State. The whole number of students attending in 1879–'80 was 159, of whom 43 were women; the number in collegiate classes was 65, against 59 in 1870. Women have been admitted since June, 1872.

Courses in general science are reported by 18 of the other colleges and universities, and are supplemented in the case of 4 by a number of technical courses.

The *Towne Scientific School of the University of Pennsylvania* offers facilities for technical and professional training in chemistry, with its many applications to the industrial arts, metallurgy and assaying, mineralogy and geology, civil, mechanical, and mining engineering, mechanical drawing, architecture, and preparatory medical studies. These undergraduate courses (6 in number) have recently been increased in length from 4 to 5 years. They may be followed by 6 corresponding graduate courses of 2 years. In 1881 a school of finance and political economy is to be added.

*Pardee Scientific Department of Lafayette College*, besides a general course in science, has 3 technical courses, (1) in engineering, civil, topographical, and mechanical, (2) in mining engineering and metallurgy, and (3) in chemistry, besides graduate courses to correspond with them.

*Lehigh University*, South Bethlehem, presents a general scientific course of 4 years and courses of equal length in civil and mechanical engineering, mining and metallurgy, and chemistry; also, 3 graduate courses of 1 year each for the degrees of civil, mechanical, and mining engineer.

The *Polytechnic College of Pennsylvania*, Philadelphia, makes no report for 1880.

*Franklin Institute*, Philadelphia, an association for the promotion of the mechanic arts, sustains a course of lectures, which are now practically free to the public, and an evening drawing school, with a progressive course of 3 years in mechanical, archi-

tectural, and topographical drawing, both free hand and instrumental. There were 96 pupils in 1880, an increase for the year of about 33 per cent. A monthly journal of proceedings is published, a magazine of about 80 pages of scientific investigations and information.

*Spring Garden Institute*, Philadelphia, founded in 1850 for the benefit of young men who desired industrial training, supports a free course of lectures, night schools in free hand, mechanical, and architectural drawing, mechanical handwork classes, classes in cookery, a library and free reading room. The number of pupils during 1879–'80 was 358, an increase of 124 over that of the previous year. The average attendance was 211, against 154 in 1878–'79.

The *Wagner Free Institute of Science*, Philadelphia, gives essentially the same instruction as the Spring Garden Institute, but no specific report from it for 1880 has reached the Bureau.

For detailed statistics of all reporting schools of science, see Table X of the appendix; for a summary of these statistics, see a corresponding table in the report of the Commissioner preceding.

PROFESSIONAL.

Ten *theological* schools out of 13 in the State send reports for 1879–'80, of which 3 were Roman Catholic, 2 Lutheran, and 1 each Unitarian, Presbyterian, Reformed, Baptist, and Protestant Episcopal. All were organized previous to 1870. The 8 which report attendance had a total of 264 pupils; 6 report 180 pupils, of whom 135 had received a degree in letters or science, and 49 were graduated in the summer of 1880. All had courses of 3 years, except the Theological Seminary of Villanova, Villanova, and that of St. Charles Borromeo, Overbrook (both Roman Catholic), which report 7 and 9 years, respectively, that include preparatory training. A preliminary examination for admission is required of those who are not graduates of a college or academy by the Western Theological Seminary, Allegheny (Presbyterian), the 2 seminaries of the Evangelical Lutheran Church (one at Gettysburg, the other at Philadelphia), by the Theological Seminary of the Reformed Church, Lancaster, the Divinity School of the Protestant Episcopal Church, Philadelphia, and Meadville Theological School, Meadville (Unitarian). The last insists only on preparation in the common English branches, although preferring also some knowledge of Greek and Latin. In Crozer Theological Seminary, Upland (Baptist), the examination for admission seems to include only christian character. The 3 institutions not reporting are the Moravian Theological Seminary, Bethlehem (United Brethren), St. Vincent's Seminary, Philadelphia (Roman Catholic), and Missionary Institute, Selinsgrove (Lutheran). Theological or biblical courses of study of from 2 to 3 years are also found in connection with 12 universities and colleges.

For statistics of theological schools reporting, see Table XI of the appendix, and a summary of this in the report of the Commissioner preceding.

The *law* department of the University of Pennsylvania, Philadelphia, organized in 1790, reports 141 students in 1879–'80, about one-half of whom had received a degree in letters or science. The course of study covers 2 years of 36 weeks each. There is no examination for admission, unless the student desires to use his diploma to secure admission to the bar in Philadelphia. No provision for advanced standing is made; students to receive the degree must actually attend 2 full years. They are allowed the benefit of lectures in the other departments of the university free of charge, with full use of the library.

A law department was organized in connection with Lafayette College in 1874, but there is no late information respecting it. In Lehigh University law lectures form a part of the classical course, and in Dickinson College, Carlisle, although no course in law is reported, there is a professor of law in the faculty.

Of 4 *medical* schools reporting (all in Philadelphia), 3 were "regular" and 1 was homœopathic. The 3 regular schools, viz, the medical department of the University of Pennsylvania (organized in 1765), Jefferson Medical College (in 1825), and the Woman's Medical College of Pennsylvania (in 1850), report a total of 1,058 students in 1879–'80.

Jefferson Medical College required the old medical course of 3 years, including 2 courses of lectures of 5 months each (to be made 6 months in 1881), also offering and commending a 3 years' graded course. No examination is required for admission.

The medical department of the University of Pennsylvania has required a 3 years' graded course since 1877, but the year, as at Jefferson, consists of only 5 months. From 1880 a preliminary examination in English is to be required of applicants for admission who are without evidence of suitable literary qualifications. An auxiliary department of medicine was organized as a distinct department in 1865, to supplement the ordinary winter course by lectures during the spring months. This is essentially a graduate course and is entirely optional.

The Woman's Medical College offered and after 1880 was to require a 3 years' graded course of 5 months each year. There is also a spring session of 10 weeks, attendance on which is optional. New apparatus for illustrating and investigating animal physi-

ology was added during the year. A preliminary examination was required only of holders of scholarships.

Hahnemann Medical College, organized in 1848, had 198 pupils in 1879–'80 and graduated 75. The course insisted on was the old one of 3 years' study, including 2 terms of lectures of 20 weeks each. A graded course of 3 years was, however, provided and strongly commended to pupils. A supplementary course during the spring months embraced all the special lectures of the graded course, and thus afforded students taking the 2 years' course opportunity for completing the full course of instruction. There was also a graduate course. There is no examination for admission, but students must have certificates from preceptors as to their fitness for the study of medicine.

*Dentistry* was taught in 3 institutions, all in Philadelphia, viz: the department of dentistry of the University of Pennsylvania (organized in 1878), the Pennsylvania College of Dental Surgery (in 1855), and the Philadelphia Dental College (in 1863). In the department of the University of Pennsylvania the regular course is graded and extends over 2 sessions of 5 months each. Study under a private preceptor is also required during the entire term, unless students prefer to attend the spring and fall lectures, which are otherwise optional; an examination is to be required for admission after October, 1881, of students not collegiate or high school graduates. The Pennsylvania College of Dental Surgery reported 45 students in 1879–'80 and 5 graduates. In this and in the Philadelphia Dental College the course extended over two years. During this time private study under a preceptor and attendance on the two winter courses of 5 months each were required. Spring and fall lectures were also provided, attendance on them being optional. The Philadelphia Dental College accepts attendance on the optional lectures as a substitute for the required study under a preceptor. No preliminary examination has been required by either, but the last named will insist on one after 1881.

Two colleges of *pharmacy* report, 1 in Philadelphia having 350 pupils, the other in Pittsburgh, the former organized in 1821, the latter in 1878. The course required for graduation covered, in 1880, 2 lecture sessions of 20 weeks each and 4 years' apprenticeship in the drug business.

For statistics of medical, dental, and pharmaceutical schools, see Table XIII of the appendix, and for a summary, the report of the Commissioner preceding.

## SPECIAL INSTRUCTION.

### EDUCATION OF THE DEAF AND DUMB.

The *Pennsylvania Institution for the Deaf and Dumb*, Philadelphia, organized in 1821, reported 324 pupils in December, 1880. Of these, 288 were supported by the State, 23 by New Jersey, 2 by Delaware, the others by friends, the city, &c.; average number of years spent here, $5\frac{1}{4}$; total number of pupils receiving a common school education since the organization, 1,896. In addition to their schooling, which includes articulation for semimutes, the inmates are taught shoemaking, tailoring, lithography, dressmaking, and general sewing. The legislature failed again in 1880 to make an appropriation for this institution, but the directors assumed the responsibility of carrying it on; in other respects the report for the year is favorable.—(Report and return.)

The *Western Pennsylvania Institution for the Instruction of the Deaf and Dumb*, Turtle Creek, which was founded in 1876, reports 162 pupils since that date, and 112 remaining in 1880. About $2\frac{1}{2}$ years are spent in the institution in learning articulation, the common branches, natural sciences, &c. No trades were taught, but instruction in gardening was given to some extent.—(Return.)

Connected with the public school systems of Erie and Scranton are deaf-mute schools in which the common branches are taught. The Erie school, dating from 1875, had 13 students in 1880, who were taught by the articulation method; the Scranton school, dating from August 24, 1880, had 12 students.—(Returns.)

### EDUCATION OF THE BLIND.

The *Pennsylvania Institution for the Instruction of the Blind*, Philadelphia, organized in 1833, reported 210 pupils in December, 1880, most of them State pupils, New Jersey sending 9, Delaware 1, other places 2. The financial embarrassment from which the institution has been suffering for a year or two seemed to be somewhat diminished, and the managers felt encouraged for the year 1881. This institution has literary, musical, and industrial departments, with special prominence given to the second. The trades taught are those which will be of use in after life, such as carpet weaving, mattress making, cane seating, manufacturing of brooms, sewing by machine and hand, piano tuning and repairing, &c. A gymnasium was erected during the year to provide means for physical exercise.—(Report.)

In West Philadelphia are situated the *Pennsylvania Working Home for Blind Men* and the *Pennsylvania Industrial Home for Blind Women*. At each of these, various industrial pursuits are taught by which this class may become self-supporting.—(Report of board of public charities.)

### EDUCATION OF THE FEEBLE-MINDED.

The *Pennsylvania Training School for Feeble-Minded Children*, Media, which dates from 1852, had 323 inmates in 1880, varying in age from infancy to 52 years. In the school department were 7 teachers and 164 children. The classes were: 1 training, 2 Kindergarten, and 4 common school. In the industrial department 86 inmates were engaged in domestic or laundry work or in the shops.—(Report of board of public charities.)

### EDUCATION OF ORPHANS.

A bill was prepared in 1864 providing for the organization of a system of schools for the children of deceased and disabled soldiers. This bill failed to pass, but laws were subsequently enacted on the subject, and since 1871 the duties of the superintendent of soldiers' orphans devolve on the superintendent of public instruction. The legislature of 1878 directed that no more children be admitted to these schools after June 1, 1882, and that they be finally closed June 1, 1885. If this plan should be carried out, the record will show that at least 12,000 orphans have been supported and educated at an expenditure of $8,000,000. The number of institutions in which there were soldiers' orphans in 1880 was 18, a reduction of 26 since 1871; number of orphans in September, 1880, 2,457; number since the system went into operation, 11,306; applications on file September 1, 1880, 904; cost of system for the year, $351,432; cost since commencement to May, 1880, $6,313,527. For requirements for admission, &c., see the Report of the Commissioner of Education for 1879.—(Pennsylvania School Journal.)

The *Girard College for Orphans*, Philadelphia, reports 2,559 inmates since 1848 and 870 in 1880. Admitted between the ages of 6 and 10 years, they are required to leave the institution between 14 and 18 years of age, at which time they are indentured to trades. This college was reported in 1880 as enlarging its capacity by means of a new building with accommodations for 160 boys and a dining hall for 1,000.—(Return and National Baptist.)

The *Educational Home* and *Lincoln Institution*, both in Philadelphia, report, the former, 174 pupils in January, 1880; the latter, 100 for the year 1880. At the first mentioned, children from 2 years of age upwards are taken and at the age of 12 or 13 years they are transferred to the Lincoln Institution.—(Report of board of public charities.)

The *Burd Orphan Asylum*, Philadelphia (Protestant Episcopal), founded and endowed by the late Mrs. Eliza Howard Burd, receives the orphan daughters of deceased clergymen and respectable laymen, and gives them, in excellent buildings, a good English education, with instruction in French, music, drawing, embroidery, sewing, housework, and in whatever will make them useful and self-helpful women. They can remain till 17 or 18 years of age. Instructors, 9 in 1880; pupils, 60.

### INDUSTRIAL AND REFORMATORY TRAINING.

Twenty-three homes for orphan or dependent children report for 1880. Eleven of these are in Philadelphia, including 2 for colored children; the others are scattered throughout the State. In all, 1,723 children received instruction in the elementary branches during 1880. Thirteen of these homes report domestic work or some industries taught. The Burd Asylum, above mentioned, was one of these.—(Returns.)

The *House of Refuge*, Philadelphia, established its white department in 1828 and its colored department in 1850. December 31, 1880, there were 499 inmates—328 white and 171 colored. During the year the two departments were placed under charge of one superintendent, with a view to greater efficiency as well as to a diminution in expenditure. About 3 hours daily are spent in the school room and 7 hours in the workshops.—(Report of board of managers.)

The *Pennsylvania Reform School*, Morganza, opened in 1872 for both sexes, reports much usefulness attained by the "family system," a large amount of work done in the male department in farming, grading, roadmaking, quarrying, draining, &c., and by the girls in their special pursuits, and considerable progress made during the year in the school, especially in geography and arithmetic, as also in map and industrial drawing. The number of inmates in 1880 was, males, 277; females, 52.—(Report for 1880.)

### TRAINING OF INDIANS.

The Training School for Indians, Carlisle Barracks, which is under the control of the General Government, was established on October 5, 1879. In 1880 there were nearly three hundred children under instruction, 88 of them girls. Although many of these Indians had been less than 18 months in the school, they were reported to be rapidly acquiring the ability to read, write, draw, and spell, while many had advanced beyond the branches usually taught in an elementary school. All are taught to work; the girls learn sewing and all branches of housekeeping; the boys, shoemaking, tailoring, tinsmithing, carpentry, harness and wagon making, &c.—(Pennsylvania School Journal and Eadle Keatah Toh.)

### TRAINING OF NURSES.

The Nurse Training School of the Woman's Hospital, Philadelphia, had 17 students in 1879 and graduated 10 that year. Forty-six graduates are reported since 1873, and 117 students since the organization. The charter of the institution was obtained in 1860, but the organization seems to have been in 1863. The records indicate that from the first nurses were trained, that from 1872 there was a settled course, and that from 1876 there has been hospital practice.—(Return for 1879 and report of 1878.)

In connection with the Protestant Episcopal Hospital, Philadelphia, some training of the same kind is given.

For statistics of training schools for nurses, see Table XVII of the appendix, and a summary of it in the report of the Commissioner preceding.

### ART EDUCATION.

Philadelphia affords instruction in art in the Pennsylvania Academy of Fine Arts, which trains in all forms of art culture; in the Franklin Institute Drawing Classes, the Philadelphia School of Design for Women, and the Pennsylvania Museum and School of Industrial Art, all of these training to improvement in the industrial arts. An art school was to be opened in 1880 in Meadville, in which modelling in clay was to be a prominent branch. Pittsburgh reports a School of Design for Women. For more detailed information regarding these schools, see the report of the Commissioner for 1879. Information as to Franklin Institute, and as to the Spring Garden Institute, with its classes in mechanical handiwork, will be found in the present report under Scientific Instruction. For an account of the special art training given to Philadelphia teachers, see page 270.

### TRAINING IN ORATORY.

The National School of Elocution and Oratory, Philadelphia, reported 112 ladies and 107 gentlemen studying in 1880; graduates in oratory, 7; in elocution, 67. Although this school was commenced in 1866, its present status dates from September 1, 1873. Since the commencement of the work not less than 3,000 students have been under instruction. The course in elocution occupies two terms of 9 weeks each; the course in oratory, 2 years. Additional are post-junior and post-senior courses, summer and evening courses, also an afternoon course and a Saturday graduating course.—(Catalogue, 1880–'81.)

### TRAINING IN MUSIC.

The *Musical College and Pennsylvania Normal School of Music*, at Freeburg, trains both sexes in the science and art of music, teaching all branches of vocal and instrumental music.

*Madame Seiler's School of Vocal Art and Instrumental Music*, Philadelphia, was first chartered October 2, 1878, and opened with 9 pupils; at its fourth session 135 pupils were in attendance. The original design was to limit the work to the cultivation of the voice and singing, but the fall season for 1880–'81 will open with additional departments.—(Circular and catalogue.)

The *Philadelphia Conservatory of Music* is believed to have essentially the same aims and scope as the two above mentioned, but no report from it has been received.

## EDUCATIONAL CONVENTIONS.

### STATE ASSOCIATION.

The twenty-sixth annual session of the State Teachers' Association was held at York, July 27–29, 1880. After the address of welcome and the response thereto, President Shaub in his inaugural address gave a few points in regard to the educational record of the State, comparing the present record with the past. His remarks were favorable to the school system of to-day, yet he would have teachers impress more fully upon the minds of their pupils the idea of usefulness and helpfulness. There should be more cultivation of the moral nature, and a spirit of duty and of manly and womanly achievement should be inculcated. This subject was continued by others until the adjournment to the evening session, at which a paper by Miss J. V. Johnston on "Moral training" was read and discussed. The following day was given to "Teachers' studies and degrees;" "Use and abuse of examinations"; "Nature and extent of the teacher's responsibility;" "Women vs. men as teachers," in which was shown the need of the coöperation of both sexes to make the perfect school, scholar, and citizen. At the evening session, in "Star study," a paper illustrated by means of the oxyhydrogen lantern, an outline of elementary astronomy desirable for the common schools was presented. On the last day the first paper, "Esthetics in the school room," pointed out the influence of surroundings on the development of thought and the formation of character, indicated the need of comfortable school buildings ornamented within and without, advocated the cultivation of the imagination and the

inculcation in the child of a love for the beautiful, &c. This subject and that of the introduction of the natural sciences in the common schools were considered by several present. A paper on the "Merits and defects of our system of county institutes" was discussed; memorial addresses on Prof. Fordyce A. Allen and Prof. Jacob W. Shoemaker were read, and resolutions were adopted indicating the importance of a consideration of the subject of industrial education and recommending the introduction each year in the schools of elementary instruction in some one or more of the branches of natural science.—(Pennsylvania School Journal.)

### CONVENTION OF SUPERINTENDENTS.

A meeting of superintendents, including county, city, and borough officers, was held at Harrisburg April 20-22, 1880. The attendance was very large and the convention a success in every way. The papers were said to be brief, practical, and to the point, and the educational discussions on these essays of unusual value. The afternoon session of the first day was devoted to discussions on teachers' examinations and county institutes; the evening session to questions relating to school law and policy, to a paper on the necessity of new legislation, one on free school books, and on high schools. On the following morning the convention was divided into two sections, the city and borough superintendents and the county superintendents. The first division discussed matters appertaining to city institutes, their object, the means of securing additional interest, &c.; the other division took up the subjects of certificates, summer and winter schools, graded schools and their course of study, and local institutes. At the general meeting in the afternoon, among the different papers discussed were "Examinations at close of term," "Periodical reviews during term," "Duty of superintendents as to the methods of teaching each branch of study," and "What can a superintendent do to improve public sentiment in reference to the schools?" In the evening session the usual miscellaneous business was transacted prior to the opening of discussions on unpaid warrants, requisite legislation, teachers' certificates, the relation of normal graduates to the profession, &c. The last day of the session, in the divisions and in the general convention, similar subjects were broached by various members, such as the Quincy method, district supervision, school visitation, literary societies in connection with common schools, and a graded course for city schools being among the number. Among the resolutions adopted were those calling for a revision of the school law by immediate legislation, for the enforcing of prompt payment to all the school districts in the State of the amounts annually appropriated thereto, for the passage of a bill authorizing the various boards of school directors to purchase text books for use in the schools of their respective districts, to be paid for out of the funds of the districts, &c.—(Pennsylvania School Journal.)

## EDUCATIONAL BENEFACTIONS.

Under the head of Superior Instruction, preceding, may be found a detailed statement of gifts and bequests for collegiate instruction bestowed or received in 1880.

## OBITUARY RECORD.

### PROF. FORDYCE ALMON ALLEN.

On the 12th of February, 1880, this genial and pleasing principal of the Mansfield State Normal School rested in death from educational labors that had covered 40 years and had made him popular in a large part of the United States. Born July 10, 1820, in Hampshire County, Massachusetts, he went early with his parents first to the town which proved his final resting place, Mansfield, Tioga County, Pennsylvania, thence, after some years, to Ohio, back again to Massachusetts, and then into New York, where, at 19 years of age, he began life on his own account as clerk. The next year, 1840, he began teaching, and from that date made this his main life work, combining with it editorship from 1854. Through steady improvement of large natural capabilities he rose rapidly in his profession from country common schools to village graded ones, then to the principalship of an academy, to the superintendency of the schools of McKean County, Pennsylvania, and in 1857 to a joint proprietorship with two distinguished teachers in the West Chester Normal School, of which he soon became the principal, conducting it successfully for 7 years; then, in 1864, the Mansfield Normal School being established, he accepted the principalship, and, with an interval of a few years in which he turned aside to perhaps equally important work, continued to be its principal till his death. During nearly all the years that he was engaged in teaching, Professor Allen spent much of his vacation periods in conducting or aiding in the management of institutes, his geniality, quick wit, clear comprehension of great principles of education, and a peculiarly happy faculty of presenting these securing him ample occupation in this line, not only in Pennsylvania, but also in many other States. Probably no one man has done more than he to popularize this method of

improving teachers, while as the founder of a great State orphan school he also did good service.—(Pennsylvania School Journal, September, 1880.)

PROF. JACOB W. SHOEMAKER.

Professor Shoemaker, born April 18, 1842, in West Overton, Pa., died in Atchison, Kans., May 15, 1880, from the effects of overwork in teaching while engaged in the foundation of the National School of Oratory, Philadelphia. Trained in one of the State normal schools for the profession of a teacher and practising that profession in the ordinary schools and in schools for freedmen for some time, he quickly saw how much a lucid method of expression aided his pupils' comprehension of whatever subjects he presented and how much the proper vocalization of his teachings went to impress them on the minds that he addressed. He therefore gave himself increasingly to the study of the principles of rhetoric and elocution, taught these extensively in institutes throughout the State, and from 1866 labored in Philadelphia to build up a school that should embody and present these principles with full effect. His enthusiasm and persistence gradually attracted enough pupils and assistants to enable him to carry out his plans, and in the autumn of 1873 the National School of Elocution and Oratory was established. In 1874 its first catalogue was issued, showing an enrolment of 88 students for that year. In 1875 its scope and course were much extended, and a charter was secured for it from the legislature of the State. It is said that not less than 3,000 students have come under its instruction, that at least 600 lectures and readings have been given before educational bodies and lyceums, and that in 12 States of the Union students from the school have been engaged as teachers. Its founder died, worn out with the labor his great enterprise involved, but the school lives on, and probably will live, to extend and to perpetuate the effects of his good work.—(Pennsylvania School Journal, September, 1880, and catalogue for 1880–'81.)

PROF. SAMUEL STEHMAN HALDEMAN.

Dr. Haldeman, naturalist and professor of comparative philology in the University of Pennsylvania, died September 10, 1880, at Chickies, Pa., in which State he was born, at Locust Grove, Lancaster County, August 12, 1812. As a boy, he developed great fondness for investigation, and formed a small museum of specimens (in mineralogy, geology, and aborginal stone implements) in his own home. He studied at Dickinson College, Carlisle, but did not graduate; in 1836 became attached to the geological survey of New Jersey and in 1837 to that of Pennsylvania. From 1851 to 1855 he held the chair of natural history in Delaware College, and was for many years professor of geology and chemistry to the Agricultural Society of Pennsylvania. In 1869 a chair of comparative philology in the University of Pennsylvania having been provided, he was chosen to fill the position, and in 1876 the University conferred upon him the degree of LL. D.

Dr. Haldeman was a prolific writer; his work on "Analytic Orthography" took the highest Trevelyan prize in 1858, in England, over 18 competitors. On the natural sciences alone he contributed about 100 papers to periodicals and the publications of learned societies; but as a learned and distinguished philologist his labors will be best remembered. He was a sound and thorough worker, and Agassiz once said of him, "That man Haldeman has an idea behind every word he utters."—(Proceedings of Numismatic and Antiquarian Society of Philadelphia.)

## CHIEF STATE SCHOOL OFFICER.

Hon. JAMES P. WICKERSHAM, *State superintendent of public instruction, Harrisburg.*

Dr. Wickersham came into office in 1866, held place by successive reappointments for 3 years' terms as superintendent of common schools till 1873, when the new constitution of that year changed his title to that above given and extended his term to 4 years. He entered his fifth term May 5, 1880, but on doing so expressed a readiness to resign the office so long held if a suitable successor could be found to take his place. Information has since come that Dr. Elnathan E. Higbee was appointed to succeed him in the spring of 1881.

The two deputy superintendents in the greater part of the decade (1870–1877) were Robert Curry and Henry Houck; during the later years (i. e., from 1877), Henry Houck and W. A. Lindsey.

for day schools only.

## STATE SCHOOL SYSTEM.

### OFFICERS.

The general care of the State schools since 1870 has been intrusted to a State board of education, composed of the governor and lieutenant governor as ex officio members, with 6 others chosen by the legislature to represent the several counties, one-third of these last changed annually. This board chooses a commissioner of public schools as its secretary and executive officer, with liberty of annual change. He and the board act as trustees of the State Normal School. For each town there is a school committee of not less than 3 members, chosen by the people for 3 years' terms, with yearly change of one-third; for each school district, 1 or 3 trustees, also chosen by the people, who may change or reëlect the same each year, to care for school property and visit and report upon the schools. Adjoining primary school districts, uniting to establish a school of higher grade, may elect 1 member from each of the districts so uniting, to constitute a board of trustees for the union school. Towns and cities may elect superintendents for their schools; if they fail to do so, the school committees must appoint them. Women are eligible to school offices.

### OTHER FEATURES OF THE SYSTEM.

From the income of a permanent school fund and from the proceeds of State taxes $90,000 are annually appropriated for free day schools and over $3,000 for free evening schools, $63,000 of the former sum going to the several towns in proportion to the number of children under 15 years of age and $27,000 in proportion to the number of school districts.[1] All this is to aid in paying teachers, and no town may receive its share unless it raise for its own schools at least as much as the State apportionment to it. Should this not be done by July of any year, the apportionment for the delinquent town is turned into the permanent State school fund. The teachers, who are to be paid out of the State and town school moneys, have been largely trained since 1871 in the State Normal School at Providence. To be employed they must produce evidence of good moral character and certificates of qualification either given or signed by the school committee of the town in which they propose to teach or by its authorized agent. The schools under their charge are to be always subject to visitation and examination, both by the State school authorities and those of the town or city within which they are, and the trustees of school districts and the school committees are to make such visitation, at least twice in each school term, personally or by some suitable agent. The direction of the course of studies, text books, and works of reference is given to the school committees, under advice of the State school commissioner; no text book, however, is to be changed oftener than once in 3 years without consent of the State board of education. Not only are the State schools free to all children 5 to 15 years of age residing in any school district where they exist, but some degree of compulsion to attend is found in a law forbidding the employment of children under 15 in any manufacturing establishment unless they have attended school at least three months in the preceding year. Exclusion from a State school because of race or color is forbidden; but a separate school for Indians is, for special reasons, supported by the State. The education of deaf-mute and blind youth is also provided for.

### GENERAL CONDITION.

Although 1879–'80 was esteemed a prosperous year throughout the Union, $41,757 less than in the year before were raised in this State for the public schools and $53,547 less were expended on them. It is not, therefore, a matter for surprise that, with 2,711 more children of school age, 1,206 fewer pupils[1] were gathered into the State day schools.[2] Still, the high character of many of the schools so far counterbalanced this as to increase the average monthly enrolment by 111 and the average daily attendance by 278. The night schools aided by the State, too (7 more in number and better in some places), enrolled 286 more pupils. The number of public day schools was increased by 5, all graded; the number of school buildings, by 7, with improvements, of course, in others; yet, for some reason unexplained, the valuation of school property was $760,026 less than the year before. Teachers in evening schools numbered 12 more; in day schools, 20 more;[3] and of the latter 3 more (158 in all) had been trained in the normal school. Of the 824 schools reported, 640 (or 243 more than in the preceding

[1] One-half of this sum of $63,000 is apportioned among the school districts in proportion to their number, the other half on the basis of average attendance.

[2] It is only fair to say that the State commissioner ascribes this apparent diminution partly to a more careful elimination of duplicate enrolments; a large loss, however, is admitted.

[3] The increase of teachers is regarded by the commissioner with disfavor, as indicating many changes within the year.

year) had been visited according to law by the school committees in charge of them; but in the same period there was a falling off of 68 in the number visited by school trustees.

Besides the pupils reported by the census takers as attending public schools, there was a total of 6,708 reported in private and church schools, an increase of 552. There were also reported 12,279 of school age not in any school, an increase of 1,730.

### RÉSUMÉ FOR TEN YEARS.

With $44,411 more receipts for the State schools in 1879–'80 than in 1870–'71, there was an expenditure for them $83,041 greater. This seems a fair additional provision for the 13,485 more youth of school age, of whom 4,773 more were in average daily attendance out of 12,240 more enrolled. For the accommodation and training of these there were 412 more public day schools, with 406 more teachers; how many more of these from normal schools does not appear. It is satisfactory to learn, too, that in these ten years the services of teachers had grown to be more highly valued, and that with the improvement wrought in them by normal school and institute instruction there had come an average increase of $33.43 in monthly pay of men and of $6.18 in that of women—a noteworthy exception to the general rule throughout the States.

### CHANGES OF SCHOOL LAWS DURING THE DECADE.

March 8, 1870, an act was passed to require of towns, as a condition of receiving public money for their schools, that they should raise for them by tax a sum equal to their share of the State appropriation; March 14, of the same year, one to establish a State normal school, which was an outgrowth from a successful school for training teachers that had been for some time conducted under private auspices; March 24, same year, one to require in towns an election by school committee of a superintendent for their schools that had previously been only authorized; apparently in the next year, one to change the term of school committeemen from 1 to 3 years, with change of one-third each year; and May 28, 1874, one to require an annual election of school district officers.[1] May 28, 1875, came an act requiring school committees to report to the State school commissioner, in such form as he should prescribe, and authorizing him to refuse to draw his order for the town's share of the State school money until such report was made to him. June 25 of the same year he was further authorized to withhold such order until he should receive from the town treasurer a certificate of the sum voted to be raised by tax for public schools the current year, and also a statement of the amount paid out for such schools to order of the school committee the preceding school year. April 12, 1878, a census of the number of youth of school age (5–15 inclusive) residing in each town was required to be taken annually, in January, and its results to be deposited with the school committee before April 1.

### KINDERGÄRTEN.

No Kindergarten classes appear to have found footing in this State, except in Providence in 1873.

## CITY SCHOOL SYSTEMS.

### OFFICERS.

These are city superintendents and boards of school committees, the latter varying in number in the different cities, but numbering 3 for each town.

### STATISTICS.[2]

| Cities and towns. | Population, census of 1880. | Children of school age. | Enrolment in public schools. | Average daily attendance. | Number of teachers. | Expenditure. |
|---|---|---|---|---|---|---|
| Lincoln | 13,765 | 2,963 | 2,164 | 1,178 | 39 | $24,912 |
| Newport | 15,639 | 2,843 | 2,097 | 1,429 | 44 | 44,584 |
| Pawtucket | 19,030 | 3,292 | 2,995 | 1,902 | 54 | 34,598 |
| Providence | 104,852 | 19,108 | 13,261 | 9,659 | 289 | 236,417 |
| Warwick | 12,163 | 2,463 | 1,822 | 1,086 | 42 | 12,909 |
| Woonsocket | 16,053 | 4,110 | 2,403 | 1,353 | 44 | 27,830 |

[1] A law of April 3, 1874, to punish and reform habitual truants failed of its effect, owing to the want of an institution to receive such truants.

[2] These statistics are from the State report for 1879–'80, except the figures giving population, which are from census returns for 1880.

ADDITIONAL PARTICULARS.

*Lincoln* reports no new departures in the system, but education advancing. The district system was an obstacle to the selection of good teachers. There was an attendance of 277 in private and parochial schools.

*Newport* had more pupils attending public schools in 1879–'80 than ever before, the average exceeding that of the previous year by 150. The methods of teaching were improved, routine being shunned and individuality encouraged. The superintendent complains that while the primary schools are the most important and most difficult to manage the teachers in them were paid less than in any other grades, and he thinks teachers should be paid to remain at the post of honor in the primary school. The evening school was more successful than ever before; 350 pupils were enrolled and 164 were in average attendance. Although the average attendance was not so large as formerly, attendance was more regular and more was accomplished. All showed an earnest desire to learn. The high school had 5 teachers, 143 pupils enrolled, and 122 in average attendance. There were 555 pupils attending private and parochial schools.—(State report and return.)

At *Pawtucket* attendance was reduced through the prevalence of scarlet fever and diphtheria. School-houses, as a general thing, were in fair condition, but nearly all the primaries were overcrowded and the ventilation in them was "abominable." Four evening schools were taught, instead of 2 as formerly; attendance on them was large and of a class that cannot be reached by the other schools.

The *Providence* schools were in a satisfactory condition; some noticeable defects in them had been remedied, so that there was less routine and more vivacity in the teaching. In the grammar schools more attention was given to the quality of the work than to the amount accomplished. The primary and intermediate schools suffered from the prevalence of diseases among the pupils, but the high and grammar schools were as efficient as ever. The revival of business brought a large number of children into the city, but did not materially increase the number attending school, many of them being engaged in work. The evening schools, in discipline, order, and improvement, compared well with those of former years. Examinations for the high school showed a marked improvement; while the questions were more difficult and practical, the percentage of scholarship was larger. The report complains of imperfect ventilation in many of the school-houses. The crowded condition of some of the primaries was deplorable; in a hundred rooms there were from 4 to 8 times as many pupils as the supply of fresh air furnished reasonably warranted.—(State report.)

*Warwick* reports schools generally prosperous. The district system, however, was a hindrance. Another difficulty was lack of rooms for primary pupils, making it necessary to push the classes forward too rapidly. New school-houses are imperatively needed.

In *Woonsocket* the district system was an obstacle to efficiency and harmony, as well as more expensive than the town system. Free text books and stationery have been furnished gratuitously by the town for 3 years, and in some cases this has been an inducement to parents to send children to school. Evening schools were taught and good advancement made by the pupils. About 650 pupils attended private and parochial schools.

## TRAINING OF TEACHERS.

STATE NORMAL SCHOOL.

The Rhode Island Normal School was, by act of March 14, 1871, established on its present basis and placed under the management of the State board of education and the commissioner of public schools. The course of study and training was further developed during 1879–'80 and much improved, especially in the direction of preparing the teacher to lead his pupils to study the phenomena of nature. A new series of lessons on form was introduced, the course in geography was revised, additions were made to apparatus used in elementary instruction, and valuable reference works were added to the library, some of them being on hygiene and sanitation, to which subjects great attention is given throughout the course. One of the specific objects of the school is to aid pupils and prepare them to aid others in securing sound physical health. Physiology is studied by all, with the aid of apparatus, and each pupil is instructed to make the preservation of health a primary duty. Both sexes are admitted, but by far the greater number attending are young women. The attendance in 1879–'80 was 145, against 130 in 1870–'71.

The course of study extends over two years, but graduates of high schools usually finish it in less time. There is also an advanced or graduate course, which includes Latin, Greek, French, German, mathematics, and natural science.

TEACHERS' INSTITUTES.

The commissioner is authorized by law to hold institutes for the instruction of teachers and $500 are annually allowed by law to pay instructors and lecturers. The

institute work of 1879–'80 was unusually satisfactory, both as to immediate results and promise for the future. The commissioner was assisted by Hon. B. G. Northrop, secretary of the Connecticut State board, Prof. W. G. Sumner, of Yale College, Prof. W. H. Niles, of the Massachusetts Institute of Technology, and a number of other distinguished persons. Four institutes were held, the first being in session 3 days, the others 2 days each. About 300 teachers from the State were present, and the attendance during all the sessions was much more regular than is usually the case.

## SECONDARY INSTRUCTION.

### PUBLIC HIGH SCHOOLS.

The number of public high schools in 1879–'80 is not given by the State superintendent in his report for that year, but there were 530 graded schools in the State, an increase of 5 during the year. From city reports and returns it appears that the Providence high school had 515 pupils enrolled, under 16 teachers; that at Newport, 143 enrolled and 122 in average attendance, under 5 teachers; and that at Pawtucket, 81 enrolled, with 62 in attendance, and 3 teachers. In the Providence school the course of study was somewhat shortened, more time being given to a thorough review of grammar school studies and to those branches that fit for mechanical or mercantile pursuits. In the Newport school no changes had been made, but a feeling is reported on the part of teachers that the course in English should be made more prominent. Warren reports the incorporation of political economy into the high school course and other changes in the direction of adaptation to the needs of the majority.

### OTHER SECONDARY SCHOOLS.

For statistics of business colleges, private academies, and schools preparatory to college, see Tables IV, VI, and VII of the appendix, and for summaries, the report of the Commissioner preceding.

## SUPERIOR INSTRUCTION.

### BROWN UNIVERSITY.

Brown University, Providence, organized in 1765, presents three 4 years' courses of undergraduate study, 1 for the degree of A. B. and 2 for PH. B.; the latter, embracing a large number of electives, are simply outlined and are subject to modifications. There are also departments of physical science for students who wish to prepare themselves for such pursuits as require a knowledge of the mathematical and physical sciences and their application to the industrial arts. From an attendance of 220 students in 1870–'71 the number rose to 260 in 1879–'80, and the number of resident graduates in the same time increased from 2 to 16, with, it is believed, a corresponding advance in standard of instruction. Work was continued during the year on a new hall for the university, commenced in 1879, for which funds were given by Hon. Wm. F. Sayles. Its completion was looked for early in 1881, when it will take the place of the hall that has been in use more than a century. Improvements were made in the college grounds. Bequests and gifts were received amounting to $38,000, of which the greater portion was from the late Stephen Olney, who, besides his microscopes and botanical books, the latter numbering 712 volumes, left $25,000 for the endowment of a professorship of natural history and $10,000 to constitute a fund for the purchase of plants and botanical books. Rev. Alva Woods, D. D., gave $1,000 to add another to the 5 scholarships previously founded by him; Mrs. Caswell, widow of the late president, and Newton May, esq., another $1,000 each.

## SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

### SCIENTIFIC.

The departments of practical science in Brown University include (1) a course in chemistry applied to the arts; (2) a four years' course in civil engineering, which, however, may be made longer or shorter according to the wants of students; (3) physics; (4) botany; (5) zoölogy and geology, and (6) agriculture. The last includes preparatory study in chemistry and physics, botany, physiology, zoölogy, and comparative anatomy. There are special lectures on agriculture, relating to the study of soils and applied economic zoölogy, illustrated by specimens from the museum of natural history and by field excursions.

### PROFESSIONAL.

No schools for theological, legal, or medical instruction report from this State.

## SPECIAL INSTRUCTION.

### SCHOOL FOR THE DEAF, PROVIDENCE.

This school was founded April 2, 1877, and is under the control of the State board of education. The pupils receive instruction in reading, writing, and speaking the English language, also in arithmetic and drawing. More advanced pupils take up the higher branches, but the actual use of the English language is of first importance. Special attention was paid in 1880 to art work, regular instruction being given in free hand, mechanical, and map drawing; inventing and coloring designs for tiles, oil cloth, and wall paper; copying pen and ink and crayon sketches, and painting with water colors on silk and other material. Even the youngest pupils—4 to 6 years of age—are under instruction in some of this work. The number of pupils from April 2, 1877, to January 1, 1880, was 13; entered in 1880, 15; left, 5; remaining in December, 1880, 12 males, 11 females.—(Report and return.)

### EDUCATION OF THE BLIND.

In 1879–'80 Rhode Island paid $3,150 to the Perkins Institution and Massachusetts School for the Blind, South Boston, for the training of blind children sent from the State.

### ART EDUCATION.

The Rhode Island School of Design, Providence, pays great attention to mechanical and architectural drawing, designing for patterns of jewelry, wall papers, print cloths, and such other things as art culture demands. The chief purpose of the school is to teach a knowledge of such art as is connected with business and manufactures. The annual exhibitions show improvement from year to year. There are day and evening classes, and the two courses—elementary and advanced—extend over 2 years. A school of embroidery is to be added; children over nine years of age have drawing lessons once a week; a course of lectures for teachers is reported for the fall of 1881; and daily instruction is given in painting in oil and water colors, crayon drawing, modelling in clay and wax, &c.—(Circular, Journal of Education.)

### EDUCATION IN MUSIC.

Reporting in 1879 was a musical institute connected with Greenwich Academy, East Greenwich. Its courses were arranged with a view to graduation in piano, organ, and vocal music, and a diploma is accorded at completion of a full course; partial courses entitle to certificates. Instruction was also given in painting, drawing, crayons, &c., as many students desire also to teach these branches. Information for 1880 is wanting.—(Circular.)

### REFORMATORY AND INDUSTRIAL TRAINING.

The State Reform School, Providence, established November 1, 1850, and changed from city to State control in July, 1880, reports the ages of commitment as 10 to 21. In 1880 the 14 instructors, teachers, and employés had charge of 239 inmates, 121 of them entering during the year. Since the foundation 2,903 inmates have been received. The common school branches, writing, and singing are taught, as also such industrial employments as tailoring, cane seating, domestic duties, &c.—(Report and return.)

### HOMES FOR ORPHANS OR DEPENDENT CHILDREN.

Rhode Island reports 6 such asylums: (1) the Bristol Home for Destitute Children, Bristol, incorporated in 1867, 5 inmates in 1880; (2) St. Mary's Orphanage, East Providence, incorporated March 18, 1879; (3) Home for Friendless and Destitute Children, Newport, dating from 1867; (4) Providence Association for the Benefit of Colored Children, incorporated 1846, 29 inmates in 1880; (5) Providence Children's Friend Society, sending its forty-fifth annual report in 1880, which indicated that 1,237 children had been cared for up to that time, 161 of them in 1880; and (6) the Rhode Island Roman Catholic Orphan Asylum, Providence, organized in 1861 and reporting 211 inmates in 1880. Reading, writing, arithmetic, &c., are taught where the children do not attend the public schools. Generally some industrial employments are taught.—(Reports and returns.)

For statistics, see Table XXII of the appendix, and a summary of it in the report of the Commissioner preceding.

## EDUCATIONAL CONVENTION.

### RHODE ISLAND INSTITUTE OF INSTRUCTION.

The thirty-fifth annual meeting was held January 15–17, 1880. On the first day, in the grammar and primary department, "Primary school occupations" and "Our free

schools from the standpoint of a business man" were discussed, while in the higher department the papers were "The study of natural history as a mental discipline," and "Suggestions on teaching English literature," in which a thorough and systematic study of the text of a few great classics was advocated as the true method. At the evening session Rev. E. G. Robinson, president of Brown University, addressed the meeting on "What constitutes an education?" The second day's proceedings opened with the election of committees, after which Mr. Wm. E. Foster, of the Providence Public Library, presented a paper on "The relation of the libraries to the school system," in which, after explaining the functions of the school system, he showed how the library, by its collections and resources, may be supplementary to them. The subject of "Supplementary reading in primary and grammar schools" was next considered, and in this, too, the need of school libraries was maintained, the libraries to contain books of an instructive and substantial character, the pupils of these grades to be trained to read such works. Papers on "Oral instruction" and on "The present condition of the study of the English language" were next in order, while the evening session was devoted to short addresses on educational subjects. The last day was given up to business, such as the reports of the committee on necrology, on resolutions, and on finance, at the termination of which the meeting adjourned.—(Report of proceedings.)

## CHIEF STATE SCHOOL OFFICER.

Hon. Thomas B. Stockwell, *State commissioner of public schools, Providence.*

Mr. Stockwell has been annually reëlected since 1874. During the earlier years of the decade Hon. Thomas W. Bicknell served.

## SUMMARY OF EDUCATIONAL STATISTICS

| | 1870–'71. | 1871–'72. | 1872–'73. | 1873–'74. | 1874–'75. |

## STATE SCHOOL SYSTEM.

### OFFICERS.

The only elective school officers within the decade have been a State superintendent of education (chosen for 4 years' terms till 1878 and since that time for 2 years' terms) and a school commissioner for each county (chosen throughout the decade for two years' terms). Appointed officers have been, throughout, 2 persons in each county, to be associated with the county commissioner as a county board for examination of teachers, and 3 persons in each school district, appointed biennially by these county boards to manage local educational affairs. Since 1878 there have been 4 persons appointed biennially by the governor to form, with the State superintendent, a State board of examination, which has taken the place of an unwieldy State board of education composed previously of the State superintendent and all the county school commissioners. This board of examination has since its institution appointed the two associates of each county school commissioner, whom he previously himself appointed to aid him in examining teachers.

### OTHER FEATURES OF THE SYSTEM.

The school age recognized is 6 to 16, and, till 1878, a census of children of this age was taken. Since then there has been no provision for it, and there appears to be no restriction of school attendance to persons of this age. In the earlier years of the decade a tax was required to be levied in every school district, to be added to a State poll tax of $1 on each voter and to a further State levy for the support of public schools. Since January, 1878, this district tax has not been called for,[1] and the State schools have had to depend upon the proceeds of a State school tax of 2 mills on $1 and of the poll tax now retained and to be used in the county in which it is collected. In Charleston the tax is 1 mill on $1 since 1878; previously it was 1½ mills. By the constitution of 1868 all State schools were made free to all youth of the State without regard to race or color, but practically there has been no ability to enforce this rule, and separate schools for white and colored pupils have been maintained, as in the other southern States. Their courses of study and the text books to be used in them have been prescribed by the State board of examiners since 1878, no text book, however, to be changed within five years from its adoption except with consent of the legislature. Teachers for them must have certificates of qualification from either the State board of examiners or that of the county in which they intend to teach;[2] in Charleston, from the city school authorities. To receive their pay they must make monthly school reports of attendance and studies according to the prescribed State forms. The basis for the distribution of State school funds is, according to the constitution, the number of attendants so reported; by law of 1878, the average number. Visitation of the schools with a view to the stimulation and improvement of them is required of the State superintendent, county school commissioners, and district trustees.

### GENERAL CONDITION.

In what proportion the youth in need of training were brought into the State schools cannot be told at present, no State census of such youth having been taken since 1877 and the figures of the tenth United States census not having become available as this goes to press. But the State superintendent's report for 1880 shows an absolute increase of 2,851 in the enrolment of whites and of 8,758 in enrolment of colored pupils, 11,609 in all, more than twice as large a gain as in Connecticut, New Jersey, New York, and Pennsylvania combined. This plainly shows how highly even the slender education given in the brief school terms of only about four months has come to be appreciated, and how eagerly both the white and colored parents are hastening to secure it for their children. If the State tables showed also the average attendance, the amount of educational benefit received would be much more perceptible. But that much increase of such benefit must have come from so many thousands more being busy with their studies instead of either idling or working in the fields is evident enough. And from what is said by Superintendent Thompson of the increased efficiency and qualification of the teachers, through the closer and more rigid examinations of late years, there is ground for believing that the education given now is better than at any former period, whatever improvement it may still require. One great step toward better teaching was taken in 1880 by holding (through generous

[1] Winnsboro and Chester have by special petition secured permission to levy local taxes for their schools.

[2] In the earlier years, from the State superintendent or county board.

aid from the Peabody fund trustees) an animated State teachers' institute, in which the philosophy and the methods of the improved instruction of the day were presented by competent professors. Then, too, the teachers in 1880 worked with more encouragement, because, through an increase of receipts for schools, old debts for teaching were in many cases paid and the current pay made surer than for years before.

### RÉSUMÉ FOR TEN YEARS.

The only absolute increase in the decade of youth that ought to be in the schools has been, as shown by the State censuses up to August, 1877, all on the colored side. The figures of the latest of these numberings (somewhat doubtful as to accuracy) even indicate a decrease of some hundreds of white youth; but the colored at that date numbered 19,143 more than in 1870–'71, making the reported growth of school population in seven years 18,752. Perhaps 10,000 more would cover the further growth to 1880. But such has been the zeal for education in the free schools, that the attendance in them of the whites alone exceeded this whole increase of youth of school age of both races, while the attendance of colored youth advanced so rapidly as to make the total enrolment in free schools 39,264 more in 1880 than the estimated increase of young people to be instructed. Allowing for very many duplicate enrolments, this shows how much the schools have grown in favor and how eagerly the poor whites and the colored people are availing themselves of the new advantages for the young members of their families. And as the increase of teachers (1,273) has been well proportioned to the increase of attendance in State schools, as the qualifications of many of these teachers have been much advanced, and as public interest has been more and more directed toward improvement of both schools and teachers, there appears to be good ground for the belief that fair foundations for future development have been laid. This much may be said, though there was in 1877 a great step backward in the breaking up of the State Normal School at Columbia, thus leaving all training of teachers to mere private enterprise or to the heavily tasked resources of the Peabody fund aid. This aid has come in to train specially good teachers from the State at the Normal College, Nashville, Tenn., and in 1880 to give institute instruction, as before detailed, and private or church enterprise has done useful work; but a revival of the State school for normal training under legislative auspices is still desirable, as is a special State institution for training colored teachers.

