CHAPTER XXXVII.

AGRICULTURAL AND MECHANICAL COLLEGES.

The reports for the year ending June 30, 1901, received from the presidents of the institutions endowed by the acts of Congress approved July 2, 1862, and August 30, 1890, for the establishment and for the more complete endowment and support of colleges for the benefit of agriculture and the mechanic arts, show that the several States have received under the act of Congress of July 2, 1862, for the establishment of such institutions, 10,320,843 acres of land, of which 1,030,572 acres remained unsold at the close of the fiscal year. The invested funds received from the sale of the 9,290,271 acres of land amount to $10,806,780, yielding an income of about 6.3 per cent. Unsold lands received under the act of July 2, 1862, ranging in amount from 40 to 200,000 acres, are held by 17 States. Seven of the States last admitted into the Union have sold none of their lands, owing to the fact that Congress specified $10 per acre as the minimum sum for which such lands should be sold. The value of the unsold lands as given in the reports of the presidents of the several institutions is estimated at $6,301,000, or at an average of about $6 per acre.

In addition to the funds derived from the land-grant act of July 2, 1862, 11 institutions report an aggregate amount of $1,697,134, yielding an annual income of $54,446, received from other lands granted by the General Government.

INCOME.

The income of these institutions for the year ending June 30, 1901, was derived from the following sources:

From States and Territories		$3,073,736
From the Federal Government:		
Land-grant act of July 2, 1862	$682,690	
Other land grants	54,446	
Endowment act of August 30, 1890	1,200,000	
Total Federal aid		1,937,136
From endowments other than Federal or State sources		553,503
Tuition fees		606,530
Incidental fees		354,091
Miscellaneous income		800,608
Total income		7,325,604
Received from the Federal Government for experiment stations		681,000

PROPERTY.

The total value of the property held by the agricultural and mechanical colleges amounts to $68,084,925, divided as follows:

Land-grant funds (act of July 2, 1862)	$10,806,780
Unsold land (act of July 2, 1862)	6,301,000
Other land-grant funds	1,697,134
Other permanent funds	14,690,455
Farms and grounds	4,540,014
Buildings	20,866,618
Apparatus	1,551,766
Machinery	826,491
Libraries	2,009,272
Miscellaneous equipment	4,795,395
Total	68,084,925

The value of the additions to equipment during the year amounts to $1,932,058.

STUDENTS.

The total number of students reported in the agricultural and mechanical departments of these institutions was 29,950, of which number 23,872 were men and 6,078 women. Of the total number, 14,282 men and 2,202 women were enrolled in the regular undergraduate departments, 503 men and 123 women were pursuing graduate or advanced courses, and 3,214 men and 1,016 women were pursuing short or special courses.

The enrollment of students in the various courses from 1895 to 1901 was reported as follows:

Course.	1894–95.	1895–96.	1896–97.	1897–98.	1898–99.	1899–1900.	1900–1901.
Agriculture	2,712	2,881	3,053	3,190	4,390	5,035	5,625
Mechanical engineering	2,413	2,526	2,484	2,723	3,355	3,938	4,570
Civil engineering	1,107	1,527	1,499	1,551	1,463	1,964	1,859
Electrical engineering	1,349	1,616	1,340	1,213	1,325	1,617	1,806
Mining engineering	163	424	503	572	587	822	865
Chemical engineering							393
Textile engineering							112
Architecture	264	537	226	193	225	191	191
Household economy	321		457	722	1,573	1,868	2,432
Veterinary science	395	471	336	459	646	1,167	984
Dairying						1,215	1,462

The average age of the students graduating in 1901 from fifty of the sixty-five institutions was 22 years.

CHANGES IN COURSE OR METHODS OF INSTRUCTION.

1. AGRICULTURE.

University of California.—There has been added a department of dairy husbandry and animal industry with full laboratory equipment (model dairy) and herd. A department of irrigation has also been added.

University of Minnesota.—A special lecture course for men of mature age who desire special knowledge on subjects pertaining to agriculture was inaugurated in January and continued for ten weeks. It was attended by 28 farmers, mostly young men, who evinced such a desire for knowledge along special lines as to warrant the continuation of this work and give hope that it will fill a want that has long been felt by those who are actively engaged in farming.

For the first time in the history of the institution girls graduated at the School of Agriculture have attended the College of Agriculture. The college course has been arranged to meet the needs of lady students and bids fair to equal in popularity that pursued by the boys.

Lincoln Institute (Missouri).—The legislature made a special appropriation of $2,000 to be used in the study and practice of agriculture. A teacher of agriculture has been employed for the ensuing year.

University of the State of Missouri.—The last general assembly provided $5,000 for the establishment of a chair of dairy husbandry and to defray expenses of travel, publications, etc. With the aid of this appropriation instruction will be offered in creamery management, cheese making, and professional dairy work.

In the summer school of agriculture and horticulture teachers are prepared to introduce the elements of agriculture and horticulture into the public schools of the State. The fortieth general assembly so amended the laws governing the public schools as to permit and encourage the introduction of elementary agriculture and horticulture into the courses of study. Agriculture is now being successfully taught in at least half a dozen high schools of the State, in one of the State normal schools, and in a number of rural district schools, and will be introduced next year into another of our State normal schools and a number of public schools. Already the teachers in several counties have formed themselves into an organization for the promotion of this work, and for the improvement of the methods of giving this instruction.

University of Nebraska.—New courses have been added in animal husbandry and agriculture. The department of dairy husbandry has been established. An associate dean of the industrial college (college of agriculture and mechanic arts) has been created to have full charge of agricultural instruction and work.

Nevada State University.—For the first time short courses were offered in agriculture and dairying. The courses were to be given from February 1 to March 29, 1901. There were no students for the short course in agriculture. Three men and two women took the course in dairying, and two of the men are now in charge of creameries.

Cornell University (New York).—The university is prosecuting a large amount of work in extension teaching by means of State funds. The annual appropriation, which now amounts to $35,000, is made by the legislature for the purpose of extending agricultural knowledge among the people of the State. This work has fallen into two great lines: First, the itinerant experimentation and the inspection of farms; second, direct teaching. Under the second category are included two more or less distinct and coordinate movements, the nature-study work, designed to reach the teachers and the school children of the State, with the particular object of interesting them in rural affairs, and the farmers' reading course, which endeavors to interest farmers and farmers' wives in reading on distinct agricultural problems. In order to prosecute these various lines of endeavor, several publications have been issued by the College of Agriculture aside from the regular experiment station bulletins. The leading publications have been as follows: Nature Study Quarterly, designed for the use of teachers in the public schools; the Junior Naturalist Monthly, which is prepared for the use of the pupils in the grades; the Home Nature Study lesson for those teachers who desire to inform themselves at home along specific lines of nature-study work; the Farmers' Reading Course lesson, which supplies the text for all those persons who join the reading course; Farmers' Wives' Reading Course lesson, which is a coordinate serial for farmers' wives. All this work is meeting with approval by the people of the State.

Ohio State University.—The first session of the Graduate School of Agriculture under the auspices of the Ohio State University and with the cooperation of the

United States Department of Agriculture and the Association of American Agricultural Colleges and Experiment Stations will be held at the Ohio State University from July 7 to August 1, 1902. The school is open to both sexes, but admission is limited to persons who have taken a bachelor's degree and to nongraduates who are recommended by the faculties of the colleges with which they are associated as persons properly qualified to profit by advanced instruction in agriculture.

Instruction will be given in three main lines—agronomy, zootechny, and dairying. A special course in animal and plant breeding will also be given. The course in agronomy will include climatology and soil physics, vegetable physiology, fertilizers, and the culture and management of field crops. The course in zootechny will include the principles of animal form, the breeding and nutrition of domestic animals, and the application of these principles to the choice and management of beef and dairy cattle, sheep, swine, and horses. The course in dairying will include the science of dairying, especially its chemistry and bacteriology, the application of the science in practice, and demonstrations of improved methods of butter and cheese making.

President W. O. Thompson, D. D., LL. D., of the Ohio State University, is president of the faculty, and the dean is Director A. C. True, Ph. D., of the Office of Experiment Stations of the United States Department of Agriculture.

The instructors in agronomy are as follows: Prof. F. H. King, Prof. Milton Whitney, Lyman J. Briggs, Ph. D., and Prof. B. T. Galloway, of the Department of Agriculture; Prof. W. D. Gibbs, M. S., of the New Hampshire College of Agriculture and Mechanic Arts; Prof. E. B. Voorhees, Sc. D., of Rutgers Scientific School (New Jersey); Prof. H. J. Wheeler, Ph. D., of the Rhode Island College of Agriculture and Mechanic Arts; Prof. Cyril G. Hopkins, Ph. D., of the University of Illinois; and Prof. John F. Duggar, M. S., of the Alabama Polytechnic Institute.

The instructors in zootechny are as follows: Prof. H. P. Armsby, Ph. D., of Pennsylvania State College; Director W. H. Jordan, Sc. D., of the New York State Experiment Station; Prof. C. F. Curtiss, M. S. Agr., of the Iowa State College; Prof. H. J. Waters, B. S. A., of the University of Missouri; Prof. M. A. Scovell, M. S., of the Agricultural and Mechanical College of Kentucky; Prof. T. L. Haecker, of the University of Minnesota; Prof. C. D. Smith, M. S., of the Michigan Agricultural College; Prof. Thomas F. Hunt, M. S., of the Ohio State University; and John A. Craig, B. S. A., editor of Iowa Homestead.

The instructors in dairying are Prof. H. W. Conn, Ph. D., of the Storrs Agricultural Experiment Station; L. L. Van Slyke, Ph. D., of the New York State Experiment Station; Prof. H. H. Wing, M. S., of Cornell University; Prof. G. L. McKay, of the Iowa State College; Prof. J. W. Decker, B. Agr., of the Ohio State University, and E. W. Allen, Ph. D., and H. E. Alvord, C. E., of the Department of Agriculture.

The instructors in plant and animal breeding are Prof. L. H. Bailey, M. S., of Cornell University; Prof. Eugene Davenport, M. Agr., of the University of Illinois; H. J. Webber, Ph. D., of the Department of Agriculture; Prof. W. M. Hays, M. S., of the University of Minnesota, and Prof. C. S. Plumb, B. S., of Purdue University (Indiana).

The expense for attendance on the school is limited to a matriculation fee of $6. Board and lodging may be obtained for from $5 to $7 per week.

University of Tennessee.—In the agricultural department the short course has been developed and extended. There are now a general agricultural course, a dairy course, and a horticultural course. These are so arranged that a student can get a second year's work when desired.

Agricultural and Mechanical College of Texas.—The agricultural department

offers two short (ten weeks) courses for the winter term of 1902 and the horticultural department offers one course. They are designed to give a large amount of practical information during the ten weeks of the winter term to those men who do not desire to obtain a thorough college education. These courses are open only to young men 18 years of age or over.

West Virginia Colored Institute.—Nature study has been introduced, and commendable progress is noted in this interesting line of work.

2. ENGINEERING.

University of Idaho.—The department of mechanical engineering was created by the board of regents in June, 1901. It occupies five rooms, especially designed for its use, in the north end of engineering hall. On the first floor is a machine shop, 35 by 55 feet, an office, 12 by 21 feet, and in the basement an engine and boiler room, 33 by 25 feet. A wood-working shop, 35 by 55 feet, and a drafting room, 21 by 12 feet, are located on the second story.

Purdue University (Indiana).—Only minor changes have been made in courses of instruction, these relating chiefly to the course in civil engineering and with the purpose of securing more time to the student for instruction in professional subjects. A locomotive museum has been established in connection with the school of mechanical engineering, for which three locomotives, representing types now going out of use, were secured.

Massachusetts Institute of Technology.—A graduate course in electrical engineering leading to the degree of M. S. has been established. The course is rich in advanced professional courses. Other graduate courses are planned but not yet adopted.

University of Minnesota.—During the past year the mechanical engineering department has moved into more commodious quarters for its shop work, and many improvements have been made in the administration of the work. The machinery equipment is, however, inadequate to the demands for instruction, and it is hoped that an appropriation may soon be obtained by which this difficulty will be overcome. The overcrowded condition of the present mechanic arts building will also be materially relieved by the erection of an addition, to cost $10,000, to the shop building, which will be used for recitation and drawing rooms for the mechanical engineering department. A power house and an electrical laboratory to cost $45,000 will also afford much relief and additional facilities for instruction in the work of electrical and steam engineering.

Mississippi Agricultural and Mechanical College.—Heretofore there have been maintained the agricultural and the mechanical courses, which differed only in the junior and senior years. In the future there will be three courses, the additional one being the textile course. The freshman year is the same in each course, the differentiations taking place in the sophomore year.

University of the State of Missouri.—The engineering department has made a systematic study of the water power of the State, especially with reference to the feasibility of developing the power and transmitting it electrically to convenient and suitable manufacturing centers. The coals of Missouri have also been the subject of investigation by the professor of mechanical engineering, in cooperation with the professor of agricultural chemistry, with special reference to their chemical composition, burning qualities, and heat value. The professor of civil engineering has under way a study of the natural cement materials of the State and the best ways of combining them in the manufacture of cement. The building stone of Missouri is the subject of a special investigation by the professor of geology.

Nevada State University.—A short course in assaying was offered from Feb-

ruary 1 to March 29, 1901. Three men took the course, and they are now engaged in profitable mining. Under the head of university extension a branch school of mines was established at Virginia City with gratifying results.

Washington Agricultural College and School of Science.—In order to make available the facilities in the mechanical engineering laboratories, the college has established a one-year course for artisans and tradesmen. No one under 21 years of age will be enrolled in the course. The student will be admitted to such artisan work as is assigned by the department. The instruction offered is as follows:

First semester: Forge work, 108 hours; machine shop, 108 hours; mechanical drawing, 180 hours; apprentice work in boiler room, 180 hours, and 10 lectures.

Second semester: Foundry practice, 108 hours; pattern making, 108 hours; beginning steam-engineering practice, 72 hours; power transmission, 32 lectures; dynamo and engine room apprentice work, 180 hours; traction-engine practice (Fridays and Saturdays).

3. DOMESTIC ECONOMY.

University of Illinois.—A department of household science has been established. The courses of instruction given in the department are planned to meet the needs of two classes of students, viz: (a) Those students who specialize in other lines of work but who desire a knowledge of the general principles and facts of household science; (b) those students who wish to make a specialty of household science by a comprehensive study of the affairs of the home, together with the arts and sciences whose applications are directly connected with the management and care of the home. The four-year course leads to the degree of Bachelor of Science.

University of the State of Missouri.—A department of domestic economy was established at the beginning of the year 1900–1901, and during the year 39 students were enrolled in the course. Two courses are offered, an elementary course for the housekeeper and a technical course intended to prepare teachers for this work. The elementary course covers one year and the teachers' course covers two years.

Nevada State University.—The school of domestic art and science attached to the College of Agriculture was opened for students with the second semester, January 8, 1901. Students who have completed the eighth or ninth grade of the public schools are admitted by examination or by certificate from accredited schools.

4. GENERAL.

Agricultural and Mechanical College for Negroes, Normal, Ala.—In a general way the curriculum has been greatly improved. The teaching force, both literary and industrial, was increased and strengthened. An effort was made to cut down the enrollment, giving better accommodations and bringing the student in personal contact with the teacher, and so contributing to a better grade of citizenship. The nurse-training and cooking departments have been greatly improved.

Georgia State College of Agriculture and Mechanic Arts.—Two new courses of instruction in the school of chemistry have been added during the year: (1) Physical chemistry (lecture and laboratory), half year, three hours per week; (2) electro-chemistry (lecture and laboratory), half year, three hours per week.

University of Maine.—The most important changes in instruction are the introduction of two courses in American literature, the extension of courses in Spanish, the establishment of a laboratory for experimental psychology, the establishment and equipment of lecture and laboratory courses in industrial chemistry, the reorganization of the work in biology.

Massachusetts Agricultural College.—Increased instruction in French and German has been provided and one addition has been made to the faculty. The chair of military science and tactics has been filled by the detail of a retired army officer. Out of the additional income for the maintenance of the college appropriated by the State a librarian has been provided and means for the repair and purchase of books.

Agricultural and Mechanical College for the Colored Race (North Carolina).—The three-year preparatory course, the woman's course, and the four-year college course have been reduced to a four-year course exclusively for men. The first two years will be devoted to the work of the trade school, while during the remaining two years students will be given general technical work largely of their own election. In this reduction the technical studies have been retained, the elimination being mostly in the English or literary studies.

North Dakota Agricultural College.—One year of English has been added to the regular courses of study. This is in addition to previous requirements.

Oregon State Agricultural College.—A two-years' business course has been authorized for the year 1901–2 and thereafter.

Rhode Island College of Agriculture and Mechanic Arts.—A course in general science has been established.

Agricultural and Mechanical College of Texas.—A course in general science has been established.

Prairie View State Normal and Industrial College (Texas).—A four-year college course has been established in addition to the four-year normal-industrial course.

University of Vermont and State Agricultural College.—A course in commerce and economics has been established.

PRACTICAL WORK.

The practical application of knowledge acquired is one of the chief features of the agricultural and mechanical colleges. Thus the students in agriculture are required to apply their theoretical knowledge to practice on the farm, in stock judging, in the college dairy, etc. The students in mechanical and electrical engineering must do actual work in the shops and in the inspection of engineering works, especially in the neighborhood of the several institutions, and the students in mining engineering[1] make excursions to the various sections of the country, inspecting the workings of the different kinds of mines, and often taking part alongside of miners in the actual performance of the work. The students of a number of the agricultural colleges take part annually in stock-judging contests.

The following account of a stock-judging contest by the students of the Ohio State University has been furnished by President W. O. Thompson, of that institution:

STOCK-JUDGING PRIZES TO OHIO STUDENTS.

One of the novel features of the recent two weeks Ohio State Fair, and one that attracted considerable favorable comment on the part of stockmen and visitors generally, was a live-stock judging contest by twenty-six students of the Agricultural College of the Ohio State University, prizes having been contributed by leading breeders of the State.

The contest was conducted by Professors Hunt, Gibbs, and Decker, and Mr. Ruhlen, of the department of agriculture of the university. The method of conducting the contest was to bring five animals of a given class into the ring and give the students thirty minutes to place first, second, and third, and write down their reasons for so doing. The students' judgment was then passed upon by expert

[1] For a statement of the instruction in mining engineering offered by the institutions of the country, see Chapter XLVI.

judges, who explained to the students the reasons for placing the animals in a given manner.

The judges who passed upon the students' work were as follows:

Horses, J. B. McLaughlin, Columbus, Ohio.
Beef cattle, O. E. Bradfute, Cedarville, Ohio.
Dairy cattle, A. T. Dempsey, Westerville, Ohio.
Sheep, Dwight Lincoln, Marysville, Ohio.
Swine, Reuben Gentry, Biltmore Farms, N. C.

The successful contestants were as follows:

Prize.	Name.	Post-office address.
HORSES.		
First prize	D. A. Tobias	Bucyrus, Crawford County, Ohio.
Second prize	H. C. Mallow	Washington, Fayette County, Ohio.
Third prize	Merritt Harper	Grove City, Franklin County, Ohio.
Fourth prize	J. A. Folsom	Franklin Furnace, Scioto County, Ohio.
Fifth prize	Lamotte Ruhlen	Plain City, Madison County, Ohio.
BEEF CATTLE.		
First prize	E. L. Shaw	Newark, Licking County, Ohio.
Second prize	F. E. Hamilton	Brownsville, Licking County, Ohio.
Third prize	C. C. Hatfield	Lebanon, Warren County, Ohio.
Fourth prize	J. A. Folsom	Franklin Furnace, Scioto County, Ohio.
Fifth prize	O. A. Pettiford	Wauseon, Fulton County, Ohio.
DAIRY CATTLE.		
First prize	T. W. Ditto	Delphos, Allen County, Ohio.
Second prize	C. H. Case	Hudson, Summit County, Ohio.
Third prize		
Fourth prize	V. W. Cahill	Tiro, Crawford County, Ohio.
Fifth prize	W. B. Smith	Chesterhill, Morgan County, Ohio.
SHEEP.		
First prize	H. L. Belden	Middlefield, Geauga County, Ohio.
Second prize	E. L. Shaw	Newark, Licking County, Ohio.
Third prize	V. W. Cahill	Tiro, Crawford County, Ohio.
Fourth prize	W. B. Smith	Chesterhill, Morgan County, Ohio.
Fifth prize	G. F. Abbott	Medina, Medina County, Ohio.
SWINE.		
First prize	Morris Churchman	Jerome, Union County, Ohio.
Second prize	W. B. Smith	Chesterhill, Morgan County, Ohio.
Third prize	J. A. Folsom	Franklin Furnace, Scioto County, Ohio.
Fourth prize	C. H. Case	Hudson, Summit County, Ohio.
Fifth prize	Merritt Harper	Grove City, Franklin County, Ohio.

The prize money will be distributed among contestants as follows: First prize, 25 per cent; second prize, 22½ per cent; third prize, 20 per cent; fourth prize, 17½ per cent; fifth prize, 15 per cent.

The prize winners are to represent the Ohio State University at the intercollegiate stock-judging contest at the International Live-Stock Exposition at Chicago the first week in December.

The University of Tennessee announces a number of prizes for proficiency in the various agricultural subjects.

The following prizes are offered through the generosity of Mr. George Vanderbilt, of Biltmore, N. C. These prizes will be competed for on the Biltmore farms:

Biltmore silver cup. Value, $15. Awarded for proficiency in judging dairy cattle. Second prize, $10 in gold.

Biltmore silver cup. Value, $15. Awarded for proficiency in judging Berkshire hogs. Second prize, $10 in gold.

Biltmore silver cup. Value, $15. Awarded for proficiency in judging Southdown sheep for wool and mutton. Second prize, $10 in gold.

Biltmore silver cup. Value, $15. Awarded for proficiency in judging beef cattle. Second prize, $10 in gold.

Biltmore silver cup. Value, $15. Awarded for proficiency in judging poultry. Second prize, $10 in gold.

The following other prizes are offered:

Ten dollars in gold to the student writing the best essay on the Biltmore farms as a whole; given by Mr. George F. Weston, superintendent of the Biltmore estate.

Twenty dollars in gold awarded for proficiency in judging light horses; given by Hon. E. J. Sanford, Knoxville, Tenn.

Overton Lea silver cup. Value, $25. Awarded for proficiency in judging beef cattle; given by Hon. Overton Lea, Nashville, Tenn.

Camp silver cup. Value, $20. Awarded for proficiency in feeds and feeding and breeds and breeding; given by Maj. E. C. Camp, Knoxville, Tenn.

One pure-bred Jersey calf. Value, $25. Awarded for proficiency in judging dairy cattle; given by Mr. W. J. Hussey, Mount Pleasant, Ohio.

One silver cup. Value, $25. Awarded for proficiency in agricultural work; given by the Deering Harvester Company, Chicago, Ill.

Twenty dollars in gold to the student writing the best essay on dairying; given by the American, Nashville, Tenn.

Twenty dollars in gold to the student writing the best essay on corn culture; given by the American, Nashville, Tenn.

Twenty dollars in gold to the student writing the best essay on horse breeding; given by the American, Nashville, Tenn.

Twenty dollars in gold awarded for proficiency in dairy work; given by the Journal and Tribune, Knoxville, Tenn.

East Tennessee Farmers' Convention silver cup. Value, $25. Awarded for proficiency in judging sheep and swine.

Vaughan silver cup. Value, $15. Awarded for proficiency in horticulture; given by Vaughan's Seed Store, Chicago, Ill.

One silver cup. Value, $15. Awarded as a second prize for proficiency in horticulture; given by Knoxville Nursery Company, Knoxville, Tenn.

Herbert Domain-Cumberland Plateau prize, $50 in gold, and a scholarship, awarded for general proficiency in all subjects of the short course; given by Mr. Joseph J. Kittle, New York, N. Y.

Silver cup. Value, $20. Awarded for proficiency in meteorology.

One ton of muriate of potash. Value, $50. Awarded for proficiency in agricultural chemistry; given by the German Kali Works, New York, N. Y.

New Buildings.

1. agriculture.

Alabama Polytechnic Institute.—A dissecting hall for the use of the veterinary department (cost, $350) has been built; also a greenhouse for the horticultural department, by removing the one formerly built (cost, $250).

Colorado Agricultural College.—New feeding sheds have been built at a cost of about $1,000.

Connecticut Agricultural College.—A stone and brick building, 60 by 40 feet, and three stories high, was erected and equipped for the agricultural and dairy departments at a cost of $10,000. The basement of the building, connected with the creamery, contains the dairy apparatus, laboratory, and samples of machinery. The second floor is devoted to the veterinary laboratory and class room and the agricultural laboratory and class room. The third floor is given to experiment station work.

Florida State Normal and Industrial College for Colored Students.—A dairy building, with all modern appliances to teach in every detail the art of butter making, is in process of construction. Through the direct application of the professor of agriculture to the manufacturing establishments of the country, a large and varied assortment of dairy apparatus, such as separators, churns, Babcock tester, and the like, have been donated to the institution.

Purdue University (Indiana).—An addition has been made to the agricultural chemical laboratory at an expense of about $1,500, to be used for instruction in agricultural chemistry. The legislature has appropriated $60,000 for an agricultural

building and $10,000 annually for two years for equipment, maintenance, and instruction in the school of agriculture.

Southern University (*Louisiana*).—Improvements in the way of sheds and horse and cow stalls were made on the farm, with additions to the barn, etc., costing $450.

University of the State of Missouri.—The last general assembly appropriated $40,000 for a building for dairying, live-stock judging, and veterinary science, and for the equipment thereof; also $40,000 for a building and equipment for horticulture, entomology, and botany.

New Hampshire College of Agriculture and Mechanic Arts.—At the recent session of the legislature an appropriation of $30,000 was made for a building devoted to the uses of the agricultural and horticultural departments.

Agricultural and Mechanical College for the Colored Race (*North Carolina*).—A silo and a piggery have been constructed at a cost of about $350.

North Dakota Agricultural College.—The large college barn was burned on January 4, 1901. A new horse barn has been built at a cost of $10,000 and a new cow barn at a cost of $8,000.

Rhode Island College of Agriculture and Mechanic Arts.—The State has appropriated $3,000 for the building of a stable to replace the one destroyed by fire on January 9, 1901.

Clemson Agricultural College (*South Carolina*).—A new barn costing $2,000 was erected during the year.

Colored Normal, Industrial, Agricultural, and Mechanical College (*South Carolina*).—A new dairy building (cost, $350) and a silo (cost, $400).

University of Tennessee.—A new dairy hall was erected on the university farm at a cost of $4,130, and equipped at a cost of $2,988.52. It is a one-story brick building with marble trimmings. The main building is 40 by 80 feet, with an engine room annex 25 by 31 feet, and is devoted entirely to the accommodation of the classes in dairy work.

Hampton Normal and Agricultural Institute (*Virginia*).—The poultry department has been enlarged by the building of a brooder house 16 by 64 feet, and a fowl house 16 by 196 feet, with yards covering about 1¼ acres. This house is being stocked with fowls of various breeds and will be used for technical instruction and practice work by the students.

University of Wisconsin.—A contract has been let to further enlarge the dairy building, at a cost of about $7,000. The contemplated changes include a butter-working room and a pasteurizing room, both with tile floors and porcelain-tile walls; also a refrigerator with several compartments, a wash room, etc. It is intended to add an ammonia refrigerating plant. When these rooms are completed the dairy building will represent an outlay for the structure alone of nearly $50,000. The last legislature appropriated $159,000 for a new central building for the college of agriculture

2. ENGINEERING.

Agricultural and Mechanical College for Negroes (*Alabama*).—Plans have been made for the erection of a large stone mechanic arts building. The stone is being quarried on the grounds of the institution.

University of Arizona.—During the year a new manual training building has been added at a cost of $7,500. It contains a total area of 7,600 feet, divided as follows: Power room, 1,200 feet; drafting room, 1,200 feet; woodworking shop, 1,400 feet; forge shop, 1,400 feet; machine shop, 1,400 feet; wash room, 600 feet; model room, 400 feet. Each shop division provides working space for 24 students at benches and ample space for machinery and tool rooms. The drafting room accommodates from 36 to 48 students. Light and ventilation are provided for by

means of a continuous sawtooth-roof construction. A constant circulation of air is thus assured, also an ample supply of north light, and incidentally the hot rays of the sun in the fall and spring months are excluded. The drafting room is heated by steam from the boiler house.

Florida State Normal and Industrial College for Colored Students.—The mechanical hall has been enlarged by adding one story thereto.

University of Idaho.—The new engineering building, costing $25,000, is a commodious brick structure three stories high, with a ground plan 60 by 108 feet. One side of the building contains a mining laboratory, assay rooms, balance rooms, private laboratory and office for the department of mining, and a museum, laboratory, lecture rooms, library and office for the department of geology; the other half of the building is devoted to machine and woodworking shops for the department of mechanic arts. In other rooms are the boilers and engines which supply power and heat to the building.

Massachusetts Institute of Technology.—The corporation has decided to erect a building for the purposes of instruction in electrical engineering. It is to be placed near the present engineering buildings.

Mississippi Agricultural and Mechanical College.—The new textile building is two stories high, made of brick and trimmed with stone, and is 227 by 78 feet. The cost has been about $31,000.

University of the State of Missouri.—The last general assembly appropriated $40,000 for an engineering laboratory and its equipment.

Missouri School of Mines and Metallurgy.—The last general assembly appropriated $13,000 for a heating plant and $12,000 for mechanical shops.

Montana College of Agriculture and Mechanic Arts.—A new boiler house was erected at a cost of about $1,200.

North Carolina College of Agriculture and Mechanic Arts.—A small brick building for instruction in electrical engineering has been added, costing about $1,000.

North Dakota Agricultural College.—An addition to the mechanical building, 45 by 120 feet, is completed. The addition cost $7,500, and contains 40 forges for blacksmithing, provided with down draft and otherwise thoroughly equipped. It also provides a large engine room and a large lecture room, both used for instruction in steam engineering.

West Virginia University.—A new engineering building was erected during the year.

West Virginia Colored Institute.—A brick and stone addition to machinery hall, to cost, when completed, $15,000, is in course of erection. The remodeled building will be used as a trade school.

3. GENERAL.

State College for Colored Students (Delaware).—A new brick building to cost $6,000 is in course of erection, to be used as library, chapel, and dormitory. It is 60 by 38 feet and four stories high, including basement.

Florida State Normal and Industrial College for Colored Students.—A neat official residence for the president of the institution has been constructed.

Georgia State College of Agriculture and Mechanic Arts.—The university is now building a new dormitory (150 capacity) and mess hall with funds ($40,000) appropriated by the State.

University of Idaho.—A dormitory for women has been erected during the year at a cost of $25,000. It is a three-story brick building, with basement, finished and furnished according to the most approved plans. It contains 2 reception halls, 35 dormers, study halls, sewing rooms, gymnasium, a dining hall for 100

boarders, apartments for the preceptress, an infirmary, and many other features conducive to the health and comfort of the young women. The building is heated by steam.

Agricultural and Mechanical College of Kentucky.—A new building to be used as a gymnasium and drill hall is being erected of pressed brick and Bedford stone. It is 154 by 93 feet, and has two wings of 93 by 48 feet each of one story to be used as gymnasium and drill hall. The wings are connected by a structure of three stories to be known as the administration division. A site has been purchased, and a dormitory for women is to be erected thereon. The legislature appropriated $60,000 for the above-mentioned buildings.

Louisiana State University.—New three-story brick dormitory and mess hall building, costing $28,000.

Southern University (Louisiana).—A new residence for the portress; cost, $519.82.

University of Maine.—Alumni Hall, a brick building 117 by 160 feet, contains a chapel 114 by 38 feet, a gymnasium and drill hall 60 by 106 feet, bathroom, offices for military instructor and physical director, locker room, ball cage, bowling alley, two recitation rooms, and administration offices. The cost is about $35,000.

An observatory has been erected and a telescope of 8-inch aperture installed at a cost of about $4,000.

A new laboratory has been furnished for the department of biology. It is 33 by 39 feet, accommodates 35 students, and is completely equipped.

Massachusetts Institute of Technology.—The alumni association has subscribed $100,000 to build a memorial gymnasium for the physical training of the students. The corporation has set aside 10,000 square feet of newly purchased land for a site for the building.

Mississippi Agricultural and Mechanical College.—There have been put in a new sewerage system, water-closets, and baths at a cost of about $7,000.

University of the State of Missouri.—The last general asssembly appropriated $35,000 for a women's dormitory and furnishings.

Missouri School of Mines and Metallurgy.—The last general assembly appropriated $12,000 for enlarging the chemical laboratory and $50,000 for a main building.

Nevada State University.—The State legislature in March, 1901, appropriated $12,000 for a chemical building and $3,500 for a hospital for students.

North Dakota Agricultural College.—A wing of a contemplated Science Hall is in process of erection. This wing is 68 by 80 feet, three stories, and is designed for the departments of biology, horticulture, geology, and temporarily for mathematics. The building when completed will be about 220 feet long and 80 feet deep. The new wing cost $25,000.

A sewerage system connecting all the college buildings and grounds with a trunk sewer in the city of Fargo has been completed at a cost of $5,000.

Rhode Island College of Agriculture and Mechanic Arts.—The State has appropriated $1,700 for the building of a laundry and $5,096 for repairs on the various buildings.

Clemson Agricultural College.—The following new buildings were erected during the year: Chemical laboratory, cost $14,000; dormitory, cost $22,000; five cottages, $4,000.

Colored Normal, Industrial, Agricultural, and Mechanical College (South Carolina).—Four professors' houses have been built at a cost of $4,000.

University of Tennessee.—Barbara Blount Hall, a four-story brick building for the accommodation of women students, has been erected on the university

grounds at a cost of about $17,000. This building contains living rooms, parlor, dining hall, study hall, gymnasium, literary society hall, etc., for these students.

University of Vermont and State Agricultural College.—A new gymnasium has been erected at a cost of $30,000.

Virginia Agricultural and Mechanical College and Polytechnic Institute.—There are in course of erection a dormitory of 60 rooms; a science hall, three stories, for biology, physics, geology, mineralogy, and chemistry; heating and power plant, two 200-horsepower boilers, generator, 75-horsepower engine, etc.; president's house; conversion of executive residence into an infirmary, addition of ward with 24 beds.

West Virginia University.—A library and museum building and an armory and drill hall were erected during the year.

Courses of Study.

The range of instruction offered by the several institutions endowed by the acts of Congress approved July 2, 1862, and August 30, 1890, varies greatly in the different States and Territories. On the passage of the act of July 2, 1862, granting lands to the several States for the establishment of institutions in which instruction in agriculture and the mechanic arts should be the leading object, some of the States granted the lands or the proceeds arising from the sale thereof to institutions already existing, while in others new institutions were established. In consequence of such action by the various State legislatures it happens that in some of the States the institutions endowed by the act of July 2, 1862, are universities offering courses of study in the classics, law, medicine, dentistry, etc., as well as in agriculture, the mechanic arts, and other technical studies preparing students for the industrial pursuits of life, while in others the entire work of the institutions is concentrated on technical lines.

The undergraduate courses of study leading to degrees, in nearly all cases, extend through four years, but during the past few years a large number of the institutions have established short courses of varying length, especially in the line of agriculture, for the benefit of farmers, dairymen, and others who wish to enlarge their knowledge of scientific or practical agriculture, dairying, etc., but who can not afford the time to spend four years in a regular course. The length of the short courses varies from two weeks to two or three years, the shorter of the courses being given generally during the winter months.

The courses of study offered by the several institutions are given in the following pages, classified, so far as possible, as undergraduate courses of four years, short courses, and other courses.

Alabama Polytechnic Institute.

Undergraduate courses of four years (B. S.).—Chemistry and agriculture; civil engineering; electrical and mechanical engineering; general science; pharmacy.

Short courses.—Agriculture (1 year); agriculture (2 years); mechanic arts (2 years); pharmacy (2 years).

Other courses.—Graduate.

Agricultural and Mechanical College for Negroes (Alabama).

English primary course (3 years); preparatory (3 years); normal (4 years); agriculture (B. A. S., 4 years); mechanical (B. M. S., 4 years); scientific (B. S., 4 years).

Industrial courses.—Carpentry (3 years); agriculture (3 years); iron working (3 years); shoemaking (3 years); broom making (1 year); chair bottoming (1 year); nurse training (2 years); sewing (3 years); millinery (1 year); cooking (2 years); laundry (2 years); printing (3 years); machine shop (4 years); shorthand (1 year).

UNIVERSITY OF ARIZONA.

Undergraduate courses of four years (*B. S.*).—Literary and scientific; engineering and mining; agriculture.
Short course.—Assaying (2 years).
Other courses.—Graduate; preparatory (4 years).

UNIVERSITY OF ARKANSAS.

Undergraduate courses of four years.—Classical (A. B.); philosophical (Ph. B.); scientific (B. S.); mechanical engineering (B. M. E.); civil engineering (B. C. E.); electrical engineering (B. E. E.); agriculture (B. S.); agriculture (B. S. A.); horticulture (B. S.).
Short courses.—Mechanic arts (2 or 3 years); electrical engineering (2 years).
Other courses.—Normal (2 years, L. I.); graduate; preparatory (2 years); music; art; law; medicine.

BRANCH NORMAL COLLEGE (ARKANSAS).

Preparatory course (3 years); normal (4 years, L. I.); classical (6 years, A. B.); mechanic arts (4 years); manual training (4 years); sewing; typewriting and stenography.

UNIVERSITY OF CALIFORNIA.

Undergraduate courses of four years.—Letters (A. B.); social science (B. L.); natural sciences (B. S.); commerce (B. S.); agriculture (B. S.); mechanical engineering (B. S.); electrical engineering (B. S.); mining engineering (B. S.); railroad engineering (B. S.); sanitary engineering (B. S.); chemistry (B. S.).
Short courses.—Premedical (3 years); agriculture (2 years); dairying (9 weeks).
Other courses.—Veterinary (3 years of 6 months each, D. V. S.); pharmacy (2 years, Ph. G.); graduate; law; medicine; postgraduate medicine; dental; Lick astronomical department; Mark Hopkins Institute of Art.

COLORADO AGRICULTURAL COLLEGE.

Undergraduate courses of four years (*B. S.*).—Agriculture; mechanical engineering; civil and irrigation engineering; ladies' course; architecture; veterinary science.
Other courses.—Commercial (2 years); preparatory (1 year).

CONNECTICUT AGRICULTURAL COLLEGE.

Undergraduate courses of four years (*B. Agr.*).—Agriculture; domestic science.
Short course.—Dairying (12 weeks).

DELAWARE COLLEGE.

Undergraduate courses of four years.—Classical (A. B.); Latin-scientific (A. B.); agriculture (B. S.); general science (B. S.); civil engineering (B. C. E.); mechanical engineering (B. M. E.); electrical engineering (B. E. E.).
Short courses.—Agriculture (2 years); agriculture (winter term).
Other courses.—Graduate.

STATE COLLEGE FOR COLORED STUDENTS (DELAWARE).

Undergraduate courses of four years.—Classical (A. B.); scientific (B. S.); agriculture (B. Agr.); engineering (B. E.).
Other course.—Normal (3 years).

FLORIDA AGRICULTURAL COLLEGE.

Undergraduate courses of four years.—Classical (A. B.); agriculture (B. S.); mechanical (B. S.); Latin-scientific (B. S.).

Other courses.—Commercial (1 year); preparatory (2 years).

FLORIDA STATE NORMAL AND INDUSTRIAL COLLEGE FOR COLORED STUDENTS.

Model school (3 years); intermediate department (1 year); academic (3 years); preparatory (2 years); normal (2 years); music.

Industrial courses.—Mechanical (3 years); agriculture (3 years); sewing (3 years); cooking (3 years); laundry (1 year).

GEORGIA STATE COLLEGE OF AGRICULTURE AND MECHANIC ARTS.

Undergraduate courses of four years (B. S.).—General science; agriculture; civil engineering; electrical engineering.

Short course.—Agriculture (12 weeks, winter).

Other courses.—Graduate.

GEORGIA STATE INDUSTRIAL COLLEGE FOR COLORED YOUTHS.

Preparatory (3 years); normal (3 years); collegiate (3 years, A. B.); commercial (2 years).

Industrial courses (three years each).—Agriculture; woodworking; ironworking; carpentry; blacksmithing; masonry; painting; tailoring; shoemaking; sewing.

UNIVERSITY OF IDAHO.

Undergraduate courses of four years.—Classical (A. B.); scientific (B. S.); agriculture and horticulture (B. S.); mechanical engineering (B. M. E.); civil engineering (B. C. E.); mining engineering (B. E. M.).

Short course.—Agriculture and horticulture (3 years).

Other courses.—Preparatory (3 years); music (4 years, B. M.).

UNIVERSITY OF ILLINOIS.

Undergraduate courses of four years.—General courses allowing a wide range of electives (A. B.); classical (A. B.); English (A. B.); German and Romanic languages (A. B.); Latin and modern languages (A. B.); philosophy (A. B.); political science (A. B.); architecture (B. S.); architectural engineering (B. S.); civil engineering (B. S.); electrical engineering (B. S.); electro-physical (B. S.); electro-chemical (B. S.); mechanical engineering (B. S.); railway engineering (B. S.); municipal engineering (B. S.); chemistry (B. S.); chemistry and engineering (B. S.); physics (B. S.); general science (B. S.); household science (B. S.); mathematics and physics (B. S.); mathematics and astronomy (B. S.); astronomy and physics (B. S.); teachers' general science (B. S.); teachers' course in biological sciences (B. S.); premedical (B. S.); agriculture (B. S.); library science (B. L. S.).

Other courses.—Preparatory; graduate; music; law; medicine; dentistry; pharmacy.

PURDUE UNIVERSITY (INDIANA).

Undergraduate courses of four years (B. S.).—Mechanical engineering; civil engineering; sanitary engineering; electrical engineering; agriculture; general science; biology; chemistry; physics; industrial art; sanitary science; premedical; pharmacy.

Short courses.—Agriculture (2 years); agriculture (11 weeks, winter), (*a*) for men and women, (*b*) for women; pharmacy (2 years of 27 weeks each, Ph. G.).

Other courses.—Graduate.

IOWA COLLEGE OF AGRICULTURE AND MECHANIC ARTS.

Undergraduate courses of four years.—Agriculture (B. S. A.); mechanical engineering (B. M. E.); civil engineering (B. C. E.); electrical engineering (B. S.); mining engineering (B. S.); technology (B. S.); science as related to industries (B. S.); general and domestic science (B. S.).

Short courses.—Dairying (1 year); dairying (16 weeks, beginning in September and again in February); dairying (4 weeks, January); stock and grain judging (2 weeks, January); mining engineering (2 years); mining engineering (16 weeks, beginning in August and again in January).

Other courses.—Graduate; veterinary medicine (3 years, D. V. M.).

KANSAS STATE AGRICULTURAL COLLEGE.

Undergraduate courses of four years (B. S.).—General science; agriculture; domestic science; mechanical engineering; electrical engineering.

Short courses.—Dairying (12 weeks, winter); agriculture and mechanics (2 years of 12 weeks each, winter); horticulture and mechanics (2 years of 12 weeks each, winter); domestic science (2 years of 12 weeks each, fall). Apprentice courses (80 weeks): Machine shop; blacksmith shop; carpenter shop; foundry; boiler and engine room; printing.

Other courses.—Graduate; preparatory.

AGRICULTURAL AND MECHANICAL COLLEGE OF KENTUCKY.

Undergraduate courses of four years.—Letters (A. B.); science (B. S.); pedagogy (B. Ped.); mechanical and electrical engineering (B. M. E.); civil engineering (B. C. E.); agriculture (B. Agr.).

Short courses.—Agriculture (2 years); agriculture (10 weeks, winter).

Other courses.—Graduate; preparatory (2 years).

STATE NORMAL SCHOOL FOR COLORED PERSONS (KENTUCKY).

Normal (3 years); normal (4 years of 2 terms each); preparatory (3 years); agriculture (3 years); mechanical (3 years); printing (3 years); domestic science (3 years).

LOUISIANA STATE UNIVERSITY.

Undergraduate courses of four years.—Agriculture (B. S.); mechanical engineering (B. S.); civil engineering (B. S.); general science (B. S.); commerce (B. S.); Latin-scientific (A. B.); literary (A. B.).

Other courses.—Sugar (5 years, B. S.); preparatory (1 year).

SOUTHERN UNIVERSITY (LOUISIANA).

Classical (4 years); scientific (4 years); normal (5 years); grammar school (3 years); agriculture (4 years); manual training (3 years); tinsmithing (3 years); printing (4 years); bookkeeping (2 years); typewriting (1 year); sewing (4 years); music (5 years).

UNIVERSITY OF MAINE.

Undergraduate courses of four years.—Classical (A. B.); Latin-scientific (Ph. B.); scientific (B. S.); chemical (B. S.); premedical (B. S.); agriculture (B. S.); civil engineering (B. S.); mechanical engineering (B. S.); electrical engineering (B. S.); pharmacy (B. S.).

Short courses.—General agriculture (1 term or less); horticulture (1 term or less); agriculture (1 year); agriculture (2 years); dairying (2 years of 6 weeks each, winter); horticulture (2 weeks, spring); pharmacy (2 years, Ph. C.).

Other courses.—Graduate; law.

MARYLAND AGRICULTURAL COLLEGE.

Undergraduate courses of four years.—Agriculture (B. S.); mechanical engineering (B. M. E.); classical (A. B.); scientific (B. S.).

Short courses.—Agriculture (January and February); agriculture (2 years); creamery.

Other course.—Preparatory.

MASSACHUSETTS AGRICULTURAL COLLEGE.

Undergraduate course of four years (B. S.).—Agriculture.

Short courses (11 weeks, winter).—Agriculture; dairying; horticulture; botany; chemistry; zoology.

Other courses.—Graduate.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY.

Undergraduate courses of four years (B. S.).—Civil engineering; mechanical engineering; mining engineering and metallurgy; architecture; architectural engineering; landscape architecture; chemistry; electrical engineering; biology; physics; electro-chemistry; general studies; chemical engineering; sanitary engineering; geology; naval architecture.

Other courses.—Graduate.

MICHIGAN AGRICULTURAL COLLEGE.

Undergraduate courses of four years (B. S.).—Agriculture; mechanical engineering; women's course.

Short courses.—Preparatory chemistry (12 weeks); beet sugar production (8 weeks); cheese making (4 weeks); dairy husbandry (6 weeks); creamery management (6 weeks); live-stock husbandry (6 weeks); fruit culture (6 weeks).

Other course.—Graduate.

UNIVERSITY OF MINNESOTA.

Undergraduate courses of four years.—Classical (A. B.); scientific (B. S.); literary (B. L.); civic (Ph. B.); chemistry (B. S.); civil engineering (C. E.); mechanical engineering (M. E.); electrical engineering (E. E.); science and technology (B. S., and at end of fifth year professional degree); mining engineering (E. M.); metallurgy (Met. E.); agriculture (B. Agr.).

Short courses.—Agriculture (3 years); dairying (4 weeks, January).

Other courses.—Graduate; law; medicine and surgery; homeopathic medicine and surgery; dentistry; pharmacy.

MISSISSIPPI AGRICULTURAL AND MECHANICAL COLLEGE.

Undergraduate courses of four years (B. S.).—Agriculture; mechanical; textile.

Short course.—Agriculture (2 years of 10 weeks each, winter).

Other courses.—Preparatory; graduate.

ALCORN AGRICULTURAL AND MECHANICAL COLLEGE (MISSISSIPPI).

Undergraduate course of four years (B. S.).—Scientific.

Industrial courses.—Industrial (5 years); shoemaking (3 years); agriculture (7 years); agriculture (3 years); carpentry (3 years); blacksmithing (3 years); painting (3 years).

UNIVERSITY OF THE STATE OF MISSOURI.[1]

Undergraduate courses of four years.—General culture courses (A. B.); agriculture (5 years, B. S.); civil engineering (B. S.); electrical engineering (B. S.); mechanical engineering (B. S.); sanitary engineering (B. S.); architecture (B. S.).

Short courses.—Agriculture (12 weeks, winter); dairying (12 weeks, winter); horticulture (12 weeks, winter); agriculture (2 years); agriculture and horticulture (summer); domestic science, general course (1 year); teachers' course (2 years); mechanic arts (3 years); surveying (40 weeks).

Other courses.—Graduate; law; medicine; pedagogy, elementary and advanced courses.

MISSOURI SCHOOL OF MINES AND METALLURGY.

Undergraduate courses of four years (B. S.).—Mining engineering; civil engineering; chemistry and metallurgy; general science.

Short courses.—Chemistry and assaying (2 years); mining (2 years); electricity (2 years); surveying (2 years).

LINCOLN INSTITUTE (MISSOURI).

College course (4 years, A. B.); preparatory (3 years); normal (4 years); subnormal (2 years); model and training department.

Industrial courses.—Carpentry (3 years); blacksmithing (3 years); machinery (3 years); sewing (3 years); cooking (1 year); laundry (1 year); printing; typewriting; agriculture.

MONTANA COLLEGE OF AGRICULTURE AND MECHANIC ARTS.

Undergraduate courses of four years.—General science (B. S.); agriculture (B. S. A.); biology (B. S.); analytical and applied chemistry (B. A. C.); domestic science (B. S.); mechanical engineering (B. M. E.); electrical engineering (B. E. E); civil engineering (B. C. E.).

Short courses.—Domestic science (1 year); agriculture (13 weeks, winter).

Other courses.—Graduate; preparatory (3 years); business (1 year); music; art.

UNIVERSITY OF NEBRASKA.

Undergraduate courses of four years.—General culture (A. B.); general science (B. S.); general agriculture (B. S.); agriculture and chemistry (B. S.); botany and agriculture (B. S.); botany and zoology (B. S.); chemistry and physics (B. S.); horticulture and botany (B. S.); mathematics and physics (B. S.); zoology and philosophy (B. S.); chemistry and domestic science (B. S.); technical agriculture (B. S.); civil engineering (B. S.); electrical engineering (B. S.); mechanical engineering (B. S.).

Short courses.—Agriculture (3 years of 24 weeks each); agriculture (11 weeks, winter); domestic science (2 years); mechanic arts (2 years); teachers' course (2 years); premedical (2 years); physical education (2 years).

Other courses.—Graduate; preparatory; law; music; art.

NEVADA STATE UNIVERSITY.

Undergraduate courses of four years.—Agriculture (B. S.); domestic arts and science (B. D. S.); liberal arts (A. B.); general science (B. S.); commerce (B. S.); mining and metallurgy (B. S.); civil engineering (B. S.); mechanical engineering (B. S.).

