CHAPTER XXVI.

COURSES OF STUDY IN GERMAN SCHOOLS.[a]

CONTENTS: Introduction.—I. General Regulations for Prussian Elementary or People's Schools.—II. Typical Courses of Study.—III. New Course for Preparatory Departments of Normal Schools.—IV. New Course for Normal Schools.

INTRODUCTION.

On account of urgent inquiries concerning the course of instruction in German schools, as well as requests to publish the courses of study prescribed for elementary schools in leading German States, the following compilation has been made. The fact that in this country the courses of study for common schools generally embrace three stages—four years' primary, four years' grammar, and four years' high school—makes it imperative to first explain that the schools of the States of the German Empire do not form homogeneous systems such as ours, but rather a series of systems. The one of these separate systems which comes nearest to our common school system is the public elementary (or people's) school system, which accommodates a little over 90 per cent of all school children of the States of Germany. The compulsory-attendance law, in force for more than one hundred and fifty years, affects every child between 6 and 14 years of age, but it does not prescribe the nature of the school it is to attend. Hence many children of that age attend private elementary schools, advanced city (or burgher) schools, middle schools, girls' superior schools, and a variety of secondary schools for boys. Many of such schools begin their course with the child's tenth year of age; some reach further down, to the sixth year of age, having special preparatory classes. But the fact that a little over 90 per cent of all school-going children attend the people's schools makes these institutions the most important factors in the educational activity of the state.

In the smaller States of the Empire and in the large cities the object of the authorities is to gradually change this system of people's schools, so that it may serve as the common foundation for all secondary education. The tendency is sufficiently strong for that purpose in many places in Germany. As yet, however, Germany has no common school as we understand the term. This should never be left out of sight by the reader in comparing the following courses of study with those found in American schools. Hence, in studying some leading German courses, it is in each case necessary to know for what condition of life or stratum of society the schools are intended that follow the specific course prescribed.

A few general principles and historic facts, however, may be stated which have

[a] Articles on similar subjects in previous Reports:
1. Courses of study in graphic representations. An. Rep., 1888–89, p. 53.
2. Courses of study in history found in vogue in Europe. An. Rep., 1893–94, p. 302.
3. Courses of study in 16 German cities. An. Rep., 1894–95, p. 406.
4. Teaching civics in Switzerland, France, and England. An. Rep., 1896–97, p. 233.

guided the authorities of all the various school systems in Germany, particularly of the elementary schools:

1. The matter of instruction for any kind of school depends wholly upon the aim of the school, and must not only be in intimate relation with it, but its various branches must be in some sort of correlation to each other to make the education which is its result complete.

2. German school education, since Luther, has always considered that religion, and in connection with it reading (including grammar and literature) and writing (including orthography and composition), are the foremost branches in all schools, regardless of the character of the institution in which they are taught. The only difference is in the character and amount of what is taught in these branches in elementary and advanced schools.

3. A people like the German, which has inherited an alien civilization and literature, lays much stress upon instruction in foreign languages simultaneous with that in the mother tongue: and in the schools of alien populations (such as are found near the Polish, Danish, and French boundaries) instruction in the foreign language even precedes that of German, because it is the mother tongue. But for more than a thousand years a knowledge of foreign tongues on the part of persons of German descent has been considered evidence of a secondary education, i. e., an education beyond the elementary stage. Hence classical and modern languages are taught in secondary schools, and often in advanced city schools which minister to local needs or the demands of a cultured society.

4. Side by side with these matters stands the group of mathematical studies, which up to the first century of the modern epoch was a prerequisite of the study of philosophy. This group has always been represented by arithmetic and geometry (or mensuration) in elementary schools. Where the higher mathematical studies are taught, the school belongs to the secondary category.

5. With religion and bible stories history entered the schools as a regular study and claimed a generous share of time.

6. Realistic knowledge, not offered in the lower schools of former ages, has found an abiding place in the course of study of every elementary school in the forms of geography, natural history, and natural science, since, and in consequence of, the great epoch of discoveries, and especially since the time of Pestalozzi. All three branches, however, are taught in elementary schools only in their elements and without text-books, except that for geography an atlas is used. The term under which the sciences are introduced is nature study (knowledge of nature—"Naturkunde"). The lessons are based on objects, and the teacher furnishes all new matter, as well as terminology, orally if it is not discoverable by the pupil himself through the senses or by inference.

7. Of the so-called technical branches, penmanship is developed in connection with language studies. Special copy books are not often found, since the principle is followed that calligraphy is best developed by good example on the part of the teacher and by habit, i. e., not allowing bad writing at any time. Singing has always been in the service of religion. Drawing has for a long time been mathematical. Its development into an artistic study does not date back further than the second half of the nineteenth century. Gymnastics is a branch which owes its existence to the philanthropinists (the teachers of educational institutions in Germany who followed Rousseau's principles), and especially to the noted national upheaval during the Napoleonic era. Female handiwork is a branch which the school took over from the home in the earliest times after the Reformation. Recently other forms of domestic science for girls claim admission to the elementary school, while manual training for boys, wherever it is adopted into the course, is always an optional branch.

Thus it is seen that the course is one historically developed; not prescribed by

the whim of this or that authority or by chance. Nature study, for instance, never assumes a predominating influence over the linguistic and the mathematical groups of branches, but merely aids them. Since the child must have something to talk about in order to develop linguistic talent and rational thinking, observation of natural objects forms an important part of the child's work. Its senses are sharpened, its stock of ideas augmented, and its thinking power so increased that it instinctively seeks for expression of its thoughts. The division of nature study into a number of separate studies (geology, geography, meteorology, botany, zoology, physics, physiology, and chemistry), as is done in some places in this country, can not be found in the course of study of any German elementary school. In the nature of the case, and owing to the capacity of its pupils, nothing but the elements can and should be taught in elementary schools; these schools are so called because they offer the elements of learning only.

The course of the German elementary school having historically developed, it is reasonable to think that it will in course of time adapt itself to changed conditions of intellectual life—i. e., embrace some new branch or group of branches, or drop some. The one aim is at all times steadily kept in view—that the inner connection of all matters of instruction must be preserved, for he to whom these matters are offered is a human being, a mental unity, not a series of compartments to be filled with labeled fragments of knowledge.

The courses in the following pages are not offered with the view of showing something better than is found in this country, but simply and solely for the purpose of stating facts. Whether they suit our civilization or not; whether they fit our schools or not; whether they are adapted for copying or not is not the question here. They give us, however, the key to German elementary education. With this fact in view one will understand them, and judge American courses of study the better.

I. General Regulations for Prussian Elementary Schools.

The elementary schools of Prussia follow the regulations laid down by Doctor Falk, minister of education (October, 1872). They are translated from a work by Dr. A. Petersilie, entitled "The Public System of Instruction in the German Empire and Other Civilized States of Europe." Two volumes, Leipzig, 1897.

Aim and purposes of instruction in people's schools.[a]

The object of the Prussian people's school has always been to educate the growing generation to become pious, patriotic men and women, who are able by means of the general education and training they receive to fill an honorable position in civil society. In whatever way the relation of church to the State has been conceived, and whatever theological tendency was paramount at any period, the religiously moral education of youth has at all times been considered the foremost purpose of the school; and never have the administrative authorities of the State wavered in aiming at the high ideal—"to sow the seeds of patriotic, religiously moral sentiment in children, so that they will become citizens whose inner worth can secure the welfare and preservation of the State." But side by side with this exalted ideal, the requirements of practical life have not been left out of sight. In school, children are to learn how to perform duties, they are to be habituated to work, gain pleasure in work, and thus become efficient for future industrial pursuits. This has been the aim from the earliest times of popular education in Prussia; and to this day it is plainly understood by all State and local administrative officers, as well as by all teachers and the majority of the parents, that the school has more to do than merely teach the vehicles of culture—reading,

[a] The people's schools are public elementary schools, attended by over 90 per cent of all school children in the State. The other 10 per cent are in advanced city schools, middle schools, girls' superior schools, private schools, and various kinds of boys' secondary schools.—Translator.

writing, and arithmetic—namely, the preparation of citizens who can, and cheerfully will, serve their God and their native country as well as themselves. These are the leading ideas followed by the subjoined course.

ORGANIZATION AND COURSE OF STUDY OF THE PRUSSIAN PEOPLE'S SCHOOLS.

(1) As people's schools of normal conditions are considered (*a*) the fully graded school, (*b*) the partially graded school, and (*c*) the ungraded school with one teacher only, who may divide the pupils to attend half-day schools.

(2) In the ungraded or one-class people's school, containing children of all the years of compulsory school age (6 to 14), the pupils are taught in one and the same room by one teacher. The number of such children must not exceed 80.[a] The pupils of the lower age are to receive twenty hours' instruction a week, but thirty hours will be given in the middle and upper ages, including gymnastics for boys and female handiwork for girls.

(3) *Half-day schools.*—Where the number of pupils rises above 80, or where the schoolroom is not sufficiently large for even a less number, and the appointment of a second teacher is not immediately possible, as well as where other circumstances make it necessary, the organization of half-day schools may be resorted to with the sanction of the authorities. There shall be given thirty-two hours' instruction to both classes per week, or sixteen to each.

(4) *Schools of two teachers.*—If two teachers are engaged at a school the children are separated into two rooms. If the number of pupils rises above 120 the opening of a third room is required; the lowest grade will then have twelve hours' instruction per week, the middle twenty-four, and the highest twenty-eight hours.

(5) *Graded schools.*—In schools of four or more grades the children of the lower grades are to receive twenty-two, the middle twenty-eight, and the upper grade between thirty and thirty-two hours' instruction per week.

(6) *Separation of the sexes in school.*—In graded schools of more than four grades it is desirable to separate the children according to sex in the upper grades, but in schools of only two teachers the arrangement of ascending grades without regard to sex is preferable.

(7) If in any school district several one-class or ungraded schools exist, a consolidation into a central union school is strongly recommended.

(8) *Arrangement and equipment of schoolrooms.*—The schoolrooms must be large enough to give each child an area of 0.6 square meter. Care should be taken to make the room light and airy, that it have good ventilation, give protection against bad weather, and be well provided with window shades. Desks and seats should be in sufficient number, and so placed and arranged that all the children in the room may sit and work without detriment to their health. The desks should be provided with ink wells. To the proper equipment belongs also a sufficient number of hooks for cloaks, coats, and caps, etc.; also a blackboard on an easel, a wall blackboard, a platform with desk that may be locked, a cupboard for storing books, copy books, crayon, sponge, etc.

(9) *Necessary appliances.*—For complete instruction there are required: (1) A copy of each text-book and exercise book introduced in the school (for the teacher's desk); (2) a globe; (3) a wall map of the home province or state; (4) a wall map of Germany; (5) a wall map of Palestine; (6) some pictorial representations of geographical scenery; (7) alphabets in large, bold type pasted on wood slides or pasteboard for use in the primer class; (8) a violin; (9) large ruler and compasses for use on blackboards; (10) an abacus. In Protestant schools there is to be added (11) a bible and (12) a copy of the hymnal used in the parish church. For schools of more than one grade these appliances are to be multiplied adequately.

(10) *Lists and registers.*—The teacher is required to keep the following books and registers: (1) A book devoted to school chronicles; (2) a list of pupils, their addresses, etc.; (3) a book of progress, showing the subject-matter taught each day, and (4) a list of attendance, punctuality, etc. The teacher is further required to have at hand always the course of study prescribed, a time-table, and the distribution of subject-matter of instruction for each term.

(11) *Text-books and exercise books.*—The appliances required of the pupil in ungraded schools or schools of two teachers are: (*a*) Books, to wit, a primer or a reader, a book of problems for arithmetic, a song book, and the books required for instruction in religion; (*b*) exercise books, to wit, a diary, a copy book for penmanship, a blank book for spelling and composition, a drawing book in the upper grades; (*c*) other appliances, to wit, a slate with pencil and sponge, a ruler and compasses.

---

[a] Subsequent ministerial orders have decreased this number to 60.

Pupils of graded schools may be required to provide themselves with brief guides for nature study and other realistic branches, also with a copy of the reader arranged for ascending grades, as well as with an atlas. For each separate study an exercise book is to be procured.

(12) *Grading of the people's school.*—The school, even the one-class school, is divided into three sections or grades in accordance with the age of the pupils and their degree of progress. In a school of four classes the middle section is represented by two classes. In schools of six classes each section has two classes.

(13) *Subjects of study in the people's school.*—The subjects to be taught are: Religion, German language (speaking, reading, and writing), arithmetic and the elements of geometry, drawing, history, geography, nature study, gymnastics for the boys, female handiwork for the girls.

The hours of instruction in ungraded schools for the separate subjects are as follows:

	Lower section.	Middle section.	Upper section.
	Hours.	*Hours.*	*Hours.*
Religion	4	5	5
German language[a]	11	10	8
Arithmetic; geometry	4	4	5
Drawing		1	2
Realistic studies[b]		6	6
Singing	1	2	2
Gymnastics; female handiwork		2	2
Total	20	30	30

[a] German language includes reading, writing, spelling, grammar, composition, and literature.
[b] Realistic studies include geography, history, elements of natural history, and natural science.

In graded schools the distribution is as follows:

	Lower section.	Middle section.	Upper section.
	Hours.	*Hours.*	*Hours.*
Religion	4	4	4
German language[a]	11	8	8
Arithmetic	4	4	4
Geometry			2
Drawing		2	2
Realistic studies[b]		6	6 (8)
Singing	1	2	2
Gymnastics; female handiwork	2	2	2
Total	22	28	30 (32)

[a] German language includes reading, writing, spelling, grammar, composition, and literature.
[b] Realistic studies include geography, history, elements of natural history, and natural science.

In half-day schools and in schools of two teachers with three grades changes in the foregoing time-table may be made in accordance with local circumstances.

[NOTE.—Paragraphs 14, 15, 16, 17, 18, 19, 20, and 21 refer to matter and method of religious instruction. The subject is subdivided into sacred history, Bible reading, church calendar, catechism, hymns, and prayers. Then follow the rules governing the other branches of study.]

22. *German language.*—Instruction in German includes all exercises in speaking, reading, and writing. The latter includes penmanship, spelling, grammar, composition, and literature. These subjects must in all grades remain in organic connection (i. e., be correlated) and as far as is possible progress in uniform steps.

23. *Practice in oral expression.*—Practice in oral expression requires no separate instruction. It prepares the way for instruction in writing and reading and accompanies it in its further development.

The simplest and best-known objects form the material in the lower division, the pictures in the middle, and the pieces in the reading book in the upper division.

Its formal aim is, in gradual progression, to enable the pupil to pronounce correctly and clearly each single word and to give free expression to his thoughts in a simple sentence, the power of sure and correct expression in compound sentences, avoiding the most common mistakes in forms of words and formation of sentences and, lastly, the ability to reproduce freely and correctly imparted knowledge and to arrange and clearly state his own thoughts.

24. *Instruction in writing and reading.*—Instruction in writing and reading is to be according to the method in use in the training college of the district. The spelling method of learning the letters is forbidden.

The aim is, in the lower division, to enable the children to read correctly connected reading pieces and not only to copy but also to write for themselves short sentences; in the middle division, to read whole reading pieces, in prose and verse, in Latin and German characters, without stumbling and intelligently, to write correctly a simple dictation, and to reproduce unaided a reading piece of simple form and content. In the upper division the pupils are to be led to read at sight easily and with expression more difficult reading pieces, of which the content is not too remote from the circle of their ideas, to write dictations of this kind without a mistake, and to reproduce correctly longer reading pieces.

Special hours are to be assigned for penmanship in the middle and upper divisions of a school with one or two teachers and in the middle classes of larger schools; in the upper classes of such schools it can take the form of home work. The aim of the instruction is the acquirement of a neat, clear, graceful handwriting in all work, even in that quickly written.

The results of a good instruction should be plainly visible in the pupil's notebooks.

To be recommended as context of the copies are popular proverbs and good and appropriate samples of business letters and forms.

25. *Instruction in German grammar.*—In the upper classes of schools with several classes special hours are assigned to instruction and practice in German grammar; in the schools with one or two teachers it is combined with the rest of the language instruction.

The aim of the instruction for the middle grades is a knowledge of the simple sentence and the simplest rules of etymology; for the upper division, the compound sentence and more thorough instruction in accidence and formation of words.