### CHANGES OF SCHOOL LAWS.

The main changes in the school laws of the State within the decade have been already included under the preceding heads.

### AID FROM THE PEABODY FUND.

The trustees of Mr. Peabody's munificent donation for the improvement of southern public schools have granted to South Carolina, in the 10 years up to and including 1879–'80, a total of $24,050, used, in the earlier years, for advancing graded school instruction; in the later ones, for improving the qualification of teachers. The annual sums thus granted have ranged from $200 to $5,000, the latter amount in 1875.

### KINDERGÄRTEN.

Only 2 of these excellent means of preparing young children for further education appear to have been established in this State, one in connection with the Williamston Female College, Williamston, in 1876, the other in the Charleston City Orphan House, apparently in 1879.

## CITY SCHOOL SYSTEM.

### CHARLESTON.

*Officers.*—The officers of the school board consist of a commissioner from each ward, elected by the people, and a superintendent, elected by the board.

*Statistics.*—Taxable property valuation, $26,422,000; amount raised for schools by a tax of 1 mill on a dollar, $21,703; school population, 12,727 children—5,873 white and 6,854 colored. The city had 1 frame and 4 brick school buildings valued at $125,000, containing 91 classes, with an attendance of 7,284 (an increase of 509), taught by 91 teachers, 86 of whom were females, 85 white southern, and 6 colored, of whom 1 was from the North; 17 were third grade, 51 second, and 23 first grade teachers. The 5 male teachers were paid an average monthly salary of $126.66; the females, $38.70. Income, $65,142; expenditures, $62,811.

Comparing the statistics of 1879–'80 with those of 1870–'71 there was an increase of 1,043 in population, of 2,216 in enrolment, and of 23 in teachers, while in receipts there was a gain of $43,285 and in expenditures of $22,358.—(State reports.)

For high school, see Secondary Instruction.

## TRAINING OF TEACHERS.

### NORMAL SCHOOLS AND NORMAL DEPARTMENTS.

From 1874 to June, 1877, the State trained teachers for its schools in a normal school of its own at Columbia. At that time this training was discontinued from lack of legislative appropriation for it, and up to 1880 it had not been resumed. The only normal training continued throughout the decade has been in the Avery Normal Institute, founded at Charleston, in 1865, under the auspices of the American Missionary Association. Claflin University, Orangeburg, gave such instruction during the earlier and later years, first in a 2 years' course, and later in one of 4 years, in which were 86 normal students in 1880, with an indeterminate number in higher normal and preparatory studies.

The *Avery Normal Institute* (for colored pupils), at date of July 1, 1880, reported 3 resident instructors and 6 non-resident teachers and lecturers, 60 male and 87 female normal students, 103 male and 190 female other students in attendance during the year, and 18 graduates, 4 of whom had engaged in teaching. The whole course of study, beginning with primary elements, required 11 years of 40 weeks each. Drawing and vocal and instrumental music were taught. There was a library of 200 volumes and a small collection of models, casts, apparatus, and examples for free hand drawing.—(Return.)

*Fairfield Normal Institute* (for colored pupils), Winnsboro', founded in 1869, reported on June 4, 1880, an appropriation of $600 from the State and $250 from the county, 4 resident instructors, 70 normal students, and 270 other students during the year, 35 graduates who received certificates for teaching, and 70 previous graduates who had engaged in teaching. The full course of study, beginning with primary elements, covered 6 years, with an annual session of 40 weeks. A model school attached to the institution, supplied with models, casts, apparatus, and examples for free hand drawing, afforded instruction in drawing. Vocal and instrumental music were taught, and students on completion of the course received certificates. Of its pupils 100 were preparing to be teachers and 20 to be ministers. A class in geometry was reported by the principal to compare favorably with any he ever taught before among white or colored.—(Return and Presbyterian Record, May, 1880.)

The *Normal Department of Brainerd Institute* (for colored pupils), Chester, founded in 1874, had on June 30, 1880, 3 resident teachers, 20 normal students, and 120 others in attendance during the year, as well as primary scholars; a course of 2 years, each of 36 weeks; a library of 60 volumes; 1 educational journal; and a small chemical laboratory. Instruction was given in vocal music and drawing. Much had been done to supply the region with teachers and with better facilities; the outlook was encouraging.—(Return and report of Presbyterian committee of missions for freedmen, May, 1880.)

### TEACHERS' INSTITUTES.

Under the head of General Condition, reference has been made to a State institute held through aid from the Peabody fund trustees. Held at Wofford College, Spartanburg, for white teachers, it was largely attended by both citizens and teachers, and seems to have inaugurated a new era in State school teaching. The exercises, August 3–27, were under the charge of Principal F. Louis Soldan, of the St. Louis Normal School, Mo., assisted by Prof. E. S. Joynes, of the State Normal College, Nashville, Tenn., and 4 other skilled instructors, with addresses from several college presidents and from the State school commissioner of Georgia. The teachers present, 197 in all, were divided into classes, and had instruction in the science of education, in the English language, and in methods of teaching grammar, arithmetic, geography, singing, and reading, more general topics being discussed in afternoon and evening lectures. The effects of the institute appear to have been of the most healthful kind. A new interest in the studies gone over and an eager zeal to test the improved methods of instruction in them were widely excited in the teachers present, some of them prolonging throughout the session an attendance that had been meant to be only temporary.

A county institute for colored teachers was held in Charleston in October, 1880. This lasted for a week, under the leadership of the commissioner of Charleston County, with the aid of the principals of two Charleston City schools and of a professor in Charleston College. The attendance reached 62, and from the excellent instruc-

tion given it was hoped that valuable results would manifest themselves in the school sessions of 1880–'81.

Superintendent Thompson had some hope of obtaining from the legislature permission to use a small special school fund for the continuance, in another year, of this institute instruction for both races.

## SECONDARY INSTRUCTION.

### PUBLIC HIGH SCHOOLS.

The State superintendent reported 3,989 pupils in branches higher than those prescribed, but makes no allusion to any high school except that at Charleston. This school had been removed to a commodious building, fitted with new and improved furniture, sufficient to meet all the requirements of such a school. With the possession of its new house, the school was thoroughly reorganized, extending the course of studies through 4 years, prescribing the qualifications of admission and graduation, and assigning each teacher to one branch which he should teach in all the classes, and to which he should be confined. The studies prescribed by the board of supervisors were compulsory, except that French and German might be taken in the place of Greek. It was intended to establish a gymnasium in charge of a competent teacher. (State report and high school report.)

### OTHER SECONDARY SCHOOLS.

For private academies and preparatory departments of colleges, see Tables VI, VII, and IX, in the appendix; for summaries of their statistics, see corresponding tables in the report of the Commissioner preceding.

## SUPERIOR INSTRUCTION.

### COLLEGES FOR YOUNG MEN OR FOR BOTH SEXES.

Of 7 universities and colleges reporting, 6 had a total of 260 students in collegiate departments during 1879–'80, under 36 professors and instructors. One of the 7, Furman University, Greenville, reports 83 students in preparatory studies, but does not give the number in collegiate. All but the College of Charleston (which depends on the city high school for its pupils) have preparatory courses of 2 or 3 years, and all have collegiate courses of 4 years leading to the degree of A. B., though in Furman University the arrangement is that of independent schools rather than the ordinary classical course. Scientific courses of 3 or 4 years are found in 4; commercial, in 3; philosophical, in 1; normal and theological, in 1. German was taught in 6 and French in 5. All but 1 are under denominational influence, this being in 2 cases Presbyterian, in 2 Methodist, in 1 Baptist, and in 1 Lutheran. Only 2 of them were organized during the last decade, Claflin University and Adger College.

*Claflin University and South Carolina Agricultural College*, Orangeburg, was organized in 1870 under the name of Claflin University, and the agricultural department was added in 1874. The courses are classical, agricultural, scientific, theological, normal, and preparatory. There is also a grammar school of 2 years, which, it is said, will be necessary until the common schools shall improve. The number of students attending in 1880, in all departments, was 388. Of these, 20 were undergraduates, 126 were in normal and preparatory departments, and the remainder were in the grammar school.—(Catalogue, 1880.)

*Adger College*, Walhalla (Presbyterian), organized in 1877, presents a collegiate classical course of 4 years, a commercial and scientific course of 3, a partial course, and a preparatory department.

The *University of South Carolina* (non-sectarian), organized in 1805, was closed in 1877 through failure of legislative appropriation for its maintenance, and remained closed in 1880.

For statistics of colleges and universities reporting, see Table IX of the appendix; and for a summary, the report of the Commissioner preceding.

### INSTITUTIONS FOR THE SUPERIOR INSTRUCTION OF YOUNG WOMEN.

Four colleges for young women report from this State, situated respectively at Due West, Walhalla, Greenville, and Williamston, all being authorized by law to confer collegiate degrees. For statistics, see Table VIII of the appendix, and a summary in the report of the Commissioner preceding.

## SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

### SCIENTIFIC.

In the South Carolina Agricultural College and Mechanics' Institute of Claflin University, Orangeburg, there is a scientific and agricultural course of 4 years, which is especially adapted to the wants of those who desire a higher education for industrial pursuits. The college has an experimental farm of 116 acres, which, with other lands under the control of the Claflin board, contains about 150 acres of choice land, mostly under cultivation. There is a carpenter shop for practical instruction, and other mechanical departments will be opened as means shall warrant. Students are paid for labor, and can thus aid materially in their own support during the collegiate term. About $5,000 annually are appropriated from the agricultural land grant fund to sustain this institution, which is for colored students and admits both men and women.

A similar institution for whites was established in 1880 at Columbia, but no detailed information regarding it is at hand.

### PROFESSIONAL.

*Theological* instruction was given in the Theological Seminary of the Presbyterian Church, Columbia, and in Baker Theological Institute, Methodist Episcopal, a department of Claflin University. The former had 26 students during 1879–'80, but in the fall of 1880 it was suspended on account of loss of funds and teachers, to be reopened, it is hoped, in 1882.—(Return.)

The *Medical College of the State of South Carolina*, Charleston ("regular"), reports 72 students in 1879–'80 and 25 graduates, but conferred the medical degree on 30 and a degree in pharmacy on 2. The course is of 3 years, including 2 lecture terms of 20 weeks each. No preliminary examination was required for admission.—(Return.)

## SPECIAL INSTRUCTION.

### EDUCATION OF THE DEAF AND DUMB AND THE BLIND.

The South Carolina Institution for the Education of the Deaf and Dumb and the Blind, Cedar Spring, founded in 1855, reported 56 pupils admitted in 1880, with an average attendance of about 46. Instruction is given in the English branches and Latin, also in broom and brush making and in bead work. A teacher of articulation was employed for the first time in 1880.—(Report and return.)

### EDUCATION OF ORPHANS.

In answer to inquiries respecting homes and asylums for orphan or dependent children information was received from the Holy Communion Church Institute, Charleston, which was incorporated in 1876 but organized in 1867; it had admitted 2,100 pupils, between 10 and 18 years of age since the foundation, and reported 125 resident and 81 day scholars in 1880, who were taught the ordinary English branches and linear drawing. Workshops are to be added in a year or two. The Thornwell Orphanage, Clinton, incorporated in 1872 and organized in 1876, reported 41 inmates between 5 and 13 years of age since the foundation and 28 in 1880. They are taught, in addition to the common branches and instrumental and vocal music, farming, printing, house painting, bracket sawing, sewing, cookery, and laundry work. The Charleston Orphan House reported for 1879 as follows: Inmates, 235; Kindergarten and common school instruction given; also, teaching of sewing, laundry, and kitchen work.—(Returns and reports.)

## EDUCATIONAL CONVENTIONS.

### TEACHERS' ASSOCIATIONS.

The school laws throughout the decade have required the county school commissioners to encourage the formation of associations of the teachers for mutual improvement, and also have required them to attend the meetings of such associations and give such advice and instruction as to their management as might contribute to their efficiency. But with the exception of 6 held in 1875, with an attendance of 60, of 4 in 1876, of 5 in 1878, of 24 in 1879, with unknown numbers, and of the 2 teachers' institutes in 1880, with an association meeting growing out of one of these, there is no note in the State reports of either county or State associations.

## CHIEF STATE SCHOOL OFFICER.

Hon. HUGH S. THOMPSON, *State superintendent of education, Columbia.*

[Second term, January 1, 1879, to January 1, 1881.]

Hon. J. K. Jillson was superintendent from 1868 to 1876; since then Mr. Thompson has filled the place and was again reëlected in 1880 for the term from January 1, 1881, to January 1, 1883.

## SUMMARY OF EDUCATIONAL STATISTICS

| | 1873–'74. | 1874–'75. | 1875–'76. |
|---|---|---|---|

*f* Returns to Bureau of Education.

## STATE SCHOOL SYSTEM.

### OFFICERS.

A State superintendent of public schools, nominated biennially by the governor and confirmed by the senate, has general supervision of the school system. Since 1875, he has been aided by a State board of education, composed of the governor and six civilians appointed by him, with change of two biennially. Each county court chooses biennially "a person of literary and scientific attainments and, if practicable, of skill and experience in teaching" as county superintendent. His duties have been increased since 1879 by imposing upon him the chief responsibility for the management of county school finances, &c. Three school directors are chosen in each school district by the voters for three years' terms, with change of one each year. Until 1873, three district commissioners, elected for two years' terms and acting as a board of education, fulfilled duties similar to those of the district directors.—(Laws of 1870, 1871, 1873, 1875, and 1879.)

### OTHER FEATURES OF THE SYSTEM.

The schools, which are separate for whites and blacks, are sustained by the proceeds of a State school fund of $2,512,500, bearing interest at 6 per cent., by a poll tax of $1 annually (50 cents until 1873) on each male citizen; by a State tax, since 1873, of 1 mill on the $1 of all taxable property, and, if necessary in order to keep the schools open five months, by another county tax, the whole sum not to exceed the entire State tax. Until 1875, a district tax for purchasing school furniture, building school-houses, &c., was allowed. The distribution of the school fund is according to the last annual enumeration of children of school age, which age was 6 to 18 until 1879, then 6 to 21. Teachers to be employed and to receive pay must have duly authorized certificates. The studies required in the public schools were orthography, reading, writing, arithmetic, grammar, geography, elementary geology of Tennessee, and history of the United States. Vocal music may also be taught. In 1879, instruction in the elementary principles of agriculture was added and further provision for industrial training was urged.—(Laws of 1870, 1871, 1873, 1875, and 1879.)

### GENERAL CONDITION.

The statistics for the year ending August 31, 1880, are for 91 counties, the superintendents of 3 counties failing to report. An advance of 25,454 in public school enrolment and of 5,299 in attendance over the preceding year is noticed, and it is thought that the present system, improved by certain changes made by the law of 1879, will continue to show progress in years to come. Although a slight decrease (of 90) in the number of schools was noted, 252 more buildings for school purposes were reported. The average monthly salary of teachers also increased 99 cents. The income for public schools, minus balances on hand, was larger by $14,166. Where the public schools do not show advance, traces of a desire for schooling may be seen in the reports from private schools. In these schools a marked increase in enrolment and attendance and in the number of schools was noticed, and, although the public school teachers diminished in number, so great was the increase of those employed in private schools that the total for the State increased by 150. The State superintendent says that, while the school system is not yet what it should be, its benefits are increasing continuously, and it bids fair to override opposition and to extend its advantages to all who may stand in need of them. Higher standards are being instituted for teachers, and they seem to be trying to gain through institutes and other means a knowledge of the best methods of imparting information. The people too are manifesting great interest in education, and suggestions of Superintendent Trousdale in regard to grading district schools and in regard to holding normal institutes have been adopted in part, so that the future outlook is promising.[1]—(State report.)

### RÉSUMÉ FOR TEN YEARS.

The system of public schools in this State attempted to be established by act of 1870, although it contained many excellent features, virtually failed because of its inherent weakness as a whole. It was neither a State nor a county system distinctively, but drew its leading characteristics from both; consequently, wanting a general head, it lacked unity and vitality. The law embodied the essential elements of an efficient general system of elementary schools, but it needed to be supported by corresponding action on the part of the people, as there was no general or county leadership of school interests provided for and as even the existence of schools in any county was left wholly to the people's choice. In 1872, when the State was canvassed by the State agent of the Peabody fund, there was not a single school to be found in some of the

[1] These suggestions were made with special reference to the year 1880–'81, and will be more fully noticed in the report of the Commissioner for that year.

counties, nor were any efforts made by the citizens to remedy the deficiency. His report was the means of the passage of the law of 1873 restoring State and county supervision. Prior to that, only 29 counties levied any school tax and in some of these the tax was merely nominal. The reorganization aroused some of the counties to supplement the State tax, but in 1873 there were 25 counties not levying an additional tax, and in 1874 some 27 failed to raise one. Since then the march of progress has been slow but steady, and 84 out of 94 counties have by levying a tax endeavored to further the educational movement. A glance at the statistical table will show where the advance is most apparent. What is now most needed seems to be a strongly supporting public sentiment and capable and efficient teachers, so that, through harmonious coöperation, one system will be formed from the primary school to the university.—(Laws, 1873; State report, 1880; address of H. M. Doak, at the Nashville centennial, &c.)

### AID FROM THE PEABODY FUND.

During the decade the trustees of this fund have given $187,000 towards the permanent establishment of a good school system in this State. Starting out with $22,000 in 1870, the largest amount, $36,800, was furnished in 1873–'74. Since that date, the schools being on a firmer basis, the annual help has been less, and in 1880 was only $1,900, besides what was given to the normal college. That amount was divided as follows: Congressional district institutes, $1,000; colored institutes, $300; Jackson City graded schools, $600. This last grant to the city schools was to aid in the continuance of the graded system which had just been organized and which was liable to suffer from a deficit of the school fund. Forty bronze medals were also supplied by the general agent to be offered as an incentive and reward to meritorious scholars in grammar and secondary schools. No medal was to be awarded on less than 90 per cent. general average. The recipients were to be placed on the Peabody roll of medalists.—(Reports of trustees of Peabody fund and State report for 1880.)

### KINDERGÄRTEN.

Two of these schools were reported in 1878 and in 1879, one connected with a Young Ladies' School at Memphis, the other a part of Nashville Academy, Nashville. Nothing has been heard of them for 1880. For statistics of former reports, see Table V of the appendix, and a summary in the report of the Commissioner preceding.

## CITY SCHOOL SYSTEMS.

### OFFICERS.

For cities there are boards of education, their number and constitutions being determined by special laws; the members are elected by the people, with partial changes each year. The boards elect superintendents not of their own number.

### STATISTICS.

| Cities. | Population, census of 1880. | Children of school age. | Enrolment in public schools. | Average daily attendance. | Number of teachers. | Expenditure. |
|---|---|---|---|---|---|---|
| Chattanooga | 12,692 | 3,061 | 2,185 | 1,390 | 30 | $25,621 |
| Knoxville | 9,712 | 2,751 | 1,759 | 1,253 | 29 | 14,922 |
| Memphis | 33,593 | ..... | 4,105 | 2,389 | 63 | 49,000 |
| Nashville | 43,543 | 12,460 | 6,098 | 4,299 | 96 | 89,343 |

### ADDITIONAL PARTICULARS.

*Chattanooga* had a school population of 1,961 whites and 1,100 colored; owned 3 and rented 7 buildings for its public schools, affording 27 rooms for study and recitation and 3 for recitation only. The schools were classed as primary, grammar, and high, with an increased enrolment of 298 and 285 more in average daily attendance, reaching a per cent. of such average attendance on average belonging of 95. There were 6 male and 24 female teachers employed through 158 of the 180 days of school year. School property was valued at $37,000; in private and parochial schools there were 350 enrolled. Notwithstanding many disadvantages, there is said to have been creditable progress.—(City report and return.)

*Knoxville* in 1879–'80 had for its 2,751 children of school age 4 school buildings, with 29 rooms, valued, with furniture, at $26,600, but insufficient in sittings, except by dividing the first and second grades into morning and afternoon classes. The population had increased 692; children of school age, 521; enrolment, 250; and average daily attendance, 323. The per cent. of average daily attendance on number belonging was 94, a gain of 2 per cent. The second year of the new superintendency continued the general improvement in the schools noticed in 1879. Of the new methods introduced

as a result of sending an agent to gather from the model schools of the nation the best methods of instruction and discipline, not one had failed, but had been improved in the hands of apt and skilful teachers. During the year a good building was completed and occupied by colored children as a "free industrial school," an account of which is given under Special Instruction.—(City report.)

*Memphis* in 1879–'80 had for its school population 10 school buildings, with 63 rooms for study and 3,780 sittings. The schools were classed as primary, grammar, and high; the graded course in the two former covered 8 years; in the high school, 3. Of the 63 teachers 58 were females, the 5 male teachers including the principals of the higher grades. The schools were taught 149 of the 151 days of school year. In the city population there was a decrease of 11,407 as compared with previous year; while the other statistics remained the same, except in expenditure, which increased $19,778.—(Return.)

*Nashville.*—In the absence of a city report for 1879–'80 we can note only the facts stated in a return. These indicate a general progress, under the continued classification of the schools as primary, intermediate, grammar, and high, the course in the first covering 3 years, in the second and third 2 each, and in the last 3, making in all 10 years. Promotion from grade to grade is allowed only at the end of each school year, as the result of examination at that time. There were 12 school buildings, with 53 rooms, affording sittings for 4,760, and valued, with sites, furniture, and apparatus, at $193,600. The reported population increased 15,583; children of school age, 3,414; enrolment, 1,876; and average daily attendance, 1,108. There was a gain in teachers of 15. Special instruction was given in music, drawing, and penmanship. Private and parochial schools had 8 buildings, with 1,200 sittings and an enrolment of 400.—(Return.)

## TRAINING OF TEACHERS.

### NORMAL SCHOOLS AND NORMAL DEPARTMENTS.

The *Normal College* in 1879–'80 continued to occupy the buildings of the University of Nashville and to prosecute its work of preparing teachers for the schools. This was done without aid from the State, county, or city, as such, but from the Peabody fund, with $4,000 from citizens of Nashville and vicinity; while the students had the advantage not only of the buildings of the university, but also of its library of 10,000 volumes, chemical laboratory, apparatus for illustrating physics, and museum of natural history. Under the presidency of Eben S. Stearns, D. D., there were 7 instructors and 137 normal students—62 of them from Tennessee—while at the close of the school year 7 baccalaureates and 61 seniors were graduated. Of the baccalaureate class 6, of the senior 14, of the middle 16, and of the junior 6, had maintained an average of 90 per cent. in their studies. The diploma of the university is given to those only that have completed the 3 years' undergraduate course, who receive the degree of licentiate of instruction, the possession of which renders such graduates eligible as teachers in any county of the State without the examination otherwise required by law; while the degree of B. A. is given to such as go through the advanced or baccalaureate course, involving an additional year of study.—(Catalogue of University of Nashville.)

At the *University of Tennessee*, Knoxville, there was a normal school of 4 weeks in the summer of 1880, under 6 instructors and 3 lecturers, with an attendance of 99 pupils, the originator of this movement being Prof. S. H. Lockett, of the university; attendance was free to all.

Of the 13 others reporting in 1879, all but 3 report again in some form for 1880, the East Tennessee University, Athens (1867), and Vanderbilt University, Nashville (1875), showing the same arrangements for normal instruction, but without note of any normal students; Humboldt Normal Institute, Humboldt, a teachers' training course of no specified duration, with 6 students; Knoxville College, Knoxville (1875), a 2 years' preparatory normal course and a 4 years' normal and scientific, with 69 students in the main school and 55 in the East Knoxville branch; Maryville College, Maryville, a normal class organized every year, and 21 normal students; Le Moyne Normal Institute, Memphis (1871), a 2 years' course for teaching, with 122 pupils; Fisk University, Nashville (1866), a normal department of 4 years for the common school course and a 3 years' higher normal, with 166 students in the two, of whom 13 graduated; Central Tennessee College, Nashville (1866), a normal class of 170 in its 3 years' course; Nashville Normal and Theological Institute, Nashville (1866), a 3 years' normal course, with 130 students; and Winchester Normal, Winchester, 249 students, and a normal course which followed Ogden's Outlines of Pedagogical Science.

Besides these, the following presented some report for 1879–'80: Freedmen's Normal Institute, Maryville (1872), with a teachers' elementary course of 2 years and a teachers' advanced course of 1 year, 57 students, and 9 graduates; Warner Institute, Jonesboro' (1877), meant to carry pupils from the alphabet into studies preparatory to college, with 31 normal students up to 1879, but no note of those for 1879–'80; and finally Maryville Normal School, Maryville (1878), presenting courses of study covering 3 years, in which were 75 normal students.—(Catalogues and returns.)

### INSTITUTES FOR TEACHERS.

Superintendent Trousdale reports for 1879–'80 that much of the success attending the growth of sound sentiment among the people is due to the congressional district institutes held under his supervision by means of aid from the Peabody fund. Twelve were held during the year at as many given points in the State, being attended by many of the ablest teachers. Twelve others were held for colored teachers, under the auspices and direction of the State Teachers' Institute, also aided by the Peabody fund, resulting in a large measure of improvement of the 266 teachers who attended them. Besides these general institutes there were 254 county institutes or meetings of teachers for conference and mutual improvement.

From accounts given in papers received at this Bureau, the exercises of these institutes seem to have embraced a wide range of practical topics, at once varied and useful.—(State report.)

### EDUCATIONAL JOURNALS.

The Tennessee department in the American Journal of Education, at St. Louis, Mo., ceased in 1880 from the death of the editor, W. F. Shropshire, superintendent of Obion County; that in the Eclectic Teacher, at Louisville, Ky., was continued till February, 1880, when, with other information as to State systems, it came to a sudden close.

## SECONDARY INSTRUCTION.

### PUBLIC HIGH SCHOOLS.

Schools of this class appear in 1879–'80 in the reports and returns from Chattanooga, Knoxville, Memphis, and Nashville; but the first and third show only the employment of a principal and assistants, without note of pupils or studies for that year;[1] the second shows only studies reaching a respectably high grade in English and Latin; while the last presents distinctly a school with a principal and 6 assistants, 261 pupils, and a good 3 years' Latin and English course.

### OTHER SECONDARY SCHOOLS.

For statistics of business colleges, private academic schools, and preparatory departments of colleges, see Tables IV, VI, VIII, IX, and X of the appendix; for summaries of their statistics, see corresponding tables in the report of the Commissioner preceding.

Many academic schools in this State, under a law allowing what are called consolidated schools, receive public pupils as free scholars so far as relates to pay from themselves or their parents, receiving for their tuition in common school branches a certain rate of pay from the public school officers of the district. The contract with such schools or the teachers in them may also include higher branches if the trustees choose. Some high school instruction is probably thus secured without any specific presentation either of the course, the number of pupils, or the measure of advance.

## SUPERIOR INSTRUCTION.

### COLLEGES FOR YOUNG MEN OR FOR BOTH SEXES.

Of the 21 colleges and universities in this State from which recent information has been received, 10 were for both sexes, while 11 were exclusively for men. Six report themselves as non-sectarian and 5 as under Presbyterian, 4 under Methodist, and 2 under Baptist influence, while the Roman Catholic, Lutheran, Protestant Episcopal, and Christian churches were each represented by 1. Five were organized during the last decade and 8 during the previous one; 1 was opened in 1853; 4 dated from 1840 to 1850; 1 was organized in 1808; 1 in 1819, and the oldest, Greeneville and Tusculum College, Tusculum, in 1794. Woodbury College, Woodbury, organized in 1859, is not included in the above summary, no information having been received from it since 1877. The colleges and universities opened during the last 10 years are Mosheim Institute, Mosheim (1870), Christian Brothers' College, Memphis (1871), Vanderbilt University, Nashville, and Southwestern University, Jackson (1875), and Winchester Normal, Winchester (1878). The last seems intended especially to train teachers, but it embraces a fair collegiate curriculum and gives collegiate degrees, the plan being that of independent schools, of which there are 10. Special importance is attached to the principle of coeducation. Mosheim Institute also admits women, but the other 3 organized during the decade are exclusively for men. Vanderbilt University, the most important of these, owes its foundation to Cornelius Vanderbilt, of New York, who, desiring to aid education in the South and West, in 1873 gave $500,000 and subsequently an equal sum for its establishment. Only half of this million could be used for buildings, furniture, &c.; the other half was invested and the income reserved to carry on the institution. Departments of literature and science, of theology,

[1] Memphis, in a report for 1880–'81, presents a high school course of 3 years, with 81 pupils enrolled.

law, and medicine were opened in the fall of 1875; those of dentistry and pharmacy have since been added. The Southwestern Baptist University was opened during the same year, in the buildings of the West Tennessee College, with property valued at $70,000, $68,000 in productive funds, and a department of literature and science and one of law. The Christian Brothers' College, opened at Memphis in 1871, gives instruction in preparatory, classical, scientific, and commercial studies, and had 60 undergraduate pupils in 1879–'80 against 37 in 1873.

The 19 colleges and universities which report the number of students attending in 1879–'80 had a total of 1,996 undergraduates. All had preparatory departments, 11 beginning with primary studies and generally having low standards for collegiate work; all had classical courses, usually of four years, for the degree of A. B., although in 7 the plan was that of independent schools, 11 also made provision for scientific study, 4 for graduate, and 6 for normal, 9 prepare for business, 11 give more or less instruction in theology, 3 have departments of law, and 3 of medicine.

*Carson College*, Mossy Creek, received a gift of $15,000 in real estate to aid in the education of theological students; Central Tennessee College, Nashville, $300 in small amounts for the same purpose; and the University of the South, Sewanee, 2,000 books and 1,500 pamphlets from Rev. Theo. Nole.

The *University of Tennessee*, Knoxville, was formerly known as East Tennessee University and chartered as such in 1808. In 1879 the name was changed, and the university, united with the agricultural college, became fully a State institution. The governor was authorized to appoint a board of visitors on behalf of the State, whose duty it is to visit the university at least once a year and report to him. The law also makes it the duty of school superintendents to hold annual competitive examinations of applicants for appointment as State cadets. The course of study has been materially modified, greatly enlarged, and its flexibility increased by the further adoption of the elective principle, though under careful supervision; the enlargement being mainly in the sciences relating to agriculture and the mechanic arts. The departments remain as before, viz: collegiate, subcollegiate, and medical. In the collegiate department, besides 2 general courses for the degree of B. A. and B. S., are 5 technical courses also of 4 years, and 2 special ones of 2 years each, which will be further noted under scientific instruction. As a further step in the direction of practical education a business course has been arranged, also a normal course of 2 years. There were in the collegiate department of the university 154 students and in the preparatory 131, a total of 285 in 1879–'80 against 300 in 1875–'76. It appears, from a careful comparison of the statistics for 5 years, that while the whole number of students decreased very slightly there was a considerable increase in the proportion of collegiate to preparatory students. The results show not only a steady progress within the university, but also the growing ability of the schools (in large part, it is claimed, through the agency of the university) to prepare their pupils for collegiate work. In only one point has the university failed to show the progress which its friends hoped for: the number of State students in 1875–'76 was 65 per cent. of that allowed by law, while in 1878–'79 it was only 63 per cent. The proportion in 1879–'80 is not given.

For statistics of colleges reporting, see Table IX of the appendix; and for a summary of these statistics, the report of the Commissioner preceding.

#### INSTITUTIONS FOR THE SUPERIOR INSTRUCTION OF YOUNG WOMEN.

Out of 16 colleges and seminaries exclusively for women recently reporting from this State (all but 2 of them authorized by law to confer collegiate degrees), 11 report a total attendance of 1,248 students in all departments during 1879–'80. A large majority were denominational institutions. Three only were organized during the decade. Of the 11 reporting, all teach French, all but 1 both French and German, while 2 add Italian and 1 Spanish. For further statistics, see Table VIII of the appendix, and for a summary, the report of the Commissioner preceding.

## SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

#### SCIENTIFIC.

Provision is made for instruction in a variety of scientific and technical branches in the State University, Knoxville. There are 5 technical courses of 4 years, viz: (1) in civil engineering, (2) in mechanical engineering, (3) in mining engineering, (4) in agriculture, and (5) in applied chemistry. There are also 2 partial courses, each of 2 years, for students whose time or means may not allow a full one. One is a course in practical agriculture; the other, a surveyor's course in applied mathematics. In the former students work on the farm and study on alternate days, being paid for work according to a fixed scale of prices, and are thus enabled to pay their board by the proceeds of their labor. Tuition is free to all State appointees; and it is hoped by means of this short course to bring the advantages of the university within the reach of the largest number of the farming community. General courses in science are found

in 10 of the other universities and colleges, some of them also having courses in civil engineering.

For statistics of scientific schools reporting, see Table X of the appendix, and for a summary of it, the report of the Commissioner preceding.

### PROFESSIONAL.

The *theological* schools reporting are the Theological School of Cumberland University, Lebanon (Cumberland Presbyterian), Nashville Normal and Theological Institute (Baptist), Fisk University Theological School, Nashville (Congregational), the theological departments of Central Tennessee College and of Vanderbilt University, Nashville (both Methodist Episcopal), the theological department of the University of the South, Sewanee (Protestant Episcopal), and the theological department of Burritt College, Spencer (Christian). All but Burritt College report courses of theological study covering 2 or 3 years; in this, the length of course is not given. No examination for admission beyond the common English branches is required by any, as far as can be ascertained. Three were organized since 1870, that of Vanderbilt University in 1875, that of the University of the South in 1878, and that of Burritt College in 1879. The Nashville Normal and Theological Institute (organized in 1866) is an unincorporated missionary training school for preachers and teachers. It had 50 students in 1879–'80. The other 6 institutions reported an attendance for the year of 167. Besides the colleges mentioned, 3 others give theological or biblical instruction in connection with the collegiate course.

*Legal* training is given in courses of 2 years in the law school of Cumberland University, Lebanon, in that of Vanderbilt University, Nashville, and at Central Tennessee College, Nashville. The last is reported now for the first time, and appears to have been recently established, but the date of its opening is not given. There were in Vanderbilt University 53 students of law during 1879–'80; in Cumberland, 38, of whom 27 were graduated in 1880, and in Central Tennessee College, 2 students in the junior class. A fine building has recently been erected for the law department of Cumberland University, in great part through the munificence of Judge Robert L. Caruthers, after whom the hall is called.

The "regular" *medical* schools are the Nashville Medical College (a department of the University of Tennessee, Knoxville), organized in 1876; Meharry Medical Department of Central Tennessee College, Nashville; the medical department of Vanderbilt University, Nashville (1874); and the medical department of the University of Nashville (1855). The faculty of the last named seems to be identical with that of the Vanderbilt Medical School, as also is the length of lecture course, which covers only about 19 weeks, a week less than the minimum course prescribed by the American Medical Association. Students must attend 2 such courses in order to graduate, besides having spent "at least 33 months" in medical study. A year at Vanderbilt University in the schools of chemistry, physics, and natural history is accepted as an equivalent for one year of medical study. A 3 years' graded course is recommended, but not required. The medical department of Tennessee University presents a 2 years' course of 24 weeks, besides 1 year of previous medical study. There is no preliminary examination for admission. Meharry Medical Department, one of the two institutions in the United States for the medical education of colored students, presents the ordinary 3 years' course, the 2 lecture sessions being of 20 weeks each, and proposes soon to require a 3 years' graded course, in which no extra charge will be made for the last year. A new building for the school, completed in 1880, was erected principally through the generous donations of members of the Meharry family.

Departments of *dentistry* and of *pharmacy*, as has been already noted, now form a part of the course in Vanderbilt University; provision is also made for dental training in the medical department of the University of Tennessee. The dental training in both schools requires attendance on 2 lecture courses of 5 months each, with approved dental work, both operative and mechanical; the pharmaceutical, at Vanderbilt, a like attendance, with 3 hours of practical work daily in the laboratory and pharmaceutical manipulations one afternoon each week, in place of the usual 4 years' apprenticeship. The Tennessee College of Pharmacy, formerly at Nashville, has temporarily suspended.

For statistics of the above schools, see Table XIII of the appendix, and a summary of it in the report of the Commissioner preceding.

## SPECIAL INSTRUCTION.

### EDUCATION OF THE DEAF AND DUMB.

The Tennessee School for the Deaf and Dumb, Knoxville, dating from 1845, had 114 inmates in 1880 and 111 remaining in December of that year. The instructors were 7 in number. The biennial report for 1879 and 1880 has not reached this Bureau as this goes to press, but it is presumed that the common school branches and the industrial employments heretofore reported are continued.—(Annals of the Deaf and Dumb.)

### EDUCATION OF THE BLIND.

The Tennessee School for the Blind, Nashville, dating from 1846, reports that the remodelling of the building, which has been in progress for several years, has now resulted in a large, convenient, and well planned establishment, and that while these repairs involved a diminution in the number of inmates received, there were 67 pupils under training in 1879 and 1880, while in December, 1880, there were 35 present. The act by which an appropriation was made for the enlargement of the building limited the applications for admission by specifying a certain age. The hope is expressed that in order not to exclude many worthy persons, scattered throughout the State, such limitation will be removed and sufficient funds appropriated to admit all. The common and some of the higher branches were taught; also, calisthenics, music (on different instruments), piano tuning, and various industrial employments.—(Biennial report.)

### INDUSTRIAL TRAINING.

The *Girls' Industrial Home*, Knoxville, was first organized in December, 1873, as the Knoxville Benevolent Association, and received its present name in April, 1874. Sixty-nine girls have been under training in sewing and domestic work since the organization and 19 were present in the latter part of 1879. These girls attend the public schools.

In connection with the public school system of Knoxville, Miss Emily L. Austin has established a free industrial school for the colored race. Aided by contributions from that race and from others in northern cities, a fine building has been erected, and in 1879–'80 it was opened as the *Knoxville Industrial School*. Sewing is taught, and a "kitchen garden" (that is, regular Kindergarten instruction in relation to domestic work) is a part of the system. Instruction in cookery will also be given in the near future.—(Circulars and Knoxville report.)

### EDUCATION OF ORPHANS.

Memphis reports the Canfield Orphan Asylum, chartered December 25, 1878, and the Church Orphans' Home, founded in 1867; Nashville, the St. Mary's Orphan Asylum and the Nashville Protestant Orphan Asylum, which last was incorporated and organized in 1845. These four institutions are sustained by appropriations and contributions. The Canfield Home does not yet give instruction to the inmates. The others teach reading, writing, arithmetic, and sewing and housework. Singing is also taught at the Church Home and at the St. Mary's Asylum.—(Returns.)

For any other like institutions reporting and for statistics of those mentioned above, see Table XXII of the appendix.

## EDUCATIONAL CONVENTIONS.

### TENNESSEE STATE TEACHERS' ASSOCIATION.

This association met at Pulaski August 26–27, 1880. The following subjects were discussed: "Agriculture in our public schools," by Hon. T. B. Harwell; "Reading and writing in primary schools," Prof. Frank Goodman; "School discipline," Prof. R. P. Yancey; "The press and popular education," S. T. G. Doak; "Penmanship," Dr. Wm. Austin Smith; "Method of teaching history," Capt. W. R. Garrett; "How can the elements of natural science be taught in our public schools?" W. Le Roy Broun; and "Practical education," Capt. John S. Wilkes. Resolutions of respect were passed touching the death of W. F. Shropshire, president of the association, and of Dr. Barnas Sears, general agent of the Peabody fund. A resolution favoring the introduction of elementary scientific instruction in the public schools received the approbation of the association.—(State report.)

### CENTENNIAL EDUCATIONAL CONVENTION.

In connection with the celebration of Nashville's centennial, a teachers' convention was held, the afternoon and evening of May 7, 1880, being set apart for this meeting. Many persons connected with the various public and private schools of the city were present, as well as numerous visitors from different sections of the country. Dr. T. A. Atchison, president of the centennial board of directors, in his speech of welcome, referred to the important part that would have been omitted in the celebration had the schools not been preëminently recognized. The board fortunately considered the subject, an educational committee was appointed, a grand display of school work was made at the exhibition, and a meeting of teachers was called together. General John Eaton, United States Commissioner of Education, demonstrated the importance of the normal school, refuted the popular objections to higher and special education, indicated the varied relations of statecraft to education, and pictured the future of the State under just and proper educational facilities. Rev. O. P. Fitzgerald, in "Education in the South," spoke of the importance of good local officers, the need of well trained, progressive, and enthusiastic teachers, and advocated religious teachers

for the whole country. Hon. W. T. Harris, in "The press as an educator," referred to the important functions of the school in teaching technical expressions, in giving a broader knowledge of human life and moral civilization, &c., but said that where the dictum of the teacher was accepted as final there could be no independent thought. Then came the press to open the way to a knowledge of events occurring at different points of the globe: the daily newspaper chronicles the events of the world's life and doings; the periodical holds up the mirror of nature to man and pictures the customs of all times and all peoples, &c. Prof. E. S. Joynes spoke on "Educational progress." He referred to the achievements of the century and to the immense amount of progress made, but felt that the educational results had not been equal to the advancement of society, and that there was danger of education becoming superficial, unless there should be better teachers and more of them. He considered industrial education the most important problem of the age.—(The Daily American, Nashville, May 8, 1880.)

## OBITUARY RECORD.

### W. F. SHROPSHIRE.

A member and president of the State Teachers' Association and for the last seven years superintendent of public instruction in Obion County, Mr. Shropshire was truly a friend of education. A gentleman of cultured mind, he labored hard and faithfully to make the system popular in his county, and was in a measure successful. Reckoned one of the most efficient and energetic superintendents in the State, he was also a writer on educational subjects, being for several years associate editor of the American Journal of Education and directing his efforts in this department to the improvement of the public schools and of the teachers in them. He died August 3, 1880, aged about 45 years.—(American Journal of Education.)

## CHIEF STATE SCHOOL OFFICER.

Hon. LEON. TROUSDALE, *State superintendent of public schools, Nashville.*

[Third term, March 25, 1879, to March 25, 1881.]

Other superintendents in the decade were Hon. William Morrow, State treasurer, who, with Mr. J. B. Killibrew as visiting assistant, served from 1870 to 1873. Next came Hon. John M. Fleming, 1873 to 1875. Since that date Mr. Trousdale has filled the office, but is to be succeeded by Hon. W. S. Doak.

## STATE SCHOOL SYSTEM.

### OFFICERS.

From 1870 (the beginning of the reconstruction school system) to 1876 there was a State superintendent of public instruction appointed by the governor till the first general election, then chosen by the people for a term of 4 years. His aids were, for the first year, a board of school directors (the members of the county court to serve as such) for each organized county, and a board of examiners for teachers, with 3 trustees for each school subdistrict into which the county might be divided, both examiners and trustees to be appointed by the directors. The next year, 1871, the governor and attorney general, by a law of April 24, were associated with the State superintendent as a State board of education, and the superintendent, with the approval of the governor, was directed to appoint for each judicial district a supervisor of education, these districts then numbering 35. November 29 of the same year came a change of law by which, instead of the 35 supervisors, 13 were appointed, as before, for 13 educational districts into which the State was to be divided by the State board, these supervisors to subdivide the counties in their jurisdiction into school districts and appoint for each 5 directors. May 22, 1873, another law provided, instead of the county court, 5 elective school directors for each county, who should choose one of their number as president and county superintendent, should divide their county into convenient school districts, and should cause to be elected in each district yearly, in September, 3 school trustees. In 1875 a new constitution dropped the State superintendency; reorganized the State board of education to make it include the governor, comptroller, and secretary of state; and left other school officers to be determined by new laws. Such laws in 1876 and 1879 made the county judge in each county substantially the chief school officer there, with 3 examiners of teachers for the county and 3 trustees for each community school allowed to be organized within it, except in cities and towns that had assumed or should assume control of the public free schools within their limits, examiners and trustees to be appointed by the judge.

### OTHER FEATURES OF THE SYSTEM.

The age for free schooling was 6 to 18 from 1870 to the autumn of 1876; thereafter, 8 to 14, a shorter period than in any other State. During the earlier years mentioned, attendance was compulsory for all children of school age in good health not taught elsewhere or excused because of distance from a public school, danger from Indians, or prevalence of infectious disease. Since 1876 it has been so entirely voluntary that some county judges think there must be a return to the compulsory system to secure a fair attendance. The schools for white and those for colored pupils have been kept separate since the institution of the State system, and from 1875 have been required to be so; teachers have been obliged to hold certificates of qualification from the proper officer, and, up to 1876–'77, received pay according to the grade of certificate held; since that time, according also to the number of pupils in attendance. The studies prescribed are only the elementary English ones; but towns and cities that have assumed control of their own schools, as they are allowed by law to do, may have what grades and studies they think fit. Local taxes for the support of schools are not authorized under the later school laws, except in such towns and cities, and are there restricted to 5 mills on $1, to be voted only by the taxpayers as an addition to the pro rata of the available school fund received from the State. This fund (which is distributed on the basis of children of school age in each community)[1] is derived from a poll tax of $1 on each male citizen, from the interest on a permanent fund now of more than $4,000,000, and from appropriations, not to exceed ¼ of the State revenue, made biennially by the legislature.

### GENERAL CONDITION.

The revised school system of 1876, which came in with many plaudits, reached the height of its influence in 1878–'79. The zest of novelty by that time was gone, and such great inherent defects as want of active State and county supervision, of normal training for the teachers, and of provision for local taxation for the schools began to show their influence; hence in 1879–'80 the slenderly remunerated county judges, who had been put in place of county superintendents of free schools, in many cases failed to send reports to the State board of education. Thus, although a census showed that there were 26,925 more children entitled to free schooling, and although 5 more counties and apparently 5 more towns or cities had organized school communities, the whole number of these communities reported was 303 less than in the year before; the number of public schools reported, 280 less; and the reported enrolment in these

[1] The school community, which answers here substantially to a school district elsewhere, is a voluntary association of persons living in the same neighborhood in any county for the establishment and maintenance of a school for their children. When recognized by the county judge, it is entitled to a share of the State funds.

schools, instead of rising to meet the increase of school children, decreased by 5,868. Partly from the same cause, too, the receipts for schools, as reported, show an apparent falling off of $191,151; the expenditures for them, a diminution of $188,058; while the already short school term (only 73.7 days in 1878–'79) seems to have been further shortened by 2 full days upon an average for the whole State. For these and other reasons going to demonstrate the defectiveness of the existing system, the State board of education in 1880 recommended to the legislature the restoration of the State superintendency and local taxes in aid of the State funds for schools, with fuller provision for State normal training, while from several of the county judges came expressions of the need of restoring also county superintendency and even compulsory attendance on the schools, some also calling for a restoration of the fixed school district instead of the uncertain and shifting school community.

### RÉSUMÉ FOR TEN YEARS.

The free school system instituted in 1870 under the constitution of 1868 encountered the strong prejudices then prevailing in the South against northern methods and laws that bore traces of their northern stamp. These prejudices were especially intense against including the negro population among those entitled to free schooling by the State and against local taxes for the maintenance of any schools. Hence, there were in the first years, besides the burning of the school-houses for colored people and a social ostracism of the teachers, efforts to prevent by legal processes the collection of the local tax for educating either white or colored youth. In spite of these hindrances the new school officers worked on. A better feeling on the part of many of the people soon came to aid their efforts, and the record of the first three years showed a substantial gain. For the next two years there was a superintendency more of the soil, and hence in better favor with the people, under which some advance was made. But opposition was not silenced, and in 1875, 1876, and afterwards it showed its strength by breaking down the reconstruction constitution of 1868, by the obliteration of the school system founded on it, and by the institution of a wholly new one, which made the opening of schools in any community entirely voluntary; made attendance on them, if established, likewise wholly so; did away with the supervision of educated officers; shortened from 12 years to 6 years the ordinary time for free schooling by the State; allowed this to be shortened still more by permitting communities to use a year's school funds for a school-house, instead of for teaching; and, except in cities and towns, made no provision for allowing even those who wished to do so to tax themselves for the extension of their educational advantages beyond mere elementary studies and a 4 months' annual term of school. This is the system that in 1880 still existed, but which had so demonstrated its inherent weaknesses that the chief State officers were urging its improvement.—(Printed and manuscript reports, State constitutions, and laws.)

Owing to the comparative fulness with which educational statistics have been reported since the inauguration of the present State system, a comparison has been made between the figures for 1876–'77 and those for 1879–'80, instead of attempting to show the educational movement for the whole decennial period.

### AID FROM THE PEABODY FUND.

The agents of the Peabody fund have granted from 1874 to 1880 inclusive $49,850 for the improvement of the schools of Texas, in the earlier years chiefly to encourage the formation and maintenance of graded schools, in the later ones largely for the fuller preparation of trained teachers.

