Of the colleges for young men or for both sexes, Lebanon Valley, Ursinus, Thiel, Monongahela, Allegheny, Westminster, and Swarthmore admitted young women to equal privileges with young men, as did the State College and the University at Lewisburg, while the University of Pennsylvania opened to them as to others the courses of lectures on literary and scientific subjects referred to above.

Besides these, at least 18 schools and colleges especially for the instruction of young women in studies reaching often much beyond the elementary and sometimes well into the collegiate may be found in Table VIII of the appendix or in the memoranda that follow it.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

The agricultural and mechanical instruction at the *Pennsylvania State College*, State College P. O., was continued and improved in 1882, under an able president, with somewhat increased appropriations from the State. The preparation for these specialties is meant to be begun in a general scientific course of 4 years, from which the technical courses branch at the opening of the third year; but the president says that far too many students content themselves with only brief preparatory courses, and altogether fail to reach the purely technical courses.

In at least 13 of the other colleges there were general scientific courses of 3 or 4 years in length, while, for more specific and thorough training, schools of civil, mechanical, and mining engineering were maintained, with chemical or chemical and metallurgical instruction added, in a 3-year course at the Western University of Pennsylvania, Allegheny; in 4-year courses at the Pennsylvania Military Academy, Chester; Lafayette College, Easton; Lehigh University, South Bethlehem, and Swarthmore College, Swarthmore; as well as in 5-year courses at the Towne Scientific School of the University of Pennsylvania, Philadelphia. This last had 4 courses of this character, branching off from the general scientific course at the opening of the third year. The Swarthmore studies were largely elective; and so, to some extent, were the studies at Haverford College. Laboratory and other aids to effective scientific work were common to all the colleges named. Muhlenberg College, Allentown; Dickinson College, Carlisle; and Allegheny College, Meadville, also provided such aids for the study of natural sciences.

The *Wharton School of Finance* in the University of Pennsylvania, founded for the thorough study of the science of business, had only reached its second year in 1882, with 2 regular and 7 special students, but with an apparatus for instruction and a thoroughness of course that must ere long make it an important factor in instruction preparatory to financial work. To enter on its 3-year course one must have a fair approximation to a collegiate training in mathematical, English, and linguistic studies, these last including French and German, with Latin and Greek optional.

The *Franklin Institute*, *Spring Garden Institute*, and *Wagner Free Institute of Science*, all in Philadelphia, continued and in several ways enlarged their very useful work of instructing, in classes or by lectures, persons desirous of fitting themselves properly for industrial occupations. Practice in the elements of the industries to be prepared for supplemented the instruction given in at least the latter two.

Two other institutions came into essentially the same field of work, the *Girard College for Orphans*, which undertakes to train its boys, in workshops connected with the college, in the use of tools and in the first steps in mechanics; and a mining firm at Drifton, Luzerne County, which established an *Industrial School for Miners and Mechanics*, to fit its brighter boys and men to become good machinists and effective mine bosses.

PROFESSIONAL.

Theology.—The statistics and denominational connection of fifteen schools preparing students for the Christian ministry in this State may be found in Table XI of the appendix and a summary of such statistics in the report of the Commissioner preceding. Fourteen of these schools had 3-year courses, meant to be prepared for by at least an academic and if possible by a collegiate course. The remaining school, at Bethlehem (Moravian), had only a 2-year course following a substantially collegiate one at Nazareth Hall. Two others appear in 1882, not termed theological, but practically such, one a biblical elective course at Dickinson College, Carlisle; the other a biblical department at Allegheny College, Meadville; both under Methodist Episcopal influences and both combining the Hebrew of the Old Testament and Greek of the New with studies of an ordinary col-

legiate course, that at Allegheny College giving instruction also in the evidences of christianity, biblical literature, and studies in theism.

Law.—The law department of the University of Pennsylvania, Philadelphia, with a course of 2 years, appears to have been in 1882 the only law school in the State. It provided lectures on the institutes of law; personal relations and personal property; real estate, conveyancing, and equity jurisprudence; practice, pleading, and evidence; and medical jurisprudence. It graduated 37 bachelors of laws in June.

Medicine.—The medical department of the University of Pennsylvania, Philadelphia, the Woman's Medical College of Pennsylvania, and the Medico-Chirurgical College, also in the same city, maintained still in 1882 their regular 3-year graded courses, in the first, of 26 weeks each year, with a free preliminary course of 2 weeks; in the second, of 20 weeks, and in the third, of 24. A preliminary examination in English and in physics was required at the university. Jefferson Medical College, Philadelphia, "regular," continued its old 2-year course of 24 weeks each without any special gradation of its studies and without any preliminary test of qualification for undertaking these studies. The medical staff at the university offered, besides its required 3-year course, a fourth supplemental year; also, 3 terms of graduate instruction covering 7 months. An auxiliary faculty of medicine has also, since 1865, supplemented the ordinary winter course by giving lectures during the spring months on such collateral branches as medical jurisprudence and toxicology, mineralogy and geology, botany, hygiene, comparative anatomy, and zoölogy.

The Hahnemann Medical College of Philadelphia continued to be the only homœopathic school in the State. Its requirements were, as before, 3 years of study under a medical preceptor, attendance on 2 lecture courses of 22 weeks each, and the passing of a final examination. A 3-year graded course was recommended but not required.

Dentistry was taught in 3 schools: The Pennsylvania College of Dental Surgery, the Philadelphia Dental College, and the Department of Dentistry of the University of Pennsylvania, all in Philadelphia and all with 2-year courses of 20 weeks each. The course in the University of Pennsylvania was graded.

Pharmacy.—Philadelphia and Pittsburgh each had a College of Pharmacy, with 2-year courses of 20 weeks each, meant to supplement 4 years of apprenticeship in some reputable pharmacal establishment.

SPECIAL INSTRUCTION.

TRAINING IN ART.

The *Pennsylvania Academy of Fine Arts*, Philadelphia, has its regular school of art, in which classes are trained in drawing, painting, and sketching from life and from models, besides which, art instruction is given in the *Normal Art School*, the *Woman's Industrial Art School*, and in the art department of the *Spring Garden Institute*, in all which there were 2,000 persons studying the various branches of art.

The *Pennsylvania School of Art* adopted for 1882–'83 a schedule of prices for instruction which had previously been gratuitous, the fee for a session of 8 months to be $48, with all privileges; the fee for a single month $8, with like privileges; for the antique class, day and night, $4 a month; and for the life class, $4 a month.

Mr. Charles G. Leland, by the authority of the Philadelphia school board, introduced the teaching of the minor arts into the public schools, by which any child in them may be enabled to perform decorative work in the rudiments of tile painting, leather work, wood carving, sheet metal work, etching, papier mâché work, glass work, pottery, painting, modelling in clay, art needle work, stencilling, illumination, and a number of other industries.

The School of Design for Women, Philadelphia, the School of Design for Women, Pittsburgh, and the Art School at Meadville send no reports for 1881–'82.

TRAINING IN MECHANICS.

Girard College added in 1882 a mechanical department through an appropriation for this purpose by the board of city trusts. The plan of this school includes a complete machine shop in the basement, with 35 work benches, vises, a forge, a full set of machine tools, and an engine. A superintendent was employed, who visited the principal technical schools of the Eastern States and then entered upon the work of this new school. Without any appreciable interference with the usual course of study, 150 to 200 boys, divided into 5 classes, received daily instruction in the use of tools, the properties of materials used in construction, and the proper proportion of parts in machine construction. The pupils are given an opportunity to do practical work and acquire skill in the use of tools. Great interest was manifested by the boys, the work being so attractive that there has been no instance of a pupil reported for idleness or misconduct. Some of the work is said to be exceedingly creditable. The expenses for the year were $6,536.

Training in mechanical handiwork is also given in the *Spring Garden Institute* and instruction preparatory to industrial work in mechanics, chemistry, and engineering was continued in the lectures of the *Franklin Institute*.

TRAINING IN ORATORY.

The National School of Elocution and Oratory, Philadelphia, offers a 1-year course of instruction in elocution, including junior and senior evening courses, and a course in oratory extending through 2 years of 36 weeks each. In addition to the regular course of instruction a series of lectures is given upon a wide range of topics connected with the work of the school. No report for 1881–'82 is at hand.

TRAINING IN MUSIC.

The Musical College and Pennsylvania Normal Music School, Freeburgh, offers instruction in the science and art of music, as well as training for both sexes in all branches of vocal and instrumental music. It is said to be the only institution of the kind in the State. There were 100 preparing to be teachers, and 25 others. There were 20 engaged in teaching. Since its organization in 1870 1,000 pupils have received its instructions. Annual conventions are held in January and are largely attended by musicians from Pennsylvania and other States.

The other musical schools heretofore noted, but from which there are no reports for 1881–'82 are Madam Seiler's School of Vocal Art and Instrumental Music, Philadelphia, and the Philadelphia Conservatory of Music.

EDUCATION OF THE DEAF AND DUMB.

The *Pennsylvania Institution for the Deaf and Dumb*, Philadelphia, reported 23 teachers, including the principal, superintendent, and matron, with 383 inmates during the year, 210 boys and 173 girls, of whom 290 were from the State. During the year 66 were dismissed, 46 having completed the full course, and 61 new pupils were admitted. Since the opening, 2,000 pupils had been educated in this institution, of whom one-third were congenital mutes, a majority of the others having lost their hearing through sickness.[1] Articulation and lip reading were taught, it is said, with encouraging success. A branch for oral instruction was sustained as a day school for city pupils, with an attendance of 48, under 6 teachers. The work done there during the year is reported as eminently successful. The industries of tailoring, shoemaking, and lithography were successfully pursued. By far the largest industry in the institution was dressmaking and sewing, in which 120 girls were taught 2 hours each day, using during the year 12,635 yards of material. Lessons in cookery were given with good results; also, in the laundry. Two legacies were received, one of $5,000, the other of $2,500, the latter for the fund for destitute deaf-mutes. Extensive repairs were made, the buildings and grounds being valued at $500,000, with a library of 5,000 volumes.

The *Western Pennsylvania Institution for the Instruction of the Deaf and Dumb*, Turtle Creek, reported inadequate accommodations for the wants of Western Pennsylvania, there being in 29 counties 239 deaf-mutes of proper school age who have never received instruction and cannot be admitted to the institution for want of room. Provision has been made for the erection of an additional building, at an estimated cost of $160,000. The attendance for the year was 124—77 boys, 47 girls—with 9 instructors, including the principal and matron. Twenty were dismissed and 15 new ones added. Of the 165 inmates since the opening, 59 were born deaf, 39 made so by fevers and 67 by other diseases, nearly all under 3 years of age, the ratio of sex being 3 boys to 2 girls, which is said to be the ratio in all the institutions. Four-fifths of the pupils were taught only the manual system, while 21 were taught orally and in articulation and lip reading, with varied results. No industries have been provided for.

The *Erie School for Deaf-Mutes*, Erie, is a part of the city school system. The articulation method was reported as being successfully taught.

The *Scranton Deaf-Mute School*, Scranton, under the control of the city board of education, reported 1 teacher and 13 pupils, 6 males and 7 females, having instructed 18 since its foundation. The school is graded as primary.

EDUCATION OF THE BLIND.

The *Pennsylvania Institution for the Instruction of the Blind*, Philadelphia, made its fiftieth annual report December, 1882, showing 33 instructors, 28 employés, 27 blind employés and workmen, and 170 pupils, having admitted 1,130 since opening. The literary department comprises elementary, grammar, and high school branches, including scientific training in vocal and instrumental music, a large church organ and piano being provided. The industries were mattress, broom, and brush making, cane seating, carpet weaving,

[1] Of the 3,079 deaf-mutes in the State, 32 were colored.

sewing by hand and machine, and bead work. There were made during the year 11,733 brushes, 28,175 brooms, and 1,783 yards of carpet, which, with other articles, including knitting, sewing, and bead work, were valued at $7,750. Pupils are admitted from 10 to 21 years of age. A Kindergarten department for children between 8 and 10 years of age was much needed. Five graduates have been received by the Pennsylvania University, 4 of whom graduated with honor, the other standing high in his class. There was 1 blind person to each 1,100 of the population of the State. There was a library of 1,500 volumes, containing a full supply of books in raised type. The State appropriation was $43,500; total income, $59,473; expenses, $70,160; and grounds, buildings, and apparatus were valued at $187,000. Information was received through the Philadelphia Evening Telegraph that the institution was to receive $130,000 from the estate of Mrs. Mary Shields, deceased.—(Report and return.)

There are in West Philadelphia the *Pennsylvania Working Home for Blind Men* and the *Pennsylvania Industrial Home for Blind Women*. These homes are for those who, leaving the parent institution and failing to get employment at their trades, do not become self supporting. In the former, 65 men found employment during the year and made 225,000 brooms, besides many brushes. In the latter, 45 females found employment, most of whom it is said would otherwise have been homeless. The future wants of these when old and helpless are provided for by an organized charity called the Pennsylvania Retreat for Blind Mutes and Aged and Infirm Blind Persons.—(Report.)

EDUCATION OF THE FEEBLE-MINDED.

The Pennsylvania Training School for Feeble-Minded Children, Elwyn, reported 403 inmates, the year beginning with 355; 48 were admitted and 48 dismissed, closing the year with the same number as last year. Of these 191 were supported by the State, 50 by New Jersey, 1 by Delaware, 16 by Philadelphia, 67 by parents and guardians, 10 by a free fund, and 20 by the institution. Of the 48 admitted nearly 86 per cent. were residents of the State, from 1 to 21 years of age. In the school department there were 158 pupils and 8 teachers; in the manual, 121; in the asylum and nursery, 76.

The industries taught were mattress and shoe making, caning, farm, garden, and grading work, washing, domestic duties, and sewing. All not physically incapacitated were thus employed, and many, it is said, were trained so as to become very useful. Of the 48 discharged 16 were physically unimproved, 23 improved, and 9 greatly improved; while of the 355 resident at close of the year 193 had mentally improved in the school, 132 remained stationary, and 30 had deteriorated through disease. During the term of 7 years fully 10 per cent. are so improved as to be capable of self care and usefulness. The legislature at its last session appropriated $40,000 for the maintenance of 200 feeble-minded children of the State and $60,000 for 2 additional buildings, to one of which the whole asylum and nursery department were soon to be transferred. These 2 additional buildings, with the present ones, will accommodate 460 pupils. The Pittsburgh and Allegheny Protestant Orphan Asylums have contributed $5,000 as a foundation for 1 perpetual free lodging. It is estimated that 40 per cent. of the inmates will sooner or later be candidates for a life home in the institution, and a "free fund" of $200,000 is being raised to meet this future necessity; of this, $75,000 were secured. The property, including 139 acres of land, was valued at $231,092.—(Reports of the board of public charities and of the institution.)

EDUCATION OF ORPHANS.

Girard College, Philadelphia, reported for December, 1882, a consolidated family of 1,333 persons, of whom 29 were teachers and 1,104 pupils. The year began with 878 pupils, adding 300 during the year and dismissing 71, between the ages of 14 and 18, to begin active life; 3 died. From 150 to 200 boys, in classes of 5, have received regular mechanical instruction in workshops under an experienced teacher, in which the pupils are said to have taken a deep interest. The pupils are grouped into 4 schools, corresponding to the ordinary primary, intermediate, grammar, and high schools. The average cost of maintenance for a boy during the year was $305.92.—(Report of board of trustees.)

The State includes in its public school system homes (which are also schools) for the orphans of Pennsylvania soldiers in the civil war. These homes numbered 18 in 1880, and in 1882 10 reported, with an aggregate of 2,963 inmates, being an increase of 361, the cost for the year being $381,764. Seven of these schools reported to this Bureau 1,691 inmates and 6,518 since their foundation. In addition to thorough training in the common school branches, considerable attention was given to industrial pursuits. By an act of 1878 it was provided that no more children should be admitted to the schools after June, 1882, and that the schools be finally closed June, 1885, for admissions; however, applications continued to come in in 1882, leaving on file 737, rendering it certain that in June, 1885, there will be 1,770 children on the rolls of the schools under 16 years, the

legal age for dismissal. Earnest efforts were being made for a change of the law in view of these facts.— (Pennsylvania School Journal.)

Besides these, 28 other institutions for the care and instruction of orphan and dependent children, maintained by local and general charities, reported for 1882. Ten were in Philadelphia, the others elsewhere in the State. The age for admission ranged from 1 to 16 years. Boys at 18 and girls at 16 were provided with homes or apprenticed to trades, in many cases with an outfit of clothes and $25 in money. Most of them were said to be doing well. There was a general uniformity as to school and industrial training, some using the Kindergarten method.

Of these 28 institutions, 6 were Roman Catholic, 12 non-sectarian, 3 Lutheran, 2 Reformed, 2 Protestant Episcopal, 1 Hebrew, 1 Presbyterian, and 1 Friends. The 28 schools reported 171 teachers; 24 had 1,992 inmates; 23 had had 18,064 since foundation; 21 had incomes for the year aggregating $331,468; and 14 reported 12,759 volumes in their libraries. The printed returns give the dates of opening of these orphan schools as follows: The oldest one, the Orphan Society of Philadelphia, was opened in 1814. From that date to 1850 but 3 others are reported; between 1850 and 1860, 10 more were opened; between 1860 and 1870, 7 more; between 1870 and 1880, 6, including 1 opened during 1880.— (Returns.)

INDUSTRIAL AND REFORMATORY TRAINING.

There are 2 distinctively reformatory institutions in the State, viz: the House of Refuge, Philadelphia, and the Pennsylvania Reform School, Morganza.

The *House of Refuge* originated at a public meeting in Philadelphia held in 1826, called by a number of benevolent gentlemen who recognized the need of a school for erring and neglected children. A society was organized, chartered in March, and funds amounting to about $135,000 were raised. In 1828 suitable buildings were ready, and in December, 1829, the first child was received. In 1850 the department for colored children was opened in separate buildings erected for them. In 1870 separate buildings were erected for white girls on grounds presented by the city of Philadelphia and dedicated in 1872, when the girls were transferred to their spacious and comfortable home. The institution is supported by donations, by the earnings of the inmates, and by annual appropriations from the State and the city of Philadelphia. It is governed by a board of 37 managers chosen annually. The average number of inmates has varied from 550 to 600 annually, and since opening nearly 14,000 have been under its care and discipline. Of these, 8,675 were white boys, 2,719 white girls, 1,534 colored boys, and 843 colored girls. Two-thirds of all these are said to have been restored to society. In the schools the common branches, including drawing, are taught by experienced female teachers. One evening a week is devoted to training in vocal and brass band music. Of those placed in homes during the last 3 years, favorable reports were received in 486 cases, fair in 108, and unfavorable in 87. The library contains 2,890 volumes suited to the minds of children. The average period of retention, heretofore 15 months, was recently extended to 24.

The *Pennsylvania Reform School*, which opened in 1854 on the congregate system, was changed to the family system in 1876, with larger grounds and buildings. The boys and girls, divided into 6 families, are kept entirely separate; each group is brought, as nearly as possible, into the condition of a family and everything suggestive of prison life is avoided. All attend school 4½ hours each school day. The industries are various and every one may learn some trade to follow as an honorable calling in life. By a system of merits inmates may obtain release in 2 years, but only when the managers are assured that they go to good homes and regular employments. The whole number under its care since opening was 4,278: boys, 3,166; girls, 1,112. These were committed at the average age of 13.9. Of the 396 committed during the 2 years covered by the last report, 83 had intemperate fathers; 10, intemperate mothers; 47, illiterate parents; 150, parents who could read and write; 76 had been previously arrested; 8 had parents in prison; and 10, parents in almshouses. The president of the board of managers says that every year brings evidence of the value of this school to the State. Many who without it would have been vicious and criminal are now respectable and industrious men and women. Some of the boys are at the head of the shops where they work.— (Report.)

The aggregate population of the 2 schools for 1882 was 1,431: whites 1,095, colored 336; an increase of 66 in whites and a decrease of 3 in colored as compared with the previous year. The committals of the 2 schools were 498: whites 405, colored 93; three-fourths were boys. The combined receipts from the industries pursued by the inmates for 1882 were $22,942, the House of Refuge earning $17,530 and the Reform School $5,412. The aggregate appropriations from the State for 1881 and 1882 were $183,545, the House of Refuge receiving $103,545 and the Reform School $80,000.— (Report of the board of public charities.)

TRAINING OF INDIANS.

The Indian Training School, Carlisle, in its third annual report for 1882, shows 267 Indian pupils from 24 different tribes at the close of 1881. There were added during the year 126 from 13 different tribes, 6 had died, and 90 had returned to agencies, leaving at the close of the year 296 pupils (boys, 188; girls, 108) from 33 different tribes. In school room work the chief point for the first two years is to learn the English language. The most satisfactory progress for the year was in English speaking, rewards being offered for speaking only English for a week, and then larger ones for a month. Industrial instruction is held to be of equal importance with school work, one-half of every working day being given to each. The 134 apprentices manufactured during the year wagons, harness, tinware, and shoes valued, in Government contract prices, at $6,731; besides this, all repairs were made by them. All the boys not trained in the shops worked the farm, cutting the grain with hand cradles and hay with scythes. The girls make all their own and most of the boys' garments, do all the household sewing by hand and machine, and wash and iron 2,500 pieces every week. Lessons in cookery are given and all the girls are trained in general housekeeping and economy. The superintendent says that no feature of the work is more productive of good results than that of temporary homes with good families during vacations.— (Report of the Commissioner of Indian Affairs.)

TRAINING IN COOKERY.

The Cooking School of the New Century Woman's Club, organized in 1882, while teaching expensive classes, aims to help working women, through cheap evening classes. Courses of 5 and 10 cent lessons were given at the Franklin and Spring Garden Institutes. Free instruction was given in the ward houses of the society for organizing charities. The object of this school is teach how to make the best use of the cheapest materials and to test the comparative nutritiousness of different food materials. To demonstrate the economy of scientific cookery, 25 gentlemen were invited to dine, first on a bill of fare, costing at retail market price, $4.50, or 18 cents each; and then a second dinner on a bill of fare costing $2.25, or 9 cents a guest.

INSTRUCTION IN FARMING.

Farming was taught to children in a recently organized Farm Garden School, Philadelphia, by Mrs. Briant. The object is to give children an idea of farming life, founded on the belief that emigration to the West will solve the problem of overcrowded cities. A trough, 4 feet by 3, filled with earth, represents the farm, where the whole process of raising a crop of corn is illustrated.—(Journal of Education.)

TRAINING OF NURSES.

For statistics of training schools for nurses, see Table XVII of the appendix, and a summary of it in the report of the Commissioner preceding.

KITCHEN GARDEN INSTRUCTION.

Classes of this kind are said to have been formed in Philadelphia, of which no official report has been received.

OBITUARY RECORD.

PROF. WILLIAM HENRY ALLEN, M. D., LL. D.

This honored educator was born near Augusta, Me., March 17, 1808, prepared for college at the Maine Wesleyan Seminary, and entered Bowdoin College 1829, from which he graduated in 1833; he was a teacher of Greek and Latin in Oneida Conference Seminary 2½ years; principal of Augusta High School, Maine, in 1836; professor of chemistry and natural philosophy in Dickinson College from 1836 to 1848; professor of philosophy and English literature in the same college from 1848 to 1850, being acting president during part of this time; and was president of Girard College fron 1850 to 1863. After acting as president of the Pennsylvania Agricultural College 4 years he was reëlected in 1867 president of Girard College, which position he held till his death. In 1872 he became president of the American Bible Society, and continued till his death. The degree of doctor of laws was conferred on him by Union College, New York, in 1850, and the same degree by Emory and Henry College, Virginia. He was a frequent contributor to the secular and religious press. He died in Philadelphia, August 29, 1882, in the seventy-fifth year of his age.

CHIEF STATE SCHOOL OFFICERS.

Hon. E. E. HIGBEE, *State superintendent of public instruction, Harrisburg.*

[Term, April, 1881, to April, 1885.]

HENRY HOUCK, *deputy superintendent.*

RHODE ISLAND.

SUMMARY OF EDUCATIONAL STATISTICS.

	1880–'81.	1881–'82.	Increase.	Decrease.

STATE SCHOOL FUND.				
Permanent available State fund	$240,376	$240,376		

(From reports and returns of Hon. T. B. Stockwell, State commissioner of public schools, for the two years indicated.)

STATE SCHOOL SYSTEM.

OFFICERS.

The general supervision of the public schools is vested in a State board of education; a State commissioner of public schools, chosen annually by the board, acts as its secretary. The school committee of each town consists of 3 residents of the town elected

for 3 years, with annual change of 1. A town may elect a superintendent of schools annually; if it fail to do so, he may be appointed by the school committee. For each district 1 or 3 trustees must be elected annually by the people.

OTHER FEATURES OF THE SYSTEM.

The public schools are free to all resident citizens of the State without regard to age, race, or color. To support schools the sum of $90,000 is paid annually from the income of a permanent school fund and from other money in the treasury, on the order of the commissioner of public schools, the money to be used for the payment of teachers only. No town may receive any part of the State appropriation unless it raise by tax for the support of public schools an equal amount. There is an annual appropriation of $3,000 to purchase works of reference and other apparatus for the schools. Means for the maintenance of evening schools are also provided. Towns may vote such sums as they deem necessary for the support of schools, purchase of sites, erection and repair of school-houses, and maintenance of school libraries. Any town establishing a free public library may appropriate 20 cents on each $1,000 of its ratable property for its support. Towards the maintenance of such library the State board may appropriate annually a sum not exceeding $50 for the first 500 volumes in such library and $25 for every additional 500. The board may also allow $500 annually for teachers' institutes, $500 for aiding in training in industrial art, and $300 for distributing educational journals and other means of promoting education. The training of deaf-mutes, of the blind, and of the feeble-minded is likewise provided for. Any one employing a minor under 15 years of age in work that prevents attendance upon school is subject, together with the parent or guardian of the child, to a penalty of $20 for each offence.

GENERAL CONDITION.

The statistics of the State commissioner's report show that with an increase of 2,755 in youth of school age only 668 more were enrolled in public day schools and 107 more in evening schools. The number of youth of school age not attending any school increased from 12,730 to 13,826 during the year. The average length of the school term fell off 2 days. But as there was an increase of school buildings, of graded schools, of the general public school property, of the number of schools taught, and of the funds for the support of them, the commissioner thinks the showing very good upon the whole. In addition to the 35,055 reported by the school census as attending public schools there were 6,964 in private and church schools. An advance of $1.44 was made in the average monthly pay of men teaching and one of $1.64 in that of women. The commissioner advocates the grading of salaries and deplores the neglect of some of the school officers, remarking that nearly a quarter of the schools outside of the 2 chief cities were not reported as having been visited by them during the year even the minimum number of times required by law. Corporal punishment was permitted in the public schools, but it is seldom inflicted. Training in morals is encouraged.

KINDERGÄRTEN.

For statistics of Kindergärten at Providence, see Table V of the appendix.

SCHOOL SYSTEMS OF CITIES AND TOWNS WITH OVER 7,500 INHABITANTS.

OFFICERS.

These are school committees of 3 or more members, divided into 3 classes for annual change of one-third, with a superintendent chosen either by the people or the committee.

STATISTICS. *a*

Cities and towns.	Population, census of 1880.	Youth of school age.	Enrolment in public schools.	Average daily attendance.	Number of teachers.	Expenditure.
Lincoln	13,765	3,365	2,142	1,225	38	$34,462
Newport	15,693	3,479	2,096	1,367	47	45,786
Pawtucket	19,030	3,580	3,238	2,087	55	38,463
Providence	104,857	21,300	14,542	10,248	311	248,909
Warwick	12,164	2,396	2,059	1,122	39	13,123
Woonsocket	16,050	3,514	2,187	1,236	40	42,863

a The statistics, except for population, are from the State report. The expenditures include those for evening schools, where there were any, as at Newport, Pawtucket, Providence, and Woonsocket.

ADDITIONAL PARTICULARS.

Lincoln reported 13 school buildings, containing 29 graded and 4 ungraded schools, taught by 7 men and 31 women, with a session of 10 months. The value of school property was $95,000. There were 382 children in private and church schools and 1,336 in no school. One new school-house containing 4 rooms was built during the year.

Newport had 11 school-houses, with 37 graded and 2 ungraded schools. In the evening schools there were 240 boys and 85 girls, taught 60 evenings by 12 teachers, the average attendance being only 123. The total expense of the evening schools was $894. One new building had been erected during the year for day schools. There were 825 pupils in private and church schools and 941 in no school. Music and drawing were taught by special teachers.

Pawtucket in its 18 school-houses had 40 graded and 5 ungraded schools. The 5 evening schools had an enrolment of 655 pupils, taught 12 weeks by 26 teachers. There were 534 private and church schools and 382 in no school. The estimated value of all school property was $174,000. Of the receipts for public schools $5,576 were from the State. Drawing was taught by a special teacher.

Providence reported 51 school buildings, the same number as last year, valued, with sites, furniture, &c., at nearly a million and a half of dollars. All its 246 schools were graded. There were 10 evening schools, an increase of 1, taught a little more than 16 weeks by 106 teachers, with an enrolment of 1,536 boys and 599 girls, an increase of 1,810 over 1881. There were 3,693 pupils in private and church schools and 4,920 in no school. The city superintendent deplores the non-enforcement of the truant law and says truancy is a rapidly growing evil, attributing to this cause the fact that arrests of minors for crimes and misdemeanors amounted to 1,117, or more than 14 per cent. of the arrests for the entire year.

Warwick reported 18 graded and 10 ungraded schools in 18 buildings, valued, with sites, &c., at $36,913. There were 73 in private and church schools and 1,120 in no school. The city superintendent reports that 10 per cent. of all the absenteeism for the State belongs to Warwick and strongly recommends a suitable State truant law.

Woonsocket had 32 graded and 3 ungraded schools in 15 buildings, valued at $150,000. Evening schools, 3 in number, were taught 7⅘ weeks by 11 teachers, with 326 pupils enrolled. There were 645 pupils in private and church schools and 1,392 in no school. The falling off from the grammar schools during the year was 91. The superintendent, in recommending a compulsory school law, says that almost 1,400 children in the city have not attended school a single day for the year, but roam the streets during school hours: the great wrong being done them cannot be corrected unless truant laws shall be enacted by which they can be reached.

TRAINING OF TEACHERS.

STATE NORMAL SCHOOL.

The State Normal School, Providence, requires for admission an examination of all but graduates of high schools. It has a 2-year course, prescribed by the board of education, which high school graduates usually finish in less time. An advanced course is also offered, including Greek, Latin, French, German, mathematics, and natural sciences. Such advanced study may be pursued in connection with the 2-year course, but not to the neglect of authorized common school studies. Observation and practice teaching are introduced in the senior year. The whole number of students during the year was 159, of whom 18 pursued one or more studies of the advanced course. Graduates of the year, 23. Graduates receive State diplomas, which do not, however, entitle them to teach without further examination.

TEACHERS' INSTITUTES.

The State provides institute training for teachers by appropriating $500 annually for that purpose, the institutes to be held under the direction of the commissioner of public schools. Institutes were held in 1882 at Wickford, at Bristol, and at Shannock Mills. Each meeting is said to have been a success, the attendance both of teachers and citizens being unusually full. The commissioner was assisted by Principal Greenough, of the State Normal School, who presented geography and the correct methods of teaching it, and several other branches; also, by Miss Marble, teacher of natural science in the same school, she devoting 2 lessons to mineralogy, showing how it should be taught and studied in the common schools. Nine other speakers and lecturers aided in the work by presenting such topics as the teaching of language, school hygiene, business arithmetic, English composition, English grammar, and common fractions. The superintendent, recognizing the importance of these institutes (they being provided by the State for the benefit of the schools), recommends that the State give the commissioner power to close the schools within such limits as he may determine during the sessions of the institutes.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

Full information of this class of schools has been received from the chief cities only. The Rogers High School, Newport, enrolled 140 pupils and had 7 instructors. A graduate course pursued by 11 students was added, requiring attendance at 8 or more recitations each week. Providence High School, with two courses for boys and a special department for girls, had 515 pupils for 1881–'82, with 16 teachers. Bristol, Pawtucket, and Warren maintained high schools and Woonsocket enrolled 97 pupils, under 3 teachers. South Kingston, which had a high school in 1881, makes no report of it for 1882.

OTHER SECONDARY SCHOOLS.

For statistics of business colleges, private academies, and schools preparatory to college, see Tables IV, VI, and VII of the appendix to this volume.

SUPERIOR INSTRUCTION.

BROWN UNIVERSITY.

Brown University, Providence, for young men only, the only institution for superior instruction in the State, offered for 1882 its 3 courses of 4 years each, the first leading to the degree of A. B., the second and third to that of PH. B. The university maintained its usual high standard of instruction, with an enrolment of 263 classical and 7 scientific students, under 17 instructors. The value of the buildings, including grounds, apparatus, and library, amounted to $1,250,000.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

The departments of practical science in Brown University for special preparation in the mathematical and physical sciences and their application to industrial arts were continued in 1882. The department of civil engineering occupied 4 years, subject to modification according to the wants and abilities of the students. The physical laboratory is used during the second half year by a limited number of students. Instruction in botany is given by lectures, practical class work, and drawing from nature. The course in agriculture includes chemistry and physics, botany and physiology, and zoölogy and comparative anatomy, with special lectures in agriculture. This course also includes practical instruction in obtaining and preserving specimens and in taxidermy.

PROFESSIONAL.

No professional schools are reported in the State for 1882.

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF.

The Rhode Island School for the Deaf, Providence, established in 1877 and under the control of the State board of education, up to December 31, 1882, had had a total attendance of 41, of whom 27 then remained out of 33 present during some part of the year, under 3 instructors. One of the chief aims of the school is to give the pupils command of written language. Another is to teach them to understand speech by watching the movements of the lips of others, an exercise in which they have daily practice. At the suggestion of the State school commissioner, afternoon sessions were established in September, 1882, for the benefit of pupils living out of the city, the 3 teachers taking charge alternately.

INSTRUCTION IN ART.

The Rhode Island School of Design, Providence, in its fourth year, offered courses of systematic training in free hand and mechanical drawing, painting in oil and water colors, and modelling in clay. Instruction was also given in making original designs for tiles, wall paper, jewellery, furniture, carpets, cotton prints, book covers, &c. There were 46 pupils in the first (day) class, 77 in the advanced (day and evening) class, and 43 in the Saturday morning children's class, an increase in all of 16 over 1881. The primary aim is to furnish such instruction in the elements of industrial art as may prepare artisans for the skilful prosecution of their work, as well as enable them and others to become successful art teachers.

INSTRUCTION IN MUSIC.

Greenwich Academy, East Greenwich, for 1882 offered 2 courses of instruction, one in instrumental and vocal music and the other in musical composition and the science of music.

INDUSTRIAL AND REFORMATORY TRAINING.

The Rhode Island State Reform School, Howard, received 148 children committed in 1882 and discharged 179, leaving in the institution 126 boys (of whom 12 were colored), under 14 teachers. The common English branches were taught and the industries of chairmaking, farming, washing, housework, and tailoring. Since the school was established in 1850 as the Providence Reform School, there had been committed 3,273 children 10–18 years of age. After leaving the institution the boys are under the supervision of the school officers, and it has thus been ascertained that two-thirds of them have become useful and orderly members of society. The cost of the school for the year was $17,500 and its earnings were $8,495.— (Return.)

EDUCATIONAL CONVENTION.

STATE INSTITUTE.

The Rhode Island Institute of Instruction held its thirty-seventh annual meeting at Providence January 12–14, 1882, J. Milton Hall presiding. There was a large attendance of teachers from all parts of the State. The exercises opened with an address on arithmetic, followed by addresses and papers on "Growth," "Pronunciation of Latin," "Deep-sea soundings," "Teaching United States history," "Geography," and "Elocution." Superintendent A. P. Marble, of Massachusetts, read an able paper on "Education many sided," which cautioned the teachers against falling into "ruts," against doing the same thing the same way every time, saying that in a general sense there is no best way, every way having its advantages and disadvantages and none being suitable for adoption as an exclusive method. President J. H. Seelye, of Amherst, in his address said we need higher education, and the real outcome of education is not culture alone, but character as well: there is something more than culture in the producing of character; we need the wisest and closest care for the higher schools of learning; but when culture is accomplished there is still a deeper question. President Seelye closed his address with an earnest plea for moral and religious training. Other speakers urged that moral culture and good manners should go hand in hand with intellectual training, Prof. William C. Russel insisting that morality is entirely within the sphere of school teaching. Resolutions were adopted declaring: That the teachers should point out the danger of using intoxicating drinks; that they should discourage the use of tobacco in all its forms, and should, as far as possible, advise their pupils in regard to books and periodicals read out of school; that a truant law is needed for the protection of the common school system; and that the address of Dr. Seelye be indorsed. A few closing remarks were made by the president, after which the meeting adjourned.

CHIEF STATE SCHOOL OFFICER.

Hon. THOMAS B. STOCKWELL, *State commissioner of public schools, Providence.*

Mr. Stockwell has held the place of supervisor and visitor of the State schools, by annual election of the State board of education, since 1874.

SOUTH CAROLINA.

SUMMARY OF EDUCATIONAL STATISTICS.

	1880–'81.	1881–'82.	Increase.	Decrease.

a United States Census of 1880. b Incompletely reported.

(From reports and returns of Hon. Hugh S. Thompson and Hon. A. Coward, State superintendents of education, for the two years indicated.)

STATE SCHOOL SYSTEM.

OFFICERS.

The general educational interests of the State are in the hands of a State superintendent of education, elected by the people for 2 years, and of a State board of examiners, composed of the superintendent and 4 others appointed biennially by the governor. Local officers are county school commissioners, elected by the people; a county board of 3 examiners, including the commissioner as chairman, with 2 other members appointed by the State board for 2-year terms; and district boards of 3 trustees, appointed for 2 years by the county boards.

OTHER FEATURES OF THE SYSTEM.