26. *The reading book.*—The groundwork of all instruction in German is the reading book. Where possible, the whole book is to be worked through. The reading book is not only to further the attainment of skill in reading, but also to lead to the understanding of the contents of the piece. The pieces are so to be selected that about thirty are treated in a year.

Suitable poetical pieces (in small schools particularly the texts of songs) are to be committed to memory in all three divisions after they have been commented on.

In the upper classes of larger schools the reading book is to be used to give the children examples of the chief works of patriotic (popular) poetry, and some information about the national poets, but only those since the Reformation.

The selection of the reading book to be introduced is to be made from those which have a popular character and which by the whole of their contents promote the educative purpose of the school. And among these those deserve the preference which are correct in form, and in the historical and scientific selections are not the original productions of the editors, but specimens from the best popular works of great writers in those branches, and which are free from all political and religious bias. For schools attended by children of different denominations, as far as possible, only those reading books are to be chosen which have really no denominational character. In books already in use the pieces denominational in character are to be assigned to the religious instruction.

27. *Language instruction in schools attended by children of different nationalities.*—With regard to the schools in which the children, or some of them, speak another language than German, the special regulations issued in the past or to be issued in the future are to be put in force.

28. *Instruction in arithmetic.*—In the lower divisions operations with concrete and abstract numbers between 1 and 100 are learned and practiced; in the middle division, the same operations with unlimited numbers, also problems in averages, reduction, and simple rule of three; the arithmetic for the upper division includes fractions (for which suitable preparation must be made in the other divisions), their application to calculations of everyday life, and a thorough treatment of decimal fractions.

In the larger schools this amount is extended in these everyday calculations to problems of a harder kind, in decimals to the extraction of square root.

In the lower division, in schools with only one or two teachers as far as possible, in other schools regularly, all calculations are to be done mentally. At the beginning of a new rule in all divisions mental calculations precede those on the board. In practical applications the relation to everyday life is always to be kept in view; consequently examples with large and many-figured numbers are to be avoided, and the problems made to correspond to the actual condition of things.

By means of these problems the pupils are to be made acquainted with the existing system of weights, measures, and coinage.

Arithmetic is to be regarded in all divisions as practice in clear thinking and correct speaking. Still, the ultimate aim is to enable the pupils to solve unaided, surely, and quickly, the problems set them.

In all schools the instruction is to be based on a collection of examples for the pupil, to which the teacher has the key.

29. *Instruction in geometry.*—The set portion of geometry includes the line (straight, equal, unequal, parallel), the angle and its kinds, the triangle, quadrilateral, regular figures, the circle and its aiding lines, and regular solids.

In larger schools lines and angles are more fully treated, and, in addition, the equality and similarity of figures in elementary treatment.

Instruction in geometry is to be connected with both arithmetic and drawing. While in the latter the pupils learn to correctly observe and represent the forms of lines, surfaces, and solids, in the former they learn to operate certainly and intelligently with their measurements, to calculate the length of lines, the extent of surfaces, and the volume of solids.

30. *Drawing.*—In instruction in drawing all children are to be occupied simultaneously and similarly, and by constant practice of hand and eye are to be so trained that they are able, with the help of ruler, scale, and compasses, to copy pattern figures on a given reduced or magnified scale and to represent geometrical views of objects of simple shape on a given scale—e. g., the furniture of the room, garden surfaces, houses, churches, and other solids which present straight edges and large surfaces.

Where this end is attained, specially gifted children may be set to draw from copies.

A special regulation is issued as to drawing in larger schools.

31. *Instruction in Realien.*[a]—In the instruction in the realien the reading book is to be used to give life, completeness, and repetition to the material which the teacher, after careful preparation, presents orally and through direct observation. In larger schools special text-books may be used as well. No use is to be made of dictations; forbidden, too, is the purely mechanical committal to memory of dates, lists of kings and queens, names of countries and towns, numbers of inhabitants, names and characteristics of plants, numbers of size and relations in natural science. In geography and nature study the instruction begins with observation, which in geography is attained by means of the globe and map; in the descriptive sciences, by samples of the objects to be discussed or by good illustrations; in natural science (physics), at least in the larger schools, by experiment.

Throughout, even in larger schools, the material is to be gradually extended, proceeding from the easier to the more difficult, from the nearer to the remote.

32. *History.*—From the earlier German history, and from the earlier history of Brandenburg, certain biographies are to be selected; from the time of the Thirty Years' war and the Great Elector the chain of such biographies is to be continued unbroken. So far as the children are able to grasp it, the chief features of the progress in civilization are also to be dealt with.

The fullness and the number of the biographies is determined by the character of the school and the amount of time devoted to this branch of the instruction.

33. *Geography.*—Geographical instruction is to begin with the surroundings of the home and school; it then deals with Germany, and with the outlines of general geography; shape and motion of the earth, causes of day and night and of the seasons, the zones, the five oceans, the five continents, the chief states and cities of the world, the greatest mountains and rivers.

The quantity of the matter will be determined by the character of the school; but in working out a course of studies it is better to limit the extent than to sacrifice the clearness of the instruction and to allow it to degenerate into a mere list of names.

34. *Object lessons in natural history, botany, etc.*—This branch of the instruction includes, besides a description of the structure and life of the human body, that of the native rocks, plants, and animals, and of foreign ones, the chief beasts of prey, animals and plants of the east, those cultivated plants of which the products are in daily use in our country (cotton plant, tea plant, coffee tree, sugar cane). Of native objects, those are to be made particularly prominent which arouse special interest (1) through the services which they render to men (e. g., domestic animals, birds, silkworm, corn, spinning plants, fruit trees, salt, coal); (2) through the harm which they do to men (poisonous plants); (3) through the

[a] By Realien are meant the branches which convey knowledge of real things—actual knowledge, not merely the form of knowledge.

peculiarity of their life or way of living (e. g., butterflies, trichinæ, tapeworm, bee, ant).

In larger schools such objects may not only be increased in number, but also systematically arranged and more exhaustively treated as to their use in industry. Everywhere the aim of the instruction should be to accustom children to an attentive observation and to bring them up to a thoughtful consideration of nature.

35. *Natural science.*—In this instruction in a school with only one or two teachers the children are to be led to an approximate understanding of those phenomena which daily surround them.

In larger schools this instruction is to be extended to include the most important principles of the equilibrium and movement of bodies, of sound, light, heat, magnetism, and electricity, so that the children are able to explain the commoner natural phenomena and the most frequently used machines.

36. *Singing.*—Hymns are to be practiced alternately with popular songs. The aim should be to secure that each child can sing not only in chorus, but also alone correctly and surely, and that when he leaves the school he takes with him a sufficient number of hymns and songs (the words of the latter to be perfectly known by heart) as a lasting possession.

37. *Gymnastics.*—This instruction is given in the middle and upper divisions two hours a week, according to the regulation of October 8, 1868. It is desirable that a preliminary course should be instituted in the lower division.

38. *Needlework.*—Needlework should be practiced, where possible, from the middle division upward two hours a week.

[NOTE.—A part of this Prussian elementary course is copied from Prof. A. E. Twentyman's translation, who published it as a Special Report of the English Education Department.]

II. TYPICAL COURSES OF STUDY BASED ON THE FOREGOING REGULATIONS.

It is likely that American teachers, especially in cities where the matter of instruction is minutely prescribed and divided into annual and term courses, will think that the foregoing course is not sufficiently precise, stating really only the ultimate aim in view. Yet there is deep wisdom in thus leaving the teacher "to work out his own salvation;" that is, arrange the prescribed matter in such a way as to adapt it to local circumstances, to the comprehension of his pupils, and to his own, the teacher's, convenience. All teachers being normal school or university graduates in Germany, they may be relied upon to have studied the course during a period of preparation lasting from three to six years, and hence may safely be granted sufficient latitude. What is here said of the teachers in Germany is to a large degree applicable to those of Switzerland and Austria proper. Hence a review of the time-tables in vogue a few years ago in a number of German, Swiss, and Austrian schools will bear witness to the variety of interpretations of the outline prescribed by the State governments.

The foundation for the order of study of Prussian people's schools is given in the general regulations of Minister Doctor Falk of the 15th of October, 1872, as has been stated before. The general regulations prescribe for graded schools:[a]

Hours per week in—	Lower grade.	Middle grade.	Upper grade.
Religion	4	4	4
Language	11	8	8
Arithmetic	4	4	4
Geometry			2
History, geography, and nature study		6	6–8
Singing	1	2	2
Gymnastics	2 [0]	2 [0]	2 [0]
Drawing		2	2
Female handiwork	[2]	[2]	[2]
Total	22	28	30–32

[a] Where there is but one number in a column, the statement applies to both sexes. If the number refers only to boys, a naught is added in brackets. The numbers referring to girls only are inclosed in brackets.

How this time-table was amended by subsequent ministers is seen by comparing it with the one now in force. (See p. 1221.)

The original time-table of the general regulations has not been strictly adhered to in any part of the state. It is, moreover, decidedly obscure. Which years are to be included in each of the three grades it does not state. But as it is decided that if the school has four classes two shall constitute the middle, and with six successive classes two shall cover the ground of one grade, one must presume that in schools of four grades the upper grade begins with the seventh year; in schools of six grades with the fifth year. A wide scope is thus given the teacher to work out his own plan. In the former case, the middle grade embraces four years; in the latter, two; in the former, history, geography, and natural history must be begun in the second year (which has actually been attempted in several instances); in the latter, in the third.

Typical examples of both extremes in the scales here considered are furnished by the time-table of the people's schools in Charlottenburg and the elementary schools in Wiesbaden.

People's schools in Charlottenburg.

[a] The designation of grades in all the time-tables contained in this article is according to the North German custom (the I grade being the highest, even when the reversed designation is made use of). For uniformity's sake, writing and object lessons are always included in language lessons, natural history and science are classed as nature study, and preparatory instruction for geography (study of home and environs) included with geography. Particular features are explained in footnotes.

[a] Each year from the first to the fourth has three hours of object lessons and home geography.

The difference is very apparent. If we compare the third and fourth years in both plans we shall see the essential difference between an elementary school and a school occupied from the very start with a wholly unnatural multiplicity of studies, and beginning nearly all the branches included in the people's school cur-

riculum at the same age, when the average faculty of comprehension has not been sufficiently developed.

In the old Prussian provinces, particularly in those east of the Elbe River, schools of six grades predominate; they follow the "General regulations" rather closely. The people's schools in Danzig, Posen, Breslau, Stettin, and Halle present only unimportant differences. In Danzig, Stettin, and Halle history, geography, and natural history are taught in the third year; in Posen and Breslau instruction in history is deferred until the fourth year. In nearly every instance drawing is begun in the second year; until lately, in Berlin two special drawing lessons were prescribed even for the first year. The present time-table in communal schools in Berlin is as follows:

Communal schools in Berlin.[a]

Hours per week in—	Grades.

Total	22	22	28	30 [32]	30 [32]	32

[a] See also the article on "The elementary schools in Berlin," published in the Report of the Commissioner of Education for 1893-94, p. 235, where the courses for 1840, 1860, 1873, and 1893 are compared.

The amount of time devoted to female handiwork (formerly eight hours weekly), the early beginning of drawing, the third hour of geometry in the upper grade, and the small number of language lessons in the upper grades of female schools are characteristic of this plan. The model hereby proposed has rarely been followed outside of Berlin. The following table of the people's schools in Halle serves as a type for schools of six grades:

City people's schools in Halle.

The time-tables for the people's schools of the new Prussian provinces resemble in general the plan of Wiesbaden more than that of the schools of six grades in the cities just mentioned. The people's schools in Kiel (eight grades) begin only geography with two hours in the third year, history and nature study with one hour in the fourth year. In Altona the three lower grades have only three hours

of religion. In Osnabrück nature study begins with one hour in the third year, geography is introduced in the fourth, history in the fifth, and geometry in the sixth year.

The people's schools of Bavaria have no common order of study. That of Munich seems most characteristic. It reflects the purpose of the general primary school most clearly, and in the upper grade endeavors to satisfy the higher claims on public instruction, as far as can be possible within the limits of a seven years' compulsory attendance. For comparison the order of study in Augsburg is placed in juxtaposition. The course in Nuremberg is about a medium between the two, while that at Würzburg differs widely in devoting a great many hours to religious instruction.

The following regulations apply to country schools throughout the Kingdom of Wurttemberg. With an aggregate number of twenty-six hours per week, one-third must be devoted to religion, including memorizing hymns and Bible texts. The remainder, as well as all hours over twenty-six, are devoted to other studies in the proportion of three-sevenths to language, two-sevenths to arithmetic and mensuration, and two-sevenths to history, geography, nature study, and singing. Teachers for a long time have endeavored to reduce the one-third devoted to the study of religion, but without apparent success.

In Saxony and the Thuringian states under its direct influence there exist two or three kinds of people's schools. We shall here consider only the lower people's or district schools and the burgher schools, which in many places pursue the same course as intermediate people's schools or advanced schools elsewhere. In Leipzig the advanced and district male schools follow exactly the same course; the female schools present few differences. In Dresden the deviations are greater.

In the first year of burgher or advanced schools and district or elementary schools in Leipzig, the sessions number only sixteen hours per week in the first four years of elementary schools; in Zwickau they number twelve, fourteen, eighteen, twenty-two (girls twenty-three) hours, and in advanced schools twelve, sixteen, twenty-two, twenty-four (girls twenty-six) hours. The conditions prevailing in the Thuringian states resemble in essential points those of Saxony; in some states, as in Weimar, the Prussian model has been followed.

The special features of the course of study in the people's schools in Baden are officially defined. Elementary embraces sixteen, advanced instruction twenty-six to thirty hours. In the latter case, three are devoted to religion, nine to ten to language, four to five to arithmetic, two to singing, six to seven to history, geography, and nature study. Communities are allowed to establish advanced people's schools in place of or in connection with the people's schools required by law. Mannheim furnishes an instance of the first case. The city besides supports advanced people's and girls' schools, likewise designated "advanced people's schools;" in them, however, French is a compulsory study, whereas in the other people's schools foreign languages are optional.

The course of study in Hessia is almost identical with that of Prussia prescribed in the "General regulations," particularly in the amount of time given to religion and in the early special study of history, geography, and nature study. But a radical deviation in the Hessian regulation prescribes fewer hours for the first two years, and divides graded schools into four instead of three grades, thus paving the way for schools of eight grades.

In Mayence the eighth and seventh grades have each three, the other grades each five hours of religion.

Schools in the middle and minor states of north Germany incline to those of

Prussia. The conditions of the city schools of the two Mecklenburgs are identical with those of the provinces east of the Elbe River. Rural schools are considered only the beginnings of educational institutions. Oldenburg, the capital, has schools of eight grades; Bremen and Lübeck follow the example of the new provinces of Prussia. In Brunswick Saxon influences prevail. We select only three schools from the different states.

Total	26	26	28	32	32	32	32

[a] The school board of Hanover has prepared a course in which the following radical changes are proposed: The seventh grade should receive eighteen hours in summer and twenty in winter; the sixth grade twenty-four; the fourth grade thirty. The other grades retain the same number. Some studies suffer the following alterations: Religion is not studied in the seventh grade and is limited to two hours in the other grades; language is much further advanced; female handiwork is limited in the intermediate and omitted from the two lower grades.

The people's schools of Alsace and Lorraine differ widely. Mülhausen has schools of eight; Strassburg of six, five, and four grades. Particulars may be omitted, since they would scarcely enhance the value of this statement.

The course of people's schools and the arrangement of studies in Austria and in some Swiss cantons appears desirable. Furthermore, from an American point of view, their time-tables correspond better to the purpose of common schools than most German tables presented in the foregoing.

The foregoing tables invite comparison in very different directions. The aim of education in the lower grades is defined by the earlier or later introduction of history, geography, and nature study, and by the latitude given to religious instruction. As the addition of new studies signifies in most cases the existence of a course in the sciences, it is of importance that the beginning and extent of these studies be for some schools presented synoptically. This has been attempted in the following table, which, however, only includes schools for boys.[a]

[a] The study of home geography, when preparatory to geography, is included, while elementary object lessons are not included.

