CHAPTER XXXVIII.

MANUAL AND INDUSTRIAL TRAINING.

References to recent Reports of the United States Commissioner of Education, in which this subject has been treated or statistics published: Annual Report for 1888-89, pages 411-428, 1362-1367; 1889-1890, pages 1148, 1209-1212, 1351-1356; 1891-92, page 1197; 1892-93, pages 186, 188, 560-575; 1893-94, pages 877-949, 2093-2169; 1894-95, page 2170; 1895-96, pages 989-992, 1001-1152, 1321-1329, 1510-1521 (column 8); 1896-97, pages 193-197, 699-703, 2211-2222 (column 8), 2279-2294; 1897-98, pages 141, 194, 723, 2370-2382 (column 8), 2419-2440; 1898-99, pages 26, 83, 179-189, 208-209, 853-863, 1355-1361, 1442, 1448, 1525-1536 (column 8), 2139-2162; 1899-1900, pages 329, 875, 1811-1821 (column 8), 2437-2467, 2505; 1900-1901, pages 216, 217, 1510, 1961, 2231-2268, 2342-2372; 1901-2, pages 1294-1311 (column 9), 1959-2002.

There are 587 cities in the United States having 8,000 inhabitants and over. In 322 of these cities manual training is taught in some of the grades of the public schools. In 1890 only 37 city school systems included manual training in the list of subjects of instruction. In 1894 the number had increased to 95, in 1896 to 121, in 1898 to 146, in 1900 to 169, in 1901 to 232, in 1902 to 270, and in 1903 the number had increased to 322. Table 1 gives these figures by States and geographical divisions. Table 2 gives the names of the cities in which manual training was given in 1902-3, indicating for each city the grades in which it was taught.

In 1894 this Bureau had reports from 15 manual training schools in the United States. These schools had 3,362 students in manual training, 2,403 males and 959 females, all of secondary or high school grade. The next year, with the same number of schools reporting, there were 4,892 students, 3,621 males and 1,271 females. In 1897 the number of schools had increased to 40, with 13,890 students, 9,224 males and 4,666 females. Industrial training schools, or schools in which certain trades were taught, were included with the manual training schools proper, and since 1897 the statistics given are for "manual and industrial training."

In 1898 there were 58 manual and industrial training schools, with 18,977 students, 12,975 males and 6,002 females. All these were reported as students of secondary or high school grade. Those not actually pursuing such secondary studies had been required to master certain secondary branches before entering. In 1899 the number of schools had increased to 66, with 20,701 students, 13,903 males and 6,798 females. In 1900 there were 69 schools, with 24,716 students, 15,819 males and 8,897 females. In 1901 the number of schools reporting was 78, with 28,981 students, 18,928 males and 10,053 females. In 1902 the number had increased to 85 schools, with 29,507 students, 18,771 males and 10,736 females. In 1903 there were 95 schools, with 33,062 students, 20,170 males and 12,892 females.

The statistics for the nine years mentioned, showing the growth of manual and industrial training schools since 1894, will be found in tables 3, 4, and 5. From these tables every effort has been made to exclude all students below secondary or high school grades.

For the scholastic year 1902-3 this Bureau collected statistics from 186 manual and industrial training schools. These include the 95 of high school grade mentioned above, 48 of elementary grade, and 43 industrial schools for Indians. Four of the Indian schools had some students of high school grade.

The statistics of the 186 schools are summarized in table 6. These schools had 56,432 pupils in manual and industrial training, 22,672 in elementary grades, and 33,760 in secondary or high school grades. Of those in secondary grades 9,180 were not receiving literary instruction, but were regarded as students of high school grade before admission. The actual number receiving literary instruction of secondary school grade in these 186 schools was 24,580. It may be noted also that of the elementary pupils in industrial training 1,076 were not receiving literary instruction. The actual number receiving such instruction of elementary grade was 21,596. Table 6 also shows that the 186 schools had 1,354 teachers of elementary and secondary studies and 2,321 instructors in manual and industrial training.

Table 7 gives, by sex, the number of teachers and students already shown by totals in table 6.

The statistics of the 43 Indian schools are included in these two tables. Four of the Indian schools had 698 students of high school grade and 9,267 of elementary grades in industrial training.

Table 8 is a financial summary, so far as the requisite data could be obtained from manual and industrial training schools, not including the schools for Indians. The aggregate value of buildings, machinery, tools, and other equipment for the schools reporting was $5,892,269. These schools had a total expenditure for the scholastic year of $1,099,926. Of this amount $710,083 was for pay of teachers, $117,294 for materials, $94,489 for new tools and repairs, and $178,060 for incidentals and for purposes not classified.

Table 9 gives in detail the number of students and teachers in the 143 manual and industrial training schools, exclusive of Indian schools. Table 10 exhibits the financial statistics of each school. Table 11 is a statistical showing for the 43 schools for Indian children. Table 12 shows the number of pupils in each branch of industrial or manual training in each school from which this information could be obtained. Industrial training is offered in most of the negro schools, reform schools, and schools for the defectives, statistics of which will be found in the chapters devoted to these classes of institutions.

SPECIAL AND UNCLASSIFIED SCHOOLS.

Certain schools which could not be classified or fully reported as manual or industrial training schools, and others giving incomplete statistics, are mentioned below:

Alabama Girls' Industrial School, Montevallo, Ala.—This is a State institution for white girls. In the language of the legislative act the school "is established for the purpose of giving therein instruction in the liberal arts and sciences; English language and literature, the science and art of teaching as a profession; music, drawing, painting, decorative art, botany, horticulture, floriculture, scientific dairying, cooking, sewing, dressmaking, millinery, bookkeeping, stenography, typewriting, telegraphy, and any and every other branch of human knowledge or industry by which women may live."

Cogswell Polytechnic College, San Francisco, Cal.—This school offers the following courses, of three years each: Mechanic arts, drafting, steam engineering, surveying, domestic science, art. There is a one-year commercial course.

Bliss Electrical School, Washington, D. C., offers a course complete in one year in electrical engineering, including mechanical drawing.

Bradley Polytechnic Institute, Peoria, Ill., has as many as 10 departments, including those of chemistry, domestic economy, manual arts, physics.

Simmons College, Boston, Mass., was established by the will of the late John Simmons "as an institution in which instruction in such branches of art, science, and industry might be given as would best enable women to earn an independent livelihood." The courses offered for the year of opening (1902–3) included 4 courses in household economies, 3 secretarial courses, 2 library courses, and 5 scientific courses.

Lowell Textile School, Lowell, Mass.—This school has four regular courses of three years each, as follows: Cotton-manufacturing course, wool-manufacturing course, general course in designing, course in chemistry and dyeing.

Pratt Institute, Brooklyn, N. Y.—Besides the regular high school department, this school has the following departments: Fine arts, domestic arts, domestic science, science and technology, kindergarten, library.

The Brooklyn Institute of Arts and Sciences, Brooklyn, N. Y., has departments of archæology, architecture, astronomy, botany, chemistry, domestic sciences, electricity, engineering, entomology, fine arts, geography, geology, law, mathematics, microscopy, mineralogy, music, painting, pedagogy, philology, photography, physics, political science, psychology, zoology.

Ethical Culture Schools, New York, N. Y.—Throughout the entire course of eight years in the elementary grades periods are given to manual work and art. In the high school the work in art is continued, but manual training is an elective study.

Hebrew Technical Institute, New York, N. Y., offers a course of study extending over three years, including the common branches and algebra, geometry, physics, chemistry, electrical and steam engineering, wood and metal working.

New York Trade School, New York City, has courses of instruction in drawing, electrical work, house, sign, and fresco painting, blacksmithing, bricklaying, plastering, carpentry, printing, steam and hot-water fitting, sheet-metal work, and plumbing.

School of Industrial Art and Technical Design for Women, New York, N. Y.—This school offers, besides courses in free-hand and mechanical drawing, instruction and practice in designs for stained glass, carving, lace, oilcloth, book covers, wall papers, furniture coverings, draperies, tapestries, carpets, rugs, furniture, mantels, hangings, staircases, lamps, ornaments of all kinds.

Rochester Athenæum and Mechanics' Institute, Rochester, N. Y., has three well organized and equipped departments with several three-year courses in each. The departments are industrial and fine arts, manual training, domestic science and art.

The Ohio Mechanics' Institute, Cincinnati, Ohio, "is a technical school in which certain branches, demanded by local industries, are made prominent." At present there are courses of instruction in mechanical drawing and engineering, architectural drawing and engineering, free-hand drawing and general designing, painting in oil and water colors; also mineral colors, chemistry, physics, and electricity, mathematics, modern languages, general instruction.

The School of Industrial Art of the Pennsylvania Museum, Philadelphia, Pa., has now in operation ten schools or courses, as follows: Drawing, applied design, normal instruction, textile design and manufacture, wood working and carving, decorative painting, illustration, decorative sculpture, architectural design, modern languages.

Drexel Institute of Art, Science, and Industry, Philadelphia, Pa., has no fewer than a dozen departments, with several courses in each. The leading departments are mentioned under fine and applied arts, mechanic arts, electrical engineering, commerce and finance, science, technology, domestic science, domestic arts, normal training, library training, English language and literature, physical training.

Girard College, Philadelphia, Pa.—The courses of instruction cover the common branches, French, Spanish, mathematics, manual training, electrical mechanics, plumbing and gas fitting, carpentry, blacksmithing, foundry work, metal work, special training for the trades, military drill.

Pittsburg School of Design for Women, Pittsburg, Pa.—Instruction is given in all branches of drawing and painting, with special reference to their application in the fine and applied arts. Sculpture and architecture are made prominent.

The Rhode Island School of Design, Providence, R. I.—In the free-hand department instruction is given in drawing, painting, modeling, wood carving, decorative design, sculpture. The mechanical department has courses in mechanics, engineering, mathematics, architecture.

New Bedford Textile School, New Bedford, Mass.—The principal course of instruction in the school relates to the general manufacturing of cotton, giving spinning, weaving, with a special course in mill designing, engineering, and general transmission of power.

Cooper Union, New York, N. Y.—A school endowed by the late Peter Cooper for the advancement of science and art, having a day and an evening session. In addition to the day and evening art classes, a free day school of technical science is maintained, including departments of engineering, physics, chemistry, electricity, naval architecture, etc.

New York School of Art, New York, N. Y.—The original purpose of this school was to afford instruction in the fine arts, but owing to the growing interest in illustration, ornamental and decorative work, industrial and applied art were added with a complete course in architecture.

Girls' Industrial College, Denton, Tex.—This school was opened in 1903. The subjects taught thus far have been arranged under four departments: English-science department, domestic arts, fine and industrial arts, and commercial arts. As the college develops new departments will be added.

Virginia Mechanics' Institute of Technology, Richmond, Va.—Instruction is given in arithmetic, algebra, geometry, trigonometry, applied mechanics, bookkeeping, free hand drawing, architectural drawing, mechanical drawing, naval architecture, chemistry, physics, electricity, and modeling.

Maryland Institute for the Promotion of the Mechanic Arts, Baltimore, Md.—The school has a night and a day course, consisting of artistic and industrial drawing, painting, modeling in clay, sculpture, and designing.

Washington Linotype School, Washington, D. C.—This school was established in 1899 to provide linotype instruction for union printers who have had no shop training in this kind of machine work.

Illinois College of Photography, Effingham, Ill.—This institution is devoted exclusively to teaching high-class photography. Its annual enrollment is at present over 250, consisting of students from all parts of the world.

Wells Memorial Institute, Boston, Mass.—The object of this institution is to provide working people mutual helpfulness, mental and moral improvement. The course includes classes in architectural and machine drawing, practical electricity, steam engineering, dressmaking, millinery, cooking, and stenography and typewriting. The present membership is from 1,800 to 1,900 men and women.

School of Messrs. R. Hoe & Co., New York, N. Y.—This school is maintained by this well-known company of manufacturers of printing presses and other machinery. In order to better equip the employees a night school was opened. The course of instruction includes English, mathematics, geometry, free hand and mechanical drawing. The membership of the school is restricted to the apprentices of the company.

Young Women's Christian Association, Brooklyn, N. Y.—This school has large classes of various nationalities studying English. The industrial course consists of cooking, sewing, dressmaking, millinery, embroidery, basketry, nursing, commercial department.

The Young Women's Christian Association, Boston, Mass.—This school furnishes a complete course in dressmaking, millinery, and domestic science, cooking, sewing, general house work, laundry work, and home nursing.

Young Women's Christian Association School, New York, N. Y.—The object of the association is to promote the temporal, social, mental, moral, and religious welfare of young women. During the earlier period of the association the work was largely confined to commercial branches; now the industrial branches have overshadowed all other branches combined. The course includes thorough instruction in hand and machine sewing, dressmaking, millinery, art embroidery, feathercurling, cooking, and a

course for trained attendants. The industrial art course includes mechanical, free-hand, cast, and life drawing, pen and ink work, crayon and water color, clay modeling, wood carving and designing.

Hutchinson's School for Watchmakers, Engravers, and Opticians, Laporte, Ind.; Waltham Horological School, Waltham, Mass.; Omaha Watch Repairing, Engraving, and Optical Institute, Omaha, Nebr.; St. Louis Watchmaking School, St. Louis, Mo.—These are schools for teaching the practical work of watch making, repairing clocks, jewelry repairing, engraving, and optics. The course of instruction also embraces etching, chasing, metal work, cardplate, and steel die work.

The Industrial Chemical Institute, Milwaukee, Wis.; Wahl-Henius Institute of Fermentology, Chicago, Ill.; National Brewers Academy, New York, N. Y.; United States Brewers Academy, New York, N. Y.—These schools offer courses in the analytical study of all materials used by modern brewers, with particular reference to all new devices for cooling, aerating, fermenting, filtering, carbonating, racking, and pasteurizing.

Aurora (East side)	6 to 8, and high school.
Aurora (West side)	3 to 8.
Bloomington	8 and high school.
Cairo	High schools.
Champaign	8 and high school.
Chicago	5 to 8, English high and manual training schools
Dixon	1 to 8.
Evanston, District 1	6 to 8.
Galesburg	9 to 11.
Harvey	6 to 8.
Joliet	1 to 8.
La Salle	High school.
Moline	7 to 8, and high school.
Monmouth	1 to 8.
Peoria	8 to 12.
Quincy	7 to 8.
Rockford	7 to 10.
Rock Island	High school.
Springfield	7 to 10.
Sterling	7 and 8.
Taylorville	1 to 3.
Urbana	Do.
Waukegan	7 to 8, and high school.
INDIANA.	
Bluffton	1 to 8.
Crawfordsville	1 to 6.
Evansville	High school.
Fort Wayne	1 to 8.
Hammond	1 to 7.
Huntington	1 to 8.
Indianapolis	4 to 8.
Kokomo	Primary.
Laporte	Do.
Marion	1 to 8.
New Albany	1 and 2.
Richmond	1 to 8.
Seymour	1 to 3.
Whiting	1 to 8.
IOWA.	
Clinton	8 and high school.
Council Bluffs	1 to 8.
Davenport	8 and high school.
Des Moines (West)	1 to 8 and high school.
Iowa City	5 to 10.
Marshalltown	Kindergarten to 7.
Mason City	7 to 12.
KANSAS.	
Emporia	1 to 8.
Lawrence	Do.
Pittsburg	1 to 6, high school.
Topeka	4 to 8.
Winfield	1 to 6.
KENTUCKY.	
Frankfort	High school.
Louisville	Do.
LOUISIANA.	
Shreveport	7 to 10.
MAINE.	
Bath	6 to 9, 3 years in high school.
Gardiner	Grammar.
Lewiston	6 to 9, 1 year in high school.
Portland	7 to 10.
Westbrook	1 to 10.

TABLE 2.—*Cities in which manual training (other than drawing) was given in public schools, 1902–3*—Continued.

Cities.	Grades in which manual training was given.
MARYLAND.	
Annapolis	4 to 10.
Baltimore	High school and manual training schools.
Cambridge	6 to 10.
Cumberland	7 to 10.
Salisbury	1 to 10.
MASSACHUSETTS.	
Amherst	6 to 9.
Arlington	7 to 10.
Attleboro	1 to 6.
Barnstable	8 and 9.
Boston	6 to 9.
Bridgewater	7 to 9.
Brockton	High school.
Brookline	1 to 8.
Cambridge	Grammar and high school.
Concord	6 to 10.
Dedham	4 to 13.
Easton	7.
Everett	5 to 8.
Fall River	High school.
Fitchburg	9 to 12.
Framingham	Normal practice school.
Greenfield	2 to 9.
Haverhill	8 and 9.
Holyoke	High school.
Lawrence	Do.
Lexington	8 and 9.
Lowell	10 to 14.
Lynn	8, grammar and high school.
Malden	9, grammar and high school.
Medford	1 to 13.
Milton	1 to 8.
Natick	6 to 9 and high school.
Needham	1 to 6.
New Bedford	7 to 9 and sloyd.
Newton	6 to 8 and sloyd.
North Adams	8 to 9, grammar.
Northampton	5 to 7.
Plymouth	5 to 9.
Quincy	5 to 8.
Reading	7 to 8.
Salem	Grammar.
Somerville	5 to 8 and high school.
Springfield	6 to 9 and high school.
Taunton	9 to 10.
Wakefield	7 to 9.
Waltham	5 to 13.
Watertown	1 to 9.
Wellesley	1 to 8.
Westfield	5 to 8.
Williamstown	1 to 9.
Winchester	4 to 8.
Worcester	8 to 9.
MICHIGAN.	
Albion	1 to 8.
Ann Arbor	Do.
Battle Creek	5 to 8.
Bay City	9 to 10.
Bessemer	1 to 4.
Calumet	1 to 8 and high school.
Detroit	4 to 8.
Flint	7 to 8.
Grand Rapids	5 to 8.
Hillsdale	1 to 7.
Ishpeming	7 to 8 and high school.
Kalamazoo	5 to 12.
Menominee	Do.
Muskegon	1 to 8.
Saginaw (East)	5 to 8.
Saginaw (West)	Do.
Traverse City	1 to 5.
Ypsilanti	5 to 8.
MINNESOTA.	
Duluth	High school.
Faribault	1 to 3 and high school.
Mankato	Primary to high school.
Minneapolis	High school.
St. Cloud	5 to 8 and high school.
St. Paul	5 and high school.
Stillwater	First year in high school.
MISSISSIPPI.	
Greenville	1 to 8.
Little Falls	4 to 8.
MISSOURI.	
Carthage	6 to 9.
Columbia	3 and high school.
Hannibal	1 to 8.
Independence	6.
Joplin	5 to 10.
Kansas City	5 to 7.
Kirksville	High school.
Moberly	4 to 8.
St. Louis	7 to 8.
Warrensburg	1 to 4.
MONTANA.	
Helena	5 to 8.
NEBRASKA.	
Beatrice	7 to 9.
Norfolk	11 to 12.
Omaha	9 to 10.
NEW HAMPSHIRE.	
Concord	5 to 9.
Manchester	8 to 9.
Portsmouth	4 to 6.
NEW JERSEY.	
Asbury Park	1 to 8.
Atlantic City	4 to 11.
Bayonne City	4 to 5.
Camden	1 to 8.
Dover	Primary.
East Orange	5 to 8 and high school.
Elizabeth	5 to 9 and high school.
Englewood	1 to 4.
Hoboken	6 to 8.
Longbranch	5 to 8.
Montclair	1 to 8.
Newark	Do.
North Plainfield	1 to 12.
Orange	1 to 8.
Passaic	3 to 8.
Paterson	7 to 8.
Redbank	6 to 10.
South Orange	1 to 12.
Summit	5 and first year of high school.
Union	From third year through high school.
Vineland	1 to 8.
West Orange	Do.
NEW YORK.	
Albany	High school.
Auburn	1 to 8.
Batavia	Primary.
Binghamton	9 to 12.
Buffalo	1 to 8 and high school.
Geneva	Kindergarten to 7.
Herkimer	Primary.

TABLE 2.—*Cities in which manual training (other than drawing) was given in the public schools, 1902–3*—Continued.

Cities.	Grades in which manual training was given.
NEW YORK—cont'd.	
Hudson	1 to 5.
Ithaca	6 to 8.
Jamestown	1 to 8.
Lockport	1 to 7.
Malone	5 to 8.
Middletown	3 to 4.
Mechanicsville	1 to 3.
Newburgh	8 to 11.
New Rochelle	5 to 6.
New York City	7 to 8.
Niagara Falls	5 to 7.
Port Chester	1 to 7.
Rochester	1 to 8.
Syracuse	7 to 8.
Utica	5 to 9.
Whitehall	High school.
Whiteplains	1 to 8.
Yonkers	Above fourth year.
NORTH CAROLINA.	
Asheville	1 to 8.
Durham	6 to 10.
OHIO.	
Akron	5 to 12.
Cleveland	1 to 8.
Dayton	7 to 8.
Delaware	4 to 8.
Elyria	5 to 7.
Fostoria	4 to 8.
Galion	5 to 8.
Glenville	1 to 3.
Norwood	1 to 8.
Oberlin	2 to 5.
Toledo	1 to 12.
Washington Court House	7 and 8.
Youngstown	High school.
PENNSYLVANIA.	
Allegheny	10 to 11.
Braddock	6 to 12.
Bradford	7 to 8 and high school.
Conshohocken	All above primary.
Harrisburg	High school.
Homestead	4 to 8.
Johnstown	7 to 14.
Meadville	5 to 7.
Philadelphia	3 to 8.
Pittsburg	5 to 7.
St. Marys	1 to 8.
Titusville	3 to 7.
Westchester	High school.
Wilkesbarre	Do.
RHODE ISLAND.	
Newport	4 to 12.
Providence	High school.
Woonsocket	7 to 9.
SOUTH CAROLINA.	
Anderson	6 to 7.
Charleston	In the lower grades.
Columbia	1 to 7.
Sumter	2 to 4.
SOUTH DAKOTA.	
Lead	1 to 5.
Sioux Falls	1 to 8.
TENNESSEE.	
Jackson	1 to 7.
Knoxville	1 to 8.
Nashville	1 to 10.
TEXAS.	
Austin	7 to 10.
Cleburne	1 to 4.
Dallas	9 to 11.
Sherman	1 to 8.
San Antonio	3 to 6.
UTAH.	
Logan	1 to 8.
Provo City	Do.
Salt Lake City	7 to 8.
VERMONT.	
St. Johnsbury	6 to 7.
VIRGINIA.	
Danville	Primary.
Lynchburg	Grammar.
Norfolk	High school.
Staunton	7 to 10.
WASHINGTON.	
Seattle	High school.
WISCONSIN.	
Appleton	8 and high school.
Ashland	1 to 8.
Chippewa Falls	4 to 7.
Eau Claire	1 to 10.
Fond du Lac	1 to 3 and high school.
Janesville	9 to 12.
Manitowoc	1 to 8.
Marinette	7 to 8 and high school.
Menominee	1 to 8.
Merrill	Do.
Milwaukee	5 to 8 and high school.
Neenah	5 to 9.
Portage	High school.
Racine	4 to 8.
Sheboygan	Primary.
Superior	6 to 8 and high school.
Washburn	6 to 12.

CHAPTER XXXIX.

COMMERCIAL AND BUSINESS SCHOOLS.

During the scholastic year 1902–3 there were enrolled, in 5,387 different schools, 243,521 students in business or commercial studies, as shown by reports from individual institutions to this Bureau. Of this number, 137,979 were in 516 regular commercial and business schools and 79,207 in 3,673 public high schools. The distribution of business students by sex among the five different classes of institutions giving business instruction is shown in the following summary for the past two years:

Classes of institutions.	1901–2.				1902–3.			
	Number of schools.	Male.	Female.	Total.	Number of schools.	Male.	Female.	Total.
Universities and colleges	177	7,085	2,122	9,207	170	6,168	2,011	8,179
Public and private normal schools	51	682	383	1,065	50	1,434	1,267	2,701
Private high schools and academies	956	10,094	6,290	16,384	978	9,462	5,993	15,455
Public high schools	3,213	35,762	41,032	76,794	3,673	36,320	42,887	79,207
Commercial and business schools	520	81,344	55,903	137,247	516	79,175	58,804	137,979
Total	4,917	134,967	105,730	240,697	5,387	132,559	110,962	243,521

In the grand total there was an increase of 2,824 students. The commercial and business schools had an increase of 732, public high schools 2,413, and normal schools 1,636, while the number of business students decreased 1,028 in universities and colleges and 929 in private high schools and academies.

The following summary shows the fluctuations in enrollment of business students each year since 1890:

Students pursuing commercial studie

Scholastic year.	In institutions not distinctly business schools.					In commercial and business schools.	Aggregate of students in commercial studies.
	Universities and colleges.	Normal schools.	Private high schools and academies.	Public high schools.	Total.

1899–1900	7,953	6,657	15,649	68,890	99,149	91,549	190,698
1900–1901	8,610	7,099	16,281	84,412	116,402	110,031	226,433
1901–2	9,207	1,065	16,384	76,794	103,450	137,247	240,697
1902–3	8,179	2,701	15,455	79,207	105,542	137,979	243,521

The number of institutions in each State in which commercial branches were taught and the students enrolled may be learned from Table 1. Tables 2 and 3 show the distribution of such students among universities and colleges, normal schools,

public and private high schools. Tables 4, 5, and 6 summarize the statistics of the 516 regular business schools reporting, while information concerning each school is found in Table 11.

Tables 7 and 8 show the number of public high schools in each State offering business courses and the number reporting enrollment of students in bookkeeping, commercial geography, and commercial law, and the number of students in each of these branches. Tables 9 and 10 give similar statistics for private high schools.

TABLE 1.—*Number of institutions of all grades in which commercial and business studies were taught and number of students in such studies in 1902–3.*

CHAPTER XL.

SCHOOLS FOR NURSES.

The number of schools for training nurses in 1903 was 552, and the number of pupils receiving instruction was 13,779. This is an increase of 527 pupils over the previous year. The number graduating or completing the course was 4,206. The rapid growth of nurse training is well shown by the number of nurse pupils at different periods: 323 in 1880, 1,552 in 1890, 11,164 in 1900, and 13,779 in 1903.

Three years are now required for graduation in more than one-half of the schools not connected with hospitals for the insane.

University of Texas School of Nursing. [a]—The School of Nursing has been undertaken as a successor of the John Sealy Hospital Training School for Nurses.

After receiving instruction for a period of two years, if found worthy in every particular, the pupil nurses are, upon recommendation of the medical faculty, given certificates of proficiency as trained nurses by the University of Texas and the president of the board of managers, or other authorized officials, on the part of the management of the John Sealy Hospital.

For their services in the wards of the hospital, the pupil nurses whose applications for admission have been accepted, are given their board, lodging, laundry, and education free.

Table 1.—Comparative statistics of nurse training schools.

Year.	Schools.	Beds for patients.	Nurse pupils.	Graduates.	Value of grounds and buildings of the hospitals.	Endowment funds of the hospitals.

Several States have passed laws requiring a license to be obtained in order to assume the title of registered or trained nurse, and in other States such laws have been proposed. Among the States adopting such laws are New York, New Jersey, Maryland, Virginia, and North Carolina. The legislature of Illinois also passed such a bill in 1903, but it was vetoed by the governor, objection being made to the proposed method of appointing the examiners.

In New York a board of examiners, consisting of 5 members, is appointed by the regents, each member to serve five years. The fee for examination and certification is $5, and the candidate must be 21 years of age, of good moral character, and have received a diploma from a training school requiring at least two years of instruction and maintaining a standard satisfactory to the regents.

In North Carolina the State board of examiners, consisting of 5 members, 2 physicians and 3 nurses, elected by the North Carolina State Medical Society and the

[a] From University catalogue, 1903–4.

State Nurses' Association, examines the candidates who desire to become registered nurses. Fee, $5. If satisfied as to the qualifications of an applicant they may dispense with the examination. They may also revoke a license for incompetency or conduct derogatory to the profession. (Act of March 3, 1903.)

In New Jersey anyone desiring to practice the profession of a trained nurse must obtain a license from the clerk of the county court, after showing a diploma from a nurse school, obtained after a course of practical and theoretical training; fee, 50 cents. (Act of April 7, 1903.)

In Virginia a State board of examiners, consisting of 5 members, is appointed by the governor from the names of 12 nurses submitted by the Virginia State Association of Graduate Nurses, each member to serve five years and to receive as compensation $1 for each day actually engaged in the service, together with "all legitimate and necessary expenses incurred in attending the meeting of said board." The secretary may receive a salary of $100 and expenses. All to be paid from the fees received. Certificates allowing the use of the terms "Trained nurse" or "Graduate nurse," or the abbreviations "T. N." or "G. N.," are granted to those who pass a satisfactory examination and who are 21 years of age, of good moral character, and have sufficient preliminary education, in the estimation of the board, and have "graduated from a training school of a general hospital in good standing, as may be determined by the board, and where at least two years' training" is given. The penalty for violation of this act is a fine of $50 to $200 for the first offense or $100 to $500 for each subsequent offense. Licenses may be revoked for incompetency or any act derogatory to the profession. (Act of May 1, 1903.)

Registration of nurses in Maryland.—The governor appoints a board of examiners, of 5 members, each to serve three years, from names submitted by the Maryland State Association of Graduate Nurses. A nurse who receives a certificate shall be known as a registered nurse, and "no other person shall assume such title or use the abbreviation 'R. N.,' or any other letters or figures to indicate that he or she is a registered nurse." Applicants must be 23 years of age, of good moral character, have received the equivalent of a high-school education, and have graduated from a training school connected with a general hospital of good standing, where a 3-years' training with a systematic course of instruction is given in the hospital, and must pass an examination (fee, $5). Nurses graduating prior to June 1, 1906, and possessing the above qualifications may be registered without examination. Anyone violating the provisions of this law, or making any false representation to the board of examiners shall be fined not more than $500. The board may revoke licenses for cause.

It will be observed that in none of these States is any person forbidden to act as a nurse, even for compensation, but it is required only that no one shall claim to be a registered or trained nurse without being authorized to do so. As legislation of this kind is of recent date, the law of New York is given in full in order to present clear and definite information on the subject.

LAW OF NEW YORK REGULATING THE PRACTICE OF NURSING.

ART. XII, SEC. 206.—*Who may practice as registered nurses.*—Any resident of the State of New York, being over the age of twenty-one years and of good moral character, holding a diploma from a training school for nurses connected with a hospital or sanitarium giving a course of at least two years, and registered by the regents of the University of the State of New York as maintaining in this and other respects proper standards, all of which shall be determined by the said regents, and who shall have received from the said regents a certificate of his or her qualifications to practice as a registered nurse, shall be styled and known as a registered nurse, and no other person shall assume such title, or use the abbreviation "R. N." or any other words, letters, or figures to indicate that the person using the name is such a registered nurse. Before beginning to practice nursing every such registered nurse shall cause such

certificate to be recorded in the county clerk's office of the county of his or her residence with an affidavit of his or her identity as the person to whom the same was so issued and of his or her place of residence within such county. In the month of January, 1906, and in every thirty-sixth month thereafter, every registered nurse shall again cause his or her certificate to be recorded in the said county clerk's office, with an affidavit of his or her identity as the person to whom the same was issued, and of his or her place of residence at the time of such reregistration. Nothing contained in this act shall be considered as conferring any authority to practice medicine or to undertake the treatment or cure of disease in violation of article eight of this chapter.

SEC. 207. *Board of examiners; examination; fees.*—Upon the taking effect of this act, the New York State Nurses' Association shall nominate for examiners ten of their members who have had not less than five years' experience in their profession, and at each annual meeting of said association thereafter, two other candidates. The regents of the University of the State of New York shall appoint a board of five examiners from such list. One member of said board shall be appointed for one year, one for two years, one for three years, one for four years, and one for five years. Upon the expiration of the term of office of any examiner the said regents shall likewise fill the vacancy for a term of five years and until his or her successor is chosen. An unexpired term of an examiner, caused by death, resignation, or otherwise, shall be filled by the regents in the same manner as an original appointment is made. The said regents, with the advice of the board of examiners above provided for, shall make rules for the examination of nurses applying for certification under this act, and shall charge for examination and for certification a fee of five dollars to meet the actual expenses, and shall report annually their receipts and expenditures under the provisions of this act to the State comptroller, and pay the balance of receipts over expenditures to the State treasurer. The said regents may revoke any such certificate for sufficient cause after written notice to the holder thereof and hearing thereon. No person shall thereafter practice as a registered nurse under any such revoked certificate.

SEC. 208. *Waiver of examinations.*—The regents of the university of the State of New York may, upon the recommendation of said board of examiners, waive the examination of any persons possessing the qualifications mentioned in section two hundred and six, who shall have been graduated before, or who are in training at the time of, the passage of this act and shall hereafter be graduated, and of such persons now engaged in the practice of nursing as have had three years' experience in a general hospital prior to the passage of this act, who shall apply in writing for such certificate within three years after the passage of this act, and shall also grant a certificate to any nurse of good moral character who has been engaged in the actual practice of nursing for not less than three years next prior to the passage of this act who shall satisfactorily pass an examination in practical nursing within three years hereafter.

SEC. 209. *Violations of this article.*—Any violation of this article shall be a misdemeanor. When any prosecution under this article is made on the complaint of the New York State Nurses' Association, the certificate of incorporation of which was filed and recorded in the office of the secretary of state on the second day of April, 1902, the fines collected shall be paid to said association and any excess in the amount of fines so paid over the expenses incurred by said association in enforcing the provisions of this article shall be paid at the end of each year to the treasurer of the State of New York. (Laws of New York, 1903, vol. 1, p. 599.)

FINAL EXAMINATION QUESTIONS OF THE EVANSVILLE SANITARIUM TRAINING SCHOOL FOR NURSES, EVANSVILLE, IND.

[Sara Bolton, superintendent.]

SURGERY.

How would you prepare for a celiotomy or a laparotomy at a patient's house? What are the chief dangers after a laparotomy, and what are their symptoms?

How would you prepare for adjustment of a fracture of the forearm, and what would you do before the doctor came if he were long delayed? What is a simple fracture? A compound fracture? A comminuted fracture? A multiple fracture?

What means can you give for stopping hemorrhage? When would you compress the brachial artery? The femoral?

What is retention of urine? Suppression of urine? What does a chill and fever following catheterization mean?

What instruments should be prepared for curettage with repair of laceration of cervix and perineum?

What would you do for uterine hemorrhage after operation?

What would you do for epistaxis?

What are the following operations:

Ventral fixation? Alexander's operation? Vaginal puncture? Myomectomy? Trachelotomy? Colpocystotomy? Colpoperineoplasty? Colectomy? Hysterectomy? Paracentesis? Cholecystectomy? Nephrectomy? Gastroenterotomy? Tracheotomy?

MEDICINE.

What is the temperature and pulse range in an average case of typhoid fever? What is a high temperature in this fever?

Why do you give liquid diet?

What is a relapse?

What two serious complications may arise, and what symptoms would warn you of their occurrence?

What is pneumonia? Its chief symptoms? Its chief dangers and their symptoms?

OBSTETRICS.

If you were alone with a woman when she gives birth to a child, what would you do?

How would you prepare a patient for labor?

What does fever following delivery indicate?

What is puerperal eclampsia? What would you do for a case of it before the doctor came?

What is post-partem hemorrhage? What would you do for a case?

With what would you feed the baby until the milk appeared? When does the milk appear? Is its advent accompanied by fever?

Give the stages of labor?

How do you tie the umbilical cord?

How do you take care of the child immediately after it is born?

What is Credé's method?

What is the placenta? What is placenta previa?

PHYSIOLOGY AND HYGIENE.

Where are the fats and starches digested, and by the secretions of what organs?

What are the chief constituents of gastric juice?

How is the blood changed in the lungs?

What is the most important substance excreted by the kidneys?

Give the difference between excretion and secretion.

Give systemic circulation; pulmonary circulation.

Give the function of the skin.

How would you ventilate a sickroom which had only one window and one door? What is natural ventilation? What is ventilation by extraction? Name three important rules in regard to ventilation.

How would you take care of the flush closets, stationary basins, and old dressings?

Give a thirty-line treatise on digestion.

ANATOMY.

What bones make the elbow joint?

How many vertebræ are there? Name the divisions.

Give the names of the muscles of the arm.

What organs are in the umbilical region? Name the divisions of the abdomen.

Name the bones of the head; of the face; of the leg.

What are soft tissues? Hard tissues? How are they nourished?

Give the divisions of the alimentary canal. Of the region of the chest. Locate the heart, the liver, the spleen, and the kidneys.

Give gross structure of the heart.

Name five arteries; five nerves.

What kind of nerves are the fifth and seventh cranial nerves?

BACTERIOLOGY.

Name five pyogenic germs which cause disease. How are they killed? What are the requirements for their growth?

What is asepsis? What is antisepsis?

What are pyogenic germs?

What is immunity? What germs produce immunity in the system?

MATERIA MEDICA AND THERAPEUTICS.

What is the dose of sulphate of atropia? Of sulphate of strychnia? Of hyoscine hydrobromate?

What would you do for a patient who had taken an overdose of opium or morphine? What in poisons generally? What is a special antidote for carbolic-acid poisoning?

What is static electricity? Galvanic? Faradic?

In strychnine mixture with grs. ii to ʒvi of water, how much strychnine will be given to ʒi dose?

Bismuth subnitrate 480 grs.; simple sirup ʒvi. How much bismuth subnitrate will be given to ʒii dose?

How much morphia would you give to a child 2 years old? Four years old? Seven years old? How much strychnine sulphate to a child 3 years old? Eight years old? Twelve years old? Give the standard rule by which the dose for children is reduced.

What is an antidote for acid poisoning? For alkaline poisoning? Give three or four names of each?

CHEMISTRY.

Give the meaning in reaction of urine, of acid, alkaline, and neutral. Give test for albumin and sugar, and the normal specific gravity of urine.

Does the presence of albumin necessarily indicate disease of the kidney?

How would you obtain a specimen of urine for examination? How is it often contaminated?

Write about one hundred words of general urinalysis.

How do you test for free hydrochloric acid in stomach contents?

How do you make 4 per cent carbolic-acid solution? One per cent ditto? One-half per cent ditto? How do you make saturated solution of boracic acid? Normal salt solution? Ten per cent solution of nitrate of silver? How do you make bichloride solution 1–2,000, 1–5,000, 1–10,000?

TABLE 2.—*Summary of statistics of schools for training nurses, for 1903.*

This chapter exhibits, so far as information could be obtained, the present status of negro education in the United States. The 15 tables require but little explanation. The amount of money expended each year since 1870 in the 16 former slave States and the District of Columbia for the public education of both races, and the separate enrollment of whites and negroes since 1877, may be seen from Table 1. It is estimated that at the present time about 20 per cent of the public school funds in the South is for the support of schools for the negroes. The table shows that for the year 1902–3 the sum of $39,582,654 was expended for the schools of both races. The public school expenditure for the entire South since 1870 has aggregated $727,867,089. It is estimated that at least $132,000,000 of this sum has been expended to support common schools for the colored race.

Comparative statistics of the schools for both races will be found in Table 2 for the year ending June, 1903. Summaries of the statistics of public high schools for negroes will be found in Tables 3 to 6, while Table 13 gives a list of such high schools, with information in detail. Tables 7 to 12 summarize the statistics of private institutions devoted to the secondary and higher education of the negro race, Tables 14 and 15 giving in detail the statistics of these private schools.

CHAPTER XLII.

REFORM SCHOOLS.

In many of the States juvenile reformatories are known as State industrial schools. In this report all these institutions are classified as industrial and reform schools. This Bureau received reports from 96 of these institutions for the year 1902–3. These schools employed 644 teachers for the instruction of 31,468 pupils. There were 34,422 inmates—27,602 males and 6,820 females—showing that 2,954 did not attend school. There were 21,603 learning useful trades.