The public schools are sustained from the proceeds of a tax of 2 mills on $1 and a poll tax of $1 on each voter. These funds, under the constitution, are to be distributed to

the several school districts in proportion to the respective number of pupils attending. As this has been construed in some sections of the State to mean enrolment and in others to mean average attendance, the law was amended in 1878 by a provision that after 1882–'83 the basis for apportionment shall be average attendance. There is no general law for district taxation, although local taxes are levied in Charleston and other localities under special laws. The length of the school term in each county is limited by the amount of public money received, notwithstanding the fact that the constitution requires a 6 months' term. Teachers must have certificates of qualification from the State or county board of examiners and must report annually to the board of trustees. County school commissioners must report annually to the State superintendent or forfeit one-fourth of their pay to the school fund.

GENERAL CONDITION.

The statistics show a marked increase in the number of schools, number of teachers, number enrolled, amount of expenditure, and length of the school term; the average of the last, however, was lessened by the diversion of a large part of the school fund to pay claims due for expenses of previous years. The school revenues for 1880–'81 were larger than those reported for any previous year, and the superintendent thought that the amount for 1881–'82 would be still larger, although he had not full returns on this point at the date of his report. A decrease appears in the number and value of school-houses, but the returns relating to these are very imperfect. Comparatively few are owned by the public; most of the schools are taught in churches, residences, &c., of which no accurate reports can be made.

The superintendent has observed a marked improvement in the character and attainments of the teachers, resulting, he thinks, from the higher standard of qualification required for certificates, the gradual increase of salaries and their payment in full each year, and from State normal institutes. These institutes, moreover, have given a great impetus to the cause of education throughout the State, all classes of schools (public and private), academies, colleges, and seminaries having been stimulated by their influence. (State report.)

AID FROM THE PEABODY FUND.

The income of the Peabody fund having been much diminished, the trustees have used the greater part of it in the education of teachers. During the year South Carolina had $5,375; of this Claflin University received $250 for training colored teachers; the public schools, $2,150; and teachers' institutes, $1,400; scholarships at Hampton, Va., cost $250, and scholarships at Nashville, Tenn., $1,325. The latter are held by 7 students from South Carolina at the Nashville Normal College.

CITY SCHOOL SYSTEM OF CHARLESTON.

OFFICERS.

The Charleston public schools, according to a law passed in 1882, are governed by a board of 10 commissioners instead of 8, as formerly. Six of these are to be elected by the people, being one for each school district into which the city is divided. The others are appointed by the governor, two on the recommendation of the board of trustees of the high school and two on that of the trustees of the College of the City of Charleston. The board, as before, chooses a superintendent to assist in the work of supervision and in other respects retains all its former powers and duties.

STATISTICS.

The population of Charleston, according to the Census of 1880, was 49,984; the whole number of children attending public schools in 1882 was 5,904 and the average daily attendance 3,789, under 94 teachers. Six schools were in operation during most of the year, an increase of one since the last report, and $62,144 were expended for them.

ADDITIONAL PARTICULARS.

A new school building was erected, of brick, three stories high, with basement, containing 3 large main rooms and 14 class rooms, besides the necessary cloak rooms. The two colored schools are still suffering from lack of sufficient accommodations, but a plan is in contemplation which will relieve them. The superintendent recommends the establishment of a reformatory school for the education of neglected children, many of whom as young as 12 are now found in the jails.

Of other schools not belonging to the public system but doing important work the Holy Communion Church Institute reports 136 boarding and 110 day pupils; the Central Catholic School for Boys, 376; the Society Street School for Girls, 280; and St. Peter's School for Colored Children, 110. The first named, founded in 1867 by Rev. A. T. Porter

for the benefit of orphan boys, offers greater facilities for instruction than ever, and opened in October, 1882, wholly free from debt.

TRAINING OF TEACHERS.

NORMAL SCHOOLS AND DEPARTMENTS.

Four schools of this class report 325 normal students and 40 graduates during the year, besides 696 students in other courses.

Of these the *Avery Normal Institute*, Charleston (first opened in 1865), with 50 normal pupils, presents courses of 3 and 4 years, the latter with the addition of foreign languages.

The *normal department of Allen University*, Columbia (opened in 1881), with 115 normal pupils, offers a 3-year normal course, including drawing and music, and has a model school attached.

The *normal department of Claflin University*, Orangeburg, organized in 1868, reports 59 normal pupils and 10 graduates, the course covering 3 years and including music and drawing. It has a model school attached.

Fairfield Normal Institute, Winnsboro', first opened in 1869 and mainly supported by the Presbyterian committee of freedmen, at Pittsburgh, Pa., gave instruction to 101 normal pupils. There is a model school attached to the institute and music and drawing are a part of the normal course, but the length of this course is not fixed.

TEACHERS' INSTITUTES.

Teachers' associations have been formed in several counties, and some of these are called teachers' institutes; but only in one county was any attempt made to give the instruction usually imparted in such institutes. This was held during the month of July in Edgefield County, the expenses being defrayed by voluntary contributions from citizens, with $100 from the Peabody fund.

A State institute for white teachers was held in August at Columbia, under the charge of Hon. M. A. Newell, of Maryland, and one for colored teachers was held in Columbia during July, superintended by H. P. Montgomery, of Washington. Good results attended both. The former had 306 members enrolled, representing 22 counties, several students also being from North Carolina; the latter reported about 235 attending.—(State report.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The State superintendent makes no definite statement as to the existence of public high schools, but says that 4,307 children in the public schools were studying the higher branches. The two schools at Charleston enrolled, respectively, 389 girls and 121 boys. The changes recently made in the management of the school for boys, among others making the study of Latin compulsory and requiring pupils to maintain a standard of at least 50 per cent. in recitations, have worked well.

OTHER SECONDARY SCHOOLS.

For statistics of private academic schools, preparatory schools, and preparatory departments of colleges reporting, see Tables VI, VII, and IX of the appendix, and for summaries, see the report of the Commissioner preceding.

SUPERIOR INSTRUCTION.

COLLEGES FOR YOUNG MEN OR FOR BOTH SEXES.

Eight colleges and universities report for the year 1881–'82, as follows: the College of Charleston, Charleston, (non-sectarian); Erskine College, Due West (Associate Reformed Presbyterian); Furman University, Greenville (Baptist); Newberry College, Newberry (Evangelical Lutheran); Claflin University, Orangeburg (Methodist Episcopal); Wofford College, Spartanburg (Methodist Episcopal South); Adger College, Walhalla (Presbyterian), and Allen University, Columbia (Methodist). The last, organized in April, 1881, for colored students, presents primary, intermediate, and classical collegiate departments, besides legal, theological, and normal. The others report courses substantially the same as those of the previous year, all having preparatory and classical departments, although in two, Wofford College and Furman University, the arrangement of studies is that of independent schools, with no fixed time for graduation. Scientific departments are found in 3 and special or partial courses in 4, while 1 had a philosophical, 1 a normal, and 1 an agricultural course. Claflin and Allen Universities admit young women as well as men.

Gifts were reported by Claflin University and Adger and Erskine Colleges as follows:

by Claflin, from individual friends, $1,671; from the Freedmen's Aid Society, $2,000; by Adger, $525; and by Erskine, 350 acres of land from Rev. John Wilson, Monticello, Ark.

INSTITUTIONS FOR THE SUPERIOR INSTRUCTION OF WOMEN.

Six colleges and seminaries for the superior instruction of young women, 5 of them authorized to confer collegiate degrees, report for 1881–'82 an aggregate of 453 students in regular collegiate classes, besides nearly 200 in other courses. The institutions referred to are Anderson Female Seminary, Anderson; Columbia Female College, Columbia; Due West Female College, Due West; Greenville Female College, Greenville; Walhalla Female College, Walhalla, and Williamston Female College, Williamston.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

The *South Carolina College of Agriculture and the Mechanic Arts*, Columbia, for white pupils, presents 3 departments of study; regular courses of 4 years, leading to the degrees of B. A. and B. S.; special courses of 2 years; and elective ones, subject to the consent of the faculty. The regular courses are divided, according to the predominant studies, into two principal groups, scientific and literary, in each of which some choice is allowed. The scientific group embraces courses in general science, in engineering, and in agriculture, the studies in all 3 being identical for the first 2 years. About 30 acres of land are available for the illustration of work in the departments of agriculture and horticulture.

Claflin University (for colored students) offers, besides its classical and normal courses, a 3-year course in science and agriculture, especially adapted to the wants of young men that desire a higher education for industrial pursuits. About 150 acres of choice land, mostly under cultivation, are connected with the college. There is also a carpenter's shop for practical instruction. Scientific and industrial education are practically united here, and students may aid materially in defraying their expenses by manual labor on the farm and in the shop.—(Catalogue, 1881–'82.)

PROFESSIONAL.

Theological instruction was offered in Baker Theological Institute, Orangeburg (Methodist Episcopal); in Allen University, Columbia (Methodist), established in 1881 and reporting a 3-year course of study, which includes Greek, Hebrew, and French; and in Benedict Institute, Columbia (Baptist), which reports a 3-year course of study, with 33 students in it. The Theological Seminary at Columbia (Presbyterian), suspended for 2 years, reports encouraging progress made in the work of restoring the endowment; 2 additional professors had been elected and the seminary was to be reopened in September, 1882.

Legal instruction was begun in 1881–'82 by Allen University, Columbia, which reports a course of study extending over 2 years of 33 weeks each and 8 students enrolled, 1 of whom had received a collegiate degree.

Medical.—The Medical College of the State of South Carolina, Columbia (regular), opened in 1833, reports the usual 3-year medical course of study, including 2 courses of lectures of 21 weeks each, with 61 pupils enrolled during the year and 19 graduates.

A department in *pharmacy* has recently been established by the above medical college. The faculty, already elected, comprised a professor of chemistry, one of materia medica and medical botany, one of practical pharmacy, and an assistant in pharmaceutical and practical chemistry.

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF AND DUMB AND THE BLIND.

The South Carolina Institution for the Deaf and Dumb and the Blind, Cedar Springs, founded in 1849, reports 48 deaf and dumb and 12 blind pupils for the year.

The course of instruction for the deaf comprises geography, penmanship, arithmetic, English grammar, history, natural philosophy, biblical and general literature, and articulation, besides such employments as shoemaking, printing, sewing, and household work. The pupils in articulation, commencing in 1879–'80, have made steady progress; they can read quite readily from the lips almost any simple sentence and speak many sentences with sufficient distinctness to be understood with little difficulty.

The blind are taught music, as well as the English branches; also, mattress making, bead and fancy work, broom making, brush making, and chair seating.—(Returns and report.)

EDUCATION OF ORPHANS.

Two institutions for the care and education of orphans report, viz: the Holy Communion Church Institute, Charleston, already noted, and the Thornwell Orphanage, Clinton. The

latter is under the auspices of the Presbyterian Church and is supported by contributions and an endowment of $5,000. Children are received from 6 to 13; they are taught all domestic work, farming, carpentry, and printing, and leave the institution at 16 or 18 years of age. There were 34 children under instruction during the year. The family plan is followed, only 15 or 20 children being kept in a house, a matron and teacher being in charge of each house.

EDUCATIONAL CONVENTIONS.

TEACHERS' ASSOCIATIONS.

The law makes it the duty of county school commissioners to encourage the holding of teachers' associations throughout the State, and two State institutes, one for white and one for colored teachers, were held during the year, as already noted, in which much practical instruction was given and many topics bearing on school work were discussed. (State report, 1882.)

CHIEF STATE SCHOOL OFFICER.

Hon. HUGH S. THOMPSON, *State superintendent of education, Columbia.*

[Third term, January 1, 1881, to January 1, 1883.]

Hon. Asbury Coward was elected his successor in 1882.

TENNESSEE.

STATISTICAL SUMMARY.

	1880–'81.	1881–'82.	Increase.	Decrease.
POPULATION AND ATTENDANCE.				
White youth of school age (6–21)	402,580	408,364	5,784	
Colored youth of school age (6–21)	143,295	140,815		2,480

(From reports of Hon. W. S. Doak and Hon. G. S. W. Crawford, for the two years indicated, with written return from Mr. Crawford for 1880–'81.)

STATE SCHOOL SYSTEM.

OFFICERS.

For general supervision there is a State superintendent of public schools, nominated biennially by the governor and confirmed by the senate. For local supervision a superintendent for each county is chosen by the county court biennially, and in each district the people choose one out of 3 directors annually after the first election of the three. The

law requires State and county superintendents to be persons of literary and scientific attainments and of skill and experience in the art of teaching.

OTHER FEATURES OF THE SYSTEM.

The public schools are free to all youth of school age (6–21), but, as elsewhere at the South, schools for white and colored must be separate. The studies in them include only the ordinary branches, with vocal music, elementary geology of Tennessee, and elementary principles of agriculture, though other and higher branches may be provided for by local taxation or be allowed by special regulations on the payment of tuition fees. The union of public schools with academies and colleges allowed by law facilitates such arrangements. To receive pay from public funds, however, each teacher must hold a certificate of qualification from the county or city superintendent under whom he or she may be employed. The State aids the schools with the annual proceeds of a State fund of over $2,500,000, of a poll tax of $1 on each voter, and of a property tax of a mill on each $1, all distributed on the basis of scholastic population. If from these sources there should not be enough to sustain schools 5 months in the year, the county courts, of their own motion or following a vote of the people, may levy an additional tax to keep them open for that time or longer, the whole amount, however, not to exceed the entire sum raised as State tax. The non-obligatory character of the levy is the point in the system which is especially weak, the counties that most need additional school facilities often being the foremost to reject a proposition which would provide needed school facilities.

GENERAL CONDITION.

The report of school affairs for 1882 is not encouraging. Perhaps from a succession of rapid changes in the office of State superintendent of public schools—an experienced man being retired, his successor dying, and a third coming in after an interval of vacancy—many counties failed to present full returns of school attendance. This was the case in 1881 as well as in 1882, but to so much greater a degree in the latter year as to nearly invalidate the comparisons made between the two. Partly from this cause, partly it would seem from lack of interest in some counties that presented their returns, the figures given indicate a falling off of 19,112 in public school enrolment, of 28 in the number of graded public schools, of 140 in consolidated schools, of 338 in public school-houses, of 1,193 in teachers for public school classes, and of $1.94 in the average monthly pay of teachers. There is no report of average attendance for public schools. Private schools continued to report this item and showed in these reports a good percentage of average attendance on enrolment; but, as in the public schools, there was a large diminution in the enrolment and in the average attendance. Only in the average time of public schools, in the valuation of school property, and in income and expenditures are there any evidences of educational advancement.

AID FROM THE PEABODY FUND.

Tennessee had from this source in 1881–'82 $12,800, namely: $2,300 for public schools, $1,500 for teachers' institutes, and $9,000 for the Normal College, Nashville. This last is an important means of furthering educational interests throughout the South generally by training for progressive school work teachers sent to it from the other States on Peabody scholarships.

KINDERGARTEN.

Only one school of this class in the State is on the list of this Bureau for 1882, the Memphis Kindergarten in the Young Ladies' School of Mrs. F. C. James, and no report from it has been received for 1882. Another formerly existed at the Nashville Academy, but it appears to have been dropped.

SCHOOL SYSTEMS OF CITIES WITH 7,500 OR MORE INHABITANTS.

OFFICERS.

For cities there are boards of education elected by the people. City superintendents are elected by these boards.

STATISTICS.

Cities.	Population, census of 1880.	Children of school age.	Enrolment in public schools.	Average daily attendance.	Number of teachers.	Expenditure.
Chattanooga	12,892	3,408	2,580	1,548	38	$24,722
Knoxville	9,693	3,044	2,137	1,533	30	16,086
Memphis	33,592	11,200	3,948	2,671	67	44,265
Nashville	43,350	13,160	6,045	4,568	99	89,264

ADDITIONAL PARTICULARS.

Chattanooga reported for 1881–'82 graded schools in 8 buildings containing 37 school rooms. The youth of school age were 2,178 white and 1,230 colored, of which number 1,638 white and 942 colored were enrolled in the public schools, a gain of 246. The schools were taught 164½ days (a gain of 6½ days) by 7 men and 31 women, a gain of 4 teachers. The high school presents a 3-year course, including German and Latin, from which course 14 were graduated in 1882. School property was valued at $39,750. An enrolment of 350 was reported in private and church schools.

Knoxville had its 27 graded schools in 5 buildings, with 1,360 sittings. The schools were taught 189½ days by 5 men and 25 women. The estimated value of school property was $49,200. Private and church school enrolment was 100.

Memphis reported graded schools in 11 buildings, with 67 rooms and 3,200 sittings. The number of white school children was 6,370; of colored, 4,872; white pupils enrolled, 2,171; colored, 1,777. The average attendance of white children was 1,600; of colored, 1,071. The schools were taught 165 days by 9 men and 58 women. The high school for whites enrolled 71 and had an average belonging of 60 and an average attendance of 57. Calisthenics and singing were introduced as a part of the exercises in the public schools.

Nashville divided its schools into primary, intermediate, grammar, and high, the first 3 departments occupying 7 years, the last 1, 3. Thirteen school-houses — the same number reported last year — with 6,000 sittings, were occupied by the city schools. These schools were taught 185 days by 15 men and 84 women, with 2 special teachers, 1 of music and 1 of drawing and penmanship. The school population had decreased 1,352; but notwithstanding this the enrolment increased 200 and average attendance 197. There were 72 boys and 184 girls in the high school taught by 8 teachers. Private and church schools enrolled 500 children. The valuation of public school property was $195,000.

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

The State Normal College (so called, though no aid was received from the State up to 1882) is a department of the University of Nashville and is supported by university funds, by the Peabody education fund, and by appropriations of the different States for scholarships. It receives from the States students of either sex, who, for admission, must declare their intention to become teachers and pass a satisfactory examination in the common English branches. The course of study, covering 3 years, is strictly professional, and students are required in every study to occupy temporarily the place of teacher and subject themselves to criticism as to the methods they employ. Students completing the full course receive the degree of "licentiate of instruction," and may teach in the public schools of Tennessee and some other States without further examination. An advanced or baccalaureate course of one year, that leads to the degree of B. A., is optional. Twenty-five scholarships of $100 each annually have been established by the State for the training of teachers for its schools. The funds for a number of other scholarships for different States have been supplied by the Peabody fund.

There were 12 other institutions reporting normal departments or normal courses, viz: East Tennessee Wesleyan University, Athens; Humboldt Normal Institute, Humboldt; Warner Institute, Jonesboro'; Knoxville College, Knoxville; Freedman's Normal Institute and Maryville College, both at Maryville; Le Moyne Normal Institute, Memphis; Morristown Seminary, Morristown, and Fisk University, Nashville, both for colored students; Nashville Institute and Roger Williams University, both at Nashville; and Winchester Normal, Winchester. For statistics of such of these schools as report them, see Table III of the appendix; for a summary of these statistics, a corresponding table in the report of the Commissioner preceding.

Fifty scholarships of $50 each were established in 1882 at Fisk University. A normal class of teachers is required to meet the city superintendent monthly or oftener at Nashville, for the discussion of studies and methods of teaching.

SUMMER NORMAL INSTITUTES.

The State Normal Institute at the University of Tennessee, Knoxville, was held in June and July, 1882, and, owing to the death of the president, Rev. W. S. Doak, D. D., was conducted by the vice president, S. H. Lockett. There were 183 attendants, of which number 120 were teachers in public schools. Instruction in the branches taught in these schools was given, while optional courses were offered in languages, botany, physiology, and penmanship. Lectures were delivered on school organization and management, embracing "Public school law," "Rights and duties of teachers," "Grading of city and county schools," "Management and discipline of schools," "Best methods of

school teaching," &c. Some time was also devoted to an explanation of the Roman method of pronouncing Latin. The institute was well organized and successful, the lectures and teaching in the different branches being highly satisfactory.

Two normal institutes for colored teachers were held in June and July, 1882, one at Le Moyne Institute, Memphis, the other at Knoxville. The attendance at the former was 126; at the latter, 44. Instruction was given in the common school branches, and at the examination most of the students obtained good grades. Instructive lectures were delivered, much earnest work was done, and great interest was manifested.

EDUCATIONAL JOURNAL.

The Educational Record, first issued at Nashville in August, 1881, was continued through 1882, but appears to have then ceased. In its place there was proposed the Tennessee Journal of Education, to be conducted by the former State superintendent, Hon. Leon. Trousdale. The Southern Teacher was begun in the latter part of 1882 at Hollow Rock, but soon changed its title to West Tennessee Normal. An educational journal has for many years been published at Columbia, in the interests of the Columbia Athenæum, called The Guardian, and devoted to the cause of female education, especially in that school.

SECONDARY TRAINING.

HIGH SCHOOLS.

The State report does not give statistics of schools of this class, but the cities of Chattanooga, Knoxville, Memphis, and Nashville reported high schools in 1882. All had 3-year courses, which included Latin. The total enrolment was 411 and included both sexes, but whether separately taught or not does not appear, except at Knoxville and Memphis, where they were separate. The State allows academies and colleges unconnected with its school system to teach public school pupils at public school rates, by arrangements to that effect with school officers, and in this way some high school instruction is probably given.

OTHER SECONDARY SCHOOLS.

For information as to business colleges, private academic schools, schools specially engaged in preparing pupils for college, and preparatory departments of universities or colleges, see Tables IV, VI, VII, and IX of appendix. For a summary of the statistics of such schools, see corresponding tables in the report of the Commissioner preceding.

SUPERIOR INSTRUCTION.

COLLEGES FOR YOUNG MEN OR FOR BOTH SEXES.

The University of Tennessee, Knoxville, for young men, has subcollegiate courses in classical, scientific, and Latin scientific studies, of undefined length, with collegiate general courses in arts and sciences of 4 years; technical courses in engineering, agriculture, chemistry, and biology, also of 4 years; and special courses, including selections from these, of 2 years each. The collegiate courses all lead to their customary degrees, at graduation, beyond which there are graduate degrees of M. A., PH. D., C. E., and M. D., that require one to two years of resident graduate study. Honor scholarships, with exemption from all university fees, are offered to the student standing first in the third year of any one of the 4 specified courses.

Of the 19 other colleges, 10 were for both sexes and 9 for young men only. Central Tennessee College and Fisk University, both of Nashville, were for colored students. All in the State gave preparatory instruction, with 4-year collegiate courses. Fourteen had scientific courses; 11, commercial; 12, instruction in modern languages; and 10, in the fine arts. Five presented graduate courses and 6 offered normal training.

For statistics of colleges reporting, see Table IX of the appendix; for a summary of their statistics, a corresponding table in the report of the Commissioner preceding.

INSTITUTIONS FOR THE SUPERIOR INSTRUCTION OF YOUNG WOMEN.

Of the 20 colleges and universities in the State 10 admit both sexes, Maryville giving a 4-year ladies' course. Of the 20 on the lists of this Bureau, only 16 reported for 1882. Most of them present courses of from 4 to 7 years and have arrangements for teaching music, drawing, painting, and modern languages.

For statistics of those reporting, see Table VIII of the appendix; for a summary of their statistics, a corresponding table in the report of the Commissioner preceding.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

The State University and Agricultural College, Knoxville, presented in 1882 courses of 4 years each in civil engineering, mechanical and mining engineering, agriculture, and applied chemistry. There were also special courses of 2 years each in practical agriculture and applied mathematics and an English science course. In the first named, students combine class instruction with farm training and are graded and remunerated according to their skill. Scientific courses were offered in 15 other collegiate institutions, while Cumberland University, Lebanon; Vanderbilt University, Nashville; and the University of the South, Sewanee, presented courses in engineering.

For statistics of scientific schools reporting, see Table X of the appendix; for a summary of their statistics, see the report of the Commissioner preceding.

PROFESSIONAL.

Theological instruction was reported in 1882 in full 3-year courses at East Tennessee Wesleyan University, Athens; Central Tennessee College and Vanderbilt University, Nashville (both Methodist); Southwestern Presbyterian University, Clarksville; Fisk University, Nashville (Congregational); and at the University of the South, Sewanee (Protestant Episcopal). Southwestern University offered also 2 years of study in Greek and Hebrew and Vanderbilt a 2-year English course. Cumberland University, Lebanon (Cumberland Presbyterian), gave a 2-year course in theology, including Greek and Hebrew. Burritt College, Spencer (Christian), and Southwestern Baptist University, Jackson, offered biblical instruction, indefinite as to time.

Legal instruction was offered in the law school of Cumberland University, Lebanon; also, in the law departments of Central Tennessee College and Vanderbilt University, both in Nashville. The first named, opened in 1847, offers a 2-year course, which it is said, however, may be completed in 10 months. There were 40 students graduated in 1882 and invited to remain another year free of charge. The second, organized in 1880, has a course of 2 years of 32 weeks each year. There were 11 students graduated in 1882.

The *medical* schools reporting are Meharry Medical Department of Central Tennessee College (for colored students, both sexes), Nashville Medical College (a department of the State University), and the medical departments of Vanderbilt University and the University of Nashville, all offering a 3-year course of study, with 2 courses of lectures of 20 weeks each, except Meharry, which has only 19 weeks.

Dentistry was taught in the Dental School of the University of Tennessee and at Vanderbilt University, each requiring attendance upon 2 lecture courses of 20 weeks each, with approved dental work. Vanderbilt admits women to this department.

Pharmacy is also offered at Vanderbilt, with 3 hours' laboratory work, attendance upon 2 full courses of lectures of about 21 weeks each, and an original thesis for graduation. There were 5 graduates in 1882, who received the degree of PH. G.

For statistics of professional schools, see Tables XI, XII, and XIII of the appendix.

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF AND DUMB.

The Tennessee School for the Deaf and Dumb, Knoxville, opened for instruction in 1845 and free to all deaf-mute residents of the State of school age, reported 64 boys and 38 girls in 1882, under the instruction of 5 men and 2 women, 3 teachers being deaf-mutes. The common school branches were taught 5 hours each day, one class being taught by the articulation method; printing and shoemaking were also taught, and gardening to some extent. The State appropriated $22,500 for the year. Estimated value of buildings, grounds, &c., $150,000.

EDUCATION OF THE BLIND.

The Tennessee School for the Blind, Nashville, reported 58 pupils for 1881–'82, of which number 8 were colored. Common English and some of the higher branches were taught, also vocal and instrumental music, and training for piano tuning and various other industrial employments was provided. The State appropriated $40,000 for the year. A site and buildings were purchased at a cost of $8,586 for a home for colored pupils. The total expenditures for 1882 were $31,287.

INDUSTRIAL TRAINING.

The Austin School, formerly the Knoxville Industrial School, established by Miss E. L. Austin in connection with the colored public school at Knoxville, reported 314 pupils for 1881–'82 in the sewing school and 114 in the kitchen garden and classes for calisthenics. Two-thirds of the children were under 12 years of age. The school was taught 172 days by 2 teachers and reported fair progress.

EDUCATION OF ORPHANS.

For statistics of all reporting schools and institutions for the care and training of orphan children, see Table XXII of the appendix to this volume; for a summary of these statistics, a corresponding table in the report of the Commissioner preceding.

EDUCATIONAL CONVENTION.

TENNESSEE STATE TEACHERS' ASSOCIATION.

The seventeenth annual session of the State Teachers' Association was held in Morristown, August 17 and 18, 1882, Dr. William A. Smith presiding. The meeting was largely attended, representatives being present from all parts of the State. The subjects presented for discussion were "Morals and religion in school;" "National aid to public schools;" "Teacher's salary;" "Neglect of the plant for the sake of the flower;" "Progressive education;" "Practical education;" "Practical elocution;" and "What is a normal school?" After much discussion, a committee was appointed to examine the present school law, to see what revisions and amendments were necessary to improve the school system, and to bring the matter before the legislature.

OBITUARY RECORD.

DR. W. S. DOAK.

When the governor of Tennessee, in March, 1881, presented to the legislature this respected president of Tusculum College, Greeneville, as his nominee for the State superintendency of public schools, while many regretted the retirement of Hon. Leon. Trousdale, who had served with great fidelity from 1874, all hoped for much success in school work under Dr. Doak. He was known to have displayed great ability as a teacher and college president and to devote himself unsparingly to whatever work he undertook. Such a preparation and such character gave promise of the happiest results for the school system which he was called on to supervise and stimulate; and for some time it seemed that these results would be secured, as he went heartily into his work, planned wisely for it, and made favorable impressions upon most of those with whom he came in contact; but the duties of a superintendent of public schools in a large State like Tennessee, with but one assistant, are laborious and exhausting, and Dr. Doak was past his prime when he undertook them. Long journeys and exacting office work, therefore, soon told on him. Malarious disease, contracted through exposure, could not be shaken off. After a time he went back to his college home at Tusculum, convinced that if his life was to be saved it must be through complete rest for a time from his official duties. But it was too late, and he died there May 23, 1882, after occupying his high office only about 14 months. Dr. Doak was the third college president in lineal succession of his family: his grandfather, of the same name, not only founded the first school west of the mountains (afterward Washington College), but Tusculum College also, in which his son, Dr. Samuel Doak, succeeded him as president, the subject of this sketch, a graduate of the college and of Danville Theological Seminary, Kentucky, following as president from 1867 to 1881.

JOHN MERCHANT STURTEVANT.

For almost 32 years the faithful and efficient principal of the Tennessee School for the Blind, at Nashville, Mr. Sturtevant died there, December 26, 1882, in the fifty-eighth year of his age. Born March 23, 1825, in Mattapoisett, Mass., he was so unfortunate as to lose his sight from the effects of an accident when he was less than 10 years old. But with indomitable will he pursued his studies, first at the Massachusetts School for the Blind in Boston, then at Dartmouth College, New Hampshire (where he graduated in the first third of the class of 1846), and finally at the Bridgewater State Normal School, Mass., where he went to acquaint himself with the best methods of teaching. Returning to the Massachusetts School for the Blind, where he had taught already with much success and where he had succeeded in training a blind deaf-mute to articulate, he resumed his teaching with increased success, and continued it till January, 1851, when he was called to fill the principalship of the school at Nashville, which he subsequently occupied until his death. It was an unpromising work at the beginning, with only a poorly furnished rented building, with few pupils, and with very slender pay. But Mr. Sturtevant engaged in the undertaking with the energy of his noble Puritan ancestor, Miles Standish, and, finding that the legislature had the year before appropriated $4,000 toward the erection of a building for the school, he succeeded in getting an additional $8,000 voted for the purchase of a site and the completion of the building. To this building, on a site purchased from the University of Nashville, the school (then increased to 26 pupils) was transferred in January, 1853, and there it flourished under the judicious

leadership of its new principal till the outbreak of the civil war in 1861. Early in 1862 the school building was taken for a military hospital by the confederate authorities; then for the same purpose by the Federal forces, by whom it was finally destroyed. Such blind orphan children as remained were thus thrown upon the care of the blind principal, and, finding boarding places for them in the country, he supplied them as well as possible with clothing during the remaining years of the war. To secure the means for supporting and clothing these poor wards he twice took long pedestrian journeys, one trip lasting six weeks, pursuing the shifting State authorities and urging on them their duty to these children. To the credit of the authorities it must be said that they promised him at his first visit the means he sought and at the second provided them, he accounting fully, at the conclusion of the war, for every dollar thus obtained and they giving him again an appropriation to revive and carry on the school. With buildings gone, furniture largely destroyed, and pupils scattered, this was a heavy task, but Mr. Sturtevant proved equal to it. He rented new quarters, found and utilized whatever old furniture was left, sent out for scholars, urged the legislature and friends to action, and in 1867 had 16 pupils; in 1869, 37; and in 1871, 40, with a workshop for industrial employment. In 1873 he secured a new site of 7 acres for the school by a generous gift of Hon. John M. Lea and wife, and persuaded the legislature to give $40,000 for the erection of the necessary buildings, on a plan that would admit of indefinite extension. In 1881 he crowned his long labors by obtaining from the legislature the means for enlarging and improving the school and for a separate building for the colored blind. Worn out with long exertion and stricken with paralysis on the very day of his assured success, he died within a year.

CHIEF STATE SCHOOL OFFICER.

Hon. G. S. W. Crawford, *State superintendent of public schools, Nashville.*

[Mr. Crawford filled the unexpired term of W. S. Doak, and was succeeded by Hon. Thomas H. Paine, whose term extends from March 25, 1883, to March 25, 1885.]

TEXAS.

STATISTICAL SUMMARY.[a]

	1880–'81.	1881–'82.	Increase.	Decrease.

[a] In 1881 reports were received from only 109 counties; in 1882, 127 out of 166 counties reported, as well as 13 cities, none of which furnished statistics last year. No comparison between the two years, therefore, has been attempted.
[b] Race not reported in all cases.
[c] In counties; in cities, 137.

(From the third biennial report of Hon. O. N. Hollingsworth, secretary of the State board of education.)

STATE SCHOOL SYSTEM.

OFFICERS.

Public schools are under the control of a State board of education, composed of the governor, the secretary of state, and the State comptroller. The board is authorized to appoint some competent person as secretary, who is paid $2,000 a year.

County school affairs are superintended by county judges, who perform the duties usually devolving on county superintendents. The county judge of each county also appoints annually a board of examiners, consisting of 3 well educated citizens, for the examination of teachers.

OTHER FEATURES OF THE SYSTEM.

The funds set apart for the support of public schools are the interest of the public school fund, not more than one-fourth of the general revenue, and a poll tax of $1 on all men 21 to 60 years of age. These funds are distributed to the several counties in proportion to their school population (8 to 14), white and colored. Each race must receive its just proportion of the funds and must share equally in school privileges, but must be taught in separate schools, any mixed school being even forbidden to receive aid from the school funds, as is also any school in which sectarian religion is taught. In cities and towns, if two-thirds of the taxpayers so decide, an additional sum may be raised by local taxation to keep the schools open 10 months, but such tax must not exceed one-half of 1 per cent. on the city property.

GENERAL CONDITION.

The secretary of the State board reports a steady progress in public school affairs. Very little idea as to this can be gained, however, from a comparison of such statistics as are available, on account of the incompleteness of the returns. The records for 1881 were destroyed by a fire that consumed the capitol, but duplicates of them were received from 109 counties, 127 reporting for 1882, out of 166 that maintained schools. Of 45 cities and towns having control of their own schools only 13 sent reports. Such neglect suggests to the State board of education the necessity of a law which shall require reports to be made as a condition of receiving compensation by those whose duty it is to report. County judges complain of great difficulty in getting teachers to make out their term reports in proper form and in due time, and in many instances give this as a reason for the delay in sending their own reports. It is believed also that the law relating to the organization and government of schools by cities and towns is too general in its terms to produce uniformity and to give assurance that the objects of the school law will be carried out; that it, in effect, delegates to the cities and towns the power which the constitution confers on the legislature of having the school funds which are distributed to each county applied as provided by law. The authorities of such cities and towns are under no obligation to report to the board of education the manner in which the schools are organized or in which the State money is applied; consequently the legislature cannot be informed in regard to either. Another subject of complaint is in regard to the uncertainty as to exactly what is meant by the expression "sectarian school" in the constitution. County judges are not furnished with any guide except their own judgment in determining what is or is not a sectarian school, and this will continue to be a source of dissatisfaction until the legislature shall have passed a law defining such a school.

AID FROM PEABODY FUND.

During the year ending October 1, 1882, $17,500 were disbursed by the trustees of this fund in aid of education in this State, as follows: For teachers' institutes, $500; for public schools, $6,900; for educational journal, $200; to Sam Houston Normal Institute, $6,950; and for Nashville scholarships, $2,950.

SCHOOL SYSTEMS OF CITIES WITH 7,500 OR MORE INHABITANTS.

OFFICERS.

The councils or boards of aldermen of cities and towns are invested with exclusive power to maintain, regulate, control, and govern all the public free schools within their limits. Austin, Galveston, Houston, and others of the larger cities have school superintendents.

STATISTICS.

Cities.	Population, census of 1880.	Children of school age.	Enrolment in public schools.	Average daily attendance.	Number of teachers.	Expenditure.
Austin	11,013	1,459	a1,161	a805	25	$14,956
Galveston	22,248	3,698	2,150	1,447	41	26,175
Houston	16,513	2,861	1,796	1,221	29	18,249
San Antonio	20,550	4,006	2,079	1,261	29	15,650

a Pupils of school age.

ADDITIONAL PARTICULARS.

Austin reports 26 schools, maintaining 19 of them for white children and 7 for colored, their average term being 8 months. The schools occupied 9 school-houses, of which 3 belonged to the city. Teachers were paid from $50 to $65 a month; the average rate of tuition for white children was $1.43; for colored, $1.35.

In *Galveston*, public schools were taught 184 days in 9 school buildings, of which 4 were owned and 5 rented, the number of sittings for study being 2,000.

Houston had 29 public schools, classed as primary, grammar, and high, 18 of them for white children and 11 for colored, taught in 12 buildings belonging to the city, 10 of frame and 2 of brick. Teachers were paid from $35 to $122 a month. The average rate of tuition for white pupils was $1.41; for colored, $0.78.

TRAINING OF TEACHERS.

STATE NORMAL SCHOOLS.

The third annual session of the Sam Houston Normal Institute opened in September, 1881, with 165 students, of whom 130 (4 from each senatorial district and 6 from the State at large) were State students, who were received for one year without expense even for board and lodging. Tuition and books are free to all who attend; but students must pledge themselves to teach in the public schools for as many sessions as they have attended the institute. Applicants for admission must, if young men, be at least 20 years of age, if young women, 18; and they must pass a satisfactory examination in orthography, reading, penmanship, arithmetic, geography, English grammar and composition, and the history of the United States. The full course of study extends over 3 years and comprises an elementary, an advanced, and a graduate year. State certificates, good throughout the State, are granted by the board on recommendation of the faculty; also, first, second, and third class certificates, on the attainment of such proficiency as would secure like certificates from a county board of examiners.

From the State Normal School of Texas for Colored Students, Prairie View, no information has been received for 1882.

OTHER NORMAL INSTRUCTION.

Tillotson Normal Institute, Austin, under the American Missionary Association, having a normal course of 4 years, the completion of which entitles a student to a normal diploma, reports 50 students during the year, under 6 instructors.

The *American Normal School*, Kellyville, organized in 1878, but not chartered, reports assistance to the amount of about $150 received during the year from the State. There was one instructor, but the number of students is not given.

TEACHERS' INSTITUTES.