## CITY SCHOOL SYSTEMS.

### STATISTICS.

| Cities. | Population, census of 1880. | Children of school age. | Enrolment in public schools. | Average daily attendance. | Number of public schools. | Number of teachers. | Expenditure. |
|---|---|---|---|---|---|---|---|
| Houston | 16,513 | 2,746 | 1,601 | 1,066 | 23 | 23 | $15,346 |
| San Antonio | 20,597 | 3,022 | 1,584 | 934 | 20 | 22 | 17,632 |

### ADDITIONAL PARTICULARS.

*Houston* reported 2 brick and 9 frame school buildings in 1879–'80, all in good order, having purchased during the year 1 with grounds at a cost of $10,000. Of its school population 1,528 were white and 1,218 colored, of whom 688 whites and 457 colored had not attended school, being 42 per cent. of the whole school population. Of the 23 teachers employed 14 were white females and 6 colored females, leaving but 1 white male and 2 colored male teachers. All were paid an average monthly salary of $41.50

The schools continued to be classed as 1 high, 3 grammar, 10 primary, and a city normal school, and were taught 8 months. There was a decrease in number of school age of 222 from previous year, of 155 in enrolment, of 106 in average daily attendance, and of 8 in teachers, while in schools there was an increase of 9.—(City return.)

*San Antonio* in 1879–'80 had 5 school buildings, mostly of stone, with 22 rooms for study and recitation, and 1,100 sittings. The public schools consisted of a high school and 19 different graded schools, one of them for colored pupils, and were classed as primary, grammar, and high, this last having a 4 years' course, while below it there were 8 grades of 1 year each, 4 being primary and 4 grammar. Of the 22 teachers employed 18 were females. In children of school age there was an increase of 892; in enrolment, of 160; in average daily attendance, of 178; in schools, of 14, and in teachers, of 3. The estimated value of school property remained $45,000. This city is considered as one school district, and the schools are free to all between the ages of 6 and 18 inclusive. Educationally San Antonio is said to be the richest city in the State. In private and parochial schools there was an enrolment of about 1,000.—(City return.)

## TRAINING OF TEACHERS.

### STATE NORMAL SCHOOLS.

Two such institutions were opened in the autumn of 1879 to prepare teachers for the free schools, one of them for colored pupils.

The Sam Houston Normal Institute (for whites), Huntsville, was established in October, under an act approved April 21, 1879, Dr. Barnas Sears, the agent of the Peabody fund, having offered $6,000 a year for two years in aid of such a school (with the expectation of continuing the gift annually) if the State would provide an equal amount. The legislature responded by the passage of a bill appropriating $14,000 annually for the school and providing for its installation in the buildings formerly used by Austin College, Huntsville, if these should be conveyed by valid title to the State with their grounds. The bill was promptly approved by the governor. An efficient principal, eminent for educational services in Georgia, was engaged, with 2 assistants, since increased to 5, and the first session began on Friday, October 10. Two courses of a year each, an elementary and an advanced, were established, with arrangements for a model practice school. Students were to be admitted only on proof of their acquaintance with the studies prescribed for the free schools, the aim not being to train them in these studies, but in the philosophy of human culture and in the best methods of organizing and governing a school. They were all to pledge themselves beforehand to teach in the public free schools of their legislative districts at least a year after leaving the institute. The principal, Mr. Bernard Mallon, died October 21, only 11 days after the opening exercises, but another of proved skill was immediately chosen, and in the first year 107 students were enrolled, of whom 40 graduated and 39 engaged in teaching. A summer session was subsequently held for teachers already engaged in school work.—(State report, return, catalogue, &c.)

The school for colored students, Prairie View, commencing October 6, 1879, was organized by legislative enactment approved April 19 of that year, with a principal and 2 assistants. There were 60 pupils in the first 5 months, with an average of 49 attending, of whom all but 10 were State students whose entire expenses were paid. An hour and a half of labor a day in farm and garden was required of each one. Some embarrassment resulted from the fact that the students were generally lacking in preparatory attainments, but commendable progress was made. The law requires the admission of at least 1 student from each congressional district and 3 from the State at large.

### OTHER NORMAL SCHOOLS AND DEPARTMENTS.

These for 1880 were Tillotson Collegiate and Normal Institute, Austin (1876); American Normal School, Kellyville (1878); Yorktown Normal School, Yorktown (1878), and Whitesboro' Normal, Whitesboro' (1880).

Tillotson Institute, one of the chartered schools of the American Missionary Association, is for the colored race. It and the 2 following were so far recognized by the State as to receive State funds for educating pupils in common school studies. It had 178 under instruction in 1879–'80, of whom 120 were present in the last term, while 50 taught in the schools of their race within the year. It began to occupy an excellent new building near the State capitol in 1880. The school at Kellyville reported 101 normal pupils, under 5 instructors, and graduated 2, both engaging in teaching. Yorktown Normal, with 3 instructors, had 139 pupils in English and German studies, without indication as to how many of these were normal. That at Whitesboro', opening in the autumn of 1880, presented no list of pupils for that year, but offered instruction under 5 teachers in 6 years of primary and grammar school studies, with the option, beyond that, of either a commercial or a semicollegiate course, the latter arranged in 6 schools. Its specifically normal instruction was not to begin till 1881.—(Reports and returns.)

### TEACHERS' INSTITUTES.

Teachers' institutes are not required by law to be held, and no information of any county institutes which may have been held during 1879–'80 is at hand. In San Antonio institutes or teachers' meetings were held nearly every Saturday, in which instruction was given with gratifying results in the theory and practice of teaching.

### EDUCATIONAL JOURNAL.

The teachers of Texas now have the valuable assistance in their work of the Texas Journal of Education, a monthly issued at Austin and edited by Hon. O. N. Hollingsworth, secretary of the board of education, assisted by Mrs. Hollingsworth. The first number was issued in August, 1880. Its aim is to keep teachers informed as to official proceedings of the State board of education, to discuss the various school systems and methods of progressive educators, and to give the mature thoughts of experienced and distinguished educators.

## SECONDARY INSTRUCTION.

### PUBLIC HIGH SCHOOLS.

There is very little definite information relating to the high schools for 1879–'80, but from such as has come relating to that and former years it is known that such schools have been sustained in Brenham, Denison, Houston, and San Antonio. In Sherman there was added in 1879–'80 to the public graded course a class in the first high school year. The school in San Antonio had a 4 years' course and employed 2 teachers, but the number in attendance was not given. The Brenham high school in 1877 hoped soon to fit pupils for college; in 1878 classical and scientific courses were established.

### OTHER SECONDARY SCHOOLS.

For information as to business colleges, private academies, and preparatory departments of colleges reporting, see Tables IV, VI, and VII of the appendix; for summaries of their statistics, see corresponding tables in the report of the Commissioner preceding.

## SUPERIOR INSTRUCTION.

### COLLEGES FOR YOUNG MEN OR FOR BOTH SEXES.

The universities and colleges which send reports for 1879–'80 or for a later year are Southwestern University, Georgetown; Baylor University, Independence; Austin College, Sherman; Trinity University, Tehuacana; Waco University, Waco, and Marvin College, Waxahachie. Two of them were under Methodist Episcopal control; 2 Baptist, and 2 Presbyterian. The 5 first mentioned had a total of 412 undergraduate students in 1879–'80; Marvin College did not report statistics of attendance for that year; most of them had primary as well as preparatory courses of study, all had classical courses of 4 years, and 4 had scientific courses of equal length; 5 gave instruction in commercial and business studies; 1 had a department of law, 1 a department of theology, and another a special theological course; all gave instruction in 1 or more modern languages, and 2 in Hebrew; French is taught in all but 1, and German in all but 1; Spanish, in 3; Italian, in 1. Four make provision for teaching music, and 3 for instruction in artistic and ornamental branches also, the latter admitting both sexes.

From Salado College, Salado; Mansfield Male and Female College, Mansfield; St. Joseph's College, Brownsville, and Henderson College, Henderson, no late information has been received. Texas Military Institute was closed in 1880, not to be reopened.

Of the 6 institutions reporting, 2 have been organized since 1870: Marvin College in 1872 and the Southwestern University (under its present name) in 1873. The latter reports a steady increase in attendance since opening under its new charter. Austin College was moved from Huntsville to Sherman in 1878, its former buildings at Huntsville being occupied by the State Normal School for whites.

The State board of education, in its report for 1879–'80, and the State Teachers' Association, at its meeting in 1880, recommended to the legislature the immediate establishment of the State University provided for by the constitution of 1876, which directs the legislature to inaugurate the university as soon as practicable, and sets aside a million acres of land for its endowment.[1]

For statistics of universities and colleges reporting, see Table IX of the appendix and a summary in the report of the Commissioner preceding.

[1] Later information shows that definite measures have been taken for the establishment of the university.

### INSTITUTIONS FOR THE SUPERIOR INSTRUCTION OF WOMEN.

Women were, at last accounts, admitted on equal terms with men in 6 of the 9 colleges and universities above mentioned. There were also 8 institutions exclusively for women, of which all but 1 were authorized by law to confer collegiate degrees.

The 5 which report for 1880 had a total of 298 students in collegiate courses. These extended over 4 years in all, except Bryan Female Institute, Bryan, organized in 1873, but not chartered as a college. Another of the 8 referred to was organized since 1870, the Young Ladies' School of the Southwestern University, Georgetown (1875). This school is operated under the same charter, trustees, curator, and faculty as the university, but has a schedule of studies entirely distinct.

For statistics of colleges for women, see Table VIII of the appendix, and for a summary, see the report of the Commissioner preceding.

## SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

### SCIENTIFIC.

Scientific and industrial instruction, as well as literary training, is provided for in the State Agricultural and Mechanical College of Texas. Organized in 1876 on the basis of the congressional land grant, the college has a domain of 2,416 acres, about equally divided into woodlands and rolling prairie. The schools are (1) mathematics, (2) English language and literature, (3) ancient languages, (4) modern languages, (5) agriculture and chemistry, (6) moral philosophy, and (7) applied mathematics. There were 114 students in 1879–'80 against 6 in 1876. The president and faculty recommend in the report to the governor for 1879–'80 that the present system of elective schools be abolished and a well arranged curriculum of 4 years' study be substituted, allowing the Latin and Spanish languages as optional studies, but excluding Greek and French, and making a certain amount of daily labor on farm or in shop compulsory.

### PROFESSIONAL.

*Theological* instruction is given in a department of Trinity University, Tehuacana (Cumberland Presbyterian), and in Baylor University, Independence (Baptist), which presents a special theological course for students preparing for the ministry. The former reports 14 undergraduate students during 1878–'79, the latter 11.

There was no school for *legal* training, the law department of Trinity University having been suspended in 1878–'79.

The only *medical* school reporting is the Texas Medical College and Hospital, Galveston. In this the requirements for graduation are those prescribed by the American Medical Association: 3 years of medical study, including 2 terms of lectures, the latter extending over 20 weeks. The student must also have attended the hospital clinics and dissected during 2 courses.

## SPECIAL INSTRUCTION.

### EDUCATION OF THE DEAF AND DUMB.

The Texas Institution for the Deaf and Dumb, Austin, founded in 1856, reported for the year ending March 1, 1880, good order, discipline, and harmony prevailing in all the departments; pupils advancing rapidly in the acquisition of the English language; new studies introduced, philosophy being added in three classes; and articulation and lip reading taught to 21 out of the 64 pupils present. Work in the shoe shops and practical lessons in farming and gardening entered into the instruction for boys; the girls were taught to sew and to do housework.—(Report.)

### EDUCATION OF THE BLIND.

The Texas Institution of Learning for the Blind, Austin, founded in 1858, reports 485 inmates since September, 1874 (no records prior to that), and 84 in June, 1880. Fourteen instructors, 3 of them blind, and 10 employés were also connected with the institution in 1880. Although additional accommodations were provided in 1878–'79, there was still great overcrowding of the building, and the need of sufficient room to domicile the sexes apart was felt. This institution has 3 departments, literary, musical, and mechanical. In the first the common branches, ancient and modern history, natural philosophy, and natural history were taught; in the second, vocal and instrumental music; in the third, broom, mattress, and pillow making, cane seating, piano and organ tuning and repairing. Special attention is paid in this (as in other similar institutions) to the study of music, over one-half of the pupils studying this branch. Piano tuning, introduced in 1877–'78, has been taught with some success, and the intention is, with suitable rooms and appliances, to graduate first class tuners and repairers.—(Report and return.)

## EDUCATIONAL CONVENTIONS.

### TEXAS STATE EDUCATIONAL ASSOCIATION.

This association was in session at Mexia from June 29 to July 1, 1880. A union with the Texas State Teachers' Association was effected, the body to be called by the title used above. After the calling of the meeting to order and an introductory address by Dr. R. C. Burleson, of Waco University, Governor O. M. Roberts reviewed the policy of his administration in reference to public education and dwelt upon the importance of perfecting a thorough system of public instruction in the State; Hon. O. N. Hollingsworth spoke on taxation for school purposes; Dr. W. C. Crane, on the best method of securing a regular attendance of pupils; Prof. O. H. Cooper, on the establishment of a Texas University. A lecture on "English grammar" by Prof. Smith Ragsdale, an essay on the "English language," and the adoption of resolutions favoring the organization of the University of Texas at an early date were also reported. Memorials were drawn up to be presented to the legislature in regard to changes in the school law and in regard to securing donations for the various colleges and universities of the State. The subjects of music, depth of mind, and elocution were treated by Miss Lay, Dr. Crane, and Professor Hudson in the order named. A prolonged discussion on changes in the public school laws was participated in by different members, and after the business of the association was attended to the meeting adjourned, to assemble at Corsicana in June, 1881.—(Texas Journal of Education.)

### EAST TEXAS TEACHERS' ASSOCIATION.

A semiannual meeting of this association seems to have been in session at Dangerfield in January, 1880. The proceedings reported below are those of a meeting at Kellyville in 1880, month not given. Here, too, the subject of a State university was discussed, and steps were taken towards the establishment of an educational journal, which appeared subsequently, August, 1880, as the Texas Journal of Education. At the evening session the topic under discussion was "The duty of the State to educate her citizens." During the debate the different speakers favored, on one side, "a liberal system of popular education;" on the other, "education in the elementary branches only." The second day's proceedings were marked especially by a report of a committee on the public free school system. The committee recommended the adoption of the following resolutions: That, in the opinion of the association, the system of public schools now prevailing in Texas, involving the community system and the plan of general appropriation instead of local taxation, should not be changed in any essential particular until, after fair and full trial, it had been found to be inefficient; that private schools in different neighborhoods be made as far as possible the community schools, and that their teachers be allowed by law to charge pupils within the scholastic age tuition fees for studies other than those which are free by law; that the school authorities have the privilege of paying to teachers of well known skill and experience, under some circumstances, more than is now permitted; and that the legislature at its next session be asked to take the matter of a wise system of supervision for the public schools into serious consideration, and to make such enactments as the premises may require. The association adjourned to meet at Marshall in July, 1881.—(Texas Journal of Education.)

## CHIEF STATE SCHOOL OFFICER.

Hon. O. N. HOLLINGSWORTH, *secretary of State board of education, Austin.*

Hon. J. C. DeGress was State superintendent of public education from April, 1871, until the latter part of 1873; Mr. Hollingsworth the same from 1874 to 1876; since then, secretary of State board.

## SUMMARY OF EDUCATIONAL STATIS

| | 1870–'71. | 1871–'72. | 1872–'73. | 1873–'74. | 1874–'75. |

## STATE SCHOOL SYSTEM.

### OFFICERS.

The chief officer is a State superintendent of education, who is elected by the legislature at each biennial session.

Town school officers are town superintendents, elected annually by the people, and, where the district system has been abolished, boards of 3 or 6 school directors, elected for 3 years, one-third going out each year. A county examining board for the examination of teachers is appointed by the town superintendents at their annual meeting.

Districts have a moderator, a clerk, a collector of taxes, a treasurer, 1 or 3 auditors, and a prudential committee of 3, elected by the voters for 1 year. Women may vote in school meetings and have been eligible to the offices of town clerk and town superintendent of schools since 1880.

### OTHER FEATURES OF THE SYSTEM.

Each town must sustain one or more schools in which are taught the common school branches, free hand drawing, history, the Constitution of the United States, and good behavior; and any town may establish one or more higher schools if a majority of the voters so desire. Text books are furnished by the town or district to children whose parents are unable to buy them. Public schools are supported by district taxation, the income of town school funds and of the United States deposit funds. The interest on the last is distributed to towns and gores of land on the basis of population. One-half of the district and town school moneys is apportioned according to the number of children attending public school, the other half without regard to the school population; but when the sum to be apportioned reaches $1,200 or more two-thirds of it are apportioned on the basis of attendance. If the selectmen of any town neglect or refuse to assess, collect, or appropriate the tax for the support of schools, such town forfeits to the county a sum equal to double the amount required to be raised by the tax, with costs. Teachers of district schools must have certificates of qualification and must make report of school statistics or forfeit pay. County teachers' institutes must be held by the State superintendent on the written application of a specified number of teachers, and less formal meetings of like character may be held in counties that do not call for institutes.

Attendance on public schools of children between 8 and 14 is required for at least 3 months in the year unless they have been otherwise instructed. The employment in factories of children who have not complied with this law is forbidden, and a penalty of from $10 to $20 is imposed on parents, guardians, or employers who violate the law.

### CHANGES IN THE SYSTEM.

The most important changes in the school system made by law within the decade are these: In 1870–'71 towns were authorized to abolish their school districts and place their schools under a town board of school directors, whose chairman should be substantially town superintendent. In 1874 the State board of education, which had existed from 1856 and had done much good work, was abolished, as well as its executive secretaryship, and the office of State superintendent of education was created, with powers less extensive. In 1876 an amendment to the law of 1870 allowed town school directors (for whose chairmen only pay had been provided) to receive such pay as their town might vote them at the time of their election. Another authorized towns that had abolished the district system to restore it after 5 years. Provision was made too for county boards to examine teachers; the establishment of schools for training teachers in connection with any graded school with no normal school adjacent was allowed, and free hand drawing was added to the list of subjects to be taught in common schools. In 1878 the holding of brief educational meetings of a day and evening each in counties that should not call for teachers' institutes was authorized and entered on, and the continuance of the 3 State normal schools till 1890, on certain conditions, was assured. In 1880 women were made voters in school meetings and eligible to town and district school offices; the Vermont College of Teachers was incorporated, to give greater ability for working out its aims, which were to raise the standard of efficiency in schools, to encourage more thorough preparation for school teaching, and to make teaching a more permanent profession. School districts, too, were required to make their 20 weeks of school consecutive for 10 weeks in the early part and 10 in the later part of every year.

### GENERAL CONDITION.

No census of youth of school age having been taken for the last two years of the decade, it is impossible to say whether the number of children in the public schools maintained the comparatively high proportion (nearly 79 per cent. on youth of school age) reported in 1877–'78. A considerable increase of youth in private and church schools made up in large measure for the lessened number in the public schools, and,

on the whole, there were 1,728 more under instruction; but the average attendance on the public schools fell off by 625, and against this there is no recorded offset. With the diminution of public school pupils there appears also a decrease in the number of teachers in State schools, notwithstanding an increase of 9 districts and of 24 schools; but if this was a real falling off it probably was fully made up by the higher average quality of those employed, as 98 more, 544 in all, a much larger proportion of the whole number than in any previous year, had been instructed in the normal schools.

#### RÉSUMÉ FOR TEN YEARS.

The showing for the decade is better than for the last year of it. If the number of youth entitled to free schooling continued the same as in 1877–'78, there was in the ten years then ending an increase of 16,456 such youth. Of these, somewhat more than half had been gathered into the State schools, besides 244 more in private and church schools. The additional State scholars (8,568) were taught in 185 more districts, by 175 more teachers, and on an average for 9 more days each year, the quality of the teaching, moreover, being doubtless better in the main, from the fact that in the last year 228 more teachers than in the first (544 in all) had been trained at the State normal schools. There were 21 additional public schools. On the whole, then, there seems to have been fair advance, notwithstanding a diminution in the funds for State school work and consequently in the wages of teachers, the disbursements of the former being $32,123 less in 1880 than in 1871, and the decrease in the latter $17.78 for males and $8.21 for females since 1874.

## CITY SCHOOL SYSTEMS.

#### OFFICERS.

There still appears to be no general provision in the law for officers of city school systems. In Burlington there is a board of school commissioners of 5, composed of one from each ward; in Rutland, a board of education of 9 members. Both have city superintendents of schools.

#### STATISTICS.

| Cities. | Population, census of 1880. | Children of schoolage.*a* | Enrolment in public schools. | Number of teachers. | Expenditure. |
|---|---|---|---|---|---|
| Burlington | 11,364 | 3,258 | 1,566 | 32 | $19,259 |
| Rutland | 12,149 | 3,432 | 2,395 | 64 | 32,643 |

*a* In 1878.

#### ADDITIONAL PARTICULARS.

*Burlington* in 1879–'80 reported 30 common schools, with 1 male and 31 female teachers, 3 of whom had attended a Vermont normal school. The schools were classed as high, grammar, intermediate, primary, and mixed grades, the last including 2 evening schools held through the winter and fall terms, with an enrolment of 130 and an average daily attendance of 81. A slight decrease in the general attendance was due to the prevalence of infectious diseases. Teachers' meetings were held on alternate Saturday forenoons during term time for the year.—(State and city reports.)

*Rutland* for 1879–'80 reported 42 common schools, with 7 male and 57 female teachers employed, the men at an average monthly pay of $60.60 and women receiving $26. There was an increase in enrolment of 729. The graded schools within the graded districts are classed as high (with a course of 3 years), grammar, intermediate, secondary, and primary (with a course of 2 years each). The enrolment was 1,059: the high school having 68, the grammar 126, the intermediate 151, secondary 268, and the primary 446.—(State report and catalogue.)

## TRAINING OF TEACHERS.

#### STATE NORMAL SCHOOLS.

The 3 State Normal Schools at Castleton, Johnson, and Randolph reported for 1879–'80 an encouraging progress, having had a total attendance of 697, an increase of 289, and having graduated 92, a gain of 8. By a system of scholarships established and provided for by the State, tuition in these schools was, under some conditions, free. In all there was an increasing demand for more aid from the State, as the schools were suffering in comparison with those of other States and many teachers were going elsewhere to find superior advantages.

The *Castleton* school had 4 instructors, 108 pupils, and graduated 25, having 2

courses of 1 year each. This school was reported as gaining ground in public favor, with encouraging prospects for the future.—(State report.)

The *Johnson* school had a principal and 4 assistants, with an enrolment of 364, and graduated 32. In the last two years the gain in attendance had been 22 per cent.; in number of graduates, 44 per cent., while the recipients of scholarships had been more widely distributed throughout the district, and their number increased. During the year the second course of study was extended by the addition of English literature and geometry. "Methods of teaching" had been added to both courses, and increased attention given to these. Each course of study extended through a year and a half and the demand for more thorough training would soon call for the addition of the other half year. Additions to the apparatus and working materials were made.—(State report and catalogue.)

The school at *Randolph* (1866) reported 7 instructors for 1879–'80, a special teacher of music, and a lecturer on constitutional law, with 225 different pupils and a total attendance of 493. Only 35 were graduated, as the number in the first course class had been reduced by the prevalence of measles and by the extension of the course of study, but the second course class was considered the finest ever graduated from the school. The attendance for the year was the largest since the establishment of the school, while the courses of study were extended and the standard of entrance and graduation was advanced. A complete set of the American Cyclopædia, with index and annals, was added to the library. The school property, including grounds, furniture, apparatus, and library, was valued at $9,700.—(State report.)

#### TEACHERS' INSTITUTES.

The school laws, as before said, require the State superintendent to hold annually an institute in every county on a written application of 25 teachers in most counties or of 15 in two sparsely settled ones. These are to be held at a time when the common schools are not in session and are not to cover more than 3 days each. There is provision for the employment of such assistants as may be necessary to give efficiency and interest to such institutes, the expenses incurred not to exceed $30 a day. Two were reported in 1880 and two in 1879, the same two counties, Orange and Windham, applying for them and the attendance in each reaching about 100 on an average.

In 1878 the legislature provided that, in counties where institutes were not called for before July 1 in any year, educational meetings of a day and evening each might be held, the number of such in a county not to be less than 3 nor more than 5 in any year, and the expense for assistants, &c., not to exceed $12 a meeting. In accordance with this law, 44 such meetings were held by the State superintendent, with various assistants, and 2 more in 1880, 1 of them in February, the other in July. The exercises were similar to those of institutes, the attendance considerable, and the results encouraging.

## SECONDARY INSTRUCTION.

#### PUBLIC HIGH SCHOOLS.

The law makes provision for instruction in the higher branches in districts sustaining more than one school, whenever a majority of the voters in such district shall decide to have them taught; and any town may by vote establish one or more central schools for advanced pupils, to be supported by tuition fees from pupils, and, when necessary, by a tax which prudential committees are authorized to assess. These committees may also make arrangements for the instruction of public school pupils in academies that are located in the district or in an adjoining district, if a majority of the voters so decide. All incorporated academies must report annually to the State superintendent. No statistics of graded schools can be given later than for 1878–'79, when 19 reported a total of 6,044 students, of whom 130 were in college preparatory courses.

#### OTHER SECONDARY SCHOOLS.

For business colleges, private academic schools, and preparatory departments of colleges, see Tables IV, VI, and VII of the appendix; for a summary of their statistics, see corresponding tables in the report of the Commissioner preceding.

## SUPERIOR INSTRUCTION.

#### COLLEGES FOR YOUNG MEN OR FOR BOTH SEXES.

The *University of Vermont*, which includes the State Agricultural College, is a non-sectarian institution at Burlington. The Agricultural College dates from 1865; the university proper was chartered in 1791, organized in 1800, and graduated its first class of 4 in 1804. Continuing through the next decade it turned out annually classes of about 11 persons, but during the war of 1812 the courses were suspended, and for several years thereafter there were only 4 or 5 members to a class. Just prior to the

civil war a period of great prosperity was reported. Again there was a decline for a few years, but latterly the classes have averaged good numbers, while the financial resources and capacity for instruction have gained wonderfully. There are now 27 professors reported for 1880 against the 13 of 20 years ago, and the course of instruction has been correspondingly improved and broadened. The university property was valued in 1880 at $285,000 and the yearly income (including $8,130 annual interest on the congressional fund for support of the Agricultural College) was about $21,661. The course of instruction has not varied much during the decade 1870–1880. A literary and scientific course was added in 1871–'72 and the degree of B. S. was after that date only given on completion of a 4 years' course, instead of the 3 years required before. Women were admitted to both academic and scientific departments in 1871. Three departments are reported: arts, applied science, and medicine. The first comprises the usual academic course; the second is subdivided into courses in agriculture and related branches, chemistry, engineering, and mining. The literary-scientific course (mentioned above) omits Greek and adds certain scientific branches. The degrees bestowed by the university are B. A., PH. B., C. E., and M. D. In all departments 1,565 students were reported within the decade, the numbers gradually increasing from 115 to 129.—(Catalogues and return.)

*Middlebury College*, Middlebury (Congregational), has a 4 years' classical course, but depends on academic and high schools for all preparatory work. In 1880 there were 39 students.—(Catalogue and return.)

#### INSTITUTIONS FOR THE SUPERIOR INSTRUCTION OF YOUNG WOMEN.

As above stated, the university gives equal privileges to both sexes. Similar institutions, but of lower grade, for women only may be found in Table VIII. For the summary, see the report of the Commissioner preceding.

## SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

#### SCIENTIFIC.

The *State Agricultural College* (the department of applied science of the State University), Burlington, was organized in 1865 as one of the schools of science endowed with the national land grant. The courses are civil engineering, theoretical and applied chemistry, agriculture and related branches, metallurgy and mining engineering; also a literary-scientific course (as noted under Superior Instruction), and a winter course for farmers, in which agricultural chemistry, botany, physics, entomology, stock breeding, dairying, fruit and bee culture, road making, and farm accounts are treated. Since 1872 the 4 years' course entitles to B. S.; prior to that date 3 years only were required. Sixteen full course students were reported in 1879–'80 and 2 in a partial course.—(Catalogue and return.)

*Norwich University Scientific and Military College*,[1] Northfield, embraces the usual studies of a good scientific education and gives special attention to civil engineering and military science. Students desiring to go into business after graduating have the privilege of instruction in commercial law, book-keeping, and kindred studies. The regular course in this college is 4 years.—(Catalogue.)

#### PROFESSIONAL.

There is no provision in this State for *theological* or *legal* instruction.

The *medical department of the University of Vermont*, organized in 1823, continued to 1837, then suspended, and was again opened in 1854. As a "regular" school the requirements are 3 years of study, attendance on 2 full lecture courses (of only 17 weeks each, however), the final lecture course to be in this college, and a thesis. A graded course to cover 3 years is allowed. Statistics of 1880: 8 resident professors, 11 non-resident, 145 students (5 of them having already degrees in letters or science), and 49 graduates at the commencement in 1879. No examination for admission is required, chemical laboratory work is optional, and medical botany is not required for a diploma.—(Announcement and return.)

## SPECIAL INSTRUCTION.

#### EDUCATION OF THE DEAF AND DUMB AND THE BLIND.

No institutions for such unfortunates are to be found in this State. The American Asylum at Hartford, Conn., had 6 pupils from Vermont in 1880; the Clarke Institution for Deaf-Mutes, Northampton, Mass., 4 pupils; and the Perkins Institution and Massachusetts School for the Blind, Boston, received $1,925 in 1880 from Vermont in payment for Vermont pupils.—(Reports.)

[1] The catalogue for 1881–'82 reports as from Lewis College, the name having been changed in honor of Charles H. Lewis, LL. D., an alumnus who gives to his alma mater a handsome endowment.

### REFORMATORY TRAINING.

The Vermont Reform School, at Vergennes, established in November, 1865, but first opened June 14, 1866, receives boys under 16 and girls under 15. The whole number of inmates since 1866 is 619; remaining in July, 1880, 122. Four hours a day are devoted to instruction in reading, writing, spelling, geography, history, arithmetic, and geometry; 6 hours to labor on the farm, in the shops, sewing room, and laundry. During the two years ending with July, 1880, the boys earned $6,276 in the shops, and it is stated that if the frames, for which the cane is prepared, could be made here, the income would be largely increased. Commendable improvement was reported in both school and work, as well as a generally prosperous state of the institution.—(Biennial report.)

### HOMES AND ASYLUMS FOR ORPHAN OR DEPENDENT CHILDREN.

Two such institutions report for 1879–'80: the *Home for Destitute Children*, incorporated and organized in 1865, and the *Providence Orphan Asylum*, organized in 1854, but incorporated in 1866. Both are in Burlington. The former has had 450 inmates since the foundation (75 in 1879–'80), to whom reading, writing, and arithmetic, and cane seating and general work were taught; the latter, 1,365 inmates (90 in 1880), who also learned the three "R's," with sewing, washing, and cooking for girls, and farming for boys. The first mentioned admits children from 4 to 12 years of age and requires them to leave at 18; the last admits from 2 to 10 years and requires the boys to leave at 12 years of age and the girls at 15, but places them in good families.—(Returns.)

## EDUCATIONAL CONVENTIONS.

### VERMONT STATE TEACHERS' ASSOCIATION.

The thirtieth annual meeting was held August 4–6, 1880, at Bellows Falls. Among the topics treated were "Rights of the pupil;" "Home influence," in which Hon. G. A. Davis appealed to the parents for correct home principles and influences as an aid to the child's education; "The teacher's outfit;" and "Discipline," the need of self mastery and the importance of attention, diligence, and obedience being set forth in this last. Hon. Edward Conant addressed the meeting on the changes in the educational field during the last twenty-two years. The question "Ought teachers to be examined by teachers and ought licenses to be given for life?" was discussed by several members. In "Methods of classical study," H. H. Shaw, of Northfield, urged greater thoroughness in teaching the elements of a language. A report on normal schools, calling for needed enlargement and improvement through increased State appropriations and more effective State aid, was approved by the association. Mr. Bicknell, of the New-England Journal of Education, spoke on "Educational papers for teachers;" Prof. W. R. Shipman, of Tufts College, on "The personality of the teacher as a factor in education," in which the need of live, enthusiastic teachers was urged; J. S. Cilley, on "Language;" and a eulogy was delivered on the late Dr. Jacob S. Spaulding, of Barre. The committee appointed in 1879 to report on the formation of a pedagogic association of professional teachers was continued, with instructions to report at an early day, and after the usual business exercises the meeting adjourned.—(New-England Journal of Education.)

### VERMONT COLLEGE OF TEACHERS.

During 1880 the Vermont teachers endeavored to organize an association (with the above title) to which only educators of proved ability and experience were to be admitted. The chief object was to raise the standard of qualification among teachers and to improve the course of study and methods of instruction in all grades, from the primary to the completion of the high school or academic course.[1]—(New-England Journal of Education.)

## OBITUARY RECORD.

### PRINCIPAL JACOB S. SPAULDING, LL. D.

Mr. Spaulding was born in Wilmington, Mass., and was a graduate of Dartmouth College, in the class of 1841. His field of labor was at the academies of Bakersfield and Barre, in Vermont. At the latter place he was principal of Barre Academy for twenty-five years. A man of excellent judgment and a heart abounding in good feeling and good wishes, his great desire was to benefit those under his charge, and to that end he labored with earnest and unselfish devotion of purpose. He died on April 29, 1880, at Barre.—(Journal of Education.)

[1] The organization was completed at Montpelier, March 18, 1881, and the first public meeting was announced for August 9 of that year, at Northfield.

## CHIEF STATE SCHOOL OFFICER.

Hon. EDWARD CONANT, *State superintendent of education, Randolph.*[1]

[Third term, 1878–1880.]

Hon. John H. French was secretary of the State board of education from 1870 to 1874; Hon. Edward Conant, State superintendent of education from 1874 on.

[1] Mr. Conant's successor, Hon. Justus Dartt, will fill the office from December, 1880, to December, 1882.

## SUMMARY OF EDUCATIONAL STATIS

| | 1870–'71. | 1871–'72. | 1872–'73. | 1873–'74. |

c This includes both races.
d Each grade of 1 teacher in a graded school is counted a school.

## STATE SCHOOL SYSTEM.

### OFFICERS.

The officers having general charge of school affairs are a State superintendent of public instruction, elected by the legislature for 4 years, and a State board of education, composed of the superintendent, the governor, and the attorney general.

Local officers are county school superintendents, appointed by the State board of education for 4 years and confirmed by the senate; county school boards, composed of the county school superintendent and district school trustees; school trustee electoral boards, composed of the county superintendent, county judge, and county attorney; district trustees,[1] appointed by the school trustee electoral board; and subdistrict directors, elected by the voters of subdistricts for three years or appointed by the district school board in case the subdistrict fails to elect.

### OTHER FEATURES OF THE SYSTEM.

The new State constitution of 1870 made provision for a uniform system of public free schools; it set apart for their support the annual interest on the literary fund, a capitation tax of $1 on all men over 21, and a State tax of not less than 1 nor more than 5 mills on the dollar, to be distributed on the basis of the number of youth 5 to 21, as determined by a census to be taken every 5 years. Counties and districts were allowed to raise additional sums by tax, not to exceed 5 mills on the dollar. Under advice of the State superintendent, however, county and district taxation has been restricted from the first to 10 cents on $100, except in the county of Alexandria, which may impose the full amount permitted by the constitution if three-fourths of the voters are willing. The amount of State tax levied, subject to the constitutional limit of 5 mills, is determined from time to time by the legislature. No State money is to be paid to a district that has not sustained a school at least 5 months. Schools are to be graded in all localities where the number of children is sufficient; they are free to all persons 5–21, but white and colored are not to be taught in the same school. The branches prescribed by law are orthography, reading, writing, arithmetic, grammar, and geography; no others may be admitted except by special regulations, one of these being that the plan must have the sanction of the county school board. Teachers are chosen by subdistrict directors, but are employed by the district trustees. To be thus employed and to receive pay from public funds, they must have certificates from county superintendents. These certificates are of two grades, good for 1 and 2 years respectively, the higher or professional certificate representing superior ability, experience, attainments, and success. Teachers are required to keep a daily register and are expected to attend their county institutes, suffering no loss of pay for time thus spent unless the session is longer than one week. Each county superintendent is required to hold at least one such institute during the scholastic year.

### CHANGES IN THE SYSTEM.

Few changes of importance have been made in the school law of 1870. In 1871–'72 it was enacted that preference should be given to graded schools in all localities where the number of children should be sufficient. In 1874–'75 provision was made for the introduction of higher branches into the schools when in accordance with the judgment of county and district boards, the purpose being to encourage a grade of instruction intermediate between the common school and college, and such branches were authorized as are necessary to qualify pupils to become teachers as well as to fit for college. In 1876–'77 the term of county superintendents was lengthened from 3 years to 4, and their pay, which had been in proportion to the population and schools of their respective counties, was increased for the larger counties and made to depend on population only. District boards of school trustees were required to be appointed by county school trustee electoral boards, instead of by the State board of education. In 1877–'78 arrangements were made to determine the boundaries of subdistricts for white and black schools, and to have each alternate school open for the first 5 months and the remaining ones for the second 5 months of the school year.

### GENERAL CONDITION.

The year that closed July 31, 1880, is reported by State Superintendent Ruffner to have been the best for the public schools since the organization of the new system in 1870. The number of such schools, the enrolment and average attendance, and the teachers employed were each about double that of the troublous year preceding; while 77 more schools were graded, 363 more buildings were owned by school districts, $88,588 were thus added to the value of school property, and the average school term for the State was lengthened by 6 days. Then, too, "an increased amount of State school money was turned over," and the districts seem to have come up encouragingly to the

[1] These are for magisterial districts, answering to northern townships.

help of the State by raising local funds. Yet, while there was a greatly larger outlay for teachers and school-house expenses, there was almost no increase in the cost of the administration of the system and a decided reduction in the per capita cost of education; this was due to a reduction in the pay of the teachers, their average monthly wages being now below the rate of any previous year. A census of youth of school age taken in 1880, the first since 1875, showed an increase in 5 years of 73,018, or 14,604 a year. More than half of this increase consisted of colored youth, from which class, as the preceding table shows, a comparatively small proportion is gathered into the schools. The percentage of colored enrolled and in average daily attendance in the last year, however, was fairly up to that of previous years. The teaching for the year through the influence of county and private institutes is believed to have been better than at any time before, while through 2 large State institutes held for white teachers at the university and for colored ones at Lynchburg in the vacation of 1880, with aid from the Peabody fund, a foundation for much improvement in future teaching has no doubt been laid.

### PROGRESS IN TEN YEARS.

During the first year of the decade, the first also of the public school system, the superintendent says Virginia had an attendance of white children in public schools 50 per cent. greater than had in any previous year been enrolled in all the schools, and twice as large, counting both white and colored pupils. The number increased steadily (except in 1873) up to 1877, when it reached 204,974. The failure of State funds caused a falling off of over 2,700 in 1878 and of nearly 97,000 in 1879; but, funds returning, in 1880 the schools and attendance doubled. The number of graded schools having more than 1 teacher has risen from 70 to 205, but there has been no material rise in the average length of school term, the highest average reached having been in the second year. The average pay of teachers scarcely held its own, but the tendency was upward until the financial embarrassments of 1878 and 1879 made it necessary to reduce expenditures. School-house building progressed fairly; there were 2,395 houses owned by the districts in 1880 against 190 in 1871. The style of buildings has varied greatly, the cost ranging from $100 and $200 to $25,000. Improved desks and seats are being gradually introduced; blackboards are general, though not universal; and other appliances, such as globes and wall maps, are found in the larger towns. The work of protecting and beautifying school premises by trees, paint, and good fences has only been begun. Superintendent Ruffner notes, as an important element, although one which cannot be tabulated, a decided and steady improvement in the character of the schools, as well as in the public appreciation of them. It is shown that attendance on private schools advanced somewhat, and that, therefore, the vast work done by the public schools was largely clear gain.

That the colored people of the State have not had their fair proportion of schools the superintendent shows by a comparison of the number sustained for the two races, with the population of each respectively; but he says that after looking into the matter carefully he cannot find any evidences of injustice on the part of school boards. The white people, he says, have an advantage over the colored in the greater density of their population, as well as in their superior wealth, which enables them to supplement the pay of teachers, to furnish their children proper clothing, and to dispense with their labor. The proportion of total and of average attendance from year to year between the races was singularly uniform, except that in 1873, a year of relapse with the whites, there was a gain in the attendance of colored pupils. The record for the 10 years is a creditable one for the State, and much of that credit, it may now be said, belongs to the superintending head of the school system, who with remarkable fidelity has piloted it through many difficulties, has courageously battled for it against all assaults, and will leave it to a successor in March, 1882, a splendid monument of what perseverance, bravery, and well directed skill can accomplish in twelve years.

### AID FROM THE PEABODY FUND.

Since 1870 a total of $206,000 has been given by the trustees of this fund to aid education in Virginia, because the people there and the authorities were ready to do their part. During the year 1880 the superintendent reported $5,200 received at his office, which was to be used "chiefly for the improvement of teachers." Of this sum $1,500 were appropriated to the support of schools, $200 to the Educational Journal of Virginia, $3,500 to teachers' institutes, nearly $3,000 of this sum being used at the 6 weeks' institutes at the university and Lynchburg already mentioned. Then, besides the $5,200 thus passed through the State office, $700 were given to the Hampton Normal and Agricultural Institute, and $1,600 for scholarships at the Nashville Normal College; in all, $7,300 for 1880.—(State report.)

### KINDERGÄRTEN.

Two of these schools report for 1880, the American Kindergarten, Lynchburg, and the Kindergarten connected with the Leache-Wood Seminary, Norfolk. For statis

ties, see Table V of the appendix; for a summary of them, see the report of the Commissioner preceding.

## CITY SCHOOL SYSTEMS.

### OFFICERS.

Public school boards, composed of not more than 3 trustees from each ward, or 3 for each school district in case there are no wards, attend to the school affairs of cities and towns. In cities of 10,000 or more inhabitants the State board of education appoints a city superintendent of schools.—(School laws.)

### STATISTICS. *a*

| Cities. | Population, census of 1880. | Children of school age. | Public schools. | Enrolment in public schools. | Average daily attendance. | Number of teachers. | Expenditure. |
|---|---|---|---|---|---|---|---|
| Alexandria | 13,659 | 4,582 | 20 | 1,048 | 804 | 17 | $11,131 |
| Danville | 7,526 | 2,126 | 14 | 1,059 | 519 | 14 | 5,999 |
| Lynchburg | 15,959 | 4,907 | 31 | 1,815 | 1,070 | 31 | 19,525 |
| Norfolk | 21,966 | 6,695 | 28 | 1,613 | 1,117 | 26 | 16,214 |
| Petersburg | 21,656 | 6,392 | 33 | 2,020 | 1,492 | 28 | *b*15,146 |
| Portsmouth | 11,390 | 3,210 | 14 | 1,010 | 611 | 14 | 9,640 |
| Richmond | 63,550 | 21,536 | 118 | 5,911 | 5,130 | 129 | 83,802 |

*a* The statistics, except in the case of population and expenditure, are taken from the State report.
*b* State report.

### ADDITIONAL PARTICULARS.

*Alexandria* reports school property worth $26,000 in 1880, with 1,150 sittings in the public and 1,200 in private and parochial schools; the primary and grammar the only grades in this city, the former having an attendance of 56 pupils a day to a teacher, the latter, 38; and the schools open 197 days. Institutes were held once a month, the teachers attending with great punctuality and profiting by the discussions. A table of enrolment and attendance for the decade presents an enrolment of 1,109 in 1871 to 1,049 in 1880, and an average attendance of 652 in 1871 to 804 in the latter year. Although no high school is reported, there are said to have been 121 pupils studying the higher branches.—(Report, return, and State report.)

*Danville* reports 500 sittings for study in 14 schools, located in 2 buildings, valued, with grounds and sites, at $20,100. The public schools were taught 160 days by teachers who received as average monthly salary, males, $63.95, females, $37.18. In the private and parochial schools 336 pupils were enrolled.—(Return and State report.)

*Lynchburg* had 20 primary school rooms, 7 grammar, and 4 high, in 6 buildings, valued at $34,000. An average daily attendance to a teacher of 37.35 pupils in the lowest and 21 in the highest grade is reported. There were 110 whites studying the higher branches. The schools, which held 1,075 sittings, were taught 194 days. Private and parochial schools enrolled 590 pupils.—(State report and return.)

*Norfolk* valued its 7 school buildings, with 1,320 sittings for study, at $59,000; had an average daily attendance of 43 pupils to a teacher, reporting no special teachers; kept the schools open 191 days; had 174 white and 85 colored pupils studying the higher branches; and reported 8 rooms in private and church schools, with an estimated enrolment of 550 pupils.—(Return and State report.)

*Petersburg* divided her 33 schools into 18 white and 15 colored, all taught by white teachers, at a salary of $75 for males and $46.01 for females. The average monthly enrolment to each teacher in 1879–'80 was 56; number supplied with text books at public expense, 104; number studying higher branches, all whites, 80. Of the 4,000 colored children in the city of school age not more than 1,200 were enrolled during the year in either private or public schools, and considerable irregularity on the part of white pupils was also reported, so that the superintendent fears that the advantages of education are not understood by all.—(State report.)

*Portsmouth* had 10 white schools and 4 colored, all taught by white teachers, at a salary of $72.50 a month for men and $38.50 for women. Twenty-eight white pupils were reported studying higher branches.—(State report.)

*Richmond* reported 12 different school buildings, valued, with furniture and grounds, at $259,603. The number of sittings for study in public schools was 5,840; in private schools, 3,500. There were 2 high school buildings, with 390 sittings, and the number of pupils studying the higher branches was 347 whites and 65 colored. The male teachers received $86.69 as average monthly salary; the women, $42.15. The average daily attendance to a teacher was, in primary grades 40, in grammar 36, in high 25; school days taught, 188.—(State report and return.)

## TRAINING OF TEACHERS.

### NORMAL SCHOOLS.

Provision is made for the training of teachers by means of various normal institutes and of the following schools: The Valley Normal School, Bridgewater, organized in 1873; Hampton Normal Institute, Hampton, 1868; St. Stephen's Normal School, at Petersburg, 1871; and Shenandoah Valley Normal School, Strasburg, 1873. The first mentioned has reported in different past years primary (model school), intermediate, grammar, business, teachers', and classical departments. The Hampton Normal originated in 1861, a day school being opened under the auspices of the American Missionary Association. In April, 1868 (after purchasing and fitting up buildings), the normal school was opened, with 15 pupils, on the manual labor basis. The range of studies included little more than the common English branches, the purpose being to qualify the students for teaching primary schools; a portion of the time of each student was also to be devoted to manual labor. In June, 1870, the institution received a charter from the assembly, and in March, 1872, received one-third of the agricultural college land grant of the State. The property has grown to be so considerable that the number of students and employés upon the ground is 500 on an average. The course of study occupies 3 years and embraces the common branches, with methods of teaching, and also instruction in agriculture, horticulture, sewing, cookery, household work, and printing. Up to May 19, 1880, 1,429 pupils had been admitted; in 1879–'80 the enrolment was 354, of whom 68 were Indians. St. Stephen's Normal School reported 8 resident instructors, 20 normal students, 350 other students, 3 graduates in 1879–'80, and 50 graduates engaged in teaching. From the Shenandoah Valley Normal School no information was received.—(Reports, returns, School Moderator.)

### GENERAL TEACHERS' INSTITUTES.

The normal institutes, held at the University of Virginia and at Lynchburg for white and colored teachers respectively, constituted a very important feature of the year's work. The former enrolled 467 members, many of them public school teachers, who during the 6 weeks' session listened to the instruction given by the 3 regular professional instructors and to the lectures of prominent educators from different sections of the country. The institute for colored teachers was also open 6 weeks, with an enrolment of 240, and provided practical and thorough instruction. The best methods of teaching the primary branches were explained, as well as leading points in school organization and discipline. The university institute was the first effort on a large scale to give a systematic course of instruction to Virginia teachers and to test the demand for such instruction among the teachers themselves. Both these institutes were very successful.—(State report.)

### COUNTY INSTITUTES.

The law requires county superintendents to hold at least one teachers' institute each year in their respective counties. These important meetings are now becoming general, and in 1879–'80 there were 31 counties and cities holding more than 1. The more frequent sessions were in Alexandria City and County, Lynchburg, Petersburg, and Montgomery County.—(State report.)

### EDUCATIONAL JOURNAL.

The Educational Journal of Virginia, published monthly at Richmond, issued its eleventh volume in 1880. Throughout the period of publication it has afforded full information as to the State school system, and has done much for the improvement of teachers in methods of teaching.

## SECONDARY INSTRUCTION.

### PUBLIC HIGH SCHOOLS.

The law provides for an intermediate grade of instruction between the common school and the college, the branches to be such as are needed for the qualification of pupils desiring to teach or to enter with advantage into any of the colleges or higher institutions of the State. The introduction of such branches in any school is to be sanctioned by the county school board and to be discontinued whenever said board shall deem it advisable. The State reports 7,262 pupils studying the higher branches in 1879–'80, but does not give the number of high schools. Of the different cities sending returns Danville reports 1 high school room in which pupils are seated for both study and recitation; Lynchburg, 4, with 111 pupils enrolled; Norfolk, 4, without note of pupils; Richmond, 390 sittings in the higher grades, with 271 enrolled and 188 in average daily attendance.—(School laws, State report, returns.)

### OTHER SECONDARY SCHOOLS.

For business colleges, private academic schools, and preparatory departments of colleges, see Tables IV, VI, and VII of the appendix. For summaries of their statistics, see the report of the Commissioner preceding.