The commitments for the year numbered 12,757 and the discharges 12,698. Of the inmates there were 26,576 white and 4,755 colored, so far as reported. So far as known, 13,352 were children of native parents and 7,169 children of foreign-born parents. Of the inmates committed, 2,888 could only read and 2,192 could neither read nor write. There were 2,275 assistants caring for the inmates.

So far as reported, the value of grounds and buildings occupied by these institutions aggregated $23,362,543. Of expenditures for the year the sum of $564,241 was for buildings and improvements and $3,788,127 for support. All the above items are given by States in Tables 1 and 2.

The North Atlantic Division had 34 of the 96 schools. These schools had 238 teachers and 13,231 pupils. There were 13,480 inmates—11,590 males and 1,890 females—10,027 of the total number receiving industrial training. The value of grounds and buildings was $12,105,335, or more than one-half the value of all the property occupied by reformatories in the United States. The expenditure for buildings and improvements was $208,934, and for support, $1,588,481.

In the South Atlantic Division there were 16 reformatories, with only 57 teachers. There were 192 assistants caring for inmates, and these assistants must have done some part of the teaching. In these schools 1,947 of the 3,194 inmates were learning useful trades. So far as reported, 1,985 of the inmates belonged to white schools and 1,094 to negro schools. The value of grounds and buildings was $1,824,301. Expenditures on buildings amounted to $30,564, while $202,393 was expended for support.

The South Central Division reported only 7 reform schools, with 41 teachers and 1,544 pupils. The institutions had 2,404 inmates, only 456 being taught useful trades. In white reformatories there were 1,698 inmates, and in negro schools 516. The value of grounds and buildings was $505,000. For improvements there was an expenditure of $10,700, and for support $113,223.

The North Atlantic Division reported 31 reformatories, with 264 teachers and 12,517 pupils. There were 13,925 inmates—10,285 males and 3,640 females. Of the inmates, 8,283 were receiving training in useful trades. The 31 schools occupied property valued at $8,116,371, upon which $253,391 had been expended during the year. The expenditure for support was $1,598,354.

In the Western Division there were 8 reform schools, with 44 teachers and 1,219 pupils. There were 1,419 inmates—1,232 males and 187 females. The number taught useful trades was 890. The institutions occupied property valued at $811,536. Buildings and improvements cost $60,652, while $285,676 was expended for the support of these institutions.

TABLE 1.—*Summary of statistics of reform schools, 1902–3.*

CHAPTER XLIII.

SCHOOLS FOR THE DEFECTIVE CLASSES.

Statistics of schools for the blind, schools for the deaf, and schools for the feeble-minded are given in this chapter.

Schools for the blind.—The 38 schools reporting employed 468 teachers—155 men and 313 women. There were 150 teachers of music and 115 instructors in industrial departments. In the 38 institutions there were 4,363 pupils—2,374 males and 1,989 females. The number studying vocal music was 2,216; instrumental music, 2,233. There were 523 children in the kindergarten and 2,667 in the industrial departments. The schools had 165 graduates in 1903. The libraries had 106,655 volumes, the value of scientific apparatus was $115,299, and the value of grounds and buildings $7,166,920, on which $86,451 was expended during the year. For salaries and other expenditures the aggregate was $1,032,916. These items are given by States in Tables 1, 2, and 3 of this chapter, while the statistics of the schools will be found in detail in Table 4.

Schools for the deaf.—This chapter gives statistics of 127 schools for the deaf, 56 State institutions, 54 public day schools, and 17 private day schools, with an aggregate enrollment of 11,927 pupils. The 56 State institutions report 1,130 teachers—384 men and 746 women, instructing 10,528 pupils—5,800 males and 4,728 females. These statistics are given by States in Tables 5 and 6. The number of pupils taught by the purely oral method was 3,617, by the manual method 2,845, and by the combined system 5,498. There were 732 pupils in the kindergartens, and the institutions had 226 graduates. Table 7 shows that the school libraries had 111,794 volumes. The value of scientific apparatus was $15,702, and the value of grounds and buildings, $12,795,950. Expenditures on grounds and buildings amounted to $303,947, the aggregate for salaries and other expenses being $2,370,321.

In the 54 public day schools for the deaf there were 121 teachers and an enrollment of 881 pupils—469 males and 412 females. The 17 private day schools had 89 teachers and 523 pupils—233 males and 290 females. The statistics of these public and private day schools will be found summarized in Table 8. Table 9 gives in detail the statistics of State schools for the deaf. Tables 10 and 11 give similar information concerning public and private day schools for the deaf. Table 12 indicates the branches of manual and industrial training taught in the State schools for the deaf.

Schools for the feeble-minded.—Table 13 summarizes the statistics of the 20 State schools and the 14 private schools for the feeble-minded. In the State institutions there were 12,714 pupils—6,642 males and 6,072 females, taught by 239 instructors. There were 856 assistants caring for the inmates. In the private institutions the enrollment was 556 pupils—338 males and 218 females, taught by 70 instructors. The State institutions cost $1,860,557 for maintenance for the year. Tables 14 and 15 give in detail the statistics of the institutions for the feeble-minded. Table 16 shows the branches of manual and industrial training in the public institutions.

CHAPTER XLIV.

REPORT ON EDUCATION IN ALASKA.

DEPARTMENT OF THE INTERIOR, BUREAU OF EDUCATION,
Washington, D. C., June 30, 1903.

SIR: I have the honor to submit my eighteenth annual report as United States general agent of education in Alaska for the fiscal year ending June 30, 1903.

During the year, outside of incorporated towns, there have been maintained 33 public schools with 39 teachers and an enrollment of 2,108 pupils.

The schools are distributed as follows:

SOUTHEAST ALASKA.

Saxman.—Miss Selma Peterson, teacher; enrollment, 56; population, Thlinget.

The school opened on the 4th of November, 1902, with an attendance of 16, all young children. Later the older children came in, until the enrollment increased to 56 children. From November 18 to January 31 a night school, holding a two hours' session, was held four evenings a week. This evening school proved very helpful to an older class of pupils who worked during the day. The attendance at the night session was from 20 to 30. On February 1 the night school was changed to a sewing class for women.

The parents frequently visited the day school, encouraging the children in their work and exhorting them to be obedient to their teacher. Often they would inform the teacher that if their children were unruly the teacher should punish them and that they would see to it that the little one would be at school as usual the next day.

After a punishment, the parent would frequently accompany the child to school to make sure that it did not play truant. The children came to school because of the interest they had in the school; there was no need of bribing or compulsion. The natives of Saxman have abandoned their old customs. During the winter of 1902–3 there was no potlatch nor feast of any kind that would indicate that they were of an uncivilized race.

The progress made in all the branches was such as might be expected in the average white school. They were especially good in spelling and writing.

Gravina.—Miss Olga Hilton, teacher; enrollment, 96; population, Thlinget. September, the time for opening school, proved unusually stormy and caused the people to return earlier than usual to their winter homes, which was an advantage to the school.

On Saturday previous to opening school every grown girl and boy came to the schoolhouse equipped with pans, soaps, brooms, and hot water to remove the summer's accumulation of dirt and dust.

Gravina does not boast of a social hall; the schoolroom has to answer for all such purposes, and the cleaning is always left to the teacher and pupils, who vigorously apply hot soapsuds, thus making the place habitable after every festive occasion.

For weeks there were present only members of the primary class; then later the school filled up with the older pupils returning from their summer work. All the pupils are in the lower grades, and after the summer vacation some of them had to recommence with last year's studies. They soon settled down to regular work, and in a short time they became interested in their review work, and entered into it all with much enthusiasm. All worked for promotion.

Since variety is essential to the schoolroom, other subjects were introduced besides reading, spelling, and number work. There were classes in geography, history, and temperance hygiene, and all had instruction in English. All did earnest work and the classes were large and interesting until Thanksgiving recess, when preparation began for returning to Metlakahtla, where each family has a winter house, Gravina being a work colony from Metlakahtla.

Another exodus occurs the latter part of December, and at this time all go and remain until the weather permits them to resume their work in the sawmill at Gravina.

The teacher accompanied the children to Metlakahtla and finished the preparation made for the school entertainment. Mr. Duncan's school children joined and helped fill the programme most generously. A week after New Year's Day they had a successful entertainment. The dumb-bell drill given by the Gravina girls was the most pleasing number of the programme. It was something entirely new at that place and was heartily appreciated.

Some of the same families returned to Gravina the 1st of February; still the increase of new ones changed the school greatly and every class had to be reorganized.

In the midwinter break-up school work continues in peace until April. The primary class increased and proved the most progressive class in school. All the classes at this time made rapid strides in English, writing, reading, and number work. The English language is used now freely by the children, much to the parents' satisfaction.

In April another trip is made to Metlakahtla to plant the seeds and do general outdoor work; many of the children were out two or more weeks in April and upon their return began preparations for the closing exercises. The entertainment occurred on the evening of the last Friday in the month. This successful month's work was largely due to the effort made by the Gravina local board to keep as many children as possible in school until the last day. Many of the older boys left school early in the spring to assist in the mill; other children accompanied their parents to the fishing places; thus day by day school became smaller, and it was wise to say to the remaining few that vacation had really come. The teacher reports that her nine months were not monotonous, but were full of variety.

Kasaan.—Arch R. Law, teacher; enrollment, 48; population, natives.

For three months during the year every seat in the school was full. The children are bright and willing, and the teacher writes that, like American schoolboys, they are by no means sleepy at any time. Seven pupils have not missed one day since school opened.

A library and club have been started in Kasaan of which Mr. Law is president, and great interest has been shown in the work.

Klinquan.—Samuel G. Davis, teacher (native); enrollment, 46; population, Hydah.

The school opened September 15, 1902, at Hunters Bay, where the natives from Jackson and Klinquan do their fishing for the cannery. The school supplies not reaching this out-of-the-way village until December the teacher had to get some tar paper from the store and use it as a chart. Upon this chart were drawn the children's own games, the things they work at, such as making baskets, making mats, drying fish, making canoes, and hunting.

The school moved to Klinquan on the last of October. The temporary schoolhouse is a large barn-like room (Indian house). The pupils had to be seated on

boxes and some upon the floor (a native chair). The eagerness with which they studied their charts and first readers and worked over their arithmetic was very encouraging. Some parents made complaint about their children studying too much at night; that their studies keep them awake. Two of our pupils refused to go with their parents to their fishing grounds; one boy took to the woods and the father and mother hunted for two hours before they found him. The children take great interest in their school work, and it has been a not infrequent occurrence to have a boy or girl come to school without his or her breakfast.

Jackson.—Miss Kate Spiers, teacher; enrollment, 56; population, white, Hydah, and half-breed.

Miss Spiers reports that the low average attendance of certain months was due to the fact that many of the people live in the village but three or four months of the year, spending the fall, early spring, and summer at the salmon canneries and much of the winter in hunting and trapping. This irregularity in attendance has been the chief discouragement she found in teaching the school. Those pupils who live here all the year are regular in attendance and very much interested in their work.

All the native pupils understand English very well; and while it is difficult to get them to speak it freely, they readily understand and obey directions given in English. The progress in arithmetic and language has been especially gratifying. All the pupils in the second and third grades are able to write readily from dictation and to compose simple compositions.

Through the kindness of Rev. J. L. Gould the school was supplied with two dozen pairs of Indian clubs, which we found very pleasant and helpful in our physical exercises. Several of the older boys became so interested that they carved clubs for their own use at home from the yellow cedar found here.

The pupils are particularly fond of marches, drills, and singing, and the teacher found a half hour each day spent in these exercises both pleasant and beneficial.

The pupils of the school gave a public entertainment of songs, recitations, marches, and fancy drills at Christmas, which the patrons pronounced very pleasing.

Klawock.—Miss Eva V. Culp, teacher; enrollment, 48; population, natives.

As this was the first year of the school at Klawock, all the time was spent in laying a foundation for school work. The people showed their appreciation to the Government by doing their best to make use of the opportunity afforded them. However, trapping, hunting, and logging took many of them away during the winter. In March most of the people went to Fish Egg Island to gather fish eggs. The teacher went with them and held school on the island. The children are naturally very musical. The good effect of the school is most apparent in the improved appearance of the scholars. They now keep themselves clean and take pride in their care of the schoolhouse.

Kake.—Mrs. Ann R. Moon, teacher; enrollment, 96; population, natives.

During this year several outside causes assisted in raising the enrollment and in arousing new interest among the natives for the school at Kake. Strange to say, one of these causes arose from the advancement of civilization and the other from a heathen custom. Owing to a new game law which prohibited the slaughter of deer for their skins, the natives were compelled to come to the village during the winter in order to find homes and food. The natives of Kake also gave a "big potlatch" (heathen feast) during the winter, which drew still more of the natives from the surrounding country. In spite of the influence of such parents, the school children are enthusiastic and quick to learn. They are punctual, and some even came without breakfast, while others would slip a pilot biscuit under their coats and take that for their breakfast. Music, penmanship, and drawing seem to be natural gifts with the natives, while arithmetic is rather difficult for them to master.

Sitka No. 1.—Miss Gertrude H. Spiers, teacher; enrollment, 68; population, whites.

Miss Spiers reports:

Regarding the year's work which has just closed, there are many pleasant things to report, although there are also many discouragements.

There has been marked progress in every class along the lines of the regular school work, especially in the first, second, and sixth grades. About half of the beginners' class now read quite fluently in the second reader. All the lower-grade work in language, literature, and spelling has been very satisfactory.

The penmanship, which you will remember I cited as my chief discouragement, has been improved in a marked degree, but is still below grade, as is also the arithmetic in all grades below the sixth.

We had the usual Thanksgiving and Christmas vacations and an extra vacation of three days at Russian Easter. It was hoped that an early announcement of a vacation at this time would induce the pupils to attend school during the remainder of the Easter holiday. I can not report that the attendance was any more regular than usual.

We had the usual annual school festivities, a taffy pull on Halloween, a Christmas tree on the afternoon of December 24, and the May picnic on the 20th of May.

The fifth annual agricultural fair came off, as usual, on the first Saturday in September, and was even a greater success than usual. The number and variety of the exhibits improve from year to year. The display of beets, carrots, and turnips was remarkable, even for Sitka, which is becoming noted for its gardens. The agricultural fair was held under the supervision of Miss Patton, who originated the custom.

The Alaska Chapter of the Daughters of the American Revolution offered a prize to the school children for the best composition on a Revolutionary topic. The subject chosen was "What Boston did for independence." The contest closed on February 22. While only three children competed, there was a great interest in the contest among all the pupils. The ladies of the society professed themselves surprised and delighted with the results. The judges were appointed by the society. They had great difficulty in deciding which should have first rank, but finally awarded the prize, a beautiful picture of George Washington, to Harold Gordon Bannerman. Silk flags were presented to Edward Logan Campbell and Clara Fagg, who ranked second and third. The society here arranged to continue this offer from year to year.

We had another series of Tuesday afternoon talks on geographical subjects, which proved very helpful and entertaining. The list of subjects was in part as follows: "Africa," by Mrs. Bannerman; "The Hawaiian Islands," Mr. Van Houghten; "The Voyage of the Dunearn," Captain Hackland; "Little Prairie Children," Miss Spiers; "Japan," Mr. Van Houghten; "The Solar System," Mr. Keeling. We hoped also to hear from Bishop Rowe, Governor Brady, and Doctor Edmonds, but shall have these interesting talks to look forward to for next year.

Mrs. Starreck gave us a very helpful series of lessons in physical culture, which continued during four months of the fall term.

Mesdames Jarvis, Distin, and Edmonds have conducted a sewing class for little girls, to which all the girls of the public school were invited. The attendance at this class has been very regular and the progress very marked.

The cadet corps organized last year has not met this year, but arrangements have been made with Captain Pendleton, commanding officer of the Marine Corps, so that it may be continued next year under command of Corporal Nogle, if the Bureau of Education desires it.

It was hoped that the work would begin in April of this present year, but the very inclement weather prevented.

In closing I wish to make grateful acknowledgment for all the assistance I have received. The help and courtesies extended the Sitka school by the patrons and citizens are certainly among the pleasant things to be reported.

Sitka No. 2.—Mrs. M. A. Saxman, teacher; enrollment, 127; population, Thlinget.

The teacher writes:

The past year has been one of varied attendance. School opened September 1, with an enrollment of 11 pupils. The attendance increased very slowly, as the people did not return from their summer's work until early winter.

By November 18, however, the families were almost all at home, and for some weeks the daily attendance was from 56 to 60. My schoolroom was full to overflowing; I had all my hands could possibly do, and was happy from morning till dark—yes, long after dark, as in Sitka in the winter time lamps must be lighted at about 3 o'clock in the afternoon.

Just before Christmas some visiting natives from a neighboring village came, and

with them came the measles, and very soon the attendance was reduced to one-half the number.

Quite a number of the girls and a few of the boys attended very regularly when at home in the village, and those who attended regularly were excellent workers in school and have made good progress.

A good number of my pupils have at length learned how to study and when in school apply themselves diligently.

Early in February they began to leave the village. Some went trapping; others hunting, fishing, etc.; until the last six weeks my school was again reduced to a limited number. Some, if at home for only a day, would come to school, while others came only when driven in by the native police.

I am very glad to report the increase in regularity of attendance on the part of some of my pupils. One little girl who is about twelve years old attended two hundred and two days during the year, while eight others attended from one hundred and two to one hundred and thirty-eight days each and not a few more attended almost one hundred days. Two boys attended over one hundred days each, while several others attended almost the hundred. I mention the attendance of said pupils because it is very much in advance of any attendance I have had since teaching this school.

Killisnoo.—Mrs. Catherine Kilborn, teacher; enrollment, 103; population, Thlinget.

Mrs. Kilborn says:

I find in teaching in Alaska that there are many encouragements, although some discouragements. I have found the children quite susceptible of improvement, and many of them manifest an interest in their studies. I believe they compare favorably with white children in this respect. I have had many young men, married and unmarried, in attendance. The greatest desire of many of them in learning to read is that they may be able to read the Bible. If the women were only as industrious as the men, they would have good, comfortable homes; with a few exceptions, they are very careless. The men work hard and make money in many ways. God provides for them so wonderfully through natural law that they scarcely do any sowing, but their reaping time is from January to December. There are fishes of all kinds in their season. Fur-bearing animals and game of all kinds abound. This winter the men have sawed, split, and piled over 2,000 cords of wood for the Alaska Oil and Guano Company. One of the discouragements is that parents are not so much interested in their children's education as they should be, and another is they are away from home so much. The men scarcely ever go away without taking their families with them, even if making a trip of only a few days. Alaska needs a law to compel them to send their children to school while in town.

Hoonah.—Mrs. John W. McFarland, teacher; enrollment, 108; population, Thlinget.

Mrs. McFarland tells the story of her work as follows:

This has been one of the most encouraging years I have ever had here. The health of the school has been very remarkable; there have been only a few cases of mumps, in a very mild form.

The regularity of attendance has much improved. It has been cheering to note the progress made. When Governor Brady was here last fall he charged our native policeman to see that the children attended school. Willis carried out his instructions and gave me valuable assistance. The impossibility of playing truant without detection contributed much to the regularity on the part of the boys. Their vacation being so full of freedom and privilege it is very hard for them to get into the traces. I have had no trouble whatever with the girls; many of them came for months without missing a day.

I devoted Friday afternoon to the old-fashioned spelling school, giving some simple prize to the best speller. This created a good deal of enthusiasm and drew visitors to the school. Our friends in California sent us a very nice box, and on Christmas evening we had a beautiful tree and nice presents for all. A great many of the parents were present to hear the children speak and sing. I have had an organ this year in school; this has helped to make it more cheerful.

Our young folks made a great deal of money fishing for the canneries; one boy about 10 years old cleared $100. Quite a number at present are at Dundas Bay cutting cord wood.

Yakutat.—A. Berggren, teacher; enrollment, 120; population, Thlinget.

As we now are at the close of the school year, it is with pleasure that we report about our school work at Yakutat. It is a move in the right direction, even if it is not

always what we wish it to be. Of course everything that goes forward will meet obstacles in the way. Perhaps our greatest enemy is noninterest. The Thlinget boys find more pleasure in the woods than in the schoolroom, and often the parents help them to hide in a corner in order to escape the teacher's call. For this cause the daily attendance during the past year has not been what it could and should have been. We should, however, forget the irregularity of the past and look upon the future with new hope and new aspiration.

Haines.—Miss G. Macintosh, teacher, enrollment, 53; population, Thlinget. No annual report.

SOUTHWEST ALASKA.

Afognak.—Mrs. C. W. Pajoman, teacher; enrollment, 35; population, Aleut.

From Mrs. Pajoman's report we take the following:

In the beginning of the term the attendance is always good, but after Christmas it grows less and less, which is very discouraging, as it is hard to keep up with the lessons. Also, when the children stop coming I am not informed of the reason unless I go to see them myself.

There has been a committee invited to help in the school work. It is a good thing, as they might be helpful for the teacher. Prof. C. C. Georgeson, of the Agricultural Department, has kindly sent me a supply of seeds for distribution. I took them over to the chief and explained to him how to plant and cultivate them, so he could tell it to others. As there were several parents present, I improved the opportunity to impress them with the importance of the duties of parents and teachers in bringing up and educating the children; how they must be taught obedience first of all; how they are like seeds that grow badly and are choked with weeds if they are not watched and cared for.

It is an unfortunate circumstance that there is a saloon in this town. At present its business is suspended, as its patrons are at work at canneries; but when they come home, then their earnings will all go to the saloon, and drunken carousals and loud voices will be heard again.

Of former pupils there are several girls married (about ten) who have families. One girl, Alexandra Kasheraoff, is teaching English in the Russian school at Nushagak.

Now, a committee being appointed, I expect great help in the future in the line of teaching temperance, disciplining, and more regular attendance.

Kadiak.—Mr. and Mrs. C. C. Bunnell, teachers; enrollment, 77; population, white and creole.

Mr. Bunnell thus reviews the school:

The work, while largely elementary, is still broad enough to meet the demands of those advanced to grammar-grade work or even higher. Few are advanced beyond grammar-grade work. It is not due to the intellectual incapacity of the children, but to the fact that only a very few attend school after arriving at the age of 15 years. This is one of the most discouraging features of the work. If we could keep them in school until 18 years of age we could accomplish much more, and the results would be more satisfactory. As it is, the majority leave school at an age when they are capable of making rapid strides, and at an age when it is imperative that their minds be busied with developing and uplifting thoughts.

The system of grading has been practically the same as last year. Although the system has not attained perfection, it has resulted in order and increased interest on the part of the pupils, and has greatly facilitated the entire work for the teachers.

Firmness on the part of the teacher is even more necessary in Alaska than in the States. In many of the Alaskan schools the teacher has to tackle the educational problem single-handed. Where this is true, in order to be master of the situation, too great emphasis can not be placed upon striving to understand the child as you find him and not as you think he ought to be.

The tendency of the whole village is to speak Russian. If the English speaking population would insist upon making their English language the business language of the place, our work would be much easier. This is discouraging, but in no way the fault of the children. The children speak more English to one another than formerly. Several of the natives speak English, and encourage their children to do so.

We have several in school who understand English very well indeed, but dislike to speak it. It is often very effectual to have such ones answer questions, asked by other members of the class, that can not be answered by "yes" or "no."

In reading we aim to make as much of the lesson as possible a matter of conversation. Many questions are asked, often of a seeming trivial nature; but in all cases the aim is to ask questions requiring a sentence or phrase for an answer. In this way the reading lesson is not a practice in pronouncing, but a practice in understanding.

The arithmetical work has been very good. It is not impossible to teach the children arithmetic, as has often been declared. It is, however, impossible to teach any child a subject if the terms used are meaningless to the child. We find that when the children really understand what is required they act intelligently. We do not mean to say that we explain to them what is meant in the language with which they are more familiar, but that we simplify our own language to their understanding. As instances of progress: One boy, 14 years of age, has completed Robinson's Advanced Arithmetic in a very creditable manner. He has shown originality of method. He is equally as well advanced in other subjects. Another boy of 7 years, besides knowing the multiplication table thoroughly, adds long columns of figures, subtracts, and multiplies correctly. Other instances could be cited where the progress has been equally as marked.

Singing is much enjoyed by all the children and has an important place in the daily programme.

There seems to be a general feeling of interest and good will toward the public school. The willingness of the people to assist at Christmas time is very much appreciated.

There are living at Kodiak about twenty young men and women who a few years ago were in the public school. They are industrious, intelligent citizens, and are a credit to the town. While the public school, perhaps, can not be directly credited with all their success in life, it surely is a factor worthy of mention and responsible for no small part in their present standing.

Unalaska.—William A. Davis and Miss Ann Mann, teachers; enrollment, 90; population, white and Aleut.

The following is the annual report of the United States public schools of Unalaska for the year ending June 12, 1903:

My seven weeks' acquaintance with the school work at this place will not permit me to be other than very brief. Arriving on the 23d of April I began teaching on the 24th and closed school on the 12th of June, which was two weeks later than the customary time, for the reason that school began two weeks later than usual. Owing to the resignation of the principal teacher, a number of substitute teachers taught periods of one and two months each until my arrival, yet, regardless of the unfavorable circumstances, the school was very well organized.

The attendance since my arrival has been exceptionally good. Possibly because I am the "new teacher." Rev. B. Kashvaroff, Greco-Russian priest, arranged his services at the mission so as to have the children in his charge attend school each afternoon, and he assures us of hearty cooperation in the future.

I have been a teacher twenty-one years, and in all that time have never found children of equal ages among the whites that excelled these little dark-skinned natives and creoles in reading, writing, and spelling.

A musical instrument is greatly needed. The children, generally speaking, have sweet voices, and to the modern teacher school work is incomplete without the national songs and others of a cheering and elevating character, and to undertake to teach them without an accompaniment is too antiquated even for the Aleutian Islander.

Manual training should be a feature in all schools, but with our limited facilities we can not do much along that line. We expect next year, if agreeable, to introduce native basket weaving, fancy work, and gardening. Of the seeds so kindly sent us by Professor Georgeson we distributed a number of packages among the children, who took unusual interest in preparing the soil, planting, and, better still, in caring for the young plants. These children are very easily led, and to lead them out along right paths should be the aim of the conscientious teacher.

Wood Island.—Charles F. Mills, teacher; enrollment, 43; population, creoles. No annual report.

Unga.—Ray Wisecarver, teacher; population, white and creoles; enrollment, 18. No annual report.

Kenai (summer school).—A. N. Evans, teacher; enrollment, 33; population, creoles. No annual report.

ARCTIC AND SUBARCTIC ALASKA.

St. Michael.—Franklin Moses, teacher; enrollment, 47; population, native.

As the ages of the scholars ranged from 5 to 20 years, the teacher found it most advantageous to hold two sessions. In the morning the younger ones had their classes and in the afternoon the older ones. Christmas Day was celebrated by special exercises. Besides the decorated tree, there were presents for all the native children, procured by public subscription. A large crowd was present, and the entertainment was pronounced a success.

Koserefsky.—Miss Mary W. Salley, teacher; enrollment, 29; population, native.

In addition to the school for children, a night school was opened for the older people. The zeal displayed by these grown-up members of the primary class was amusing, yet pitiful. The school hours, from 7 to 9 p. m., were all too short for such eager students, and during the long Arctic night many of these men and women burned their midnight fat over the A B C's. "They were so taken up with their lessons and home tasks that there was no time left for gambling or more serious mischief. Hence we spent a very quiet, happy, and profitable year."

Unalakleet.—C. O. Lind, M. D., and Miss Alice Omegitjoak (native), teachers; enrollment, 90; population, Eskimo.

The school was reopened on the 2d day of September and continued until the 19th of December, when Christmas vacation began. The second term began the 5th of January and continued until the 29th of May, 1903. The subjects taught were reading, spelling, arithmetic, United States history, physiology, temperance, hygiene, penmanship, drawing, calisthenics, and vocal music. One girl studied music on organ a part of the time. Two hours a week have been spent in Bible study. Devotional exercises were held every morning. The day has always been closed with prayer and thanksgiving, in which the children have taken active part.

All the girls in the mission have been taught general housework and sewing, and the boys have been taught the use of tools, etc., whenever any time and opportunity was given.

Evening school was held two hours five evenings a week during the months of November, December, and January. The attendance was very good, especially for the first two months. Adults not enrolled in day school, November, 59; December, 46; January, 29. Average daily attendance for the months named was about 80, 75, and 50, respectively.

The work, as a whole, has been interesting and encouraging. The children are, as a rule, true and open-hearted. As shown by the figures, the attendance was very good until the latter part of the school year, when, in March, the people began to move—some to the mountains for squirrel hunting and others along the coast for seal hunting—and most of them were obliged to take their children along. A few parents have been so thoughtful that they made arrangements for their children to stay with other families, so that they should be able to continue until the school was closed.

We sincerely hope to have a new schoolhouse by the beginning of next September, so as to be able to accommodate the large number of children then expected.

Golofnin.—Mrs. O. P. Anderson, teacher; enrollment, 55; population, Eskimo.

From Mrs. Anderson we learn as follows:

This school was opened the 1st day of September, 1902, with 31 pupils enrolled. The number increased rapidly, until in December the number had gone up to 50. This was too great a number for me to manage alone, so I was obliged to ask Peter Egelak, one of our native boys who has been with us in the mission for many years, to help me to teach in the primary class. He enjoyed this very much, and the children too. In some studies he could really do better than I could myself, on account of his knowledge of both the English and Eskimo languages.

We are very much in need of a native teacher at this place, and I do not know of any one around here that is more fitted for the position than Peter Egelak.

I am glad to say that the school is growing larger every year, and both the children

and their parents begin to understand more and more the need of education. The children seem to enjoy the school. I have had no trouble to make them attend regularly. In this they have improved wonderfully during the last two years.

The subjects studied in the schoolroom are the following: Reading, spelling, arithmetic, geography, physiology and temperance hygiene, penmanship, and drawing. Grammar and English language, also history, have been studied mostly orally, because we have been short of these books. Drawing seems to be a natural gift with nearly all of the native children.

I have opened the school every morning with devotional exercises. The Bible has been read every morning by all the children for about half an hour, and a few remarks made as to the meaning of the words, sometimes through an interpreter.

Industrial work has also been taught. As the school is in close connection with our orphanage, practical work is taught all the year round. The girls are trained to be good housekeepers and are instructed in sewing, cooking, and many other things that are included in housekeeping. The boys are trained in the outside work. Fishing and hunting they all must learn in order to be able to support themselves. Our motto is to teach the children to work. Industrial work and school work must go hand in hand with each other in order to gain a satisfactory result.

Allow me also to mention that our mission work has prospered wonderfully during the past winter. Over 200 have been baptized here and received as members into the church. The natives are truly growing better in every way. Those that have received a little education in school are not so easily drawn away from the truth.

Cape Prince of Wales.—Mrs. S. R. Bernardi, teacher; enrollment, 121; population, Eskimo.

It is with a feeling of profound thankfulness that I report to you the progress of the school work that has been so successful at the village of Kingegan, Prince of Wales.

The advancement along both intellectual and moral lines is greater than I had hoped for, though I have always feared I expected too much of the illiterate, improvident, egotistical, and superstitious fish eaters.

Naturally the younger children are more susceptible to civilizing influences.

My large enrollment, with only two teachers, has often tempted me to say to the 6 and 7 year old chart classes that they must stay at home for a year or two. But when I realize how hard it is to reach and really influence the half-grown men and women, I feel that I would be sinful to loose the opportunity of getting these young lives started on the right road before they are made to feel the cords of black superstition and savagery tugging at their heartstrings. During last May's whaling season a certain man's boat crew killed a whale. Within a year his wife gave birth to a male child. The ancient laws of superstitious faith demanded that this child be made away with. It was given to Ok ba ok and Sega bruna, his wife, and they seemingly cared as much for it as if it was their very own. But think of the poor mother's heart that must bow to that monster superstition and stifle the best feeling the Creator has given to mankind—mother love.

Perhaps you would like an exposition of the routine work of the schoolroom, since you can not be with us to see how we teach these young barbarians.

A careful study of the child and his natural capabilities and his environment are more essential to his successful teaching than a study of systems or books.

I must teach them how to study, how to recite, and myself study how best to repeat the thought over and over in a different guise, so that he may surely retain it.

For the beginners' class, on learning their names, I write it large and distinctly, vertical type, on a pasteboard card. The child is given this and made to understand that is his name. After two or three lessons he is able to find his own card after the lot is shuffled up. If they can know and use intelligently fifty words at the end of the first year I am more than satisfied.

I have fifty pasteboard boxes filled with tea, coffee, biscuit, sugar, beans, buttons, wood, nails, thread, calico, chewing gum, etc. The name of each article is written on the lid of the round box. Let us say, for instance, on Monday each child is given a box. He is left during one period (fifteen minutes) to feel, see, and contemplate his new possession. After satisfying his childish curiosity he will probably give his attention to his neighbor's box, but never handling it or speaking to the child. The only time I noticed anything but a thoughtful study of the contents of the box was when Sene kuk one day put the chewing gum into her mouth. Every child was wide awake, and if she had swallowed a pin it could have provoked no more attention. They are very fond of chewing gum. When I am ready for the recitation I say to a boy, "Keena?" (What have you there?) He likely answers, "Utuh." (I don't know). Then I speak the word slowly and carefully. Perhaps it will take

ten trials before he can repeat it plainly. Each box is opened and the name of its contents pronounced, when finally a slip of paper and pencil is provided and the child willingly copies the box name over and over. In a vocabulary test I found 9 of 14 pupils in a class spelled tea "tae," while everyone spelled correctly chewing gum and evaporated apples.

The second chart class—having fifty words, more or less, in their vocabulary—use the First Reader in connection with their language and arithmetic problems, which I use also for supplementary reading. The first chart class learn numbers to 5 perfectly the first year. This seems slow, but I can easily make fifty problems with one-half of four. By doing thorough work in their first two years I find their advancement from that time to be astonishing. They have wonderful memories for historical and geographical data.

I have tables seating 10 pupils for the four primary grades, while for recitation work I have a hollow square of seats. The children occupy three sides, while I sit at the other. In this space we play and learn—roll the ball, sweep the floor, open the box, shut our eyes, and open locks. The children enjoy doing this very much. They readily learn, in playing with the ball, roll, round, red, hard, soft, and up and down.

With the green-grass lesson we talk much of green grass all right for ptarmigan, cows, and reindeer, but he is more interested in making little brooms of dried grass to brush out his father's canoe and his mother's hut; bunches for his sister's basket weaving and his own boot padding.

They quickly learn the meaning of verbs and name words, but, strangely, refuse to use them. I have one boy who has a vocabulary of more than 200 words, and could spell 90 per cent of these correctly, yet I never remember in two years hearing him voluntarily use an English word, until I took him into my house to live. He understood and obeyed all commands readily. Finally, I said, "Nagozruk, if you do not answer in English my guests will say, 'Mrs. Bernardi must be a very poor teacher—she can not teach the boys to use English.'"

He surprised me very much the next day in answering Mr. Rognon's question, "How much seal meat did Elegatok bring for the dogs?" by saying, "One whole seal."

The knowledge of this peculiarity of theirs has done much to keep me from hopeless despair in trying to teach a working knowledge of English. The intelligent looks and ready obedience to my commands, their absolute faith in my wisdom for their good, has more than repaid me for any sacrifice I may have made for them, and if they can know of the good in the world, I am glad for them, if only a wish is inculcated in their heart for a better life, even though this wish finds no expression in their life; its fulfillment may not come till they are dead and gone and their children attest the truth.

I have taught so many children in the last ten years—they were other people's children, but these little brown savages seem my very own. Their cut fingers, torn shirts, and hungry stomachs are all brought to me to be mended. One little boy of three comes to me every Saturday to dance for biscuit. His old white-haired grandfather, too old to hunt, spends his spare time training his little boy, Ky tuk, to do the dances that represent the spearing of seal and walrus. Hardy little warrior, full of life and love, his almost perfect physique gives promise of a grand manhood. How cruel to leave him to be nurtured in the barbaric, superstitious faith of his fathers!

Another branch of my work that has given me much satisfaction is the careful and painstaking work the older pupils have taken in phonics. In teaching them to write their own language the words are spelled with but few silent letters. Many of the children write a sentence of their own language phonetically correct even though they never have seen the words written before.

We have extended our school work to the winter reindeer camp. It was quite a novel undertaking.

Every trip brings us numerous and often long letters from the boys and girls. Lately they have begun to write to each other quite often. I think the correspondence schools of the East will have to look to their laurels when this school is further advanced.

Mr. Lee, the missionary in charge of the mission here, has given us his most hearty support and encouragement, and his family has made the winter very pleasant indeed for myself and brother.

If people could only see the clean, open-hearted, manly looks of these herders, and see what a vast difference there is between them and the still savage seal hunters, they would never question what good are the reindeer to the Eskimo. It is their only salvation. We are duly thankful for improvements in our schoolrooms and books and the helpful encouragement of the Educational Department.

I rented a machine this year and had plenty of thread; I had the sewing classes make white drill calico covers for the boys to wear in school, and blue ones for the girls. Mittens were knit, socks made of scraps of cloth, belts crocheted, baby wardrobes made, sleeves and aprons for cooking classes. Even the boys handled the sewing machine like tailors. I think twenty girls could bake decent yeast bread. I would like to see every family deprived of the cheap baking powder and learn to use yeast.

There is one wish ungratified. I want all the children clean and the room warm enough to have them remove their frost-covered coats.

I feel as if the future was very bright for the school work at Kingegan, and believe we are to have God's richest blessings bye and bye.

Cape Prince of Wales.—Room No. 2, O. J. Rognon, teacher; population, Eskimo.

At the opening of school I found 101 Eskimos, young and old, some of them almost as filthy as they possibly could be, while others looked very neat. After having spent three summers and one winter in this part of Alaska I was somewhat acquainted with the general appearance of them.

I was assigned three classes, one of girls and two of boys, whose ages ranged from 10 to 20 years. These boys and girls had all been to school before, so were able to take up regular first, second, and third grade work.

Of course in these classes were some brighter and more industrious than others, and they were not always the oldest ones in the class. My best scholars were about 13 or 14 years of age.

We endeavored to keep them clean by having a wash day for each department. This proved very satisfactory to the children, and certainly it was a relief to us to see them look clean. On Friday nights the schoolhouse was turned into a gymnasium for the school children; most of them are very active and were exceedingly good at performing gymnastic feats. The children here do as they please at home. Their parents do not compel them to go to school; in fact they pay very little attention to them. If a child is not at home at mealtime or bedtime, nothing is thought of it. How many white children would go to school of their own accord?

Irregular attendance is our greatest drawback. Some inducement must be offered them to get them to attend school regularly. If this could be done the work of teaching them would be greatly reduced. Out of my classes those who did attend regularly were as good in their work as most white children of their age and who have advantages over them. As a whole they are very obedient, but at times they are very lazy and dull. I think this is very noticeable just after a good feed of seal meat.

The only way to do anything with the Eskimo is through the school by educating the young ones. The old men and women are beyond reach.

Gambell (St. Lawrence Island).—E. O. Campbell, teacher; enrollment, 58; population, Eskimo.