A much larger number of institutes, or summer normal schools, was held during 1882 than the previous year, and very encouraging reports of the results are given. Teachers of private as well as public schools attended and by their labors contributed to the success of the work. Eighteen institutes were sustained in different parts of the State, and their advantages were generally appreciated, the interest being greatest in the smaller places. The success attending them was considered a strong argument for their maintenance in succeeding years. Still, the class of teachers most in need of the training thus afforded was absent, and it was felt that to be of the greatest use these institutes must reach the rural teachers. It was thought, also, that 6 weeks is too long a term, and sessions of 4 weeks are recommended for the future.

EDUCATIONAL JOURNAL.

The Texas Journal of Education, a monthly published at Austin by Hon. O. N. Hollingsworth, secretary of the State board of education, was devoted to educational subjects generally and gave special information in regard to normal schools and teachers' institutes in 1882.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

No definite information is at hand in regard to public high schools; but from the State report it appears that 227 pupils were instructed in the public schools in algebra, 109 in geometry, and 153 in natural philosophy.

OTHER SECONDARY SCHOOLS.

For information as to business colleges, private academies, and preparatory departments of colleges reporting, see Tables IV, VI, and VII of the appendix; for summaries of their statistics, see the report of the Commissioner preceding.

SUPERIOR INSTRUCTION.

COLLEGES FOR YOUNG MEN OR FOR BOTH SEXES.

The collegiate institutions reporting are St. Mary's University, Galveston; Southwestern University, Georgetown; Baylor University, Independence; Salado College, Salado; Mansfield Male and Female College, Mansfield; Austin College, Sherman; Trinity University, Tehuacana; Waco University, Waco; and Marvin College, Waxahachie. All report preparatory departments and collegiate courses of 4 years. While some have the collegiate curriculum arranged in separate schools, all report studies that correspond to the classical course, leading to the degree of A. B.; 3 had scientific courses; 4, commercial; 1, a philosophical; 2, separate courses for young women; 3, courses in theology; and 1, a course in law. Music was taught by 3 and the modern languages by 7. Five admitted both sexes, and 4 of these had 270 young women enrolled in regular collegiate classes, the whole number of undergraduates reported by 8 institutions out of the 9 named being 961. Mansfield Male and Female College does not give the number of collegiate students apart from those in the preparatory department.

Gifts were received during the year by the Southwestern University of $5,000 from citizens of Georgetown, to erect a college chapel, and by Trinity University of $5,000 in notes, payable in 10 annual instalments.

INSTITUTIONS FOR THE SUPERIOR INSTRUCTION OF WOMEN.

Besides the opportunities for securing a higher education afforded to young women in 5 colleges above noted, 6 institutions are reported exclusively for them, all authorized to confer collegiate degrees, viz: Dallas Female College, Dallas; Young Ladies' School of Southwestern University, Georgetown; Woodlawn Female College, Paris; Nazareth Academy, Victoria; Baylor Female College, Independence; and Ursuline Academy, Galveston. Two of these schools were under the influence of the Methodist Episcopal Church South, 2 under the Roman Catholic, 1 under the Baptist, and 1 reports itself non-sectarian.

A gift was received during the year by the Young Ladies' School of Southwestern University of $600 from citizens of Georgetown, to improve the buildings, and one by Baylor Female College of $5,000 from citizens of Independence and other friends, part of it being in buildings and land, the remainder in money.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

The Agricultural and Mechanical College of Texas presents two courses of 3 years each in agriculture and mechanics. All students must enter one of these courses, pay students making their own selection, State students being assigned in accordance with their appointments. Of the latter, 3 are appointed from each senatorial district of the State, one-half of such students being obliged to take an agricultural and the other half a mechanical course of study, to be assigned thereto by the president of the college. Optional courses in the ancient and modern languages are open to students without extra charge. The college tract consists of 2,416 acres of land. The mechanical department comprises carpenter, forge, and vise shops; wood working and metal working machine shops, and one of steam enginery, all thoroughly equipped with the necessary tools and machinery. There were 258 students attending during the year, of whom 93 held State scholarships.

PROFESSIONAL.

Theological instruction is given in the theological department of Baylor University (Baptist), which reports 7 students, under 2 professors; also, in Trinity University (Cumberland Presbyterian) and Waco University (Baptist), some provision is made for the training of young men to the work of the ministry, but the number under instruction in this branch during 1881–'82 was not reported.

Legal instruction was given in Baylor University, though to what extent does not appear clearly from the catalogue at hand. There was, however, a professor of common and statute law and equity jurisprudence, and among the alumni were reported 31 graduates in law.

No *medical* institutions report from this State since the suspension of the Texas Medical College and Hospital, Galveston.

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF AND DUMB.

The Texas Institution for the Education of the Deaf and Dumb, Austin, organized in 1857, had 110 pupils during 1882, under 7 teachers; the whole number of pupils taught since organization being 243. The branches studied were spelling, reading, writing,

arithmetic, geography, grammar, composition, and history. Pupils were also taught such employments as printing, shoemaking, farming, gardening, care of stock, sewing, crocheting, embroidery, knitting, and household work. The institution owned 57 acres of land, valued with buildings at about $70,000. Out of $27,920 expended during the year, $24,960 were from the State.— (Return.)

EDUCATION OF THE BLIND.

The Texas Institution of Learning for the Blind is a free school maintained by the State for the benefit of blind children of rich and poor alike. Three departments are maintained, literary, musical, and mechanical, the first comprising the elementary English branches with some of the higher. In the musical department instruction is given in vocal music and in the use of various instruments, including the piano, violin, bass viol, cornet, clarionet, and flute. The employments taught are broom, mattress, and pillow making, chair seating, and the tuning of pianos and organs.

EDUCATIONAL CONVENTION.

STATE ASSOCIATION.

The State Teachers' Association which met at Tyler, June 28, 1882, was more largely attended than any previous meeting of the body. Great interest, as well as harmony, characterized the proceedings; interesting papers were read and earnest and forcible speeches delivered on appropriate topics. Galveston was selected as the place for holding the next regular session.

CHIEF STATE SCHOOL OFFICER.

Hon. O. N. HOLLINGSWORTH, *secretary of the State board of education, Austin.*

[Mr. Hollingsworth's term closes in 1883, Hon. B. M. Baker succeeding to the office.]

VERMONT.

STATISTICAL SUMMARY.

	1880–'81.	1881–'82.	Increase.	Decrease.
POPULATION AND ATTENDANCE.				
Youth of school age (5–20)	----------	a99,463	----------	----------

Amount of available school fund	$669,087	$669,087	----------	----------

a United States Census of 1880. b Items not fully reported.

(From biennial report of Hon. Justus Dartt, State superintendent of education, for the two years indicated.)

STATE SCHOOL SYSTEM.

OFFICERS.

The chief educational officer is a State superintendent of education, elected by each biennial general assembly; town superintendents, who report to the selectmen, are elected for 1-year terms; in counties there are examining boards; in districts, moderators, clerks, collectors of taxes, treasurers, 1 or 3 auditors, and prudential committees. In towns where the district system has been abolished there are boards of 3 directors. Any town having a high or central school or schools elects for each such school a prudential committee of 3, with a change of 1 each year. Women have the same right as men to hold district, town, and county school offices and to vote at school elections.

OTHER FEATURES OF THE SYSTEM.

Public schools are sustained by district and town taxation and the income of town school funds and of the United States deposit fund. The interest on the last is apportioned to the towns according to population, while one-half of the town school money, if it does not exceed $1,200, or, if it does, one-third of it, is divided equally among the dis-

tricts of such towns, the remainder to be divided among the districts according to the aggregate attendance of the children of school age during the previous year. Towns failing to assess school taxes forfeit to the county a sum equal to double the amount required to be raised by such tax, to be recovered in the county court. No public money of any town is to be distributed to any school district employing a teacher without the certificate required by law, nor to any district whose register does not contain the certificate of the town superintendent. One or more schools must be maintained in each town for instruction in the common school branches, including freehand drawing, history, and Constitution of the United States, with special training in the geography, history, and government of Vermont. The school year consists of 2 sessions, each session of 10 consecutive weeks.

A school maintained for not less than 30 weeks each year, having 4 or more departments, taught by 4 or more teachers, with an established course of study, and under one principal, must be graded. A district may provide for high school studies if the number of children in it is so great as to require more than one teacher. Contiguous districts may form a union school for the benefit of the older children of such districts. A town may establish one or more high or central schools for advanced pupils in the several districts in the town and for such non-residents as may be admitted. When the tuition charged is not sufficient to pay the expenses, a tax may be assessed on the town to pay the deficiency.

Unless otherwise instructed, every child in good health, between 8 and 14 years of age, must attend a public school at least 3 months in a year, the employment of such a child by a manufacturer being forbidden, unless the child has attended school 3 months during the previous year. Parents, guardians, and employers violating this law are liable to a fine of from $10 to $20.

In counties where there is no normal school a graded school legally organized may establish a department for the instruction and training of teachers, subject to the control of the State superintendent.

Teachers must have legal certificates of qualification and make required reports to district clerks or forfeit the pay they would receive from public school funds. Town superintendents must report annually to the State superintendent and he biennially to the legislature. The State superintendent is required to hold annual county institutes when so requested in writing by 25 teachers in any county, not to exceed a term of 3 days, and, when not so requested, may act upon his own judgment.—(Revised school law.)

GENERAL CONDITION.

According to the census of 1880 the population of Vermont was 332,286; of the 264,052 persons over 10 years of age enumerated there were 12,993 who could not read and 15,837 who could not write. The superintendent reports that the school work of the last 2 years has been largely directed to dissipating this illiteracy by means of improving the common schools. As compared with 1881, there was a decrease of 646 in enrolment, of 1,928 in average daily attendance, of 38 in attendance in private schools, of 20 in school districts, 34 in public schools, and of 43 in teachers. The gains were 17 in teachers who had attended a Vermont normal school, of 76 cents in the monthly pay of men, and of $1.40 in that of women. With this general falling off, there was an increase of $29,226 in expenditures.

The great work to be done is the improvement of the district ungraded schools, which six-sevenths of the scholars of the State attend, most of them attending no other. Among the causes to which the inefficiency of these schools is attributed are the decrease of native-born children, the gathering of the population around business centres, thinly populated rural districts, small schools and young scholars, the employment of cheap teachers, who are too young and totally ignorant of child nature, the neglect of school-houses and all their surroundings, and an indisposition to unite districts and thus secure good schools. With some exceptions the superintendent says the work of the ungraded district schools of the State is not satisfactory.

Thirty years ago there were 70 academies and only 4 graded schools in the State. Since then the academies have decreased and the graded schools have increased and greatly improved, reporting in 1881 10,404 scholars, while in the high schools there were 1,818.

SCHOOL SYSTEMS OF CITIES WITH 7,500 OR MORE INHABITANTS.

OFFICERS.

Burlington has a board of school commissioners of 6, 1 from each of the 5 wards and the city superintendent as president; Rutland, a board of education of 9 members, with a city superintendent.

STATISTICS.

Cities.	Population, census of 1880.	Enrolment in public schools.	Number of teachers.	Expenditure.
Burlington	11,365	1,584	40	$21,906
Rutland	12,149	2,585	65	19,928

ADDITIONAL PARTICULARS.

Burlington reported the general condition of the schools during the year as good. Thoroughness characterized instruction and discipline was easily maintained. The enrolment for every term was greater than that for the corresponding term of the preceding year, the increase for the winter term being 22; for the spring term, 77; for the fall term, 55. The report, though giving no statistics of average daily attendance, says that there was a slight gain in this and in the number of scholars having no absences. Tardiness was reduced 36 per cent. Teachers numbered the same as last year. A special teacher of music was employed. Writing and book-keeping are given particular prominence in the course of study. Great defects in language were found in the grammar schools, and oral lessons were made a part of the instruction in the grammar and intermediate grades. The two ungraded day and evening schools were said to be among the most interesting schools in the city. An important work was done by some of the teachers in arousing an interest among the scholars in good reading.

Rutland for 1881–'82 reported 22 school districts and 45 common schools, enrolling 2,585, under 65 teachers, 5 men and 60 women; 15 of the teachers had attended a Vermont normal school.

TRAINING OF TEACHERS.

STATE NORMAL SCHOOLS.

By an act of the general assembly 3 normal schools were established in 1867, at Castleton, Johnson, and Randolph, under the general control of the State superintendent and a board of trustees for each school. Two courses of study were prescribed for each, the first to cover 2 years, the second a year and a half. Each town in the State is entitled to a scholarship in any one of the schools, and for those filled the school receives $12 a half year. The schools are sustained by appropriations from the State, rents of grammar school lands, and tuition fees. State teachers' certificates, good for 5 years, are issued to graduates from the lower course of these schools or graduates from the lower course of a training department of a graded school, and for 10 years to those graduating from the higher course of either.

The *State Normal School*, Castleton, had 4 instructors, 82 normal and 43 other students, and 15 graduates, 9 of whom were teaching. The school, which was in session 40 weeks, had a library of 975 volumes and received from the State $1,936.

The *Johnson State Normal School* had 6 instructors, 122 normal students, and 19 graduates, all engaged in teaching. It reported a school year of 40 weeks, a library of 6,000 volumes, and an appropriation from the State of $1,784.

The *Randolph State Normal School* reported 6 instructors, 270 normal students, and 43 graduates, 42 of whom were teaching. The school year occupied 40 weeks. The library contained 600 volumes, of which 100 were pedagogical works.

All the normal schools gave instruction in drawing, but only in the Johnson school was freehand drawing taught. No special instruction in either vocal or instrumental music was given in any of them.

TRAINING SCHOOL DEPARTMENTS OF GRADED SCHOOLS.

In counties where there is no normal school a training school department for the instruction of teachers may be organized in a legal graded school under the general direction of the State superintendent, the certificates of graduation having the same power as those of normal schools.

TEACHERS' INSTITUTES.

As the law requires, the State superintendent held a teachers' institute, or teachers' association, in every county in the State. Of these no special mention is made, except of those at Chester, Windsor County, and at St. Johnsbury, Caledonia County, which are said to have been of unusual interest; the attendance on the former was 110, and on the latter over 100 teachers. Besides these, up to June, 1882, meetings were held in 43 towns.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

For these schools no statistics have been reported for 1882. In 1881 there were 34 high schools, with 1,818 students, of whom 700 studied Latin or Greek or both, 117 graduated, and 59 fitted for college.

The superintendent suggests that nine-tenths of these scholars would be better fitted for life had they studied science rather than the classics. He considers that, as the necessity of understanding science is imposed on the great majority of scholars, it must come to the front, the demand of the world to-day being for skilled labor.

OTHER SECONDARY SCHOOLS.

For statistics of business colleges, private academic schools, and preparatory departments of colleges, see Tables IV, VI, and VII of the appendix, and for summaries of the same, the report of the Commissioner preceding.

SUPERIOR INSTRUCTION.

COLLEGES FOR YOUNG MEN OR FOR BOTH SEXES.

The *University of Vermont and State Agricultural College*, Burlington (non-sectarian), gives instruction in the three departments of arts, applied science, and medicine, all the courses of the first two being open to young women on the same conditions as to young men. The department of arts comprises the usual academic courses in language, mathematics, physical sciences, mental, moral, and political philosophy, rhetoric, literature, and history. Applicants for admission to the academical department without examination must bring certificates from preparatory schools whose courses of study fully meet the requirements of the university and they are on probation during the first term. Valuable additions were made to the museum, library, and chemical laboratory. The graduating class of the engineering department aided in the purchase of a plane table for the use of this department. All male students are required to take part in military drill and instruction 2 hours each week, under an officer of the United States Army, detailed for that purpose.

Middlebury College, Middlebury (Congregational), for young men, confines its instruction to an extended classical course of 4 years. For admission its requirements are essentially the same as those of the State University for the same course. It reports a faculty of 10, with 38 students: 9 seniors, 11 juniors, 9 sophomores, and 9 freshmen. Of 15,000 volumes in the college library 1,000 were added during the year. The college has a productive fund of $140,000, yielding an annual income of $8,000, and property valued at $150,000.

Lewis College, Northfield (non-sectarian), was removed from Norwich to its present location in 1866, and was liberally endowed by Colonel Lewis, whose name it bears. The college, with its scientific courses noted further on, offers courses in science and literature and in arts, the last of which is stated to be a full classical course answering to the usual academic course of the American colleges. Candidates for admission to this course must be at least 15 years of age, must give proof of good moral character, and must be examined in mathematics, English language, geography, history, Latin, and Greek.

SUPERIOR INSTRUCTION OF YOUNG WOMEN.

The Vermont Methodist Seminary and Female College, Montpelier, with a faculty of 10 professors and instructors, is authorized to confer degrees, and, while it admits both sexes to equal advantages, appears to be largely for young women. It is not fully collegiate, but has courses such as belong to a good preparatory school.

For statistics of this class of schools, see Table VIII of the appendix, and for a summary of same, the report of the Commissioner preceding.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

The *State Agricultural College of Vermont*, Burlington, a department of the State university, continues to provide instruction in agriculture and related branches of chemistry, in engineering, and in mining, leading to the degrees of PH. B., C. E., and M. E. A special winter course for young men who cannot leave their farms in summer and autumn is provided if not less than 10 signify their wish to attend. Among other topics treated are stock raising, dairying, fruit culture, road making, farm accounts, and bee culture. There was a large increase in this department during the year, the class in engineering more than doubling.

Lewis College requires for admission to its scientific courses of 4 years each an examination in mathematics, English, geography, history, and Latin, with French, German, or advanced mathematics.

For further statistics, see Table X of the appendix; for a summary of it, a corresponding table in the report of the Commissioner preceding.

PROFESSIONAL.

No theological or legal schools report from Vermont.

The medical department of the University of Vermont, Burlington, reports a faculty of 10 instructors and lecturers, 1 demonstrator, 5 other instructors connected with the Mary Fletcher Hospital, and 8 professors on special subjects. Candidates for graduation must be 21 years of age, must have attended 2 full lecture courses such as are recognized by the American Medical Association, must have studied medicine 3 years with a regular physician or surgeon, must pass a satisfactory examination before the medical faculty and a board of examiners appointed by the State Medical Society, and present a thesis on some medical subject. The Mary Fletcher Hospital, whose grounds adjoin those of the university, affords ample opportunities for clinical study.

SPECIAL INSTRUCTION.

EDUCATION OF THE DEFECTIVE CLASSES.

Vermont continues to educate its deaf-mutes, blind, and feeble-minded in the institutions of other States. From October, 1880, to October, 1882, there were 21 deaf-mutes in the American Asylum at Hartford, Conn., and 4 in the Clarke Institution, Northampton, Mass., at a cost of $7,120; at the Perkins Institution, Boston, 8 blind pupils, at a cost of $4,850; and at the Massachusetts School for Feeble-Minded Children, South Boston, 3, at a cost of $2,317.

REFORMATORY TRAINING.

The Vermont Reform School, Vergennes, in its biennial report shows 631 inmates since opening, 149 boys and 26 girls during the 2 years, 35 of whom were committed and 18 returned. Of the 89 discharged, 18 were pardoned, 32 furloughed, and 26 placed out. In school the ordinary English branches were taught; in industries, housework and sewing were taught to the girls; seating chairs, shoemaking, and farming to the boys. Of the $41,413 expended for the 2 years, the earnings of the boys amounted to $6,535, in addition to the income from the farm. An appropriation of $10,000 was expended in enlarging the boys' department.

EDUCATION OF ORPHAN AND DEPENDENT CHILDREN.

The only institutions for this purpose in the State are in Burlington and both are supported by private contributions:

The *Providence Orphan Asylum* (Roman Catholic) reported 10 instructors, 1,862 inmates since opening, and 46 boys and 52 girls for the year. Children are received from 2 to 10 years of age and after instruction are placed out in good homes. In school they are taught the common school branches, industries, farming, and laundry and general house work.

The *Home for Destitute Children* (non-sectarian) shows 14 instructors, 505 inmates since the beginning, and 40 boys and 24 girls for the year. Receiving children from infancy to 12 years of age, it trains them in the ordinary English branches in school, and in the industries of cane seating, laundry, and general housework. By the charter of the institution no inmates of either sex are retained beyond the age of 18 and frequently they are placed in homes long before. The income of the home was $15,898, in part from a permanent fund of $62,000.

EDUCATIONAL CONVENTION.

TEACHERS' ASSOCIATION.

The thirty-second annual meeting of the Vermont State Teachers' Association was held at Castleton August 9–11, 1882, President J. S. Cilley in the chair. It is said to have been a notable occasion. Castleton is at home with educators, having for 96 years contained one of the prominent educational institutions of the State and for one-half of that time a medical college. "The nobility of work" was the first paper presented. "Institutes and institute work" was then fully discussed. This was followed by illustrations of practical physics in common schools, showing that teachers with mechanical genius may furnish their own apparatus for illustrating the lever, screw, pulley, siphon, atmospheric pressure, and for finding the centre of gravity, &c. The subject of the best methods of teaching language was then considered, followed by a paper showing that since the advent of normal schools illiteracy in the State had decreased,

common schools had advanced under more competent teachers, and pupils were better prepared for life. "Woman's opportunity" then engaged the attention of the association; "Politics in school" came next and was followed by a discussion of school supervision. The closing part of the session was taken up in discussing the State school system. President Hamlin, of Middlebury College, said he had searched the statute books for a system, but had failed to find one, Mr. Emerson exposed the defects of the system, and Professor Goodrich suggested the advisability of taking a sponge and wiping out the semblance of a system, so as to begin anew. Readings and music were among the exercises. Officers for the ensuing year were elected and the association adjourned.

EDUCATIONAL BENEFACTIONS.

GIFTS TO THE UNIVERSITY OF VERMONT.

During the two years 1881 and 1882 the university received the largest individual gifts in its history. In 1881 John P. Howard, esq., of Burlington, gave $50,000, in one payment, for the endowment of the chair of natural history, the surplus above the salary going to enlarge the cabinets and library. In 1882 John H. Pomeroy left by will $20,000, endowing the chair of chemistry. In June, 1882, Hon. J. P. Poland, of St. Johnsbury, and John H. Converse, of Philadelphia, each established a scholarship of $1,000 to pay the tuition of indigent students. Another gentleman, whose name is withheld, gave $1,000 to increase the permanent library fund. Other valuable donations were made to the library, the museums, and chemical laboratory. In addition to all his other benefactions, Mr. Howard has undertaken, at his own expense, the reconstruction of the main college building, at an expense of $40,000.

OBITUARY RECORD.

HON. GEORGE PERKINS MARSH, LL. D.

This eminent scholar, author, statesman, and diplomat was born in Woodstock, Vt., March 15, 1801. Graduating at Dartmouth College in 1820, he studied law at Burlington, Vt., and practised. In 1835 he was elected a member of the supreme executive council of the State. Having studied comparative philology, he printed privately a translation of Rask's Icelandic Grammar in 1838. He was a member of Congress from 1842 to 1849, when he was appointed minister resident at Constantinople; went on a special mission to Greece in 1852; and travelled extensively in Europe, returning to the United States in 1854. He published in 1856 The Camel, His Organization, Habits, and Uses, Considered with Reference to His Introduction into the United States; served as railroad commissioner in Vermont 1857–1859. He delivered in 1859 a course of lectures on the English language (published 1861) at Columbia College, New York, and the winter of 1860–'61 a second course on the same subject before the Lowell Institute at Boston. In 1861 he published a largely annotated edition of the first volume of Wedgewood's Etymology and in 1862 The Origin and History of the English Language. He also wrote Man and Nature, 1864, which was reissued with important additions in 1874 with the title The Earth as Modified by Human Action. On the accession of President Lincoln in 1861, Mr. Marsh was appointed minister to the new Kingdom of Italy, "the first minister to the first king." He followed the Italian government from Turin to Florence and from Florence to Rome. During the twenty-one years of his diplomatic service at the Italian court, his dispatches to the Department of State cover almost every month. They contain a most vivid and trenchant review and narration of contemporary public history and personal anecdote, which prove not only Mr. Marsh's conscientious and able discharge of duty, but to the future scholar and historian will afford an unequalled storehouse of facts recorded in a style rarely equalled in such dispatches. In the later decade of his service no place could have been found more to his mind or the duties of which he could have administered with less fatigue. He was widely known, universally respected, and beloved by every one in the official Roman world from the King down. "There was no American living who had anything approaching the personal prestige with the Italian government that Mr. Marsh enjoyed, and that not for the sake of his Government, but for his own." During all those years of active diplomacy, it is said, he never remitted his scholarly research nor the use of his pen. He was constantly gathering that valuable library which the munificence of a fellow townsman, Hon. Frederick Billings, has given to the university of his own State. His mental faculties were in clear activity to the end; his physical frame alone grew old. He died July 24, 1882, aged 81 years.—(Johnson's Cyclopædia and memorial discourse of S. G. Brown, D. D., LL. D.)

CHIEF STATE SCHOOL OFFICER.

Hon. JUSTUS DARTT, *State superintendent of education, Springfield.*

[Second term, December, 1882, to December, 1884.]

VIRGINIA.

STATISTICAL SUMMARY.

	1880–'81.	1881–'82.	Increase.	Decrease.

a According to the State census taken in 1880; according to the United States Census of 1880 the population between 5 and 21 numbered 585,042.
b Including $221,669, balance on hand from previous year.

(From report of Hon. R. R. Farr, State superintendent of public instruction, for the two years indicated.)

STATE SCHOOL SYSTEM.

OFFICERS.

The State system of free schools is administered (1) by a superintendent of public instruction elected by the general assembly for 4 years, (2) by a State board of education, consisting of the superintendent, the governor, and attorney general, (3) by county su-

perintendents appointed by the board for 4 years and confirmed by the senate, and (4) by district school trustees and subdistrict school directors.

OTHER FEATURES OF THE SYSTEM.

The State schools are free to all persons of school age, but the law requires separate schools for colored pupils. Persons between the ages of 21 and 25 may be admitted on the payment of a tuition fee of $1 a month. The schools are supported by a State fund made up of the annual interest on a literary fund, a capitation tax not to exceed $1 on all voters, and a property tax of not less than 1 nor more than 5 mills on $1, as the general assembly may direct. County and district funds are composed of fines, penalties, and donations and a tax not to exceed 10 cents on $100. Telegraph and railroad companies are liable to a tax for county and school purposes. Cities and towns may levy for the support of public free schools a tax not to exceed 3 mills on $1 and a capitation tax not to exceed 50 cents for all school purposes. A school census is taken every 5 years, and the State funds are apportioned among the counties and cities by the State superintendent on the basis of the number of children of school age shown by this census. School districts, to receive State funds, must provide school-houses, furniture, &c., and show that the schools have been taught 5 months during the year. The common English branches must be taught in every public school, but any district may admit instruction in any branches which qualify pupils for teaching or for college, on the payment of a fee not exceeding $2.50 a month for each pupil. County superintendents are required to hold at least one teachers' institute in their respective counties each scholastic year. Teachers are expected to attend these institutes and are not to lose their pay should the time so occupied cover any part of the school term.

GENERAL CONDITION.

The State school census being taken only once in 5 years, that of 1880 is used for children of school age, but the enrolment and attendance have increased very largely. There were 17 more graded schools, and although fewer school-houses had been built than in 1881 8 more were owned by the districts and the value of school property increased $147,324. The superintendent of public instruction reports progress in nearly every item, but calls attention to the fact that 438 colored schools were taught by white teachers; he says these schools should be taught by competent colored teachers and that many more schools should be opened to accommodate the colored children.

AID FROM THE PEABODY FUND.

The State received $1,000 in 1882 from this source, with the stipulation that it should be used to defray the expenses of teachers' institutes.

KINDERGÄRTEN.

Two schools of this class report for 1882: the American Kindergarten, Richmond, and Portsmouth Kindergarten, Portsmouth. The statistics of these schools will be found in Table V of the appendix.

SCHOOL SYSTEMS OF CITIES WITH 7,500 OR MORE INHABITANTS.

OFFICERS.

All cities of 10,000 inhabitants must and all others may have a city superintendent of schools, appointed by the State board of education and confirmed by the senate. The school affairs of such cities are managed by a board of not more than 3 trustees from each ward.

STATISTICS.

Cities.	Population, census of 1880.	Children of school age.	Public schools.	Enrolment in public schools.	Average daily attendance.	Number of teachers.	Expenditure.
Alexandria	13,659	4,582	25	1,421	1,063	21	$16,894
Danville	7,526	2,108	16	893	515	16	6,335
Lynchburg	15,959	4,907	37	2,182	1,396	34	21,196
Norfolk	21,966	6,695	26	1,524	1,182	26	19,728
Petersburg	21,656	6,382	29	2,106	1,532	31	18,948
Portsmouth	11,390	3,200	14	1,010	575	14	8,999
Richmond	63,600	21,536	138	7,232	5,620	149	76,181

ADDITIONAL PARTICULARS.

Alexandria reported graded schools in 4 buildings, with 1,350 sittings, and an increase of 217 in enrolment and of 142 in average daily attendance, the enrolment being 27.30 per

cent. of the white school population and 36.30 of the colored. There were 140 white pupils and 42 colored studying in the higher grades. School property was valued at $26,500. Private and church schools had an enrolment of 1,100.

Danville reported a decrease of 99 in its enrolment in public schools and an increase of 7 in average daily attendance, with a percentage of 49 of the white school population enrolled and of 37 of the colored. The schools were graded; 9 were for white pupils and 7 for colored, the latter being taught by white teachers. The white schools were open 10 months and the colored 9.

Lynchburg reported 6 school buildings, with 35 rooms and sittings for 1,600. The enrolment had increased 310 and the average attendance 198. There were 57.3 per cent. of the white school population enrolled and 38.3 of the colored, with 102 white pupils and 5 colored studying the higher branches.

Norfolk reported 18 white schools and 8 colored, taught 180 days by 18 white teachers and 8 colored. Seven buildings were reported, with 1,600 sittings. The number of pupils enrolled had fallen off 118 and the average daily attendance 13. The average monthly pay of men teachers was $83.88; of women, $54.13. Value of school property, $60,000. Estimated enrolment in private schools, 4,000.

Petersburg reported an enrolment of 1,039 colored, an increase of 23 over 1881, with an average daily attendance of 784 white pupils and 748 colored. The schools were taught 9 months by 31 white teachers, including a writing master; at an average monthly salary of $86.25 for men and $45.37 for women. The white schools (4 in number) were graded as primary, grammar, and high, and 2 for colored ranked as primary and grammar. The superintendent reports improvement in all the schools.

Portsmouth reported 3 buildings in which 13 primary schools were taught and 1 in which higher mathematics and Latin were taught. The enrolment increased 43, average daily attendance being the same as for 1881. The schools were taught 198 days by 4 men and 10 women (all white), with an average monthly salary of $72.05 for men and $38.05 for women. Estimated enrolment in private schools, 819.

Richmond reported 15 public school buildings (2 of them built during the year), containing in all 138 rooms, with 6,809 sittings, an increase of 260. Notwithstanding the increase of room, the enrolment had fallen off 43 and the average daily attendance 119. The schools were taught 173 days by 134 white teachers and 18 colored, at an average monthly salary of $85.03 for men and $41.38 for women. The per cent. of attendance in the 84 white schools was 93; that in the 54 for colored pupils, 96.

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

The normal schools reporting for 1881 are the Virginia Normal School, Bridgewater, organized in 1873; Hampton Normal and Agricultural Institute, organized in 1868; St. Stephen's Normal School, Petersburg, organized in 1871; Virginia Normal and Collegiate Institute, Petersburg, established in March, 1882, and Richmond Normal School, organized in 1867. The first named offered a 2-year course of normal training; Hampton, for colored and Indian youth, reported a 3-year normal course, 442 students, and 60 graduates, of whom 47 engaged in teaching; St. Stephen's, for colored youth, under control of the Protestant Episcopal Church, offered a 3-year normal course, with 20 students, of whom 10 were graduated; and the Virginia Institute offered a 3-year normal course, but furnishes no statistics. The legislature appropriated to this much needed institution $100,000 for the erection of suitable buildings and $10,000 annually for its support. The city appropriated $1,400 in 1882 for the Richmond Normal School, which is a part of the public school system of that city. There were 49 (colored) students, with 9 graduates, 8 of whom engaged in teaching.

GENERAL TEACHERS' INSTITUTE.

While the laws of Virginia forbid the use of public money for institute purposes, the agent of the Peabody fund required that the $1,000 given to the State in 1882 from that fund should be devoted to institutes. Three normal institutes were held, at Salem, Farmville, and Petersburg, in August, 1882. The first two of these continued 10 days, the last two weeks, with a total attendance of 307 teachers. Lectures were delivered and instruction was given in the common English branches. Towards the close of the Petersburg institute the Virginia Teachers' Association was formed, having for its object a closer union of teachers, and it is believed that if this is fostered great good will result.

COUNTY INSTITUTES.

Of the counties reporting, 44 held no institute, while 67 held 1 or more, Essex reporting 17, Lynchburg 11, and Alexandria 10. The attendance of teachers was reported good in nearly all the institutes.

EDUCATIONAL JOURNAL.

The Educational Journal of Virginia, Richmond, a useful monthly publication, is devoted to the educational interests of the State, and in 1882 was in its thirteenth volume. The general department was edited by Wm. F. Fox and the official by State Superintendent R. R. Farr.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The State superintendent gives no definite information concerning high schools, but reports 7,164 white pupils and 665 colored studying the higher branches, a decrease of 310. The city of Alexandria reported 1 high school, with 45 pupils; Lynchburg, 3 schools, with 107 pupils, under 4 teachers; and Richmond reported 2 high school buildings, with 14 rooms, 663 sittings for study, and 16 teachers, but did not give the number of pupils.

OTHER SECONDARY SCHOOLS.

For statistics of business colleges, private academic schools, and preparatory departments of colleges, see Tables IV, VI, VII, and IX of the appendix. For summaries of their statistics, see the report of the Commissioner preceding.

SUPERIOR INSTRUCTION.

UNIVERSITIES AND COLLEGES FOR YOUNG MEN.

The University of Virginia, Albemarle County (non-sectarian), offers free instruction to residents of the State and 14 scholarships, good for one year, to successful candidates from any State at a competitive examination, 3 of these being added by the visitors in 1882. Thorough instruction was given in all the chief branches of learning. The courses of instruction are academical and professional: the former are in 2 departments, literary and scientific; the latter, in the 4 departments of medicine, law, engineering, and agriculture. In the several departments there are 19 distinct schools, from which students may elect their course of study. For 1882 there were reported 326 undergraduates and 24 instructors.

Of the 6 other institutions of this class reporting for 1882, Randolph Macon College, Ashland (Methodist Episcopal), Washington and Lee University, Lexington (non-sectarian), and Richmond College, Richmond (Baptist), arranged their courses of study in separate schools. Emory and Henry College, Emory (Methodist Episcopal), Hampden Sidney College, Hampden Sidney (Presbyterian), and Roanoke College, Salem (Lutheran), all reported preparatory departments and 4-year classical courses. Richmond reported gifts to the amount of $30,000 in 1882, from friends in Virginia, Georgia, and Northern States, for building purposes. Roanoke noted the sum of $4,000 from Northern States for current expenses.

For statistics of the several institutions, see Table IX of the appendix; for a summary of these statistics, the report of the Commissioner preceding.

INSTITUTIONS FOR THE SUPERIOR INSTRUCTION OF WOMEN.

For names and full statistics of institutions for the higher education of young women, see Table VIII of the appendix, and a summary thereof in the report of the Commissioner preceding.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

Scientific instruction was offered in 3 of the regular colleges reporting for 1882: Emory and Henry College, Washington and Lee University, and the University of Virginia. The first had a 3-year course and a 4-year Latin scientific course; the 2 universities, courses in civil engineering and general science, the last named adding schools of agriculture, zoölogy, and botany of 2 to 3 years, with an experimental farm for practical instruction.

The special scientific schools reporting for the year are (1) the Virginia Agricultural and Mechanical College, Blacksburg, organized in 1872, free to resident students, with 1 year of preparatory study and a 3-year scientific course leading to the degrees of graduate in agriculture, graduate in mechanics, and bachelor of arts; (2) Hampton Normal and Agricultural Institute, organized in 1868, for colored students, since opened to Indians also, offering a 4-year course, including elementary studies, agriculture, and engineering; and (3) the Virginia Military Institute, Lexington, founded in 1839, which receives $15,000 annually from the State for the benefit of cadets who are unable to pay

their own expenses, and in which instruction was offered in architecture, civil and mining engineering, mechanical drawing, and natural sciences, in a 4-year course, with a special school of applied science for a graduate course. The Polytechnic Institute, New Market, continued its primary, preparatory, and 2-year scientific courses.

For statistics of institutions of this class, see Table X of the appendix; for a summary of them, the report of the Commissioner preceding.

PROFESSIONAL.

Theological instruction was given at Union Theological Seminary, Hampden Sidney (Presbyterian); Richmond Institute (Baptist); Theological Seminary of the Evangelical Lutheran General Synod South, Salem; and the Theological Seminary of Virginia, Theological Seminary Post Office (Protestant Episcopal). A preliminary examination was required in these schools of candidates not college graduates, and all offered 3-year courses except Richmond, for colored students, which gave 2 years of preparatory study, 3 years of academic, and a 2-year course in theology. For statistics, see Table XI of the appendix to this volume.

Legal instruction was given in the law departments of Richmond College, the University of Virginia, and Washington and Lee University. No examination was required for admission. All offer a 2-year course, which may be completed in one year, but students are advised to take the full course. For statistics, see Table XII of the appendix to this volume.

Medical instruction is given in the medical department of the University of Virginia in a graded course of 2 years, which, however, may be completed in 9 months. This instruction is given in schools of physiology and surgery; anatomy and materia medica; medicine, obstetrics, and medical jurisprudence; and chemistry and pharmacy. The degree of M. D. or a diploma in pharmacy is conferred for satisfactory attainments.

The Medical College of Virginia, Richmond, sends no report for 1882.

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF AND DUMB AND THE BLIND.

The Virginia Institution for the Deaf and Dumb and the Blind, Staunton, reported 101 pupils for the year, receiving instruction in the common school studies, with drawing and painting for the deaf and dumb. In the department for the blind there were 34 pupils studying the common and higher English branches, French, and vocal and instrumental music. The employments taught in the institution were book-binding and printing in raised type, broom making, cabinet making, carpentry, cane seating, mat and mattress making, shoemaking, tailoring, printing, and painting; also, sewing, knitting, and bead work for the girls.