Short courses (January and February).—Agriculture; dairying; domestic arts and science.

Other courses.—Preparatory (3 years); normal.

[1] Not including Missouri School of Mines and Metallurgy.

NEW HAMPSHIRE COLLEGE OF AGRICULTURE AND MECHANIC ARTS.

Undergraduate courses of four years (*B. S.*).—Agricultural; mechanical engineering; electrical engineering; technical chemistry; general course.

Short courses.—Agriculture (two years); agriculture (ten weeks, winter); dairying (ten weeks, winter).

Other course.—Preparatory (one year).

RUTGERS SCIENTIFIC SCHOOL (NEW JERSEY).

Undergraduate courses of four years (*B. S.*).—Agriculture; civil engineering and mechanics; chemistry; electricity; biology.

NEW MEXICO COLLEGE OF AGRICULTURE AND MECHANIC ARTS.

Undergraduate courses of four years (*B. S.*).—General course; agriculture; mechanical engineering.

Short courses.—Agriculture (two years); agriculture and horticulture (twelve weeks given in each term of the college year); practical mechanics (two years.)

Other courses.—Graduate; preparatory (five years); stenography and typewriting (one year).

CORNELL UNIVERSITY (NEW YORK).

Undergraduate courses of four years.—General culture courses (A. B.); agriculture (B. S. A.); forestry (B. S. F.); architecture (B. Arch.); civil engineering (C. E.); mechanical engineering (M. E.); electrical engineering (M. E.); marine engineering (M. E.); naval architecture (M. E.); railway mechanical engineering (M. E.).

Short courses.—Agriculture (eleven weeks, winter); dairying (eleven weeks, winter); forestry (one term); forestry (three years); architecture (two years).

Other courses.—Graduate; law; medicine; veterinary.

NORTH CAROLINA COLLEGE OF AGRICULTURE AND MECHANIC ARTS.

Undergraduate courses of four years.—Agriculture (B. Agr.); civil engineering (B. E.); mechanical engineering (B. E.); electrical engineering (B. E.); chemical engineering (B. E.); textile industry: cotton manufacturing (B. E.), dyeing (B. E.)

Short courses.—Agriculture (two years); agriculture (twelve weeks, winter); mechanic arts (two years); carpentry (twelve weeks); machine shop (twelve weeks); engine and boiler tending (twelve weeks); machine drawing and designing (twelve weeks); cotton manufacturing (two years).

Other courses.—Graduate.

AGRICULTURAL AND MECHANICAL COLLEGE FOR THE COLORED RACE (NORTH CAROLINA).

Industrial course of four years for men.

NORTH DAKOTA AGRICULTURAL COLLEGE.

Undergraduate courses of four years (*B. S.*).—General science; agriculture; mechanical.

Short courses.—Agriculture (two years); steam engineering (two years); farm school (three months, winter).

OHIO STATE UNIVERSITY.

Undergraduate courses of four years.—Agriculture (B. S.); horticulture and forestry (B. S.); domestic science (B. S.); arts (A. B.); Latin course in philos-

ophy (Ph. B.); modern language course in philosophy (Ph. B.); English course in philosophy (Ph. B.); commerce and administration (Ph. B.); general science (B. S.); civil engineering (C. E.); mining engineering (E. M.); mechanical engineering (M. E.); electrical engineering (M. E.); ceramics (E. M.); industrial arts (B. S.); chemistry (B. S.); architecture; pharmacy (B. S.).

Short courses.—Agriculture (two years); dairying (three months, winter); domestic science (two years); preparatory to law and to journalism (three years); mining (two years); clay working and ceramics (two years); industrial arts (two years); pharmacy (two years).

Other courses.—Graduate; law; veterinary.

OKLAHOMA AGRICULTURAL AND MECHANICAL COLLEGE.

Undergraduate courses of four years (B. S.).—General science and literature; agriculture; mechanical engineering; chemistry; biology.

Short courses.—Agriculture, horticulture, and mechanic arts (eight weeks, winter); printing.

Other courses.—Preparatory (two years); stenography and typewriting (six to nine months).

COLORED AGRICULTURAL AND NORMAL UNIVERSITY (OKLAHOMA).

Undergraduate courses of four years.—Classical (A. B.); scientific (B. S.); normal (B. S. D.); civil architecture (M. E.); electrical and mechanical engineering (M. E.); agriculture (B. S. A.).

Other courses.—Elementary (four years); preparatory (three years).

OREGON STATE AGRICULTURAL COLLEGE.

Undergraduate courses of four years (B. S.).—Agriculture; household science; mechanical engineering; electrical engineering; pharmacy; mining engineering.

Short courses.—Mining (two years); agriculture (four to six weeks, winter).

Other courses.—Preparatory (one year); business (two years).

PENNSYLVANIA STATE COLLEGE.

Undergraduate courses of four years.—General science (B. S.); classical (A. B.); Latin-scientific (B. S.); philosophy (B. S.); agriculture (B. S.); biology (B. S.); chemistry (B. S.); civil engineering (B. S.); electrical engineering (B. S.); mathematics (B. S.); mechanical engineering (B. S.); mining engineering (B. S.); physics (B. S.).

Short courses.—Agriculture (twelve weeks, winter); creamery (six weeks, winter); chemistry (two years); mechanic arts (two years); mining (two years).

Other courses.—Preparatory (one year); graduate.

RHODE ISLAND COLLEGE OF AGRICULTURE AND MECHANIC ARTS.

Undergraduate courses of four years (B. S.).—General science; agriculture; mechanical engineering; electrical engineering; chemistry; biology.

Short courses.—Poultry (six weeks); horticulture (two weeks); nature study (two weeks, summer).

Other course.—Preparatory (two years).

CLEMSON AGRICULTURAL COLLEGE (SOUTH CAROLINA).

Undergraduate courses of four years (B. S.).—Agriculture; mechanical; textile.

Short course.—Dairying (ten weeks, beginning November 15).

Other course.—Preparatory.

COLORED NORMAL, INDUSTRIAL, AGRICULTURAL AND MECHANICAL COLLEGE (SOUTH CAROLINA).

Undergraduate courses of four years.—Classical (A. B.); scientific (Ph. B.); agriculture (B. Agr.); literary (B. L.).

Industrial courses.—Sewing; cooking; carpentry and woodwork; bricklaying and plastering; architecture; mechanical drawing and painting; iron working and machinery; housekeeping; farming; upholstering and cabinetmaking; saddlery; harness making and shoemaking; sawmilling and manufacture of hard and soft lumber; typewriting; printing; tailoring.

Other courses.—Preparatory (two years); normal (three years); model school (eight grades); art; music.

SOUTH DAKOTA AGRICULTURAL COLLEGE.

Undergraduate courses of four years.—Practical agriculture (B. Agr.); scientific agriculture (B. S.); scientific horticulture (B. S.); domestic science (B. S.); mechanical engineering (B. S.); electrical engineering (B. S.); pharmacy (B. S.).

Short courses.—Agriculture (twelve weeks, winter); dairy science (twelve weeks, winter); horticulture (twelve weeks, winter); steam engineering (twenty-four weeks); domestic science (twelve weeks, winter); pharmacy (two years, Ph. G.).

Other courses.—Preparatory; music; art; business (one year); amanuensis (one year).

UNIVERSITY OF TENNESSEE.

Undergraduate courses of four years.—Agriculture (B. S.); civil engineering (B. S.); mechanical engineering (B. S.); electrical engineering (B. S.); chemistry and metallurgy (B. S.); pharmacy (B. S.); literary (A. B.).

Short courses.—Agriculture, animal husbandry, dairying, and horticulture (ten weeks, winter); pharmacy (two years, Ph. C.).

Industrial department for colored students.—Agriculture (four years); mechanical course (four years).

Other courses.—Graduate; law; medicine; dentistry.

AGRICULTURAL AND MECHANICAL COLLEGE OF TEXAS.

Undergraduate courses of four years (B. S.).—Agriculture; horticulture; mechanical engineering; civil engineering.

Short courses.—Stock farming (ten weeks, winter); dairying (ten weeks, winter); horticulture (ten weeks, winter).

Other courses.—Graduate.

PRAIRIE VIEW STATE NORMAL AND INDUSTRIAL COLLEGE (TEXAS).

College course (six years, A. B.) with instruction in practical industries: Agriculture; dairy husbandry; horticulture; broom making; butchering; wood working; ironwork; sewing; millinery; cooking; music.

AGRICULTURAL COLLEGE OF UTAH.

Undergraduate courses of four years (B. S.).—Agriculture; mechanical engineering; civil engineering; domestic arts; commerce; general science.

Short courses.—Agriculture (two years of five months each); agriculture (two years); domestic arts (two years); commerce (two years); mechanic arts (three years); agriculture (twelve weeks, winter); domestic arts (twelve weeks, winter); manual training in domestic arts (two years).

Other course.—Preparatory (one year).

UNIVERSITY OF VERMONT AND STATE AGRICULTURAL COLLEGE.

Undergraduate courses of four years.—Classical (A. B.); literary-scientific (Ph. B.); civil engineering (B. S.); mechanical engineering (B. S.); electrical engineering (B. S.); chemistry (B. S.); agriculture (B. S.); commerce and economics (B. S.).

Short courses.—Agriculture (one or two years); dairying (four weeks, winter).

Other course.—Medicine.

VIRGINIA AGRICULTURAL AND MECHANICAL COLLEGE AND POLYTECHNIC INSTITUTE.

Undergraduate courses of four years (B. S.).—Agriculture; horticulture; applied chemistry; general science; civil engineering; mechanical engineering; electrical engineering.

Short courses.—Practical agriculture (two years); practical mechanics (two years).

Other courses.—Graduate.

HAMPTON NORMAL AND AGRICULTURAL INSTITUTE (VIRGINIA).

Academic course (three years); normal (two years); physics (three years); agriculture (three years); agriculture (one year); horticulture (one year); dairying (one year); business (one year).

Trade courses (three years).—Carpentry; painting; bricklaying; plastering; house building; wheelwrighting; blacksmithing; machinist; steam engineeri g; harness making and carriage trimming; shoemaking; tailoring; cabinetmaking; tinsmithing; printing.

WASHINGTON AGRICULTURAL COLLEGE AND SCHOOL OF SCIENCE.

Undergraduate courses of four years.—Mathematics and civil engineering; chemistry; botany; zoology; agriculture; horticulture; English language and literature; economic science and history; mechanical engineering; modern languages; mining engineering.

Short courses.—Agriculture (three years); dairying (ten weeks); horticulture (six weeks, winter); artisans (one year).

Other courses.—Pharmacy (two years, Ph. G.); veterinary (three years, D. V. S.); business (two years); stenography (one year); typewriting (one year); preparatory (three years); music; art.

WEST VIRGINIA UNIVERSITY.

Undergraduate courses of four years.—General culture (A. B.); pharmacy (B. S.); civil and mining engineering (B. S.); mechanical engineering (B. S.); electrical engineering (B. S.); agriculture (B. S. A.).

Short courses.—Agriculture (two years, B. Agr.); agriculture (one year); agriculture (twelve weeks, winter); veterinary science, stock breeding and feeding (twelve weeks, winter); manual training; mechanic arts.

Other courses.—Graduate; law; medicine; fine arts; music; business (two years); preparatory (four years).

WEST VIRGINIA COLORED INSTITUTE.

Preparatory (one year); normal (four years); academic (four years); agriculture (four years); English and mechanical (five years).

Industrial courses.—Carpentry (four years); machinery woodworking (four years); blacksmithing (four years); steamfitting and plumbing; sewing (two years); dressmaking (three years); printing (four years); music.

UNIVERSITY OF WISCONSIN.

Undergraduate courses of four years.—Ancient classical (A. B.); modern classical (B. L.); civic historical (B. L.); English (B. L.); general science (B. S.); pre-medical (B. S.); pre-engineering (B. S.); commerce (B. C. S.); pharmacy (B. S); civil engineering (B. S.); sanitary engineering (B. S.); mechanical engineering (B. S.); electrical engineering (B. S.); applied electro-chemistry (B. S.); general engineering (B. S.); pre-mining engineering (B. S.); pre-metallurgical engineering (B. S.); agriculture (B. S.).

Short courses.—Agriculture (two years of fourteen weeks each, winter); dairying (twelve weeks); pharmacy (two or three years, Ph. G.); philosophical course for normal school graduates (two years, Ph. B.).

Other courses.—Graduate; law.

UNIVERSITY OF WYOMING.

Undergraduate courses of four years.—Classical (A. B.); literary (A. B.); scientific (A. B. or B. S.); agriculture (B. S.); mechanical engineering (B. S.); mining engineering (B. S.); normal (B. Ped.).

Short courses.—Agriculture (two years); agriculture (one year); mining (six weeks, winter).

Other courses.—Preparatory (three years); graduate; business (two years); stenography (two years).

TABLE 1.—*Statistics of colleges of agriculture and the mechanic arts endowed by acts of Congress of July 2, 1862, and August 30, 1890.*

	Institution.	President.	Date of opening of institution.	Acres of land allotted to State under act of July 2, 1862.	Acres of land grant of 1862 still unsold.	Acres in farm and grounds.	Acres under cultivation.	Acres used for experiments.	Library.	
									Volumes.	Pamphlets.
	1	2	3	4	5	6	7	8	9	10
1	Alabama Polytechnic Institute, Auburn, Ala	Wm. Le Roy Broun, LL.D.*a*	1872	240,000	0	323	90	35	15,458	2,000
2	Agricultural and Mechanical College for Negroes, Normal, Ala.	W. H. Councill, Ph. D	1875			182	100		2,804	
3	University of Arizona, Tucson, Ariz	M. M. Parker, A. M	1891			80	40	40	6,000	10,000
4	University of Arkansas, Fayetteville, Ark	J. L. Buchanan, LL. D	1872	150,000	0	160	60	40	8,500	7,500
5	Branch Normal College, Pine Bluff, Ark	J. C. Corbin, A. M	1875			20			3,389	1,241
6	University of California, Berkeley, Cal	B. I. Wheeler, Ph. D., LL. D	1869	150,000	4,195	411	182	182	88,000	60,000
7	Colorado Agricultural College, Fort Collins, Colo	B. O. Aylesworth, LL. D	1879	90,000	44,685	240	240	40	10,056	
8	Connecticut Agricultural College, Storrs, Conn	Rev. R. W. Stimson, A. M., acting.	1881	180,000	0	300	135	10	8,127	800
9	Delaware College, Newark, Del	G. A. Harter, Ph. D	1834	90,000	0	14	4	4	12,000	2,500

CHAPTER XXXVIII.

STATISTICS OF NORMAL SCHOOLS.

The estimated number of persons engaged in teaching in the United States exceeds half a million. Many thousands of new teachers are added to the ranks each year to take the places of those who have proven failures or who for other reasons have left the work. It is recognized that inadequate training is the chief cause of failure, although many who have received professional instruction in normal schools retire after the discouraging work of a year or two. On the other hand, there are thousands of men and women who have never been inside a normal school building whose adaptability to the work has enabled them by earnest effort to become successful teachers. It is generally conceded, however, that these teachers could have won earlier success and achieved more valuable results had they first received the professional training offered by a good normal school.

The growing demand for trained teachers has led to a steady increase from year to year in the attendance in normal schools and other institutions where pedagogical instruction is offered. The following table shows the number of institutions of the several classes offering such instruction and the number of normal students in each class for the last four years:

Normal students reported for four years.

Classes of institutions.	1897–98.		1898–99.		1899–1900.		1900–1901.	
	Institutions.	Students.	Institutions.	Students.	Institutions.	Students.	Institutions.	Students.
Public normal schools	167	46,245	166	44,808	172	47,421	170	43,372

Private high schools	326	5,989	378	6,886	417	8,522	398	8,985
Grand total	1,376	89,225	1,488	93,687	1,476	98,342	1,461	94,157
In all public institutions	684	55,878	739	56,279	704	60,128	732	57,689
In all private institutions	692	33,347	749	37,408	772	38,214	729	36,468

It is the purpose in this chapter to summarize and give in detail the statistics of public and private normal schools. In addition a list is given of the universities and colleges having departments of pedagogy and those offering courses for the training of teachers. A table appears in the summaries giving the number of institutions, other than normal schools, having teachers' training courses and the number of students pursuing such courses.

For the year 1900-1901 there were in the regular training courses for teachers in public and private normal schools 63,402 students, while in all other institutions there were 30,755 students pursuing such courses. The 170 public normal schools had 2,232 instructors, 43,372 students, and 8,753 graduates, while the 118 private normal schools had 873 instructors, 20,030 students, and 1,630 graduates.

The following table will indicate in some measure the progress made by the public and private normal schools since 1890:

	1889-90.				1900-1901.			
	Schools.	Instructors.	Normal students.	Normal graduates.	Schools.	Instructors.	Normal students.	Normal graduates.
Public normal schools	135	1,182	26,917	4,413	170	2,232	43,372	8,753
Private normal schools	43	274	7,897	824	118	873	20,030	1,630
Total	178	1,456	34,814	5,237	288	3,105	63,402	10,383

For the last dozen years the growth of public normal schools has been constant, while the progress of private normal schools has shown as many fluctuations as commercial enterprises. In 1890 there were 43 private normal schools, with 7,897 students. In 1897 the number had reached 198, with 24,181 students. Since that time there has been a gradual decline in the number of such schools until 1901, when there were 118, reporting 20,030 students. The loss of 80 schools has not brought a corresponding reduction in the number of students. The weaker institutions have dropped out, leaving the majority of the remaining 118 stronger and better than before.

The number of students graduating from the normal courses of public and private normal schools in 1901 was 10,383. The normal graduates of other institutions were not reported to this office, but it may be estimated that the number was nearly 5,000, so that the number of graduates from teachers' training courses in all the institutions, including the normal schools, was not less than 15,000.

PUBLIC NORMAL SCHOOLS.

With two exceptions all the States and Territories make provisions for public normal schools. Delaware and Nevada are without normal schools, but provision has been made heretofore for the education of teachers in the State colleges of these two States. The first statistics of the new State normal school of Wyoming will appear in the next Annual Report of this Bureau.

The steady growth of public normal schools is well illustrated by the following table, which shows the amounts of public appropriations received each year since 1890:

Public appropriations to public normal schools for 12 years.

Year.	For support.	For buildings.	Year.	For support.	For buildings.
1889-90	$1,312,419	$900,533	1895-96	$2,187,875	$1,124,834
1890-91	1,285,700	409,916	1896-97	2,426,185	743,333
1891-92	1,567,082	594,635	1897-98	2,566,132	417,866
1892-93	1,452,914	816,826	1898-99	2,510,934	560,896
1893-94	1,996,271	1,583,399	1899-1900	2,769,003	718,507
1894-95	1,917,375	1,003,933	1900-1901	3,068,485	709,217

The summarized statistics of the 170 public normal schools will be found in Tables 1 to 10, while detailed information concerning the individual schools will be found in Tables 21 and 22.

Table 1 shows the number of public normal schools in each State and the number of teachers employed. In the 170 schools 2,232 were engaged in teaching normal students, 722 in other departments, making a total of 2,954 teachers employed, 1,075 men and 1,879 women.

As shown in Table 2, there were 43,372 students in normal departments, 10,989 males and 32,383 females. It addition, there were 708 students in business courses, 7,153 in other secondary grades, and 22,617 pupils in elementary grades. The total enrollment in all departments was 73,850, as shown in Table 3. Included in the normal departments there were 1,632 colored students, most of them being in the colored normal schools of the two Southern divisions. There were 31,638 children in the model schools used by the institutions. In most of the public normal schools the model schools belong to the elementary departments, while others use convenient public schools as model or practice schools.

Table 4 shows that for the year ending June, 1901, there were 8,753 graduates from public normal schools, 1,583 men and 7,770 women. There were 208 graduates of business courses and 688 graduates of other courses. Comparatively few public normal schools now maintain other than normal or teachers' training courses.

The total income of 145 of the 170 public normal schools was $4,014,774, as shown in Table 5. The amount of public appropriations received by 141 of these schools for support was $3,068,485.

The value of the property of public normal schools is shown in Table 6, so far as information could be obtained by this office, only 139 of the 170 schools giving the desired figures. The libraries of 156 schools had an aggregate of 680,758 volumes.

Table 7 shows the amount of public appropriations received each year for the last six years for support, while Table 8 shows the public appropriations for buildings and improvements in the same period.

BRANCHES OF INSTRUCTION.

For the first time an attempt was made by this Bureau to ascertain to what extent certain leading branches belonging to the professional instruction of teachers were taught in the public normal schools. The result of the inquiry is summarized in Tables 9 and 10. The details by schools are given in Table 21. There were 10,628 students in history of education, 12,561 in theory of education, 11,575 in school organization and supervision, 14,101 in school management and discipline, 12,094 in school hygiene, 14,491 in psychology and child-study, 4,489 in ethics, 8,109 in school laws, and 14,914 in practical pedagogy.

PRIVATE NORMAL SCHOOLS.

Tables 11 to 16, inclusive, summarize the statistics of the 118 private normal schools. These tables are in the same form as Tables 1 to 6 for the public normal schools, and may be compared with them, table by table, in the same order.

Table 17 compares certain statistics of public and private normal schools. In the former only about one-fourth of the students are males, while in the latter the number is almost evenly divided between the sexes. In the former about 20 per cent of total number of normal students graduated in 1901, while in the latter the number of normal graduates bore less than half this ratio to the number of normal students.

Table 18 shows the distribution of normal students not in the regular public and private normal schools. Table 19 shows the distribution of the 94,157 students in training courses for teachers in all institutions in 1900–1901.

TABLE 1.—*Summary of statistics of public normal schools in 1900–1901.*

CHAPTER XXXIX.

STATISTICS OF SECONDARY SCHOOLS.

More than 22 per cent of the total population of the United States was in school for some portion of the year ending June, 1901. The total enrollment in the schools and colleges was 17,299,230. The enrollment in elementary grades was 16,323,393, in secondary or high school grades 736,000, and in all grades of higher instruction 239,837. It will be seen that the 736,000 secondary students comprised 4.25 per cent of the entire school enrollment of the country. These were distributed among eight classes of institutions, as follows:

Institutions.	Male.	Female.	Total.
Public high schools	224,584	317,146	541,730
Public normal schools	2,749	4,404	7,153
Public universities and colleges	7,287	2,570	9,857
Private high schools	53,813	54,408	108,221
Private normal schools	4,408	2,809	7,217
Private universities and colleges	30,016	14,785	44,801
Private colleges for women	.....	5,614	5,614
Manual training schools	6,818	4,589	11,407
Total	329,675	406,325	736,000

The aggregate number of secondary students increased from 719,241 in 1899–1900 to 736,000 in 1900–1901, or 2.33 per cent increase in one year. The increase in secondary students in public schools was 28,315, or 5.34 per cent, while there was a decrease of 11,556 in the number of secondary students in private schools, or a falling off of 6.12 per cent. This decrease in private school attendance was nearly 13 per cent in the South Central and North Central Divisions and over 7 per cent in the Western Division. These figures are shown in the following table:

Students receiving secondary instruction in public and private high schools and academies and in preparatory departments of colleges and other institutions.

	1899–1900.			1900–1901.			Per cent of increase.		
	Public.	Private.	Total.	Public.	Private.	Total.	Public.	Private.	Total.
United States	530,425	188,816	719,241	558,740	177,260	736,000	5.34	a 6.12	2.33
North Atlantic Division	171,460	54,823	226,283	178,322	55,930	234,252	4.00	2.02	3.52
South Atlantic Division	28,708	28,327	57,035	30,569	28,346	58,915	6.48	0.07	3.30
South Central Division	41,228	37,400	78,628	44,886	32,643	77,529	8.87	a 12.72	a 1.40

a Decrease.

In the last ten years the rate of increase of secondary students has been more rapid than the rate of increase in population. The number of secondary students in private institutions has about kept pace with the growth of population from year to year, while the number of such students in public institutions has increased from about 3,500 to the million in 1891 to about 7,200 to the million in 1901. In 1891 the total number of secondary students was about 5,800 to the million, while the number in 1901 was about 9,500 to the million of population. These figures are verified in the following table:

Secondary students and per cent of population.

Year.	In public institutions.		In private institutions.		In both classes.	
	Secondary students.	Per cent of population.	Secondary students.	Per cent of population.	Secondary students.	Per cent of population.
1889-90	221,522	0.36	145,481	0.23	367,003	0.59
1890-91	222,868	.35	147,567	.23	370,435	.58
1891-92	247,660	.38	154,429	.24	402,089	.62
1892-93	256,628	.39	153,792	.23	410,420	.62
1893-94	302,006	.45	178,352	.26	480,358	.71
1894-95	361,370	.53	178,342	.26	539,712	.79
1895-96	392,729	.56	166,274	.23	559,003	.79

1897-98	459,813	.63	166,302	.23	626,115	.86
1898-99	488,549	.66	166,678	.23	655,227	.89
1899-1900	530,425	.70	188,816	.25	719,241	.95
1900-1901	558,740	.72	177,260	.23	736,000	.95

This chapter is devoted almost exclusively to the statistics of the 6,318 public high schools and the 1,892 private high schools, academies, and seminaries reporting directly to this Bureau for the scholastic year 1900–1901. It has been found impracticable to collect complete statistics of secondary students in the preparatory departments of colleges and other institutions, such as the number of students pursuing certain studies, the number graduated or promoted, and many other details. The following table will show the remarkable growth of public and private high schools since 1889–90:

Public and private high schools since 1889–90.

Year reported.	Public.			Private.			Total.		
	Schools.	Teachers.	Students.	Schools.	Teachers.	Students.	Schools.	Teachers.	Students.
1889-90	2,526	9,120	202,963	1,632	7,209	94,931	4,158	16,329	297,894

1892-93	3,218	10,141	254,023	1,575	7,199	102,375	4,793	17,340	356,398
1893-94	3,964	12,120	289,274	1,982	8,009	118,645	5,946	20,129	407,919
1894-95	4,712	14,122	350,099	2,180	8,559	118,347	6,892	22,681	468,446
1895-96	4,974	15,700	380,493	2,106	8,752	106,654	7,080	24,452	487,147
1896-97	5,109	16,809	409,433	2,100	9,574	107,633	7,209	26,383	517,066
1897-98	5,315	17,941	449,600	1,990	9,357	105,225	7,305	27,298	554,825
1898-99	5,495	18,718	476,227	1,957	9,410	103,838	7,452	28,128	580,065
1899-1900	6,005	20,372	519,251	1,978	10,117	110,797	7,983	30,489	630,048
1900-1901	6,318	21,778	541,730	1,892	9,775	108,221	8,210	31,553	649,951

The above table shows that in 1889–90 there were 2,526 public high schools, with 202,963 students, while in 1900–1901 the number of schools had increased to 6,318, and the number of students to 541,730. This was an increase of 150 per cent in the number of schools and 167 per cent in the number of students. The number of private high schools increased from 1,632 in 1889–90 to 2,180 in 1894–95. Since that year the number has decreased to 1,892 in 1900–1901. The relative progress of public and private high schools since 1889–90 is shown in the following table:

Relative progress of public and private high schools in eleven years.

Year reported.	Per cent of number of schools.		Per cent of number of teachers.		Per cent of number of students.	
	Public.	Private.	Public.	Private.	Public.	Private.

Public High Schools.

The summarized statistics of the 6,318 public high schools reporting to this office for the scholastic year 1900–1901, are given in Tables 1 to 15 in this chapter, while the detailed information concerning each school is given in Table 43.

Table 1 shows that the public high schools had 21,778 teachers instructing secondary students, 10,786 men and 10,992 women. There was a total of 541,730 secondary students in these schools, 224,584 males and 317,146 females. There were 129,365 pupils in the elementary grades.

Students and courses of study.

As shown in Table 2 there were 33,164 public high school students preparing for the college classical course and 27,263 preparing for college scientific courses. The number of graduates for the year ending June, 1901, was 65,696, and 20,540 of these were reported as college preparatory students. Of the total number of high-school students 9,632 were in military drill.

Tables 3 to 11, inclusive, show the number of students in each State in each of the leading high-school studies. The table which follows is a synopsis of the summaries exhibited in Tables 2 to 11. The per cent of male students preparing for college was 13.78, and the per cent of female students 9.30. Over 10 per cent of the male students and over 13 per cent of the female students graduated in 1901. About 40 per cent of the male graduates and about 26 per cent of the female graduates were preparing for college.

Students in certain courses and studies in public high schools.

Courses, studies, etc.	Number of students.	Per cent of total number.	Male students.	Per cent of total number of male students.	Female students.	Per cent of total number of female students.

[a] Per cent of total number of graduates.

HIGH SCHOOLS IN THE LARGE CITIES.

For the first time this office has tabulated separately the statistics of public high schools in the 50 largest cities of the United States. In these cities there were 146 public high schools with 109,029 secondary students, 43,686 males and 65,343 females. The object was to ascertain to what extent certain high-school studies were pursued in these cities, and to compare the statistics with those of the public high schools outside of the fifty cities. The high-school principals in making their reports men-

tioned about thirty different studies. Table 42 shows the number of students in each of the 146 schools in each of 24 of these studies. A summary of that table, giving also certain statistics not shown there, appears below:

Number and per cent of students in certain studies in 146 public high schools in the 50 largest cities in the United States in 1900–1901.

	Male.	Per cent.	Female.	Per cent.	Total.	Per cent.

The table which follows may be compared with the preceding. The per cent of students in Latin is about the same in the large cities and outside of them. The same may be said of physics. In the cities named a larger proportion of the students are in French, German, geometry, chemistry, rhetoric, English literature, and history, than are found in the same studies outside these cities. On the other hand, outside these cities the proportion of students in algebra, physical geography, physiology, and civil government is greater.

Number and per cent of students in certain studies in public high schools outside of the fifty largest cities in the United States in 1900–1901.

Tables 12, 13, and 14 are arranged for the purpose of comparing the statistics of public high schools in cities of 8,000 population and over with schools outside of such cities. In the 570 cities of the size indicated there were 725 public high schools, with 8,493 instructors and 246,473 students. Outside of these cities there were 5,593 public high schools, with 13,285 instructors and 295,257 students. In the cities the high schools had an average of 340 students to a school, while the average outside of the cities was 53 students to a school.

EQUIPMENT AND INCOME.

So far as the items could be obtained by this office, Table 15 shows the equipment and income of the public high schools in each State. Of the 6,318 schools 5,211 reported libraries aggregating 3,044,585 volumes, and 4,923 schools had grounds, buildings, scientific apparatus, etc., valued at $101,026,453. Owing to the fact that in most cases separate accounts are not kept of the proportion of public appropriations used by the high schools, only 2,056 of these schools were able to report the amounts of State or municipal funds received. The aggregate of these amounts was $5,943,250. Tuition fees to the amount of $507,982 were received by 1,611 schools; 202 received $167,724 from productive funds, and 666 received $914,690 from sources reported as unclassified. Nearly all of the latter items should be credited to State, county, or city appropriations The aggregate income of 2,194 schools was $7,533,646.

Private High Schools and Academies.

The statistics of private high schools, academies, and seminaries are summarized in Tables 16 to 29. Tables 16 to 26 are similar in form to Tables 1 to 11, relating to public high schools, and the two series may be compared. Tables 27 and 15 may also be compared. Table 30 is a comparison of certain averages computed for public and private high schools.

Tables 16 and 17 show that there were 1,892 private secondary schools, with 9,775 secondary instructors and 108,221 secondary students, 20,776 of whom were preparing for the college classical course and 15,270 for college scientific courses. There were 11,961 graduates, 5,463 of whom were reported as prepared for college. There were 9,038 in military drill.

STUDENTS AND COURSES OF STUDY.

The number of students in each of 18 high-school studies in each State will be found in Tables 18 to 23, while the percentages of students in these studies are shown in Tables 24 to 26. The following table gives a synopsis of the number and per cent of students, by sex, in college preparatory courses, and in the leading high school studies in private secondary schools in 1900–1901:

Students in certain courses and studies in private high schools and academies.

Courses, studies, etc.	Number of students.	Per cent of total number.	Male students.	Per cent of total number of male students.	Female students.	Per cent of total number of female students.
Students preparing for college:

Civics	20,279	18.73	9,499	17.65	10,780	19.81

The above table may be compared with a similar table on a preceding page relating to public high schools. It is shown that over 33 per cent of the private high school students were preparing for college, while only about 11 per cent of the public high school students were making such preparation.

The progress made by the private high schools and academies in the past ten years, as indicated in the increased percentages of students in certain studies and courses, may be shown in the following table:

Per cent of total number secondary students in private high schools and academies in certain courses and studies.

Students and studies.	1890–91	1891–92	1892–93	1893–94	1894–95	1895–96	1896–97	1897–98	1898–99	1899–1900	1900–1901

a Per cent of number of graduates.

EQUIPMENT AND INCOME.

The equipment, income, benefactions, value of endowment, etc., of private secondary schools are exhibits made in Table 27. The number of volumes in the libraries of 1,342 schools was 1,813,443. The value of grounds, buildings, scientific apparatus, etc., owned by 1,299 schools was $54,300,917. Tuition fees aggregating $6,008,778 were received by 1,139 schools, and 275 schools received $1,509,265 from productive funds. From public funds 227 schools received $136,926. Income from other sources and unclassified received by 422 schools amounted to $1,212,826. The aggregate income of 1,187 schools was $1,867,795. During the year 166 schools received benefactions amounting to $1,206,294. The money value of endowment reported by 240 schools aggregates $14,632,800.

DENOMINATIONAL SCHOOLS.

Only 918 of the 1,892 private secondary schools are controlled by religious denominations. In Table 44, which gives in detail the statistics of private secondary schools, the name of the religious denomination controlling each school is given in column 4. Tables 28 and 29 show the number of schools in each State controlled by each denomination. The following synopsis is made from these tables:

Religious denomination and nonsectarian.	Schools.	Instructors.	Students.
Nonsectarian	974	4,844	54,041
Roman Catholic	361	1,912	17,171
Baptist	89	448	6,455
Methodist	67	364	5,384

Episcopal	88	664	4,882
Methodist Episcopal South	38	169	3,202
Congregational	45	225	2,792
Friends	53	291	2,709
Lutheran	31	146	1,726
Other denominations	54	316	4,974
Total	1,892	9,775	108,221

COMBINED STATISTICS.

Tables 31 to 38 combine the statistical summaries of public and private secondary schools. Table 30 presents a comparison of certain statistics. It is shown that in the public high schools there were about 86 secondary students to a school and 25 students to a teacher, while in the private schools there were 57 secondary students to a school and 11 to a teacher. Table 31 shows that the 8,210 public and private secondary schools had 31,553 secondary teachers and 649,951 secondary students. Over 57 per cent, or 371,554 of these students were females. The number of students preparing for college was 96,473, or nearly 15 per cent of the total secondary enrollment. The graduates for 1901 numbered 77,657, or nearly 12 per cent of the number enrolled for the year. The number of graduates who had prepared for college numbered 26,003 or more than one-third of the total number of graduates.

Tables 33 to 38 give the number and per cent of students in each of the 18 leading high-school studies in each State. The following synopsis shows the number of male and female students in certain courses and studies for the United States for 1900-1901:

Students in certain courses and studies in public and private high schools and academies.

Courses, studies, etc.	Number of students.	Per cent of total number of secondary students.	Male students.	Per cent of total number of male students.	Female students.	Per cent of total number of female students.
Students preparing for college:						
Classical course	53,940	8.30	28,137	10.11	25,803	6.94
Scientific courses	42,533	6.54	25,570	9.18	16,963	4.57
Total preparing for college	96,473	14.84	53,707	19.29	42,766	11.51

Students in certain courses and studies in public and private high schools and academies—Continued.

Civics	133,875	20.60	57,863	20.78	76,012	20.46

a Per cent of total number of graduates.

In 1889–90 there were 100,152 students in public and private high schools studying Latin. This was 33.62 per cent of the total secondary enrollment. In 1900–1901 the number had increased to 324,497, or almost 50 per cent of the total number of secondary students in these schools. Since 1890 the number of secondary students in algebra has increased from 42.77 per cent to 55.66 per cent in 1901. The following synopsis will show the increase year by year in the percentage of students in certain leading high-school studies since 1891:

Per cent of the total number of secondary students in public and private high schools and academies in certain courses and studies, etc.

Students and studies.	1890–91	1891–92	1892–93	1893–94	1894–95	1895–96	1896–97	1897–98	1898–99	1899–1900.	1900–1901.

Distribution of Secondary Students.

The distribution of secondary students enrolled in 1900-1901 in the eight classes of institutions mentioned on the first page of this chapter is shown in Tables 39 and 40, where the statistics are summarized by States.

Table 41 shows that the number of secondary students to each 1,000 of population in the United States was 9.53. The same table shows that the number in higher education was 239,837, or 3.10 to the 1,000 of population. This number includes all students who in 1900-1901 were receiving higher instruction in universities and colleges, all professional students, including those in theology, medicine, law, dentistry, pharmacy, and veterinary medicine, and all in training courses for teachers in normal schools. Students in nurse-training schools and business schools are not here included as in either secondary or higher instruction.

Table 42 gives statistics of studies in the public high schools of the 50 largest cities. Tables 43 and 44 give in detail the statistics of the 8,210 public and private high schools reporting to this Bureau in 1900-1901. Table 45 shows the number of public and private high schools for boys only, for girls only, and the number of coeducational secondary schools in each State.

Establishment of High Schools.

A recent inquiry sent to the superintendents of public instruction in 160 of the largest cities, those having over 25,000 population, asking for the date of first opening of a public high school, brought 142 responses. Of the 142 cities reporting it appears that 28 had public high schools before the end of the year 1850, in 41 cities such schools were established from 1851 to 1860, inclusive, in 32 cities public high schools were established from 1861 to 1870, inclusive, and subsequent to 1870 such schools have been established in the 41 remaining cities named.

In addition to the inquiry as to the date of first opening of a public high school the superintendent was asked to give the date of establishment of a regular two to four years course in the high school, also the date when the high school began to receive pupils by promotion upon completion of the elementary course of six to eight years, or upon successful examination in the studies of the six to eight years elementary course.

Replies to the three inquiries are tabulated in the following table:

City.	Population of city in 1900.	Date of first opening of a public high school.	Date of establishment of a regular two to four year course in the high school.	Date when high school began to receive pupils by promotion upon completion of six to eight year elementary course.

CHAPTER XL.

MANUAL AND INDUSTRIAL TRAINING.

References to recent Reports of the United States Commissioner of Education, in which this subject has been treated or statistics published: Annual Report for 1888–89, pages 411–428, 1362–1367; 1889–1890, pages 1148, 1209–1212, 1351–1356; 1891–92, page 1197; 1892–93, pages 186, 188, 560–575; 1893–94, pages 877–949, 2093–2169; 1894–95, page 2170; 1895–96, pages 989–992, 1001–1152, 1321–1329, 1510–1521 (column 8); 1896–97, pages 193–197, 699–703, 2211–2222 (column 8), 2279–2294; 1897–98, pages 141, 194, 723, 2370–2382 (column 8), 2419–2440; 1898–99, pages 26, 83, 179–189, 208–209, 853–863, 1355–1361, 1442, 1448, 1525–1536 (column 8), 2139–2162; 1899–1900, pages 329, 875, 1811–1821 (column 8), 2437–2467, 2505.

The number of schools devoted chiefly to manual and industrial training reporting to this office for the scholastic year ending June, 1901, was 153, an increase of 9 schools over the preceding year. The number of different pupils in these schools receiving manual or industrial training was 48,028, an increase of 6,292. The expenditures of these schools for the pay of teachers, for materials, for new tools and repairs, and for incidentals, amounted to $823,064, an increase of $56,943 over the preceding year. These items are given in detail, by States, in Table 3 of this chapter.

Included in the list of manual training schools are 35 schools for the industrial training of Indian children. The 153 schools had 1,698 teachers of manual training—940 men and 758 women. The number of boys receiving training was 30,293, and the number of girls 17,735.

Table 4 gives in detail the statistics of the 118 manual and industrial training schools other than the Indian schools. In these 118 schools there were employed 1,340 teachers—774 men and 566 women. In the same schools there were 41,059 pupils—26,239 boys and 14,820 girls.

The statistics of the 35 Indian schools are given in Table 5. There were 358 teachers employed in these schools—166 men and 192 women. The number of pupils was 6,969, the number of boys being 4,054 and girls 2,915.

The branches of manual training, or the trades taught, and the number of pupils in each branch, so far as reported for the individual schools mentioned in Tables 4 and 5, are shown in Table 6.

It has been found impracticable to ascertain each year the number of pupils receiving manual or industrial training in schools not chiefly devoted to such training. Statistics of this character were collected in 1893–94 and printed in the Report of this Bureau for that year, pages 2093–2169.

A reference to chapter 42 of the present volume will show that most of the schools for the negroes offer manual and industrial training. Statistics of manual training in reform schools are given in chapter 43, and similar statistics for schools for the defective classes in chapter 44.

Table 1 shows the number of cities of 8,000 population and over in whose public schools manual training has been given since 1890. In that year it was given in 37 cities, in 1894 in 95 cities, in 1896 in 121 cities, in 1898 in 146 cities, in 1900 in 169

cities, and in 1901 in 232 cities. Table 2 gives a list of the 232 cities in whose public schools manual training (other than drawing) was given in 1900–1901, and indicates the grades in each city system in which such instruction was given.

Special Schools of Arts and Sciences.

It was the intention to include in the list of 118 institutions given in Table 4 only those which could be properly classed as manual or industrial training schools, but this plan could not be strictly followed. In many instances the statistics of but one department of the school could be given. Other schools were omitted from the list. Schools of science and technology of collegiate grade are mentioned under the head of "Higher education" in chapter 35. Other special schools are mentioned below.

Alabama Girls' Industrial School, Montevallo, Ala.—This is a State institution for white girls. In the language of the legislative act the school "is established for the purpose of giving therein instruction in the liberal arts and sciences; English language and literature, the science and art of teaching as a profession; music, drawing, painting, decorative art, botany, horticulture, floriculture, scientific dairying, cooking, sewing, dressmaking, millinery, bookkeeping, stenography, typewriting, telegraphy, and any and every other branch of human knowledge or industry by which women may live."

Cogswell Polytechnic College, San Francisco, Cal.—This school offers the following courses, of three years each: Mechanic arts, drafting, steam engineering, surveying, domestic science, art. There is a one-year commercial course.

Bliss Electrical School, Washington, D. C., offers a course in electrical engineering, including mechanical drawing.

Bradley Polytechnic Institute, Peoria, Ill., has as many as 10 departments, including those of chemistry, domestic economy, manual arts, physics.

Simmons College, Boston, Mass., was established by the will of the late John Simmons "as an institution in which instruction in such branches of art, science, and industry might be given as would best enable women to earn an independent livelihood." The courses offered for the year of opening (1902–3) include 4 courses in household economies, 3 secretarial courses, 2 library courses, and 5 scientific courses.

Lowell Textile School, Lowell, Mass.—This school has four regular courses of three years each, as follows: Cotton-manufacturing course, wool-manufacturing course, general course in designing, course in chemistry and dyeing.

Pratt Institute, Brooklyn, N. Y.—Besides the regular high-school department, this school has the following departments: Fine arts, domestic art, domestic science, science and technology, kindergarten, library.

The Brooklyn Institute of Arts and Sciences, Brooklyn, N. Y., has departments of archæology, architecture, astronomy, botany, chemistry, domestic sciences, electricity, engineering, entomology, fine arts, geography, geology, law, mathematics, microscopy, mineralogy, music, painting, pedagogy, philology, photography, physics, political science, psychology, zoology.

Ethical Culture Schools, New York, N. Y.—Throughout the entire course of eight years in the elementary school periods are given to manual work and art. In the high school the work in art is continued, but manual training is an elective study.

Hebrew Technical Institute, New York, N. Y., offers a course of study extending over three years, including the common branches and algebra, geometry, physics, chemistry, electrical and steam engineering, wood and metal working.

New York Trade School, New York City, has courses of instruction in drawing, electrical work, house, sign, and fresco painting, blacksmithing, bricklaying, plastering, carpentry, printing, steam and hot-water fitting, sheet-metal work, and plumbing.

School of Industrial Art and Technical Design for Women, New York, N. Y.—This school offers, besides courses in free-hand and mechanical drawing, instruction and

practice in designs for stained glass, carving, lace, oilcloth, book covers, wall papers, furniture coverings, draperies, tapestries, carpets, rugs, furniture, mantels, hangings, staircases, lamps, ornaments of all kinds.

Rochester Athenæum and Mechanics' Institute, Rochester, N. Y., has three well organized and equipped departments with several three-year courses in each. The departments are industrial and fine arts, manual training, domestic science and art.

The Ohio Mechanics' Institute, Cincinnati, Ohio, "is a technical school in which certain branches, demanded by local industries, are made prominent." At present there are courses of instruction in mechanical drawing and engineering, architectural drawing and engineering, free-hand drawing and general designing, painting in oil and water colors, also mineral colors; chemistry, physics, and electricity; mathematics, modern languages, general instruction.

The School of Industrial Art of the Pennsylvania Museum, Philadelphia, Pa., has now in operation ten schools or courses, as follows: Drawing, applied design, normal instruction, textile design and manufacture, wood working and carving, decorative painting, illustration, decorative sculpture, architectural design, modern languages.

Drexel Institute of Art, Science, and Industry, Philadelphia, Pa., has no fewer than a dozen departments, with several courses in each. The leading departments are mentioned under fine and applied arts, mechanic arts, electrical engineering, commerce and finance, science, technology, domestic science, domestic arts, normal training, library training, English language and literature, physical training.

Girard College, Philadelphia, Pa.—The courses of instruction cover the common branches, French, Spanish, mathematics, manual training, electrical mechanics, plumbing and gas fitting, carpentry, blacksmithing, foundry work, metal work, special training for the trades, military drill.

Pittsburg School of Design for Women, Pittsburg, Pa.—Instruction is given in all branches of drawing and painting, with special reference to their application in the fine and applied arts. Sculpture and architecture are made prominent.

The Rhode Island School of Design, Providence, R. I.—In the free-hand department instruction is given in drawing, painting, modeling, wood carving, decorative design, sculpture. The mechanical department has courses in mechanics, engineering, mathematics, architecture.

Annapolis	4, 5, 6, 7, 8, 9, and 10.
Baltimore	Primary and high school.
MASSACHUSETTS.	
Arlington	7, 8, 9, and 10.
Barnstable	8 and 9.
Boston	Grammar grades.
Bridgewater	7, 8, and 9.
Brockton	High school.
Brookline	All.
Cambridge	Grammar and high school.
Concord	6, 7, 8, 9, and 10.
Dedham	7, 8, 9, and high school.
Easton	5, 6, 7, 8, and 9.
Everett	5, 6, 7, 8.
Fall River	High school.
Fitchburg	9, 10, 11, and 12.
Framingham	State Normal School.
Gardner	High school.
Greenfield	11 and 12.
Haverhill	Grammar, 5, 6, 7, 8, and 9; high school, 10, 11, 12, and 13.
Holyoke	High school.
Hudson	Primary.
Lawrence	High school.
Lowell	10, 11, 12, and 13.
Lynn	8, grammar and English high school.
Malden	Grammar and high school.
Medford	5, 6, 7, 8, 9, 10, and 11.
Milton	4, 5, 6, 7, 8, 9, and high school.
Natick	6, 7, 8, and 9.
New Bedford	7, 8, and 9 (sloyd).
Newton	8 and 9.
North Adams	8 and 9.
Northampton	5, 6, and 7.
Quincy	5, 6, 7, 8, 9, 10, 11, and 12.
Reading	7 and 8.
Rockland	Primary.
Salem	Grammar.
Somerville	High school.
Springfield	6, 7, 8, and 9 of grammar schools; also high school.
Wakefield	7, 8, and 9.
Waltham	6, 7, 8, 9, 10, 11, 12, and 13.
Watertown	7 and 8.
Whitman	1, 2, 3, 4, 5, 6, 7, 8, and 9.
Winchester	3, 4, 5, 6, 7, and 8.
Woburn	1, 2, 3, and 4.
Worcester	9, and first two years of high school.
MICHIGAN.	
Ann Arbor	4, 5, 6, 7, 8, and 9.
Bay City	6, 7, 8, 9, 10.
Detroit	4, 5, 6, 7, and 8.
Flint	7, 8, and 9.
Grand Rapids	5, 6, 7, and 8.
Ishpeming	5, 6, 7 and 8, high school.
Kalamazoo	5, 6, 7, 8, 9, 10, 11, and 12.
Menominee	6, 7, 8, 9, 10, 11, and 12.
Muskegon	3, 4, 5, 6, 7, 8, 9, 10, 11, 12, and 13.
Saginaw (East)	5, 6, 7, and 8.
Ypsilanti	1, 2, 3, 4, 5, 6, 7, and 8.
MINNESOTA.	
Duluth	High school.
Mankato	High school and grammar.
Minneapolis	High school.
St. Cloud	5, 6, and 7.
St. Paul	High school.
Stillwater	9.
MISSISSIPPI.	
Greenville	In all (sloyd).
Meridian	Primary.

Montclair	1, 2, 3, 4, 5, 6, 7, 8, and 9.
Newark	5, 6, 7, 8, and high school.
North Plainfield	5, 6, 7, 8, 9, 10, 11, and 12.
Orange	All.
Passaic	3, 4, 5, 6, 7, and 8.
Paterson	7, 8, and high school.
Phillipsburg	2, 3, 4, 5, and 6.
Redbank	6, 7, 8, 9, and 10.
South Orange	4, 5, 6, 7, 8, 9, 10, 11, and 12.
Summit	1, 2, 3, 4, 5, 6, 7, 8, and 9.
Union	3 years through the high school.
Vineland	6, 7, 8, 9, 10, 11, and 12.
West Orange	1, 2, 3, 4, 5, 6, 7, 8, and 9.

TABLE 2.—*Cities in which manual training (other than drawing) was given in the public schools in 1900–1901*—Continued.