The teacher writes:

The school is one bright spot in our work and is a constant source of joy and encouragement to us. The books show the remarkable record of attendance, being an average of 52.5 for the one hundred and forty-six days of school taught, 9 of the entire enrollment of 59 being neither absent nor tardy during the year, 4 others being only one time tardy, 10 others were not absent more than five days at the beginning of the year when their parents had not yet returned from the summer hunt and camp. Still others have good and sufficient excuses for very slight differences between their records and that of those already named. A few were excused from attendance because they were needed at home in support and care of the family. Two or three others should have come, but their attendance could not have been secured without serious difficulty with the parents or guardians, and in one case the boy himself, who will surely grow into as troublesome a character as his father before him (his name is Enok), persisted in hanging about the deer camp, though warned away, until at last the apprentices themselves attempted to drive him away, when he drew a knife. They took this away from him and tied him up, but this did not cure him. He has been a mischief-maker among the boys in our home, fighting some and inciting others to riot, lies, disobedience, and insolence.

The deportment of the scholars was all that we could ask. We have nothing but praise for the children, though some of the grown people have caused us much trouble. Kolo, who gave us his youngest boy two years ago, has frequently countermanded our instructions to him and caused us more difficulty in managing an older son, Gootoomu, whom he loaned to Omogo, one of the big Indian Point men who assaulted me last spring.

Kotzebue (Arctic Ocean).—Mrs. Otha Thomas, teacher; enrollment, 62; population, Eskimo.

Mrs. Thomas writes:

I inclose school report for December. Average last month, 40+, the largest in history of this school. Will be smaller for remainder of season, as our natives commence to scatter soon, to Point Hope and other places, whaling, sealing, etc. In blizzard of last week several children who have been attending school here were more or less severely frozen. The brightest boy (age 12) in the school and his proud mother we found dead on the ice about 8 miles distant from mission.

I think that the best time for the Kotzebue school is from July 1 to March 31. Our natives who live here at Kotzebue leave the village and go out sealing during April and May, and the river natives come down here during months of July and August and literally beg for school. Our own natives also return from sealing. Of course this is our busiest time, as there are hundreds of natives here every summer fishing for salmon, and it is the time when steamers call here. Notwithstanding our heavier mission work, as these poor children were so anxious for school, denying themselves the delight of trading on steamers (leaving that to their parents), I took the privilege of opening school in July. Had 62 pupils to-day. Some days Mr. Thomas assists me with teaching, if I am indisposed, but the Lord has given me such good health there have been exceedingly few days but what I have been at my post of duty.

I find the Kowak and Noatak children brighter than those on the Selawik; the former have scarcely missed a day, are seldom tardy, and most of them walk 4 miles a day to and from school.

NEW SCHOOLS NEEDED.

Applications have been received for the establishment of schools at Ellamar, Seldovia, Kenai, Shakan, and Council City. In addition to the above places, schools should be established at Anvik, Candle, Circle, Copper City, Deering, Dolomi, Point Hope, Belkofski, Karluk, Nulato, Rampart, Solomon, Sunrise, Ikogmut, Andreafski, Diomede, King Island, Ougavig, Nushagak, and Point Belcher. Each of these places should have a public school, but up to the present time the school fund placed at the disposal of the Commissioner of Education has been so limited that it has been simply impossible to establish schools that should be provided for.

The following places, being incorporated, have each a local system of education that is not under the control of this Bureau: Nome, Valdez, Eagle, Skagway, Juneau, Douglas, Treadwell, Wrangell, and Ketchikan.

By legislation approved March 3, 1901, Congress provided that "Fifty per cent of all license moneys that may hereafter be paid for business carried on outside incorporated towns in the district of Alaska shall be set aside to be expended, within the discretion and under the direction of the Secretary of the Interior, for school purposes outside incorporated towns in said district."

In the application of this law the United States district courts of Alaska have taken "court expenses" from the license fund received from outside of incorporated towns.

To secure the intention of Congress—that 50 per cent of all license moneys collected outside of incorporated towns in Alaska should go for education in Alaska—the Fifty-seventh Congress, second session, amended the above provisions to read as follows:

Provided, That fifty per centum of all license moneys provided for by said act of Congress approved March third, eighteen hundred and ninety-nine, and any amendments made thereto, that may hereafter be paid for business carried on outside incorporated towns in the district of Alaska, shall be covered into the Treasury of the United States, and set aside to be expended, so far as may be deemed necessary by the Secretary of the Interior, within his discretion and under his direction, for school purposes outside incorporated towns in said district of Alaska.

This amendment was approved March 2, 1903. Under its provisions it is hoped that a larger sum will be secured for education in Alaska.

The following table shows the Congressional appropriations for education in Alaska:

First grant to establish schools, 1884	$25,000.00
Annual grants, school year—	
1886–87	15,000.00
1887–88	25,000.00
1888–89	40,000.00
1889–90	50,000.00
1890–91	50,000.00
1891–92	50,000.00
1892–93	40,000.00
1893–94	30,000.00
1894–95	30,000.00
1895–96	30,000.00
1896–97	30,000.00
1897–98	30,000.00
1898–99	30,000.00
1899–1900	30,000.00
1900–1901	30,000.00

Amount received from one-half of license fees received from outside of incorporated towns in Alaska:

From—	
March 3, 1901, to June 30, 1902 (16 months)	$35,882.41
July, 1, 1902, to June 30, 1903	19,742.62

Expenditure for education outside of incorporated towns, Alaska, 1902–3.

Salaries of 3 officials	$4,500.00
Salaries of 39 teachers	19,026.66
Supplies for 33 schools	4,940.34
Fuel and lighting	1,508.95
Repairs	454.10
Rent	177.50
Traveling expenses	826.65
Freight	52.60
Total	31,486.80

Cost per pupil, $14.93+.

LOCAL SCHOOL COMMITTEES.

In the management of the Alaska school service the Commissioner of Education is, in many settlements, aided by local school committees. The members of these committees render good service to this Bureau as correspondents, suggesting measures for the greater efficiency of the schools; as auditors countersigning the vouchers for the salaries of the teachers and for the various local expenses of the schools; they approve the inventories of school property and the requisitions of the teachers for supplies, submitted at the close of the school year; they also inspect the repairs made to the school buildings from time to time.

The local school committees as at present constituted are as follows:

Southeast Alaska.

Gravina: Roderick Murchison, Alfred B. Atkinson.

Jackson: Rev. D. R. Montgomery, M. Kalkeet, Luke Frank, appointed January 3, 1903.

Kasaan: L. A. Babcock, W. L. Bunard, Walter Frank, appointed March 14, 1903.

Klawak: David Waggoner.

Klinkwan: Edward Scott (native Alaskan), appointed May 11, 1904.

Kadiak: A. C. Goss, H. P. Cope, appointed December 1, 1902; Fred D. Kelsen, M. Bailey, appointed February 3, 1904.

Saxman: Rev. Edward Marsden (native Alaskan), appointed April 9, 1900; George McKay, Edmund Verney, appointed February 19, 1904.

Sitka: John G. Brady, governor, and Edward D. Groff, appointed January 15, 1891; Rev. Anthony Dashkevich, appointed May 14, 1900.

Yakutat: Steven A. Gee, Hans Hansen, Paul P. Italio, appointed February 19, 1904.

Southwest Alaska.

Afognak: Alexander Friedolin, Emil Christensen, Theodore Gregoroff, appointed February 13, 1904.

Ellamar: John Ross, W. A. Dickey, J. B. Munach, appointed February 3, 1904.

Unalaska: N. Gray, A. W. Newhall, J. R. Richards, appointed September 5, 1902.

Unga: George Leavitt and F. C. Driffield, appointed January 23, 1901; G. A. Cushing, appointed February 19, 1904.

Northern Alaska.

Carmel: J. H. Romig, M. D., appointed March 4, 1904.

Council City: Francis L. Anton, G. A. Adams, Hugo Beyer, D. D. Young, appointed, March 5, 1904.

St. Michael: Maj. R. H. Wilson, F. T. Merritt, appointed September 24, 1902.

The following list contains the names of former members of local school committees in Alaska:

Sitka: Hon. James Sheakley, N. K. Peckinpaugh, Dr. C. D. Rogers.

Juneau: Karl Koehler, Rev. Eugene S. Willard.

Douglas: G. E. Shotter, S. R. Moon, Robert Duncan, jr., Alber Anderson, A. J. Campbell.

Wrangell: W. G. Thomas, William Millmore, Allan Mackay, Rufus Sylvester, Finis Cagle, Thomas Wilson, Rev. H. P. Corser, E. P. Lynch, T. G. Wilson, William H. Lewis (native Alaskan).

Jackson: James W. Young, W. D. McLeod, G. Loomis Gould.

Metlakahtla: William Duncan, Dr. W. Bluett, D. J. Leask.

Unga: N. Guttridge, John Caton, Edw. Cashel, C. M. Dederick.
Unalaska: N. S. Resoff, N. B. Anthony, L. R. Woodward.
Skagway: Thomas Whitten, E. L. Niskern, Walter Church, F. R. Burnham.
Juneau: John G. Heid, B. M. Behrends, J. B. Denny, Rev. John B. Rene.
Nome: Walter Church, D. J. Elliott, John Brynteson, Dr. S. J. Call, D. W. McKay, S. A. Keller, E. S. Ingraham, J. V. Logan.

ALASKAN CHILDREN AT CARLISLE, PA.

In the United States Indian Training School at Carlisle, Pa., are 81 children from Alaska. Among the 81 are representatives of the Eskimo, Indian, Thlinget, and Aleut families. They are associated at that school with 1,000 children representing 72 different tribes of North American Indians. The grading of the Alaskan children in industry, health, conduct, and scholarship compares favorably with the best of the pupils from other sections.

Ekuk: I. Udaluk.
Knahnak: I. Kilinak.
Kohiak: S. Udaluk.
Afshek: B. Maluhpak.
Thirty schools, 740 pupils. There are 16 parishes in Alaska, with 10,225 parishioners.

Presbyterian.

Barrow (Eskimo): Rev. H. R. Marsh, M. D., Mrs. H. R. Marsh, Mr. Pēter Koonooya (native).
Douglas (Auke and Taku tribes): Rev. Thomas Coyle.
Eagle: Rev. and Mrs. Charles F. Ensign.
Gambell (St. Lawrence Island, Eskimo): Mrs. Edgar O. Campbell.
Haines (white and Chilkat): Rev. and Mrs. Norman B. Harrison and Elder A. R. Mackintosh.
Hoonah (Hoonah tribe): Rev. William M. Carle, Mr. W. Hammond (native).
Jackson (Hydah tribe): Rev. D. R. Montgomery.
Juneau (Auke and Taku tribes): Rev. L. F. Jones, Rev. James H. Condit (white children).
Kasaan (Hydah tribe): Rev. D. H. Montgomery.
Killisnoo (Kootznahoo tribe): Rev. W. S. Bannerman.
Klawock (Hydah and Hanegah tribes): Rev. and Mrs. David Waggoner.
Kilnquan (Hydah tribe): Mr. Samuel Davis (native).
Klukwan (Chilkat tribe): Rev. F. Falconer.
Rampart (Chena and Fairbanks): Rev. M. Egbert Koonce, Ph. D.
Saxman (Tonga and Cape Fox tribes): Rev. and Mrs. Edward Marsden (natives).
Sitka (Sitka tribe): Rev. W. S. Bannerman, Mrs. Matilda K. Paul (native).
Sitka Training School (all the tribes) Mr. William A. Kelly, Miss Susan Davis, Mrs. M. F. Schuknecht, Miss Frances H. Willard (native), Miss Anna M. Sheets, Miss Lucile Owen, Mrs. Ella C. Heizer, Miss Mary Langabear, Mr. George J. Beck, Mr. John E. Gamble, Mr. J. T. La Tourrette, Mr. Howard George (native).
Sitka Hospital: Miss Nellie F. Shulen, M. D., Miss Esther Gibson, nurse.
Skagway: Rev. James Thompson, Rev. S. Hall Young, D. D.
Teller and Council City: Rev. Herman M. Hosack.
Wrangell (Stikine tribe): Rev. Harry P. Corser.

Roman Catholic.

Holy Cross, Koserefsky: Very Rev. J. F. Lucchesi, Rev. Jos. Perron, Rev. P. Pasino; Brothers V. O'Hare, Al. Markham, B. Marchisio, E. Horweedel, E. LeFevre; Sisters M. Winifred, Antonio, Pauline, Mary of the Passion, M. Joseph, and Julia.
St. Peter's Mission, Nulato: Rev. C. Rossi, Al. Ragaru, J. Jette; Brothers C. Giordano, P. Brancoli; Sister M. Stephen.
St. Ignatius Mission: Rev. A. Robaut.
St. Michael Mission: Rev. R. Camille, Brother T. Moutaldo.
St. Mary's Mission: Revs. A. Keyes, J. Treca; Brother J. Twohig.
Eagle City: Rev. Fr. Monroe.
St. Joseph's Mission, Nome: Revs. J. Van der Pol, E. Devine, B. Lafortune; Brother B. Chiaudano.
Juneau: Rev. Y. B. Rene, Rev. J. Carden.
St. Paul's Church, Douglas Island: Rev. P. Bougis.
St. Mark's Church: Rev. Phil. Turnell.

Episcopalian.

Sitka: Right Rev. Peter Trimble Rowe, D. D., Rev. Clarence S. Mullikin and wife, G. W. Chilson.
Juneau: Rev. Christian A. Roth.
Skagway: Rev. James G. Cameron, Miss Carter, deaconess; Miss Langdon, Miss Emberley.
Ketchikan: Rev. Thomas Jenkins.
Circle City: Rev. C. E. Rice, Miss Woods, Miss Farthing.
Fort Yukon: Rev. and Mrs. L. J. H. Wooden, Rev. William Loola.
Rampart: Rev. J. E. Huhn, Rev. A. R. Hoar and wife.
Anvik: Rev. and Mrs. John W. Chapman, Miss Bertha M. Sabine, Mrs. Evans, Isaac Fisher.
Point Hope: Rev. John B. Driggs, M. D., E. J. Knapp.
Tanana: Mr. and Mrs. Jules L. Prevost, Miss Mason.
Nome: Rev. C. H. H. Bloor, Rev. John White.
Valdez: Rev. F. C. Taylor, Miss Deane.
Douglas: Rev. Christian A. Roth.
Kasaan: Miss Edmond.

The Woman's American Baptist Home Mission Society.

Wood Island: Mr. and Mrs. C. P. Coe, Mrs. M. G. Campbell, Miss Augusta Curtis, Dr. and Mrs. C. F. Mills.
Copper Center: Rev. George S. Clevenger and wife.

Methodist.

Skagway: Rev. John Parsons, superintendent.
Ketchikan: Rev. J. A. Chapman.
Douglas: Rev. L. H. Pederson.
Juneau: Rev. F. H. La Voilette.
Dolomi: Rev. J. W. Glenk.
Unalaska: Jesse Lee Home, Prof. W. A. Davis, principal. Dr. A. W. Newhall, superintendent; Miss Barnett, Miss Schwab, Miss Darling.

Swedish Evangelical Union.

Yakutat: Rev. and Mrs. Alvin Johnson, Mr. August Berggrem, Miss Jennie Olsen, and Mr. Paul Page.
Golofnin: Rev. O. P. Anderson, Rev. K. Hendrickson, Miss Amanda Johnson, and Miss Eivor Eklund.
Unalakleet: Rev. and Mrs. Axel E. Karlson, Dr. and Mrs. Carl O. Lind, Mr. and Mrs. Stefan Ivanhoff, and Miss Alice Omegitchok.

Friends.

Kotzebue: Dana H. and Otha C. Thomas, Miss Martha Hadley.
Kake: Rev. and Mrs. Silas R. Moon.
Douglas: Charles Replogoe and wife, Miss Jennie Lorenz.

Congregational.

Nome: Rev. C. E. Ryberg.
Valdez: Rev. William Burnett.
Douglas: Rev. Thomas Coyle.
Wales: Mr. and Mrs. Hugh J. Lee.

Norwegian Evangelical Lutheran.

Teller: Rev. and Mrs. T. L. Brevig, Mr. A. Hovick.

Moravian.

Bethel: Rev. A. Stecker, superintendent; Rev. John Hinz, Rev. Joseph Weinlick.
Ougavig: Rev. Benjamin K. Helmich.
Quinhagak: Rev. John Schoechert.
Carmel: Rev. Paul Zucher and wife, Rev. Samuel H. Rock and wife, Miss Mary Huber, Rev. J. H. Romig, M. D., and wife, Mr. Joseph Kahlen.

MISSIONS OF THE PRESBYTERIAN CHURCH.

[Commenced 1877.]

[From Rev. George F. McAfee, D. D.]

As the facts concerning the resources of the great Territory of Alaska come slowly into public view, it bulks not less but larger in the interest of the country. We no longer feel, as Congress did when Alaska was purchased, that the price was exorbitant, for the $7,200,000 paid for it in 1867 were more than covered by the catch of salmon alone in 1902. The Alaskan mines have sent to Seattle alone $14,000,000 in gold dust and bullion, almost twice the purchase price of the Territory. In 1901–2 the total output of gold in Alaska was more than four times the amount paid to Russia. The fur companies have paid into the United States Treasury in the last thirty years more than Alaska cost us.

Meanwhile the output of gold, copper, and other minerals is steadily increasing. Railways are being built, and there is even talk of at some time connecting the Aleutian Islands with Siberia by a railroad tunnel. Remote as that time may be, the time is now at hand when the church should do not less but more for the development of Christian civilization along those stormy coasts.

The past year has been one of persistent and faithful work on the part of our missionaries and teachers.

The Woman's Board pays the salaries, either in whole or in part, of the board's ordained missionaries and unordained native interpreters and helpers in the presbytery of Alaska. There have been engaged in this work during the year 12 ordained ministers and 10 unordained native interpreters and helpers. The results have been most gratifying.

Barrow.—Dr. and Mrs. R. H. Marsh remained in charge of the mission station at Barrow during the entire year. Their supplies sent up last spring failed to reach them, the vessel on which they were shipped being unable to make its way through the ice floes. Providentially, however, they were able to purchase the necessary provisions from the captain of a whaling vessel who expected to bring his vessel out of the Arctic region in the fall. A letter received from Doctor Marsh, dated August 24, 1903, was just six months and two days in reaching the office. Rev. and Mrs. Samuel R. Spriggs are their neighbors and helpers, Mr. Spriggs being the Government teacher.

Gambell, St. Lawrence Island.—Dr. and Mrs. E. O. Campbell are conducting the work, and seem to be exceedingly happy in it. In writing to the Presbyterian Mission Board, Doctor Campbell speaks of the waning influence of old heathen customs: "However, we feel on a better footing with the people than ever. Some appear to listen, while others come to church only to go to sleep or laugh at the most solemn warnings of God. This is the month in which each member of a family goes to the ancestral home or place, though miles away, and there, after kindling a small fire, put on it or the embers some plug tobacco—Russian tobacco—walrus flipper, and fish, wash themselves in front and behind with the palm of the hand and hope to be free from sickness. The manner in which this and many similar performances are carried out shows a lack of sincerity. They do not half believe it all themselves, yet persist in it because they have done so for time past—long, long ago—and are afraid to make any change. At a funeral service not long ago the mother of Omungou, whose sister-in-law had died, acted as chief director, and just outside the village the procession was halted and some of the more personal effects destroyed and each member of the immediate family taken behind the corpse and the ceremony of washing them from the spirit of sickness and death was gone through. This is usually done with the dead person's drinking cup, using the bottom next to the person, passing it three times down the back and three times down the front. Then the cup is mutilated and thrown away. This time the mother did the acts very perfunctorily, barely touching each one, and failing to repeat the prayer, though laughing most of the time. After returning from the burial place on the mountain I had a long talk with Omungou, and he admitted he did not believe it all, but was afraid to change. Will you not take every means at your command to lay before the praying people of

America our work and people this winter? Oh, for a mighty pouring out of the Holy Spirit on St. Lawrence Island this winter!"

Hoonah.—Rev. William M. Carle and Mrs. Carle have remained on the field during the entire year. They report the work progressing satisfactorily. Their interpreter is proving himself to be a valuable helper.

Jackson.—Rev. D. R. Montgomery and Mrs. Montgomery remained at Jackson for a few months and were then transferred to Kasaan, since which time the Jackson people have been without a minister.

Klinquan.—This is a settlement of Hydahs, being only a few miles distant from Jackson, and is ministered to by Mr. Samuel Davis, a native. He reports that the people are interested in religious things, but appeals for the services of an ordained minister.

Haines.—The work at Haines is changing in character very rapidly. Rev. Norman B. Harrison has charge. The military reserve adjoining our mission is being rapidly improved for the accommodation of the United States troops. This has brought in quite a number of American people who have established a village on the opposite side of our mission property from the military reserve. This makes our work somewhat difficult but exceedingly important. Mr. A. R. Mackintosh has charge of the native work. He is introducing gardening and farming on a small scale. Quite a number of vegetables were grown very successfully last year, and preparations are being made for more extensive gardening the coming year. Fruit trees will also be planted as an experiment. Small fruits do well, strawberries especially being of most excellent flavor and extraordinary in size.

Teacher, 1; boarding pupils, 6; total cost, including salary, current expenses, etc., $831.31. Tuition collected, $153.80.

Juneau.—The work at Juneau is among both the white people and the natives, there being a church organization for each. Rev. James H. Condit is the pastor of the white church, which is rapidly advancing toward self-support. Rev. L. F. Jones is the faithful pastor of the native church. He has been in Juneau a number of years and his influence is widely extended among the natives. His church is in a prosperous condition.

Douglas Island.—This field is across the bay from Juneau. A chapel was erected two years ago, and services are held there regularly among the natives who are working in the Treadwell mines. Mrs. Moore, the widow of the late Frederick L. Moore, whose work was so greatly prized by Mr. Jones as his assistant and interpreter, has very successfully taken the place of her husband during the past year.

Kasaan.—This is an offshoot of the Hydah tribe. Rev. D. R. Montgomery, who labored so successfully at Jackson for several years, found it advisable to move to Kasaan and open the work there. This work has been very encouraging. As a result of religious meetings held during the winter almost every native has become a Christian. "It was a thrilling sight to see old Chief Sunnyhart arise and give himself to Christ. It is now no more whisky, cards and gambling, or swearing."

Klawock.—Rev. David Waggoner and Mrs. Waggoner, who went to the field in 1902, have had very encouraging success in their work. The natives are among the most interesting and intelligent of the Alaskan people, and have shown the effects of faithful work done by the missionaries. The work of Mrs. Waggoner for the women is spoken of as being particularly interesting and helpful.

Klukwan.—Mr. F. Falconer, who during the absence of the missionary from Haines so successfully worked among the people there, has taken up work at Klukwan, and reports it to be very encouraging. The people have rallied about him, and he is faithful in ministering to their spiritual wants as well as helping them in their physical needs. Being a layman, he is unable to administer the sacraments or perform marriages, but Mr. Harrison, of Haines, makes him periodical visits, which are very highly prized by the people and very helpful to Mr. Falconer as well.

Saxman.—Rev. Edward Marsden, our only native ordained missionary in Alaska, together with Mrs. Marsden, is still at work among the Tonga and Cape Fox tribes at Saxman. Mr. and Mrs. Marsden paid a visit to the States during the year and were very cordially received, making friends wherever they went.

Wrangell.—The work at Wrangell has been interrupted by the retirement of the minister, but later on was taken up by Rev. Benjamin F. Miller. Mrs. Matilda K. Paul, who has been for so many years connected with the work at Sitka, has been transferred to Wrangell to work among the native people as a Bible reader. Reports from the field are very encouraging since Mrs. Paul's arrival.

Sitka Mission.—Rev. W. S. Bannerman is pastor of both the native and the white churches. The white work is encouraging. The work in the native church is progressing quite satisfactorily.

Sitka Training and Industrial School.—Progress has been made in all departments

of the work in connection with the school during the past year. The boys and girls are trained in the industries which will best fit them for the rapidly changing conditions in Alaska. A transition is always fraught with more or less of danger in any country, and it is none the less true in Alaska. The baser element of American civilization has found its way into Alaska, which makes the work doubly hard. Consequently the pupils are subjected to such temptations as are common under such conditions, and it is no wonder that, having so recently emerged from the darkness and superstition of heathenism and paganism, they are so easily-led astray and fall into the grosser sins of a semi-civilized community. Many Christian homes have been established, and many native Christian men have found places in the lumber mills, fisheries, and mines as skilled workmen, who received their education in the Sitka school.

Advancement has been made in the line of the industries. Shoemaking is carried on extensively. All shoes worn by the pupils are made in the shops. Boat building is also becoming more prominent than in former years. Farming has been undertaken on a larger scale, though limited in extent at best. A logging outfit has been purchased and put in operation; this will enable the superintendent to open up a road to the forest and begin the manufacture of lumber. The engine is also used in clearing land for cultivation. It is the determination of the woman's board to give all these industries a fair trial. The lumber interest is already large in Alaska, and farming will become more extensive as the years go by. It is our business to train the natives to meet these new conditions.

Teachers, 14; boarding pupils, 132; day pupils, 5; total, 137. Total cost, including salaries, current expenses, repairs, and improvements, etc., $17,163.01 Tuition collected, $532.86. Scholarship, $100.

Hospital.—We were so unfortunate as to lose, by withdrawal, our very efficient physician and surgeon about the middle of the year, Dr. Nellie S. Shulean, who was called home on account of the feeble health of her father. Her work was exceedingly profitable and very satisfactory to the natives. She made friends wherever she went, and showed herself not only a skillful physician and surgeon, but a wise and earnest missionary. The trained nurse, Miss Esther Gibson, has been doing the medical work since the retirement of Doctor Shulean.

Skagway has attained self-support during the year. The board has missions at Rampart, Chena, and Teller in addition to those previously mentioned.

ROMAN CATHOLIC.

[Commenced 1878.]

[From Rev. L. Van Gorp, S. J.]

Holy Cross, Koserefsky.—Very Rev. J. F. Lucchesi, Rev. Jos. Perron, Rev. P. Pasino; Brothers V. O'Hare, Al. Markham, B. Marchisio, E. Horweedel, E. LeFévre.

The boys boarding school, under the immediate charge of the Fathers and Brothers, numbers about 50. It is divided into two classes: To the first belong those boys who have sufficiently progressed in the ordinary branches of an elementary English book education, and are now applied almost entirely to manual and industrial training; the second class is composed of the younger pupils, whose time is principally taken up with class work, varied and interrupted with light housework.

The boarding school for girls is in charge of the Sisters of St. Anne, viz, Sisters M. Winifred, Antonio, Pauline, Mary of the Passion, M. Joseph, and Julia. These ladies are heart and soul in their work, and their 55 pupils appreciate their devotion and are a credit to them by their progress and excellent behavior. Much the same order is followed here as at the boys' school. The younger pupils are instructed in the various English branches; the larger girls are employed in every department of housework. A visit was paid Holy Cross School in July, 1903, by the United States Senate committee and party, who visited Alaska in the summer of that year. The distinguished gentlemen expressed themselves immensely pleased with the school and its work.

The day and night school for externs continues successful, and the attendance is steadily increasing. In connection with the school there is a garden of about 8 acres; the ground is well tilled, and an abundant crop of vegetables was the reward of last summer's work. The mission has at present 5 cows and 1 bull, and this past winter a start was made with domestic fowl.

St. Peter's Mission, Nulato.—Missionaries: Rev. C. Rossi, Al. Ragaru, J. Jette, Brothers C. Giordano and P. Brancoli; also Sister M. Hephens and two assistant Sisters. A mixed day and boarding school is maintained here, with an attendance of about 30 pupils.

St. Ignatius Mission on the Kuskokwim.—Rev. A. Robaut, resident missionary. During the night of November 30, 1903, this mission was completely destroyed by fire, Father Robaut barely escaping with his life. Absolutely nothing was saved, not even his valuable manuscripts, the work of fifteen years' hard labor. The mission is to be rebuilt at once.

St. Michael Mission.—Rev. R. Camille, resident missionary; Brother T. Moutaldo. The missionary attends to both whites and Indians.

St. Mary's Mission on the Akularak.—Revs. A. Keyes and J. Treca, Brother J. Twohig. A school has been reopened at this place and is well attended. The Fathers visit the Indians of the coast for hundreds of miles around.

Eagle City.—Rev. Fr. Monroe, Missionary.

St. Joseph's Mission, Nome.—Revs. J. Vander Pol, E. Devine, B. Lafortune, Brother B. Chiaudano. There is a flourishing church and a good school. Six Sisters of Providence are in charge of the Hospital Church of the Nativity, Juneau; Rev. Y. B. René and Rev. J. Cardon; Sisters of St. Anne in charge of hospital.

St. Paul's Church, Douglas Island.—Rev. P. Bougis.

St. Mark's Church, Skagway.—Rev. Ph. Turnell.

MISSIONS OF THE MORAVIAN CHURCH.

[Commenced 1884.]

[From Right Rev. J. M. Levering.]

Kuskokwim district.—Five missionaries with their wives were employed on the Kuskokwim at the close of 1903, viz., the Rev. A. Stecker, superintendent, with the Rev. John Hinz and the Rev. Joseph Weinlick at Bethel, the Rev. Benjamin K. Helmich at Ougavig, and the Rev. John H. Schoechert at the new station, Quinhagak, near the mouth of the Kuskokwim, established in August, 1903. This station, from which the region to Goodnews Bay and up the Kuskokwim to the Ik River will be cared for, had 36 communicants and a total of 60 souls enrolled at the close of the year. Bethel, with 11 small outposts, numbered 87 communicants and a total of 358 persons. Ougavig, with 2 outposts, reported 88 communicants, and a total of 186 persons. The entire membership of all classes at the 3 main stations and the 13 outstations was 604 at the close of 1903. An increase, therefore, of 98 souls appears for the year. The day school at Bethel consists of 22, and that at Quinhagak of 17 scholars. Five native helpers assist the missionaries at different points. Very satisfactory visits to four villages on the Tundra, with a population of 150, near the close of the year were reported. Arrangements have been made to establish systematic industrial instruction at Bethel in accordance with the plans of the United States Bureau of Education. The reindeer station connected with Bethel has introduced an important influence upon the economic and social condition of the region, and its value in various respects is beginning to appear.

Nushagak district.—Carmel Mission, on the Nushagak, with its itinerary, was at the close of 1903 in charge of the missionaries Rev. Paul Zucher and wife, Rev. Samuel H. Rock and wife, and Miss Mary Huber. Statistics for the year had not yet been received by the church authorities in May. Mr. and Mrs. Rock and Miss Huber were at last writing preparing to come to the States on furlough, and the Rev. J. H. Romig, M. D., with his wife, now returning to Alaska, will settle at Carmel to cooperate with Mr. and Mrs. Zucher. Mr. Joseph Kahlen, who accompanies them, will have charge of the day school at that station. Doctor Romig has been authorized to establish a hospital and general medical practice at Nushagak as an adjunct to the mission. An effort will also be made to do evangelistic work among the churchless white population at that point, and thus enlarge the sphere of the mission as a center of Christian influence.

MISSIONS OF THE PROTESTANT EPISCOPAL CHURCH IN ALASKA.

[Begun in 1886.]

[From Mr. W. Wood, secretary.]

The missions of the Protestant Episcopal Church in Alaska may be roughly divided into three groups:

1. In southeast Alaska at most of the stations the work is chiefly done among whites. At Ketchikan and Kasaan, on Prince of Wales Island, successful day schools are being carried on among the Indians by the Rev. Thomas Jenkins, Miss Prichard, and Miss Edmond. At Skagway, Valdez, Douglas, Juneau, and Sitka efficient work is being maintained among the white population.

2. Along the Yukon at Anvik, Tanana, Rampart, Circle City, Fort Yukon, and Eagle there are successful missions among the Indians, and at all the stations school work is carried on more or less regularly and effectively. The Anvik and Tanana stations are the best equipped. At Anvik a new girls' school building has been erected to replace an old building burned two years ago. During the past winter the boarding department has averaged about 15 pupils, and about 20 more have come to the day school. The Rev. J. W. Chapman, Miss Sabine, and Mrs. Evans are beginning to see excellent results from the school work of former years. The first generation of scholars has now grown up, and most of them are living worthy and useful lives.

At Tanana the mission is under the lead of the Rev. J. L. Prevost, who ministers to the Indians scattered over a wide area, making occasional visits to their winter camps. Miss Mason, besides teaching in the day school, is nurse in charge of the hospital, and does much good in visiting the homes of the Indians to teach them the care of the sick.

At Circle City the school and hospital work has been carried on without interruption by Miss Woods and Miss Farthing, though the illness and consequent absence of the missionary in charge, Rev. C. E. Rice, have prevented the full round of mission services.

3. In arctic Alaska missions are maintained at Nome and at Point Hope. Bishop Rowe plans to begin work at Council City in the near future. The Rev. J. B. Driggs, M. D., is much encouraged by the results of his ten years' work among the Eskimos at Point Hope. When he went to them they were a wild and pagan people; they could not speak or understand a word of English, and Doctor Driggs was warned by a naval officer of the difficulties and dangers he was facing in going to them. To-day prospectors travel in entire safety throughout the region, and although they may not know a word of the native tongue they can easily make their wants known to the young people in English.

The people are making improvements in their homes. "Instead of holes cut through the floor for an entrance," says Doctor Driggs, "they have introduced small doors, which, to one who knows the discomfort of going in and out of the old iglos, is quite an improvement. Not one of the old homes which were here on my first arrival is left standing. All the iglos are new, but the people are under a great disadvantage in building their new homes from the lack of material to work with. They have no boards, and consequently have to use driftwood. Even with that material they have to study rigid economy, as the wood is scarce, but little having been thrown on the beach in several years."

Hospitals for both white people and Indians are maintained at Skagway, Valdez, Tanana, and Circle City.

Bishop Rowe has just completed a visitation lasting almost a year, during which he has visited all sections of Alaska, from Sitka to Point Hope. During the winter of 1903–4 he has been traveling on the Yukon trail and has made an overland journey by a new route from Circle City to Fairbanks, in central Alaska, where a new mission has been opened.

BAPTIST MISSIONS IN ALASKA.

[Commenced in 1886.]

[From Mrs. James McWhinnie.]

The Woman's American Baptist Home Mission Society have a mission and orphanage on Wood Island, Alaska. The mission was established in 1886, but not until 1871 was the orphanage built. The present plant consists of the orphanage, the Winch dormitory for boys, and the Baptist Church. In connection with the mission a fish industry has been carried on for a number of years.

About 16 acres of ground have been well cultivated, and the grounds and buildings present a neat and attractive appearance. Experiments in agriculture for the Government have been tried during this last year. The weather throughout the whole season was unfavorable, and the results in some cases far from being satisfactory, as in other years. During the entire summer only two days did the thermometer reach 80°. On the 4th of July and the 4th of November it registered the same.

A great event of the year was the marriage of one of the girls in the orphanage to a sober, industrious young man on the island. Invitations to the wedding were printed on the mission printing press and issued to everyone of age on the island. They were married in the church and a reception followed at the orphanage.

The present number of children in the orphanage is 43. Five of them have joined the church during the last year. The Sunday evening service in Russian has been very attractive to the natives throughout the whole year and has been well attended.

In February, 1903, 90 barrels of salmon were sold at $7.50 per barrel. Experience proves that the salmon industry is a success; the cod fishing is not as profitable, for the cod caught around Kodiak are of a poor quality. With poultry there has been great success and a ready market is found for it at Kodiak. Six cows belong to the orphanage, which supply butter for the entire year.

Our present workers are Mr. and Mrs. C. P. Coe, Mrs. M. G. Campbell, and Miss Augusta Curtis, with Dr. and Mrs. C. F. Mills in charge of the Government school.

The American Baptist Home Mission Society has established a mission in the Copper River district, not far from Valdez. Rev. George S. Clevenger and wife are in charge of it. They write: "We find the people learn readily and seek to imitate the white man. Mrs. Clevenger is getting hold of them nicely, and all show her great respect. They come to service Sunday morning if they are within walking distance. How they love to sing. One girl about 16 plays nicely the chords of the hymns on the zither, an instrument which she purchased from a white woman here. Some have beautiful voices and we have a very nice service."

The work of the American Baptist Home Mission Society in Alaska, which was successfully begun and prosecuted for some time at Skagway, has been discontinued at that point for the time being on account of the business depression and the large depopulation of the place. The valuable church property remains, and it is hoped that soon the work may be resumed. Rev. G. S. Clevenger, who was stationed at that point, was transferred to Copper Center, where he is successfully engaged in work among the Indians in that locality. They have been very responsive, and seem a promising field for missionary work. In addition to his services in their interests, he ministers to large numbers of Americans going to and from Valdez and the Tanana gold fields on the Yukon. A school has been established for the Indian children, taught by Mrs. Clevenger. Enlargement of the society's work in Alaska will depend upon developments there.

THE MISSIONS OF THE METHODIST EPISCOPAL CHURCH.

[Commenced in 1886.]

[From Miss Martha Van Marter, editor.]

The work of the Methodist Episcopal Church in Alaska consists of several preaching stations maintained by the missionary society and the Jesse Lee Industrial Home at Unalaska, under the care of the Woman's Home Missionary Society.

Rev. John Parsons, superintendent, writes:

"Immediately after the meeting of the general missionary committee in November, 1903, I proceeded to Alaska and located in Skagway. We have here an excellent church and parsonage. The society has been much depleted by removals, but the outlook is hopeful. I am serving as pastor of this church, as well as superintendent of the mission.

"At Ketchikan we have a small society and a church property worth about $2,000. The Rev. J. A. Chapman, of Pekin, Ill., is serving as pastor. The town is a growing one, and the work will doubtless be permanent.

"At Douglas (Rev. L. H. Pederson in charge) there is a church with living rooms attached. The society is small, but the town is permanent and we look for growth.

"Juneau, joined by ferry with Douglas, also has a small society, but as yet no church property, though we are about to purchase lots there for a church and parsonage. The Rev. F. H. La Voilette, of the Puget Sound conference, is stationed at Juneau.

"At Dolomi, near Ketchikan, we have a missionary, the Rev. J. W. Glenk, of the Puget Sound conference, who both preaches for the people and teaches school.

"Douglas and Juneau are over 100 miles, and Ketchikan and Dolomi are nearly 400 miles, from Skagway."

Rev. J. A. Chapman, pastor at Ketchikan, writes:

"We find the need here very great and the laborers few. Most of the missionary work done in Alaska thus far has been done among the native Indians, but there is pressing need among the whites also. Nearly every State in the Union is represented, and the church should care for these 30,000 or 40,000 whites. Outside of our own church there may be a half score of churches for the white people.

"The Methodist Church has a splendid hearing in Alaska. In Skagway, Juneau, and Ketchican the buildings are crowded. The good will of the people is with us, and Methodism in Ketchikan is sure to grow with the growing town. Alaska has undoubtedly a great future with its paying mines, unlimited lumber, and fishing business, and Methodism, true to her mission, must help to lay the foundations of our new State."

Jesse Lee Industrial Home, Unalaska, Alaska.—The work of the home during the past year has been steady and satisfactory. The enrollment is 44. The children attend the Government school, which, although independent of the home, works in hearty cooperation with it. Prof. W. A. Davis, principal of the Government school, was for several years principal of Bennett Academy, Clarkson, Miss., under the care of the Woman's Home Missionary Society.

Dr. A. W. Newhall is the efficient and conscientious superintendent of the home, and Miss Barnett and Miss Schwab still remain actively useful in the work of the home. Miss Darling, the kindergarten and primary teacher, has been obliged by failing health to return to her home, and her successor will doubtless go out early in the autumn. During the year three Eskimo boys and one girl have been sent to the Indian school at Carlisle, Pa.

Jesse Lee Home is fully sustaining its excellent reputation under the present administration.

MISSIONS OF SWEDISH EVANGELICAL COVENANT.

[Commenced 1887.]

[By Rev. A. Millander, secretary.]