Hours per week in so-called realistic studies (history, geography, natural history, and science) in German people's schools.

Cities.	First year.[a]	Second year.	Third year.	Fourth year.	Fifth year.	Sixth year.	Seventh year.	Eighth year.

Zurich				4	4	4	6–7	6–7

[a] In this and the following table the years of the course are mentioned, since the grades, not being uniform, would give no adequate idea. In schools of six grades the grade corresponds to the period from the sixth to the eighth year; in schools of seven grades, to the period including the seventh and eighth years. The tables, arranged accordingly, will speak for themselves. The numbers in the columns signify the number of hours per week.

Number of hours per week devoted to religion in German people's schools.

[a] The same in Danzig, Stettin, Posen, Breslau, Halle, Kiel, Osnabrück (Protestant schools), Bielefeld, Cassel, New Brandenburg, and Mecklenburg-Strelitz.

[b] The same in Duisburg.

[c] In Leipzig religion begins in the second quarter of the first year; in Zwickau religious instruction is prescribed for either sex; and in the second year none for boys. Bible history is commenced with object lessons.

[d] Like those in Prussia, the schools of Mannheim have only two hours for religion. Choral singing is included in religion and omitted from singing.

[e] The same in Worms.

A second factor of paramount influence in the plan or course of study, as the foregoing examples show, is religious instruction. There is a great difference in the fact whether people's schools have six or seven hours of religion in the upper grade or two, as in Munich and Hamburg, or whether it be omitted altogether, as in Basel.

Whoever examines this table will be convinced that opinions in the German Empire greatly vary on the subject of the amount of religious instruction necessary. As far as it affects the subject a thoroughly frank explanation of this point is therefore permissible. The following table shows that preparatory departments of intermediate and secondary schools for girls differ essentially in this as in many other points, although the true cause may not be found in the facts themselves.

Course of advanced female schools in Prussia.

Hours per week in—	Lower grades.			Intermediate grades.			Upper grades.

Total	18	20	22	28	30	30	30	30	30

For the purpose of comparison with people's schools the lower grades suffice. As a rule, only two hours of religion are prescribed for preparatory classes of secondary schools for boys. The entire number of hours varies between sixteen and twenty-two per week. The upper grade very rarely has more. The course of intermediate schools prescribed by Minister Doctor Falk allows three hours of religion for the three lower and two for the three upper grades. The study of home geography is added to elementary branches only in the third year. History and nature study are reserved for the fourth year.

III. Regulations and Course of Study for Preparatory Departments of Normal Schools.

The preparatory departments of normal schools are never under the same roof with the normal schools, but have their own buildings, usually some 10 or 15 miles away in another community, but they are the feeders of normal schools; about 60 per cent of all normal school students are graduates of the preparatory schools. The other 40 per cent are recruited from secondary schools. Recently the minister of education, who, in absence of a school law, administers the educational affairs of the Kingdom, revised the course of study of these feeders to normal schools. His order reads:

BERLIN, *July 1, 1901.*

The subjoined course of study for preparatory schools is to take the place of the course dated October, 1872. In using this new course the annexed methodical instructions are to be followed. It has been found a necessity to make the organization and course of the preparatory institutions more uniform, and thus secure everywhere throughout the Kingdom an equal preparation for normal school stu-

dents. Especially necessary seems a more definite relation of the aim of their instruction to that of normal schools.

The course prescribed is intended for three years, and in connection with that prescribed for normal schools is considered an organic whole. The preparatory institution builds its work upon the basis of knowledge transmitted in the elementary school and the general culture that school has developed. It becomes the duty of the normal school afterwards to round out the instruction thus given, to prepare its students for practical professional work in the schoolroom.[a]

The course of the preparatory institution is in its general features based upon the course of the elementary schools. Where in any branch the same matter is prescribed, as in biblical history, catechism, history, and geography, this advanced school should insist upon greater depth and organic correlation of knowledge. Since it is to be assumed that the preparatory school will receive its scholars from various institutions, hence will not be uniformly prepared, it should be the object of the first year's work to promote uniformity in capacity, in order to establish a firm basis for subsequent work. For this purpose it is deemed unavoidable to repeat the matter taught in several branches (in arithmetic, geometry, orthography) in the upper grades of the elementary school, but to treat these branches with the view toward the manner in which they are to be taught later on by the students themselves.

The course of study of the normal schools is based upon that of these preparatory schools. The normal school must presuppose the knowledge transmitted by the preparatory school and upon this basis build its work. Generally speaking, the normal school is not to go over the ground of the preparatory school any more than the preparatory school can be allowed to anticipate the course of the normal school by invading its course of study.

Of the matter heretofore taught in the normal schools in the first and second year a considerable part has been transferred to the preparatory school, so far as it is adapted to the comprehension of the younger age of the preparatory students. By this means the normal school has been enabled to concentrate more energy upon professional studies, such as pedagogy, religion, language, and history, and to increase the amount of actual trial teaching and practice in training children. The normal school has thus gained more time for thorough treatment of real normal school work.

In the preparatory school some branches are to be taught with a view toward making it unnecessary to take them up as new branches in the normal school, such as biblical history, catechism, hymns, elementary grammar, elementary arithmetic, ancient history, natural history.

In the normal schools proper the actual instruction in mathematics, natural history, and geography is closed at the end of the second year. The third year is utilized in giving only the methodology of these and all other branches. Students unable to pass the examination for promotion at the close of the second year in any one branch are required to stay another year in the second class, because it is essential that they have the necessary knowledge before didactics and methods are taken up. [Note.—Here follow regulations concerning partial examinations, which are here omitted.]

The course of study in religion has been framed with the approval of the State religious authorities. The provincial school authorities are required to have the detailed courses of study in other branches brought in harmony with the following and submitted for approval. [Note.—Other immaterial regulations concerning the beginning of the new courses are here omitted.] Introduction of new text-books is subject to approval of the State authorities.

The Minister of Worship, Education, and Medical affairs,

STUDT.

COURSE OF STUDY IN PREPARATORY SCHOOLS.

I. *Religion*—(*A*) *Protestant;* (*B*) *Catholic.*

[This is here omitted as not germane to American schools. The only item necessary to state is that four hours a week are devoted to instruction in religion in the first and second years, but only three hours in the third year.]

II. *German language.*

First year (5 hours a week).—Reading: Model selections in prose and poetry. Stories (such as fables, fairy stories, sagas, legends) and lyric poetry. Grammar:

[a] A condition of admission to these preparatory schools is that the student shall have completed his fourteenth year of age. Three years of study in these schools will cause the students to be 17 or 18 years old before they can enter the normal school.

The simple sentence, noun, adjective, numeral, and pronoun. Composition: Easy description and representation of matter taught during lessons, and of things observed or events experienced. Exercises in orthography are to be connected with composition, and one lesson a week is to be devoted to rules of orthography.

Second year (5 hours a week).—Reading: Ballads, romances, lyric poetry, popular, secular, and church poetry; prose, historical, geographical, and natural historical. Grammar: Compound and complex sentences, the verb, conjunction, preposition, adverb, and other parts of speech. Composition: Home work on given topics and ready composition in class on matter of lessons. Every fortnight a composition is to be submitted for correction.

Third year (5 hours a week).—Reading: Ballads and romances, idyls, lyric poetry, especially of native poets; Schiller's Lay of the Bell, dramatic poetry, Wilhelm Tell, prose, historical selections, description of characters, landscapes and culture epochs. Grammar: Etymology completed, syntax completed, origin and derivation of words. Composition: Topics to be selected from the matter gone over during the week's lessons; one independent composition every three weeks, two class compositions every week.

III. *Foreign languages.*

(A) FRENCH.

First year (3 hours a week).—The proper pronunciation in a brief course in phonetics; reading; acquisition of a moderate vocabulary; regular conjugation of avoir and être, indicative mood; written and oral exercises in connection with the reader and grammar; exercises in orthography.

Second year (3 hours a week).—Vocabulary to be enlarged; conjugation of verbs and auxiliary verbs, conjunctive mood; declension of nouns and adjectives; comparison; numerals; written and oral exercises in the use of French; exercises in orthography.

Third year (3 hours a week).—Vocabulary enlarged and phrases committed to memory; necessary irregular verbs conjugated and thoroughly memorized; pronouns; written and oral exercises as in first and second years; French conversation.

(B) ENGLISH.

First year (3 hours a week).—Proper pronunciation as in French; reading; acquisition of a moderate vocabulary; etymology of regular forms; written and oral exercises in connection with the reader and grammar; exercises in orthography.

Second year (3 hours a week).—Like the course in French, only irregular forms in grammar.

Third year (3 hours a week).—Same as in French, only in grammar the auxiliary verbs, infinitive, gerundium, participle, and the correct use of the tenses; English conversation.

IV. *History.*

First year (2 hours a week).—A review of German history to the outbreak of the Thirty Years' war (1618).

Second year (2 hours a week).—German history continued to the present, especially Brandenburg and Prussian history.

Third year (3 hours a week).—Chief events of Greek and Roman history, with especial consideration of matters promoting progress in civilization and culture. General review at close of course.

V. *Mathematics.*

(A) ARITHMETIC.

First year (3 hours a week).—Review of fundamental rules with whole numbers; decimal and common fractions; proportion; percentage (increase and decrease in taxes, duties, etc.); ratios (in alloys, compounds, nutriment in food, and similar practical applications).

Second year (3 hours a week).—Continuation of percentage and business rules (interest, profit and loss, discount); partnership and alligation; insurance (especially problems relating to old-age pensions, accident and life insurance); stocks, bonds, and drafts.

Third year (3 hours a week).—Introduction into algebra, fundamental rules with whole quantities and fractions; proportion; equations of the first degree with one unknown quantity. General review.

(b) GEOMETRY.

First year (2 hours a week).—Problems with lines and angles, the triangles.
Second year (2 hours a week).—Problems with parallelogram, trapezoid, regular polygon, and circle.
Third year (3 hours a week).—Similarity of rectilinear figures; problems with different figures, including regular polygons; problems with circles. General review.

VI. *Natural science.*

First year (2 hours a week).—Plants: Seed plants at home, with easily comprehended construction. Animals: Mammals.
Second year (4 hours a week).—Plants: Seed plants with complicated construction. Animals: Birds, reptiles, amphibious animals, and fishes. Physics: Simple phenomena of solids, fluids, and gases; general qualities of bodies; elements of mechanics.
Third year (4 hours a week).—Plants: Important foreign culture plants; spore plants; systems of classification; exercises in classifying plants. Animals: Mollusks, articulata, worms, echinoderma, plant animals, prehistoric forms. Physics: Phenomena in mechanics; sound. General review.

VII. *Geography.*

First year (2 hours a week).—Form, size, and motions of the earth; longitude and latitude; distribution of water and land; horizontal and vertical articulation of the earth's surface; comprehensive knowledge of globe and maps. The native province; physical (that is, topographical) and political geography of Germany.
Second year (2 hours a week).—Physical and political geography of all the countries of Europe and America.
Third year (2 hours a week).—Physical and political geography of Asia, Africa, and Australia. The German colonies. General review.
Map sketching and drawing in all three classes.

VIII. *Calligraphy.*

First year (2 hours a week).—Gothic and roman script in genetic succession of letter forms. Figures and rythmic writing.
Second year (4 hours a week).—Exercises in penmanship in continued practice, both in gothic and roman script.
Third year (1 hour a week).—Exercises in rapid penmanship; blackboard practice.

IX. *Drawing.*

First year (2 hours a week).—Free-hand drawing of flat forms from the horizon of the pupils, especially nature forms. A part of the class draws the exercises ordered on the blackboard.
Second year (2 hours a week).—Free-hand drawing of objects of utility and nature forms (leaves, fruit, shells, etc.), with shadow. Drawing of flat forms on blackboard, also from memory. Exercises in matching colors with natural objects (autumn foliage), butterflies, tiles, textile stuffs, etc. Practice in sketching.
Third year (2 hours a week).—(*a*) Free-hand drawing continued from second year. (*b*) Instrumental drawing, after elementary exercises in the use of drawing implements; geometrical representation of simple bodies in ground plan and elevation.

X. *Gymnastics.*

Each of the three grades must have gymnastic exercises three hours a week, of which, in winter, one may be utilized for skating; in summer, during suitable weather, for games.
First year.—Same exercises as prescribed for elementary schools.
Second and third years.—Extension of gymnastics and the use of appliances not specifically prescribed for elementary schools. Where opportunity offers, exercises in swimming should be added.

XI. *Music.*

(a) VOCAL MUSIC.

Each of the three grades one hour a week. About thirty of the popular church hymns and folk songs, the latter at first in one part, later in two parts. All sing-

ing is to be done from notes. With every hymn or song, key, tempo, intervals, pauses, as well as pronunciation, breathing, expression, or phrasing should be discussed. Every singing lesson is to be opened with exercises in singing scales, chords, and striking notes; the latter will prepare the students for ready note reading.

For all the students whose voices are not in transition one hour a week should be employed in choir singing; hymns and songs of several parts for mixed choir; the compass of the male voices, being limited at this age, should not be strained, and the voices of all the students carefully watched.

(B) VIOLIN.

The students are to be divided into sections according to their talents in instrumental music, each division to have a lesson of one hour a week. Exercises according to the violin school introduced as a guide, besides hymns and popular airs. The object in view during the three years of the course is to enable the students to play the most frequently used major and minor scales in the first position and in moderate tempo, some hymns and songs from notes and from memory without gross errors. Attention should be given from the beginning to correct position of the violin, easy handling of the bow, secure position of the fingers, and the production of pure tones, also to expressive play and observation of correct tempo.

(C) PIANOFORTE.

The students are to be divided into sections according to their talents in instrumental music, each division to have a lesson of one hour a week. Exercises according to the piano school introduced as a guide, and the book of études used. The object in view during the three years' course is to enable the students to play all major and minor scales with correct fingering, easy études, sonatinas, and sonatas, and play from notes simple piano pieces without previous practice. Attention is to be given to memorizing modulations. All pieces practiced are to be discussed with reference to key, tempo, pauses, intervals, composition, fingering, and expression. From the beginning the teacher must insist upon correct position of hand and fingers, good touch, prescribed fingering, and correct tempo in playing.

(D) ORGAN.

Students of no pronounced talent for music are to be excluded from this study. Organ playing is taught only during the third year, each division to have a lesson a week. Elementary manual and pedal exercises according to the organ school introduced; easy hymns and preludes; practical exercises in connection with harmony. Attention is to be paid to correct fingering and proper position of feet in pedaling, also upon well-connected play and correct tempo. The students are to continue the practice until they can play four-part music of hymns from notes and play simple offertories and preludes from memory.

(E) THEORY OF MUSIC.

From the Theory of Harmony, the text-book prescribed, the student should learn the different keys, tempos, signs of expression, intervals, and the relation of the various keys to each other; also memorize all major and minor scales. During the first year no especial lessons in theory are necessary, inasmuch as all the elementary parts of the theory of music may be taught in connection with singing and violin and piano playing. During the second year the students are to have one lesson a week devoted to the theory of music, so that they may verify in theory the experiences made in the practice of music. The third-year class also is to have a special lesson in theory of music, to wit: In harmony, law of formation of chords, knowledge of sharp and flat triads, as well as of the chief seventh chord in their various positions and transitions. Each item of theory is to be illustrated by examples on the keyboard and pedal.

IV. Course of Study for Prussian Normal Schools.

[NOTE.—Admission to normal schools is free to graduates of the preparatory schools, the course of which is found preceding this. The age of admission is about 18 years; the course is one of three years.]

I. *Pedagogy.*

(A) THEORY OF EDUCATION.

First year (3 hours a week).—General instruction in psychology and logic and their applications in didactics and methods.

Second year (3 hours a week).—Theory of education; history of education during second semester.

Third year (3 hours a week).—Continuation of history of education up to the present time. School organization, hygiene, management, and regulations. Advice in regard to further study after graduation.

(B) TRAINING IN SCHOOL PRACTICE.

Second year.—In connection with model lessons in the practice school given by the practice teachers the students of the normal school are given opportunities all through the year to give lessons which they have prepared, and they receive instructions as to how to proceed.