Cities.	Grades in which manual training was given.
NEW YORK.	
Albany	High school.
Binghamton	9, 10, 11, and 12.
Buffalo	5, 6, 7, 8, and 9.
Cohoes	3, 4, 5, 6, 7, 8, and 9.
Corning	Primary.
Herkimer	Do.
Ithaca	6, 7, and 8.
Jamestown	All.
Newburg	3, 4, 5, 6, 7, 8, 9, 10, and 11.
New York	High, elementary, and truant.
Niagara Falls	5, 6, and 7.
Plattsburg	All.
Port Chester	Primary and intermediate.
Rochester	4, 5, 6, 7, and 8 of one school only.
Syracuse	Primary, grammar, and high.
Utica	5, 6, 7, 8, and 9.
Whitehall	High school.
White Plains	8.
Yonkers	5, 6, 7, 8, 9, and high school.
NORTH CAROLINA.	
Asheville	3 and 4.
Durham	6, 7, 8, 9, and 10.
OHIO.	
Akron	5, 6, 7, 8, 9, 10, and 11.
Cleveland	All.
Dayton	7 and 8.
Elyria	5, 6, and 7.
Toledo	5, 6, 7, and 8.
OKLAHOMA.	
Guthrie	High school.
PENNSYLVANIA.	
Allegheny	Grammar.
Archbald	Primary and intermediate.
Conshohocken	All above primary.
Harrisburg	High school.
Homestead	6, 7, 8, 9, and 10.
Johnstown	Grammar and high school.
Norristown	7, through high school.
Philadelphia	High school.
Pittsburg	Grammar school.
West Chester	9, 10, 11, and 12.
Wilkesbarre	High school.
RHODE ISLAND.	
Newport	6, 7, 8, 9, 10, 11, and 12.
Providence	High school.
Woonsocket	7, 8, and 9.
SOUTH CAROLINA.	
Sumter	6 and 7.
SOUTH DAKOTA.	
Sioux Falls	All.
TENNESSEE.	
Jackson	4, 5, 6, and 7.
Nashville	7 and 8.
TEXAS.	
Austin	9, 10, and 11.
Houston	1, 2, 3, 4, 5, 6, and 7.
Palestine	Primary.
San Antonio	4, 5, 6, and 7.
UTAH.	
Ogden	1, 2, 3, and 4.
VERMONT.	
St. Johnsbury	6 and 7.
VIRGINIA.	
Lynchburg	Grammar.
Petersburg	High school.
Staunton	6, 7, 8, 9, and 10.
WASHINGTON.	
Seattle	High school.
WISCONSIN.	
Appleton	8 and high school.
Ashland	Primary.
Beaver Dam	1, 2, 3, 4, 5, and 6.
Chippewa Falls	Primary.
Eau Claire	6, 7, and 8.
Fond du Lac	9, 10, and 11.
Grand Rapids	1, 2, and 3.
Janesville	8 and high school.
Menominee	All.
Milwaukee	6, 7, and 8, two high schools.
Oshkosh	5, 6, 7, 8, 9, and 10.
Portage	High school.
Superior	6, 7, 8, and high school.

TABLE 3.—*Summary of statistics of manual and industrial training schools in the United States in 1900–1901.*

State or Territory.	Number of schools.	Different teachers of manual and industrial training.			Different pupils who received manual and industrial training.			Expenditure for manual and industrial training during 1900–1901 for 153 schools.				
		Male.	Female.	Total.	Male.	Female.	Total.	For teachers.	For materials.	For new tools and repairs.	For incidentals.	Total.

CHAPTER XLI.

COMMERCIAL AND BUSINESS SCHOOLS.

Commercial and business branches were taught in 5,040 schools of various grades in the United States in the scholastic year 1900–1901. In these institutions there were 226,433 students pursuing such studies, 129,866 males and 96,567 females. There was an increase over the preceding year of 647 schools offering instruction in business branches, and an increase of 35,745 students in these studies. Those studying bookkeeping were classed as business students.

The following table is an exhibit of the number of students reported in business studies for each year from 1889–90 to 1900–1901:

Students pursuing commercial studies.

Scholastic year.	In institutions not distinctly business schools.					In commercial and business schools.	Aggregate of students in commercial studies.
	Universities and colleges.	Normal schools.	Private high schools and academies.	Public high schools.	Total.		
1889–90					24,994	78,920	103,914
1890–91					36,564	81,898	118,462
1891–92					27,254	77,856	105,110
1892–93					30,892	99,654	130,546
1893–94	7,300	7,771	4,466	15,220	34,757	115,748	150,505
1894–95	4,577	5,293	8,819	25,539	44,228	96,135	140,363
1895–96	5,678	5,375	9,889	30,330	51,272	80,662	131,934
1896–97	5,056	6,297	11,574	33,075	56,002	77,746	133,748
1897–98	5,869	5,721	9,740	31,633	52,963	70,950	123,913
1898–99	6,463	6,126	10,609	38,134	61,332	70,186	131,518
1899–1900	7,953	6,657	15,649	68,890	99,149	91,549	190,698
1900–1901	8,610	7,099	16,281	84,412	116,402	110,031	226,433

Table 1 gives the number of institutions of all grades in each State and Territory in which business studies were taught in 1900–1901, and the number of students in such branches.

Table 2 shows the number of normal schools and the number of universities and colleges teaching business branches, and the number of students in such studies in each State and Territory. Table 3 gives like information concerning public and private high schools and academies.

Tables 4, 5, and 6 summarize the statistics of the 407 business and commercial schools reporting to this office for the year 1900–1901. These schools had 2,434 teachers and an enrollment of 110,031 students. The number of students in the day schools was 81,694, and in evening classes alone 20,470, while apparently 7,867 had studies in both day and evening classes. The 407 schools had 12,415 graduates from commercial courses and 12,354 from amanuensis courses. There were 68,280 students in commercial courses, 39,070 in amanuensis courses, 17,151 in English

courses, and 1,974 in telegraphy. Several thousand pursued two courses at the same time.

Table 7 gives in detail the statistics of the 407 commercial and business schools.

Chapter XXV of the present Report gives synopses of commercial courses of higher grade offered by a number of institutions. See pages 1137–82.

Special report, New Orleans Exposition, 1884–85, pp. 468–470, 775–781.

The total expenditure for the public schools of the South (the 16 former slave States and the District of Columbia) for the scholastic year 1900–1901 was $35,405,561. It is estimated that about 17 per cent of this sum, or about $6,000,000, was expended in support of the negro public schools. Table 1 below shows the expenditure for both races for each year since 1870–71, the aggregate for the thirty-one years being $650,026,877. During the first part of the period the colored schools did not receive as large a share as 17 per cent of the whole, but it is estimated that the South has expended for the education of the colored race in the public schools about $121,000,000. It is impossible to obtain an accurate statement as to the amounts separately expended for the education of the negroes, for the reason that in 11 of the Southern States separate accounts are not kept. In Maryland the expenditure for negro schools is known for each of the thirty-one years. In North Carolina separate accounts have been kept since 1873, in the District of Columbia since 1875, in Kentucky from 1880 to 1897, in Texas since 1892, in Florida since 1893, and in South Carolina since 1895. These statistics are given in the introduction to Vol. 1 of this Report.

a Subject to correction.

The estimated number of children in the South between 5 and 18 years of age for the scholastic year 1900–1901 was 8,698,888. Of this number 5,964,665, or 68.57 per cent, were white and 2,734,223, or 31.43 per cent, were colored, as shown in the first part of Table 2. The same table shows that the enrollment in the white public schools was 4,268,877, or 71.57 per cent of the white school population, while the enrollment in the colored public schools was 1,564,526, or 57.22 per cent of the colored school population. The average daily attendance in the white schools was 2,812,758, or 65.89 per cent of the white enrollment, and the average daily attendance in the negro schools was 977,192, or 62.46 per cent of the colored enrollment.

PUBLIC HIGH SCHOOLS.

Public high schools for negroes now number 100, an increase of 8 over the preceding year, 94 of these schools being in the South. Tables 3 to 6 summarize the statistics of the 100 schools mentioned. The statistics of the 94 schools in the South are also included in Table 2, which gives the enrollment and attendance in the common schools. For the 100 public high schools for negroes there were 326 teachers in 1900–1901, an increase of 54 over the preceding year. These schools had a total enrollment of 12,202, an increase of 3,754. The enrollment in the elementary grades connected with these high schools was 6,633, or more than half the total enrollment. The total number of secondary students was 5,569, an increase of only 337. In the high school grades there were 1,151 students in the classical course, an increase of 68; in the scientific courses 1,608, an increase of 305; in the English course 2,107, a decrease of 681; in the business course 249, an increase of 149; in the normal course 286, an increase of 80. The number receiving manual or industrial training was 1,259, an increase of 659. The number of graduates from the high school departments was 678, an increase of 32 over the preceding year.

An incomplete financial summary of the public high schools for negroes is given in Table 6. In most cases separate accounts for high schools are not kept. Of the 100 schools, 65 had libraries aggregating 14,780 volumes, valued at $13,740. The value of buildings, grounds, and equipment of 70 schools was $738,141. Only 16 schools reported the amount of State or municipal aid, aggregating $31,604. The sum of $739 was received by 8 schools from tuition fees, and 4 schools received $2,650 from other sources. The aggregate income of 18 schools reporting this item was $34,993. The statistics of the 100 high schools are given in Table 13.

SCHOOLS SUPPORTED FROM PRIVATE SOURCES.

The number of schools of secondary and higher grade for the education of colored students and supported almost entirely from private sources was 138, as reported to this office for the year 1900–1901. This was a decrease of 7 in the number of schools reporting. Of the 138 schools 5 are not in the South. Tables 7 to 12 summarize the statistics of these schools.

The 138 schools had an aggregate enrollment of 39,419, an increase of 1,723. The elementary grades had 22,893 pupils, an increase of 850; the secondary grades 13,547 students, an increase of 280, and the collegiate grades 2,979 students, an increase of 593.

These schools had 1,781 teachers for all the grades, a decrease of 45 from the preceding year.

In the secondary and higher grades, as shown in Table 8, these schools had 1,600 students in the classical course, an increase of 82; in the scientific courses 842, an increase of 185; in English course 9,972, a decrease of 1,434; in business course 402, an increase of 58, and in the normal course 3,776, a decrease of 1,105. The apparent decrease in the number of students in the English and normal courses may be due to the fact that many pupils in the elementary grades were reported the pre-

ceding year as belonging in these courses. They should not be so included until they have passed from the elementary grades.

Table 9 shows that there were 744 graduates from the high-school course, a decrease of 63, and 793 graduates from the normal course, a decrease of 10. The number of graduates from collegiate courses was 247, an increase of 91.

Table 10 shows that there were 1,673 students and graduates in professional courses, a decrease of 78. There were 768 students and 71 graduates in theology, 121 students and 24 graduates in law, 493 students and 39 graduates in medicine, 70 students and 10 graduates in dentistry, 68 students and 7 graduates in pharmacy, 143 students and 27 graduates in nurse training.

In the 138 schools there were 17,138 pupils and students, in all the grades, receiving industrial training, an increase of 1,455 over the preceding year. There were 2,294 in farm and garden work, 2,279 in carpentry, 236 in blacksmithing, 34 in plastering, 131 in painting, 109 in tin or sheet-metal work, 355 in forging, 257 in machine-shop work, 108 in shoemaking, 597 in printing, 9,349 in sewing, 2,930 in cooking, and 4,429 in other trades.

Table 12 is a financial summary. The aggregate income of 114 of the 138 schools was $1,193,384. The amount of State or municipal aid received by 41 schools was $293,129; received from tuition fees by 85 schools, $137,356; received from productive funds by 35 schools, $163,297; received from other sources by 98 schools, $599,602. The value of benefactions or bequests received by 43 schools for the year 1900–1901 was $505,244. The number of volumes in the libraries of 110 schools was 250,524, valued at $238,798. The value of grounds, buildings, furniture, and scientific apparatus of 111 schools was $7,624,520.

Tables 14 and 15 give in detail the statistics of the 138 schools.

CHAPTER XLIII.

STATISTICS OF REFORM SCHOOLS.

There were 92 reform schools in the United States reporting to this office for the year 1900–1901. In these schools 696 teachers were employed in the instruction of 22,131 pupils. Of those under instruction 14,582 were learning useful trades. The reformatories had 25,337 inmates, 20,041 males and 5,296 females. During the year 10,621 youths were committed and 10,308 discharged. Of the number in the institutions 19,184 were white and 3,485 colored, 2,668 not reported as to race. There were 8,955 inmates children of native parents and 5,506 of foreign-born parents, the remainder not reported as to parentage. There were 1,411 inmates who could neither read nor write and 2,128 who could only read when admitted.

The number of assistants caring for inmates, not including those wholly engaged as teachers, was 1,966. The grounds and buildings belonging to the institutions had an aggregate valuation of $18,614,337. During the year the sum of $3,173,702 was expended for support of the reformatories and $499,958 for buildings and improvements. The items mentioned above are given for each State in Tables 1 and 2.

Of the 92 schools 34 were in the North Atlantic Division. These schools had 370 teachers and 8,782 pupils, 5,620 of the latter receiving industrial training. The number of inmates reported was 10,686, of which number 9,202 were males and 1,484 females. The value of grounds and buildings was $8,731,444, on which the expenditure for the year amounted to $135,824. For support of the 34 schools the sum of $1,547,687 was expended.

The South Atlantic Division had 15 reform schools with 65 teachers, 2,148 pupils in school departments and 1,393 in industrial training. Of the 2,308 inmates there were 1,865 males and 443 females. The value of grounds and buildings was $1,456,802, on which was expended for the year the sum of $45,823. The amount expended for the support of the 15 schools was only $113,301.

The South Central Division reported only 7 schools with 30 teachers, 2,091 pupils in school and 1,251 receiving industrial training. The number of inmates was 2,142, of whom 1,427 were males and 715 females. Buildings and grounds were valued at $260,000, on which the sum of $32,719 was expended during the year. The 7 schools expended $140,663 in running expenses.

In the North Central Division there were 29 reform schools with 213 teachers and 8,007 pupils, 5,692 in industrial training. The total number of inmates was 9,049, of whom 6,540 were males and 2,509 females. Buildings and grounds were valued at $7,336,423. The sum of $269,592 was expended during the year for buildings and improvements, and $1,142,327 for running expenses.

The Western Division reported 7 schools with 21 instructors and 1,003 pupils, 626 in industrial training. The total number of inmates was 1,152, of whom 1,007 were males and 145 females. Grounds and buildings were valued at $829,668. Improvements were made at a cost of $16,000. The sum of $229,724 was necessary to the support of the 7 schools.

TABLE 1.—*Summary of statistics of reform schools, 1900–1901.*

CHAPTER XLIV.

SCHOOLS FOR THE DEFECTIVE CLASSES.

This chapter includes statistics of schools for the blind, schools for the deaf, and schools for the feeble-minded reporting to this office for the year 1900–1901.

Schools for the blind.—The total number of schools reporting was 39, with 472 instructors—173 males and 299 females—including 148 in music and 116 in industrial training. The total number of pupils was 4,199, the number of males being 2,222, and females 1,977. In the kindergartens there were 481 pupils; in vocal music, 2,237; in instrumental music, 1,993; and in industrial training, 2,649. There were 160 graduates. The total number of volumes in the libraries was 103,626. The value of scientific instruments was $94,025 and the value of grounds and buildings $6,513,315. The sum of $75,842 was expended for buildings and improvements and $945,060 for support.

Schools for the deaf.—There are represented in this report 118 schools for the deaf, with 1,281 instructors and 11,343 pupils. The 57 State institutions report 1,095 instructors—386 male and 709 female. There were 427 teachers of articulation, 38 in auricular perception, and 333 in the industrial departments. The total number of pupils reported was 10,069, the number of males being 5,560 and the females 4,509. The number taught by the manual method was 2,979, the number by the purely oral method 3,748, and the number by the combined system 4,292. There were 672 pupils in the kindergartens, and the schools reported 299 graduates. The libraries of these institutions contained 102,428 volumes; the value of scientific apparatus was $14,518, and of grounds and buildings $12,381,767. The sum of $280,107 was expended for buildings and improvements, and $1,925,071 for salaries and support.

The 46 public day schools for the deaf had 107 instructors—7 males and 100 females—85 in articulation, 25 in aural development, and 40 in industrial training. Of the 780 pupils 433 were boys and 347 girls. The number taught by the manual method was 24, by the purely oral method 642, and by the combined system 138. There were 37 pupils in the kindergartens. As many of these schools are departments of regular city systems, the cost of maintenance could not be accurately ascertained.

The 15 private institutions for the deaf had 79 teachers—20 males and 59 females—48 being teachers of articulation, 18 of aural development, and 26 in industrial training. There were 494 pupils—213 males and 281 females. The number taught by the manual method was 59, by the purely oral method 151, and by the combined system 264. There were 56 pupils in the kindergartens.

Schools for the feeble-minded.—There were 20 State schools reporting, with 251 teachers—45 males and 206 females—136 being in industrial training. There are 928 assistants caring for inmates. The State schools had 11,149 pupils, 5,949 males and 5,200 females—984 being in the kindergartens. These institutions had buildings and grounds valued at $6,323,372. The sum of $454,222 was expended for buildings and improvements, and $1,603,173 for support.

There were 12 private schools for the feeble-minded, with 55 teachers and 468 pupils—287 boys and 181 girls.

CHAPTER XLV.

INSTRUCTION IN MINING ENGINEERING.

The first school of mines in the United States was established by the board of trustees of Columbia College (now Columbia University), New York City, in December, 1863, but was not put in operation until November 15, 1864. The school of mines owes its origin to the efforts of Mr. Thomas Egleston, a graduate of the École des Mines of Paris, who was made its first professor of mineralogy and metallurgy. The professorship of mining and engineering was filled by the election of Brig. Gen. Francis L. Vinton, also a graduate of the École des Mines of Paris. The course of study as originally adopted extended through three years of six months each, from November 15 to May 15. The school proved very popular, enrolling 48 students during the first session, 97 during the second year, and has continued its popularity to the present day, the number of students enrolled in the mining-engineering course in 1900–1901 being 116.

The inception of the above-mentioned school was quickly followed by the establishment of courses of study in mining engineering in other institutions and the organization of separate State schools of mines. Thus, we find that at the close of the year 1870 courses in mining engineering were offered by 6 institutions, at the close of 1880 by 10 institutions, at the close of 1890 by 17 institutions, and at the close of 1901 by 37 institutions, the number having increased 117.6 per cent during the last eleven years. The names of the institutions offering courses in mining engineering, with the dates when such courses were established, are as follows:

Columbia University	1864
Massachusetts Institute of Technology	1865
Lafayette College	1866
Lehigh University	1866
University of Virginia	1867
University of California	1869
University of the State of Missouri	1871
Colorado School of Mines	1874
Ohio State University	1877
Vanderbilt University	1879
Case School of Applied Science	1881
Alabama Polytechnic Institute	1886
Michigan College of Mines	1886
Nevada State University	1886
University of Alabama	1887
South Dakota School of Mines	1887
West Virginia University	1888
University of Arizona	1891
University of Minnesota	1891
University of Wyoming	1892
Leland Stanford Junior University (California)	1893

New Mexico School of Mines 1893
Pennsylvania State College 1893
Washington Agricultural College 1893
Iowa College of Agriculture and Mechanic Arts 1894
University of Idaho 1895
Harvard University 1895
University of Oregon 1895
Western University of Pennsylvania 1895
University of Utah 1895
University of Kansas ..... (?)1896
University of Washington 1896
University of North Dakota 1898
University of Mississippi 1900
Oregon Agricultural College 1900
University of North Carolina 1901
University of Texas 1901

Of the above-mentioned institutions offering instruction in mining engineering, 15 receive the benefits of the acts of Congress of July 2, 1862, and August 30, 1890, in aid of colleges of agriculture and the mechanic arts; 4 are State schools of mines; 8 are privately endowed institutions, and 10 are State universities not endowed by the land-grant act of July 2, 1862.

The regular courses in mining engineering generally extend through four years. In a few institutions short or special courses in mining or assaying are offered, extending as a rule through two years. These latter courses are very practical in character and are intended chiefly for persons who have already had some experience in mines and can not afford the time to complete a regular course.

The first two years of the regular course are devoted largely to subjects of a general nature that prepare students to take up the purely technical subjects of mining and metallurgy. The courses vary somewhat in the several institutions, but in order to give some idea as to what is usually included in a mining-engineering course the course laid down by the Colorado School of Mines is given in full as follows:

SCHEDULE OF STUDIES.

[The figures indicate the number of hours per week.]

Freshman year.

First term.—Algebra, 5; geometry, 3; general chemistry, 4; descriptive geometry, 2; drawing, 15.

Second term.—Trigonometry, 3; algebra, 5; general chemistry, 4; descriptive geometry, 2; drawing, 6; qualitative analysis, 12.

Sophomore year.

First term.—Calculus, 3; analytical geometry, 2; mineralogy, 5; physics, 4; physical laboratory, 2; mechanism, 1; quantitative analysis, 12; mechanical drawing, 4; chemical analysis (lectures), 1.

Second term.—Calculus, 3; analytical geometry, 2; mineralogy, 10; physics, 4; physical laboratory, 2; volumetric analysis and fire assaying, 8; drawing, 3; mechanism, 1.

Junior year.

First term.—Geology, 4; mechanics, 3; surveying, 3; surveying (field work), 9; metallurgy, 3; machine design, 2; machine design (drawing), 6.

Second term.—Geology, 3; mechanics, 3; metallurgy, 3; surveying, 2; surveying (field work), 9; graphics, 2; graphics (drawing), 3; machine design, 1; machine design (drawing), 3.

Senior year.

First term.—Metallurgy, 4; mining, 5; hydraulics, 5; theory of construction, 2; mining and metallurgical design, 6; hydraulic laboratory, 2; theoretical chemistry, 1; testing laboratory, 2.

Second term.—Metallurgy, 4; mining, 5; power transmission, 5; technical chemistry, 1; steam-engine laboratory, 2.

The instruction in mining is not confined to lectures, recitations, and laboratory work, but during the summer months students are required to visit mines and metallurgical plants that are being worked and must observe and report upon the various mining operations. The reports thus made must be accompanied in many cases by drawings illustrating the operations reported upon.

In the following pages are given short statements concerning the mining engineering courses of the several institutions, accompanied by a description of the special equipment and an account of the visits to mining and metallurgical plants required to be made by students.

ALABAMA POLYTECHNIC INSTITUTE.

Students who have received the degree of B. S. in civil or electrical and mechanical engineering, or who have prosecuted an equivalent course of study, can enter upon a special course in mining engineering, which includes the following subjects of study: Industrial chemistry, analytic chemistry, reduction of ores, mineralogy, economic geology, mining machinery, with the applications of steam and electricity to the various operations connected with the exploitation of mines.

UNIVERSITY OF ALABAMA.

The course in mining engineering requires three years for its completion. The first and second years are the same as the junior and senior years of the engineering section of the scientific course. The third year represents graduate work, divided between the subjects of chemistry, geology, and engineering, and leads to the degree of Engineer of Mines. Instruction is given by means of lectures and recitations, and by constant practice in the field, mines, and drafting room.

UNIVERSITY OF ARIZONA.

The regular course in mining extends through four years and leads to the degree of Bachelor of Science in mining. The institution offers also a short course, extending through two years, in practical assaying, metallurgy, and allied subjects.

As occasion offers, excursions are made to the important mining plants of the Territory. In the year 1900–1901 a visit was made by the senior mining students, with instructors, to the Copper Queen Mining Company's works at Bisbee, Ariz., where the entire plant, both below and above ground, was inspected.

Equipment.—The mining annex, 80 by 60 feet, contains machinery and appliances for crushing, sampling, concentrating, amalgamating, leaching, chloriding, cyaniding, and for the electrical treatment of various kinds of ore in large or small lots. Power is furnished by a 35-horsepower engine.

The mill building has a storage capacity for ore of 50 to 100 tons. A 7-inch by 10-inch Blake crusher is used for coarse crushing, and a Dodge crusher for finer work. Beneath the Blake crusher is a set of 14-inch by 20-inch Cornish rolls, from which the ore passes by a conveyor to the main elevator, which carries it up 31 feet to the top of the mill. By means of slides and chutes the crushed ore may be sent at will to various machines to be tested by different methods. For concentration there are provided revolving sizing screens, giving facilities for preparing six sizes, besides hydraulic separators for classifying slimes into three grades. The coarser sizes may be worked upon full-sized jigging machines of the Hartz pattern, the finer

sizes being jigged upon bottom discharge machines and the slime worked upon a double Rittinger percussion table, or otherwise as desired. Amalgamation tests may be made upon a working scale by different methods, including plates and riffles, pans and settlers, etc. A five-stamp gold mill, with silvered plates and aprons of the latest and most approved construction, permits the working of free-milling gold ores by the usual methods and on a large scale. A smaller prospecting mill of three stamps has been added, so as to work small lots of ore of from 100 to 500 pounds. The assay laboratory is equipped with assay furnaces for crucible work, for scorifying and cupeling, and for retorting mercury from amalgam, besides all needed appliances for assaying by dry and wet methods, including electrolysis. The laboratory also has desks and fittings for the chemical work required in metallurgical and mineralogical investigation and analysis of ores, mineral fertilizers, and in qualitative tests of minerals.

UNIVERSITY OF CALIFORNIA.

The College of Mining offers an undergraduate course of four years, leading to the degree of B. S., and is designed for students who wish to become mining or metallurgical engineers, or to engage in any of the pursuits connected with the mining industry, such as the surveying and mapping of mines, the assaying and working of ores, the designing and use of mining machinery, or the exploitation of mines. Graduate courses are also offered. During the vacation at the end of the junior year all mining students will be required to spend at least four weeks in the systematic study of practical mining, taking notes and making sketches of processes observed. This is the minimum requirement. It is recommended that all free vacation time throughout the four years be devoted to actual work underground at the various branches of practical mining. A full report of this work must be presented and read before the juniors and seniors at the mining conference during the senior year. This conference is held weekly.

Equipment.—Metallurgical laboratories: 1. The assaying laboratory is equipped to give instruction by the most improved method in the fire assays of gold, silver, lead, antimony, tin, iron, nickel, cobalt, and quicksilver ores and furnace products. It occupies six rooms on the lower floor of the mining building.

The crushing and sampling room contains a Taylor sample crusher, large iron mortars, and rubbers; a panning sink, with full assortment of miners' pans, horns, bateas, and other devices for making vanning tests of ores; a complete assortment of sieves, and a large sampling table. In this room the small-scale sampling is done and the sample is prepared for assaying. From here the sample goes to the fluxing room. This is provided with eight Becker pulp scales and desks containing all the necessary fluxes; it also contains a Fairbanks platform scale, graduated in kilograms as well as pounds, for convenience in large-scale tests. The sample, after fluxing, goes to the furnace rooms. These contain four crucible furnaces and three muffle furnaces, built after an improved design, and arranged to burn either coke or charcoal; also two large crucible and muffle furnaces for burning soft coal, like those used in Freiburg, Przibram, and Colorado. All these furnaces have been carefully designed, built in the walls, and ironclad in a substantial manner. Besides these, examples of eight portable charcoal and gasoline furnaces commonly used are also provided to familiarize students with their use. From the furnace room the doré buttons go to the parting hood and then to the balance room, which is provided with eight Becker assay balances. A convenient storeroom completes the assaying laboratory.

2. Research laboratory: This laboratory occupies a set of four rooms on the floor above, covering the same ground area as the assaying laboratory. The largest of these contains two ironclad crucible furnaces, with an air blast, in which cast iron can be easily melted, and two ironclad muffle furnaces; the electric current is available for all kinds of electrolytic determinations in electro-metallurgy, both in the wet way and by fusion; and small-scale apparatus specially designed for demonstrating with exactness all the essential points in chlorination, cyanide, and other leaching tests, is provided. This room is also fitted with horizontal and vertical shafting, so that power can be used in every part of it, and a 10-horsepower transmitting dynamometer is provided for such tests as require it. This room is also fitted up for the humid,

or mint, assay of silver bullion, and general volumetric work. A second large room is fitted up for analytical and special research work, and contains a distilled water and drying apparatus, a water-blast blowpipe, gas muffle, and crucible furnaces, and a small Pelton water motor, besides the appliances usual in an analytical laboratory. Two other rooms contain eleven of the finest Oertling and Becker assaying and analytical balances and a small reference library.

This laboratory is provided with a complete equipment for measuring high temperatures, such as an air thermometer, a Fischer calorimeter-pyrometer, a Siemens electric pyrometer; also the Orsat, Bunte, and Fischer apparatus for the analysis of furnace gases, and a Thomson calorimeter for determining the heating effect of fuels.

Mining laboratories: The mining laboratory originally constructed by legislative appropriations having grown entirely inadequate to the needs of the large classes now enrolled in the College of Mining, through the generosity of Mrs. Phœbe A. Hearst has been enlarged to about four times its original use. The completed laboratory consists of the following divisions:

I. Gold and silver mill: This laboratory is designed to illustrate, on a working scale, the methods in successful use in crushing, sampling, concentrating, and amalgamating gold and silver ores. The first floor is 58 by 34 feet, the second floor 41 by 34 feet. The floor of the first story is of concrete, and the floor above is double, for sampling ores.

At one extremity of the laboratory is the dry-crushing and sampling plant. A platform elevator lifts the ore by the carload to the upper floor, where it is fed to Dodge jaw crushers, provided with automatic samplers which select automatically a sample of the crushed ore. This remains on the upper floor to be quartered down for assaying. The main lot of crushed ore passes through the floor by chutes at will, either to a pair of 16-inch Krom steel rolls especially designed for this laboratory or else to a 6-inch Sturtevant mill. After being crushed in either of these machines the ore is elevated by a bucket elevator and delivered to a Krom revolving trommel, where it is classified into three sizes and the coarse particles are returned to the machine for further reduction. The whole plant is connected with an exhaust fan and a set of dust chambers, so that the operation is conducted without inconvenience or loss from dusting.

For reducing the assay samples an adjustable Fraser & Chalmers Comet crusher and an E. P. Allis sample grinder, and a Krom crusher, with a set of Krom shaking screens, together with the usual "bucking-plates," are provided.

The wet-crushing plant consists of a stamp battery with three 500-pound stamps; the mortar is especially designed for either single or double discharge, so that it can be used, if necessary, for either wet or dry crushing of silver ores, or as a deep mortar for gold ores.

For gold ores a high discharge is used in the mortar, and the pulp passes first over a set of amalgamated copper plates and then over a Frue concentrator, specially designed for either side or end motion, and altered to facilitate accuracy in making experimental runs. A Johnson concentrator is also provided. An automatic sampler, also of special design, takes, at intervals of three minutes, samples of the pulp simultaneously as it leaves the mortar, the plates, and the concentrator. The frequency of the sample taking is also adjustable. An exact knowledge of the entire operation at each step is thus made possible. The tailings are all impounded in a concrete settling-tank and are finally sampled by quartering as a check. Owing to a scarcity of water and to avoid a loss in slimes, the clear water is returned by a centrifugal pump to the battery.

For silver ores the ore may be crushed, either dry or wet, and the pulp, either raw or roasted, may be treated either by amalgamation or by leaching. For this purpose four amalgamating pans and two arrastras, and numerous leaching and precipitating boxes are provided.

The concentration of coarsely disseminated ores is provided for by the dry-crushing and sizing plant, and two Harz ore jigs; while finely disseminated ores are crushed wet, sorted in spitzkasten and spitzlutten, and either jigged on an ore bed or treated on vanners, according to fineness.

Students are afforded every opportunity to acquire practical familiarity with each detail of the best methods now in use. For this purpose parcels of ore varying in amount from five hundred pounds to several tons are assigned to each member of the class. He is expected to take charge of the work, and, with the assistance of his fellow-students, to weigh, crush, sample, and assay his lot of ore; to determine the best mode of treatment, and then to carry this plan into execution, determining the amount and nature of the losses at each step and the best method of reducing them to a minimum. Thus each student, in turn, acts as workman and foreman in charge of work, and all acquire experience covering a wide range of methods.

II. Chlorination room: A room 20 by 34 feet has been provided to contain a reverberatory roasting furnace and the necessary leaching vats to illustrate the extraction of gold ores by the chlorination process, as well as the chloridizing roasting of silver ores.

III. Cyanide and hyposulphite leaching rooms: Two floors each 43 by 58 feet have been provided for experimental work in leaching gold and silver ores by these methods. The lower floor is of concrete and contains large sumps to contain the solutions. These rooms will be fitted up to contain solution tanks, pumps, precipitating boxes, etc., all on a working scale of from 1 to 5 tons.

IV. Forge and drilling rooms: For the purpose of familiarizing the mining students with the operations of the hardening and tempering of drill steel and of rock drilling and blasting, a space of 34 by 51 feet has been provided with fourteen down-draft forges of the Buffalo Forge Company's most improved pattern. It also contains a full equipment of single and double hand drills, hammers and sledges, Ingersoll & Rand machine drills, with all the appliances for sharpening, hardening, and tempering drills of all kinds. A supply of quarry blocks of sandstone and Rocklin granite is also provided for students to familiarize themselves with the work of rock drilling.

Blasting and the effect of explosives are illustrated during the term by actual work at the rock quarries near Berkeley, and in vacation by work in the mines.

V. Power and work shops: Power is provided for all large work by a 20-horsepower Babcock & Wilcox water-tube boiler, and steam is conveyed in covered steam pipes to any point where it may be needed. Electric power is also available, electric motors being provided wherever necessary.

For the construction and repair of apparatus used by the department, workshops have been provided covering an area of 34 by 43 feet, which contain a band saw, universal saw bench, a planer, a wood lathe, and a full set of woodworking tools; also, a Hendy-Norton 14-inch swing engine lathe and a small speed lathe, a Cincinnati universal milling machine, shaper, drill press, and a full line of machinists' tools. It is also equipped with tools for water, gas, and steam fitting.

VI. Lecture room and museums: These are located on the third and fourth floors of the mining building, and are designed to give a complete illustration of the lectures by maps, drawings, and plans, and by collections of models and products. The arrangement of the lecture room is such that lantern-slide illustrations may be projected upon a screen when needed. A large collection of lantern-slide illustrations is designed to illustrate the mining art as practiced in all parts of the world.

LELAND STANFORD JUNIOR UNIVERSITY (CALIFORNIA).

This institution offers instruction in mining, metallurgy, and assaying which may be counted towards fulfilling the requirements for the degree of Bachelor of Arts in geology and mining.

COLORADO SCHOOL OF MINES.

The four years' course in mining and metallurgical engineering leads to the degree of Engineer of Mines and Metallurgy (E. M.).

Mining is taught by lectures illustrated by lantern slides, photographs, and drawings. Five lectures per week are delivered during the senior year. In addition to the class-room instruction, two afternoons per week are devoted to the detailed design of a plant for the development of a mine.

Visits to local mines and metallurgical plants are of weekly occurrence during the last two weeks of the course. In addition to these the senior class makes two excursions to more distant plants. The first of these takes place in the fall just previous to the opening of the school year, and the second shortly before commencement. The graduating class of 1900 devoted two weeks to the spring trip, visiting the lead smelters and steel works at Pueblo, the coal mines and washeries and the coke ovens at El Moro, Starkville, and Walsenburg, and the gold and silver mines and mills of the Telluride and Ouray districts. During the fall the class of 1901 visited the chlorination mill at Colorado City and the iron and lead smelters at Pueblo. On these trips the students are accompanied by two or more professors, and the visits are carefully scheduled. The inspection of the various works is accompanied by lectures on the ground by the professors in charge.

Equipment.—The fire assaying building is 92 by 46 feet and has 32 muffle furnaces, with space for 16 more, well equipped parting room, balance rooms, office and store room.

In metallurgy the school has models of the following furnaces: Long hearth roasting furnace, for silver, lead, and copper ores; American lead-silver furnace; round silver-lead furnace; small round silver-lead furnace; complete plant for refining base bullion, including softening furnace in Parks's process, zinc pots, sweating furnace, and lead pots; concentration cupel for making silver bullion; Belgian zinc furnace; Silesian zinc furnace; silver amalgamation pan; copper reverberatory furnace; Gerstenhofer roasting furnace for fine copper and iron sulphides; tin blast furnace; Bismuth smelting furnace; large mercury furnace; fume furnace for making lead and zinc paints. There are also working models of the following: Twenty-stamp mill, ore rolls, and Dodge crusher; model of modern blast furnace for lead-silver ores, with water jacket; also a large number of smaller models.

The ore dressing laboratory contains a crusher, a sample grinder, a Vezin laboratory jig and a Wilfley table; a model of all the workings of the Della S. Consolidated Mining Company in Smuggler Mountain; maps of mine workings, etc.

UNIVERSITY OF IDAHO.

The course in mining extends through four years and leads to the degree of Bachelor of Engineer of Mines.

It is recommended that all mining students spend the three vacations in actual work in the mines. During the vacation at the end of the junior year all mining students are required to spend at least four weeks in the systematic study of practical mining, taking notes of processes observed. Afterwards they make working drawings of the mining or metallurgical plant observed.

Equipment.—The department of mining and metallurgy occupies three rooms in the basement of the main building. One of these rooms is used as a class room, and contains samples of battery screens, samples of drill steel, of wire rope, a library of technical books on mining and metallurgy, the leading mining and metallurgical journals, photographs of mining machinery, maps illustrating methods of mining, drawings of mining machinery and mine plants, mine maps, a clinometer, a mining transit, drawing tables, and models of mines.

The fire assay room is furnished with rock crushers, samplers, sieves, a bucking board, mortars, coke and hydro-carbon assay furnaces, and furnace tools. Adjoining the fire assay room is the metallurgical laboratory, 24 by 60 feet, furnished with a hood, working desks supplied with water and gas, a shaking frame, gravity cells for electrolytic work, a chlorination apparatus, tanks for normal solutions, apparatus for quantitative determinations, analytical, pulp, and button balances, an Ingersoll-Sergeant steam drill, an air compressor, and a working model of a stamp and concentrating mill made by the students. This laboratory also contains a leaching plant, and a cyanide plant consisting of a solution tank, a leaching tank fitted with false bottom and duck filters, a zinc box with six compartments fitted with wire screens, and a sump tank, all conveniently arranged and fitted with pipe connections.

IOWA STATE COLLEGE OF AGRICULTURE AND MECHANIC ARTS.

By an act approved March 30, 1894, the general assembly of the State of Iowa established a school of mines as a department of the State Agricultural College, and made it the duty of the board of trustees "to provide for a thorough course in theoretical and practical mining, so as to fit the students to undertake the full management of mining in its different branches." In order to carry out the provisions of the act, three courses in mining are offered: A four years' course, intended for those

students who desire a thorough course in theoretical and practical mining and underlying sciences, and which leads to the degree of Bachelor of Science in mining engineering; a two years' course, designed for young men who have had some practical experience in mines and wish to study mine surveying, drafting, the problems of ventilation, drainage, haulage, mine operating, etc., and also to learn something of the sciences which bear upon their work; a one-term course, adapted to men actively employed in the mining industry, and intended particularly as a review course for mine superintendents, mine foremen, and the more progressive miners. The one-term course embraces a review of the principles of mine ventilation and drainage, mine operation and equipment, mine surveying and accounts, mechanical engineering applied to mining, the principles of prospecting, mode of occurrence and distribution.

Summer field work in mine surveying.—The work is carried on in one of the coal mining districts of the State, and comprises the complete survey of a mine and a thorough examination of the equipment and mode of operation of a typical mine for the district, and leads in the first place to a mine map, and in the second to a careful report on a mine property, accompanied by the necessary illustrations. Two full weeks.

Summer field work in the study of mine operations and equipment and of concentrating plants.—This course necessitates a visit to one of the great metal-producing centers. A careful study of mine properties is made, and a detailed report, properly illustrated by sketches and drawings, is required. A portion of the time is to be devoted to a study of ore dressing and concentrating plants. Four weeks.

Equipment.—The department is supplied with a Sullivan core drill with a complete set of tools and accessories for actual field operations, a "Queen" light mountain mining transit, a sensitive 6-dial anemometer reading to ten millions of feet and adapted for the measurement of currents of air through mines and tunnels, a miner's level with rods and measuring tape, a plane table with accessories, a set of miners' tools, a barometer, clinometer, balances, a series of miners' lamps, and various instruments used in ascertaining distances.

UNIVERSITY OF KANSAS.

The course in mining engineering extends through four years and leads to the degree of Bachelor of Science.

In addition to the work at the institution, the students during the summer vacation between the junior and senior years must devote about six weeks to a study of some of the more important mining localities of America under the direction of instructors. The work is passed upon and graded the same as other studies in the course.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY.

The course of study in mining engineering and metallurgy extends through four years and leads to the degree of Bachelor of Science. Instruction is given by lectures and recitations, by laboratory work, and in the summer school.

To bring the mining students into closer acquaintance with their profession, summer schools are organized for the study of mines, mills, smelting works, and geological fields. At the summer school of mines, the students, with their instructors, locate at a mine and take up in succession systematic studies in methods of mining and ore dressing, of underground and surface surveying, doing actual work in all these lines. At the summer school of metallurgy, the party visits a locality where a variety of smelting and refining operations are conducted, and makes a systematic study of the different operations, writing up the notes from day to day. The mining and metallurgical summer schools take place in alternate years.

In 1897 the summer school of metallurgy was held in western New York and Ohio. The leading works of Syracuse, Buffalo, Niagara Falls, and Cleveland were visited, and coking in by-product ovens and the metallurgy of iron, steel, and copper were studied, as well as some electrical and chemical processes.

In 1898 the summer school of mining was held in Nova Scotia, where a study was made of the mining and milling of gold, the mining and shipping of coal, and the manufacture of gas and coke.

In 1899 the summer school of metallurgy was held in New Jersey and Pennsylvania. Copper works were visited at Bergen Point; iron, steel, and zinc works at Bethlehem; and iron and steel works at Pittsburg. The methods of smelting were followed through from the ore to the finished metal ready for the market.

In 1900 the summer school of mining was held in New Jersey and eastern Pennsylvania, where the mining of iron ores and anthracite coal were the principal objects of study.

Equipment.—The John Cummings laboratories of mining engineering and metallurgy include four parts—concentration and plate amalgamation, roasting and smelting, lixiviation and pan amalgamation, and assaying.

In the concentrating laboratory the effects of different combinations and adjustments of machines upon the saving of losses in slime and included grains, in order to produce the best scientific result or the greatest commercial profit can be tested. Among these combinations are graded crushing, graded sizing, graded jigging; hydraulic classifying as preparation for jigging and the slime table; jigging with much or little suction; the variations of the slope, the quantity of water, and the roughness of the surfaces of slime tables; the adjustments of the gravity stamps, the amalgamated plates, and the Frue vanner.

In the lixiviating and amalgamating laboratory the effects of varying the sizes of grains, the strength of the cyanide solution, and the time of treatment may be tried; suitable variations also may be made in the hyposulphite process, in the gas-chlorination process, either by vat or by revolving barrel; in the amalgamating pan the temperature, the chemicals, and the time of exposure can be studied for production of the best results.

The smelting laboratory is provided with furnaces for roasting, smelting, and cupelling lead; for chloridizing roasting, preparatory to pan amalgamation or lixiviation.

The assaying laboratory is provided with furnaces for crucible work, scorification, cupellation, and all the usual accompanying operations. Nearby are rooms for fine balances and for supplies. A laboratory with chemical desks is provided for conducting all the small lixiviation tests and such wet work as is necessary in connection with the smelting and lixiviation of ores. The blow-pipe laboratory of the geological department is used for the blow-pipe silver assay. A museum of ores, products, and models of mining engineering and metallurgy serves to illustrate the lectures.

HARVARD UNIVERSITY (MASSACHUSETTS).

This institution offers instruction in mining and metallurgy, some of which may be offered toward fulfilling the requirements for the degrees of Bachelor of Arts and Bachelor of Science, while some of the courses can be offered only for the degree of Bachelor of Science. Besides the instruction at the institution students are required to make a study of mining operations during six weeks in the summer and make a report thereon.

MICHIGAN COLLEGE OF MINES.

The degrees granted in the course in mining engineering are Bachelor of Science and Engineer of Mines according to the number of credits obtained by the student. The institution is located in the mining region of northern Michigan, and excursions

are made on Saturdays into the copper mines. Practical work in mine surveying and mining is carried on for five weeks, forty-five hours per week. The first two weeks are devoted to surveying and mapping a mine or some portion thereof either in the "copper country" or in some one of the iron mining districts of northern Michigan. The last three weeks are devoted to the examination of mining methods in the iron-ore mines, and sketches are made of the various mining methods.

Equipment.—The metallurgical and assay laboratory is a brick building, 24 by 99 feet. It contains a general furnace room, 55 by 21 feet, equipped with 12 Koenig assay furnaces working with gasoline. There are provided also an experimental furnace, a muffle furnace, several ordinary portable assay furnaces, a Foos gas driver, Root blower, small Blake crusher, a pair of Krom rolls, a Weatherhead mill, and a large pair of rolls. In the western end of the building are a supply room, 13 by 15 feet, and an electro-metallurgical room, 12 by 21 feet. The latter contains a battery of 12 large storage cells. In the eastern end of the building are a parting room, 10 by 12 feet, and a weighing room, 19 by 12 feet.

The ore-dressing building or stamp mill is a wooden building, 81 by 30 feet. It contains a Blake crusher, a Comet crusher, a pair of crushing rolls, a three-stamp battery, a set (3) of trommels, 2 Hartz jigs, a spitzkasten, a Frue vanner, a Rittinger table, a Calumet classifier, a MacDermott sampler, and a sample grinder, together with minor machinery.

A reverberatory roasting furnace operated in connection with the mill, stands near in a building 28 by 28 feet.

UNIVERSITY OF MINNESOTA.

In the School of Mines there are two regular courses of study: Mining engineering course leading to the degree of Engineer of Mines, and a course in metallurgy leading to the degree of Metallurgical Engineer, each requiring four years for completion. The recipient of either of the degrees may obtain the other by an additional year's work.

The field work is conducted during the last four weeks of the school year at the iron mines in the northern part of Minnesota, in the copper and iron regions of Michigan, in the mines and smelters of Montana and Colorado, and in the coal mines of Pennsylvania. At least two of these districts are visited by each class.

Equipment.—The assay laboratories consist of a preparation room, furnace room, and balance room. The preparation room contains a Forster crusher, Frazer and Chalmers sample pulverizer, and Bridgman ore sampler. The furnace room is equipped with crucible and muffle furnaces and all the appurtenances necessary for carrying on the reduction of the methods from their ores by fire methods. The balance room contains balances for accurately weighing the gold and silver beads, and bullion.

The ore-testing works occupy a building 94 by 66 feet, built of brick and stone. The plant contains the following machinery: A Bridgman mechanical sampler, size B; a link belt bucket elevator; a pulley feeder, complete; a pair of 12½ by 12 geared rolls, complete; a four-compartment spitzkasten; a three-compartment Hartz jig; a Collum jig, complete, with cone for driving; a 3½-foot Huntington mill, complete; a three-stamp mill, 275-pound stamps; a five-stamp mill, 850-pound stamps; a Challenge automatic feeder for five-stamp battery; a suspended Challenge feeder for three-stamp battery; a Tulloch feeder for Huntington mill; a single-deck buddle, 12 feet in diameter; a 4-foot plain belt Frue vanner; a Cammett concentrator; a 3-foot amalgamating pan; a 5-foot settler; a Bruckner roasting furnace, with fire box on wheels; a chlorination barrel; a battery tightener; a 2-horsepower vertical boiler; a steam drying pan; three trommels, with driving arrangement and gears; a 1,000-pound Reedy elevator, complete, with worm gear, two overhead crawls, each with 80-foot track; 1-ton pulley block; a quarter-ton pulley block; a scoop car with flat wheels; two 20-horsepower electric motors; three MacDermott automatic samplers, etc.

UNIVERSITY OF MISSISSIPPI.

This institution offers a four years' course leading to the degree of Bachelor of Mining Engineering.

UNIVERSITY OF THE STATE OF MISSOURI.

The Missouri School of Mines and Metallurgy at Rolla, Mo., maintains a course of four years in mining engineering, a course of four years in chemistry and metallurgy, a special course of two years in mining, and a special course of two years in chemistry and assaying. The four-year courses lead to the degree of Bachelor of Science.

In 1900 the students of the senior class made an excursion to St. Louis and the southwestern part of Missouri. At St. Louis the methods of smelting zinc ores, of smelting and refining lead ores when accompanied by silver, and of the manufacture of steel by the basic open-hearth process were studied. In the lead producing portion of southeastern Missouri, the mines and mill of the St. Joseph Lead Company at Bonne Terre, of the Desloge Lead Company at Desloge, and of the Central Lead Company at Flat River were visited, where a careful study was made of the methods of concentration of galena ores by both the English and Continental systems. The students of mining engineering were also enabled to make a careful study of the methods of mining.

Equipment.—The mining and metallurgical building consists of two distinct portions, one containing a chemical and a mineralogical laboratory, lecture room, reference library, drafting room, petrographical laboratory, blue-print room, etc.; the other comprises a large mill room, an engine room, and a boiler room. The mill room contains a Dodge rock breaker, Cornish rolls, stamp battery with automatic feeder, Calumet hydraulic classifier, Inlet discharge separator, Hartz jig, spitzkasten, Parsons-Rittinger percussion tables, Frue vanner, grinding and amalgamating pan and settler with settling boxes, and working models of different types of concentration. The reduction plant consists of a reverberatory roasting furnace, and 20-inch water-jacket cupola furnace, with Root blower, for lead and copper ores. There are also assay and cupellation furnaces, a barrel chlorination outfit, and an Ingersoll-Sergeant steam and compressed-air drill.

NEVADA STATE UNIVERSITY.

The course in mining and metallurgy extends through four years and leads to the degree of Bachelor of Science. Visits to mines are made during the senior year.

Equipment.—The mining laboratory contains the metallurgical laboratory, the chemical laboratories of the school of mines, the mineralogical laboratory, and one class room. The assay office has accommodations for twelve students, and the quantitative chemical laboratory for sixteen students. There are also a small stamp mill and a smelter.

NEW MEXICO SCHOOL OF MINES.

This institution offers a course of study in chemistry and metallurgy and a course in mining engineering, each extending through four years and leading to the degree of Bachelor of Science. A short course in assaying and one in prospecting are also offered, and may be completed in a single session.

Equipment.—A new metallurgical laboratory and an assay building are being erected.

COLUMBIA UNIVERSITY (NEW YORK).

In the school of mines there are three courses of study, each extending through four years, as follows: Course in mining engineering, leading to the degree of Engineer of Mines; course in mining engineering, with a geological option leading to

the degree of Engineer of Mines, and a course in metallurgy, leading to the degree of Metallurgical Engineer. Graduate courses in mining and metallurgy leading to the degrees of Master of Arts and Doctor of Philosophy are also offered.

In addition to the instruction given at the institution, summer courses are given in metallurgy and in practical mining. Two weeks are spent at metallurgical works in studying the operations there carried out. The students are given individual and class instruction and are required to make complete descriptions of the various processes, including sketches of furnaces and apparatus. This course is held in the vacation between the third and fourth years, and in two divisions. The first, required of students in mining engineering, visits copper, lead, gold, and silver works; the second, required of students in mechanical engineering, visits iron and steel works. Students in metallurgy are required to attend both.