Golofnin.—Membership, about 300; of these, 259 were baptized during the year. In boarding school, 35 Eskimos; in day school, 50. Missionaries, 2 male, 2 female (white), and 4 native assistants.

Unalaklik.—Membership, 150; of these 21 were baptized last year. Attendance in Sunday school, 155 to 175. Eskimo children supported at station, 18. Missionaries, 3 male, 2 female (white), and 5 native assistants.

The following is the report of my medical practice: Number of patients, 114; office calls, 256; calls in the homes, 62; total calls, 318; prescriptions dispensed, 200; treatments in the office, 186.

Yakutat.—Membership unknown. Missionaries, 2 male, 2 female (white), and 4 native assistants.

School report: The Swedish Evangelical Mission Covenant School reports for September, 1902, to March, 1903, total number of children from 6 to 14 years of age in the community, 40; total number of children from 14 to 21 years of age in the community, 20; total number of pupils enrolled from the commencement of the school year, 20–41; total number of classes taught daily, 4; average daily attendance, 8–20.

FRIENDS' MISSION AT KOTZEBUE.

[Commenced 1887.]

[By Irvin H. Cammack, superintendent.]

The year 1902–3 was a very successful one in all departments of our Kotzebue Mission work. It was administered by Dana H. and Otha C. Thomas and Miss Martha E. Hadley.

Considerable improvements were made to the buildings through the energy and economy of Mr. Thomas. Much credit is due him, as witnessed by the natives giving him the cognomen of "The missionary who works." No reflection is meant to others who had less material resources at hand.

There are about 380 reindeer at the mission, about one-half belonging to the United States Government. The unusually hard winter, with snow at an average depth of 7 feet, caused the loss of some 18 fawns, but one wonders that any of the herd survived at all.

The greatest cold was January 7, the mercury registering —54°.

Mr. Thomas has at this point the most northerly post-office and handles mail for about 75 white men far up the rivers, and also for Points Hope and Barrow, forwarding the mails at irregular intervals by natives.

He is also resident physician for several hundred natives and 100 whites, who have depended upon him for help.

The mission now has about 150 well-selected books, tracts, pamphlets, magazines, etc.

Native help was employed during the year to the amount of $150.

Religious services were held morning and evening every Sabbath during the past year. The attendance is splendid, as nearly every resident native is present at every service, save when illness prevents, even the severest blizzards not preventing such attendance. They give evidence of great love for their Bibles and come into the mission and read them to get help with the hard words and for explanations of the

more difficult passages. All the members quote some text at each service when their names are called; even the youngest is lifted up in his mother's arms and speaks his text. As many attend the midweek meetings as on Sabbath, and all pray, even down to the 6-year-old child. On Thanksgiving Day every native in the village (98) was present. Sixty members arose and quoted some text, with words of thanks, praise, or thanksgiving in it. Fourteen were added to the church that day, giving evidence of conversion.

Four funeral services were held for natives during the year, and 27 marriage ceremonies, most of these, however, having been married Eskimo fashion for years.

In the Bible school there were 52 services, with average attendance of 96 the first forty-two weeks and 14 the other ten weeks, while most of the village people were away. One hundred and three white people visited these services.

At a number of outposts similar services are now conducted by the native Christians from Kotzebue. Up the Kowak there are now 63 members; on the Noatuk, 4; at Naboktatook, 27; at Sheshalik, 14; on Buckland River, a few; at Point Hope, 6; on the Selawik River, 10; at Candle Creek, a few; at Deering, 10, etc.

Day school opened September 1 and closed April 4, 1903. Only the older pupils can read with much understanding, but all read better than they speak. Some of the older ones read page after page from the Bible, but understand but little on account of the limited bounds of their observations—an isolated people in a desolate land. They have never seen much of anything but snow and tundra, and have but a faint conception of the great world outside. They have splendid memories and make good progress.

They say they are very thankful for the new and enlarged schoolroom. Our pupils still have to sit on the floor and use the backless benches as desks, but a beneficent Government will most probably furnish other supplies some time in the future.

All in all, the progress of the mission has been delightful to contemplate, as Christianity seems to be sweeping the country there. And the fruits are very blessedly manifest in many ways. God's blessing has rested richly upon all concerned, and to Him be the praise.

SKETCH OF FRIENDS' MISSION AT KAKE, ALASKA.

[By S. R. Moon.]

The Friends of the Oregon Yearly Meeting, desiring to open a mission work among the natives of Alaska, sent me to Kake village, on Kupreanof Island, about 100 miles from Wrangell. Here I hired an Indian with his canoe for $50 to take me and a six months' supply of provisions to Kake. I arrived there March 5, 1894. (My wife and two little boys and Mrs. Liter, a minister and trained nurse, came six months later.) At Kake we found a native village of thirteen dilapidated houses and three others partially inclosed, and a Government schoolhouse, with a teacher's room, 12 by 16, built on the end of it. Through the kindness of Judge Kelly, local school superintendent, I was given the privilege to occupy it until I had one erected, for which I had to pay two Indians 25 cents per log for 100 small 20-foot logs, delivered on the beach at our place. All lumber goods and nails had to be brought from Wrangell by canoe or rowboat, often taking three or more weeks to make the trip.

The Kakes have always been regarded by both whites and natives as being the most savage and worst hoochinoo makers in southeast Alaska. We were very kindly received by them, though some of them expected if we were to help them it would be in a mercenary way. They would charge $2.50 for bringing my mail, or 25 cents per letter. There were about 300 of the Kake Indians—men, women, and children—crowded into the few houses. Only one house had openings for windows; the glass had been broken out, so boards were nailed on. The opening in the roof served for chimney and window, the fire being built on a gravel bed in the center of the house; a few had lanterns. We have visited the people evenings, when they would pour on a can of seal oil or cut off a few slices of venison fat to give us a brighter light. Sometimes they would run with a chunk of wood on fire to serve as a lantern. Our cook stove was a novelty to them; they would often ask the price of it; some came and tried baking bread and were pleased.

Several of the natives have told how they would plan to build a house when they came to the village from their summer's work, but soon some one would bring in some hoochinoo and give them a drink, and they would keep on drinking often until their money was gone, and sometimes their clothing and provisions destroyed. When they sobered up and saw the wreck, they would wish for a missionary to come and teach them a better life. Some said they must show a respect for the missionaries

and drink and carouse in the village. Often when I would be detained on my trips to Wrangell the people would be anxious for my return. They would advise me about the waters and weather, knowing I was a stranger.

On a casual visit among them one could not comprehend the darkness and superstition that existed among them. At that time there were five Indian doctors among them, and the people believed them to have a supernatural power with their spirits. All ailments, chronic or acute, are believed to be caused by a witch, and all the people lived in fear of being called a witch, especially if they had enemies, as by their law witches should be got out of the way as soon as possible. Three innocent parties have met death from this cause in the last ten years. The deeds were committed while they were out in camp.

Those who came to church always seemed to enjoy the services. In the day meetings the house was often crowded, but very few would come at night, as there were some graves to pass near the schoolhouse.

We opened a day school, but it was a difficult task with such a crowd of wild folks and no interpreter. "Yes" and "no" was about the extent of their English vocabulary. Then there was so much feasting and dancing, and often on bright days the children would get out on the beach and have a gambling game, and, like all children, would go where the excitement was, as there was no restriction. The parents were only in the village from nine to twelve weeks.

The second year after I came to Kake a man from Juneau came with a stock of merchandise, and always kept a stock of black molasses on hand, which greatly tempted these natives to keep up their hoochinoo brewing, and, like the white man's whisky, the result was fighting and troubles, while they congregated in the village to visit and settle feuds, which caused a great many blankets and personal effects to change hands.

The water being the highway, the only conveyance was by canoes. A rowboat belonging to myself and a native was the only boat used for some years.

Now the village consists of the Government schoolhouse, repaired and painted; a large church building, a missionary's residence and barn, with 2 acres of cleared land fenced in, and a store building run on better principles. Thirty-three native houses have been built, some individually, and finished up inside quite comfortably, and thus they will stand for years. The old custom, when a building was barely inclosed, was to give a feast and potlatch. All the old houses but one have been remodeled into more modern structures and painted; each house has from two to eight windows. Some of the large partnership houses are being partitioned off to the families, as some have from four to six families owners of one house. All have heating stoves and one or two cook stoves. Sewing machines, wringers, bedsteads, chairs, tables, plates, cups, and metal spoons take the place of the horn and wooden spoon and washbowl, with the parties seated around it on the floor eating. The younger people are fast building small houses for themselves.

A number of sailboats, sloops, and one small steamboat are owned by the natives. They are fast realizing that drink and the keeping up of the old customs have deprived them of many comforts in their own homes. There is less practice of the old customs, and with less vigor, than a few years ago.

There is but one Indian doctor living, and he is very feeble. The younger people see so much harm done by these doctors they are even ashamed to speak of them.

A Kake man is now serving a life sentence in the San Quentin prison for following the directions of these doctors. I have received many letters from him acknowledging deeds done under the Indian law, with sad regrets for it, and he abhors drink and these old customs, saying that they are what have put him where he now is, and begs of his people to lay aside these foolish customs. I have received letters from the officers in San Quentin prison recommending his release, as he is obedient in every respect. Being the only Alaskan there now, and as his health is failing fast, we hope he will be permitted to return here to his people.

Our meetings for worship, both Sabbath morning and evening, and the Wednesday evening prayer meetings are well attended. We often hear them say that now when they hear anyone on the street at night singing they are not frightened, for they can understand that it is a gospel song. Before the missionary came any singing or loud talking meant trouble.

There are 60 members of the Friends' Church here, and are living consistent lives as far as their enlightenment. There have been 10 marriages by Christian ceremony the past year. In one instance the marriage of the parents and a daughter occurred on the same day.

The Kakes have this winter collected and subscribed money enough to get 12 instruments for a brass band. They are obliged to have some amusement during the long winter evenings, as they can not read and they are fond of music. Now,

when they have any offenses to settle, it is in a Christian way by acknowledgment and hand shaking with the majority of them, and the parents are getting interested in their children's education, though they are obliged to be away from the village to earn a living. Some desire us to take their children in a home, but we are not yet prepared to build a home. We recommend them to send boys and the larger girls to the Sitka Training School. We have taken five small girls in our home, and their parents help to support them.

Take the Kakes as a tribe, they are apparently a healthy people; but if any sickness attacks them they are likely to develop consumption. They are getting to recognize that fresh eggs and milk are better diet for the sick than dried fish and meat. Some of the natives are keeping chickens. They are fast giving up the old mode of women sitting down and stirring up the ground with a stick for a garden, when they see our ox with the plow (a big knife, they say) doing it so easily.

The blossoms on the apple trees and red cherries are spots of attraction on the mission premises. They are becoming more naturalized to the taste of cultivated fruit, and are anxious to plant currants, raspberries, and rhubarb roots; also to plant more of a variety of the hardy vegetables.

Our helpers in the work were Frances Liter, who came for two years and then returned home; Anna Hunnicutt and Lizzie Morris, of California, came the autumn of 1895. Anna Hunnicutt felt called to other fields the spring of 1896. Lizzie Morris remained until 1899, and went home on a visit to rest, but her health would not permit of her return. In the autumn of 1902 Malinda Newby, of Newberg, Oreg., came to assist in the work, but owing to failing health returned home in January. We now have four native men and wives as helpers in the church work. One of our faithful helpers was called from his work to a reward a year and a half ago. Our present interpreter is also the policeman, and I can say that he is faithful in discharging his duties.

MISSIONS OF THE CONGREGATIONAL CHURCH.

[By Rev. Washington Choate, D. D., secretary.]

Congregational churches are established at three points in Alaska—Nome, Valdez, and Douglas.

The work at Nome is that of an independent, self-supporting church, and we are unable to give the facts with regard to membership or general conditions. The pastor is Rev. C. E. Ryberg.

At Valdez the pastor is Rev. William Burnett. There is a membership of 8 in the church. The changes taking place in the population have very positively affected the membership of the church. During the past year 5 have been added to this number on confession.

The church at Douglas is under the pastorate of Rev. Thomas Coyle. This church has a membership of 14, with a Sunday school of 90. The Sunday school at Valdez has 55 members.

The Eskimo mission at Cape Prince of Wales continues to make marked progress. No detailed report received.

The above include the reports submitted to me by the various missionary organizations at work in Alaska.

Very respectfully, yours, SHELDON JACKSON,
United States General Agent of Education in Alaska.

The COMMISSIONER OF EDUCATION.

CHAPTER XLV.

THIRTEENTH ANNUAL REPORT ON THE INTRODUCTION OF DOMESTIC REINDEER INTO ALASKA.

DEPARTMENT OF THE INTERIOR,
BUREAU OF EDUCATION, ALASKA DIVISION,
Washington, D. C., December 31, 1903.

SIR: I have the honor to submit the thirteenth annual report on the introduction of reindeer into Alaska. The winter of 1902–3 was one of unusual severity, both as to the degree of cold and depth of snow. In many sections, especially along the coast, there was a succession of thawing and freezing of the snow until several layers of ice and crust had been formed so thick that even the hard hoofs of the reindeer could not dig down to the moss, and in those sections it became necessary to drive the reindeer farther away from the coast where these conditions did not exist. Notwithstanding the unfavorable conditions, the reindeer did surprisingly well. During the spring of 1903, 1,877 fawns were born and lived. The reindeer multiply rapidly. From the 1,280 reindeer which have been imported from Siberia between the years 1892 and 1903, and from their natural increase, 7,983 living fawns have been born in Alaska. Commencing with 79 fawns surviving in the spring of 1893, over 500 were born in 1898 and over 1,000 in 1901, and it is reasonable to expect that over 2,000 will be born in the spring of 1904. Thus the herds are increasing by a progressive increment and doubling their number by birth every three years.

At present there are 6,505 reindeer gathered in eleven herds at nine central stations. Seventy-five persons have an ownership in these deer. They are distributed as follows: 2,841 belong to 68 Eskimo herders; 741 are loaned to missionary stations of the Norwegian Evangelical Synod, the Swedish Evangelical Union, the Presbyterian, Moravian, Roman Catholic, and Friends; 500 loaned to 5 Laplanders; 650 owned by 5 Laplanders; 1,435 are the property of the Evangelical Swedish Union, the Episcopal, Presbyterian, Norwegian Evangelical Synod, Moravian, Friends, and Roman Catholic mission stations, and 338 are still remaining in the Government herds to be hereafter loaned.

The reindeer are held by their owners subject to the conditions of a written agreement with the United States which prevents the slaughter of the female deer for meat and the sale of female deer to any other party than the Government, and insures the instruction of the apprentice in the arts of training and breaking the deer to harness. Surplus male deer are allowed to be sold to miners or others for meat or transportation purposes. The Eskimo apprentice during the five years of his training is supported and clothed either by the Government, the mission station, or a herder, according as he is employed by one or the other of these parties. In addition to food and clothing he is allowed the loan of two female deer per year, upon which he must place his mark and consider the deer and her offspring as the beginning of a future herd, subject to Government limitations. If at the end of five years the apprentice is judged to be skilled in the training of reindeer, he is loaned a sufficient number of additional deer to increase his holding to 50 animals. These deer are usually retained in the general herd under the care of an experienced Lapp and the

supervision of the mission station with which the herder is connected. This general supervision extends for twenty years, at the termination of which the Government or missionary station gives up all supervision or control.

If, however, during this period of twenty years the herder indulges in a protracted season of intemperance, abandons or otherwise fails to care for the herd, the Government is at liberty to dispossess him of its loan, and reloans the same to other parties who may give evidence of making a better use of the loan. This works no injustice to the individual herder, as the herder during the five years of his apprenticeship has had from the Government or missionary station regular food and substantial clothing, far better than he would have had if he had remained away from the herd. The same is true after the years of his apprenticeship are ended; he will continue to receive food and clothing from his herd. When an apprentice becomes a herder he is expected to secure the support of himself and family by the sale of surplus male deer to butchers and miners, and expected to train some other apprentice. In most cases this apprentice is some member of the herder's family. There are now 25 Eskimo herders who have served an apprenticeship of five years or more supported at the different stations. The herders have 61 Eskimos now under training as apprentices who do not own any deer. As many of the herders have families of growing children and relatives living with them, it is estimated that at least 300 natives are now obtaining their support from the deer.

Thus for the $183,000 appropriated up to the present year by the Government for the introduction of reindeer into Alaska, the Government has to show 6,505 reindeer used for the instruction and support of about 300 Eskimos.

On January 3, 1903, the Commissioner of Education, with the approval of the Secretary of the Interior, made an agreement with the Northeastern Siberian Company (Limited) for the delivery of 400 female reindeer by said company to the Government at the Teller reindeer station. The company is reported to have secured in Siberia 700 deer in fulfillment of its agreement with the Government, but before navigation opened in northern Bering Sea the Russian Government recalled its permission to export the deer to Alaska. On account of this action of the Russian Government no deer were exported from Siberia to Alaska during the year.

PERSONNEL.

General superintendent: Carl O. Lind, M. D., Unalaklik, Alaska.

Local superintendents: Samuel R. Spriggs, Point Barrow; Dana H. Thomas, Kotzebue; Hugh J. Lee, Cape Prince of Wales; Tolef L. Brevig, Teller; Edgar O. Campbell, M. D., Gambell (St. Lawrence Island); O. P. Anderson, Golofnin; Carl O. Lind, M. D., Unalaklik (Eaton); Adolf Stecker, Kuskokwim; Julius Jetté, Nulato.

Laplander teachers: Alfred Salmonsen Nilima, Kotzebue; Isak Andersen Bango, Nulato; Nils Klemetsen, Teller; Per Larsen Anti and Ole Pulk, Gambell; Ole Olesen Bahr and Nils Persen Bals, Unalaklik (Eaton); Per Nilsen Bals, Nulato; Nils Sara and Per Spein, Bethel, Kuskokwim Valley.

Eskimo herders and apprentices:

Point Barrow: Ahlook, Electoona, Shoudla, Tokpuk, Panigeo, Segevan, Paneoneo, Powun, Ungawishok, Otpelle, Ingnoven.

Kotzebue: Okamon, Oghoalook, Minungon.

Cape Prince of Wales: George Ootenna, Stanley Kivyearzruk, James Keok, Thomas Sokweena, Frank Iyatunkuk, Joseph Enungwouk, Sinrok, Karmun, Oblee, Ongnalook, Masoak, Oknaklook, Teomok, Peter Ibiono, Okboak, and Erheruk.

Gambell (St. Lawrence Island): Sepilla, Putlkinhok, and Pinink.

Teller: Ablikak, Dunnak, Sekeoglook, Serawlook, Sagealook, Coxrook, jr., Kotezuk, Neeluk, Mrs. Immuklina, Nunasarlook, Ehrnak, jr., Ahberina, Etugeeuk, Ahneemausook, Emausrook, Dora, Elahkan, Ogeelesook.

Golofnin: Constantine, Toktok, Tautook, Ahmahkdoolik, Pamakcheerk, Albert Angotak, Benjamin Jutmans, Peter Egelak, Mrs. Dexter.

Unalakleet: Moses, Okitkon, Tatpan, Nellagoroak, Stephen Ivanoff, Mary Andrewuk, Kotoak, Angalook, Sagoonuk, Accebuk, Avogook, Amikravinik, Sakpillok, Koutchok, Moses Koutchok, Big One.

Nulato: Stephen Annu, Alexander Kulana, and John Rorondelel.

Kuskokwim: Wasili and Robert.

STATIONS.

Point Barrow.—The annual supplies for the herders and apprentices at this station, shipped from San Francisco in May last, failed to reach Point Barrow on account of the unusual ice conditions. The schooner *Madsen* reached within about 100 miles of the station, when it was compelled to turn back; the supplies were returned to San Francisco. This would have left the station dependent upon the reindeer herd for almost its entire subsistence. Fortunately, however, some supplies were procured from the whalers as they were starting on their return trip to San Francisco. In view of the failure of the annual mail and supplies to reach Point Barrow, it has been decided to establish an additional station south of Point Barrow, at the edge of the summer ice fields. Counsel was taken of Captains Tuttle and Healy, also of Lieut. D. H. Jarvis, of the Revenue-Cutter Service, with reference to the best point on the coast that could unfailingly be reached every summer, and upon their suggestions Wainwright Inlet has been selected, and this coming summer it is hoped to erect the necessary buildings and start the station.

This new station will be of much assistance in operating the new winter reindeer mail route, which has been established by the Post-Office Department at Washington between Kotzebue and Point Barrow, a round trip of about 1,500 miles.

It is recommended by Doctor Marsh, superintendent of the Point Barrow reindeer station, that Ahlook, Shoudla, and Paneoneo, with their reindeer, be sent to the new Wainwright Inlet station, and that Electoona and Otpelle be sent to the Kivalena River, near Point Hope.

Lieut. D. H. Jarvis, who was in charge of the famous reindeer relief expedition to the whalers at Point Barrow in the winter of 1897–98, suggests, as the result of his experience, that relay stations be established, commencing with Kotzebue, in the following order: First, at a point 100 miles north of Kotzebue (Corwin Lagoon); second, at Kivalena River, near Point Hope; third, in the neighborhood of the coal mines at Cape Lisburne; fourth, about midway between the coal mines and the Wainwright Inlet station; fifth, Wainwright Inlet; sixth, at a point between Cape Beaufort and Kukpowruk.

During the winter of 1902–3 an epidemic broke out among the animals in the neighborhood of Point Barrow, called by the natives "mullo kully," or crazy. The dogs died by scores; the mission station lost 7 dogs, the whaling station out of 70 dogs saved only 12; some families lost every dog they owned. The disease extended to the foxes and also to the reindeer. Natives out trapping could walk around and knock sick foxes in the head.

Kotzebue.—The winter of 1902–3 was one of unusual severity, the thermometer registering 54° below zero and the snow lying with an average depth of 7 feet. Notwithstanding the depth of snow and the difficulty of the reindeer procuring food, the grown deer came through the winter without any losses from starvation and in fairly good condition. The effect of the difficulty of securing sufficient food was found in an unusual number of deaths among the fawns. The superintendent reports a growing interest in the reindeer upon the part of the natives, and he states that now without exception the young men are glad of the opportunity to be taken into the herd as apprentices. He recommends that the peninsula between Hotham Inlet and Kotzebue Sound be set apart by the President as a reindeer reserve.

Cape Prince of Wales.—Six of the herders at this station have accumulated a sufficient number of deer to be self-supporting. Next year another will enter upon self-support, and in the following year, 1905, there will be two others. Four of the Eskimo herders in the fall of 1902 ordered their supplies at San Francisco. These supplies were sent up during the past summer and aggregated in value $4,200. This sum included lumber bought by one of the Eskimo herders for a five-room house, 30 by 20 feet in size. In addition to these independent Eskimo owners there are five mission apprentices and five herder apprentices, making 16 Eskimos who have an actual interest in this herd. The past winter was not a favorable one for the herds, there being an unusual depth of snow and an unusual amount of ice formed from the December rains, followed by severe cold. This icy crust to the snow made it difficult for the deer to dig through to procure moss.

Gambell (St. Lawrence Island).—The report notes that in many level places the snow covered the ground to a depth of 10 feet, the average, however, not being over 2 feet. During the season five sets of pack harness and two additional sleds were made. Frequent trips were made during the summer looking for stray deer, and especially in familiarizing the herders with the best pasturage for the deer and good camping places for the men. During the winter of 1902-3 a long reindeer-sled trip was made around the island in search of wrecked sailors that were said to be upon the island. The report proved to be a canard. An epidemic of bronchitis and hydrophobia carried off a large number of dogs, and among them the Lapp herding dogs, so that now there are none in connection with the herd.

At this village there has always been difficulty in securing apprentices who take any real interest in the reindeer.

Teller.—On the 20th of December, 1903, 100 reindeer in this herd belonging to the Government were loaned to Nils Klemetsen and removed to his station at Golofnin. With him were the Eskimo herders, Tautook, with 108 deer, and Ahmukdoolik, with 10 deer. Fifty-seven additional deer belonging to the Government were driven to Unalakleet and loaned to Nils Sara. In March, 1903, a white man who had traded whisky to the herder for reindeer meat was convicted and sentenced to jail for five months. The herder and his brother-in-law, both of whom had become drunk and disorderly, were convicted and sentenced. The orphanage of the Norwegian Lutheran Mission at Teller is reported as caring for 30 Eskimo children.

Eaton (Unalakleet).—On September 6, 1902, the two herds were driven from their summer quarters on the peninsula to their winter pasturage, the main herd, under the supervision of Ole O. Bahr, to South River, and the other, in charge of Per Spein, to a river still farther east.

On November 17, 1902, Nils Klemetsen, Nils Sara, and Nallagorook were sent to Teller to bring back the Government deer which were at that point. Returning to Unalakleet early in February, in accordance with contract, Klemetsen received the loan of 100 deer. On February 5 Nils Sara and Per Spein, with their families and herds, were started for their new station at Bethel, on the Kuskokwim. They were assisted on the journey by Nils Klemetsen and the native herder Tatpan. The two herds were fat and strong and said to have been the finest ever sent out from Eaton. Soon after they had left Unalakleet storms commenced that lasted through February, March, and April. After many hardships they reached the Yukon River in the neighborhood of Andreafski. Crossing the river on the ice they found that on the south side the moss was covered with such a heavy coating of solid ice that the reindeer were unable to secure pasturage, and they were compelled to retrace their steps to the northern side of the river and go into camp, where they were compelled to remain, suffering much inconvenience, from the 1st of April to November 25. On the 25th of November the journey was resumed, and Bethel was finally reached December 3, 1903.

On the 5th of April the Eaton herd was driven from its winter quarters to the fawning ground on the south side of Shatolik Mountain, about 40 miles distant. The station reports an unusual depth of snow and severe cold, the thermometer registering at one time 72° below zero.

On the 26th of April Nils Bals and family arrived after a hard trip from the Kuskokwim, and later Mr. Bals was placed in charge of Mary's herd.

Nulato.—The station reports during the winter of 1902–3 that the usual winter pasturage was covered with 7 feet of snow and the herd was transferred 10 or 15 miles south of Nulato, where the snow was not so deep.

During the summer Isaak Bango, Laplander in charge, was transferred to the Teller station, his place being taken by Nils Persen Bals.

Bethel (Kuskokwim River).—Mr. Bals and his son, who had been in charge of the herd at this station for two years, in February last resigned and returned to Unalaklik. Messrs. Sara and Spein, who were started in February last to take the place of the Messrs. Bals, were storm-stayed at Andreafski and detained there until November. It is hoped that they finally arrived in safety at Bethel about the close of 1903.

SUPERVISOR OF REINDEER.

Carl O. Lind, M. D., a medical missionary of the Swedish Evangelical Church, and a former teacher of the United States Bureau of Education in Alaska, has been appointed supervisor of the reindeer herds in Alaska, with headquarters at Unalakleet.

STATISTICAL TABLES.

Special attention is called to the gratifying progress of the reindeer enterprise as exhibited in the following tables.

Herds of reindeer.—The following table shows the number of fawns born during the spring of 1903 and the number of domestic reindeer in the nine herds in Alaska, July 1, 1903:

Number, distribution, and ownership of domestic reindeer in Alaska.

a 246 deer were killed in the relief expedition to the whalers at Point Barrow.

TABLE OF HERDS LOANED BY THE GOVERNMENT.

A number of reindeer have been loaned by the Government to missionary societies and natives, the Government reserving the right, after a term of three to five years, of calling upon the mission station or individual for the same number of deer as composed the original herd loaned.

1898	12,500		
1899	12,500	Total	183,000
1900	25,000		

Expenditure of appropriations "Reindeer for Alaska, 1903."

Amount appropriated	$25,000.00
Salaries of six employees	3,247.29
Supplies for stations	6,408.05
Freight	691.50
Traveling expenses	139.00
Printing of annual report (1,000 copies)	471.13
Photographs and electros for report	18.95
Coal	1,650.00
Purchase of reindeer	5,727.12
Balance	6,646.96
Total	25,000.00

REINDEER AN IMPORTANT FACTOR IN THE CIVILIZATION OF THE ESKIMOS.

For some months past the newspapers have from time to time published cases of destitution among the Eskimos and the natives of northern and central Alaska, also accounts of the ravages of consumption and other diseases, and the demoralization caused by the proximity to the saloons that are being established in the new mining settlements. While these newspaper reports are doubtless more or less exaggerated, yet, from the official reports of Brig. Gen. Frederick Funston to the Adjutant-General United States Army, Washington, D. C., of Mr. James W. Witten, special inspector of the General Land Office, to the Secretary of the Interior, both of which reports are printed in the appendix of the report of the Secretary of the Interior for the fiscal year ending June 30, 1903, from interviews had with members of the committee of the United States Senate that visited Alaska during the past summer, and from my personal knowledge, there is a certain amount of destitution, a prevalence of consumption, and demoralization from liquor that should receive attention from the General Government.

This raises the question what that attention should be and how these natives can be made valuable helpers and assistants in the development of the country by the white men now there engaged in mining operations.

Any successful method of accomplishing such desirable results must keep clearly

before it the aim to prepare the natives to become a help to the immigrants who come from the States for the purpose of conducting mining operations. There are two things which the native may be taught to do which will enable him to help the immigrant: First, he may be taught how to create a supply of cheap food; second, he may be taught how to supply a cheap transportation by means of reindeer. It is known that in the river valleys certain garden vegetables may be produced in large quantities, even up to the Arctic Circle and for 50 miles beyond it. The native knows how to take fish from the rivers and from the sea for his family use, and with proper training can be made an equally successful fisherman for the market.

The experience of the past twelve years has proved that he can also become skillful in raising reindeer for food. With the gradual disappearance of the caribou and moose in sections of Alaska, and the difficulty and expense of bringing beef and mutton from the States to the inland mining camps, it is of great importance that the Eskimo be trained to raise reindeer with which to supply the immigrant miner with fresh meat.

When in the winter of 1897–98 400 sailors engaged in whaling were imprisoned in the ice off Point Barrow and in danger of perishing with scurvy and starvation, they were saved by the reindeer herd driven by Eskimos from Bering Strait to Point Barrow and slaughtered for food.

Already 68 Eskimos and 1 Indian (nearly all of whom have served a five years' apprenticeship learning the business) own 2,841 deer. Reindeer multiply rapidly. From the 1,280 Siberian reindeer imported between 1892 and 1903 and from their natural increase 7,983 fawns have been born in Alaska.

The Eskimo has always been skillful in driving dogs, and now, under instruction, he is proving equally skillful in driving reindeer, and upon various occasions, when the opportunity has offered, has invariably demonstrated his ability to successfully transport with reindeer mails, freight, and passengers between mining camps. Under contract with the Post-Office Department the United States mail has been carried by reindeer teams on the four postal routes between St. Michael and Kotzebue, Eaton and Nome, Teller and Deering, and Kotzebue and Point Barrow (this latter being the most northern mail route in the world). With the increase of reindeer and trained native teamsters such service will become universal in northern and central Alaska.

When the native has thus become useful to the white man by supplying the markets with fish and fresh meat, and when he has become herdsman and teamster with reindeer, he has not only assisted the white man in solving the problem of turning to the use of civilization the vast territory of Alaska, but he has also solved his own problem. If useful to the white man as a self-respecting and industrious citizen, he has become a permanent stay and prop to civilization, and his future is provided for.

The conclusion resulting from this is that the native must be taught in school how to speak English, and be trained in industrial schools in the simple arts of agriculture and of reindeer herding and teaming with a view to provide cheap food and cheap transportation for the use of the immigrant.

To accomplish such training it is important that an increased number of small industrial schools shall be established at centers convenient to the native population.

At these schools, in addition to elementary instruction in the English language, there shall be given special instruction (*a*) in making fish nets and in adopting improved methods of catching and preparing fish for family use and for sale; (*b*) in the care and raising of reindeer, and in their breaking in and use in transportation; (*c*) wherever the conditions of soil and climate will allow, in the cultivation of hardy vegetables.

While destitution is not at present very widespread among the natives, yet it may be wise to have at each of these schools a small supply of food and clothing to afford temporary relief for very special cases of destitution. The principal of the school

can be made a bonded officer of the Government, and be charged with the care and distribution of such supplies without additional expense to the Government.

The Secretary of the Interior has again and again called the attention of Congress to the need of hospitals for the natives. These should be provided for at once. But when the hospitals are erected they will necessarily be accessible to comparatively limited areas. In addition to the proposed hospitals, very important service may be rendered and a greatly increased number of natives benefited by the employment of a physician in connection with each of the industrial schools. This plan has been in successful operation at several of the missionary stations in Alaska.

REINDEER AND THE MINER.

While the original purpose in the introduction of domestic reindeer into Alaska was to assist in the civilization of the natives and to help them to a better and more certain method of gaining a livelihood, yet the reindeer will prove equally important to the whites who may seek homes or engage in business in subarctic Alaska.

In the development of the rich mineral resources of that region he will find the reindeer and the Eskimo herder and teamster the connecting link between himself and the resources of nature—for his comfort and for his profit.

The ordinary white man is unwilling to undergo the drudgery of herding in that rigorous climate, and unwilling to work for the small compensation that is paid for such services. He can do better. His directive ability can be more profitably employed as merchant and manager of transportation, in employing and directing the trained Eskimo herders and teamsters.

With the increase of domestic reindeer in Alaska it will become possible for white men to own large herds, but the men that will do the herding and teaming will always be Eskimos and Laplanders.

Thus the Eskimo, trained as herder or teamster, will prove valuable to the white man, and the white man, in turn, as director and employer, will be valuable to the native.

Already the reindeer have given evidence of some of the ways in which they will prove an important factor in the development of the great north region.

As the reindeer is the only draft animal in arctic regions that is able to secure its own food while on a journey, the question of cheapness and speed will bring it into universal use.

They will carry passengers, mails, and freight between the mining camps and the trunk railways that will yet penetrate Alaska.

EMPLOYMENT OF REINDEER.

As the reindeer are more and more coming into use in the development of northern and central Alaska, a recapitulation of their employment in mail carrying, relief expeditions, freighting, etc., is of interest.

In summer these enterprises are carried on with the aid of steamers along the water courses, but in the fall, winter, and spring recourse is had to reindeer and dogs.

REINDEER AND THE CARRYING OF THE UNITED STATES MAILS.

Reindeer mail between St. Michael and Kotzebue, with a branch line to Golofnin.—During the summer of 1899 the Second Assistant Postmaster-General gave to Mr. William A. Kjellmann, superintendent of the reindeer in Alaska, as subcontractor, the carrying of the mail on route No. 78110. This route called for three round trips during the winter of 1899, between December 1, 1899, and May 31, 1900, between St. Michael, Eaton, Golofnin, and Kotzebue—the latter place being north of the Arctic Circle. Mr. Kjellmann, being compelled to return to the States on account of

sickness, gave the work into the hands of Mr. David Johnson Elliott, who employed Johan Peter Johannesen, a Laplander, not in the employ of the Bureau of Education, as mail carrier. The service was successfully performed with reindeer, each round trip of 1,240 miles being through an unbroken wilderness without a road or trail. The Bureau of Education being very anxious to provide its schools on this route with mail facilities, and desiring to show what the reindeer could do, and at the same time give practice and experience to its apprentices in reindeer teaming, allowed the use of three or four deer, with sledges manned by apprentices from the Eaton station, without compensation.

Reindeer mail between Eaton and Nome (post-office route No. 78113).—In the fall of 1899 the Post-Office Department, wishing to expedite and increase the mail service along the Yukon River and to Nome to a semimonthly winter service, on the 23d of November gave a contract for a semimonthly mail between Nome and Eaton to Mr. William A. Kjellmann, who had eight months previously severed his connection with the Government on account of ill health. Mr. Kjellmann, not having recovered his health, employed Mr. David Johnson Elliott, of Nome, to take charge of this mail route. Mr. Elliott was also taken sick and went to the hospital in Nome for the winter. To prevent a failure in the delivery of the mail at Nome, the post-office inspector at St. Michael directed Dr. F. H. Gambell, Government superintendent of reindeer and postmaster at Eaton, to put on a service to Nome at the expense of the contractor. Mr. Newman Sherzer was relieved from his duties as assistant superintendent at the station and appointed manager of the reindeer mail service to Nome by Doctor Gambell. On the 1st of March, 1900, the reindeer started from Eaton with the mail for Nome. Five consecutive successful trips were made, thus completing the winter contract.

At the close of the service Doctor Gambell, in behalf of the Eaton reindeer station, made out a bill against Mr. Kjellmann, charging him with the wages of the men, station supplies, use of the reindeer, etc., amounting to $1,863.50. Of this sum, Mr. Kjellmann paid the carrier, Mr. Sherzer, $500. He also sent to Sheldon Jackson his power of attorney and a check for $1,000, with which to pay Mr. Kjellmann's indebtedness to the Eaton reindeer station for expenses incurred in carrying this mail, objecting to certain items on account of informality of the vouchers, which items aggregated $363.50. Accordingly Mr. Jackson, as Mr. Kjellmann's attorney, with the advice and consent of the Commissioner of Education, expended the thousand dollars received from Mr. Kjellmann to replace supplies at the reindeer stations as follows:

Reindeer supplies from S. Foster & Co., San Francisco, Cal	$257.26
Reindeer supplies from Armour Packing Company	139.50
To Mr. W. T. Lopp, for services of himself and assistants in transferring a herd of Government reindeer from Cape Prince of Wales to Kotzebue, by direction of the Bureau of Education	350.00
To Nils P. Bals, in payment of wages as instructor of apprentices in the care and management of reindeer	253.74

Reindeer, pack saddles, and sleds furnished Mr. N. V. Hendricks, subcontractor on mail route between Weare and St. Michael.—In the spring of 1900 Mr. N. V. Hendricks, a trader on the Yukon River and subcontractor on the post-office mail route between Weare and St. Michael, arranged with Doctor Gambell, superintendent of Government reindeer station at Nome, for the use of a few reindeer, saddles, and sleds for carrying the mail between St. Michael, Eaton, and Nulato, a distance of about 200 miles each way.

Reindeer mail route between Nome, Candle, and Deering.—During the winter of 1901–2 Mr. J. T. Lindseth secured the contract for carrying the United States winter mail from Nome, via Teller, York, Cape Prince of Wales, and Shismaref Inlet, to Candle and Deering, on the shores of the Arctic Ocean, a distance of 260 miles. His reindeer

during the winter traveled 6,000 miles. The mail carriers were Amund Hansen, Isak Salamonsen Nikkila, and Johan Peter Johannesen. Johannesen lost his life near Candle, being frozen to death while carrying this mail. His reindeer team was afterwards found well and in good condition. He had previously carried the mail for the Norwegian Government many years in Lapland. Mr. Lindseth hired reindeer from their owners (Eskimo herders who had completed their apprenticeship at one or the other of the reindeer stations in Alaska). The Bureau of Education had no connection with the matter.

Reindeer mail route between Kotzebue and Point Barrow.—One of the great needs of Alaska is better communication and postal facilities. This is especially the case north of the Arctic Circle. Although at Point Barrow the Government has had a relief station and a public school, and the Presbyterians a mission station, and capitalists a whaling station for the past dozen years, yet the place has had but one mail a year, and on three occasions during the past twelve years the yearly mail failed to reach them. The conditions were so distressing that Mr. S. R. Spriggs, the Government teacher, while on a year's furlough with his relatives in New York, availed himself of the opportunity, and with the assistance of friends made application to the Post-Office Department for a winter mail, which was granted, and a contract for carrying the same was awarded to Mr. Spriggs. The distance from Kotzebue to Barrow via Point Hope is 630 miles, making a round trip of nearly 1,300 miles, north of the Arctic Circle, over a country without a road or trail and through a long winter night with the thermometer ranging from 20° to 60° below zero. He is allowed by the Post-Office Department $750 for each round trip, a sum barely sufficient to cover the incidental expenses and allow a slight compensation to the hardy Eskimo drivers, who, at the risk of their lives, carry the mail on this northernmost postal route in the world. The time consumed in making each round trip will be between two and three months. There will be times when they will be storm bound in their snow huts for several days at a time. The Bureau of Education, to encourage and assist these pioneers of civilization, to furnish the Government employees at Barrow with mail facilities, and to practice and train its apprentices in reindeer freighting, allows the use of a few deer without compensation.