## SUPERIOR INSTRUCTION.

### UNIVERSITIES AND COLLEGES FOR YOUNG MEN.

Eight colleges and universities, all exclusively for young men, report a total attendance during 1879–'80 of 936 students (569 residents of Virginia and 367 from other States), under 70 professors. The arrangement of studies is that of independent schools in Randolph Macon and Richmond Colleges, in the University of Virginia, and in Washington and Lee University; all, however, presented the usual studies of a classical course, nearly all added general scientific branches, while at least 2 had schools of engineering. French and German were taught in 7; 2 added Hebrew, Spanish, and Italian; 1 of the latter, Anglo-Saxon also. Commercial or business courses were offered by 2, law by 3, and medicine by 1. Two report themselves as non-sectarian, 2 were under Methodist Episcopal influence, while the Presbyterian, Lutheran, Protestant Episcopal, and Baptist denominations had 1 each. Gifts were received during the year by 3, the total amounting to $30,854, of which Hampden Sidney College (Presbyterian) had $11,854 from sundry persons to increase the endowment and library fund; Richmond College (Baptist), $5,000 for general purposes; and Roanoke College (Lutheran), $10,000 from the estate of Jacob Presinger, with $4,000 more from donors in Boston, New York, and Philadelphia. None of these colleges was organized during the last decade, the latest being Emory and Henry College (1838), and the oldest, William and Mary (1693). The latter had not recovered from the pecuniary embarrassment caused by the destruction of property during the war, but still maintained its organization and had 29 students during the year, though whether in collegiate or preparatory departments is not stated. Washington and Lee University was known as Washington College previous to 1871.

The University of Virginia, established in 1827, is a non-sectarian institution supported largely by the State. Tuition in the academic department is free to Virginians over 18; and there are 11 scholarships for non-residents, covering tuition and matriculation fees, 5 in the academic department and 2 each in those of law, of medicine, and of industrial chemistry, engineering, and agriculture. The undergraduate course of academic study comprises 11 independent schools, including classical and scientific studies; also, the French, German, Italian, Spanish, and Anglo-Saxon languages. There is a graduate department, and there are professional schools which will be noted further on. The undergraduate academic degrees given are those of proficient, graduate in a school, bachelor of arts, and master of arts. Doctor of philosophy is given after a certain course of graduate study. There were 328 students attending in 1879–'80, against 447 in 1870–'71.

For statistics of colleges reporting, see Table IX of the appendix and a summary of it in the report of the Commissioner preceding.

### INSTITUTIONS FOR THE SUPERIOR INSTRUCTION OF YOUNG WOMEN.

Of 16 or more colleges and seminaries for young women, nearly all being authorized by law to confer collegiate degrees, 10 send some information for 1879–'80 and 9 of them report a total of 739 students in collegiate departments. All but 4 of them are under denominational influence: Baptist, 4; Methodist, 3; Lutheran, 2; Protestant Episcopal, 2; and Presbyterian, 1. Four of them were organized in 1870 or since that year, viz: Staunton Female Seminary, Staunton, in 1870; Farmville College, Farmville, in 1873; Episcopal Female Institute, Winchester, 1874; and Norfolk College for Young Ladies, 1880.

For full statistics of colleges reporting, see Table VIII of the appendix, and for a summary of it, the report of the Commissioner preceding.

## SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

### SCIENTIFIC.

Opportunities for instruction in scientific and technical branches are found in 4 independent scientific schools, as well as in 3 of the colleges above mentioned. The University of Virginia, Washington and Lee University, and Emory and Henry College all offer courses in some branches of engineering, and the former in agriculture also.

The independent schools of science are the Virginia Agricultural and Mechanical College, Blacksburg; Virginia Military Institute, Lexington; Hampton Normal and Agricultural Institute, Hampton; and the Polytechnic Institute, New Market. The Agricultural and Mechanical College, organized in 1872, offers free tuition to about 200 students, possible holders of scholarships, but only had 92 attending during 1879–'80.

The course extends over 3 years, besides 1 preparatory year, and includes, besides literary, linguistic, and mathematical branches, military tactics, agriculture, and mechanics. A part of the congressional grant for the benefit of agriculture and the mechanic arts goes to this school and the remainder to the Hampton Normal and Agricultural Institute. The latter has been very successful in training colored and Indian youth in agricultural, mechanical, and other industries. The Virginia Military Institute had 129 students in its 4 years' undergraduate course, which includes architecture, civil engineering, machine work, mining, metallurgy, analytical and applied chemistry, and agriculture. The Polytechnic Institute appears to be not so much for scientific as for general training; the undergraduate department, which extends over 2 years, besides literary and mathematical branches, embraces a school of natural science.

#### PROFESSIONAL.

The 4 *theological* schools are Union Theological Seminary, Hampden (Presbyterian); Richmond Institute, Richmond (Baptist); Theological Seminary of the Evangelical Lutheran Church, Salem; and Protestant Episcopal Theological Seminary, Theological Seminary P. O., Fairfax County. All report an undergraduate course of 3 years. Richmond Institute, which is for colored students, precedes the professional course by six years of preparatory and academic study. The others require an examination of applicants for admission who have not had a collegiate training. All these schools were established before 1870; the Lutheran Seminary was, however, removed in 1872 from Lexington to Salem, its present seat. A gift of $15,000 was received by the Union Theological Seminary in November, 1880, under the will of Joseph B. Wilson, of Rockbridge County. For statistics, see Table XI of the appendix, and for a summary, the report of the Commissioner preceding.

*Legal* instruction is given in departments of Richmond College, the University of Virginia, and Washington and Lee University. The school at Richmond College, first opened in 1870, had 10 students during 1879–'80 and graduated 7. The course extends over 2 years, but students are allowed to complete it in 1, although earnestly advised to give 2. In Washington and Lee University the course is arranged with a view to its completion in 1 year, but students who prefer to devote 2 to it may do so and are thus able to pursue at the same time certain academic studies. There were 19 students in 1879–'80. The law department of the University of Virginia has a 2 years' course, but students are allowed to complete it in 1, although advised to spend 2 on it. There were 117 attending during the year. This university also presents a private summer course in law of 2 months, in which there are junior and senior classes. For statistics, see Table XII of the appendix, and for a summary of them, the report of the Commissioner preceding.

The 2 *medical* schools are the medical department of the University of Virginia and the Medical College of Virginia, Richmond. The former presents a graded course of 2 years (each of 9 months) and requires no examination for admission. Students who can pass an examination on the studies of the junior year may enter the senior class and graduate after attending 1 session. Sixty students attended during 1879–'80 and 12 were graduated. The college at Richmond had 50 students attending (of whom 19 had received degrees in letters or science) and graduated 20. The course extends over 3 years of 40 weeks each. An examination for admission is required "if considered necessary." For statistics, see Table XIII of the appendix; and for a summary, the report of the Commissioner preceding.

## SPECIAL INSTRUCTION.

#### EDUCATION OF THE DEAF AND DUMB AND THE BLIND.

The Virginia Institution for the Education of the Deaf and Dumb and the Blind, Staunton, founded in 1839, has received since that date 501 deaf and dumb and 240 blind pupils. In 1879–'80 there were 98 of the former and 35 of the latter reported. The value of grounds, buildings, and apparatus for the two classes was $175,000; State appropriation for 1880, $35,000; expenditure, $32,302. The articulation method is employed in teaching the deaf and dumb, and they have instruction in such studies as reading, writing, arithmetic, geography, United States history, Scripture lessons, composition, drawing, oil painting, and familiar science, with such industries as printing, tailoring, carpentry, shoemaking, bookbinding, knitting, sewing, and crocheting. To the blind are taught the common branches, algebra, geometry, natural science, French, and music, with mattress and broom making, cane seating, knitting, &c. The average number of years spent in the institution is six; number of graduates who have become teachers in similar institutions, 68.—(Report and returns.)

#### INDUSTRIAL TRAINING.

The *Hampton Normal and Agricultural Institute* teaches various industries to its Indian and negro students. The girls learn housework and knitting; the boys work on

the farm, as carpenters, shoemakers, blacksmiths, tailors, printers, brickmakers, &c. A cookery class for negro and Indian girls was also established in 1879–'80, and for the next term a flower and a vegetable garden were planned, these to be worked by girls under good instruction.—(Report.)

The *Miller Manual Labor School*, for orphan and outcast children of Albemarle County, received its first pupils October 15, 1878; since that date 104 have been enrolled. Reading, spelling, arithmetic, geography, composition, dictation, history, geometry, trigonometry, algebra, philosophy, Latin, French, and German are to be taught, while book-keeping, penmanship, and free hand and mechanical drawing also enter into the course. In the intervals between their studies the boys work in the shop, in the printing office, on the farm, or in the garden.—(Catalogue.)

Information for 1879–'80 was received from 4 homes and asylums for orphan or dependent children, in which 104 children were reported for that year. Reading, writing, and arithmetic were taught in all. The St. Paul's Church Home, Petersburg, dating from 1875, trains its girls for servants; the Portsmouth Orphan Asylum (1856) teaches horticulture, care of stock, &c.; the Male Orphan Society, Richmond (1846), cigar making; and the St. Paul's Church Home, Richmond (1862), domestic work, sewing, knitting, and fancy needlework.—(Returns.)

## EDUCATIONAL CONVENTION.

### EDUCATIONAL ASSOCIATION OF VIRGINIA.

This association held its fifteenth annual session at Hollins Institute July 13–15, 1880. Although the attendance was very small those present were said to have profited much by the excellent papers and addresses. The first evening was occupied with an address of welcome from Prof. C. L. Cocke, superintendent of the institute, and with the organization. On the next day a report of the financial transactions of the year was followed by a paper on chemistry, by Prof. F. P. Dunnington; by one on the business features of educational establishments; on education in Virginia, its excellences, its defects, its future; on English language and literature, Prof. W. T. Thom directing attention to quite a number of recent works on English, which elicited from Prof. T. R. Price a capital outline of an English course. The third day's proceedings were opened by a paper on "The strong points in southern society: how they can be conserved;" then came a discussion on female education, growing out of papers on "Courses and standards in high schools for girls," and on the "School life of girls: with what aspirations shall it be stimulated?" An address by President J. D. Dreher on "Endowments: how shall capital be attracted in larger amounts?" contained valuable suggestions; "The profession of teaching: how can it be made more attractive, remunerative, and permanent?" followed; and resolutions in memory of Dr. Barnas Sears and of Prof. Harry Estill were adopted. The association adjourned to meet at Ocean View in July, 1881.—(Educational Journal of Virginia.)

## OBITUARY RECORD.

### PROFESSOR HARRY ESTILL, A. M.

Died, in Augusta County, May 16, 1880, in the thirty-seventh year of his age, Harry Estill, professor of natural philosophy at Washington and Lee University and former professor of mathematics at Randolph Macon College. Chosen to fill the chair of mathematics in the latter college at its reopening in 1868, Professor Estill's greatest delight was the ever widening expression of modern mathematics, the reduction into mathematical shape of other sciences, especially heat, optics, logic, and political economy. Noted for courage, truthfulness, and decision of character, he was a man born to be obeyed, so that as a teacher trouble was unknown in his classes. His well balanced character, love for his profession, and enthusiasm in his studies made him, even in his short life, a power in the cause of exact science and of scientific education.—(Educational Journal of Virginia.)

### BARNAS SEARS, D. D., LL. D.

Rev. Dr. Barnas Sears, who died at Saratoga, N. Y., July 6, 1880, was born at Sandisfield, Mass., November 19, 1802. He graduated at Brown University in 1825; studied theology in the seminary at Newton; was pastor of the First Baptist Church at Hartford for about 2 years; accepted in 1829 a professorship of languages in what is now Madison University, Hamilton, N. Y.; went to Europe in 1833 and studied for several years at Halle, Leipzig, and Berlin; returning, he was chosen professor and later president of the Baptist Theological Seminary at Newton. In 1842 he began to publish learned works, and was for several years editor of the Christian Review. From 1848 to 1855 he was secretary and executive agent of the Massachusetts board of education, and in that capacity did much to elevate the standard of teaching in the public schools. In 1855 he accepted the presidency of Brown University, filling that

place for nearly twelve years with exceptional ability. In March, 1867, Dr. Sears was selected to take charge of the Peabody educational fund, and as general agent of that fund for public education in the South he made Staunton, Va., his residence. His administration of the fund showed his marked ability, his aims being directed first to the encouragement of graded school instruction, and afterwards to the improvement of the character of southern teaching. Through such aid good school systems have been built up, and there is opportunity for still greater improvement by means of normal schools and institutes. Warm-hearted and sympathetic, his intellectual clearness, activity, and cultivation were remarkable, his love of learning insatiable, his habit of study continuous, and his judgment as to ends to be attained and means to reach them wonderfully sound. Dr. Sears received the degree of D. D. from Harvard in 1841, and that of LL. D. from Yale in 1862.—(State report, Virginia; Boston Daily Advertiser; Daily Saratogian.)

## CHIEF STATE SCHOOL OFFICER.

Hon. WILLIAM H. RUFFNER, *State superintendent of public instruction, Richmond.*

Mr. Ruffner was appointed to the office of superintendent in March, 1870; his third and last term was March 15, 1878, to March 15, 1882. Hon. R. R. Farr has been elected to succeed Mr. Ruffner.

## SUMMARY OF EDUCATIONAL STATISTICS

| | 1870–'71. | 1871–'72. | 1872–'73. | 1873–'74. |
|---|---|---|---|---|

## STATE SCHOOL SYSTEM.

### OFFICERS.

From 1870–'71, there have been for the State at large (1) a superintendent of free schools, chosen by the people for a four years' term since 1872; (2) a State board of school fund, embracing the superintendent and other chief executive officers; (3) a board to examine candidates for State teachers' certificates, and license them if approved; (4) a board of regents of the Normal School; and (5) a board of regents of the State University.

For each county a superintendent of free schools has been chosen by the people in the alternate odd numbered years, and a county board of examiners is formed by associating with him annually 2 experienced teachers chosen by the presidents of district boards of education in the county.

For each school district (which embraces what up to 1873 was a township) there is a board of education of 3 members,[1] chosen by the people of the district at the same time at which the county superintendent is elected.

For each subdistrict into which a district may be divided, the district board of education chooses at the outset a board of 3 trustees, and annually afterward one to replace the outgoing one.

A high school may be formed by the concurrent action of 2 or more districts, the boards of education concerned either electing directors, removable at their discretion, or delegating the care of the school to the board within whose territory it is held.—(School laws of 1877.)

### OTHER FEATURES OF THE SYSTEM.

The State schools throughout the decade have been sustained and conducted essentially under the same general law as in 1871. The schools are free to all youth between 6 and 21 years of age in the districts in which they are established. There are to be enough of them in each district for primary instruction of all entitled to attend, those for whites and colored to be separate. The funds for the colored children can in no case be used for the whites. High schools, as well as graded schools leading up to them, are authorized in such districts as require them. For all there are to be duly licensed teachers, who must keep the prescribed registers of attendance and studies and make the required monthly and term reports to the secretary of their board of education in order to draw their pay. The schools are sustained from the proceeds of a permanent fund, a school tax of 10 cents on the $100, the fines and forfeitures of the previous year, and a capitation tax of $1 on each voter, while districts are required to raise for the same purpose annual taxes not to exceed 50 cents on each $100, and to maintain a primary school for at least 4 months each year or lose their share of the State apportionment, which is according to the number of youth of school age as ascertained by an annual census. For graded schools beyond the primary 15 cents more on the $100 may be raised and for a high school 30 cents; while for school-houses and all expenses beyond teachers' salaries 40 cents on the $100 may be levied. Plans for school-houses must be approved by the county superintendent before the building can be erected. The school month for teachers is 22 days, 20 of which are to be given to teaching and 2 to be carried to the account of the institutes which the teachers of State schools are required to attend not less than 8 days each year.—(School laws, edition of 1877.)

### GENERAL CONDITION.

The report for 1879–'80 shows gratifying progress. With only 3,990 more youth of school age, 6,324 more were in public schools and 1,436 more were held in average paily attendance, all but 52 of this last increase being whites. The per cent. of average daily attendance on number of children between 6 and 16, according to the State report, was 92. To accommodate the increased attendance, there were 86 more public schools, with 714 more licensed teachers; and although 38 fewer male teachers were employed, there were 45 more females, while there were 2 more school districts, 146 more subdistricts, and 84 more school-houses.

With all these items of important increase, to which, as the tables show, there were few offsets, the cost of the school system for the year was held at almost the same point as the year before, less than $8,000 covering the whole addition to it. Nor did the teachers generally have to suffer to secure this, for, except a slight reduction in the average pay of white males, the rate of monthly pay went up. The superintendent says, indeed, that the general growth was largely due to improvement in the quality of teachers and in their interest in school work, both which he thinks were brought about by a higher efficiency in the training at the normal schools and in the county and district institutes aided by funds from the Peabody trustees.

### RÉSUMÉ FOR TEN YEARS.

The statistics of 1879–'80, compared with those of 1870–'71, show even greater progress for the decade than that in the last year. The increase in school population,

[1] Consisting of 4 members until 1872–'73.

as reported, was 43,364; in enrolment, 66,251; and in average daily attendance, 40,368; showing that, with an increase in school population of only 26 per cent., the per cent. of increase in enrolment and average daily attendance nearly doubled. There were 36 more districts and 962 more subdistricts having schools; while of the schools 5 more were high schools, 55 more graded schools, and 1,488 more common schools; 1,498 more school-houses and 1,666 more teachers showed fair provision for increased school population. As to school property it is evident from an increase of $657,262 in value that there must have been a considerable improvement in the quality of the later buildings, the increase in the outlay for this improvement being about 58 per cent. The log houses were giving place to more commodious frame, brick, and stone buildings. It is also apparent that there was a corresponding growth of interest in the public schools from the fact that an increase of 25 per cent. in the school income came largely, if not wholly, from an increase of 75 per cent. in district levies, while the increase in expenditure (only 24 per cent.) and in average daily attendance (79 per cent.) indicates both an economical management of the funds and a greatly improved condition of the schools. The reports also show that this increase in provision for free instruction and in the number actually taught was about three times as great as the increase of youth entitled to the privileges of free schools. As to teachers it might have been hoped that with an increase in their quality and attractive teaching power there would be a corresponding increase in their wages; but instead of this must be recorded a decline of $7.25 in average monthly pay of white males and of $2.85 in that of white females.

#### PEABODY FUND.

The amount contributed to the State during the decade was $94,860. Of this amount $2,000 went toward the expenses of teachers' institutes during 1880. The remainder was used to sustain graded schools and an educational journal.

#### GRADUATING SYSTEM FOR COUNTRY SCHOOLS.

The system of graded studies, annual examinations, commencement exercises, and diplomas of graduation introduced by Superintendent A. L. Wade, of Monongalia County, in 1876, continued to be regarded with increasing favor; where introduced, it appeared to give new life to the country schools. Marion County reported in 1878 the introduction of this plan the previous year and its great success, having graduated from all its schools in two years 225 and formed classes for the future. In 1879–'80 there were 6 of these schools in this county in successful operation. In this year Tyler County reported the graduation of 57 from its primary schools, and that the system had done much to improve the public schools in that county. The State superintendent, in his report for 1879–'80, calls attention to his former recommendations on this subject, as there can be no question of the value and importance of this system. Further than this no information in regard to the system has reached this Bureau.—(State report and Commissioner's report, 1878.)

## CITY SCHOOL SYSTEM.

#### WHEELING.

*Officers.*—The officers here are a board of education of 3 members for each ward, with a superintendent of the city school district, appointed by the board and required to have had, before his appointment, at least 3 years of practice in graded school work.—(Act creating the district and State school laws, 1877.)

*Statistics.*—Population, 30,736; school population, 10,903; enrolment, 4,785; average daily attendance, 3,300; teachers, 93, teaching in 8 brick school buildings, which, including land, furniture, and apparatus, were valued at $236,680. There was a gain in school population of 579; in enrolment, of 97; in teachers, of 2; and in average daily attendance, a loss of 174.—(State report, 1879–'80.)

## TRAINING OF TEACHERS.

#### NORMAL SCHOOLS.

The West Virginia State Normal School, established under an act of 1867, in connection with Marshall College, Huntington, with its branches at Fairmont (1869), West Liberty (1871), Glenville and Shepherdstown (1873), continued in 1880 the work of training teachers for the schools. These institutions, established by the State, are under the control of a board of regents, with local executive committees for the direct supervision of each school, and are for the exclusive use of the white youth of the State. The course for each is the same, covering 3 years of instruction in the branches taught in the common schools, as well as in the art of teaching them and management in the school room. Upon completion of the course the regents confer diplomas with the title of normal graduate, which, up to 1880, authorized the holder to teach throughout the State, while those desiring to continue their studies may do so under appointment of the regents. Pupils who agree to teach in the free schools one year are admitted free of tuition and provided with books. All except the one at West Liberty report for 1879–'80, showing a total of 14 instructors, 261 normal students,

and 31 graduates for the year, 23 of whom engaged in teaching. A falling off of 2 instructors and 145 students resulted from the failure of State appropriation for 1880.

Besides these State normal schools, there is one at Harper's Ferry established in 1867 by friends of the colored people. At first this school was intended for training colored teachers, but afterwards, as it afforded opportunities for higher education, it was named Storer College, having preparatory, normal, and academic departments, with 3 and 4 years' courses of study. It reports for its third year 5 instructors, with 203 normal and 42 classical students, 13 graduates, 3,200 volumes in the library, and instruction in elementary drawing, with vocal and instrumental music.

### TEACHERS' INSTITUTES.

The State school laws make it the duty of each county superintendent to aid the teachers to improve themselves in their profession. With this in view he is to encourage the formation of county institutes for mutual improvement, to attend these himself whenever practicable, to give such advice and instruction as may contribute to their efficiency, and, in connection with superintendents of adjoining counties, to encourage the formation of union institutes, attend and participate in the exercises of the same, aiming throughout at the improvement of the teachers and thus at the elevation of their work and their profession. Public school teachers are required to attend the institutes held in their county or district for an average of 2 days in each month contracted for, or 8 days in the school year, during which attendance their wages continue.

The State appropriation in aid of these institutes being only $500 in 1880, or $9.26 for each county, the general agent of the Peabody fund directed that the whole appropriation made should that year be expended on institutes. With this aid 1 institute was held in every county and in some large ones 2 were held, none, however, being well attended. Besides these, 4 district institutes were held, conducted by Professor Ladd, who called to his aid the late Dr. Sears and Professor De Graff of New Jersey. The effect of these institutes was excellent.

## SECONDARY INSTRUCTION.

### FREE PUBLIC HIGH SCHOOLS.

The law authorizes this class of schools for the higher instruction of the advanced pupils of either a single district or of two or more districts uniting for the support of one school. In 1880 there were 8 reported, the same number as in previous years, but with no note of pupils in them, except as these may be included in 285 reported as studying German and 7,943 reported in other branches than those required by law.

### OTHER SECONDARY SCHOOLS.

For business colleges and private academic schools, see Tables IV and VI of the appendix to this volume; for preparatory departments of colleges, see Table IX; for full summaries of the statistics of each class of schools, corresponding tables in the report of the Commissioner preceding.

## SUPERIOR INSTRUCTION.

### COLLEGES FOR YOUNG MEN OR FOR BOTH SEXES.

The *West Virginia University*, Morgantown, chartered in 1867, owed its establishment and partial endowment to the congressional land grant for the benefit of agricultural colleges. It was first opened as "The Agricultural College of West Virginia," but, in order to carry out a plan of having this a State institution on a university basis, the name was changed, in 1868, by legislative action. The courses in 1868 were preparatory, 2 years; literary, 4; scientific, 3; agricultural, 2; military tactics throughout a 3 years' course; normal classes during 1 or 2 terms each year; and an optional course leading to a certificate instead of a degree. In 1869 lectureships in civil and constitutional law, physiology, hygiene, and similar subjects were provided for;[1] in 1871 a department of engineering, the first 2 years like the general scientific course, the third devoted to this branch and kindred studies; in 1872 the scientific course was extended to 4 years, while that of engineering was correspondingly increased. The different departments were arranged in schools, the instruction given not varying much from year to year. In June, 1878, the first step was taken towards the establishment of regular departments of law and medicine. These will be treated under the proper headings. A total of 166 students was reported in 1870–'71; in 1879–'80 there were 132.—(Catalogues.)

The other colleges reporting are Bethany (Christian), organized in 1841; West Virginia, Flemington (Free Will Baptist), in 1870; Shepherd, Shepherdstown (non-sectarian), in 1873. Bethany has 3 separate, complete courses—classical, scientific, and ministerial—also special courses in engineering, physics, and chemistry; a preparatory class of 1 year is also reported, as well as a teachers' course in experimental philosophy occupying from 6 to 10 weeks. West Virginia announces preliminary, com-

[1] These seem to have been filled first in 1878–'79.

mercial, academic, normal, college preparatory, and collegiate courses. A return for 1880 gives 53 preparatory students, but reports "no permanent arrangements yet" in the college of liberal arts. Shepherd reports 55 students in the normal classes (including preparatory pupils and graduate students) and 45 in the collegiate.—(Catalogues and returns.)

#### INSTITUTIONS FOR THE SUPERIOR INSTRUCTION OF YOUNG WOMEN.

West Virginia and Shepherd Colleges admit women to equal privileges with men. For similar institutions admitting only women, see Table VIII of the appendix; for a summary of their statistics, the report of the Commissioner preceding.

## SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

#### SCIENTIFIC.

West Virginia University, as above stated, began as an agricultural college. Its scientific courses stood in 1880 as follows: (1) A regular 4 years' course, leading to the degree of B. S.; (2) 1 in engineering, the first 3 years of which are similar to the scientific, while the senior year includes civil and military engineering; (3) an agricultural 2 years' course. Those deficient in elementary studies must spend at least one year in preparatory work before entering the agricultural course. Bethany College had a 4 years' scientific course; a special course in engineering (entitling to certificate only); a teachers' course in natural philosophy of 6 to 10 weeks, in which, by experiment, physical laws are verified and illustrated; and a special course in practical chemistry.

For statistics of each college, see Table IX of the appendix; for a summary of the statistics of all that present them, see the report of the Commissioner preceding.

#### PROFESSIONAL.

The only *theological* instruction given in this State, so far as known, is in the 4 years' ministerial course at Bethany College. This course embraces 5 schools, viz: of sacred literature, ancient languages, mathematics and astronomy, natural science, mental philosophy, belles lettres, and political economy. The degree of B. L. is given at the close.—(Catalogue.)

The *law* department of West Virginia University was created in June, 1878. The full course includes common and statute law, mercantile law, equity and evidence, and constitutional and international law, these last, however, not required of ordinary students. Daily examinations and two general examinations are held during the collegiate year, and certificates of distinction are awarded at the end of it when the result of these examinations has been satisfactory.—(Catalogue.)

At date of June, 1878, a beginning was made of a *medical* department in the same university. A chair of anatomy, physiology, and hygiene was established (an advance upon a lectureship of physiology and hygiene reported in 1869). This course is to occupy two or three terms of the university year. In 1879–'80 much interest was reported on the part of the students, as seen by their punctuality of attendance at lectures, their evident comprehension of the topics treated, and their answers at the examinations.—(Catalogue.)

## SPECIAL INSTRUCTION.

#### EDUCATION OF THE DEAF AND DUMB AND THE BLIND.

The West Virginia Institution for the Deaf and Dumb and the Blind, Romney, since its foundation in 1870, has instructed 167 deaf and dumb and 56 blind. The common English branches are taught to both classes; the special ones for the deaf and dumb have been lip-reading, articulation, and drawing; for the blind, some higher studies, with music. The employments for the former were tailoring, shoemaking, carpentry; for the latter, mattress and broom making and chair caning. The average number of years spent in the institution is six; pupils in 1879–'80, deaf and dumb, 65; blind, 24. Within the decade 93 deaf-mutes and 31 blind pupils—in all, 124—have been graduated or regularly discharged, and many of them are now self-supporting. Articulation and lip-reading were first introduced in the fall of 1877; four classes of 5 to 6 pupils each were formed, and the instruction was continued until October, 1879, when the classes were discontinued. This was evidently only a temporary cessation, for the return for 1879–'80 reports articulation taught during that year.—(Biennial report and returns.)

## EDUCATIONAL CONVENTION.

#### WEST VIRGINIA EDUCATIONAL ASSOCIATION.

No information has reached this Bureau in reference to the holding of a meeting in 1880. The session of 1879 was at Charleston August 26–28.

## CHIEF STATE SCHOOL OFFICER.

Hon. W. K. PENDLETON, *State superintendent of free schools, Wheeling.*

[Term, March, 1877, to March, 1881.]

Other superintendents in the 10 years have been: Hon. C. S. Lewis, 1870–1872; Hon. W. K. Pendleton, 1872–1873 (filling a vacancy made by Mr. Lewis's resignation); Hon. B. W. Byrne, 1873–1877.

In October, 1880, Mr. B. L. Butcher was chosen to succeed Mr. Pendleton.

b The attendance of the school at Whitewater was not reported in 1870-'71.

## STATE SCHOOL SYSTEM.

### OFFICERS.

The general supervision of the common school system has been, throughout the decade, as for 20 previous years, under a State superintendent of public instruction, elected by the people for a term of 2 years. He has been allowed an assistant, of his own appointment, and other clerical aid.

The local supervision has been under (1) county superintendents, also chosen for terms of 2 years by the people, 2 being allowed in counties with more than 15,000 inhabitants, and (2) district school boards, consisting of a director, treasurer, and clerk for an ordinary school district, chosen all at once at the first district meeting, and afterwards one each year for a term of three years.[1] Free high schools, when not under the ordinary school boards, have also boards of 3 members, elected since 1875 at a called meeting of the district officers within the territory constituting the high school district.

In the comparatively few towns (26) that, up to 1880, had come under a township system, there are town boards of school directors, composed of the clerks of the subdistricts within the town, with those of joint subdistricts that have school-houses within it. The secretary of the board has supervision of its schools.

Boards of regents are appointed by the governor for the State normal schools and for the State university.

Since 1875 women have been eligible to all school offices below the State superintendency.

### OTHER FEATURES OF THE SYSTEM.

On the current plan of State aid to local effort, the income of the State school fund has been distributed annually to the proper local officers in the years under review on the basis of the number of youth 4 to 20 years of age, shown by an annual report from them to have been resident in towns, cities, and school districts that have had schools of at least 5 months' duration, that have raised for these schools as much as the State apportionment to them, and that have had them taught by duly licensed teachers. Persons over or under the school age, with consent of the school officers, may attend the public schools on payment of tuition, if such attendance should not interfere with the free pupils. Youth between 7 and 15 are, by law of 1879, required to be sent to school for at least 12 weeks in each school year, unless excused by the school board because of illness, distance from school, instruction elsewhere, or other sufficient cause. To make it easier for such children to attend, school boards are required to furnish needed text books for pupils of this class whose parents or guardians cannot supply them. They may, by authorization from their districts, furnish these also to other pupils. The determination of the text books to be used, of the discipline to be maintained, of the licensed teachers to be engaged, and of the annual length of school term beyond the 5 school months required, belongs by law to the school boards. The elementary studies to be pursued are prescribed by the State; but graded studies reaching beyond these, even to preparation for university work, have not only been allowed for many years, and especially since 1875, but also encouraged by express provision for them.

### CHANGES IN SCHOOL LAWS.

Although the school code has remained in general features essentially the same throughout the decade, modifications have been made at several points to remedy defects disclosed by experience.

In 1872, for instance, the requirement for voting in a school district of 10 days' residence therein was remitted to persons having the general qualifications for voting in the State; engagement of teachers in school districts was transferred from the clerk to a majority of the school board; the school month was made 20 days instead of 22; general election day was declared to be a legal holiday; districts that could show good reason for coming short of 5 months' school term were released from penalty; restrictions on alterations of the boundaries of joint school districts were imposed; counties reaching a population entitling them to 2 superintendents were ordered to have the second chosen by popular vote of half of the county, instead of being appointed, as before, by the State superintendent; provision was made for limited State teachers' certificates, and compensation of $2 to $3 daily for actual service was allowed to superintending secretaries of town school boards. In 1873 town supervisors were ordered to abolish any school district that should fail for two years to maintain a school; power was given district boards to purchase in any year school apparatus not costing more than $75, with consent of the State or county superintendent; districts

[1] For city officers, see City School Systems, further on.

were exempted from loss of State school money through mistake of any officer, and from penalty for failure to raise a school tax if the amount it would have reached was supplied from the general fund; and authority was given cities to establish schools for truants and place in them children 7 to 10 years of age found to be habitual absentees from school without cause. In 1875 school boards were authorized to purchase, with consent of their constituents, school books to be loaned or otherwise furnished to pupils; free high schools were allowed to be established, with boards for managing them, in any town, incorporated village, or city, by a majority vote of the people, and aid from the State was pledged to them; women were also made eligible to school offices. In 1877 school officers and teachers were forbidden to act as agents for sale of stationery or school books, persons 20 to 30 years of age were allowed to enter public schools for studies in English, with consent of school boards, and the free high school law of 1875 was modified. In 1879 a compulsory school law was passed, the high school law was further modified, and the annual district school tax was limited to 5 per cent. of the assessed valuation of the property in the district.

#### GENERAL CONDITION.

How effective the school system had come to be under good superintendency and many leading teachers from the normal schools is shown by the fact that, although 224 fewer youth of school age were reported in the last year of the decade than in the year before, there were 8,071 more in the public schools, these schools having 41 more buildings, 3,947 more seats, and 240 more teachers, with several more days of term and greatly improved facilities for cheapening text books or making them entirely free. How much the teaching in the schools had been improved, too, may be judged from the growth of schools with three or more departments, and of course with teachers of high quality in the upper grades at least, as also from the greatly increased number sent up from these grades to the State academies and colleges, at least 1,500 more within the year, making all possible allowance for those coming in from other States. An advance of $127,700 in the estimated value of school property and of $476,647 in receipts for maintenance of schools looks in the same direction, almost the only falling off being a reduction in the proportion of expenditure to receipts, which seems to have come in large measure from the unwise reduction of teachers' wages in country schools.

#### RÉSUMÉ FOR TEN YEARS.

Progress continuous and encouraging in almost everything but pay of teachers marks the record for the ten years covered by the table given, though the proportion of that progress is not shown to be as great for the whole decade as for the closing year of it. The ratio of districts making report of their statistics to the whole number known to exist was indeed greater for the ten years than the last year; but while these fuller reports show an increase of 62,281 in youth to be instructed, and show, too, that a fair proportion of this increase was gathered into State and private schools, with greater advantages for instruction in the former certainly and probably in the latter, we find no invasion of the region of non-attendance such as that in 1879–'80. The State schools enrolled only a little more than half of the additional youth of school age, and all schools together only a little more than two-thirds. The pay of teachers fell off somewhat during the decade, but their number increased by 947, or about 100 a year on an average, while the houses in which they taught were more numerous by 734, the seats for pupils by 50,841, the estimated increase in value in school buildings, sites, and furnishings being $1,306,812. The passage of a compulsory school law near the conclusion of the decade and the somewhat extensive institution of a system of gradation and graduation in country schools promise, if well administered, an era of still greater success and growth in years to come.

### CITY SCHOOL SYSTEMS.

#### OFFICERS.

The principal cities of the State are by charter independent districts, and elect each a board of education with defined powers and duties. This board in each city chooses generally a president, a clerk, and a superintendent; it establishes and organizes graded schools, determines the studies to be pursued in them beyond those prescribed by law, and decides what text books shall be used and what discipline be maintained. The superintendent, besides his supervisory duties, usually examines persons proposing to teach, sometimes with the aid of a committee.

STATISTICS.

| Cities. | Population, census of 1880. | Children of school age. | Enrolment in public schools. | Average daily attendance. | Number of teachers. | Expenditure. |
|---|---|---|---|---|---|---|
| Appleton | 8,005 | 2,897 | 1,638 | 1,490 | 28 | $16,492 |
| Eau Claire | 10,118 | | | | | |
| Fond du Lac | 13,091 | 5,482 | 2,321 | 1,515 | 46 | 22,499 |
| Green Bay | 7,476 | 2,301 | 1,182 | | 20 | 10,504 |
| Janesville | 9,018 | 3,386 | 1,727 | 1,318 | 36 | 18,651 |
| La Crosse | 14,505 | 4,070 | 2,559 | 2,482 | 42 | 26,600 |
| Madison | 10,325 | 3,517 | 1,939 | 1,745 | 34 | 23,305 |
| Milwaukee | 115,578 | 37,742 | 17,085 | 11,149 | 250 | 234,706 |
| Oshkosh | 15,749 | 5,874 | 2,217 | 2,017 | 53 | 35,785 |
| Racine | 16,031 | 5,858 | 2,302 | 1,620 | 46 | 32,575 |
| Watertown | 7,883 | 3,483 | 1,138 | 740 | 22 | 11,785 |

ADDITIONAL PARTICULARS.

*Appleton* reported a good condition of its schools, 8 commodious school buildings, 2 more required, and 1 built during the year (affording sittings for 1,800), only 1 properly ventilated, and 7 with separate outhouses for the sexes; valuation of all, with sites, $50,000. There was an increase of 297 children of school age and of 132 in enrolment, and the ratio of average daily attendance to enrolment was 91, showing a gain of ¼ of 1 per cent. on this ratio. The schools were conducted with one teacher less than in the previous year and there was a reduction of $6,273 in expenditure.—(State report and return.)

*Fond du Lac* reported 17 school buildings for its primary, grammar, and high schools, with 2,800 sittings, with a decline in the main. In school population there was a falling off of 418, in enrolment of 163, and in average daily attendance of 3 per cent. There was one teacher less employed; also, a saving in expenditure of $7,714. In private and parochial schools there were 500 enrolled, an increase of from 200 to 300, showing that these schools had drawn largely from the public schools.—(Return.)

*Green Bay* had 3 brick and 3 frame school-houses, with sittings for 1,020, valued, with sites, at $64,000, only 1 having a suitable outhouse in good condition. With an increase of 129 in school population, there was a loss of 25 in enrolment, but a gain of 4 per cent. in average daily attendance, due, perhaps, to the gain of 1 teacher; while in private and parochial schools there was an estimated enrolment of 450, a decrease of 160 from the previous year.—(State report.)

*Janesville* reported 10 school buildings for its primary, grammar, and high schools, with 1,801 sittings for study, which, with sites, furniture, and apparatus, were valued at $96,500. With a decrease of 172 in school population there was an increase of 32 in enrolment, of 4.3 per cent. in average daily attendance on enrolment, and the usual high standard of punctuality was maintained. The high school enrolled 161, while the private and parochial schools had an estimated enrolment of 250. The Grube method in arithmetic had proved satisfactory, while the advantages of loaning text books to the students were commended to all the districts in the State.—(State report and return.)

*La Crosse* reported that during the last eight years the public schools had gradually improved in their work. They were classed as primary, intermediate, grammar, and high, taught in 9 buildings, with sittings for 2,100, all having separate outhouses for the sexes in good condition. Although there was a loss of 109 in youth of school age, the schools gained 241 in enrolment, and 97 per cent. of those belonging were in average daily attendance. The high school enrolled 125 and graduated 30 males. Vocal music was introduced as an experiment into the intermediate and grammar schools during the spring of 1880, and after a trial of 3 months a special teacher of music was employed. It is estimated that there were 500 in private and parochial schools.—(State report.)

*Madison* had 9 school buildings, all well ventilated, with 1,750 sittings, with separate outhouses, valued, with sites, furniture, and apparatus, at $100,000. The schools had primary, grammar, and high departments, each with a 4 years' course and an addition of a term to the high school for the graduate class. This school has 5 courses of study, the completion of the first 3 admitting to the university without examination. It enrolled 244, with an average daily attendance of 92, graduating 27. In school population there was a loss of 494; in teachers, of 1; in expenditure, a reduction of $2,213; while in enrolment there was a gain of 37 pupils, and in average daily attendance of 1 per cent. Private and parochial schools had an estimated attendance of 650.—(State and city reports.)

*Milwaukee*, with 25 public school buildings, with 12,978 sittings, valued, including sites, furniture, and apparatus, at $696,588, had 726 more youth of school age, 628 more

enrolled, and 5 per cent. more in average daily attendance, with 68 more teachers. The schools are classed as district, primary, branch, and high, the last having enrolled 322, besides 23 in a normal department connected with it, being a gain in both of 137 over 1879 and of 188 over 1871. German, music, drawing, and calisthenics were taught in all the schools under 16 special German teachers and 1 for each of the other branches. Two new buildings were to be erected and others were contemplated, to meet the rapid increase of the primary grades. There were 48 private schools, with 7,392 pupils and 211 teachers, showing a decrease of 5 schools, 7 teachers, and 239 pupils, and, as compared with 1876, of 4 schools, 23 teachers, and 2,046 pupils.—(State and city reports.)

*Oshkosh*, with an increase of 178 in school population, had 10 public school-houses (adding 1 during the year), containing 59 rooms, mostly in good condition and suitably furnished, affording sittings for 3,500, and valued, with their appurtenances, at $128,000. There was an increase of 38 in enrolment, a falling off of 1 per cent. in average daily attendance, and an increase of 3 teachers. The schools are classed as primary, intermediate, grammar, and high; the whole course covers 12 years, giving to the primary and intermediate 6, to the grammar 2, and to the high 4. The private and parochial schools enrolled 1,000.—(State report and return.)

*Racine* had 8 public school buildings for its school population of 5,858, all but one in good condition, with 46 rooms for study, fully supplied with blackboards, and affording sittings for 2,500, while its school property was valued at $80,000. The enrolment and attendance were slightly less than during the previous year. Of the 46 teachers employed, 40 were females. The schools are classed as primary, grammar, and high, the latter having 114 enrolled, with 5 teachers. There were 9 buildings occupied by private and parochial schools, with an estimated enrolment of 1,034, taught by 35 teachers.—(State report and return.)

*Watertown* had 15 rooms for its primary department, 4 for its grammar, and 2 for its high school, all well supplied with suitable furniture and apparatus, in 5 substantial and commodious houses, properly ventilated, with separate outhouses in good condition; number of sittings, 1,200; valuation of school property, $37,500. In youth of school age there was a loss of 79, in enrolment of 172, while the expenditure increased $411. The free text book system received especial attention in the hands of an able committee, and after an experience of three years it was shown to be not only simple in its working but economical, the cost of the investment for the three years being less than $1.50 for each pupil and the loss of books only 2 cents a pupil. Private and parochial schools had an estimated enrolment of 770.—(State and city report and return.)

## TRAINING OF TEACHERS.

### STATE NORMAL SCHOOLS.

The report of the regents of the 4 State normal schools shows that a growing demand for professionally trained teachers has led to enlarged accommodations for the increasing number of students; that the professional element in the training of these students is assuming greater prominence; that the academical has also found a place in which it can aid the professional; and that each year a perceptible advance is made in the amount of time given to methods of teaching and to the philosophy of education. The pupil teachers practised in the training schools connected with these institutions are said to be widely called for and highly prized as teachers in the public schools. The board commends this important feature of a normal education, hopes that it may be fully perfected, and expresses the belief that, when it is, "to present a candidate for graduation will be to vouch for his professional skill."

The reports from the 4 schools show 958 normal students and 992 others, the latter number including 126 preparatory students at the Oshkosh and River Falls schools and 25 pupils in a Kindergarten connected with the practice department of the Oshkosh school. The remainder of the 992 were in the primary, intermediate, and grammar grades of the practice schools at all the 4 institutions. Of the 958 normal students—219 at Platteville, 279 at Whitewater, 332 at Oshkosh, and 128 at River Falls—65 completed the elementary course and received certificates; 13, the advanced course and were graduated. The whole number of pupils of all grades was 177 greater than in the preceding year; the number that received certificates or diplomas, 26 less.—(Report of regents in State report.)

### OTHER NORMAL TRAINING.

The Milwaukee City Normal School, organized in 1872, had 23 pupils in 1880 and an average daily attendance of 22. The full course occupies a year. The National German-American Teachers' Seminary, Milwaukee, organized in 1878, reported 29 normal students in 1880; the Catholic Normal School of the Holy Family, St. Francis, 35. At Galesville and Northwestern Universities and at Milton College there were normal departments or teachers' courses.—(City report, returns, and catalogues.)

### TEACHERS' INSTITUTES.

During 1880 the 62 institutes held were in session 104 weeks—that is, 1 for four weeks, 39 for two weeks, and 22 for one week. The attendance was 4,965 (men 1,335, women 3,630). A very large percentage of the teachers of the State avail themselves of the privileges afforded by this branch of normal instruction, and the institute work is steadily growing in favor. Its effect on the common schools was quite apparent in 1880. A general programme of instruction for the next three years was adopted, the session of 1879 having completed the 3 years' course formerly selected, and the work for the year was confined largely to primary teaching in the public schools.—(State report.)

### EDUCATIONAL JOURNAL.

The Wisconsin Journal of Education, published monthly at Madison under the editorship of the State superintendent and his assistant, continued to give valuable information on educational subjects throughout 1880, as for 9 preceding years.

## SECONDARY INSTRUCTION.

### PUBLIC HIGH SCHOOLS.

According to a law of 1875, as modified in 1879, any town, incorporated village, city, or school district that has within it an incorporated village, or that has a graded school of not less than two departments with at least 25 pupils prepared to begin a high school course, may establish and maintain one or two high schools, or adjoining towns may unite in establishing and maintaining such a school. High schools thus established are to be under a graduate of some university, college, or normal school, or of one that can pass an examination in the studies required to be taught; and they are to be free to all qualified pupils in their districts. Aid from the State, not to exceed $500 to any district in any year, was promised to such schools for 5 years from the establishment of each, on condition that they should be taught at least 3 months in each school year and comply with certain other requirements of the law. In 1880 there appear to have been 110 schools of this class, of which 91 reported to the State superintendent, as required, against 102 schools existing and 88 reporting in 1879, while at least 15 excellent high schools are said never to have organized under the free high school law. Of those reported, 20 had in 1880 received their full 5 years' apportionment from the State, and 3 new ones were to come in for annual aid in the school year 1880–'81. The statistics of the 91 reporting showed for 1879–'80 these figures: Whole number of pupils, 6,730; of these in common branches, 2,535; in natural sciences, 3,065; in modern languages, 1,023; in ancient languages, 1,128; in algebra or geometry, 2,449; graduates for the year, 114 males and 237 females, making a total of 1,702 graduated since the institution of this high school system. The State superintendent says that the advantages of the existing high school system are becoming more apparent as the years advance, this system of local establishment of such schools with State countenance and aid making it possible for many youth in different parts of the State to prepare themselves for college or for responsible positions in active life. He therefore urges still other villages and towns to avail themselves of the opportunity afforded them for the establishment of schools of this class, believing that, besides the direct advantages resulting to the youth instructed in them and to the State through the future influence of these youth, the schools will have a healthful stimulating influence on the lower rural schools around them.—(State report for 1879–'80.)

### OTHER SECONDARY SCHOOLS.

For information as to business colleges, private academic schools, and preparatory departments of colleges and universities, see Tables IV, VI, VII, and IX of the appendix. For summaries of their statistics, see corresponding tables in the report of the Commissioner preceding.

## SUPERIOR INSTRUCTION.

### COLLEGES FOR YOUNG MEN OR FOR BOTH SEXES.

The 8 colleges and universities in this State, 5 of them open to both sexes, reported a total attendance in 1879–'80 of 677 students in collegiate classes, of whom 130 were women. All had classical courses of 4 years, all but 1 offered scientific instruction in 4 years' courses, while 1 added agricultural and engineering branches, 3 gave normal and 3 business training, 2 instruction in music, 3 in drawing and painting, and 1 in law. All were organized previous to the present decade; all but the State University were under the influence of some religious denomination; the Presbyterians claiming 2, the Presbyterians and Congregationalists, united, 1; and the Methodists, Seventh Day Baptists, Episcopalians, and Lutherans, 1 each.

Gifts were received by 6 of these institutions during the year, aggregating $59,465.

Lawrence University, Appleton, was given $12,000 to cancel debt, half of it being part of a bequest made some time ago by Rev. Joseph Rork, of Appleton; the remaining $6,000 came in small sums. Beloit College received $13,000 from Rufus Dodge, S. C. Morgan, and others, for endowment, ministerial education, buildings, and current expenses; the University of Wisconsin, $10,000 from C. C. Washburn, Madison, for completion of the observatory; Milton College, $3,365 to pay current expenses; Ripon College, $18,000 from persons in Wisconsin, Chicago, and New England, principally for endowment; and the Northwestern University, Watertown, $3,000.

The University of Wisconsin, comprising colleges of arts, letters, and law, reports a generally satisfactory condition during 1879–'80. The college of arts offered 4 courses in science; that of letters, 2 classical courses, both requiring Latin, and the former Greek also. There were special courses and courses for graduate study; also, a course of 6 years for those who wished to take music or any similar pursuit in connection with a collegiate training. Within the year Washburn Observatory was considerably enlarged; the number of students increased; the standard of instruction raised; and preparatory work discontinued, with the exception of a class in Greek—a step in the interest of the high schools not taken without some solicitude, since these schools are not yet in a condition to do all the preparatory work required. The number attending in collegiate classes was 324, a gain of 44 per cent. in four years, made notwithstanding a considerable advance in the terms of admission. The growth for five years past is chiefly indicated by advance in scholarship and a steady increase of students in higher work. The attendance on the classical courses has gone up in that time from 65 to 149, and that in special studies from 49 to 91, owing partly to the many electives provided, while in the same time students in science have decreased from 135 to 82. The number of young women in attendance advanced somewhat, as also did that of students not residents of the State.