The summer school in practical mining is held in June and July, at some mine or mines selected for the purpose, in the vacation between the third and fourth years, and lasts six weeks. The course of instruction includes three weeks' detailed study of the plant and methods of working at some important mine or mines; one week practical mine surveying; one week excursion to other mines and mining regions; and one week geological work, surface and underground.

The course of study includes the subjects of shaft sinking, drifting, stoping, timbering, underground haulage, hoisting, mine drainage, ventilation, surface plant and machinery, mine buildings, shops, houses, water supply, drainage, organization, and administration. The students are divided into small squads and assigned each day to a foreman, or working gang of miners, or to a definite portion of the mines, for the study of some definite subject. Each squad of students is visited several times during the day by the instructor, who supplements the explanations of the miners and indicates subjects demanding special study and observation. Notes and sketches must be made by the students, and each evening they are examined and criticised.

In 1897 the summer school was held in Michigan. The detail work, occupying four weeks, was carried on in the mines of the Pittsburg and Lake Angeline Iron Company. Short visits were then made to the Lake mine of the Cleveland Cliffs Iron Company and the Lake Superior Section Sixteen mine, and finally a few days were spent in the copper district at the Atlantic mine and mill, the surface plants of the Calumet and Hecla and the Tamarack mines, and the Calumet and Hecla concentrating mills.

In 1898 the summer school was held in West Virginia and Virginia. The detail work was done in the bituminous collieries of the Caswell Creek Coal and Coke Company, near Bramwell, W. Va. Visits were then made to the Pocahontas, Peerless, Norfolk, Angle, Pulaski, Crozer, and Turkey Gap collieries, all situated in the Pocahontas coal field. The last week of the session was spent in the Cripple Creek iron and zinc region of Virginia, where the class visited the Bertha, Wythe, and Cedar Run mines, the Bertha zinc furnaces, and the Pulaski iron furnace.

The summer school of 1899 was held in the lead region of southeast Missouri and the Wyoming Valley coal field, near Wilkesbarre, Pa. Two weeks were occupied by study of the Central and Theodora lead mines at Flat River, Mo., and the concentration mill at which their ore is treated. Then from Wilkesbarre, as headquarters, the remainder of the session was devoted to visits to the Prospect, Dorrance, Maltby, Exeter, Stanton, Nottingham, Sugar Notch, and Glen Lyon collieries.

In 1900 the summer school was held in the Cripple Creek gold district of Colorado. Between three and four weeks were devoted to detailed study of the plant and methods employed in the Vindicator and Lillie mines. A week was then spent in making short visits to the Victor, Portland, Independence, Wild Horse, and Granite mines.

The summer school work in practical mining is required of students in the courses of mining engineering and metallurgy.

Equipment.—Metallurgical laboratory: In order to enable the student to carry out metallurgical processes on an illustrative scale, this laboratory is equipped with furnaces for roasting, for heating, and for melting in large and small crucibles, apparatus for electrolytic and hydro-metallurgical processes, a full-sized cupola furnace, and an English cupelling furnace for cupelling and for "bringing forward" and refining copper.

For high-temperature investigations the laboratory has several special furnaces, and it will be equipped for the current year with a large furnace heated by electricity.

This laboratory has also a collection of the various modern calorimeters, of calorimetric, optical, photometric, and several thermo-electric pyrometers, including an autographic attachment; apparatus for analyzing furnace gases, and equipment for preparing sections of metals; lathes, grinders, polishers, a micro-photographic camera, and several excellent microscopes especially adapted for examination of opaque objects; a sclerometer, and many other valuable instruments.

Of these, the Le Chatelier pyrometers and the apparatus for the microscopic study of metals are found especially useful, and much attention is given to their study.

Mining museum: The subject of mining is illustrated by collections as follows: Maps of coal and metal mines of this and other countries; working drawings, diagrams, and photographs of mine plant, and of mining and dressing machinery; models of mines and parts of mines and of mine plants; mining tools—picks, shovels, hammers, drills, blasting apparatus, lamps, safety lamps, anemometers, hand-power and machine drills; ores and dressing products from typical works in this and other countries; surveying instruments—geological compasses and clinometers, attraction compasses, dipping needles, hanging compasses and arcs, transits, lamp signals, rods, and apparatus for plumbing and measuring shafts.

Among the more notable exhibits are large relief models of two mines of the Cleveland Cliffs Iron Mining Company, of Michigan, a similar model of the Saratoga gold mine in Colorado, a set of three glass models and two relief models of the Copper Queen mine in Arizona, and a glass model of the Calumet and Hecla and Tamarack copper mines. There is also a large model of the St. Joseph Lead Company's dressing works at Bonneterre, Mo.

A very complete collection of working drawings of mine plant, and an unusually large collection of underground photographs, taken by magnesium light, are worthy of particular notice.

Mining laboratories: Seven large rooms in the basement and subbasement of Engineering are being equipped as laboratories for the department of mining. These laboratories are not intended to replace the careful study of mining methods and of the operations of ore dressing at the mines and dressing works in connection with the summer school of mining, but are intended to supplement such study, and in particular to afford opportunities that can not be obtained at the mines.

These laboratories will include—

The laboratory for mechanical assays, which contains small crushers, rolls, and screens, and conveniences for sampling, hand picking, jigging, and vanning small samples of ore, and for panning gold-bearing gravel; a Richards laboratory classifier, and several Vezin laboratory jigs have been added recently to the equipment of this room.

The laboratory for working tests will contain small power jigs, a hand jig, a buddle, a frame, a keeve, and other similar apparatus for working a ton or more of ore at a time.

The laboratory of dressing machinery will contain full-sized machines of standard types, each arranged so that the products, heads, middlings, and tailings are returned at once to the same machine for retreatment. With a small quantity of ore each machine can thus be operated as long as may be necessary, and the student is afforded an opportunity to become familiar with the adjustments of the machine and the tests of proper and successful working. The apparatus now being installed includes a two-sieve jig, a three-sieve jig, and a five-sieve jig, a round table, a Frue vanner, and a Wilfley table, and the necessary crushing and screening apparatus and classifiers.

The laboratory for milling gold and silver ores includes a stamp mill, copper plates, pan, and settler, which are arranged to be run in connection with the concentrating apparatus.

UNIVERSITY OF NORTH DAKOTA.

The course in mining engineering extends through four years and leads to the degree of Bachelor of Mining Engineering.

Equipment.—Rooms suitable for work in mining engineering as related to chemistry and geology will be fitted up in the basement of the new Science Hall. Connected

with the main-line shaft will be reducers conveying power to crushers, grinders, pulverizers, and other machinery necessary for the preparation of rocks and ores for furnace work. In a similar manner a small room will be provided as a tool room for constructing and repairing apparatus in this department. Adjoining the grinding and crushing room will be a furnace room equipped with a variety of furnaces, roasting ovens, and assay appliances. Connected with the furnace room will be a room for the storage of rock, material, and characteristic specimens, and adjoining this will be a balance and apparatus room for assay determinations.

CASE SCHOOL OF APPLIED SCIENCE.

The course in mining engineering extends through four years and leads to the degree of Bachelor of Science.

Equipment.—The metallurgical laboratory is supplied with furnaces for roasting and reduction processes, including a small reverberatory furnace, four smelting furnaces, and four muffle furnaces. There is also a Blake crusher, a Gates mill, a Frisbee-Lucop grinder, and small sample grinders.

OHIO STATE UNIVERSITY.

In the college of engineering there is a four-year course in mining engineering, leading to the degree of Engineer of Mines, and a short course of two years in mining. The short course is especially designed for young men who have had a practical experience in mines, and wish to study mine surveying, drafting, the problems of ventilation, drainage, haulage, mine operating, etc., as well as something of the sciences bearing upon their work.

Equipment.—The departments of mining and metallurgy occupy the east end of Chemical Hall. In the basement are the smelting furnaces, the assay laboratory, a room for rough work, and storeroom for supplies. On the first floor is the lecture room for metallurgy with a seating capacity for 40; a laboratory with desks for 16 students, a storeroom, a balance room, a private laboratory, and an office. On the second floor is the lecture room for mine engineering, a drafting room, a room for instruments, and an office.

The metallurgical laboratory has all the appliances for the most modern methods of technical analysis as practiced in iron and steel laboratories, including gas analysis. A furnace room in the basement is fitted for gold and silver assaying, with improved muffle and crucible furnaces. The lecture room in metallurgy has arrangements for projecting photographs of machines, mines, and furnaces for class illustration. There is also a photographic room with blue-printing facilities.

The mining department is equipped with all of the latest improved instruments and apparatus used in mine engineering, surveying, and the study of mine ventilation. There is a collection of models of mine machinery and supplies. The lecture room has arrangements for projecting photographs of machines, mines, and mine equipment for class illustration.

OREGON STATE AGRICULTURAL COLLEGE.

There is a four-year course in mining leading to the degree of Bachelor of Science, and a special course of two years in mining.

UNIVERSITY OF OREGON.

The school of mines and mining offers a four years' course leading to the degree of Bachelor of Science, and a five years' course leading to the degree of Bachelor of Science or to the degree of Mining Engineer.

Equipment.—The assay department contains two single Hoskins crucible furnaces, a double crucible furnace, and three Hoskins muffle furnaces; of these the largest

takes a Battersea "L" muffle holding 3 dozen cupels. All of these furnaces are worked from a central gasoline tank fitted with pressure gauge. Besides furnaces, all the ordinary equipment for assay work is at hand, such as rock crusher, bucking board, sieves, cupel, and other molds, tongs, trays, etc., and an amalgamating mortar, for free-milling tests of gold and silver ores. The assay outfit is capable of completing about sixty assays per day.

WESTERN UNIVERSITY OF PENNSYLVANIA.

The legislature of Pennsylvania, in the spring of the year 1895, appropriated to the Western University of Pennsylvania the sum of $50,000 for the establishment of a school of mines and mining engineering in connection with the university, to be designated as the Western Pennsylvania School of Mines and Mining Engineering, conditioning their grant upon the gift by the citizens of the State of an additional sum of $50,000 for the endowment and improvement of the course of scientific instruction in the university.

The mining engineering course offered by this institution extends through four years and leads to the degree of Mining Engineer.

LAFAYETTE COLLEGE (PENNSYLVANIA).

The course in mining engineering extends through four years and leads to the degree of Engineer of Mines.

Students in this course make frequent visits to the mines and quarries in the vicinity, and two weeks in the spring vacation are spent at some prominent mining region in the practice of mine surveying and in the study of practical mining. Students are advised to spend one long summer vacation during their course in actual work at the mines.

LEHIGH UNIVERSITY (PENNSYLVANIA).

This institution offers a four years' course in metallurgical engineering, leading to the degree of Metallurgical Engineer, and a four years' course in mining engineering, leading to the degree of Engineer of Mines. The latter course unites the branches of mining and metallurgy up to the end of the junior year. At this point the student will have had age and experience sufficient to survey the ground and learn whether his tastes or his opportunities direct him toward the mine or the furnace, and two options are offered, both leading to the degree of Engineer of Mines.

Frequent and regular visits are made to mines and furnaces in the vicinity. These visits are rendered valuable through the courtesy of the officials of the Bethlehem Steel Company and the Lehigh Valley Coal Company, by which classes with an instructor and individual students under certain restrictions are allowed access to the extensive metallurgical works of the former and to the mines of the latter in a manner which permits a regular and systematic work to be carried on during the term, as illustrative of the theory developed in the class room.

PENNSYLVANIA STATE COLLEGE.

The college maintains a four years' course in mining engineering, leading to the degree of Bachelor of Science, and a short course of two years in mining.

A large amount of practical work is required of students during the scholastic year as well as during the summer vacation. At the close of the freshman year one hundred hours are devoted during the summer to surveying; at the close of the sophomore year one hundred hours are devoted to mine surveying; and at the close of the junior year one hundred hours are devoted to inspection of mines.

Equipment.—In metallurgy the college has a line of ores of the metals, various products and by-products of the smelting furnaces, besides extensive and complete

illustrative series in the smelting of lead, silver, gold, copper, zinc, iron, and steel, and numerous other series illustrating throughout the various stages of the processes for the extraction of metals from the ores. Eight models illustrate the furnaces used in the metallurgies of iron, zinc, lead, and copper, and in the coking of coals.

In coal washing and ore dressing the equipment consists of a building supplied with large, perfect working models, a working model of a typical Western ore mill for treatment of argentiferous lead and copper ores, and a three-compartment jig with elevators and screens for preliminary sizing of the crushed product. There is also a large assortment of illustrative material consisting of the most improved tools, drills, lamps, cars, and appliances used underground.

SOUTH DAKOTA SCHOOL OF MINES.

The course extends through four years and leads to the degree of Bachelor of Science in mining engineering.

The lecture work in mining is supplemented by a summer school in mining held at various convenient places in the Black Hills, where the methods of mining, mine plans, and general features are studied.

Equipment.—The metallurgical laboratory contains a Dodge crusher, Cornish rolls, 3-stamp dry-crushing mill, and 3-stamp wet-crushing mill, each equipped with Tulloch automatic feed, amalgamated copper plates, Frue vanner, amalgamating pans and settler, sizing trommels, hydraulic separator, spitzkasten, Hartz jig, Bruckner roasting furnace, 24-inch water-jacket blast furnace, Baker blower, small cyanide leaching plant, Gates sample crusher, sample grinder, 4-horsepower water motor.

VANDERBILT UNIVERSITY (TENNESSEE).

The course in mining engineering extends through five years. The degree of Bachelor of Engineering is conferred at the close of four years and the degree of Mining Engineer on the completion of the five years' course.

Visits of inspection, under the supervision of one or more of the instructors, are made to structures and operations of professional interest not only in and about the city but to distant points, and carefully written reviews, giving minute details of the subjects examined, are required of the students.

Equipment.—The mining laboratory is supplied with a Gates ore crusher, a bank of assay and smelting furnaces, gas and hydrocarbon furnaces for cupellation and scorification, and the usual outfit of furniture, apparatus, and appliances for assaying and metallurgical work generally.

UNIVERSITY OF TEXAS.

The course in mining engineering extends through four years and leads to the degree of Engineer of Mines. Eight weeks of field work are required during the vacation between the junior and senior years.

UNIVERSITY OF UTAH.

A course in mining engineering was first offered by this institution in 1895. In 1901, by an act of the State legislature, the State School of Mines was formally established as a department of the University. The course in mining engineering extends through four years and leads to the degree of Bachelor of Science in mining engineering.

Frequent visits of inspection are made to the leading mining, metallurgical, electrical, and manufacturing plants of Utah. During the vacation between the junior and senior years the class is taken into the field for a period of six weeks, where various practical problems are solved in mine surveying. A complete survey is made of some mine, and each student is required to make all the computations and plat the field notes.

UNIVERSITY OF VIRGINIA.

The course in mining engineering leads to the degree of Mining Engineer. Instruction is offered in exploitation of mines, mining machinery, and ore dressing.

WASHINGTON AGRICULTURAL COLLEGE AND SCHOOL OF SCIENCE.

This institution maintains a four years' course in mining engineering, leading to the degree of Bachelor of Science, and a short course of twelve weeks in assaying.

A portion of the last two summers in college is given to mine examination, mine surveying, visits to concentrators and smelters, and to field geology. The students are required to keep systematic notes on this summer work and make regular reports on the same.

Equipment.—The mining and metallurgical building has been equipped for the double purpose of serving as a student laboratory and providing for working tests of all ores which may be sent for advice as to treatment from mining districts of the State of Washington and elsewhere. The building contains three floors. The upper floor, which measures 40 by 31 feet, is used for the storage of ore and for weighing, quartering, sampling, and hand dressing. On this floor are also an office room and cabinets and glass cases for ores and the smaller mining apparatus. The ore-dressing laboratory occupies the second floor of the building, and is equipped with a Gates rotary crusher, a pair of 9 by 4 inch rolls for fine crushing, screens, a Wilfley concentrator, a 3-compartment Hartz jig, and other apparatus. The lower floor is given up to the metallurgical laboratory. This laboratory, which has a brick floor, contains an Eaton 2-stamp mill, with plate, two hand-stamp mills, appliances for amalgamation, retort, a cyanide mill for making working tests on 100-pound lots, and a hand forge with apparatus. Power for running all of the machinery in this building is had from a 20-horsepower Jenney motor, placed in the ore-dressing department.

The assay laboratory is well equipped with all the appliances necessary for such work. One brick double-muffle furnace, with muffle 6 by 12 by 15, and one gasoline furnace, crusher, buckboard, and all tools for furnace work are available for student use.

UNIVERSITY OF WASHINGTON.

The school of mines offers five courses of study. (1) Mining engineering; (2) mining engineering with geology as an alternative; (3) metallurgical engineering; (4) short course of two years in mining engineering; (5) course in mining for prospectors, beginning on January 1 and continuing to April 1. The degree of Bachelor of Science is conferred on the completion of the first three courses.

It is required of all students in mining engineering that at the end of the junior year they spend from four to six weeks of the vacation in actual work in some mine, and that they hand in an exhaustive report of the work at the beginning of the senior year. In the course with the geological alternative two seasons must be spent in practical work in the field. Students in metallurgy are required to spend at least four weeks of the vacation at the end of the junior and senior years in study at some of the reduction works of the country or at some mining or milling plant where the metals are obtained from their ores by some of the various wet processes.

Equipment.—The engine room is provided with a large coal muffle furnace, Hoskins gasoline crucible and muffle furnaces, Caulkins combination gasoline and muffle furnaces, a Koenig furnace, a gas furnace, and wind furnaces for the use of coke and charcoal.

The ore-crushing and sampling room contains a Bosworth crusher, a Colorado Iron Works grinder and sampler, No. 1, and a Caulkins gyratory muller.

The preparation room accommodates from 18 to 20 students in the preparation of charges for the furnace.

The analytical laboratory consists of a general laboratory, a bullion room for the determination of the fineness of silver bullion, and an electrolytical laboratory.

WEST VIRGINIA UNIVERSITY.

This institution maintains a four years' course in civil and mining engineering leading to the degree of Bachelor of Science in civil engineering.

UNIVERSITY OF WYOMING.

The school of mines offers a four years' undergraduate course in mining engineering leading to the degree of Bachelor of Science, and a short winter course of six weeks in mining.

Students are required to visit mines of various kinds in the vicinity of the school and make personal examinations of methods and report.

Equipment.—The assaying department occupies five rooms and the students have the use of three single and one double furnace, a steam rock breaker, a hand crusher, sampling mill, six pulp and three button balances.

CHAPTER XLVI.

CURRENT TOPICS.

CONTENTS.—Teachers' pensions—Transportation of pupils to school—Higher commercial education—Corporal punishment—Coeducation—Foreign students in German universities—Compulsory attendance and child labor—Teachers' salaries.

TEACHERS' PENSIONS.

In the United States no teachers are pensioned from public funds. Voluntary beneficial associations have been formed in some cities and in other localities specified below. In certain States the laws provide for pension funds, the essential difference being that in this case participation is generally enforced upon all teachers. This feature of compulsion has been eliminated from the laws of Illinois and Ohio. In the former State the law applied only to Chicago, where opposition to it resulted in an amendment which provided for voluntary membership only. A consequence of this was that one-fourth of the members in Chicago withdrew, and that the annuity, which was at first fixed at $600, was reduced to $240. The following paragraphs show the varieties of organization, etc.:

Voluntary mutual benefit associations for temporary aid only exist in Baltimore, St. Louis, Cincinnati, Cleveland, Detroit, Chicago, Buffalo, San Francisco, and St. Paul, and there is one interstate association. These call for $1 to $2 initiation fee; $1 to $5 annual dues. Special assessments of $1 are made in some cases. Benefits in sickness range from 50 cents a day to $10 a week; at death funeral expenses only are paid in some instances, and in others a sum equal to $1 from each member of the association.

Associations for annuity, or retirement fund only, are in New York, Boston, and Baltimore, and there is an annuity guild in Massachusetts. The initiation fees reported are $3 to $5. The annual dues are 1 to 1½ per cent of salary up to $18 or $20. The annuity is from 60 per cent of salary to $600 a year. Time of service required for retirement is from two to five years with disability, or from thirty-five to forty years without disability.

Associations for both temporary aid and annuity exist in Hamilton County (Cincinnati), Philadelphia, Brooklyn, and District of Columbia. Initiation fees, $1 to $10; annual dues, $5 to $40. Annuity, $5 per week to $600 per year, and $100 for funeral expenses in case of death. Temporary aid, during illness, $5 or $6 per week. Time of service required for retirement is two to five years with disability, or thirty-five to forty years without disability.

Pension or retirement funds are authorized by State legislatures for St. Louis, Boston, Brooklyn, New York City, Detroit, Chicago, Charleston, S. C., and Buffalo, and all cities in Ohio, California, and New Jersey. Dues vary little; they are generally 1 per cent of salary. Annuity, $250 to one-half of salary; maximum, $600. Minimum length of service with disability, twenty to thirty years; without disability, twenty-five to thirty-five years.

There are no new establishments of private annuity funds to be reported for 1900–1901, but the existing ones report progress, though some fears are expressed that the annual dues are generally too low, a fact which may lead to financial difficulties in the future unless special efforts are made to increase the funds by holding bazaars and securing donations.

The law passed in May, 1902, by the legislature of Ohio amends the law which authorized the cities of Cincinnati and Cleveland to maintain pension funds for teachers, and extends the benefits of such funds over all school districts of the State; that is to say, the school authorities of a district are granted the right to create a fund and retire teachers, but the act does not make it mandatory upon them. The fund is obtained by withholding $2 each month, or $20 a year, from the salaries of teachers who have declared their desire to become contributors and subsequently beneficiaries of the fund. This is the voluntary feature of the act mentioned before. The authorities may retire a teacher from service on account of mental or physical disability and apply the pension provisions after twenty years of service, provided three-fifths of that time have been spent in the service of the district or county and two-fifths of that time in other parts of the State or elsewhere. The term teacher includes principals and supervisory officers. The right to retire voluntarily and become a beneficiary is granted for both women and men teachers alike, after they have taught thirty years, with the same proviso as before. The amount of the pension paid is $10 a year for every year served, but in no case more than $500 a year. Both principal and income of the fund may be drawn upon to pay the pensions. The teachers are to receive certificates monthly showing what amount has been withheld from their salaries. In case a teacher resigns from the profession she may claim one-half of the sum she paid into the fund during her service in school. The act is explicit on the question as to who may serve as custodian of the fund, how it is to be invested, and on other details.

TRANSPORTATION OF PUPILS TO SCHOOL.

The practice of consolidating small schools and transporting the more distant pupils to a central (usually graded) school at the public expense has been resorted to in the following States to a greater or less extent: Connecticut, Florida, Indiana, Iowa, Kansas, Maine, Massachusetts, Michigan, Minnesota, Nebraska, New Hampshire, New Jersey, New York, North Dakota, Ohio, Pennsylvania, Rhode Island, South Dakota, Vermont, and Wisconsin.

A Missouri law of 1901 permits of consolidation of schools, but without the feature of transportation. Some progress in the direction of consolidation has already been made in Louisiana and North Carolina under existing laws.

The following tables give the available statistics on the subject. It will be seen that Maine expends the largest proportion of its school money for transportation, about 3 per cent of the total; yet in 1901 there were still in that State 2,896 ungraded schools against 1,349 graded. In Connecticut the proportion expended for transportation is minute (about one-tenth that of Maine) and decreasing, though "numerous small schools are inadequately maintained," and "children find the doors of their own schoolhouse closed and no other opened." (Conn. Rep., 1901, p. 13.)

These facts, taken in connection with the remarks of the State superintendents of Massachusetts and Pennsylvania quoted below, would seem to indicate that consolidation and transportation, in spite of their great and undoubted advantages, have been put into practice as yet only to a very limited degree even in those States where the most progress in this direction has been made, and that their future general adoption is uncertain. It is probable that the various objections and obstacles

to this plan for improved schools, which have been frequently rehearsed, have in practice more than outweighed its manifest benefits, except in cases where the diligence of school officials and an advanced public opinion have combined to prevail over obstacles and inaugurate a more efficient system of rural schools.[a]

Per cent of total expenditure used for transportation.

1897–98	38,961	2.41	18,306	1.96	123,032	.90	$11,416	0.38
1898–99	50,118	3.20	20,881	2.14	127,409	.92	10,752	.34
1899–1900	51,050	2.98	26,492	2.47	141,754	1.03	9,817	.31
1900–1901	54,037	3.13	.....	.....	151,773	1.07	.....	.....

Expenditure per pupil transported.

School year.	Vermont.		Connecticut.	
	Number of pupils transported.	Average cost.	Number of pupils transported.	Average cost.
1894–95	921	$14.05	.....	.....
1895–96	1,347	13.68	.....	.....
1896–97	1,309	14.15	.....	.....
1897–98	1,574	11.63	849	$13.45
1898–99	1,652	12.64	773	13.91
1899–1900	2,062	12.85	639	15.36

In Vermont, the average annual cost per pupil for the 6 years tabulated has been $13.16, which, with a school term of 156 days, makes the expense of transportation about 8½ cents a day for each pupil. In Connecticut, with a school term of 190 days, the daily cost for 3 years has been about 7½ cents. These are averages. In individual cases the cost varies greatly according to the particular circumstances in each case.

It is the general experience that a saving of money is effected through consolidation of schools. Of the towns in Massachusetts that have tried the plan, 68 per cent report a less cost after consolidation, and only 8 per cent an increased cost.[b] Of 124 New Hampshire towns, 118 report less cost with conveyance as compared with maintaining local schools, 5 report the cost the same, and 1 the cost greater; 26 give the cost with conveyance as one-half of that with local schools, 8 give one-third, 7 give one-fourth, 3 give one-fifth, and 1 each one-sixth, three-eighths, two-fifths, and three-fifths.[c]

The testimony is very general that consolidation results in improved schools, and is well nigh unanimous that attendance is more regular.

[a] Chapter III, Vol. 1, of this Report (pp. 161–213) contains reports on this subject by a number of State superintendents giving in detail the experience of localities.

[b] 62 Mass. Rep. (1897–98), p. 456.

[c] 51 N. H. Rep. (1900), pp. 276–81.

PRESENT STATUS.

Connecticut.—A law of 1889 provided for the discontinuance of small schools and in certain cases their union with schools of adjoining districts. In 1893 free transportation of pupils was authorized. In 1897–98 the number of schools closed was 84; pupils transported, 849; cost, $11,416. In 1899–1900 there were 639 children transported at a cost of $9,817. The law "has been immensely advantageous to the State" (Conn. Sch. Rep., 1901, p. 11).

Florida.—"Several counties have inaugurated the system of consolidating the smaller schools and transporting the pupils by wagons." (Fla. Sch. Rep., 1900, p. 19.)

Indiana.—The trustee or trustees of a school district or corporation, upon petition of a majority of voters for the abandonment of their schools and the consolidation of their schools with others in the same township, must comply therewith. (Ind. Sch. Law, 1901, sec. 116.)

No township trustee may abandon any district school without written consent of the majority of voters, excepting schools with an average attendance of 12 or less. A school so abandoned must be reestablished upon written petition of two-thirds of the voters. (Sec. 117.)

"Forty counties have already begun the work of collecting pupils into larger groups by transporting them." (Ind. Sch. Rep., 1900, p. 529.)

Iowa.—An early law (sec. 2800 of the code) provided for the consolidation of the rural independent districts composing a township. Under this statute the people of Buffalo Center township organized themselves into a school township in 1895. It was not proposed at the time to consolidate the schools, but a demand for better school facilities arose, and during the succeeding four years all the rural schools of the township except two were closed in succession and their pupils transported to a central graded school. The experience of this township is detailed at some length in the Iowa School Report of 1901, pages 78-80.

Sec. 2774 of the code provides that when a board is for sufficient reason released by the county superintendent from keeping a school, or when children live at an unreasonable distance from their own school, the children may be sent to school and have their tuition paid in other districts. And when there will be a saving of expense, and children will also thereby receive increased advantages, school boards may arrange for the transportation of any child to and from school in the same or in another corporation. An amendment of 1901 provides that not over $5 may be estimated in the contingent fund for each person of school age for transportation.

Consolidation has been tried in 28 counties, transportation in 35, and both in 19. Ninety-five per cent of the county superintendents favor the plan. Good effects are reported in 27 counties, doubtful in 5. Bad roads are the chief obstacle. (Iowa Rep., 1901, pp. 35, 73.)

Kansas.—The parents or guardians of any pupils residing more than 3 miles from the schoolhouse of their district shall be allowed not exceeding 15 cents a day for not more than one hundred days in a year for the conveyance of such pupils. (Sch. Laws, 1901, sec. 49.)

A school district may discontinue a school entirely and send the pupils to school in another district, paying their expenses and tuition (sec. 112*a*). Or any part of the pupils of a district may be so sent to school in another district (sec. 112*b*).

Two or more school districts by a majority vote of each may unite to form a union school district and conduct a graded school (sec. 50). Children living 2 or more miles from such school may be transported (sec. 51).

Louisiana.—"In several parishes the effort to consolidate small ungraded schools into large graded schools has been made with the result of considerable improvement in the school work, although I fear that it brought the superintendent under

the ban of those who considered it their right to have a school and a teacher exclusively for their own family use." (La. Sch. Rep., 1900–1901, p. 7.)

Maine.—By an act of 1893 and subsequent amendments school districts are abolished; towns determine the number and location of schools; schools having too few scholars may be suspended for one year; schools having less than eight pupils are discontinued. The superintendent of schools in each town must provide transportation for a part or the whole of the distance, to the nearest suitable school for the full school term in his town, for all pupils who reside so far from school as to render it necessary, in the opinion of the superintending school committee; or he may board scholars near schools. (Me. Sch. Laws, 1901, sec. 1–3.)

Massachusetts.—A law of 1869 provides that the school committee of any town may expend in their discretion money raised and appropriated for transporting pupils to and from school. Towns determine the number and location of schools.

"The returns indicate that the process of consolidating small and feeble schools is probably still going on, although it is possible that, if the process were at a standstill, the growth in population, with a certain pressure for better terms by those who convey children, might occasion the entire increase," i. e., in the amount expended. (65 Mass. Rep., 1900–01, 115.) For amount expended see p. 2397.

"The number of towns and cities that return expenditures for conveyance has now reached 274, and the expenditures range all the way from $6.25 in Hatfield to $2,640.75 in Lexington." (Ib., 116.)

Michigan.—At least one county (Menominee) has had recourse to transportation. The experience of this county, as reported by the county superintendent, is so instructive that it is quoted here at length (from Mich. Rep., 1900, pp. 179, 180):

In one of our township districts there was a locality with twenty children in it. The parents brought every pressure possible to bear on the members of the board to induce or compel them to build a schoolhouse in that neighborhood to accommodate these children. The board, after canvassing the matter thoroughly, decided to transport these children about three miles to the nearest village school. The parents opposed the plan by every conceivable objection, but the board thought they were right and went ahead. A suitable rig was hired to take the children to school in the morning and home in the evening, at what it would cost to hire a teacher, thus saving the interest on the money invested in building and furnishing a schoolhouse and the expense of keeping up the school and house.

The children attended school more regularly and had the advantages of a village graded school. Every one of the protesting parents are, after the year's trial, now as enthusiastic endorsers of the plan as they were opponents last fall. The board have decided to continue the same plan for that locality another year and inaugurate it in another neighborhood in the same township. Other boards are discussing the feasibility of inaugurating the scheme. This is by far the best method of providing for the children of many localities, and I expect to see it come into more general use throughout the county.

Minnesota.—(Laws, 1901, chap. 262.) Two or more school districts may be organized as an independent school district on petition of majority of freeholders and by vote of electors (Sch. Law, 1901, secs. 214–216). Board of education to be elected (sec. 216). Such board may provide for the transportation of pupils at public expense; every person employed for this purpose must give reasonable bond (sec. 217).

Missouri.—A law of 1901 enables three or more school districts, one of which may be a village district, to unite and form a new district. The new district may maintain a high school and as many lower grade schools as the board of directors may determine.

Nebraska.—A law of 1897 authorizes a city or a high-school district board, by a two-thirds vote of entire board, or any district board, when authorized by a two-thirds vote of those present at a district meeting, to make provision for the transportation of pupils to any other school in their district who live so far from school as to render attendance impracticable without transportation; or they (except city

boards) under the same conditions may contract for the instruction of all pupils in a neighboring district, and transport them thither, without forfeiting apportionment. (Nebr. School Law, 1899, V, 4b, 4c.)

Twenty-one counties contain schools in which one or both features of the law have been tried. Fifty-seven pupils were transported, at a cost of $560; 158 pupils attended school in adjoining districts for an average of seven months at a total cost of $1,471. "Those making the report are unanimous in the opinion that the law is beneficial." "The difficulty in inaugurating any new system, where prejudice and long-established usages prevail, is met here as well as in other matters." (Nebraska School Report, 1900, pp. 40–43.)

New Hampshire.—Towns are authorized to expend a portion of the school money, not exceeding 25 per cent, in conveying children to and from school. (New Hampshire School Laws, 1898, chap. 92, sec. 1.)

New Jersey.—Children in any district "living remote from the schoolhouse" may be transported to and from school under rules and contracts made by the board of education. A child living remote from any public school in his own district may, with the written consent of the county superintendent, attend a school in an adjoining district, and be transported at the public expense. (N. J. Sch. Law, 1902, secs. 111, 112.)

Children who have completed the school course of their own district may attend a higher grade school in another district (with the consent of the school boards of both districts), and have their transportation and tuition paid. (Secs. 111, 113.)

In making the apportionment of the school moneys, $200 must be apportioned to each district for each teacher whose services shall have been dispensed with by adopting transportation. (Sec. 177, I.)

New York.—School districts are authorized to contract with adjoining districts for the tuition of their children, and to convey them at the public expense; 150 such contracts were made in 1898–99. There are still in the State 3,552 districts (nearly one-third of the whole number) with an average attendance of 10 or less. (New York School Report, 1900, p. 55.)

North Dakota.—Schools with an average attendance of less than 4 on ten consecutive days may be discontinued. Two or more schools may be consolidated and pupils transported. (North Dakota General School Laws, 1901, sec. 704.)

Ohio.—In 1894 a special law was passed authorizing centralization and transportation in Kingsville, Ashtabula County. The experience of Kingsville is detailed at some length in the Report of this office of 1898–99, pp. 526–529, and in the first volume of this Report, pp. 161–164. The succeeding legislature passed a measure applicable to the counties of Stark, Ashtabula, and Portage. In 1898 the law was made general, and in 1900 further amended. As it now stands boards of education may submit to a vote the question of township centralization, and must submit it upon petition of one-fourth the electors. (Ohio School Laws, 1900, secs. 2931, 2932.)

A graded school must be maintained in centralized townships, and a high-school course of not less than two years is authorized. Transportation must be furnished all pupils living more than three-fourths of a mile from the central building. (Secs. 3921–3928.)

An act of 1867, as amended in 1902, provides that a board of education, when in its opinion for the best interests of the pupils, may suspend any or all subdistrict schools under its jurisdiction, and convey the pupils to some other school or schools in the same or an adjoining district. (Laws of Ohio, 1902, p. 221.) "Under this section the schools of a township can be centralized without submitting the question to the electors." (State School Commissioner.)

"More townships each year approve it [centralization], and always with the same result." (Ohio Report, 1901, p. 18.)

Pennsylvania has a law (dating from 1897) authorizing directors to provide transportation for the children at the public expense to and from any school of their own district or of a neighboring district; but only for pupils of schools that have been closed by reason of small attendance, and who will have a greater distance to travel than before, and with the proviso that the cost of transportation per pupil shall not exceed the cost of maintaining the schools so closed. No school official may be a party to any contract for conveying children. (Pennsylvania School Laws, 1901, Secs. CXXX, CXXXI.)

An act of 1901 requires township boards, upon petition of a majority of the electors representing one-fourth the assessed valuation, to submit to the electors the question of township centralization,[1] which is carried by a majority vote. (Sec. CXXXIII.) A graded course must be maintained in centralized townships, and a high-school course of not less than two years is authorized. Transportation must be furnished all pupils living more than three-fourths of a mile from the central building. (Sec. CXXXVI.)

There is a loss of upwards of $50 in the State appropriation for every school which is closed. * * * So far as one can see from the reports which have reached the department, the act of April 25, 1901, has not borne much fruit in the centralization of schools in country districts, and further legislation will be necessary if this idea is ever to be generally realized in the sparsely settled sections of our State." (Pennsylvania School Report, 1901, P. VII.)

Rhode Island.—A law of 1898 authorizes school committees to consolidate any schools that have an average number belonging of less than 12, and provide transportation for pupils. Any town may consolidate three or more ungraded schools. Any district with ungraded school may consolidate with district having graded school. The State pays $100 to each district so consolidated. A few ungraded schools have been consolidated; the conveyance of the children still remains as the great obstacle. Two schools of Burrillville formerly cost the town $600 per year. Consolidated with others the cost for transportation was $427.50.

South Dakota.—"We understand the school laws of this State are sufficient to allow a school township to try this plan, or even two or more subdistricts may unite their schools into one, so that centralization may be tried in this State at once." (B. D. Kribs, in South Dakota School Report, 1900, p. 13.)

The reports of the county superintendents show that the question is much discussed and that a beginning has been made in three or four counties; elsewhere considerable opposition has been developed, principally on the part of parents.

Vermont.—On a written application from ten resident taxpayers of a town a portion of the school money, not exceeding 25 per cent, may be used to transport scholars who live 1½ miles or more from school. That transportation is growing in favor is attested by the fact that the expenditure for this purpose increased from $11,122 in 1893–94 to $26,492 in 1899–1900. In 1899–1900 there were 726 schools closed all or part of the year and 2,909 pupils furnished transportation. There were still, however, in the last term 201 schools of 8 pupils or less each, a decrease of 34 from the preceding year.

Wisconsin.—Any school district may make provision for closing its schools and sending its pupils to adjoining schools, and provide for the payment of tuition and transportation of pupils by taxation. An amendment of 1901 gives the annual meeting power "to vote a tax for the purpose of providing for the free transportation of any or all children residing in the district, by the most direct route, to and from the schoolhouse in the district." (Sch. Laws, Wis., 1901, sec. 430, 16.)

[1]The Pennsylvania law is closely modeled in certain features after the Ohio law. In each "centralization" of a township is defined as "the abolishment of all subdistricts, and the conveyance of pupils to one or more central schools."

In towns which have adopted the township system the town school board may transport pupils in their discretion. (Sec. 524.)

There were, in 1900, 955 schools in the State having an average daily attendance of not more than 10. Professor Upham reports that there is no organized transportation of pupils, though three counties are contemplating it. (Wis. Sch. Rep., 1900, p. 22.)

HIGHER COMMERCIAL EDUCATION.

Courses of study for the higher education of young men desiring to enter business careers have been established within recent years by a number of the leading institutions of the country. Among the institutions offering such courses leading to a baccalaureate degree may be mentioned the University of California, University of Chicago, Northwestern University at Evanston, Ill., University of Illinois, Indiana University, Louisiana State University, University of Michigan, Nevada State University, Ohio State University, Central High School (Philadelphia, Pa.), University of Pennsylvania, Agricultural College of Utah, University of Vermont, and University of Wisconsin. The commercial course of study in these institutions extends through four years, or the subjects relating especially to commerce or to other business pursuits may be elected as a part of the four-year college course, usually in the last two years. Dartmouth College offers courses extending through two years, which are intended as graduate courses. The first year of the course may, however, be elected by seniors of the college.

In addition to the institutions mentioned above the New York University and the University of South Dakota offer courses of study extending through two years and leading, respectively, to the degrees of Bachelor of Commercial Science and Bachelor of Commerce. The University of Virginia offers a special course for young men desiring to enter the consular service. The course extends through three years, but does not lead to a degree. Other institutions offering courses of two or three years are Colorado Agricultural College, Drexel Institute at Philadelphia, Pa., University of the South at Sewanee, Tenn., Washington Agricultural College, West Virginia University, and University of Wyoming.

Considerable latitude in the election of studies is generally allowed by the several institutions, so that students are able to select such studies as may be especially valuable in fitting them for the particular career they may have in view. Thus, the Amos Tuck School of Dartmouth College offers instruction intended to prepare men to enter upon private banking, brokerage and investments, insurance, railroad service and water transportation, foreign trade, general mercantile or manufacturing businesses, journalism, consular service, or for active participation in municipal and civic affairs.

A detailed description of the instruction in commercial branches offered in a number of universities and colleges that have established colleges or courses of study for the higher education of business men, and a tabular statement showing the number of students in such colleges or courses, are given in Chapter XXV, Volume 1, of this Report.

REGULATIONS RELATING TO CORPORAL PUNISHMENT IN CITIES OF OVER 100,000 INHABITANTS.

Corporal punishment is forbidden in the schools of—

The entire State of New Jersey. (New Jersey School Laws, 1902, p. 46, sec. 106.)

Boroughs of Manhattan and the Bronx, New York City. (Rules and Regulations, 1900, p. 62, sec. 64–1.)

Borough of Richmond, New York City. (Manual and Course of Study, 1899, p. 9.)

Chicago, Ill. (Rules and Regulations, 1898, p. 28, sec. 62.)

Baltimore, Md. (Rules, 1901, p. 17, art. 18.)

Cleveland, Ohio. (Handbook, 1899–1900, p. 77, sec. 22.)

St. Paul, Minn., except to repel violence, etc. (Forty-second Annual Report, p. 228, sec. 134.)

Syracuse, N. Y. (Rules and Regulations, 1898, p. 30, sec. 20.)

Providence, R. I., in grades above primary; permitted only with parent's consent in primary grades. (By-laws, 1897, p. 23, art. 15.)

REGULATIONS IN OTHER CITIES OF OVER 100,000 INHABITANTS.

Philadelphia, Pa.: There is no rule, but corporal punishment is said to have been abandoned by common consent.

For the borough of Brooklyn and the borough of Queens, New York City, there is no information at hand.

St. Louis, Mo.: May be administered only by a principal, or in his presence and by his consent. It must be avoided as far as possible. (Rules, 1897, p. 73, rule 47, sec. 4.)

Boston, Mass.: Forbidden in high schools and kindergartens and as to girls in grammar schools. In any case it is restricted to blows upon the hand with a rattan. Each case must be reported through the principal to the superintendent. (Rules and Regulations, 1898, secs. 218 and 241.)

Buffalo, N. Y.: The schools must be governed as far as possible without corporal punishment. Except when the superintendent gives special permission to other teachers, only a principal or acting principal may inflict it. (Charter and ordinances, 1896, Chap. XIV, p. 218, sec. 39.)

San Francisco, Cal.: May not be inflicted in the high schools or upon girls in any schools. It is permitted only in extreme cases and may be inflicted only by principals or by vice-principals, with the consent of principals. Excessive punishment is prohibited, only a strap or a rattan being allowed. (Rules, 1900, p. 25, sec. 64.)

Cincinnati, Ohio: May not be inflicted for failures in lessons or recitations. Blows on head or violent shaking of pupils prohibited. (Sixty-sixth Report Board of Education, 1895–96, p. 199, sec. 84.

Pittsburg, Pa.: No recent information is at hand.

New Orleans, La.: May be inflicted only in extreme cases as a last alternative, and only by the principal or by his express authority. Must not be inflicted in the presence of the class or during lesson in which offense was committed. Blows upon the head and lonely confinement forbidden. (Rules and Regulations, 1896, p. 9, sec. 13.)

Detroit, Mich.: Must be avoided if possible. Must not be inflicted without full knowledge and consent of principal. (Rules Board of Education, 1895, p. 29, rules 90 and 92*c*.)

Milwaukee, Wis.: Permitted, as last alternative, by principal only. Excessive punishment and lonely confinement prohibited. Must not be inflicted in presence of class. All cases must be reported monthly to superintendent. (Rules and Regulations Board of School Directors, 1898, art. 13, secs. 7 and 8.

Washington, D. C.: Must be avoided if possible. All cases must be reported monthly to principal and through him and supervising principal to superintendent. (Rules, 1900, p. 10, sec. 50.)

Louisville, Ky.: Must be avoided as far as possible. Cruel punishment or confinement in closets prohibited. May be inflicted only after nature of offense has been fully explained to pupil. (Manual of School Board, 1898, p. 31, sec. 3, rule 3.)

Minneapolis, Minn.: Permitted only when all other means fail. Principal only may inflict corporal punishment; then only when parents give written consent. Each case must be reported by principal to superintendent. (Twenty-fourth Report Board of Education, 1901, p. 134, sec. 60.)

Indianapolis, Ind.: Must be avoided as far as possible. May be inflicted only in presence of principal, and must be immediately reported by him to superintendent. (Manual of Public Schools, 1900–1901, p. 51, sec. 11.)

Kansas City, Mo.: May be inflicted in cases of flagrant offenses, and then only after duly notifying parents or guardians of intended punishment; and if parent or guardian will administer punishment, so as to preserve discipline of the school, teacher must inflict no additional punishment. Must not be inflicted in presence of school, but at the close of session and in presence of two other teachers or the superintendent. (Rules and Regulations Board of Education, 1896, p. 24, sec. 88.)

Rochester, N. Y.: May be inflicted in extreme cases by the principal or with his consent by an assistant. (By-laws and rules, Board of Education, 1898, p. 38, sec. 5.)

Denver, Colo., district No. 1: May be inflicted only after consultation with and with consent of principal. When practicable, superintendent should be consulted. All cases must be immediately reported to superintendent. (Twenty-fifth Annual Report Board of Education, district No. 1, 1899, p. 112.)

Toledo, Ohio: Forbidden in by-laws of 1885, p. 53, sec. 3. Not mentioned in by-laws of later date.

Allegheny, Pa.: Must be avoided when obedience and good order can be preserved by milder measures. (Rules, Twenty-sixth Annual Report Superintendent Public Schools, 1901, p. 124, art. 5, sec. 3.)

Columbus, Ohio: Allowed when all other means have failed. To be inflicted in schoolroom by pupil's teacher, the principal being the judge of special cases. Punishment in the nature of personal indignity forbidden. (Report, 1891, p. 136, secs. 27, 28.)

Worcester, Mass.: Permitted only in extreme cases, then only when approved by principal or superintendent. Must not be inflicted in presence of school. Teachers are required to make and keep complete records of all cases. (Rules of School Committee, 1900, p. 22, sec. 12.)

New Haven, Conn.: May be administered, with consent of principal, in extreme cases only, but never at same session of school at which the offense was committed. Cases to be reported monthly to superintendent. (Manual, 1891, p. 56, sec. 176.)

Fall River, Mass.: May be inflicted where milder measures fail. Must not ordinarily be administered in presence of school. Record of each punishment and offense must be sent to superintendent for inspection of the board. (Rules and Regulations, 1894, p. 13, sec. 46.)

St. Joseph, Mo.: Must be avoided as far as possible. Each case to be reported to principal and by him monthly to superintendent. (Report, 1889–90, p. 170, sec. 12.)

Omaha, Nebr.: Not mentioned in Rules and Regulations, 1896.

Los Angeles, Cal.: Must be avoided if possible; switch or strap to be used; blows upon face or head forbidden. (Report, 1899–1900, p. 138, sec. 55.)

Memphis, Tenn.: Must be avoided when good order can be preserved by milder measures. (Manual, 1897–98, p. 53, sec. 48.)

Scranton, Pa.: No information is at hand.

COEDUCATION IN THE UNITED STATES AND IN FOREIGN COUNTRIES.

Coeducation, or the education of boys and girls in the same classes, is the general practice in the elementary schools of the United States. Exceptions are indeed found in a few cities (less than 6 per cent of the total number), situated for the most part on the eastern border of the country, but these exceptions are in the main due to accidental conditions, such as the location or structure of school buildings. In some

cases they are survivals from the period of feeble beginnings, when experiments in the direction of public schools were cautiously begun by the establishment of schools for boys.

The tendency is to do away with the separate schools where these exist; thus, out of 15 cities which in 1891 reported separate high schools, three have since adopted the coeducation plan. Of a total of 6,005 public high schools reporting to the office the present year, 98 per cent are mixed schools. The majority, even of private secondary schools reporting to the office, are also mixed schools, viz, 1,121, or 56.7 per cent, in a total of 1,987.

The policy of coeducation in higher institutions was inaugurated by Oberlin College, Ohio, in 1833. In 1880, that is, forty-seven years from the founding of Oberlin, more than half the colleges of the country—51.3 per cent (technical schools not included)—had adopted the policy. In the decade 1880 to 1890 the proportion increased to 65.5 per cent. In 1900 it had risen to 71.6 per cent. In the number of coeducational institutions reporting to this office in 1891-92 were included 24 State universities, and 8 private foundations of the highest order. Since that time there have been added to the list 6 State universities, 3 Territorial universities, and 6 private institutions of high order. Several colleges have also adopted coeducation during the last decade, which in respect to scholastic standards and present equipments might well be classed with some of the State institutions included above; but for obvious reasons the latter must exert an influence in the development of their States beyond what is possible for any local college.

Foreign countries.—In England 65 per cent of the departments into which the elementary schools are divided have boys and girls in the same classes; in Scotland, 97 per cent. Statistics for Ireland show that 51 per cent of the national schools have a mixed attendance of boys and girls.

Separate education is the general policy in English schools of secondary grade, and where both sexes are admitted to the same school it is generally to separate departments. The royal commission on secondary education advocate the extension of the coeducational policy, and since the publication of their report (1895) experiments in this direction have noticeably increased.

In the British colonies, with very few exceptions, both mixed and separate schools are found. In Ontario all the schools are mixed. In Quebec the schools for English children are, as a rule, mixed, but in those for the French the sexes are separated. In the Australasian colonies the tendency to separate departments for boys and girls is noticeable in cities. In Cape Colony, while nearly all schools are mixed, separate schools for girls are encouraged.

In France custom and sentiment favor the separate education of boys and girls, and the law requires every commune having above 500 inhabitants to establish a separate school for girls unless specially authorized to substitute therefor a mixed school.

In secondary schools, public and private, separate education is the universal rule.

Germany.—Separate education is the preferred policy of the German States, but is not practicable in the rural primary schools. According to statistics of 1891, in Prussia two-thirds of the children in the common schools were in mixed classes, but in the cities the proportion was only three-tenths. In Saxony only the two lowest classes are mixed, so that separation occurs generally at the tenth year of age—always by the twelfth.

Other continental countries.—Similar conditions prevail in the remaining countries of Europe, the tendency toward separation being most strongly marked in the Catholic countries. In Italy the law calls for separate schools for boys and girls, and if they attend at the same building it must be in separate departments, each provided with its own entrance door. The lowest classes, however, may be, and often are, mixed.

In Norway, and to a less extent in Denmark, girls are securing admission to secondary schools formerly reserved for boys.