INDUSTRIAL TRAINING.

The *Hampton Normal and Agricultural Institute*, Hampton, for colored and Indian youth, gives the boys industrial training (in connection with school studies) in the saw mill and in wood working, farming, wheelwrighting, blacksmithing, engineering, machine knitting, painting, printing, shoe and harness making, carpentry, and tinning. The girls are taught cookery, sewing, tailoring, and general housework. All receive pay for labor according to proficiency, and a limited number of candidates failing to pass a satisfactory examination for admission to the junior class may be admitted to a students' night class, the members of which work all day at fair wages and by study in the evening fit themselves to enter the following year.

The *Miller Manual Labor School*, Crozet, endowed by the late Samuel Miller, combines industrial training with school studies. Printing, telegraphy, and farming in all its details are taught and a 3-year course in a machine shop is provided. The studies of the school embrace the common English branches, with French, German, Latin, chemistry, engineering, and music. The amount of the permanent fund is $1,200,000, with an income of $65,000 in 1882; expenditures for the year were $95,000. Enrolment, 100 boys, under 8 teachers.

For statistics of orphan asylums reporting, see Table XXII of the appendix to this volume; for a summary of it, the report of the Commissioner preceding.

CHIEF STATE SCHOOL OFFICER.

Hon. RICHARD R. FARR, *State superintendent of public instruction, Richmond.*

[Term, March 15, 1882, to March 15, 1886.]

WEST VIRGINIA.

SUMMARY OF EDUCATIONAL STATISTICS.

	1880–'81.	1881–'82.	Increase.	Decrease.

(From reports and returns of Hon. B. L. Butcher, State superintendent of free schools, for the two years indicated.)

STATE SCHOOL SYSTEM.

OFFICERS.

A State superintendent of free schools, elected by the people for 4 years, has general control of public school interests; a board of the school fund, composed of the governor, State superintendent, auditor, and treasurer, manages, controls, and invests the public school funds; a board of regents of the State Normal School, comprising the

State superintendent and one person from each congressional district of the State, appointed by the governor, has the government and control of the normal school and its branches; and a board of regents of the West Virginia University, consisting of one person from each senatorial district, manages the affairs of that institution.

Local school interests are supervised by county school superintendents elected by the people for 2 years, by district boards of education, and by subdistrict boards of trustees. A county board of examiners for each county, to examine and license teachers, is composed of the county superintendent, who is ex officio president, and 2 experienced teachers, the latter nominated by the county superintendent and appointed, for terms of one year, by the presidents of district boards. District boards comprise a president and two commissioners elected by the people for terms of 4 years, with provision for a change of one commissioner every two years. The district board appoints 3 trustees for each subdistrict, who hold office for 3 years, 1 going out each year.

ADDITIONAL PARTICULARS.

Public schools are sustained from the proceeds of a State school fund and from district taxation. The State fund is derived from the sale of United States land warrants, an annual tax of 10 cents on the $100, a capitation tax of $1, fines, forfeitures, &c., and the income of such bank stock and United States bonds as may be held by the State. Districts are required to raise a tax sufficient to provide schools at least 4 months in the year, but the amount so levied must not exceed 50 cents on $100; and any districts failing to raise the required tax may not receive their share of the State school fund. The latter is distributed on the basis of the number of youth of school age in the State according to the latest enumeration, the salary of the State superintendent and other expenses of the office being first deducted from the amount. Teachers to be employed in public schools must have a certificate from the proper authorities. These certificates are of 3 grades, determined by the percentage attained on examination. Teachers must keep a daily register and make monthly and term reports to the district board, failing in which they forfeit the balance of pay due them. White and colored children are not allowed to attend the same school, but the law requires the establishment of a school for colored children in every district containing 15 or more colored persons 6 to 21 years old. Provision is made in the system for graded and high schools, teachers' institutes, a State normal school and branches, and a State university.

GENERAL CONDITION.

The statistics show an increase in the number of youth of school age, in public school enrolment and average attendance, in the number of schools taught and the amount of money expended for them, in the value of public school property, and in the amount of the public school fund. The latter had materially increased during the years 1881 and 1882; and the amount of public funds for distribution to the counties arising from the interest on the invested funds, State school tax, and other sources was greater this year than ever before. The average school term throughout the State was one day longer than in 1881 and 10 more school-houses were built during the year. The percentage of enrolment and average attendance based on the enumeration increased during the year, although that of average attendance on enrolment fell off slightly. The latter fact is accounted for partly by the unusually wet winter, which made the numerous streams dangerous for the children to cross, causing also more than the average amount of sickness. Superintendent Butcher says the general approval and generous aid given educational work by members of all professions and callings have been very gratifying. Newspapers and physicians are especially mentioned, the latter for instruction given to teachers in school hygiene and other subjects. A large number of newspapers gave the teachers a column each week, to be edited by the county superintendent or some of the teachers; others gave generously of their space for all educational news.

AID FROM THE PEABODY FUND.

Assistance to the amount of $2,300 was afforded the public school interests from the Peabody fund, The Educational Journal receiving $200, normal schools $1,100, and teachers' institutes $1,000.—(Report of trustees.)

CITY SCHOOL SYSTEM.

WHEELING.

Officers.—A board of education of 3 members from each subdistrict, with a superintendent of the city school district, appointed by the board.

Statistics.—With a total population of 30,737, according to the United States Census of 1880, Wheeling reports for 1882 9,986 youths of school age, 4,881 enrolled, and 4,330 in

average attendance on public schools, under 92 teachers; about 1,000 attended private and parochial schools; 8 public school buildings furnished accommodations for 5,550 children. School property was valued at $240,680 and $90,025 were expended during the year for public school purposes.

Additional particulars.—The year was one of advance in all departments of school work, bringing a better and higher public sentiment regarding the public schools. These were classed as primary, grammar, and high, the latter comprising 490 sittings for study and giving employment to 22 teachers. A fine school building was completed during the year. It was finished throughout in good style, well heated and ventilated, and cost nearly $40,000.

TRAINING OF TEACHERS.

STATE NORMAL SCHOOLS.

The regents of the *State Normal School* report for 1881–'82, in the State Normal at Marshall College, Huntington, and its branches at Fairmount, Concord, West Liberty, Shepherdstown, and Glenville, a total enrolment of 617 pupils, of whom 37 were graduated, the average actual monthly enrolment of normal pupils being 321. State appointments to the normal schools for white pupils may be given to 600 persons, divided among the counties according to population. The minimum age for admission is fixed at 13 for girls and 14 for boys. It is the practice to allow persons attending under appointment to teach one term of school each year if they desire to do so.

Storer College, for colored students, enrolled 230 pupils in normal and other departments, 18 of them being State students. For the tuition of the latter, room rent, and books, $630 were appropriated by the State, in accordance with a law passed by the legislature in 1881, which provides that if possible there shall be each year arrangements made with some suitable institution of learning in the State for the training of colored school teachers, the number to be aided bearing the same proportion to the colored population that the number of white State students bears to the white population.

OTHER PROVISION FOR NORMAL TRAINING.

The State is entitled to 6 scholarships in the State Normal College, awarded by the trustees of the Peabody fund. Three of these had been filled at the date of the superintendent's report by appointment through him after a competitive examination of the applicants.

A normal course of 3 years is furnished in *West Virginia College*, Flemington, special attention being given in the first two years to the branches taught in the public schools, the third year to collegiate branches.

TEACHERS' INSTITUTES.

The institutes held during the year were well attended and well taught, and, it is thought, contributed materially to the general improvement going forward in the schools. There were 58 county institutes and 7 district Peabody institutes held (one of the latter being for colored teachers), with a total attendance of 4,699, the average attendance at all being 3,269. The whole expense for county institutes was $1,275; for district institutes, $625.

WEST VIRGINIA SCHOOL JOURNAL.

This journal, published at Concord, Mercer County (in its second volume in 1882), has been found by the State superintendent to be of great service to the educational department. Official papers and announcements appear in it, as well as current information in regard to school affairs and many articles useful to teachers.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

Free high schools, according to law, may be established in districts where they are considered necessary, and 10 such were reported in 1882 by the State superintendent, but without statistics, except as to the number of pupils studying different branches. These were: In algebra, 1,429; geometry, 136; philosophy, 348; physiology, 259; physical geography, 213; rhetoric, 91; book-keeping, 74; botany, 301; and German, 303.

OTHER SECONDARY SCHOOLS.

For business colleges and private academic schools, see Tables IV and VI of the appendix; for preparatory departments of colleges, see Table IX; and for summaries, corresponding tables in the report of the Commissioner preceding.

SUPERIOR INSTRUCTION.

COLLEGES FOR YOUNG MEN AND FOR BOTH SEXES.

West Virginia University, Morgantown (non-sectarian), heretofore comprising classical, scientific, engineering, and military courses of study, each of 4 years, reports a change made in the arrangement of the studies in 1882 by the board of managers, who, acting upon the unanimous request of the faculty, abolished the curriculum and distributed the course into 10 independent schools, of which 8 are academic and 2 professional. Still the course of study has the same general scope as formerly: the degrees conferred continue to be bachelor of science, bachelor of arts, and bachelor of laws. The change was expected to secure greater freedom in the selection of studies and to result in an elevation of the standard of instruction and attainment. The academic schools as organized are: (1) metaphysics; (2) mathematics; (3) ancient languages; (4) modern languages; (5) English; (6) geology; (7) history; and (8) agriculture, chemistry, and physics. The professional schools are: (1) law and equity and (2) anatomy, physiology, and hygiene. There were 112 students enrolled during the year, all men.

Bethany College, Bethany (Christian), open to both sexes, presents 3 separate complete courses, the classical, the scientific, and the ministerial, leading respectively to the degrees of bachelor of arts, bachelor of science, and bachelor of letters, besides 3 special courses in engineering, physics, and chemistry, for which certificates only are given, and a thorough academic course of 2 years, which is preparatory to the regular collegiate. There is a special arrangement of studies for young women who prefer French and German to Greek, but all courses are open to them.

West Virginia College, Flemington (Free Will Baptist), also open to both sexes, offers in its collegiate department 3 courses, classical, philosophical, and literary, leading to the degrees of A. B., PH. B., and LIT. B. and requiring only 3 years for completion; also, select or partial courses for such as are not candidates for a degree. There is also a conservatory of music, with a 3-year course in piano and vocal music; a military department, affording to the young men physical training and a knowledge of military science; and a normal department, with a 3-year course of study.

INSTITUTIONS FOR THE SUPERIOR INSTRUCTION OF YOUNG WOMEN.

Broaddus Female College, Clarksburg (Baptist), Parkersburg Seminary for Girls, Parkersburg (non-sectarian), and Wheeling Female College, Wheeling (non-sectarian), all authorized to confer collegiate degrees, report over 150 pupils in collegiate classes during 1882. For further statistics, see Table VIII of the appendix, and for a summary, see the report of the Commissioner preceding.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

The *State university* continues, as before the change in the arrangement of its curriculum, to provide facilities for scientific study, the scientific degree conferred being that of B. S. To obtain this, students must have graduated in the schools of metaphysics, modern languages, English, geology and natural history, agriculture, chemistry and physics, and mathematics.

Bethany College presents a scientific course of 4 years, leading to the degree of bachelor of science, and a special course in engineering, for which no specified time is required. The branches included in the special course are land surveying, topographical surveying and drawing, levelling, profiling, mapping, descriptive geometry (with shades, shadows, and perspective), and road and railroad surveying.

For statistics, see Table X of the appendix, and for a summary, see a corresponding table in the report of the Commissioner preceding.

PROFESSIONAL.

Theological instruction is given in a 4-year ministerial course in Bethany College (Christian). The course comprises sacred literature, Greek, Latin, mathematics and astronomy, natural science, mental and political philosophy, belles lettres, sacred history, and moral philosophy.

Legal instruction is given in West Virginia University in a 2-year course of study, embracing common, statute, mercantile, constitutional, and international law, and equity. Twelve students were enrolled during 1882 and 2 were graduated.

There is no full *medical* course reported; but the school of anatomy, physiology, and hygiene of West Virginia University aims to teach anatomy thoroughly and practically, providing subjects for dissection, and physiology and hygiene also practically by specimens, drawings, lectures, the use of the microscope, and other means.

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF AND DUMB AND THE BLIND.

The West Virginia Institution for the Deaf and Dumb and the Blind, Romney, established in 1870, reports for 1882 an appropriation from the State of $27,000 and grounds and buildings valued at $80,000. There were 98 pupils under instruction, of whom 66 were deaf and dumb and 32 blind.

The deaf and dumb are taught the English language, arithmetic, geography, history, grammar, and drawing; also, the employments of printing, tailoring, shoemaking, carpentry, and cabinet making. Articulation has been taught, but the results were not practical and it was discontinued.

The blind are instructed in the common school branches, higher mathematics, and music, besides mattress and broom making and chair caning.

EDUCATIONAL CONVENTION.

WEST VIRGINIA EDUCATIONAL ASSOCIATION.

The State Association met at Kingwood July 11, 1882, and was called to order by State Superintendent B. L. Butcher. The first subject before the meeting was "What they do in the rural district schools." It was discussed by several members, after which the association listened to an address delivered by Hon. C. J. Faulkner, on "Education." "Teachers' salaries" was the next topic under discussion, in the course of which it was argued that good work cannot generally be expected of poorly paid teachers. In the evening an address of welcome was delivered by Joseph H. Hawthorn, county superintendent of Preston County, to which Mr. T. C. Miller, superintendent of the Fairmount graded schools, responded. The remaining papers read and discussed were "Mental discipline vs. knowledge," "Professional training in normal schools," "Local history," and "School hygiene," the last by Dr. James E. Reeves, of Wheeling, and "Free text books for free schools." W. L. Wilson, president of West Virginia University, gave a talk on the future of that institution, its possibilities, and the place it should occupy in the educational system of the State. After the adoption of resolutions and the election of officers for the ensuing year, the association adjourned, to meet in 1883 at Buckhannon.

CHIEF STATE SCHOOL OFFICER.

Hon. B. L. BUTCHER, *State superintendent of free schools*, ***Wheeling.***

[Term, March 4, 1881, to March 4, 1885.]

WISCONSIN.

STATISTICAL SUMMARY.

	1880–'81.	1881–'82.	Increase.	Decrease.
POPULATION AND ATTENDANCE.				
Youth of school age (4–20)	491,358	495,233	3,875	
Public school enrolment	300,122	303,452	3,330	
Average daily attendance	190,878			
Youth in private and church schools	26,252	20,967		5,285
Attending State normal schools	1,898	1,921	23	
In collegiate and theological schools	2,971	2,223		748
In State charitable and reform schools	966			
SCHOOL DISTRICTS AND SCHOOLS.				
Number of school districts	5,645	5,624		21
Number that lent books to pupils	579	579		
Ungraded State free schools	5,369	5,318		51
Graded, including high schools	474	575	101	
Number of high schools	117	121	4	
Whole number of State free schools	5,843	5,893	50	
Average term of school in days	175.6			
Town and district school libraries	274	305	31	
Houses for State free schools	5,754	5,808	54	
Value of all public school property	$5,522,657	$5,569,962	$47,305	
Number of private and church schools	465	420		45
TEACHERS AND THEIR PAY.				
Number of men teaching	2,721	2,456		265
Number of women teaching	7,198	7,631	433	
Whole number of teachers	9,919	10,087	168	
Average yearly pay of men in cities	$902 82	$964 00	$61 18	
Average yearly pay of women in cities	348 72	349 00	28	
Average monthly pay of men in counties	35 39	38 91	3 52	
Average monthly pay of women in counties	25 21	25 40	19	
Number of teachers in private schools	a852			
INCOME AND EXPENDITURE.				
Whole receipts for public schools	$2,178,219	$2,870,897	$692,678	
Whole expenditure for them	2,279,103	2,132,807		$146,296
EDUCATIONAL FUNDS.				
Public school fund	$2,790,214	$2,790,214		
University fund	226,797			
Agricultural college fund	271,940			
Normal school fund	1,098,467			

a Nineteen counties not reporting.

(From printed reports of Hon. William C. Whitford and Hon. Robert Graham, State superintendents of public instruction, for the two years indicated, with returns from the latter for both years.)

STATE SCHOOL SYSTEM.

OFFICERS.

A State superintendent of public instruction is chosen biennially by the people; there are also county superintendents. Counties with more than 15,000 inhabitants may have two superintendents, and two counties appear to have availed themselves of this provision. Ordinary school districts (which must not include more than 36 square miles) elect, at the first annual meeting of their resident voters, a district school board of 3 members, and each year afterwards one member in place of an outgoing one. Township districts that by popular vote have abolished the district system have boards composed of the clerks of the former school districts, now made subdistricts, such clerks to be chosen by vote of the people of each subdistrict at their annual meetings. These boards elect from their own number a president and vice president, who, with a secretary elected at the same meeting (not necessarily from their own number), constitute an executive school committee, the secretary acting as supervisor of the schools. Free high schools have also boards of 3 members, except in cities not under county superintendents, where the city board acts as the high school board. Women are allowed to hold school offices below the State superintendency.

OTHER FEATURES OF THE SYSTEM.

The schools of the State are free to all the persons residing in the district who are between 4 and 20 years of age. Persons under or over this age may attend by consent of school boards, and children 6 to 15 years of age must, unless excused. The number of children 4 to 20 in each district is ascertained by an annual census taken by the district clerk, who must also report the number taught in the district school or schools during the preceding school year, the number over or under the school age that have been so taught, the time covered by such teaching, the names and wages of the teachers, the text books used, the moneys received and expended for school purposes, and such other facts and statistics as the State superintendent may require. The income of a considerable State school fund is distributed annually only to such towns and districts as send in through their clerks these required reports and show that they have raised towards the support of common schools at least half the amount last apportioned to them from the State fund, besides maintaining schools at least 3 months, and 5 months, if possible. If State funds be thus lost by any town or district through failure of the clerks to make report, the offending clerks are liable to suit for the recovery of the whole amount so lost. The teachers of all schools thus assisted by the State must have certificates of qualification for their work and must keep a daily register to show that work. To aid in acquiring the proper qualifications, there are county teachers' institutes, free high schools, 4 State normal schools, and a State university.

GENERAL CONDITION.

The summaries of items in the State school work, given with great fulness in the State report for 1881, have been so reduced in the report for 1882 that a fair comparison of the two years is rendered difficult. From the figures given, however, it appears that there was progress on the whole. The increase in enrolment in the State free schools was more than five times as great as the increase of the year before, but the average daily attendance is not given for 1882. The 4 State normal schools increased their attendance by 23 students, but in private and church schools and in collegiate and theological seminaries the figures given indicate a falling off of 6,033, so that the whole number under instruction for the year appears to have been considerably less than in 1880–'81. At other points the record is more favorable. Ungraded schools diminished; graded ones considerably increased. The whole number of State free schools was 50 greater, with 54 more houses for them, the valuation of State school property being $47,305 higher; and private and church schools fell off 45. Teachers in State schools were not only more numerous (in some cases, it is true, from changes within the year), but they also upon the whole got better pay.

CHANGES IN THE SCHOOL LAW.

The only changes noted were (1) a requirement that the annual census of children of school age should be taken on the last day of May, instead of the last day of August; (2) that the annual meetings of school districts, formerly in July for those with graded schools and in September for all others, should be in all districts on the first Monday in June; (3) that high schools affording true high school training and having not less than 25 pupils should have the time for State aid extended from 5 to 10 years—all evident improvements.

KINDERGÄRTEN.

For information as to 17 of these institutions in this State, see Table V of the appendix.

SCHOOL SYSTEMS OF CITIES WITH 7,500 OR MORE INHABITANTS.

OFFICERS.

Boards of education, termed in some cases school boards, of differing numbers, but all liable to partial annual change, have charge of city school interests, usually with the aid of city superintendents elected by the boards.

STATISTICS. *a*

Cities.	Population, census of 1880.	Children of school age.	Enrolment in public schools.	Average daily attendance.	Number of teachers.	Expenditure.
Appleton	8,005	3,168	1,815	1,183	32	$37,612
Fond du Lac	13,094	5,076	2,039	1,329	40	20,294
Green Bay	7,464	2,681	1,110	704	21	10,978
Janesville	9,018	3,632	1,648	1,144	42	15,817
La Crosse	14,505	4,627	2,675	1,804	46	23,779
Madison	10,324	3,711	1,981	1,605	37	23,679
Milwaukee	115,587	42,094	18,620	12,071	272	173,700
Oshkosh	15,748	6,375	2,392	2,215	54	28,255
Racine	16,031	6,867	2,566	1,812	52	34,365
Sheboygan	7,314	3,440	1,200	726	20	10,849
Watertown	7,883	3,361	1,134	780	22	10,510

a The statistics here given, except of average attendance, are from the city tables in the State report for 1881–'82. They differ in a few cases from those in Table II of the appendix, which are from written returns.

ADDITIONAL PARTICULARS.

All the cities named above had in 1881–'82, as previously, graded courses of instruction, covering usually 10 to 12 years and including high school studies. In most of them pupils are enabled to fit themselves for college.

Appleton reports 7 school buildings, with sittings for 2,000 pupils, containing 30 rooms for school use, all of which were supplied with blackboards, 8 with reading charts, 6 with globes, &c. The cash value of school apparatus was $1,200, or $400 more than last year, but that of sites and buildings was reported less than in 1880–'81. Teachers' meetings, last reported as held semimonthly, were held weekly in 1882. Instead of the 4 private schools of 1881 there were 3, with the same number of teachers, but with 36 fewer pupils.

Fond du Lac reports its 19 school buildings all in good condition, with sittings for 3,800 pupils (1,000 more than in 1881), and its school rooms fewer, but all supplied with blackboards and dictionaries. There is no note of the 12 private schools reported the preceding year. Teachers met for consultation semimonthly. A school library of 282 volumes is reported.

Green Bay had 5 school buildings, as before, with 1,000 sittings, accommodating imperfectly 3 primary grades, 3 intermediate, 3 grammar, and 4 high. The valuation of its best school-house and site was $25,000; that of the 5, with apparatus, $51,900. There were 6 private schools, with 11 teachers and 509 scholars.

Janesville held its 6 graded schools in as many school-houses, with seats for a few more pupils; its 32 or 33 school rooms were all supplied with needful apparatus; value of school property, $67,150. The teachers held meetings twice a month. Three private schools had 265 pupils, under 7 teachers.

La Crosse reported 11 buildings for its public schools (one more than in 1881, with 66 more sittings), its 34 school rooms supplied with blackboards and illustrative apparatus, valued, with sites, buildings, and furniture, including a library of 210 volumes, at $104,330. The teachers met semimonthly. There is no note of the evening school reported in 1881 nor of any private schools.

Madison continued to report 9 school-houses, but rated their seating capacity 264 higher. All were said to be in good condition and well ventilated, with necessary conveniences, their 27 rooms being supplied with school apparatus worth $1,500. The valuation of its best school-house and site was $27,000; that of all, not including furniture or apparatus, $100,000. The schools all had 4 or more departments, and 2 Kindergärten were reported, with 2 teachers and 65 children, whether connected with the city system or not does not clearly appear. The city teachers held meetings once a week. Eight private schools had 180 days of session, under 16 teachers, but the attendance in them is not given.

Milwaukee, with 26 public school buildings, as before, had rebuilt one, and valued its best, with site, at $52,000; it valued all, with sites, furniture, and apparatus, at $705,033. Night schools were held in 47 rooms, under as many teachers. A city normal school, with 2 teachers, had 14 pupils, all in daily attendance for the year. This was soon to be superseded by a State normal school in the city, for which the legislature had made provision. German, as well as music and drawing, entered into the courses of the public schools, all being taught by special teachers. The rooms for city schools numbered 233, well furnished with school apparatus and appliances for aid in study. Two Kindergärten are reported, with 2 teachers and 227 pupils; also, 53 private or church schools, under 216 teachers, with 7,579 scholars.

Oshkosh reports 9 school buildings, with 59 rooms, one building less than in 1881; the rooms the same in number, but with an estimated seating capacity 500 less; its school apparatus about the same as last year and rated at the same sum, $2,500. The entire school property was estimated as worth $146,500.

Racine shows 9 school-houses, with 48 occupied rooms and 2,700 sittings, an increase of 1 in buildings, of 3 in rooms, and of 150 in seats for pupils. Five other rooms were used for recitations only. The rooms appear to have been well supplied with apparatus, valued at $750, besides a library of 1,580 volumes, rated at $500. A return gives $107,000 as the valuation of all school property. The meetings of its teachers were semimonthly. In 9 private or church schools, under 27 teachers, there were 1,061 pupils.

Sheboygan had 6 buildings, with 1,050 seats, as in 1881, and set the same valuation on its school property. Its schools were regularly graded and its 19 rooms all supplied with blackboards and other aids to teaching. The teachers held monthly meetings. Four private schools, under 12 teachers, had an enrolment of 490 pupils; a Kindergarten had 27 pupils.

Watertown had 5 school buildings, with 1,200 sittings, as before reported. Its night school was continued, with 2 more pupils. There was also a Kindergarten, with 25. The apparatus of the 22 city school rooms was rated at $1,500, other school property, including a library of 750 volumes, being estimated at $35,150, not including furniture. Teachers' meetings were held semimonthly. In 4 private schools there were 650 pupils, under 10 teachers.

TRAINING OF TEACHERS.

STATE NORMAL SCHOOLS.

Four seminaries, under a State board of regents of normal schools, have for some years been the agents especially authorized to train young men and women in scientific methods of instruction: one at Platteville, organized in 1866; one at Whitewater, in 1868; one at Oshkosh, in 1871; and one at River Falls, in 1875. All have elementary and advanced normal courses, the 2 together covering 4 years; preparatory instruction for imperfectly trained candidates for admission is likewise provided. All have also primary, intermediate, and grammar departments of regular public schools, which serve as practice schools for the normal classes and to some extent as lower means of preparation for them. The Oshkosh school has also a Kindergarten department for the initiation of its students into that method of instruction. The number of students in the normal departments of these schools in 1881–'82 was 948; in the preparatory, not including the practice schools, 233; in the practice schools, with the Kindergarten, 755. Deducting names counted twice, the whole number was 1,921. Of these, 61 completed the elementary and 31 the advanced course. Superintendent Graham says that 334 graduates of these normal schools and 1,097 that had studied in them without graduating served as teachers in the State schools in 1881–'82. This was almost one-fifth of the whole number required to teach the schools, and, as the proportion of such trained teachers thus employed increases gradually each year, the average quality of the State school instruction must be steadily improved through their influence. Under the law of 1880, another school of this class is about to be established at Milwaukee, with probably greater attendance and at least equally good instruction, so that the beneficial influence of these State agencies for training will be considerably increased. The instruction given in them for the year is highly commended by the regents.

OTHER NORMAL TRAINING.

The *City Normal School of Milwaukee*, established in 1872 to prepare trained teachers for the city schools, continued its good work in 1881–'82, with 14 pupils, under 2 instructors. As before said, it is soon to be superseded by a new State normal school to be established in the city.

The *National German-American Teachers' Seminary*, Milwaukee, reports 44 normal students and 5 graduates, its course of study comprising 3 years.

The *Catholic Normal School of the Holy Family*, St. Francis Station, also reports a 3-year normal course of study, 35 students, and 6 graduates.

Milton and Beloit Colleges and Lawrence and Galesville Universities provide instruction for students intending to teach, the first named preparing for work in high as well as district schools.

INSTITUTES FOR TEACHERS.

Of these temporary normal schools, maintained under State authority and largely with funds provided by the State, 14 were held in the spring and 42 in the summer and fall of 1882, after a special meeting of the conductors appointed and full arrangement of the course of instruction to be given. This instruction, part of a graded course, was largely devoted to the grammar grade of school work, its connection with that of 2 preceding years being kept up by a review of the subjects treated in those years. These institutes were held in 54 counties and superintendent districts and were in session 87 weeks, under 4 regular and 27 assistant conductors. With or without aid from the State most of the other counties or superintendent districts had their regular annual institutes, and 2 held 2 institutes each. In all the institutes 694 males and 2,879 females were enrolled, making a total of 3,573 instructed more or less in normal methods and in the science of teaching.

EDUCATIONAL JOURNAL.

The Wisconsin Journal of Education, conducted by the State superintendent and his assistant at Madison, continued in 1881–'82 its monthly information and discussions respecting current school work. The best of the papers presented at the annual meetings of the State Teachers' Association usually get into its pages, and thus many useful suggestions as to discipline, instruction, &c., are disseminated among teachers and school boards, as the law allows each school district clerk and each town clerk or secretary of a town board of directors to subscribe for the paper out of the school money.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

Since 1875 the formation of schools of this class has been encouraged by an offer of State aid to such as should be organized, with not less than 25 pupils prepared to enter on a high school course, in connection with the schools of the State system. The aid to be given was limited to $25,000 annually, which was to be divided among the schools in proportion to the amount expended by each for instruction in high school studies. In consideration of this aid each principal of a participating school appointed after the enactment of the law was to be a graduate of a university, college, or normal school or was to pass an examination in the studies to be pursued. The State aid given was limited at first to 3 years, then to 5, but in 1882 was lengthened to another 5. The number of schools aided has been as follows: In 1876, 20; 1877, 59; 1878, 85; 1879, 88; 1880, 91; 1881, 78; 1882, 98. This last number does not include 6 that were known to exist, but did not report in time to receive their apportionment. The diminution in 1881 is attributed to the fact that the 5-year limit of State aid had been reached by such as had received it at the beginning and that some of them, not knowing of the extension of the time, did not send in their reports.

Of 6,528 pupils enrolled in these schools in 1881–'82, only 367 completed either of the 2 courses of study (English and classical) that had been arranged for them, and only 2,418 had completed such a course in the 7 years since the plan of State aid was inaugurated. The great majority are said to take the easier English course, comparatively few including in it certain optional German studies. Still, the State superintendent expresses a firm belief that these schools have done and are doing an important work, both in supplementing the ordinary common school instruction and in indirectly preparing teachers for the common schools. In this last direction he thinks they can be utilized still further, and makes suggestions which, if carried out, will be likely to add much to their efficiency.

Of high schools not aided by the State there is a list of 23 in the tables of the State report. These had a registration of 1,574, so that, adding 6,528 in the aided schools, at least 8,102 were under high school training in 1881–'82. Both sexes were admitted to the schools of each.

OTHER SECONDARY SCHOOLS.

Only 13 academies and 2 business colleges are reported by the State superintendent in 1882, against 17 of the former and 7 of the latter reported the year before.

For further statistics of business colleges, academic and preparatory schools, and preparatory departments of colleges or universities, see Tables IV, VI, VII, and IX of the appendix, further on, and for summaries of such statistics, corresponding tables in the report of the Commissioner preceding.

SUPERIOR INSTRUCTION.

COLLEGES FOR YOUNG MEN OR FOR BOTH SEXES.

Eight institutions classed by this Office as colleges and universities, all but 2 being open to both sexes, send reports for 1882, their names and locations being as follows: Lawrence University, Appleton; Beloit College, Beloit; Galesville University, Galesville; University of Wisconsin, Madison; Milton College, Milton; Racine College, Racine; Ripon College, Ripon; and Northwestern University, Watertown. All except the State University provide preparatory departments; all have classical courses of 4 years and all scientific courses of 4 years, except Beloit, which presents, instead, a course leading to the degree of PH. B., but still gives special attention to the natural sciences and the modern languages. German forms a part of the course, either required or optional, in all but 1, and French in all but 2; Northwestern University makes Hebrew as well as French an optional; and in the State university special provision is made for the study of Scandinavian languages, which are also taught in Milton College. Four colleges make some provision for the preparation of teachers, 3 for business, and 3 for instruction in musical and artistic branches.—(Catalogues.)

Three colleges report gifts received during the year amounting to $32,078. Beloit received $25,000, of which $13,000 were for an observatory, $2,000 for scholarships, and $10,000 for general purposes. Lawrence University had $3,774 from various friends to meet current expenses, and Milton College, $3,304 for endowment.

The State university, with grounds, buildings, and apparatus valued at $1,400,000 and productive funds amounting to $493,790, receives also an annual appropriation from the State and gives tuition free to students residing in the State. In accordance with the law of its organization the university comprises a college of arts and one of letters. Of the professional colleges contemplated only that of law has been established. The college of arts includes a course in general science and special technical departments of agriculture and civil, mining, metallurgical, and mechanical engineering. The college of letters comprises an ancient and a modern classical course. Provision is also made for special students who are not candidates for a degree. They are allowed to take up any study they may be qualified to pursue, but, on admission, must first pass such an examination in the English branches as is required for admission to the freshman class of the general scientific course. Bachelors of arts, letters, and science may continue their studies at the university under direction of the faculty and take appropriate degrees.

The board of regents report for the year satisfactory progress made in all departments, but urge that the funds are becoming insufficient for the growing wants of the institution. The most marked external event in its history during the year was the renovation of University Hall, which was satisfactorily accomplished at an expense of $15,000, the sum granted by the legislature for that purpose. There were 314 students under instruction during 1882 in all departments of the university, 207 of them in regular collegiate classes, of which latter number 49 were women.

For further statistics of colleges and universities reporting, see Table IX of the appendix, and for a summary, see the report of the Commissioner preceding.

In the State superintendent's report a table is given embracing statistics from 13 institutions classed by him as collegiate, including the 8 given above except Galesville University. Six of the 13 are, however, classed by this Office among other than collegiate institutions. The whole enrolment reported to the superintendent was 2,141, of whom 894 were women; 45 of the whole number were candidates for the degree of A. B. and 42 for that of B. S. The value of college buildings (11 reporting this item) was $664,350; that of sites (10 reporting), $127,000. In the college libraries (12 reporting) there were 49,766 volumes, and in society libraries (7 reporting), 7,976.

INSTITUTIONS FOR THE SUPERIOR INSTRUCTION OF WOMEN.

Wisconsin Female College, Fox Lake (including also an academy for young men), Milwaukee College, Milwaukee, and the Academy of Santa Clara, Sinsinawa Mound, report 91 students in regular collegiate classes, the whole enrolment being 437. Kemper Hall, Kenosha, sends no report for 1882. For further statistics, see Table VIII of the appendix, and for a summary, a corresponding table in the report of the Commissioner preceding.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

Provisions more or less thorough for scientific study are made in all the universities and colleges included in Table IX, all but Beloit College, as already stated, presenting courses of 4 years in general science leading to the degree of B. S., and the State university, in addition to this general course, offering 4 technical courses in agriculture, civil

engineering, mining and metallurgical engineering, and mechanical engineering, each of these requiring 4 years for its completion and leading to the corresponding bachelor's degree. The degrees of civil engineer, metallurgical engineer, mining engineer, and mechanical engineer are conferred on examination after a year of additional study and practice at the university or elsewhere. There were 95 undergraduate students in general and technical scientific studies at the opening of the fall term of 1882.

PROFESSIONAL.

Three *theological* schools, viz, Luther Seminary, Madison (Evangelical Lutheran), Mission House, Franklin (German Reformed), and Nashotah House, Nashotah (Protestant Episcopal), report to the State superintendent a total of 10 instructors, 82 theological students, and 11 graduates, the course of study in each extending over 3 years. The aggregate value of buildings was reported as $119,600; the number of volumes in libraries, 11,000, 968 having been added during the year.

The Seminary of St. Francis of Sales, St. Francis, reports grounds and buildings valued at $100,000, 12 resident professors and instructors, and a 10-year course of study, but does not give the number of students enrolled.

For further statistics, see Table XI of the appendix, and for a summary, see a corresponding table in the report of the Commissioner preceding,

Legal instruction is provided in the law department of the University of Wisconsin. The method of instruction is that of lectures, with weekly moot court practice, the course requiring two full years for its completion. Applicants for admission must pass an examination in English branches and, unless college graduates, must be at least 20 years of age. Fifty students were enrolled during the year, of whom 9 had received a degree in letters or science, and 25 were graduated at the commencement of 1882.

For further statistics, see Table XII of the appendix, and for a summary, a corresponding table in the report of the Commissioner preceding.

There are no *medical* schools reported.

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF AND DUMB.

The *Wisconsin Institution for the Education of the Deaf and Dumb*, Delavan, founded in 1852, during the 31 years of its existence has given instruction to about 600 deaf pupils. Although accurate figures cannot be given, owing to deficiencies in the records, the board of supervisors estimate that over 100 students have completed the full course of study. They consider that no work undertaken by the State has produced more satisfactory results than that of this institution, saying that there are few if any of its pupils who have not been here qualified for some pursuit by which they could gain a livelihood. They recommend a more liberal expenditure on the instructing force in the school proper and in the mechanical departments. In the literary department the common English branches are taught, including drawing and history, with physiology, natural philosophy, and natural history; in the industrial department, shoemaking, cabinet work, printing, baking, and sewing. The institution has a library of 600 volumes; owns 37½ acres of land, the grounds and buildings being valued at $100,000; receives from the State an annual appropriation for its support; and gives tuition and board free to its pupils.—(Return and State report.)

St. John's Deaf-Mute Asylum, St. Francis (Roman Catholic), reporting 48 deaf-mute pupils for 1882, gave instruction in christian doctrine, Bible history, writing, reading, grammar, arithmetic, geography, United States history, articulation, the finger alphabet, and the languages of natural signs; also, in the employments of printing, agriculture, needlework, fancy work, and general housework.—(Return.)

The *Phonological Institute for Deaf-Mutes*, Milwaukee, founded in 1878, is under the care of the Wisconsin Phonological Institute, an association organized for the purpose of propagating the articulate method of instruction. No finger alphabet or other sign language is used. All the elementary branches are taught and the girls also learn needle work. Twenty-four pupils were under instruction during 1882.

For further statistics of deaf-mute schools, see Table XVIII of the appendix, and for a summary, see the report of the Commissioner preceding.

EDUCATION OF THE BLIND.