For statistics of colleges and universities reporting, see Table IX of the appendix, and for a summary of them, the report of the Commissioner preceding.

### INSTITUTIONS FOR THE SUPERIOR INSTRUCTION OF YOUNG WOMEN.

Besides the colleges noted above, in which both sexes are received on equal terms, facilities for the higher instruction of young women are offered by 4 or more institutions exclusively for them. Three of these send reports for 1879–'80, viz: Wisconsin Female College, Fox Lake (Congregational), Milwaukee College (non-sectarian), and St. Clara Academy, Sinsinawa Mound (Roman Catholic). Kemper Hall, Kenosha, (Protestant Episcopal), the only one organized during the decade, sends no report for 1880.

For statistics of such as report, see Table VIII of the appendix, and for a summary of this table, see the report of the Commissioner preceding.

## SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

### SCIENTIFIC.

The provision for scientific and technical instruction made in the college of arts of the University of Wisconsin embraces courses of 4 years in general science, agriculture, civil, mechanical, and mining engineering, mining, and metallurgy. Military science and tactics are prescribed by law, and all able-bodied students of the university must receive instruction in them. Students in the agricultural course are required to perform such labor on the farm as is necessary for educational purposes. Tuition is free to residents of the State.

Nearly all the other colleges in the State have 4 years' courses in general science leading to the degree of S. B. Statistics of attendance, &c., on these courses will be found in Table IX.

For statistics of scientific instruction, see Table X of the appendix, and for a summary, see the report of the Commissioner preceding.

### PROFESSIONAL.

*Theological* instruction is given in the Nashotah House, Waukesha County (Protestant Episcopal), and in the Seminary of St. Francis of Sales, Milwaukee (Roman Catholic). The former gives a 3 years' course of strictly theological study, the latter a course of 10 years, of which 5 are devoted to academic studies, 2 to philosophy, and 3 to theology. Statistics of theological schools reporting may be found in Table XI, and a summary of them in the report of the Commissioner preceding.

The one school of *law* is that of the University of Wisconsin, which had 64 students in 1880, under 8 professors. The course extends over 2 years, and graduates are entitled to practise in all courts of law in the State. Candidates for admission must be of good character and 20 years old if not college graduates. There is a preliminary examination in ordinary English branches.

No *medical* schools report from this State.

## SPECIAL INSTRUCTION.

### EDUCATION OF THE DEAF AND DUMB.

The *Wisconsin Institution for the Deaf and Dumb*, Delavan, founded in 1852, labored under great embarrassment at the commencement of 1879–'80, owing to the burning of the main building in September, 1879. Still the work of instruction was not interrupted or seriously impaired, the standard of scholarship was well sustained, and the way was prepared for a decided advance as the classes came into new school rooms. Since the foundation, 549 pupils had, in 1880, entered the institution, the average number of years spent in it being 6.42. In 1879–'80 there were 179 pupils in the primary, intermediate, and academic departments. Of these 55 were in the articulation classes. The common and some higher branches are taught. The employments include shoe and cabinet making, sewing, and the printing of an 8 page paper.—(Report and return.)

The *Wisconsin Phonological Institute*, Milwaukee, founded January 14, 1878, and under the control of a board of directors, reported 19 pupils in 1879–'80, under charge of 2 professors and instructors, who taught them the elementary branches and articulation. This school was established for the purpose of propagating the articulation method, and 25 pupils have been taught in the 3 classes since 1878. Satisfactory improvement is reported in all branches. Drawing, sewing, needlework, and light gymnastics enter into the course.—(Report and return.)

*St. John's Catholic Deaf-Mute Asylum*, St. Francis, founded in May, 1876, reports 88 pupils since that date, and 50 in 1879–'80. The average number of years spent in the institution is 3. Instruction is given in the common branches and in Christian doctrine. The articulation method is used. As employments they have knitting, hand and machine sewing, crocheting and other fancy work, housework, and agriculture.—(Return.)

### EDUCATION OF THE BLIND.

The Wisconsin Institution for the Education of the Blind, Janesville, has admitted 296 pupils since the foundation in 1850, and reports 89 in 1879–'80. In the literary department, in addition to the common branches, rhetoric, geometry, chemistry, geology, English literature and history, physical geography, and United States history were taught; in the musical department, piano, organ, and vocal classes, harmony, and orchestral playing were included; in the industrial department, one hour daily was given to some occupation, such as crocheting and other fancy work, sewing, knitting, beadwork, cane seating of chairs, and, instead of broom making, the weaving of rag carpets.—(Report and return.)

### REFORMATORY AND INDUSTRIAL TRAINING.

The *Wisconsin Industrial School for Boys*, Waukesha, was organized as a "House of Refuge" and opened in 1860. The name was afterwards changed to "State Reform School," and then to its present title. The arrangements include a main central and three family buildings, these last accommodating from 30 to 36 boys each. In October, 1879, there were 431 boys on the roll; one year later, 430; total since organization, 1,801. The boys attend school 4 hours each day; the classes in it are primary, intermediate, and senior, and there are promotions every 6 months on passing a written examination. Factories for making boots and shoes, socks and mittens, employ many of the boys; the tailor shop and mending room (this last a new feature), the bakery, laundry, and farm employ others. There is also a band composed of some 20 boys, membership in which is considered a special privilege.—(Report.)

The *Wisconsin Industrial School for Girls*, Milwaukee, established April, 1875, is under private control, and, although it is nominally a school for girls, boys under 10 years of age are admitted, as the State institution will not receive them. Since the opening 241 persons have been committed, and 109 remained on November 1, 1880. Since the completion of the new building (in 1879, apparently) the school sessions have been held in large, airy rooms; the discipline of the school is reported as improved, and the general progress is steady and satisfactory. The common branches, drawing, and composition are taught, also housework, laundry work, machine and hand sewing, knitting, crocheting, embroidery, gardening, milking, &c.—(Fourth annual report and return.)

Four homes and asylums for orphan or dependent children report instruction given in domestic duties, common needlework, &c., as well as in the common branches. These are the Cadle Home and Hospital, Green Bay, incorporated in 1872, whose inmates numbered 4 in 1879–'80; the Milwaukee Orphan Asylum (1852), inmates 80; St. Rose's Female Orphan Asylum, Milwaukee (1848), inmates 80; Taylor Orphan Asylum, Racine (1872), inmates 33. The Fond du Lac Relief Society also aids this class of children.—(Returns.)

## EDUCATIONAL CONVENTIONS.

### WISCONSIN STATE TEACHERS' ASSOCIATION.

The twenty-eighth annual session of the association took place July 6–8, 1880, at Madison. After the usual preliminaries, a lecture on "Some national experiments in education" was delivered by Prof. Joseph Emerson, of Beloit College. On the following morning Superintendent Viebahn read a paper on "The developing method," and President Stearns one on "Some incalculable elements of school work." A class from the Platteville Normal School presented an illustrative exercise in primary object teaching, and after some discussion of the subject the session closed. In the evening, Rev. Mr. Rose, of Milwaukee, delivered an address on the "Inabilities and disabilities of the teacher's profession." On the last day of the session, President G. S. Albee read a paper on "The province and function of a normal school." A discussion on the "Kindergarten" was opened by an essay from Rev. J. B. Pradt, and most of the speakers favored the introduction of Kindergarten methods into the school system. Several committees asked leave to report at the winter session. Prof. Samuel Colvin read a paper on "Natural science in our schools," and various business arrangements were concluded prior to adjournment.—(State report.)

### CONVENTION OF SUPERINTENDENTS.

In connection with the meetings of the State association the superintendents hold semiannual and annual meetings. They came together at Madison July 7 and December 29, 1880, the latter occasion being the regular annual session. The duties and qualifications of county superintendents, proper tests in teachers' examinations and how exercised, teachers' libraries, and superintendents' duty and action toward the course of study for ungraded schools were the subjects introduced at the first mentioned meeting. At the last, an address by State Superintendent W. C. Whitford, the relation of superintendent to the compulsory law, superintendents as institute and association workers, and aims and process of school visiting filled the programme.—(State report, Wisconsin Journal of Education.)

### PRINCIPALS' ASSOCIATION.

The fourth annual meeting of this body took place at Madison, December 27–28, 1880. The list of subjects included social science in graded and high schools, general history, language, English literature, what subjects in natural science should graded and high schools teach and what should be the general method of teaching? the model principal, and a general discussion on the function of the Wisconsin Principals' Association.—(Wisconsin Journal of Education.)

### MEETING OF INSTITUTE CONDUCTORS.

State Superintendent Whitford presided at the annual gathering at Madison July 5–6, 1880. The subjects of the first morning's exercises included teaching the first reader, primary arithmetic, and penmanship as taught to primary pupils. In the afternoon, United States history and government, primary geography, and spelling as taught to primary classes. In the evening, papers were presented on the introduction of the system of grading country schools and on the programme and records for grading country schools. These two papers drew forth complaints as to indefiniteness in the system and inadequacy of the records. Superintendent Whitford expressed an intention to prepare a circular on the subject and Superintendent Lunn gave a specimen page of a register which he had devised. On the following day the discussion was on teaching numbers and language to primary pupils and on drawing. A paper on school organization indicated that the basis of classification should not be size or age, but ability and attainments. A general exercise in teaching history to primary classes was presented by Professor Salisbury, who considered pictures of great value as a means of stimulating the imagination.—(State report.)

## OBITUARY RECORD.

### PROF. JAMES CRAIG WATSON, LL. D.

For an obituary notice of this eminent astronomer, see page 168, his observatory work having been done mainly in Michigan.

## CHIEF STATE SCHOOL OFFICER.

Hon. WM. C. WHITFORD, *State superintendent of public instruction, Madison.*

[Second term, 1880–1882.]

Other superintendents in the decade were Rev. Samuel Fallows, who, at the death of Hon. A. J. Craig, July 3, 1870, served out his unexpired term, and until January, 1874. He was followed by Prof. Edward Searing, who served for successive terms until the election of Mr. Whitford in 1878.

The assistant superintendent throughout the decade, as for 2 years previously, was Rev. J. B. Pradt.

## ALASKA.

### EDUCATIONAL CONDITION AND PROSPECTS.

Alaska was purchased from Russia for $7,200,000 on March 30, 1867; the purchase was ratified by the United States Senate May 28, and on October 18, 1867, the country became a part of the United States. With an area of 580,107 square miles—equal in extent to the territory north of Alabama, Georgia, and North Carolina and east of the Mississippi—the country may be divided into three sections, the Sitkan, beginning at the northern boundary of British Columbia, Dixon's Inlet, 54° 40′, and including southeastern Alaska; the Yukon, extending from the Alaskan range of mountains to the Arctic Ocean; and the Aleutian, embracing the Aliaskan Peninsula and islands west of the 155th degree of longitude. No census was ever undertaken before 1880, and estimates of population vary widely. At the time of the transfer the Russian officials reported the population as 66,000; a report made by Major-General Halleck in 1869 put down the Indian population at about 60,000; and Mr. W. H. Dall for 1867 gives 29,097, about 2,000 of them whites and half breeds. During the Russian rule this territory had a government and schools and was under the Greek religion, but, upon entering into the possession of the United States, the rulers, priests, and teachers were withdrawn, and the United States authorities sent no others in their place. In 1875 the condition of the inhabitants was said to be less favorable than under the Russian régime. During the decade under consideration various endeavors have been made to establish schools in the territory, but the chief hindrance to progress has been the absence of law and of recognized forms of government. According to a contract with the Alaska Commercial Company, an eight months' school was to be taught each year on the islands of St. Paul and St. George, and on the first mentioned a school was begun October 2, 1873, which reported an attendance of 7 pupils, who made commendable progress during the eight months. Three other classes were taught by natives, 2 in Russian, 1 in Aleutian; in all, 17 persons attended school. Dressmaking and sewing entered into the course. In 1877 the reports indicated that the schools at both St. George and St. Paul (on the Fur Seal Islands, over 1,000 miles from Kodiak) had an average attendance of 18 and 20 pupils, respectively. During the same year the Presbyterian Board of Home Missions placed Mrs. A. R. McFarland in charge of a school at Fort Wrangell, which had been commenced by the natives, and which, in December, 1877, was reported as very successful. In the spring of 1878 a school was opened at Sitka with 80 pupils, and in October measures were taken to establish at Fort Wrangell a home to preserve girls whose mothers desired to sell them for base purposes. In 1879 this school, the "Girls' Home and Industrial School," reported 13 pupils; a day school, 100 native pupils; a primary department, between 30 and 40; a day school at Sitka, 60 pupils; and the Aleutian population (on the islands) had schools and churches of their own. Such advancement was made as to prove that the people have good minds and are susceptible of a high state of culture, and they are said to be eager to learn. Rev. Sheldon Jackson, D. D., superintendent of Presbyterian missions, reported for 1880 as follows:

The schools have made encouraging progress. The day and boarding school at Fort Wrangell averaged 100 day and 22 boarding pupils. A new school building has been finished, and the pupils are already established therein. At Sitka the attendance averaged about 200 Indian children. Attendance at school was made compulsory by an order from Commander Glass, of the United States Ship Jamestown, punishing the parents for non-attendance of children. A school was opened at the head of Lynn Channel for the Chilcut tribe. As no white teacher could be found, an Indian woman took charge and had 80 in attendance. Preparations have been made to erect a school building on Prince of Wales Island and to send teachers to the Hydahs.

In a preliminary report of the special agent of the census, Ivan Petroff, it is stated that at least 20,000 natives are entirely without the remotest influence of church or school, and he urges the United States Government to provide the youth of Alaska with simple elementary education, and thus promote the progress of the people. He says that the natives are quickened into the appreciation of the benefits of an education as they observe the advantages which the scholars among them have over the others in matters of trade, keeping accounts, &c. He finds among the Innuits quickness of apprehension and a spirit of inquiry—they are brighter and more desirous of learning than the Aleutians themselves—and they would be much benefited by an intelligent system of educational labor. He speaks of the average attendance at two schools, at Oonalaska and Belkovsky, as less than 10 of both sexes, while among the 7,000 or 8,000 members of the Russian Church less than 400 are able to write in either the

Russian, the Aleutian, or Kodiak Innuit vernacular. Not one of the three missions of the Yukon, Nushegak, and Kenia possesses a school. The present bishop of the Russian Church has planned the establishment of a training school for native boys from all parts of the Territory at Oonalaska, but the English language will be ignored. Mr. Petroff suggests the training of some 15 or 20 youth at some of our Indian schools, and, if they show capacity, at some normal school, then sending them back to help to educate the masses in Alaska. His plan has since been adopted.

## SUMMARY OF EDUCATIONAL STATIS

## TERRITORIAL SCHOOL SYSTEM.

### OFFICERS.

The chief school officer is a superintendent of public instruction, who was formerly the governor, but since 1879 has been appointed by him. With him has been associated from the first a board of education, including, besides the superintendent, the territorial secretary and treasurer till 1879; since then, the governor and treasurer. The probate judge of each county is ex officio county superintendent of public schools. To aid him in examining teachers for these schools the territorial superintendent appoints 3 persons to be associated with him as a board of examiners. For each school district there is a board of 3 trustees elected by the people, or, in case of their failure to elect, appointed by the county superintendent, subject to approval of the territorial superintendent.—(Laws of 1871, 1875, and 1879.)

### OTHER FEATURES OF THE SYSTEM.

Public school funds are derived from a territorial tax of 15 cents on the $100, a county tax of 50 to 80 cents, and a special district tax voted by residents of districts in case the other funds are not sufficient to keep the schools open 3 months, the apportionment of county funds being in proportion to the number of pupils attending school in each for 3 months. Districts, before receiving public money, must report according to law; and no school in which sectarian doctrines are taught or sectarian books used can receive any of the public school funds. It is the duty of the territorial board to provide a uniform series of text books for the schools. This board issues, on examination, life certificates to accomplished professional teachers of experience and ability. County boards of examiners grant teachers' certificates good for 2 years, their examinations being governed by rules prescribed by the territorial board.

### CHANGES IN THE SCHOOL LAW DURING THE DECADE.

The principal change was the provision made in 1879 for the appointment of a territorial superintendent of public instruction, the governor having previously been ex officio superintendent. The State tax of 10 cents on each $100 of taxable property, adopted in 1871, was in 1875 increased to 15 cents; the county tax of 1871, which then could not exceed 50 cents on $100, was decreased in 1875 to 35 cents, but in 1879 it was increased not to exceed 80 cents nor to be less than 50. The compensation of county superintendents was raised in 1879 from $100 a year to $250. In 1877 a compulsory school law was passed, embracing all children from 8 to 14 years of age, but it has been inoperative, owing to the lack of school accommodations.

### GENERAL CONDITION.

There was a decided increase during 1879–'80 in the number of youth of school age, the number enrolled in public schools and the average attendance thereon, in the number of school rooms used, the value of school property, the number of teachers employed, and in receipts and expenditures for public schools. The only important item of decrease is that of average length of school term. This average is kept low by the short sessions in all the rural districts. City and village schools were taught from 150 to 200 days, while the terms of country schools seldom exceeded 100 days and were sometimes as low as 40. There were some districts in which no school was opened. Notwithstanding the increase in number of pupils enrolled, the per cent. of enrolment on youth of school age remains about the same; large numbers never attend school; and yet the number seeking to attend is in excess of the accommodations afforded, the compulsory school law being, consequently, inoperative.

### RÉSUMÉ FOR TEN YEARS.

The first two years of the decade were mainly occupied in the laying of foundations. The progress in school affairs since then has been decided, notwithstanding the discouragements incident to the organization of a school system in a new community without aid from school funds other than those raised by taxation. The number of youth of school age was in 1879–'80 more than four times as great as in 1872–'73, the number enrolled more than twelve times as great, and the value of school property more than sixteen times as great, while public school income and expenditure increased in fair proportion to enrolment and attendance in the schools. The number of rooms for study increased during the last seven years from 11 to 101, and the number of teachers from 14 to 101; while, probably from a greater supply, the average monthly pay of teachers decreased from $100 for both sexes to $83 for men and $70 for women. Among obstacles to the usefulness of the schools mentioned by the superintendent are a lack of school funds and the frequent changes in teachers and county superintendents. Superintendent Sherman has endeavored, by correspondence with others interested in the subject, to arrange some plan by which the attention of Congress

might be brought to the necessity existing in the Territories for present aid from their public land funds; but his efforts have not met with success.

## SECONDARY INSTRUCTION.

### PUBLIC HIGH SCHOOLS.

There is no information for 1879–'80 respecting the public high schools of Arizona, though at least one is believed to have existed then.

## SUPERIOR INSTRUCTION.

### TERRITORIAL UNIVERSITY.

The school law provides for the establishment of a territorial university, to be sustained by the proceeds of congressional grants, territorial appropriations, and individual gifts, but it does not appear that definite steps have yet been taken for its organization.

## CHIEF TERRITORIAL SCHOOL OFFICER.

Hon. MOSES H. SHERMAN, *territorial superintendent of public instruction, Prescott.*

[Term, February, 1879, to January 11, 1881.]

Hon. A. P. K. Safford was governor and ex officio superintendent from 1869 to 1878, when he was succeeded by Hon. J. C. Frémont, and afterwards by Hon. John P. Hoyt.

b The statistics for 1879–'80 are very imperfect, some of the largest counties having failed to report and several others reporting only partially. The superintendent thinks the figures for each of the items given to be too small.

## TERRITORIAL SCHOOL SYSTEM.

### OFFICERS.

A territorial superintendent of public instruction has throughout the 10 years been appointed by the governor for terms of 2 years, subject to the approval of the legislature. From 1871 to 1877 he was allowed a deputy for the northern part of the Territory. There have been throughout county superintendents, elected by the people for 2 years, and district boards (comprising a director, clerk, and treasurer), elected for 3 years, 1 being changed each year.

### OTHER FEATURES OF THE SYSTEM.

The school funds are derived from a poll tax of $1 on each elector, a general school tax of 2 mills on the dollar (to be apportioned in proportion to the number of children over 5 and under 21), the proceeds from fines, forfeitures, &c., and special district taxes voted by the people. The last must not exceed 1 per cent. for school-houses and sites, 1½ per cent. for teachers' pay, fuel, and incidentals, ½ of 1 per cent. for apparatus and debts lawfully incurred, and $25 a year in each district for a library. Orthography, reading, writing, geography, arithmetic, and grammar are the branches taught. Teachers' certificates are given on examination by county superintendents, and remain in force not less than 3 months nor more than 1 year. Teachers must keep a register of school attendance, &c., or forfeit their pay. District boards furnish school books to children unable to pay for them. The law does not consider the Bible a sectarian book, and it must not be excluded from the schools. County teachers' institutes must be held by the territorial superintendent on the written request of one or more county superintendents; and if such request be not made he must hold annually 2 institutes in the third judicial district, 2 in the second, and 1 in the first.

### CHANGES DURING THE DECADE.

The principal changes in the school laws since 1870–'71 were made in 1879. The general school tax was then reduced from 3 to 2 mills on the dollar; district boards in connection with county superintendents were given power to decide what text books shall be used; teachers' institutes were provided for in the first, second, and third judicial districts in case county institutes were not held; and the qualifications of voters in district meetings were defined anew, taking in all residents of the district over 21 who are citizens of the United States or have declared their intention to become such. The pay of the territorial superintendent, changed several times during the decade, was in 1879 restored to $600 a year, the sum allowed in 1873. In 1875 it was made the duty of the territorial superintendent to hold a territorial teachers' institute annually, but as the law of 1879 is silent on this point the provision appears to be repealed.—(School laws, 1873, 1875, 1879.)

### GENERAL CONDITION.

The statistics show a decrease for the year 1879–'80 in all except financial items, but no fair comparison can be made between the two years, from the fact that the statistics of 1878–'79 are not entirely trustworthy. Seven large counties in that year made no report, and on some items 17 counties failed to send statistics. It may therefore be supposed that full reports would have shown increase instead of loss.

## CITY SCHOOL SYSTEM.

### YANKTON.

*Officers.*—Yankton has a board of education of 8 members, elected for 4 years, 2 going out each year, the secretary of the board being ex officio superintendent.

*Additional particulars.*— As the chief city of the Territory in 1880, Yankton seems entitled to notice, although its population (3,437 in that year against 737 in 1870) left it still below the limit to which such notice is usually restricted. Its school population (youth 5–21) in 1880 was 1,142, an increase for the year of 77. There were 789 pupils enrolled and 504 in average daily attendance in 10 school buildings, affording 545 sittings for study. Of the 10 schools (taught by 12 teachers) 1 was a high school, 3 were grammar, and 6 primary. The schools in 1880 completed the fifth year of their history. Beginning in April, 1875, they had during the year 1875–'76 an enrolment of 626 out of a school population of 867, an average attendance of 319, 9 teachers, and 8 schools, affording 442 sittings. The plan adopted by the board of education in 1877 of furnishing text books to pupils at cost or else renting them at an advance for each term of about one-fifth of their value, has resulted in a saving of more than 25 per cent. on the cost of material and has proved very satisfactory in all respects.— (City report.)

## TRAINING OF TEACHERS.

### TEACHERS' INSTITUTES.

The only provision in this Territory for the training of teachers is that afforded by teachers' institutes. As already mentioned, the law makes it the duty of the superintendent to hold county institutes if requested to do so by 1 or more county superintendents. If not so requested he must annually hold institutes in the three judicial districts of the Territory, 2 in the third, 2 in the second, and 1 in the first, the sessions to be not less than 6 days each. At least 11 were held in 1879–'80. For some years a territorial institute was also required.—(School laws, 1879

## SECONDARY INSTRUCTION.

### PUBLIC HIGH SCHOOLS.

No information has come in respect to any high schools except that at Yankton. This had 46 sittings, 49 pupils enrolled, and 41 in average attendance, under 3 teachers. The course of study extends over 4 years, and, besides the higher English branches, includes Latin. The fourth graduating class of the school, numbering 11, received diplomas in June, 1880.—(City report, 1879–'80.)

### OTHER SECONDARY SCHOOLS.

For information as to any private academies or other schools of like grade that may report, see Table VI of the appendix.

## SUPERIOR INSTRUCTION.

### COLLEGES AND PROFESSIONAL SCHOOLS.

No steps appear to have been yet taken towards the establishment of colleges, universities, or professional schools in this Territory.

## SPECIAL INSTRUCTION.

### EDUCATION OF DEAF-MUTES, BLIND, AND DEPENDENT YOUTH.

As far as can be learned, no provision for special instruction in the Territory had been made up to the close of 1880.

## CHIEF TERRITORIAL SCHOOL OFFICER.

Hon. WILLIAM H. H. BEADLE, *territorial superintendent of public instruction, Yankton.*

[Term, January 1, 1879, to January 1, 1881.]

Preceding superintendents within the decade have been Hon. James S. Foster, 1867–1871; Hon. J. M. Turner, 1871–1873; Hon. E. W. Miller, 1873–1875; Hon. J. J. McIntire, 1875–1877; Hon. W. E. Caton, 1877–1879.

## DISTRICT SCHOOL SYSTEM.

### OFFICERS.

From 1804 to 1874 the public schools of this District were under the charge of different school boards, which, in the order of their existence, were (1804) for the schools for whites in Washington, (1842) for like schools in Georgetown, (1864) for the schools for both races in the rural districts outside of both cities, (1873)[1] for the schools for colored youth in both cities. In 1874 these several boards were consolidated into one, at first meant to be composed of 15 members, but soon made 19 in number, with sub-boards corresponding to the former boards, the different parts of the District and the colored population having each a fair representation in the board. The members, formerly appointed by the mayor, then by the governor from 1871 to 1874, have been appointed by the District Commissioners since the spring of that year, provision being made for partial change of them annually.

The chief executive officer since 1869 has been a superintendent of public schools for whites in Washington and Georgetown and those for both races in the rural districts, his appointment coming first from the mayor till 1871, then depending on the governor till 1874, thenceforward on the District Commissioners. From 1873 there has been also a superintendent of public schools for colored children in the two cities, appointed at first by the governor of the District, and since 1874 dependent for reappointment on the Commissioners. The terms of both are without limit of time, and are substantially during good behavior and the pleasure of the ruling powers.

A board of examiners for teachers is annually formed of the 2 superintendents and others from the corps of supervising principals and principals chosen by the committee on teachers, to afford the trustees the means of determining who shall be employed or promoted.

Supervising principals, appointed annually by the school board, act under the superintendent as local supervisors in their respective divisions of the District.

### OTHER FEATURES OF THE SYSTEM.

The public schools are not only free to all resident children 6 to 17 years of age, but, by a law of 1864, those 8 to 14 are required to attend at least 12 weeks annually, unless taught elsewhere or excused because of bodily or mental infirmity. Want of sufficient school accommodation has made the law practically inoperative, but it has not been repealed. The schools for white and colored children are separate, but with like advantages, those for whites being taught by white teachers only and most of those for colored children by instructors of their own race.[2] There are normal schools to prepare both races for their work. The city schools are of 8 grades, with high school classes gradually rising beyond these, the studies of each grade covering a year. Vocal music and industrial drawing are among these studies. The rural districts have schools graded or ungraded, according to the degree of density in population in the different parts. The determination of text books for the schools belongs to the school board, which also appoints the teachers, determining the grade of these partly from the annual reports of the examining board, partly from the measure of their proved efficiency. Vaccination, or other protection against small-pox, is required in the case of both teachers and pupils. Teachers must attend all meetings to which they are called and all special classes organized for their improvement; and in order to receive their pay must make daily records and present such reports as are required.

### GENERAL CONDITION.

With a school population increased by about 2,300 in 1879–'80 from 1878–'79, the enrolment in the District schools was enlarged by 1,309, the increase of average daily attendance rising to almost the same number. To provide for this increase there were 23 more rooms for study, 1,100 more seats, and 31 more teachers, which gave nearly 1 additional seat for each pupil ordinarily present, and an additional teacher for each new group of 37 pupils. The school term was lengthened by 4 days, the valuation of school property increased by improvements $21,641, and, with $96,957 fuller income, it became practicable to raise the average pay of male teachers 69 cents a month, that of female teachers being also somewhat increased. Two new school buildings, with

[1] Before 1873 there was a board for the care of colored schools not connected with the District system, but appointed by the Interior Department from 1864.

[2] The funds for school purposes, derived from a tax of not more than 50 cents on each $100 of taxable property, go to white and colored schools in proportion to the number of youth of school age of each race.— (Revised Statutes, section 306.)

12 rooms each, came into use in Washington, with 2 other small ones in the county, and 2 additional for the city were begun. In the "advanced grammar" classes, commonly termed high schools, the standard is said to have been raised, additional assistants of high order were engaged, the foundations for a broader culture in English literature were laid, and in industrial drawing commendable progress was shown at the exhibitions of this work for the year. The normal schools and lower schools did well in the same direction.

### RÉSUMÉ FOR TEN YEARS.

The general excellence of the teaching in the District public schools and of the supervision they have had throughout the decade is shown by the fact that the increase of school population within that time has been almost wholly absorbed by these schools, and that nearly the whole number thus annually brought into school has been retained in average daily attendance. The increased enrolment came only 605 short of the whole 11,887 additional of school age, and the increased average attendance only 906 short of the 11,282 additional pupils enrolled, a difference fairly attributable to sickness and other good grounds of absence in both cases. One reason for this fine record may be found in an increase of 145 new school rooms, with accommodations for 8,526 new pupils, and a corresponding increase of 202 teachers for the instruction and care of these. Another reason has been that since 1873 the incoming teachers have had the benefit of normal training to fit them for their work in schools for whites and to some extent in those for colored youth; while from the same year the children and teachers in these latter have been stimulated by the presence and active supervision of a superintendent of their own race. The same stimulation for a longer time and to a greater extent has been felt in the schools for whites from the skilled supervision of an active superintendent and several able supervising principals throughout the decade. In the later years of it the Georgetown schools have had the advantage of an excellent library of useful and well chosen books, formed and sustained from the proceeds of a fund given by Mr. George Peabody in 1867; while youth of the same place unable to attend school during the day have had opportunities for good instruction in the evening at the Linthicum Institute of the same place, established from a fund left for that purpose by Mr. Edward Magruder Linthicum in 1869. The library and institute, both opened in 1875, are in the Curtis school building in Georgetown.

### KINDERGÄRTEN.

Kindergärten first appeared in Washington in 1872, when 2 were established, one by Mrs. Emma Marwedel, said to have been a pupil of Fröbel, the other by Miss Fannie Perley. In 1874 another was opened by Mrs. Louise Pollock, who still continues it, and a fourth in connection with the Washington Female Seminary. In 1876 there were 2 more; in 1880 the number was 8 in Washington and 2 in Georgetown. For information respecting them, see Table V of the appendix.

## TRAINING OF TEACHERS.

### NORMAL SCHOOLS.

Normal instruction is given in the Washington Normal School, organized in 1873; in the Miner Normal School (for colored pupils), in 1877; in the normal departments of Howard University and Wayland Seminary; and in the Kindergarten Normal Institute of Mrs. Louise Pollock, organized in 1875.

The *Washington Normal School*, with a course limited to one year, is organized on the theory that no candidate shall be eligible to membership who has not the scholastic qualifications requisite for a teacher. The year is to be devoted to professional work and the theory and practice of teaching; graduates who have taught in the city schools not less than one year, and have given satisfactory evidence of their ability to govern and instruct a school, are entitled to diplomas, which are equivalent to third class certificates. Since the establishment of this school 161 pupils have entered and 119 are now teaching; undergraduates in 1880, 20; average percentage attained at examination for admission, 67.3.—(Report of principal.)

The *Miner Normal School* is an outgrowth of an agreement made in 1877–'78 between the Commissioners of the District of Columbia and the trustees of the institution for the education of colored youth, by which this school might furnish yearly trained teachers for the public colored schools. Female graduates of the public high school for colored children, when duly recommended, are entitled to admission to the Miner Normal; on the successful completion of the usual 1 year course and the passing of a required examination, they are given preference over other candidates for the position of teachers in the primary grades. At the commencement of 1879–'80 certain articles of agree-

ment were drawn up which give the Miner School the same relation to the schools for colored children of the District as the Washington Normal bears to the schools for whites. The one year's course was undertaken by 19 pupils in 1879–'80. Special attention was paid to object lessons, phonetics, and elementary drawing, to music, and in the latter part of the year to elocution. In the practice school, practical illustrations of the theory of teaching were given.—(Report of principal.)

The *normal departments* of Howard University and Wayland Seminary have 3 years' courses and report 95 and 90 students, respectively.—(Return and report.)

The *Kindergarten Normal Institute* reports a course consisting of five lectures and lessons a week throughout 8 months, which is reckoned a year's course. The Kindergarten method and system of education are taught in the normal class, and by means of two model Kindergärten the advantages of daily observation and practice are given. The necessary requisites for entering the normal class are a good education in the English branches and a natural love of children. Statistics for 1879–'80: resident instructors, 2; normal students, 9; graduates, 9, of whom 8 have engaged in teaching.—(Circular and return.)

### TEACHERS' INSTITUTES.

A law defining the work of the superintendent of public schools and of the trustees makes it the duty of the latter, in conjunction with the superintendent, to establish a teachers' institute to meet semiannually, under such rules as they may deem best adapted to increase the efficiency of the public schools. More frequent meetings (not, however, called institutes) are held in substantial accordance with the law.

## SECONDARY INSTRUCTION.

### PUBLIC HIGH SCHOOLS.

The schools for whites are so graded that the high school part of the course commences with the ninth year and extends through two years. The high school for colored children, with a three years' course, was established some years ago, but it was first at the close of the year 1878–'79 that the school board substituted the name high school for advanced grammar school among the white population. The studies of this grade for whites are book-keeping, botany, English literature, general history, geometry, physical geography, rhetoric, trigonometry, and surveying. The high school for boys and that for girls (white) reported as follows for the year 1879–'80: 172 sittings for study, 4 teachers, 179 pupils enrolled, and 150 in average daily attendance. The school for colored of this grade reported 120 sittings, 94 pupils enrolled, and 80 in average daily attendance, under charge of 3 teachers. In this school only 19 males were enrolled, and it was possible to dispense with one of the teachers. The average per cent. of scholarship in the three classes was, first year, 59.4; second, 78.6; third, 70.5. The average per cent. for the entire school in 1878–'79 was 58.5; in 1879–'80, 67, or 8.5 per cent. greater. The graduates in June, 1880, were 16 in number from this school.—(Reports of superintendents.)

### OTHER SECONDARY SCHOOLS.

For information respecting business colleges, private academic schools, preparatory schools, or preparatory departments of colleges, see Tables IV, VI, VII, and IX of the appendix. For summaries of their statistics, see corresponding tables in the report of the Commissioner preceding.

## SUPERIOR INSTRUCTION.

### COLLEGES FOR YOUNG MEN OR FOR BOTH SEXES.

*Georgetown College* was founded as a college in 1789, chartered as a university by act of March 1, 1815, and empowered by the Holy See to grant degrees in philosophy and theology on March 30, 1833. A medical department was established in May, 1851, and the law department in October, 1870. The entire course of studies, including preparatory classes, is completed in 7 years. The regular course leads to B. A., and a graduate course of ethics and natural philosophy to M. A. A 3 years' scientific course following such elementary studies as geography, history, grammar, and composition entitles to B. S. The students in 1870–'71 numbered 322; in 1880 there were 152.—(Catalogues and returns.)

*Gonzaga College* (formerly Washington Seminary) was reopened October 2, 1848, and raised to the rank of a university and incorporated May 1, 1858. Although it aims

to have a college course proper (including the Greek and Latin classics) and a non-classical course (embracing English language and literature, mathematics, and natural sciences), the studies pursued in 1880 indicate that it had not then advanced beyond a preparatory school.—(Catalogue.)

*Columbian University*, chartered and organized in 1821, reports 7 schools in 1880. These are schools of English, Greek, Latin, and mathematics, of 4 years each; schools of French and German, 3 years each; a school of natural science, 3 years; and one of philosophy, 2 years. Anglo-Saxon is reported among the elective studies, and a preparatory course of 4 years leads to these schools. The degrees of B. A., M. A., and B. S. are accorded after completion of the requisite courses. Since 1822 a medical school and since 1864 a law school[1] have formed part of the university. A theological department was reported for more than 20 years, but this seems to have been done away with at the commencement of the decade under consideration. There were 376 students in 1870–'71 to 312 in 1879–'80.—(Catalogues.)

*Howard University*, organized in 1868, reported in 1870, as in 1880, preparatory, normal, and classical courses, theological, legal, and medical departments. There were 566 students in 1870–'71 and 251 in 1879–'80. In addition to the 3 years' normal and the 4 years' classical course, a literary course of 5 years (including 2 preparatory and 3 collegiate years) is reported.—(Catalogues.)

The *National Deaf-Mute College* dates its collegiate department from April, 1864. The courses are preparatory, 2 years; collegiate, 4. Degrees of B. A., M. A., B. S., B. L., and PH. B. are given on completion of the required studies. About 200 youths have been connected with the college as students, and 32 of them have become teachers; students, 58 in 1879–'80.—(Catalogue.)

### INSTITUTIONS FOR SUPERIOR INSTRUCTION OF YOUNG WOMEN.

There are no public institutions of collegiate rank for women in the District, but Howard University gives equal privileges to this sex.

## SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

### SCIENTIFIC.

Scientific courses were reported in Georgetown College, Columbian University, and the National Deaf-Mute College. In connection with the National University there is to be a polytechnic department, which offers a 3 years' course embodying mathematics, surveying, civil engineering, geology, mineralogy, and mining. Special classes in chemistry, natural philosophy, botany, natural history, and mechanical drawing are also spoken of. According to the latest reports for 1880 this polytechnic department was not then fully organized.—(Catalogues, circular, return.)

### PROFESSIONAL.

The *theological* department of Howard University, organized in 1867, reported 50 undergraduate students, 5 of them having received a degree, 10 graduates in 1880, and a scholastic year of 35 weeks. Wayland Seminary, organized in 1864 and under Baptist influences, reports 36 students and 4 resident and 3 non-resident instructors. The scholastic year is 36 weeks. Both schools require an examination for admission and both have 3 years' courses.—(Returns.)

*Legal* instruction is given in the law departments of Columbian University, Georgetown University, Howard University, and the National University. All have regular courses of 2 years, covering 34 to 37 weeks each year, and all, to meet existing requirements in the courts of the District of Columbia, offer also a year of graduate instruction to those who are graduates of some known law school or who can produce a certificate of having studied law for 2 years under a competent instructor. Howard requires an examination for admission, and the National University law school a partial examination.—(Returns, college catalogues, and announcements.)

*Medical* instruction is given in the medical department of the University of Georgetown, of Columbian University, and of Howard University. All these have 3 years' graded courses; the first named, of 7 months each year; the other 2, of 5 months. Howard alone required in 1879–'80 a preliminary examination. The medical school of Columbian University is commonly known as the National Medical College.—(Catalogues, circulars, and returns.)

The *National College of Pharmacy* requires 4 years' service, 2 lecture courses of 5 months each, the writing of a thesis, and the passing of an examination prior to gradua-

[1] The law course was organized in 1826, then discontinued, and again reëstablished, as stated above.

tion. A spring course of 8 weeks in analytical chemistry must be attended by all students applying for a degree.—(Circular.)

For students and graduates in the legal, medical, and pharmacal schools, see Tables XII and XIII of the appendix.

## SPECIAL INSTRUCTION.

### EDUCATION OF THE DEAF AND DUMB.

The Columbia Institution for the Deaf and Dumb, Kendall Green, near Washington, was founded in 1857; the collegiate department (National Deaf-Mute College, see Superior Instruction), in 1864. Since July 1, 1879, 128 pupils have been under instruction, 79 of them in the collegiate department. The work continues with no essential changes, and the results of teaching by the articulation method are so encouraging that a second instructor will be required at no distant date. In 1880 the degree of B. A. was conferred on one person, 3 were graduated from the primary department with suitable diplomas, and 3 were promoted to the collegiate department.—(Report.)

### EDUCATION OF THE BLIND.

As there is no institution in the District for this class of unfortunates they are sent to the Maryland Institution for the Blind, where, in 1879–'80, there were 20 United States beneficiaries. Of this number 2 graduated at the close of the session, having completed the full course, including music. Two others withdrew after finishing a partial course.—(Report.)

### REFORMATORY AND INDUSTRIAL TRAINING.

The *Reform School of the District of Columbia*, organized in 1866, has received 683 boys during the 14 years of its existence. At the close of 1878–'79, they numbered 157; in 1879–'80 there were 220 under instruction. Good progress was reported in the school, and the propriety of adopting a higher standard of studies for the older inmates has been broached. More family buildings are urgently needed, as nearly 100 applications for admission have been refused, owing to lack of room. Workshops are also requisite, so that useful trades can be taught.—(Report.)

The *Industrial Home School*, Georgetown, has trained 936 children since its organization in 1867. In 1879–'80 there were 87 children under instruction in the common branches and drawing, in gardening, agriculture and horticulture, carpentry, shoemaking, making of tree-boxes, sewing, and general housework. On January 2, 1880, two new buildings (the one containing school rooms, dining room, kitchen, and laundry, the other, a workshop) were dedicated. Kindergarten training and lessons in cookery are to be given.—(Report and return.)

### CHILDREN'S HOMES AND ORPHAN ASYLUMS.

Those reporting in the District are the German Protestant Orphan Asylum, Uniontown, incorporated in 1879, and reporting 35 inmates in 1880; the Home for Destitute Colored Women and Children, organized in 1863, with 98 children in 1879–'80; St. Joseph's Asylum, in 1855, reporting 100 orphans and 80 day scholars; and St. Vincent's Female Orphan Asylum, which had 130 inmates in 1880. In all, the three "R's," and sometimes drawing and singing, are taught. St. Joseph's alone gives no industrial employments. The age of admission and dismissal varies in these institutions, but good homes are found for the children when leaving.—(Returns.)

### TRAINING IN ART AND MUSIC.

Instruction in these branches, so far as public institutions are concerned, has not reached a very high state of development in this District. There are, however, several private art classes, and there is a school under the auspices of the Washington Art Club; in music, the Washington Conservatory of Music and the National School of Music, as well as several private classes, seem to meet the growing demand for instruction. No statistics for 1879–'80 are at hand.

### TRAINING OF NURSES.

The Washington Training School for Nurses, incorporated December 14, 1877, admits candidates between the ages of 21 and 40, where general fitness for the work, a

common school education, good moral character, and good health are shown. The third course of lectures commenced November 1, 1880. At the close of the second year certificates or diplomas are given to those complying with all requirements.

## EDUCATIONAL CONVENTIONS.

### TEACHERS' ASSOCIATIONS.

A voluntary association of the graduates of the Normal School for whites meets once a month to compare experiences in government and teaching.

## CHIEF DISTRICT SCHOOL OFFICERS.

Hon. J. ORMOND WILSON has throughout the decade held the office of superintendent of public schools for whites in Washington and Georgetown and of the schools for both races in the rural districts.

Hon. GEORGE F. T. COOK has since 1873 been superintendent of the schools for colored pupils in Washington and Georgetown.

## SUMMARY OF EDUCATIONAL STATIS

| | 1870–'71. | 1871–'72. | 1872–'73. | 1873–'74. |

*b* Includes balance on hand at beginning of school year. *c* From county and local taxation only.

## TERRITORIAL SCHOOL SYSTEM.

### OFFICERS.

In the Territory there has been throughout the decade a territorial superintendent of public instruction, the territorial controller acting as such; for each county, a superintendent, who, up to 1877, was elected by the people for a 2 years' term; from that time on, the auditor of each county has acted as superintendent, except in two counties, where the probate judges have served instead. There has been in each school district a board of trustees, consisting of 3 members, with a 1 year term, except from 1871 to 1873, when there were 2 members with 2 years' terms. Since 1879 there has been a school examiner appointed by the board of commissioners to assist the county commissioner in the examination of teachers.— (School law.)

### OTHER FEATURES OF THE SYSTEM.

The schools have been dependent for support throughout the decade (1) on 1 per cent. of the gross proceeds of all franchises and moneys arising from breach of penal laws; (2) on the proceeds of a county tax, which was 1 to 5 mills on $1 till 1876, then 2 to 5 till 1877, then 5 to 8 till 1879, when it was made 2 to 8; (3) on a district tax, optional both as to levy and amount.

The basis for the distribution of this fund is the number of children of school age in each county; but as each county constitutes at least one district, irrespective of the number of children of school age therein, one-half is divided equally among the districts in the county complying with the requirements of the school law; the other half, in proportion to the number of school age enumerated, except in 2 counties, which have a different arrangement. For a district to receive its quota, at least 10 children must have been reported by the census marshal and the schools must have taught no political, sectarian, or denominational doctrines, nor have distributed such papers, tracts, or documents. Since 1876 teachers who fail to make, at the close of each session, the required report to the county superintendent, can draw no pay until such report shall have been received. In the years 1870 and 1871 teachers were examined and licensed by the county superintendents and so continued till 1876, from which time to 1879 district trustees, with any one they might choose to call in to assist, performed this duty; from that time to 1880, a person appointed by each board of county commissioners, with the county superintendent, constituted a board of school examiners. The school age throughout the decade has been 5–21, except from 1875 to 1879, when it was 5–18. A rate bill for repairs of school property and supplies, not to exceed $25, may be levied on the parents and guardians of children attending school; the children under such parents and guardians as are unable to pay are not, however, to be denied the privileges of the schools.— (School law.)

### GENERAL CONDITION.

The report of the governor of the Territory indicates commendable progress in the school system, considering the smallness of its school fund, the two sections in each town given for school purposes by the Government not being available till the Territory becomes a State. Under such circumstances, there was not a county in the Territory that could raise by taxation a sum sufficient to keep up the public schools during the year; while in some counties it was totally inadequate even for a few months, although no portion of what was raised was paid to either the territorial or county superintendents.— (Governor's report, 1880.)

For comparison with 1878–'79, the reports give only 4 items called for, which show an increase of 404 in school population; of 1,162 in enrolment; of $28,530 apparently in receipts for public schools, but really much less, since the territorial taxes were not reported in 1878–'79; and of $18,812 in expenditure. As compared with 1870–'71, there was a gain of 5,852 in enrolment, of 114 in school districts, and of 127 in schools, while in receipts there was an increase of $33,235 and in expenditure of $19,809. Only in 1871–'72 do any items appear as to teachers, when there were 26 male and 34 female teachers employed at an average monthly salary of $162.50.

## ADVANCED INSTRUCTION.

### NORMAL SCHOOLS, COLLEGES, &C.

There is no information from this Territory respecting any normal school, high school, college, scientific school, professional school, or special school.

## CHIEF TERRITORIAL SCHOOL OFFICER.

Hon. JOSEPH PERRAULT, *territorial controller and ex officio superintendent of public instruction, Boisé City.*

Mr. Perrault appears to have held these positions since 1872, his only predecessor within the decade having been Hon. Daniel Cram, who held from 1866 to 1872.

## SUMMARY OF EDUCATIONAL STATISTICS OF

## SCHOOL SYSTEMS IN THE INDIAN TERRITORY.

### OFFICERS.

By an amended law of 1880 the general charge of the educational work among the Cherokees is given to a board of education, to consist of 3 persons nominated by the principal chief and confirmed by the Senate, 1 at first for a year, 1 for 2 years, and 1 for 3; afterwards 1 each year for a term of 3 years. There is also a special board of trustees in charge of an asylum for the blind, deaf-mute, and feeble-minded youth.

The Choctaws by an amended law retain their board of 4 trustees, composed of a superintendent of public schools and a trustee from each of the 3 districts into which their territory is divided, electing these 4 by both houses of the general council in joint session, for terms of 2 (formerly 4) years. No provision for annual change of a part of this board appears in the law.

The Chickasaws and Creeks (or Muskogees) have superintendents of public instruction, who, by laws of 1878 in the former nation and of 1880 in the latter, are elected by their national legislative councils for 4 years among the Chickasaws and 2 among the Creeks. These superintendents appoint trustees for each school in their respective nations, the Chickasaw trustees numbering 1 for a school, the Creeks 3. Both nations have also examining boards for testing the qualifications of teachers.

The Seminoles, at date of the latest information, had also a superintendent and trustees for care of the general and local education of their youth; but, from want of any published laws, the mode of electing these and the term of their continuance cannot be now given.

Among the tribes and bands outside of the Five Nations all educational work appears to be under the charge of the missionary agents of the several religious societies authorized by the United States to labor for the improvement and civilization of these tribes and bands.