The South American Republics follow the precedent of the Latin States of Europe. Brazil, like Italy, requires separate schools for the two sexes. In 1888 the experiment of admitting boys and girls to the same class room was made in a few schools, but they were seated in different rooms outside of recitation hours.

Coeducation in the universities of Europe.—At Oxford University women are admitted by courtesy to the lectures of about 160 professors and readers. They are also admitted to the examinations for B. A., but the degree itself is not conferred upon them. Substantially the same arrangements have been adopted at Cambridge. Durham University confers upon women all degrees excepting those in divinity. London University, Victoria University, and the University of Wales make no discriminations on account of sex.

The university colleges established in England since 1868 are open to men and women. By the "universities act" of 1889 the Scotch universities were authorized to open their doors to women. Edinburgh admits them to the classes with men. Glasgow has affiliated Queen Margaret College for Women, and more recently (1895) opened all lectures in the faculty of arts to women. The University College of Dundee, affiliated to St. Andrews, is coeducational.

Women are admitted to all the privileges of the Royal University of Ireland. Trinity College, Dublin, does not admit women, but "special examinations for women outside the course for students of the college were established about twenty-five years ago and are still continued."

In 1897 there were altogether 3,550 women in attendance upon universities and university colleges in Great Britain and Ireland.

In France women have never been legally deprived of university privileges, and since 1863, when the first woman was enrolled in the Paris faculties, the number of women matriculates has been gradually increasing.

The number of women students registered in the French universities in 1898 was 871 on a total of 28,782.

The universities and secondary schools of Italy admit students of both sexes to the same class, a policy at variance with that pursued in the elementary schools.

Women have recently been admitted to courses in the universities of Germany, Austria, and Hungary, special authorization being required in each individual case.

In 1898–99 the Prussian universities granted the privilege of attendance to 414 women as against 117 in 1895–96.

The University of Athens was open to women in 1890.

WOMEN IN SCHOOL ADMINISTRATION.

There are at present 2 women holding the position of State superintendent of schools, 12 that of city superintendent, 284 that of county superintendent. The status of women in respect to directive influence in school affairs is tersely summarized as follows:

Women may hold any school office in Colorado, Kansas, Idaho, Illinois, Indiana, Iowa, Louisiana, Minnesota, North Dakota, Oregon, South Dakota, Utah, and Wyoming.

Women are eligible to all local school offices under the general school laws in the following additional States and Territories: Arizona, California, Connecticut, Louisiana, Maine, Massachusetts, Michigan, Montana, Nebraska, New Hampshire, New Jersey, New York, Ohio, Pennsylvania, Tennessee, Texas (any position open to teachers), Vermont, and Wisconsin.

In several of the above-named States cities form districts under special school laws; where such is the case they are not included in the general provision. As a rule, however, women are eligible to the school boards of Northern and Western cities.

In the following additional States the relation of women to school administration appears to be restricted to the positions named: Alabama (county board), Kentucky (district school officer), Nevada and Oklahoma (district), Rhode Island (town), Washington (district).

The following tables show the number of women holding the office of superintendent of public schools in States, cities, and counties as reported to this office for the current year:

Women State superintendents of public instruction, 1900–1901.

State.	Name.	Post-office.
Colorado	Mrs. Helen L. Grenfell	Denver.
Idaho	Miss Permeal French	Boise.

Women city superintendents, 1900–1901.

City.	Name.
San Bernardino, Cal	Miss Lula Claire Bahr.
Southington, Conn	Mrs. Anna D. Pollard.
Evanston, Ill	Mary H. O'Brien (District No. 3.)
Augusta, Me	Mrs. Caroline S. Fogg, superintendent suburban and high schools.
Brewer, Me	Mrs. Mertie M. Curtis.
Old Town, Me	Miss Ardelle M. Tozier.
Orange, Mass	Miss Lizzie A. Mason.
Malone, N. Y	Sarah L. Perry.
Bristol, Pa	Louise D. Baggs.
Appleton, Wis	Carrie M. Morgan.
Neenah, Wis	Jennie S. Cooke.
Rhinelander, Wis	Myra Germond.

Women county superintendents, 1900–1901.

State or Territory.	Total number of county superintendents.	Number of women.
California	57	15
Colorado	57	32
Idaho	21	14
Illinois	102	8
Iowa	99	10
Kansas	105	24
Kentucky	119	19
Michigan	83	6
Minnesota	82	9
Missouri *a*	*a* 114	*a* 11
Montana	26	24
Nebraska	90	16
Nevada	14	1
New York	58	13
North Dakota	39	10
Oklahoma	24	6
South Dakota	53	18
Tennessee	96	2
Utah	27	3
Vermont *b*	14	1
Washington	36	8
Wisconsin	73	8

a Missouri has 114 county boards consisting of three members each, viz., a county commissioner, a member appointed by the county court, and a member appointed by the board of education. The number of commissioners is given in column 2 and the number of women commissioners in column 3.

b County examiners.

Woman suffrage as related to school affairs.—Women have like suffrage with men in Colorado, Idaho, Utah, and Wyoming. They may vote (1) on general school questions in Minnesota (at any election or at any district meeting), in North Dakota, and South Dakota; (2) on local school questions in Arizona, Connecticut (for town and district school officers), Florida and Indiana (district school officers), Illinois (district and township officers), Iowa (on issue of bonds or increase of tax levy), Kansas, Kentucky (if widowed parents or guardians or spinster guardians of school children), Massachusetts (town officers and disposition of school money), Michigan, Mississippi (if heads of families, for district school officers), Nebraska, New York (if parents and taxpayers), Montana (at district elections), New Hampshire, New Jersey (restricted from voting for members of boards of education), Ohio (for members of boards), Oklahoma, Oregon (widows with children to educate and taxpayers), Vermont (on all questions pertaining to schools), Washington (for directors), and Wisconsin.

FOREIGN STUDENTS IN GERMAN UNIVERSITIES.

The number of foreigners who are matriculated at the old German universities, not including the technological schools, agricultural, mining, and forestry academies, during the year 1901 was 2,606. These figures are somewhat below those of the preceding year, which were 2,698, but are much above those of the summer term of 1900, when 2,322 were matriculated. Of the number in 1901 (2,606) as many as 646 studied philosophy, philology, and history; 579 mathematics and natural sciences; 568 studied medicine; 313 studied law; 147 Protestant theology; 25 Catholic theology; 146 forestry and administration; 138 agriculture; 25 pharmacy, and 19 dentistry.

As to nationality of the foreigners, 717 are Russians. Other European countries are represented with the following figures: Austria-Hungary, 507; Switzerland, 259; England, 157; Bulgaria, 68; the Netherlands, 50; France, 47; Greece, 46; Italy, 44; Servia, 44; Luxemburg, 38; Roumania, 37; Turkey, 35; Sweden and Norway, 26; Belgium, 22; Denmark, 8; Spain, 5; Portugal, 2; Montenegro, 2. As many as 492 are from other continents. Of these 323 are Americans, almost all from the United States; 154 are from Asia, almost all from Japan; 12 from Africa, and 3 from Australia.

As regards the different universities, Berlin leads with 385 foreign students, followed by Leipzig with 370, Munich with 232, Heidelberg with 158, Halle with 141, Freiburg with 140, Göttingen with 102, Marburg with 81, Strassburg with 79, Jena with 60, Bonn with 56, Konigsberg with 47, Tübingen with 46, Würzburg with 45, Breslau with 36, Erlangen with 30, Giessen with 24, as also Greifswald and Kiel, Rostock with 18, and finally Münster with 8.

In the year 1835–36 there were only 475 foreign students, or 4.02 per cent of the total number in Germany. In 1870–71 there were 735, or 6.1 per cent. In 1880–81 the percentage had fallen to 5.16 per cent. In 1890–91 it again rose to 6.7 per cent, and in 1901 it was 7.3 per cent. Ten years ago America furnished the largest contingent with 415 students, 22 per cent of the total number of foreign students; now Russia leads. In 1902 the number of foreigners in the 20 German universities rose considerably, namely, to 2,917. In the same year the number of foreigners in polytechnica was 2,489; in veterinary colleges, 45; in agricultural colleges,156; in forestry academies, 74; in mining academies, 304; in commercial universities, 195. Hence the total number of foreign students in German higher seats of learning at present is 6,180.

In the same year the Austrian universities and other higher seats of learning had 1,107 foreign students, while Switzerland had 2,522.

COMPULSORY ATTENDANCE AND CHILD-LABOR LAWS.

The table following is a revision (by this office) of that compiled by Madeleine W. Sikes for the Chicago Association of Collegiate Alumnæ and published in the last Report of the Commissioner of Education (pp. 2598–2602). In prosecuting the revision all the State laws of 1901 and 1902 were examined; the new legislation effected during those years occasioned changes involving 14 States to be made in the table.

Perhaps the most notable characteristic of recent compulsory school-attendance legislation is the trend in the direction of extending the period of required attendance so as to include the full school term, instead of limiting it to some specified portion thereof. The table as originally drawn showed only three States exacting attendance for the full term, or whenever the schools were in session, to wit: Massachusetts, Connecticut, and New York (in the latter State for children 8 to 12 only). There have since been added to the list 10 States—Colorado (in districts of the first and second class), Indiana, Maine, Maryland (limited to Baltimore city and Allegany County), Michigan (in cities having a police force), New Hampshire, New Jersey, Ohio, Pennsylvania (local school boards may shorten the obligatory term), and Rhode Island.

No attempt has been made in the table to note the States regulating the hours of labor of minors where labor is permitted. Such regulations are now very general.

The provision relating to educational restrictions on child labor are not complete for all the States. These provisions are varied and complicated, and can be ascertained exactly only by reference to the statutes of each State.

Many States forbid, or permit only under restrictions, occupations dangerous to the life, limb, morals, or health of children. In some States the employment of children in begging, theatrical and circus exhibitions, occupations requiring the handling of intoxicating liquors, night work, etc., is specifically forbidden.

Statutory provisions relating to compulsory attendance and child labor.

COMPULSORY EDUCATION.				CHILD LABOR.[1]	
State.	Age.	Annual period.	Penalty on parents for neglect.	Age under which specified employments are forbidden.	Educational restrictions on child labor.
Alabama				10 years, in mines	
Alaska				21 years, in barrooms	
Arkansas				14 years, in mines	Children under 16 years, unable to read and write, may not be employed in mines.
California	8–14	Two-thirds of full term; 12 weeks consecutive.	First, not exceeding $20; subsequent, $20 to $50, with costs.	10 years, in any factory, workshop, or mercantile establishment. Certificate of age required under 16.	
Colorado	8–14	12 weeks; 8 consecutive. Full term, not less than 20 weeks, in districts of the first and second class.	$5 to $25	14 years, in any underground works, mine, smelter, mill, or factory; 12 years, in coal mines (boys). No girls may be employed in coal mines.	Children under 14 years may not be employed in any business during school hours unless they have attended school 12 weeks during the year; under 16, unable to read and write, may not be employed in mines.
Connecticut	[2] 8–16	Full term	Not exceeding $5	14 years, in any mechanical, mercantile, or manufacturing establishment.	Children under 14 must have attended day school a prescribed period. Between 14 and 16 provisions similar to Maine and Massachusetts.
District of Columbia.	8–14	12 weeks; 6 consecutive	Not exceeding $20		
Florida				Children under 15 may not be employed more than 60 days without consent of legal guardian.	
Idaho	8–14	12 weeks; 8 consecutive	First, not less than $5; subsequent, $10 to $50, with costs.	14 years, in mines (constitution of State).	
Illinois	7–14	16 weeks: 6 consecutive. Time to commence with beginning of first term of school year for pupils under 10 years of age, and not later than December 1 of said year for pupils over 10.	$1 to $5 and costs; stand committed till paid. Penalty for false statements as to age or attendance, $3 to $20.	14 years, in any mercantile institution, store, office, laundry, manufacturing establishment, factory, workshop, or mine. Girls may not work in mines at any age. Certificate of age required under 16.[3]	
Indiana	7–14	Full term	$5 to $25, and, in discretion of court, imprisonment 2 to 90 days.	14 years, in any manufacturing or mercantile establishment, mine, quarry, laundry, renovating works, bakery, or printing office. Certificate of age required under 16.	Children under 16, unable to read and write English, may not be employed in foregoing employments except in vacation of public schools.
Iowa				12 years, in mines (boys)	

Kansas	8–14	12 weeks; 6 consecutive	First, $5 to $10; subsequent, $10 to $20.	12 years, in coal mines	Same as Arkansas, and must have attended school 3 months in the year.
Kentucky	7–14	8 consecutive weeks	First, $5 to $20; subsequent, $10 to $50.	14 years, in any workshop, factory, or mine, without written consent of parent and county judge, under penalty of $25 to $250.	
Louisiana				12 years (boys), 14 (girls), in any factory, warehouse, or workshop.	Children under 14 must not be employed in foregoing employments, or in clothing, dressmaking, or millinery establishments, nor by itinerant musicians, unless they have attended school 4 months in preceding year.
Maine	7–14	Full term	Not exceeding $25, or imprisonment not exceeding 30 days.	12 years in any manufacturing or mercantile establishment. Certificate of age required under 16. Under 15, this certificate must state school attendance.	Children under 15 shall not be employed in any manufacturing or mercantile establishment, except during vacation, unless they have attended school 16 weeks during preceding year. Such school attendance must continue during employment.
Maryland[4]	[5]8–12	Full term	Not exceeding $5	14 years, in mills and factories (except canning establishments), unless self, widowed mother, or invalid father solely dependent upon such employment. 19 counties exempt from law.	No minor, 12 to 16, unable to read and write English may be employed where there is an evening school unless attending that or another school.
Massachusetts	[6]7–14	Full term	Not exceeding $20	14 years, in factories, workshops, or mercantile establishments; 14 in any other employment for wages during school hours; 18 years, handling intoxicating liquors (except in drug stores). Certificate of age required under 16.	Children under 14 (see preceding column); over 14, who can not read and write English, shall not be employed where there is an evening school unless they attend the same, or at a day school.
Michigan	[7]8–15	4 months; full term in cities having a duly constituted police force.	Fine of $5 to $50, or imprisonment 2 to 90 days, or both.	14 years, in manufacturing establishments, hotels, or stores. Certificate of age required under 16. (Law does not apply to canning or evaporating works.)	Children under 16, unable to read and write, may not be employed in manufacturing establishments.

[1] See remarks introductory to the table.
[2] Not applicable to children over 14 lawfully employed and not enrolled at school.
[3] This certificate must contain: Name, place, and date of birth of child; in New York and Massachusetts and some other States, a statement of school attendance, personal description of the child, and other data.
[4] The provisions tabulated for Maryland (except in 5th column) are those of the compulsory attendance act of 1902, whose operation is limited to Baltimore City and Allegany County.
[5] To 16 unless regularly employed to labor at home or elsewhere.
[6] To 16 if wandering about public places without lawful occupation.
[7] In cities 7 to 15, and to 16 if wandering about public places without lawful occupation.

Statutory provisions relating to compulsory attendance and child labor—Continued.

COMPULSORY EDUCATION.				CHILD LABOR.[1]	
State.	Age.	Annual period.	Penalty on parents for neglect.	Age under which specified employments are forbidden.	Educational restrictions on child labor.
Minnesota	8–16	12 weeks; 6 consecutive	First, $25; subsequent, $25 to $50	14 years, in factories, workshops, or mines; 14 years, in mercantile establishments, telegraph, telephone, or public messengers companies, except during vacation of public schools; 16 years, in any occupation dangerous to life, limb, health, or morals.	Children under school age (16 years) may not be employed in any occupation unless they have attended school the prescribed period; under 16, unable to read and write English, may not be employed in any indoor occupation (except in vacation) unless attending day or evening school.
Mississippi				Children under 21 (boys), under 18 (girls), may not be employed away from home without consent of legal guardian.	
Missouri				14 years, in manufacturing or mechanical establishments, or where work would be dangerous to health of child.	
Montana	8–14	12 weeks; 6 consecutive	$5 to $25	14 years, in mines.	
Nebraska	7–14	Two thirds of school term	$5 to $25	10 years, in manufacturing mechanical, industrial, or mercantile establishments; under 12 years, not more than 4 months in the year in railroad shops, factories, shops or mines. Certificate of age under 16 years.	Children under 14, in foregoing employments (provisions similar to Maine).
Nevada	8–14	16 weeks; 8 consecutive	First, $50 to $100; subsequent, $100 to $200; with costs.		
New Hampshire	8–14	Full term	First, $10; subsequent, $20	12 years in any manufacturing establishment.	No child may be engaged under 14 years in any employment during school hours; 16 years, in any employment if unable to read and write English. No minor unable to read and write English may be employed unless attending day or evening school.
New Jersey	7–12	Full term	$1 to $25, or imprisonment 5 to 90 days.	14 years (girls), 12 years (boys), in factories, workshops, mines, or manufacturing establishments.	Children under 15 may not be employed in any business whatever unless they have attended school for 16 weeks in preceding year.
New Mexico	8–16	12 weeks	$1 to $25, or imprisonment not exceeding 10 days.		

New York	8–16	Full term (October 1 to June 1) between ages of 8 and 12; 80 days between ages of 12 and 14; when unemployed between 14 and 16.	First, not exceeding $5; subsequent, not exceeding $50, or imprisonment not exceeding 30 days, or both fines and imprisonment.	14 years, in factories and in mercantile establishments in villages and cities over 3,000 inhabitants. Certificate of age, school attendance, etc., required under 16.	Children under 16 (provisions similar to Massachusetts); but children over 14 and over 12 who can read and write English may be employed in factories and mercantile establishments, respectively, during vacation, without complying with the school requirements in other respects.
North Carolina				Under 21, may not be employed out of State without consent of legal guardian.	
North Dakota	8–14	12 weeks; 6 consecutive	First, $5 to $20; subsequent, $10 to $50, with costs.	12 years, in mines, factories, and workshops (constitution of State).	Children under 14 may not be employed in any manner during school hours unless they have attended school 12 weeks during the year.
Ohio	[2] 8–14	Full term, in no case less than 24 weeks.	$5 to $20; on default, imprisonment from 10 to 30 days.	14 years, in factories, shops, mercantile, or other establishments; 15 years, in mines.	No child under 14 may be employed during school hours without certificate of having completed the legal studies; or between 14 and 16 if unable to read and write English.
Oregon	8–14	12 weeks; 8 consecutive.			
Pennsylvania	[3] 8–16	Full term; but the school board of each district has power to reduce this to not less than 70 per cent of the term	First, not exceeding $2; subsequent, not exceeding $5; on default, imprisonment; first, not over 2 days; subsequent, not over 5.	13 years, in factories, manufacturing or mercantile industries, laundries, workshops, renovating works, or printing offices; 14 years in mines (boys); girls may not work in mines; 12 years in bituminous mines. Certificate of age required under 16.	Children under 16 may not be employed in the foregoing "or other industrial establishments" unless they can read and write English, or have attended school 16 weeks in preceding year.
Rhode Island	[4] 7–15	Full term	Not exceeding $20	12 years, in factories, manufacturing or mercantile establishments. Certificate of age required under 15.	Children under 13 may not be employed except during school vacations.
South Dakota	8–14	12 weeks; 8 consecutive	$10 to $20 and costs; stand committed till paid.	14 years, in mines	Same as North Dakota.
Tennessee				14 years, in workshops, mills, factories, or mines.	
Utah	8–14	20 weeks; 10 consecutive	First, not exceeding $10; subsequent, not exceeding $30, with costs.	14 years, in mines (constitution of State); girls may not work in mines.	
Vermont	8–14	20 weeks	$5 to $25	10 years, in manufacturing or mechanical establishments.	Children under 14 (provisions similar to Maine and Massachusetts).

[1] See remarks introductory to the table.
[2] To 16 if unemployed.
[3] Not applicable to children over 13 who can read and write and are regularly employed in useful service.
[4] Not applicable to children over 13 who are lawfully employed.

Statutory provisions relating to compulsory attendance and child labor—Continued.

COMPULSORY EDUCATION.				CHILD LABOR.[1]	
State.	Age.	Annual period.	Penalty on parents for neglect.	Age under which specified employments are forbidden.	Educational restrictions on child labor.
Washington	[2]8–15	12 weeks	$10 to $25; defective children, $50 to $200.	14 years, in mines (boys); girls may not work in mines.	Children under 15 may not be employed in manufacturing, mechanical, or mercantile establishments, or by telegraph or telephone companies (except in vacation) unless they have attended school a prescribed period the previous year, or have attained reasonable proficiency in common branches. Such attendance to continue during employment).
West Virginia	8–14	16 weeks	First, $2; subsequent, $5	12 years, in mines, factories, workshops, manufactories, or establishments where goods or wares are manufactured.	
Wisconsin	7–14	12 weeks	$3 to $20	14 years, in mines, factories, or workshops; 14 years, in mercantile establishments, laundries, or in telegraph, telephone, or public messenger service, except in vacation of public schools. Certificate of age required under 16 (but county judge, commissioner of labor, factory or assistant factory inspector may exempt any child over 12 from this act where labor is necessary to support).	
Wyoming	[3]6–21	12 weeks	Not exceeding $25	14 years, in mines (constitution of State); girls may not work in mines.	
United States laws (for Territories).				12 years, in the underground workings of any mine.	

[1] See remarks introductory to the table.
[2] 6 to 21, in case of defective children.
[3] Penalty only for child 7 to 16, or one living idly and loitering about public places.

TEACHERS' SALARIES IN CITIES.

CHAPTER XLVII.

MISCELLANEOUS EDUCATIONAL TOPICS.

CONTENTS.—Need of a commission for investigating the negro problem.—Information relative to the appointment of cadets to the U. S. Military Academy.—Gardiner Greene Hubbard.—The school of comparative jurisprudence and diplomacy of Columbian University.—South Carolina State summer school for teachers.—The possibilities of Alaska.—Educational provisions of Cecil Rhodes's will.—Dr. William Henry Ruffner, and his work for popular education.—Burke Aaron Hinsdale.—What the Government fails to do for the people.—Hampton Normal and Agricultural Institute.—Ventilating schoolrooms by windows and fireplaces.—Catholic parochial schools in Eastern Massachusetts.—The college man as leader in the world's work.—Statistics of elementary education in foreign countries.

THE NEED OF A NATIONAL COMMISSION FOR INVESTIGATING THE NEGRO PROBLEM.

[From the report of Hon. J. L. M. Curry, chairman of the educational committee of the John F. Slater fund.]

Since 1860 the negro has attracted unusual attention, more thorough and scientific study, especially along ethnological and sociological lines, than ever before. In the East, because of increased modern discoveries, we have abundant archæological and historical material. On the contrary, among the negroes there is an utter dearth of such aids to investigation. No written documents, no tombs and palaces, no inspiring memories from Thermopylæ or Salamis, no objects teaching the actual life of the past, but we are confronted by a dreary, sterile waste, an arid nullity. As there is such little inducement to study the native land, the primitive home of the negro, the student must confine himself to those of the race who were torn from Africa and brought under the influence of other races, cults, and civilizations. Practically all periods are prehistoric, and no influence is traceable on other peoples. Early and later centuries are alike destitute of invention, commerce, literature, international relations. It is well that in studies we are having aids from Dubois, Washington, Thomas, Johnson, and others of partial negro ancestry. Every slaveholder knew that a characteristic of the negro, inherent or an evolution from his servile condition, was his secretiveness. No white person is the full confidant of the negro. It is doubtful whether the confessional secures a frank and full disclosure. Dr. Slattery, of Baltimore, after twenty-two years in the closest relations with the race, says "there is no white man living who has the negroes' entire confidence." With my well-known and gratefully acknowledged labors for the upbuilding of the freedmen, I have found it impossible to gain full testimony as to their social and religious conditions. The facts as they lie on the surface are not always a proper indication of what lies below.

During the last year numerous utterances, in press and public address by learned professors, investigators in social statistics, and by others of both races, have appeared, presenting various aspects of the ever-recurring negro problem. Some of these have been hopeful, but more have been tinged with darkest hues. Temperate and thoughtful discussion will eliminate error and bring out truth. Unfortunately, prejudice and ignorance blind us to facts, warp judgment, and injuriously affect conclusions. One writer, of negro ancestry, with large observation drawn from residence and official position both in the South and North, has in a recent, much-reviewed book, "The American Negro," presented a most doleful and pessimistic view of the negro question, giving an exaggerated and repulsive picture of faults and vices, of industrial, mental, and moral incapacity, of depravity in men and women, of insensibility to their own vileness, of party subordination, of inappreciation of duties and requirements of American citizenship. He emphasizes the need of "thoroughly safeguarding every step in the training of the negro with forceful and effective methods of instruction." What is imperatively needed is "a training of the perceptive, constructive, and executive faculties of man, in order that he may have an intelligent notion of what he undertakes to do and the faculty of knowing when and how to do it in the best possible way." Wise as are the disapproval of applying to negro children the same methods of education that are used in the case of white children of intelligent ancestry, environed with more or less cultured homes, and the insistence upon an industrial education, as covering the entire ground of the ordinary negro needs and wants, yet the educational committee and the chairman certainly, after long and anxious study of the problem in its manifold bearings, can not accept these doleful and discouraging conclusions. It is preferred to take the more rational and hopeful conclusions of other students, especially of Mr. Washington, whose strong and persuasive and buoyant testimony is more conducive to hopeful effort and to Christian teachings. My observations and reasonings make me to trust in the slow but sure progress, and in the ultimate attainment of a higher and nobler condition. What has been done is not what was wished, is often very disappointing—results sometimes not commensurate with the outlay—but it justifies continued and wiser efforts. The painful thing, after the experience of years, in connection with what has been written, of conservative or destructive character, is the "lame and impotent conclusion," the failure to meet admitted difficulties by practical and adequate suggestions and remedies. The anxious mind waits, seeks for a solution which remains unspoken. How are evils to be averted, dangers to be met, conditions to be changed, hopes to be realized? Where is the path which leads to safety, to light? Statesmanship is lacking, philanthropy accomplishes a little, and religion points to agencies and outcome which may require indefinite time.

In view of the circumstances, unprecedented and marvelous, connected with the negro, his advent to America, his enslavement, his history, his emancipation and the consequences thereof, public opinion should be slow to find fault, and should be charitable in seeking excuses and palliatives for errors and wrongs. The obstacles, inherent and ignorantly or criminally imposed, have been apparently insurmountable. Whatever there is in heredity, in unbroken millennial continuity of poverty, ignorance, barbarism, savagery, paganism, in the degrading influence of slavery and inferiority, has stood like an impenetrable barrier in the way of progress. Deplorable as slavery was to the Afro-American, there was some relief to the dark background. It made homogeneous a diverse negro race; it gave a language[1] and improved religion, habits of obedience, subjection to authority, regular and systematic labor, acquaintance with productive industries, food, shelter, and clothing, the benefit of kind treatment, the humanizing influence of contact with a cultivated race and those beneficent ameliorating influences which come from personal example and association with the refined, the pious, the free. Emancipation, intended for good, and

[1] A missionary in Africa, Bishop Penick, said that in his schools the boys had thirty-six languages.

lauded as a providential deliverance, as an open door to greater enjoyment of human and civil rights, has not produced the expected results. * * *

By a singular perversity of fact and reason, education, heretofore regarded as a priceless boon, as the cause and result of free institutions, of civilization, as a necessity to human development, to attainment of a higher life, worth millions of expenditure and the best administrative capacity, is now by some regarded as the source and provocative of crime, as incompatible with the best development of a race, and as so full of harm that it should be doled out most sparingly and under rigid limitations. The truer doctrine is, that remedies for social, political, and personal maladies are not material and legislative, not quick and direct, but by the slower and surer method of mental education and moral regeneration. The question of negro education, in itself, is a big one, of prodigious import, and we should get some lessons of patience and wisdom from the conduct of Great Britain, Holland, and Germany in their dealings with dependent and inferior races. An American, by a kind of peculiar instinct, evolved from his own history, turns to the church house and the schoolhouse as the pioneer factors in civilization and good government. During and immediately after the war of secession, the General Government, through the Freedmen's Bureau, undertook to furnish the means of education, but soon withdrew its support, and since, persistently and in inconsistent disregard of the claims of the negro and the obligations resulting from emancipation and enforced citizenship, has refused national aid for fitting the negro for his suddenly created and imposed rights and privileges. Religious denominations were prompt and liberal in devising schemes for education, and, by a blunder, from the evil effects of which the race has not recovered, dubbed the schools "colleges" and "universities," and adopted inapplicable and unattainable courses of study. Methods and courses of instruction, borrowed from advanced civilization, were sought to be applied to new and strange conditions, without reference to age, race, pursuits, environments, capacities. What these early established schools and others of like aim and character are doing and have done, deserve, despite serious mistakes, grateful commendation rather than censure and criticism. They should have encouragement and aid, but far more effective and wide-reaching agencies are needed. All these denominational and private schools reach but a small fraction of the uncountable mass of negro children. The total enrollment in the public schools of the South of negro children, in 1898–99, was 1,511,618, or 52 per cent of an estimated number of negro children of 2,912,910, and the public expenditure from State revenues for these children, from 1870 to 1901, was about $117,000,000.

The American Missionary Association, at its last meeting, said:

> While we are thankful to the forces of philanthropy and religion in the North, which have been able to do so much in planting schools and churches, and lifting the colored race up to a level of self-respect, the South has not failed in doing its part. Considering their means, they have taxed themselves heavily for the support of schools and have afforded nearly, if not quite, equal advantages to the children of former slaves as to their own.

What Hampton, Spelman, Tuskegee, Claflin, Tougaloo, and others are doing is a great blessing, but the aggregate attendance does not reach over 45,000. What of the millions that have not been, never can be, reached by these schools! Many people seem unwilling to recognize the great fact, the most important fact in our history, that these children can be reached only through the public, State-established, State-controlled, State-supported public schools, and that "free schools for all the people," the education of the illiterate, here, within our own ancient territorial limits, at our own doors, is the paramount issue, overshadowing all other questions, domestic or foreign, which can be presented to, or acted upon, by our people. This education is more vital to our internal peace and prosperity than are navies and territorial expansion to our external defense.

The association already referred to, probably the most effective of all agencies at the North in behalf of the education of the colored people, wisely says:

The public-school system, through the energy of wise leaders, men of higher education and skill, is gradually becoming perfected and is destined to become in the South, as it is in the North, the most potent of all factors for the uplifting, the saving, and the culture of the young people of our time.

That is the work for States, cities, the whole people, on general principles, with wide adaptation to racial needs, with revenues, State and local, supplied by taxation.

Unfortunately, in these late days, there is little intelligent, concerted effort of statesmanship to master this question or find a solution of the problem. Session after session of Congress goes by, and, after a few passionate speeches, Senators and Representatives reflect the feeling and wishes of the people when they pass the subject by without serious thought or a suggested remedy. This momentous question remains in huge proportions. Apprehensions of the wisest have not been allayed. The Slater fund has addressed itself conscientiously to doing what was possible with an inadequate income, recognizing manual, mental, and moral instruction as the true basis of reform and elevation. Other and stronger agencies are needed and their cooperation should be sought. National platforms and political parties and candidates for Federal offices turn, like the Levite, to the other side, and leave the suffering unhelped. Gigantic expenditures for necessary purposes and for favorite interests, running into the billions, are discussed at length and voted profusely, but not a word is heard in our national councils for the education of the negro, and not a dollar is offered to aid the States in the white man's burden. School revenues are insufficient, teachers are poorly paid and poorly prepared, houses are ill furnished. Great improvements are necessary. In Great Britain strong royal commissions are appointed for the investigation of questions of great moment, and ample time is given upon the understanding that the recommendations will be at once proposed as the basis of legislation. While we have had elaborate reports upon the relations between labor and capital and prolonged industrial commissions, we have had no official inquiry into the many-sided negro problem. Statesmanship, since the messages of President Lincoln, has avoided the question. There has been no pretense at suggestion or adoption of large and adequate and nonpartisan measures. We venture to commend to the President and the American Congress a thorough and exhaustive and impartial consideration of a question affecting seriously every possible interest of the country. A report similar to that of the recent committee on Ireland in 1896 would be invaluable for trustworthy information and as suggestive of appropriate legislation.

Mr. Slater made training of teachers from among the people requiring to be taught a special object of his beneficence. Every day enforces the wisdom of his requirement. There is no royal road to learning except through competent instructors. Nearly all the aided schools have departments of pedagogy. Would it not be possible, with State or city aid, to establish and maintain, as a model, a professional school which should combine teacher training, industrial training, kindergarten work, where better ideas of home life, the only basis of all true elevation, of personal purity, of morality in everything done, desired, or thought, of healthy manliness and womanliness, of right living by the light of personal and social duty as taught in the New Testament, of thrift, of sanitation, might be inculcated? Possibly a proposition to States or cities might now meet with better consideration and a cooperative response.

INFORMATION RELATIVE TO THE APPOINTMENT AND ADMISSION OF CADETS TO THE UNITED STATES MILITARY ACADEMY.

[Extract from the Official Register of the U. S. M. A.]

APPOINTMENTS.

How Made.—Each Congressional District and Territory—also the District of Columbia—is entitled to have one cadet at the Academy. Each State is also entitled to have two cadets at the Academy, from the State at large. Thirty are also appointed from the United States *at large*. The appointments (except those from the United States *at large* and from the District of Columbia) are made by the Secretary of War at the request of the Senator, Representative, or Delegate in Congress; and the person appointed must be an actual resident of the State, District, or Territory from which the appointment is made. The appointments from the United States *at large* and from the District of Columbia are specially conferred by the President of the United States.

Manner of Making Applications.—Applications can be made at any time, by letter to the Adjutant-General, to have the name of the applicant placed upon the register that it may be furnished to the proper Senator, Representative, or Delegate when a vacancy occurs. The application must exhibit the full name, date of birth, and permanent abode of the applicant, with the number of the Congressional district in which his residence is situated.

Date of Appointments.—Appointments are required by law to be made one year in advance of the date of admission, except in cases where, by reason of death or other cause, a vacancy occurs which can not be provided for by such appointment in advance. These vacancies are filled in time for the next examination.

Alternates.—For each candidate appointed there may be nominated *two alternates*. Each of the alternates will also receive from the War Department a letter of appointment, and will be examined *with the regular appointee*. In the event of the failure of the principal to pass the prescribed preliminary examinations, the better qualified of the alternates, as determined at the preliminary examination, will be admitted. The alternates will not be allowed to defer their reporting until the result of the examination of the regular appointee is known, but must report at the time designated in their letters of appointment. The alternates, like the nominee, should be designated as nearly one year in advance of date of admission as possible.

ADMISSION OF CADETS.

Candidates selected for appointment shall appear for mental and physical examination, before boards of army officers to be convened at such places as the War Department may select, on the 1st day of May, annually, except when that day comes on Sunday, in which case the examination shall commence on the following Tuesday. Candidates who pass successfully will be admitted to the Academy without further examination, upon reporting in person to the Superintendent at West Point before 12 o'clock noon on the 15th day of June of the same year.

No candidate shall be examined at any other time unless prevented from presenting himself at the May examination by sickness or other unavoidable cause, in which case he shall report to the Superintendent at West Point before 12 o'clock noon on the 12th day of June of the same year.

Each candidate before he shall be admitted to the Academy as a cadet shall be shown, by the examination provided for in the preceding paragraph, to be well versed in the following prescribed subjects, viz: Reading, writing, spelling, English grammar, English composition, English literature, arithmetic, algebra through quadratic equations, plane geometry, descriptive geography and the elements of physical geography, especially the geography of the United States; United States history, the outlines of general history, and the general principles of physiology and hygiene.

Candidates may be examined either orally or in writing, and no rejected candidate may be reexamined except upon the recommendation of the academic board.

Immediately after reporting to the Superintendent for admission, and before receiving his warrant of appointment, the candidate is required to sign an engagement for service in the following form, in the presence of the Superintendent, or of some officer deputed by him:

"I, ——— ———, of the State (or Territory) of ———, aged ——— years ——— months, do hereby

engage (with the consent of my parent or guardian) that, from the date of my admission as a cadet of the United States Military Academy, I will serve in the Army of the United States for eight years, unless sooner discharged by competent authority."

In the presence of ——— ———. ——— ———.

The candidate is then required to take and subscribe an oath or affirmation in the following form:

"I, ——— ———, do solemnly swear that I will support the Constitution of the United States, and bear true allegiance to the National Government; that I will maintain and defend the sovereignty of the United States, paramount to any and all allegiance, sovereignty, or fealty I may owe to any State or country whatsoever; and that I will at all times obey the legal orders of my superior officers, and the rules and articles governing the Armies of the United States."

——— ———.

Sworn and subscribed, at ———, this ——— day of ———, nineteen hundred and ———, before me.

——— ———.

Qualifications.—No candidate will be admitted who is under seventeen, or over twenty-two years of age, or who is deformed, or afflicted with any disease or infirmity which would render him unfit for the military service, or who has, at the time of presenting himself, any disorder of an infectious or immoral character. Accepted candidates if between seventeen and eighteen years of age should not fall below five feet three inches in height and one hundred pounds in weight; if between eighteen and nineteen years, five feet three and one-half inches in height and one hundred and five pounds in weight; if over nineteen, five feet four inches in height and one hundred and ten pounds in weight. Candidates must be unmarried.

CHARACTER OF EXAMINATIONS.

PHYSICAL EXAMINATION.

Every candidate is subjected to a rigid physical examination, and if there is found to exist in him any of the following causes of disqualification to such a degree as would immediately or at no very distant period impair his efficiency, he is rejected:

1. Feeble constitution; unsound health from whatever cause; indications of former disease, glandular swellings, or other symptoms of scrofula.
2. Chronic cutaneous affections, especially of the scalp.
3. Severe injuries of the bones of the head; convulsions.
4. Impaired vision, from whatever cause; inflammatory affections of the eyelids; immobility or irregularity of the iris; fistula lachrymalis, &c., &c.
5. Deafness; copious discharge from the ears.
6. Loss of many teeth, or the teeth generally unsound.
7. Impediment of speech.
8. Want of due capacity of the chest, and any other indication of a liability to a pulmonic disease.
9. Impaired or inadequate efficiency of one or both of the superior extremities on account of fractures, especially of the clavicle, contraction of a joint, deformity, &c.
10. An unusual excurvature or incurvature of the spine.
11. Hernia.
12. A varicose state of the veins of the scrotum or spermatic cord (when large), hydrocele, hemorrhoids, fistulas.
13. Impaired or inadequate efficiency of one or both of the inferior extremities on account of varicose veins, fractures, malformation (flat feet, &c.), lameness, contraction, unequal length, bunions, overlying or supernumerary toes, &c., &c.
14. Ulcers, or unsound cicatrices of ulcers likely to break out afresh.

MENTAL EXAMINATION.

Reading.—In reading, candidates must be able to read understandingly, and with proper accent and emphasis. They will be required, if called upon, to define intelligently the leading words of the text read.

Writing and spelling.—In writing and spelling they must be able, from dictation, to write legibly, neatly, rapidly, and correctly, sentences from standard pieces of English literature, both prose and poetry, sufficient in number to test their qualifications both in handwriting and in spelling. In punctuation and capitals they must be familiar with the rules for punctuation and for the use of capitals. In order to test their knowledge, sentences will be given for correction, or for this purpose a theme may be required of the candidate.

The following specimens are from a recent examination in this subject:

There was no pursuit, though the sun was still high in the Heaven when William crossed the Gette. The conquerors were so much exhausted by marching and fighting that they could scarcely

move; and the horses were in even worse condition than the men. Their general thought it necessary to allow some time for rest and refreshment. The French nobles unloaded their sumpter horses, supped gaily, and pledged one another in champagne amidst the heaps of dead; and, when night fell, whole brigades gladly lay down to sleep in their ranks on the field of battle. The inactivity of Luxemburg did not escape censure. None could deny that he had in the action shown great skill and energy. But some complained that he wanted patience and perseverance. Others whispered that he had no wish to bring to an end a war which made him necessary to a Court where he had never, in time of peace, found favor or even justice. Lewis, who on this occasion was perhaps not altogether free from some emotions of jealousy, contrived, it was reported, to mingle with the praise which he bestowed on his lieutenant blame which, though delicately expressed, was perfectly intelligible.

And what is home and where, but with the loving?
Happy thou art, that so canst gaze on thine!
My spirit feels but, in its weary roving,
That with the dead, where'er they be, is mine.

Go to thy home, rejoicing son and brother!
Bear in fresh gladness to the household scene!
For me, too, watch the sister and the mother,
I will believe—but dark seas roll between.

1. Abdicate.	5. Accosted.	9. Derelict.	13. Imperative.	17. Orally.	21. Salad.
2. Abutted.	6. Acme.	10. Despondent.	14. Kerosene.	18. Preference.	22. Tidiness.
3. Accessibility.	7. Bachelor.	11. Disperse.	15. Mnemonics.	19. Presbyterian.	23. Triple.
4. Acclivity.	8. Compass.	12. Erase.	16. Neuter.	20. Raisin.	24. Villain.

NOTE.—Candidates are eligible for admission from the day they are 17 until the day they become 22 years of age, on which latter day they are not eligible.

There being no provision whatever for the payment of the traveling expenses of either accepted or rejected candidates for admission, no candidate should fail to provide himself in advance with the means of returning to his home in case of his rejection.

It is suggested to all candidates for admission to the Military Academy that before leaving their places of residence for the place of examination they should cause themselves to be thoroughly examinad by a competent physician, and by a teacher or instructor in good standing. By such an examination any *serious* physical disqualification or deficiency in mental preparation would be revealed.

It should be understood that the informal examination herein recommended is solely for the convenience and benefit of the candidate himself, and can in no manner affect the decision of the academic and medical examining boards.

The *use of tobacco* in any form by cadets is *prohibited*.

Arithmetic.—Candidates must possess such a complete knowledge of arithmetic as will enable them to pursue the study of such branches of mathematics as are taught at the United States Military Academy. They will be subject to examination only in that part of arithmetic which relates to denominate numbers, the processes of common and decimal fractions, the greatest common divisor of numbers, and the least common multiple of numbers.

The following are typical questions:

Reduce $\dfrac{5\frac{1}{2}+\frac{7\frac{1}{4}}{0.5}-1.725}{\frac{4+3.45}{2\frac{1}{2}}}$ to an equivalent decimal.

Multiply .0578 by .4.

Change .013 to an equivalent fraction whose denominator is 135.

Deduce a method for finding the greatest common divisor of any two integers which can not readily be factored.

Find the greatest common divisor of $26\frac{1}{4}$, $28\frac{2}{3}$, and $29\frac{1}{6}$.

How many men would be required to cultivate a field of $2\frac{5}{8}$ acres in $5\frac{1}{4}$ days of 10 hours each, if each man completed 77 square yards in 9 hours?

5 cubic feet of gold weigh 98.20 times as much as a cubic foot of water, and 2 cubic feet of copper weigh 18 times as much as a cubic foot of water. How many cubic inches of copper will weigh as much as $\frac{7}{8}$ of a cubic inch of gold?

English shillings are coined from a metal which contains 37 parts of silver to 3 parts of alloy; one pound of this metal is coined into 66 shillings. The United States silver dollar weighs 412.5 grains, and consists of 9 parts silver to 1 part of alloy. What fraction of the U. S. dollar will contain the same amount of silver as 1 English shilling?

What is the difference in grains between $42\frac{2}{3}$ lbs. Av. and 42.375 lbs. T.?

Algebra.—Candidates will be required to pass a satisfactory examination in that portion of algebra which includes the following range of subjects: Definitions and notation; the fundamental laws; the fundamental operations, viz: Addition, subtraction, multiplication, and division; factoring; highest common factor; lowest common multiple; fractions, simple and complex; simple, or linear, equations with one unknown quantity; simultaneous simple, or linear, equations with two or more unknown quantities; involution, including the formation of the squares and cubes of polynomials; evolution, including the extraction of the square and cube roots of polynomials and of numbers; theory of exponents; radicals, including reduction and fundamental operations, rationalization, square roots of binomial surds, equations involving radicals, and imaginary quantities; quadratic equations; equations of quadratic form; simultaneous quadratic equations; ratio and proportion; arithmetical and geometrical progressions. Candidates will be required to solve problems involving any of the principles or methods contained in the above subjects.

The following are typical questions:

Enunciate the Commutative Law, the Distributive Law, the Associative Law.

What is a homogenous algebraic expression? Give example.

Remove brackets from $a-\Big[5b-\Big\{a-(3c-3b)+2c-(a-2b-2c)\Big\}\Big]$.

Find *L.C.M.* of $6(a^3-b^3)(a-b)^3$, $9(a^4-b^4)(a-b)^2$ and $12(a^2-b^2)^3$.

Deduce the condition that the roots of the quadratic equation $ax^2+bx+c=0$ shall be equal, equal numerically with opposite signs, real, imaginary, rational.

A hare is eighty of her own leaps before a grayhound; she takes three leaps for every two that he takes, but he covers as much ground in one leap as she does in two. How many leaps will the hare have taken before she is caught?

A and *B* run a race, their rates of running being as 17 to 18. *A* runs $2\frac{1}{2}$ miles in 16 minutes 48 seconds, and *B* runs the entire distance in 34 minutes. What was the entire distance?

A and *B* can do a piece of work in 4 hours, *A* and *C* in $3\frac{3}{7}$ hours, *B* and *C* in $5\frac{1}{7}$ hours. In what time can *A* do it alone?

A gun is fired 36 times before a second gun begins, after which the first is fired 8 times while the second is fired 7 times; but the second requires the same amount of powder for 3 shots that the first requires for 4. When both guns have used up the same amount of powder, how many shots have been fired from each?

A, B, C, and D, working one at a time do a certain work in 130 days. A gets 42 cents, B gets 45 cents, C gets 48 cents, and D gets 50 cents for each day's work. Each received the same amount. How many days did each work?

Having 300 barrels of flour worth $7.50 per barrel, and 800 barrels worth $7.80 per barrel, and 400 barrels worth $7.65 per barrel, how many more barrels of flour at $8.00 and $8.50 per barrel will make 2,000 barrels worth $7.85 a barrel?

Solve $\left.\begin{aligned} x+\frac{3}{y}&=\frac{7}{2} \\ 3x-\frac{2}{y}&=\frac{26}{3} \end{aligned}\right\}$.

There is a number which consists of two digits, such that if we divide the number by the product of its digits we obtain a quotient 5 and a remainder 2, but if we invert the order of the digits and divide the resulting number by the product of its digits we obtain a quotient 2 and remainder 5. Required the number.

Solve $\left.\begin{aligned} 2y^2-4xy+3x^2&=17 \\ y^2-x^2&=16 \end{aligned}\right\}$

Simplify $\dfrac{(3+\sqrt{3})(3+\sqrt{5})(\sqrt{5}-2)}{(5-\sqrt{5})(1+\sqrt{3})}$

Solve $\sqrt{2x+7}+\sqrt{3x-18}=\sqrt{7x+1}$

Find the geometrical progression whose sum to infinity is $4\frac{1}{2}$, and whose second term is -2.

Plane geometry.—Candidates will be required to give accurate definitions of the terms used in plane geometry, to demonstrate any proposition of plane geometry as given in the ordinary text-books, and to solve simple geometrical problems either by a construction or by an application of algebra.

The following are typical questions:

Name and define the different kinds of triangles; of quadrilaterals.

Prove that, if a perpendicular is drawn to a given straight line at its middle point: 1st. Any point of the perpendicular is equally distant from the extremities of the line; 2d. Any point without the perpendicular is unequally distant from the extremities.

Show that, if through the middle point of one of the sides of a triangle, a line be drawn parallel to the base, it will bisect the second side and the part intercepted will be equal to one-half the base.

What number of sides has the polygon, the sum of whose angles is twenty-six right angles?

To draw a common tangent to two given circles.

Find the locus of the middle points of all chords of a circle equal in length to a given line.

Find the locus of the middle points of all chords of a circle passing through a given point within the circle.

Prove that, through three points not in the same straight line, one circumference may always be made to pass, and but one.

Prove that the square described on the hypothenuse of a right angled triangle is equivalent to the sum of the squares described on the other two sides.

Given the side of an equilateral triangle equal to 10 feet; find its area.

Define "limit of a variable." Illustrate by an example.

Prove that the area of a circle is equal to the product of its circumference by half the radius.

Angles at the centres of equal circles are proportional to what? Angles at the centres of unequal circles are proportional to what? Define the unit angle or radian.

The regular inscribed hexagon is double the equilateral triangle inscribed in the same circle, and one-half of the circumscribed equilateral triangle.

English grammar.—Candidates must have a good knowledge of English grammar; they must be able to define the terms used therein; to define the parts of speech; to give inflections, including declension, conjugation, and comparison; to give the corresponding masculine and feminine gender nouns; to give and apply the ordinary rules of syntax.

They must be able to parse correctly any ordinary sentence; giving the subject of each verb, the governing word of each objective case, the word for which each pronoun stands or to which it refers, the words between which each preposition shows the relation, precisely what each conjunction and each relative pronoun connects, what each adjective and adverb qualifies or limits, the construction of each infinitive, and generally to show a good knowledge of the function of each word in the sentence.

They must be able to correct in sentences or extracts any ordinary grammatical errors.

It is not required that any particular text-book shall be followed; but the definitions, parsing, and corrections must be in accordance with good usage and common sense.

The following questions were used at a recent examination:

I. Give the principal parts (present tense, past tense, and past participle) of the following verbs: 1. choose; 2. crow; 3. freeze; 4. slay; 5. stick; 6. fly; 7. sit; 8. burst.

II. Write the plurals of the following words: 1. motto; 2. fairy; 3. money; 4. belief; 5. axis; 6. synopsis; 7. man-of-war; 8. Norman; 9. M.

III. Write the feminine forms of the following words: 1. hero; 2. mankind; 3. murderer; 4. testator; 5. priest; 6. ambassador; 7. Englishman; 8. poet; 9. emperor.

IV. Write the possessive case of the following words: 1. men; 2. I; 3. it; 4. boys; 5. they; 6. prince; 7. King John; 8. King of Italy; 9. Henry the Fourth.

Define the following: 1. Personal pronoun. 2. Preposition.

Parse the words in italics in the following sentence:

Other *things being equal, it* is obvious *that* the writer *who* has most words *to choose from* is most *likely* to find in *his* assortment just the word *which he* needs at a given moment.

Correct all the errors in the following sentences:

1. It was not her that did it.
2. Who do you take him to be?
3. He surely don't expect me to do it.
4. Neither by you nor he was it considered necessary.
5. Each have their own faults.
6. How do you know when its coming?
7. I should not have asked like you did for twice the money.
8. Are either of these places marked on the map?
9. Two fatal errors underlaid his theory.
10. Except you go with me, I shall stay at home.
11. You or he is in the wrong.
12. Here comes Smith and two other men.