Third year.—All the students of this third grade are intrusted with giving lessons and acting as class teachers in the practice school throughout the year. Each student has to have from four to six hours a week of independent teaching. Two hours a week are to be devoted to model lessons prepared beforehand, and lessons given by the students are criticised with reference to their success, management, discipline, etc. Besides these two other model lessons are to be given in the different branches by the practice teachers, in which didactics or methods are exemplified. The normal students also are required to attend the lessons given by their colleagues according to previously determined rotation. The practice and special teachers are to familiarize the students with the methods used in each branch of study.

II. *Religion.*

(A) PROTESTANT—(B) CATHOLIC.

[This subject is here omitted as not germane to the American secular school. Each of the three grades has from three to four hours' instruction in this branch, chiefly for the purpose of giving the students skill in teaching Bible history, catechism, history of the church, prayers, and hymns.]

III. *German language and literature.*

First year (5 hours a week).—Introduction to the Nibelungen and Gudrun songs, the Germanic cycle of sagas, and the epic and lyric poetry of chivalry, in connection with selections from the literary reader. Hermann and Dorothea. Selections from Homer and from modern epic poetry. To be read: Goetz and the Maid of Orleans. Prose reading: Orations; selections from history and from the history of civilization, art, and literature; descriptions of natural scenery and ethnographical accounts; essays and letters. Grammar: Phonetics and enunciation; German dialects. Composition: One every three weeks at home, two in class.

Second year (5 hours a week).—The most notable personages in the German literature of the sixteenth and seventeenth centuries, in form of biographies with specimens of their works. Also biographies of Klopstock, Lessing, Herder, Goethe, and Schiller, and a study of their leading works in the light of their time. Odes of Klopstock. Goethe's and Schiller's lyric poems. Dramas: Minna von Barnhelm and Egmont. Prose reading as in first year, and in addition selections from Dichtung und Wahrheit, Goethe's letters, and Lessing's fables. Review of the historical development of the German language; change in the meaning of words. Home compositions once a month. Two compositions in class.

Third year (3 hours a week).—The most notable contemporaries of Goethe and Schiller in connection with their works and their time. Some of the noted modern poets in biographies and in connection with the reading of their works. The German folk song. Dramas: Wallenstein; one drama of Shakespeare. Prose reading, preferably Herder's and Schiller's prose works. Home compositions once a month. Two compositions in class. Methods of teaching: One hour a week throughout the year.

IV. *Foreign languages.*

Instruction in foreign languages is confined to French or English. Two hours a week are devoted to this branch. In schools where Latin has been an optional study it may be retained. In this case the students may dispense with French or English.

(A) FRENCH.

First year (2 hours a week).—Review and completion of etymology; the position of words; the use of tenses. Reading: Simple stories in prose; easy poems. Written and oral exercises to be given in connection with reading matter as far as possible. This holds good for all three grades. The vocabulary gained in the preparatory school is to be increased and enriched by idiomatic phrases.

Second year (2 hours a week).—The uses of moods: infinitive and participles; declension and words governing cases. Reading: Prose authors of modern times; poems.

Third year (2 hours a week).—Syntax completed and reviewed. Reading: Some historians of modern times; poems.

(B) ENGLISH.

First year (2 hours a week).—Continuing the work of the preparatory school; conjunctive mood. Syntax of article, noun and adjective. Reading: Easy stories in prose; poems. Written and oral exercises; repetition and extension of vocabulary and phraseology.

Second year (2 hours a week).—Syntax of pronoun and adverb. The most important preposition. Reading: One historian of modern times; poems.

Third year (2 hours a week).—Review and completion of syntax. Reading: Prose authors of modern times; poems.

V. *History.*

First year (2 hours a week).—German history to the close of the Thirty Years' war. Consideration of the history of foreign nations so far as it is of importance for the comprehension of German history.

Second year (2 hours a week).—German, especially Brandenburg-Prussian, history from the close of the Thirty Years' war (1648) to the Congress at Vienna (1815). History of foreign countries with special reference to Germany, as in first year.

Third year (3 hours a week).—Modern history, from 1815 to the present. Introduction into modern legislation and public law in Germany and Prussia. Methods of teaching history.

VI. *Mathematics.*

(A) ARITHMETIC AND ALGEBRA.

First year (3 hours a week).—Powers and roots, logarithms, equations of the first degree with several unknown quantities.

Second year (3 hours a week).—Equations of the second degree. Arithmetical and geometrical progressions. Compound interest, computing revenues, annuities, etc.

Third year (1 hour a week).—Methods of teaching arithmetic and geometry.

(B) GEOMETRY.

First year (2 hours a week).—Proportionality of straight lines and similarity of figures. Stereometry.

Second year (2 hours a week).—Continuation of stereometry; construction of algebraic formulæ; trigonometric functions and computation of plane figures.

Third year (1 hour a week).—Methods of teaching mathematics.

VII. *Natural Sciences.*

First year (4 hours a week).—(*a*) Natural history: Botany, theory of plant forms and cellular tissues; biology of plants. Zoology, theory of forms and tissues; the most important phenomena of life in animals. Structure and functions of the human body with reference to hygiene. (*b*) Physics, complex phenomena of solid, liquid, and gaseous bodies. Theory of heat; meteorology; magnetism. (*c*) Chemistry and mineralogy, metalloids, light metals.

Second year (4 hours a week).—(*a*) Physics, theory of light; electricity. (*b*) Chemistry and mineralogy, metals; minerals most important in the formation of the earth's crust; kinds of soil; mineral important for industry and technology; important facts of organic chemistry and technology; knowledge of food stuffs.

Third year (1 hour a week).—Systematic exercises in tests and observation of facts and changes.

VIII. *Geography.*

First year (3 hours a week).—The principal features of general physical geography: The earth as a whole; its crust (history of the earth); reciprocal relations between land and sea; the watery covering; the atmospheric envelope; review of the world of plant life; animal and human life. Political geography: Europe outside of Germany; the continents outside of Europe. Sketching maps.

Second year (2 hours a week).—Political geography; commercial geography and world commerce; mathematical geography; instruction in cartography and practice in map drawing.

Third year (1 hour a week).—Methods in teaching geography.

IX. *Drawing.*

First year (2 hours a week).—(*a*) Free-hand drawing: Representation of simple natural and art forms (tools, implements, vessels, plastic ornaments, architectural detail) with light and shadow; drawing of simple articles of use on the blackboard, also from memory; painting with water colors of vessels, vases, natural flowers, twigs, fruit, etc.; exercises in sketching. (*b*) Instrumental drawing: Geometrical representation of simple bodies after models from different points of view, with sections and working drawings.

Second year (2 hours a week).—(*a*) Free-hand drawing: Representation of complicated natural and art forms with light and shadows; free perspective exercises in representing parts of a room, of the schoolhouse, etc.; drawing of plastic natural forms on the blackboard, also from memory; painting with water colors of utensils, vessels, natural flowers, twigs, fruit, etc.; exercises in sketching. (*b*) Instrumental drawing: Subjects as in first year; in addition, the elements of shade construction and perspective.

Third year (1 hour a week).—Continuation of exercises of second year. Methods of teaching drawing, and utilization of blackboard in other branches of study.

X. *Gymnastics.*

Each grade is to receive instruction in gymnastics three hours a week, according to the guide prescribed for elementary schools. One hour is to be devoted to gymnastic games or sports; in winter, to skating. In the third year one of the three hours is to be utilized in giving theoretic instruction in gymnastics.

First year and second year.—Calisthenics and military exercises, with or without weights; exercises on parallel and horizontal bars, ladders, and springbock, the horse and trapeze; popular games.

Third year.—Physical exercises with special reference to requirements for elementary schools; knowledge of safety measures and aid in accidents. Where occasion offers, exercises in swimming should be given.

XI. *Music.*

(A) VOCAL (ONE HOUR A WEEK IN EACH GRADE).

First year.—Continuation of elementary exercises for formation of voice; harmonizing voice registers; striking notes correctly; learning to sing, with and without notes, hymns and folk songs, the latter both in one and two or three part music; exercises in solo singing; description of the vocal organs and measures for preserving the voice.

Second year.—Vocalizing and solfeggios; continued learning of hymns and folk songs; exercises in solo singing; instructions regarding the teaching of singing; model lessons.

Third year.—In alternate hours: (*a*) Solo singing; methods of music instruction; essentials of the history of music, especially the development of hymns and folk songs; the most important forms of vocal music. (*b*) Choir singing, mixed chorus arranged with soprano and alto voices of younger pupils in the model school; exercises in beating time and leading choruses. Besides the foregoing exercises in mixed choir singing there should be arranged male choruses consisting of normal school students alone. Four-part music, such as hymns, liturgic choirs, psalms, motettes, secular songs, especially folk songs and patriotic hymns.

(B) VIOLIN.

The students are to be graded according to their skill. Each division receives instruction one hour a week. The book of exercises introduced is to be completed. Hymns and folk songs are to be memorized and duets practiced. The higher grade is to be instructed to use the second and third hand positions on the instrument. More advanced students should be held to play sonatas by Haydn, Mozart, and other classic composers. For each division a separate hour for class practice is to be set aside. Also exercises in trios and quartets, and, where occasion offers, in limited string orchestra pieces, as well as a combination of violin and organ music may be attempted.

(C) PIANO.

Piano playing must remain a private affair in the normal school, but pronounced musically talented students, if otherwise well advanced, should be given opportunity for further development and practice.

(D) ORGAN.

As in other musical studies, the students are graded according to their skill in performing. Each division receives one hour instruction a week. The prescribed "organ school" or text-book is to be used according to each student's ability and progress. Preludes by old masters in appropriate gradation are to be practiced; the more talented of the students may proceed to the intricate preludes and fuges of J. Seb. Bach; continuation of hymn playing, playing in trios, transposition from one key into another. Each student must memorize the hymns he has learned to play. All exercises in the theory of harmony must be secured by practice. The senior class, aside from the foregoing thorough instruction, should attempt the following tasks: Playing the liturgy by memory; exercises in independent modulation; invention of interludes and hymn preludes; also register practice.

(E) THEORY OF MUSIC.

First year (1 hour a week).—Augmented and diminished triads; chords of the seventh and the ninth; application of the knowledge of harmony gained in harmonizing hymns and brief interludes; first attempts in harmonizing melodies.

Second year (1 hour a week).—Constant practice in the application of harmonic material and its application; analysis of harmonized hymns and organ pieces.

Third year (1 hour a week).—Conclusion of the theory of harmony and modulation; harmonizing hymns and popular airs. The student should be enabled (1) to harmonize completely in four-part music any hymn of which the melody alone is given, (2) to transcribe hymns and airs from mixed choir to male choir or vice versa. Attention is to be paid to two or three part music for children's chorus; invention of simple preludes and interludes; the ancient church-music keys; construction and care of the church organ. Some instruction may be given in the most important forms of instrumental music (orchestra work).

XII. *Instruction in agriculture.*

During the first and second years the students are to be given instruction in agriculture one hour a week; in summer, principally in a practical manner; in winter, theoretically. The subject should include the working and improvement of the soil, the planting of important staples and plants of the truck garden, also the nursing and care of fruit trees and ornamental flowers (these to be confined to the customary garden flowers); if possible, also, the treatment of silkworms and bees. All this work should be done in a manner which will enable the students, after they have been appointed as principals in rural schools, to act in these matters with comprehension and forethought and to teach in rural continuation schools; hence instruction should be given in profitably managing a school garden. The subject of agriculture naturally varies in the different provinces of the Kingdom, since local practical needs determine the character of the instruction. The necessary complement to this instruction is found in the lessons in natural history.

Time-table.

[Numbers signify full hours per week.]

CHAPTER XXVII.

REPORT ON THE CHILEAN EDUCATIONAL CONGRESS AND EXHIBIT, 1902–3.

By John Vavasour Noel.

I.—CHILE AND EDUCATION.

The educational system of the Republic of Chile has a well-merited reputation, not only among the neighboring States, but in Europe as well and in the United States, where a deep interest is taken among educators in the effort of that progressive country to enhance and strengthen its intellectual development.

In 1813, three years after the overthrow of Spanish rule, the young Republic created the National Institute and promulgated a law which was the basis of the present administrative supervision of the people's education. The compulsory primary-instruction law was enacted in 1860 and followed in 1879 by a decree which established and organized secondary and superior education.

In harmony with the system generally adopted by the Latin-American Republics, education is in Chile under the care and direction of a special department of the public service, namely, the ministry of public instruction, and under the guidance of a council of public instruction. There are two sections—that of primary instruction, and the section in charge of higher, secondary, and special instruction. The elementary and normal schools and some specified industrial schools depend upon the first-named subdivision of the ministry; all other public educational institutions are in charge of the second.

The University of Chile is naturally the seat of learning and includes schools of law, engineering, medicine, fine arts, and theology. The National Institute is an important and well-organized school of secondary instruction, with an attendance of 1,200 pupils. The Pedagogic Institute is another establishment which has graduates all over Central and South America, whose diplomas are highly considered. As the name implies, its object is to train and mentally equip those who intend to make teaching their life work. There are 30 lyceums of secondary instruction for males, with a total attendance of 6,200; 12 lyceums for females, with 1,300 pupils; 1,500 elementary schools, with 116,000 pupils of both sexes, and 6 normal schools for the education of primary-school teachers. Those classified under the heading of special instruction are a conservatory of music; a commercial institute; schools of fine arts, agriculture, mining, and arts and trades; an institute for the blind and deaf-mutes; professional schools for females, and several industrial schools. The State devotes large sums to education and maintains these numerous establishments in a state of high efficiency, supplying the people with every opportunity to improve their mental needs without expense to them.

The Chilean constitution guarantees freedom of instruction, and there are in consequence numerous private colleges and schools, among them the Roman Catholic University, with courses in law and engineering; manual training schools and asylums, as well as 450 primary schools, with 27,000 pupils of both sexes.

The Academy of War and the Military School for Sergeants and Corporals are

under the direction of the minister of war; the Naval Academy and the training ship *General Baquedano* report to the minister of the navy, while the schools of mines, agriculture, arts and trades, and the professional schools for females depend upon the minister of industries and public works.

II.—ORIGIN AND AIM.

On October 14, 1901, an expository note was addressed to the minister of public instruction by the organizing committee of the Chilean Educational Congress and Exhibit. It said in part:

Pursuant to an invitation by the rector of the university, a number of professors in the various branches of the department of public instruction of this country and many others in analogous occupations gathered with the purpose of organizing for the coming year a general educational congress and a scholastic exhibit for the display of the apparatus used by other countries as well as ours in the pursuit of instruction.

You can not fail to realize the influence for good which such a step will exercise toward our young institutions. If it be true that of recent years our methods of teaching have improved by completing and enlarging the curriculum of secondary and higher education, by installing new chemical laboratories, and by amplifying in general scientific and practical knowledge, on the other hand new interests and demands due to the development of our social life have arisen which our present pedagogic organization can not meet and to which the latter must be molded in such a form as will best suit the necessities of trade and the exigencies of our culture in general.

The study of such problems by persons of the necessary qualifications, as well as those who will gather at this congress, will doubtless shed a clear light on the present condition of our educational methods and suggest direct and conservative reformatory steps.

To this same purpose does the projected exposition tend. Our professors and teachers will have an opportunity to study therein all the technique of pedagogy that is available for the communication of knowledge. Our own school material and apparatus are limited, and the types of other nations will give us an opportunity to enlarge it and perfect it.

This extract is quoted for the purpose of giving a general idea of the aims of the projectors, who sought to arouse the interest of the Government. The note was signed by Diego Barros Arana and Manuel Barros Borgoño, as presidents of the organizing committee, and by Enrique Matte Vial, Luis Espejo V., Octavio Maira, and M. A. Ponce as general secretaries.

The project met with the hearty approval of the Government and the earnest interest of the minister of public instruction. Steps were immediately taken and subcommittees formed whose aim it was to prepare the various subjects to be discussed. Six divisions or sections were created:

(1) Primary or elementary instruction.
(2) Secondary instruction.
(3) Higher and professional instruction.
(4) Special and practical instruction.
(5) Hygiene, construction, and school furniture.
(6) School material and apparatus.

The educational congress opened its session December 25, 1902, and closed on January 1, 1903, a period of seven days. During that time the subjects prepared by the first five sections were discussed, a detail of which is given below.