Reindeer mail routes between Teller and Wales and between Teller and Igloo were in operation during the winter of 1903–4.

REINDEER IN CONNECTION WITH RELIEF EXPEDITIONS.

Transportation of United States troops with camp equipage and rations from St. Michael to Golofnin and return.—In the fall of 1896 gold mines were discovered on Snake River, near Cape Nome, Alaska, and during the winter there was a stampede to the new mines from St. Michael, Kotzebue Sound, and the mining districts on the lower Yukon that received the information. The influx of a large population into a region where there was an insufficiency of supplies and shelter required the presence of United States troops to preserve the peace. An application was made by Captain Walker, in command of the camp at St. Michael, to Mr. Kjellmann for transportation, in response to which Lapps and reindeer were sent from Eaton station to St. Michael, and transported troops, with their tents, rations, and camp equipage, from St. Michael to the Golofnin Bay mining region. When there was no longer any need for their presence at Golofnin Bay the Lapps and reindeer returned the soldiers to St. Michael without accident or difficulty.

Military expedition to Kotzebue.—In January, 1901, information having reached Nome that the Eskimo in the neighborhood of Kotzebue, 400 miles distant, were starving, the commanding officer at Fort Davis ordered Dr. J. Bevans, army surgeon at the post, to make a trip of investigation. He and his party were furnished at Teller by Superintendent Brevig with five reindeer, together with sleds and drivers, for a three months' trip.

Relief of soldiers engaged in building a military telegraph line.—In the fall of 1900 the War Department had three construction parties, aggregating about 110 officers and enlisted men, engaged in the work of building a Government telegraph line between Unalaklik and Kaltag, on the Yukon River. As the winter storms came on, one after another, all work had to be suspended, rations began to fail, and mule transportation gave out. In this emergency General Randall, in command of the military Department of Alaska, requested Doctor Gambell to take all the deer teams that could be spared and go to the relief of the Government party. Accordingly, on the 4th of December, Doctor Gambell started with 3 deer, leaving Mr. Lindseth, who had for about fifteen months been an employee at the Eaton reindeer station, to follow the next day with 32 deer and the necessary drivers and sleds.

The troops were found in camp 18 miles west of Kaltag, and with their camp equipage were brought through deep snow to a new camp established near Old Womans Mountain, a distance of 50 miles. The troops being left in a place of safety, the deer teams were sent, at the request of the commanding general, to St. Michael for the transportation of provisions for the men and telegraphic supplies, all of which they secured and delivered. They were also employed during a portion of the winter in drawing telegraph poles from the woods.

Relief of wrecked and ice-imprisoned whalers.—In the fall of 1897 word was received on the Pacific coast that 8 whaling ships and 275 men had been caught in the ice in the neighborhood of Point Barrow with only three months' provisions in their ships, and that the ships would necessarily be detained for twelve months, if not sooner crushed in the ice, before they could escape, and that starvation faced the whalers. A relief expedition, which ultimately cost nearly $100,000, was instituted by the Government for the rescue of those men.

Lieutenants Jarvis and Bertholf and Surgeon Call were put ashore near Nunivak Island to move northward with dogs about 750 miles to Point Radney and Cape Prince of Wales, where the reindeer herds of the Congregational Missionary Society (in charge of W. T. Lopp, their missionary) and of Antisarlook (an Eskimo reindeer owner) were in pasture. With nearly 500 reindeer from these herds, accompanied by Messrs. Lopp and Antisarlook, the officers proceeded to Point Barrow, where as many reindeer as were needed were slaughtered and issued as rations to the destitute whalers. The total number of reindeer killed was 246.

In accordance with the promise made, the deer borrowed were returned during the summer of 1900, the second year after the expedition, together with the annual increase of fawns during two seasons, making a total of 1,042 reindeer.

REINDEER FOR TRANSPORTATION AND FREIGHTING.

A winter trip of 2,000 miles.—Since the commencement of the enterprise, in 1892, the obstacles that it was predicted would prevent the successful introduction of domestic reindeer into Alaska have either been proved to be groundless or have one by one been met and overcome. Having shown by actual experience that they could be bought, transported, and successfully propagated, it remained to give a practical demonstration of their ability to traverse any part of the country under the most unfavorable circumstances and with a temperature at times lower than experienced by some of the arctic expeditions.

This was done in the winter of 1896–97. At 3 p. m. on the 10th of December, 1896, with the temperature at 15° below zero, Mr. William A. Kjellmann, the superintendent, accompanied by the Lapps Per Aslaksen Rist and Mikkel J. Nakkila, started from the Teller station with 9 sleds and 17 head of reindeer to demonstrate the capacity of the hardy and swift animal for winter travel in Alaska. Native trails and well-known sections of country were ignored, to show the ability of the deer to traverse unbeaten tracks. The course, while traveled by compass, was a zigzag one, in order to better learn the extent and abundance of moss pasturage. Scaling high

mountain ranges, shooting down precipitous declivities with toboggan speed, plodding through valleys filled with deeply drifted snow, laboriously cutting a way through the man-high underbrush of the forest, or steering across the trackless tundra, never before trodden by the foot of white man; gliding over the hard-crusted snow, or wading through slush 2 feet deep on imperfectly frozen rivers unknown to geographers, were the experiences of the trip.

The second day of the journey, with the temperature 43° below zero, and over a rough, broken, and pathless country, they made a distance of 60 miles.

After celebrating Christmas with Reverend Mr. Hultberg and the Swedish missionaries on Golofnin Bay, December 30 found Mr. Kjellmann's party crossing Norton Sound, an arm of Bering Sea, and getting into a crevasse filled with snow, from which they escaped without much damage.

The next day, keeping on the ice along the coast, hummocks were found so steep that steps had to be cut up and over them to enable the deer to cross.

On New Year's Day, coming to a flagstaff projecting from a huge snow bank, they found under it, completely buried in the snow, the comfortable home of the Reverend Mr. Karlsen and the Swedish missionaries at Unalaklik. On the afternoon of January 11 and morning of the 12th 85 miles were made in twelve hours. The native guides at St. Michael being afraid to undertake a winter trip across the country to Ikogmute, the Russian mission on the Yukon River, and affirming that it could not be done, Mr. Kjellmann started on January 19 without them, traveling by compass.

On the 23d, while crossing a barren mountain range, they were overtaken by that dread specter of arctic regions, a Russian poorga.[a] Neither man nor beast could stand against the blast. The reindeer were blown down and the loaded sleds overturned. The men, throwing themselves flat, clung to one another and to mother earth to keep from being blown away. Gravel and pieces of crushed ice flew by, darkening the air. A lull coming toward evening, with great difficulty a little coffee was made, after which the storm broke with renewed fury during the night, which, to the travelers, clinging to the earth with desperation, seemed endless. The following day a belt of timber was reached and rest and safety secured. January 25 and 26 found them cutting a way for the deer and sleds through a dense forest, from which they finally emerged to wade through snow and water 2 feet deep, with the temperature at zero. On the 31st they encountered a succession of driving, blinding snowstorms while crossing the tundra south of the Yukon delta, being reduced to such straits that they were compelled to cut the railing from their sleds for fuel. On February 5 the storm passed away, leaving the temperature at 73° below zero, causing even the reindeer to break loose from their tethers and tramp ceaselessly around the tents to keep warm.

Notwithstanding the severe cold, the journey was continued, and at 2 o'clock in the afternoon they found shelter and a warm welcome from the Moravian missionaries at Bethel. On the 10th of March, between the Kuskokwim and Yukon rivers, a lake 15 miles wide was crossed.

The struggle for life commenced, however, on the 11th, when they reached the Yukon, and, contrary to information, found no moss for the deer. A push was made up the Yukon to reach, if possible, the Episcopal mission at Anvik. There being no food, the march was kept up all night, the men plowing their way through loose snow from 2 to 4 feet deep, and on through the 12th, with snow falling fast. That afternoon two of the deer fell dead and were left with their sleds where they fell, while the journey continued uninterruptedly through the blinding snow the second night. On the 13th two more deer dropped dead and were abandoned, as the party with desperate energy pushed ahead day and night for food and life. On the 14th another deer fell in his traces. That evening a native hut was reached and the continuous march of four days and three nights without sleep or rest and without food for the deer

[a] An arctic blizzard.

was over. Trees were cut down by the Lapps, that the deer might browse on the black moss that hung from them, while Mr. Kjellmann, suffering with a high fever, was put to bed by the medicine woman and dosed with tea made from some medicinal bark. On the 17th one of the Lapps, who had been scouring the country, reported moss upon a mountain 60 miles away. The deer were unharnessed and driven to the distant pasturage, while Mr. Kjellmann continued his journey to Anvik on skees. In the hospitable home of Reverend Mr. Chapman he was nursed back to health and strength.

The return journey to the Teller station was made without any special adventure, except, on the 16th of April, getting into a crack in the ice while crossing Norton Sound and soaking the load with salt water. On the 24th of April the Teller station was safely reached after a trip of 2,000 miles, the longest ever recorded in any land as made by the same reindeer.

The result of this trial trip has convinced missionaries, miners, traders, and others residing in northern and central Alaska that domestic reindeer can do for them there what they have been doing for centuries in Lapland, that when introduced in sufficient numbers they will supplant dogs, both for traveling and freighting, furnish a rapid means of communication between widely separated communities, and render possible the full and profitable development of the rich mineral interests.

At the Teller station the sled deer were kept in constant practice, both on their own account and also for the training of the Eskimo apprentices. Including the trip to the Kuskokwim Valley, the aggregate number of miles driven was over 10,000.

Reindeer freight line between St. Michael and Nome.—Late in the fall of 1898 gold was discovered on Snake River near Cape Nome, and during the following winter there was a miner's stampede from St. Michael, Kotzebue Sound, and the lower Yukon Valley to the new mines. As there was no adequate supply of provisions within 300 miles of the mines and an abundant supply in the warehouses of the large trading companies at St. Michael, at the request of said companies Mr. Kjellmann, superintendent of Eaton reindeer station, agreed, as an act of humanity, to transport for the companies a limited amount of food from St. Michael to Nome, which was done, and payment for the same was rendered by the trading companies by furnishing needed provisions to the Eaton reindeer station.

During the same winter of 1898–99 the Swedish Mission at Golofnin, using their own reindeer, freighted supplies to Nome on their own account.

During the winter of 1900–1901, there being a scarcity of provisions on the overland route between Dawson and Nome, Mr. Kjellmann, superintendent of Eaton reindeer station, freighted some provisions from St. Michael to Norton Sound for G. L. Stanley & Co. Payment for the same was made in supplies to the Eaton reindeer station.

During the same winter of 1900–1901 Mr. W. T. Lopp, missionary of the American Missionary Association, organized an express and freight line between Nome and Teller, in order that the Eskimo herders at Cape Prince of Wales, using their own deer and sledges, might have a way of earning a support, with a result that they secured $600 in gold.

The same season the Eskimo apprentices at Teller, Synrock, and Golofnin reindeer station, using their own deer, did considerable transporting of miners and supplies to various outlying mining camps. In this connection especial mention is made of Kozebuk, a young man or boy about 17 years old, the youngest of the three mission apprentices at Teller station. In May he, with Johan Tornensis, took a train of 18 loaded sleds to Tuttle Creek, on the Arctic slope, about 65 miles from the station, Kozebuk driving a string of 5 deer with loaded sleds, the last 4 being tied to the preceding sled. From there he alone took 2 harnessed deer with sleds and 10 loose deer to Mr. Lopp's herd, 45 miles distant, returning to camp, and in a week taking 10 more deer to Mr. Lopp's herd. Returning to camp on June 1, he

started for the station with 4 deer and 8 empty sleds during the worst possible condition of travel, the snow melting and the rivers opening, arriving at the station June 4 without accident and the deer in good condition, having traveled 245 miles.

In the winter of 1901–2 two miners at Nome purchased two sled deer from Mary Antisarlook. The deer were worked in harness like horses and hauled on sleds 790 pounds each from Nome to Good Hope, 250 miles. After reaching Good Hope they were used in delivering supplies from the stores to the miners' cabins in the neighborhood. During July, when supplies of provisions ran short, one of them was killed and sold for meat, and the other was made the pet of the camp.

The same winter, from Cape Prince of Wales reindeer station, 11 deer were sold by the herders to the miners for transportation purposes; they were worked in harness like horses and each drew 700 pounds per load.

From the Teller station an apprentice, Kozebuk, made two trips to Shishmaref Inlet district, a round trip of 400 miles, and one to Golofnin Bay and return (400 miles), carrying supplies for the miners. Another, Serawlook, made one trip to Shishmaref Inlet and one to Golofnin Bay. In addition to the above five trips numerous trips were made by the apprentices between the winter camp and station, a round trip of about 120 miles.

From Eaton station, the superintendent states in his report, two prospectors who attempted to freight their supplies from St. Michael to the Buckland River with dog teams failed on account of not being able to procure food for the dogs. Returning to Unalaklik (Eaton) they hired Okitkon, who, with five of his deer and sleds, took them and their supplies to destination without difficulty.

On July 19, 1902, Judge E. L. Bosqui, who had been appointed United States commissioner for the valley of the Colville River, Arctic Alaska, left Nome on the U. S. revenue cutter *Bear* for Point Barrow, which place was reached in twenty-one days. At Point Barrow he had expected to be able to employ natives with their dogs to take him to his destination on the Colville, over 200 miles along the Arctic coast to the eastward of Point Barrow, but owing to an epidemic of sickness he was unable to secure the expected help and was obliged to remain at Barrow from August 12 to November 23, when Dr. H. Richmond Marsh, who was in charge of the Government reindeer at that station, came to his rescue. Thirty-six deer were taken from the herd and 20 sleds carrying about 250 pounds each were loaded with supplies for the judge, his deputy, and 5 natives, who accompanied the party. As a majority of the deer had not been broken to harness, it was a case of training while on the road, which greatly delayed the progress and added to the annoyance of travel. The Arctic night had commenced and the thermometer stood from 40 to 60° below zero. The party kept closely along the coast, except where they came to bays and inlets, which they crossed upon ice from point to point. When they reached Harrison Bay they turned and proceeded inland before reaching their destination at the village of Jarvis on the Colville. Owing to their imperfect acquaintance with the route, and the difficulty of traveling with half-trained deer, and inability to travel over four or five hours during the twenty-four, on account of want of sufficient light, the trip, which should have been made in fifteen, consumed thirty days.

Dana Thomas, Quaker missionary at Kotzebue, writes, August 14, 1903, as follows:

> The old prejudice of Alaskan miners, who have always heretofore used dog teams as beasts of burden in this work, is fast dying away before the very evident superiority of the reindeer for such work. Only those who have gone long journeys with dog teams, and have been compelled to load the greater part of the sled with food for the dogs or to pay very high prices for the same along the course of travel, can fully appreciate the great advantage of using reindeer that are to be driven all day, knowing that when resting time comes the deer will find their own food in the deer moss that covers the tundra in this region.
>
> The different white men who have used deer during the past unusually severe winter on the upper Kowak River, north of the Arctic Circle, have, without a single exception, been more than pleased with same.

Charles Dankurt left this place in December last with five deer, some of them not well broken. They were soon so well trained and so gentle that he and his wife had no trouble in driving them, going a distance of about 300 miles up the Kowak (north of Arctic Circle). His deer are so gentle that he tells us they will follow him or his wife about and take food from their hands.

In April of this year Doctor Benson, of Candle Creek, left that place with his two companions, using four deer, which hauled the three men, together with sleeping bags, camping outfit, and four months' supply of food. They traveled a distance of about 500 miles over tundra and across mountain ranges. After snow disappeared they used the deer as pack animals, strapping the burden upon the willing little animal's back. At the last stage of the trip, when the men had to cross a river or to go down the same in boats, the deer had become so gentle that when turned loose they would swim the streams after the boat, or follow after the same along the river bank. Both of these gentlemen declare that reindeer are by far the best animals to use as means of traveling or as pack animals in this region.

During the year I have read with much interest The Land of the Long Night, by Paul Du Chaillu. While written for young people, the book contains so much information concerning the reindeer industry in Lapland, told in an entertaining way, that it can not fail to interest and instruct older people as well, and I would recommend that a copy be sent to each of the reindeer stations in Alaska.

THE CRUISE OF DR. WILLIAM HAMILTON, ASSISTANT AGENT.

The extended tour of inspection of public schools and reindeer stations in Alaska was this season made by Dr. William Hamilton, the assistant agent. The following is an abstract of his itinerary:

Leaving Washington May 4, Doctor Hamilton joined the U. S. S. *Thetis*, at Seattle. On May 26 the *Thetis*, Capt. M. A. Healy commanding, left Seattle with Unalaska, the largest settlement on the Aleutian Islands, as her objective point, where she arrived June 5. While the *Thetis* was coaling for her Arctic cruise Doctor Hamilton inspected the public schools at Unalaska and conferred with the teachers and with the members of the local school committee, who here, as elsewhere throughout Alaska, by acting as auditors and advisers, assist the Bureau of Education in carrying on the Alaska school service. Extensive repairs to the school building at Unalaska were authorized.

On June 11 the *Thetis* left Unalaska harbor heading for Nome in order to render assistance to merchant vessels, if necessary. The season was unusually late, and in approaching Nome the *Thetis* encountered a great deal of ice. Ice fields were drifting about off Nome, causing the large passenger steamers that had just succeeded in pushing their way to this important distributing point frequently to shift anchorage in order to avoid being driven ashore by the pressure of the ice.

At Nome, which can be reached by steamer from Seattle in eight or nine days, letters and recent newspapers were received, fresh stores were obtained, and the mail for the remote places in the arctic, whose only means of communication with the outside world is the annual visit of the cutter, was taken on board.

At Nome considerable anxiety was felt for the safety of the steamship *Portland*, which was long overdue. Captain Healy without delay started in search of the missing vessel. Three days were spent in the difficult work of pushing through the ice in that part of Bering Sea where the *Portland* had last been sighted without finding any trace of the missing steamer. While in the neighborhood of St. Lawrence Island, where there is a public school, a Presbyterian mission, and a reindeer station, an attempt was made to reach the island. St. Lawrence Island was found to be icebound, and it was impossible to approach within many miles of land.

On June 20 the *Thetis* returned to Nome, where the *Portland* was found safely at anchor. On account of the unusually heavy ice in Bering Sea it was impossible to continue the cruise until June 26, when a second attempt was made to reach St. Lawrence Island. Heavy ice and almost continual fog were encountered, and not until

June 29 did the *Thetis* succeed in reaching the village of Gambell, near Cape Chibukak, at the northwestern extremity of the island.

Dr. Edgar O. Campbell and Mrs. Campbell, the teachers on this remote island, were found to be in good health and spirits. A few hours were spent in exchanging the news of the past year, in visiting the school, in inspecting Government property, and in attending to miscellaneous business in connection with the station.

At Cape Prince of Wales, where the *Thetis* arrived July 2, on account of ice fields drifting rapidly northward on the strong current through Bering Straits it was impossible to communicate with the village, and the ship proceeded to a somewhat sheltered bay a few miles to the south of the cape. Mr. Rognon and Mr. Lee, the teacher and the missionary at Wales, came to the *Thetis*, and considerable business in connection with the school and reindeer station at Cape Prince of Wales was transacted, the visit of inspection being of necessity postponed until later in the season.

At St. Michael the *Thetis* was delayed awaiting the arrival of the Yukon River steamer having on board Senator Charles H. Dietrich, of Nebraska, who had received permission from the Secretary of the Treasury to make the arctic cruise on the *Thetis*. At St. Michael business connected with the school was attended to and supplies were purchased. The reindeer station at Unalakleet, on Norton Sound, was also visited, and Dr. Carl O. Lind, the superintendent of reindeer herds in Alaska, was consulted.

On August 2 the *Thetis* left Nome and started on its cruise to Point Barrow, the extreme northwestern cape of the continent, visiting the mission station of the Protestant Episcopal Church at Point Hope en route.

In the vicinity of Icy Cape, August 6, heavy ice was encountered. During the following days many unsuccessful attempts were made to proceed farther north. On August 8, near Point Belcher, about 80 miles southwest of Point Barrow, Captain Healy decided to give up the attempt to reach Point Barrow, hardly enough coal remaining in the bunkers to take the ship back to Dutch Harbor, on the Aleutian Islands, the nearest coaling station, more than 1,400 miles distant.

The mail for Point Barrow was left at Point Hope to be forwarded by the overland mail route, which was to commence operations during the winter of 1903–4.

While the *Thetis* was in Kotzebue Sound Doctor Hamilton had a consultation with Mr. Dana Thomas, in charge of the reindeer station at Kotzebue, near the entrance to Hotham Inlet. Here, as at every other station in Alaska, the wisdom of introducing reindeer to aid in the development of the country, and as a future means of support for those of the natives who are intelligent enough to avail themselves of the opportunity to become owners of reindeer, is being demonstrated.

After cruising along the Siberian coast adjacent to Bering Straits, where the villages of Whalen and Indian Point were visited, the *Thetis* returned to Alaskan waters, anchoring off Cape Prince of Wales August 16. This time it was possible to communicate with the shore. Several hours were spent in the village, the school and mission being visited. In the village is a store conducted entirely by natives, and several frame buildings are evidences of the ambition of the more progressive natives to improve their condition.

On August 17 Teller reindeer station, on the north shore of Port Clarence, was inspected. Since the commencement of the importation of deer, in 1892, Port Clarence has been the receiving station for the deer brought from Siberia and the distributing point for the other reindeer stations in Alaska.

On its way southward the *Thetis* called at King Island; the sea being unusually smooth, it was possible for a party from the ship to land and visit this remarkable village of cliff dwellers and to explore the cave which from time immemorial has been used as a storehouse by the natives. At the time of the visit of the *Thetis* the island was deserted, the inhabitants being absent on the mainland.

On August 21 the final visit for the season was made to the teachers on St. Law-

rence Island. During the summer Doctor Campbell had completed the erection of a building to be used as a hospital for the natives. Here Mr. Thomas Richards, who during the coming winter of absolute isolation will assist Doctor Campbell, left the ship.

St. Paul Island, the largest of the Pribilof or Seal Islands, was visited August 25, and its adaptability for the reindeer industry ascertained by a drive of about 30 miles over the tundra.

On August 27 the *Thetis* anchored in Dutch Harbor, completing the northern part of her cruise. The ship was thoroughly overhauled and coal was taken on board for the remainder of the cruise. Just before leaving Dutch Harbor the *Thetis* received for transportation to civilization the passengers and crew of the schooner *Deering*, which had been driven on the rocks by the strong currents in Akutan Pass.

Having an unusually large number of persons on board, it was desirable for the *Thetis* to make the voyage homeward with as little delay as possible. Valdez was the only place visited between the Aleutian Islands and Sitka, where the *Thetis* arrived September 17. While in Sitka Doctor Hamilton had frequent consultations with Mr. William A. Kelly, superintendent of schools in the Sitka district, and inspected the two public schools in Sitka. The *Thetis* returned to Seattle by the outside passage through the North Pacific.

By the courtesy of Capt. Francis Tuttle, Doctor Hamilton made the voyage from Sitka to Seattle on the U. S. S. *Perry* through the inside passage; he was thus enabled to visit and inspect the public schools at Killisnoo, Hoonah, Haines, and Saxman. The *Perry* arrived at Seattle October 11.

After attending to various matters of business with the firms in Seattle and San Francisco that had furnished supplies for the schools and reindeer stations in Alaska, Doctor Hamilton returned to Washington October 26, completing a tour of inspection that had covered about 16,000 miles.

COOPERATION OF STATE AND TREASURY DEPARTMENTS.

As in former years, the honorable the Secretary of the Treasury and Capt. Charles F. Shoemaker, chief of the Revenue-Cutter Service, granted Dr. William Hamilton, assistant agent of education in Alaska, transportation on the revenue cutters *Thetis* and *Perry*, where he received from Capt. M. A. Healy and the officers of the revenue cutter *Thetis*, and from Capt. Francis Tuttle and the officers of the revenue cutter *Perry*, many facilities in the work of inspecting schools and reindeer stations. Thanks are also due to the honorable the Secretary of State and the Hon. Charlemagne Tower, ambassador to the Court of Russia, for negotiations with the Russian authorities concerning the exportation of domestic reindeer from Siberia to Alaska.

All of which, with accompanying papers, map, and illustrations, is respectfully submitted.

SHELDON JACKSON,
General Agent of Education in Alaska.

The COMMISSIONER OF EDUCATION.

CHAPTER XLVI.

EDUCATION IN THE PHILIPPINES, HAWAII, AND CUBA.

EDUCATION IN THE PHILIPPINES.

The following account of the condition of education in the Philippines is taken from the report of David P. Barrows, general superintendent of education for the Philippine Islands, for the year ending September 30, 1903. The report directs attention principally to the sustained effort to perfect the installation of the American public school system in the islands. The organization of the department of public instruction includes a secretary of public instruction, a general superintendent of education, and division superintendents for the provinces.

It appears that high schools have been established in many of the provinces, and that the instruction given at the insular normal school is now supplemented by the courses of normal institutes in several of the provinces.

It was remarked, in commenting upon the report on education in the Philippines last year, that no information was available showing the condition of higher education in the islands. The same reason exists this year for not publishing any account of that grade of instruction. No reports have been received from the University of San Tomas and its feeders, the "colegios" which are scattered throughout the islands, which are in charge of the Dominican order, nor from the Jesuit college.

The Americans continue to extend elementary education and instruction in English as far and as fast as possible. The American teachers appear to have met and overcome unprecedented obstacles and to have disarmed prejudices generally.

In the last report of the Bureau a sufficient number of extracts were taken from the reports of the various division superintendents to illustrate the conditions the teachers are called upon to meet, and any further selections of that kind would be mainly repetition. This year more attention is given to statistics.

At the close of the scholastic period ending with September 30, 1903, there were about 2,000 primary schools in operation in the islands, with 723 American and 3,000 native teachers. Instruction was given wholly in English from English texts. The subjects taught were the English language, primary arithmetic, and geography, with supplementary reading in Philippine and American history, and elementary human physiology. The attendance was about 150,000, and the accommodations were inadequate.

The report of the general superintendent of education contains a table giving the expenditures for school purposes from municipal and provincial funds during the fiscal year 1903 in the different divisions of the Bureau. These expenditures (in local currency or pesos) were as follows: Furniture, 16,202.10 pesos; rent, 37,749.54 pesos; purchase and construction of school buildings, 134,583.43 pesos, and salaries of native teachers, 475,215.75 pesos, making a total of 663,750.82 pesos. In Senate Document No. 304, Fifty-eighth Congress, second session ("What has been done in the Philippines"), which was compiled in the Bureau of Insular Affairs of the War Department under the direction of Secretary Taft, we find the statement that in the

last fiscal year (1903) the Philippine bureau of education expended 2,438,185 pesos in addition to the sums raised by the various municipalities and provinces for school purposes. This would make a total of 3,101,935.82 pesos expended for education in that year, or, the Philippine peso being worth fifty cents in gold, $1,550,967.91 in gold.

In August, 1903, the sum of $72,000 was appropriated by the Philippine Commission to defray the expenses of the education of 100 Filipinos in the United States in 1904. They were required to be natives of the islands and pupils of the public schools. This education in the United States will be continued from year to year.

NORMAL INSTITUTES.

The following is a report of the normal institutes held in the various divisions during the present calendar year:

Division.	Location of normal.	Inclusive dates.	Enrollment.
Albay and Sorsogon	Sorsogon	May 24–June 29	60
	Guinobatan		87
Ambos Camarines	Nueva Caceres	May 4–May 29	121
Batangas	Batangas	May 4–June 26	165
	Lipa		136
Bohol	Tagbilaran	July 6–July 31	254
Bulacan	Bulacan	May 4–June 26	300
Cagayan and Isabela	Tuguegarao, Cagayan	June 1–July 24	203
Capiz	Capiz	Apr. 6–May 2	86
Cavite	Cavite	Apr. 13–May 15	110
Cebu	Cebu	Apr. 27–May 22	180
Ilocos Norte	Laoag	May 18–June 19	260
Ilocos Sur and Abra	Vigan, Ilocos Sur	May 18–June 12	407
Laguna	Santa Cruz	Mar. 9–Apr. 3	234
Union	San Fernando	May 25–July 17	230
Masbate	Masbate	Mar. 31–Apr. 30	44
Nueva Ecija	Gapan	Jan. 12–Feb. 12	103
Nueva Viscaya	Bayombong	Mar. 9–Apr. 10	38
Negros Occidental	Bacolod	Apr. 13–May 8	241
Negros Oriental	Dumaguete	Apr. 27–May 22	145
Pampanga and Bataan	San Fernando	Feb. 16–Mar. 27	308
Pangasinan	Lingayan	June 15–Aug. 21	392
	Dagupan		325
Rizal	Pasig	May 4–May 30	300
Romblon	Romblon	May 11–June 5	140
Surigao	Surigao	Apr. 3–May 11	96
Tarlac	Tarlac	June 8–Aug. 17	315
Tayabas	Lucena	Mar. 31–Apr. 24	131
	Boac		71
	Atimonan		79
Paragua	Cuyo, Cuyo	May 1–May 31	35

Secondary schools (with American principals).

Province.	Town.	Enrollment.	Province.	Town.	Enrollment.
Albay	Guinobatan	52	Negros Oriental	Dumaguete	101
Batangas	Batangas	118	Nueva Ecija	San Isidro	172
Do	Lipa	105	Pampanga	San Fernando	124
Do	Bauan	116	Pangasinan	Lingayen	392

NOTE.—Moro Province, Benguet, and Lepanto-Bontoc are not here included; enrollment, 2,000; attendance, 1,560.

EDUCATION IN HAWAII.

The report of Mr. Alatau T. Atkinson, superintendent of public instruction of Hawaii for 1902–3, gives the following information:

FINANCIAL.

The department asked the legislature of 1902–3 for $280,800 for new buildings. The legislature granted more than was asked for, petitions having come in for schools at certain specified places. The total appropriation for buildings was $324,600.

It is well to note how important and how large the administration of the department is, when the funds to be disbursed by it amount during the current biennial period to $1,188,610.28. Considering the size of the population, the number of isolated places to be provided for, and the expense in keeping up small schools, where the attendance is between 15 and 25 pupils, but which are kept open throughout the whole school year, the showing is a remarkable one.

ENROLLMENT.

At the close of the fiscal period the total enrollment in all schools of the Territory was 18,415 pupils, as against 17,518 pupils on June 30, 1902. This shows a gain of 897 pupils during the year. Of these, 10,030 were males and 8,385 were females, the disproportion of sexes among the school population not being so great as among the main population. The enrollment of the public schools was 13,793, against 13,189 in 1902, an increase of 604, and the enrollment of the private schools was 4,622, against 4,329 in 1902, an increase of 293.

It may be further interesting to note, before quitting this section of the subject, that the total school enrollment in 1880 was 7,164; in 1890 it was 10,006; in 1900 it was 15,537, and that at the present writing it is 18,415, a very remarkable advance in the space of three years.

There are in all 203 schools in the Territory, of which 144 are public schools, supported by public money, and 59 are private schools, supported by trust funds, rents, private contributions, and fees. All public schools, from the normal and high schools to the smallest country school, are free, and are open to all classes of the population, regardless of color or race. In the public schools all the heterogeneous elements of our polyglot population meet upon a plane of equality, and the Asiatic, the American, the Malay, and the European sit side by side and play together in the playground in perfect harmony.

The following table gives the number of teachers and pupils for 1903:

	Number of schools.	Teachers.			Pupils.		
		Male.	Female.	Total.	Male.	Female.	Total.
Public schools	144	101	285	386	7,590	6,203	13,793
Private schools	59	82	165	247	2,440	2,182	4,622
Total	203	183	450	633	10,030	8,385	18,415

NATIONALITIES OF PUPILS.

The school population is divided according to the nationality of the parents, for purposes of race statistics; but it must be remembered, that with only a few exceptions, chiefly among the Asiatics, the pupils are by right of birth American citizens. It may be said that at the present time the schools of the Territory are educating over 18,000 pupils who are by birth American citizens, derived from the various races enumerated.

It is in this fact that the justification for educating Chinese and Japanese children lies. They are born on the island. In course of time they will claim their rights as voters, and that right can not be denied them. It is necessary, therefore, that they should be educated and trained by American methods. It is the school that makes citizens. During the last year nearly 600,000 Italians, Asiatics, Hungarians, and Russians came to the mainland as immigrants. In a generation the younger portion of these immigrants will have become thoroughly assimilated. They will no longer be Italians, Hungarians, or Russians; they will be Americans; and as this process must be followed in Hawaii, we must make Americans.

The total number of Hawaiians of unmixed blood in school has remained practically stationary. In 1902 there were 4,903, and the present report shows 4,893. This is a decrease of 10 in a year, which means nothing. On the other hand, there has been a considerable increase in the number of part Hawaiians—that is, children whose parentage is partly Hawaiian and partly some other nationality. Last year these pupils were reported at 2,869. This year they number 3,018, and it is evidently only a question of time when the part Hawaiians will equal and then exceed those Hawaiians of unmixed blood. In 1880, when this classification was first made, there were only 955 part Hawaiians in school; in 1890 there were 1,573; in 1900 there were 2,631. There has thus been a steady annual increase. Adding Hawaiians of unmixed blood and part Hawaiians together, we have 7,911 pupils in the schools of Hawaiian parentage of one kind or another.

The Portuguese stand next in order of importance as to the number in the schools. On June 30, 1902, there were 3,809 pupils of this nationality. June 30, 1903, they numbered 4,243—over 400 more in the space of one year. Another year will, in all probability, see the number of Portuguese children in school equal the number of Hawaiian children. In 1880 there were 55 Portuguese children in school; in 1890 there were 1,813; in 1900, 3,809. The increase from decade to decade has been enormous. The statement that numbers of Portuguese are leaving the Territory is certainly not borne out by the school statistics. If they are leaving the Territory there are enough remaining to swell the census returns.

Chinese appeared in the statistics of 1880 as only numbering 85. Ten years later, in 1890, there were only 262 in the schools; in 1900 there were 1,289; in 1902, June 30, there were 1,395, and at the present writing Chinese in school number 1,554, of whom 1,106 are in the public schools and 448 are in private institutions.

The increase of Japanese has occupied a much shorter space of time. This nationality first appears in the school statistics in 1888, when 54 pupils were reported. In 1894, there were only 113, but from that time there has been a steady increase. In 1898 there were 737; in 1900 the thousand mark was overtopped and 1,352 were reported. Last year, on June 30, there were 1,993 Japanese in school, and this year 2,521 was the number given at the same date.

Americans and Europeans other than Portuguese number 1,648. Adding this to the Portuguese pupils, we get a white school population of 5,891—larger than the Hawaiian school population, but not so large as the Hawaiians and part Hawaiians combined. On the other hand, the white school population is larger than the two Asiatic populations combined. The Porto Ricans, though Americans, and of very much mixed blood, it is interesting to chronicle apart. There were 538 of them in school June 30, 1903.

Nationality of pupils attending school in the Territory of Hawaii.

Nationality.	Public schools.	Private schools.	Total.
Hawaiian	4,090	803	4,893
Part Hawaiian	2,087	931	3,018
American	493	306	799

German	138	157	295
Portuguese	2,879	1,364	4,243
Scandinavian	156	38	194
Japanese	2,140	381	2,521
Chinese	1,106	448	1,554
Porto Rican	454	84	538
Other foreigners	102	41	143
Total	13,793	4,622	18,415

TERRITORIAL TEACHERS.

The year ending June 30, 1903, showed 633 teachers engaged in education in the Territory, against 609 reported on June 30, 1902. Of these, 386 were employed in the public schools and 229 in the private schools. The bulk of the teaching force both in public and private schools is of American parentage, the figures being 192 in public schools and 135 in private schools, or 327 altogether. The public schools employ 115 teachers of Hawaiian blood, while the private schools employ but 35. The public schools employ no Chinese or Japanese teachers; the private schools employ 13 of the former and 9 of the latter. Portuguese appear as 21 in the public schools and 11 in the private schools. The number of Portuguese teachers is

increasing. Of course these are really American; not Portuguese. Their education has been gained in American schools; they speak, read, and think in English, which is their mother tongue, and they are all American citizens.

Comparative nationality of teachers.

Nationality.	Public schools.	Private schools.	Total.
Hawaiian	56	22	78
Part Hawaiian	59	13	72
American	192	135	327

Portuguese	21	11	32
Scandinavian	8	7	15
Japanese		9	9
Chinese		13	13
Other foreigners	4	13	17
Total	386	247	633

It is well to call attention to the fact that there is a regular system of certificates which are gained by examination, a regular set of certified normal teachers, a system of life certificates, and a schedule rate upon which salaries are paid.

Salaries of principals, elementary schools.

Enrollment.	First year.	Second year.	Third year.	Fourth year.	Fifth year.	Sixth year.	Eleventh year.	Sixteenth year.	Twenty-first year.
196–300	$1,000	$1,200					$1,500		
166–195	1,000		$1,200					$1,500	
136–165	1,000			$1,200					$1,500
106–135	900	1,000			$1,200				1,500
76–105	720	840	900			$1,000	1,200

Third year	1,020
Fourth year	1,080
Fifth year	1,200

Of the teachers employed 37 have Hawaiian life certificates, 82 have normal certificates or diplomas, 70 have Hawaiian first-class primary certificates, 24 have Hawaiian second-class certificates, 13 have Hawaiian third-class certificates, 93 have certificates or diplomas from universities, normal schools, or States, and 65 have no certificates. The latter are mostly Hawaiians who are teaching on probation.

DISTRIBUTION OF SCHOOLS.

The largest number of public schools is on the island of Hawaii, of which 56 are public schools, taught by 132 teachers, and 11 are private schools, the total enrollment of the two classes of schools being 5,413. On Oahu there are 34 government schools, in which are engaged 136 teachers, and 31 private schools, the total enrollment being 7,854. The large number of schools on Hawaii is explained by the number of isolated villages where teachers are in charge of small numbers of children. On Oahu, on the other hand, the schools are concentrated and large and greater economy in the use of teachers can be obtained. Thus 132 teachers are required for 4,556 pupils on the island of Hawaii, while 5,031 children require 136 teachers on the island of Oahu, and this includes the high school and the normal school, together with special teachers in drawing, music, and physical culture.

The chief seat of the private schools is Honolulu, where the headquarters of all the denominational schools are situated, and also where there is opportunity for small advanced schools to be carried on at a profit. The Roman Catholics, the Episcopalians, and the German Lutherans maintain schools, and there are also endowed schools, like the Kamehameha schools for youths of both sexes, which were provided for by the late Chieftess Bernice Pauahi Bishop, and a preparatory annex fitted up and endowed by the Hon. C. R. Bishop, husband of the chieftess. There is Oahu College, also endowed in part by the early chiefs and in part by donations and bequests from private individuals. The private schools outside of Honolulu are almost without exception denominational schools.

Distribution of schools, pupils, and teachers upon the Hawaiian Islands.

PUBLIC SCHOOLS.