The Wisconsin Institution for the Education of the Blind, Janesville, supported by the State, having grounds and buildings valued at $155,000 and a library of 1,200 volumes, reports 83 pupils enrolled during the year and 318 since 1850, the year of foundation. The board of supervisors report that there is a large number of blind of proper age in the State, as well as of deaf and dumb, who are not attending school or receiving sys-

tematic instruction of any kind. The school comprises 3 departments, literary, musical, and industrial. In the first the design is to give each pupil a good knowledge of the common branches, and, to those who are qualified, instruction in some of the more practical of the higher English studies. Careful examinations of the classes are made at the middle and close of each term, and scholars are classified according to their daily record combined with the results of the examination. In the music department there are three choral classes and an orchestra; harmony, the New York system of musical notation, the piano, cabinet organ, violin, and other instruments receive attention. The industrial department affords instruction in carpet weaving, cane seating, fancy work, and sewing. The young children obtain from their bead work increased keenness of touch and nimbleness of fingers, which assist them in learning to read and write.

For statistics, see Table XVIII of the appendix, and for a summary, see a corresponding table in the report of the Commissioner preceding.

REFORMATORY AND INDUSTRIAL TRAINING.

The *Wisconsin Industrial School for Boys*, Waukesha, under State control, established in 1860, has since had under training nearly 2,000 boys, the number during 1882 being 299, and that of teachers, officers, and assistants 44. Pupils are taught the common English branches, farm work, and the manufacture of boots, shoes, socks, and mittens. The school is divided into primary, intermediate, and senior departments, and is graded as closely as the frequent changes caused by boys going out and coming in will admit. Classes are promoted from one department to another after passing a written examination.—(Report and return.)

The *Wisconsin Industrial School for Girls*, Milwaukee, under private control though aided by the State, takes charge of girls from infancy to 16 years of age, who have committed petty offences or are in danger of falling into vicious ways, teaching them the common English branches, history, and domestic science, besides house and laundry work, common and fine sewing (including the use of the machine), dressmaking, and cookery. Seventy-eight per cent. of the inmates discharged are known to have become orderly and useful members of society. There were 126 present during the year; 78 were committed and 72 discharged. The new building, for which the legislature appropriated $15,000, was expected to be ready for occupancy December 1, 1882.

Another industrial school for girls at Milwaukee, the *Good Shepherd Industrial School*, is under the care of the Roman Catholic Church, though receiving some aid from the county. The same church also sustains three orphan asylums in Milwaukee.

For statistics of reform schools reporting, see Table XXI of the appendix, and for a summary, see the report of the Commissioner preceding; for statistics of orphan asylums, see Table XXII.

EDUCATIONAL CONVENTIONS.

WISCONSIN STATE TEACHERS' ASSOCIATION.

The thirtieth annual session of the Wisconsin Teachers' Association was held at Janesville July 5, 1882. After the opening exercises an address was delivered by Superintendent James MacAlister, of Milwaukee, on "The new education." The address of welcome was given by Mayor Croft, of Janesville, and the reply to it by President Albee, who then delivered his annual address, in which he reviewed the educational field and presented questions to which attention might profitably be directed. The address was referred to a committee for the distribution of topics. Addresses were then read on the "Likeness of character to objects of thought;" "Physical culture in our schools;" Defects in training and testing teachers; "Vocal music in our schools;" one on geography entitled "Too much and too little;" "The danger to mental habits in the knowledge-getting of our schools;" "Shall we teach trades in our public schools?" by President S. H. Peabody, of the Illinois Industrial University; "Some defects in our graded system," and "Notes upon education abroad."

After the election of officers for the ensuing year and other routine business, Professor Marshall gave a description of the geography and scenery of Yellowstone Park and its approaches, when the association adjourned.—(Wisconsin Journal of Education.)

CONVENTION OF CITY AND COUNTY SUPERINTENDENTS.

The city and county superintendents met July 7, 1882, at Janesville, 23 superintendents being present. An address was first read by State Superintendent Graham, in which, after saying that "The child is the most precious thing on earth" and referring to the enlarged possibilities for improved training due to what is called the new education, he proceeded to consider the duty of superintendents in the matter of securing good teachers. Other topics discussed were the "Relation of superintendents to quantity and quality of teachers," "National appropriation for common schools," and

"County libraries." A resolution was adopted declaring the sense of the convention to be that a national appropriation should be made where conditions of illiteracy demand it.—(Wisconsin Journal of Education.)

MEETING OF INSTITUTE CONDUCTORS.

A special meeting of institute conductors was held in Madison in connection with the executive session of the State Teachers' Association in December, 1881, when schemes of work upon the several branches in the third form were presented and determined upon for 1882, and carried out as already mentioned under Training for Teachers, ante, p. 273.

CHIEF STATE SCHOOL OFFICER.

Hon. ROBERT GRAHAM, *State superintendent of public instruction, Madison.*

[Term, 1882 to 1885.]

ALASKA.

GENERAL EDUCATIONAL CONDITION.

Nearly all the available information respecting education in Alaska in 1882 will be found in the accompanying letters, the first addressed to the Commissioner of Education and the second to the Secretary of the Interior. It will be observed that different parts of the country are referred to in the two reports.

LETTER OF REV. SHELDON JACKSON.

THE BOARD OF HOME MISSIONS OF THE PRESBYTERIAN CHURCH
IN THE UNITED STATES OF AMERICA,
23 *Centre Street, New York, December* 31, 1882.

DEAR SIR: The school work of Alaska is still dependent on private benevolence. In the western and southern portions of that vast territory small schools are maintained by the Alaska Commercial Company at St. Paul, St. George, Unalashka, and Kadiak, and a still smaller school by the Russo-Greek Church at Belkovsky. The principal development of school work, however, is in the southeastern section, known as the Alexander Archipelago. In the archipelago there are 7 good English schools, 3 of which have a boarding and industrial department. Of the 7, 6 are maintained at the expense of the board of home missions of the Presbyterian Church. Six of these schools are among the Thlinket and one (Jackson) among the Hydah speaking people.

The Thlinkets are a hardy, self supporting, warlike, superstitious race, whose name is a terror to the civilized Aleuts to the west as well as to the savage Tinneh to the north.

HAINES.

Occupying the extreme northern section of Lynn Channel and the valleys of the Chilkat and Chilkut Rivers is the Chilkat tribe, numbering 988. They are the "middlemen" of their region, carrying goods to the interior and exchanging them for furs, which are brought to the coast and in turn exchanged for more merchandise. Their country is on the highway of the gold-seekers to the interior.

In the summer of 1880 I established a school among them, with Mrs. Sarah Dickinson, a Christian Tongas Indian woman, as teacher. In 1881 the station was enlarged by the arrival of Rev. Eugene S. Willard and family from Illinois and the erection of a teacher's residence and school-house. In 1882 Miss Bessie M. Mathews, of Monmouth, Ill., was sent out to take charge of a boarding department. The school attendance has been about 75.

WILLARD.

Thirty miles up the Chilkat River, in the village of Willard, is a branch school, in charge of Mr. and Mrs. Louie Paul, native teachers, with an attendance of 60.

BOYD.

One hundred miles south of Haines is the Hoonyah tribe, occupying both sides of Cross Sound and numbering 908. In 1881 I erected a school-house and teachers' residence at their principal village on Chichagoff Island, and placed Mr. and Mrs. Walter B. Styles, of New York City, in charge. The station has been named Boyd. During the year Mr. and Mrs. Styles have been transferred to the school at Sitka and the school at Boyd has been temporarily closed.

TSĒK'-NŬK-SÄNK'-Y.

A few miles to the eastward, on Admiralty Island, is the Auk tribe, numbering 340. In their region valuable gold mines have been opened and an American mining village established at Juneau. A summer school is furnished them by Mrs. W. H. R. Corlies.

A few miles to the south, on the mainland, is the Takoo tribe, numbering 269. A summer school was held among them in 1880 by Rev. and Mrs. W. H. R. Corlies, of Philadelphia. In 1882, pressed by the importunities of the leading men of the tribe, Mr. Corlies took up his abode among them and erected school and residence buildings at Tsēk'-nŭk-sänk'-y.

FORT WRANGELL.

Around the mouth of the Stickeen River is the Stickeen tribe, numbering 317. Their principal village is at Fort Wrangell, on an island of the same name.

At this point, in the fall of 1877, I located Mrs. A. R. McFarland, the first white teacher in southeastern Alaska after the transfer. In 1878 Rev. S. Hall Young, of West Virginia, was sent out, and a boarding department for girls established by Mrs. A. R.

McFarland. In 1879 Miss Maggie A. Dunbar, of Steubenville, was sent out, and the erection of a suitable building commenced, which was occupied the following year.

The same year Rev. W. H. R. Corlies and family arrived. Mrs. Corlies opened a school on the beach for visiting Indians and her husband a night school for adults. He also served as missionary physician to the place.

In 1882 Rev. John W. McFarland was added to the teaching force.

The school attendance is from 75 to 90, with 50 girls in the boarding department. During the year the dormitory and school building were destroyed by fire.

JACKSON.

On the southern half of Prince of Wales Island is the Hydah tribe, numbering 788. They are a large and handsome race, with light complexion, and have long been noted for their bravery and ferocity. Terrorizing all the neighboring tribes, they were known as the "bulldogs" of the North Pacific.

On the 22d of August, 1881, I established a mission among them at the village of Howcan, placing Mr. James E. Chapman in charge as teacher. In the spring of 1882, Rev. J. Loomis Gould and family, of West Virginia, were sent to the Hydahs at Jackson. In the fall of that year Miss Clara A. Gould was added to the teaching force. The attendance is from 60 to 90.

SITKA.

On the western coast of Baranoff is the Sitka tribe, numbering 721. Their chief village is at Sitka, the old capital of the Russian possessions in America. It was their political, commercial, religious, and educational centre. As early as 1805 a school was opened at Sitka. It had a very precarious existence, however, until 1820, when it came under the charge of a naval officer, who kept a good school for thirteen years. In 1833 this school fell under the direction of Etolin, who still further increased its efficiency. Etolin was a creole, who raised himself to the highest position in the country, that of chief director of the fur company and governor of the colony. He was a Lutheran and a patron of schools and churches. While governor he erected a Protestant church at Sitka, and presented it with a small organ, still in use.

In 1840, besides the colonial school at Sitka, was one for orphan boys and sons of employés of the fur company, in which were taught reading, writing, arithmetic, grammar, mechanical trades, and religion. The most proficient of the pupils at the age of 17 were advanced to the colonial school and prepared for the navy or priesthood. The number of boarders was limited to 50. The school was in charge of Lieutenant-Commander Prince Maxutoff, assistant governor of the colony. In 1847 the attendance was 52; in 1849, 39; and in 1861, 27.

In 1839 a girls' school of a similar character was established and the number of boarders limited to 40. The course of study comprised the Russian language, reading, writing, arithmetic, household work, sewing, and religion. In 1848 the school numbered 32; in 1849, 39; and in 1861, 26.

In 1841 a theological school was established at Sitka, which, in 1849, was advanced to the grade of a seminary. In 1848 it reported 30 boarders, 12 day pupils, and 12 creoles being educated in Russia. In 1849 the attendance was reported as 28, with 11 others in Russia.

In 1859 and 1860 the common schools at Sitka were remodelled in order to secure greater efficiency. The course of study consisted of Russian, Slavonian, and English languages, arithmetic, history, geography, book-keeping, geometry, trigonometry, navigation, astronomy, and religion. A knowledge of Russian, reading, writing, and the four rules of arithmetic was required for admission. The course extended over five years. The faculty consisted of a principal, who was a graduate of the School of Commercial Navigation; a free pilot, who taught navigation; an employé of the company, who taught book-keeping and commercial branches; one priest and two licentiates, graduates of the University of St. Petersburg. The corresponding school for girls was in charge of a lady graduate of one of the highest female schools in Russia, with 2 male teachers. This made 5 schools at Sitka, 2 for the children of the lower class, 2 for the higher class, and 1 seminary.

About the time of the transfer the teachers were recalled to Russia and the schools suspended. This condition of things lasted until the winter of 1877–'78, when I secured the appointment of Rev. John G. Brady for Sitka, and in April, 1878, a school was opened by Mr. Brady and Miss Fannie E. Kellogg. In December it was discontinued. In the spring of 1880 Miss Olinda Austin was sent out from New York City, and reopened the school April 5 in one of the rooms of the guard-house, with 103 children present. This number increased to 130. Then some of the parents applied for admission, but could not be received, as the room would not hold any more. Miss Austin received the support and substantial assistance of Captain Beardslee, then in command of the United States ship Jamestown, and Lieutenant Symonds, the chief ex-

ecutive officer, who proved themselves warm friends of the enterprise. In July the school was moved to the old hospital building. In November some of the boys applied to the teacher for permission to live at the school-house. At home there was so much drinking, talking, and carousing that they could not study. The teacher said she had no accommodations, bedding, or food for them. But they were so much in earnest that they said they would provide for themselves. Upon receiving permission, 7 Indian boys, 13 and 14 years of age, bringing a blanket each, left their homes and took up their abode in a vacant room of one of the Government buildings. Thus commenced the boarding department of the Sitka school. Soon other boys joined them. One was a boy who, taken out to be shot as a witch, had been rescued by the officers of the Jamestown and placed in the school. Capt. Henry Glass, who succeeded Captain Beardslee in command of the Jamestown, from the first, with his officers, took a deep interest in the school. As he had opportunity he secured boys from distant tribes and placed them in the school, until there are 27 boys in the boarding department.

In February, 1881, Captain Glass established a rule compelling the attendance of the Indian children upon the day school, which was a move in the right direction and has worked admirably. He first caused the Indian village to be cleaned up, ditches dug around each house for drainage, and the houses whitewashed. These sanitary regulations have already greatly lessened the sickness and death-rate among them. He then caused the houses to be numbered and an accurate census taken of the inmates, adults and children. He then caused a label to be made of tin for each child, which was tied around the neck of the child, with his or her number and the number of the house on it, so that if a child was found on the street during school hours the Indian policeman was under orders to take the numbers on the labels and report them, or the teacher each day would report that such numbers from such houses were absent that day. The following morning the head Indian of the house to which the absentee belonged was summoned to appear and answer for the child. If the child was wilfully absent, the head man was fined or imprisoned. A few cases of fine were sufficient. As soon as they found the captain in earnest, the children were all in school. This ran the average attendance up to 230 and 250, one day reaching, with adults, 271. In April Mr. Alonzo E. Austin was associated with his daughter in the school and Mrs. Austin was appointed matron.

Early in 1882 the school met a great loss in the destruction of its building by fire. It is in contemplation to replace the burned building with a substantial two-story frame and increase the corps of teachers.

INDUSTRIAL EDUCATION.

On the completion of the new building a boarding department will be created for girls, so that both sexes may enjoy the advantages of an industrial training. The school attendance has been about 200.

With the increase of public attention to Alaska and the growing interest of the country in the education of Indian children in industrial schools, the time has come to enlarge the industrial department of the school at Sitka.

The nearest school of the kind to Alaska is at Forest Grove, Oreg. But Forest Grove is 1,500 miles distant from Southeastern Alaska and 2,500 miles away, by present routes of travel, from Southwestern Alaska. Then, the resources and character of the two countries are different. Oregon is largely agricultural, while Alaska's agricultural interests are of slight importance. As the object of an industrial training is to enable the boy, upon arriving at manhood, to earn a support that will sustain his family in a civilized way, it is important to train him to utilize the resources of his own country. The resources of Alaska, in addition to the fur-bearing animals, are her vast supply of fish and great forests. Therefore the training school of her children should be on the coast, where they can be taught navigation and seamanship; the handling of boats and sails; improved methods of fishing and handling fish nets; improved methods of salting, canning, and preparing fish for market. With a saw-mill, a carpenter shop, cooper shop, boot and shoe shop, the school should be one in which pupils may be taught both theory and practice under conditions similar to those they will meet when they undertake to support themselves.

The need of such enlargement is urgent.

THE DEVELOPMENT OF ALASKA AND THE EDUCATIONAL QUESTION.

A new era is opening for Alaska. Two years ago gold mines were opened about 160 miles northeast of Sitka, and the mining village of Juneau was established. From these mines gold dust worth $150,000 was taken last season. Rich discoveries were also reported in the valley of the Upper Yukon River. These reports have considerable interest in the mining regions of Arizona and the Pacific coast, and hundreds have, within the past few months, gone to Alaska.

As a mining excitement first opened California, Colorado, and Montana to settlement, so the present movement may be the commencement of the development of Alaska. That

development has already commenced. In addition to the quartz mills and mining interests, trading posts have been established at a number of native villages. The Northwest Trading Company has established extensive works at Killisnoo for the manufacture of fish oil. Four salmon canneries have been established at different points, and several fisheries at others. Extensive cod-fisheries are in operation at the banks, off of the Shumagin Islands, and saw-mills are running at Sitka, Roberts, Klawack, and Jackson.

These changes again bring up the question of education. Shall the native population be left, as in the past, to produce, under the encroachments of the incoming whites, a new crop of costly, bloody, and cruel Indian wars, or shall they be so educated that they will become useful factors in the new development? The native races are partially civilized, industrious, anxious for an education, readily adopt the ways of the whites, and, with the advantages of schools, will quickly, to all intents and purposes, become citizens. To accomplish this requires the sympathy and coöperation of the friends of education throughout the country.

Very respectfully yours,

SHELDON JACKSON.

Hon. JOHN EATON,
United States Commissioner of Education, Washington, D. C.

LETTER OF IVAN PETROFF, ESQ.

WASHINGTON, D. C., *February*, 1882.

SIR: In compliance with your kind suggestion, I have the honor to lay before you a communication on the subject of education in Alaska.

A letter on this subject written by the Rev. Sheldon Jackson has already been forwarded to the United States Senate and printed as an executive document, but, as this letter deals almost exclusively with the southeastern section of the Territory, I think that a brief statement concerning the western portion of Alaska, containing the greatest number of semicivilized natives, may be acceptable.

The Innuit tribes inhabiting the coast from Mount St. Elias westward and northward have all long since been brought under the influence of the Greek Catholic Church, and in the principal trading centres, the Kadiak Archipelago, and the Aleutian group of islands a population of mixed blood has sprung up, numbering several thousand, who, under the Russian rule of nearly a hundred years' duration, had made considerable advance in civilization. The actual membership on the islands and the continental coast is now reported at between eight and nine thousand; and of these less than five hundred, nearly all of the mixed or creole class, are able to read and write in their own language, for which an alphabet had been provided and books printed by the Russians. Perhaps 25 per cent. of the number mentioned can also read and write in Russian. The schools formerly maintained by the Russian-American Company have, of course, been discontinued, and the priests of the Russian Church have neglected educational work altogether. At present the only school maintained by the church authorities in the Territory is located at Belkovsky, the central settlement of the sea-otter hunting grounds; but here the attendance is irregular and very small. On the island of Unalashka the Alaska Commercial Company maintains at its own expense a school with a competent Russian and English teacher, an institution which has been conducted for the last two years with the most gratifying success; but, as it owes its existence solely to the liberality of a mercantile firm, there can be no certainty as to its continuation in the future.

On the so-called Fur Seal Islands, the reservation of the Treasury Department, the lessees are obliged, under the terms of the lease, to keep a school on each of the islands of St. Paul and St. George for eight months of the year. This proviso has been faithfully carried out since the year 1870. On the island of St. Paul the teacher is a young native of the island who received his training at the State Normal School of Vermont and graduated from that institution after a constant attendance of seven years. He is now an accomplished gentleman, an excellent musician, and his success in teaching his countrymen has been very satisfactory.

The average daily attendance at the school of St. Paul is reported by the Government agent as 69 and numerous specimens of penmanship and composition testify to the proficiency of the school and scholars. On the island of St. George, with a much smaller population, the average daily attendance is reported as 22.

A small number of boys from Western Alaska receive schooling at San Francisco, Cal., under the supervision of the Russian bishop of the Alaskan diocese. These youths are designed for the church, but the present enlightened and progressive bishop makes them attend the public schools.

This comprises all the educational facilities extended thus far to the inhabitants of Western Alaska.

But very little progress has been made in introducing the English language among the natives of all that vast region west of the meridian of Mount St. Elias. The traders and

fishermen, the only Americans who thus far have gone among them, have found it easier to pick up the peculiar idiom current along the coast than to induce the natives to adopt the English, and it is safe to assert that in all the section referred to the people are as little acquainted with American customs and institutions as they were at the time of their transfer from Russia to the United States.

As efforts are now being made to procure an appropriation for the establishment of schools in Alaska, it is to be hoped that due attention will be paid to the rights and wants of the people who inhabit the more remote regions of the Territory, whence all the revenue is derived which it is proposed to expend for the purpose, but who are not represented in Washington by any advocate of their interests.

The schools now in existence in Southeastern Alaska are maintained and controlled by the Presbyterian Board of Missions, and are necessarily sectarian in their tendency. These schools have the most beneficial effect among the savage tribes coming under their immediate influence, and they are certainly entitled to any assistance it is in the power of Congress to give; but among the seven or eight thousand members of the Russian Church, where the necessity of fostering education is most urgent, such schools would be a failure, owing to the influence of the Russian clergy, who would prevent the attendance of children and youths in schools conducted by Protestant missionaries and their teachers. Such sectarian prejudices are of course to be deplored, but as long as they exist they should be taken into consideration by those who wish to benefit the people by the extension of educational facilities.

With regard to the best mode of spreading knowledge and civilization among these people inhabiting the coasts and islands between Prince William Sound and Unalashka, I would respectfully suggest the establishment of one or two industrial schools, centrally located between these points. The segregation of youths to be instructed from their families I consider essential; the mode of life of these sea-otter hunters is such that no regular school attendance could be secured in any one village or settlement. The families move about in quest of fish and game as the season changes, and all children living with the family necessarily move with it. At first it would be most advisable to collect as pupils for the industrial school the sons of chiefs or headmen of the villages, who would be most influential in demonstrating the benefits of education to their people. At two points in the section of Alaska referred to, the Government already has extensive buildings erected by the military forces once stationed in the Territory. These buildings could be fitted up for educational purposes at comparatively little expense. These points are Rensi, on Cook's Inlet, and St. Paul Harbor, on Kadiak Island. When I visited those places during last summer the buildings were in a good state of repair. There can be no doubt that both natives and creoles (descendants of Russians from native mothers) are possessed of considerable ability and intelligence. Quite a number of the latter class held prominent and responsible positions under the Russian Government, but unfortunately these individuals left for Russia, together with the other officials of the Russian-American Company, shortly after the transfer of the Territory.

My experience in travelling among these people for the last four years has convinced me that schools maintained by the Government, not by the missionaries, will be heartily welcomed and supported by the Christian inhabitants of the western coast and islands and that such institutions will receive every assistance from the trading and fishing firms engaged in business there.

Hoping that in the case of the necessary appropriation being made by Congress this communication may be of some assistance to those who will be charged with the execution of educational projects for Alaska, I remain, very respectfully,

IVAN PETROFF,
Special Agent Tenth Census, for Alaska.

The Hon. SECRETARY OF THE INTERIOR,
Washington, D. C.

SCHOOL ON ST. PAUL'S ISLAND.

At the school for natives on St. Paul's Island, which was under the care of L. H. Atkins as teacher, there was an enrolment of 45 pupils, with an average attendance of 42. During the months of September, October, November, and December school was taught about 20 days each month.

a United States Census of 1880. *b* Territorial school census, May, 1882, probably incomplete.

(From the reports for the years indicated of Hon. Moses H. Sherman, territorial superintendent.)

TERRITORIAL SCHOOL SYSTEM.

OFFICERS.

The school system of Arizona is conducted by a territorial board of education, a superintendent of public instruction, county superintendents, county boards of 3 examiners, and a board of 3 school trustees for each district.

The members of the territorial board of education are the governor, the territorial treasurer, and the superintendent of public instruction. The county probate judge is ex officio county superintendent; in his educational capacity he is the presiding officer of the county board of examiners, his colleagues holding their appointments from the superintendent of public instruction. The territorial superintendent and the boards of school trustees are elected, the first biennially by the Territory at large, the latter annually by the voters of the districts over whose school affairs they have jurisdiction.

The board of education moulds the system and the superintendent administers it. The duties required of the probate judge when acting as county superintendent seem to be of a passive rather than an active kind, the more professional work devolving on the district boards or on the teachers themselves. The county board of examiners grants two kinds of certificates, one good for life, the other for 6 years. The district boards of school trustees exercise full power in local school affairs, subject to the rules and regulations of the territorial board.

OTHER FEATURES OF THE SYSTEM.

Three species of school taxation are provided for by the law: The first, which is obligatory, consists of a territorial tax of .15 of 1 per cent., known as the territorial school fund, and of a county tax of not less than .5 of 1 nor more than .8 of 1 per cent. on taxable prop-

erty, known as the county school fund; the second is a conditional tax, only required of those districts in which the apportionment of the obligatory tax is inadequate to secure 3 months of school; the third is an optional tax, for prolonging the school term beyond the 3-month limit or for building school-houses, voted by the district at a meeting called by the board of trusteees.

The territorial fund is apportioned to the counties on the basis of school population, becoming a part of the county fund, which is distributed among the districts, one-fourth equally and the remainder in proportion to the average school attendance of each district during the preceding 3 months.

GENERAL CONDITION.

The meagre statistics render a comparison of figures impossible, and any statement of the educational condition of the Territory must be based on the conclusions arrived at by the superintendent of public instruction. The schools, though now established on a firm basis, need that general supervision which the law requires of the superintendent, but which the insufficiency of the legislative appropriation will not permit him to give. Nor is the want of general supervision the only hindrance of its kind. The time of the ex officio county superintendent is so constantly taken up by his duties as probate judge that he also lacks opportunity for personal supervision, and finally, from the laxity of the examinations, candidates are in some cases passed who are incompetent. On the other hand, two items of progress are given: the adoption of a uniform system of text books, thereby facilitating the work of the teacher and the progress of the pupil, and the increase in the number of school-houses.

To sum up, it appears that the territorial system has by far too few children and far too wide a territory under its control to do its work either precisely or economically.

SCHOOL SYSTEM OF TUCSON.

STATISTICS.

Tucson has not, strictly speaking, a city system, being school district No. 1 of Pima County. The report of the principal of its one school building shows 6 teachers, including the principal and his assistant, and a special teacher of Spanish and another of vocal music. The regular teachers were paid on the average a monthly salary of $100 and the specials $50. The enrolment in the schools was for the year 281, an increase of 72.

TRAINING OF TEACHERS.

TEACHERS' INSTITUTES.

Whenever a county contains 20 districts a teachers' institute is required by law to be held at least once a year and to continue not less than 3 nor more than 5 days, every public school teacher in the county being required to attend.

Whether the contingency has not arisen or the meetings, if held, have failed to be noticed cannot be determined, as no report or mention of them appears.

SECONDARY AND SUPERIOR INSTRUCTION.

SECONDARY.

The Territory has not as yet made any provision for the instruction of its children beyond the common school course, but the city superintendent of Tombstone speaks of high school studies being taught in his own schools and probably in those of Tucson, Prescott, and Phœnix.

SUPERIOR.

There are no schools of this class, either territorial or private.

Taking advantage of the act of Congress of February 18, 1881, granting public lands for university purposes to the Territories, the superintendent, with the aid of the register of the land office at Prescott, located the seventy-two sections allowed Arizona, securing the most valuable timber lands in the Territory.

CHIEF TERRITORIAL SCHOOL OFFICER.

Hon. W. B. HORTON, *territorial superintendent of public instruction, Prescott.*

[Term, January 1, 1882, to January 1, 1884.]

(From the report of Territorial Superintendent W. H. H. Beadle for the school year ending March 31, 1882.)

TERRITORIAL SCHOOL SYSTEM.

OFFICERS.

The system is administered by a superintendent of public instruction, county superintendents, a board of education for every incorporated city, town, or village, and township boards. Biennially appointed by the governor and confirmed by the legislative council, the territorial superintendent exercises the usual duties of general supervision and compilation of statistics. The county superintendent (women being eligible to election) is chosen biennially; he has charge of the county educational interests and is the medium through which the territorial superintendent acts on the subordinate county officers. The township board is composed of a director, clerk, and treasurer, chosen for 3-year terms, one going out annually. It is the duty of this board to provide buildings, employ teachers, regulate the schools, and disburse the funds of the township. The city, town, or village boards of education are governed by special laws.

OTHER FEATURES OF THE SYSTEM.

Taxation is of two kinds: (1) a general tax of $1 on each elector and 2 per cent. on property, to be distributed to districts that maintained 3 months of school during the preceding year, and (2) a local tax, not to exceed 3 per cent. of the taxable property of the district in which it is levied. The general tax, or public fund, as it is called, is increased by penalties of various kinds and is distributed according to the population of school age (5 to 21) in each district.

GENERAL CONDITION.

The statistics of Dakota are not unnaturally incomplete. Educational statistics are primarily dependent on local supervision, and when citizens having neither time nor technical knowledge for compiling statistics are elected supervisors, information will be wanting, the law to the contrary notwithstanding. In Dakota, this more or less general evil is aggravated by a municipal system peculiar for its entire independence of that of the Territory, which is fast removing the more populous places from the superintendent's control.

Though the condition of the Territory relatively to the preceding year cannot be given, some idea of what is being done in the cause of education may be derived from a comparison of the figures at hand for the year under consideration. Of the 33 counties reporting, 29 returned an enrolment of 67 per cent. on their reported school population; 25, as having sittings for 77 per cent. of their children of school age; 17, as having on an average a teacher to every 25 of the enrolment; and 24, as expending $13.04 per pupil enrolled. These figures are by no means discouraging, and, although some of the newly organized counties failed to report, the tendency their statistics might have to depreciate the educational condition would be counterbalanced by the more favorable returns from nearly as many of the oldest counties that have likewise failed to report. One noticeable item in the superintendent's report, however, is the low average pay of teachers in a community where the school year is rarely 5 months.

CITY SCHOOL SYSTEM OF YANKTON.

ADMINISTRATION.

There are no places in Dakota having the requisite population to entitle them to mention here; but it is thought advisable to introduce the statistics of Yankton, the largest place in the Territory and the only city reporting statistics.

As has been previously said the municipal system or systems, for each is of its own kind, are in no way subordinate to the territorial system; thus any incorporated city, town, or village may isolate itself, its only obligation being to report its school population when it desires to obtain its pro rata share of the public fund.

STATISTICS.

Under a board of education, composed of 8, and its secretary, the Yankton system seems to be progressing in everything except school accommodations. The population of the place (3,690) comprised 803 children 6–16; of these, 646 were enrolled. The population of school age (5–21) was 1,186; of this number 738 were enrolled in public and 120 in private schools, and 479 of the public and 100 of the private school enrolment were in average daily attendance. The 10 schools, one of which was a high school, were accommodated in five buildings, containing 571 sittings, and were taught 175 days. School property owned by the city was valued at $14,000, and the expenditure for schools, exclusive of payments for previous indebtedness, was $11,918.

TRAINING OF TEACHERS.

NORMAL SCHOOL.

The Dakota Normal School, Springfield, reports 17 normal and 18 other students in attendance during the last year, and 10 graduates engaged in teaching. The institution has 3 instructors, a model school, a course of 3 years of 36 weeks each, and grants certificates to its graduates authorizing them to teach in the public schools. The school is endowed with twenty sections of public land and received last year an appropriation of $800 from the city of Springfield.

OTHER NORMAL TRAINING.

There is a normal course of 3 years provided in the academic department of the University of Dakota, designed to prepare pupils for teaching either in the common or high schools.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

High schools, though not required by law, have been established in the larger towns. The high school of Yankton, the only one of which statistics are at hand, had 3 teachers, an average membership of 40, and an average attendance of 38 for the year. The course, 4 years in length, is academic in character and had 10 graduates in 1882.

OTHER SECONDARY INSTRUCTION.

The English course of the academic department of the University of Dakota, opened September 1, 1882, had 52 students during its first term in common and high school studies.

SUPERIOR INSTRUCTION.

TERRITORIAL UNIVERSITY.

The University of Dakota opened in September, 1882. A fine two story stone building has already been erected and will constitute a wing of the main building of 3 stories now in course of erection. The academic department only has been established. It has 5 courses: the English, noticed under Secondary Instruction; the normal, also noticed under its appropriate head; the classical; the scientific; and the course in fine arts.

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF AND DUMB.

The Dakota School for Deaf-Mutes, Sioux Falls, had 11 pupils, under 2 instructors. The inmates were taught agriculture and the common school studies.

CHIEF TERRITORIAL SCHOOL OFFICER.

Hon. W. H. H. BEADLE, *territorial superintendent of public instruction, Yankton.*
[Third term, 1883 to 1885.]

a United States Census of 1880.

(From reports and returns of Superintendents J. Ormond Wilson and Geo. F. T. Cook for the two years indicated.)

DISTRICT SCHOOL SYSTEM.

OFFICERS.

The absence of suffrage in the District of Columbia places the choice of the 9 members of the board of trustees, which is the educational authority, in the hands of the commissioners of the District. This board annually selects 2 superintendents, who are its chief executive officers, and chooses supervising principals, who act under the supervision of these superintendents; through its committee on teachers the board of trustees also appoints an examining board composed of the 2 superintendents and an undefined number of supervising principals and principals of public schools. To assign each superintendent to his proper sphere of action, the public schools have been formed into 8 divisions, the first four comprising the white schools of Washington, the fifth those of Georgetown, and the sixth the rural schools, over all of which one of the superintendents exercises authority; the seventh and eighth, comprising the colored schools of Washington and Georgetown, are under the control of his colleague.

OTHER FEATURES OF THE SYSTEM.

To support the system Congress makes an annual appropriation, one half of which is taken from the amount raised by local taxation and the other from the public funds of the United States. The school age is 6–17; the schools are all graded, with a few exceptions among the rural schools, and each race is taught by instructors of its own color.

GENERAL CONDITION.

As no statistics have been published for 1882, the comparative standing of the year cannot be determined except as to the items of receipts and expenditures, each in 1882 amounting to $579,312, being increases of $23,668 and $52,000, respectively, over the preceding year. The statistics of the white schools of Washington are given under the following head:

WHITE SCHOOLS OF WASHINGTON.

With a white school population of 27,142, Washington enrolled 17,306, of whom 13,168 were in average daily attendance, under 293 teachers, and had in private schools an enrolment of 5,000. The 54 buildings contained 244 rooms and 14,552 sittings for study. The schools were taught 186 days and instruction in music and drawing was given by special teachers. Compared with the preceding year the gains were 899 in enrolment, 530 in average daily attendance, 35 in teachers, and 115 in sittings for study. The number of days the schools were taught was less by 4.

KINDERGÄRTEN.

For information respecting schools of this kind, see Table V of the appendix.

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

Only one of the two city normal schools has reported, the Miner Normal School, for colored pupils; for its statistics, as well as for those of Wayland Seminary and the normal department of Howard University, also for colored persons, see Table III of the appendix. An additional Kindergarten normal school appears in Table III of the appendix under the title of Garfield Kindergarten Training School, having been organized in October, 1882.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The Washington high school, for whites of either sex, furnishes no statistics for 1881–'82. It has academic and scientific courses, each of 3 years, and a business course of 2, and at the beginning of the year 1882–'83 had 382 students, under 11 instructors, with special teachers of drawing and music.

OTHER SECONDARY SCHOOLS.

For information respecting business colleges, private academic schools, preparatory schools, or preparatory departments of colleges, see Tables IV, VI, VII, and IX of the appendix; and for summaries of them, see corresponding tables in the report of the Commissioner preceding.

SUPERIOR INSTRUCTION.

COLLEGES FOR YOUNG MEN OR FOR BOTH SEXES.

The 5 institutions for superior instruction are Georgetown College, Georgetown, and Gonzaga College, Washington (both Roman Catholic), and Columbian University, Howard University, and the National Deaf-Mute College; the last 3, in Washington, report themselves non-sectarian. Only one of the above, Howard University, is open to young women as well as men.

Georgetown College provides a preparatory course of 3 years, a classical of 4, and a scientific of 3. The degree of bachelor of arts is conferred on graduates of the regular classical course, which comprises Latin, Greek, French (or some other modern language), mathematics, rational philosophy, physics, mechanics, and chemistry. A graduate course in ethics and natural philosophy leads to the degree of master of arts.

Columbian University has the regular collegiate course of study arranged in 7 schools, viz, English, Greek, Latin, modern languages, mathematics, natural science, and philosophy. By selections from these, courses are formed leading to the degrees of bachelor of arts, bachelor of letters, and bachelor of science. The degree of master of arts is given to students who have been graduated from all the schools and have passed a satisfactory

examination on the studies embraced in them. The university received a valuable gift during the year from Hon. W. W. Corcoran, consisting of a large lot of ground in Washington for the erection of a building to accommodate its collegiate and law departments.

Gonzaga College divides its course of study into 2 departments: the collegiate course proper, including the Greek and Latin classics, and the non-classical, embracing the English language and literature, mathematics, and the natural sciences. Twenty-two students were reported in the collegiate course and 85 in other studies.

Howard University offers collegiate, theological, legal, medical, preparatory, and normal departments, to which all are admitted, irrespective of race, sex, or creed, who are prepared to pursue the studies in which they propose to engage. There is also a literary course, which may be completed in 5 years from the first preparatory, the regular collegiate requiring 7. Fifteen students were reported in regular collegiate classes during 1882, and 32 in preparatory. A gift of $5,000 was received during the year from Hannah S. Toland, of Germantown, for the benefit of the theological department.

The *National Deaf-Mute College*, the collegiate department of Columbia Institution for the Instruction of the Deaf and Dumb, reports an introductory course of 1 year, an undergraduate one of 4 years for the degree of B. A., and select courses of 3 years in science, philosophy, and literature. There were 28 undergraduate students during the year, and 53 in the preparatory department.

For further statistics of colleges, see Table IX of the appendix, and for a summary, see a corresponding table in the report of the Commissioner preceding.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

Georgetown University, Columbian University, and the National Deaf-Mute College reported scientific courses of 3 years each leading to the degree of B. S.

PROFESSIONAL.

Theological.—The theological department of Howard University offered a well organized 3-year course, including Hebrew and Greek. This department is supported entirely by the American Missionary Association and the presbytery of Washington City, but is open to students of all Christian denominations who pass the required examination for admission. Wayland Seminary (Baptist) in its theological department prepares students for the ministry; they devote a part of each day during the entire course to Bible studies.