The sixth section had charge of the exhibits from many parts of the world of school apparatus, school furniture, and all that appertains to appliances for text or demonstrative purposes, of which full details are given further on. The exhibit was inaugurated on December 14, 1902, and closed on the 18th of January following.

III.—THE EDUCATIONAL CONGRESS.

The opening session of the educational congress took place on December 25, 1902, at the university building amid imposing ceremonies and in the presence of a numerous concourse of State officials and leading educators of Chile. His excellency the minister of public instruction, Señor Don José Domingo Amanutegui Rivera, as representative of the Government, declared the sessions open, and said in part:

Concerning practical instruction, it may be said that Chile is merely on the eve of implanting the same and making it available for all social classes. It is well understood that "general instruction" is sufficient preparation for the ordinary duties of man. Modern life, however, has developed numerous occasions which place individual initiative to work where the stimulus and guidance of practical or technical knowledge are needed. The occasion is propitious for this congress, in view of our present and future economic needs, to give this important subject special attention and to suggest such steps as will tend to stimulate methods of education on those lines and adapted to this country's special needs.

Señor Don Diego Barros Arana, honorary president of the congress, then delivered an interesting address, of which the opening paragraph is here quoted:

The congress the opening of which we celebrate to-day is not a merely perfunctory performance. The gathering of the teachers from all parts of the Republic, the display of the instrumentalities of instruction, and the preparation of hundreds of papers on many subjects all fulfill a clear and definite object, twofold and of indisputably beneficial effect. It is as if a balance were to be struck of the condition of our education and, in a certain fashion, of our intellectual culture, of the difficulties overcome, of the progress reached, and of the improvements which our experience suggests to harmonize with our highest patriotic aspirations and efforts and sacrifices thereby imposed. It has also been deemed advisable to study the progress and improvement in this respect of other and more advanced nations, by which we may adapt that which most suits our necessities and requirements.

Señor Don Luis Espejo Varas, secretary of the congress, in closing the ceremony with appropriate words, thus referred to the distinction between general and special education:

It is not possible to confuse general education, which has for its aim the harmonious training of the mind, with special education, which develops only specified faculties.

The first makes of man an element or part of progress and general happiness, prepares him for the widest and fullest adaptability in his social sphere, and gives him, therefore, a mass of theoretic knowledge which defines his relation to the world and his species.

The second applies to special departments of human activity and to but a part thereof, supplies the individual with the necessary weapons for his defense in the struggle for existence, serves the arts and industries, regulating and divulging at the same time the scattered principles of practical knowledge.

One is disinterested, complete, and uniform; the other is clearly utilitarian, partial, and heterogeneous.

Space forbids a detailed account of the debates and papers read. In consequence the subjects discussed by the several divisions are hereby given, with extracts from some of the more striking remarks.

FIRST SECTION.

1. Reform of the organic primary instruction law of the 24th of November of 1860. The creation of a council for this branch. Graduation of primary schools. Stability among the teachers. 2. Means to enlarge the sphere of obligatory primary instruction. 3. Organization of Sunday and evening classes for adults, with suitable programme. 4. Methods by which to obtain a better attendance among children of the lower grades. Proletariat schools. 5. Statistics, census and school map of the Republic. 6. Revision of the programme or curriculum of normal and primary schools. 7. Physical and moral education. 8. Development of knowledge of hygiene. Crusade against alcoholism. 9. Manual training. Elementary knowledge of practical applica-

tion in schools of either sex. 10. Reform in the orthographic system adopted by decree of September 5, 1894. 11. Instruction in domestic economy in girls' schools. 12. Encouragement of savings in schools.

SECOND SECTION—SECONDARY INSTRUCTION.

Fundamental matters.—1. Reforms concerning secondary instruction in Chile and other countries. 2. Hours of study. 3. Supervision over private educational establishments. 4. The matter of examinations. 5. On the subject of bachelorships. 6. Concerning the advisability of establishing a course of higher studies in the "humanities." 7. Pensions for professors. 8. General plan relating to the salaries and promotions of professors. The rewards.

Special matters relating to this section.—1. Changes and reforms in the curriculum. 2. Adjustment of hours and time-tables. 3. Supervision of State lyceums. 4. What methods might be employed to interest the families of pupils in the general work of instruction and education? 5. Pensions for professors abroad. 6. Fundamental or basic books which should be placed in the lyceum libraries. 7. Should all the lyceums of secondary instruction be of the same grade? 8. Concerning the best method for scholarships in the lyceums of secondary instruction. 9. Relating to whether it is desirable to have absolute uniformity of courses in the lyceums of equal grade throughout the State. 10. Manner of practically applying scientific knowledge in the secondary grades. 11. Should a secondary instruction office of supplies be established? 12. Review of methods of instruction in modern languages for the last twenty-five years. 13. The teaching of modern languages in Chile since 1890. 14. Text-books. 15. Languages. 16. Philosophy, literature, history, and geography. 17. Natural, mathematical, and physical science. 18. Administration, internal regulations, and education in general.

THIRD SECTION—SUPERIOR INSTRUCTION.

1. Reform of the educational law of January 9, 1901. 2. Establishment of the superintendency of national education referred to in paragraphs 144 and 145 of the constitution. 3. The need of founding new special careers or professions, such as notaries, technical inspectors, chemists, electricians, veterinaries, nurses, etc. 4. The need of a polytechnic school. 5. Advisability of codifying the laws on education. 6. Extension and generalization of university (college) instruction. 7. Special courses for doctors of law, hygienists, sanitary engineers, and military surgeons. 8. The creation of a medical tribunal (protomedicates). 9. Subdivision of the humanity course from the fourth year in order to assist those taking up mathematics. 10. Conditions under which the special ——— of professorship should be established. 11. Equivalence and uniformity of grades and titles in Latin-American countries. 12. Advisability of regulating by law pensions abroad and scholarships at home. 13. Establishment of fine art schools independent of the university. 14. System of examples adaptable to higher and professional instruction. 15. A systematic reorganization of the university. 16. Grant of subsidies or pensions to encourage special professions. 17. Titles of competency for administrative responsibilities.

FOURTH SECTION—SPECIAL AND PRACTICAL INSTRUCTION.

1. A superior organization following a law of technical instruction, which, through supplying the needs of the latter, facilitates its progressive development. Should a special faculty be established for this instruction, or should it depend upon a special directive council? 2. To assure an improvement in primary instruction, that it may serve as a basis for special instruction. 3. The most suitable method by which to obtain this in private schools. 4. Advantages that might be obtained by including in primary and secondary instruction such knowledge as might stimulate an inclination to industrial careers or tendencies. 5. The best way to teach agriculture in establishments of primary and secondary instruction. 6. Establishment and development of manual training and drawing in primary and secondary grades to prepare for industrial and agricultural specialization. 7. Manner of increasing the number of those who take advantage of the present agricultural, mineral, commercial, arts and trades, fine arts, and other schools. 8. Establishment of professional technical courses in primary grades, in workmen's night schools, or in schools held on Sunday. 9. The establishment of technical schools which, starting from the primary grades, shall teach mechanics (theoretic and applied), chemistry, electricity, drawing, mechanical construction, applied geometry, and other branches of practical utility. 10. The institution of short commercial courses, comprising bookkeeping, etc. 11. How to increase attendance at male and female professional schools. 12. Schools for industrial and decorative art. 13. Night or Sunday schools, to disseminate industrial, agricultural, mineral, commercial, and artistic knowledge, and in which studies undergone in special schools devoted to these subjects may be perfected. 14. Lectures in school buildings to farmers on the subject of agriculture and allied branches. 15. Practical traveling courses in industries relating to agriculture, such as dairies, canning, etc. 16. School savings banks to induce the habit of saving, and to encourage excursions at home or abroad in search of technical knowledge. 17. Appointment of inspectors of technical instruction, who, in harmony with local boards, shall

encourage this form of instruction, especially that of technical knowledge for the skilled artisan. 18. Improvement of instruction in agriculture on a par with the superior grade. 19. Establishment of a polytechnic institute. 20. A high school of commerce. 21. A special chair of technical instruction in the pedagogic institute. 22. The founding of an institution to comprise: (*a*) A library of reviews and publications, containing the most advanced and complete information applicable to the arts and industries; (*b*) an industrial and commercial museum; and (*c*) a bureau of information, for the publication of consular reports from Chilean or other consuls abroad, and to furnish the data and information required by commerce and industry for the extension of trade. 23. Establishment of popular libraries, containing local papers and principal reviews as well as books of current interest. 24. Systematic legislative aid to and encouragement of clubs and societies which may aim to furnish legitimate amusement, promote temperate and economic habits, and supply practical knowledge to the workingman. 25. Reforms necessary in military schools in order that obligatory military service instructors may exert a beneficial educational influence on the masses. 26. Advantages of adapting gymnastic exercises to the demands of military instruction.

FIFTH SECTION—HYGIENE, CONSTRUCTION, AND SCHOOL FURNITURE.

1. A report on the present hygienic condition of public schools in general. 2. Hygiene in industrial schools. 3. Hygiene of internes. 4. School physicians. 5. Light in schools. 6. Writing and printing of texts. 7. Baths. 8. Furniture. 9. Construction and architecture. 10. Heating and ventilation. 11. Sewerage and closets. 12. Education or training of the organs of the senses. 13. Physical education. 14. School hours from the view point of mental strain. 15. Hygienic condition of the schools of the Society of Primary Instruction.

Some of the more notable papers.

The following addresses represent the authoritative views and evince the high aims, perfect understanding of the subject, and public spiritedness of Chilean educators, and are a suitable testimony of the high standard of education desired in the Republic of Chile.

At the session of December 27, 1902, Dr. Manuel Barros Borgoño,[a] rector of the State University and professor of surgical clinics in its faculty of medicine, read a paper entitled

THE REORGANIZATION OF THE UNIVERSITY.

In 1865 an eminent French publicist began one of his writings with the following epigram, written in bold type: "The people having the best schools are the foremost people; if not to-day, they will be so to-morrow." This axiom, which has not lost its truth or luster with years, and which should be in the minds of all such as in Chile think of our country's future, evinced not only by its clean-cut laconism a thinker's prophetic intuition, but there was embodied as well a patriotic warning and an efficacious corrective.

He meant to say to his countrymen: "We must not be so proud of our recent military triumphs, or of glory won in Russia and Italy, for there is an active poison undermining our social organism beneath the apparent greatness of our material progress. Six hundred thousand children attend no school, and a third of our males 20 years old can not read. The prestige of our great schools is lessening and our university has lost its ancient splendor. At our side a dangerous rival is arising, who considers the education of her children the first and unavoidable duty; who has raised high the standard of her schools and universities; who worships her wise men as we worship ours of the sword, and who made public instruction the keynote of her organization and future greatness. Let us change our ways unless we court defeat."

The reactionary government and frivolous society of the second French Empire were deaf to the sensible warnings of that patriot, and cruel experience proved later that "the destinies of peoples are indiscernible and unknowable, and the fortunes of war do not cause defeats, but only prove them," and that moral and intellectual supremacy must be maintained if material supremacy is desired.

The schoolmasters, as was said at the time, were not those who triumphed at Reichshoffen and Sedan. They did not construct that formidable machinery of

---

[a] Recently deceased. See p. 1274.

war and its ironlike structure, nor did they make of the art of war an exact science. The glory of the day belongs chiefly to that vast number of wise men who in all parts of Germany delved into science and its practical applications. Foremost it belongs to its universities, which from the day Fichte besought them to undertake the moral regeneration of the nation became, while centers of learning, the home of the most ardent patriotism, laboring without rest to elevate the German soul by education. They were the real palladium which made the German hosts invincible, and though the patriots of 1813 believed that without the University of Berlin there would have been no war of independence, its thinkers of to-day rightly believe that the universities have been the real founders of national unity.

Thus it was understood by France. Her wounds but healed, and before building her army, when the reconstruction began, it was judged that the first effort should be to raise the standard of her higher education. Correcting former errors, education was decentralized, thus increasing the sources of work and progress. New faculties of physical and biological sciences were created in several cities and some splendid buildings were erected. To realize practical aims their cabinets, museums, and laboratories received donations, and their libraries were enriched. Original investigation was encouraged. Special superior schools were established. National associations were formed to make general the study of science. It was believed that all the live forces of the country should be applied to the service of the work of public salvation.

If I have recalled to memory this well-known historical proceeding and sought as an example the German universities, it is not because I believe that they alone influenced the general culture of that nation, but because I believe it would be difficult to find clearer proof as to how educational institutions may grasp the soul of a people and raise it to a great destiny.

It is for us to study the causes of the latter and to discover, if possible, the secret of their success, and to draw therefrom inspiration to guide us toward our betterment and improvement.

I have no foolish fancy that it would be possible or sufficient for us to follow the rules and regulations which govern those universities, or to humbly copy their programmes of study and general courses, or that by changing the outside or front of our institutions that we could by this act effect a sudden and miraculous change in our intellectual development. There is in this problem an important factor which can not be neglected—national character or instinct, a complex product of innumerable and varied influences, cosmologic and ethnographic, acting for thousands of years, an indestructible seal, the active imprint of an education of centuries.

Aside from this element there are other conditions which have contributed powerfully toward the influence which German universities have wielded. In effect, how could German intellectuality have given a free rein to its powerful faculties, to its proverbial painstaking industry, to its penetrating analytical spirit, and its high mental concentration, if, oppressed by a dominating and overwhelming theocracy, it had been obliged to yield to the latter's exigencies and to temporize with its errors? How could the teachers of Germany have devoted their entire lives to study and teaching if instead of being provided with the means to a comfortable and smooth existence they had been obliged to risk the chances of an uncertain livelihood? How could they have effected such prodigies of investigation and learned criticism if an intelligent and wise administration had not placed at their disposal the necessary works and material for reference? How, finally, could they have fulfilled their patriotic and civilizing mission if their people, seeing in them the guardians of its freedom and the most powerful cause of its progress, had not protected them in a loving atmosphere of veneration and sympathy?

German university influence is due, therefore, to several converging forces: To Lutheranism, which as the more tolerant of the subdivisions of reformed religion and faithful to its founder's doctrine, proclaimed free science when it created freedom of thought; to the financial independence of its professors; to a powerful and intelligent control by wise men and thinkers; to a generous and thoughtful Government; and, lastly, to that social prestige which professors and their families enjoy.

Therefore not only have these universities exercised an influence on the destinies of their own country, but they have caused the eyes of all cultured people to look toward Germany, and send thither their scholars and masters, who have copied from these German institutions. The University of Berlin has become like that of Paris in the thirteenth century—the learned world's center of attraction and the most powerful seat of intellectual activity in the Western World.

In America especially has this beneficial influence been felt. Before now

Anglo-American universities had not exercised important influence on the world's intellectual movement. Public men in the United States of America, in an erroneous fashion, have devoted their attention principally toward popular education, neglect ng higher culture for the directing classes. It may be said that secondary education hardly existed; and in their universities, influenced if not controlled by the various religious sects, "students were nourished with ecclesiastic pap instead of genuine thought," as White expressed it, "and the ideas of great thinkers like Darwin, Spencer, Draper, and Huxley were kept from them with great care."

In their schools of medicine nearly all instruction was limited to theoretic lessons on determined scientific points and a slight clinical experience. By their facility of admission, the shortness of the course, and the examining leniency these schools had become the center of attraction for those who sought not real knowledge at the universities, but merely wanted to be able to display a pompous title.

Concerning education an extraordinary reform has taken place among this great people during the last thirty years. All branches have made wonderful improvements. Without losing the practical and experimental tendencies of secondary education, on the contrary by strengthening them, it was deemed, notwithstanding, that its principal function is the gradual and simultaneous development of the mind, and in consequence the preliminary step of all higher education.