### OTHER FEATURES OF THE SYSTEMS.

The board of education in the Cherokee Nation, having entire control of educational interests, determines rules for the government of the primary schools, orphan asylums, and seminaries, for the admission of pupils, examination of teachers, selection of text books, and enforcement of courses of study. The 3 local trustees who help to form the board have especial supervision, each one of the district from which he is selected. Each is to ascertain and report, within a year from his entrance upon office, the number of children 7 to 21 years of age in his district and the number in each of the 3 minor districts of the school district under his superintendence. They are to visit semiannually all schools under their immediate supervision and report thereon, at the close of each school term, to the principal chief, who is to report to the national council. The schools are classed as primary and high schools; the full term of study in the former to be 3 years, that in the latter 4 years. Not only tuition, but also clothing, board, and lodging are furnished free to children in the primary schools, that the board may have fuller control of them during their whole period of study. To those in the higher schools or seminaries, tuition only is free, but board is provided for them at actual cost, they furnishing their bedding and clothing. The school month is 20 days, or 4 weeks of 5 days each.

In the other 4 tribes of the civilized Indians the superintendent is the chief general school officer, having the trustees as associate advisers with him in his visits to their districts. The primary schools among them are termed neighborhood schools, and for these among the Choctaws the district trustee in each district employs the teachers, appointing three representative and active school men near each school to approve their accounts, pay them $2 a month for each scholar in actual attendance, and encourage parents and guardians to send to school all children of proper age and condition for instruction. He also selects the scholars to be sent from the different neighborhood schools to the higher schools, being guided to this selection by promptness in attendance and capacity to learn on the part of the pupils to be chosen, as well as by regard to a pro rata representation from each school district.

Arrangements not differing much from these prevail also among the Creeks and Chickasaws, and apparently among the Seminoles.

The educational officers of all the Five Nations are authorized to extend their care and supervision, as far as may be needful, to pupils studying under the authority and at the cost of each nation in the academies and colleges of the United States.

Among the imperfectly civilized tribes under the general charge of the Commissioner of Indian Affairs, the only educational features until the year 1878 were that the United States Government should furnish schools and pay the teachers in them, encouraging attendance through its agents. In that year a great improvement was inaugurated by taking a number of Indian youth of both sexes away from their semi-savage associations at the West and placing them at good training schools in the East. This experiment, as first tried at the Hampton Institute, Virginia, in connection

with its schools for colored youth (1878), proved so successful that another school of kindred character for Indians alone was soon established at Carlisle, Pa. (1879), and a third at Forest Grove, Oreg. (1880), a few pupils being also placed in specially selected private schools in New York and Massachusetts. The training of these youth in the 3 schools first mentioned, and to some extent in the others also, has been not only in the elements of a fair literary education, but (for the boys) in mechanical and farming work as well, and (for the girls) in all needful domestic industries.—(Laws of Indian tribes and Reports of the Commissioner of Indian Affairs.)

RESULTS OF THESE SYSTEMS.

Among the Five Nations of the Indian Territory, notwithstanding many disadvantages from their still imperfect civilization and their remoteness from the educational and industrial influences of the States, a progress very encouraging in the circumstances may be perceived. Within the 10 years from 1870–'71 to 1879–'80 they have fairly met the increase of school children by establishing 73 more day schools and 5 more boarding schools, into which have been gathered 2,506 more pupils. And although the education given has not been all that could be wished, it has shown its influence in a vast improvement of their dwellings, their agriculture, their social condition, and their laws.

Among the other tribes the advance has been apparently less decided, because they have, during these 10 years, been more exposed to encroachments on their reservations; while many for this and other reasons have been compelled to go elsewhere and build up new homes. The number of their schools has thus rather diminished than increased, but apparently most of them are boarding schools, which are usually much more effective than the day schools, because the Indian youth are kept out of bad home associations and are held for long periods under the civilizing influences of good teaching. This is especially observable in the young Indians who, with the consent of their parents, are entirely separated from their wild people and trained in morals, manners, literary culture, and industrial pursuits at such good schools as those at Hampton, Va.; Carlisle, Pa.; Forest Grove, Oreg.; Northfield, Mass., and elsewhere. In all these, and especially at Carlisle, the civilizing, refining, elevating, and generally improving influence of a training carried through several years has been immense. From 300 to 400 Indian youth in 1880 were brought under these healthful influences, and there seems ground for the belief that through these youth, and through the steadily increasing number (3,000 to 4,000) trained at boarding schools on the reservations, a stronger stimulation than ever previously will be given to educational and civilizing processes.—(Reports of the Commissioner of Indian Affairs and others, 1879 and 1880.)

For schools of New York Indians, see page 221.

the age for admission to school is 5–21.

## TERRITORIAL SCHOOL SYSTEM.

### OFFICERS.

A territorial superintendent of public instruction is appointed for 2 years by the governor, with consent of the legislature. There are county superintendents, elected by the people for 2 years; district boards of 3 members holding office 3 years, 1 being elected each year; and district clerks who are the executive officers of the boards, 1 being elected annually for each board.

### OTHER FEATURES OF THE SYSTEM.

Public school funds are derived from a county tax of not less than 3 mills nor more than 5 on the dollar, district taxes voted by the people, fines arising from breach of penal laws, and proceeds of sales of town lots. All moneys derived from the sale of any school lands which may be granted by Congress are to constitute an irreducible school fund, the interest of which is to be used for public school purposes. School funds are apportioned to districts according to the number of youth therein 4 to 21; but the school age is from 5 to 21, and in the towns children under 6 may be excluded by trustees. A school census is taken annually by the district clerks. No apportionment can be made to districts which have not maintained a free public school at least 3 months during the school year; nor unless the teacher employed shall hold a legal certificate in full force; nor if sectarian or partisan books, tracts, papers, &c., have been used in the schools, nor if political or denominational doctrines have been taught in them. Reading, writing, orthography, arithmetic, geography, and grammar are prescribed studies, and such others may be added as are deemed expedient by trustees, who are also authorized to establish high schools. Teachers must make annual reports to their county superintendent and district clerk; or, failing to do so, forfeit pay for the last month employed. Trustees are required to report to the county superintendent, and county superintendents must report annually to the territorial superintendent or forfeit $100 of their salary. Since 1877 a teachers' institute may be held annually in all counties having 10 or more organized school districts.

### CHANGES DURING THE DECADE.

The school law of 1872, the second attempt to establish a public school system in the Territory, was the first which recognized fully the duty of providing for the education of the school population at public expense without the aid of rate bills. By the first law (1864) public funds were derived from a county tax of 1 mill on the dollar and from certain fines; the residue was made up from rate bills. The only school officers were county superintendents and district trustees; but a territorial superintendent was provided in a separate bill 2 years later. The provisions of the law adopted in 1872 are essentially the same as described above; for, although it was superseded by a new one in 1874, there appear to have been no changes of any consequence made, and the only addition of general importance noted since that date is an act of 1877 permitting superintendents to hold county teachers' institutes under certain circumstances.

### GENERAL CONDITION.

The statistics show a gain for 1879–'80 of 1,185 in the population of school age and of only 61 in the number enrolled in public schools, while the number in average attendance was less by 298. Another unfavorable indication was a decrease of 9 days in the average length of term. On the other hand, there were more public schoolhouses and rooms for study, more schools taught and more of them graded; more teachers employed and larger salaries paid both men and women. School property increased in value and the income for public school purposes was greater, although less was actually expended during the year. The superintendent says, in regard to the short school term, that the situation is really worse than it appears; for, as in order to make the average even what it is all the large graded schools with terms of twice the average length go into the calculation, a majority of the schools have the minimum term of 60 days. The remedy pointed out is to increase the county school tax. The average rate levied in 1879–'80 was 3.6 mills, the minimum allowed being 3 mills. Only 1 county levied the maximum of 5 mills, while 3 counties levied only 3 mills; and, as the superintendent remarks, "the minimum rate necessitates the minimum term." The gain of 21 in number of schools, although small compared with the large extent of territory, is yet 16 per cent. of the whole number reported in 1878–'79. A tendency is reported in those districts where public sentiment is most advanced to build better school-houses and to furnish them with the most approved seating, as well as to ornament the interior with pictures and other decorations.

### PROGRESS DURING THE DECADE.

No statistics of importance can be given previous to 1872–'73, when the new school law went into effect. The only official report previous to this is believed to be one issued in 1868, when only 4 counties reported, including 25 organized districts and a

school population of 1,359, of whom about half attended school. In 1872–'73 the school population had increased to 3,517 and enrolment to 1,818 (of whom 50 per cent. were in average attendance), the school revenues from about $12,000 to $33,161, and the value of school property from nearly nothing to $21,192. Since that year there has been a large and constant increase in most points, indicating progress; school population and enrolment have more than doubled, while the average attendance is nearly three times as great. The number of teachers employed and schools taught was nearly double, and the value of school property more than five times as much as in 1872–'73. The school term was 13 days longer in 1879–'80, but the increase in this point has not been so uniform as in the others, the highest years being 1875–'76 and 1878–'79. The average monthly pay of men teaching has increased by $3.23, but that of women has decreased by $12, though the income for school purposes has more than doubled.

## HELENA CITY SCHOOLS.

### OFFICERS.

In Helena, the largest city of the Territory, with 3,624 population, there is a board of education of 3 members, the officers of which are a president and secretary.

### ADDITIONAL PARTICULARS.

The schools, graded as primary, intermediate, grammar, and high, had 508 enrolled during 1879–'80, with an average attendance of 300, all under 10 teachers. They are well supplied with maps, charts, globes, and other apparatus, and a good beginning has been made toward collecting a library. The graded school building, erected in 1875 at a cost of $25,000, has a good piano, besides other necessary furnishing. Two brick school-houses were built in 1879 at a cost of about $6,000, making accommodations for about 500 pupils, 200 more than the average attendance during the year.—(City report.)

## TRAINING OF TEACHERS.

### TEACHERS' INSTITUTES.

The only provision made by law for the professional training of teachers was the act of 1877 already referred to, which permits county superintendents to hold an annual institute of 2 to 5 days' duration in counties containing 10 or more organized school districts, provided they believe such institutes will be beneficial to the educational interests of the county. It is made the duty of all teachers to be present at such institutes and participate in the proceedings, and their usual pay is allowed them during actual attendance. Less interest was shown in this subject in 1879–'80 than in former years. The only institute held was in Deer Lodge County, the place of meeting being Butte City, the second town in size, having a population of 3,363. There was a good attendance during the 5 days of the institute, the proceedings were spirited and profitable, and the evening sessions crowded. Such meetings in Deer Lodge County, the superintendent says, have always been well attended and enthusiastic, and to their influence he ascribes the fact that here alone was levied the maximum school tax of 5 mills on the dollar.

### NORMAL COURSE.

In the high school of Helena there is a normal course, which embraces the theory and practice of teaching, the necessary qualifications of teachers, school government, history of education, and the school laws of Montana.

## SECONDARY INSTRUCTION.

### PUBLIC HIGH SCHOOLS.

There were 34 graded schools in the Territory in 1879–'80, an increase of 9 for the year; but the number of higher departments in these is not reported. The high school in Helena had 16 pupils attending, besides 26 in a preparatory class. Classical, scientific, and normal courses are presented, each extending over 3 years.

## SUPERIOR, SCIENTIFIC, AND PROFESSIONAL INSTRUCTION.

Montana has no territorial university nor other institution for superior, scientific, or professional instruction, so far as information has been received.

## CHIEF TERRITORIAL SCHOOL OFFICER.

Hon. W. Egbert Smith, *territorial superintendent of public instruction, Butte City.*

[Term, 1879–1881.]

Hon. Cornelius Hedges was territorial superintendent from the passage of the free school law in 1872 till 1877, when he was succeeded by Hon. Clark Wright. The present superintendent followed Mr. Wright.

## NEW MEXICO.

### EDUCATIONAL STATISTICS.

#### DEFICIENCY OF REPORTS.

From want of consecutive territorial reports as to public schools and from extreme scantiness of information as to other schools, no statistical table for the last ten years can be presented. The territorial officers charged by law with the duty of making annual report of the statistics of public education have not performed that duty or the legislatures to which the reports have been presented have not made them public. A statement made in 1875 (including, however, some statistics of 1874) by the secretary of the Territory and somewhat enlarged by him for 1876 remained in 1880 the only summary of the educational statistics of New Mexico presented to this Bureau during the decade under review. The figures thus secured, with those of the census of 1870, may be found under the head of General Condition.

### TERRITORIAL SCHOOL SYSTEM.

#### OFFICERS.

Under a law of January 28, 1863, amended January 9, 1874, a territorial board of education was created, to consist of the governor, secretary, judges of the supreme court, and the Roman Catholic bishop of New Mexico. This board still seems to have a nominal existence.

Under the same law, a territorial superintendent of schools was in 1863 required to be appointed by the governor, with consent of the legislative council, to hold office for two years, and in 1874 the duties of the office were transfered to the territorial librarian.

The only other educational officers provided for are county boards, termed supervisors and directors of public schools, composed of the county probate judge with 3 others, who must be heads of families, citizens of the United States, owners of real estate, and residents in the county for 5 years previous to their election.—(Laws of New Mexico, 1880.)

#### OTHER FEATURES OF THE SYSTEM.

The amended school law of 1874, which made the territorial librarian superintendent of schools, required him to visit the schools of each county once a year and to make to the governor annually, for the use of the legislative assembly, a report of the number of schools in the counties, the pupils taught, the teachers employed, and the pay given for their service, as well as the number of pupils in each precinct, the average attendance of these, and the branches in which they are instructed. To enable him to furnish such report, each county board of school supervisors and directors is required to make report to him at such times, of such things, and in such form as may be prescribed. These county boards receive the proceeds of a poll tax of $1 on each male citizen and one-fourth of a tax of $1 on each $100 of all taxable property, both to be applied to the maintenance of the public schools in their counties. They are to make annual report in the columns of some newspaper published in the county where the schools are held (or, if none be published there, then in the one published nearest to the county) of the funds thus received, the purposes for which they have been disbursed, the number of schools, and the attendance on these.—(Compiled laws of 1880.)

#### GENERAL CONDITION.

As may be seen from the preceding statement, the machinery for a school system has been long constructed; but, from want of a strong and general feeling in favor of good unsectarian public education, the educational movement has been comparatively slow. Seven years after the law of 1863 to create a board of education and have a superintendent of the territorial schools, the census takers in 1870 found that of about 29,000 youth of educable age only 1,798, or about 1 in 16, were attending schools of any kind, and that only 188 of these were in the 5 ungraded schools, each with 1 teacher, reported as public schools. The remaining 1,610 were in 6 parochial, 29 day and boarding schools, 3 academies for girls, and 1 college for the other sex. After that census a considerable immigration into the Territory began from regions where free school instruction was the rule, and hence we find in 1874 a report from the territorial secretary of 4,694 pupils in 116 schools reputed to be public, under 129 teachers, with 1,158 in 39 other schools, under 73 teachers. In 1875 the same gentleman reported, as the result of his inquiries, 5,151 pupils in this class of schools, which then had come to be 138, under 147 teachers; while in 12 Roman Catholic, 8 Prot-

estant, 6 private, and 7 Indian schools were 1,359 pupils, under 73 teachers. Additional information from some counties not reported or imperfectly reported previously was secured for 1876, which brought up the number of schools apparently public to 163, the pupils in them to 6,285; the schools other than public to 38, with 185 more pupils, making the whole number in these 1,544. The statistics of the United States census of 1880, except as to population, are not available as this goes to press, so that no comparison of 1880 with 1870 is possible.

As to the schools called public here, it must be said that many of them, from apparently trustworthy information, are private or sectarian schools, receiving and instructing public pupils through arrangements to that effect with county school boards. The fact that in 1875 only 5 of the 138 public schools reported were in buildings either owned or rented for that use, tends to confirm this information and to show how few purely public schools there are.

ACADEMIES.

No public high schools appear to be in existence, the public school instruction in most cases up to 1880 having been, by concurrent reports, of the most elementary kind. Of private or Protestant schools apparently academic there were 4 in 1880, at Albuquerque 1, at Las Vegas 2, and at Santa Fé 1; of Roman Catholic institutions, 3, which appeared to be of like rank, 2 of them entitled colleges.

## TERRITORIAL SCHOOL SYSTEM.

### OFFICERS.

These are a territorial superintendent of schools, elected annually until 1877, since then biennially; a superintendent for each county, elected biennially; and three trustees for each school district, elected biennially until 1880, since then at first for 1, 2, and 3 years' terms, and subsequently for 3 years. Each county court also appoints a board of examination of 3 persons, whose duty it is to examine teachers and grant certificates.—(Laws.)

### OTHER FEATURES OF THE SYSTEM.

According to the laws of 1878 and 1880, the school funds are made up from a tax of 3 mills on the dollar of all taxable property, from taxation of railroads, sales of estrays, and from a special district tax, which must not exceed 2 per cent. a year and is levied only by a two-thirds vote of taxpayers. The apportionment of these moneys is according to the number of youth of school age (6–18) reported annually by the county superintendents. The trustees employ teachers; provide and repair school-houses; furnish fuel, maps, charts, &c., and may collect tuition fees. Teachers are required to furnish quarterly reports to the trustees. The establishment of union schools in contiguous districts, to be supported out of the funds belonging to their respective districts, is allowed. Text books, chosen by territorial and county superintendents and the president of the University of Deseret, are to remain unchanged for 5 years, unless for special cause. Until 1878 a tax for school purposes of $\frac{1}{4}$ of 1 per cent. on all taxable property in each district was allowed, and if this was not enough to carry on the schools a sum not to exceed 3 per cent. was to be allowed, if voted for by two-thirds of the taxpayers; added to this was a sum not to exceed 1 per cent. a year on all taxable property, to pay teachers and for school furnishings, till 1876, when this last clause was repealed. By act of February, 1874, the sum of $15,000 was appropriated for the next two years for school purposes; in 1876 the amount was raised to $25,000, of which $20,000 were for the schools and $5,000 for the University of Deseret. The $20,000 were appropriated for the payment of teachers' wages, rated according to the average daily attendance of children. For both the quarter per cent. tax and the specific appropriation were substituted in 1878 the provisions as to taxation and apportionment first referred to. The apportionment of the different amounts has been in accordance with the enumeration of the youth of school age in the different districts, which was 4–16 until 1876, 6–16 until 1880, then 6–18.—(Laws.)

### GENERAL CONDITION.

From lack of a report for the year 1879–'80 (reports being published only biennially, and that being an off year), very little can be said as to progress in school matters. According to a written return from Superintendent Taylor, an increase over 1878–'79 was noticeable in the number of youth of school age (which the change in school age from 6–16 to 6–18 would in a measure account for), in the enrolment, and in the average attendance. There was a decrease in the number of school days taught, in the value of school property, and in the receipts and expenditures. With 13 fewer women teachers, the total was larger by 8. Information from the private schools of the Territory was furnished for 1879, but this list omitted certain Catholic, Episcopal, and Mormon schools, from which no information was obtainable. There were some 44 named in 1880, but in order to include those alone which present full statistics only 22 are reported in the table.

### REVIEW OF EDUCATION IN THE TERRITORY.

The University of Deseret was the so called "parent school." Incorporated in 1850, to the chancellor and board of regents was given the power of appointing a superintendent of primary schools. The superintendent was to be under the supervision and discretionary control of those officers. The enactments of different years, which constituted the school system, were nearly all repealed February 18, 1876, with changes again in 1878 and 1880. Still a gradual advance is reported at most points; the standard of teachers and of schools was raised; the adobe school-houses yielded to substantial brick and frame buildings, many of them well furnished; a normal department was added in 1875 to the university; and a Territorial Teachers' Association, organized in 1870, continued to hold sessions up to 1875, and perhaps later. An increase for the decade of 11,935 in youth of school age, of 7,334 in enrolment in public schools, of 4,359 in average daily attendance, and of 159 teachers was reported. The private and church schools, with Salt Lake Academy as an initial point, are also helping in the work by raising up teachers and educating children.—(Biennial reports, &c.)

## CITY SCHOOL SYSTEM.

### SALT LAKE CITY.

Salt Lake City has a population of 20,768, according to the census of 1880. Of the city schools and officers in charge nothing can be said for the year 1880, as no reports are on file.

## TRAINING OF TEACHERS.

### NORMAL COURSE.

As stated under the general review, a normal course has been connected since 1875 with the University of Deseret. The president of the university is the instructor in the theory and practice of teaching. On completion of the teachers' course, which occupies 1 year, a certificate of graduation is given. The statistics for 1879–'80 are: instructors, 3; students, 55; graduates, 17.—(Circular and return.)

## SECONDARY INSTRUCTION.

### HIGH SCHOOLS AND ACADEMIES.

Of public high schools nothing is known. Various academic schools report to this Bureau. Information concerning them will be found in Table VI. Of the number, St. Mark's Grammar School, Salt Lake City, founded in 1867, reports 2,207 pupils since that date, 539 in 1879–'80; St. Mark's School for Girls, founded in 1871, had 61 pupils in 1880; and Salt Lake Academy, organized in 1878, reported 138 students in the year 1879–'80, who were instructed in drawing, music, an English course, or in the classics.—(Register and return.)

## SUPERIOR INSTRUCTION.

### UNIVERSITY OF DESERET.

This institution, open to students of both sexes, was incorporated in February and organized in November, 1850. Owing to its financial condition and limited patronage, the school was soon discontinued, and until November, 1867, it had but a nominal existence. Reopened as a commercial college late in 1867, it was first fully organized in 1869 as an institution for scientific and classical instruction. The students, 223 in number, were divided among the commercial, preparatory, and scientific courses. The preparatory or model school had primary, intermediate, and academic grades. The second year 546 pupils were reported; the third, 580. In 1873 the primary and intermediate divisions were dropped; preliminary, scientific, and classical preparatory courses were carried on; and in 1875 the teachers' course of one year was added. In the academic department there were optional and special courses leading to certificates of graduation. In 1878–'79 the university was reported in a prosperous condition, which continued during 1880. The courses included teaching, English literature, history, politics, mathematics, natural history and science, chemistry, Latin, and Greek. There were 159 students in 1880 in the preparatory department, beyond which instruction does not seem to have gone.—(Biennial reports, return, and circular.)

## SCIENTIFIC, PROFESSIONAL, AND SPECIAL SCHOOLS.

### SCIENTIFIC COURSES.

No such schools report in the Territory, but at the University of Deseret there are courses in mathematics and physical and political sciences. The students seem, however, to be only in the preparatory department.

## EDUCATIONAL CONVENTIONS.

### TEACHERS' ASSOCIATION.

An association was formed in 1870, and at date of the biennial report for 1874 and 1875 was still in existence. Lack of information for 1880 precludes any report as to the work, if still continued.

## CHIEF TERRITORIAL SCHOOL OFFICER.

Hon. JOHN TAYLOR, *territorial superintendent of district schools, Salt Lake City.*[1]

[Second term, August 4, 1879, to August 1, 1881.]

The previous superintendents have been Hon. Robert L. Campbell, 1862 to 1874; Hon. O. H. Riggs, 1874 to 1876.

[1] Hon. L. John Nuttall has been chosen to succeed Mr. Taylor.

*c* The statistics, which are taken from the United States census of 1880, are incomplete, only 19 counties out of 25 reporting.

## TERRITORIAL SCHOOL SYSTEM.

### OFFICERS.

A territorial superintendent of public instruction was from 1872 till 1877 chosen biennially by the legislature; since then, by the governor, with consent of council. To aid him in selecting text books, prescribing rules, and examining candidates for territorial certificates, there has been since the latter year a territorial board of education composed of 1 person from each judicial district, appointed in like manner with himself for 2 years' terms, he being also a member ex officio.

For local educational interests there have been from the beginning county superintendents of schools, who, up to 1872, were elected by the people for 3 years' terms; since then for 2 years. Since 1877 each of these has associated with him 2 high grade teachers for examination of persons desiring to teach in the county. Also from the beginning there have been district boards of directors of 3 members for each district, at first chosen by the people for 1, 2, and 3 years' terms, and afterwards 1 each year for a term of 3 years. With them is associated a district clerk, chosen apparently for 3 years.—(School laws of 1854, 1871, 1873, and 1877.)

### OTHER FEATURES OF THE SYSTEM.

Public schools are supported from county taxes, which from 1871 to 1877 were of 4 mills on the dollar, since then 3 to 6 mills on the dollar, the proceeds from fines, licenses, &c., and special district taxes when voted by the people, but not to exceed 10 mills on the dollar since 1873. Public school funds are apportioned on the basis of the number of census youth 4–21, although the age for admission into school is 5–21. No sectarian, partisan, or infidel doctrine may be taught in the public schools. The studies prescribed are the elementary English branches, including physiology and history of the United States; others may be authorized by district directors. A union of districts for the establishment of graded schools is permitted, and such schools must be sustained in towns of more than 500 census children. District clerks must take an annual census of all youth 4–21. Failing to do this they are individually liable for the amount of money the district may thereby lose. School districts having more than 15 census scholars cannot receive their share of county school funds unless they have sustained a school for at least 3 months during the preceding school year. Teachers, to be legally employed, must hold certificates of fitness to teach, either from the territorial board of education or the county board of examiners. The former hold for 3 years; the latter, being of 3 grades, for 1, 2, and 3 years. Teachers must keep a register and report annually to the county superintendent or forfeit the last month of their pay, and county superintendents failing to make annual report to the territorial superintendent forfeit $100 of theirs. It is the duty of the board of education to adopt a uniform series of text books; that of the territorial superintendent, to hold annually a territorial institute; that of county superintendents, to hold annually county institutes.

### CHANGES IN THE DECADE.

The first school law of the Territory, passed in 1854, was succeeded in 1871 by another which raised the annual tax for school purposes from 2 to 4 mills on the dollar, provided for the choice of a territorial superintendent by the legislature, gave districts power to levy a special school tax, and required parents and guardians to send children 8–16 to school for at least three months each year under penalty of $100. A law of 1873 changed the positive requirement of a 4 mill tax to "not more than 4 mills," restricted the district tax to not more than 10 mills, and named the purposes for which alone the tax might be levied, required voters to be also taxpayers, and omitted the compulsory feature of the law. In 1877 followed the present law, whose chief provisions have been given above, its principal changes being the creation of a territorial board of education and of county boards for the examination of teachers, a provision for the appointment of a territorial superintendent by the governor instead of the legislature, and another making women eligible to vote in school meetings.

### GENERAL CONDITION.

The territorial reports being biennial, no statistics from them can be obtained for 1879–'80. A comparison between the figures for 1878–'79 and 1876–'77 shows fair educational progress, the only exception to this being in respect to the average length of school term, which was more than a day less. The enrolment in public schools in those two years exceeded by more than 12 per cent. the increase of youth entitled to attend; while the income for school purposes, number of school rooms used, and teachers employed more than doubled, and the average monthly pay of teachers advanced.

The foregoing figures from the United States census of 1880, being only those of the first count for 19 counties out of 25, cannot justly be compared with those of 1878–'79. They show, however, a greater number of school-houses, but a decrease in the value of school property. From the same authority it appears that high schools were taught in 4 public school buildings; that there were 13 buildings with more than 1 study room and 16 with 2 or more recitation rooms, the latter number probably indicating graded schools; also, that 125 of the 350 teachers were educated at high schools or academies, 19 at normal schools, and 65 at colleges.

### PROGRESS DURING NINE YEARS.

The first school report for this Territory was for the years 1871–'72 and 1872–'73. Since then, up to 1878–'79, the school population had become nearly three times as numerous, the number enrolled nearly four times as great, the number of school districts larger by 156, and that of school-houses larger by 182.

## TRAINING OF TEACHERS.

### NORMAL DEPARTMENT OF WASHINGTON UNIVERSITY.

A normal course of 2 years forms a part of the curriculum of the territorial university at Seattle. It includes the higher English branches, methods of instruction, and pedagogics. There were 21 students attending in 1879–'80 and 3 were graduated.

### TEACHERS' INSTITUTES.

In the absence of a territorial report for 1879–'80 no information can be given respecting the county institutes held during that year. According to law, institutes must be held annually in all counties containing 10 or more organized school districts and must remain in session from 1 to 5 days. It is made the duty of all teachers employed in the county to attend and to take part in the proceedings, and all having charge of schools must adjourn them for the purpose.

## SECONDARY INSTRUCTION.

### PUBLIC HIGH SCHOOLS AND OTHER SECONDARY SCHOOLS.

There is no information regarding public high schools beyond the fact reported in the census that such schools were taught in 4 public school buildings. For statistics of private academic schools reporting, see Table VI of the appendix, and for a summary, the report of the Commissioner preceding.

## SUPERIOR INSTRUCTION.

### UNIVERSITY OF WASHINGTON TERRITORY.

The University of Washington Territory, Seattle, is a part of the public school system and receives an annual legislative appropriation of $1,500. This affords free tuition to 30 pupils, who are appointed by members of the legislature. The courses of study are classical, scientific, normal, and commercial, the first and second covering 4 years and the others 2. There were 160 students attending during 1879–'80, of whom 83 were in preparatory studies, 19 in a commercial course, 21 in normal, 25 in scientific, and 12 in classical. Women are admitted on equal terms with men and are also members of the faculty.—(Catalogue, 1879–'80.)

## EDUCATIONAL CONVENTION.

### WASHINGTON TERRITORY TEACHERS' INSTITUTE.

The fifth annual meeting of the Territorial Teachers' Institute, held at Seattle August 17–20, 1880, was the most successful of the series. Intense interest was manifested, and the attendance was much larger than at any previous meeting, owing to the liberality of transportation companies throughout the Territory and the coöperation of the newspapers, which advertised the meeting gratuitously.

After an opening address by the secretary of the institute, Mr. J. E. Clark, an address of welcome was delivered by the territorial superintendent, Dr. J. S. Houghton. Among the addresses and papers presented, Prof. A. J. Anderson, of the Territorial University, contributed one on "Methods of teaching mental arithmetic" and one on "Graded schools;" Mr. J. E. Clark, one on the "Importance of normal training" and another in opposition to the text book system of teaching grammar; Charles McDermott, superintendent of Kitsap County, one on "Oral methods of teaching natural history;" Helen L. Pearce, one on "The relation of primary to other schools;" Mr. R. C. Kerr, one on "Word building" and another on "Morality in the schools;" Superintendent Houghton, one on "Teaching the elements of reading;" Mr. H. Jones, of Seattle, on "Teaching physiology;" Mr. B. L. Northup, on "How to keep pupils profitably employed;" Mr. E. S. Ingraham, on the "Quincy method." A paper by County Superintendent J. R. Thompson, of Thurston County, entitled "A history of education in ancient times," was read by Mr. F. E. Eldridge. Nearly all the topics treated in papers and addresses were earnestly discussed. Early in the session a resolution was passed tendering the thanks of the institute to its secretary, Mr. J. E. Clark, who gave each member a copy of a volume containing the proceedings of the 4 former meetings, prepared at his own expense. Another resolution adopted recommended the organization of an eastern division of the institute, in view of the difficulties of travel across the mountain ranges running through the Territory.—(Printed proceedings.)

## CHIEF TERRITORIAL SCHOOL OFFICER.

Hon. JONATHAN S. HOUGHTON, *territorial superintendent of public instruction, Olympia.*

[Term, November, 1879, to November, 1881.]

The first territorial superintendent was Rev. Nelson Rounds, D. D., appointed at the opening of 1872. In 1874 he was succeeded by Dr. John P. Judson, who served till the appointment of Dr. Houghton, and he, it is learned, is to be succeeded by Mr. Charles W. Wheeler.

## SUMMARY OF EDUCATIONAL STATIS

NOTE.—After repeated efforts, it has been found impossible to secure any educational statistics for 1879–'80, and the comparisons given in other cases must therefore be omitted.

## TERRITORIAL SCHOOL SYSTEM.

### OFFICERS.

The territorial auditor was ex officio superintendent of public instruction up to December 14, 1871, at which time the office was discontinued and the governor received the reports of the county superintendents.

A law of December 12, 1873, slightly amended by one of December 11, 1875, renewed the territorial superintendency and made the territorial librarian ex officio superintendent. Up to 1880 he continued to act as such.

For counties there were throughout the decade superintendents elected by the people for biennial terms; and for school districts boards of trustees of 3 members elected for 3 years, 1 being changed each year.—(School laws of 1878.)

### OTHER FEATURES OF THE SYSTEM.

The public schools are sustained by a poll tax of $2 on each voter and a county tax which, up to December, 1875, was not to exceed 2 mills on the dollar, but since has been not less than 2 mills, with the proceeds of fines and forfeitures. The people at the annual district meeting may vote also a district tax to provide school-houses, buy text books for indigent pupils, meet other necessary contingent expenses, and supply deficiencies in funds for paying teachers. They may also vote $100 a year for a district library. Women may vote for and be elected to school offices, and as teachers receive the same pay as men, if equally qualified. Provision has existed for separate colored schools where there have been 15 or more children of school age in any district. The continuance of this is doubtful. A compulsory law has continued through the decade, requiring parents and guardians to see that their children between 7 and 16 attend school at least 3 months each year. Teachers must present certificates of qualification from the county superintendent authorizing them to teach in public schools, and must make reports of school statistics each term or forfeit their pay, at the discretion of the district boards; while the county superintendent who fails to report annually to the territorial superintendent forfeits $100. The law providing that an annual teachers' institute be held from 4 to 10 days, to be conducted by the territorial and county superintendents, makes it the duty of this institute to decide on a series of school books to be used and a system of education which shall be uniform throughout the Territory, allowing no change except by the unanimous vote of the institute. While this institute also settles the studies to be pursued in any high school, each county superintendent and district board of directors may decide whether a high school shall be established in the district and what number of teachers shall be employed.—(School laws of 1878.)

### GENERAL CONDITION.

The school system is reported one of the best; the schools, though not numerous, excellent in character and attendance, the larger towns having been able to enroll 90 per cent. of the children of school age. The public graded schools at Cheyenne and Laramie are among the best of their class, being well directed and admirably taught. School buildings are generally excellent, a new one at Laramie City being especially fine. Teachers are liberally paid, not on the basis of sex, but of merit.

As yet there is no institution of a higher grade than the high school department of the public schools.

In the absence of sufficient data for a satisfactory comparison, reference is made to the statistical summary for a review of the decade.

Enough is given to indicate the progress and culture of the people, beginning ten years ago with but 4 public and 5 private schools, in which were but 15 teachers and 305 scholars, only 175 of these being in the public schools.—(Governor Hoyt's reports, 1878 and 1880.)

## CHIEF TERRITORIAL SCHOOL OFFICER.

Hon. JOHN SLAUGHTER, *territorial librarian and ex officio superintendent of public instruction, Cheyenne.*

Mr. Slaughter became superintendent in 1873, succeeding with an interval of two years Hon. J. H. Hayford, who was superintendent from 1869 to 1871.

# EDUCATIONAL ASSOCIATIONS AND CONVENTIONS.

## NATIONAL EDUCATIONAL ASSOCIATION.

### GENERAL ASSOCIATION.

This association held its nineteenth annual convention July 13–16, 1880, at Chautauqua, N. Y., the president, J. O. Wilson, of Washington, D. C., in the chair. The session was opened with prayer by Dr. Lemuel Moss, president of the Indiana State University. Rev. J. L. Hurlbut delivered the address of welcome, which was responded to by the president. Rev. A. D. Mayo, D. D., of Massachusetts, read a paper in which, after tracing the history of the reaction of twenty years ago against religious and moral training in the public schools and the demand of the people that the American school shall be a place for the training of character through moral instruction, he discussed a method of object training, in the centre of which stands the true teacher —the incarnation of what he would have his pupils become, a perpetual object lesson in gentle manners and good morals. Edward Spring, of Perth Amboy, N. J., urged the introduction of modelling in clay into the primary public schools, citing the Kindergarten, where it is taught with gratifying success. Fröbel saw its possibilities and introduced it into his system. Hon. James P. Wickersham, chairman of the committee to secure a bill incorporating the association, reported that the United States Senate passed the bill and sent it to the House, where it slept; so the committee was continued. Dr. E. E. White, of Indiana, reported an amendment to the constitution, admitting educational associations to a perpetual directorship on payment of $100, which was adopted. At the evening session, John Hitz, of Washington, D. C., consul general of Switzerland, gave a detailed account of the normal training of teachers for the girls' industrial schools in the canton of Aargau, Switzerland, in which he said that the first and essential thing is competent teachers, and that without them all attempts to introduce industrial training into the public schools will be premature. Supt. A. P. Marble, of Worcester, Mass., then read a paper on "The unattainable in public school instruction," which he discussed at length. At the Wednesday morning session the paper of Prof. W. H. Payne, of Michigan University, on "The domain of nature and art in the process of education," was read by Z. C. Spencer, of Michigan (the author being absent), in which it was held that education is neither the work of art alone nor of nature alone, but is a process based on nature and requiring the full resources of human art. Col. Francis W. Parker, one of the Boston school supervisors, formerly of Quincy, Mass., spoke at some length in defense of the "Quincy methods," holding that, far from being new, they are the outcome of the experience of the last century. Miss Grace C. Bibb, professor of pedagogics in Missouri University, read a paper on "Normal departments in State universities," which was followed in the evening session, after the election of officers for the ensuing year, by the reading of a paper on "The development of the superintendency," by Charles Francis Adams, jr., of Quincy, Mass. Hon. G. J. Orr, of Atlanta, Ga., then read an interesting paper on "The education of the negro: its rise, progress, and present status," which closed the session. The session of Thursday morning opened with a report from T. W. Bicknell, of Massachusetts, in favor of the organization of a "National Council of Education" in connection with and as a part of this association, and a constitution for the same was adopted and officers were chosen. The council consists of three members chosen by each of the five departments of the association, with twelve additional elected by the directors of the association, and twenty-four others elected by the twenty-seven thus created, making fifty-one in all, provision being made for annual change of seven and for annual meetings in connection with those of the general association.

J. W. Dickinson, secretary of the Massachusetts board of education, then read a paper on "Results of methods of teaching," in which he held that those who have no definite methods to use have generally no definite ends to obtain. Dr. W. T. Harris, of St. Louis, followed with a paper on "Text books and their uses," in which their abuse and proper use were set forth at length, quoting the words of Rousseau: "Reading is the great misery of children. The pedagogues teach children words, nothing but words, and no real knowledge." Edward A. Singer, of Philadelphia, opened the evening session with an instructive paper on "What constitutes a practical course of study;" at the close of which Supt. A. J. Rickoff, of Ohio, after indorsing the excellent paper read, said, "I do not hesitate to give it as my opinion that our course of study is gorged and must be diminished." Then followed a paper on the "New education," by W. N. Hailmann, of Detroit, Mich., explaining the theory and working of Kindergarten training and contrasting the theories of Pestalozzi and Fröbel.

At the opening of Friday morning session, the names of the National Council of Education were reported by W. D. Henkle, of Ohio, chairman of the committee to appoint such members. Dr. James McCosh, president of Princeton College, read a paper on "The importance of harmonizing the primary, secondary, and collegiate systems of

education," dwelling largely on the importance of an educational system in which the high and normal schools shall educate for and feed the colleges. This was followed by a paper on "The relation of educators to the spelling reform." Z. Richards, of Washington, D. C., read the report on necrology. Resolutions on the death of Rev. Barnas Sears, after appropriate remarks by G. J. Orr, of Georgia, were adopted. E. E. White, of Indiana, was requested to prepare a tribute to the memory of Bernard Mallon for publication in the report of the proceedings. Hon. J. D. Pickett made a report for Kentucky, when, after a few closing remarks by the president, the association adjourned.

### DEPARTMENT OF HIGHER INSTRUCTION.

This department (Rev. Lemuel Moss, president) met in the hall of philosophy and after the appointment of a committee of nomination of officers adjourned.

On the second day Professor Timayensis, in a brief address, explained and illustrated the modern pronunciation of the Greek language.

The third day was devoted to the reading and discussion of a paper by Prof. J. L. Packard on "Scholarships," which he said presented a problem of no easy solution. The discussion was continued by John Hancock, of Dayton, Ohio, President L. Moss, of Indiana, A. C. Hall, of New York, I. W. Andrews, of Marietta, Ohio, E. T. Tappan, of Kenyon College, Ohio, and L. S. Thompson, of Lafayette, Ind.

The department on the fourth day met in the amphitheatre, and was addressed by its president, Eli T. Tappan, on the "Complexity of causes," who was followed by W. T. Harris, of Missouri, with a paper on "Equivalents in a liberal course of study."

### NORMAL DEPARTMENT.

The normal department was called to order by its president, J. C. Gilchrist, of Cedar Falls, Iowa. The paper on "Object lessons in morals," read before the general association by Rev. A. D. Mayo, was discussed by several gentlemen.

The proceedings of the second day were discussions of the paper on "The domain of nature and art in the process of education," read by W. H. Payne; an address from the president of the department; a paper on "Subject matter in normal training," by G. L. Osborne, of the Warrensburg Normal School of Missouri, which elicited much discussion as to what was legitimate work in the school room; following which came an elaborate paper by George P. Brown, State Normal School, Indiana, on "The obstructions which resist the formation and growth of the pedagogic profession." The discussion which ensued showed a wide difference of opinion on the views expressed in the paper.

The third day was devoted to a review of the papers read before the general association, which showed a deep interest in the various topics presented.

After a brief session on the fourth day, the department adjourned.

### ELEMENTARY DEPARTMENT.

This department, presided over by J. H. Smart, superintendent of public instruction of Indiana, after electing officers for the ensuing year and attending to minor matters, devoted the third day to a paper on "The practical use of reference books," by Miss Mary W. Hinman, of La Porte, Ind., and to one by E. O. Vaile, of Chicago, on "What shall we seek to accomplish in the reading exercises?" These two papers were largely discussed, eliciting great interest and diversity of views. Then followed a paper by Miss Ellen Hyde, president of the normal school at Framingham, Mass., discussing the question "How can character be symmetrically developed?"

### DEPARTMENT OF INDUSTRIAL EDUCATION.

The department was opened with an address from President E. E. White, of Purdue University, Indiana, in which he presented the importance of "Technical training in American schools," arising from the steady decline of the apprenticeship system and the consequent danger that our artisans may be at the mercy of the skilled labor of Europe. This was followed by a paper on "Technical training in the land grant colleges," by Dr. J. M. Gregory, of Illinois, stating their origin, purpose, present difficulties, and his belief in their future popularity and success, as they will aid the arts by giving them trained investigators, inventors, and leaders and by bringing larger lights from science into workshops and fields.

### DEPARTMENT OF SUPERINTENDENCE.

The department was called to order by J. O. Wilson, and officers for the next year were chosen. A resolution on the life and death of Bernard Mallon, after some appropriate remarks by S. G. Brinkley, of Georgia, was adopted. At the second day's session J. P. Wickersham, J. O. Wilson, and A. J. Rickoff were chosen representatives of the department in the National Council of Education. The time and place of next meeting was left to the officers and the department adjourned.

## AMERICAN INSTITUTE OF INSTRUCTION.

The fifty-first annual meeting of the American Institute, held at Saratoga Springs, N. Y., July 6, 1880, was a notable gathering in the representative character of the persons attending, in the excellence of papers read, and in the eagerly improved opportunities for discussion. The death of Dr. Barnas Sears during the session, and before the hour assigned for the delivery of his paper, gave a sad and pathetic interest to the occasion when his paper was read by Dr. Ellis, of Boston.

Hon. Neil Gilmour, superintendent of public instruction in New York, gave an address of welcome, which was responded to by the president of the Institute, I. N. Carleton, of New Britain, Conn. The first paper was by Hon. B. G. Northrop, secretary of the Connecticut board of education, on "The Quincy method." It was discussed by Col. F. W. Parker, of Quincy, and W. T. Harris, of Missouri. H. P. Warren, of the New Hampshire Normal School, read a paper on "The spiritual side of the high school question," which was then discussed by A. P. Stone, of Massachusetts, Dr. Hoose, of Cortland, N. Y., W. A. Mowry, of Rhode Island, and others. R. C. Metcalf, of Boston, spoke in favor of the greater use of public libraries by the schools, and the subject was continued by Supt. Ariel Parish, of Connecticut, President Buckham, of the Vermont University, and others. A paper followed on "Private schools," by Thomas Cushing, late principal of the Chauncy Hall School, Boston. The history of the American Institute was given in a paper read by Elbridge Smith, of Boston, Mass., and at its close remarks were made by Dr. Henry Barnard, Dr. John Kneeland, of Boston, an ex-president of the Institute, and others. Dr. Kneeland referred to the admission of women to membership in 1868 as a step marking the progress of the period. Dr. Barnard said there had been no forward movement in education during the last fifty years which had not been discussed in the Institute. A congratulatory letter was read from Governor Cornell, of New York, and a letter from General H. K. Oliver, one of the two living founders of the association, regretting that the infirmities of fourscore years prevented his presence. The evening session of the second day was devoted to the paper by the late Dr. Barnas Sears. Before reading it Dr. Ellis made a statement of the circumstances under which it was completed by the writer, who believed it would be his last work and requested him to read it to the association. The subject was "Educational progress in the United States during the last fifty years." Beginning with a history of the condition of schools and colleges from the earliest settlement of the country, it concluded with a statement of the improvements in the methods and quality of instruction since the year 1837, when Horace Mann became secretary of the Massachusetts board of education, at which period the writer dated the beginning of real progress. At the conclusion of the paper the association adjourned, out of respect to the memory of the distinguished writer, and before the final adjournment resolutions were passed expressing great admiration for his character, life, and achievements in behalf of education, and profound sorrow for his death. The first paper of the third day was by Dr. John W. Philbrick, of Boston, on "Coeducation of the sexes," in which he insisted on the importance of higher education for women as well as for men, but wanted women to obtain it in separate institutions. Want of time prevented a full discussion of the question; only four gentlemen gave their views on it, one of them agreeing with the opinions expressed in the paper, the others favoring coeducation. A paper by Miss J. H. Stickney, of Boston, Mass., on the "Language element in education," was read by S. W. Mason, of Boston. After its discussion readings were given by Prof. Charles Roberts, jr., of the Union Theological Seminary, New York, and lessons in singing by Prof. H. E. Holt, musical instructor of the public schools of Boston, given to his class of sixteen girls who were present from the Boston schools. Reports from committees, the election of officers, and other business followed. From the report on necrology it appeared that eight members died during the year. The programme of the last evening began with recitations by Professor Roberts and singing by Professor Holt's class, and concluded with a lecture from Rev. Henry Ward Beecher on "The new profession."—(New-England Journal of Education, July 15, 1880.)

## NEW ENGLAND ASSOCIATION OF SCHOOL SUPERINTENDENTS.

### FIRST SESSION.

This body holds two meetings each year. The first session for 1880 convened on May 28, in Boston. Supt. W. H. Lambert, of Malden, Mass., in a paper on the best interests of the high school, suggested that the causes of the antagonism to the high school were narrowness in aim, absorption in classical to the detriment of other studies, comparative fewness of its pupils and consequent cost, and a course of study inelastic and overcrowded. He recommended that teachers be experts, the studies more practical, the high school be the end of the school course, and the curriculum arranged to fit pupils for the ordinary business of life. Then he would have special fitting schools for colleges. Dr. Harris, of St. Louis, pleaded eloquently for high schools.

Mr. G. A. Walton analyzed the new departure in educational affairs in New England, and instanced the benefit that accrued from it to both teachers and pupils. Gen. John Eaton, Commissioner of Education, spoke on the "Supervision of instruction by civil authority." He referred to the growth, present condition, and legal basis of such supervision, to the functions of this supervision and the character and qualifications of those who administer it, to the rigid inspection and examination of English schools, to the authoritative and non-authoritative functions of a superintendent, and to the need of special training for this position. A report on the definition of teaching, the word method in teaching, and on school discipline was submitted and recommitted, and a general discussion of the papers followed.

SECOND SESSION.

The fall meeting was also held in Boston, October 29, 1880. Supt. W. W. Waterman, of Taunton, discussed "What is the most satisfactory division of classes and apportionment of studies of graded schools?" He would have teachers continue long enough with a class to understand the individualities of the pupils and to produce permanent impressions; he would have both general and separate class work, short steps in the course of study, and all studies distributed so as to cultivate power of concentration and continuity of thought. A resolution that the State make provision for the uniform examination of teachers for all grades of schools was next discussed. Supt. O. B. Bruce, of Lynn, considered the expediency and feasibility of such an examination. He urged the right of the State to demand a certain high standard of its teachers after expending so much in training them. Superintendents Stone and Marble were heartily in favor of State examinations. The following resolution was adopted: That the interests of the public schools of New England require that they be committed to the care of efficient skilled supervision. After the election of officers, the meeting adjourned.—(New-England Journal of Education.)

## WESTERN PEDAGOGICAL ASSOCIATION.

An informal meeting of men interested in the professional education of teachers was held at Ann Arbor, Mich., January 2–3, 1880. The purpose of the meeting was to discuss some of the fundamental questions in normal instruction and to agree upon certain lines of doctrine and policy. The papers presented and discussed were as follows: "Diagnosis of the disease of the body educational," by G. P. Brown; "The Quincy system," by E. C. Hewitt; "Educational psychology," by W. H. Payne; "The doctrine of memory," by Daniel Putnam; "Pupil teaching," by Joseph Estabrook; and a sketch of the École Normale Centrale of Paris, by Professor Hennequin. The following resolutions were adopted: That in lectures in the class room and before the people the value of skilful supervision be enforced and the largest liberty in the exercise of supervisory duties advocated; that while formation or culture is the great purpose of scholastic training, the mind, as the instrument of thought, is best developed while being furnished with valuable knowledge; that an elementary and an advanced treatise on educational psychology and a compendious history of education are needed for the purposes of sound normal instruction; that a meeting of men especially interested in normal instruction be called, at Put-in Bay in the third week of July, 1880. At such meeting the following topics were to be brought forward for discussion: (1) The formation of a body of educational doctrine, (2) the unification of professional instruction in normal schools, (3) the relation of normal school work to the State, (4) the education of the public with reference to normal schools and their work, (5) the relation of academic to strictly professional work, and (6) the relation of model and training schools to normal schools. Whether this meeting was held is not known.— (Pennsylvania School Journal.)