Legal.—The law departments of Columbian, Georgetown, Howard, and National Universities each gave a 2-year course of legal instruction, leading to the degree of bachelor of laws. Three years of study being required to secure admission to the bar of the District, each school adds a year of graduate study, on the completion of which the degree of master of laws is conferred.

Medical.— The National Medical College of the Columbian University and the medical departments of Georgetown College and Howard University all continued their 3-year graded courses. Georgetown held its sessions 8 months in the year, and the others 5. Howard required for admission an examination in English and Latin and Georgetown held an examination at the close of each term.

The *National College of Pharmacy* required for graduation 4 years of experience in the practice of pharmacy, 2 full courses of lectures of 5 months each, and a course occupying 10 weeks in practical and analytical chemistry.

For statistics of the legal, medical, and pharmaceutical schools, see Tables XII and XIII of the appendix, and for summaries, see the report of the Commissioner preceding.

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF AND DUMB.

The Columbia Institution for the Deaf and Dumb, Kendall Green, near Washington, including the National Deaf-Mute College, reported 111 pupils for 1882, of whom 17 were young women. There were 60 in the primary department. The number of pupils taught articulation had increased, and the result was encouraging. Great benefit is said to have resulted from the active gymnastic exercises, each student being required to spend 4 hours a week in physical training.

EDUCATION OF THE BLIND.

There being no institution for the blind in the District of Columbia, the Government continued in 1882 to make provision for them in the Maryland Institution for the Blind. There were 4 in 1882 from the District receiving instruction in that institution.

REFORMATORY AND INDUSTRIAL TRAINING.

The *Reform School of the District of Columbia* (1869) up to July, 1882, had received 812 boys; 99 were committed during the year and 87 discharged, leaving in the school 143. The average age of boys received since the opening is 13½ years, the oldest being 18 and the youngest 6. A workshop was built in 1882, at a cost of $3,516, and the chair work removed to it, where it is carried on more satisfactorily. Common school studies were pursued and the industries taught were farming, chair caning, shoemaking, and tailoring, by which the boys earned $1,631. The money so earned is paid them on their final discharge from the institution.

The *Industrial Home School* (for both sexes), Georgetown, cared for 116 children during the year, received 47 and discharged 46, of whom 20 were returned to parents and 22 provided with homes. During the year the industries have been reorganized, so that one half attend school in the forenoon, the other in the afternoon. Work is done in the greenhouse, shoe and carpenter shops. Under a special instructor, 171 pairs of shoes were made and 216 repaired, being enough to supply the institution. The new cottage building for girls was furnished and occupied. Considering the limited means at hand, the institution has been successful. The income for the year was $14,691, of which Congress gave $5,000.—(Report.)

CHILDREN'S HOMES AND ORPHAN ASYLUMS.

The *St. Vincent's Female Orphan Asylum*, with an average of 125 children from 6 to 12 years of age, a day school for girls in the same building, with an average of 150 pupils, and the *St. Rose's Female Orphan and Industrial Asylum*, a branch of St. Vincent's, are essentially one institution. St. Vincent's orphan department is supported by the tuition fees of the day school. The orphan girls on leaving this school go to the branch department, where they are trained from 4 to 6 years in the more advanced English studies and in ordinary housework, but mostly in common sewing, dressmaking, and embroidery. By these last industries the institution, with an average of 43 inmates, is made self sustaining. At a suitable age homes are provided for them.

The *St. Joseph's Orphan Asylum for Boys*, with an average of 115 children, is also connected with a boys' day school, with an average attendance of 85, and is entirely supported by it. Children are received from 6 to 12 years of age and placed in homes as soon as possible after reaching 12 years of age. Teachers of these schools receive no salary.

The *Washington City Orphan Asylum*, in its sixty-eighth year, had a family of 139 orphan children, of whom 11 were infants under 1 year old. This infant department has been added during the year and occupies an addition built by Dr. J. C. Hall. No girl is now allowed to leave the institution till 18 years of age, unless it be by adoption in some permanent home. By far the greater part of those who have left have become good men and women and useful citizens. The asylum continues to be managed by the ladies of the city and to depend on the charities of the public.

The *German Protestant Orphan Asylum*, Uniontown, had 33 inmates, a decrease of 8 from the previous year. In the general management, as reported in 1881–'82, no change is noted. Of the 33 inmates 21 attended the public school in Uniontown.

In the Home established by the *National Association for the Relief of Destitute Colored Women and Children* 128 inmates were cared for during the year, of whom 7 were aged women and 128 children. Homes were found for 26 and 35 were received. In the school there has been a marked improvement since it was made a part of the public school system of the District. In the industrial school, where the average age of the workers was 8 years, there were made 104 pairs of stockings and all the bedding and clothing, except the hats and shoes, needed by the institution. The need of a new substantial building was engaging the attention of the association. To this charity Congress appropriated $6,535.

TRAINING OF NURSES.

The Washington Training School for Nurses, after an existence of a little more than 4 years, reported for 1882 7 instructors, 33 pupils, and its first graduating class, consisting of 3 students, who finished the regular 2-year course. Of these 1 continues in the profession and finds ready and remunerative employment.

From its organization this useful institution has been in need of funds to place it on the same foundation as those established in other places, its only income being from membership dues. Still, regular medical courses have been maintained.

SCHOOL OF COOKERY.

The Mission Free School of Cookery and Housework was opened January 1, 1881, with 7 pupils, the object being to give free instruction in cookery to girls, both white and colored, under 18 years of age, who are unable to pay for it.

More recently a ladies' class has been added for those who are able to pay. With the

limited space and means at their control, the committee have not been able to carry out their plans as they would like. Still the success has been more than was expected. It is believed that this good work, so favorably inaugurated in Washington, will greatly increase.

TRAINING IN ART AND MUSIC.

So far as can be ascertained no important change has occurred within the year 1882 in respect to the training in art reported for 1881 in the schools of Mr. W. M. Rouzee, Mr. Edmund C. Messer, Mrs. S. E. Fuller, or Mrs. Imogene R. Morrell, except that in Mr. Rouzee's case at least additional facilities for instruction were secured in a new building, with greater conveniences for effective and pleasant work.

The Washington Conservatory of Music, under the direction of Mr. O. B. Bullard, is believed to have continued its instructions in vocal and instrumental music, as also the School of Music of Mr. Theo. Ingalls King, while the Georgetown Conservatory of Music was added to these in 1882.

EDUCATIONAL CONVENTIONS.

TEACHERS' ASSOCIATIONS.

A voluntary association of the graduates of the Normal School for Whites meets once a month to compare experiences in government and teaching.

CHIEF DISTRICT SCHOOL OFFICERS.

Hon. J. ORMOND WILSON is superintendent of public schools for whites in Washington and Georgetown and of the schools for both races in the rural districts.

Hon. GEORGE F. T. COOK is superintendent of the public schools for colored pupils in Washington and Georgetown.

IDAHO.

Expenditure for public schools	44,840	46,855	2,015	

[a] Nearly all the statistics here given, whether for 1881 or 1882, are incomplete, several of the counties failing to report in either year.
[b] United States Census of 1880.

(From biennial report and returns of Hon. James L. Onderdonk, territorial superintendent of public instruction, for the two years indicated.)

TERRITORIAL SCHOOL SYSTEM.

OFFICERS.

The territorial controller is ex officio superintendent of public instruction and county auditors are ex officio county school superintendents. Each county has a board of examiners and each district a board of 3 trustees.

OTHER FEATURES OF THE SYSTEM.

The public schools are sustained by the income of an irreducible and indivisible school fund, by a county tax of not less than 2 nor more than 8 mills on the dollar, by moneys arising from legal fines and forfeitures, and by fees paid by teachers for certificates of qualification. The basis of distribution of the school moneys by the territorial treasurer is the number of children of school age (5–21) in each county, according to the last census report. Each county treasurer divides one half of this amount equally among the organized districts in the county, the other half to be apportioned per capita among the several districts in proportion to the children, irrespective of age, except in 2 counties, which have a different arrangement.

Districts may levy special taxes for building or repairing school-houses, and, when the cost of repairs does not exceed $25, the trustees may levy a rate bill, to be collected from such patrons of the school as are able to pay it. No district or teacher is to receive any of the public school money if political or sectarian doctrines have been taught in the schools or books, papers, tracts, or documents of this character have been distributed.

GENERAL CONDITION.

The superintendent of public instruction, in his report for 1881 and 1882, speaks of the continued embarrassments in his work arising from the defects in the school system and lack of funds. Being only an ex officio school officer, with but little time for school work and with no salary as superintendent, his supervision of school interests is imperfect; and the same being true of the county superintendents, their supervision of schools is also defective. He calls attention especially to the absence of any provision for teachers' institutes; to the lack of care in the selection of teachers; to the fact that the pay of teachers was too small to command good ones where most needed; that in many districts the school term was only 3 months; and that he was able to report but 2 graded schools. Under such circumstances, he says, true education is next to an impossibility.

ADVANCED INSTRUCTION.

NORMAL AND SECONDARY SCHOOLS, COLLEGES, ETC.

There are no schools for normal, secondary, superior, or special instruction reported from this Territory.

CHIEF TERRITORIAL SCHOOL OFFICER.

Hon. James L. Onderdonk, *territorial superintendent of public instruction, Boisé City, Idaho.*

[Second term, February 21, 1881, to February 21, 1883.]

[a] As a matter of convenience all information respecting the education of Indians is, as far as possible, included under this head, except what has been given in regard to missionary work in Alaska, pages 278–282.
[b] An understatement, several tribes not reporting.
[c] All reporting except the Creeks.

(From reports of Hon. Hiram Price, Commissioner of Indian Affairs, for the two years indicated.)

SCHOOL SYSTEMS AMONG THE INDIANS.

OFFICERS.

So far as can be ascertained, the school systems of the Five Nations are nearly the same. The Cherokees have a board of education, consisting of 3 persons of liberal literary attainments, appointed by the principal chief and confirmed by the senate, who appoint to each primary school 3 directors for local supervision. Among the Choctaws, Chickasaws,

Creeks, and Seminoles there are superintendents of public schools, boards of education for general control, and for local supervision trustees who have charge of the schools in the districts into which the territory of each tribe is divided.

Through the Commissioner of Indian Affairs, the Government continues to intrust the educational work among the tribal Indians (except in Alaska) largely to several religious associations.

The schools at Hampton, Va.; Carlisle, Pa.; and at Forest Grove, Oreg., authorized by the Government, continue the training of large numbers of Indian youth of either sex, sent by the chiefs and headmen of various tribes.

OTHER FEATURES OF THE SYSTEMS.

The Cherokees class their public schools as primary and high and provide for a male and female seminary, which are the high schools, and an orphan asylum. The board of education makes the rules for the government and studies of these schools, each of its 3 members having the supervision of 1 of the 3 districts into which the nation is divided. Each one is required to report the number of children of school age (7–21) in his district, number of each sex, their language and nationality, and number of orphans, and to visit semiannually all schools in his district. The board may establish industrial boarding schools. It must examine all applicants for the position of teacher. The school year has 2 terms, one of 20, the other of 16 weeks. Qualifications being equal, preference must be given to the applications of native teachers for places in the primary and high schools. Tuition is free only to children of citizens of the Cherokee Nation. Provision is also made for the establishment and support of asylums for the insane, indigent, blind, and deaf and dumb.

The Choctaws have 6 national schools, of which 2 are academies and 4 seminaries for females, consisting of a specified number of youth from each district. The minor schools are called neighborhood schools, of which previous to 1881 there could be but 2 in a county, and these 8 miles apart. By act of 1881 this was repealed, and all districts including 10 Choctaw children of school age (7–18) are entitled to a neighborhood school.

Among the tribal Indians there is yet no uniform school system, studies and methods of instruction being left with the missions to which the Government has largely committed the work, the teachers employed being paid by the Government.

It is becoming more and more apparent that the best method of training the youth of these tribes is to gather them into large boarding institutions, such as those now in successful operation.

GENERAL CONDITION.

The whole Indian population in 1882, exclusive of Alaska, was 262,366, with a school population of 43,977 as far as reported. There were enrolled in schools of all kinds 14,394, or under 33 per cent. of Indian youth in school. Of these, 5,639 were of the Five Nations and 8,755 of the tribal Indians. In total population there was a gain of 515 over 1881. The enrolment in the Five Nations shows a loss of 544; that of the tribal Indians, a gain of 646 and in average attendance of 593. The number of Indians who could read, including the civilized nations, fell off 346 as reported, while the number taught to read during the year in the uncivilized tribes was 198 higher than the number taught the year before. Among both classes of Indians the number of boarding and day schools slightly increased. There was a considerable increase in the teachers and missionaries having charge of schools. The whole expenditure for Indian education increased $107,593 over 1881.

These figures, with all concurrent reports, indicate a steady advance, especially among the tribal Indians, notwithstanding the usual embarrassments occasioned by the presence of white men.

COMBINED EDUCATIONAL AND INDUSTRIAL TRAINING.

Increased importance is being attached to the agency of industrial boarding schools. They have come to be regarded as the centre of Indian civilization and as doing pioneer work. In each of the reservation boarding schools the girls are trained in all the branches of household industry, in making and repairing garments, in kitchen, laundry, dining room, dormitory, and sewing room work, in doing which they receive as thorough and constant instruction in the art of home-making as in reading and writing the English language. Industrial training for boys is receiving more attention every year. During the last year, in connection with 57 reservation boarding schools, 1,245 acres of land were put under cultivation, and the crop amounted to 8,370 bushels of corn, 3,698 of oats, 11,683 of vegetables, 1,248 of wheat, 154 tons of hay, and other products in proportion. The teaching of trades is rapidly being introduced. Tailoring, blacksmithing, and harness making were already taught in 4 of these schools, shoemaking in 7, carpentry in 10, and raising and care of stock in 15.

The success in industrial training at Carlisle, Hampton, and Forest Grove has greatly stimulated the efforts just mentioned. In these latter schools good work has been accom-

plished during the year. Carlisle numbered 284 pupils from 33 tribes; Forest Grove, 91 from 10 tribes; Hampton, 101 pupils.

At Carlisle and Hampton the apprentices, in addition to the large amount of building, repairing, and furnishing required by the 2 schools, manufactured 253 sets of double harness, 13 wagons and 1 buggy, 2,000 pairs of shoes, and 14,125 articles of tinware. The apprentices to the trades of blacksmith, carpenter, printer, shoemaker, tinsmith, wheelwright, painter, butcher, tailor, saddler, and baker were 183, while the rest of the boys were trained to farm work. During the summer vacation 106 boys and girls were placed in private families, with, it is said, the most satisfactory results. The first graduates from Carlisle, consisting of 37 Sioux from Dakota and 35 from tribes in the Indian Territory, returned to their homes in July, 1882.

Industrial work at Forest Grove is said to have met with unusual success, the blacksmith and shoe shop having netted to the school $772, while the carpenter apprentices put up additions to the buildings and made necessary repairs and furniture for the school rooms. Practical lessons in farming were given. Several of the boys were employed by farmers in harvest fields, where they received the same pay as white men.

During the year 18 boarding school buildings have been opened for the first time among 36,517 Indians of different tribes, and 10 more were to be opened among other tribes in 1883. The Episcopalians have for many years maintained among the Yankton Indians a flourishing boarding school for boys.

The whole number of Indian youth to be educated, exclusive of the Five Nations, is estimated at between 45,000 and 50,000. The cost of maintaining a youth at a reservation boarding school is $150 a year; at a day school, $30.

NORMAL AND SECONDARY TRAINING.

In some of the more advanced schools of the Five Nations normal instruction is given. The seminaries of the Cherokees have normal departments. Hampton school had 30 Indians in its normal classes. The Santee Normal Training School, Santee Agency, Nebr. (Congregational), St. Paul's Boarding School, Yankton Reserve, Nebr. (Protestant Episcopal), and several other schools under the same management give normal training to native teachers.

CHIEF SCHOOL OFFICERS.

These at last advices were reported to be as follows:

FOR THE FIVE NATIONS.

Hon. O. H. BREWSTER, *president of the board of education of the Cherokees, Tahlequah, Ind. Ter.*
Hon. BENJAMIN BIRNEY, *school superintendent of the Chickasaws, Tishomingo, Ind. Ter.*
Hon. EDMUND MCCURTIN, *school superintendent of the Choctaws, Red Oak, Ind. Ter.*
Rev. JOHN MCINTOSH, *school superintendent of the Creeks, Eufaula, Ind. Ter.*
Hon. THOMAS CLOUD, *superintendent of schools for the Seminoles, Wewoka, Ind. Ter.*

FOR OTHER INDIAN SCHOOL WORK.

Gen. S. C. ARMSTRONG, *Hampton Normal School, Hampton, Va.*
Capt. R. H. PRATT, *Training School for Indian Youth, Carlisle, Pa.*
Lieut. M. C. WILKINSON, *Training School for Indian Youth, Forest Grove, Oreg.*

a Basis of distribution of funds; school age, 5 to 21.
b Estimated in 1880–'81, and 3 counties not reporting in 1881–'82.

(From reports and returns for the two years of Hon. R. H. Howey, territorial superintendent of public instruction.)

TERRITORIAL SCHOOL SYSTEM.

OFFICERS.

Educational affairs are managed by a territorial superintendent of public instruction, county superintendents, and district boards of 3 trustees. The first is biennially appointed by the governor and confirmed by the upper branch of the territorial legislature; the others are chosen by the voters of their respective counties or districts, county officers for 2 years, and district boards for 3, with an annual change of 1 member.

ADDITIONAL PARTICULARS.

The schools are supported by money derived from a county tax of not less than 3 nor more than 5 mills on the dollar, from unlimited taxes voted by the districts, from various fines imposed by the courts, and from a fund arising from the sale of town lots previously reserved to provide for the erection and furnishing of school buildings. The county tax and the amount derived from legal penalties are distributed to the districts in proportion to their population 4 to 21 (Indians not under the guardianship of white persons being excluded),

provided the district has maintained school 3 months under a legally qualified teacher; that is, one who has obtained a county superintendent's certificate, which may be of first, second, or third grade.

GENERAL CONDITION.

Though more fortunate than his brethren of the neighboring Territories in securing returns, the superintendent complains of the inaccurate and unintelligible way in which they are made up, and to remedy the evil he recommends that the reporting of statistics be made the business of the district clerk, with a penalty for the neglect of it. So far from being satisfied with the increase of 4 per cent. of enrolment on the population 4–21, the superintendent thinks that a compulsory law and reform schools would prove efficient instruments for increasing the small attendance. He urges the necessity of a high standard of qualification for teachers, a thing impossible of attainment under the present method of certification, and would have non-attendance on teachers' institutes work a revocation of the delinquent's certificate.

The rate of taxation for the year was 3.7 mills, one-tenth of a mill less than the preceding year, but, owing to the increased value of property, the decreased percentage yielded a larger amount than that obtained the year before. The average cost of the schools was also decreased from $3 a month per pupil to $2.45, notwithstanding an average increase of $3.76 in the salaries of 191 teachers.

Steps were being taken to prosecute two settlers who had located on the public school lands or were removing timber from them.

CITY SYSTEM OF HELENA.

STATISTICS.

Although a school district and containing a population of only 3,624, the system of Helena is sufficiently advanced to warrant mention. Under a principal and 10 teachers the schools are all thoroughly graded and apparently thoroughly taught. Vocal music and drawing appear throughout the course and in the grammar grade there is the unusual feature of elementary Latin. In the 3 school buildings, which are valued at $40,000, were 600 sittings to accommodate a school population of 810 children, of whom 584 were enrolled, 424 in average belonging, and 390 in average daily attendance. The schools are furnished with chemical and philosophical apparatus and with the usual appliances of a well appointed school room, while to aid the teacher the library is supplied with educational works and current periodicals. The high school enrolled 41, graduating 1.

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

The only information received concerning instruction of this kind relates to the normal course of the Helena high school, and no mention is made of pupils pursuing it.

INSTITUTES.

During the year county institutes were held in Deer Lodge and Lewis and Clarke Counties, both well attended and satisfactory, many well written papers being read and earnestly discussed. The superintendent complains that neither the law nor his appeals, with a few exceptions, have been of any avail in overcoming the indifference of county superintendents regarding institutes, and that when institutes are called the teachers who need them most invariably stay away.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

Although high schools are a part of the system, that at Helena is the only one of which information has been received. The academic courses are scientific and classical, each of 4 years.

OTHER SECONDARY SCHOOLS.

For statistics of institutions of this class, see Table VI of the appendix, and for a summary, see the report of the Commissioner preceding.

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF AND DUMB.

One deaf-mute was maintained at the Missouri institution at an expense of $280 for the year.

EDUCATIONAL CONVENTION.

TERRITORIAL TEACHERS' ASSOCIATION.

This association effected a permanent organization at its meeting at Helena on August 1. Although not fully attended, the teaching force of the Territory was fairly represented. The next meeting of the association will be at Deer Lodge.

CHIEF TERRITORIAL SCHOOL OFFICER.

Hon. R. H. HOWEY, *territorial superintendent of public instruction, Helena.*

[Term, 1881 to 188

NEW MEXICO.

STATISTICAL SUMMARY.[a]

	1880.

INCOME AND EXPENDITURE.	
Receipts for school purposes	$32,171
Expenditure for schools	28,973

[a] From the United States Census of 1880, being the latest statistics available.

TERRITORIAL SCHOOL SYSTEM.

OFFICERS.

Whatever general officers the Territory of New Mexico may have provided for the schools that it maintains, their duties can be of little importance, since the "sole and entire management, supervision, and control" of the schools are vested in a county board of supervisors and directors composed of 4 members; one of these is the county probate judge ex officio, and the others, elected biennially by the people, must be 5-year residents, heads of families, and owners of real estate.

OTHER FEATURES OF THE SYSTEM.

There is no school tax levied as such, but from the general tax of 1 per cent. one-fourth is reserved for educational purposes and, with a poll tax of $1, is retained in the county treasury to be disbursed at the option of the supervising and directing board.

GENERAL CONDITION.

Education in New Mexico is by no means flourishing. The inhabitants seem to be divided into two hostile parties, the larger of which, composed of the older and Mexican element of the population, desires to perpetuate the existing state of things; the other party demands reform, and not only wants the schools relieved from direct ecclesiastical control, but made non-sectarian. The reforms advocated have thus far made little headway.

As this Territory has no superintendent, reports no statistics, in fact has no territorial system, it is impossible to do more than note the unsatisfactory condition in which its public educational affairs are and probably will for some time continue to remain.

Five private institutions for secondary instruction report for the year, the statistics of which may be found in Table VI of the appendix.

UTAH.

Total expenditure for district schools	199,264	185,538		13,726

(From reports and returns of Hon. L. John Nuttall, territorial superintendent of district schools, for the two years indicated.)

TERRITORIAL SCHOOL SYSTEM.

OFFICERS.

A territorial superintendent of district schools, elected for 2 years, has general charge of public school affairs. The local officers are county superintendents, elected by the people for 2 years, and district school trustees, elected for 3 years, with provision for annual change of one. There are also boards for the examination of teachers, comprising 3 members appointed by the county courts.

OTHER FEATURES OF THE SYSTEM.

Public schools are supported from a tax of 3 mills on $1 of ordinary taxable property, from taxation of railroads, sale of estrays, and a special district tax not to exceed 2 per cent. a year. The funds provided by the Territory are disbursed by the superintendent in proportion to the number of children 6 to 18 years of age, according to the annual reports of county superintendents. These officers must visit the schools at least twice in each year, examine the records of trustees, audit their accounts, and see that they are diligent in the discharge of their duties. They must keep accounts with the county treasurers and embody a full statement thereof in their annual reports to the territorial superintendent. District trustees must visit each school in their district at least once during each term, must take an annual census of the youth 6 to 18, and make report to the county superintendent, stating the condition of the schools. All failing to make such report are liable to prosecution on their bonds for neglect of duty, the amount recovered to go to the benefit of district schools. Teachers must report to the trustees at the close of each term. The territorial and county superintendents decide what text books are to be used in the public schools, the territorial superintendent appointing a convention for this purpose.

GENERAL CONDITION.

The statistics show an increase of 950 in youth of school age and of 444 in the number enrolled in public schools, but a decrease of over a thousand in average daily attendance. The estimated value of public school property was reported $98,724 less than for the previous year, the receipts and expenditures for public schools also showing considerable decrease.

TRAINING OF TEACHERS.

NORMAL DEPARTMENT.

The principal provision in this Territory for the training of teachers is made in the normal department of the University of Deseret. The university receives $5,000 each year from the Territory to defray the expenses of 40 normal pupils for tuition, books, and use of apparatus, the incumbents being selected annually by the territorial superintendent from persons nominated by the boards of examination of the several counties. The course of study extends over 1 year, and students completing it receive certificates which authorize them to teach in the common schools of the Territory without further examination. There were 41 normal pupils in attendance during the year and 16 graduates are reported.

TEACHERS' INSTITUTES.

No information has come to hand in regard to the normal institutes held during the year.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

There is no information regarding any public high schools in this Territory other than the academic department of the University of Deseret.

ACADEMIES AND SEMINARIES.

For statistics of academies and seminaries reporting, see Table VI of the appendix, and for a summary, see a corresponding table in the report of the Commissioner preceding.

SUPERIOR, SCIENTIFIC, AND PROFESSIONAL INSTRUCTION.

UNIVERSITY OF DESERET.

The University of Deseret is the only institution for superior instruction reporting, and this is a college only in name, its students being all academic and normal. The number in attendance during 1881–'82 was 193, of whom 85 were young women.—(Return.)

There are no institutions for scientific or professional instruction.

CHIEF TERRITORIAL SCHOOL OFFICER.

Hon. L. JOHN NUTTALL, *territorial superintendent of district schools, Salt Lake City.*

(From report of Hon. J. S. Houghton, territorial superintendent of public instruction, for 1881.)

TERRITORIAL SCHOOL SYSTEM.

OFFICERS.

The chief school officers are a territorial superintendent of public instruction, appointed for 2 years by the governor and confirmed by the legislature, and a territorial board of education, composed of the superintendent and one person from each judicial district, appointed by the governor for 2 years. County officers are superintendents, elected by the people for 2 years, and boards of examination for teachers, comprising the county superintendent and 2 teachers chosen by him, who must be holders of the highest grade of certificate. District school affairs are in the hands of a board of 3 directors elected for 3 years, one being changed each year, and a district clerk. Women are eligible to school offices and may vote at school meetings.

OTHER FEATURES OF THE SYSTEM.

Public schools must be taught by qualified teachers at least 3 months during the year; the schools must teach the common English branches in the English language and be open free to all residents 5 to 21 years old. Attention must be given to the cultivation of manners and morals, to the laws of health, physical exercise of the pupils, and to the ventilation and temperature of the school room. Teachers must keep a register and make an annual report to the county superintendent or forfeit the last month's pay. In order to be paid from public money they must hold certificates from the county or territorial

board of examination. The territorial board grants certificates good for 3 years; the county board, those of 3 grades, good for 1, 2, and 3 years, respectively. County superintendents must report annually to the territorial superintendent, failing in which they forfeit $100 of salary. District clerks must take an annual census of the school population and report to the county superintendent. If any clerk fail to take such census he is individually liable to the district for the loss of the apportionment which it would otherwise have received. The schools are supported from the income of a public school fund, an annual tax on property of not less than 3 nor more than 6 mills on the dollar, and the proceeds of certain fines and penalties, all to be apportioned according to the number 4 to 21 years old. District taxes may be raised to furnish additional school facilities at the will of the qualified voters of the district, but they must not exceed 10 mills on the dollar, except in incorporated cities or towns.

GENERAL CONDITION.

The superintendent of public instruction calls attention to the prosperous condition of the schools throughout the Territory and says school districts and school-houses have increased in proportion to the vast increase of population, that a better class of school buildings was reported in the Territory than at any time in its past history, that there had also been a steadily increasing demand for better teachers, and that a great improvement in that direction had been made.

In 1881 the law was so amended as not to require county superintendents to hold institutes and no longer made it the duty of teachers to attend. This has had a bad effect on institute work, and the territorial superintendent recommends that the law be again amended so as to require county superintendents of counties having 10 or more organized districts to hold at least once a year a teachers' institute, requiring all teachers to attend. There were 15 graded schools in the Territory; no other statistics were furnished for 1882.

TRAINING OF TEACHERS.

NORMAL DEPARTMENT OF WASHINGTON UNIVERSITY.

The normal department of the University of Washington Territory, Seattle, offers a 3-year course of normal instruction, including the higher English branches and methods of teaching. There were 23 students in this department and 53 in the training school.

OTHER NORMAL TRAINING.

Whitman College and Seminary, Walla Walla, presents a 2-year normal course in the higher branches of study, with 1 year of preparatory training. Thorough preparation is given in both institutions for teaching in the public schools, and diplomas are conferred on the completion of the courses.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS AND OTHER SECONDARY SCHOOLS.

No definite information is at hand in regard to public high schools.

For statistics of private academic schools reporting, see Table VI of the appendix, and for a summary, the report of the Commissioner preceding.

SUPERIOR INSTRUCTION.

INSTITUTIONS FOR YOUNG MEN AND YOUNG WOMEN.

The University of Washington Territory, Seattle, and Whitman College and Seminary, Walla Walla, open alike to both sexes, offered 4-year classical and 3-year scientific courses. The university gives a full 3-year commercial course, and in the departments of music and art are taught vocal and instrumental music, painting in oil and water colors, crayon work, freehand drawing, and sketching from nature. Both institutions required a preliminary examination for admission to any department and conferred appropriate degrees at the completion of each course.

For statistics of these institutions, see Table IX of the appendix, and for a summary, the report of the Commissioner preceding.

CHIEF TERRITORIAL SCHOOL OFFICER.

Hon. C. W. WHEELER, *territorial superintendent of public instruction, Olympia.*

[Term, January 5, 1882, to January 5, 1884.]

WYOMING.

TERRITORIAL SCHOOL SYSTEM.

OFFICERS.

The territorial librarian continued to be ex officio superintendent of public instruction for the Territory. County superintendents are elected by the people every 2 years, and for each school district boards of 3 trustees are elected for 3 years, with annual change of one.

OTHER FEATURES OF THE SYSTEM.

The public schools are sustained from a poll tax of $2 on each voter, from 2 mills on $1 of all taxable property, and from fines, penalties, and forfeitures. The people may at the annual district meeting vote such tax as they deem necessary to pay teachers, to purchase libraries, build or repair school-houses, and to procure fuel or books for poor children; the sum for a library is not to exceed $100 for any one year. In voting for school officers, in holding office, and in pay for teaching, no discrimination is made between the sexes. Separate schools may be established for colored children when there are 15 or more in a district. A compulsory school law requires parents or guardians to send their children of school age to some public school at least 3 months in each year, or furnish satisfactory reason for absence, under penalty of a fine of $25. County superintendents and district directors may, in their discretion, establish schools of higher grade than the ordinary district school, the studies pursued to be determined by the Territorial Teachers' Institute. This institute must be held annually by the territorial superintendent of public instruction, with the county superintendents and principals of graded schools; it is to continue not less than 4 days nor more than 10. It must also decide upon the books and system of instruction to be used in the Territory.

GENERAL CONDITION.

The system of public schools in the Territory is said to be one of the best. The territorial library had increased in the last two years 1,454 volumes, the present number being 6,667, exclusive of the public documents of the Territory.

An association called "The Wyoming Academy of Sciences, Arts, and Letters" was organized during the year, having for its leading objects "the encouragement of historical and scientific research and the promotion of practical industries in Wyoming."

No statistics of schools are given for 1882, except for the city of Cheyenne, whose public school in 1871 enrolled 60 pupils, and in 1882, 500. The school is graded, and the course of study practical and thorough. There were 8 grades, with a 4-year course in the high school, which included the higher mathematics and classics, general history, English literature, political economy, and the natural sciences. A library belonging to the school numbered 500 volumes, largely representing the best writers. The school has a thorough system of discipline in all its departments, and the method of examination at the end of each term is complete.

CHIEF TERRITORIAL SCHOOL OFFICER.

Hon. JOHN SLAUGHTER, *territorial librarian and ex officio superintendent of public instruction, Cheyenne.*

Mr. Slaughter has acted as ex officio superintendent since 1873. His term of service will expire March 31, 1884.

EDUCATIONAL ASSOCIATIONS AND CONVENTIONS.

NATIONAL EDUCATIONAL ASSOCIATION AND AMERICAN INSTITUTE OF INSTRUCTION.

PROCEEDINGS IN THE GENERAL MEETING.

The fifty-third consecutive annual meeting of the American Institute and the twenty-first annual meeting of the National Educational Association were held conjointly at Saratoga, July 11–14, 1882, the institute on the 11th and 13th and the association the 12th and 14th, with a joint meeting on the evening of the 14th.

Hon. Gustavus J. Orr, president of the association, in his inaugural address referred to the great work before the educators of the country, and said that the proper solution of the educational question will not be reached until the whole subject of government shall be fully explored. The first regular paper was on "The university: its place and work in the American system of education," the next on "Self consciousness in education," both being ably discussed. Superintendent Patterson, of New Hampshire, advocated national aid and offered a resolution that a liberal appropriation on the basis of illiteracy be made from the National Treasury for the support of schools in the several States. A unanimous vote favored this. At the next session of the association "Country schools" and "The foundation principle of education by the state" were the topics treated. The second day's proceedings were taken up with the report of the president of the National Council of Education to the association (in which Mr. T. W. Bicknell gave its origin and objects), with papers on "Secularization of education," "The prize system as an incentive to college students," and "The Delsarte system of expression," followed by memorials of members who died during the year. After the election of officers a joint meeting of the two bodies was held, in which five-minute addresses on educational topics were participated in by Messrs. Patterson, of New Hampshire; J. H. Carlisle, of Wofford College, S. C.; Neil Gilmour, of New York; Henry Barnard; President Tappan, of Kenyon College; G. A. Walton and C. C. Coffin, of Massachusetts.— (Proceedings and Addresses of the National Educational Association.)

DEPARTMENT OF HIGHER INSTRUCTION.

On the afternoon of July 14 the only session of this branch of the association was held. After the annual election of officers the following address was listened to: "The place of original research in a college education," in which Prof. H. J. Wright, of Dartmouth, discussed the question from the German as well as the American standpoint. Mr. Wright deplored the lack of power of independent and progressive intellectual activity in unfamiliar fields of knowledge, found in our colleges. He suggested that the German seminary system would help much towards original research, as these undergraduate courses, with their association in work, awaken interest and enthusiasm, so that the workmanship, constantly subjected to severe and vigilant criticism, becomes finished and mature. Several prominent educators discussed this subject. Prof. John W. Glenn, of Jefferson, Ga., then read an address on "Man the machine or man the inventor; which?" He stated that the main duty of the primary schools is to awaken a consciousness of the creating energy and to develop the ability to use it. He further argued that that education is best which gives the broadest reach to the mental vision, and, arousing most perfectly the activities of intelligent will, links us most closely to the spiritual nature from which we emanated. The suggested topics in this address came up for discussion prior to the final adjournment.

DEPARTMENT OF INDUSTRIAL EDUCATION.

After the usual preliminaries the reading of papers was proceeded with. The topic "Dexterity before skill," presented by Dr. George T. Fairchild, president Kansas State Agricultural College, led to a very animated discussion, Mr. Daniels, of Virginia, maintaining that in all schools teachers should be employed who could give instruction in manual training. Prof. C. M. Woodward, of Washington University, St. Louis, followed with "The function of a manual training school," in which he gave the daily program of the St. Louis school, and, furthermore, stated that the aims of education are to teach language, literature, and mathematics, with a view to making each child a master of the art of verbal expression; to teach mechanical and free hand drawing with natural tints and with the conventions of shade and color, and aim at a mastery of the art of pictorial expression; and to teach the cunning fingers the wonderful power and use of tools, and aim at nothing less than a mastery of the fundamental mechanical

processes. To do all these things while the mind is gaining strength and clearness and materials for thought is the function of a manual training school. Prof. E. L. Youmans, in discussing this paper, referred to the need of this form of education for boys whose tastes do not lead them to purely intellectual pursuits. President White, of Purdue University, ably treated the subject of "The national industrial college: its history, work, and ethics," and Prof. S. R. Thompson, of Lincoln, Nebr., reported the progress of industrial education in 1881–'82. The election of officers closed the session.

DEPARTMENT OF NORMAL SCHOOLS.

The first part of the session was occupied by the appointment of committees; then the president, C. C. Rounds, delivered an address on "Needed changes in the organization and work of the normal school," which led to the appointment of a committee to report at the next meeting on the proper organization and equipment of a normal school. "The true place of the normal school in the educational system," read by Hon. D. L. Kiehle, State superintendent of Minnesota, was discussed by several gentlemen. The normals were maintained to be centres of reformatory influences; the importance of giving professional instructors to the mass of country common schools was emphasized; and the need of educating public sentiment to appreciate right teaching, so that the people may really know a good teacher, was dwelt upon. The good result of teachers' institutes in the South being next considered, the president of the department spoke of the earnestness of the pupils and the high character and ability of the instructors, saying that in this work the North had something to learn from the South.

DEPARTMENT OF ELEMENTARY SCHOOLS.

On the afternoon of the 14th, President John M. Bloss, of Indiana, called this department to order, and, in his inaugural, referred to the problems to be solved in the department of primary education, such as the discovery of the true teacher from among those who have attained the necessary scholarship and the recognition of the fact that the chief purpose of the primary school is to prepare the pupil for the exigencies of life, so that when he leaves the school he may become a useful citizen. In "The relation of memory to elementary education," George P. Brown, president of the Indiana State Normal School, dwelt upon the difference between the mere verbal memory and the complete mastery of the subjects taught in the text books. He said that a rational study of a text book causes activities of soul in the student similar to those experienced by the original discoverer. He would not have less use of text books, but better use of them by better teachers. A paper by Miss Carrie B. Sharp, of Indiana, on "What, how, and how better?" (on better methods of education, so as to cultivate real mental power), was discussed. Then, after the election of officers, the meeting adjourned.

NATIONAL COUNCIL OF EDUCATION.