Its universities have taken a new lease of life. Harvard, Yale, Johns Hopkins attract attention in the scientific world, and appear to be destined to be the center of a powerful intellectual movement. In that country so absolutely commercial, in the home of "trusts," the gold of millionaires is not hoarded in vaults or made to satisfy the insane vanity of display or to give vent to egotistic or petty instincts, but is utilized for magnificent creations of high social importance. Its great capitalists—among the first Mrs. Phœbe Hearst, who has shouldered the responsibility of creating the University of California at an estimated cost of $40,000,000—have spent vast sums to endow colleges with what is needful for their present development. Brushing aside inherited prejudices and guided by a peerless eclecticism, the directors of education have sought everywhere for the elements necessary for progress. They called specialists of all classes; have built immense laboratories with the most improved appliances; have endowed their libraries with treasures of scientific and literary bibliography; and, finally, they have amply provided for the material needs of the professors, in order that the latter may devote themselves freely to study and the university care of the pupils. Imitating the eminently educational tendencies of the English universities, not only have they provided for intellectual stimulus, but they have given attention to physical and moral culture, which education in the real sense demands. Besides the establishment of colossal gymnasiums, where the students are trained to all classes of physical exercises, they are also encouraged to form temperance societies and other associations for moral betterment which are peculiar to that country.

The location of these colleges, generally away from the great centers; the devotion of the entire time to education in its different phases; the debating societies, where scientific and literary questions of interest to all are discussed, and in which the professors take part—these features are all favorable, with such a community of sentiments, ideas, and scientific methods, to a unity of interests among students, and give university life in the United States special and marked characteristics. Frequent intercourse among students of the different classes has the advantage of giving them a more harmonious conception of human knowledge as well as a greater range of vision, and avoids one of the greatest evils of modern education, what Auguste Comte called "anarchic specialism" (especialismo anárquico).

Let us glance rapidly at the part taken by our universities in the development of national culture, to study afterwards what changes may be introduced in harmony with the demands of scientific progress, and which may assure us a bright future.

I hardly need recall our first university, that of San Felipe, pitiful remnant of obsolete Spanish universities, which, like the offshoots of an ancient tree, bore neither flowers nor fruit. Furthermore, education therein was routinary and elementary, diplomas were sold without hesitation, and the proceeds of these sales went to purchase gifts for the new rulers of the Kingdom. In those days the power of the church was supreme and the text-books required its approval. An ecclesiastical representative always presided at the examinations of doctors to repress all heretical doctrines.

Happily for our continent, those intrusted with organizing the new university were men of high intelligence and rich culture, who were familiar with the great intellectual homes of the world, where they had been able to appreciate the importance of those institutions in relation to the future of nations. The names of Bello and Egaña will therefore be always identified with our national university and ever remembered with that admiration and respect due to worthy public servants.

Bello's vigorous initiative, the truly encyclopedic variety of his learning, his staggering power of assimilation, his scientifically organized mind, and his refined literary culture were all qualities the beneficial influence of which was immediately felt in our young organization. He drew to him all minds, and, guided and stimulated by him, a numerous group of young men devoted themselves to the study of letters and our national history. Their efforts were assisted by eminent professors who came from Europe. Medicine and engineering received the practical and experimental direction which they require; jurisprudence, which he (Bello) enriched with a monument worthy of his name, began to be taught, not as a dry compilation of arbitrary dispositions, but as a harmonious and complete whole, and in all branches of learning the fruits of that glowing spirit appeared. The University of Chile soon gained merited repute and was considered the greatest intellectual center in Latin America.

Since that period the succeeding administrations in the Government of Chile have cooperated toward its aggrandizement, it remaining for the liberal administrations to give it powerful help.

Notable changes have been made, and thanks are due to the patriotic and intelligent initiative of many public men, among whom stands foremost the illustrious professor to whom Chilean intellectuality will erect a statue. Costly buildings have been erected; considerable sums have been spent to endow collections and laboratories; all the assignments have been made which the several faculties deem necessary; eminent professors have been engaged abroad, who brought us the precious tribute of their talent and wisdom; for thirty years many students have been sent to Europe to perfect themselves, and, lastly, all reforms thought to favor the progress of science have been introduced into the curriculum and programmes.

This does not imply that all reforms have been carried out and all needs supplied. On the contrary, there are yet many demands to be satisfied and many innovations to be introduced, because the least observant may note that the results so far realized are not in proportion to the efforts made to obtain them.

It is true the lawyers, engineers, doctors, pharmacists, architects, etc., who come from our halls possess a superior amount of knowledge and are therefore better prepared for the exercise of their respective professions; it is equally true that the pedagogic institute, considered justly a branch of the university, molds professors who generalize the new methods of instruction and scatter those healthy educational seeds throughout the Republic. It is irrefutable that these facts, whose result is a general diffusion of light and a powerful influence on the happiness and prosperity of the country, are a more than ample justification for those efforts. But it is not less true that the strictly national literary and scientific productions are inferior, in proportion, to those obtained before, with more meager results. I speak in a general sense, knowing also that works of great merit have been produced—efforts that go beyond our frontier and are a notable evidence of original and powerful minds.

What is the cause of this apparent inferiority? Why are our efforts toward the advance of the sciences, the high function of universities, fruitless?

This can not be attributed to intellectual incapacity. Human progress is not exclusively due to those brilliant spirts which, like luminous meteors, appear from time to time leading the unknown way. Science is to-day as never before the result of collective work. All may contribute to this silent work of testing and proving fixed laws, and of experiments and patient analysis which are the fruitful source of all great discoveries.

It can not be attributed ever to the fact that Chilean thought may have been restrained or coerced in its free scope by dogmatic or theological impositions. The founders of our independence, in breaking the ties that bound us to the mother country, brushed aside musty traditions and gave us moral and political liberty. In consequence, various efforts to restore a lost control have always been quickly suppressed.

Those who formed our present organic status and started the university on its new way, impressed with the belief that liberty is the primary basis of culture and of the progress of science, made the absolute independence of the teacher of higher education amply secure. It is highly creditable that this great principle should have been upheld in Chile when even now in other cultured lands dis-

tinguished professors are dismissed for inculcating doctrines that conflict with the religious tendencies of the country. * * *

And if no obstacles have been put in the way of intellectual labor—if, on the contrary, the laws have favored its free development—and if the constitutional authorities have cooperated efficaciously toward the creation or reorganization of our schools, why, may I ask again, are our own original efforts so unimportant?

The explanation for this phenomenon lies in various causes of different character which have had a simultaneous influence. The general tendencies affecting our educational methods, the defective organization of our corps of teachers, the university not sufficiently autonomic, and the lack of resources are the various reasons, in my judgment, which explain why our scientific production has not been greater or more varied.

The university does not fulfill its primordial mission if it limits itself to the propagation of things already known, and if it does not, above all, try to fortify such knowledge and contribute by its own original efforts toward science in general. Herein lies precisely the distinction between secondary and higher education. The first develops the faculties of the mind and furnishes simultaneously a certain form of knowledge, while the second, above all, develops those faculties in the line of personal investigation. Able professors and learned men are doubtless desirable and necessary, but the real intellectual wealth of the country lies among the scientists.

To give instruction in such a channel it is not sufficient to suppress the method of memory commitment, which unfortunately has not totally disappeared; nor is it enough that the teachers, with well-prepared lessons, should expound the text of their various assignments, studying its many phases or discussing the several theories possible before developing their own opinion. Neither is it sufficient that professors in science, taking advantage of their well-supplied laboratories, should make numerous demonstrations concerning the exactness of laws and their practical application. Nothing can take the place of personal effort. "No one is sure of that which he does not do himself," said a Greek philosopher twenty-three centuries ago. This axiom should be placed in all our schools and be the basic principle of our education. Those who have attended the fine European universities know the importance given to such a system. In a laboratory, as soon as the pupil knows the object and use of the various instruments and appliances, he is intrusted with some experiment which may afford a personal and original investigation on his part.

This does not imply that practical instruction is absolutely lacking in our university, yet even though such a tendency has been observed of late years it is far from having a sufficient importance. Several distinguished professsors have made worthy efforts to stimulate tendencies to investigation among their pupils. The lack of early preparation in this method of teaching has proved, however, a great stumbling-block. Children must from their earliest years accustom themselves to do things for themselves. Practical scientific instruction must begin early and follow with manual training as a chain, the links of which shall be the work in wood or metal, to reach the point of delicate experiments in physics or physiology. No one will be a good investigator unless he be able to supervise the construction of an appliance or to manufacture it himself. * * *

I shall now refer to a matter which I consider of vital interest, namely, university autonomy. The present law gives this body a relative independence in that which concerns the appointment of its members, the establishment of new departments, the making of new regulations, and the changes in the curriculum, and further establishes that the university funds shall be administered by the council of public instruction. In reality the university has little control over its economics, for, as a matter of fact, even though it establishes its chairs it does not endow the professorships nor adjust their budgets. Its initiative is subject to the good or ill will of a minister and depends upon the result of negotiations with members of the council or Congressmen. It is also influenced by the more or less prosperous condition of the public treasury, and sometimes by purely political occurrences which cause matters of vital interest to be delayed or neglected. This lack of resources disturbs the organization, and it is therefore sometimes necessary to wait for years before being able to meet urgent demands or obligations contracted.

It is time that the supreme Government should think of a remedy for these evils, creating a university fund to promptly supply all unprovided-for needs, including those that might not have been cared for on account of temporary disturbances in the national budget. As we have not among us men like Peabody, Vanderbilt, and Johns Hopkins, who give fortunes to colleges, it remains for the National Government to remedy from general funds this lack of private endowment.

Grants of land at present of little value, or national credits or property, to-day in hands of others, and in addition a university fee for examinations and titles, might be the basis of an important fund which would relieve higher education from the anxieties of the future. This suggestion would doubtless meet the opposition of those who hold it antidemocratic to impose taxes on anything that should be within the reach of all fortunes. Notwithstanding, in this as in many other things, we have passed the limits of prudence. As I understand it, Chile is the only country where higher education is given gratuitously. It is also an exclusive privilege and an old practice that the treasury pays the national professors when foreign professionals are examined in order to practice in this country. Differences of wealth are adjusted by special concessions to be established for each individual case. This is the practice in American colleges which can not be charged with an aristocratic tendency and where higher education is very costly. The same things occur at the University of Buenos Ayres; this body receives considerable assistance from the State, which, added to the fees and the interest on university property, is sufficient to cover all expenses. It will be of interest to know that the total of the fees there collected would be sufficient to care for the present expenses of our university.

All these measures tending to improve the style and condition of our education may be introduced without the need of modifying our organic law. However, to strengthen the university influence, to fortify its teaching body, it would be needful to make changes which, while not disturbing fundamental principles, would allow an adaptation toward the newer tendencies.

In my opinion the change which would have the greatest effect would be the creation of substitute professorships. Our education law recognizes only two classes of professors—the ordinary and the extraordinary. The first have all the prerogatives, and in exchange are the only ones whose services are regulated; the others have but slight exactions in case they desire the privilege of a vote in the councils of the faculty. Their part in the work, their educational action, do not follow any methodical plan. It is not therefore strange that the results obtained, to the present, have not been in proportion to the number and ability of those professors who, with varying assiduity, have desired to participate in the work of education.

Substitute professors would have a more stable position. Their number would not be indefinite, but would depend on the ordinaries. Among their number the supplementary (suplementes) professors might be appointed. Vacancies could be filled, and they might be placed in charge of complementary or rehearsing classes. They would, by right, take part in the examinations, and would give public lectures with the object of spreading the elements of superior education among all social classes. Thus they would powerfully help in the difficult task of education. If, in addition, it were held that an original work should be an indispensable condition to admission to a professorship, then by this a method would have been found for the forming of competent teachers, and, in addition, works of investigation would have been stimulated.

If, with this or other objects in view, our organic statute should be altered, it would so furnish an opportunity to modify the studies. It would be an advantage, in any event, to introduce technology in our higher education and create a course in mechanical and industrial art, though I do not believe that this would have a decisive influence, as it matters little how studies are classified. The great development of such knowledge and its importance toward the progress and happiness of a people demand attention. Such an incorporation would not be uncommon in university practice. It has taken place at American universities and in the new one at Brussels.

Our university was founded during a period of great scientific change and before the present modern classification was adopted. The nomenclature of the studies appears to-day incomplete, obscure, and somewhat anachronic. Who may determine, for instance, what is embraced in the course of philosophy and humanities? Philosophy, which at one time denoted all known science, is considered to-day not as a science, but as its soul, and is, according to Spencer, "knowledge fully united." It treats of the actual condition of the sciences, of their mutual relations and interchange by which to reach the total or general knowledge of all things. That which was until recently taught among us under the name of philosophy, after which the corresponding course was named, was a conglomeration of knowledge appertaining to various sciences—psychology, embodied nowadays with biology, as concerning the cerebral processes, and even the condition of conscience, and with sociology in so far as it refers to the evolution of ideas; logic, which is allied to mathematics, and also considered by some as an independent science; morality, a part of social science; and, lastly, theodicy, which treats of first causes, the

domain of the unknowable. As much might be said of the humanities. Some understand this designation to apply only to letters, others to the dead languages, and there are those who believe that the sciences are the truly modern humanities. Why not therefore change this ancient appellation to "Letters and fine arts?"

The name of the chair of law and political sciences might be advantageously changed to that more comprehensive one of chair of "social and political sciences," and that of the chair of medicine and pharmacy, devoted only to the art of healing, would gain by the change to "biological sciences."

In this fashion our university would contain the following chairs: Mathematics, astronomy, physics and chemistry, biology, social and political science, letters and fine arts.

There might be yet other changes in the law to suggest, but I must not infringe on the subjects whose elucidation has been intrusted to distinguished members of this congress.

I have reached the end of my task, gentlemen, and I beg you will pardon me for having engaged your minds and attention for so long a time. It is for you to decide now if I have had the fortune to interpret your sentiments, and if my ideas deserve your approval.

I am sure that, if this be so, a new and bright future will be opened for our university. It will not then be a walled and narrow place, with the making of professional men for its only object, but a temple open to the worship of science and letters, where all thought may find echo, all inspirations, courage, and all brilliancy a home. Thus should a university be, thus our fathers desired it; not a pale priestess keeping alive the sacred fires in solitude, but an august and glorious goddess scintillating with learning and light!

Señora Maria Espíndola de Muñoz, the distinguished principal of the Young Ladies' American Lyceum at Chillan, Chile, delivered the following address on the subject of

INTELLECTUAL AS WELL AS PRACTICAL EDUCATION FOR WOMEN.

I wish to raise my humble voice at this majestic gathering of learning and science, not to make a brilliant speech, but to call the attention of the honorable Congress of Education to a subject of real importance, which, notwithstanding the many subjects discussed, has not been worthily considered. I do not pretend to be able to point out all the needed remedies, but I trust I may be heard with sympathy in view of my object, which is to contribute to the full measure of my efforts toward the formation of woman's individual character. How may this be obtained, if it has been possible but recently to raise one's voice concerning suitable education and instruction for women? How many conflicting ideas and principles have appeared and been suggested in order to solve the problem?

It is not long ago that people believed that women should be able to read in order to read "certain books;" later she was allowed to learn how to write and read, with some restrictions; still later she was allowed to grasp a "little more" knowledge, but not as much as her companion, man.

This last condition has been amply proven by the fact that in the discussions on secondary instruction it has not been possible to discuss in common the subject of education of both sexes, because the standard of female instruction is much inferior.

I need not go into details, gentlemen, to prove the sad results which come from an intellectual inequality between man and woman, and this is quite natural. To expect of woman that she should intellectually understand her mate and share with him his great ideals, tastes, and opinions is analogous to the likelihood of a peasant having the aristocratic manners of those born and raised in a cultured and refined atmosphere. How may poor woman realize that there is wisdom lacking in her companion, if the latter soars in higher mental regions where she can not follow owing to the limited horizon of her mind?

Ah! sad fate of poor woman! Born to be man's companion, endowed with the same intellectual faculties and the same rights, she finds herself without the sap of education, and notwithstanding all her efforts to make her companion happy and maintain her place with dignity, it can not be done, because they have placed her in a lower mental sphere.

How different would woman's condition be if we gave as much to our daughters as we do to our sons! They would not be, as to-day, with rare exceptions, subservient slaves and ardent defenders of prejudices which oppress the spirit and curtail liberty, but, on the contrary, they would be as a bright light shedding the

gleam of truth from the home to society, from society to the nation, and from the nation to humanity.

We would not see her, as to-day, disdaining work, for it is a nearly universal understanding that man alone must work to support the home, and that woman may quietly secure the benefits of his struggles and sacrifices. Up to the present, woman has consumed more than she produces, and is therefore a charge on the home.