Islands.	Number of schools.	Teachers.			Pupils.		
		Male.	Female.	Total.	Male.	Female.	Total.
Hawaii	56	41	91	132	2,495	2,061	4,556

Total	59	82	165	247	2,440	2,182	4,622

AGES OF PUPILS.

The ages of the pupils in school are given in the following table. Attendance at some school is compulsory from the age of 6 to 15. Between those ages there were 16,218 pupils in school in 1903 as against 15,525 the previous year. There are also 1,081 children under 6 years of age who are attending for the most part kindergarten schools supported by voluntary contributions. It is intended to make a preliminary experiment of kindergarten work in the public schools, and when the new normal school is erected a building will be provided for that purpose. The attendance at such schools is entirely voluntary, and would be so if kindergarten attachments were made to the public schools. The attendance above 15 years of age is also entirely voluntary. The public high school, the normal school, and Lahainaluna provide for

those who ask for a more extended education. These divide up some 300 pupils, while the other 214 are scattered among the various schools of the Territory. The private institutions have 582 pupils above school age. These are found in Oahu College, St. Louis College, Kamehameha schools, and similar establishments.

Ages of all pupils in all schools of the Territory of Hawaii.

PUBLIC SCHOOLS.

	Under 6 years.	Six to 8 years.	Eight to 15 years.	Above 15 years.
Boys	169	2,278	4,853	290
Girls	108	1,857	3,996	242
Total	277	4,135	8,849	532

PRIVATE SCHOOLS.

	Under 6 years.	Six to 15 years.	Above 15 years.
Boys	390	1,674	377
Girls	414	1,560	207
Total	804	3,234	584

TOTALS IN PUBLIC AND PRIVATE SCHOOLS.

Boys	559	8,805	667
Girls	522	7,413	449
Total	1,081	16,218	1,116

The number of pupils in sewing has increased from 5,889 to 6,589 during the year. In agriculture there are 5,819 instead of 5,010. Those receiving instruction in lauhala and bamboo work have increased from 565 to 737. Drawing is now given to 10,210, instead of 8,164, as was reported last year. This all shows an advance, and there is every prospect of further advance. As teachers trained in the normal school with the direct object of giving instruction to the peculiar population begin to fill positions throughout the Territory, manual training will take its proper standing in the school curriculum. Every teacher who passes through the normal school course, whether male or female, has a knowledge of the use of tools, has a knowledge of agriculture and practical gardening, and can sew, draw, and give instruction in tonic sol fa singing.

INDUSTRIAL SCHOOLS.

During the last six months the department has been able to carry out its plans with regard to industrial schools and of a reformatory character. In this the superintendent has had a keen personal interest for fully twenty years, and it is a pleasure to see fruition of these hopes. The movement in favor of two industrial schools of a reformatory character, one for boys and one for girls, has been steadily kept before the public both by newspaper articles and by reports to the legislature, and in spite of many rebuffs and some failures the two establishments have at length been placed, or nearly placed, upon a satisfactory footing.

The Waialee estate, where the boys' industrial school is situated, contains some 700 acres of land on the northern side of the island, about 5 miles from Kahuku and 8 miles from Waialua. It has a coast line of over a mile, and extends back to the mountain ridge. About half a mile from the sea a series of bluffs extend, and the low land between them has been chosen as the site for the school buildings. Above the beach is a fine tract of taro land, some of which is owned in Kuleanas, and a considerable quantity belongs to the estate. There is also a large pond supplied by never-failing springs. The situation of the school will enable the department to carry on agriculture, dairy farming, and fishing, besides giving instruction in carpentering, blacksmithing, the manufacture of poi, and, of course, general school work.

The following table shows the nationalities of the inmates of the school and the offenses for which they were committed:

Nationality:	
Hawaiian	37
Part Hawaiian	7
American (colored, 1)	2
Portuguese	15
Chinese	2
Porto Rican	15
Total	78

List of offenses and number committed for each.

Truancy	18
Vagrancy and homeless	11
Disobedience to parents	15
Common nuisance	1
Trespass	3
Assault and battery	2
Larceny	25
Housebreaking	1
Burglary	2
Total	78

It will be seen by comparing these tables with last report that larceny has increased from 24 to 32 per cent. The last table shows that there is not much uniformity among committing magistrates with regard to the terms of sentence imposed for the different offenses.

THE GIRLS' INDUSTRIAL SCHOOL.

It is the purpose of the department to make the Girls' Industrial School a place where a thorough training in housework will be acquired. The girls will be taught to cook, understand house cleaning, washing, ironing, sewing, and lace making. There is enough land to employ them in horticulture. Habits of cleanliness, modesty, and self-confidence will be instilled. By this means it is hoped that a class of girls who might otherwise grow up to be vicious and spread moral corruption in many directions may be saved from themselves and prevented from carrying further ill into the body politic.

CONCLUSION.

The department has to its credit the fact that a pupil of the high school passed his examination for Annapolis and is now enrolled as a naval cadet in that institution. Six pupils of our high school took the university entrance examinations and five passed brilliantly. In a large number of the educational institutions of the mainland there are representatives from Hawaii.

Financial statement, year ending June 30, 1903.

A recapitulation of the appropriations, with disbursements and balances, to June 30, 1902, gave the following result:

	Appropriated.	Disbursed to June 30, 1902.	Balance on hand July 1, 1902.
Salaries and pay rolls	$652,862.50	$317,429.93	$335,432.57
Current expenses	202,525.00	60,123.66	142,401.34
Total	855,387.50	377,553.59	477.833.91

Recapitulation for the year ending June 30, 1903.

	Balance on hand July 1, 1902.	Disbursed.	Unexpended balance July 1, 1903.
Salaries and pay rolls	$335,432.57	$328,387.23	$7,045.34
Current expenses	42,585.69	36,746.14	5,839.55
New buildings	99,815.65	25,380.81	74,434.84
Total	477,833.91	390,514.18	87,319.73

In addition to the above there were certain appropriations made by the legislature of 1903 under the head of "Emergency." The following are the appropriations of this kind made for this department, with the expenditure under each, and the balance remaining June 30, 1903:

	Appropriated.	Disbursed.	Balance remaining July 1, 1903.
Stationery and incidentals	$1,500.00	$1,488.51	$11.49
General expenses industrial school	2,400.00	2,389.86	10.14
Kindergarten	1,800.00		1,800.00
Schoolhouse, Haiku	1,000.00	939.08	60.92
Total	6,700.00	4,817.45	1,882.55

EDUCATION IN CUBA.

The following statistics of the schools of Cuba are taken from La Instrucion Primaria, the official journal of the department of public instruction of Cuba, and cover the second period of the school year 1903–4, comprising the months January, February, and March, 1904. From the tables published in that periodical we find that there were as many as 355 school buildings with 713 rooms owned by the State or not rented, and 1,581 rented buildings with 2,734 rooms, making a total of 1,936 buildings and 3,447 rooms in use during that period. The highest rent paid per building per month was 15.97 pesos.

The largest number of teachers in the period January–March, 1904, was 3,513 (lowest 3,503), of whom 3,357 were white and 155 colored. Of the total number of teachers, 1,451 were men and 2,062 were women. Of the white teachers, 1,411 were men and 1,946 women, and of the colored, 43 were men and 112 women. The ages ranged from 18 or less to 50 and over, and while there were only 23 young men teachers to 243 young women teachers of 18 years of age, or 1 man to about 10½ women, the proportion increased with age until at 30 to 40 years of age there were 391 men to 364 women, at 40 to 50 years the men were 194 and the women 112, while above 50 there were 125 men to 26 women.

The highest enrollment during the scholastic period January–March was in February, when there were 95,737 whites and 47,348 colored pupils matriculated. Of these, 78,794 were boys and 64,391 were girls, making a total enrollment of 143,085, against 149,525 in 1902, a loss of 6,440. The total mean attendance was 111,095 in 1904 and 117,187 the previous year, a diminution of 6,092. The ages of the pupils ranged from under 6 to 15 years and more, the greatest number being between 10 and 12 years of age.

The total expenditure for the period from January to March, 1904, for educational purposes was 719,475.76 pesos, of which 513,126.84 pesos was for salaries of teachers. The Cuban peso being $0.926 in American money, the above total expenditure would amount to $666,234.55.

COMPULSORY ATTENDANCE AND CHILD-LABOR LAWS.

The following table has been brought, so far as practicable, down to the date of this report, and in the case of many of the States the legislation of 1904 has been given.

In this latest revision several noteworthy changes have been made. The period of compulsory school attendance has been extended to include the full school term in Illinois; also in Kentucky in certain classes of cities. In New York the period of full-term attendance has been made to include children 12 to 14 years of age, who hitherto have been required to attend only eighty days. In Iowa the period of compulsory attendance has been lengthened from twelve to sixteen weeks.

The age limits of children subject to compulsory attendance have been extended one year in Maine and two years in New Jersey.

In North Carolina four counties and the city of Washington have been put under special compulsory attendance laws.

The States of Arkansas, Virginia, and Washington have new laws restricting the labor of children in manufacturing establishments, and in several other States the existing laws have been amended, nearly, if not quite, always in the direction of making them more comprehensive and rigorous.

No attempt has been made in the table to note the provisions regulating the hours of labor of minors in those States where such labor is permitted. Such regulations are now very general.

Many States forbid, or permit only under restrictions, occupations dangerous to the life, limb, morals, or health of children. In some States the employment of children in begging, theatrical, and circus exhibitions, on dangerous machinery, in occupations requiring the handling of intoxicating liquors, night work, etc., is specifically forbidden.

Statutory provisions relating to compulsory attendance and child labor.

COMPULSORY EDUCATION.				CHILD LABOR.[a]	
State.	Age.	Annual period.	Penalty on parents for neglect.	Age under which specified employments are forbidden.	Educational restrictions on child labor.
Alabama				10 years, in factories in all cases; 12, unless orphans, or children of the widowed or disabled; 12, in mines.	
Alaska				21 years, in bar rooms.	
Arizona	8–14	12 weeks; 6 consecutive	$5 to $25		
Arkansas				10 years, in all cases in manufacturing establishments; 12, unless to support a parent or self, as specified by law. 14, in mines; females not at all.	No child under 14 may be employed in a manufacturing establishment unless he attends school 12 weeks each year and can read and write English.
California	8–14	5 months; 18 weeks consecutive.	First, not over $10 or 5 days' imprisonment; subsequent, $10 to $50, or 5 to 25 days, or both.	12 years, in any factory, workshop, or mercantile establishment.	
Colorado	[b]8–16	Full term	$5 to $25	14 years, in any underground works, mine, smelter, mill, or factory. No female may be employed in a coal mine.	Unlawful to employ children under 14 during school hours unless they have complied with the school-attendance law; under 16, unable to read and write, unless attending day or night school.
Connecticut	[c]7–16	Full term	Not exceeding $5 each week of absence.	14 years, in any mechanical, mercantile, or manufacturing establishment.	Children under 14 may not be employed while school is in session; nor between 14 and 16, if unable to read and write, unless attending an evening school, if one is held.
District of Columbia.	8–14	12 weeks; 6 consecutive	Not exceeding $20.		
Florida				Children under 15 may not be employed more than 60 days without consent of legal guardian.	
Idaho	8–14	12 weeks; 8 consecutive	First, not less than $5; subsequent, $10 to $50, with costs.	14 years, in mines (constitution of State).	
Illinois	7–14	Full term, to be not less than 110 days of actual teaching.	$5 to $20 and costs; stand committed until paid. Penalty for false statements as to age or attendance, $3 to $20.	14 years, in any mine, mercantile institution, factory, office, theatre, elevator, etc., or as messenger or driver. No female may work in a mine.	No child 14 to 16 unable to read and write may be employed unless attending an evening school, if there is one. No child under 14 may be employed at any work for wages during the school term.

[a] See remarks introductory to the table.
[b] Children 14 to 16 whose labor is necessary to their own or parents' support are excused.
[c] Not applicable to children over 14 lawfully employed to labor at home or elsewhere. Children 14 to 16 can not leave school to be employed unless their education is satisfactory to the school board.

Statutory provisions relating to compulsory attendance and child labor—Continued.

COMPULSORY EDUCATION.				CHILD LABOR.	
State.	Age.	Annual period.	Penalty on parents for neglect.	Age under which specified employments are forbidden.	Educational restrictions on child labor.
Indiana	[a] 7–14	Full term	$5 to $25, and, in discretion of court, imprisonment 2 to 90 days.	14 years, in any manufacturing or mercantile establishment, mine, quarry, laundry, renovating works, bakery, or printing office. No female may work in a mine.	Children under 16, unable to read and write English, may not be employed in foregoing employments except in vacation of public schools.
Iowa	[a] 7–14	16 consecutive weeks	$3 to $20	12 years, in mines (boys)	
Kansas	[a] 8–15	Full term [b]	$5 to $25	12 years, in coal mines	No minor, 12 to 16, may work in a coal mine unless he can read and write and has attended school 3 months in the year.
Kentucky	7–14	8 consecutive weeks; full term in cities of first, second, third, and fourth classes (1904).	First, $5 to $20; subsequent, $10 to $50.	14 years, in any workshop, factory, or mine, without written consent of parent and county judge.	
Louisiana				12 years (boys), 14 (girls), in any factory, warehouse, or workshop.	Children under 14 may not be employed in foregoing employments, nor in clothing, dressmaking, or millinery establishments, unless they have attended school 4 months in preceding year.
Maine	7–15	Full term	Not exceeding $25, or imprisonment not exceeding 30 days.	12 years, in any manufacturing or mechanical establishment.	Children under 15 shall not be employed in any manufacturing or mechanical establishment, except during vacation, unless they have attended school 16 weeks during preceding year.
Maryland [c]	[d] 8–12	Full term	Not exceeding $5	14 years, in mills and factories (except canning establishments), unless self, widowed mother, or invalid father solely dependent upon such employment. 19 counties exempt from law.	No minor, 12 to 16, unable to read and write English may be employed where there is an evening school unless attending that or another school.
Massachusetts	[e] 7–14	Full term	Not exceeding $20	14 years, in factories, workshops, or mercantile establishments.	Children under 14 may not be employed during school hours; over 14, who can not read and write English, shall not be employed where there is an evening school unless they attend the same, or a day school.
Michigan	[f] 8–15	4 months; full term in cities having a duly constituted police force.	Fine of $5 to $50, or imprisonment 2 to 90 days, or both.	14 years, in manufacturing establishments, hotels, or stores. (Law does not apply to canning or evaporating works.)	Children under 16, unable to read and write, may not be employed in manufacturing establishments.

Minnesota	8–16	12 weeks; 6 consecutive	First, $25; subsequent, $25 to $50	14 years, in factories, workshops, or mines.	Children under 14 years may not be employed in mercantile establishments, telegraph, telephone, or public messengers companies, except during vacation; under school age (16 years), in any occupation unless they have attended school the prescribed period; under 16, unable to read and write English, in any indoor occupation (except in vacation) unless attending day or evening school.
Missouri				14 years, in manufacturing or mechanical establishments, or where work would be dangerous to health; under 12 (males) in mines.	No boy under 14 may work in a mine unless he can read and write.
Montana	[g]8–14	Full term; in no case less than 16 weeks.	$5 to $20	14 years, in mines or underground works (penalty not over $1,000).	Children under 14 not to be employed during school sessions unless they have completed the studies required by law; from 14 to 16, if unable to read and write English.
Nebraska	7–15	Two-thirds of school term; in no case less than 12 weeks.	$5 to $25 (on truant officer)	10 years, in manufacturing, mechanical, industrial, or mercantile establishments.	Foregoing employments unlawful for children under 14 (except during vacations) unless they have attended school 20 weeks the preceding year.
Nevada	8–14	16 weeks; 8 consecutive	First, $50 to $100; subsequent, $100 to $200; with costs.		
New Hampshire	[h]8–14	Full term	First, $10; subsequent, $20.	12 years, in any manufacturing establishment.	No child under 14 may be employed during school sessions, nor under 16 if unable to read and write English. No minor unable to read and write English may be employed unless attending day or evening school, if any is held.
New Jersey	7–14	Full term	"Punishable as a disorderly person."	14 years, in factories, workshops, mills, or manufacturing establishments; also mines.	Children under 15 must have attended school 12 weeks the preceding year as a condition of employment.
New Mexico	7–14	3 months	$5 to $25, or imprisonment not exceeding 10 days.		

[a] Inclusive.
[b] 8 weeks for children over 14 who can read and write English and are at work to support themselves or others.
[c] The provisions tabulated for Maryland (except in fifth column) are those of the act of 1902, whose operation is limited to Baltimore city and Allegany County.
[d] To 16 unless regularly employed to labor at home or elsewhere.
[e] To 16 if wandering about public places without lawful occupation.
[f] In cities 7 to 15, and to 16 if wandering about public places without lawful occupation.
[g] To 16 if unemployed.
[h] To 16 if unable to read and write English.

Statutory provisions relating to compulsory attendance and child labor—Continued.

	COMPULSORY EDUCATION.			CHILD LABOR.	
State.	Age.	Annual period.	Penalty on parents for neglect.	Age under which specified employments are forbidden.	Educational restrictions on child labor.
New York	8–16	Full term (October 1 to June 1) between ages of 8 and 14; when unemployed, between 14 and 16.	First, not exceeding $5; subsequent, not exceeding $50, or imprisonment not exceeding 30 days, or both fine and imprisonment.	14 years, in factories; if 14 to 16, the child must have attended school 130 days the preceding year, and be able to read and write English and cipher. Similar provisions apply, in places of over 3,000 population, to work in mercantile establishments, business offices, restaurants, hotels, express or messenger service, except for children over 12 in small places during vacation.	Unlawful to employ in any business or service child under 14 during school term; 14 to 16, unless has attended 130 days preceeding year, and can read and write English and cipher, or (in first and second class cities) has completed elementary course or attends evening school 16 weeks a year. See preceeding column.
North Carolina	(*a*)			12 years, in any factory or manufacturing establishment (does not apply to oyster canning and packing); 12 years, in mines employing over 10 men (boys).	
North Dakota	8–14	Full term	$5 to $20 (on school official)	12 years, in mines, factories, and workshops (constitution of State).	Children under 14 may not be employed in any manner during school hours unless they have attended school 12 weeks during the year.
Ohio	*b* 8–14	Full term; in no case less than 24 weeks.	$5 to $20; on default, imprisonment from 10 to 30 days.	14 years, in mines, factories, workshops, mercantile or other establishments.	No child under 14 may be employed in any other manner during school sessions; or betwen 14 and 16 if unable to read and write English; or in mines during school term if under 15.
Oregon	*c* 8–14	Full term		14 years, in any factory, store, workshop, mine, or in the telegraph, telephone, or public messenger service.	No child under 14 may be employed in any work for compensation during school hours; no minor under 16 may be employed while school is maintained if unable to read and write English.
Pennsylvania	*d* 8–16	Full term; but the school board of each district has power to reduce this to not less than 70 per cent of the term.	First, not exceeding $2; subsequent, not exceeding $5; on default, imprisonment; first, not over 2 days; subsequent, not over 5.	13 years, in factories, manufacturing or mercantile industries, laundries, workshops, renovating works, or printing offices; 16 years in mines (boys); 14 years in or about the outside workings of a colliery (boys); girls may not work in or about mines.	Children under 16 may not be employed in the foregoing "or other industrial establishments" unless they can read and write English, or have attended school 16 weeks in preceding year.

Rhode Island	e 7–15	Full term	Not exceeding $20	12 years, in factories, manufacturing or mercantile establishments employing 5 or more persons.	Children under 13 may not be employed except during school vacations.
South Carolina				10 years after May 1, 1903; 11 after May 1, 1904; 12 after May 1, 1905, in any factory, mine, or textile establishment, except that certain self-dependent children may work in the latter.	Children may work in textile establishments in June, July, and August if they have attended school 4 months during the year and can read and write.
South Dakota	8–14	12 weeks; 8 consecutive	$10 to $20 and costs; stand committed till paid.	14 years, in mines	No child 8 to 14 to be employed during school hours unless he has attended school 12 weeks during the year.
Tennessee				14 years, in workshops, factories, or mines.	
Texas				12 years, in mills, factories, manufacturing or other establishments using machinery; 16 years, in mines, distilleries, or breweries.	Unlawful to employ children 12 to 14 who can not read and write English in mills, factories, etc., certain self-dependent children excepted.
Utah	8–14	20 weeks; 10 consecutive	First, not exceeding $10; subsequent, not exceeding $30, with costs.	14 years, in mines (constitution of State).	
Vermont	8–15	28 weeks; continuous, beginning with school year.	$5 to $25	10 years, in manufacturing or mechanical establishments.	No child under 15 may be employed in a mill or factory unless he has attended school 26 weeks the current year; if under 14 and can not read and write he may not be employed during school sessions.
Virginia				12 years, "in any manufacturing, mechanical, or mining operation."	
Washington	8–15	4 months; in graded school districts in incorporated places, 6 months.	$10 to $25	14 years, in mines (boys); 12 (boys), in the outside workings of a colliery; 14, in any factory, mill, workshop, or store, except (12 to 14) in specified cases of need; 18, as public messengers (females).	Children under 15 may not be employed in manufacturing, mechanical, or mercantile establishments, or by telegraph or telephone companies (except in vacation) unless they have attended school the obligatory period the previous year or have attained reasonable proficiency in common branches.
West Virginia	8–14	20 weeks	First, $2; subsequent, $5	12 years, in mines, factories, workshops, manufactories.	

a Four counties and the city of Washington are under special compulsory attendance laws.
b To 16 if unable to read and write English.
c To 15 if unemployed.
d Not applicable to children over 13 who can read and write and are regularly employed in useful service.
e Not applicable to children over 13 who are lawfully employed.

Statutory provisions relating to compulsory attendance and child labor—Continued.

COMPULSORY EDUCATION.				CHILD LABOR.	
State.	Age.	Annual period.	Penalty on parents for neglect.	Age under which specified employments are forbidden.	Educational restrictions on child labor.
Wisconsin	[a] 7–14	Full term; in cities, not less than 8; elsewhere not less than 5 calendar months.	$5 to $50, or imprisonment not over 3 months.	12 years, in any occupation; 14, in factories, workshops, bowling alleys, bar rooms, beer gardens, mines; 14 to 16, in any occupation without specified written permit; 18, as messengers (females).	Children 12 to 14 may not be employed in any occupation, except during school vacations, by specified written permit, in stores, offices, hotels, mercantile establishments, laundries, telegraph, telephone, or public messenger service, where they reside.
Wyoming	[b] 6–21	3 months	Not exceeding $25	14 years, in mines; females may not work in mines. (Constitution.)	
United States laws (for Territories).				12 years, in the underground workings of any mine.	

[a] To 16, if not regularly and usefully employed at home or elsewhere.
[b] Penalty only for child 7 to 16, or one living idly and loitering about public places.

CONSOLIDATION OF SCHOOLS AND TRANSPORTATION OF PUPILS.

[For further information on this subject see the Annual Report of this Office for 1894-95, Vol. II, pp. 1469-1482; 1895-96, II, 1353-1358; 1898-99, I, 526-529; 1899-1900, II, 2581-2584; 1901, I, 161-213, and II, 2396-2402; 1902, II, 2353-2369.]

The practice of consolidating two or more small schools and transporting the more distant pupils of the discontinued schools to the central (usually graded) school at the public expense has been resorted to, either under specific provisions or under the general authority of the law, in the following States: California, Colorado, Connecticut, Florida, Georgia, Indiana, Iowa, Kansas, Maine, Massachusetts, Michigan, Minnesota, Montana (1903), Nebraska, New Hampshire, New Jersey, New York, North Dakota, Ohio, Pennsylvania, Rhode Island, South Dakota, Vermont, Virginia (1903), Washington, and Wisconsin.

Notable movements toward the consolidation of schools, but without the feature of transportation, have been recently inaugurated in North Carolina and Missouri. Some progress in the same direction has also been made in Louisiana.

The following tables give the available statistics on the subject. It will be seen that Maine and Vermont expend the largest proportion of their school money for transportation, about one-thirtieth of the total.

Per cent of total expenditure used for transportation.

School year.	Maine.		Vermont.		Massachusetts.		Connecticut.		New Jersey.

Some reported cases showing the economical advantages of consolidation and transportation.

Location.	Schools.		Pupils transported.	Cost of transportation.	Cost per pupil.	Amount saved (annually unless otherwise noted).
	Before consolidating.	After.				
NEW HAMPSHIRE.						
The State				Mostly 4 or 5 cents a mile each way.		Cost less in 118 towns, the same in 5, more in 1.
1 town						Five-sixths saved.
3 towns						Four-fifths saved.
7 towns						Three-fourths saved.
8 towns						Two-thirds saved.
1 town						Five-eighths saved.
Do						Three-fifths saved.
26 towns						One-half saved.
1 town						Two-fifths saved.
Do			3 to 5	$69 a year		$101.
MASSACHUSETTS.						
The State						Cost (after consolidation) less in 68 per cent of towns, more in 16 per cent, the same in 15 per cent.
Warwick	9	1	60			$132 in regular teachers' wages, though salaries increased from $5 to $9 per week, and term from 24 to 36 weeks.
Quincy (Crane School abandoned, 1874.)	2	1	17	$420 a year		$140.
Montague						$600 at least.
OHIO.						
Gustavus	10	1		$220 a month		$256 greater cost after consolidation.
Kingsville				$97 a month		More than $1,000 in three years.
Madison	13	5	About 90	About $5 a day		Total expense about the same; per capita of enrolment reduced from $16 to $10.48.
INDIANA.						
Allen County, Fort Wayne.	2	1	20			About $1 a day.
Bartholomew County, Columbus.	2	1				About $35 a month.
Benton County				$25 a month (1 school).		Fully 50 per cent (3 townships).
Clark County, Charleston			5			$75 (a year?).
Clinton County (3 townships).						$1.65 to $2.50 a day (each school?).
Delaware County:						
Crossroads	2	1	7	$1.25 a day		$450 to $500 in 7½ months.
Daleville	2	1	7	do		
Royerton	6	1	129	$8.75 a day	$0.067	$58.
Selma	3	1	24	$1.50 a day		$600.
Hendricks County						About $2 a day for every school vacated.
Huntington County (1 school).				$0.89 a day		Over $1 a day, besides expense of fuel, etc.
Jackson County, Carr	2	1	12			75 cents a day.
Jasper County, Walker	2	1	8	$90		$210.
Lagrange County						About one-third.
Laporte County				$75 to $160 per school.		$220 to $305 per school.
Newton County, McClellan.	6	3				$708.
Ohio County, Randolph						$150 (1 school abandoned).
Perry County, Union			9			$240 (1 school abandoned).
Rush County:						
Raleigh	5	1				
Washington	8	5	43			"Money has been saved."
Shelby County, Hanover (1 school).				$1 a day		Cost per pupil reduced one-half.
Tipton County, Jefferson (1 school).			10	$100		$172.

Webster	4	1	50	$4.40 a day	.....	About $4 a day.
White County (4 townships).	.....	.....	.....	.....	.....	$150, $165, $180, $220.
Whitley County	.....	.....	.....	.....	.....	About $135 by each abandonment.
IOWA.						
Buffalo Center	6	1	98	$175 a month	.....	Expenditure per pupil reduced in 6 years from $5.03 a month to $2.31.
NEBRASKA.						
Thayer County (district 96).	2	1	.....	$190 a year	.....	Teachers' wages alone in abandoned school were $270.

PRESENT STATUS.

CALIFORNIA.

Two or more school districts in the same county shall be formed into a union school district when so voted at elections held in each of the districts, which must be called by the county superintendent for that purpose on petition of the majority of heads of families in each district. Methods of procedure for determining the location of the union school or schools are minutely prescribed, also composition and powers of boards of trustees; course of study to be not less than eight years.

The board of trustees of a union district may contract for the transportation to and from school of such pupils as may seem to be in need of such transportation and pay therefor out of any funds available for the purpose; but such contract must first be approved by the county superintendent. (Stats. 1903, sec. 1674 of Code.)

COLORADO.

Two or more contiguous school districts may be consolidated by a majority vote of each district at meetings called upon petition of a stated number of legal voters. (Act approved Feb. 17, 1903.)

A district school board, when authorized by a majority vote at a school meeting, is required to "furnish transportation to and from school to all pupils living more than 2 miles from the school building; and may, at their discretion, provide for the transportation of any and all pupils residing nearer than 2 miles from the central building." The school board, however, may board the pupils near the school if cheaper than transporting them. In either case they may pay the expense out of the common school fund, and must levy a tax for the purpose when authorized by a vote of the district.

Or a district board, when authorized as before, must suspend the district school and make arrangements with another district for the instruction of all the pupils, and provide for their transportation, meeting the expense of tuition and transportation as before. (Act approved Feb. 16, 1903.)

CONNECTICUT.

Some towns retain the district system, with a town board of school visitors; other towns have abolished districts (adopting the town system) and have town school committees. Schools must be maintained in all towns and districts at least thirty-six weeks; but no school need be maintained in any district where the average attendance at the district school the preceding year was less than 8. (School Laws, ed. 1904, sec. 38.)

When the attendance at the school of any district is so small as, in the judgment of the visitors, to render its continuance inexpedient, they may unite it with the school of an adjoining district and provide transportation for the children to and from school. (Sec. 223.)

Law of 1903.—Every town in which a school has been discontinued (secs. 38 and 223) must furnish, whenever necessary, by transportation or otherwise, opportunity for every child to attend school. If a town refuses or neglects this, any parent may obtain a hearing by the town school committee or visitors, and, if aggrieved by their finding, may appeal to the board of selectmen, who must require the proper school officers to comply with the law. (Secs. 47 and 48.)

Another law of 1903 requires any town not maintaining a high school to pay the cost of railway or other transportation of children attending an approved high school in another town with consent of school visitors or committee.

FLORIDA.

Expended for transportation of pupils, 1901, $3,225; 1902, $5,427.

State Superintendent Sheats reports that concentration and transportation are being tried in a few counties. The subject is being agitated throughout the State; the movement is making some progress, but, as elsewhere, has much opposition to contend against.

GEORGIA.

Transportation.—Number of counties reporting no trial of transportation, 101.

Number of counties reporting trial of transportation, 11.

The idea does not seem to be popular with the people, nor successful where tried. The cost is about 5 cents per pupil per day.

Consolidation.—Number of counties reporting no effort at consolidation, 39.

Number of counties reporting efforts at consolidation, 60.

The idea seems to be popular with board members and commissioners and not objectionable to patrons. Several commissioners report new buildings as results of consolidation. (Ga. Rep., 1902, p. 310.)

INDIANA.

The trustee or trustees of a school district or corporation, upon petition of a majority of voters for the abandonment of their schools and the consolidation of their schools with others in the same township, must comply therewith. (Ind. Sch. Law, 1901, sec. 116.)

No township trustee may abandon any district school without written consent of the majority of voters, excepting schools with an average attendance of 12 or less. A school so abandoned must be reestablished upon written petition of two-thirds of the voters. (Sec. 117.)

There are "181 wagons transporting 2,599 pupils at public expense in two-thirds of the counties of Indiana." (Ind. Rep., 1902, p. xi.)

IOWA.

Section 2774 of the code provides that when a board is for sufficient reasons released by the county superintendent from keeping a school, or when children live at an

unreasonable distance from their own school, the children may be sent to school and have their tuition paid in other districts. And when there will be a saving of expense and children will also thereby receive increased advantages, school boards may arrange for the transportation of any child to and from school in the same or in another corporation. An amendment of 1901 provides that not over $5 may be estimated in the contingent fund for each person of school age for transportation.

Consolidation has been tried in 28 counties, transportation in 35, and both in 19. Ninety-five per cent of the county superintendents favor the plan. Good effects are reported in 27 counties, doubtful in 5. Bad roads are the chief obstacle. (Iowa Rep., 1901, pp. 35, 73.)

KANSAS.

The parents or guardians of any pupils residing more than 3 miles from the schoolhouse of their district shall be allowed not exceeding 15 cents a day for not more than one hundred days in a year for the conveyance of such pupils. (Sch. Laws, 1901, sec. 49.)

A school district may discontinue a school entirely and send the pupils to school in another district, paying their expenses and tuition. (Sec. 112*a*.) Or any part of the pupils of a district may be so sent to school in another district. (Sec. 112 *b*.)

Two or more school districts by a majority vote of each may unite to form a union school district and conduct a graded school. (Sec. 50.) Children living 2 or more miles from such school may be transported. (Sec. 51.)

LOUISIANA.

"In several parishes the effort to consolidate small ungraded schools into large graded schools has been made, with the result of considerable improvement in the school work, although I fear that it brought the superintendent under the ban of those who considered it their right to have a school and a teacher exclusively for their own family use." (La. Rep., 1900–1901, p. 7.)

MAINE.

By an act of 1893 and subsequent amendments school districts are abolished; towns determine the number and location of schools; schools having too few scholars may be suspended for one year; schools having less than eight pupils are discontinued. The superintendent of schools in each town must provide transportation for a part or the whole of the distance to the nearest suitable school for the full school term in his town for all pupils who reside so far from school as to render it necessary, in the opinion of the superintending school committee, or he may board scholars near schools. (Me. Sch. Laws, 1901, secs. 1–3.)

MASSACHUSETTS.

A law of 1869 provides that the school committee of any town may expend, in their discretion, money raised and appropriated for transporting pupils to and from school. Towns determine the number and location of schools.

The law prescribes no limits beyond which the children must be conveyed. Schoolhouses are conveniently located if they are sufficiently near the children, or if, being too far away, the children are transported to the schoolhouses. What convenience is the school committee determines; its decisions are influenced naturally by the magnitude of the problems involved and the money available for their solution. The courts incline to sustain committees in the exercise of their discretion. (Mass. Rept., 1901–2, pp. 101, 102.)

MICHIGAN.

"Our school laws now provide the means and make it possible to rearrange or consolidate school districts." (Mich. Rept., 1902, p. 9.)

"The matter of consolidating school districts is entirely in the hands of the people of the districts interested, and it can only be done * * * by distinct action taken by the voters of the districts." (Ibid., p. 10.) In case two or more districts vote to consolidate, the township school board should proceed at once to form the new district.

An amendment of 1903 to section 4665 of the School Laws empowers district meetings "to appropriate the funds derived or to be derived from the 1-mill tax, or such part thereof as is deemed necessary, for the purpose of transporting pupils to and from school." (Ibid., p. 10.)

MINNESOTA.

Two or more school districts may be organized as an independent school district on petition of majority of freeholders of each district and vote of electors. (Sch. Law, 1901, secs. 214–216.) Board of education to be elected. (Sec. 216.) Such board may provide for the transportation of pupils at public expense; every person employed for this purpose must give reasonable bond. (Sec. 217.)

An act of 1903 provides for the transportation and instruction of scholars of one school district in an adjoining district or districts when in the opinion of the school board of the first-mentioned district it would be for its best interests. This district retains its organization and receives its portion of public money. (Laws of Minn., 1903, pp. 81–82.)

Another act of 1903 permits one or several school districts to be consolidated with an adjoining district that maintains a State graded or high school, upon due petition and vote as above. The officers, organization, and laws of the last-mentioned district are to be those of the consolidated district. School boards of such consolidated districts may provide for free transportation of children to and from school. (Ibid., pp. 412–414.)

Still another act of 1903 provides that the "board of education in any incorporated city having over 50,000 inhabitants and constituting a special or independent school district may, when in their opinion the same will be for the best interest of the pupils in any such city, provide for the conveyance of pupils living at a distance of more than 1 mile from any schoolhouse wherein a graded school shall be held, to and from such schoolhouse at public expense." (Ibid., p. 50.)

MISSOURI.

A law of 1901 enables three or more school districts, one of which may be a village district, to unite and form a new district. The new district may maintain a high school and as many lower grade schools as the board of directors may determine.

MONTANA.

A law of 1903 provides that "the trustees of any school district in the State of Montana may, when they shall deem it for the best interest of all the pupils residing in such district, close their school and send the pupils of the district to another district, and for such purpose are hereby empowered to expend any moneys belonging to their district for the purpose of paying for the transportation of the pupils from their district to such other districts and paying their tuition."

NEBRASKA.

"Two districts may be made from one by the county superintendent upon a petition from each district proposed, signed by a majority of the voters in each district proposed. One district may be discontinued, and its territory attached to other adjoining districts, upon petitions signed by one-half of the legal voters in each district affected." (Nebr. Sch. Law, I, 4, Fourth.)

A law of 1897 authorizes a city or a high school district board, by a two-thirds vote of entire board, or any district board when authorized by a two-thirds vote of those present at a district meeting, to make provision for the transportation of pupils to any other school in their district who live so far from school as to render attendance impracticable without transportation; or they (except city boards) under the same conditions may contract for the instruction of all pupils in a neighboring district, and transport them thither, without forfeiting apportionment. (Ibid., V, 4b, 4c.)

Twenty-one counties contain schools in which one or both features of the law have been tried. Fifty-seven pupils were transported, at a cost of $560; 158 pupils attended school in adjoining districts for an average of seven months, at a total cost of $1,471. "Those making the report are unanimous in the opinion that the law is beneficial." "The difficulty in inaugurating any new system, where prejudice and long-established usages prevail, is met here as well as in other matters." (Nebr. Sch. Rept., 1900, pp. 40–43.)

NEW HAMPSHIRE.

Towns are authorized to expend a portion of the school money, not exceeding 25 per cent, in conveying children to and from school. (N. H. Sch. Laws, 1898, chap. 92, sec. 1.)

NEW JERSEY.

Children in any district "living remote from the schoolhouse" may be transported to and from school under rules and contracts made by the board of education. A child living remote from any public school in his own district may, with the written consent of the county superintendent, attend a school in an adjoining district, and be transported at the public expense. (N. J. Sch. Law, 1903, secs. 117, 118.)

Children who have completed the school course of their own district may attend a higher grade school in another district (with the consent of the school boards of both districts), and have their transportation and tuition paid. (Ibid., secs. 117, 119.)

In making the apportionment of the school moneys, $200 must be apportioned to each district for each teacher whose services shall have been dispensed with by adopting transportation. (Ibid., sec. 182, I.)

NORTH CAROLINA.

Since June 30, 1901, 318 districts have been consolidated, and there has been a total decrease of 179 districts. In Durham County the number of districts has been reduced from 65 to 49, and still more than nine-tenths of the children are within less than 2 miles of a school, and less than 100 of them are as far as 3 miles. Consolidation has been tried with great success in Buncombe, Guilford, Lincoln, Cabarrus, Alamance, Mecklenburg, Robeson, Randolph, Iredell, and other counties.

NEW YORK.

School districts are authorized to contract with adjoining districts for the tuition of any or all of their children and to convey them at the public expense.

NORTH DAKOTA.

A district school board may, and on petition of a majority of the voters shall, arrange for sending to the schools of an adjoining district such pupils as can be conveniently taught therein and for paying their tuition and transportation. (Rev. Code, sec. 696, as amended 1903.)

A school may be discontinued when its average attendance for ten consecutive days shall be less than 4.

A district board may, and on petition of a third of the voters shall, call an election to determine the question of "conveying pupils at the expense of said district to and from schools already established," or "of consolidating two or more common schools, and of selecting a site and erecting a suitable building * * * to accommodate the pupils of schools to be vacated." If a majority is in favor of either of these proceedings the board shall carry out the decision. (Ibid., sec. 704, as amended 1903.)

A few instances of consolidation are reported by county superintendents.

OHIO.