The second annual meeting of this body was held at Saratoga, commencing July 6, 1882, and continuing by adjourned sessions until the close of the joint meetings of the National Educational Association and the American Institute of Instruction, on July 14. At the first session the purposes and scope of the council were discussed by the members. The report of the committee on pedagogics occupied two sessions of the council. The report of the committee on technical education in public schools, which was discussed at Atlanta in 1881, was ordered to be printed. "High schools as a part of a system of public education" was presented in four papers, viz: (1) "The right of the high school to a place in the system," in which J. L. Pickard, president of Iowa University, said that the high school exists from necessity; (2) "The relation of the high school to the lower grade of schools," in which it was argued that high schools are an incentive to pupils to push forward to higher attainments than can be secured in their own grades; (3) "Its relation to business life, with the true course of its studies," which Dr. Mowry closed with a carefully prepared plan for an English high school course of studies; and (4) "The relation of high schools to schools of technology," in which C. O. Thompson, PH. D., of Massachusetts, said that ample general preparation, such as a high school gives, is requisite to prepare students for either schools of engineering or industrial schools. All these papers were thoroughly discussed. The committee on a graded course of instruction for country schools reported through its chairman, Hon. J. W. Dickinson, of Massachusetts, showing that the ultimate end to be secured by all school exercises is the harmonious development of the faculties of the human mind. "The harmonizing of primary, secondary, and collegiate systems of education" was reported from the committee on university and college education. The committee held that the unity of the great educational course requires that each stage should prepare pupils for the succeeding stage; the high schools should recognize the college as the last of the educational systems and arrange their work accordingly. If this idea of the unity of the educational process be conscientiously acted upon, any want of harmony must soon disappear. Some

amendments were made to the constitution and committees were announced, after which the council adjourned, to meet with the National Association in the week previous to its next annual meeting.— (Journal of Education.)

ANNUAL MEETING OF THE DEPARTMENT OF SUPERINTENDENCE.

A brief meeting of this department was held at Saratoga to elect officers and a member of the National Council of Education. The regular annual meeting was at Washington, D. C., March 21–23, 1882. At the preliminary meeting the subject of national aid formed the basis of discussion, and on motion of General John Eaton the executive committee was instructed "to select a committee on the subject of national aid, to prepare resolutions and present this matter in behalf of this association before a joint meeting of the congressional Committees on Education and Labor." The opening session, on March 22, was devoted to papers on "The information necessary to determine the merits of the heating and ventilation of a school building," by Dr. John S. Billings, U. S. A.; on "The chemical examination of air as applied to questions of ventilation," by Capt. Charles Smart, U. S. A.; on "Obstacles in the way of better primary education," by Hon. H. S. Jones, PH. D., superintendent of schools, Erie, Pa.; and on "Chairs of pedagogy in our higher institutions of learning," by Prof. G. Stanley Hall, PH. D., Cambridge, Mass. Dr. Billings, in his very able paper, spoke of the location and exposure of a school building as being of great importance in connection with its heating and ventilation, and called attention to the deficiencies in the various systems of heating because of the want of sufficient heating surface and the want of some means of control by which a free supply of air may be permitted to enter the building without passing over the heating surface. He also urged that a committee be appointed to take into consideration the subject of systematically recording the health of children and advised that it should suggest forms of records. Dr. Smart gave an account of the amount of carbonic acid in the outside air and in that of buildings, stating how the carbonic acid determination is to be made and what information it furnishes regarding the ventilation of a school room or other apartment. The second session was devoted solely to a discussion of the subject of national aid to education, Rev. A. D. Mayo making the opening address. He was followed by Dexter A. Hawkins, A. M., of Newark, N. J., and by Hon. J. L. M. Curry, LL. D. At the next session the leading topic was "The neglect of education in Alaska," presented by Rev. Sheldon Jackson, in whose paper the state of education before and after the purchase of that country was depicted at length and the need of aid from Congress impressed on the friends of education. Dr. W. W. Godding, superintendent of the Government Hospital for the Insane, read a paper dealing with mistakes in the education of the young as seen from his standpoint. He says sufficient attention is not paid to the temperament of the child, and desires that the mental growth be natural without forcing, as the greatest danger to our civilization to-day lies in the direction of nervous exhaustion. Dr. J. M. Gregory, in "Some fundamental inquiries concerning the common school studies," challenged the propriety of devoting so much time to the seven studies which run all through the lower school years and suggested that the indispensable branches should be those which impart a knowledge of ourselves, physical, mental, and moral, and of the world in which we live. At the fourth session resolutions were adopted in regard to the death of prominent educators. This was followed by a paper, sent by W. T. Harris, LL. D., on improving the qualifications of teachers, which subject was afterwards discussed. Earlier in the session a resolution was adopted that the report of the commission on school buildings in the District of Columbia be furnished the department of superintendence for publication. Adjourned.

NEW ENGLAND ASSOCIATION OF SCHOOL SUPERINTENDENTS.

The semiannual meeting was held in Boston, May 26, 1882, Col. F. W. Parker in the chair. The order of the day was the presentation and discussion of the subject of examinations. First the purpose of examinations was taken up, Superintendent S. A. Bent saying that their primary object was to test the teacher, for, as the teacher so the class. Superintendent S. T. Dutton thought that too much stress might be laid upon the value of examinations as a test of teachers. Oral examinations were declared unsatisfactory by Superintendent M. L. Hawley, of Gloucester, while Superintendent C. Morrill, of Lowell, favored them as giving an insight into the child's mind not obtainable by written questions. Written examinations were discussed by Superintendents O. B. Bruce and E. A. Davis, the former maintaining that they compel original reasoning and serve as a stimulus and useful guide, the latter, though favoring them for certain purposes, arguing that their general tendency is to direct the ambition and energies of pupils toward obtaining high percentages. Superintendents Kimball, of Newton, and Connell, of Fall River, spoke on the systems of marking required to show the child's progress; with the

proper marking, examinations, which are too often mere belittling tests, become broadened and elevated into a means of liberal culture. There was a general discussion of examinations as a basis of promotion. Superintendent Buck, of Manchester, N. H., did not favor the percentage examination as a necessary step for promotion, owing to the evils of nervousness, &c., engendered by this system, Superintendent Cogswell would dispense with uniform examinations and would pass the bright pupils as fast as they were ready, while Superintendent Seaver protested against all arbitrary numerical marking, as it could only be considered relatively. In conclusion Professor Tweed explained one of the reasons why the marking system was introduced, namely, to allay suspicion of favoritism at a time when the high school was considered a peculiarly aristocratic institution.

On October 27, 1882, about 35 of the New England superintendents met again in Boston to discuss educational topics. The subjects of high school graduation exercises and school exhibitions came up, the discussion covering a broad range and bringing out all phases of the question.—(New-England Journal of Education.)

NATIONAL ACADEMY OF SCIENCES.

This body held its sessions in Washington, D. C., commencing April 26, 1882. Many of the leading scientists of the country were present. Papers were read on the "Course of the Gulf Stream since the Cretaceous period," "Notes on the geology of Yucatan," "Desiccation of the Plateau of Mexico," and "On the young stages of a few osseous fishes"—all by Professor Alex. Agassiz. Other papers of general interest were "The relation of rain areas to areas of low pressure," by Elias Loomis; "Preliminary notice of a new dividing engine," by H. A. Rowland; on "Photographs of the spectrum of the nebula in Orion," by Henry Draper; "Theory of concave gratings," by H. A. Rowland; on "The results of the incandescent lamp tests at the Paris Exhibition," by G. F. Barker; "Note on a special form of secondary battery or electric accumulator," by Wolcott Gibbs; and "Some discoveries that enhance the value of the cotton and orange crops," by C. V. Riley.—(Industrial News.)

AMERICAN MEDICAL ASSOCIATION.

The thirty-third meeting of this association was convened at St. Paul, Minn., on June 6, 1882, and continued in session four days. After the usual address of welcome the question of professional ethics was agitated, the secretary announcing that numerous communications had been received protesting against the admission of delegates from the New York Medical Society and condemning its course in reference to the code of ethics. In the annual address First Vice-President Dr. Hooper also referred to the action of the New York Medical Society, and insisted that the broad line of demarcation between the irregular and the true physician should never be obliterated. In the section on medical practice the subjects presented were "Therapeutic action of chlorate of potassium," "Home treatment of pulmonary consumption by general local antisepsis on the basis of strict individualization," and "The use of salicylate of potassa in acute rheumatism and dyspepsia." They were fully discussed. Dr. A. L. Gihon, chairman of the section on State medicine, gave one of the most notable papers of the entire session. In this he laid great stress on making physicians alive to their responsibilities as sanitary guides, on encouraging the formation and development of State boards of health, and through these influencing the legislation of the country to recognize the practical sanitary needs of this advanced age. In the section on surgery and anatomy several papers of interest were presented. One on "Anchylosis of the hip" was discussed at length. In the section on ophthalmology, otology, and laryngology the matter of communicable diseases of the eye received considerable attention. A resolution was adopted that every second meeting be held in Washington. The association adjourned to meet in Cleveland in June, 1883.—(Buffalo Medical and Surgical Journal and Boston Medical and Surgical Journal.)

NATIONAL ASSOCIATION FOR SANITARY AND RURAL IMPROVEMENT.

On July 7–10, 1882, this body met at Greenwood Lake, New York. The secretary, C. F. Wingate, of Brooklyn, spoke of the need of sanitary associations and gave a review of such organizations in the United States and Great Britain. F. B. Hough, of Washington, D. C., advocated the planting of trees as a preventive of malaria and a security against drought. Papers were read in relation to the adornment and sanitary surroundings of farmers' homes; in condemnation of wall papers containing arsenic; on dust and the forms of disease resulting from its effects on the human system. On the second day sewerage and the causes and remedies of malaria were the topics treated. A paper by

Frederick Law Olmstead on the economy of park organizations and the necessity of tree-planting was discussed. Tenement house reform, the necessity of teaching sanitary science in the public schools, and unsanitary cookery filled the remainder of the session. The committee on organization desired that the association should disseminate its principles by the formation of local organizations and the issuing of pamphlets and other publications. The election of officers followed. Adjourned.—(Boston Medical and Surgical Journal.)

AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

The thirty-first annual meeting took place at Montreal the last week of August, 1882. The sessions were characterized as unusually successful, owing to the number of members and distinguished scientists from abroad who were present, as well as to the number of papers presented (256) and the variety of excursions and entertainments planned by the Canadian hosts. The president, Principal J. W. Dawson, F. R. S., of McGill College, in his opening address spoke of the increase in membership since the previous meeting at Montreal, 25 years before, then 400 members, now 2,000, and of the increase in sections. In 1857 there were two sections and a subsection; now nine sections meet simultaneously. A list of deceased members for the year was read; over 169 applicants were elected members, among them the English and European scientists present; and the meeting resolved itself into the various sections. In the evening of the first day, Prof. J. G. Brush, of Yale College, the retiring president, addressed the body on "Mineralogy," instead of reviewing the progress of science during the year, as has heretofore been the custom. In section A—mathematics and astronomy—Prof. J. R. Eastman read Professor Harkness's paper on the transits of Venus, and Dr. Houghton, of Dublin, gave a radical paper on "New views of Mr. George H. Darwin's theory of the evolution of the earth-moon system, considered as to its bearing on the question of the duration of geological time." In opposition to Sir Wm. Thomson and others, the doctor doubted whether the earth or any other planet ever existed in a fluid condition. In section B—physics—Vice-President T. C. Mendenhall spoke of the necessity of spreading an elementary knowledge of physics among educated people in general, and Prof. A. Graham Bell read a paper on the electrical experiments to determine the location of the bullet in the body of President Garfield. He also brought before the section a proposed method of producing artificial respiration by means of a vacuum jacket. Chemical literature and laboratory appliances were treated by Dr. C. Bolton and Mr. E. H. Cook in the chemistry section. Numerous technical papers were presented in the section of mechanical science. Among them "The permeability of the linings of house walls to air," in which Mr. T. H. Baker advocated the old fashioned whitewashed walls, because, hygienically considered, walls should be porous, and wall papers rendered them nearly air tight. In section E—geology and geography—E. Orton, of Ohio, discussed "A source of the bituminous matter in the Ohio black shale," and Dr. John Rae described the various land expeditions undertaken for the exploration of the country between Hudson's Bay and the Arctic Ocean, off the Mackenzie River. Prof. Wm. H. Dall, in the biological section, reviewed the progress of knowledge about the American mollusks. Prof. T. Mehan, State botanist of Pennsylvania, gave his impressions as to variations in nature from his experience in regard to the origin of species. He thought the Darwinian theory could not be controverted. Professor Ward, in "Classification of organisms," tended to show that organic life results from aggregations of matter. In section G—histology and microscopy—the vice president described the progress this section had made since its inception in 1869. Vegetable poisons were practically treated by Prof. J. S. Burrill, of Illinois Industrial University, and "The bacillus of tuberculosis" was discussed by Professor Osler. A scheme of anthropology was presented by Professor Mason in the anthropology section. This paper was to help anthropologists to classify their material. H. Hale Clinton, of Ontario, answered the question "Have the Indians come from Europe?" in the affirmative. In section I—economic science and statistics—the session opened with the usual address by the vice president, E. B. Elliot. He next spoke on international standard time, which subject was fully discussed. Other technical papers were read. In the general department Dr. W. B. Carper gave an interesting lecture on deep-sea temperature and Prof. A. Graham Bell illustrated his system of visible speech.—(Journal of Education and Kansas City Review of Science and Industry.)

NATIONAL EDUCATION ASSEMBLY.

The first annual meeting of this body took place at Ocean Grove, N. J., August 8–9, 1882. This was said to be a meeting of more than ordinary significance, as the majority of the States and Territories were represented by eminent men engaged in or deeply interested in the subject of popular education. The opinion was universally expressed

that the illiterate masses need aid and that the National Government should give it. A practical result of this meeting was the organization of a national education committee to urge on Congress the need of annual aid to supplement the work of the public schools of the various States and Territories, so that illiteracy may be overcome. Letters were read from many prominent men indorsing the object of the meeting. The Commissioner of Education, General John Eaton, gave a stirring address on "The nation the only adequate patron of education," and Dr. H. R. Waite, one on "The relations of illiteracy to suffrage." General James F. Rusling, of Trenton, spoke on the education necessary to the state, and others on the philosophy of education and on the illiteracy of the white people of the South. The evening session was devoted to education in Alaska and the training of Indians. On the second day the education of the colored people, the relation of education to the church, and national aid for illiteracy were taken up. Senator Blair earnestly advocated such aid as will stimulate home effort. Resolutions were adopted in favor of presenting a memorial to Congress in regard to the need of aid from the nation. A constitution for permanent organization was presented and adopted. A letter in regard to the objects of the meeting, from Hon. H. M. Teller, Secretary of the Interior, was read, and after the usual transaction of business the meeting adjourned.— (New-England Journal of Education.)

AMERICAN INSTRUCTORS OF THE DEAF AND DUMB.

The tenth annual meeting was held at the Illinois Institution for the Instruction of the Deaf and Dumb, Jacksonville, August 26–30, 1882, Dr. E. M. Gallaudet presiding. Nearly all the papers bore upon living questions, and the discussions which followed them were pertinent and suggestive. Although the question of articulation came up, less time was given to it than at any other recent conference of instructors of the deaf. The papers covered such subjects as the religious education of deaf-mutes, what deaf-mute instruction in the United States owes to the American Asylum and its early instructors, the physical training of deaf-mutes, the value of experience in our school work, the Grube method of teaching arithmetic, the mental life of deaf-mutes as related to their education and care, deaf-mute education in Minnesota, the preparation of advanced pupils for colleges, the necessity of a more systematic instruction, institution libraries, compulsory education, &c. Many of these papers were freely discussed. After the reading of obituary notices and the usual business arrangements the association adjourned.— (Annals of the Deaf and Dumb and report of the proceedings.)

AMERICAN PHILOLOGICAL ASSOCIATION.

The fourteenth annual session of this association was held at Cambridge July 11–13, 1882, the president, Prof. F. D. Allen, of Cambridge, in the chair. The secretary reported the association in a better financial condition than ever before. The report of the committee, which, in conjunction with a committee of the American Association for the Advancement of Science, presented a memorial to 430 colleges, asking them to abstain wholly from conferring degrees honoris causa, was accepted and the committee continued. In the afternoon session papers were read by Prof. J. B. Sewall, of Braintree, on "Peculiarities of the letters as they appear in early colonial records;" by Prof. C. H. Toy, of Harvard, on "Semitic personal pronouns;" and by Prof. William D. Whitney, of Yale, on "Further words as to surds and sonants" and on "The law of economy." At the evening session President Allen read his annual address, which was on "The influence of the University of Leyden upon modern philology." On the following morning Prof. F. A. March, professor of Anglo-Saxon in Lafayette College, Pennsylvania, read a paper on the early poem of "Beówulf," which he represented as the picture of a singular world. Its characters are strange to us, the action goes on in the midst of a strange nature; some explanation of its strangeness was reached in examining the manner in which its effects on the different senses are presented. The next paper was by Prof. A. C. Merriam, of Columbia College, on "Alien intrusion between article and noun," in which he stated that in most languages only attributive words or phrases are admitted between the article and its noun, but the Greek admits alien words and clauses of all kinds, with the exception of the particles, under the strict application of the law that an attributive must also be present and precede the alien element. Rev. J. Colver Wightman followed with a paper on "The form and significance of the aorist tense in Greek." Other papers for the day were on the quantity of Latin prosody, the influence of Latin syntax on Anglo-Saxon gospels, the use of the phrases "two first" and "first two," and a discussion of surds and sonants. The last day was devoted to papers on "οὐ μὴ with the future prohibitive," "Cyclops," and "The smile of Aphrodite," "Initial P in Gothic and Anglo-Saxon," and "Indo-European case system." The society

pledged itself once more to the cause of bettering English spelling, in which it is supported by the spelling reform associations of this country and Great Britain.—(Boston Daily Advertiser.)

SPELLING REFORM ASSOCIATION.

The sixth annual meeting of the Spelling Reform Association was held at Harvard University, commencing on July 13. The annual reports and letters afforded much encouragement to the members present, showing as they did a deepening interest in the reform. The most important work of the meeting was the adoption of a form of pledge proposed by the secretary and after full discussion adopted by unanimous vote. This form covered the following simplified spellings: to use the forms program, favor, &c.; tho, thru, gard, catalog, ar, giv, definit, &c.; f for ph, t for d or ed final when sounded as t; drop silent e after a short vowel; when a word ends with a double letter omit the last; use all changes recommended by the American Philological Association; use complete phonetic spelling. A choice was given to the signers to declare in favor of any of the above rules. Each person signing the pledge writes after his name the number of the regulations which he intends to follow, to indicate how far he intends to carry out the reform. The action of the Philological Association in pledging itself to the cause of English reform spelling did much to encourage the reformers. The officers for the ensuing year were chosen and the meeting adjourned.— (New-England Journal of Education.)

AMERICAN SOCIAL SCIENCE ASSOCIATION.

The association was called to order at Saratoga, September 4, 1882, by the president, Dr. Francis Wayland, of Yale College, who in his opening address stated that the public mind is disposed as never before to consider the problems of social phenomena with fearless independence. The secretary, F. B. Sanborn, presented his yearly report, which contained a statement of some general considerations and special conditions that make it incumbent on the members of the association to maintain the study of social science in America and which encourage them to think that their studies and labors in former years have not been altogether in vain. On September 5, Dr. W. T. Harris discussed the subject of education in its broadest signification. Miss Alice Fletcher presented an abstract of a paper on "Civilization of American Indians" and Dr. H. L. Wayland one on progressive spelling. Both of these papers were fully discussed. The evening lecture was by Rev. A. D. Mayo, on "State aid to education." He was followed by Professor Goldwin Smith, who spoke briefly on state aid given to education in England and France. He deprecated interference by the General Government in local affairs. Dr. W. T. Harris in reply maintained that under the pending bill in aid of education there need be no fears of interference. On September 6, Dr. Walter Channing, of Boston, spoke on boards of health, and Dr. Henry Baker, secretary of the Michigan board of health, continued the subject. Dr. A. N. Blodgett followed with a paper on the management of chronic inebriates and insane drunkards, which paper was discussed by Professor Wayland, Judge A. P. Peabody, and Rev. I. S. Prime. Dr. E. M. Hunt, of the New Jersey board of health, and Dr. D. F. Lincoln presented papers on sanitation. After the election of officers Miss Clara Barton read a paper on "Relief associations." The opening paper on the following day was by T. Bacon, of Rochester, N. Y., on "Professional ethics," which was briefly discussed in the affirmative. Disfranchisement for crime was treated by Messrs. James F. Colby, of New Haven, and Carroll D. Wright, chief of the Massachusetts bureau of statistics. A paper on "Local government in the West" was read by Mr. Edward W. Bemis, of Springfield, Mass., and Rev. Washington Gladden, of the same city, closed the day with an interesting paper on "Unsocial forces." The last day, September 8, was mainly devoted to reports on factories.— (Journal of Education.)

NATIONAL CONFERENCE OF CHARITIES AND CORRECTIONS.

The report of the proceedings of this body for 1882 has not reached the Bureau.

APPENDIX.

STATISTICAL TABLES

RELATING TO

EDUCATION IN THE UNITED STATES.

o Includes 22 of whom the sex is not reported.
p In schools corresponding to public high schools only.
q In normal schools, academies, and private schools.
r For white teachers; for colored teachers the average salary is $19.93.
s In private schools of all grades.
t Exclusive of Philadelphia.
u Number between 5 and 15 reported as attending Catholic and select schools.
v Includes evening school reports.
w In the counties; 137 days in cities.
x In the counties the average salary of white male teachers is $38; of white females $29; in the cities the salaries are, respectively, $73 and $40; for colored males in the counties, $32; for colored females, $20; in the cities, respectively, $60 and $28.
y In the counties.
z United States census of 1889.
aa Includes 89 of whom the sex is not reported.
bb Number of schools reported; number of teachers for them is not given.

o Total of items reported.
p Includes revenue from other funds.
q Includes expenditure for apparatus.
r For libraries only.
s In 1881.
t Several counties failed to report this item.
u This is not included in the total receipts, the interest on the permanent fund being retained in the State treasury until the fund is large enough to make a per capita apportionment.
v Includes income for evening schools.
w As compiled from reports of city and county treasurers; the total State apportionment for the year was $1,105,260.
x Exclusive of income for normal schools.
y 25 counties reporting; it is estimated that a full report would make the total revenue for the year over $500,000.
z United States census of 1880.
aa Total income not reported; amount given is that reported as expenditure, which, it is stated, was derived from tribal funds.

a In estimating these items, only the interest on amount expended under the head of "permanent" (i. e., for sites, buildings, furniture, libraries, and apparatus) should be added to the current expenditure for the year.
b Includes $15,500 spent for normal schools.
c Estimated by the Bureau, 6 per cent. being the rate used in casting interest on permanent expenditure.
d In 1880.
e Items not fully reported.
f In 1879.
g Includes $1,690 expended for colored schools outside of Wilmington.
h Does not include expenditure for books.
i For white schools only.
j An estimate including per capita of total permanent expenditure for the year.
k Amount received from the State and from local taxation for the support of public schools; this amount is largely supplemented by patrons.
l Exclusive of the value of normal school property.
n Total amount expended from tuition revenue.
n Includes salaries of secretaries and treasurers, interest on bonds, &c.
o Includes salaries of superintendents.
p The sum included in this total as public school expenditure for colored schools is the amount raised for them, and may be somewhat greater or less than the actual expenditure.

and Territories, showing the income, expenditure, &c.—Continued.

ANNUAL EXPENDITURE.				Amount of available school fund.	Amount of permanent school fund (including portion not now available).	Estimated real value of sites, buildings, and all other school property.	
Expenditure in the year per capita of pupils enrolled in public schools. *a*	Expenditure in the year per capita of average attendance in public schools. *a*	Expenditure in the year per capita of population between 6 and 16. *a*	Expenditure in the year per capita of population between 6 and 16, including interest on the value of all school property. *a*

q In 1878.
r Includes fuel and care of school rooms.
s Total expenditure per capita of population between 5 and 15.
t Includes total expenditure for high schools of $20,000 and for normal schools of $38,000.
u In 1881.
v Estimated.
w Several counties failed to report this item.
x Exclusive of the United States deposit fund.
y As reported for 1881; exclusive of large quantities of swamp lands.
z Includes interest on bonds.
aa Includes evening school reports.
bb Total of items reported.
cc As compiled from reports of city and county treasurer; the total State apportionment for the year was $1,105,260.
dd $50,255 of this are for sheriffs' commissions and delinquent lists.
ee Exclusive of cost of normal schools.
ff 25 counties reporting; it is estimated that a full report would make the total expenditure for the year over $500,000.
gg Value of school-houses only.
hh United States census of 1880.
ii The income derived from these funds is augmented from other sources.
jj Schools supported from general tribal funds.

TABLE II.—*School statistics of cities containing 7,500 inhabitants and over, for 1882; from replies to inquiries by the United States Bureau of Education.*

	City.	Superintendent.	Total population (census of 1880).	School population.				Number enrolled in public schools.			Estimated enrolment in private and parochial schools.	Number of school days in the year.	Number of days the schools were taught.
				Legal school age.	Number under 6 years of age.	Number over 16 years of age.	Total number of legal school age.	Number under 6 years of age.	Number over 16 years of age.	Whole number enrolled, excluding duplicate enrolments.

* From Report of the Commissioner of Education for 1881.
a These are in rural schools.
b Estimated.
c Number registered during fall term.
d Exclusive of evening school reports.
e In Portland school for the deaf.
f Includes special teachers.
g In English-German schools.
h In colored schools.
i Number on roll November, 1882.
j Including special schools for the deaf and licensed minors.
k Average whole number.
l For the first term of the school year ending July 1, 1881.
m For the summer term.
n In primary and grammar schools.
o Includes some duplicate enrolments

*From Report of the Commissioner of Education for 1881.

a Includes total cost of evening schools, amounting to $1,415.

b Per capita in day schools based on average number belonging.

c These statistics are from a return for the year 1881.

d Fuel and lights.

e Includes pay of janitors.

f These statistics are for the Kingston school district only.

g Includes salaries of superintendents and cost of nautical school.

h For all incidental or contingent expenses.

i Expenditure for fuel and miscellaneous objects.

j Includes expenditure for fuel and insurance.

k In 1880.

l Exclusive of amount paid for indebtedness which is incurred by local boards and provided for by the same.

TABLE II.—*School statistics of cities containing 7,500 inhabitants and over, for 1882, &c.*—Continued.

	City.	Expenditures.												Average expenses per capita.	
		Payment of indebtedness.		Tuition.		Incidental or contingent expenses.									
		Bonds (including interest).	Floating (including interest).	Cost of supervision.	Amount paid for teaching.	Officers of board, secretaries, messengers, &c.	Pay of janitors of buildings.	Fuel.	Rent.	Insurance.	Repairs.	School books supplied for use of pupils.	All other supplies and current expenses.	Total expenditure.	Supervision and instruction, based on average daily attendance.	Incidental or contingent expenses, based on average daily attendance.

* From Report of the Commissioner of Education for 1881.

a To normal students.

b To residents of the city.

c Reported with classical department (see Table IX).

d After two years of successful teaching graduates may receive the degree of "bachelor of didactics."

e During the year 35 teachers received instruction and training in Kindergarten methods in the Kindergarten department, organized April 10, 1882.

f Incidental fee.

g Graduates receive State certificates for five years from State board of education.

h Free to 200 State scholars; $50 to others.

i Receive diplomas after one year's successful teaching.

j In schools of the city.

k To all who comply with the condition of teaching in the schools of Massachusetts; incidental fee, $4.

l These statistics are for the year ending July 1, 1882; the school has since closed.

m Entrance fee.

n To those pledged to teach in the State.

o To State pupils.

p Elective studies only.

q Course of study was raised during this year from a three to a four years' course.

r Connected with this school is a Kindergarten training department under the supervision of Mrs. C. A. Burr.

s From return from Syracuse High School, with which the Training School is connected.

t These statistics are for the year 1881.

TABLE III.—PART 1.—*Statistics of public normal schools for* 1882, *&c.*—Continued.

NOTE.—× indicates an affirmative answer; 0 signifies no or none; ..... indicates no answer.

	Name.	Graduates in the last year.		Number of years in full course of study.	Number of weeks in scholastic year.	Library.			Number of educational journals and magazines taken.	Annual charge to each student for tuition.	Is drawing taught?	Has the school a collection of models, casts, apparatus, and examples for free hand drawing?	Is music taught?		School possesses a chemical laboratory?	School possesses a philosophical cabinet and apparatus?	School possesses a museum of natural history?	School possesses a gymnasium?	Model school attached to the institution?	Students receive diplomas or certificates on completion of course?	Graduates teach in State common schools without further examination?	Time of anniversary.
		Whole number.	Number who have engaged in teaching.			Number of volumes.	Increase in the last school year.	Number of volumes of pedagogical works.					Vocal.	Instrumental.

* From Report of the Commissioner of Education for 1881.

a To residents of the city.
b In schools of the city.
c To State pupils.
d For two years.
e In 1880.
f Estimated.
g Graduates from the first course receive a State license to teach for five years; from the second, for ten years.
h To those who are not State normal students.
i To normal students.
j After one year of successful teaching and indorsement of the diploma by the State superintendent.
k Reported with classical department (see Table IX).
l Free to those appointed by the Territory.

TABLE III.—PART 2.—*Statistics of private normal schools for* 1882; *from replies to inquiries by the United States Bureau of Education.*

* From Report of the Commissioner of Education for 1881.

a A department of Jennings Seminary (Table VI).

b Faculty of Eureka College.

c No separate report for normal department (see Table VI).

d Students in various departments of work are here included.

e Students in beginning, advanced, and review classes are here included, "the student being allowed to enter at any time * * and continue as long as he can."

f Preparatory and normal departments intimately associated; for report, see Table IX.

g Includes report of Bellewood Seminary, with which the Kentucky Presbyterian Normal School is associated.

h Educational authorities failed to make provision for this seminary, and it is to be continued as a private institution after December 11, 1882.

i These also instruct in other departments.

j For all departments.

k Normal and English students.

TABLE III.—PART 2.—*Statistics of private normal schools for* 1882, *&c.*—Continued.

* From Report of the Commissioner of Education for 1881.

a Assisted by other college professors.

b These statistics, which are for the year 1881, are for the normal department of Shaw University; in 1882 the name of this institution was changed to Rust University.

c These also instruct in other departments.

d In 1881.

e Organized at Worthington in 1872; removed to Fayette in 1881.

g In the high school department.

h No separate report for normal department (see Table IX).

TABLE III.—PART 2.—*Statistics of private normal schools for* 1882, *&c.*—Continued.

NOTE.—× indicates an affirmative answer; 0 signifies no or none; .... indicates no answer.

	Name.	Number of years in full course of study.	Number of weeks in scholastic year.	Library.			Number of educational journals and magazines taken.	Annual charge to each student for tuition.	Is drawing taught?	Has the school a collection of models, casts, apparatus, and examples for free hand drawing?	Is music taught?		School possesses a chemical laboratory?	School possesses a philosophical cabinet and apparatus?	School possesses a museum of natural history?	School possesses a gymnasium?	Model school attached to the institution?	Students receive diplomas or certificates on completion of course?	Graduates teach in State common schools without further examination?	Time of anniversary.
				Number of volumes.	Increase in the last school year.	Number of volumes of pedagogical works.					Vocal.	Instrumental.

* From Report of the Commissioner of Education for 1881.

a Incidental fee.

b No separate report for normal department (see Table VI).

c There are 6 free or partially free scholarships which are donated to charity Kindergärten.

d In experimental or receiving classes.

e After teaching one year in a Kindergarten they receive a second grade certificate, and after two years a first grade certificate.

f A department of Jennings Seminary (Table VI).

g Diplomas after one year of successful teaching.

h Preparatory normal course; the collegiate normal course is about two years for those who have pursued or passed examination in branches requisite for admission to the college.

i See Table IX.

j Includes report of Bellewood Seminary, with which the Kentucky Presbyterian Normal School is associated.

k For board, books, and tuition for paying students; 23 full beneficiaries and 53 partial beneficiaries maintained during school year 1881–'82.

l Educational authorities failed to make provision for this seminary, and it is to be continued as a private institution after December 11, 1882.

m These statistics, which are for the year 1881, are for the normal department of Shaw University; in 1882 the name of this institution was changed to Rust University.

TABLE III.—PART 2.—*Statistics of private normal schools for* 1882, *&c.*—Continued.

NOTE.— × indicates an affirmative answer; 0 signifies no or none; .... indicates no answer.

	Name.	Number of years in full course of study.	Number of weeks in scholastic year.	Library.			Number of educational journals and magazines taken.	Annual charge to each student for tuition.	Is drawing taught?	Has the school a collection of models, casts, apparatus, and examples for free hand drawing?	Is music taught?		School possesses a chemical laboratory?	School possesses a philosophical cabinet and apparatus?	School possesses a museum of natural history?	School possesses a gymnasium?	Model school attached to the institution?	Students receive diplomas or certificates on completion of course?	Graduates teach in State common schools without further examination?	Time of anniversary.
				Number of volumes.	Increase in the last school year.	Number of volumes of pedagogical works.					Vocal.	Instrumental.

13	Mrs. Haven's Mission Kindergarten.*	San Francisco, Cal. (corner Eighteenth and Jessie streets).	1881	Louise L. Havens.	3	65	2–8	4½
14	Jackson Street Free Kindergarten.	San Francisco, Cal. (116 Jackson street).	1879	Miss Belle T. Scott.	1	50	3–4½	4
15	Jackson Street Public Kindergarten.	San Francisco, Cal. (116 Jackson street).	1880	Flora van Den Bergh.	....	45	4–6	5

* From Report of the Commissioner of Education for 1881.

plies to inquiries by the United States Bureau of Education.

Number of school days in the week.	Number of weeks in the year.	Occupations of pupils.	Apparatus and appliances.	Effect of the system.
9	10	11	12	13
5	36	Perforating, embossing, paper folding, stick laying, block building, weaving, embroidering, singing, calisthenics, drawing, and study of natural history.	Blocks, sticks, rings, slates, drawing books, colored crayons, and all appliances necessary for a Kindergarten.	Happiest and most satisfactory results physically and mentally.
....	....			
....	....			
5	42	All of Fröbel's occupations...	All modern apparatus and appliances for Kindergarten.	The physical and mental development is wonderful, and a grand opportunity is afforded for moral and religious training.
....	....			
5	47	Rudiments of primary work in connection with Kindergarten gifts. Special attention paid to drawing, sewing, weaving, paper folding, tablets, sticks, and music.	Kindergarten tables and chairs, blackboards, charts, zoölogical and physiological tablets, sticks, slats, drawing books, slates, and materials for sewing, weaving, and modelling.	Most beneficial; the young mind is pleasantly occupied and improved and the body given free and careful exercise.
5	40	Weaving, sewing, drawing, exercises with 1st gift and tablets, making of straw and paper chains, songs, and games.	.....	Marked improvement in the children and beneficial influence on the parents.
....	....			
5	40	All Fröbel's occupations.....	Fröbel's gifts, Kindergarten tables, blackboards, piano, &c.	Develops the physical, moral, and intellectual faculties, in perfect health and beauty, and forms the groundwork of a thorough education.
....	40	Fröbel's occupations.....	The Kindergarten gifts and materials.	Develops the mental faculties through artistic and mechanical labor, improves the manners of the children, and turns natural talent into right directions.
5	40	Fröbel's occupations and exercises with the gifts.	Pictures, plants, blackboard, piano, &c.	Very satisfactory.
5	44	Perforating, sewing, drawing, weaving, modelling, paper folding, paper cutting, and chain making.	Gifts, tables, and seats, piano, plants, and a large sunny room.	Children are further advanced mentally than those who have not received the same training.
5	40	Fröbel's gifts and occupations, object lessons, games, motion songs, dancing, calisthenics, and lessons in German and drawing.	Fröbel's gifts and materials, slates, blackboards, designs for drawing, crayon and water colors, musical charts, educational charts, &c.	Tends to form a graceful figure, cultivates the perceptive faculties, habits of attention and concentration, and induces kindness and generosity of dispositon and general refinement of character.
5	40	Pricking, sewing, drawing, weaving, paper cutting, paper folding, and modelling.	Piano, squared tables, squared blackboard, slates, gifts, and everything essential to a first class Kindergarten.	
5	42	Weaving, sewing, pricking, paper folding, paper cutting, drawing, stick laying, and slat work.	Gifts, tables, benches, pictures, slates, and squared blackboards.	Children are better fitted mentally and morally to begin the hard world of school, having been trained to habits of attention, thoughtfulness, and obedience, accompanied with pleasing and strengthening physical exercise.

a The normal pupils of the Pacific Kindergarten Normal School.

b Two hours weekly.

24	St. Luke's Free Kindergarten.	San Francisco, Cal. (n. e. corner Polk and Pacific streets).	1882	Mrs. B. M. Briggs	1	45	3½–6	4
25	Silver Street Kindergarten, No. 2.	San Francisco, Cal. (64 Silver street).	1882	Mrs. Mary E. Arnold..	(*b*)	70	3–5½	4
26	South Park Private Kindergarten.	San Francisco, Cal....	.....	Miss Thompson.....	....	....	.....	....
27	Union Street Public Kindergarten.	San Francisco, Cal. (512 Union street).	1881	Anna M. Stovall	0	40	5–6	4
28	Zeitska Institute Kindergarten.	San Francisco, Cal. (922 Post street).	1877	Mrs. F. Taubman	2	30	3–7	3–4

a At San Francisco; first established at Los Angeles in 1876.

inquiries by the United States Bureau of Education—Continued.