If woman, like industrious and economical man, produced more than she consumed, there would be plenty in all the homes and the great problem of social economy would be solved, which can never be until woman takes her place in the matrimonial partnership.

But how much effort will it not cost to propagate the beautiful idea of work, the only possibility, with education, by which to make of woman an independent being, useful to herself and society?

The undertaking will be arduous, but we must not be faint if we seek to put woman in her place in the field of knowledge and among the duties of humanity.

Aleta Jacobs, the first young woman in Holland to secure the degree of doctor, said: "As long as woman is dependent from an economic standpoint all civic, political, and social privileges are worthless to her." According to this principle woman's economic education will be of the greatest consequence to her happiness.

I would say in conclusion:

1. Woman should be educated in the same degree as man in order to choose her life companion with freedom of judgment and be able to suitably fulfill her duties in the home.

2. She needs a practical education in order to be independent, to serenely face the difficulties of life, and be an active factor in the public and private wealth.

Let us pledge ourselves, gentlemen, to carry out such a noble undertaking, which will result in political and social comfort, much happiness for our daughters, the wives of to-morrow, and many pleasant hours for the founders of our homes.

Let us join actual work to intellectual grace, either in man or woman, and we shall thus remove obstacles that to-day darken many dreams of happiness.

Let us remember the words of an English writer: "Work and science shall be masters of the world."

Dr. Manuel J. Barrenechea, a well-known physician, who is considered an authority on hygiene, read the following paper on

HYGIENE IN THE SCHOOLS.

I have been honored with the charge of studying and expounding before this distinguished audience the subject of "hygiene in our educational establishments, its present condition, and the improvements which might be introduced."

This statement of the subject in itself evinces its great importance, and similarly denotes its extent and the many difficulties attendant upon its proper presentation. Had I been a school physician for some years, a post which has yet no place in the mechanism of our school system, notwithstanding its pressing need, or if I had been a hygienic or school inspector I would not only have had the opportunity to make daily notes of the violations of the fundamental laws of hygiene which are met with at every step, but at the same time I could have suggested the most desirable means of improvement in matters of such great moment.

The elucidation of such a great problem can not be done under the conditions which to-day exist. The basis of the great and grand edifice of scholastic hygiene can not be laid until the foundations have been placed. Up to the present no care has been taken, it may be said without exaggeration, in the construction of school buildings, begun in a small way, to apply therein the fundamental principles of hygiene, without which all done is basically wrong.

The above stated is to exculpate me if on this noteworthy occasion, with a limited fund of facts and knowledge, I appear before you merely and simply to give a synopsis of what may be called in Chile scholastic hygiene.

The hygiene of the sight, our main consideration, and which doubtless occupies the first place among the various problems to be solved by hygienists when the building of schools is discussed, is in our country underestimated and not treated as a question of importance. "Of all the human senses," says Helmholtz, "the eye has been considered the most precious of gifts and the most admirable manifestation of nature's creating power." Poets and orators have sung its praises and philosophers have considered it the representation of organic force. Physi-

cists have attempted to imitate it as the incomparable model for optical apparatus. Loss of sight is, next to that of life, the most severe loss that we can experience.

A. von Graefe said: "Der volle Werth des Auges ist versenkt in das stumme Sehnen derer die es einst besessen und verloren haben." All the value of the eyesight sinks into the dumb longing of those who once possessed and have lost it. And Herman Cohn adds to these words, "Therefore should the authority of science be understood as pledged to protect this admirable organ from all injury."

These quotations are sufficient to emphasize the great importance of the hygiene of the eye. Such learned men as Helmholtz, the modern Newton, who formulated the laws of refraction and optics; Von Graefe, the creator of modern oculism; and Cohn, the learned Breslau professor, who may be justly styled the creator of eye hygiene—such eminent masters, I repeat, are sufficient of themselves to give our subject that value which my unauthorized voice does not.

The principle aim of hygiene of the eye is to prevent myopia or nearsightedness, avoiding or counteracting the causes that tend to produce it. I had occasion to state in a pamphlet which, under the title of "Experiments on scholastic myopia," I read before the first Latin-American medical congress, at Santiago in January, 1901, that of 366 scholars of the National Institute, whom I examined one by one, 14.48 per cent were afflicted with nearsightedness, and in another 8.75 per cent conditions were favorable to its development and traces of it could be found. Of these cases 33.9 per cent were due to heredity, and the balance, 66.1 per cent, traceable to work or study under bad conditions of light, that is, conditions that could have been avoided or prevented.

The reasons that contribute toward the development of myopia should be considered also. Among them is the forward inclination of the head, which by its position causes a compression of the vein of the neck, and thus produces an excess of blood in eye globe. Light is a principal element in near-by work. Therefore in proportion to its deficiency is the object closer to the eye, and in consequence all those conditions take place which lead, separately, to a strain in the adjustment, convergence, and muscular compression of the optic nerve. Similarly, bad light in schools leads to various eye diseases which might be readily avoided if the buildings were hygienically designed.

Curvature of the spine is also found with frequency in schools wherein the principles of hygiene have been neglected. School furniture and desks should be so constructed as to prevent the child from giving his shoulders a defective position, or from inclining the head forward in an exaggerated way. These defects must be corrected early or it will be impossible to do so later. This curvature of the spine brings on later "lordosis," with which many people in this country suffer. It is not a result of the rickets, a disease which fortunately does not exist in Chile, but is a vicious conformation resulting from the habitual position of children studying under bad conditions.

While these topics are of leading interest, there are as well other more general conditions which must be taken into consideration to avoid catarrhal affections, so frequent among children, especially in the upper respiratory organs, and which arise from bad or defective ventilation and heating or their total absence; also from the assembling of a large number of pupils in a small room defectively built, and, lastly, on account of the lack of neatnes or cleanliness which is found in some schools.

To these afflictions may be added those which attack the entire organism. They give children nearly constant pain and are hard to eradicate, especially if they become chronic, a condition easily developed, especially in case of ills not very painful. I refer, gentlemen, to those well-known "plagues" familiar under the names of rheumatism, anemia, and chloro-anemia, scrofula, and tuberculosis.

If hygiene does not come to the assistance of those poor children who have had the misfortune to have been attacked by any of these ills, they will become the victims later of those "monsters" which destroy their weak and fragile constitutions by degrees.

In educational establishments we observe with regrettable frequency what is known as "constitutional weakness"—the condition of a constitutional organism (though acting normally and in response to the usual physiological laws) in which the equilibrium is nearly lost and normal functions are interrupted or broken, which creates a pathologic condition or disease. Its causes, which hygiene can readily avoid, are many: Temperament, somewhat due to heredity, and especially to lack of exercise and the solitude in which many children are kept; in some cases poor food; in other instances overcrowding, foul air, and corporal punishment, which latter embitters character and depresses the soul.

There are other conditions also, gentlemen, such as accidents occurring at industrial schools, which can not be mentioned in this generalization, as well as

endemic and epidemic diseases, which find such a favorable foothold in a child's delicate condition.

I previously stated that school hygiene was not known among us; that its governing rules had not been observed at all, even in the recently constructed buildings for educational purposes. But it is not sufficient that, in order to be believed, I should make statements of such serious character; it is needful, in order to sustain my contention, that I present serious arguments and prove it by facts.

Dr. Ricardo Davila Boza, sanitary inspector of the council of hygiene, has presented to the hygiene division of this congress an interesting work on the present sanitary conditions of the primary schools of Santiago. He visited the 89 schools of this city and took notes, also preparing a review on each school and every visit. There we find the following data:

"It is to be noted [he says, speaking of the space covered by schools] that while the ground embraced seems quite sufficient and even more than so, in truth it is not. The excess is generally a stable yard or garden, which can not be frequented the greater part of the year on account of the muddy condition of the soil, due to the effects of rain or irrigation. It may therefore be assumed that all schools demand more space, and that in half of them at least the crowding is intolerable, there being from 1 to 6 square meters per scholar."

Further on he adds: "The summary of which is that 25.8 per cent of public school pupils are literally crowded on top of each other and that barely 41.5 per cent have sufficient space and comfort."

The majority of the buildings are old, some truly ancient, few of recent construction. In female schools 18 are classed as old and 9 as new; of coeducational schools 15 as old and 2 as new, and in male schools 18 as old and 3 as new. By old buildings are meant those upon which time and weather have made inroads, excluding those that have been repaired and given an appearance of youth. Thus 57.3 per cent of the schools are conducted in old and sometimes half-ruined buildings, 26.9 per cent in fairly suitable homes, and but 15.7 in buildings less than fifteen years old or of recent construction.

The class rooms vary naturally in proportion to the number of scholars. It can be stated that, in general, schools that by their appearance and name of palace schools are understood to have been erected to fulfill such requirements are lacking in the size and number of class rooms required.

Concerning the height of the class rooms Dr. Davila Boza finds that 41.5 per cent are not sufficiently high (that is. 4 meters or less) and 17.9 per cent of satisfactory height (5 meters or more).

Respecting light, the writer referred to finds that in 39.4 per cent of cases the proportion of light area is not less than a minimum of 1 to 5—"a low proportion for any light area, which reveals a great wrong that needs to be remedied, because it is not meet to oblige 60 per cent of the attendants to use their eyes in places not sufficiently lighted. Be it observed in addition that there are rooms, hardly less than prison cells, with light areas less than 1 to 10 and 15, and even some as low as 1 to 42.5."

This instructive address closes with data of a purely local character.

Señor Joaquin Cabezas, secretary of the section devoted to the school exhibit, read a most opportune paper on

PHYSICAL EXERCISE AND ITS INFLUENCE ON EDUCATION.

In the discussions among the various sections of the congress there has been an unanimity of opinion in reference to the important bearing of physical exercise in relation to the education of the young and in recognizing its great influence toward development of moral force, will power, bodily vigor, and on the normal and forceful function of all faculties.

We all know that movement is as imperious a necessity and demands as much attention as starvation and thirst, and that the lack of it begets a general state of nervous excitement which can only be overcome by exercise. No live animal deprived of movement can escape the consequences of bodily suffering; savage beasts, when confined, are constantly moving restlessly in their cages, while domestic animals, after being shut in for some time, when freed show by their brusque movements and wild racing how nervous energy has accumulated in their limbs dormant.

In all species, but especially in the human species, do young beings show with much vehemence the need of movement. Nature, a careful mother, has endowed them with an innate force which leads them constantly to satisfy such an imperative need.

The attitude of children.—During the first years fathers have but little need to concern themselves in order to follow the counsels which Spencer, the English philosopher, gives in his book entitled "Education." The mind is in swaddling-clothes, and the parents' chief concern is to have them grow and increase in weight. With the passing of years they and their friends are always interested to know whether the youngsters can read, write, or count, or if he be capable of memorizing whatever is taught him. Of the body no one thinks, unless some bodily ailment attacks the child.

This neglect is greater in the large centers than in the country. City life and its occupations lead parents to neglect the physical education of their children; public squares and gardens are generally crowded, and the young ones therefore lack playground. As a result they remain at home the greater part of the day, playing alone and in silence. Mothers usually endeavor to keep things in such a state, lessening the child's instinctive tendency and suppressing its natural impulse to jump, run, or cry out, and they deem themselves lucky if by threats or promises they can silence the little tyrant's natural inclinations.

Children need exercise.—At 5 years of age the kindergarten helps the youngsters out, though even then the rule of silence begins and the child is told to "keep quiet." The strict compliance with this rule is important from the teacher's standpoint, but such severe discipline is disastrous from a hygienic view, not on account of the submission it teaches, but by reason of the constant repression of that youthful ardor which is a precious safeguard in insuring functional activity and lays for life the basis of the child's health.

The schoolboy ends by accustoming himself to discipline without great suffering, and with it has been stilled the heretofore imperious need of exercise. His attitude and position must in all cases be "correct," and the ideal of a correct position is immobility. Instead of taking advantage of short recesses in order to exercise his muscles, the boy prefers those pleasures having with them the least amount of physical exercise. Some of them on reaching this stage of physical depression become avid readers and devour all books within their reach; others employ their time in drawing or painting. The parents, who are always building great hopes on their children, attach much importance to the artistic tendencies of their offspring, and do not realize that this devotion to the fine arts and æsthetics is but a pretext to allow them to remain quietly in their seats and avoid anything that entails physical effort.

During this time the moral health of the child is as much affected as the physical. His will has lost its energy. He becomes more sensitive and with a more vivid imagination.

Deformation of character.—The juvenile population of our schools may be divided into three classes: The children weakened by lack of exercise; those who are indifferent or unemotional, and they are in the majority, and, finally, the turbulent and incorrigible, who are the only ones, by the way, whom discipline can not subjugate.

A notable majority has therefore given way to the pressure which, from earliest years, has been effected by their parents and teachers, the first by making them play in silence, and the second by constant admonitions to keep quiet in the class rooms and move no part of the body. Another important reason for the indifference displayed by our scholars is the custom of appointing young men, recently graduated, to care for the youngsters during their studies and walks. They have no knowledge of children and are empowered to punish them at will for the slightest cause.

Gymnastic classes.—Education avails itself of several means to develop the child's mind. There is only one, however—gymnastics—to develop the body and stimulate energy, will power, and abnegation.

Under good conditions that would be sufficient, but as the case is to-day it is decidedly lacking in amplitude.

Only two hours a week are devoted to it in the lyceums for boys, excepting the lower grades, which have half an hour daily. In the girls' lyceums, notwithstanding the statement during one of the sessions of the congress that physical education was there well provided for, we may observe that in the budget for 1902, which ended yesterday, there are, for instance for Santiago, salaries charged for ten hours of instruction in lyceums with six and eight classes or grades, which means an average of a little more than half an hour a week for each pupil. Primary schools have about an hour weekly, and in the private schools physical education is in a still more lamentable condition.

In addition to the meager time allowed, I must add the undesirability of using the recreation time and of placing pupils in small and unsuitable places and yards,

lacking apparatus or any possibility of making these exercises attractive and interesting in order to counteract the previous six hours of mental strain.

A bad system.—It is readily understood that we have not given physical education the attention it deserves in order to serve as a counterbalance for the student's mental work and thus exercise a salutary influence on his general education. On the other hand, the above-mentioned causes do not tend to inspire interest for physical exercise in the child or heighten its educational importance. Its neglect adds to its lack of prestige, as it is really to be classed among the voluntary studies and not necessary for promotion from year to year. I state that gymnastics belongs to the voluntary branches, not because the council of public instruction says so, but because it is so as a matter of fact, for it is a rare case indeed that the parents of children physically weak do not obtain exemption from gymnastic classes.

"Complete education," as Doctor Espejo said in his masterly speech at the inaugural session of the congress, "should unite in one all ideas, sentiments, and mutual aspirations, all the forces of human nature, to make them useful for the benefit of order and social progress." If we desire to comply with this requirement of modern education, we must give physical culture the same care and attention that is given to the intellectual development of students, and we must impress the latter with the fact that there are other duties and demands besides theoretic teaching. It is essential that the youth should early be impressed with the idea that in order to defend others he must learn how to defend himself; also that man needs courage and presence of mind, in addition to strength, in order to overcome the many difficulties which are constantly met with in life. He must keep before him the undeniable fact that, with the scientific knowledge and moral teachings given to him by his masters, he must have iron strength in a vigorous and healthy body that will act as his willing slave.

Influence of teachers.—The youth will not realize these truths unless he hears them from his teachers constantly. The latter should, all of them, be zealous of the prestige of every one of the studies taught. Unfortunately there are teachers in the so-called scientific branches who, like the scholars, look upon physical training with indifference and disgust. And that is readily understood, because they have perhaps never attended a gymnasium, or at least since they left the school desk. Their only exercise consists in their walks from their home to the school.

The State itself contributes toward the general belittling by looking upon the teachers of this art as inferior to the others officially. They are paid but two-thirds of the salary paid to other teachers, forgetting that the individual who would be an instructor in gymnastics must possess, as any other educator, positive scientific knowledge, without which he could not obtain a diploma. He must have a good constitution as well, and take very good care of himself in order to maintain that physical condition which is absolutely necessary in his calling.

Needed reaction.—It will be seen that evidently we have neglected physical culture, but there is yet time for action in order to rectify those evils which I have superficially mentioned.