In 1894 a special law was passed authorizing centralization and transportation in Kingsville, Ashtabula County. The succeeding legislature passed a measure applicable to the counties of Stark, Ashtabula, and Portage. In 1898 the law was made general, and subsequently further amended. As it now stands (1904) township boards of education may submit to a vote the question of township centralization, and must submit it upon petition of one-fourth the electors. Centralization, once effected, shall not be discontinued within 3 years, and then only by petition and election. A central graded school must be maintained in centralized townships, and a high school course of not less than two years is authorized. Transportation must be furnished all pupils living more than three-fourths of a mile from the central building.

An act of 1867, as amended in 1904, provides that the board of education of any township school district may suspend any or all subdistrict schools under its juristion but must in that case convey the pupils to some other school or schools in the same or an adjoining district; or the board may abolish all the subdistricts providing conveyance is furnished to one or more central schools for pupils living more than one-half mile from the schoolhouse. "Under this section the schools of a township can be centralized without submitting the question to the electors." (State School Commissioner.)

PENNSYLVANIA.

A law (dating from 1897) authorizes directors to provide transportation for the children at the public expense to and from any school of their own district or of a neighboring district, but only for pupils of schools that have been closed by reason of small attendance, and who will have a greater distance to travel than before, and with the proviso that the cost of transportation per pupil shall not exceed the cost of maintaining the schools so closed. No school official may be a party to any contract for conveying children. (Pa. Sch. Laws, 1901, Secs. CXXX, CXXXI.)

An act of 1901 requires township boards, upon petition of a majority of the electors representing one-fourth the assessed valuation, to submit to the electors the question of township centralization, which is carried by a majority vote. (Sec. CXXXIII.) A graded course must be maintained in centralized townships, and a high school course of not less than two years is authorized. Transportation must be furnished all pupils living more than three-fourths of a mile from the central building. (Sec. CXXXVI.)

RHODE ISLAND.

A law of 1898 authorizes school committees to consolidate any schools that have an average number belonging of less than 12 and provide transportation for pupils. Any town may consolidate three or more ungraded schools. Any district with ungraded school may consolidate with district having graded school. The State pays $100 to each district so consolidated. A few ungraded schools have been consolidated. The conveyance of the children still remains as the great obstacle.

SOUTH DAKOTA.

We understand the school laws of this State are sufficient to allow a school township to try this plan, or even two or more subdistricts may unite their schools into one, so that centralization may be tried in this State at once. (B. D. Kribs, in S. Dak. Rep., 1900, p. 13.)

Although in a few localities action has been taken looking to the establishment of central graded township schools, I regret to report that the movement in that direction is not general. However, much discussion of the proposition has been had in many districts, and many of the smaller schools of the State have been closed and the pupils transported to other schools in the same or other districts. It would seem that evolution rather than revolution is to be the method of change which will eventually give us "no school of fewer than 20 pupils and graded township schools where possible." (S. Dak. Rep., 1902., p. 4.)

A county superintendent reports: "The financial side of the plan is the only thing that can bring it into this [McPherson] county, and as that is favorable, I believe that in a few years we shall have many central schools. We are at least working and hoping for that time to come." (S. Dak. Rep., 1902, p. 100.)

UTAH.

Opinion of attorney-general: "The county commissioners may consolidate two or more school districts, upon the petition of as many residents of such districts as have the care and custody of not less than twenty school children of school age residing therein, or upon the recommendation of the county superintendent; that is to say, if the residents of the territory of which the new district is to be composed who control twenty school children of school age, or the county superintendent, shall petition to the board of county commissioners, the said board may consolidate the districts set forth in such petition. It is not necessary for the people to vote upon the question. The county commissioners possess ample power under the law to make such consolidation. The power is conferred upon them by section 1801 of the Revised Statutes." (Utah Rep., 1902, 287.)

VERMONT.

The town system established (Sch. Laws, 1903, sec. 664). "Schools shall be located at such places and held at such times as in the judgment of the [town board of] school directors will best subserve the interests of education and give all the scholars of the town equal advantages so far as practicable. The school directors may provide conveyance of scholars from such points as they may designate to and from school at the expense of the town, when in their judgment they deem it advisable, or may pay a reasonable sum for the board of such scholars while in attendance upon school. In case the school directors refuse to provide board or conveyance for scholars residing more than 1½ miles from school, when requested so to do by the parent or guardian of any such scholar, an appeal may be had to the selectmen of the town on a petition signed by ten or more resident taxpayers of such town. On receipt of such petition the selectmen shall inquire into the necessity of such conveyance, and determine whether such scholars are receiving the quality of school advantages herein contemplated. They shall make known their decision to the school directors in writing, whose duty it shall be to provide board or transportation for such scholars when so ordered by the selectmen. Nothing in this act (section) shall be construed as applying to the conveying of scholars attending high schools." (Sec. 685.)

Without doubt in towns conveniently situated for the purpose it is possible for Vermont to profit by the union of schools and the transportation of pupils. And yet only a few towns have made a success of the plan. Probably no other detail of school administration has caused the directors so much perplexity and has caused so much dissatisfaction among patrons.

There is some misunderstanding of the meaning of the law. As the law is commonly interpreted directors are empowered to locate schools and furnish conveyance for the practicable equalization of educational advantages as their judgment directs. In cases of pupils residing more than 1½ miles from school an appeal may be made to the selectmen on the refusal of directors to convey pupils. It is not known in this office whether any appeal has been made to the courts to compel conveyance in any case on the ground that it is the intent of the statute to require equal advantages so far as is practicable. Several complaints have been received from parents that suitable conveyance was not furnished, and that towns by vote and directors refused to furnish conveyance in cases of 2, 3, and 4 miles, even when schools near the aggrieved had been closed. On the other hand, directors report the difficulty of providing conveyance with the means afforded, and of making satisfactory arrangements with certain patrons. Also objection is made in some quarters to the expense.

The aim of the law is excellent. The difficulty of its execution is unfortunate. To provide more equable school advantages in a town is progressive and commendable. There are abundant evidences that many directors have exerted faithful effort to profit by the provisions of the law. The wisdom of further amending the law is doubtful. Certainly directors should continue to have present powers. It is questionable whether compulsory conveyance in certain cases would be wise. At best the wise execution of law must be left to the sober thought of the people. (Vt. Rep., 1902, pp. 23–24.)

VIRGINIA.

"District school boards are authorized to provide for the consolidation of schools and the transportation of pupils." (Va. Sch. Law, 1903, sec. 1503.) It is made the duty of boards of education to guard against such multiplication of schools as "will tend to cause a low grade of instruction." (Sec. 1504.)

WASHINGTON.

"Upon receipt of a petition signed by five heads of families of two or more adjoining districts, * * * the county superintendent may organize and establish a consolidated district." Provision is made for the election of a board of three directors for the consolidated district. (Sch. Laws, sec. 12, as amended, 1903.)

District school boards "shall have power, and it shall be their duty: * * * Twelfth. To provide and pay for transportation of children to and from school when, in their judgment, the best interests of their district will be subserved thereby." (Sch. Laws, sec. 40, amendment of 1903.)

WISCONSIN.

Any school district may make provision for closing its schools and sending its pupils to adjoining schools, and provide for the payment of tuition and transportation of pupils by taxation. An amendment of 1901 gives the annual meeting power "to vote a tax for the purpose of providing for the free transportation of any or all children residing in the district, by the most direct route, to and from the schoolhouse in the district." (Sch. Laws, Wis., 1901, sec. 430, 16.)

In towns which have adopted the township system the town school board may transport pupils, in their discretion. (Sec. 524.)

FREE TEXT-BOOKS AND SUPPLIES.

The following table gives certain particulars of the laws relating to free text-books and supplies in those States which have statutory provisions upon the subject:

State.	Law mandatory or optional?	What shall or may be loaned free?	Limited to what pupils, grades, branches, etc.?
Maine	Mandatory	Schoolbooks, apparatus, and appliances.	Not limited.
New Hampshire	do	Text-books and other supplies	Do.
Vermont	do	Appliances, supplies, and text-books.	To certain specified elementary branches.
Massachusetts	do	Text-books and other school supplies.[a]	Not limited.
Rhode Island	do	Text-books and other school supplies.	Do.
Connecticut	Optional	do	Do.
New York	do	Text-books	To pupils of schools in union free school districts.
New Jersey	Mandatory	Text-books and school supplies.	Not limited.
Pennsylvania	do	Books and school supplies	Do.
Delaware	do	Text-books	To pupils (including colored) of public schools outside of Wilmington.
Maryland	do	do	Introduced into the grades successively, beginning with the first. Annual expenditure limited to $150,000, appropriated by the State.
District of Columbia[b]	Optional	Text-books and supplies	To grades below high school.
West Virginia	do	Text-books	Not limited.
Ohio	do	Schoolbooks	To the elementary branches specified in the compulsory-attendance law.
Michigan	do	Text-books	To certain specified elementary branches.
Wisconsin	do	do	Not limited.
Minnesota	do	do	Do.
Iowa	do	do	Do.
North Dakota	do	Books and supplies	Do.
South Dakota	do	Schoolbooks	Do.
Nebraska	Mandatory	Text-books and school supplies.	Do.
Kansas	Optional	Text-books	Do.
Wyoming	Mandatory	Text-books and school supplies.	Do.
Colorado	Optional	Text-books	Do.
Utah	Mandatory	Text-books and supplies	To pupils of schools below high school.
Idaho	Optional	Text-books	Not limited.
Washington	do	do	Do.

[a] Including tools, implements, and materials used for instruction in the use of tools and cooking.
[b] No law upon the subject. Congress makes annually the necessary appropriation upon the estimate of the Board of Education.

IN CITY SCHOOLS.

In January, 1903, the following inquiries were addressed to the superintendent of city schools of each of the 161 cities of 25,000 population and over in the United States:

1. Are text-books furnished free to all the pupils in any of the grades of your city schools?
2. In what year did the city begin to furnish free text-books in any of the grades?
3. In which grades were they then supplied to all the pupils in said grades?
4. In which grades of your schools are they now furnished to all the pupils?

Responses were received from 159 of the 161 superintendents. In many cases the information was not complete. The answers to the inquiries, so far as could be tabulated, are given for each city in the following table:

Name of city.	Population in 1900.	Are free textbooks furnished?	City began to furnish free textbooks.	In which grades then supplied?	In which grades now furnished?
New York, N. Y	3,437,202	Yes	1878	All grades	All grades.
Chicago, Ill	1,698,575	No			
Philadelphia, Pa	1,293,697	Yes	1818	All grades	Do.
St. Louis, Mo	575,238	Yes	1897	1 to 4, inclusive	1 to 4, inclusive.[a]
Boston, Mass	560,892	Yes	1884	All grades	All grades.
Baltimore, Md	508,957	Yes	1884	do	Do.
Cleveland, Ohio	381,768	Yes	1901	3 to 8, inclusive[b]	3 to 8, inclusive.[b]
Buffalo, N. Y	352,387	Yes	1893	All grades	All grades.
San Francisco, Cal	342,782	No			
Cincinnati, Ohio	325,902	Yes	1899	7 and 8	3 to 8, inclusive.
Pittsburg, Pa	321,616	Yes	1894	All grades	All grades.

TEMPERANCE INSTRUCTION IN THE PUBLIC SCHOOLS.

The following table shows the leading provisions of the statutes of the several States and Territories relating to temperance instruction in the public schools.

EXPLANATION OF CHARACTERS.

M—The study of physiology and hygiene, with special reference to the effects of alcoholic drinks and narcotics upon the human system, is **M**andatory in the public schools.

TT—It must be **T**aught in the same manner and as **T**horoughly as other required branches.

TE—**T**eachers must pass a satisfactory **E**xamination in this subject as a condition of employment.

A—The study must be taught in **A**ll schools supported in whole or in part by public funds.

AA—It is required of **A**ll pupils in **A**ll schools.

PRB—**P**upils able to **R**ead must be taught by means of text **B**ooks on the subject.

1/5-20 (or 1/4-20)—The text-books on physiology for primary and intermediate schools must give one-fifth (or one-fourth) their space to this subject, and those for high schools at least 20 pages.

SA—Text-books must give **S**pace **A**dequate to the subject.

PE—**P**upils must be **E**xamined and tested in their knowledge of this subject before being promoted to higher grades.

SR—County or city **S**uperintendent must **R**eport to State superintendent to what extent this law has been complied with.

TC—Teacher must **C**ertify in school register, before returning same at the end of the term, whether this law has been complied with in his school or grade.

TN—The subject must be **T**aught in **N**ormal schools, teachers' training classes, and institutes.

P—The statute specifies a **P**enalty for violation. In other States it is punishable under some general penal statute.

n—A minimum **N**umber of lessons per week and year is specified.

*Above primary.

°All pupils whose capacity will admit.

§Above the fourth grade.

NUMBER OF STUDENTS IN EACH FACULTY IN THE HIGHER INSTITUTIONS OF LEARNING IN CENTRAL EUROPE, 1902–3.

The following is a complete list of higher institutions of learning in German-speaking countries. It gives the latest official statements of attendance for the winter of 1902–3, and is particularly interesting, because it gives not only the attendance in full, but also in detail with reference to the faculties or departments, and the number of foreigners studying at these institutions.

According to the following tables, there are in Germany alone 6,306 foreign students in higher institutions, in Austria (Hungary excluded) alone 2,487, and in Switzerland alone 2,989 foreign students. The total number of students in Germany (population in 1900, 56,345,014) was 70,250; this does not include undergraduate college students, but only young men and women engaged in professional or post-graduate work. The total number in Austria (population in 1900, 26,150,597) was 28,515. The total number in Switzerland (population in 1900, 3,315,443) was 7,105.

TRIENNIAL REPORT OF THE SUNDAY SCHOOL STATISTICS OF NORTH AMERICA FOR THE TENTH INTERNATIONAL SUNDAY SCHOOL CONVENTION, DENVER, COLO., JUNE 26–30, 1902.

[Compiled by Marion Lawrance, general secretary, Toledo, Ohio.]

OFFICERS OF THE TENTH INTERNATIONAL CONVENTION.

President.—Rev. B. B. Tyler, D. D., Denver, Colo.

Vice-presidents.—E. R. Machum, St. John, New Brunswick, for Canada; W. A. Eudaly, Cincinnati, Ohio, for the Center; A. B. McCrillis, Providence, R. I., for the East; Rev. W. S. Jacobs, Nashville, Tenn., for the South; C. M. Campbell, Sacramento, Cal., for the West; Rev. E. R. Carter, D. D., Atlanta, Ga., for the negroes.

Other officers.—Dr. Geo. W. Bailey, treasurer, Philadelphia, Pa.; Howard L. Merrick, assistant treasurer, Philadelphia, Pa. (both the above, 634 Real Estate Trust Building); Rev. E. Morris Fergusson, recording secretary, Trenton, N. J.; Rev. E. W. Halpenny, assistant recording secretary, Indianapolis, Ind.

Executive committee.—W. N. Hartshorn, chairman, 120 Boylston street, Boston, Mass.; E. K. Warren, first vice-chairman, Three Oaks, Mich.; J. J. Maclaren, second vice-chairman, Toronto, Ontario; Alabama, W. T. Atkins, Selma; Alaska, Sheldon Jackson, D. D., Washington, D. C.; Alberta, A. W. Ward, Calgary; Arizona, M. W. Messinger, Phoenix; Arkansas, B. W. Green, Little Rock; Assiniboia, G. B. C. Sharpe, Moose Jaw; British Columbia, Noah Shakespeare, Victoria; California (N), H. Morton, San Jose; California (S), Hugh K. Walker, D. D., Los Angeles; Colorado, William E. Sweet, Denver; Connecticut, H. H. Spooner, Kensington; Delaware, W. O. Hoffecker, Smyrna; District of Columbia, W. W. Millan, Washington; Florida, H. C. Groves, Ocala; Georgia, W. S. Witham, Atlanta; Idaho, H. E. Neal, Boise; Illinois, A. H. Mills, Decatur; Indian Territory, Thomas Lain, Muskogee; Indiana, W. C. Hall, Indianapolis; Iowa, J. F. Hardin, Eldora; Kansas, Don Kinney, Newton; Kentucky, John Stites, Louisville; Louisiana, E. P. Mackie, New Orleans; Maine, L. R. Cook, Yarmouthville; Manitoba, F. W. Clingan, Virden; Maryland, John P. Campbell, D. D., Baltimore; Massachusetts, W. N. Hartshorn, Boston; Michigan, E. K. Warren, Three Oaks; Minnesota, Geo. R. Merrill, D. D., Minneapolis; Mississippi, John T. Buck, Jackson; Missouri, W. J. Semelroth, St. Louis; Montana, Rev. Henry F. Cope, Dillon; Nebraska, W. R. Jackson, University Place; Nevada, Rev. Charles E. Chase, Reno; New Brunswick, E. R. Machum, St. John; Newfoundland, Dr. N. S. Fraser, St. Johns; New Hampshire, G. W. Bingham, Derry; New Jersey, Rev. Frank A. Smith, Haddonfield; New Mexico, H. E. Fox, Albuquerque; New York, W. A. Duncan, Ph. D., Syracuse; North Carolina, N. B. Broughton, Raleigh; North Dakota, Rev. John Orchard, Fargo; Nova Scotia, Dr. Frank Woodbury, Halifax; Ohio, Ed. L. Young, Norwalk; Oklahoma, Fred L. Wenner, Kingfisher; Ontario, J. J. Maclaren, Toronto; Oregon, A. M. Smith, Portland; Pennsylvania, H. J. Heinz, Pittsburg; P. E. Island, Rev. D. B. McLeod, Charlottetown; Quebec, Seth P. Leet, Montreal; Rhode Island, T. W. Waterman, Providence; Saskatchewan, J. W. Hannon, Prince Albert; South Carolina, W. E. Pelham, Newberry; South Dakota, Rev. Charles M. Daley, Huron; Tennessee, H. M. Hamill, D. D., Nashville; Texas, J. F. Sadler, Bonham; Utah, Thomas Weir, Salt Lake City; Vermont, D. M. Camp, Newport; Virginia, J. R. Jopling, Danville; Washington, W. D. Wood, Seattle; West Virginia, Rev. C. Humble, M. D., Parkersburg; Wisconsin, S. B. Harding, Waukesha; Wyoming, D. R. Cowhick, Cheyenne; Hawaii, W. A. Bowen, Honolulu; Porto Rico, Robert W. Miller, Ponce; Philippines, ———; Cuba, Rev. Pedro Rioseco, Habana; Mexico, Rev. H. W. Brown, Mexico; Central America, Rev. W. W. McConnell, San Jose, Costa Rica.

At large, representing the organizations of the negroes in the South, Prof. I. Garland Penn, Atlanta, Ga.

The president, vice-presidents, treasurer, and recording secretary are ex officio members of the executive committee.

STATISTICS.

We believe, on the whole, those who gathered these statistics are not given to overestimates, and that these figures may be relied upon as conservative, and under rather than over the truth.

The statistical tables presented herewith tell their own story. We believe statistics gathered only once in three years will never be accurate unless the States and provinces do something, at least, toward keeping track of the growth of their Sunday-school statistics from year to year. Accurate statistics are an inspiration, but estimates are very depressing. The "guessing at half and multiplying by two" process does not commend itself to thinking people, and yet this is the basis of some of our statistics.

Statistics presented to the several international Sunday school conventions.

	Sunday schools.	Teachers.	Scholars.	Total.

[a] Included in West Indies.

NOTES.—1. It is not claimed that these statistics are complete or accurate. They are the sum of such statistics as have been sent in from the States, Provinces, and Territories.

2. All reports made to the international convention include the Sunday schools of the colored people.

3. In the column "Date of this report," 1901 and 1902 indicate fresh reports; 1899, report given to the ninth international convention at Atlanta; 1898, report given to the world's third convention in London; 1896, report given to the eighth international convention in Boston.

4. The words given under "Remarks" indicate the estimates set upon the various reports by those who sent them in.

5. The column "Per cent of population in Sunday school" will be filled in the printed report. Present returns too incomplete.

Triennial report on condition of organization.

	Organization.															
	Counties.	Counties organized.	Banner counties.	Conventions held past year.	Primary unions.	Home departments.	Membership, home departments.	Normal classes.	Membership, normal classes.	Normal graduates past year.	Cities having house visitation.	Population of cities visited.	Paid workers, full time.	Paid workers, part time.	Teachers' meetings.	Scholars joining church.

NOTES.—1. It is not claimed that these statistics are complete and accurate. They are the sum of such statistics as have been sent in from the States, Provinces, and Territories.

2. Black-face type indicates complete organization—that is, every county organized and holding conventions annually.

3. *Italics* indicate not organized.

*In addition to house visitation in cities, Indiana has done more or less house visitation in 46 counties, Iowa in 80 counties, Kansas in 69 counties, Missouri in 15 counties.

The following tables of statistics are those presented to the World's Third Sunday School Convention, held in London, England, in 1898, increased by the addition of the figures from North America, presented to this convention:

Sunday school statistics of all nations.

	Sunday schools.	Teachers.	Scholars.	Total membership.

The world	254,382	2,408,591	23,208,180	25,869,249

A CLOSER LOOK.

Notwithstanding the fact that our statistics are not wholly satisfactory, they nevertheless indicate better than any other means at hand the actual progress of the work.

Alaska shows a gain of over 100 per cent in membership, and these figures may be relied upon. Alberta's report is especially gratifying. The largest gains among the States are in Texas, which leads with 116,154, and Pennylvania, with 104,807. Connecticut, Illinois, Maine, Michigan, Missouri, North Dakota, Oklahoma, Tennessee, Manitoba, and Ontario show gains ranging from 10,000 to 20,000 each. Colorado and Nebraska show gains ranging from 20,000 to 30,000. Washington gains 34,000, Virginia 44,000, and Ohio 78,000 in round numbers.

On the other hand, northern California loses about 10,000, southern California 7,000, Iowa 22,000, Kansas 17,000, Kentucky 14,000, North Carolina 59,000. New York shows a loss of over 100,000, but we believe that this, with some of the others named above, is the result of inaccuracy either in this report or the preceding one. It is noticeable that Quebec is the only province showing a decrease, and that of only 500.

In regard to this whole matter of gain and loss, it ought to be said that in many cases it is more apparent than real, and is often because of inaccuracies in the reports.

It can not be granted that two great States adjoining each other would show a loss of 100,000 in one and a gain of 100,000 in the other.

In the last tabulated form given above there is very much to encourage us. Over 18,000 conventions held in one year is truly a remarkable record. The home department shows a gain of nearly 124,000 in membership. For the first time we have some statistics concerning normal work, and are able to report from twenty-nine States and provinces 1,450 normal classes, enrolling 13,962 members, and 1,453 receiving diplomas the past year. This is certainly very encouraging. Seventeen States and provinces report house visitation in eighty-three cities containing a population of 3,200,000, besides considerable work done in rural districts. Four thousand five hundred and sixty-two teachers' meetings are reported in twenty-three States and provinces. Perhaps the most encouraging feature of our report, however, is the number of conversions and additions to the church. One hundred and fifty-nine thousand nine hundred and one are the figures sent in from twenty-eight States and provinces. Had all our States and provinces reported upon this item we have no doubt the figures would have shown 200,000 conversions during the past year.

THE LEGAL STATUS OF SCHOOL BOARDS IN CITIES OF THE UNITED STATES.

The legal status of school boards in cities of 40,000 inhabitants or over in this country was made the subject of special inquiry by circular letter to the superintendents of city schools. Ninety of the 92 letters of inquiry were answered and the items of information gleaned will be found in the following tables.

(1) In 48 cases out of 90, the name of the board which administers the public education of the city, was found to be board of education (in one or two cases varied to board of public education). In 10 cases, it is school board; in 11 cases, school committee; in 10 cases, board of school directors; in 3 cases board of school commissioners; in 2 cases, board of trustees; in 2 cases, board of school inspectors; in 2 cases board of control; and in one city (Buffalo) no separate board exists, the city council administering the schools.

(2) The greatest variety is found in the number of members of these boards. The results of the inquiry are as follows:

Four boards have 3 members, 8 boards have 5 members, 6 boards have 6 members, 12 boards have 7 members, 3 boards have 8 members, 10 boards have 9 members, 4 boards have 10 members, 1 board has 11 members, 6 boards have 12 members, 2 boards have 13 members, 3 boards have 14 members, 3 boards have 15 members, 1 board has 16 members, 1 board has 17 members, 1 board has 18 members, 1 board has 19 members, 4 boards have 20 members, 3 boards have 21 members, 1 board has 22 members, 1 board has 23 members, 3 boards have 24 members, 1 board has 25 members, 1 board has 27 members, 3 boards have 30 members, 1 board has 33 members, 1 board has 36 members, 1 board has 39 members, 1 board has 42 members, 1 board has 46 members, 1 board has 64 members, 1 board has 90 members.

(3) The members of the boards are chosen by popular vote in 63 cities, at regular elections; in one or two cases at special elections. In a few cities only the votes of property owners are admitted. In 15 cases they are appointed by the mayor of the city; in 6 cases they are elected by the city council (sometimes by the common council alone); in 6 cases other ways are resorted to, such as appointment by courts, by local boards, or by the governor of the State.

(4) The members of the boards are selected from the city at large in 42 cases; from wards in 34 cases; from both in 6 cases, and from school districts in 8 cases.

(5) The term of office of members of the boards varies between two and seven years. It is two years in 24 cases; three years in 35 cases; four years in 16 cases;

five years in 6 cases; six years in 7 cases; seven years in 1 case; from one to five years in 1 case, and in one city a part of the board is not elected or appointed for a specific term.

(6) Vacancies in the board are temporarily filled by the board itself in 38 cases; by appointment by the mayor in 22 cases; by the city council or board of aldermen in 12 cases; by joint conventions of the board of aldermen and the school board in 9 cases. Other modes are resorted to in 10 cases. These show, however, that the principle is adhered to to let the same authority make the selection which made the original appointment or selection.

(7) The principal source of revenue for public schools is in all cases (90) local taxation, but in 41 cases the State and county are also mentioned as sources of school revenue.

(8) The maximum rate of tax could not be ascertained in all cases; many of the replies state that the law does not specify a maximum, only providing for "reasonable expenditures."

(9) The title to schoolhouses and property is vested in the board in 49 cases, in the city in 41 cases.

(10) The board is a legal corporation in 62 cases; in 28 cases it is not.

(11) The superintendent of schools is elected in 86 cases by the board, of which he is usually a professional adviser, but rarely, if ever, a voting member. In 2 cases he is elected by popular vote, and in 1 or 2 cases he is elected by local boards (i. e., not by the central city board), or appointed by the governor of the State.

(12) The superintendent's term of office varies between one and six years. In 27 cases it is one year; in 11 cases two years; in 17 cases three years, in 9 cases four years; in 3 cases five years, and in 1 case six years. In 22 cases the term is not defined, or is subject to the pleasure of the board.

(13) Authority to examine candidates for teachers' certificates is vested in the superintendent of city schools in 26 cases; in a special board of examiners in 27 cases; in a committee of the school board in 12 cases, and in county and State examiners in 8 cases. Where the board is the authority, the latter is usually delegated to the superintendent and his deputies, or to specialists among the principals of schools. The board of examiners, if such exist, also consists of professional men of distinction and reputation.

(14) Authority to appoint teachers is vested, as a rule, in the board of education, namely, in 77 cases. In 5 cases a committee of the board performs this duty, but its action is subject to the approval of the board. In 6 cases the superintendent appoints teachers, and in 2 cases local or district boards do so.

Summary of laws relating to the school boards of cities of 40,000 inhabitants or over.

PART I.

City.	Population in 1900.	Name of school board.	Number of members.	How chosen.	Selected from city at large, wards, or school districts.	Term of office.	Vacancies in board are filled for the unexpired term.
Akron, Ohio	42,728	Board of education	16	By popular vote	From wards	2 years	By board itself.

Portland, Me							
Portland, Oreg	Special taxation	11½ mills	In the board	Yes	By board of directors; term indefinite.	City board of examiners.	Board of directors.
Providence, R. I	Local taxation		In the city	No	By school committee; first for 1 year, after that during good behavior.	Only normal graduates appointed.	School committee, on nomination by superintendent.

Summary of laws relating to the school boards of cities of 40,000 inhabitants or over—Continued.

PART II—Continued.

City.	Principal source of school revenues.	Maximum amount of tax for schools permitted by law.	Title to school property is vested—	Is the school board a legal corporation?	Manner of selecting city superintendent of schools.	Authority charged by law with examination of teachers.	Authority charged by law with appointment of teachers.
Reading, Pa	Local taxation and State appropriation.	4 mills (yields $180,000).	In the school district.	Yes	By school board; for 3 years.	Superintendent	School board, on nomination by superintendent.
Richmond, Va	City and State appropriation.	30 cents on $100	In the city	Yes	By State board of education; confirmed by senate.	Superintendent; State board of education also issues certificates.	School board.
Rochester, N. Y	Local taxation	$25 per registered pupil.	do	Yes	By board of education; for 4 years.	Board of examiners, appointed by board of education.	Board of education, on nomination by superintendent.
Saginaw, Mich	do	$5.90 on $1,000	In the board	Yes	By board of education; for 1 year.	Committee of board of education.	Board of education.
St. Joseph, Mo	do	$1 on $100	do	Yes	do	Superintendent and committee of board.	Board of education, on nomination by committee.
St. Louis, Mo	Local taxation, merchants and manufacturers' tax, railroad tax, State school fund.	6 mills for local taxation.	do	Yes	By board of education; for 4 years.	Superintendent and principals, under rules of board of education.	Board of education, on nomination by superintendent.
St. Paul, Minn	Appropriation by city council.	25 cents on $100	In the city	No	By board of school inspectors; term not stated.	Board of school inspectors.	Board of school inspectors.
Salt Lake City, Utah.	Local taxation and State and county apportionment.	Local 5½ mills, county 2⅓ mills, State 3 mills.	In the board	Yes	By board of education; for 2 years.	Board of examiners, appointed by board of education.	Board of education, on nomination by superintendent.
San Antonio, Tex	do	30 cents	do	Yes	By school board; for 1 year.	Superintendent	School board.
San Francisco, Cal	State and city taxation.		do	No	By popular vote; for 4 years.	Board of examination (superintendent and 4 deputies).	Board of education.
Savannah, Ga	State and county taxation.		do	Yes	By board of education; for 1 year.	Board of education through committee.	Do.
Scranton, Pa	Local taxation	13 mills for schools and 13 mills for building purposes.	In city of Scranton school district.	Yes	By board of control; for 3 years.	Superintendent	Board of control.
Seattle, Wash	Local taxation and State revenues.	1 per cent	In Seattle school district No. 1.	Yes	By board of directors; for term not stated.	Board of directors	Board of directors.
Somerville, Mass	Local taxation		In the city	No	By school committee; for 1 year.	No special authority	School committee, in consultation with ward committees.

Springfield, Mass.	do	No legal limit	do	No	do	Superintendent examines; school committee issues certificates.	School committee.
Syracuse, N. Y.	Local taxation and State appropriation.	No limit fixed	do	No	By board of education; for 3 years.	Board consisting of superintendent, 1 principal, and 1 board member.	Board of education.
Toledo, Ohio	Contingent tax levy and State funds.	$7\frac{7}{10}$ mills	In the board	Yes	By board of education; for 2 years.	Board of examiners of 3 members.	Superintendent, approved by board.
Trenton, N. J.	City and State appropriation.		do	Yes	By board of education; for indefinite term.	Board of education	Board of education.
Troy, N. Y.	Local taxation		In the city	Yes	By board of education; at pleasure of board.	State uniform system; State examines and reviews papers.	Do.
Utica, N. Y.	do	City appropriation not to exceed 4 times the State apportionment.	do	Yes	By board of school commissioners; no term stated.	State licenses are adopted.	Board of school commissioners.
Washington, D. C.	Appropriation by Congress; one-half from local taxation, one-half from Federal Treasury.		In District of Columbia.	No	By board of education; for indefinite term.	Board of education	Board of education.
Waterbury, Conn.	Local taxation	No limit; reasonable expenditures.	In the board	No	By board of education; for 2 years.	Superintendent	Superintendent.
Wilkesbarre, Pa.	do	13 mills	do	No	By school board; for 3 years.	do	School board.
Wilmington, Del.	City appropriation; amount stipulated in charter.	50 cents on $100	do	Yes	By board of education; for 2 years.	Superintendent, under direction of teachers' committee.	Board of education; superintendent only advises.
Worcester, Mass.	Local taxation; appropriation from city council.	No definite limit	In the city	No	By school committee; for 3 years.	Subcommittee of school committee.	Committee on teachers, approved by school committee.
Yonkers, N. Y.	Local and State taxation.		In the board	Yes	By board of education; at pleasure of board.	Teachers certified by State department; must be normal or college graduates.	Board of education.
Youngstown, Ohio.	Local taxation and State apportionment.	10 mills	do	No	By board of education; for 2 years.	City board of examiners.	Board of education, which may or may not act on nomination by superintendent.

BIBLE READING AND RELIGIOUS EXERCISES IN THE PUBLIC SCHOOLS.

The following tables, A, B, and C, are the result of an inquiry made during the month of February, 1904, of the superintendents of over 1,000 cities and towns. The questions submitted to the superintendents were: (1) Are religious exercises conducted in the schools of your city at the opening of the day's session? (2) Are they prohibited by law, ordinance, or regulation? (3) Are they limited to the reading of the Bible? (4) If the Bible is read in the schools, is it only the Old Testament, or only the New Testament, or only a book of selections? (5) Is comment on Bible contents forbidden? (6) Are prayers said by (*a*) the teacher, (*b*) the class? (7) Are hymns or other sacred songs sung?

With reference to question 5, it may be said that in most cases where it is negatively answered, it is stated that all sectarian comment is avoided; in most cases where it is affirmatively answered the same appears to be meant. In reply to question 6, the statement is made almost unanimously that the Lord's Prayer is recited or chanted; no other prayers are said, except in less than a dozen cases. Question 7 is many times answered in the affirmative, even in cases where the State school law or the constitution prohibits religious exercises, and where the Bible is not read nor prayers said. This, however, is explained by the fact that hymns and sacred songs are learned in the course of regular music lessons, since song books generally contain them. Some consider patriotic songs as sacred, and therefore reply to question 7 in the affirmative without hesitation.

The National Reform Association published, in 1902, among its national reform documents (Vol. IV, Nos. 1 and 2) a comprehensive summary, from which the following statements are taken. The facts given in Tables A, B, and C do not quite agree with the summaries of the reform association. A careful comparison will show this:

"There are nine States, to wit, Georgia, Indiana, Iowa, Kansas, Massachusetts, Mississippi, New Jersey, North Dakota, and South Dakota, in which the reading of the Bible in the public schools is legally prescribed, either in the State constitution or in the school law." Local authorities, however, discourage it in some places, owing to the heterogeneous population of these towns or cities.

"There are twelve States, to wit, Arkansas, Idaho, Illinois, Maine, Michigan, Nebraska, New York, Pennsylvania, Rhode Island, Utah, Vermont, and West Virginia, in which there is no mention of the Bible in the constitution or in the school law, but there are decisions of courts and State school superintendents of an authoritative character, which give a legal status to the custom of Bible reading." Where it is not read in these twelve States it is prohibited by local boards. Such cases are quite numerous.

"There are sixteen States and one Territory, to wit, Alabama, Colorado, Connecticut, Delaware, Florida, Kentucky, Maryland, New Hampshire, North Carolina, Ohio, Oregon, South Carolina, Tennessee, Texas, Virginia, Wyoming, Oklahoma, in which the custom of Bible reading prevails, being supported only by usage and public sentiment." Where it is not done, and the cases are quite numerous in some of these States, local authorities discourage it.

"There are three States and one Territory, to wit, California, Louisiana, Nevada, and New Mexico, in which the Bible is, as a rule, not read, and in which public sentiment is against it, except in a few places.

"There are five States and one Territory, to wit, Minnesota, Missouri, Montana, Washington, Wisconsin, Arizona, in which decisions of courts, attorneys-general, and State school superintendents are adverse to the reading of the Bible. In most of these, moral instruction is required by law." Where in these States the Bible is read, nevertheless, it is done in compliance with local sentiment of the community.

A comparison of the results of this last inquiry (February, 1904) with those of a similar one made in 1896 reveals the fact that in 75.8 per cent of the towns and cities reporting (830 of 1,098), religious exercises are conducted in the schools, while in the year 1896 the percentage was 80.05 per cent (to wit, 651 of 808). But the percentage of those places in which the Bible is read varies scarcely half a per cent in the two years, to wit, 74.5 per cent in 1896, and 75 per cent in 1904. The difference of nearly 5 per cent in the number of places where religious exercises are conducted lies not so much in the facts as in the interpretation of "religious exercises," the occasional singing of hymns during music lessons or festive occasions being interpreted to signify a devotional exercise.

Mr. Ossian H. Long reports in the Forum (April–June, 1904) as follows:

New York is now busy with another interesting legislative bill. The plan is that in all schools wholly or in part supported by the State, or under State control, instructions in the principles of morality shall be given as thoroughly as in any branch of learning. The pupils are to be taught with suitable text-books, in not less than four lessons a week for ten weeks, or its equivalent during every school year, and must pass satisfactory examinations as in other studies. In all normal schools, normal colleges, teachers' training classes, and teachers' institutes adequate time and attention are to be given to instruction in the best methods of teaching this branch; and no teacher will be licensed who has not passed a satisfactory examination on this subject and the best method of teaching it. The willful refusal of a teacher to teach the subject shall result in the revocation of her license. No public money is to be apportioned to any school not following out the provisions of this law.

TABLE A.—*Statistics relating to religious exercises in the public schools in 1904 of 521 cities of 8,000 population and over.*

States and Territories.	Number of cities reporting.	Religious exercises at the opening of school.					Bible read.					Other exercises.[a]	
		Conducted.		Prohibited.		Limited to reading of Bible.	Yes.	New Testament.	Old Testament.	Book of selections.	Comment forbidden.	Prayer by teacher or class.	Hymns or sacred songs.
		Yes.	No.	Yes.	No.

[a] Including prayers chanted and hymns sung as musical exercises.

TEACHERS' PENSIONS.

The conditions under which pensions are paid to teachers in European countries are stated in the Annual Report of 1902 (see pages 2369–2371), where dues, pensions, and years of service required are tabulated, and afford an opportunity for comparison.

In the United States teachers are not pensioned from public school funds, except in Maryland, Ohio, and New Jersey. In New York other funds are drawn upon to pension teachers. (See below.) Voluntary beneficial associations have been formed in some cities and in other localities specified below. In certain States the laws provide for pension funds, but the feature of compulsory membership which the laws contained at first has been eliminated in Illinois and Ohio. A consequence of this was that many members withdrew and that the amount of annuity was greatly reduced. The following paragraphs show the varieties of organizations, etc.:

Voluntary mutual benefit associations, for temporary aid only, exist in Baltimore, St. Louis, Cincinnati, Cleveland, Detroit, Chicago, Buffalo, San Francisco, and St. Paul, and there is one interstate association. These call for $1 to $2 initiation fee, $1 to $5 annual dues. Special assessments of $1 are made in some cases. Benefits in sickness range from 50 cents a day to $10 a week; at death, funeral expenses only are paid in some instances, and in others a sum equal to $1 from each member of the association.

Associations for annuity, or retirement fund only, are in New York, Boston, and Baltimore, and there is an annuity guild in Massachusetts. The initiation fees reported are $3 to $5. The annual dues are 1 to 1½ per cent of salary up to $18 or $20. The annuity is from 60 per cent of salary to $600 a year. Time of service required for retirement is from two to five years with disability, or from thirty-five to forty years without disability.