In English composition and English literature.—Candidates must have a fair knowledge of the general principles and leading rules of composition. Their knowledge will be tested by the correction of errors in the selection and right use of words, of errors in the construction of sentences, by their proficiency in variety of expression, and by their ability to write a letter in the correct form.

They must have a fair knowledge of the names of the most prominent American and English authors and the names of their principal works.

Questions similar to the following are likely to be used:

Indicate the errors in the selection and use of words in the following sentences by underscoring the errors and writing the correct word above the incorrect:

1. He had exceptionable opportunities for learning the language.
2. A century transpired before it was revisited.
3. King Edward VII replaced Queen Victoria on the throne of England.
4. I was continually aggravated by his conduct.
5. There were not less than twenty persons present.

Correct the following errors in construction of sentences:

1. The teacher should repress the practice of throwing stones, as far as possible.
2. The French having nearly lost 5,000 men, became discouraged.
3. The picture of the king hung on the wall behind the door, covered with a cloth.
4. He made no petition, though he did not like the new representative quite as well as his colleagues.
5. He did not pretend to abolish French music but only to cultivate it.

For variety, change the following sentences into another correct form and still keep the same meaning:

1. If that be granted the rest is easily proved.
2. We hope we shall have the pleasure of seeing you.
3. A man that has little sense is seldom aware of the fact.
4. He was the first that entered.
5. His disease was one that can not be cured.

Write the following letter in proper form to Charles Smith, at 2121 Mount Vernon Avenue, Baltimore, Maryland, giving proper address and complimentary conclusion:

March 2 1900 philadelphia pa 8131 Eighth street

by this mail I send you two copies of the boook ordered by you the 13th ultimo hoping they will prove satisfactory hamlin and Co.

What author wrote? 1. Gulliver's travels. 2. Macbeth. 3. Pilgrim's Progress. 4. Childe Harold.

Name one work of each of the following authors: 1. Tennyson. 2. Hawthorne. 3. Milton. 4. Spencer.

Geography.—Candidates will be required to pass a satisfactory examination in *descriptive geography* and the elements of *physical geography.* A preponderance of weight is attached to a knowledge of the geography of the United States.

In descriptive geography of the United States, candidates should be thoroughly informed as to its general features and boundaries (both with respect to neighboring countries and latitude and longitude); its adjacent oceans, seas, bays, gulfs, sounds, straits, and islands; its lakes, the location and extent of its mountain ranges; the sources, directions, and terminations of the important rivers, the names of their principal tributaries, and at what points, if any, these rivers break through highlands on their way to the ocean; the water routes of communication from one part of the country to another; the location and termination of important railroad lines; the boundaries of the several States and Territories and their order along the coasts, frontiers, and principal rivers; the locations and boundaries of the island possessions; and the names and locations of the capitals and other important cities of the several States, Territories, and island possessions.

In short, the knowledge should be so complete that a clear mental picture of the whole of the United States is impressed on the mind of the candidate.

In descriptive geography of other countries, candidates should be familiar with the continental areas and grand divisions of the water of the earth's surface; the large bodies of water which in part or wholly surround the grand divisions of the land; the capes, from what parts they project and into what waters, the principal peninsulas, location, and by what waters embraced; the parts connected by an isthmus; the principal islands, location, and surrounding waters; the seas, gulfs, and bays, the coasts they indent, and the waters to which they are subordinate; the straits, the lands they separate, and the waters they connect; the location of the principal lakes; the locations, boundaries, capitals, and principal cities of the political divisions of the world.

In physical geography candidates should be familiar with the relief of the earth's surface; the principal mountain systems, the river systems and watersheds; the coastal and lake plains; and the influence of climate, soil, mineral deposits,

and other physical features on the resources, industries, commercial relations, and development of a country and its people, especially of the United States.

The following questions were used at a recent examination:

1. Name the bodies of water surrounding Europe.

2. Where is 1. Cape St. Vincent. 2. Cape Corrientes. 3. Cape Matapan. 4. Cape Lopez. 5. Cape Comorin. 6. Cape York?

3. Name in order the political divisions of South America which border on the Pacific Ocean and the capital of each.

4. Locate definitely the following islands: 1. Mauritius. 2. Tasmania. 3. Formosa. 4. New Zealand. 5. Madeira. 6. Falkland. To what country does each belong?

5. Where are the gulfs of—1. Bothnia? 2. Guinea? 3. Paria? 4. Salonica? 5. Pechili?

6. What lands are separated and what waters connected by—1. Torres Strait? 2. Hudson Strait? 3. Strait of Malacca?

7. Bound Italy; name its capital, largest river, and principal mountain range.

8. Locate definitely the following cities: 1. Vienna. 2. Nankin. 3. Cork. 4. Tunis. 5. Montevideo. 6. Batavia. 7. Suez. 8. Pretoria.

9. Name in order the waters traversed in sailing from Liverpool, England, to Hongkong, China.

10. A considerable portion of the boundary line of the United States is along what parallel?

11. Locate definitely the following: 1. Flatland Lake. 2. Sabine Pass. 3. Black Hills. 4. Sebago Lake. 5. Cape Lookout. 6. Montauk Point. 7. Wichita Mountains. 8. Lingayen Bay.

12. The meridian of Minneapolis passes through what States?

13. Name the principal rivers that drain Pennsylvania. Where do they rise, at what points do they leave the State, and at what points, if any, do they break through highlands?

14. Name all the waters traversed in going by the two commercial water routes from Duluth to the Atlantic Ocean.

15. Name the principal ranges of mountains crossed in going by rail from New York to San Francisco; state the rail route assumed to be traveled.

16. Bound precisely the following States and Territories: 1. Montana. 2. Arizona. 3. Arkansas. 4. Wisconsin. 5. Pennsylvania. 6. Georgia. (In bounding, all contiguous States must be mentioned, as well as rivers, mountain ranges, etc.)

17. Name the States west of the Mississippi River drained wholly or in part by it or its tributaries and give the capital of each.

18. Locate accurately the following cities: 1. Austin. 2. Pensacola. 3. Asheville. 4. Winchester. 5. Allegheny. 6. Iloilo. 7. Oswego. 8. Pasadena. 9. Guthrie. 10. Detroit.

19. Going by water from New Orleans, La., to Pittsburgh, Pa., what States would you pass on the left?

20. How many large islands are there in the Hawaiian group? Which is the largest? Which is the most important?

21. Going westward on the 35th parallel of north latitude, from near Newberne, N. C., what States and large rivers would be crossed?

22. Describe the chief mountain system of the Eastern Hemisphere, and state what island chains of Asia abound in volcanoes.

23. What are the great river systems of South America? Where are the principal coastal plains?

24. What are the qualifications of a good harbor? Name three of the best harbors on the Atlantic coast; one on the Pacific coast.

25. What has made the Middle Atlantic States the principal commercial section of the United States?

History.—The candidate will be required to be familiar with so much of the history of the United States and the outlines of general history as is contained in the ordinary school histories.

In history of the United States the examination will include questions concerning early discoveries and settlements; the forms of government in the colonies; the causes, leading events, and results of wars, and prominent events in the history of our Government since its foundation.

In general history candidates must have a fair knowledge of the general outlines of the history of the following nations: Egyptian, Assyrian, Babylonian, Persian, Grecian, and Roman, and of the mediæval and modern history of the European nations.

The following questions show the character of the examination in U. S. history and in general history:

1. What explorations or discoveries did each of the following-named persons make? Give the date in each case. *a*. De Narvaez. *b*. Coronado. *c*. Marquette. *d*. La Salle.

2. Name three colonies that were founded for religious reasons, and give the sect or denomination by which each was colonized.

3. Who were the Pilgrims?
4. When and under what circumstances was Delaware separated from Pennsylvania?
5. Give an account of Bacon's Rebellion.
6. When and where did each of the following events occur? *a.* Meeting of the first Colonial Congress. *b.* Burgoyne's surrender. *c.* Arnold's treason.
7. Name some important results of each of the following battles of the Revolutionary war: *a.* Long Island. *b.* Trenton. *c.* Brandywine.
8. Name four additions to the territory of the United States since the Revolutionary war, and give the way each has been acquired.
9. Bound the territory of the United States at the close of the Revolutionary war.
10. What was the "Massacre of Wyoming?"
11. When, where, and for what purpose did the Constitutional Convention meet? What resulted from its deliberations?
12. What was the "Whiskey Insurrection?"
13. What were the "Alien and Sedition" laws? What was their effect?
14. When and where was the last battle of the war of 1812 fought? Name the commanders on each side.
15. What were the two principal political parties in 1860? Their candidates for the Presidency? Their leading doctrines on the slavery question? Parties. Candidates. Principles.
16. With what foreign nations had the United States unfriendly relations during and at the close of the civil war? Give the cause in each case.
17. Name, with date, three important military events of 1865.
18. What Vice-Presidents have become President? Name the predecessor in each case.
19. Give an account of the "Virginius affair."
20. In what war were the following battles fought? What were the opposing forces? Which side won? *a.* Ticonderoga. *b.* Monterey. *c.* Saratoga. *d.* Stony Point? *e.* Spottsylvania. *f.* Lundy's Lane.
1. Into what general periods is the history of Egypt divided?
2. Into what classes was Egyptian society divided?
3. Name one of the great kings of Assyria?
4. In what region did the Assyrian Kingdom lie?
5. Name the greatest Babylonian King and describe some of his achievements?
6. Who was the founder of the Persian Empire?
7. State the principal events in the reign of Darius I.
8. Into what three general parts was ancient Greece divided, and what was the name of the principal State in each?
9. What was the character of the Spartan people and the nature of their government?
10. What was the character of the Athenian people, and the nature of their government after the expulsion of the tyrants?
11. Name four great battles of the Græco-Persian war, and give the date of any one of them.
12. What was the name of the great war between the Grecian States, and what States were the leaders in it?
13. Give an outline of the conquests of Alexander the Great. In what century did it occur?
14. What was the nature of the early government of Rome?
15. Give the title of the principal officers of the Roman Republic, and describe their functions.
16. What were the Punic wars? How many in number? Name two great Carthagenian and two great Roman generals.
17. Who was Augustus Cæsar? State briefly the principal events of his career.
18. What was the feudal system, and how did it originate?
19. What is meant by the Renaissance?
20. Who was the leader of the Reformation? Describe briefly its nature and principal events.
21. Who was Oliver Cromwell, and what did he establish?
22. What was the cause of the French Revolution, and what did it effect?
23. Under what two forms of government did Napoleon rule France, and what was the "Code Napoleon?"
24. When and under what circumstances was the new German Empire founded?
25. Name some of the more important events of Queen Victoria's reign.

Physiology and hygiene.—Candidates must be able to pass a satisfactory examination in the general principles of physiology and hygiene with special reference to the nature and the effects of alcoholic drinks and other narcotics upon the human system.

They must be able to state the general effects of alcohol upon the cells and tissues of the body and upon the processes of digestion, its effects on the liver, lungs, and heart, on the blood, blood vessels, and on the nervous system, on the moral powers and the capacity for physical endurance; its hereditary effects; the origin and nature

of alcoholic beverages; the general effects of tobacco on the cells and tissues of the young and on the digestive organs, its effects on the throat, on the heart, on the blood, on the nervous system; the effects of opium on the stomach and on the nervous system; the influence of tea and coffee on the system.

Questions similar to the following are likely to be used:

1. What are the two important offices of the bones? Describe the internal minute structure of the bone.
2. Name in order the different parts of the alimentary canal.
3. Indicate by diagram the shape of the human stomach; mark the left side when in position.
4. What is the mucous membrane—its structure; the serous membrane—its use?
5. What in general is the effect of alcohol and tobacco on the living cells; what is the only absolute safeguard against the narcotic appetite?
6. What chronic effect is often produced on the stomach by the habitual use of alcohol?
7. Name in order all the channels through which the air passes in respiration; in what part of the circuit does it aerate the blood?
8. What is the average amount of air taken in at one inspiration; what changes are observed in the expired air?
9. What is the usual effect on the stomach of the habitual use of alcohol?
10. Name two well-determined effects of alcohol upon the liver.
11. What is meant by the general circulation of the blood?
12. What are the two systems of channels for the circulation of the blood? Describe the structure of each.
13. Starting with the blood in the right auricle, describe its course through the body until it returns to the same receptacle?
14. What are the three agencies instrumental in returning the blood from the different parts of the system to the heart?
15. What are the effects of alcohol on the blood—of tobacco?
16. What are the effects of alcohol on the heart—what is the explanation of the fact that alcohol sometimes increases the rapidity of heart beats?
17. What is the effect of tobacco that produces the disease known as the "tobacco heart?"
18. Describe the structure of the skin—what are the functions of the skin?
19. What is the explanation of the disease "aneurism" when due to alcohol?
20. Under what two heads may we in general class the changes produced by alcohol on the structures of the organs—which of these is due to the stronger beverages?

ACADEMIC DUTIES.

The academic duties and exercises commence on the first of September and continue until the first of June. Examinations of the several classes are held in January and June, and at the former such of the new cadets as are found proficient in studies and have been correct in conduct are given the particular standing in their class to which their merits entitle them. After each examination, cadets found deficient in conduct or studies are discharged from the Academy, unless the academic board for special reasons in each case should otherwise recommend. Similar examinations are held every January and June during the four years comprising the course of study.

Military instruction.—From the termination of the examination in June to the end of August the cadets live in camp, engaged only in military duties and exercises and receiving practical military instruction.

Except in extreme cases, cadets are allowed but one leave of absence during the four years' course. As a rule the leave is granted at the end of the first two years' course of study.

PAY OF CADETS.

The pay of a cadet is $540 per year, to commence with his admission to the Academy. No cadet is permitted to receive money or any other supplies from his parents or from any person whomsoever without the sanction of the Superintendent.

A *most rigid* observance of this regulation is urged upon all parents and guardians, as its violations would make distinctions between cadets which it is the especial desire to avoid. The pay of a cadet is sufficient, with proper economy, for his support.

Each cadet must keep himself supplied with the following-mentioned articles, viz:

Two pairs of uniform shoes; six pairs of uniform white gloves; two sets of white belts; *eight white shirts; *four night shirts; twelve white linen collars; twelve pairs of white linen cuffs; *eight pairs of socks; *eight pairs of summer drawers; *six pairs of winter drawers; *twelve pocket handkerchiefs; *twelve towels; two clothes bags, made of ticking; *one clothes brush; *one hairbrush; *one toothbrush; *one comb; one mattress; one pillow; four pillowcases; eight sheets, two blankets, and one quilted bed cover; one chair; one tumbler; *one trunk; one account book; one wash basin.

Candidates are authorized to bring with them the articles marked *.

Cadets are required to wear the prescribed uniform. All articles of their uniform are of a designated pattern and are sold to cadets at West Point at regulated prices.

DEPOSIT PRIOR TO ADMISSION.

Immediately after being admitted to the institution cadets must be provided with an outfit of uniform, the cost of which will be about $100, *which sum must be deposited with the treasurer of the Academy before the candidate is admitted.* It is best for a candidate to take with him no more money than will defray his traveling expenses, and for the parent or guardian to send to "*The Treasurer of the U. S. Military Academy*" the required deposit of $100. This amount is sufficient to equip a new cadet with uniform and to supply him with all articles and books.

ASSIGNMENT TO CORPS AFTER GRADUATION.

The attention of applicants and candidates is called to the following provisions of an act of Congress approved May 17, 1886, to regulate the promotion of graduates of the United States Military Academy:

"That when any cadet of the United States Military Academy has gone through all its classes and received a regular diploma from the academic staff he may be promoted and commissioned as a second lieutenant in any arm or corps of the Army in which there may be a vacancy and the duties of which he may have been judged competent to perform; and in case there shall not at the time be a vacancy in such arm or corps, he may, at the discretion of the President, be promoted and commissioned in it as an additional second lieutenant, with the usual pay and allowances of a second lieutenant, until a vacancy shall happen."

Course of study and books used at the United States Military Academy.

(Books marked thus * are for reference.)

FIRST YEAR—FOURTH CLASS.

Department.	Course of study, text-books, and books of reference.
Mathematics.	C. Smith's Treatise on Algebra. Davies's Legendre's Geometry. Ludlow's Elements of Trigonometry. C. Smith's Conic Sections. J. B. Johnson's Theory and Practice of Surveying. *Ludlow's Logarithmic Tables.
Modern languages.	Williams's Composition and Rhetoric. Abbott's How to Write Clearly. Meiklejohn's English Language. *Smith's Synonyms Discriminated. Keetels's Analytical and Practical French Grammar. Castarède's Treatise on the Conjugation of French Verbs. Roemer's Cours de Lecture et de Traduction, Vol. I. Böcher's College Series of French Plays, Vol. II. *Spiers's and Surenne's French Pronouncing Dictionary. *Roget's Thesaurus of English Words. *Webster's Dictionary. De Peiffer's French Pronunciation.
Drill regulations U. S. Army.	Practical instruction in the Schools of the Soldier, Company and Battalion—Infantry. Theoretical instruction in the School of the Soldier and Company. Practical and theoretical instruction in the School of the Cannoneer—Siege and Light Artillery. Theoretical and practical instruction in the service of security and information. Exercises in applied tactics and practice marches—Infantry. Theoretical and practical instruction in target practice. U. S. Infantry and Light Artillery Drill Regulations. Firing Regulations for Small Arms. Manual of Security and Information, by the Department of Tactics.
Use of the sword, &c.	Instruction in fencing with rapier and broadsword, and bayonet exercise, and military gymnastics.

Course of study and books used at the United States Military Academy—Continued.

SECOND YEAR—THIRD CLASS.

Department.	Course of study, text-books, and books of reference.
Mathematics.	C. Smith's Conic Sections and Solid Geometry. Church's Descriptive Geometry, with its application to spherical projections, shades, shadows, and perspective. Bass's Differential Calculus. Johnson's Text Book on the Method of Least Squares. D. A. Murray's Integral Calculus.
Modern languages.	Borel's Grammaire Française. Hennequin's Lessons in Idiomatic French. Böcher's College Series of French Plays, Vol. II. Roemer's Cours de Lecture et de Traduction, Vol. II. Revue Militaire de l'Etranger. The Weekly Figaro. Eco de Madrid. Edgren's Compendious French Grammar. *De Peiffer's French Pronunciation. *Spiers's and Surenne's French Pronouncing Dictionary. Monsanto and Languellier's Spanish Grammar. Knapp's Spanish Grammar. Knapp's Spanish Reader. Traub's Spanish Verbs and Spanish Pronunciation. Ramseys's Elementary Spanish Reader. *Seoane's Neumann and Baretti's Spanish Dictionary.
Drawing.	Constructive Problems in Plane Geometry. Point Paths. Topography and plotting of surveys with lead pencil, pen and ink, and colors; construction of the various problems in descriptive geometry, shades and shadows, linear perspective and isometric projections; practical surveying in the field. Field reconnaissance contouring, and sketching with and without instruments; theory of color and laying of tints; history of cartography and topography; triangulation and large surveys. Lectures on the foregoing. *Reed's Topographical Drawing and Sketching, including photography applied to surveying.
Drill regulations U. S. Army.	Practical instruction in the Schools of the Soldier, Company and Battalion—Infantry. Practical instruction in the School of the Cannoneer—Light Artillery; and School of the Trooper—Cavalry, and Equitation. Practical instruction in small arms target practice. Practical instruction in the service of security and information. Exercises in applied tactics and practice marches—Infantry. *U. S. Army Drill Regulations. *Manual of Security and Information, by the Department of Tactics. *Firing Regulations for Small Arms.
Practical military engineering.	Practical instruction in the construction of ponton, spar and trestle bridges, and surveying.

THIRD YEAR—SECOND CLASS.

Natural and experimental philosophy.	Michie's Analytical Mechanics. Michie and Harlow's Practical Astronomy. Young's General Astronomy. Michie's Elements of Wave Motion relating to Sound and Light.
Chemistry, mineralogy, and geology.	Tillman's Descriptive General Chemistry (2d edition). Tillman's Elementary Lessons in Heat (2d edition). Tracy's Anatomy, Physiology, and Hygiene. Thompson's Elementary Lessons in Electricity and Magnetism (new and revised ed.). Tillman's Important Minerals and Rocks. Le Conte's Elements of Geology (4th edition).

Course of study and books used at the United States Military Academy—Continued.

THIRD YEAR—SECOND CLASS—Continued.

Department.	Course of study, text-books, and books of reference.
Drawing.	Free-hand drawing and landscape in black and white. Mechanical and architectural drawing in ink and colors; military landscape, sketching in the field; memory drawing; free-hand mechanical drawing without instruments; building construction, working drawings and isometric sections; engineering and ordnance drawing. Lectures on all the foregoing subjects with stereopticon. *Reed's Topographical Drawing and Sketching, including photography applied to surveying.
Drill regulations U. S. Army.	Practical instruction in the Schools of the Soldier, Company and Battalion—Infantry. Theoretical instruction in Drill Regulations—Infantry. Practical instruction in the School of the Cannoneer—Seacoast Artillery. Theoretical instruction in Drill Regulations for Light Artillery. Practical instruction in the Schools of the Troop and Squadron—Cavalry, and Equitation. *Dyer's Handbook for Light Artillery.
Practical military engineering.	Practical instruction in the construction of ponton bridges, in laying gun platforms, and in the construction of revetments and obstacles. Practical and theoretical instruction in military signaling.

FOURTH YEAR—FIRST CLASS.

Civil and military engineering and science of war.	Wheeler's Civil Engineering. Fiebeger's Field Fortifications. Fiebeger's Pamphlet on Permanent Fortification. Mercur's Attack of Fortified Places. Wagner's Organization and Tactics and the Service of Security and Information. Mahan's Stereotomy.
Law.	Davis's Elements of Law. Davis's International Law (2d edition). Davis's Military Law. Flander's Manual of the Constitution.
History and historical geography.	Duruy's General History. *Labberton's New Historical Atlas.
Practical military engineering.	Demolitions. Practical instruction in the construction of ponton, trestle, and spar bridges; in the preparation and application of siege materials; and laying out field and siege works. Practical instruction in military reconnaissances on foot and mounted; in field telegraphy, night signaling, and the use of the heliograph. *Ernst's Manual of Practical Military Engineering.
Natural and experimental philosophy.	Practical instruction in astronomy.
Drill regulations, U. S. Army.	Practical instruction in the Schools of the Soldier, Company and Battalion—Infantry; of the Troop and Squadron—Cavalry; and Equitation. Theoretical instruction, U. S. Cavalry Drill Regulations. Practical instruction in the School of the Battery—Light, Horse, and Mountain Artillery. Practical instruction in the service of security and information; exercises in applied tactics; practical instruction in small arms target practice; practice marches—infantry, cavalry, and artillery; lectures in customs of service and military etiquette; lectures on hippology, on age of horse, horseshoeing, stable management, and practical work at stables, &c. United States Army Cavalry Drill Regulations. *Firing Regulations for Small Arms. *Manual of Security and Information, by the Department of Tactics. *Dyer's Hand Book for Light Artillery.
Ordnance and gunnery.	Bruff's Ordnance and Gunnery. Ingalls's Ballistic Tables.

Statement showing the per cent of failures of candidates for West Point at each of the places of examination in March, 1901.

Place of examination.	State.	Number examined, mental.	Percentage failed mentally.
West Point[a]	New York	96	11.45

GARDINER GREENE HUBBARD.

[The following biographical notices of Gardiner Greene Hubbard are taken from an address delivered by the Rev. Teunis S. Hamlin, D. D., at the memorial services held at the Church of the Covenant in Washington, D. C., December 13, 1897, and from addresses by Mr. A. Graham Bell and Miss Caroline A. Yale, LL. D., at the memorial meeting of the National Geographic Society held in the city of Washington January 21, 1898, and published in the National Geographic Magazine for February, 1898.]

FROM THE ADDRESS BY REV. TEUNIS HAMLIN.

Gardiner Greene Hubbard was descended from an educated and gentle ancestry on both sides for many generations. Physically, mentally, and morally his heredity, and so his personal nature, were of the best. He was born in Boston August 25, 1822. His father, Samuel, an alumnus of Yale and a doctor of laws from Yale, Dartmouth, and Harvard, was an accomplished lawyer, and during his last years a member of the supreme court of Massachusetts. His grandfather, William, was a successful merchant. Back of this the family is English, its first representative in America being William Hubbard, a graduate of Harvard in 1642; pastor for 38 years at Ipswich, Mass., and historian of New England. His mother, Mary, was the daughter of Gardiner Greene, of Boston, one of the most prosperous and eminent men of his day.

After careful preparation at the then as now excellent Boston schools, Mr. Hubbard took a full course at Dartmouth in the class of 1841 and at once entered upon the study of law at Cambridge. Admitted to the bar in 1843, he entered the office of Benjamin R. Curtis and remained with that eminent firm until its head came to this city to take his seat upon the Supreme Bench of the United States. For twenty years he practiced his profession in Boston and for five years longer in this capital, to which he was drawn by considerations of health and by our salubrious climate. It is so long since Mr. Hubbard laid down his profession (almost twenty years) and he has since become so eminent in so many other activities that his real greatness as a lawyer has become obscured; but he was thorough in this as in all else. He

was associated with Webster and other great men in many notable cases. Both Dartmouth College and Columbian University gave him a doctorate of laws. * * *

Mr. Hubbard very early evinced the far-sighted enterprise and the broad and active public spirit that characterized him to the last. Fixing his residence in Cambridge, he threw himself at once into all its municipal interests. He became president of the company that built the first street railroad in this country outside of New York City—that, namely, between Cambridge and Boston. He was for some ten years a member of the State board of education of Massachusetts. In 1860 he was led, by the result of serious sickness in one of his own children, to carefully investigate the possibility of teaching deaf-mutes to speak. The idea had originated in Germany and been successfully applied in a few cases; but it remained for Mr. Hubbard to make this, like several other things lying dormant or inefficient, widely or universally available. Convinced by personal study of what might be accomplished, and with an object lesson before him in his own household, he gathered a half dozen pupils, employed a teacher, and opened a school in Chelmsford, near Boston, to which he was a most generous contributor for several years. Meanwhile he applied to the legislature for a charter, only to be met with doubts and discouraged as a visionary. But he persevered; took the pupils of his school, and even his own little daughter, before a legislative committee to demonstrate his success, and finally secured the founding of the Clarke school at Northampton, the best of its kind in the world, which he organized, of whose board of trustees he was the first president and a member till his death, and which, in telegraphing its condolence, says it "recognizes an immeasurable loss." In this great achievement Mr. Hubbard opened the benefits and delights of language and of association, on practically equal terms with their fellow-men, to a multitude that had hitherto been doomed to live apart and to miss many of life's sweetest joys. His keen interest in this work never lagged, and he has for many years been first vice-president of the American Association to Promote the Teaching of Speech to the Deaf. This alone would entitle him to be called a benefactor of mankind.

These services, together with his high standing as a lawyer, and his very efficient labors as a commissioner from Massachusetts to the Centennial Exposition at Philadelphia, had given Mr. Hubbard a national reputation; and in 1876 President Grant appointed him chairman of a special commission to investigate the entire question of railway mail transportation. His work here was characteristically thorough, and is to be chiefly credited with the present excellent condition of that important branch of the public service. From that time distinguished political preferments have been repeatedly offered him; but though the compliment was fully appreciated the offer was always declined, since he believed independence of action to be best, both for himself and for the causes that he loved and aimed to promote. During his residence of nearly a quarter of a century at this capital he has been the trusted friend and counselor of Presidents and statesmen, and has exercised a strong, if indirect, influence upon national and international affairs. He was a wise and staunch friend of arbitration. He believed that the Government should use its post-offices as telegraph stations. He was vitally interested in the free library of this city. He had long urged what is just now happily coming anew to the front, the establishment here of a true national university upon the lines drawn by Washington. He was an active and efficient trustee of the Columbian University. He cherished the keenest interest in his alma mater, was president of her alumni association in this city, and provided a lectureship at the college which is filled by his close and cherished friend, ex-Senator Dawes. President Tucker says: "The college honors the memory which has become a part of its lasting possessions." He was a regent of the Smithsonian Institution, and eminently fitted to be, for he was committed mind and heart and soul to "the increase and diffusion of knowledge among men."

And so, while not himself a specialist in science, Mr. Hubbard became a promoter of science, and in a remarkable degree a friend of scientists. He felt a hearty and honest pride in our city's leading position as a scientific center in this country. Every earnest student of science was sure of his sympathy and encouragement. Nowhere outside of his own household will he be more missed than in the goodly scientific fellowship here, as nowhere has he been more honored and beloved. It was this fondness, probably, that led him to cast such a wealth of thought and labor into the National Geographic Society, the beloved child of his old age. He carried it daily upon his heart. He planned for it constantly. He was never too busy or too weary to consult and act for its welfare. He had willing and efficient helpers, but no one will be more quick than they to say that the president made it what it was, easily the leading organization of its kind in the United States. The estimation in which he was held among the scientific men of the national capital is shown by the fact that he was thrice elected president of the joint commission of the scientific societies of Washington, and held that honorable position from the formal organization of the commission, in 1895, until his death.

But, if not a technical scientist, Mr. Hubbard's intense sympathy with science was supplemented by a wide and far from inaccurate knowledge. He was a close student of the electric or magnetic telegraph, and the late president of the Western Union Company said he had done more than any other man to make the service of that great corporation popularly available. His capacities in such directions were widely recognized, and for many years he was first vice-president of the American Association of Inventors and Manufacturers. One of his last labors was filling the semiscientific position of commissioner of awards at the Tennessee Exposition. At the cost of immense care and very wide and protracted correspondence he formed his jury of fifty experts, and then spent three busy weeks in Nashville in directing and supervising their labors. So highly was his work appreciated that when death came there lay upon his desk an invitation to do the same thing next year at Omaha.

It was this scientific leaning, combined with a fine commercial talent and matured business judgment, that enabled him to render to the telephone that inestimable service by which, perhaps, he will be most widely known and longest remembered. In no sense its inventor, Mr. Hubbard's unfaltering faith in its possibilities fitted him to take this product of the splendid genius of his son-in-law, Professor Bell, and make it practicably available and commercially profitable. When the invention—one of the greatest of the century—was to all intents and purposes complete, it had brought with it an enormous task. "A new art was to be taught to the world, a new industry created, business and social methods revolutionized." Mr. Hubbard was the man for the hour. "It does speak," cried Sir William Thomson; and Mr. Hubbard added, "I will make the world hear it." He did. What men thought a toy he showed to be a machine of priceless value. He brought it into hourly use in this country, in England, on the continent of Europe, organizing the International, Oriental, and other companies, until, in less than a quarter of a century, it is conveying thought in every civilized language, and has become, more quickly than any other invention of history, a necessity of daily life and an untold blessing to mankind.

REMARKS BY MR. A. GRAHAM BELL.

Mr. A. Graham Bell, president of the National Geographic Society, spoke as follows:

In March, 1864, Mr. Hubbard brought into the Massachusetts legislature a bill for the establishment of an oral school for deaf children. The schools of this country were taught by means of spelling on the fingers and by means of the French sign language. Many persons had suggested that oral schools like those in Germany, where the deaf had been taught to speak and to learn to read from the lips, should

be established in America; but none had been established, until in March, 1864, Mr. Hubbard made the first attempt to establish a school where deaf children could be taught to speak and to understand speech by the motions of the mouth without resort to signs or manual spelling on the fingers.

It is not my purpose to fully set forth his efforts in this direction, but simply to direct attention to the magnitude of the work that has resulted from those efforts. Last year there were more than 5,000 deaf children in the schools of the United States learning to speak and to read from the lips. There were over 3,600 pupils who were taught by the oral method alone, without resort to alphabets or the sign language. The percentage of pupils taught by speech since these early efforts of Mr. Hubbard's has gone on increasing, increasing, increasing, until we know now with absolute certainty that the time will come when there will no longer be any deaf or dumb in this country, for all shall be taught to speak without resort to spelling or the French sign language. The instrumentalities through which this wonderful change has been effected are largely the Clarke school at Northampton, Mass., and the organization of a society to promote the teaching of speech to the deaf, known as the American Society. There are three great results that were originated by the movement of 1864: First, the teaching of speech to the deaf; second, lowering the age of instruction to the deaf (at that time no attempt was made to teach deaf children under 12 years of age), and last, but not least in importance, the employment of women as teachers of the deaf. Before that time the instructors were largely men, but the necessity of teaching speech to the very little child led to the employment of women. This fact and the improvement in the methods have been the secret of success in teaching speech to the deaf, and the work is now largely in the hands of women.

REMARKS OF DR. CAROLINE A. YALE.

Miss Caroline A. Yale, vice-president of the American Association to promote the teaching of speech to the deaf, and principal of the Clarke school at Northampton, gave the following history of the movement in behalf of the deaf:

Among all the interests of Mr. Hubbard's life, possibly none extended over a longer period or was more deeply rooted in his rich nature than his interest in the education of the deaf. In this, as in many other departments of his activity, he seemed possessed of prophetic vision. In his own little child's voice he heard the prophecy that deaf children might speak, and to him is due, probably more than to any other one man, the fact that all America has realized the fulfillment of that prophecy.

The results of the teaching of his own little child, made deaf by illness in early childhood, by means of lip reading and speech, without the use of signs or the manual alphabet, were so satisfactory that Mr. and Mrs. Hubbard were confirmed in their opinion of the importance of very early instruction for deaf children and of the superiority of the oral method of instruction. They were most anxious that this method should be fairly tried, and felt strongly that such trial could not be made satisfactorily in any of the already established schools, which employed the sign method and to which pupils were seldom admitted under 10 or 12 years of age.

The story of Mr. Hubbard's efforts to establish a school in Massachusetts in which instruction should be given through lip reading and speech alone may most fittingly be told in his own words. He writes that previous to that time "the sign language was believed in this country to be the best and only efficient method of instruction for the deaf. The reports of the Hon. Horace Mann in favor of the German system of articulation had attracted attention, and gentlemen from our oldest institutions had been sent abroad to examine into the subject. Their reports were only partially favorable, and the efforts to engraft the German system of articulation upon

the French system of signs then in use in our country proved a failure." So when in 1864 Mr. Hubbard presented a petition to the legislature asking for a charter for a school it was the first attempt to establish a school under the oral method in a country where for fifty years the sign method had been firmly established.

He says: "This application was opposed by the friends of the American Asylum, on the ground that it was a visionary project and attempting the impossible. Dr. Samuel G. Howe, of South Boston, earnestly seconded the petition and appeared with me before the legislature. Our efforts were unsuccessful and our proposition was rejected. I determined to show that it was not a visionary project, and meeting Miss Rogers, who was then teaching a deaf girl by articulation, we determined to organize a small school, so that when we again appealed to the legislature we could show the results of our new system. A small fund was raised. Our plan was advertised in the papers and after six or eight months we found six pupils, with whom we opened a school at Chelmsford, under the care of Miss Rogers."

Miss Rogers began teaching her first pupil a few months after the failure of the first attempt to establish a school. Mr. Hubbard watched the work of this little school with most intense interest, for from the first the full import of the experiment seemed clear to his mind. If it was successful, it meant speech for the deaf and the English language through speech; if it failed, it meant a deeper silence and a strange language of signs used in place of the language of home and country. The success of the school exceeded their expectations, and in 1867 an effort was made to secure its incorporation. Mr. Hubbard wrote: "Mr. Talbot and myself called on Governor Bullock and asked him in his message to the legislature to refer to our school and favor an application we intended to make for a charter for it. To our great surprise, he told us that he had that morning received a letter from a gentleman in Northampton offering $50,000 if a school for the deaf could be established in Northampton."

Governor Bullock did refer at considerable length to the offer of Mr. Clarke and recommended the establishment of a school for the deaf in the Commonwealth of Massachusetts. That portion of his message was referred to a special committee of the senate and the house, of which the Hon. Lewis J. Dudley, of Northampton, was chairman on the part of the house. Long, earnest, and sharp were the debates held before the committee. The advocates of the sign method still felt that a fearful mistake was being made. The Massachusetts State board of charities, of which the Hon. F. B. Sanborn was secretary, heartily indorsed the movement toward the establishment of the new school. Mr. Dudley had become a convert to the oral method and used his utmost influence to forward the movement. The act of incorporation was secured, and Mr. Clarke expressed his purpose to give the school the bulk of his remaining property.

The little experimental school of Miss Rogers was closed. Its zealous and devoted teacher and her pupils became the nucleus of the Clarke school in Northampton, which opened in October, 1867. Mr. Hubbard was made president of its corporation and for the first ten years of its existence gave the school much personal attention.

In 1890 the American Association to Promote the Teaching of Speech to the Deaf was founded by Dr. Alexander Graham Bell, the husband of the little child whose need of special instruction first led Mr. Hubbard to take an interest in the instruction of the deaf. The specific objects of its organization were to aid schools for the deaf in their efforts to teach speech by training teachers and by disseminating information in regard to methods of speech teaching. Into Dr. Bell's plans for this new organization Mr. Hubbard entered with all the enthusiasm which he gave to his early work. He was its first vice-president, and the wisdom of his counsel and the strength of his purpose have done much to guide the association through the difficulties of its first years of work and to give it the position which it now holds as the most influential and effective organization connected with the education of the deaf in

this country—probably in the world—its membership including, in addition to a large number of teachers, many other persons like Mr. Hubbard and Dr. Bell, who are most effective promoters of the work of the association.

The influence of these two institutions, in the founding of which Mr. Hubbard bore so active a part—the Clarke school and the American Association to Promote the Teaching of Speech to the Deaf—has been most widespread, both in this country and in Europe. To-day one-half of all the teachers in the schools for the deaf in America are teachers of articulation, and over one-half the pupils in those schools are taught speech.

ANNUAL REPORT OF THE DEAN OF THE SCHOOL OF COMPARATIVE JURISPRUDENCE AND DIPLOMACY OF THE COLUMBIAN UNIVERSITY, WASHINGTON, D. C.

JANUARY 8, 1902.

To the president and board of trustees of the Columbian University:

In presenting the annual report of the School of Comparative Jurisprudence and Diplomacy, permit us to express our appreciation of the support given and the facilities furnished to the school by the president and board of trustees. The extended notice which the school has received in the public press and from distinguished men, the uniform approval of its establishment and proposed work, the necessity of having men specially trained for the public and diplomatic service of the United States and a body of lawyers thoroughly conversant with the subjects of comparative jurisprudence and international law fully justify the wisdom of establishing the school.

The school was opened November 15, 1898. The occasion was honored by the President of the United States and members of his Cabinet, together with many other distinguished men in public life, many of whom have since aided us with their counsel and by lectures delivered before the school upon subjects of special interest to our students.

At the commencement in June, 1899, we graduated from the one-year course 53 men and conferred upon them the degree of master of laws. In June, 1900, we conferred the degree of master of laws upon 47, the degree of master of diplomacy upon 10, and the degree of doctor of civil law upon 27 men. In 1901 we conferred the degree of master of laws upon 21, the degree of master of diplomacy upon 2, and the degree of doctor of civil law upon 23 men. This year we have in the school 48 students in the regular course and 11 students pursuing special courses.

The regular courses of instruction in the school are as follows:

LAW SECTION (LEADING TO THE DEGREE OF MASTER OF LAWS). ONE YEAR.

1. *Regular course.*—Constitutional law of the United States, conflict of laws, international law, Roman law, transportation and interstate-commerce law, comparative politics.

2. *Elective course.*—Comparative constitutional law, administrative law, colonial law.

3. *Conferences for review and examination.*—Constitutional law, conflict of laws, international law, Roman law, transportation and interstate-commerce law, comparative politics.

LAW SECTION (LEADING TO THE DEGREE OF DOCTOR OF CIVIL LAW). TWO YEARS.

1. *Regular course, first year.*—Constitutional law of the United States, comparative constitutional law, conflict of laws, international law, Roman law, transportation and interstate-commerce law, comparative politics, political geography, colonial law, Latin and French, German or Spanish (special).

2. *Elective course.*—History of diplomacy of the United States, history of treaties to which the United States has been a party, administrative law, statistics and social economics.

3. *Conferences for review and examination.*—Constitutional law of the United States, conflict of laws, international law, Roman law, transportation and interstate commerce law, comparative politics and political geography.

4. *Regular course, second year.*—Comparative politics, comparative jurisprudence: laws of India, Egypt, Palestine, and Greece; Roman law to and including the time of Justinian; general view of the law in Europe during the middle ages; the extension of the Roman law into some of the modern states; common law of England, its history and extension into some of the modern states; jurisprudence of England and her colonies, France, Germany, Austria-Hungary, Italy, and Spain; international law, interstate commerce law, Latin, and French, German, or Spanish (special).

5. *Elective course.*—Practice of diplomacy of the United States, international arbitration, history of European diplomacy and treaties, international trade, finance.

6. *Conferences for review and examination.*—Comparative politics, comparative jurisprudence, international law, interstate commerce law.

DIPLOMATIC SECTION (LEADING TO THE DEGREE OF MASTER OF DIPLOMACY), TWO YEARS.

1. *Regular course, first year.*—Comparative politics, political geography, history of diplomacy of the United States, history of treaties to which the United States has been a party, international law, commercial geography, statistics and social economics, French, German, or Spanish (special).

2. *Elective course.*—Constitutional law of the United States, comparative constitutional law, conflict of laws, administrative law, colonial law.

3. *Conferences for review and examination.*—Comparative politics and political geography, history of diplomacy of the United States, history of treaties to which the United States has been a party, international law, commercial geography, statistics and social economics.

4. *Regular course, second year.*—Comparative politics, practice of diplomacy of the United States, organization of the State Department, duties of ambassadors, ministers, and consuls, international arbitration, history of European diplomacy and treaties, European diplomatists, international law, international trade and commercial geography, finance, French, German, or Spanish (special).

5. *Elective course.*—Law of ancient nations, common law of England, course in comparative jurisprudence.

6. *Conferences for review and examination.*—Comparative politics, history of diplomacy of the United States, organization of the State Department, duties of ambassadors, ministers, and consuls; international arbitration, history of European diplomacy and treaties, international law, international trade and commercial geography, finance.

In this connection we recommend the following changes and additions:

1. That the subjects of common law pleading, equity practice and pleading, testamentary practice and pleading, moot court work, and legal ethics be added to the elective course in the section leading to the degree of master of laws. All these subjects except legal ethics are now taught in the law school, and students in the school of comparative jurisprudence and diplomacy can take these subjects in the law school without any additional expense.

2. That the course in the law section leading to the degree of doctor of civil law be extended to three years, and the subject of administrative law be added to the required examinations in the second year, the student devoting the first two years to the subjects named in the course, and the third year to the preparation of a thesis. The student's attendance upon lectures not being required in the third year, he should be charged only one-half the regular tuition.

3. That the two following sections be added to the courses:

ECONOMIC AND FINANCIAL SECTION.

1. *Regular course.*—Political economy, two years. Public finance—The nature and functions of money and credits, international circulation, the sources of Government revenue, bond issues, etc., two years; banking, one year; foreign commerce and tariff legislation, one year; statistics and currents of international trade, one year; comparative commercial and maritime legislation, one year; comparative administrative organization, two years; general subject of administration in the United States, including the functions of government, modes of exercising executive power, organization of departments, methods of transacting business, etc., two years; appropriations and fiscal legislation of the United States, two years; public accounts, one year.

2. *Elective course.*—Statistics and social economics, one year; transportation and interstate commerce, one year; colonial legislation and comparative colonial policy, one year; comparative fiscal legislation, including that of England, France, Germany, Austria-Hungary, etc., one year; public works, one year.

3. *Conferences for review and examination.*—Public finance, banking, foreign commerce and tariff legislation, political economy, comparative administrative organization, general subject of administration.

ADMINISTRATIVE SECTION.

1. *Regular course.*—Constitutional history, legislative and parliamentary law of the United States; one year. General subject of administration in the United States, including the functions of government, modes of exercising executive power, organization of departments, methods of transacting business, etc.; two years. Comparative administrative organization; two years. Constitutional history of England, France, Germany, and Austria-Hungary; one year. Public finance—the nature and functions of money and credits, international circulation, the sources of Government revenues, bond issues, etc.; two years. Political economy; two years. Foreign commerce and tariff legislation; one year. Statistics and social economics, including the principles of social economics, elements of industrial society, systems of industry, etc.; one year. Civil Service—classification, commission, etc.; one year.

2. *Elective course.*—Comparative civil legislation; one year. Public health, sanitation—national and international regulations, etc.; one year. Colonial legislation and comparative colonial policy; one year. Public works; one year.

3. *Conferences for review and examination.*—Constitutional law of the United States, comparative constitutional law, administrative law, finance, political economy, statistics and social economics.

Degrees and certificates appropriately representing work done should be given to students upon the recommendation of the faculty.

With these additions the courses in the school would cover the whole field of international activities and public law. The law section would cover the subjects of international law, the two great systems—the Roman and the common law, the comparative study of the laws of modern States, transportation, and interstate commerce; the diplomatic section, the subjects of treaties, international negotiations, and that protection extended by a nation to its subjects traveling or doing business within the territory of other nations; the section on finance and economics, the subject of money and international exchange, the law governing the distribution of surplus products; and the section on administration would cover the functions of government—studied comparatively—and give the student a knowledge of the methods by which States perform their functions. This would cover the entire field of human activity in national and international affairs. The lawyer who desires to fit himself

for practice before international tribunals and to become a counselor for great industries carrying on business over the world would take the legal section as his major course, electing such other courses as he desired. The student who desired to fit himself for the diplomatic service would take the diplomatic section as his major course. He who desired to engage in banking, international, or industrial pursuits involving international trade would take as his major course the economic and financial section. And the student desiring to fit himself for public service in the United States would take as his major course the administrative section.

Each of these sections and subjects should be in charge of distinguished educators of wide reputation, whose conduct of the courses would command the highest respect and confidence; and the corps of lecturers should be increased by availing ourselves of the experience and knowledge of more of our public men at the national capital. Provision should also be made for short lecture courses by professors of other universities who have distinguished themselves upon any of these subjects. The aim and object of the administration should be to gather into the school as many learned men as possible who have experience and knowledge upon any of the subjects treated, to give to our students the benefit of their discussions. This would bring a very influential body of men to the nation's capital, and the school would become of national importance for postgraduate study and research.

This enlarged work necessarily means increased expenditure. It can not be expected that the income from tuitions alone will be sufficient to maintain the school with the courses above outlined. An endowment is therefore necessary, and immediate steps should be taken to secure it. The time seems to be favorable for the establishment of such a school upon a broad and permanent basis. There is now a generous disposition on the part of wealthy men to endow institutions for which there is a pressing demand. It is admitted by everyone who has considered the subject that there is a great demand for education of this kind in the United States; that those who are to fill places in the public service at home and abroad should be specially fitted by thorough study along the lines indicated, and that this education can be better secured in a school wholly devoted to these subjects and located at the national capital.

The facilities in Washington for the study of national and international questions are the very best. Men are here who are making law and diplomatic history. The national legislative body, the Supreme Court of the United States, and the great departments of the Government furnish men especially competent to speak upon these questions and to discuss them from the present point of view. We need only a permanent faculty to take charge of the courses and conduct the regular class-room work in conjunction with our lecture courses to make the school the strongest and the most influential and instructive center of learning upon these great questions.

There are two ways of securing endowments—first, by a general fund, and, second, by the endowment of chairs in the different courses. A fair presentation of our work and plans, with the hearty cooperation and influence of the faculty, board of visitors, and the board of trustees, just at this time, would, we believe, secure splendid results, and establish the school upon a permanent and enduring basis, with ample facilities for doing this larger work.

The importance of the work and the popularity of the school are growing. With increased facilities, the best talent in all of its courses, and good management, there is no single organization existing to-day which gives promise of exercising wider or more beneficial influence upon the future political life and history of this nation. Forty years ago commerce ran beyond State lines, and to-day our trade, influence, and political activities have outrun the national boundaries. We are a world power. To conduct this trade and exercise this influence wisely we must have an order of men specially fitted to consider and determine international and diplomatic questions.

The number of students in this field of learning will rapidly increase, and if properly trained their influence will not only be great within the nation but international in its extent.

Fortunate is the man who, by liberal gifts of money, time, or talent, connects his name with such a work and such an order of men.

Respectfully submitted.

For the faculty: CHARLES W. NEEDHAM, *Dean.*

SOUTH CAROLINA STATE SUMMER SCHOOL FOR TEACHERS.

The State of South Carolina has for several years held two summer schools of four weeks each, one for white teachers and one for negroes.

In 1901 the State school for white teachers was held at Converse College, Spartanburg, under the direction of State Superintendent John J. McMahan. The attendance surpassed all previous records; 614 were enrolled—nearly one-fifth of the white teachers of the State. The greater number were from the city or town graded and high schools. Every county in the State was represented.

Among the different courses was one on manual training, by Prof. Wm. C. A. Hammel, of the Maryland State Normal School. The classes were enthusiastic, volunteering extra work in the afternoons in order to make all the models for a complete course. They frequently gave five hours a day to this subject while carrying on other studies. This year 57 entered upon the work and 34 finished the course. These represented many town graded schools, and expected to introduce manual training when their sessions began this fall.

Professor Hammel also conducted courses in school physics. These were very largely taken by young men, principals of town and village schools, anxious to find the means to introduce elementary science in their own schools. The apparatus, made under Professor Hammel's directions out of material provided at small cost by the summer school, represented thousands of dollars worth of apparatus if it had been purchased from the manufacturers. Although inexpensive, it was found to be the more effective for teaching purposes, for the process of making has also its educational value.

A course in State history was given by Prof. R. Means Davis. Dr. Jas. H. Carlisle, president of Wofford College, gave in six lectures personal reminiscences of men and conditions in South Carolina before the war.

Dr. Wm. H. Burnham, of Clark University, gave a course of 12 lectures (two weeks) on the characteristics of the teaching profession.

Other courses were held in pedagogy, primary methods, the principal elementary and secondary branches of study, drawing, singing, nature study, etc.

The course on supervision, however, was considered by Superintendent McMahan as having in it the most of significance and promise. It was designed particularly to give instruction to teachers aspiring to become leaders in the profession, principals or superintendents. A class of 67 men, including graduates from every college in the State, public and private, each with several years' teaching experience, attended. Superintendents' round tables were held frequently, where superintendents and principals and students in attendance on the summer school interchanged experiences and views.

THE POSSIBILITIES OF ALASKA.

By C. C. Georgeson, of Sitka, Alaska.

Special agent of United States Department of Agriculture in charge of Alaska investigations.

He would have been considered a rash prophet who five years ago had the temerity to predict that Alaska would one day become a great and powerful State.