## INTERNATIONAL SOCIETY FOR INVESTIGATING AND PROMOTING THE SCIENCE OF TEACHING.

The first meeting of this society was announced for August 16–21, 1880, at the Thousand Islands Park. It was the outgrowth of a preliminary meeting—the Normal Educational Conference—held in August, 1879, in the same place. The feeling among educators that the profession of teaching should have an association to promote the scientific advancement of the knowledge and experience of teaching is to be carried out by this society. Many of the most progressive and scholarly educators in Canada and the United States are already members, and it is thought that it will be one of the most profitable educational gatherings in the country. The following subjects are to be presented: "Intellectual education: its nature, province, and method;" "Laws of methods of teaching;" "Moral education in public schools: its nature, province, and method;" "Art education in public schools: its nature, province, and method;" "How children learn to read;" "School government: its nature, province, and method," &c. This body is said to be the only educational association of a purely scientific and professional character that has been organized in this country.—(Educational Weekly.)

## AMERICAN FRÖBEL UNION.

The first of a series of public conferences to be held by the American Fröbel Union took place in New York, beginning March 31, 1880. The object of these meetings is to review the work of the Kindergarten in America by means of lectures and discussions by prominent people most interested in the work, and through these meetings to help the Kindergarten work in this country. Miss Peabody, president of the union, recounted the history, present condition, and aims of the union. Thomas Cushing, late principal of the Chauncy Hall School, Boston, spoke of the operation of the Kindergarten in his school. Dr. Wm. T. Harris, superintendent of public instruction in St. Louis, explained the methods of the Kindergarten and advocated a place for it in the common school system. Prof. Felix Adler favored these schools for the poor. Professor Bachellor spoke on the "Analogies of tone and color," and E. A. Spring, sculptor, of Perth Amboy, N. J., on "Modelling as an occupation of the Kindergarten."—(New-England Journal of Education.)

## AMERICAN PHILOLOGICAL ASSOCIATION.

The twelfth annual meeting was held in Philadelphia July 13–15, 1880. Organized in 1868 for the pursuit of philological studies, in its membership are embraced nearly all the prominent students of languages in America. The president, Prof. C. H. Toy, of Harvard College, delivered the annual address; Prof. W. D. Whitney, of Yale College, read a paper on "Logical consistency in linguistic views;" Rev. R. F. Weidner, one on "Some points connected with the prophecy of Obadiah;" Dr. W. C. Cattell, president of Lafayette College, one on the "Etymologies of Lactantius;" Prof. M. W. Humphrey, of Vanderbilt University, "A contribution to infantile linguistics;" Prof. S. S. Haldeman, University of Pennsylvania, "Notes on the invention of words by children." These were followed by papers from Dr. Isaac H. Hall, on "The declination of the Cypriote article," and from Rev. R. F. Weidner, on the "Study of the Bible." The committee on the nomination of officers reported, and this closed the morning session of the second day. In the afternoon the following topics were presented: "The use of Anglo-Saxon particles," Prof. C. P. G. Scott, of Columbia College; "The beginning of written literature in Greece," Prof. Lewis R. Packard, of Yale College; "The battle of Mons Grampius," Prof. W. F. Allen. The last day's session was opened by Professor Toy, who read a paper on "Verbs ending in *un* in Hebrew as an indication of date." A paper from A. C. Merriam, PH. D., of Columbia College, on "An experiment of reading Greek at sight with volunteer classes in college," was read by Dr. Cattell. The last paper presented to the association was on Virgil and Plato. Ernest G. Sihler, PH. D., of New York, traced the analogy between the transcendental psychology of the sixth book of the Æneid and Plato's Metempsychosis, discussing the motive of this episode in the economy of the Roman epic. The association then adjourned to meet in Cleveland in 1881.—(Daily Evening Telegraph.)

## SPELLING REFORM ASSOCIATION.

The annual meeting was held at Chautauqua, N. Y., in connection with the National Educational Association, July 15–16, 1880. The president, Prof. F. A. March, of Lafayette College, delivered the introductory address, in which he reviewed the progress made in spelling reform during the year. He referred to the formation of the English Spelling Reform Association, and to the recent action of the Philological Association of England, by which a list of words is to be made out wherein the spelling suggests a false etymology. Dr. J. M. Gregory, president of the Illinois Industrial University, spoke on the spelling reform demanded by the nineteenth century. Mr. Z. Richards, of Washington, D. C., claimed to be the first spelling reformer, as he commenced in 1844. On the second day Mr. W. G. Ballantine, professor of Hebrew in Oberlin College, commenced the exercises with a paper entitled "The duty of our colleges to the spelling reform." Mr. E. O. Vaile, of Chicago, spoke on "Spelling reform and the press." A lively discussion followed, the speakers agreeing as to the necessity of prompt action in order to improve the schools and advance the interests of education. After the usual business arrangements, the association adjourned.—(New-England Journal of Education.)

## NATIONAL GERMAN-AMERICAN TEACHERS' ASSOCIATION.

This association held its eleventh annual convention at Newark, N. J., July 27–30, 1880. After listening to addresses of welcome of Mayor Fiedler and Mr. Barringer, superintendent of city schools, the following officers were elected: Prof. W. J. Eckoff, of Newark, president; Mr. H. H. Fick, superintendent of drawing in Cincinnati, vice president; Prof. A. Schumacher, of Cleveland, secretary, and Prof. G. H. Borger, of Cincinnati, treasurer. The chairman of the executive committee read a report on the activity of the association during the preceding year.

At the first session several papers of great interest were presented and ably discussed, to wit: "Gymnastics in the common school," by Prof. Geo. Wagner; "The claims of instruction in drawing," by Prof. H. H. Fick. This paper abounded in valuable information regarding the history of the study of drawing and led to a spirited discussion. Then the question of "Establishing special schools" was taken up. Mr. A. Schück, of Detroit, advocated the adoption of his motion: "The association considers the establishment of special (so-called ungraded or unclassified) schools necessary for such pupils as disturb and check the progress of the great majority either by reason of their moral depravity or intellectual poverty." The association adopted his motion in so far as it related to schools for "morally weak" pupils, but could only after a long discussion be brought to admit the necessity of establishing schools specially adapted for the "intellectually weak" ones. The convincing arguments of Prof. W. N. Hailmann, of Detroit, however, led to the adoption of the resolution, amended by Prof. I. Keller, of Milwaukee, to the effect that special classes in large school-houses might answer the purpose.

In the evening Prof. L. R. Klemm, of Cincinnati, delivered an address to a large audience in the Academy of Music on "Old truths in new garments." He discussed the province of the common school, holding it to consist chiefly in developing harmoniously the child's natural gifts. He quoted at length the "irrepressible business man," the statesman, the artist, the learned man, the journalist, and generally refuted their claims, showing that they measure the results of the schools by the needs of their vocations. He found but one fault with the common school as it is, namely, that it lays too much stress on the acquisition of knowledge instead of its application, which fault he illustrated very convincingly. The address was exceptionally well received.

The second session was occupied in discussing the relation of the association to the National Normal School in Milwaukee, its own creation, and to the turners' and the teachers' associations. Mr. Von der Heide, of Newark, then read an essay on "German spelling and script," which led to the appointment of a committee to act with the Spelling Reform Society in Germany. Mr. C. Wiedemann, of Newark, spoke with great earnestness of the necessity of more bodily exercise for girls. Dr. Lehlbach, of Newark, read a paper on "Hygiene in school," which led to a direction to the executive officers to prepare a pamphlet containing the results of actual researches regarding the health of school children. The committee on statistics, Professor Fick chairman, presented an interesting but incomplete report showing the extent of instruction in German in public, parochial, and private schools in this country. The committee was requested to continue its labors, and funds were appropriated for the purpose. Prof. I. Keller, principal of the normal school above mentioned, reported on the present and future state of the institution. New trustees were elected. Prof. W. J. Eckoff reported on the labors of his committee on "Selection of suitable matter for æsthetic culture." The chairman of the committee on Kindergärten, Professor Hailmann, also read a valuable report on the progress of the year. All the reports and papers were discussed.

The third session began with a paper by Mr. J. Reichhelm, of Hoboken, on "The citizen of the Union and his claim for proper education." After the transaction of routine business, a special committee laid before the association a carefully revised constitution, which was adopted without discussion.

There is no question that this eleventh convention was an improvement on the previous ones, owing to the high character of the discussions held at Newark. The following gentlemen were elected officers for the year 1880–'81: Prof. W. N. Hailmann, of Detroit, president; Prof. L. R. Klemm, of Cincinnati, secretary; Prof. G. H. Borger, of Cincinnati, treasurer. Davenport, Iowa, was selected as the place for holding the next convention.

## BUSINESS COLLEGE TEACHERS' AND PENMEN'S ASSOCIATION.

This body met in Chicago July 27–31, 1880, with delegates and pupils from the different institutions of these classes in attendance. About fifty persons, representing from 25,000 to 30,000 students, attended the meeting. Among the subjects discussed were banking, book-keeping, national finances, methods of detecting false entries to cloak embezzlement, and expert methods of discovering and identifying handwriting. Lectures were given on the German language as related to commercial education, phonography, the voice as a medium in business communications, the mission of a business college and its place among educational institutions, and on the value of a business college course as ascertained by the experience of a graduate who has pursued a successful business career. The usual business matters, drafting of resolutions, &c., preceded the adjournment.—(Proceedings of the convention, New-England Journal of Education.)

## INTER STATE ORATORICAL CONTEST.

The sixth annual inter State collegiate oratorical contest took place at Oberlin, Ohio, May 5, 1880. Hon. Thomas A. Hendricks, Judge S. N. Owen, and Rev. James

Brand acted as judges. L. C. Harris, of Grinnell College, Iowa, took the first prize, and Richard Yates, of Illinois College, the second.—(Ohio Educational Monthly, June, 1880.)

The association for this purpose covers the whole Northwest, each college connected with it having a contest among its students to determine which one of them shall represent it in a State contest, the victor in which last represents his State in the inter State contest for the year. The object of the association is of course the development of oratorical capacity among college students.

## AMERICAN ACADEMY OF ARTS AND SCIENCES.

The American Academy of Arts and Sciences celebrated the centennial of its corporate existence May 26, 1880, in the old South Church at Boston. About 300 were present, including fellows, associate fellows, and honorary members, besides members of sister academies at home and abroad and of other similar associations. Many learned societies unable to send delegates forwarded cordial greetings, among these being the Royal Danish Academy of Sciences, the academic consistory of the University at Lund, Sweden, and the Astronomical Society of Gotha and Strasburg, Germany. Among the foreign societies represented were the Philosophical Society of Cambridge, England, the Statistical Society of London, the Société de Géographie Commerciale, Bordeaux, the Société Géologique de France, the Accademia dei Lincei of Rome, the Academy of Sciences at Bologna, and the Zoölogical Society of Frankfort-on-the-Main. Delegates from thirteen learned societies of the United States were present, and there was a full attendance of fellows of the academy. Hon. Robert C. Winthrop presided and delivered the principal address. Dr. O. W. Holmes read a poem, and remarks were made by Professor Gray, formerly president of the academy, Very Rev. John S. Howson, Dean of Chester, Prof. W. B. Rogers, and others.

Founded in 1779 and chartered May 4, 1780, this academy is the oldest corporation of its kind in the country save one, the American Philosophical Society, of Philadelphia, which preceded it by a few months. The French Academy and the Royal Society were taken as models, but the American academy was well aware of its special needs and has always been a true academy, faithful to its objects. An independent society of learned men who are at the head of their branches of knowledge, it excludes the schools of medicine, theology, and law, as such, because the school which trains for a learned pursuit does not intend to discover the new but to guard the old. The academy means to keep on the heights of science; its memoirs and essays are neither popular adaptations nor learned manuals and digests; they avoid rhetoric and the academic dialect. By the charter it is provided that at least four meetings a year shall be held. The membership is confined to 200 fellows who must be residents of Massachusetts, 100 associate fellows, residents of the United States outside of Massachusetts, and 75 honorary members who live in foreign countries. The academy is so far an institution of Massachusetts and Boston as that the meetings and administration are conducted there.—(Boston Daily Advertiser, May 26, 27, 1880.)

## AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

This association held its twenty-ninth annual meeting in Boston August 25 to September 1, 1880, with the president elect, Hon. Lewis H. Morgan, of Rochester, N. Y., in the chair. The introductory address, by President Rogers, of the Massachusetts Institute of Technology, was followed by addresses of welcome by Mayor Prince and Governor Long. The deaths of members of the society for the year were reported; a committee was appointed to draft resolutions on the death of General Albert J. Myer, and another to cable greetings to the British Association on its fiftieth meeting. The general session was then adjourned, and the various sections and subsections organized. Prof. Asaph Hall, of Washington, reviewed the recent advances in the science of astronomy; Prof. John M. Ordway took up the latest achievements of practical chemistry, and discussed its methods. Maj. J. W. Powell, in the subsection of anthropology, spoke on the social organization and government of the Wyandotte Indians. In the evening the retiring president, Prof. George F. Barker, addressed the association on "Some modern aspects of the life question," basing his remarks on the theory that every action of the living body is, sooner or later, to be recognized as purely chemical or physical, the life that science has to deal with having no existence apart from matter. At the second day's meetings Prof. Alfred M. Thayer, in a eulogy on the late Professor Henry, dwelt particularly on his work as a discoverer in science. The practical side of that work was touched on in connection with the experiments which proved so beneficial to the light-house and fog-signal service. Prof. Alexander Agassiz followed with an address on "Paleontological and embryological development," choosing his illustrations from a limited group of marine animals having less than 300 living species and more than 2,000 known fossil species. A glance at the programme of the meeting shows that its proceedings were rich in varied interest and characterized mainly by a genuine scientific spirit. Among other noteworthy presentations was the

picturesque photographing of the Rocky Mountain flora by Professor Gray. Various entertainments were given to the members; certain hours were devoted to visiting museums, libraries, &c.; and one evening was given to the section of microscopy of the Boston Society of Natural History; members of the association were desired to participate by exhibiting instruments, accessory apparatus, and specimens. The association was largely attended, nearly 600 members being registered the first day, and fully 500 new members were elected during the first two days.—(Scientific American, New-England Journal of Education.)

## AMERICAN SOCIAL SCIENCE ASSOCIATION.

The Social Science Association met at Saratoga Springs, N. Y., September 8, 1880, Col. T. W. Higginson, of Massachusetts, presiding over the educational department. Mr. Higginson said that the so-called Quincy method of education was only a revival of a system advocated by the late Horace Mann. Mrs. Talbot, of Boston, read the report of William T. Harris on Kindergärten. Mr. Higginson thought that some modifications in Fröbel's method were made necessary in this country by the different climate and social conditions here. Miss A. Wiggens, who had observed Kindergärten in Germany, thought that less machinery is needed here. President Gregory, of Illinois (long at the head of the Industrial University), expressed the belief that children are sent to school when too young, and that better scholarship resulted when school life was not begun earlier than 9 or 10 years of age. Mr. Higginson said the best scholars he had known began school life young. Miss Edith Simcox, of the London school board, sent a paper on educational progress in England, in which was sketched the development of the educational system in England during the past fifty years, including the various steps to secure the higher education of women. Mr. Higginson alluded to the influence of an American, Moncure D. Conway, of London, in bringing about much of this progress, particularly in respect to the higher education of women. Mr. Conway, who was present, then gave some facts showing the progress made in that cause, and expressed the opinion that in a few years coeducation of the sexes in colleges would be an assured and common fact. Other papers followed: one on "The relation of the public library to the public schools," by S. S. Green, of Worcester, Mass.; one on "The treatment of insanity in its economic aspect," by Walter H. Channing, M. D., of Boston; one on "The American newspaper: its relation to American education," by Dr. J. M. Gregory, of Illinois; and one on "The adulteration of food, drugs, and domestic articles," by Prof. S. W. Johnson, of Yale College. The last was an exhaustive review of the past and present adulterations of food in England and the United States. It concluded, however, with the opinion that we are not suffering serious loss of goods or health from this cause. A communication was read from Leroy Parker, of the Michigan State board of health, recognizing the importance of the subject and urging the necessity of arousing public opinion to secure the enforcement of laws against the adulteration of food.—(New-England Journal of Education.)

## NATIONAL ACADEMY OF SCIENCES.

### FIRST MEETING.

Two sessions of this association are held each year; the first took place in Washington, D. C., April 20–23, 1880; the last in New York City, November 16–19, 1880. In a private session of the spring meeting an amendment to the constitution was adopted limiting the number of members in the future to 100. Professor Agassiz described the new species of sea urchins found by the Challenger expedition. Dr. Coues read Prof. A. S. Packard's paper on "The internal structure of the brain of the Limulus polyphemus, or horsefoot crab." Prof. O. C. Marsh reaffirmed his discoveries touching the law of brain growth. Mr. D. P. Todd presented a plan for the use of the electric telegraph by which observers of the eclipse of 1882 might telegraph their discoveries from station to station. F. M. Green read a paper on the telegraphic determinations of longitude by the United States Hydrographic Office. Prof. T. Sterry Hunt, in his paper on "The Taconic system in geology," reviewed the evidence of a great and widespread series of rocks, pre-Cambrian in age, and showed where they are to be found and of what they are composed. Prof. S. P. Langley explained experiments in the measurement of radiant heat and told of an improved thermo-electric apparatus due to a product of the American iron industry. Prof. William Harkness, in "The solar corona," summarized the amount and distribution of light in the corona of July 29, 1878, as follows: Total light of corona 3.8 times that of the full moon, or 0.0000069 that of the sun. Other papers were on the nebula of Orion and the distribution of Zeus conchifera, an early race of man in Japan.

### SECOND MEETING.

At the fall meeting Professor Agassiz read two papers, one a report of the dredging cruise of the United States steamer Blake, Commander Bartlett, during the summer of

1880, the other on the origin of the coral reefs of the Yucatan and Florida Banks. Prof. J. E. Hilgard read a paper on the basin of the Gulf of Mexico. These papers were said to add materially to the knowledge of the South Atlantic Coast, the Gulf of Mexico, and the Caribbean Sea. Prof. Henry Morton, of the Stevens Institute, gave two papers; the first, on some recent experiments in determining the electro-motive force of the Brush dynamo-electric generator; the second, on measurement of new forms of electric lamps operating by incandescence. These electrical papers, particularly the latter, on the Maxim incandescent lamp, awakened unusual interest. Important information was presented to the academy by Prof. Wolcott Gibbs's new method of analyzing metals by electrolysis. Prof. S. P. Langley read papers on the thermal balance and on the measurement of radiant energy. Prof. Elias Loomis followed with a report on the causes which determine the progressive movement of storms. Prof. O. N. Rood described an improvement in the Sprengel air pump. Prof. J. S. Newberry's papers were entitled "Antimony mines of Southern Utah" and "Deposits of crystalline ores in Utah." He regards Utah as one of the great mineral regions. Prof. Henry Draper spoke on the photographing of the nebula in Orion; Prof. G. F. Barker, on condensers of high potentiality; C. S. Peirce, on the ellipticity of the earth; Prof. O. C. Marsh, on the brain and spinal cord of some extinct reptiles.—(Scientific American, New-England Journal of Education.)

## CONFERENCE OF PRINCIPALS OF SCHOOLS FOR THE DEAF AND DUMB.

The fourth conference of principals and superintendents of American institutions for the deaf and dumb met at the Clarke Institution, Northampton, Mass., May 25–29, 1880. After a brief address of welcome by Miss Harriet B. Rogers, principal of the Clarke Institution, committees were appointed and officers elected. Rev. Thomas Gallaudet, D. D., who was elected president, addressed the conference, expressing increased faith in the practical value of articulation and lip-reading in the teaching of the deaf. Sister Mary Ann Burke, principal of Le Couteulx St. Mary's Institution, Buffalo, N. Y., gave her views on the combined method which is used in that institution. A very interesting discussion followed on the relative value of articulation and the sign language, and on the two combined, the weight of opinion appearing to be in favor of the combined plan. Dr. Gallaudet spoke in regard to the best preparation of students for admission to the National Deaf-Mute College at Washington, and replied to a number of questions from those present on the subject. Mr. Leonidas Poyntz, of Staunton, Va., read a paper entitled "A view of the paramount importance of primary education;" and at its conclusion Mr. Westervelt, of the Western New York Institution, was asked to describe the primary instruction there, in which the Kindergarten system is used with decided advantage. Miss Sarah Fuller, principal of the Horace Mann School, Boston, explained the aims and plans of the Society for the Encouragement of Study at Home with reference to aiding indigent mute young ladies in the pursuit of their studies after leaving school, stating that a special programme of reading and study had been prepared for them and a teacher placed in charge of the work. Dr. McIntire and Mr. Hammond spoke earnestly in favor of the plan as one likely to result in great benefit to deaf-mute girls. Mr. Woodbridge, principal of the Halifax Institution (Nova Scotia), read a valuable paper on "The art of drawing; its importance to deaf-mutes." Mr. H. A. Gudger, principal of the North Carolina Institution, Raleigh, N. C., read a suggestive paper by Mrs. Helen Campbell, superintendent of the Cookery School, Raleigh, N. C., on the importance of giving special training in cookery to deaf-mute girls. The usefulness of the audiphone as an aid in the instruction of deaf mutes was next discussed, a majority of the speakers considering it of no value in most cases. Further discussion on the "combined method" ensued, in the course of which some members expressed a decided objection to the term "dumb" in characterizing persons who cannot hear. After further consideration of the means of supplying material for object teaching in institutions, resolutions of thanks to various persons were adopted and the conference adjourned.—(American Annals for the Deaf and Dumb, July, 1880.)

## AMERICAN ASSOCIATION OF INSTRUCTORS OF THE BLIND.

Held biennially, this association met for the sixth time, at Louisville, Ky., August 17–19, 1880, the president, G. L. Smead, of Ohio, in the chair. The proceedings of the first day included the address of welcome by Dr. T. S. Bell, president of the board of trustees of the Kentucky Institution for the Blind, the reply by the president, and addresses by Mr. Chapin, of Philadelphia, and Hon. Albert S. Willis, of Kentucky. On the second day, after the reading of the treasurer's report, the committee appointed at the last convention to memorialize Congress in behalf of the education of the blind, submitted their report, which was adopted. The new education, or Kindergarten for the blind, was discussed in the afternoon, the art of printing for the blind occupying the rest of the morning session. The evening was given up to the arrang-

ing of business matters. During the third day's sessions, the subject of institutions for blind colored people was entered into. A committee was appointed to consider the need of a collegiate education for the blind. A discussion took place in regard to a more comprehensive system of industrial education in institutions for this class, a combination of the best features of British and American systems being aimed at. The board of trustees of the American Printing House for the Blind met also at Louisville in connection with the association. The need of extending the field of literature for this class was urged, and a report of what has been done was presented. On the afternoon of August 19, the convention adjourned to meet at Janesville, Wis., in August, 1882.—(Report of proceedings.)

## SOCIETY FOR POLITICAL EDUCATION.

There was established in October, 1880, a national society for education in political science non-partisan in character and national in scope. It has no president, but is controlled by an executive committee of 25 members from different sections of the country, many of them distinguished as students of political and social science and of all shades of political opinion. One-third of the members resign each year, their places being filled by the remaining two-thirds. A wide correspondence is carried on by five secretaries, living in as many different sections of the country, through whom courses of reading selected by the society are recommended. Books and tracts on economic and political topics are published and circulated, the details of printing being attended to by a committee of ways and means, whose headquarters are in New York. The course of reading selected for the first year comprised Nordhoff's Politics for Young America, Prof. A. L. Perry's Introduction to Political Economy, Johnson's History of American Politics, and McAdam's Alphabet in Finance.

There are two classes of membership, active and coöperating. Active members are such persons as will pledge themselves to read the books recommended by the society for the official year, included in its Library of Political Education, and will pay an annual fee of 50 cents. Any person may become a coöperating member on the annual payment of $5 or more, which entitles such member to receive all the tracts published by the society. There are no other conditions or obligations of membership. The number of tracts to be published annually will depend chiefly on the amount of subscriptions received. It is also desired to establish a fund for furthering the general work of the society and for facilitating the placing of books approved by the society in public and school libraries.—(Circulars and letter from Secretary R. L. Dugdale, 5 Morton street, N. Y.)

## AMERICAN PUBLIC HEALTH ASSOCIATION.

Dr. John S. Billings presided over the eighth annual meeting of this association, held in New Orleans, December 7–10, 1880. Over 400 members were present. A report of the advisory committee on national sanitary legislation was the forerunner of various papers on sanitation. Dr. G. B. Thornton, of Memphis, commenced with "The sanitation of Memphis;" Colonel Waring followed with "The value of sanitation from an economic standpoint;" Prof. Jno. Gamgee, with "The sanitary urgency of the Florida ship canal." Dr. A. L. Gihon read Dr. Turner's paper on sanitation of emigrant ships; Hon. John Eaton, Commissioner of Education, a paper on sanitation and education; and Dr. Scales, one on municipal sanitation as practised in Mobile. A resolution was adopted that the advisory and executive committees take under consideration the advisability of establishing a national museum of hygiene; also, one commending the organization of auxiliary sanitary associations. Various other papers were read on different subjects; among them was one on the relations of schools to diphtheria, by Dr. Baker, of Michigan. Several resolutions were presented and adopted. In one the association, recognizing that systematic sanitary surveys and inspection are essential aids to successful public health works and to the progress and application of sanitary science, urged upon local authorities the importance of such surveys and of the sanitary maps and records that pertain thereto.—(Southern Practitioner.)

## AMERICAN LIBRARY ASSOCIATION.

Various endeavors were made during the year 1880 to have a meeting of this association. The decision was at last arrived at that Washington, D. C., should be the city, and that the conference should be held in February, 1881. A review of the proceedings will be given in the Report of the Commissioner of Education for 1881.—(Library Journal.)

## AMERICAN ACADEMY OF MEDICINE.

On September 28–29, 1880, the fifth annual meeting of this body took place in Providence, R. I. The society consisted of 119 members, of whom 24 were present during the session. Dr. Frederick D. Lente, of New York, presided, and welcomed the members.

Several amendments to the constitution were adopted and the hand of fellowship was given to 26 gentlemen. The council was instructed to collect the laws of all the States in the Union and of the Dominion of Canada which pertain to physicians and to the practice of medicine, with a digest of the same, and to present them to the academy at its next annual meeting. In the evening Dr. Lente delivered the annual address on the higher education of medical men and its influence on the profession and the public. He stated that we have too many medical schools and too many physicians, there being one to every 600 persons; in European countries there is one to every 3,800. Better men should be induced to enter the profession and there should be a higher standard of requirements. The object of this society is to bring together the most highly educated men in the profession and to encourage thorough preparatory education. The best preliminary requirement at present available is that the student possess the degree of A. B. or A. M. from some respectable literary institution. A medical diploma should show that the holder has availed himself of all possible advantages. The reading of records, report of treasurer, &c., finished the proceedings.—(Boston Medical and Surgical Journal.)

## AMERICAN MEDICAL COLLEGE ASSOCIATION.

At the fourth annual meeting of this association, held in New York May 31, 1880, it was decided that all medical colleges belonging to the association should require of their students, conditional to graduation, attendance on three full courses of lectures instead of two as heretofore, a measure proposed and debated at the meeting held in 1879. This association, which professes as the great object of its existence the advancement of medical education in the United States, claims to have been already instrumental in greatly diminishing the number of diplomas that are bestowed without thorough study and examination, to have promoted uniformity in medical teaching and in the requirements for graduation, caused the disappearance of all schools having two terms in one year, and made it impossible for students (except at two schools) to complete a medical course within one year. The next step proposed is to add to the requirements a matriculation examination.—(Report of the American Medical College Association, 1880.)

## NATIONAL ECLECTIC MEDICAL ASSOCIATION.

The tenth meeting of this association was held in Chicago June 16–18, 1880, with an attendance of about 135. The annual address by the president, Dr. Milbrey Green, was on the subject of medical improvements, higher standard of education, organization of reformed physicians, necessity of thorough training, importance of hygiene and sanitary medicine, &c. A report on surgery was made by Dr. A. J. Howe, and papers were read on the influence of heredity in disease and on medical jurisprudence. The advantages and disadvantages of the plaster of Paris jacket in spinal troubles, &c., were set forth by different persons. A discussion of John Buchanan, bogus degrees, and "snide" diplomas followed. An address on otology, by Dr. Henry Olin, concluded by comparing the human ear to a telephone constantly charged with electric force and always ready to convey messages to the brain. The States reported, by delegate or otherwise, on the status of eclectic medicine therein. Reports were read on gynæcology, microscopy, tracheotomy, and on the influence of inebriety on criminal statistics. A resolution was adopted that the California Eclectic Medical College be recognized by the association, and after the election of officers, &c., the association adjourned.—(New York Medical Eclectic.)

# APPENDIX.

## STATISTICAL TABLES

RELATING TO

# EDUCATION IN THE UNITED STATES.

TABLE I.—PART 1.—*Statistics of the school systems of the States and Territories, showing &c.; from replies to inquiries by the*

| | States and Territories. | Report for the year— | SCHOOL YEAR. | | SCHOOL POPULATION. | |
|---|---|---|---|---|---|---|

*h* Estimated.
*i* Total of reported items only, and probably not the whole income for school purposes.
*j* Includes revenue from other funds.
*k* $340,805 were obtained from the sale of bonds, making the total receipts $7,526,225.
*l* State appropriation.
*m* Includes income for evening schools.
*n* Total income not reported; amount given is that reported as expenditure which, it is stated, was derived from tribal funds.

TABLE I.—PART 2.—*Statistics of the school systems of the States*

| | States and Territories. | ANNUAL EXPENDITURE. | | | |
|---|---|---|---|---|---|
| | | Current. | | Total. | Expenditure in the year per capita of the school population. |
| | | Salaries of teachers. | Miscellaneous or contingent (includes fuel, light, rent, repairs, &c.). | | |

| | Creeks | | | 28,356 | |
| | Seminoles | | | 7,500 | |

*a* Value of school-houses, furniture, and apparatus.
*b* Items not fully reported.
*c* In 1879.
*d* Includes $1,690 expended for colored schools outside of Wilmington.
*e* Does not include expenditure for books.
*f* For white schools only.
*g* Amount received from the State and from local taxation for the support of the public schools; this amount is largely supplemented by patrons.
*h* Includes salaries of superintendents.
*i* Exclusive of the value of normal school property.
*j* Estimated.
*k* The returns as to expenditure were not complete for the year 1880; the figure above given is simply the estimated income for school purposes. *l* In 1878.

*and Territories, showing the income, expenditure, &c.*—Continued.

| ANNUAL EXPENDITURE. | | | | | | | |
|---|---|---|---|---|---|---|---|
| Expenditure in the year per capita of pupils enrolled in public schools. | Expenditure in the year per capita of average attendance in public schools. | Expenditure in the year per capita of population between 6 and 16. | Expenditure in the year per capita of population between 6 and 16, including interest on the value of all school property. | Amount of available school fund. | Amount of permanent school fund (including portion not now available). | Estimated real value of sites, buildings, and all other school property. | |

*m* So reported, though the items given amount to $1,048,386.
*n* Includes expenditure for apparatus and books.
*o* So reported, though the items given amount to $145,191.
*p* Includes amount paid for interest or to cancel debt.
*q* Includes the United States deposit fund, as reported in 1878, amounting to $4,014,521.
*r* Exclusive of large quantities of swamp lands.
*s* There was also paid $537,486 for interest on and redemption of bonds, making the grand total expenditure $7,704,449.
*t* Includes expenditure for evening schools.
*u* In 1877.
*v* Total apportioned.
*w* Including other tribal funds; the income thus derived is augmented from other sources when necessary.
*x* National fund, part of the interest of which is used for school purposes.

TABLE II.—*School statistics of cities containing 7,500 inhabitants and over, for 1880; from replies to inquiries by the United States Bureau of Education.*

| | City. | Superintendent | Total population (census of 1880). | School population. | | | | Number enrolled in public schools. | | | Estimated enrolment in private and parochial schools. | Number of school days in the year. | Number of days the schools were taught. |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | Legal school age. | Number under 6 years of age. | Number over 16 years of age. | Total number of legal school age. | Number under 6 years of age. | Number over 16 years of age. | Whole number enrolled, excluding duplicate enrolments. | | | |

* From Report of the Commissioner of Education for 1879.
*a* Estimated.
*b* Average duration of school in days.
*c* The report here given, exclusive of population, is for the central school district only, which comprises about one-half of the city.
*d* In day schools only.
*e* Including Monroe County.
*f* For the city only.
*g* Census of 1878.
*h* Including Bibb County.
*i* For the entire city.
*k* For colored children, 6–16.
*l* In colored schools, 172 and 160.
*m* Whites only.
*n* Rural schools, 167 days; primary and intermediate, 180; grammar, 184; high, 181.

TABLE II.—*School statistics of cities containing 7,500 inhabitants and over, for 1880, &c.*—Continued.

| | City. | Superintendent. | Total population (census of 1880). | School population. | | | | Number enrolled in public schools. | | | Estimated enrolment in private and parochial schools. | Number of school days in the year. | Number of days the schools were taught. |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | Legal school age. | Number under 6 years of age. | Number over 16 years of age. | Total number of legal school age. | Number under 6 years of age. | Number over 16 years of age. | Whole number enrolled, excluding duplicate enrolments. | | | |

* From Report of the Commissioner of Education for 1879.
*a* These statistics are for the Kingston school district only.
*b* In corporate schools.
*c* In unclassified and arithmetic schools.
*d* In unclassified school.
*e* Includes special teachers.
*f* In ungraded and German schools.
*g* Exclusive of average attendance in normal school.
*h* In the night schools there were 6 teachers, an enrolment of 469, and an average attendance of 223.
*i* From a return for 1879.
*j* In primary and grammar schools.
*k* There was also an enrolment in the night schools of 8,617.
*l* Based on the number of months all the schools were open.

* From Report of the Commissioner of Education for 1879.
*a* Monthly salaries.
*b* These are maximum salaries.
*c* Apparatus and books.
*d* The report here given, exclusive of that of population, is for the central school district only, which comprises about one-half the city.
*e* Including Monroe County.
*f* Including Bibb County.
*g* For German teacher.
*h* These statistics are for white schools only.
*i* For principal of normal practice class.
*j* Salary of teacher in Portland School for the Deaf.

TABLE II.—*School statistics of cities containing 7,500 inhabitants and over, for 1880, &c.*—Continued.

* From Report of the Commissioner of Education for 1879.

*a* Paid out of special appropriation for this purpose, and therefore not included in total.

*b* Total of specified items only, and probably not the whole receipts for school purposes.

*c* Exclusive of Gold Hill, a separate district.

*d* Including State tax.

*e* These statistics are for the Kingston school district only.

*f* Total of items reported.

TABLE II.—*School statistics of cities containing 7,500 inhabitants and over, for 1880, &c.*—Continued.

| | City. | Total taxable property in the city. | | Tax for school purposes. | | Receipts. | | | | | | | | | Expenditures. | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | | | Amount received from interest on permanent fund. | | | Amount received from taxation. | | | | | Permanent. | | |
| | | Estimated cash value. | Assessed valuation. | Mills per dollar of cash value. | Mills per dollar of assessed value. | Balance on hand from last school year. | State. | County. | Local. | State. | Local. | Amount received from tuition fees. | Amount received from all other sources. | Total receipts. | Sites and buildings. | Furniture and apparatus. | Libraries. |

* From Report of the Commissioner of Education for 1879.
*a* In 1878.
*b* From a return for 1879.
*c* From State appropriation.
*d* Total of items reported.
*e* From State and county.
*f* From a bank loan.
*g* For building and repairing.
*h* These statistics are for white schools only; for those in which colored schools are included, see Table I.

TABLE II.—*School statistics of cities containing 7,500 inhabitants and over, for* 1880, *&c.*—Continued.

| | City. | Expenditures. | | | | | | | | | | | | | Average expenses per capita. | |

* From Report of the Commissioner of Education for 1879.
*a* Amount paid for teaching only.
*b* For all incidental or contingent expenses.
*c* Includes $66,315 paid on account of fiscal year 1878–'79.
*d* For interest only.
*e* The report here given, exclusive of that of population, is for the central school district only, which comprises about one-half of the city.
*f* Total expenditure for county and city.
*g* Including Monroe County.
*h* Including Bibb County.
*i* Includes some other incidental expenses.
*j* Items not all reported.
*k* Average of entire expense per capita: for white schools, $14.08; for colored, $7.54.
*l* These statistics are for white schools only.

TABLE II.—*School statistics of cities containing 7,500 inhabitants and over, for* 1880, *&c.*—Continued.

* From Report of the Commissioner of Education for 1879.
*a* Includes Alleghany County.
*b* Fuel, gas, and water.
*c* Rent and taxes.
*d* Repairs, furniture, apparatus, &c.
*e* Includes repairs.
*f* Includes board, fuel, care of fires and school rooms.
*g* Total of specified items only; probably does not include all expenditures.
*h* Includes incidental expenses of evening schools.
*i* For all incidental or contingent expenses.
*j* Based on average number belonging.
*k* Exclusive of Gold Hill, a separate district.

TABLE II.—*School statistics of cities containing 7,500 inhabitants and over, for* 1880, *&c.*—Continued.

| | City. | Expenditures. | | | | | | | | | | | | | Average expenses per capita. | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | Payment of indebtedness. | | Tuition. | | Incidental or contingent expenses. | | | | | | | | Total expenditure. | Supervision and instruction, based on average daily attendance. | Incidental or contingent expenses, based on average daily attendance. |

* From Report of the Commissioner of Education for 1879.

*a* Exclusive of appropriations for permanent objects.

*b* Appropriation in common with other departments of the university, see Table IX.

*c* Of this, $10,000 is a special appropriation for a new building.

*d* $1,300 is a special appropriation for apparatus.

*e* As East Florida Seminary; reorganized as State Normal School in 1880.

*f* County appropriation per capita.

*g* Special appropriation for building.

*h* Includes instructors in model school.

*i* Since resigned.

*j* For two years.

TABLE III.—PART 1.—*Statistics of public normal schools for* 1880, *&c.*—Continued.

*inquiries by the United States Bureau of Education*—Continued.

| Number of school days in the week. | Number of weeks in the year. | Occupations of pupils. | Apparatus and appliances. | Effect of the system. |
|---|---|---|---|---|
| 9 | 10 | 11 | 12 | 13 |
| 5 | 40 | Fröbel's gifts and occupations, declamations, singing, gymnastics, &c. | Usual apparatus and appliances. | A superior preparation for the more advanced grades. |
| 5 | 47 | Block building, tablet and staff laying, clay modelling, paper pricking, sewing, weaving, songs, games, and movement plays. | Worsted balls, boxes of blocks, match splints, rings, paper, needles, and clay. | Imparts dexterity and grace of movement, and cultivates the perceptive faculties and thinking powers. |
| 5 | 38 | All of Fröbel's gifts and occupations, songs and games. | Fröbel's | Develops physically and mentally. |
| 5 | 40 | Fröbel's occupations; block building, tablet, stick and ring laying, perforating, sewing, weaving, drawing, painting, modelling, care of plants, games, singing, marching, &c. | Fröbel's gifts from the 1st to the 10th, paints, worsteds, drawing books, aquarium, plants, piano, &c. | Strengthens the body, gives grace in movement, and develops the imaginative, inventive, and perceptive faculties and the powers of observation and concentration in a marked degree. |
| 5 | 40 | Sewing, weaving, stick and ring laying, drawing, folding, block building, &c. | Squared tables, chairs, blackboards, globes, &c. | Imparts grace of motion, develops the perceptive faculties, creates a love of the beautiful, and systematically trains mind and hand. |
| 5 | 40 | Usual occupations | Fully equipped | Most gratifying. |
| 5 | 40 | Fröbel's occupations, and reading, number, and object lessons for older pupils. | Fröbel's gifts, chairs, ruled tables, piano, blackboards, &c. | Develops the body and strengthens the mind. |
| 5 | 40 | Usual Kindergarten occupations and primary instruction. | | Superior preparation for the public school. |
| 5 | 36 | 1st, 2d, and 3d gifts, weaving, sewing, drawing, clay modelling, stick and ring laying. | Balls, parallel bars, and bean bags. | Improves the bodily condition, enlarges the scope of observation, stimulates the imaginative powers, and elevates the tone of the moral nature. |
| 5 | 40 | Those given by Fröbel, music, marching, care of plants, &c. | The gifts and material for the occupations, with wholesome well ventilated rooms and pleasant playground. | Imparts strength and grace, teaches self-control, trains the powers of perception and conception, and is an excellent groundwork for all subsequent mental culture. |
| 5 | 40 | Fröbel's 20 gifts, stick laying, drawing, perforating, pricking, weaving, block building, peas work, modelling, &c. | | Its tendency is to make children happy, healthy, and good natured. |
| 5 | 40 | Building with cubes, picture laying with squares and triangles, stick laying, drawing, pricking, sewing, weaving, paper cutting and folding, modelling, &c. | Balls, cubes, tablets, and other necessary material. | Develops the physique, gives manual skill, freedom and grace in motion, leads to habits of thought, brings out the inventive faculties and gives ease in the use of language. |

* From Report of the Commissioner of Education for 1879.
*a* Suspended at Christmas, 1880; will be reopened in the fall of 1881.

*inquiries by the United States Bureau of Education*—Continued.

| Number of school days in the week. | Number of weeks in the year. | Occupations of pupils. | Apparatus and appliances. | Effect of the system. |
|---|---|---|---|---|
| 9 | 10 | 11 | 12 | 13 |
| 5 | 40 | Sewing, weaving, working in clay, paper cutting and folding, drawing, stick laying, block building, with books for older pupils. | 1st, 3d, 4th, 5th, 8th, and 9th gifts, with tables, chairs, and cabinet. | Strengthens the body, awakens the mental faculties, particularly those of perception, and constantly stimulates a desire for information. |
| 5 | 40 | All of Fröbel's gifts and occupations, reading, &c., to the more advanced pupils, movement games, songs, and gymnastics. | All of Fröbel's gifts, piano, plants, birds, cabinet, and all other necessary apparatus for teaching advanced children. | Beneficial in the development of the physical and mental natures and a superior culture morally and socially. |
| 5 | 36 | 1st, 2d, 3d, 4th, 5th, 6th, 7th, 8th, and 9th gifts, pricking, sewing, weaving, folding, cutting and pasting, peas work, modelling, interlacing, and drawing. | Squared tables, blackboards, piano, &c. | Simultaneous development of head, heart, and hand. |
| 5 | .... | Worsted work, paper mat making, building, singing; and reading, writing, and learning the use of figures for older children. | Usual apparatus. | |
| 5 | 36 | Reading, spelling, arithmetic, writing, drawing, housework of all kinds in miniature, making artificial flowers, worsted work, mat making, &c. | Everything necessary for the work, kitchen utensils, tables, dishes, beds, blackboards, &c. | Greatly beneficial. |
| 5 | 40 | Singing, games, weaving, sewing, pricking, peas work, clay work, slate writing, designing with rings and blocks, and the elements of reading and arithmetic. | All the usual appliances, with blackboards, tables, chairs, rings, dumb bells, and materials for calisthenics. | |
| .... | .... | Fröbel's occupations ..... | Fröbel's gifts ..... | It appeals to the whole nature of the child, reaching at once his intellect, his emotions, and his physical activities, and contributes to produce a balanced development not attainable by any other system. |
| 5 | 37½ | Block building, tablet and staff laying, perforating, sewing, weaving, folding, reading, number games, singing, object lessons, &c. | Nearly all Kindergarten gifts and material. | Excellent. |
| 5 | 33 | Fröbel's occupations, weaving, sewing, pricking, building, laying of rings and sticks, drawing, modelling, folding paper, singing, &c. | The gifts and occupations arranged by Fröbel for developing the triune nature of the child, including blackboard and chalks for lessons in color and form, piano, arrangements for the growth of flowers, &c. | Its beneficial effect in the physical development of the child is evident to the most superficial observer, and its agency in the development of the mind is even more marked, awakening as it does the creative faculties, giving clearness of thought, correctness of perception, and laying the foundations for after training. |
| .... | .... | Fröbel's occupations ..... | Fröbel's materials. | |
| 5 | 40 | Building, stick and ring laying, weaving, pricking, drawing, sewing, gift exercises, games, plays, &c. | Fröbel's gifts ..... | An excellent development of the physical, mental, and moral nature. |
| 5 | 40 | All Fröbel's gifts and occupations, with movement songs, games, gymnastics, &c. | Squared tables, low chairs, all Fröbel's gifts, plants, pictures, ornaments, piano, &c. | Physical development is very marked, and the preparatory mental training for the advanced departments of study is superior to that of any other system. |

[b] These statistics are for the year ending June 10, 1880, at which date the Kindergarten was discontinued.

*From Report of the Commissioner of Education for 1879.