Number of school days in the week.	Number of weeks in the year.	Occupations of pupils.	Apparatus and appliances.	Effect of the system.
9	10	11	12	13
5	....	Fröbel's occupations, music, gymnastics, &c.; reading, natural history, spelling, and writing for the advanced class.	The usual Kindergarten materials and a piano.	Very satisfactory.
5	....	Exercises with 1st, 2d, 3d, and 7th gifts, drawing, stick laying, paper folding, weaving, and sewing, accompanied with songs and games.	Kindergarten furniture, gifts, and material for occupations.	Superior to any other system for harmonious training of body and mind.
5	51	Weaving, sewing, pricking, paper folding, stick laying, chain making, tablet laying, drawing, 1st, 2d, and 3d gifts, games, and stories.	Instructive pictures of the various products of the animal, vegetable, and mineral kingdoms, blackboards, &c.	Through the occupations, games, and exercises the muscular system is evenly and carefully developed, and every mental faculty is furnished support and nourishment.
?	....			
5	42	Sewing, weaving, drawing, modelling, stick laying, paper folding, paper cutting, paper twisting, tablet and ring laying, and building with blocks.	Fröbel's gifts and materials for the occupations.	Makes the children vivacious, obedient, attentive, and observing; accustoms them to memorize and reason; and teaches self-control, amiability, self-reliance, and honesty.
5	40	Usual occupations, culture of flowers and vegetables, silk raising, &c.	Usual apparatus, a garden, a palm grove, a playground, cabinets, pictures, sand tables, and appliances for modelling.	Develops muscular strength, self-reliance, and general health, teaches clearness and precision in the use of the hand, leading to skill in art and the mechanics, influences the intellectual, social, and ethical natures and gradually leads the youngest child into the kingdom of righteousness, order, and beauty.
5	44	All of Fröbel's occupations...	A room, 70 x 30 feet, beautifully decorated and furnished, Fröbel's gifts, small collection of minerals, birds, fishes, &c., a piano and other musical instruments.	The children are remarkable for their punctuality and attendance, though coming from the poorest classes only, and the refining and elevating influences affect not only the children but the parents.
5	40	Weaving, sewing, drawing, paper folding, exercises with tablets, sticks, rings, 1st and 2d gifts, chain making, songs, and games.	Sand table, slats, &c.....	Marked mental improvement after the first few months.
5	38	Sewing, weaving, drawing, paper folding, pricking, stick and tablet laying, and building with cubes.	Squared tables, blocks, sticks, tablets, and materials for weaving, drawing, sewing, pricking, &c.	
5	44	All Fröbel's occupations.	Large airy room, completely equipped with furniture and apparatus for a model Kindergarten.	The children are remarkable for their punctuality and attendance, though coming from the lowest classes only, and the refining and elevating influences affect not only the children but the parents.
....	....			
5	43	Usual Kindergarten occupations.	Usual apparatus and appliances.	Harmonious development of the child's three-fold nature.
5	44	Exercises with Fröbel's gifts, practical use of English, French, and German languages, games, &c.	The gifts, picture charts, numerical frames, squared tables, &c.	Makes the little ones sociable, polite, kind, obliging, unselfish, apt in all mechanical occupations, docile, obedient, and calls into action all the finest qualities of their natures.

b The normal pupils of Mrs. Wiggins' training class.

* From Report of the Commissioner of Education for 1881.

inquiries by the United States Bureau of Education—Continued.

Number of school days in the week.	Number of weeks in the year.	Occupations of pupils.	Apparatus and appliances.	Effect of the system.
9	10	11	12	13
5	40	Usual Kindergarten work and primary instruction.	Usual apparatus of a Fröbel Kindergarten.	Develops the child physically and inculcates habits of observation, thought, invention, neatness, and order.
5	40	All the Kindergarten occupations except the 5th, 6th, and 15th gifts.	Usual Kindergarten appliances.	Imparts ease and erectness to the carriage, brightens and exhilarates the whole deportment, and quickens the powers of perception and understanding.
5	40	Weaving, modelling, sewing, games, counting, spelling, reading, &c.	.....	Good.
5	40	All the Kindergarten gifts with the exception of the 6th, 16th, and 17th.	.....	Strengthens the body, forms correct habits of thinking, and employs the awakening mind.
5	36	Fröbel's occupations.....	.....	Good.
5	52	Sewing, weaving, pricking, modelling, drawing, painting, &c.	Those necessary to carry out Fröbel's ideas of child education.	Strengthens the body and mind and puts the child in possession of its faculties.
5	40	Those of Fröbel's system.....	All necessary for a true Kindergarten.	Harmonious development of the child's powers.
5	40	All Kindergarten occupations and gifts, music, gardening, gymnastics, and for the older ones reading, writing, elocution, history, mythology, &c.	All needed appliances and a large playground.	Quickens all the powers of the mind and cultivates freedom, sociability, and happiness in the child.
5	40	Building with cubes, planes, sticks, and rings; drawing, sewing, weaving, paper folding, paper cutting, and modelling.	Cubes, sticks, planes, rings, &c.	Makes the children graceful, polite, and cleanly; develops ideas of number and form, and teaches the use of the faculties in various ways.
5	40	Fröbel's occupations.....	Fröbel's appliances.....	Promotes natural growth of the muscles, awakens perception, cultivates taste in design, and makes children more thoughtful, sympathetic, and happy.
5	40	All Fröbel's occupations, gifts, and games.	Piano, globes, pictures, and all materials necessary, for instruction in a Kindergarten.	Develops harmoniously the physical, mental, and moral powers of the child.
5	40	All Fröbel's occupations and gifts.	Kindergarten chairs and tables, piano, blackboard, pictures, seeds, plants, and Fröbel's gifts and occupations.	Teaches control of the muscles, giving a graceful and dignified carriage and deftness to the hand, trains the senses, develops the faculties of perception and judgment, cultivates a habit of symmetrical arrangement and classification of objects, and leads to correct expression of thought.
5	38	Weaving, paper folding, paper cutting, interlacing, pricking, sewing, drawing, peas work, and modelling.	Gifts 1, 2, 3, 4, 5, 6, 7, 8, and 9, and all necessary appliances.	Develops the hand, head, and heart simultaneously.
5	24	Paper folding, sewing, ring laying, &c.	Cubes, slats, fablets &c.....	Promotes healthy physical and mental growth.
5	40	Weaving, perforating, embroidering, paper folding, peas work, and drawing.	1st, 3d, 4th, 5th, and 7th gifts, rings, sticks, and reading chart.	Develops the powers of body and mind, training to quick perception and cultivating a love for the beautiful.

a The pupils of the Indiana Kindergarten Training School.

* From Report of the Commissioner of Education for 1881.

inquiries by the United States Bureau of Education—Continued.

Number of school days in the week.	Number of weeks in the year.	Occupations of pupils.	Apparatus and appliances.	Effect of the system.
9	10	11	12	13
5	50	Weaving, perforating, paper folding, singing, playing, lessons in number and the alphabet, and for the more advanced pupils reading, writing, and arithmetic.	Squared tables, blocks, balls, pegs, tablets, embroidery cards, and materials for weaving and folding.	Trains the eye and hand, strengthens the memory, and develops ideas of number.
5	36	Sewing, weaving, pricking, paper folding, drawing, object lessons, gift lessons, games, singing, reading, writing, spelling, number, &c.	Piano, tables, chairs, blocks, slates, sticks, slats, charts, kitchen garden appliances, balls, tablets, and materials for parquetry.	Strengthens the muscles, cultivates the observing powers, and develops the mental faculties generally.
5	40	Weaving, paper folding, embroidering, modelling, perforating, tablet, stick and ring laying, block building, outline work with cork and wire, bead stringing, cord knotting and braiding, games, slate work, &c.	Materials for weaving, sewing, and modelling, tablets, sticks, rings, balls, 2d, 3d, and 4th gifts, wires and cork cubes, wax, beads, type, and slates for the blind.	Produces the happiest results; the natural and pleasing incentives to effort arouse and interest the dormant minds, make sensitive and skilful the feeble hands, and put body and mind into a healthier condition than former methods have done.
5	36	Lessons in form and color, object lessons in natural history, calisthenics, perforating, embroidering, embossing, weaving, chain making, stick and ring laying, modelling, interlacing, and designing.	Blackboard, tables, chairs, piano, cabinet, blocks, materials for modelling, sticks, rings, and slats.	Develops the muscles, enlarges the chest, and strengthens weak lungs, gives graceful and easy carriage to the body, cultivates the memory, awakens perception, teaches children to examine objects for themselves and to give expression to their ideas, and inculcates lessons of love to God and humanity.
5	40	Modelling, drawing, sewing, weaving, perforating, peas work, stick laying, paper cutting, paper folding, mathematical exercises with blocks, sticks, rings, &c.	Squared tables, chairs, piano, cymbals, triangles, bells, Kindergarten blocks, sticks, rings, and materials for the occupations.	Marked development of mind and body.
5	37½	Block building, sewing, weaving, perforating, paper folding, drawing, singing, reading, writing, games, lessons in number, color, and physiology.	Blocks, slates, materials for sewing, weaving, paper folding, &c.	Excellent.
6	36	Those of a true Kindergarten, where only Fröbel's principles are admitted.	Those necessary for a true Kindergarten.	Superior preparation, both physically and mentally, for future school work.
5	40	Exercises with balls, blocks, tablets, slats, sticks, rings and beads, pricking, sewing, drawing, weaving, interlacing, paper folding, paper cutting, peas work, modelling, songs, and games.	Tables, chairs, blackboard, piano, and all material necessary in the use of Fröbel's gifts.	Makes the children strong, graceful, and easy in their movements, teaches them to observe closely and to express their ideas clearly, and cultivates cheerfulness, gentleness, and unselfishness.
5	33	Weaving, sewing, pricking, building, laying of rings and sticks, drawing, modelling, paper folding, singing, &c.	Fröbel's gifts and materials for the occupations, squared blackboard, colored chalks, piano, and arrangement for the growth of flowers.	Its beneficial effect in the physical development of the child is evident to the most superficial observer, and its agency in the development of the mind is even more marked, awakening as it does the creative faculties, giving clearness of thought, correctness of perception, and laying the foundations for after training.

*From Report of the Commissioner of Education for 1881.

inquiries by the United States Bureau of Education—Continued.

Number of school days in the week.	Number of weeks in the year.	Occupations of pupils.	Apparatus and appliances.	Effect of the system.
9	10	11	12	13
5	36	Fröbel's Kindergarten occupations.	Fröbel's gifts, &c.	Excellent.
5	40	Building, exercises with tablets, slats, peas, sticks, rings, thread, perforating, modelling, embroidering, net work, drawing, painting, weaving, intertwining, paper folding, paper cutting, and cardboard work.	Kindergarten tables, blocks, materials for perforating, modelling, sewing, painting, and weaving.	
5	42	Building with blocks, modelling, forming figures with sticks, rings, tablets, slats, &c., weaving, paper cutting, paper folding, gardening, marching, singing, and a variety of games.	All the necessary appliances for the occupations and exercises.	Strengthens the body, promotes ease, grace, elasticity, and firmness of movement, stimulates the mind, cultivates gentleness, friendliness, and sociability, and is an excellent preparation for school work.
5	50	Lessons with 1st, 2d, 3d gifts, tablets, sticks, and rings, weaving, sewing, paper folding, drawing, modelling, bead stringing, and games.	Kindergarten chairs and tables, and the usual materials.	The physical, mental, and moral training is decided in its effects, each child being trained individually; it is not only noticeable in the Kindergarten, but in the home life.
5	40	Sewing, weaving, pricking, stick laying, drawing, gift lessons, color lessons, object lessons, modelling, games, singing, and stories.	Two large rooms, furniture suitable to children, and best possible apparatus.	Promotes physical health, imparts quickness and acuteness in distinguishing objects, and develops the power of expression.
5	....	Block lessons, drawing, sewing, weaving, pricking, stick and ring laying, color lessons, singing, &c.	Materials for occupations and gifts.	Excellent.
5	38	Building, weaving, sewing, painting, folding, drawing, laying figures, and counting with sticks, beans, peas, &c.	Slates, drawing books, painting books, balls, 2d, 3d, 4th, and 5th gifts, and materials for the occupations.	Promotes physical health, develops the mind in an orderly manner, awakening observation and creating a desire for knowledge.
5	28	Fröbel's occupations.....	Fröbel's gifts and materials for occupations.	Healthful.
....	....	Those occupations which tend to awaken and exercise the powers of observation, comparison, combination, invention, memory, reflection, and action.	All means and appliances necessary to the carrying out of this method of instruction.	Most beneficent; no training of primary classes of blind children can attain a high degree of efficiency without its assistance.

*From Report of the Commissioner of Education for 1881.

inquiries by the United States Bureau of Education—Continued.

Number of school days in the week.	Number of weeks in the year.	Occupations of pupils.	Apparatus and appliances.	Effect of the system.
9	10	11	12	13
5	....	Weaving, sewing, paper folding, painting, stringing beads, stringing papers and straws, and slate work.	Balls (worsted and wooden), cubes, cylinders, sticks, &c.	Makes the children more receptive and keen to observe, and improves their manners and morals.
....	....			
....	....			
....	....			
....	....			
5	36	Pricking, drawing, sewing, weaving, paper folding, paper cutting, modelling, exercises with the Kindergarten gifts, object lessons, singing, and reciting.	The usual furniture, gifts, materials for the occupations, &c., of a good Kindergarten.	Develops and trains the powers of body and mind naturally and harmoniously.
....	....			
5	32	Modelling, gymnastics, singing, forming geometrical figures with blocks and sticks, and other usual occupations.		
5	40	Usual Kindergarten occupations.	Usual appliances	Very beneficial to the physical and mental natures.
5	48	Fröbel's occupations, sand table work, &c.	Squared tables, chairs, benches, piano, pictures, flowers, sand tables, all the gifts and materials for occupations, lentils, buttons, leaves, &c.	
5	45	Weaving, drawing, perforating, sewing, and other occupations, gymnastics, games, marches, &c.	Tables, benches, a large and well ventilated room, piano, and all material necessary to a Kindergarten.	Turns the natural inclinations of children into right channels, awakens the intellect, harmoniously developing the physical, mental, and moral natures.
5	40	Drawing, sewing, pricking, folding, weaving, &c.	Fröbel's gifts	Strengthens physically and develops the memory.
5	40	All those usual in a Fröbel Kindergarten.	The gifts, consisting of blocks, sticks, rings, &c., materials for the occupations, weaving, drawing, pricking, &c., and all appliances necessary to carry out Fröbel's system.	Insures a healthy physical development, trains the artistic imagination, the scientific mind, and the skilful hand, engenders love for order, neatness, freedom, and justice, without taking the child from its innocent childish sphere.
5	40	Perforating, sewing, weaving, paper folding, interlacing, pasting, modelling, peas work, &c.	Fröbel's gifts, viz, balls, blocks, tablets, sticks, and rings.	Natural and harmonious development of mind and body, and superior preparation for future abstract study.
5	....	Lessons with blocks, sticks, rings, and slates, sewing, weaving, color mixing, and modelling.	Blocks, sticks, slates, rings, balls, bags, bibs, aprons, dishes, tables, &c.	Healthful.
5	40	All used in Kindergärten taught according to Fröbel's method.	All used in a true Kinderdergarten.	Very beneficial.
5	40	Weaving, sewing, mounting, pricking, paper folding, paper cutting, modelling, interlacing, drawing, peas work, and lessons with the gifts.	1st, 2d, 3d, 4th, 5th, and 6th gifts, building blocks, sticks, rings, tablets, and slats.	Strengthens the body, develops the mental faculties, and makes the children happy, independent, unselfish, kind, sympathetic, and grateful.
5	40	Fröbel's gifts, songs, plays, marching, gymnastics, and object lessons.	Tables, chairs, Fröbel's 20 gifts, piano, small museum, and bright sunshiny room.	Superior development of the physical, mental, and moral natures.

a This is held in the morning; Mrs. Holbrook has the Charity Kindergarten in the afternoon.

* From Report of the Commissioner of Education for 1881.

inquiries by the United States Bureau of Education—Continued.

Number of school days in the week.	Number of weeks in the year.	Occupations of pupils.	Apparatus and appliances.	Effect of the system.
9	10	11	12	13
5	44	Usual occupations	Usual apparatus	
5	47	Fröbel's occupations, gymnastics, games, songs, stories, &c	Fröbel's gifts, plants, animals, &c.	
5	34		Those used in a regular Kindergarten.	Remarkably good.
5	36	Pricking, drawing, sewing, weaving, paper folding, paper cutting, peas work, modelling, stick laying, mathematical exercises with surface and solid forms.	Gifts, materials for occupations, squared tables, blackboard, &c.	Trains the eye and hand, cultivates the affections, and in many ways develops the physical and mental powers.
5	42	Singing, modelling, drawing, card board work, and paper cutting.	Balls, card board, worsteds, clay, drawing books, and paper.	Cultivates a taste for music, sharpens the intellect, awakens and develops the powers of observation, especially in regard to form.
5	44	All of Fröbel's occupations	Tables, chairs, piano, all of Fröbel's gifts, drums, &c.	Very encouraging.
5	36	Weaving, paper folding, sewing, modelling, drawing, lessons with blocks, singing, marching, and games.	All necessary for a well organized Kindergarten.	
5	40	All Fröbel's occupations	All the gifts and appliances recommended by Fröbel.	Trains the eye and ear, renders the child obedient, loving, and gentle, and brings him into close relations with nature.
5	37	All Fröbel's occupations	Fröbel's apparatus	
5	38	Lessons with Kindergarten gifts, weaving, drawing, paper folding and cutting, sewing, perforating, modelling, singing, games, and conversational lessons.	Kindergarten gifts and occupation material, Prang's series of natural history charts, piano, and the usual Kindergarten furniture.	Imparts a fondness for mathematics, makes the child more observing, more logical in thought, self-helpful, and respectful of the rights of others.
5	40	Usual occupations		Satisfactory.
5	38	Sewing, pricking, building, weaving, paper folding, paper cutting, modelling, &c.	Blocks, balls, sticks, peas, materials for modelling, sewing, pricking, weaving, &c.	Symmetrical development of the physical, mental, and spiritual natures.
5	40	Lessons with Fröbel's third and fourth gifts, weaving, sewing, stick and ring laying, modelling, paper folding, singing, object lessons, &c.	Chairs, squared tables, blocks, rings, balls, a cabinet, pictures, flowers, &c.	Very beneficial to physical development, being highly recommended by physicians; also induces thought and general mental growth.
5	52	Fröbel's occupations, and reading and numbers to the advanced class.	Those given by Fröbel	Develops the physical, mental, and moral powers, and lays a firm foundation for future education.
5	40	Weaving, sewing, cork work, modelling, paper folding, and chain making.	Gifts (1st, 2d, 3d, 4th, 5th, and 6th), modelling knives, and weaving needles.	Excellent for blind children; cultivates ease of motion and good manners, and quickens the powers of attention and apprehension.
5	24	Kindergarten games, weaving, pricking, sewing, paper folding, drawing, and modelling.	Low chairs and tables, material for occupations, dishes for lunch, and all appliances necessary for a true Kindergarten.	Harmoniously develops all the faculties of the child.

* From Report of Commissioner of Education for 1881.

a The female department is at Sweetwater, seven miles from Hiwassee College.

b No preparatory department, but a subcollegiate class.

c Since succeeded by W. B. Sherrill, A. B., who furnished this report.

d Total for all departments.

e Resigned June 12; succeeded by Prof. Smith Ragsdall.

f Since deceased.

g Commercial students.

h Preparatory Greek class.

i In English course.

j Academic, normal, and preparatory departments.

k Resigned July 1, 1882; succeeded by L. J. Powell, A. M.

l As an academy; as a college in 1882.

* From Report of the Commissioner of Education for 1881.
a Total for all departments.
b Partially endowed.
c Under classical are included students in scientific course.
d Faculties of colleges of science and of letters.
e For students in scientific department see Table X, Part 1.
f Students in the Yale School of Fine Arts.
g There were also 40 non-resident students pursuing the non-resident course.
h These statistics are for the year 1881.
i Includes students in other collegiate courses.
j See Table X, Part 1.
k Also 1 professor of painting and 1 professor of music with 10 scholars outside of all classes.

TABLE IX.—*Statistics of universities and colleges for* 1882, *&c.*—Continued.

* From Report of the Commissioner of Education for 1881.
a For students in scientific department, see Table X, Part 2.
b Includes holders of fellowships.
c Includes candidates for higher degrees.
d Also several partially endowed.
e Also about $70,000 of charitable funds undivided, the income of which is applied to remitting the tution of indigent students.
f Not prescribed.
g College proper not open.
h Scholarships to amount of $13,000 sold.
i Includes students in other collegiate courses.
j Approximately.
k In the ladies' literary course.
l These statistics are for the year ending June, 1882, up to which time the institution was known as Shaw University.
m Total for all departments.
n In 1880.
o Includes report of O'Fallon Polytechnic Institute.
p Partially endowed.
q Preparatory department only organized.
r Three are only partially endowed.
s For students in scientific department, see Table X, Part 1.
t Under classical are included students in scientific course.
u An aid fund of $30,000.
v Four partially endowed.

* From Report of the Commissioner of Education for 1881.

a Total in all courses.

b Includes students in other collegiate courses.

c Includes 1 licentiate.

d Whole number of students in art, music, and college courses.

e For students in School of Mines, see Table X, Part 2.

f These statistics are for the year 1881.

g Under classical are included students in scientific course.

h For students in scientific department, see Table X, Part 1.

i Not prescribed.

j Partly endowed.

k See Table X, Part 1.

l Total for all departments.

m These are in literary course.

n There are about 1,200 scholarships owned by members of the Reformed Church, which can be had by students of Heidelberg at $40 for three years, or $50 for four years.

o In philosophical course.

p Suspended for 1881–'82; reopened in September, 1882.

q Total enrollment for the fall term.

r In 1880.

TABLE IX.—*Statistics of universities and colleges for* 1882, *&c.*— Continued.

NOTE.—For statistics of the professional schools or departments connected with any of these institutions, reference is made to the appropriate tables.

	Name.	Collegiate department.																							
		Corps of instruction.				Whole number of students.	Students in classical course.								Students in scientific course.								Special or optional students.	No. of graduate students.	No. of fellowships.	No. of scholarships.	No. of years in collegiate course.	No. of weeks in scholastic year.
		No. of faculty.	No. of resident professors and instructors.	No. of non-resident professors and lecturers.	No. of endowed professorships.		Freshman.		Sophomore.		Junior.		Senior.		Freshman.		Sophomore.		Junior.		Senior.							
							Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.

* From Report of the Commissioner of Education for 1881.

a Under classical are included students in scientific course.

b Total for all departments.

c All students on scholarships.

d For students in scientific department, see Table X, Part 2.

e Whole and partial.

f Includes students in other collegiate courses.

g In 1880.

h See report of South Carolina College of Agriculture and Mechanic Arts (Table X, Part 1); this is the only department of the university which has been reorganized, the university having been suspended for several years.

i Partially endowed.

j Not prescribed.

k Also 10 State appointees (colored) of this university, taught in Fisk University, Nashville, Tenn.

l For students in scientific department, see Table X, Part 1.

m Curriculum consists of elective schools or departments.

TABLE IX.—*Statistics of universities and colleges for* 1882, *&c.*—Continued.

*From Report of the Commissioner of Education for 1881.
a University, academical, and art school funds.
b Current income for university, academical, and art departments; from all sources other than tuition.
c In 1880.
d In 1881.
e Board and tuition.
f In 1879.
g Income from all sources other than tuition.
h These statistics are for the year 1881.
i Estimated.
j Average charge.
k Includes volumes in students' libraries.
l See Table X, Part 1.
m Not including lands.
n In preparatory department; free in collegiate department.
o Value of grounds and buildings.
p Average cost about $2.85.
q Value of grounds and apparatus.
r Regular appropriation, $20,000; special, $5,000; $25,000 in addition for buildings.

TABLE IX.—*Statistics of universities and colleges for* 1882, *&c.*—Continued.

	Name.	Annual charge to each student for tuition.	Cost of board a week.	Libraries.				Property, income, &c.						Date of next commencement.
				College library.			Number of volumes in society libraries.	Value of grounds, buildings, and apparatus.	Amount of productive funds.	Income from productive funds.	Receipts for the last year from tuition fees.	Receipts for the last year from State appropriation.	Aggregate amount of scholarship funds.	
				Number of volumes.	Number of pamphlets.	Increase in the last collegiate year in books.

*From Report of the Commissioner of Education for 1881.
a In 1879.
b Incidental fee.
c Board and tuition.
d Value of grounds and buildings.
e These statistics are for the year 1881.
f Average charge.
g Includes fuel, light, and washing.
h To residents; $50 to non-residents.
i Includes $1,090 for permanent objects.
j In 1880.
k Value of assets of the university, independent of property held by trustees of the Rich estate and that received from New England Female Medical College.
l Estimated.
m Libraries of observatory, herbarium, Peabody Museum, and Museum of Comparative Zoölogy.
n For all departments of the university, the college funds alone being $1,174,440.
o College receipts from all sources.
p Incidentals and tuition.
q $20 to students of Michigan; to others $30.

* From Report of the Commissioner of Education for 1881.

a In 1880.
b Board and tuition.
c In 1878.
d Includes value of library.
e From city.
f See report of South Carolina College of Agriculture and Mechanic Arts (Table X, Part 1); this is the only department of the university which has been reorganized, the university having been suspended for several years.
g Includes rents.
h $15 incidental fee.
i In 1879.
j Average.
k Exclusive of agricultural college funds.
l Income from agricultural college fund.
m Tuition fees and subscriptions.
n For three or more schools.
o Includes students' libraries.

TABLE IX.—*Statistics of universities and colleges for* 1882, *&c.*—Continued.

	Name.	Annual charge to each student for tuition.	Cost of board a week.	Libraries.				Property, income, &c.						Date of next commencement.
				College library.										
				Number of volumes.	Number of pamphlets.	Increase in the last collegiate year in books.	Number of volumes in society libraries.	Value of grounds, buildings, and apparatus.	Amount of productive funds.	Income from productive funds.	Receipts for the last year from tuition fees.	Receipts for the last year from State appropriation.	Aggregate amount of scholarship funds.

e Board and tuition.
f In 1880.
g Includes $5,350 income from real estate.
h Congressional appropriation.
i Territorial appropriation.

TABLE IX.—*Memoranda.*

Name.	Location.	Remarks.
Fort Wayne College	Fort Wayne, Ind	Doing only preparatory and academic work; see Table VII.
Macalester College	Minneapolis, Minn	Not in existence during 1882; may be reopened fall of 1883.
Shaw University	Holly Springs, Miss	Name changed to Rust University.
Western Reserve College	Hudson, Ohio	Removed to Cleveland and name changed to Adelbert College of Western Reserve University.
Ohio Central College	Iberia, Ohio	See Table VII.
Miami Valley College	Springboro', Ohio	Not in existence.
Mercersburg College	Mercersburg, Pa	Closed.
Pittsburgh Catholic College	Pittsburgh, Pa	See Catholic College of the Holy Ghost; identical.
Western University of Pennsylvania	Pittsburgh, Pa	Removed to Allegheny City.
Manchester College	Manchester, Tenn	Reports only preparatory students; see Table VII.
Woodbury College	Woodbury, Tenn	See Table VI.
Shepherd College	Shepherdstown, W. Va.	See report of this college in Table III, Part 1; public normal school.
Holy Angels' College	Vancouver, Wash	See Table VI.

Colleges from which no information has been received.

Name.	Location.	Name.	Location.
St. John's College of Arkansas.	Little Rock, Ark.	Concord College	New Liberty, Ky.
College of Our Lady of Guadalupe.	Santa Ynez, Cal.	Westminster College	Fulton, Mo.
Murray Male and Female Institute and West Kentucky Normal School.	Murray, Ky.	Alfred University	Alfred, N. Y.
		Blue Mountain University	La Grande, Oreg.
		Waynesburg College	Waynesburg, Pa.
		Galesville University	Galesville, Wis.

* From Report of the Commissioner of Education for 1881.

a Reported with classical department (see Table IX).

b Faculties of colleges of science and of letters.

c Location not fixed and college not organized at last report, 1880.

d For all departments.

e As a department of Kentucky University; rechartered and reorganized in 1880.

f The name of this post office has since been changed to Agricultural College, Md.

g Includes officers of instruction in the School of Mechanic Arts and the Lowell School of Practical Design.

h Includes 57 students in School of Mechanic Arts and 91 in Lowell School of Practical Design.

i Only department organized as yet; statistics reported in Table IX.

TABLE X.— PART 1.— *Statistics of schools of science (mining, engineering, agriculture, &c.) endowed with the national land grant, for* 1882, *&c.*— Continued.

* From Report of the Commissioner of Education for 1881.

a Preparatory department is identical with Rutgers College Grammar School (Table VII).

b Reported with classical department (see Table IX).

c For total number of students in all courses, see Table IX.

d Of the University of South Carolina, of which the South Carolina College of Agriculture and the Mechanic Arts is a department; this department was organized in 1880, after the university had been in suspension for several years.

e Faculty of colleges of arts and letters.

TABLE X.—PART 1.—*Statistics of schools of science (mining, engineering, agriculture, &c.) endowed with the national land grant, for* 1882, *&c.*—Continued.

	Name.	Number of State scholarships.	Number of other free scholarships.	Number of years in full course of study.	Number of weeks in scholastic year.	Annual charge to each student for tuition.	Libraries.				Property, income, &c.					Date of next commencement.
							General library.

* From Report of the Commissioner of Education for 1881.

a 350 beneficiaries, 237 normal students, and 1 honorary appointment from each of the 74 counties.

b Free in all departments of the university proper; students in preparatory department without normal or beneficiary appointment pay $30 per annum and all students pay $5 matriculation fee.

c Reported with classical department (see Table IX).

d To residents of California; others, $50.

e Endowment is the congressional grant to agricultural colleges, amounting, in Colorado, to 90,000 acres, but not yet sold.

f One-fifth of 1 mill tax, amounting to $16,000 for the year 1882.

g This includes a large amount of funds received during the past year from the estate of the late Joseph E. Sheffield, no income from which appears in the column of income given.

h Income from all sources except tuition.

i Location not fixed and college not organized at last report, 1880.

j Incidental fees; tuition is free.

k Entire proceeds of the sale of land scrip, the income of which, $16,954, is, by various acts of the legislature, divided between the State College at Athens and the branches at Cuthbert, Dahlonega, Milledgeville, and Thomasville.

l Entire income of public land scrip fund, which income is divided, as above stated, between the State College at Athens and the branches at Cuthbert, Dahlonega, Milledgeville, and Thomasville.

m See notes on these items given in above report of Georgia State College of Agriculture and the Mechanic Arts.

n In 1880.

o Two students appointed by each of 92 counties under State law; 48 of the students in attendance during this year were thus appointed.

p Matriculation and incidental fees.

q For 1882–'83, $24,000; $3,000 for experiments and $21,000 for buildings.

r For building and library.

s Also two years at sea.

t For two years.

u See report of university (Table IX).

v To State students; $75 to others.

w Income from land grant.

x To State students, to resident graduates, and to students pursuing and intending to complete the prescribed course in agriculture; $75 a year to others.

y Value of grounds and buildings as reported for 1879.

z Congressional appropriation.

aa Except to those receiving scholarships.

bb Value of buildings only.

cc The income of $50,000 which has accrued from the national grant is disbursed at the rate of $100 a scholarship annually, to the extent of the entire annual income.

* From Report of the Commissioner of Education for 1881.

a Incidental fee; tuition is free.

b Principal of agricultural fund, the income of which is for this institution and the South Carolina Agricultural College at Orangeburg.

c Total income of agricultural fund, which income is divided between this institution and that at Orangeburg.

d Reported with classical department (see Table IX).

e See note on this item in the report given above of the South Carolina College of Agriculture and the Mechanic Arts.

f Agricultural funds only; for university funds, see Table IX.

g Does not include amount arising from sale of congressional land grant.

h Income from land grant.

a Atlanta University, although not founded under the act of Congress establishing agricultural colleges, receives an annual appropriation of $8,000 from the legislature of Georgia under an act of 1874, entitled "An act equitably to adjust the claims of the colored people to a share of the agricultural land scrip."

b To be opened in March, 1883.

c The place of this college is supplied by the Massachusetts Agricultural College at Amherst. Each successful candidate is allowed, on entering the college, to matriculate also in Boston University, and at graduation may receive his degree at the hands of the university, with a diploma entitling him to the relation and privileges of its alumni.

d A department for elective graduate study only.

e There are also 33 students in the College of Music.

* From Report of the Commissioner of Education for 1881.
a Included in report of the department of literature, science, and the arts (see Table IX).
b In the elementary school of the Polytechnic Institute.
c See report of the undergraduate department of Washington University (Table IX), which includes the college and the Polytechnic Institute.
d Students in Manual Training School of Washington University, which school organized in 1880, has now a faculty of 10 and a course of instruction covering 3 years.
e See report of Stevens High School (Table VII).
f Reported with classical department (see Table IX).
g A department of science and arts was created in 1881 in which instruction is given by lectures on chemical, astronomical, physical, and mechanical topics, and in 1882 the School of Design of the Institute was reorganized on the basis of systematic instruction in the principles of applied science, and will hereafter be known as the School of Technology of Ohio Mechanics' Institute.
h Instruction was suspended in 1877 on account of unproductiveness of endowment funds, and has not yet been resumed.
i These are students in analytical chemistry.
j This report embraces only the mechanical handiwork schools and schools of steam engineering.
k Number attending school of applied mathematics.
l Not fully organized as late as December, 1881.

TABLE X.—PART 2.—*Statistics of schools and of collegiate departments of science (mining, engineering, &c.) not endowed, &c.*—Continued.

	Name.	Number of State scholarships.	Number of other free scholarships.	Number of years in full course of study.	Number of weeks in scholastic year.	Annual charge to each student for tuition.	Libraries.				Property, income, &c.					Date of next commencement.
							General library.

*From Report of the Commissioner of Education for 1881.

a Incidental fees.

b Atlanta University, although not founded under the act of Congress establishing agricultural colleges, receives an annual appropriation of $8,000 from the legislature of Georgia under an act of 1874, entitled "An act equitably to adjust the claims of the colored people to a share of the agricultural land scrip."

c The university is bound to receive, free of charge for tuition, one pupil for each member of the house of representatives.

d Reported with classical department (see Table IX).

e To be opened in March, 1883.

f These figures are as reported for the year 1880, and the productive funds then excluded a bequest of $105,000 which had not been placed, up to that time, in the hands of the institute authorities; during 1882 the institute was reported as having an annual income of $30,000, reserved accumulations amounting to $75,000, and an original endowment of over half a million dollars.

g The place of this college is supplied by the Massachusetts Agricultural College at Amherst. Each successful candidate is allowed on entering the college to matriculate also in Boston University, and at graduation may receive his degree at the hands of the university, with a diploma entitling him to the relation and privileges of its alumni.

h A department for elective graduate study only.

i There are also scholarships in the scientific school, not exceeding eight at any one time, of the annual value of $150 for graduates of the State normal schools.

j $20 to residents of Michigan, $30 to non-residents.

k As reported for 1880.

l Value of apparatus.

m To residents of New Jersey; $225 to others.

n For all departments of the institution.

o Receipts from all sources.

p A department of science and arts was created in 1881, in which instruction is given by lectures on chemical, astronomical, physical, and mechanical topics, and in 1882 the School of Design of the Institute was reorganized on the basis of systematic instruction in the principles of applied science, and will hereafter be known as the School of Technology of Ohio Mechanics' Institute.

q Instruction was suspended in 1877 on account of unproductiveness of endowment fund, and has not yet been resumed.

r Includes endowment property.

s Including value of library, estimated at $40,000.

t This report embraces only the mechanical handiwork schools and schools of steam engineering.

u Not fully organized as late as December, 1881.

* From Report of the Commissioner of Education for 1881.
a Favored by the National Eclectic Medical Association, but not formally recognized up to the close of the year 1882.
b Includes matriculation and demonstrator's ticket.
c Value of apparatus.
d For full course.
e Final examination fee.
f Two full courses of lectures.
g Reported with classical department (Table IX).
h Matriculation fee $10 and annual tax $25 to residents of Michigan; to non-residents matriculation fee $25 and annual tax $35.
i Value of apparatus and furniture.
j Suspended for one year; figures are for the year 1881.
k For the course, including demonstrator's ticket.
l Value of grounds and apparatus.
m Four years' apprenticeship required.

* From Report of the Commissioner of Education for 1881.

a School for hearing youth, with classes for deaf-mutes.

b These statistics are for both departments of the institution.

c Lip-reading is also taught.

d Drawing is also taught.

e Articulation and lip-reading are the basis of instruction in this institution.

f Higher branches also taught.

g For current expenses only.

h Instruction in the common school studies is given in German.

i Up to the close of 1880.

j Income from counties and other sources.

k This institution has three branches, one situated at Fordham, another at Brooklyn (510 Henry street), and another at Throg's Neck. The statistics given are for the three branches.

l A branch institution was opened at Tarrytown in October, 1879.

m $24,169 of this from the State of New Jersey.

n $11,734 for permanent purposes.

o Kindergarten instruction is given, and the higher English branches and Latin, French, and drawing are also taught.

p In 1880.

q Up to the close of 1879.

r These statistics are for the year 1881.

s Includes $1,190 expended for permanent purposes.

t Including scholarships from New Jersey and Delaware.

u Includes $60,000 for new buildings.

v Value of apparatus.

w Also a sum not to exceed $500 may be drawn to defray traveling expenses of indigent pupils.

x Drawing and painting are also taught.

y Includes $3,480 from last year.

z Value of grounds and buildings.

aa Includes $2,000 for building purposes.

bb Congressional appropriation.

cc For board and tuition.

dd An organization within the Columbia Institution; its statistics are there reported. See also Table IX.

TABLE XIX.—*Statistics of institutions for the blind for* 1882; *from*

NOTE.—× indicates the employments taught;

* From Report of the Commissioner of Education for 1881.
† From Report of the Commissioner of Education for 1880.
a In 1879.
b In 1880.
c Children attend public schools.
d Including payment of mortgage of $2,400.
e The Newark Orphan Asylum Association has several auxiliary societies.
f This home was erected by the Brooklyn Industrial School Association and represents school No. 3 of that association. It is intended as a home for such very poor children as require a home as well as a school.
g This money is used for support of 6 industrial schools and home for destitute children.
h Includes report of 12 industrial schools and of a branch home at Oceanport, N. J.; a new chapel has been built, the cost of which is included.
i The object of this mission is mainly to assist families in their own homes.
j Average attendance in day school 430.