Yet to-day such a prediction would not be ascribed to prophetic sight, but simply a common-sense view, a foregone conclusion, based on the resources and possibilities inherent in the Territory. The change of opinion is due to the fact that it has been demonstrated that Alaska has agricultural possibilities of a high order. The development of agriculture will enhance the value of the other vast and varied resources of the Territory a thousand fold. It will make it possible to work the extensive placer mines not rich enough in gold to pay at the present prices for foodstuffs, as well as the enormous deposits of low-grade quartz ores found nearly everywhere in the mountains.

Alaska has been maligned, abused, and totally misunderstood. It has been regarded as a frozen, worthless waste, whose only value consisted in its seal fisheries, and totally incapable of furnishing homes for a civilized people. These ideas are still current even in quarters where one would naturally expect to find a knowledge of the facts. Through the instrumentality of Secretary Seward Alaska was purchased from Russia in 1867 for the sum of $7,200,000. It has already paid for itself many times over, and still we have scarcely begun to realize how enormous the resources are. What the profits to the lessees of the sealing privilege have been will probably never be made known, but it is interesting to note that the rentals received or due the Government for the lease of this privilege from 1870 to 1895 amounted to almost the original cost of the territory, namely, $7,192,540.41 (Senate Doc. No. 81, Fifty-fourth Congress, second session); and as to the income from mines, it is commonly reported that more than an equal sum has been taken from a single mine near Juneau, to say nothing of the millions taken out in other places.

Alaska has an area of 591,000 square miles, in round numbers; that is to say, it is as large as all of the United States east of the Mississippi River, exclusive of the four States of Florida, Georgia, Alabama, and Mississippi. It requires an effort of the mind to grasp the significance of such an expanse of territory. There never could be a greater misconception in regard to a geographical fact than the popular idea that it is a snow-covered, inhospitable waste, and it is strange that this idea should be so persistently propagated and disseminated among the people. As a matter of fact, you can travel from one end of the Yukon to the other in summer time and never see snow. You see, on the contrary, a tangle of luxuriant vegetation, large forests, and such delicacies as wild raspberries, red currants, huckleberries, and cranberries in profusion. In places the grass grows as high as a man's shoulder. At Holy Cross Mission I desired to photograph some cattle—native born, reared by the fathers—and for that purpose asked that they be turned into a meadow reserved for hay. To my astonishment I found that the cattle were totally out of sight when they got into the grass, which reached above their backs.

Alaskan tourists are largely responsible for the false conception which is abroad in regard to the agricultural possibilities of the country. The high mountain range which skirts the seacoast is covered with snow and glaciers. It has a rugged, forbidding aspect. People who go as far north as Skagway and back again to Seattle in a two weeks' trip fondly imagine that they are studying Alaska, and that they are quite prepared to pass judgment on the whole Territory, when, as a matter of fact, they have not been within 200 miles of the one hundred and forty-first meridian, where Alaska proper begins. To get anything like a correct idea of Alaska one must go inside.

WHAT EXPERIMENT HAS PROVED.

Facts ought to carry greater weight than theories founded on misconception. Now, the facts are that all the hardy vegetables are grown with marked success all over Alaska south of the Arctic Circle, except on the coast of Bering Sea. I have never seen finer potatoes, cauliflower, cabbage, kale, pease, lettuce, and radishes than have been grown at the experiment stations at Sitka and Kenai. At Dawson I have seen a magnificent display of native-grown vegetables, comprising all the hardy kinds; and at the chamber of commerce rooms of that town are displayed fine samples of barley, oats, and wheat in many varieties, perfectly normal in all particulars, and grown there by a local experimenter. At Eagle I have seen all the foregoing crops, and in addition a luxuriant growth of sweet pease, poppies, mignonette, and a host of other flowers in full bloom. At Holy Cross Mission I ate new potatoes, cauliflower, cabbage, carrots, beets, lettuce, and radishes in the beginning of August—all produced in the mission gardens. At Rampart, in latitude 65, a station was established by the Department of Agriculture in the summer of 1900. Winter rye, seeded there in August of that year, lived through the winter perfectly under a good covering of snow. Although the temperature fell to 70° below zero, it came out in the spring in perfect condition, and matured grain by the first of August, 1901. Barley seeded in May of the latter year was ripe by the middle of August. At the headquarters station at Sitka I have for three years past grown as fine spring wheat as one would wish to see (samples of it may be seen at the Department of Agriculture), and barley and oats have been grown there successfully for four years. These grains have likewise been grown successfully at the experiment station at Kenai, on the Kenai Peninsula. This station is situated in a region where there are thousands of square miles of land available for farming and grazing. Capt. W. R. Abercrombie, who constructed the trans-Alaskan military road, at my request seeded the past summer small quantities of wheat, barley, and oats at Copper Center, in the Copper River Valley, and he writes me that they all matured. Ripe oats were seen last September by Mr. Isaac Jones, an employee of the Department of Agriculture, on a tributary to the Fortymile, in about latitude 64. Two Wisconsin men, Messrs. H. C. Nicolai and D. H. Clark, started to farm at Skagway two years ago. In September of last year I saw considerable fields of oats, potatoes, and cabbage grown by them. On Admiralty Island, near Killisnoo, a man named Thomas Baker has been growing vegetables and grains for years with noted success. Small patches of grain have been matured at Kadiak, at Afognak, at the Moravian Mission on the Kuskokwim River, and at many other places. At Fort Selkirk an American named Frank Bach, and at Dawson two brothers named Morgan, also Americans, have secured from the Canadian Government tracts of upward of a hundred acres of land each, which they are farming successfully.

STOCK RAISING.

Cattle are kept at every considerable settlement in Alaska, except perhaps at Nome. They all do well. The treeless region to the westward of Sitka is especially well suited to cattle and all kinds of live stock. The Alaska Commercial Company has kept cattle, sheep, and Angora goats at Kodiak for many years, and they required but little feed and shelter, except in an occasional storm during winter. The data on these experiments were published in the report to Congress on the Alaska Investigations for 1899. The natives at Kenai and Ninilchik, on Cook Inlet, have kept cattle for half a century or more. At the latter place they have upward of thirty head. But few breeding cattle have as yet found their way into the interior, but horses are quite numerous there. In this connection it is of interest to note that in spite of the extremely cold winters in the interior there are many instances on record in which horses abandoned by prospectors in the fall have survived the winters and

come out in the spring in fair condition. Mr. Mark E. Bray, an American miner, told me last summer that he used five mules in his mining operations on one of the tributaries of the Tanana. He abandoned them when he went out in the fall, it being too expensive to buy feed for them in Dawson, where he wintered. When he returned to the diggings the following April he found four of them alive and well; the fifth had been killed by the Indians. In the fall of 1899 Mr. Jack Dalton turned loose 45 head of pack horses he had used in carrying provisions over the Dalton trail, and in the spring of 1900 he found 43 of them alive and well and in fair condition.

AGRICULTURAL LANDS.

There are extensive areas of grass land in many parts of the interior. Mr. Isaac Jones, already referred to, made a reconnoissance last summer between Eagle, on the Yukon, and Valdes, on Prince William Sound. The distance between these two points as the trail runs is about 435 miles. He examined some 15 miles on either side of the trail, thus covering an area of 30 miles wide by 435 miles long. Within the boundaries of this strip he estimates that he saw 2,000,000 acres of pasture and farming land. In the region occupied by the Kechumstuk Indians, north of the Tanana, and especially along the South Fork of the Fortymile, he reports that he crossed a meadow with the grass waist high for a distance of 8 miles. He also learned of horses which had run at large for two years in this region. The Kechumstuk Indians have given a new name to cattle. They call them "McKinley moose," and Americans were known to them as "McKinley men." The chief of the village had secured an American flag, which he hoisted on a tall pole whenever he learned that white men were in his territory. There is some hope for the civilization of a tribe which cherishes such sentiments. Mr. Jones's description of the country is highly interesting. It forms part of my report now before Congress.

WHAT IT MEANS.

The development of agriculture in Alaska means the settlement and development of the Territory. It means the making of homes, a permanent population, the rapid development of the mineral resources, the creation of wealth, the building of a State. If, on the other hand, no foodstuffs can be produced in Alaska, a large population is impossible, and it could never become a State. We can not imagine the possibility of sustaining even 100,000 people there if all that they required to support life must be brought from the States, 1,000 miles distant, and carried hundreds of miles more from the ports of entry to the mining camps and villages in the interior. Under such conditions development of the natural resources must languish. Agriculture is the backbone of prosperity. An adequate food supply is the first essential to the growth of population, to prosperity, to greatness, and if this factor were lacking in Alaska, it would be doomed to remain a scantily populated Territory. States with little or no agriculture make no growth. Look at Nevada, for instance. But it is fortunate for Alaska, and therefore for the whole country, for the growth of any section benefits the whole, that she has agricultural possibilities to an extent which will make the fullest development of her resources practicable. Alaska can furnish homesteads of 320 acres each to 200,000 families. She has abundant resources to support a population of at least 3,000,000 people. Such a population would mean a volume of trade which would yield an immense and permanent income to the coast States. There are people who fear that the development of agriculture would prejudice the mining interests. Nothing could be further from the truth. On the contrary, it would be of the greatest possible help to the mining industry. It would reduce the cost of living, make labor more plentiful, and therefore cheaper, and give rise to better transportation facilities. It would then become possible to work the low-grade mines with profit, and to materially increase the profits of the good mines.

THE EXAMPLE OF FINLAND.

The foregoing statements are borne out by the example of Finland. This little country lies wholly north of the sixtieth parallel. Alaska reaches 6° south of this latitude. Finland is less than one-fourth the size of Alaska, and its agricultural area is less than 50,000 square miles, yet in 1898 Finland had a population of over 2,600,000 souls. Agriculture is the chief industry. Only about 300,000 people are city dwellers. They export large quantities of dairy products, live stock, flax, hemp, and considerable grain, and the population has increased some 825,000 in the last twenty-eight years, and this in spite of a very considerable emigration. The conditions in Alaska from an agricultural standpoint are more favorable than those of Finland. We have a larger agricultural area, somewhat warmer summers, and the mines will yield the best possible home market. When the fishing industry of Alaska is developed, it will engage the labors of hundreds of thousands of people, who must be fed in large measure from the farms. Alaska has a coast line of 26,000 miles, practically all of which affords splendid fishing ground. The salmon is as yet the only fish which has attracted attention. There are thousands of square miles of cod banks, the enormous halibut grounds have not been touched, and the myriad shoals of herring go by unheeded. An oil and guano factory has been established for some years at Killisnoo, a little village some distance from Sitka, in which the herring is utilized. There is room for fifty such enterprises. The guano sells readily for $30 per ton.

WHY ALASKA IS NOT SETTLED.

With such facts as to resources, why is Alaska not settled? Simply because settlers can not get title to land. There is much inquiry for land, but when the would-be settler learns the status of affairs he changes his plans. To get title the settler must first buy soldiers' additional homestead script, which can be located on unsurveyed lands. This will cost him anywhere from $5 to $15 an acre. Then he must deposit in the surveyor-general's office an amount which will cover the cost of the survey. United States deputy surveyors charge $15 to $20 a day and traveling expenses in Alaska. He must also pay for the office work, entries, etc. The result of all this is that a piece of raw land in Alaska will cost him as much as a good, improved farm in almost any State. Such conditions are prohibitive, and Alaska will not be settled as long as they prevail. Again, a homestead of 80 acres, which the law allows, is not large enough. Stock raising must, of necessity, become a leading branch in Alaska farming, and 80-acre stock farms will scarcely be much in demand. Three hundred and twenty acres would be more in harmony with conditions which require considerable pasture land to make farming a success. Would it not be a wise policy to make the land absolutely free to bona fide settlers? The great expense necessary to reach the Territory with work animals, implements, and all that is required for a start, and the hardships incident to pioneer life in a rigorous climate, far from civilization, entitle the pioneer to special consideration. The development of the Territory depends upon his work. He must blaze the way and bear the brunt of the battle. His courage, endurance, and self-sacrifice constitute the very foundations on which the State must be reared. The exploitation of the Territory's resources by wealthy corporations will not enrich or build the State. It is the pioneer, the settler, the home maker, who, with ax and grubbing hoe, subdues the wilderness and forces unwilling nature to yield him a livelihood; who nurtures a family; who rears the schoolhouse and church. It is he who is the State builder, and every practicable means employed to aid him in the onerous task will further the development of the Territory.

EDUCATIONAL PROVISIONS OF CECIL RHODES'S WILL.[1]

AN IMPERIAL AND INTERNATIONAL EDUCATION SCHEME.

[The testamentary dispositions of the late Mr. Rhodes contained in his will, dated July 1, 1899, and certain codicils, one of which was signed on January 18 last, the day he left England, have been published. Mr. Rhodes has appointed as his executors and trustees the Earl of Roseberry, Earl Grey, Lord Milner, Mr. Alfred Beit, Dr. L. S. Jameson, Mr. L. L. Michell, and Mr. B. F. Hawksley.

The following paragraphs in the will are those relating to education.]

INSTRUCTION OF THE PEOPLE OF RHODESIA.

I give free of all duty whatsoever my landed property near Bulawayo, in Matabeleland, Rhodesia, and my landed property at or near Inyanga, near Salisbury, in Mashonaland, Rhodesia, to my trustees hereinbefore named, upon trust that my trustees shall, in such manner as in their uncontrolled discretion they shall think fit, cultivate the same respectively for the instruction of the people of Rhodesia.

I give free of all duty whatsoever to my trustees hereinbefore named such a sum of money as they shall carefully ascertain and in their uncontrolled discretion consider ample and sufficient by its investments to yield income amounting to the sum of £2,000 sterling per annum and not less, and I direct my trustees to invest the same sum, and the said sum and the investments for the time being representing it I hereinafter refer to as "the Inyanga fund." And I direct that my trustees shall forever apply in such manner as in their absolute discretion they shall think fit the income of the Inyanga fund and any rents and profits of my said landed property at or near Inyanga in the cultivation of such property, and in particular I direct that with regard to such property irrigation should be the first object of my trustees.

AN AGRICULTURAL COLLEGE.

For the guidance of my trustees I wish to record that in the cultivation of my said landed properties I include such things as experimental farming, forestry, market and other gardening, and fruit farming, irrigation, and the teaching of any of those things, and establishing and maintaining an agricultural college.

ORIEL COLLEGE.

I give the sum of £100,000 free of all duty whatsoever to my old college, Oriel College, in the University of Oxford, and I direct that the receipt of the bursar or other proper officer of the college shall be a complete discharge for that legacy, and inasmuch as I gather that the erection of an extension to High street of the college buildings would cost about £22,500, and that the loss to the college revenue caused by pulling down of houses to make room for the said new college buildings would be about £250 per annum, I direct that the sum of £40,000, part of the said sum of £100,000, shall be applied in the first place in the erection of the said new college buildings, and that the remainder of such sum of £40,000 shall be held as a fund by the income whereof the aforesaid loss to the college revenue shall, so far as possible, be made good. And inasmuch as I gather that there is a deficiency in the college

[1] These extracts from Cecil Rhodes's will, together with the introductory matter in brackets, are reprinted from the School Board Chronicle (London) of April 12, 1902. The boldness, novelty, and comprehensiveness of Mr. Rhodes's projects for international education, and the peculiar conditions attached to the filling of the American scholarships at Oxford, have given rise to considerable discussion and speculation in this country.

revenue of some £1,500 per annum, whereby the fellowships are impoverished and the status of the college is lowered, I direct that the sum of £40,000, further part of the said sum of £100,000, shall be held as a fund by the income whereof the income of such of the resident fellows of the college as work for the honor and dignity of the college shall be increased. And I further direct that the sum of £10,000, further part of the said sum of £100,000, shall be held as a fund by the income whereof the dignity and comfort of the high table may be maintained, by which means the dignity and comfort of the resident fellows may be increased. And I further direct that the sum of £10,000, the remainder of the said sum of £100,000, shall be held as a repair fund the income whereof shall be expended in maintaining and repairing the college buildings. And finally, as the college authorities live secluded from the world and so are like children as to commercial matters, I would advise them to consult my trustees as to the investment of these various funds, for they would receive great help and assistance from the advice of my trustees in such matters; and I direct that any investment made pursuant to such advice shall, whatsoever it may be, be an authorized investment for the money applied in making it.

EDUCATION OF YOUNG COLONISTS.

Whereas I consider that the education of young colonists at one of the universities in the United Kingdom is of great advantage to them for giving breadth to their views, for their instruction in life and manners, and for instilling into their minds the advantage to the colonies as well as to the United Kingdom of the retention of the unity of the Empire; and whereas, in the case of young colonists studying at a university in the United Kingdom, I attach very great importance to the university having a residential system such as is in force at the universities of Oxford and Cambridge, for without it those students are, at the most critical period of their lives, left without any supervision; and whereas there are at the present time 50 or more students from South Africa studying at the University of Edinburgh, many of whom are attracted there by its excellent medical school, and I should like to establish some of the scholarships hereinafter mentioned in that university, but owing to its not having such a residential system as aforesaid, I feel obliged to refrain from doing so; and whereas my own university, the University of Oxford, has such a system, I suggest that it should try to extend its scope so as, if possible, to make its medical school at least as good as that at the University of Edinburgh; and whereas I also desire to encourage and foster an appreciation of the advantages which I implicitly believe will result from the union of the English-speaking peoples throughout the world, and to encourage in the students from the United States of North America, who will benefit from the American scholarships to be established for the reason above given at the University of Oxford under this my will, an attachment to the country from which they have sprung, but without, I hope, withdrawing them or their sympathies from the land of their adoption or birth: Now, therefore, I direct my trustees as soon as may be after my death, and either simultaneously or gradually as they shall find convenient, and if gradually, then in such order as they shall think fit, to establish for male students the scholarships hereinafter directed to be established, each of which shall be of the yearly value of £300, and be tenable at any college in the University of Oxford for three consecutive academical years.

COLONIAL SCHOLARSHIPS.

I direct my trustees to establish certain scholarships, and these scholarships I sometimes hereinafter refer to as "the colonial scholarships."

The appropriation of the colonial scholarships and the numbers to be annually filled up shall be in accordance with the following table:

Total number appropriated.	To be tenable by students of or from—	Number of scholarships to be filled up in each year.
9	Rhodesia	3 and no more.
3	The South African College School, in the colony of the Cape of Good Hope.	1 and no more.
3	The Stellenbosch College School, in the same colony	1 and no more.
3	The Diocesan College School of Rondebosch, in the same colony	1 and no more.
3	St. Andrew's College School, Grahamstown	1 and no more.
3	The colony of Natal, in the same colony	1 and no more.
3	The colony of New South Wales	1 and no more.
3	The colony of Victoria	1 and no more.
3	The colony of South Australia	1 and no more.
3	The colony of Queensland	1 and no more.
3	The colony of Western Australia	1 and no more.
3	The colony of Tasmania	1 and no more.
3	The colony of New Zealand	1 and no more.
3	The Province of Ontario, in the Dominion of Canada	1 and no more.
3	The Province of Quebec, in the Dominion of Canada	1 and no more.
3	The colony or island of Newfoundland and its dependencies	1 and no more.
3	The colony or islands of the Bermudas	1 and no more.
3	The colony or island of Jamaica	1 and no more.

AMERICAN SCHOLARSHIPS.

I further direct my trustees to establish additional scholarships sufficient in number for the appropriation in the next following clause hereof directed, and those scholarships I sometimes hereinafter refer to as "the American scholarships."

I appropriate two of the American scholarships to each of the present States and Territories of the United States of North America, provided that if any of the said Territories shall in my lifetime be admitted as a State the scholarships appropriated to such Territory shall be appropriated to such State, and that my trustees may in their uncontrolled discretion withhold for such time as they shall think fit the appropriation of scholarships to any Territory.

I direct that of the two scholarships appropriated to a State or Territory not more than one shall be filled up in any year, so that at no time shall more than two scholarships be held for the same State or Territory.

CONDITIONS.

My desire being that the students who shall be elected to the scholarships shall not be merely bookworms, I direct that in the election of a student to a scholarship regard shall be had to (i) his literary and scholastic attainments; (ii) his fondness of and success in many outdoor sports, such as cricket, football, and the like; (iii) his qualities of manhood, truth, courage, devotion to duty, sympathy for the protection of the weak, kindliness, unselfishness, and fellowship; and (iv) his exhibition during school days of moral force of character and of instincts to lead and to take an interest in his schoolmates, for those latter attributes will be likely in after life to guide him to esteem the performance of public duties as his highest aim. As mere suggestions for the guidance of those who will have the choice of students for the scholarships, I record that (i) my ideal qualified student would combine these four qualifications in the proportions of three-tenths for the first, two-tenths for the second, three-tenths for the third, and two-tenths for the fourth qualifications, so that, according to my ideas, if the maximum number of marks for any scholarship were 200 they would be apportioned as follows: Sixty to each of the first and third qualifications and 40 to each of the second and fourth qualifications; (ii) the marks for the several qualifications would be awarded independently as follows (that is to say): The marks for the first qualification by examination, for the second and third

qualifications, respectively, by ballot by the fellow-students of the candidates, and for the fourth qualification by the head master of the candidate's school; and (iii) the results of the awards (that is to say, the marks obtained by each candidate for each qualification) would be sent as soon as possible for consideration to the trustees or to some person or persons appointed to receive the same, and the person or persons so appointed would ascertain by averaging the marks in blocks of 20 marks each of all candidates the best ideal qualified students.

No student shall be qualified or disqualified for election to a scholarship on account of his race or religious opinions.

Except in the cases of the four schools hereinbefore mentioned, the election to scholarships shall be by the trustees, after such (if any) consultation as they shall think fit with the minister having the control of education in such colony, province, State, or Territory.

A qualified student who has been elected as aforesaid shall, within six calendar months after his election, or as soon thereafter as he can be admitted into residence, or within such extended time as my trustees shall allow, commence residence as an undergraduate at some college in the University of Oxford.

The scholarships shall be payable to him from the time when he shall commence such residence.

I desire that the scholars holding the scholarships shall be distributed among the colleges of the University of Oxford, and not resort in undue numbers to one or more colleges only.

Notwithstanding anything hereinbefore contained, my trustees may, in their uncontrolled discretion, suspend for such time as they shall think fit, or remove, any scholar from his scholarship.

ANNUAL SCHOLARS' DINNER.

In order that the scholars, past and present, may have opportunities of meeting and discussing their experiences and prospects, I desire that my trustees shall annually give a dinner to the past and present scholars able and willing to attend, at which I hope my trustees, or some of them, will be able to be present, and to which they will, I hope, from time to time invite as guests persons who have shown sympathy with the views expressed by me in this my will.

GERMAN SCHOLARSHIPS.

By codicil executed in South Africa, Mr. Rhodes, after stating that the German Emperor had made instruction in English compulsory in German schools, establishes 15 scholarships at Oxford (5 in each of the first three years after his death) of £250 each, tenable for three years by students of German birth to be nominated by the German Emperor, for "a good understanding between England, Germany, and the United States of America will secure the peace of the world, and educational relations form the strongest tie." The tenor only of this codicil has been cabled from Cape Town.

DR. WILLIAM HENRY RUFFNER AND HIS GREAT WORK FOR POPULAR EDUCATION.[1]

In the year 1823, at Lexington, Va., was born Dr. Henry Ruffner, who has been called the Horace Mann of the South. His father, Dr. Henry Ruffner,[2] a distinguished Presbyterian divine, was for many years the president of Washington Col-

[1] From the Virginia School Journal, May 1, 1902.

[2] Author of a "Proposed plan for the organization and support of common schools in Virginia," printed in the Report of the Commissioner of Education for 1899-1900, Vol. 1, pp. 381-397.

lege, now Washington and Lee University, and it was here that the subject of this sketch was educated, and from this college he received the degree of M. A. in 1845. He afterwards took three courses in psychology, one under his father at Washington College, another at Union Theological Seminary, Hampden Sidney, Va., and the third under Dr. W. H. McGuffey, at the University of Virginia, thus fitting himself, though unconsciously, for the great part he was to play in the educational future of Virginia. He also gave much attention to political economy, which subsequently proved of great assistance to him when fighting in defense of State education. Throughout his life, however, his strongest bias was toward the physical sciences, causing him always when relieved from his public duties to give his time and labor to geological and agricultural pursuits. Courses in theology in the institutions of his own State, as well as at Princeton, N. J., prepared him for the ministry, and from 1849 to 1851 he was chaplain at the University of Virginia. Leaving the University in 1851, he became pastor of the Seventh Presbyterian Church, Philadelphia, where a series of lectures delivered by him on the relations of science and Scripture attracted much attention. While in Philadelphia he united with Stephen Colwell in 1852 in a movement to develop more prominently the benevolent features of Christianity. In aid of this cause he wrote a book entitled "Charity and the Clergy," which was severely criticised by the religious press, but which would accord with the practice of the present time.

In 1853 he resorted to farm life as a means of restoring his broken health, and did not resume his clerical work, though it was not until 1874 that he was by his own request relieved of his ministerial office by the Lexington presbytery.

It was in 1870 that Dr. Ruffner was called to the work which will cause his name always to be held in grateful remembrance by the friends of education in Virginia. In seeking a superintendent for the public free schools, provided for by the new constitution, the legislature elected Dr. Ruffner, he having been nominated in caucus on the first vote in a company of fifteen candidates. This was the only office he ever asked for, and his adviser and indorser was Gen. Robert E. Lee, to whose powerful influence, as well as to the zeal and eloquence of his friend and townsman, Hon. William A. Anderson, he was probably indebted for his election. When elected the new superintendent of public instruction had had no experience in the work, and, while he had served as trustee on the boards of several colleges and academies, was entirely ignorant of the details of public school systems. In a private letter to a friend Dr. Ruffner says: "The question you asked me has been often asked me, namely, 'How came you, with your previous career, to devise a satisfactory school system in so short a time?' To this I have sometimes answered luck, sometimes, inspiration, and sometimes, common sense. I think that the last is the true answer. Dr. McGuffey resolved my intellectual forces into common sense."

It was indeed "inspired common sense" which enabled him to report to the legislature in less than thirty days after his election a scheme for a school system so satisfactory that he was at once required by the committee on schools and colleges to prepare a school bill to be considered by the legislature. In seventeen days the bill of forty pages foolscap was complete, and Dr. Ruffner asked for criticism from Dr. Barnas Sears, agent of the Peabody fund, who had been superintendent of public instruction for Rhode Island and president of Brown University, but he suggested no change. He then asked Prof. John B. Minor, of the University of Virginia, to review the bill critically, which he did, making some suggestions in matters of detail, and giving in some sentences a better legal shape to the language, but making no change in the general cast of the document. There was much opposition to free schools in both houses, and the bill was unpopular, but by his powerful and convincing arguments before the committees Dr. Ruffner succeeded in bringing over many of the members to his views, and the bill was passed after prolonged discussion. The danger was not yet over, however, for Governor Walker

declared he could not sign the bill if prepayment of the capitation tax should be required of the parents, and it was only after considerable persuasion that he was induced to sign it, five minutes before the adjournment of the legislature, July 11, 1870.

Now began the difficult work of organizing the schools and getting them in good working order. The new superintendent neglected no public or private opportunity of interesting the people in universal education, which he had always advocated, even in his college days, going so far as to exclaim in a debate: "If slavery renders it necessary to keep the negroes in ignorance, I say down with slavery!" At the first regular meeting of the board of education the work of appointing superintendents was begun. A public educational meeting was held in the hall of the house of delegates, and the next day a meeting of county superintendents was called and continued for two days for the purpose of instructing them in their official duties. The Educational Association of Virginia indorsed Dr. Ruffner's election, and the Educational Journal became the official organ of the public schools, as well as of the association, Dr. Ruffner being editor in both departments and writing much for the advancement of the work. In April of 1871 he made a Northern tour, visiting public schools and normal schools. Graded schools and teachers' institutes were novelties in Virginia, but being manifestly useful features in any school system special attention was given to their establishment. The public mind needed to be informed on these subjects, and this information the superintendent was indefatigable in disseminating by means of the Educational Journal, monograph circulars, letters, and addresses. The cities led in the matter of graded schools and the larger towns soon followed. The superintendent prepared a scheme for the grading of country schools, which was commended and published by the Department of Education at Washington. There was great difficulty in conducting institutes from scarcity of instructors, but the State superintendent and some of the best teachers studied the methods most approved, and instructed the teachers at county institutes and summer schools.

They were greatly aided by the Peabody fund through Dr. Barnas Sears, the agent. The State sometimes received from this source as much as $30,000 in one year. By this means lecturers from Virginia and other States were employed, and excellent instruction was given in every section. During his administration Dr. Ruffner visited every county in the State except six, visiting the schools, lecturing at institutes, and making addresses on court days in the court-houses on public education.

Notwithstanding the overburden which he was bearing, in 1872 the superintendent was made the custodian of $500,000 of bonds bought by the board of education. Not being a bonded officer he earnestly sought to be relieved of this care, but succeeded in getting rid of the bonds only by drawing a bill and lobbying it through the legislature, when they were turned over to the second auditor. He was made a member of the board of visitors, charged with the heavy duty of creating the Agricultural and Mechanical College at Blacksburg, and appointed to draft the plan for the organization of the projected college. Its proper character of a technical school founded on a limited amount of literary studies was entirely unknown to the Virginia people. Hence two serious dangers had to be encountered in the beginning—first, in defining the province of the school, and, second, in filling the chairs. The superintendent of public instruction was required to originate the whole scheme of instruction and management. His report on the proper character of the new institution was accepted by the board of visitors after much opposition, and may be found in the school report of 1872. The technical features of the college were not and could not be developed in its early years, but gradually its true mission came to be discerned, until at present the Virginia Polytechnic Institute begins to realize the ideal in the mind of its projector.

In the early days of the schools the book question gave rise to an acrimonious canvass. Most of the books offered being new and untried in Virginia, the selection was a tedious process. The question was presented in two parts: First, does the constitution require that one and only one book on each subject shall be allowed in the public schools of the State? This occasioned a bitter discussion, actuated on one side by commercial motives chiefly. It was finally agreed that two books on each subject should be selected and the choice between them referred to the local boards. This broke the killing one-book scheme. The second feature of the scheme was the actual selection of the two series of books. This was followed by a canvass of the State by the publishers, which was educational in its effects, and not attended with any efforts at bribery as far as known.

A formidable trouble in the early years of the school system grew out of the well-known funding act, whose operation, as interpreted by the auditor of public accounts, was to divert large sums of school money every year toward paying the tax-receivable coupons, and in this interpretation he seemed to be sustained by the supreme court of the State. In this emergency the superintendent defended the right of the schools to the money which had been alienated, going so far as to undertake to overthrow the argument of the supreme court. This brought him attacks from various quarters. The auditor answered him in pamphlets, and he was called to account by the legislature and had to fight before five committees at once. But truth and justice prevailed, and the legislature passed an act drawn by the superintendent requiring the auditor to pay back every dollar of the school money which had been paid to the creditors of the State. Though twice invited during his twelve years' term of office to become president of a college, Dr. Ruffner declined in each case, having given himself heart and soul to the upbuilding of educational interests of his native State. When, however, superseded in office on account of a change in State politics, he gladly turned to his favorite pursuit, and at once accepted an appointment to make a geological reconnoissance of 500 miles for a railroad across three States.

In 1884 he was again pressed into the service of State education by his election as president of the female normal school to be established at Farmville. Having urged the establishment of such a school in all his reports, Dr. Ruffner felt it his duty to accept. The organization of the school was left entirely in his hands, and under his wise management it soon became a potent factor in the educational advancement of the teaching force of the State. The respect and confidence inspired by its president gave the normal school a standing which as a new feature in State education it would not otherwise have had, and brought many students to take advantage of the courses presented by its gifted head.

After organizing the school and getting it equipped with expert teachers, and having, as he thought, impressed the proper character upon it, he relinquished the presidency in June, 1887, in order that he might give his whole time to the more congenial work of making geological examinations and reports on mineral properties. This geological work he continued until he reached the age of 75. From the foregoing sketch it will be seen that to the statesmanlike and far-seeing wisdom of Dr. William H. Ruffner, Virginia is indebted for her system of public schools. Every important move that has been made in the State since 1870 in the cause of public education has had Dr. Ruffner as its inspiration, and to him is owing the establishment of the system of schools on a strong and enduring basis. In the incipiency of the system none but a man of his vigorous intellect, unwavering courage, and powerful argumentative ability would have been able to defeat all the opposition arrayed against it in legislative halls, in the gubernatorial chair, and on the judicial bench. While at present he is known outside the State chiefly as a scientist, in the years that are rolling swiftly toward us, when the education and preparation of youth for the future shall seem to us the most important function of the State, Dr. Ruffner

will take his place as one of the foremost men of his time, and one of the greatest benefactors, not only of his own State but of the South as well.

At his home in Lexington, notwithstanding his advanced age, Dr. Ruffner is now engaged in a history of Washington and Lee University, spending his leisure moments in writing historical sketches, and always giving interested attention to the progress of the world in general, and especially of Virginia, in moral, political, and educational affairs.

BIOGRAPHICAL SKETCH OF PROF. BURKE AARON HINSDALE.

[The life work of Prof. Burke Aaron Hinsdale, both as a teacher, and as a student and writer of American history, has had such a marked influence upon the theory and practice of teaching in the United States that it has been deemed of importance to publish an authentic account of his career, together with some estimates of the value of his work by competent persons who were personally familiar with it.

The following account of his life is taken from the biographical sketch published by Prof. Samuel Carroll Derby, A. M., of the Ohio State University, in the "Quarterly" of the "Old Northwest" Genealogical Society, of which he is the historian.]

Burke Aaron Hinsdale, son of Albert and Clarinda Elvira (Eyles) Hinsdale, was born at Wadsworth, Medina County, Ohio, of New England ancestry, March 31, 1837, and died at Atlanta, Ga., November 29, 1900. He was the second of five children, and the eldest son. He grew up amid the toil and struggles of a pioneer household, but amid ever-improving conditions and a widening outlook. Mr. Hinsdale's early education was gained in the district school. He was a bright and studious boy, who early had the courage to protect smaller boys from the bullying propensities of their larger fellows. In a debating society connected with the district school of the neighborhood he took a prominent part and won local renown for cogent arguments.

At the age of 16 (in 1853) he was sent to the newly established Western Reserve Eclectic Institute, which by a natural growth became in 1867 Hiram College. One of his latest papers was an historical address, which he wrote for the semicentennial of the institute—an address that, coming from the writer's heart and specially intended for the founders and friends of Hiram College, has interest and value for more than those who have personal relations with the institute and its successor. The paper is a luminous and suggestive account of an important phase of the educational movement in Ohio fifty years ago. At the institute, to which Mr. Hinsdale went in November, 1853, "the social environment was bald and realistic to a degree almost to defy idealization." Of the instructors, Mr. Hinsdale says that they had education adequate to their work; that they were skillful teachers, and that they devoted themselves, heart and soul, to their students. Of one of these instructors (Almeda Booth) he wrote that he considered her the "most masterful woman teacher" he had ever known. At the institute Mr. Hinsdale met Mr. Garfield, who was a few years his senior. These gifted young men soon formed a lifelong friendship. In 1857 Mr. Garfield became the head of the institute, and under his leadership there came a new era at Hiram; "more attention was now given to education as education, and less attention to making preachers." Some friction and heat attended the change.

Mr. Hinsdale was a hard student who read eagerly in a wide range of subjects. A singularly retentive memory aided him in gaining a vast store of accurate information. His first teaching was done in a district school in the township of Franklin, Summit County, in the autumn of 1855 and following winter, and the three succeeding winters at other places in that part of Ohio. He taught district schools winters

only; the remainder of the year was spent in study at Hiram or in work upon the home farm. In 1860 Mr. Hinsdale began to teach at Hiram as a pupil assistant, and thus defrayed a part of his expenses. It is to be hoped that they were proportionate to his compensation. "I remember distinctly," he writes, "that when I began to teach algebra here in 1860 the syndicate paid me $16 a term for one class, or about a dollar a week."

Two years later he married, and with the aid of his wife taught for one year a "select school" at Sharon, Medina County, and the next year, aided by his sister, a similar school at Solon, Cuyahoga County. He preached also for some time at Solon, and afterwards at Cleveland, where he assisted in editing the Christian Standard, but after he entered upon college work, in 1868, he preached less frequently; he felt that his proper vocation was that of teacher and author, though during his presidency at Hiram his pulpit discourses were highly acceptable to thoughtful hearers.

In 1870 Mr. Hinsdale was chosen president of Hiram College. Though only 33 years old, the new president was, without question, the natural successor of General Garfield. For twelve years Mr. Hinsdale held this arduous and honorable position, and in it toiled terribly. He was at once professor, lecturer, preacher, author, administrator, and financier. Three works of a theological cast were published by him during the years he was at Hiram: The Genuineness and Authenticity of the Gospels, 1872; The Jewish-Christian Church, 1878; and Ecclesiastical Tradition, 1879. Some other papers written during these years appeared in Schools and Studies, 1884.

Mr. Hinsdale naturally was deeply interested in the nomination of his close friend, General Garfield, for the Presidency, and at the request of the Republican national committee prepared a campaign text-book, and made several speeches in Ohio and Indiana. After the death of General Garfield Mr. Hinsdale published a book with a biographical introduction, entitled President Garfield and Education, 1882, and the following year collected and edited General Garfield's works in two volumes.

In the spring of 1882 Mr. Hinsdale, more to his own surprise than to that of those who were aware of his rapidly growing reputation, was tendered the superintendency of the Cleveland public schools. After some hesitation he accepted this unexpected call, entered upon that larger field in the autumn of 1882, and held the position for four years. Mr. Hinsdale began this new work with characteristic vigor and made a careful study of the condition and needs of the schools under his charge. Many of his suggestions are contained in his annual reports, which did not follow the stereotyped lines of most school reports. They appealed strongly to thoughtful educators. For the more immediate aid of the teachers a pamphlet, the Cleveland School Bulletin, was issued monthly. It seems clear that Mr. Hinsdale modified the school system of Cleveland in a wholesome fashion, though at first he may have been less familiar with details of administration than men of a different experience. The fact that four years after Mr. Hinsdale left Cleveland, overtures were made looking toward his return thither is good evidence that his services in that city were not unappreciated by those who directed its school system.

A high authority in education says: "His writings from the beginning were very valuable as exciting a profounder habit of thinking with regard to educational theory and practice in the common schools." In later years Mr. Hinsdale wrote less upon educational theory and more upon the history of education in this country, a field in which his contributions are of permanent value and the latest are the best. In this field Mr. Hinsdale had no superior and hardly a second.

At the end of his service in Cleveland Mr. Hinsdale's reputation was such that in 1887 he was elected professor of the science and the art of teaching in the University of Michigan. He began its duties February, 1888, and held that position the remainder of his life. In the interval between his superintendency at Cleveland and his going to Ann Arbor, Mr. Hinsdale wrote The Old Northwest, perhaps his most important and widely known work; a revised edition of it appeared in 1899.

Dr. Hinsdale's interest in history was influential in shaping his instruction in education; he dwelt by preference upon the history of educational development rather than on present educational theories, though the latter were not neglected in his lectures.

Dr. Hinsdale found at Ann Arbor his true place, and his life there was happy and fruitful beyond any previous measure. There is the best evidence that while at the University of Michigan he was counted peculiarly sane and free from "fads" in his teaching, a valuable and faithful college officer, a strong debater who persuaded by force of argument rather than by the graces of oratory, a man of untiring industry sustained by a robust constitution, which enabled him to produce numerous volumes on various subjects, not to mention frequent contributions to periodicals, reports made to various associations, and public addresses on many themes.

Pressed by all these burdens, Dr. Hinsdale took a full share of the multifarious duties which devolve upon the members of an active college faculty. There is no doubt that he overtaxed his unusual strength and shortened his life by excessive toil. How prolific his labors as an author were, is seen by the list of his books published after he went to Ann Arbor, viz: The American Government (1891), How to Study and Teach History (1893), Jesus as a Teacher (1895), Teaching the Language Arts (1896), Studies in Education (1896), Civil Government of Ohio (1896), Life of Horace Mann (1898), The Art of Study (1900), which Superintendent Maxwell styles "Professor Hinsdale's most important contribution to educational theory."

A history of the University of Michigan, on which he spent no little research, is now in the hands of the printer. During the past year he also prepared a monograph on The Training of Teachers, which won a medal at the Paris Exposition. Besides these he has contributed largely to educational journals, and has written numerous reviews and pamphlets.

Dr. Hinsdale's merit gained academic recognition and he was given the degree of A. M. by Bethany and Williams Colleges, that of Ph. D. by the Ohio State University (1887), and the degree of LL. D. by Ohio University.

He held membership in the Michigan State Teachers' Association and Schoolmasters' Club, and in the National Educational Association, of whose council he was president in 1897, and was one of the commitee of twelve on rural schools. In addition to these professional relations Dr. Hinsdale was a member of the Historical and Archæological Society of Ohio, an early and interested member of the "Old Northwest" Genealogical Society, a part of whose name was borrowed from Dr. Hinsdale's best known work, an honorary member of the Historical Society of Virginia, and a member of the American Historical Association, and was connected with other educational and religious societies.

A bibliography of his numerous books and contributions to periodicals and reports to various associations is given in the Educational Review for February, 1901, pages 197–199. Partial lists of his historical papers and pamphlets may be found in the annual reports of the American Historical Association, especially in that of 1889, pages 277–279. Careful sketches of Dr. Hinsdale, prepared by competent hands, are also to be found in the Educational Review for February and March, 1901. These naturally are largely concerned with his work in education.

During Dr. Hinsdale's visit to Europe, 1891–92, he made a careful study of the school systems of various European states, and the first account of Italian schools under the new kingdom published in the United States was prepared by him.

In education Dr. Hinsdale was an early and prominent advocate of more opportunity for the individualism of the student; the schools, he said, "handle classes better than they teach pupils." He was one of the first to discuss the correlation of related subjects; he saw with exceptional clearness the necessity of making the civilizing and refining studies stronger in the elementary schools by supplementary reading and other means.

Dr. Hinsdale was also quick to see and urge the necessity for special school laws for our city systems, whose failings none saw more clearly or discussed more sanely and wisely. In all that he said and wrote a massive common sense was as conspicuous as his learning and intense earnestness.

Physically Dr. Hinsdale was noteworthy for a sturdy frame and the appearance of strength and endurance. He was not a person with whom one would take liberties; strangers often thought him somewhat blunt and cold in manner, not understanding the absolute honesty and frankness of his character which those who knew him well valued at their true worth.

In Dr. Hinsdale inherited qualities and tendencies found ample expression; his tireless industry, his almost brusque frankness, love of books, fertility as a writer, inclination to radical thinking and conservative utterance, small patience with cant, "fads," and fools, candid study, rugged character, deep religious nature—all are more or less distinctly outlined in his ancestry. In him nature and circumstances were happily united to produce the accomplished scholar and the strong man. We may safely adopt President Angell's well-considered words:

He was generous in his judgments of others, but independent and fearless in forming and expressing his opinions of measures, whether educational, political, or religious. There was a noble manliness in him, an upright and downright integrity of make, an inspiring devotion to whatever is uplifting for men, which commanded universal respect and esteem, and which will make his memory ever dear to all of us who had the good fortune to know him.

PROFESSOR HINSDALE AS A LITERARY MAN.

Dr. Hinsdale has become one of the most prolific writers among the educational men of the country. Those of us who knew him well had come to look for a new volume from his pen about every year, and, in addition to this, there were his contributions to the Dial and to other publications, his occasional addresses, and his papers before educational bodies. But notwithstanding the great amount that he wrote and published, nowhere do we find any indication of haste or carelessness in preparation. He is always master of his subject—always conscientious, thoughtful, suggestive. His style is like the man—simple, direct, unadorned, forceful. He had no use for tinsel rhetoric to ornament his sentences. He had little patience with it in others; he never resorted to it himself. He wrote because he had something to say, and he said it with a clearness that awakened interest and carried conviction. The one quality of mind conspicuous in all his writings is his thorough sanity.

His Old Northwest and his Horace Mann are good illustrations of the thoroughness with which he did whatever he took in hand, and they will continue to be authorities on their respective subjects for long years to come. His occasional addresses, like the one delivered not long ago at the time of the celebration at Hiram, are models of their kind, and his papers before educational bodies were always welcomed and always received with commendation by all thoughtful listeners. His volumes on specifically educational subjects, like How to Study and Teach History, and Teaching the Language Arts, rank among the best works of their class produced in this country.

It is sadly but emphatically true that he put his life into his books. They are a noble monument to his memory, and he who would know him may read him in their pages. They have furnished and will continue to furnish instruction and inspiration to thousands of teachers all over this land, and so it may be well said that through them, though he be dead, he will still teach.

E. W. Coy,
Hughes High School, Cincinnati, Ohio.

A GREAT EDUCATOR.

My acquaintance with the late Prof. B. A. Hinsdale dates from his connection with the schools of Cleveland as superintendent. I noticed on first meeting him that he was a man of unusual character and ability, and that he had high ideas of educational scholarship. He commenced writing on questions relating to the theory of education and with reference to educational history in this country, more particularly the latter theme. His contributions on this subject are of permanent value, and future investigators will gladly use his labors. Systematic students like Professor Hinsdale grow rapidly in proficiency as time goes on, and the later and latest writings of Professor Hinsdale may justly be considered his best. He fell in what should have been the midst of his course, and the cause of education in America suffers great loss in his death. The consolation left for us is that he worked so earnestly and completed so much.

W. T. Harris,
United States Commissioner of Education.

PROFESSOR HINSDALE AS A CRITIC AND REVIEWER.

For the past ten years or so Dr. Hinsdale has occupied a prominent position among the Dial's most valued reviewers, and his death leaves a gap which it will be hard to fill. In the earlier days of the Dial the more elaborate reviews of important works in American history were written by Dr. W. F. Poole, a critic of very great force and authority in this field. After Dr. Poole's death Dr. Hinsdale began taking up this line of work, and it is a high but well-merited tribute to say that he, more than any other writer on the staff, succeeded to the position that had been held by Dr. Poole. His work showed the same thoroughness of preparation, the same comprehensive knowledge, the same open-mindedness and sincerity, the same power of forcible and clear expression. Of all the writers on American history that the Dial has had, these two—Dr. Poole and Dr. Hinsdale—stand preeminent. Dr. Hinsdale had reviewed also many educational books for the Dial, and his authority in this field is of course universally known. But it was in American history that his deeper scholarly interest seemed to lie, and the best and most vital work which he did for us was called out by publications in this department. It is a sad thought that its pages will know his vigorous and ready hand no more.

Francis F. Brown,
Editor the Dial.

DR. HINSDALE AS A RELIGIOUS WRITER.

Professor Hinsdale's contributions to our periodic religious literature began as far back as Lard's Quarterly, and probably earlier, but at that date I became acquainted with his writings. He has written very little since then that I have not read, including his religious books. For a number of years his contributions to our religious literature have been limited almost entirely, if not quite so, to the Christian-Evangelist. While the present writer was conducting a Christian quarterly he contributed also to that. As a religious writer he was characterized by breadth of sympathy, by spiritual penetration that went at once to the heart of his subject, and by philosophic breadth which caused him to look at religious truth as part of universal truth, in which it held the commanding place. He had no taste for those petty differences which divide sectaries, but he loved to deal with what is fundamental in Christian faith and life. He was a scholarly writer and was wont to deal with his subject in the light of history. He had the historic instinct largely developed, and would have succeeded admirably as a writer of religious history as well as he did in writing the history of his country. For scholarly breadth, for spiritual penetration, for his ability to trace the evolution of religious thought in the history of the world, for sanity of judgment on the great problems of the times, he stood in the very front rank of writers on religious themes, and the productions of his pen have left a permanent influence on the religious brotherhood with which he was connected.

J. H. Garrison,
Editor of The Christian-Evangelist, St. Louis, Mo.

WHAT THE GOVERNMENT FAILS TO DO FOR THE PEOPLE.[1]

By Hon. J. L. M. Curry, General Agent of the Peabody and Slater Funds.

In February, 1880, the trustees of the Peabody education fund presented a memorial to Congress, accompanied by a masterly argument, which proceeded from a committee composed of Mr. Stewart, Chief Justice Waite, and Mr. Evarts, inviting attention "to the vital necessity of national aid for the colored population, and especially to the great masses of colored children who are growing up to be voters under the Constitution of the United States." At other sessions the subject was presented anew to the country. The general agent of the fund has presented two petitions to Congress, appeared three times before the Senate and House Committees on Education, and urged the matter before assemblies North and South. At the late Southern Educational Association in Richmond, Va., the very able and accomplished head of the Bureau of Education, Dr. William T. Harris, felt constrained to call the attention of the country again to this vital subject, this paramount issue. Hitherto the Government has not concurred in the views of the trustees, but has cruelly and suicidally turned a deaf ear to arguments which seemed to be irresistible, and this refusal only makes more obligatory the patriotic sacrifices of the Southern States.

WHAT THE PEABODY FUND HAS DONE.

Three results from the Peabody education fund may be indisputably claimed:

1. State school systems have been permanently established, are growing in efficiency every year, and are more securely embedded in the hearts of the people. Education is now regarded as a function of government, and no tax on property is considered more legitimate than that levied for the support of the schools. The

[1] This is reprinted from the Chicago Record-Herald, June 8, 1901, where it appeared as a paper of the Record-Herald's Current Topics Club, being paper No. 17 under the general head "What the Government does for the people."

leading normal schools are the direct result of the personal influence and effort of the general agents and of timely assistance rendered from the fund.

2. Hostility to or prejudice against the education of the negroes has been largely removed or greatly softened, and this dependent class is recognized as entitled with the white people to the benefits of the system, to which by taxation they contribute only a trifle. In thirty years the Southern States have given about $110,000,000 to the education of the late slaves and their descendants. What Mr. Winthrop forcibly said has grown into a political maxim, that "slavery is but half abolished, emancipation is but half completed, while millions of freemen with votes in their hands are left without education."

3. In Mr. Peabody's devotion to his country there was something beautiful, touching, and assimilating. Such expressions as "beloved and common country," "our great country," "the whole of our dear country which I have loved so well," were frequently on his lips, and his matchless gift initiated an era of good feeling, for it "was the earliest manifestation of a spirit of reconciliation toward those from whom," said Mr. Winthrop, "we have been so unhappily alienated, and against whom we of the North have been so recently arrayed in arms." The indebtedness to a Northern man, the laborious efforts of trustees and agents, the enlarging and elevating influence of the general education of the masses, the reflex influence upon higher institutions of learning, have tended to efface sectionalism and bring the lately belligerent portions of our common country into closer relations of friendship and fraternity.