*inquiries by the United States Bureau of Education*—Continued.

| Number of school days in the week. | Number of weeks in the year. | Occupations of pupils. | Apparatus and appliances. | Effect of the system. |
|---|---|---|---|---|
| 9 | 10 | 11 | 12 | 13 |
| 5 | 36 | The usual Kindergarten occupations and plays as taught by Fröbel. | Usual Kindergarten material. | Develops physically, mentally, and morally, and trains the child for superior application to study in more advanced departments. |
| 5 | 40 | Building, weaving, working with tablets, the use of colors in various ways, designing and drawing with papers, rings, and sticks, pricking, embroidering, and modelling in clay. | All apparatus and appliances necessary for the mentioned occupations. | The child's body is developed by the games played, morals are taught, and the mental training lays the foundation for a systematic, scientific education, which will help him to become an expert and artistic workman in any occupation in which he may be engaged. |
| 5 | 38 | Weaving, sewing, &c ..... | Usual material for the manual occupations, boxes of blocks, balls, sticks, slats, &c. | |
| 5 | 34 | All Fröbel's occupations ..... | Fröbel's gifts ..... | Remarkably beneficial, giving a soundness and balance of mind not afforded by any other system, and preparing the child for future school work in an admirable manner. |
| 5 | .... | Building, laying of figures with planes or staffs, folding, weaving, sewing, painting, drawing, and modelling. | Tables, chairs, and abundant Kindergarten material. | The children attending this Kindergarten are from the worst class of people, and under the training soon grow orderly, cleanly, kind to others, physically stronger, and more graceful. |
| 5 | 40 | Usual Kindergarten occupations. | All necessary material ..... | It strengthens physically and makes the child intelligent and observant. |
| 5 | 36 | Fröbel's gifts in their proper sequence and the regular occupations, giving point, line, surface, and solid. | All necessary apparatus and appliances as given in Bradley's catalogue of Kindergarten materials. | The effect on the physical, mental, and moral nature is good. |
| 5 | 36 | Drawing, sewing, weaving, painting, singing, block building, stick and ring laying, bead, work, clay work, games, &c. | | |
| 5 | 40 | Pricking, sewing, weaving, drawing, modelling, block building, object lessons, number lessons, paper folding, marching, singing, &c. | Squared tables, small chairs, boxes of wooden cubes, sticks, steel rings, slates, and drawing books, patchwork, cardboard, &c. | Promotes bodily and mental growth, teaches the child self-control, and develops in him an ability to think and act for himself. |
| 5 | 40 | Sewing, weaving, games, marches, &c. | Balls, blocks, straws, tables, pictures, and the gifts. | Kindergarten children are better fitted for higher school work than those otherwise taught. |
| 5 | 40 | Paper weaving, sewing on cards, drawing, block building, stick laying, and work in clay. | ..... | Develops a capacity for quick and clear perception of form, size, and color; it trains all the senses, gives skill to the fingers, and health to the body, and is a superior preparation for higher education. |
| 5 | 43 | Fröbel's 1st, 2d, 3d, and 4th gifts, drawing, weaving, sewing, paper cutting, staff laying, &c. | All Kindergarten material .. | Harmonious development of all the physical, mental, and moral powers. |

| 5 | 40 | Designing with blocks, weaving with paper, stick laying, clay modelling, marching, plays, &c. | | |
| 5 | 34 | All Fröbel's gifts and occupations, musical exercises, gymnastics, games, &c. | Those necessary for carrying out the system. | Very pronounced in its development of mind and body. |
| 5 | 38 | Fröbel's gifts, games, gymnastics, and Kindergarten occupations which promote the physical, mental, and moral development of the child. | Fröbel's 1st, 2d, 3d, 4th, 5th, 6th, and 7th gifts, squared tables, low chairs, piano, slates, blackboard, cards, paper, books for drawing, &c. | Causes a natural growth of the muscles, develops the mental faculties in their natural order, and is eminently adapted to the wants of nervous and backward children. |
| 5 | 40 | Study of nature from specimens collected by the children, exercises with balls, weaving, cutting, pasting, perforating, embroidering, block building, modelling, drawing, &c. | Natural history specimens, pictures, color and form charts, balls, blocks, rings, modelling tools, squared tables, and blackboard, &c. | Renders the child quick of perception, strengthens his memory, awakens a love for the study of nature and science, teaches politeness and gentleness, promotes health and physical development. |
| 5 | 40 | Fröbel's Kindergarten occupations, learning of alphabet in English and German, and elementary writing lessons. | All Fröbel's gifts ..... | Healthy and natural development in every respect. |
| 5 | 40 | Fröbel methods, with American adaptations, with kitchen, garden work for older scholars, and singing. | Materials for weaving, perforating, drawing, stick laying, block building, &c. | Secures attention, quickens observation, awakens the powers of the mind, draws the child to more regular attendance, and fits him for more persistent effort in the work which follows. |
| 5 | 36 | Mat making, sewing, clay work, pricking, &c. | All the blocks, tablets, sticks, rings, &c., of the Fröbel system. | Renders the child thoughtful, attentive, and polite, and develops naturally his reasoning powers. |
| 5 | 38 | Fröbel's occupations ..... | Every gift of Fröbel ..... | Promotes physical health and strength, develops the several organs of sense, educates the moral nature, performing the great work of harmoniously developing body, mind, and soul. |
| 5 | 35 | Such as will produce harmonious development. | ..... | Superior to any other system as a preparation for more advanced classes. |
| 5 | 36 | Sewing, weaving, paper folding, drawing, cutting and pasting, clay modelling, peas work, and parquetry. | Fröbel's gifts, piano, pictures of animals, cabinet, mounted birds, tables, &c. | Improves the health, quickens the powers of observation, and is especially salutary in its effect on dull and unhappy children. |

| Number of school days in the week. | Number of weeks in the year. | Occupations of pupils. | Apparatus and appliances. | Effect of the system. |
|---|---|---|---|---|
| 9 | 10 | 11 | 12 | 13 |
| 5 | 40 | All occupations of Fröbel's system. | Fröbel's gifts, Kindergarten tables, benches, blackboards, slates, charts, pictures, piano, plants, &c. | Tends to make children active, healthy, and happy; teaches them to be accurate and keen observers, independent in thought, clear in expression, and makes them courteous and unselfish in their conduct to each other. |
| 5 | 38 | Weaving, sewing, perforating, outlining, drawing, designing, moulding, embossing, pasting, study of pictures illustrative of animal and vegetable life, marching, dancing, gymnastics, &c. | Squared tables and slates, charts, paper for weaving, books, crayons, cardb oard, perforating needles, &c. | Children are notably healthy under Kindergarten influence, their perceptions are rendered more acute, powers of memory are strengthened, and they are better trained for more advanced grades of study. |
| 5 | 38 | Weaving, stick laying, perforating, embossing, drawing, modelling, building, designing, gymnastics, &c. | Piano, blackboard, and all the usual appliances. | It is a natural development, checking propensity to evil, forming a necessary step from the nursery to the school room, and awakening the imagination to the influence of the true, the beautiful, and the good. |
| 5 | 48 | Fröbel's occupations ..... | Fröbel's gifts, pictures, slates, blocks, toy tools, &c. | Physical, mental, and moral development. |
| 5 | 40 | All those used in Fröbel's system. | All necessary apparatus and appliances. | Eminently satisfactory in developing physically, mentally, and morally. |
| 5 | 40 | Fröbel's occupations, gymnastic games, songs, stories, garden work, &c. | Fröbel's gifts, plants, &c. | |
| 5 | 40 | All those used in Fröbel's system. | All the usual apparatus and appliances. | Perfectly satisfactory, and superior to any other method of training for young children. |
| 5 | 40 | Weaving, designing, modelling, stick laying, paper folding, perforating, embroidering, chain making, block building, drawing, games, and calisthenics. | Kindergarten tables and chairs, piano, blackboard, charts, maps, pictures, &c. | Satisfactory. |
| 5 | 40 | 1st, 2d, 3d, 4th, and 5th gifts, stick and ring laying, slat interlaying, peas and clay work, sewing, perforating, drawing, paper cutting and weaving, games, gymnastics, study of plants, animals, &c. | All necessary appliances and apparatus. | Imparts strength and grace, cultivates powers of observation and attention, develops the inventive faculties, fosters habits of industry and unselfishness, and is highly prized as a nursery of the institute. |
| 5 | 40 | 1st to 11th gifts inclusive, perforating, sewing, mat plaiting, drawing, paper interlacing, folding and cutting, peas work, and modelling. | Kindergarten material, tables, chairs, blackboards, &c. | Strengthens the body, imparts grace of motion, gives command of language, quickens powers of perception and comparison, and carefully nurtures the moral nature. |
| 5 | 40 | 1st, 2d, 3d, 4th, 5th, and 6th gifts, weaving, pasting, pricking, sewing, stick laying, modelling, sand work, drawing, &c. | Checked tables, blackboard, slates, drawing books, and other modern apparatus. | A development of the threefold nature of the child. |
| 5 | 48 | The first five gifts, stick and ring laying, slat work, mat plaiting, perforating, sewing, paper folding, &c. | Apparatus and appliances necessary for teaching Fröbel's system. | Beneficial to mind and body. |
| 5 | 44 | Fröbel's occupations, gymnastics, games, songs, stories, garden work, &c. | Fröbel's gifts, plants, animals, &c. | |

dent movement was made by its conductor, Miss Meta C. Brown, to which the name of "The Rochester Kindergarten" was given.

*From Report of the Commissioner of Education for 1879.

*inquiries by the United States Bureau of Education*—Continued.

| Number of school days in the week. | Number of weeks in the year. | Occupations of pupils. | Apparatus and appliances. | Effect of the system. |
|---|---|---|---|---|
| 9 | 10 | 11 | 12 | 13 |
| 5 | 37 | Weaving, sewing, drawing, paper folding, clay modelling, pricking, ring laying, physical exercises, singing, &c. | Squared tables, small chairs, blackboard, Fröbel's gifts, pictures, birds, &c. | Development of happy, hearty, children, sound both in body and mind. They are educated to think, to know, and to act. |
| 5 | 40 | All the first principles of Fröbel's gifts, occupations, games, and plays. | Those necessary for the health and development of body and mind. | The effect on the body is to make the child healthy, active, and graceful; on the mind, to make him attentive, quick, and accurate; on the heart, generous, kind, obedient, and loving. |
| 5 | 40 | All the occupations of Fröbel's system, movement plays, &c. | Fröbel's gift and occupation materials, plants, tables, chairs, blackboard, &c. | Harmonious development of the child's threefold nature. |
| 5 | 35 | Block building, stick laying, modelling, perforating, embroidering, weaving, interlacing, drawing, singing, physical exercises, games, plays, &c. | Gifts and occupations designed by Fröbel. | Children obtain intelligent control of the muscles of the body and powers of the mind; their perceptive faculties are awakened, and a desire for knowledge aroused. |
| 5 | 35 | Fröbel's occupations | The usual Kindergarten tables and chairs, with Fröbel's gifts. | Very satisfactory. |
| 5 | 34 | Weaving, perforating, moulding, singing, and games. | | |
| 5 | 35 | All Fröbel's gifts and occupations. | All of Fröbel's gifts, plants, animals, piano, &c. | The powers of mind and body are developed; the system especially cultivating habits of close observation and of concentrated and logical thought. |
| 5 | 38 | Usual Fröbel occupations, with much out-door exercise. | Usual Fröbel gifts, with fountain and exotics. | Restrains the forward, brings out the diffident, trains the observing faculties, and represses selfishness and conceit. |
| 5 | 36 | Sewing, weaving, pricking, modelling, drawing, paper cutting and folding, stick laying, and interlacing. | Squared tables, small chairs, balls, cylinder, cubes, oblongs, triangles, squares, paper, slates, pencils, needles, rings, &c. | Develops healthy activity of body, arouses the interest, quickens the perceptive faculties, and teaches the child to think and act for himself. |
| 5 | 35 | Weaving, sewing, drawing, modelling, stick laying, and card pricking. | Fröbel's gifts | Makes the child observant, self reliant, and eager for knowledge, and is a superior preparation for after educational training. |
| 5 | 36 | Weaving, perforating, embossing, singing, stick and ring laying, designing, calisthenics, games, lessons in color and form, elementary lessons in spelling, reading, writing, arithmetic, geography, &c. | Kindergarten tables and chairs, piano, blackboard, color and form charts, globe, slates, books, &c. | Strengthens physically, cultivates the memory, and develops the reasoning powers. |
| 5 | 40 | Fröbel's gift occupations | Tables, chairs, blackboard, globe, minerals, plants, flower cards, &c. | |
| 5 | 40 | Fröbel's occupations, gymnastic games, stories, songs, &c. | Fröbel's gifts, plants, &c. | |
| 5 | 40 | Weaving, plaiting, sewing, first seven gifts, exercises in numbers, reading and writing from board, pricking, stringing beads, peas work, tablet laying, folding; and for older children, drawing, wood carving, games, singing, lace making, stories and poetry, gymnastics, sewing, and instruction in French and the common English branches. | All Fröbel's gifts, and materials for the occupations, globes, maps, charts, text books, chairs, tables, blackboards, plants, gardens, aquarium, &c. | Harmonious development of all the powers. |

* From Report of the Commissioner of Education for 1879.
*a* Board and tuition.
*b* Uses that of the Stevens Institute of Technology.
*c* Value of grounds and buildings.
*d* School suspended at present, but will reopen in 1881.
*e* From non-residents
*f* Includes value of library.
*g* Average charge.
*h* Value of apparatus.
*i* Reported with collegiate department (see Table IX).
*j* In 1878.
*k* Has access to that of the university.
*l* Value of apparatus.
*m* For higher branches; English course free.
*n* Belonging to principal.

TABLE VII.—*Memoranda.*

| Name. | Location. | Remarks. |

* From Report of the Commissioner of Education for 1879.
*a* These are in elementary studies.
*b* Includes students in biblical and teachers' courses.
*c* In normal course.
*d* After several years' suspension reopened in 1880.
*e* Suspended for several years; Baldwin school, the preparatory department, was reopened September, 1880.
*f* Special students.
*g* 112 students in English department and 30 in music.
*h* The trustees of Lewis College and Pritchett School Institute on June 18, 1880, consolidated the two institutions, which consolidation was, however, severed before the opening of the fall session of 1880, and the institutions remain separate, upon the same basis and doing the same work as before.
*i* Preparing for commercial or scientific course.
*j* See reports of Smith Academy (Table VII) and Mary Institute (Table VIII).
*k* Total for all departments.
*l* Preparatory department only organized.
*m* Preparatory department is identical with Rutgers College Grammar School (Table VII).
*n* These statistics are for 1879.
*o* See report of academic department (Table VI).

TABLE IX.—*Statistics of universities and colleges for* 1880, *&c.*—Continued.

NOTE.—For statistics of the professional schools or departments connected with any of these institutions, reference is made to the appropriate tables.

* From Report of the Commissioner of Education for 1879.

*a* Total for all departments.

*b* Whole number of students in college classes proper.

*c* For students in scientific department, see Table X, Part 1.

*d* In 1879.

*e* Under classical are included students in scientific course.

*f* For the department of philosophy and the arts.

*g* These are academic students.

*h* Includes students in other collegiate courses.

*i* Includes one only partially endowed.

*j* There were 49 students in elocution and phonetics and 39 in music.

*k* Six are only partially endowed.

*l* See Table X, Part 1.

TABLE IX.—*Statistics of universities and colleges for* 1880, *&c.*—Continued.

NOTE.—For statistics of the professional schools or departments connected with any of these institutions, reference is made to the appropriate tables.

| | Name. | Corps of instruction. | | | | Wholenumber of students. | Collegiate department. | | | | | | | | | | | | | | Special or optional students. | No. of graduate students. | No. of fellowships. | No. of scholarships. | No. of years in collegiate course. | No. of weeks in scholastic year. |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | | | Students in classical course. | | | | | | | | Students in scientific course. | | | | | | | | | | | |
| | | | | | | | Freshman. | | Sophomore. | | Junior. | | Senior. | | Freshman. | | Sophomore. | | Junior. | | Senior. | | | | | | |
| | | No. of faculty. | No. of resident professors and instructors. | No. of non-resident professors and lecturers. | No. of endowed professorships. | | Male. | Female. | Male. | Female. | Male. | Female. | Male. | Female. | Male. | Female. | Male. | Female. | Male. | Female. | Male. | Female. | | | | | |

* From Report of the Commissioner of Education for 1879.
*a* Includes students in other collegiate courses.
*b* These are normal students.
*c* Three are only partially endowed.
*d* Includes 8 from the Iowa Wesleyan University, who instruct in English branches.
*e* Students in civil engineering.
*f* Total for all departments.
*g* Present endowment, $80,000.
*h* These statistics are for the year 1879.
*i* Partially endowed.
*j* Includes commercial students.
*k* Not prescribed.
*l* In freshman and sophomore classes.
*m* These are fifth year students in the classical course.
*n* Total number of scholars, including fellows.
*o* Under classical are included students in scientific course.
*p* 26 are provided by the State, and are for free board, tuition, and books.

TABLE IX.—*Statistics of universities and colleges for* 1880, *&c.*—Continued.

NOTE.—For statistics of the professional schools or departments connected with any of these institutions, reference is made to the appropriate tables.

| | Name. | Collegiate department. | | | | | | | | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | Corps of instruction. | | | | Whole number of students. | Students in classical course. | | | | | | | | Students in scientific course. | | | | | | | | Special or optional students. | No. of graduate students. | No. of fellowships. | No. of scholarships. | No. of years in collegiate course. | No. of weeks in scholastic year. |
| | | No. of faculty. | No. of resident professors and instructors. | No. of non-resident professors and lecturers. | No. of endowed professorships. | | Freshman. | | Sophomore. | | Junior. | | Senior. | | Freshman. | | Sophomore. | | Junior. | | Senior. | | | | | | | |

* From Report of the Commissioner of Education for 1879.

*a* Under classical are included students in scientific course.

*b* Includes holders of fellowships.

*c* For students in scientific department, see Table X, Part 2.

*d* Includes unmatriculated students and candidates for higher degrees.

*e* The aggregate amount of scholarship funds is $120,000; the portion not represented by the 32 scholarships given above is not divided into separate scholarships.

*f* Endowment of about $85,000.

*g* Includes students in other collegiate courses.

*h* Students in school of art and in teachers' department.

*i* Total for all departments.

*j* In classical and commercial courses.

*k* After several years' suspension reopened in 1880.

*l* Suspended for several years; Baldwin School, the preparatory department, was reopened September, 1880.

*m* Students in colleges of agriculture and the mechanic arts are included.

*n* Not prescribed.

*o* Fund of $30,000 to aid needy youth of Boone County.

*p* The trustees of Lewis College and Pritchett School Institute on June 18, 1880, consolidated the two institutions, which consolidation was, however, severed before the opening of the fall session of 1880, and the institutions remain separate upon the same basis and doing the same work as before.

*q* Includes report of O'Fallon Polytechnic Institute.

*r* Preparatory department only organized.

*s* Also 6 partially endowed.

*t* Partially endowed.

*u* For students in scientific department, see Table X, Part 1.

*v* These statistics are for 1879.

*w* These are in commercial department.

* From Report of the Commissioner of Education for 1879.
*a* Also an "aid fund" of $25,000.
*b* These statistics are for 1879.
*c* Total for all departments.
*d* For students in scientific department, see Table X, Part 1.
*e* Includes students in arts.
*f* Under classical are included students in scientific course.
*g* Students from 1878 to 1880.
*h* Not prescribed.
*i* Includes students in literary course.
*j* See Table X, Part 1.
*k* Includes students in other collegiate courses.
*l* There are 286 students in the departments of music and fine arts.
*m* In 1879.
*n* These are in literary course.

TABLE IX.—*Statistics of universities and colleges for* 1880, *&c.*—Continued.

NOTE.—For statistics of the professional schools or departments connected with any of these institutions, reference is made to the appropriate tables.

| | Name. | Collegiate department. | | | | | | | | | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | Corps of instruction. | | | | Whole number of students. | Students in classical course. | | | | | | | | Students in scientific course. | | | | | | | | Special or optional students. | No. of graduate students. | No. of fellowships. | No. of scholarships. | No. of years in collegiate course. | No. of weeks in scholastic year. |
| | | No. of faculty. | No. of resident professors and instructors. | No. of non-resident professors and lecturers. | No. of endowed professorships. | | Freshman. | | Sophomore. | | Junior. | | Senior. | | Freshman. | | Sophomore. | | Junior. | | Senior. | | | | | | | |
| | | | | | | | Male. | Female. | Male. | Female. | Male. | Female. | Male. | Female. | Male. | Female. | Male. | Female. | Male. | Female. | Male. | Female. | | | | | | |

* From Report of the Commissioner of Education for 1879.
*a* Total for all departments.
*b* All tuition on scholarships.
*c* Under classical are included students in the scientific course.
*d* For students in scientific department, see Table X, Part 2.
*e* Twenty-four are only partially endowed.
*f* Partially endowed.
*g* Includes students in other collegiate courses.
*h* These are in commercial department.
*i* Suspended for several years; the South Carolina College of Agriculture and the Mechanic Arts was organized October, 1880, in the buildings of the university (see Table X, Part 1).
*j* Not prescribed.
*k* Closed June, 1880.
*l* For students in scientific department, see Table X, Part 1.

TABLE IX.—*Statistics of universities and colleges for* 1880, *&c.*—Continued.

NOTE.—For statistics of the professional schools or departments connected with any of these institutions, reference is made to the appropriate tables.

* From Report of the Commissioner of Education for 1879.
*a* Board and tuition.
*b* No charge in collegiate department; $30 in preparatory.
*c* See Table X, Part 1.
*d* From rents.
*e* Free to residents of California.
*f* Fees for diplomas, &c.
*g* Special appropriation.
*h* In 1878.
*i* For residents of the State.
*j* ⅓ of a mill on each dollar assessed in the State, yielding in 1878 an income of about $15,000.
*k* Donations and receipts for current expenses.
*l* Includes room rent and incidentals.
*m* Of this a small portion is from tuition fees.
*n* Apparently for all departments.
*o* In subscription and of uncertain value.
*p* From sources other than tuition.
*q* Also $21 for incidentals.
*r* Contingent fees.

TABLE IX.—*Statistics of universities and colleges for* 1880, *&c.*—Continued.

| | Name. | Annual charge to each student for tuition. | Cost of board a week. | Libraries. | | | | Property, income, &c. | | | | | | Date of next commencement. |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | College library. | | | Number of volumes in society libraries. | Value of grounds, buildings, and apparatus. | Amount of productive funds. | Income from productive funds. | Receipts for the last year from tuition fees. | Receipts for the last year from State appropriation. | Aggregate amount of scholarship funds. | |
| | | | | Number of volumes. | Number of pamphlets. | Increase in the last collegiate year in books. | | | | | | | | |

* From Report of the Commissioner of Education for 1879.

*a* To residents; $50 to non-residents.

*b* In 1876.

*c* Board and tuition.

*d* Includes incidentals.

*e* Value of assets of the university in 1879, independent of property held by trustees of the Rich estate.

*f* Total receipts from all sources in 1879, exclusive of those for the College of Music and the Schools of Medicine and Oratory.

*g* Libraries of observatory, herbarium, Peabody museum, and museum of comparative zoölogy.

*h* For all departments of the university, the college funds alone being $1,058,158.

*i* College receipts from all sources.

*j* Incidental and other fees.

*k* Entrance fee $10, and annual tax $20 to residents of Michigan; to others, $20 and $25.

*l* Including all departments.

*m* Income from all sources other than productive funds.

*n* From churches.

*o* After several years' suspension, reopened in 1880.

*p* Suspended for several years; Baldwin School, the preparatory department, was reopened September, 1880.

*q* Free to residents.

*r* Also 275,000 acres of agricultural college lands, valued at $1.25 to $10 per acre.

*s* The trustees of Lewis College and Pritchett School Institute, on June 18, 1880, consolidated the two institutions, which consolidation was, however, severed before the opening of the fall session of 1880, and the institutions remain separate upon the same basis and doing the same work as before.

*t* In 1878.

*u* Had, in 1878, the income of $10,000 for indigent pupils.

*v* Preparatory department only organized.

*w* Average charge.

*x* Proceeds of fund from sale of land given many years ago.

*y* These statistics are for 1879.

* From Report of the Commissioner of Education for 1879.
*a* Board and tuition.
*b* Total annual charge.
*c* Income from the conducting of parish schools.
*d* In 1878.
*e* These statistics are for 1879.
*f* Income from farm products.
*g* Includes income from other sources.
*h* Includes room rent, &c.
*i* Value of grounds and buildings.
*j* Exclusive of western lands and income thereof.
*k* Income from city.
*l* Includes amount received from rents.
*m* From incidental and other fees.
*n* $30 to clergymen's children.
*o* $3 incidental fee.
*p* Value of buildings.
*q* Income from all sources.
*r* Free to residents; $60 to non-residents.
*s* Number of volumes in the public library, which is also the library of the university.
*t* See Table X, Part I.
*u* Tuition and incidentals.

TABLE IX.—*Statistics of universities and colleges for* 1880, *&c.*—Continued.

| | Name. | Annual charge to each student for tuition. | Cost of board a week. | Libraries. | | | | Property, income, &c. | | | | | | Date of next commencement. |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | College library. | | | Number of volumes in society libraries. | Value of grounds, buildings, and apparatus. | Amount of productive funds. | Income from productive funds. | Receipts for the last year from tuition fees. | Receipts for the last year from State appropriation. | Aggregate amount of scholarship funds. | |
| | | | | Number of volumes. | Number of pamphlets. | Increase in the last collegiate year in books. | | | | | | | | |
| | 1 | 40 | 41 | 42 | 43 | 44 | 45 | 46 | 47 | 48 | 49 | 50 | 51 | 52 |

* From Report of the Commissioner of Education for 1879.
*a* Closed June, 1880.
*b* Exclusive of agricultural college fund.
*c* Income from agricultural college fund.
*d* For incidentals only.
*e* Board and tuition.
*f* Congressional appropriation.
*g* See Columbia Institution for the Deaf and Dumb, Table XVIII.
*h* Territorial appropriation.

TABLE IX.—*Memoranda.*

| Name. | Location. | Remarks. |
|---|---|---|
| College of Individual Instruction. | Evanston, Ill | Suspended during 1879; no notice of its reopening during 1880. |
| Illinois Agricultural College | Irvington, Ill | Reorganized under name of Irvington College. |
| Algona College | Algona, Iowa | Suspended. |
| Baptist College | Louisiana, Mo | Closed in 1879, but was reorganized in 1880 as the Louisiana College; see Table VI. |
| Creighton College | Omaha, Nebr | Name changed to Creighton University. |
| Richmond College | Richmond, Ohio | Suspended. |
| Geneva College | West Geneva, Ohio | Superseded by Northwood Normal and Collegiate Institute, Northwood; see Table VI. |
| Palatinate College | Myerstown, Pa | A preparatory school; see Table VII. |
| Pio Nono College and Teachers' Seminary. | St. Francis, Wis | See Tables III and IV. |

*Colleges from which no information has been received.*

| Name. | Location. | Name. | Location. |

* From Report of the Commissioner of Education for 1879.
*a* Total for all departments.
*b* As a department of Kentucky University; new charter in 1880.
*c* Reported with classical department (see Table IX).
*d* Average for both preparatory and scientific departments.
*e* Includes 43 students in the School of Mechanic Arts and 39 in the Lowell School of Practical Design.
*f* Includes students in military science and tactics.
*g* Only department organized as yet; statistics reported in Table IX.
*h* Included in full report of Corvallis College, Table IX.
*i* See also Table III; this report is for both normal and agricultural departments.

TABLE X.—PART 1.—*Statistics of schools of science (mining, engineering, agriculture, &c.) endowed with the national land grant, for* 1880, *&c.*—Continued.

| | Name. | Location. | Date of charter. | Date of organization. | President. | Preparatory department. | | | Scientific department. | | | | | | | | | | | | | |

* From Report of the Commissioner of Education for 1879.

*a* 350 beneficiaries, 237 normal students, and 1 honorary appointment from each of the 74 counties.

*b* To holders of scholarships; for others, $30 a year.

*c* Reported with classical department (see Table IX).

*d* Endowment is the congressional grant to agricultural colleges, amounting in Colorado to 90,000 acres, but not yet sold.

*e* ½ of 1 mill tax, amounting to about $13,000 for the year 1880.

*f* Value of buildings.

*g* Income from all sources except tuition.

*h* Not yet organized.

*i* Exclusive of the value of apparatus.

*j* Entire proceeds of the sale of land scrip, the income of which, $17,914, is, by various acts of the legislature, divided between the State College at Athens and the branches at Cuthbert, Dahlonega, Milledgeville, and Thomasville.

*k* Amount received annually from the income of the public land scrip fund.

*l* Incidental fees.

*m* From city and county and other sources.

* From Report of the Commissioner of Education for 1879.

*a* Incidental fees.

*b* Amount received annually from the income of the public land scrip fund.

*c* From fees and room rent.

*d* Includes incidental fees.

*e* Buildings not yet completed; $85,000 is the prospective value of grounds and buildings.

*f* Reported with classical department (see Table IX).

*g* Also two years at sea.

*h* Students from Maryland and the District of Columbia are received free of tuition.

*i* Average income from board of students.

*j* From tuition and room rent.

*k* Includes income from rent and $1,050 from Boston University.

*l* To residents.

*m* Special appropriation for building and equipment.

*n* From rents and leases of lands.

*o* See report of university (Table IX).

*p* To holders of State scholarships; $75 to others.

*q* Income from land grant.

*r* Value of equipment; for value of grounds and buildings, see Table IX.

*s* Value of grounds and buildings as reported for 1879.

*t* Congressional appropriation as reported for 1879.

*u* Defrayed from the income of $50,000, which has accrued from the national grant and which is disbursed at the rate of $100 a scholarship annually.

*v* Agricultural funds only; for university funds, see Table IX.

*w* To State students; $40 to others.

*x* Does not include amount arising from sale of congressional land grant.

*y* There is also an income for the institute from work and board of students and from various other sources.

TABLE X.—PART 2.—*Statistics of schools and of collegiate departments of science (mining, engineering, &c.) not endowed with the national land grant, for 1880; from replies to inquiries by the United States Bureau of Education.*

* From Report of the Commissioner of Education for 1879.

*a* Atlanta University, although not founded under the act of Congress establishing agricultural colleges, receives an annual appropriation of $8,000 from the legislature of Georgia under an act of 1874, entitled "An act equitably to adjust the claims of the colored people to a share of the agricultural land scrip."

*b* Not yet organized.

*c* The place of this college is supplied by the Massachusetts Agricultural College at Amherst. Each successful candidate is allowed on entering the college to matriculate also in Boston University and at graduation may receive his degree at the hands of the university with a diploma entitling him to the relation and privileges of its alumni.

*d* A department for elective graduate study only.

*e* There are also 33 students in the College of Music.

*f* In apprentice class.

*g* Number of candidates for the degree of C. E.

*h* In the elementary school of the Polytechnic Institute.

*i* Reported with classical department (see Table IX).

*j* Students in Manual Training School; this school, organized in 1880, has a faculty of 10 and a course of study covering 3 years.

*k* See report of Stevens High School (Table VII).

*l* In fifth year of course.

*m* Graduating class June 16, 1880.

*n* All instruction is for the present suspended.

*o* Number of lecturers for the season of 1879–'80; during the season there were delivered forty lectures on mechanics, physics, chemistry, and other scientific subjects.

*p* Number attending the drawing school.

*q* In the drawing schools and schools of mechanical handiwork.

*r* These statistics are from a return for the year 1878.

*s* Total number admitted during the year.

*t* Instruction in this school was suspended in the fall of 1879.

TABLE X.—PART 2.—*Statistics of schools and of collegiate departments of science (mining, engineering, &c.) not endowed, &c.*—Continued.

* From Report of the Commissioner of Education for 1879.
*a* Fees for the course.
*b* With three courses of lectures.
*c* Includes receipts from other sources.
*d* Value of apparatus.
*e* Examination fee.
*f* Value of apparatus, museum, and specimens.
*g* Reported with classical department (Table IX).
*h* Used by this department out of the income from general funds of the university.
*i* In 1878.
*j* This institution does not confer degrees.
*k* Matriculation fee $10 and annual tax $20 to residents of Michigan; to others, matriculation fee and annual tax, each $25.
*l* Two years at school and previous reading.
*m* Also a spring course of eight weeks.
*n* These statistics are for the year 1879.

* From Report of the Commissioner of Education for 1879.
*a* Drawing is also taught.
*b* School for hearing youth with classes for deaf-mutes.
*c* These statistics are for both departments of the institution.
*d* Teaching in the Clarke Institution for Deaf-Mutes.
*e* Articulation and lip-reading are the basis of instruction in this institution.
*f* Higher branches are also taught.
*g* These statistics are for the year ending June, 1880; since then the department for the blind has been removed to Lansing, and there opened with the name of Michigan School for the Blind (see Table XIX).
*h* For two years.
*i* Includes expenditure for permanent improvements.
*j* Includes $4,500 for improvements.
*k* $12,000 of this from counties.
*l* This institution has three branches; one situated at Fordham, another at Brooklyn (510 Henry street), and another at Throgg's Neck. The statistics given are for the three branches.
*m* A branch institution was opened at Tarrytown in October, 1879.
*n* From State and county appropriations.
*o* These statistics are for the year 1879.
*p* Received during the year ended September, 1880, for support of indigent pupils in the year 1878–'79.
*q* Value of grounds.
*r* Drawing and painting are also taught.
*s* Congressional appropriation for 1879.
*t* An organization within the Columbia Institution; its statistics are there reported. See also Table IX.
*u* Value of grounds and buildings.

*Memoranda.*

Free Evening Classes for Deaf-Mutes, New York, N. Y. (East 23d street), no information received.
Oregon Institution for the Deaf and Dumb, Salem, Oreg., name changed to Oregon School for Deaf-Mutes.

* From Report of the Commissioner of Education for 1879.

*a* In 1878.

*b* Number under instruction only.

*c* See report of the Brooklyn Industrial School Association, Part 3 of this table.

*d* The first of these figures is the total income and the second is the total expenditure of the Roman Catholic Orphan Asylum Society of Brooklyn, which includes St. John's Home, St. Joseph's Female Orphan Asylum, and St. Paul's Industrial School.

*e* See St. John's Home.

*f* Children attend public schools of the city.

*g* The object of this mission is mainly to assist families in their own homes.

*h* A reception room was opened November 1, 1880, for the temporary care of children until they can be provided with homes.

*i* See Roman Catholic Asylum numbered 198 in this table.

*j* The first of these amounts includes the income and the second the expenditure of the Asylum at Peekskill, the Prince Street Asylum, and the Madison Avenue Asylum, New York City, all being under the control of the Roman Catholic Orphan Asylum in the city of New York.

*k* Buildings destroyed by fire in 1880 and school suspended.

*l* There are also 9 adults in the home.

TABLE XXII.—PART 1.—*Statistics of homes and asylums for orphan or dependent children for* 1880—Continued.

| | Name. | Amount of permanent fund. | Income. | Expenditure. | Present inmates. | | | | | | | | | | | | | | | Library. | |

*a* Under "Casts of sculpture" only casts of statues and busts, life size or heroic, are enumerated.

*b* Under "Other casts" are included all statuettes, parts of human figure, and all casts of foliage, architectural ornaments, &c., for use of students in drawing.

*c* Forty original oil studies by distinguished students of the École des Beaux-Arts, Paris.

*d* 150 of these are the set of architectural casts made by Christian Lehr, of Berlin; there are also 490 medallions, 100 Braun's autotypes of old masters, and a large collection of chromo-lithographs and photographs.

*e* Ten teachers from State Normal School attend every Saturday.

*f* 7 of the casts are of statues; the school has also 37 modern paintings, 2,000 photographs, lithographs, &c., and a set of drawings given by the Life School of Paris.

*g* There are many hundred samples of foreign and domestic textile fabrics and wall paper.

*h* The mathematical and scientific instruction is given by other professors in the institute.

*i* Most of this collection of architectural casts has been deposited in the Museum of Fine Arts.

*j* 77 additional drawings from the École des Beaux-Arts, 95 lecture diagrams, 3,665 photographs, 35 specimens of stained glass, 32 architectural models, and many specimens of tiles, terra cotta, &c.

*k* Pupils have access to the collections of the museum.

*l* 1 life size anatomical figure and 21 parts of figures.

*m* The art gallery of the college contains 35 oil paintings, 1,200 Braun's autotypes of old masters arranged under the different schools of painting. Forty fine engravings, framed, adorn the public rooms and halls of the college.

*including all training in industrial art, etc., for* 1879–'80—Continued.

*n* 900 photographs in glass slides to be used with stereopticon, very complete in architectural examples.

*o* 50 are statuettes; groups by Rogers.

*p* There is also a painting class of 17, five of whom are ladies, which meets Wednesday and Saturday evenings to paint from draped model.

*q* 13 are statues.

*r* 12 full size "masks," 4 small "busts;" remainder "parts of figure." Also, a full set of Kensington casts of fruit, flowers, foliage, etc.

*s* Full set of Walter Smith's models for elementary drawing.

*t* A collection of 1,390 photographs, mostly architectural.

*u* 90 of these were in the pay drawing class and 37 in the engraving class.

*v* The association owns a small collection of china; other materials for the use of students, such as books on art, porcelain, laces, embroideries, paintings, &c., are freely loaned by members as the occasion demands.

*w* 4 are statues.

*x* 7 are reductions of antique statues.

*y* Set of 62 large diagrams for illustrating architecture; also 2,000 Braun's autotypes, and many other photographs.

*z* The total number of students in this department is 106; 78 of these are in the musical classes only.

*aa* A large collection of photographs.

*a* In all instances in which the art museum forms a department of some other institution the statistics given refer exclusively to the art museum or art school.

*b* In addition to its own, the museum exhibits important loan collections.

*c* Date of the acquisition of the Trumbull paintings.

*d* No money is spent in this department; its increase comes solely from gifts.

*e* The city of Boston gave the site of the building to the trustees of the museum on condition that the museum should be opened free to the public four days in each month.

*f* Art collection in 1870.

*to inquiries by the United States Bureau of Education.*

*a* 41 are the models of all Bartholomew's statues, and 10 of the busts are by the same artist.
*b* Collection of bronzes made in China and Japan by Prof. W. P. Blake in 1862–'63.
*c* Swedish and American vases; also cornices, capitals, columns, &c., for use in architecture.
*d* Specimens of Oriental, European, old English, and American pottery; special collections of glassware and of British, Spanish, and American tiles; also examples of artistic tiles manufactured in Connecticut, with specimens of materials used.
*e* 8 of these are copies and 1 is an original.
*f* 24 casts of antique statues and 2 of busts belonging to the Peabody Institute are at present in this museum.
*g* Copies.
*h* 2 are colossal: the "David" of Michael Angelo and the "Taney," by Rinehart; 13 are models of original statues by Rinehart.
*i* 25 are models of originals by Rinehart.
*j* The famous reproduction of the Ghiberti gates, made by Barbedienne, of Paris, for the Vienna Exposition, half size of the originals.
*k* 5 are originals by Rinehart; there are also two models of large vases by him. The Peabody has 260 feet of the Parthenon frieze in position in the sculpture gallery. It has also 170 feet in duplicate. Twenty-four casts of antique statues and 2 of busts are deposited with the Historical Society.
*l* Copies in plaster.
*m* 60 fragments of antique sculpture, collected in Rome by Mr. C. C. Perkins, are set in the wall of the corridor, as is customary in Italy.
*n* Of these, 2 are bronze and 1 terra cotta.
*o* Among the casts of antique sculpture are 6 Greek vases, 36 slabs of the frieze of the Parthenon, 24 slabs of the frieze of the Temple of Apollo at Bassæ, and other large reliefs.
*p* 11 of these are originals.
*q* Among Egyptian antiquities.
*r* Antiquities from Cyprus, Tanagra figurines, &c.
*s* These are plaster casts; the museum has also 5 carvings in ivory and 50 carvings in wood.
*t* Also the Dixwell collection of Etruscan pottery, 47 objects, and a large number of Græco-Italian fictile painted vases, collected by Castellani and presented to the museum by Mr. Thomas G. Appleton.
*u* 6 ancient inscriptions in stone.
*v* These are the famous miniature copies of antiques made by Mollica in Naples; 42 statuettes, 35 portrait busts, and 4 busts of the mediæval poets of Italy.
*w* 3 of these are copies.
*x* One medallion portrait and 9 modern statuettes.
*y* Pieces and fragments of ancient Indian pottery from Brazil and Peru.
*z* A large and fine collection of specimens of wood carving.
*aa* 2 are copies in marble.
*bb* This is the number of pieces of ancient Cypriote statuary contained in the Di Cesnola collections. These are cut in the soft limestone of Cyprus, there being no marble on the island. Among these are massive sarcophagi, heroic and life-size statues, statuettes, many hundred heads broken off from statues and statuettes, votive offerings, and mural tablets with inscriptions, the whole forming a continuous series of examples of the progress of the art, beginning with the Phœnicians and continuing with the early and later Greeks to the Romans.
*cc* 1 copy in marble.
*dd* Di Cesnola collection.
*ee* Of these, 49 are antiques in stone, 35 are plaster copies of antiques. The museum has also 19 carvings in ivory, 6 in wood, and 137 ancient inscriptions in stone.
*ff* Antique ceramics, 7,232; antique glass, 1,239; mediæval glass, 127; modern glass, 11; modern mosaic, 1.
*gg* 1 of these is an original bust.
*hh* Copies of mediæval statuary.
*ii* A rare collection of ceramics and glassware, selected from the exhibitions of different countries at the Centennial, supplemented by important loan collections of English, French, and Spanish pottery and glass, and forming a very complete exhibition of these industries.
*jj* 8 are copies.
*kk* 3 are copies.
*ll* 1 is a copy.
*mm* 17 are originals.
*nn* Original Tanagra figurines.
*oo* 1 is original.
*pp* 3 are copies in marble.
*qq* 116 are by Barye, of Paris. The Hall of Bronzes contains, also, a case of the Hildesheim treasures, 30 pieces; a case of electrotype reproductions from South Kensington, 90 pieces; and the Milton shield and other Elkington work.
*rr* Copies in plaster. Of these 78, the 198 feet of the frieze of the Parthenon which form the frieze of the Hall of Antique Sculpture and the Ghiberti gates are each reckoned as a single example.
*ss* 4 exquisite Sèvres vases, the Prometheus vase by Minton, 2 majolica vases by Decker, of Paris, and 2 porcelain plaques by Schopin, of Paris, are in this small but costly collection of ceramics.

*a* Series of panel pictures representing windows of Cologne Cathedral.

*b* The life size groups illustrating life in Sweden and Lapland which were exhibited at the International Exhibition at Philadelphia in 1876. The museum has also a collection of textile fabrics, 40 or 50 specimens of laces, and a series of large tapestry hangings, "Flemish," 12 feet by 15 feet, illustrating the adventures of Don Quixote.

*c* Carvings in jade, crystal, and ivory.

*d* Including a series of 18 bronze medals, struck by order of Congress between 1776 and 1815; a few antique Greek and Roman coins and many hundred modern coins; also, the "Towson cabinet of medals and coins," numbering 251 specimens, contained in 19 volumes, and extending from 300 B. C. to 1851 A. D.

*e* Cardinal Tosti's collection, now deposited on loan in the Boston Museum of Fine Arts.

*f* The museum contains a room known as the Lawrence Room, which is fitted with the entire lining and ceiling in carved oak of an English room of the sixteenth century, elaborately ornamented with bass reliefs and with portraits of English kings and queens in panels; purchased in London in 1871, and presented by Mrs. T. B. Lawrence. In this room are exhibited chests and other articles of furniture in carved wood, of the fourteenth, fifteenth, sixteenth, and seventeenth centuries. The museum also possesses collections illustrating the application of art to industry, including many specimens of rare embroideries, a large number of textile fabrics, 79 examples of artistic metal work, etc. Many valuable paintings as well as choice examples of art work of every description which belong to private owners are constantly to be seen in the galleries of the museum, while special loan exhibitions to illustrate particular branches of art are held from time to time.

*g* 40 of these are water colors.

*h* These are etchings; the Gray collection of 6,000 engravings and the Tosti collection of 7,000 engravings are deposited on loan in the museum.

*i* 10 volumes of photographs and 16 original drawings.

*j* 100 Mexican and Peruvian relics.

*k* The Way collection; several remarkable pieces of sculpture, lately given by the Lowell family, add greatly to the Egyptian collection.

*l* A collection of Braun's autotypes of old masters.

*m* Nearly 400 of these are ancient Greek and Roman coins, the rest are modern coins.

*n* There are also 200 specimens of ancient Peruvian pottery, 50 of Amazonian, and 100 of Chinese and Malayian pottery.

*o* Includes publications of Arundel Society, the Berlin Museum series, and heliotypes of the Gray collection.

*p* 100 of these are original drawings.

*q* Also 13 illuminated manuscripts deposited by owners.

*r* The library has a small collection of enamels, paintings on porcelain, copies of old masters, majolica, and mosaics—in all, 59 pieces.

*s* Of these 691 are original drawings, the rest are lithographs. Photographs of the principal works are on sale only at the museum.

*t* 427 of these are articles in gold and silver belonging to the Curium treasure.

*u* Gems, 120; cameos, 3; intaglios, 19.

*v* The MacCallum collection of laces, 721 pieces. The museum has also 11 pieces of tapestry.

*w* The Abbott collection; the museum also contains the Lenox collection of Nineveh sculptures, 13 pieces. The society owns a large collection of antiquities relating to North and South America not yet displayed.

*x* Of these 92 were given to the academy by the will of the late James A. Suydam, its former treasurer; of the remaining 400, 200 are portraits of members and 200 paintings by members.

*y* Also tapestry from Warwick Castle.

*z* The collection of students' work exhibited at the Centennial by the South Kensington authorities was given to this museum; the whole of the superb India collection was also given. The museum exhibits a rare and very complete collection of Persian stuffs, etc. It owns an important collection of textile fabrics, embroideries, and costumes; specimens of work in wood, metal, and stone, illustrating the use of ornament in architecture; many articles of work in the precious metals, and the electrotype reproductions of the South Kensington mediæval work in metal exhibited by Elkington & Co., at the Centennial; the reproductions of the Hildesheim treasures, also Oriental and European enamels. Many fine specimens of Oriental work in pottery, bronze, and jade are also included in the loan collections now on exhibition.

*aa* A large collection of relics of the "Mound Builders" of North America loaned by Dr. M. W. Dickeson is on view.

*bb* 200 original drawings, 200 Braun's autotypes, 558 lithographs, 150 photographs.

*cc* Also 10 fac similes of illuminated manuscripts.

*dd* Several volumes of fine engravings, among them the Musée Français, Musée Royal, Hogarth's Works, Canova's Works, &c., are in the library of the Athenæum.

*ee* Over 100 photographs of the leading works of art in its possession are taken, to be obtained only at the gallery.

*ff* 2 remarkable Japanese porcelain vases made for the Centennial, 1 large Japanese porcelain bowl, 5 specimens of cloisonné, old Chinese, and modern Elkington; in addition to these, many rare and valuable articles, antique and modern, which cannot be classified in this table, are in the Hall of Bronzes and Ceramic Ware of the Corcoran Gallery of Art.

| GENERAL SCIENCE. | | | | | |
| Elementary Guide to Determinative Mineralogy. By C. Gilbert Wheeler. Based upon the method of Weisbach's Tabellen zur Bestimmung der Mineralen; applied chiefly to American species. | S. J. Wheeler | Chicago, Ill | 12mo | 75 | 1 00 |
| Almanac of Planetary Meteorology. By Robert Mansill | R. Crampton | Rock Island, Ill | 4to | 52 | Paper, 50 |

| | | | | | | |
|---|---|---|---|---|---|---|
| Easy Experiments in Chemistry and Natural Philosophy. By G. Dallas Lind. | "Normal Teacher" Publishing House. | Danville, Ind | 12 mo | 102 | Paper, | 40 |
| The Perception of Space and Matter. By Rev. J. E. Walter | Estes & Lauriat | Boston, Mass | Cr. 8vo | | | 2 00 |
| Brief Lecture Notes on Sound and Light. By Charles K. Wead. Prepared for use of students in the University of Michigan. | John Moore | Ann Arbor, Mich | 8vo | 13 p. interleaved. | Paper, | 25 |
| Stars and the Earth; or, Thoughts upon Space, Time, and Eternity. [anon.] Revised and enlarged, with notes, by Richard A. Proctor. | G. I. Jones & Co | St. Louis, Mo | Sq. 16 mo | 2+52 | | 50 |
| Chemical Exercises in Qualitative Analysis. By George W. Rains, M. D. | D. Appleton & Co | New York, N. Y | 16mo | | | 50 |
| Chemistry of Common Life. By Prof. James F. W. Johnston. New edition, revised, enlarged, and brought down to the present time, by Arthur Herbert Church, M. A. Illustrated. | do | do | 12mo | 26+592 | | 2 00 |
| Elementary Principles of Scientific Agriculture. By N. T. Lupton, LL. D. | do | do | 12mo | 107 | | 45 |
| Elements of Astronomy. By Robert Stowell Ball, LL. D., F. R. S. Illustrated | do | do | 16mo | | | 2 25 |
| Popular Science Monthly. Bound volumes, XVI and XVII | do | do | | | Each, | 3 50 |
| Science Primers: Introductory. By Prof. T. H. Huxley, F. R. S. | do | do | 18mo | | | 45 |
| Treatise on Chemistry. By H. E. Roscoe, F. R. S., and C. Schorlemmer, F. R. S. Illustrated. Vol. II, part II. Metals. | do | do | 8vo | | | 3 00 |
| Sun, Moon, and Stars. By Agnes Giberne. With preface by Rev. C. Pritchard. Illustrated. | Robert Carter & Bros | do | 12mo | 12+299 | | 1 50 |
| The Forms of Water in Clouds and Rivers, Ice and Glaciers. By John Tyndall. Illustrated. | J. Fitzgerald & Co | do | 4to | 28 | Paper, | 15 |
| Theory of Sound in its Relation to Music. By Pietro Blaserna | do | do | 4to | 28 | Paper, | 15 |
| Town Geology. By Rev. Charles Kingsley. With appendix by Prof. T. H. Huxley, F. R. S., on Coral and Coral Reefs. | do | do | 4to | 29 | Paper, | 15 |
| The Wonders of the Heavens. By C. Flammarion | do | do | 4to | | Paper, | 15 |
| The Problem of Human Life. By A. Wilford Hall. Embracing the "Evolution of Sound" and "Evolution Evolved." Revised edition. | Hall & Co | do | 8vo | 524 | | 2 00 |
| Geological History: Chapters from the Physical History of the Earth. By Arthur Nicols. Illustrated. | Harper & Bros | do | 12mo | 10+281 | | 1 25 |
| Popular Astronomy. By Simon Newcomb, LL. D. School edition | do | do | 12mo | | | 1 30 |
| Manual of Geology. By James D. Dana. Treating of the principles of the science with special reference to American geological history. Third edition. Illustrated. | Ivison, Blakeman, Taylor & Co. | do | 8vo | | | 4 50 |
| Blowpipe Analysis. By J. Landauer. Translated by James Taylor and William E. Nay. | Macmillan & Co | do | 16mo | 9+161 | | 1 50 |
| Easy Lessons in Heat. By C. A. Martineau. Illustrated | do | do | 16mo | 13+136 | | 70 |
| Easy Lessons in Light. By W. Awdry. Illustrated | do | do | 16mo | 10+114 | | 70 |
| Hand-Book of Double Stars. By E. D. Crossley, Joseph Gledhill, and James M. Wilson. With catalogue of 1,200 double stars and lists of measures, with notes. | do | do | 8vo | 13+464 | | 6 00 |
| Aids to Chemistry. By C. E. A. Semple. In 3 parts: | | | | | | |
| Part 1: Inorganic. Non-Metallic Element | G. P. Putnam's Sons | do | 16mo | 65 | | 50 |
| Part 2: Inorganic. The Metal | do | do | 16mo | 2+60 | | 50 |
| Part 3: Organic | do | do | 16mo | 8+114 | | 50 |
| A Popular History of Science. By Rob. Routledge. Illustrated | George Routledge & Sons | do | 12mo | 20+673 | | 3 50 |
| Alphabetical Manual of Blowpipe Analysis. By W. A. Ross | Scribner & Welford | do | 12mo | | | 2 00 |
| Catalogue of Books and Papers relating to Electricity, Magnetism, Electric Telegraph, &c., including the Ronalds Library. Edited by Alfred J. Frost. | E. & F. N. Spon | do | 8vo | 27+564 | Paper, | 6 50 |
| Qualitative Chemical Analysis. By Silas H. Douglas and Albert H. Prescott, M. D. Guide in the practical study of chemistry and in the work of analysis. Third edition, revised. [Also] Study of Oxidation and Reduction. By Otis Coe Johnson. | D. Van Nostrand | do | 8vo | 306 | | 3 50 |