Associations for both temporary aid and annuity exist in Hamilton County, Ohio (Cincinnati), Philadelphia, Brooklyn, and the District of Columbia. Initiation fees, $1 to $10; annual dues, $5 to $40. Annuity, $5 a week to $600 per year, and $100 for funeral expenses in case of death. Temporary aid during illness, $5 or $6 per week. Time of service required for retirement is two to five years with disability, or thirty-five to forty years without disability.

In some cities the subject of pension funds administered by public authorities has been agitated and discussed by teachers. In consequence pension or retirement funds are authorized by State legislatures for St. Louis, Boston, Brooklyn, New York City, Poughkeepsie, Detroit, Chicago, Charleston, S. C., and Buffalo, and for all cities in California. In Ohio, in New Jersey, and in the State of Maryland the State pays pensions to retired teachers. Dues vary little; they are generally 1 per cent of salary. Annuity, $250 to one-half of salary; maximum limit, $600. Minimum length of service with disability, twenty to thirty years; without disability, twenty-five to thirty-five years. In Maryland no dues are paid, but the State exclusively assumes the burden of paying pensions to teachers.

The law of *Maryland*, dated 1902, reads as follows:

Whenever any person in this State has taught in any of the public or normal schools thereof twenty-five years, and has reached the age of sixty years, and his or her record as such teacher has been without reproach, and by reason of physical or mental disability or infirmity is unable to teach longer, the said teacher may lay his or her case before the State board of education, and the said board shall proceed to consider the same, and if the facts are found as above stated the said teacher shall

be placed upon a list, a record of which shall be kept by the said board, to be known as the "teachers' retired list," and the names upon said "teachers' retired list" shall be regularly certified by said board to the comptroller of the treasury of this State, and every person so placed upon the said "retired list" shall be entitled to receive a pension from this State of two hundred dollars per annum, to be paid quarterly by the treasurer of this State upon the warrant of the comptroller.

The law passed in May, 1902, by the legislature of *Ohio* amends the law which authorized the cities of Cincinnati and Cleveland to maintain pension funds for teachers, and extends the benefits of such funds over all school districts of the State; that is to say, the school authorities of a district are granted the right to create a fund and retire teachers, but the act does not make it mandatory upon them. The fund is obtained by withholding $2 each month, or $20 a year, from the salaries of teachers who have declared their desire to become contributors and subsequently beneficiaries of the fund. This is the voluntary feature of the act mentioned before. The authorities may retire a teacher from service on account of mental or physical disability and apply the pension provisions after twenty years of service, provided three-fifths of that time have been spent in the service of the district or county and two-fifths of that time in other parts of the State or elsewhere. The term teacher includes principals and supervisory officers. The right to retire voluntarily and become a beneficiary is granted for both women and men teachers alike, after they have taught thirty years, with the same proviso as before. The amount of the pensions paid is $10 a year for every year served, but in no case more than $500 a year. Both principal and income of the fund may be drawn upon to pay the pensions. The teachers are to receive certificates monthly showing what amount has been withheld from their salaries. In case a teacher resigns from the profession she may claim one-half of the sum she paid into the fund during her service in school. The act is explicit on the question as to who may serve as custodian of the fund, how it is to be invested, and on other details.

The new school code of *Ohio*, passed April 25, 1904, contains the following provisions:

Any board which has created, or shall hereafter create, a teachers' pension fund shall pay into such fund all deductions, fines, penalties, and assessments made against teachers or other employees of the board. Such board may also pay to such pension fund, out of the contingent fund, not to exceed 2 per cent of the amount raised by the board from taxation.

The law of *Massachusetts* contains the following provisions:

A teachers' retirement fund shall be created in the city of Boston, which shall consist of (*a*) a permanent fund, made up of gifts and legacies specifically given to said permanent fund and a sum set apart by the board of trustees; (*b*) a general fund, made up of gifts and legacies not specifically given to said permanent fund, amounts retained from the salaries of teachers under the provisions of this act, and the interest derived from said permanent fund. The general fund may be drawn upon for the purposes of this act.

SECTION VI. The city treasurer, upon vote of the board of trustees, shall pay out of said retirement fund, in monthly payments, such an annuity to any teacher who shall retire or be discharged from the service of the city as the fund will allow and said board of trustees shall determine, but in no case shall a teacher receive such annuity unless said teacher has taught for thirty years, and for at least ten years in the public day schools of the city of Boston, except as hereinafter provided.

SECTION VII. The city treasurer, upon a vote of the board of trustees, shall pay out of the retirement fund, in monthly payments, such an annuity to any teacher who has taught not less than two years in the city of Boston, although less than thirty years in the aggregate, as the fund will allow and said board of trustees shall determine, if such teacher has become incapacitated for teaching and has been discharged from the service of the city of Boston: *Provided*, That a certificate of such incapacity be furnished by the attending physician and by a physician employed by the board

of trustees: *And further provided*, That the annuity shall cease when the incapacity ceases.

SECTION VIII. All annuities shall be uniform in amount, whether the annuitants are retired under the provisions of section six or of section seven, except as provided in section nine of this act.

SECTION IX. No annuity shall be paid to any teacher until such teacher shall contribute, or has contributed, to the general fund a sum equal to all the assessments for thirty years, to wit, five hundred and forty dollars.

SECTION X. Any teacher * * * who shall retire from the service of the city of Boston, not being in receipt of an annuity, shall * * * receive one-half of the total amount paid by such teacher into said fund.

The law passed by the *New York State* legislature in 1902, with reference to a retirement fund in Poughkeepsie, provides that the fund be composed of (1) "all money, pay, compensation, or salary, or any part thereof, forfeited, deducted, or withheld for or on account of absence from duty for any cause; (2) all moneys received from donations, legacies, gifts, bequests; (3) 2 per cent of the salaries paid each month."

The law creating a retirement fund in *Greater New York* designates as sources of this fund (1) money forfeited or withheld for absence from duty; (2) moneys received from donations, legacies, gifts; (3) 5 per cent annually of all excise moneys or fees from licenses granted to sell strong or spirituous liquors. Nothing is said of a regular contribution on the part of the teachers. The amount of annuity is fixed at one-half of the teacher's salary at the date of retirement, provided it does not exceed $1,000 in the case of a teacher and $1,500 in the case of a principal or superintendent, nor shall any annuity fall below $600.

Illinois.—On May 11, 1901, the law of 1895, which provided for a pension fund, was amended as follows:

That the board of education in cities having a population exceeding 100,000 inhabitants, shall have power, and it shall be the duty of said board, to create a public school teachers' and public school employees' pension and retirement fund, and for that purpose shall set apart the following money, to wit: (1) An amount not exceeding one per cent per annum of the respective salaries paid to teachers and school employees elected by such board of education, which amount shall be deducted in equal installments from the said salaries at the regular time for the payment of such salaries; (2) all moneys received from donations, legacies, gifts, bequests, or otherwise, on account of said fund; (3) all moneys which may be derived from any and all sources: *Provided, however*, That no tax shall ever be levied for said fund; (4) any public school teacher or public school employee, a part of whose salary is now or may hereafter be set apart to provide for the fund herein created by this act, may be released from the necessities of making further payments to said fund by filing a written notice of his or her desire to withdraw from complying with the provisions of this act with said board of trustees, which said resignation shall operate and go into effect immediately upon its receipt by said board of trustees.

New Jersey.—This State makes provision for the retirement of teachers in Article XXVII of its school law. The essential features of the law are as follows: A board of trustees of the teachers' retirement fund is created, which board administers the fund and pays annuities according to the following provisions:

Whenever any teacher shall have taught in the public schools * * * for a period or periods aggregating twenty years or more, and shall have become incapacitated from earning a sufficient livelihood, such teacher shall, at his or her request, and on the approval of the aforesaid board of trustees, be retired as a teacher and shall receive an annuity out of the fund * * * equal to one-half of the average annual salary received by such teacher for the five years immediately preceding the time of retirement: *Provided, however*, That no annuity shall be less than two hundred and fifty dollars nor more than six hundred dollars: *Provided, further*, That no teacher shall be retired under the provisions of this article unless he or she shall have first paid into said fund such sum as shall make his or her total payments into said fund equal to at least twenty per centum of his or her average annual salary for the five years immediately preceding the time of such retirement.

The retirement fund herein provided for shall be made up as follows:

I. One per centum of the monthly salaries of all teachers upon whom this act shall have become binding by its terms prior to January first, one thousand nine hundred and three; one per centum of the monthly salaries of all teachers who shall become members of said fund on or after January first, one thousand nine hundred and three, and who shall have been teaching ten years or less at the time of becoming members of said fund; two per centum of the monthly salaries of all teachers who shall become members of said fund on or after said date, and who shall have been teaching more than ten years at the time of becoming members of said fund: *Provided*, That on or after said date no person who shall have been teaching more than fifteen years shall become a member of said fund unless he or she shall have passed a satisfactory medical examination under such rules as the board of trustees may prescribe: *And provided, further*, That a teacher, now a member of said fund, shall not be required to pay more than one per centum of his or her salary by reason of the fact that he or she has been teaching more than ten years. * * *

II. One per centum of all annuities paid under the provisions of this article, which shall be deducted and withheld from each payment made to any annuitant.

III. All moneys and property received by donation, legacy, gift, bequest, devise, or otherwise, for or on account of said fund.

IV. All interest on investments and other moneys which may be duly and legally raised for the increase of said fund.

In States and cities where the law provides for public authorities to administer a teachers' retirement fund the associations for temporary aid and annuity are gradually winding up their business or merging their interest with the fund created by law. This has been the result in Europe, and naturally will be the result here.

REGULATIONS RELATING TO CORPORAL PUNISHMENT.

Corporal punishment is forbidden in the schools of—

The entire State of New Jersey. (New Jersey School Laws, 1902, p. 46, sec. 106.)

New York City. (By-Laws, Board of Education, 1902, p. 41, sec. 451.)

Chicago, Ill. (Rules and Regulations, 1898, p. 28, sec. 62.)

Baltimore, Md. (Rules, 1901, p. 17, art. 181.)

Cleveland, Ohio. (Handbook, 1903, p. 90, sec. 22.)

St. Paul, Minn., except to repel violence, etc. (Annual Report, 1901–2, p. 252, sec. 134.)

Syracuse, N. Y. (Rules and Regulations, 1898, p. 30, sec. 20.)

Albany, N. Y. (Rules and Regulations, 1898, p. 48, Art. VII, sec. 63.)

REGULATIONS IN OTHER CITIES OF OVER 100,000 INHABITANTS.

Philadelphia, Pa.: There is no rule, but corporal punishment is said to have been abandoned by common consent.

St. Louis, Mo.: Not mentioned in Rules of 1902.

Boston, Mass.: Forbidden in high schools and kindergartens, and as to girls in any school. In any case it is restricted to blows upon the hand with a rattan. Each case must be reported through the principal to the superintendent. (Rules and Regulations, 1902, secs. 218 and 241.)

Buffalo, N. Y.: The schools must be governed, as far as possible, without corporal punishment. Except when the superintendent gives special permission to other teachers, only a principal or acting principal may inflict it. (Charter and Ordinances, 1896, Chap. XIV, p. 218, sec. 39.)

San Francisco, Cal.: May not be inflicted in the high schools or upon girls in any

schools. It is permitted only in extreme cases and may be inflicted only by principals or by vice-principals with the consent of principals. Excessive punishment is prohibited, only a strap or a rattan being allowed. (Rules, 1900, p. 25, sec. 64.)

Cincinnati, Ohio: May not be inflicted for failures in lessons or recitations. Blows on head or violent shaking of pupils prohibited. (Sixty-sixth Report Board of Education, 1895–96, p. 199, sec. 84.)

Pittsburg, Pa.: Not forbidden, but is inflicted only in extreme cases. (Rept. 1900, p. 11.)

New Orleans, La.: Restricted to male pupils below high school, and to be administered only after all other means have failed. Only principal, or assistant principal by authority of the former, have right to inflict. Restricted to the hands, and must not be inflicted in presence of class, or at time of offense. Monthly report to superintendent required. (An. Report, 1902, p. 187, Art. VII; secs. 5–8.)

Detroit, Mich.: Must be avoided if possible. Must not be inflicted without full knowledge and consent of principal. (Manual Board of Education, 1897, p. 78, rules 90 and 92c.)

Milwaukee, Wis.: Permitted, as last alternative, by principal only. Excessive punishment and lonely confinement prohibited. Must not be inflicted in presence of class. All cases must be reported monthly to superintendent. (Rules and Regulations Board of School Directors, 1901, p. 49, Art. XIV, secs. 7 and 8.)

Washington, D. C.: Must be avoided if possible. All cases must be reported monthly to principal and through him and supervising principal to superintendent. (Rules, 1901, p. 21, sec. 50.)

Louisville, Ky.: Must be avoided as far as possible. Cruel punishment or confinement in closets prohibited. May be inflicted only after nature of offense has been fully explained to pupil. (Manual of School Board, 1902, p. 32, rule 3.)

Minneapolis, Minn.: Permitted only when all other means fail. Principal only may inflict corporal punishment; then only when parents give written consent. Each case must be reported by principal to superintendent. (Report, 1902, p. 143, sec. 6.)

Providence, R. I.: No pupil above primary liable, and in the latter only with written consent of parent or guardian. Each case must be reported to superintendent immediately, who causes an investigation to be made. (By-laws, School Committee, 1903, p. 26, Art. XIV.)

Indianapolis, Ind.: Must be avoided as far as possible. May be inflicted only in presence of principal, and must be immediately reported by him to superintendent. (Manual of Public Schools, 1900–1901, p. 51, sec. 11.)

Kansas City, Mo.: May be inflicted in cases of flagrant offenses, and then only after duly notifying parents or guardians of intended punishment; and if parent or guardian will administer punishment, so as to preserve discipline of the school, teacher must inflict no additional punishment. Must not be inflicted in presence of school, but at the close of session and in presence of two other teachers or the superintendent. (Rules and Regulations Board of Education, 1896, p. 24, sec. 88.)

Rochester, N. Y.: May be inflicted in extreme cases by the principal or, with his consent, by an assistant. (By-laws and Rules, Board of Education, 1898, p. 38, sec. 5.)

Denver, Colo., district No. 1: May be inflicted only after consultation with and with consent of principal. When practicable, superintendent should be consulted. All cases must be immediately reported to superintendent. (Twenty-fifth Annual Report Board of Education, district No. 1, 1899, p. 112.)

Toledo, Ohio: Forbidden in by-laws of 1885, p. 53, sec. 3. Not mentioned in by-laws of later date.

Allegheny, Pa.: Must be avoided when obedience and good order can be preserved

by milder measures. (Rules, Annual Report Superintendent Public Schools, 1902, p. 123, art. 4, sec. 3.)

Columbus, Ohio: Allowed when all other means have failed. To be inflicted in schoolroom by pupil's teacher, the principal being the judge of special cases. Punishment in the nature of personal indignity forbidden. (Report, 1891, p. 136, secs. 27, 28.)

Worcester, Mass.: Permitted only in extreme cases, then only when approved by principal or superintendent. Must not be inflicted in presence of school. Teachers are required to make and keep complete records of all cases. (Rules of School Committee, 1900, p. 22, sec. 12.)

New Haven, Conn.: May be administered, with consent of principal, in extreme cases only, but never at same session of school at which the offense was committed. Cases to be reported monthly to superintendent. (Manual, 1891, p. 56, art. 12, sec. 176.)

Fall River, Mass.: May be inflicted where milder measures fail. Must not ordinarily be administered in presence of school. Record of each punishment and offense must be sent to superintendent for inspection of the board. (Rules and Regulations, 1894, p. 13, sec. 46.)

St. Joseph, Mo.: Must be avoided as far as possible. Each case to be reported to principal and by him monthly to superintendent. (Report, 1889–90, p. 170, sec. 13.)

Omaha, Nebr.: Teachers are required to govern their pupils by kindness and appeals to their nobler affections and sentiments. (Rules and Regulations, 1900, p. 55, sec. 105.)

Los Angeles, Cal.: Must be avoided if possible; switch or strap to be used; blows upon face or head forbidden. (Report, 1902–3, p. 176, sec. 87.)

Memphis, Tenn.: Must be avoided when good order can be preserved by milder measures. (Manual, 1897–98, p. 53, sec. 48.)

Scranton, Pa.: Forbidden except in flagrant cases of disobedience and disorder. Not to be administered in presence of school, but some other teacher or the superintendent required to be present. (Rules and regulations, 1887, p. 14, sec. 6.)

COEDUCATION OF THE SEXES.

Coeducation, or the instruction of both sexes in the same schools and classes, is a characteristic feature of public education in the United States. Of elementary pupils at least 96 per cent are enrolled in mixed schools, and of secondary pupils 95 per cent. Altogether, on a total enrollment of 15,990,803 pupils in public schools (elementary, secondary, and normal), 15,387,734 are in schools attended by both sexes.

The very general favor with which the coeducation policy is regarded is indicated also by its extension to private schools. The reports show that of the pupils enrolled in private secondary schools 43 per cent are in mixed schools. As to higher institutions—colleges and universities—62.5 per cent of all undergraduates are in coeducational institutions. The proportion would doubtless be much higher if only State universities and land-grant colleges were considered. Summarizing, we may say, in round numbers, that 15⅔ million children and youth of this country are studying in public coeducational schools and colleges. The number in private schools and colleges would raise this total to at least 16 million, or 93 per cent of the total school and college enrollment.

The most noticeable fact in the recent history of public education in this country

is the increase in the number of high schools. In 1902 the number of such schools reported was 6,292, enrolling 550,611 pupils (226,914 boys, 323,697 girls). Of the total enrollment, 523,344 pupils (215,944 boys, 307,400 girls) were in coeducational schools. Of 628 leading cities in the country, 15 only had separate high schools in 1891; in 1901 the number had fallen to 12. Particulars respecting these schools will be found in Chapter XX of this Report (p. 1061).

In 1880 more than half the colleges of the country, 51.3 per cent (omitting in this consideration colleges exclusively for women and land-grant colleges, not departments of universities), reported coeducation either in the preparatory departments or in both preparatory and collegiate departments. Considering the latter only, there were 128 universities and colleges, or 35.7 per cent of the total number reported, which admitted women to the college classes. The 2,323 women regularly matriculated in these institutions formed 7.2 per cent of the total number of their undergraduates. In the decade 1880 to 1890 the number of coeducational colleges had increased to 65.6 per cent of the total number and the proportion of women matriculated to 19.5 per cent of the total number of college students. In 1900 the proportion of coeducational colleges had reached 71.6 per cent, and the proportion of women in their collegiate departments 24.7 per cent of the total registration.

In the total number of coeducational institutions are included 34 universities endowed by public funds, viz: 31 State and 3 Territorial and 18 private foundations of high order. (For particulars respecting these institutions see Chapter XX, pp. 1065–1066.)

The total number of women college students reported to this Office in 1902 was 37,585. Of this number 56 per cent were in coeducational colleges.

The most significant fact in the recent history of coeducation is the admission of women to graduate courses in certain universities of the East—notably Yale and Columbia—which exclude them from the undergraduate departments.

Foreign countries.—In England 65 per cent of the departments into which the elementary schools are divided have boys and girls in the same classes; in Scotland, 97 per cent. Statistics for Ireland show that 51 per cent of the national schools have a mixed attendance of boys and girls.

Separate education is the general policy in English schools of secondary grade, and where both sexes are admitted to the same school it is generally to separate departments. The royal commission on secondary education advocate the extension of the coeducational policy, and since the publication of their report (1895) experiments in this direction have noticeably increased.

In the British colonies, with very few exceptions, both mixed and separate schools are found. In Ontario all the schools are mixed. In Quebec the schools for English children are, as a rule, mixed, but in those for the French the sexes are separated. In the Australasian colonies the tendency to separate departments for boys and girls is noticeable in cities. In Cape Colony, while nearly all schools are mixed, separate schools for girls are encouraged.

In France custom and sentiment favor the separate education of boys and girls, and the law requires every commune having above 500 inhabitants to establish a separate school for girls unless specially authorized to substitute therefor a mixed school.

In secondary schools, public and private, separate education is the universal rule.

Germany.—Separate education is the preferred policy of the German States, but is not practicable in the rural primary schools. According to statistics of 1891, in Prussia two-thirds of the children in the common schools were in mixed classes, but

in the cities the proportion was only three-tenths. In Saxony only the two lowest classes are mixed, so that separation occurs generally at the tenth year of age—always by the twelfth.

Other continental countries.—Similar conditions prevail in the remaining countries of Europe, the tendency toward separation being most strongly marked in the Catholic countries. In Italy the law calls for separate schools for boys and girls, and if they attend at the same building it must be in separate departments, each provided with its own entrance door. The lowest classes, however, may be, and often are, mixed.

In Norway, and to a less extent in Denmark, girls are securing admission to secondary schools formerly reserved for boys.

The South American republics follow the precedent of the Latin States of Europe. Brazil, like Italy, requires separate schools for the two sexes. In 1888 the experiment of admitting boys and girls to the same class room was made in a few schools, but they were seated in different rooms outside of recitation hours.

Coeducation in the universities of Europe.—At Oxford University women are admitted by courtesy to the lectures of about 160 professors and readers. They are also admitted to the examinations for B. A., but the degree itself is not conferred upon them. Substantially the same arrangements have been adopted at Cambridge. Durham University confers upon women all degrees excepting those in divinity. London University, Victoria University, and the University of Wales make no discriminations on account of sex.

The university colleges established in England since 1868 are open to men and women. By the "universities act" of 1889 the Scotch universities were authorized to open their doors to women. Edinburgh admits them to the classes with men. Glasgow has affiliated Queen Margaret College for Women, and more recently (1895) opened all lectures in the faculty of arts to women. The University College of Dundee, affiliated to St. Andrews, is coeducational.

Women are admitted to all the privileges of the Royal University of Ireland, and during the present year a statute has been passed admitting them to Trinity College (Dublin).

In France women have never been legally deprived of university privileges, and since 1863, when the first woman was enrolled in the Paris faculties, the number of women matriculates has been gradually increasing.

The universities and secondary schools of Italy admit students of both sexes to the same class, a policy at variance with that pursued in the elementary schools.

Women have recently been admitted to courses in the universities of Germany, Austria, and Hungary, special authorization being required in each individual case.

Altogether there are 86 universities in Europe which admit women on the same conditions as men, 6 which admit women by special permission to some lectures and examinations, and 20 which admit them by special permission to a limited number of lectures.

WOMEN IN SCHOOL ADMINISTRATION.

The association of young men and women on equal terms in the schools and colleges of this country explains in a great measure the freedom that women here enjoy with respect to the pursuit of careers, and especially the large share which they take in the educational work of the country.

In the public schools (all grades included) 72 per cent of the teachers are women. Their relation to the public school does not stop here. They participate as school officials and also, through the exercise of the ballot, in the local conduct of school affairs.

The number of women serving as district school officers appears to be comparatively large, but there are no complete statistics on this point. The number of women serving as county school superintendents in States having this office is 324.

As a rule women are eligible to the school boards of northern and western cities, and eleven women hold the position of city school superintendent.

In two States, Colorado and Idaho, women are at the head of the public school system, holding the position of State superintendent.

In 27 States and 2 Territories women have the right to vote for school officers.

SALARIES OF SCHOOL OFFICIALS AND TEACHERS IN CITIES.

I.—*Salaries of officers and supervisors of instruction in certain cities.*

City.	Population in 1900.	Date of information.	Superintendent of city schools.	Assistant superintendents.[a]		Drawing.			Music.			Physical training.			Supervisor of writing.	Supervisor of German. a Includes all general supervising officers, variously styled "assistant superintendents," "supervisors," "supervisors of high schools," "of grammar schools," "of primary schools," etc. For supervising principals and principals see table of teachers' salaries.
b Maximum paid men reached at sixth year of service; maximum for women, $2,500.
c Maximum for men; maximum for women, $2,500.
d Maximum.
e Four special teachers at this salary.
f Supervisor of French and German.
g Principal of manual training school.
h Two special teachers at this salary.
i No information as to salary.
j One of the assistant superintendents.
k Supervisor of woodwork.
l Also teacher in training school.
m Also director manual training and penmanship.

FOREIGN STUDENTS IN GERMAN UNIVERSITIES.

The number of foreigners who were matriculated at the old German universities (21 institutions), not including the technological schools, agricultural, mining, forestry, and veterinary colleges, during the year 1903, was 2,731. These figures show a decrease of 52 over the preceding year, when 2,783 were enrolled. Of the number in 1902 (2,783), as many as 708 studied philosophy, philology, and history; 649 mathematics and natural sciences; 585 studied medicine; 323 studied law and economics; 147 Protestant theology; 25 Catholic theology; 156 forestry and administration; 148 agriculture; 26 pharmacy; and 18 dentistry. The foregoing figures do not include the nonmatriculated foreign hearers, of whom there are many more than 2,783, but being irregular students they do not figure on the rolls.

As to the nationality of the foreigners in 1901, as many as 717 were Russians. Other European countries are represented by the following numbers: Austria-Hungary, 507; Switzerland, 259; England, 157; Bulgaria, 68; the Netherlands, 50; France, 47; Greece, 46; Italy, 44; Servia, 44; Luxemburg, 38; Roumania, 37; Turkey, 35; Sweden and Norway, 26; Belgium, 22; Denmark, 8; Spain, 8; Portugal, 2; Montenegro, 2. As many as 492 are from other continents. Of these 323 are Americans, almost all from the United States; 154 are from Asia, almost all from Japan; 12 from Africa; and 3 from Australia.

In the year 1835–36 there were only 475 foreign students, or 4.02 per cent of the total number of university students in Germany. In 1870–71 there were 735, or 6.1 per cent. In 1880–81 the percentage had fallen to 5.16 per cent. In 1890–91 it again rose to 6.7 per cent; in 1900–1901 it was 7.3 per cent, and in 1901–2 it was 7.55 per cent; in 1903 it was 7.7; and in winter of 1903–4 it was 8.2 per cent. Ten years ago America furnished the largest contingent, with 415 students, 22 per cent of the total number of foreign students; now Russia leads.

As regards the different institutions, the following details as to the number of foreigners will show their relative rank:

UNIVERSITIES.

Berlin	876	Königsberg	75
Leipzig	406	Breslau	41
Munich	257	Tübingen	30
Heidelberg	197	Giessen	53
Halle	146	Erlangen	25
Freiberg	128	Greifswald	37
Göttingen	99	Rostock	14
Marburg	51	Kiel	17
Strassburg	66	Münster	13
Jena	79	Total	2,731
Bonn	67		
Würzburg	54		

POLYTECHNICA.

Munich	486	Aix la Chapelle	134
Darmstadt	475	Stuttgart	88
Karlsruhe	375	Brunswick	69
Berlin	314	Total	2,355
Dresden	267		
Hanover	147		

In 1902 the number of foreigners in the 9 polytechnica was 2,314; in the 5 veterinary colleges, 45; in the 4 agricultural colleges, 156; in the 5 forestry schools, 74; in the 3 mining academies, 304; in the 4 commercial universities, 285. Hence the total number of foreign students in German higher seats of learning was 5,861, exclusive of nonmatriculated hearers.

In the same year the Austrian universities and other higher seats of learning in which German is the medium of instruction had 1,936 foreign students, while Switzerland had 2,491.

Number of foreign students in German universities.

NOTES.—The figures in both tables do not include the foreign nonmatriculated students, whose number is considered fully as large. They are usually students of special branches only.

The number of foreign students in agricultural, forestry, mining, veterinary, and commercial colleges was 864 in 1902.

In 1903 Austria had 1,720 foreign students in its universities; Switzerland, 2,355.

United States contribute from 22 to 25 per cent of the foreign students in Germany, but only 10.2 per cent of those in the universities.

[a] Including public high schools.
[b] Estimated or partly estimated.
[c] Under universities and colleges are included 4,921 professors and instructors in professional departments.

REFORM OF EDUCATION IN ROUMANIA.

The Bureau is indebted to the courtesy of the Hon. John B. Jackson, United States minister to Greece, Roumania, and Servia, for the latest report of the minister of public instruction and worship of Roumania, Spiru C. Haret (Bucharest, 1903). The report is mainly devoted to describing the reform in education which has been put in force since 1893 through the energy and initiative of the present ministry. It shows that the proper scope as well as the modern means and methods of education are well understood in Roumania, a fact which is illustrated in the introduction, which defines and discusses those subjects.

The report begins with defining the object of a public education, which it declares to be of a triple nature, viz, to form good citizens, to supply the youth of the country with a certain stock of knowledge which is indispensable to everyone without dis-

tinction of rank—for which reason instruction should be obligatory in acquiring this amount of knowledge—and thirdly, to furnish a well-equipped contingent for all the careers which are necessary to the complete and harmonious life of the State.

The report then proceeds to criticise the primary and secondary grades of education in Roumania as they were before the introduction of the reform, and states that while the primary rural school used to keep the children of the peasantry in attendance for five or seven years it imparted to them only theoretical knowledge, without any special preparation for a farmer's life. The instruction was the same as in city schools, and was adapted to fit for the lycées rather than for practical life. As to secondary education, it devoted the greatest part of its seven years to the study of the dead languages, which used to be considered, for reasons which have long since ceased to have weight, the only study suited to form the thinking faculty and develop a knowledge of the beautiful and the good. As a consequence, the entire cultivated class of the country was educated in accordance with the ideas of the sixteenth century, instead of being trained for actual life. Furthermore, this education was suitable only for the wealthy classes who could afford to spend eleven years in acquiring it, but was unsuited in every way for the poor, who need a practical or business training.

The reform of public education is designed to give primary and secondary education a less purely theoretical character. To this end practical agriculture is taught in the rural schools side by side with manual training, while this latter subject of instruction has been introduced into the city primary schools. In secondary instruction the programmes have been made more practical by introducing business courses, so that the graduate of a lycée or gymnasium will not be so completely defenseless in the struggle for existence as formerly. Above all, the effort is made to combat the prejudices against business pursuits, industries, and agriculture, which have become rooted in the minds of all through so many years of a one-sided education. Considering the public schools as one of the most powerful instruments of social action, from the fact that their influence is felt in all degrees of society, the modern reform is declared to have had in view not only the cultivation of the mind, by enriching it with knowledge of different kinds, but also the development and discipline of the heart and the formation of character—in a word, it has had regard for the complete education of the young. Instruction properly so called usually relegates this part of education to a secondary place.

The whole reform movement in Roumania is based upon the law of 1896 relating to primary education, the law of 1898 relating to secondary and superior instruction, and that of 1899 relating to industrial training. These laws were not made de novo, but revised and completed those of previous years, notably the law of 1886, and all were finally revised in 1901. Primary instruction was made obligatory in the rural districts (wherever there were schools) as early as 1864, but the schools and teachers were entirely inadequate for the requirements of the population. Thus, in 1864, when the population was 4,500,000 and at least 6,750 teachers would be required, there were only 2,525 teachers in the country and only one normal school to supply new teachers. Even at the present time there are 813,940 children of school age and only 338,659 attending school. There were in 1903 5,949 school-teachers for a population of 6,000,000, in round numbers, which requires, under the conditions of the country, 11,500 teachers. As it would be impossible to procure and pay this number of teachers, the expedient was resorted to in 1902 of dividing the classes so that some attend school only in the forenoon and the rest in the afternoon. By this arrangement the number of teachers necessary to teach the full number of classes has been reduced. A corresponding deficiency in the number of school-houses and school material caused the authorities to take coercive measures to compel the communes to supply both school accommodations and suitable material for instruction. The financial agency by which the construction of school buildings was

effected was a school fund, established by the law of 1896, amounting to $6,000,000, for the purpose of furnishing loans to the communes on long time to aid them in building schoolhouses. The ministry furnished the plans, which were prepared in accordance with the approved modern requirements as to space and lighting. The schools were equipped with suitable furniture and materials for instruction, including maps, globes, models of geometrical figures, and historical wall pictures, especially a number illustrating Roumanian history from the time of Emperor Trajan to the present. A uniform set of school books for primary schools is printed by the ministry of instruction and sold at 10 to 15 per cent above cost to provide a fund for supplying poor children gratis. Poor children are also aided, especially in the rural districts, where they have to go long distances to school, by the school canteens, which supply them with hot food at the minimum of cost.

Other details of organization and management of primary schools given in this report manifest wisely directed efforts to improve the schools, compel attendance, and introduce modern knowledge as far as the primary grade will allow. One instance of this disposition which must prove of great advantage to the country eventually is the establishment of practical instruction in agriculture and gardening in the country schools (including an annual tree planting) and hand work and handmade petty manufactures in city schools. Teachers' meetings, including popular lectures, held on Sundays during the school year, schools for adults, popular libraries, and the circulation of periodicals devoted to education are other means of keeping up activity in this branch of education which were introduced by the ministry.

A unique movement which merits attention on account of its origin is the founding of popular banks throughout the country by the schoolmasters, and, sometimes, the village priests. The first bank of this kind was started by a schoolmaster in 1891. Others followed, and in 1898, the attention of the ministry being called to the existence of these institutions, steps were taken to encourage them. Their number in 1902 had increased to 700, with a membership of nearly 60,000 and a capital of $850,000. These banks are established for the benefit of schoolmasters, priests, and the country people generally. They have been the means of promoting ideas of economy and business habits among the peasantry and rural laborers, who have deposited their earnings and savings in them to the extent of over $1,000,000. Notwithstanding the opposition and intrigues of the village usurers and others, whose time-honored business of exploiting the peasantry has been interrupted by the banks, the small farmers have begun to pay their debts through the assistance of the latter, to purchase cattle and land and build better houses. According to the report entire districts have been transformed within a short time through the agency of these institutions, usury has disappeared, ease and comfortable security have supplanted it, and the peasants have acquired self-confidence and now undertake enterprises which formerly they would not have ventured to dream of. Thanks to the banks, stores have been established where the country people can procure everything they need at low prices, so that they are no longer obliged to make trips to the villages and encounter the various temptations laid for them there. They can now buy on credit high-priced agricultural implements, and rent land or buy it outright. In the future it is expected that these banks will promote in Roumania the remarkable village associations which in Denmark and Norway have enabled the peasantry to monopolize the butter and cheese industries and the export trade in milk and eggs. Indirectly the country will be indebted to the popular banks for rooting out the alcohol evil. The extirpation of usury will drive from the villages most of the small tavern keepers, who were often usurers in disguise, and the development of the spirit of economy, engendered by the consciousness of the possession of bank accounts, will be the best remedy for the foolish expenditures at the cabarets. It has been noted that the peasants are prompt in paying their bank debts, and individuals are often seen to resist the temptation of going to the cabaret in order not to trench upon the sum destined for the bank.

The normal schools for supplying teachers of primary schools are 6 in number and graduate annually from 25 to 40 students each, making a total of from 225 to 360—a number which is still insufficient to recruit the teaching force to its proper quota.

SECONDARY EDUCATION.

Since 1898 the lycées have 8 classes or an eight-years' course, the first four having the same common programme in all the institutions, a trifurcation of studies taking place with the fifth year into three sections—classical, real, and modern—it being left optional with the scholar who has passed the fourth year which of the three courses he shall thenceforward pursue. In the classical section, as might be inferred from the name, great attention is given to Latin and Greek. In the real course mathematics and the physical sciences hold the first place. The modern section is merely the classical section in which Greek is replaced by the physical sciences taught as they are in the real section. Religion and the Roumanian, French, and German languages are common and obligatory to all three sections, as are also universal and Roumanian history, psychology, logic, political economy, common law, civics, singing, and gymnastics. Since 1902 the Berlitz method of teaching modern languages has been introduced.

There are also secondary schools for girls, which are divided into two classes or grades. The course in the first grade is of five years, and the studies are: Religion, the Roumanian, French, and German languages, geography, history, arithmetic and elementary geometry and accounting, cosmography, physics, chemistry, natural history, pedagogics, hygiene, domestic medicine and pharmacy, especially with regard to infants, domestic economy, hand work, calligraphy, drawing, singing, and gymnastics.

In secondary schools for girls of the second degree or grade, besides completing the previous studies, the course includes psychology, logic, political economy, law, civics, and either Latin, Italian, or English. The course is four years. Girls who have completed the course in these schools, including Latin, obtain certificates equivalent to those of the modern course of the boys' lycées, which admit to the university.

The following subjects for graduation themes for students of the lycées illustrate the scope of the secondary studies in Roumania. They include: The necessity of knowledge of history in the education of the citizen; religious reform in Europe, its causes and consequences; theoretical and applied physics; relations between history and poetry; foreign influence upon Roumanian civilization and literature; Roumanian civilization and literature before the nineteenth century; Roumanian chronicles of the seventeenth and eighteenth centuries; equations and curves and the connection between geometry and algebra; syllogisms; law, theory, and hypothesis in physics; the atomic theory; energy and its transformations; influence of the Suez Canal on commerce; men of science and men of letters; influence of scientific studies on the mind; volcanoes, their causes and effects; influence of popular Roumanian literature upon that of the educated classes; physico-chemical action of water upon the earth's crest; theory of evolution; on sensation; characteristics of Greek and Roman culture; influence of their surroundings upon animals; mimetism—adaptation; intellectual development in animals; the sun and the starry system; the State and the individual; the appearance of man upon the earth and his position among the other beings of this planet; geographical position of Roumania, its advantages and disadvantages; the planetary system; epidemics and prophylactic measures against them; causes of the decadence of the Roumanian principalities and their recovery; races, species, nations; mining.

From these selections it appears that modern or "positive" studies are fully recognized in the courses of study in Roumanian schools. The disposition to further practical ends in education is shown in the increased attention given to what in

Roumania are called "professional" schools, following the French use of that term. By professional schools are meant schools of agriculture, business, commerce, and the smaller industries of various kinds, not schools of law, medicine, or theology, as with us, these latter studies being pursued at the universities. There are now 80 schools of this character, divided into 12 agricultural schools, 31 trade or industrial schools, 11 business schools and 2 commercial classes for boys, and 18 professional (mostly millinery) schools, 3 classes and 3 housekeeping schools for girls. The instruction given in the trade schools is shaped with an eye to the industrial demands of the different localities.

SUPERIOR INSTRUCTION.

No less a revolution has been experienced in the ideas relating to university studies in Roumania than in those regulating the inferior grades of instruction within the last few years. The report gives a brief historical survey of the position of the university in the scheme of education in Roumania before and since 1898. The law of 1864 provided four university faculties—those of science, letters, medicine, and law—and prescribed the list of lectures which are to be given in each. This organization made of the university a kind of superior school to the lycée. There were the same invariable programmes, the same examinations at the same set periods, and the same diplomas year after year. The modern conception of the function of the university is quite different. According to the modern views the question of examinations and diplomas should play a less prominent part and not obscure the principal mission of the university, which is to be the highest center of culture of the country. The university should attract and retain within the sphere of its activity all those who are in the way of contributing to the progress of knowledge, or at any rate are competent to present its latest form. The university should be a tribune for the free expression of ideas, unshackled by programmes, examinations, and diplomas. Doubtless these latter should have their proper place in the university system, but they should not be the first consideration. Nor should the university instruction hold aloof from the needs, the aspirations, or the material conditions of the country, and immerse itself exclusively in superior speculations and abstractions. The law of 1898 was based upon these broader views. Professors were no longer restricted to a single course, but could lecture upon matters relating to their specialties in other courses. In this way the isolation of the several faculties was broken up. Docents were also allowed to give free lectures upon the subjects of the various faculties, outside of the regular courses, and special lecturers not connected with the university were to be invited to lecture upon any subject of interest and importance which the university authorities might deem advisable.

The two universities of Roumania are of recent origin, the university at Iassi having been founded in 1860 and the university of Bucharest in 1863. Their beginnings were small, and it is only in recent years that they have become comparable with other European universities, and they still suffer from insufficient quarters and equipment. There are some 3,500 students at Bucharest.