CAREER OF GEORGE PEABODY.

George Peabody was born in Danvers, Mass., now Peabody, Mass., February 18, 1795. His parents were humble, but respectable, and his education was obtained in a common village school. In his early life he was compelled to work for his support. This necessity took him to different places until he found himself at Georgetown, in the District of Columbia. He removed to Baltimore, and as the result of great energy and business capacity soon established houses in Philadelphia and New York. In 1837 he took up his abode permanently in London as a merchant and money broker, where he rose to respect and distinction, and established a character for business shrewdness and integrity surpassed by none in the world's metropolis. Living the rest of his life in England, he was intensely an American, without loss of local attachments and personal friendships. During the troublous periods of the war he was ardent in his patriotism and a devoted friend of the Union. When peace was made he was deeply sympathetic with those who had suffered most during the privations and sorrows of the terrible struggle.

HIS GREAT GIFT TO THE SOUTH.

Mr. Peabody became renowned for his beneficence, which was never spasmodic or the result of hasty action, but conducted on fixed principles, after mature and most thoughtful examination. Before he decided upon his munificent gift, which made him the greatest benefactor the South ever had, he considered what he purposed with the utmost care and deliberation, and called to his counsel prominent men whom he had known intimately in public or business life. Among these were Bishop McIlvaine, Mr. Corcoran, and Mr. Winthrop. To the last of these he unfolded confidentially his plans with fullness and clearness, stating that from the earliest years of his manhood he had contemplated a disposition of his property which would do great good to his fellow-men. The letter of gift finally agreed upon shows in every line the pursuasive influence of Mr. Winthrop's statesmanlike and comprehensive suggestions. The animating principle of the gift was inscribed upon the seal of the fund and was given by him as a sentiment at the bicentennial celebration at Danvers—"Education, a debt due from present to future generations."

The gift of private persons in the United States for education have surpassed in number and amount any made in other parts of the civilized world. Rockefeller, Stanford, Carnegie, Clark, Smith, Armour, Cupples, Brookings, Hearst, Slater, Johns Hopkins, Colgate, Vanderbilt, Morgan, and others have enrolled their names among the immortals by their large contributions, but these have been mainly for universities, for advanced education, for those able through parents or guardians to accomplish their honorable ambitions. Peabody, with a big heart, broad American and humanitarian views, gave to the poor, the destitute, and declared that it was for the promotion "of the intellectual, moral, or industrial education among the young of the more destitute portions of the Southern and Southwestern States of the Union—those portions of our beloved and common country which have suffered from the destructive ravages and the not less disastrous consequences of civil war."

THE VALUE OF HIS GIFT.

He required that the benefits of his gift should be "distributed among the entire population, without other distinction than their needs and the opportunities of usefulness to them." In order to appreciate the timeliness and value of this immense contribution to the needs of the people, it is necessary to recall the fact that at the time of the gift the South was in a state of apparently hopeless impoverishment. At the close of the war corporations were suspended, banks were closed, railways were dismantled, securities were depreciated or made valueless, business was paralyzed, wives were widowed, children were orphaned. Academies and colleges had been closed. The young had been arrested in their educational plans. The country was in a state of stagnation, exhaustion, poverty, and bankruptcy.

For the administration of the trust Mr. Peabody selected fifteen distinguished men, at the head of whom was Mr. Winthrop, who devoted with unrelaxing zeal and hopefulness the greater part of his time to the successful management of what he said was the greatest honor of his life. Among the men chosen were Governor Fish, Bishop McIlvaine, General Grant, Admiral Farragut, Mr. Rives, Mr. Evarts, Governor Graham, Governor Aiken, and Mr. Riggs. From that time to this, as death has released some of them from duty, their places have been filled by men of equal distinction and ability. These trustees fortunately selected as general agent Dr. Barnas Sears, a ripe scholar, an expert in education, of unfailing tact, courtesy, and common sense. With a full mind and the personal suggestions of Mr. Peabody—for he lived nearly three years after the gift and attended two of the meetings—Dr. Sears performed with consummate discretion and ability his delicate duties, and under his supervision the trust was inaugurated and began its career of wide usefulness.

The first step under Dr. Sears, growing out of his study of the situation, was to lay foundations for the establishment of public-school systems. It needs to be borne in mind that under the ancient régime no public school system providing universal education existed at the South. There was no system adequate to the education at public expense of the white youth, and the peculiar social system forbade the education of the negroes. Sparse population made permanent systems difficult, if not impossible. Slavery was now fortunately abolished, and by the fourteenth amendment national citizenship was created and co-occupancy of the same territory by two distinct races, with the same civil rights and privileges, made the education of the negroes a social, political, and industrial necessity. The South had had academies and colleges of high order, equal to any in the land, turning out products in manhood and womanhood not inferior to those in any civilized country, but there was no system on the statute book adapted to the needs of the entire population. Free schools for all the people was the only sufficient scheme to carry out Mr. Peabody's clearly expressed intentions and to put the South on a plane of equality, in capability

and mental attainments, with States which had had for years well-devised common schools. Obviously the first indispensable step was to create a healthy and sustaining public opinion and to organize that opinion for legislative and community action. Dr. Sears chose his residence at Staunton, Va., visited every Southern State, spoke in cities and towns, addressed legislatures, utilized the public press, stimulated the establishment of schools by giving to them liberal aid from the Peabody fund, always on the simple and wise principle of helping those who help themselves.

DIFFICULTIES THAT WERE OVERCOME.

The difficulties in the way of using the income effectively, according to the fixed plan, are not easy to realize. Soon the applications for aid were numerous, urgent, and annoying. Some were worthy, some were dishonest, many were wildly utopian, and the half, if granted, would have exhausted the whole fund in less than a year. Ingenuity and invention were put actively at work to devise schemes for getting hold of some of the money, which had been magnified into untold millions. Theorists, visionaries, sects, crazy people, were among the persistent applicants. Fixed rules had to be established and adhered to with firmness, patience, wisdom, and good temper. Work was begun by selecting in the States a few schools at radiating centers, to illustrate by examples the best methods of teaching and to exert a healthful diffusive influence in favor of free schools for all citizens.

To use the apt words of Professor Harris, of Richmond College, the idea was to supplement judiciously and helpfully, so as "to secure the just mean between concentration for strength and diffusion for relief." A part of current expenses was contributed to stimulate the people to self-exertion in the good cause, and this amount was determined in some degree by the amount of money raised by a State tax, local tax, or voluntary contributions. The aided schools were to be graded, to have at least 100 pupils, to continue in session nine or ten months, and to have free tuition. Teachers, discipline, text-books, and all such questions were left to the State or local authorities; yet, while disclaiming all purpose of interference with the school authorities, the trustees claimed "absolute discretion" in giving or withholding funds, refused to distribute according to population or in proportion to destitution, and were guided in their action by what would be productive of beneficial results and contribute to the furtherance of the purpose, which was frankly avowed and always kept prominently in view. All along it was declared that this aid to independent schools was a temporary expedient, and that the schools must become a part of the general system of State-controlled institutions, or the help would be withdrawn.

RESULTS OF THE WORK.

Schools—excellent, well taught, well managed—sprung up throughout the South, and the experiment was so satisfactory, good schools became so popular and such a recognized necessity, that in the course of a few years every State had in organic law or on statute books and in practical operation a system of public schools modeled with some necessary changes upon systems which had worked well in sister States in the North and West. When these systems were established, as had been assiduously worked for, the trustees no longer helped independent schools, but gave their aid only to free schools, carried on under State auspices, and acted in cooperation with State educational authorities. For twenty years or more not a dollar has been given to any school which has not been, in whole or in part, under State administration and aided by State revenues.

The improvement of State systems of public schools was the next logical step. Excellence has been rewarded and the income of the fund is now almost exclusively used in teacher training. The Peabody Normal College at Nashville, in which all

the Southern States are allowed a definite number of free scholarships, has grown to be a great institution, with 31 teachers and 600 students, male and female, and receives the major part of the annual income of the fund. Under the wise and masterly management of President Payne, this college now ranks among the best of its kind in the Union. Through the active influence of the agents and the timely pecuniary cooperation of the fund, normal schools have been established in nearly all the Southern States, and to these schools, if of a high order and supported and controlled by the State, liberal aid is given. Teachers' institutes, held annually in the different States under the management of State superintendents, are encouraged, so as to furnish to the public-school teachers, especially to those who have not enjoyed pedagogic training, instruction from experts and the most successful teachers who can be obtained. Some of the States have now several normal schools, and in this effort to increase the qualifications of teachers and to require an advancing standard the negroes have largely shared.

MEN WHO ADMINISTERED THE FUND.

Since the origin of the trust in 1867 there have been only two general agents between whom there was unbroken and intimate friendship, and often close and confidential conference. The present agent, familiar from the first with the policy and plans and acts of Dr. Sears, has felt it a duty and a privilege to follow in the footsteps of his predecessor and thus accomplish most effectually the beneficent and patriotic purpose of the great founder of the trust. He visits once or twice a year the schools receiving help and has had the honor and privilege of addressing more legislatures than any other American ever had.

Besides the names mentioned in the original trust, the trustees, chosen from both sections, now include such men as Bishop Whipple, Dr. Greene, Governor Porter, J. Pierpont Morgan, William A. Courtenay, Chief Justice Fuller, Judge Somerville, Ambassador Choate, Judge Fenner, President Gilman, Senators Wetmore and Hoar, President McKinley, and Richard Olney. Such men and their predecessors, giving without remuneration time and thought to the management of this world-renowned benefaction, have had a happy and unifying influence upon the sections that can not be overestimated.

The fund was reduced to $1,000,000 by the refusal of Mississippi and Florida to pay their bonds. The income from the remainder is used in the work which has been described. Since 1867 nearly $3,000,000 has been paid out by the treasurers, mainly on recommendation of the general agents. When it is said that that most eminent and experienced financier, J. Pierpont Morgan, is the treasurer, one may know that the finances are managed without diminution for salary and with consummate and unparalleled skill.

HAMPTON NORMAL AND AGRICULTURAL INSTITUTE.

By Principal H. B. Frissell, D. D.

This institution is located in Hampton, Elizabeth City County, Va. It was founded in 1868 by Gen. S. C. Armstrong, and is neither a Government nor a State school, but is controlled by a board of 17 trustees representing seven different denominations, no one of which has a majority. It is devoted to the practical education of negro and Indian youth, and has mechanical, agricultural, and academic departments.

Total number of students in 1900–1901 was as follows:

	Male.	Female.	Total.
Negroes	496	422	918
Indians	65	54	119
Total			1,037
Number of teachers	24	27	51
Number of other employees	28	28	56
Total number teachers and employees			107

Average age of pupils, 18.

Discipline, military.

NORMAL DEPARTMENT.

The normal department offers a two years' course of instruction in the following subjects:

History of education.
Theory of education.
School organization and administration.
Psychology and child study.
Educational classics.
Negro and Indian society
Arithmetic.
Literature and history.
Geography.
Nature study.
Manual training.
Form and color.
Domestic science.
Physical training.
Music.
Library methods.

Courses are also offered in cooking and dressmaking, leading to special normal diplomas. The Whittier preparatory school of 395 children is used as a school of observation and practice for this department. During 1900–1901 there were 28 students (19 women and 9 men—4 Indians, 24 negroes) taking the two-year advanced course; 9 received normal diplomas; 10 others have finished the first year of the normal course, and the remainder are taking post-graduate courses in agriculture, business, or electricity.

The normal department is comparatively small, because it has but recently been established as a separate department in the effort to increase the requirements for a teacher's certificate and to send out better-equipped teachers for the negro and Indian races. It is increasing in numbers each year.

ACADEMIC DEPARTMENT.

There were during the last session 605 students in this department—363 male and 242 female. They were classified as follows:

	Male.		Female.		Total.
	Indian.	Negro.	Indian.	Negro.	
Day school.					
Senior	3	24	2	12	41
Middle	7	32	3	34	76
Junior	15	24	22	63	124
Special				4	4
Preparatory	15	22	19	25	81
Night school.					
Senior		4			4
Middle	6	55			61
Junior	12	130		33	175
Preparatory	2	12		25	39
Total	60	303	46	196	605

The following subjects are taught in the academic department:

Agricultural science.	Bible study.
Hygiene.	Civics.
Geography.	Drawing.
Arithmetic.	Penmanship.
History, United States and general.	Gymnastics.
English.	Physics.
Reading and literature.	Bookkeeping.

Manual training: Basketry, sloyd, bench work, wood turning, forging, sewing, and cooking.

Every student is taught agriculture and manual training. The pupils enter at 16 and 17 with but little previous training, and the course of study is adapted to their needs. All studies are made to center about agriculture and home life. Girls are taught all the arts that pertain to housekeeping, including mattress making, painting, papering, repairing chairs and latches, and the care of a garden and of poultry.

All students are obliged to work with their hands one or two days in each week and are enabled in this way to pay a portion of their board, which is $10 per month.

Forty-one students received academic diplomas in June, 1901.

TRADE DEPARTMENT.

The number of students who have been given instruction in trades during the past year is as follows:

Blacksmithing	25
Wheelwrighting	15
Carpentry	38
Tailoring	20
Painting	10
Tinsmithing	1
Steam fitting	5
Machinist's trade	13
Bricklaying	6
Harness making	5
Shoemaking	9
Upholstering	11
Printing	7
Total	165

The students in the finishing class in carpentry last year were given for half the year one-half day each at bricklaying, painting, and tinsmithing, four hours at wood turning, and six hours at designing small houses and estimating the material for them. The rest of each week was spent at the carpenter's bench. Such an "all-around" course enables the carpenter to plan a house, estimate its cost, and finish it in every detail. All tradesmen have mechanical drawing and attend night school for academic studies. All learn also to make estimates in their various trades.

Most of the trade courses are three years in length; the first year being spent in the trade school, the second in one of the productive industries, and the third in the trade school. A regular course of technical instruction is given in each department. Sixteen tradesmen received certificates in nine different trades in June, 1901.

AGRICULTURAL DEPARTMENT.

Of the 795 acres embraced in the school's two farms, 500 are under cultivation by students.

The following crops and products have been raised or made, and sold either to the school or to outside parties:

Wheat	bushels	600
Corn	do	8,030
Oats	do	500
Potatoes	do	1,860
Turnips	do	545
Onions	do	43
Beans	do	150
Other vegetables	do	1,500
Fruit	do	215
Melons	number	4,000
Pumpkins	do	5,000
Hay	tons	240
Butter	pounds	3,500
Milk	gallons	75,000

Stock belonging to school as follows:

Horses	33
Mules	8
Cattle	258
Swine	126
Fowls	1,200

The subjects taught in the agricultural department are classified thus:

Special.—Chemistry, botany, insect life, history of agriculture, farm accounts, soils, drainage, horticulture, animal industry, dairying.

Senior.—Animal industry, dairying, stock breeding, stock feeding.

Middle.—Soil water, farm drainage after cultivation, rotation of crops, plant propagation, insects, and plant diseases, manures and manuring.

Junior.—Plant life, soils, insect life.

Whittier preparatory.—Nature study, practical work in school garden (2 acres with 200 individual plats).

Twenty acres of the school land are used as an experiment station; and four as a model farm, which is managed by a student so as to show how to maintain a moderate sized family on a small piece of land.

The institution sends weekly and monthly weather reports to the Central agricultural station.

SUMMER NORMAL INSTITUTE.

A school of methods is held in July each summer, the expenses of which are borne by the State of Virginia and the Hampton Institute. During the last session there were 347 teachers enrolled, representing 15 States and Territories, 127 being from Virginia. Industrial as well as academic courses were offered and were chosen by a large percentage of the teachers. All the industrial classes were full to overflowing within three days after the opening of the institute.

INDIANS.

There have been 119 Indians in attendance during the past year—65 boys and 54 girls. They have been classified with the negro students and have therefore had the same number of teachers and have studied the same subjects; 46 boys have taken trades, 4 have had a special course in agriculture, 4 boys and 5 girls have been working with families in the north, 4 girls have had a special seamstress course, and 48 girls have had instruction in sewing and housework. All the Indian girls have

had instruction in lace making, as well as in the various forms of manual training taught in the school.

The tribes represented are as follows:

Oneida.	Arickara.	Ponca.
Seneca.	Winnebago.	Apache.
Tuscarora.	Mohave.	Caddo.
Onondaga.	Chippewa.	Navaho.
Stockbridge.	Creek.	Yuma.
Cherokee.	Shawnee.	
Sioux.	Papago.	

FINANCES.

The entire school plant is valued at		$783,000.00
Value of land	$57,000.00	
Value of buildings	565,000.00	
Value of equipment (exclusive of library)	155,500.00	
Value of library (11,000 volumes)	5,500.00	
Total endowment		926,636.15
Annual income (including voluntary contributions)		184,539.07
Income from productive funds (endowment)	43,123.68	
Income from the General Government	37,148.27	
For maintenance of Indian pupils	$18,485.58	
Appropriation through State of Virginia (one-third of interest on land-scrip fund investment)	10,329.36	
One-third of allowance to Virginia from "Morrill fund"	8,333.33	
Income from other sources	5,488.06	
Benefactions for current expenses	98,779.06	
Benefactions received during the year for endowment		37,588.00
Benefactions received during the year for permanent improvements		21,656.00
Annual expenditures		169,277.99
Salaries of teachers and other employees	$70,927.25	
Net cost of industrial departments, including salaries of instructors	17,237.11	
All other expenses	81,113.63	
Amount credited to students for labor		48,466.58

Students are not charged tuition. It is paid by individuals and associations in annual gifts and interest from scholarship funds.

Annual academic scholarship	$70.00
Annual industrial scholarship	30.00
Permanent academic scholarship	2,000.00
Permanent industrial scholarship	800.00

THE METHOD OF VENTILATING SCHOOLROOMS BY WINDOWS AND FIREPLACES.

By W. T. Harris.

Undoubtedly the ideal plan for warming and ventilating houses includes a fresh-air shaft, bringing down the air from the top of the building, heating the same, and forcing it into the schoolroom by a fan moved by steam or other power. The feet should be kept warmer than the head, consequently the foul-air flues should be placed near the floor. This ideal plan is generally considered an expensive luxury,

too expensive for use in most places. I can remember that twenty years ago many of the buildings in Chicago were heated and ventilated on this plan. By simply turning a register the inflow of hot air could be stopped at once, and the inflow of fresh, cool air substituted. The steam engine which furnished the hot air was placed in a small building just outside of the building used for school purposes. I have never inspected schools elsewhere that were heated and ventilated in so satisfactory a manner.

The brief remarks which I shall make in this paper are devoted to the question of interest in the great majority of schoolhouses in this country—houses that depend on windows and doors and chimney flues for their ventilation, and for heating depend upon stoves or hot-air furnaces, or steam coils. The universal tendency when the air of the schoolroom becomes too hot is to raise a window and let in the cold air from the bottom. The consequence of this is a direct draft upon the backs or shoulders of pupils sitting near the window. Pupils at a distance from the window get some of the fresh air without danger from the current of air caused. It seems to me that very many cases of ill health in later life can be traced back to carelessness in this matter of direct ventilation from the window upon the pupil. The seeds of future rheumatism were then planted. Rheumatism, it is well known, leads to heart disease. In case the lungs are the weakest point, consumption may set in first, especially where the effect of sitting in a draft of air produces a bad cold instead of rheumatism.

Inasmuch as the cold stream of air falls to the floor on entering the room and diffuses itself around the floor, it tends to produce cold feet. Hence the ventilation of the room from the bottom of the window is sure to be inimical to the health of the pupil.

But the child must have fresh air. Foul air deteriorates the blood and lowers the tone of the whole system, thus inviting disease. The child must have fresh air, but the fresh air must be introduced through the top of the window, and not through the bottom. This is the point that I wish to emphasize. If the window is not constructed so as to be lowered from the top, it can easily be changed. A portion of the supports of the window can be cut out with a chisel, so as to allow the upper sash to be lowered to the distance of 1 foot or more. Then two buttons may be fixed, one of which supports the window within 1 inch of the top and another that supports it when lowered a foot or more. This change should be made in all the windows and not merely in a few of them. Every schoolroom should have at least four windows. Each of these four windows should be so constructed that the upper sash may be lowered.

In cold, sharp weather, or very windy weather, when the air is mild, the upper sash of each of the four or more windows of the schoolroom should be lowered 1 inch from the top. The cold air from without enters the space above the window and meets the hottest air in the room. It is heavier and descends toward the floor, creeping down the side of the window and the wall of the room and becoming heated in its passage. During its descent it also diffuses itself more or less, and in no case does it strike the backs or shoulders of the pupils, provided that there is an aisle, as there ought to be, between the pupils' desks and the wall of the room. Moreover, when it reaches the floor it has become so much modified and warmed it does not cause a cold chill to the feet of the children.

If the weather is warm or mild, and there is little breeze stirring, the windows should all be lowered from 6 inches to a foot. This will introduce a much larger inflow of fresh air, but it will hold its course to the floor near the wall or down the window without striking the shoulders of the pupils. In case, however, of cold weather, or of windy, mild weather, the volume of air pouring through an aperture a foot wide would be projected forward into the room like a cataract, and would reach the pupils and do them harm. Everyone knows that the hot

air rises toward the top of the room and remains as a sort of reservoir of air above the point at which fresh air is introduced. When the window is raised from the bottom and not lowered from the top, the persons seated on the other side of the room not affected by the inflow of air feel the oppressing effect on the body of stagnant air in the top of the room. This is instantly removed upon opening the ducts at the top of the room, because all of the air in the top of the room is set in motion by the process.

I have said that all of the windows, and not some of them, should be lowered from the top. It will not do to fix one window alone and suppose that is sufficient for the purpose of ventilating a whole schoolroom. It will do something, but what it does will not be well done. For, in order to affect the air of the whole room, it will be necessary to lower the window too much, and the consequence will be the creation of a too brisk current, the formation of a cataract of air, as it were, which will flow outward from the wall into the schoolroom so far as to strike the pupils sitting nearest that window. All of the windows should be lowered, and no more than is necessary to produce the change of air in the whole room by the descent of a thin sheet of cold air down the windows and the wall to the floor.

This method of ventilating the rooms is not a matter of mere theory, but has been tested by me during many years' practice. Any schoolroom that has four windows to it may be ventilated by this process in a fairly serviceable way. But it is quite important that there should be ventilating flues at the bottom of the room opening into a large ventilating flue surrounding the smokestacks which carry off the heat of the furnace. There is a sort of sour schoolroom air which the school visitor remembers vividly. This schoolroom smell can not be removed effectually except by ventilators at the bottom of the room. The ventilation by means of the tops of the windows that I have already described gives a fair supply of fresh air to all in the room, but it is not quite adequate to remove this schoolroom smell here spoken of. The ventilating flue at the bottom of the room opening into the smokestack is supposed to draw the air out of the bottom of the room by the draft of the heated air ascending the smokestack. By the term "smokestack," I refer to the iron pipes within the chimney through which the smoke and gases from the fuel escape up the chimney. A space left around this smokestack and open all the way to the top of the chimney furnishes the ventilating flue which is found to do the service in schoolhouses. When the building is not heated by furnace and the volume of air in the ventilating flues is not heated, there will not be a draft sufficient to suck out the sour and fetid air from the bottom of the schoolroom. An open fireplace in some part of of the schoolroom will answer this purpose admirably if a small fire is kept in it constantly, even in summer. A kerosene lamp of small size will do wonders by causing an ascending current of air which draws out the bad air at the bottom of the room.

In case the room is heated by a stove, the stove should be a large one, so that the door may be left open after the coal is ignited. The draft which carries the steam and gases up the chimney also draws out the bad air from the lower part of the room. In case wood is used, and an open door occasions too rapid combustion of the fuel, some other plan must be adopted. The old Franklin stove or fireplace makes the best ventilator, though a poor heater. Its heating capacity may be increased sufficiently by lengthening the pipe and carrying it around the top of the room before connecting it with the chimney.

I should have said above that when the outdoor temperature is 80° F., or above, the windows may be raised from the bottom a foot or so, and lowered from the top as much as possible.

There are devices of oblique boards placed at the bottom of the window, or at the top of it, which are intended to deflect the current of air upward, and thereby pre-

vent its injurious effects on the shoulders of the pupils. I do not doubt that these devices are of some use, but in my experience I have never known them to be so good as the plan of lowering the windows from the top simply—that is, 1 inch in cold weather and a foot or more in mild weather; the reason, I suppose, to be this: That the oblique board serves to prevent the inflow of air when there is no breeze stirring outside of the schoolroom. For air, when still, refuses to climb over the oblique board, just as water, or any other fluid, refuses to climb over its bank. The oblique arrangement will work only when the wind blows toward the schoolroom.

Of all methods of heating the schoolroom by direct radiation, hot-water pipes extending around the room, connected with means of admitting fresh air under the pipes, is the best that I have seen. The steam coil is apt to overheat and injure the quality of the air, although this may be rendered unnecessary by a more liberal supply of coils. The stove and the fireplace heat the schoolroom unevenly, but they furnish a natural means of ventilation, while the steam coil or the hot-water pipes demand some auxiliary process for ventilation, a process which is sometimes neglected, however. If ventilation is not provided for, the steam or hot-water heating apparatus may prove quite injurious to the health of the pupils.

CATHOLIC PAROCHIAL SCHOOLS IN EASTERN MASSACHUSETTS.[1]

In 1872 the present limits of the Catholic diocese of Boston were fixed, and Boston was, in 1875, made an archiepiscopal see. These limits are the counties of Suffolk, Middlesex, Essex, Norfolk, and Plymouth (with the exception of the towns of Mattapoisett, Marion, and Wareham).

There were Catholic schools in some form among the Indians during the colonial days, and perhaps for others, but the "first Catholic school" on record in New England was opened at Boston in 1820 by the Right Rev. Bishop Cheverus, and was taught by the Ursuline nuns.

The Right Rev. Bishop Fenwick (1825–1846) made great efforts to promote Catholic education for all classes of Catholic people. He established a day school in Boston for boys and girls in 1826, when the Ursulines moved to Charlestown, and in 1831 introduced the Sisters of Charity from Emmitsburg to open free schools for girls. A classical department for boys, taught by the right reverend bishop and his clergy, was opened before 1829, and afterwards was called the Holy Cross Seminary (1835), a boarding and day school for the education of young gentlemen, chiefly for the Church.

This school was practically closed in 1837, when Mount St. James Seminary was opened at Worcester, now and since 1845 known and honored as Holy Cross College.

The free schools under the Sisters of Charity increased rapidly, while the Ursulines, after the burning of Mount St. Benedict's Convent in 1834, never regained a strong foothold.

The Catholics were very poor; in fact, with much outside help, they raised only $9,000 in nine years to purchase a home for the Sisters on the corner of Pearl and High streets. It was, therefore, difficult to support schools.

Their efforts, however, were not relaxed and a new development characterized the Catholic school movement. Schoolmasters from Ireland came to New England, and settled wherever Catholics were gathered. At times they opened schools on their own responsibility, and trusted to the parents for their pay.

This will, in part, explain an historic remark in the United States Catholic Directory for the years 1845 to 1849, under "Boston." "There are common schools for

---

[1] The following account is taken from a pamphlet with the title "Historical sketch of the growth of Catholic parochial schools in the archdiocese of Boston," by Rev. Louis S. Walsh, supervisor.

both male and female children in most (?) of the cities and towns of this diocese having Catholic teachers. In Lowell they are supported at the public expense, but in all other places at the expense of the parents of the children, aided by collections in the churches."

Boston, Salem, Lowell, Lawrence, and other places saw the rise and fall of several Catholic schools under the discipline and educational methods of these schoolmasters, who were assisted by young and elderly ladies of the various parishes. It was simply the Irish, and later the German or French "school" imported.

The lack of means and the scarcity of religious teachers made constancy and progress difficult, but in 1849 a more systematic and very successful movement was begun by the introduction of the Sisters of Notre Dame of Namur, in Belgium, who had a few years before, in 1846, opened their first school in the United States at Cincinnati.

The Notre Dame Sisters were established in Boston by Father McElroy, S. J., and on November 13, 1849, opened their convent on Stillman street. On the following Tuesday morning they assumed charge of St. Mary's girls' school, replacing two lay teachers.

Their development in the archdiocese has been marked and steady, and to-day they rank first in numbers among the religious teaching communities, having a novitiate and normal training school at Waltham, three academies (at Berkeley street, Roxbury, and Lowell), and 22 parochial schools, in which girls and in many places primary boys are taught.

In 1855 there were in all Massachusetts, then forming the diocese of Boston, only five free Catholic schools for girls, taught by Sisters, and a few schools for boys taught by lay men and women. In 1866 there were ten schools for girls and four for boys, with probably a few others not noted in the Directory.

From 1866 to 1872 the progress was slow, while the diocese was narrowed in territorial limits; in the latter year there were 13 Catholic parochial schools, eleven for girls, namely: St. Mary's, Holy Trinity (German), St. Stephen's, Sts. Peter and Paul, Holy Redeemer, and Assumption in Boston, St. Patrick's in Lowell, St. Mary's and St. James in Salem, St. Mary's at Lawrence, all the above under the Sisters of Notre Dame; also St. Mary's, Cambridgeport, under the Sisters of the Congregation of Notre Dame of Montreal. Two schools for boys remained, namely, St. Mary's at Boston and the Holy Trinity (German), both under lay teachers, while the schools for boys at Salem, Lowell, and Lawrence had been closed, chiefly on account of financial difficulties.

Thus far no systematic efforts for the education of boys had been made. The Sisters of Notre Dame of Namur had been teaching in many places the small boys, but did not wish to teach the larger boys. Their rule and constitution do not expressly forbid this work, but the traditions and customs and very words of their religious profession or vows restrict them to the "instruction of girls."

This fact is shown by developments, the numerous applications for Sisters from various parts of the country, and the actual urgency in Boston to supply a new school with teachers, all combined to make the introduction of some other teaching community a necessity, and a notable movement was inaugurated when, in 1873, the Sisters of St. Joseph, from Flushing, in the diocese of Brooklyn, were introduced into the Boston diocese at Jamaica Plain. The congregation of the Sisters of St. Joseph was founded at Puy, in France, in 1650, and was first established in the United States at St. Louis, in 1836, whence it has spread over the country. The Sisters, not long after their establishment in Boston, were constituted a diocesan community, in the sense that his grace the most reverend archbishop became their superior.

The mother house and novitiate, established first at Jamaica Plain, was transferred in 1885 to Cambridge (Fresh Pond), where an academy for girls was also opened. In 1891 both were removed to Allston.

The Sisters of St. Joseph opened schools for boys and girls of all grades, and now teach in eight parochial schools, also in the Daily Industrial Home for Girls at Neponset, and in 1899 opened a day and boarding school for deaf mutes at Jamaica Plain.

The introduction of this congregation was rapidly followed by the establishment of several other religious communities of women, that teach boys and girls of all grades, and of four orders of Christian Brothers to teach large boys.

In 1873 there were perhaps three or four fairly good school buildings in the 13 parishes then having schools; to-day 62 parishes have schools in 74 buildings (not including basements of churches or convents), for the most part modern and well equipped; 42 of these buildings are brick. The valuation of school property, including all the convents, is not far from $4,500,000. In 1873 there were 11 schools for girls and 2 for boys. To-day there are 65 for girls and 61 for boys.

Then there was no high school, now there are 10 high schools for boys and 25 for girls.

In 1873 there was only one religious community teaching in the diocese, if we except the Sisters then teaching at Cambridgeport, and replaced soon after, in 1876, by the Sisters of Notre Dame of Namur. To-day there are 17 orders of Sisters, having 664 teachers, and 4 orders of Christian Brothers, having 75 teachers with nearly 50 lay teachers.

The priests of the parish teach Christian doctrine in many schools, and in few places teach other branches, as natural science, history, music, etc.

In 1873 there were not more than 6,000 pupils, while to-day there are at least 38,200 pupils, according to the statistics of June, 1900. In January, 1901, the statistics show for parochial schools of the archdiocese of Boston 40,273 pupils and 820 teachers.

In the meantime a new impetus was given to the Catholic school movement by the legislation of the Third Plenary Council of Baltimore in the year 1884. Recalling and reviving all the previous laws, new decrees, more urgent, more detailed, and explicit, were issued by the fathers of the council, and all pastors and people were again earnestly exhorted to provide Catholic schools, with an equipment and training not inferior to the standards of the best public schools. The results are seen in the great increase of schools from 1884 to 1900. In the school year 1888–89 a school board was appointed for the archdiocese of Boston. In 1897 a supervisor of schools was appointed, Rev. Louis S. Walsh. He has made a personal visitation of every school in the archdiocese during the past two and a half years, and presented to the Archbishop of the diocese a report on the diocesan system of schools, and on each individual school.

In all New England, where in 1820 1 Catholic school was opened, there are to-day about 325 schools and 122,000 pupils.

In these various facts, figures, and estimates the pupils in the Catholic academies and in the Catholic charitable institutions have not been included.

General recapitulation.

THE COLLEGE MAN AS LEADER IN THE WORLD'S WORK.[a]

By Prof. R. H. Thurston,

Cornell University.

In the twentieth century the college man is, more than ever before, the leader of the world. Mind leads the world; mind ultimately is the ruler of the world. That mind leads the world which is not simply developed into maximum intellectual perfection; it is that mind which, perfected and strengthened and given symmetry and vigor, is also made most thoroughly at one with the world. It is not enough that the man shall be a great scholar, or the greatest of scholars; nor is it enough that he shall represent the highest culture and possess the most vigorous brain; nor can learning, even learning united with wisdom and culture, however magnificent the whole, in union give leadership in this world.

A primary requisite of leadership is close and strong connection with the great world to be led. This union being assured the true leader gains and holds his leadership by the exercise, in unrivaled power and with unequaled tact and judgment, of those talents which have been reenforced by the no less indispensable learning and culture and wisdom; these united confer leadership. Ultimately, also, it must be remembered that the greatest mind can never lead if apart from the world and out of touch with those who are to be led. Any man of good sense and rich in humanity, even though unlearned and without extraordinary genius, will sooner acquire leadership than the wisest and greatest man of genius the world at the time possesses, lacking this firm hold upon those who should follow.

He who would lead must have this compound constitution and must acquire the useful forms of learning and the hardly less valuable forms of culture, for such purposes, and he must cultivate that wisdom and tact and those virile qualities which are all-essential to perfect success. He who would lead must be prepared closely to follow leaders preceding him, and the requisites for following leaders in the front ranks are substantially the same, apart from the peculiar genius of the general of the army, as for leadership itself. And each should be well prepared to follow, each in his proper place, and there to be content while most efficient. * * *

[a] A commencement address, Case School of Applied Science. Reprinted from the Popular Science Monthly, February, 1902.

A century ago there was but one recognized form and method of education—what is now termed the classical—composed of studies of the ancient languages and literatures, comparatively lean and narrow as they are; the elementary mathematics, to the extent now attained in the secondary schools; a homeopathic dose of physics and chemistry; a little French; and a somewhat larger, if less palatable, dose of "philosophy." The century has been one of extension, broadening, elevation, diversification, and systematization of education, and of the incorporation into the curriculum of the modern languages and literatures; the modern physical sciences experimentally developed; the arts, fine and useful, so far as capable of scientific treatment; and the principles and practice of the professional schools, including the latest and most strictly taught of the group, the school of engineering and its associate professional schools of every sort. The whole evolution of the century has been consistent in every field and technical, "practical," education is simply one of the elements of a complete and perfect evolution of modern life.

The world now acknowledges its need of the college man, and my own letter files are crowded with calls for competent men far in excess of the number available; while the number seeking even improved situations is small, and I know of none out of work, unless ill. At the top, the space is enlarging, though it is always ample for tiptop men. Formerly positions paying $5,000 were rare, now the college-bred man is coming forward when $10,000 positions are seeking, and failing to find, the men who are competent to fill them satisfactorily. Generals are, comparatively, still more rare than ever, even though training for generalship is going on at an unprecedented rate and the opportunities are multiplying for great men and good men and capable men as never before. * * *

The leaders of even the world of business are educated men, as a rule. Morgan, the leader of finance to-day, is a college man, a graduate of Göttingen. None of this class of men is likely to advocate the endeavor of a people to become a crowd of wealthy boors rather than a nation of gentlemen, scholars, and wise men. The great financiers of the country are now usually college men; the heads of railways are often of that class, even though they have begun at the foot of the ladder; all distinctively learned men are of that class; our greatest men in literature, science, and art are practically all educated and cultivated men; the inventors of the telegraph and the telephone were both educated, and in fact learned, men; all the great men in medicine and surgery are college men; all the great lawyers and every great jurist on the bench is of the same rating. We make our Presidents of learned men and usually of college men. The same is true of the members of their Cabinets, of the judges on the Supreme Court bench, of the chiefs of bureau, and practically all men in highly responsible positions. Our foreign ministers and ambassadors, where reflecting special credit upon their country, like Lowell and White and Hay and Choate, have been not only college men, but distinguished for their attainments in the highest fields of academic learning.

In engineering no man will in the coming generation have even an average chance of success professionally without uniting to the essentials characteristic of a "general of industry" in generations just past the now hardly less essential requisites furnished him by systematic instruction in the sciences underlying his art and the applied sciences and the scientific methods fundamental to his profession. Now and then a man may get on, and even possibly attain a high or leading rank, but it will be at enormous sacrifice of strength, energy, and physical vigor; and when he reaches his goal it will prove that he has gathered "apples of Sodom" for a "Barmecide feast," and he will mourn, as have so many before him, the lack of that which makes a life of independence and of liberty in expenditure worth having. He will probably, as have so many before him, if his long life of self-seeking has not poisoned his character and killed all his sympathies, seek the next best thing and try to help other later youth of ambition and energy secure what he so greatly needs.

While it is largely true, as has been asserted by more than one such man—like the fox in the fable seeking to justify his amputated tail—that the prizes of our time and our country are now being often grasped by the uncultivated and unlearned man, the fact is mainly due to the circumstance that these men of to-day are mainly uneducated through the misfortune that they were born too soon and before higher education had come to be general and suitable to the conditions of modern life. In another generation this situation will be modified in the direction of giving these opportunities to educated men in vastly larger proportion. Meantime every successful man lacking education, learning, and culture recognizes to-day either that he has also lacked wisdom if deliberately declining to secure an education when young, or that he has been extremely unfortunate if deprived of that privilege by force of circumstances. Not a man of them but envies his poorest acquaintance who possesses the essentials of content in a life outside the narrowing and engrossing pursuits of a business life. He lacks preparation for precisely what all his energies have been directed toward—making suitable provisions for a profitable and happy life on a higher plane.

Visiting the famous Homestead Steel Works some years ago, the gentleman who was taking me through the mills pointed out a strong, good-looking, and evidently masterful man standing on the top of a set of heavy roll housings in the armor-plate mills and remarked: "That man is paid more than your college president," and, indicating another who was directing work not far away, and who evidently belonged to the same class—the most intelligent of mechanics—he said: "That man is getting pay exceeding that of any one of your professors." Both men were soiled and grimy, dressed in overalls, and, as occasion arose, ready to take a hand in the work; and to the unaccustomed eye of the casual visitor they would seem to be day workmen, but one familiar with such scenes would instantly detect the bearing and manner of the born general, prepared through natural force of character to command. They were men from the ranks—active, ambitious, good workmen; strong, proud, yet pleasant in their intercourse with all about them, and perfectly well prepared for their places by knowledge, experience, and natural fitness.

Why were these skilled mechanics paid the salaries of college presidents and of college professors? The answer is simple: They could make themselves so useful and so necessary in the business that the proprietors could make money by employing them, large as was their compensation. Precisely the same principle operates when the presidents of great corporations receive tens of thousands of dollars as salary, or fifty thousand or a hundred thousand. The directors of such enterprises do not give away a hundred thousand dollars simply out of kindness; their enormous interests compel them to seek out the one fittest man in all the country, the man who is sought by perhaps many other great enterprises as a guide and director, to make those interests safe; identifying him, him they must have at his own price. Similarly, the great leaders in the industries take a few millions of the many which they earn for the people; it is quite fair.

The unlearned and uneducated man will always have his place in this world of ours; but yet he will not hereafter have such opportunities, however great his natural abilities, as he has had in the past. It is sometimes—not very often—said by "successful" men of this class that the boy who grows up without learning, and who gives his boyhood's years to unskilled labor in shops and factories and mills, may hope for a larger success than he who is taught sound learning or given a "liberal and practical" education. They speak without foresight or forethought. The world of the coming generations is to be a very different world from that of these last, even as the last generation lived in a very different world from that of their fathers. Education is permeating the whole body politic, and rapidly becoming distributed to all ranks in life. For one poor man's son in college a generation ago there are many to-day, and for one one hundred years ago there are now the many

multiplied, and the man who would succeed, in whatever rank of business life, in whatever profession, must hereafter meet in competition men who, in addition to all the native talent which he possesses, and all the energy, vigor, and ambition which he may display, will have a brain stored with knowledge and scientifically cultivated and trained, and thus far better equipped than formerly for successful struggles with the world and for seizing the opportunities and meeting the responsibilities of the highest positions for which all may strive.

This is, in fact, admitted, and it is often asserted by the most wise and able and successful of this very class; and Andrew Carnegie is founding libraries, is promoting technical education, and is organizing a great technical institution as the noblest contribution of which he can conceive for the benefit of those workingmen to whom he owes so much and indebtedness to whom he so freely acknowledges. His great pupil, Mr. Schwab, while encouraging the penniless boy to begin bravely at the bottom and to work hopefully toward the top, still more emphatically declares his respect for learning, and his high estimate of the desirability of more general education, by himself organizing a trade-school for Pittsburg. A very large part of the work of founding schools and colleges and universities and every form of higher, as well as primary, education, outside the common-school system of the United States has been already done, and is being performed more and more generally and liberally and generously by this very class of men. Rockefeller builds up Chicago University; Ezra Cornell, uneducated and once in poverty, nevertheless gives all his surplus, once secured, to found a university in which "any man may find instruction in any study," and interests himself most of all in providing for the poor man's son; Hiram Sibley, owing his millions to the same sturdy, manly, and vigorous spirit, fighting his way from the bottom to the top, finds his noblest pleasure in organizing a college in which the education of the young mechanic and engineer may be carried up into the realms of applied science and the highest departments of professional work.

Lawrence and Sheffield, Case and Rose and Rensselaer, and the numerous other great philanthropists who have founded schools and colleges, even the most thoroughly educated and most cultured of all among them, it must be remembered, had no such educational opportunities as are offered the young men and women of to-day. The coming generation is to be comparatively highly educated people, and the man who is to succeed in dealing with the new, the modern, man must, more than ever before, have something of that culture. Highest success will only come of education and culture combined with a thorough scientific, professional preparation for the most advanced positions in the industrial or professional organization. In the past generations few men were given, or could be given, even the academic education of the time; to-day almost any man who has the wish and a real determination to succeed may secure a good education of the kind which he may most desire. In the last generation the competition for the high places and grand prizes, outside the then so-called learned professions, occurred between uneducated men, as a rule; in the generations now coming forward that competition will be between men who have not only the brain and the native talent, but also, and superadded to all that the older type of man possessed, that kind of systematic training which makes the intellectual as well as the physical gymnast, that scientific instruction which provides learning that finds its peculiar use in the industrial departments of life, out of which come, directly or indirectly, all great fortunes.

This is already coming into view as the characteristic change of the time in the making of the personality of the notable man of the time. To-day the educated men are taking their place in the world and their chances of success are, and have long been, vastly greater, in most directions, than those of the uneducated. The proportion of educated men taking their places in history is already fifty times as great as of the uneducated; the next generation will see practically all great prizes

in their hands. It is a splendid evidence of the progress of the world that he who chooses may enter the ranks of the educated, and he who will may make himself a man of culture.

As for opportunity to gain the prizes of common life, "what more can the college man ask than he now receives?" One man in a hundred to-day obtains a college diploma; these men supply one-third the members of Congress, one-half and more of our Presidents and Vice-Presidents, two-thirds of our Supreme Court justices, seven-eighths of the Chief Justices. In all ranks, in all great places, the names of immortals are in the proportion of 50 to 1 favoring the college man. If, as asserted by some writers of late, as I however think mistakenly, the proportion of college men to population is falling off, then so much the greater will be the opportunities of the wise. If, as presumably is the fact, college men are more and more pursuing professional studies, that means the elevation of the professions to a higher level and still larger opportunities for the college man fitted to lead. To-day the college man has thirty times as large an opportunity to succeed in public life as the nongraduate, fifty times as large an opportunity to reach the Cabinet, the Vice-Presidency, or the President's chair, sixty or seventy times as large a probability of success in striving for the Supreme Court, eighty or ninety times as favorable chances of becoming Chief Justice.

In the great industries there are probably a still larger proportion of positions which, without the scientific learning and systematic training in applied sciences given by the engineering schools, the most ambitious of men and the most talented could not attain, or, attaining, could not hold. The coming century will see these opportunities more and more the prize of intellect suitably trained, of mind properly strengthened, of talent precisely outfitted for the task of their acquirement. The college man will come more and more generally to take and to hold 100 per cent of the positions assigned the generals in the great army of industry. This is the more probable since, as is asserted by a foreign and unprejudiced observer, "The engineering profession is to-day, upon the whole, the best educated in America."

In all the later centuries until the nineteenth the college man seeking to unite with learning and culture, with knowledge and wisdom of the sorts approved by the older academicians, that no less noble and still more helpful learning of the sciences and of the arts of industry, joining the academic with the scientific and the professional, has been at a disadvantage among other college men. The end of this discrimination among learnings is now in sight, and one of the most striking signs of the times in this direction is the recent action of the Emperor of Germany and his Government and of the Emperor of Austria-Hungary and his officials in ranking the scientific and the professional schools beside the universities.

Many years ago, at the instance of your annalist, was initiated the degree of Doctor in Engineering; later, it has come to be the fact that at least one university has established entire equality between its colleges of arts and sciences, those of applied science and engineering and its professional schools, both in requirements for entrance and in those for graduation, as well as in value of its degrees in those departments of learning. Only recently the Emperor of Germany has announced the same democracy of learning for his country, and the Emperor of Austria-Hungary has followed suit, making the doctorates of engineering and of the applied sciences, and the institutions permitted to confer them, coequal with the doctorates of philosophy and their conferring universities. * * *

The college man is he who, in the days which are now come, when practically everyone who wills can secure learning if not wisdom, knowledge if not culture, sees opening before him the largest and most attractive opportunities. Whatever any other man may possess, he has that which permits him to aspire to companionship with, if not leadership of, the greatest and noblest in the land and of the time.

Given similar physical vigor, equally strong aspirations, similarly clear and strong intellect, no less refined sense of justice, sympathy, and manly brotherhood with men, it is the college man alone who has the advantage of systematic training of faculties, of most efficient teaching, of scientific knowledge and of highest learning through communion with the greatest men and the loftiest minds of the present and of the past, and who may with greatest confidence undertake the leadership of men. It is the college man who is best equipped for generalship in the industrial army, for furthest exploration of unknown fields of science, and for loftiest rise in the philosophical world, and, even with similar elementary experience and training, for greatest success in the lower, but none the less great, world of money makers. The twentieth century man will be the college man in type, and it will be college men, as a rule, who may be expected to go farthest and rise highest and to do the great deeds of the coming centuries, whether in finance, in the industries, in political life, or in the highest realms of science and the loftiest worlds of morals and philanthropy.

Shame be to him if, with all his advantages, he permits another to wrest from him that leadership by greater desert, by more perfect fitness. Glory be to him if he do his duty and splendidly, as he may, accomplish his grand task!

The college man is evidently ere long to take charge of our public offices and of the industrial and professional departments, and college men are to find their way into prominent positions as never before; but, fortunately, college men come from all sorts and conditions of people, and it can never be said that this means the organization of a class to dominate other classes, much less the masses. The sons of poor men, as a rule, always have been, and probably always will be, able to secure these positions oftener than the sons of rich men, for they have the discipline in early life that the latter usually lack. The process of promotion of the college man is to be one as well of constant redistribution of power among all classes, very much as common experience shows the wealth of the country to be as constantly in process of redistribution. The democracy of intellect and the democracy of influence will be insured by this process in the most desirable of all possible ways. The way is now opening to the college man as never before, and especially the departments of applied science and the industries offer him opportunities beside which those of the college man in the other professions are insignificant.

In another generation the proportion of men, educated and uneducated, who attain success will be vastly changed, and, happily, the number of men who have reached competence or wealth in their vocations and who must still sigh that they can not give of their millions to gain the education which they lack will be, probably, comparatively small—for the ambitious poor boy will much more commonly than now find his way to his triumph by way of the college or the professional school. The number of wealthy men who will esteem it a privilege to help on the work of education and to take part in other great works will undoubtedly also steadily increase until, as we may perhaps hope, the redistribution of surplus wealth may become the pleasure and the recognized duty of all.

The college man, leaving college, goes out into life once more a freshman and with the university of life for his next place of struggle, of aspiration, and of achievement. He enters upon a new training by different methods and through radically different experiences. He is trained indeed, but by no sympathetic and systematic teachers. He must find his own way to knowledge, and to wisdom, which is greater than knowledge, and must struggle onward and upward with not only little assistance, but even with almost every man's hand against him, and driven at times to raise his hand against every man except the select few whose interests or whose convictions coincide with his own and are opposed by all the world beside. But this is not difficult for the man who knows himself in the right. In all men, it is obvious to the close observer, there exists a fighting instinct which has its use in life, and the joy of contest makes easier the struggle for the intended goal.

Honesty, ability, capacity, and power, supplemented by precisely the right sort of learning and made available through systematic training, in every case prove winning quantities. The complete development of the man to a maximum of usefulness in the vocation and the life to which he is by nature best fitted means progress and ultimate success—provided he can keep himself in training. An essential element of the art of success is that of living long enough and in a state of high working efficiency. The fact that this is so generally ignored makes the opportunity of the man who never forgets it all the larger.

It is also the fact that it must be admitted that the incapacity, the lack of integrity, the indifference to duty, and the general inefficiency of the average man is one of the elements of the success of the man who does finally succeed. But, sad as is the fact, it may fairly be accepted by the man who is at once gentleman and scholar and expert as contributing to his opportunity. * * *

[a] In ambulatory schools.

[b] Also 142,965 in private elementary schools.

[c] Also in private elementary schools, 40,230.

[d] Enrollment included 104 pupils over 21 years of age, 51,700 between 5 and 21 years of age, and 84 below 5 years.

[e] Also in "model schools and academies" partly supported by public funds, 113,757 pupils, chiefly elementary.

[f] Teachers belonging to religious orders not included.

[g] Maximum at any one time. The figures for Cuba are taken from official statistics published by the Secretary of Public Instruction of the island.