Yesterday the committee on hygiene approved a series of resolutions for the correction of those evils which have interfered with the proper teaching of physical culture in Chile. I would also say with much enthusiasm that the distinguished rector of our university has seen fit to approve of said reforms, and, furthermore, that there exists a resolution of the board of public instruction favoring daily classes in this branch.

I would say once for all that I do not advocate that physical culture should be given greater importance than intellectual development, but I plead for a just equilibrium between the body and the mind. Let us have proper curriculums, organize walking tours, make bathing obligatory upon all children, give plenty of room as playground and proper gymnastic apparatus, and we will not have sacrificed to the pressure of the examinations the physical necessities of refreshing and cleansing the skin, of breathing the pure air of fields and mountains, of giving the brain the vivifying nervous excitation of pleasure, and finally of furnishing the muscles with the work which their development demands.

At the closing session of the congress, January 1, 1903, Dr. Barros Borgoño reviewed the work done, briefly, as follows:

If we were to characterize the physiognomy of this congress we might state that its tendencies were essentially organic. The great majority of those who were present at the general sessions, as well as those who took part in the debates of the different sections, have manifested this tendency in unmistakable form. The dominant idea seems to be that nothing is gained by the anarchistic specializa-

tion of studies at an early age; on the contrary, there is a marked advantage, in that which concerns the educational effect on the mind, in devoting some years to teachings which develop the child's faculties, and in not giving said studies a utilitarian tendency, except when they do not conflict with the primordial object of secondary education. Notwithstanding, there have been contrary opinions in this congress, that is, with separatistic tendencies, advocating for special instruction a life completely apart. Said instruction should have from the first an independent and autonomous existence, and have no other object but to turn out specialists as fast as possible.

I do not pretend to interpret movements or criticise doctrines which may be the result of careful reflection, but it might, however, be opportune to refer to an opinion expressed and analyze it. Some have thought to see or notice among those in charge of the general education of the country a marked dislike toward special or technical instruction, and it has been feared that, if left in their hands, such instruction might run the danger of being suppressed. Such fears are not justified. On the contrary, as one of our most distinguished professors said, the superior council of public instruction, even though it was attempted to remove from its jurisdiction this branch of education, which belongs to it by law, has evinced a desire and intention to create technical institutes, and by forming practical courses, annexed to several lyceums, it has helped to disseminate valuable knowledge in the branches of mining, agriculture, and commerce. * * *

Another marked characteristic of this congress has been the importance given to the education of women, and, further, the part which distinguished foreign teachers, and our native teachers as well, took in the debates. The exquisite good taste of the latter, their sagacious remarks, and their cultured forms of expression have brought to view a new phase of the Chilean woman, and have proved that, in addition to being endowed with charming domestic virtues, she has the necessary qualifications for an educatress. * * *

The men to whom the popular vote has intrusted the mission of directing the destinies of the people should keep present the following sentiment expressed years ago by the eminent American jurisconsult and educator, Horace Mann. He said:

"In our country and time no one is worthy of the honored title of statesman unless the practical education of the people occupies the first place in his administrative programme. He may be eloquent, be learned in history, diplomacy, and jurisprudence, and this would be sufficient in many other countries to aspire to the high rank of statesman; but unless his words, aims, and efforts are * * * devoted to education he could not become an American statesman."

In officially declaring the congress closed, Señor Don Diego Barros Arana, its honorary president, said:

In declaring the plenary sessions of this assembly closed, I am glad to be able to say that by the number and character of those present, by the number and value of the papers read on nearly all subjects relating to public education, and by reason of the splendid success of our scholastic exhibit, the Educational Congress of 1902 has exceeded in every way the hopes of its promoters. This congress will mark an epoch in the history of the development of our culture; this success will encourage the determination in most of us to hold periodically such meetings as this, which has held us to together for eight days in the name of the most noble interests of Chile.

To which effect I suggest that another congress be held in September, 1905, to be organized by the present board and by Messrs. Vicente Reyes, Osvaldo Renjifo, Manuel Ejidio Ballesteros, Alejandro Bertrand, Agustin Edwards, Pedro Bannen, Domingo Amunátegui Solar, Carlos T. Robinet, Ventura Carvallo Elizalde, Rafael Sanhueza Lizardi, and the inspector-general of primary instruction.

Dr. Barros Arana's suggestion, as well as the names proposed, met with universal and hearty approval.

IV.—THE INTERNATIONAL EXPOSITION OF SCHOOL FURNITURE AND APPARATUS.

This branch of the congress, comprising the sixth division, was solemnly inaugurated on December 14. It was held at the "Quinta Normal de Agriculture," a building on the outskirts of Santiago used as an exposition edifice and originally

constructed for an agricultural exhibit. In addition, there were a number of temporary pavilions erected in the beautiful gardens attached to the "Quinta."

His excellency the minister of public instruction, Señor Don José Domingo Amunátegui Rivera, made an appropriate address at the inaugural ceremonies. The chairman of the organizing committee of this section, Señor José Abelardo Núñez, also made a speech, in which he outlined the general aim and scope of the exhibit.

The first thing that attracted the attention of the visitor to the exposition was the glass gallery, or crystal pavilion. In this vast hall a valuable collection of school material and apparatus had been installed.

The most important exhibit in this pavilion was that of the English firm of Hume & Co. and of the foreign exhibits under its care. It included apparatus for the teaching of drawing, geography, and mathematics, wood carving and woodwork for schools; also object-lesson charts, kindergarten material, pedagogic works, and school benches. As subagents for Rogers & Co. this firm had charge of the exhibits of John G. Rogers, Glasgow, Scotland; Thomas Nelson & Sons, Edinburgh; Blackie & Sons, Glasgow; Bennet Furniture Company, Scotland, and Charles & Dibble, Glasgow.

Next came the Thomas Trading Company, with toys for children, benches, and school furniture; the Pedagogium of Rio Janeiro; the General Board of Normal Instruction of Mexico, with a varied exhibit of scholastic material; firms belonging to the French syndicate of school apparatus; several Swiss houses, and others, who all presented interesting and varied exhibits.

Attention was especially attracted toward the displays of the Santiago College, the Catholic kindergarten, the Proletariat School, the bibliographic section, the Suplementeros School, the general board of the navy, and to the "German Library" of José Ivens.

In the main building the exhibit of the American School Furniture Company, of the United States, was unquestionably the most modern and complete of its character. It represented the latest improvements and models of school benches and school furniture and apparatus. This company sent a special representative to Chile, and had also charge of an exhibit of the Faber pencil. The Central Supply Company, of Chicago; the Prang Educational Company; the American Book Company, and Silver, Burdett & Co., all from the United States, had suitable exhibits, every one of which received first or second prize.

Other exhibits that attracted attention were those of the Swiss firm of Payot & Co.; the Lausanne Agricultural Institute; the blind asylum and the department of public instruction of Lausanne; the Federal topographic office of Berne; the departments of public instruction of Berne, Geneva, and Neuchatel, and the Federal interior department of Berne. The firm of Hardy exhibited gymnastic apparatus, as well as maps, charts, and books, while Arellano & Perez displayed wall charts for instruction in vertical handwriting. Mr. Carlos E. Porter, the present director of the review entitled "Natural History," director also of the Museum of Valparaiso and member of several foreign scientific societies, exhibited interesting printed matter and several oil paintings illustrative of animal history, which were highly appreciated and were given prizes.

In the Paris pavilion there were a number of valuable and instructive exhibits: Gleisner & Co. displayed complete scientific cabinets for the teaching of physics, chemistry, and mineralogy in lyceums and normal schools. Messrs. Pein & Co., as the agents of various German firms, showed a very well-arranged collection of insects and reptiles in alcohol. Don Carlos Monery contributed a fine horizontal map in relief of that portion of Chile between the twenty-first and twenty-seventh degrees. Messrs. Pedro Charpin, Julio Molina, and Carlos Iraarrazaval, pupils at the Academy of War, exhibited a relief map of San Bernardo and its neighbor-

hood. A relief map of Switzerland, with its attendant photographic reproduction, was an exhibit and greatly admired. The same may be said of a splendid and economical collection of geographic and cosmographic globes, also a splendid collection of fossils, geological maps, and certain specimens of mountain ore. This display was by the firm of H. Minot, of Switzerland.

On the second floor of the Paris pavilion there were also a number of firms who exhibited apparatus to impart knowledge of physics, mechanics, and air navigation, and especially chemistry and natural history.

The Swedish pavilion drew attention on account of the practical and economic character of its exhibits. Several of the exhibits were by colleges and public offices of Sweden, which made interesting displays. The Radiator machine is worthy of mention, as it furnished excellent butter within two minutes. Another attractive feature was the fact that Swedish young ladies, dressed in their national costume, served ice cream and other refreshments, prepared according to the custom of their country. The money thus secured will be devoted to the Protective League of Poor Students.

In the Picadero there were exhibits from some public schools and lyceums, from the normal school, the Professional School, the School of Fine Arts, the Young Ladies' Lyceum, the School of Arts and Trades, the schools of the societies of public instruction in Santiago and Valparaiso, the Goyenechea School, the Infants' Protective Society, and the School of Mining.

The various sections drew attention on account of their bewildering variety. The professional school and the lyceums for girls, fiscal or subsidized, displayed beautiful work, which gave evidence of a great concentration of effort. A fine display of handwork was greatly commented upon. It was the result of the effort of Miss Brijida Walker, the principal of the School of Application, an annex of the Teachers' Normal, of Santiago. Don Gaspar Moll, a professor in the Male Normal School, contributed a valuable collection of models in plaster.

The primary schools and the lyceums were not well represented; that is, not in proportion to the other institutions.

In closing, it is pleasant to say that the exhibit of school apparatus was a great success. It has stimulated the downhearted and been like a draft of wine to the promoters of the congress.

Classification of the exhibits at the congress.

GROUP I.

Models of writing desks, etc.
Models of special benches, etc.
Tables, etc.
School furniture for the deaf and dumb, the blind, kindergartens, etc.
Special furniture for schools for the deformed, and apparatus for correcting deformities, acquired or inherited, etc.
Models of teacher's desk and chair, etc.
Models of blackboards, etc.
Special slates for drawing, etc.
Wooden or metal easels and stands, etc.
Shelves or bookcases, etc.
Noiseless clocks for class rooms, etc.
Curtains and blinds; sample of material employed in their manufacture, etc.
Material of daily use in school, etc.
Ink, inkstands, pens, penholders, etc.
Copybooks, etc.
White and colored chalk, erasers, rules, squares, compasses, wood, or metal, etc., for geometrical drawing.

GROUP II.—MATERIAL AND APPARATUS DESIGNED AS AIDS IN TEACHING.

FIRST DIVISION—READING AND WRITING.

Object-lesson sheets for beginners.
Reading charts for the deaf and dumb.
Apparatus for teaching reading to the blind.
Movable alphabets for beginners in reading and writing.
Material for public and school libraries.

SECOND DIVISION.

Wall sheets and pictorial illustrations used in teaching modern languages.

THIRD DIVISION—GEOGRAPHY.

Globes.

Terrestrial globes.
Globes in relief.
Geological globes.

Geographical wall maps.

Series of physical, political, and physical-political maps, etc.
Series of maps in relief.

Cosmography.

Celestial, sidereal, and planetary globes, illustrating celestial regions.
Maps and charts to illustrate the movements of the heavenly bodies, origin of the seasons, phases of the moon, etc.
Apparatus and instruments for astronomical observations.

History.

Historical wall maps.
Historical hand atlas.

FOURTH DIVISION—MATHEMATICS.

Ball frames.
Weights and measures.
Calculating machine.
Rules and tables.

Geometry.

Material for teaching stereometry, etc.
Wire models with colored threads to show the most important lines and sections in the study of the property of bodies.

Perspective and projective.

Apparatus, solid or otherwise, for the teaching of projections and perspective in secondary and technical schools.

FIFTH DIVISION—NATURAL HISTORY.

Natural-history cabinets for use in primary, secondary, and science and art schools. Skeletons and anatomical specimens of man and animals, formed of any kind of material. Animals preserved in spirits or otherwise.
Collections of insects and other arthropods fixed on corks by pins; shells, mollusks, etc.
Collections of plants, fruits, seeds, and woods.
Pictorial wall sheets and charts on anthropology, zoology, and botany; animal and vegetable geography; zoology; and paleontology.
Apparatus and instruments for the teaching of vegetable physiology and the demonstration of the secondary growth of trees.
Material for microscopy, school lenses, etc.
Cabinets of minerals, rocks, and fossils for the study of mineralogy and geology; mineralogical collections and the principal industrial products derived from them.

SIXTH DIVISION—PHYSICS AND CHEMISTRY.

Apparatus of precision and demonstration for physics and chemistry.
Apparatus used in demonstration in all experiments in physics and chemistry. Price of the cabinets not to exceed £1,000 and £200, respectively.
Apparatus for making the most elementary experiments in physics and chemistry in high schools. Price of these cabinets not to exceed £150.
Small cabinets for primary schools. Price about £8.

SEVENTH DIVISION—TECHNICAL EDUCATION.

Elementary agriculture schools.

Plans of buildings and lands forming practical schools of agriculture.
Wall diagrams, plans, models, tools, implements, etc.

Agricultural colleges.

Plans of buildings and lands forming agricultural colleges.
Wall maps, diagrams, apparatus, models, cabinets, implements, and tools for teaching agriculture, climatology, etc.

Schools of mines.

Plans and designs for a practical mining school.
Wall maps, diagrams, models, implements, tools, and cabinets.
Text-books and works of reference.
Mining: Synoptic tables of statistics.

Advanced technical instruction.

Wall maps, charts, diagrams, plans, models, apparatus, cabinets, and implements to illustrate lessons for civil, mining, railway, hydraulic, and agricultural engineers, for architects, etc.
Text-books and works of reference.

School of fishery.

Plans of building and dependencies, wall sheets, etc., showing the different kinds and classes of hooks, natural and artificial baits, nets, etc.
Specimens of the different implements employed in this industry.

Schools of commerce.

Special furniture for these schools; wall pictures illustrating commercial products, commercial geography, bookkeeping, commerce, etc.; calculating machines.

EIGHTH DIVISION—DRAWING.

Collection of models for drawing, etc.
Sets of drawing cards and geometrical projections.
Models and casts, etc.

NINTH DIVISION—MUSIC.

Wall sheets and charts, etc., for musical notation, etc.
Aids for teachers and musical instruments—violin, harmonium, piano, etc.

TENTH DIVISION—GYMNASTICS.

Implements and apparatus required for a gymnasium for kindergartens, and for elementary, secondary, and normal schools; materials for school sports and pastimes.

ELEVENTH DIVISION—MANUAL TRAINING.

Froebel exercises.

Complete set for kindergarten.
Boxes of blocks, movable alphabets, and numerals.

Cardboard work.

Models, diagrams, and specimens of material and tools required.

Carpentry.

Benches and tools.
Cases for models and tool chests, etc.

Metal working.

Benches, tools, and appliances required.

Needlework.

Models for teaching.
Appliances, etc., for the practical teaching of sewing; furniture and tools.

Artificial flower work.

TWELFTH DIVISION—SCHOOL HYGIENE.

Hygiene.

Pictorial wall sheets and diagrams of the human body, the organs and their functions; foods and food stuffs; alcoholism.

Drainage.

Models of dry wells; hygienic closets.

Drinking (or potable) water.

Plans and models of wells and filters for school use and dwelling-houses; sand filters, beds for water purification.

School building.

Ventilation; apparatus for fixing on the tops of ventilators.
Mechanical ventilators moved by hydraulic, electric, or other power.
Heating.
Lighting.

GROUP III.—STATISTICS AND ANTHROPOLOGY.

Specimens of school registers of admittance, attendance, progress, etc.
Anthropometric apparatus.

GROUP IV.

Literature and the science of education.
Text-books; works of reference.

LIST OF EXHIBITORS AND PRIZE WINNERS.

ENGLAND AND SCOTLAND.

Glasgow:
- John C. Rogers.
- Blackie & Sons.
- Charles & Dibble.

Edinburgh:
- Thomas Nelson & Sons—
  - Teaching material. First prize for models of drawing, modern style.
  - Vegetable kingdom. Second prize for a royal portfolio of plants.
  - Geography, history, and cosmography. First prize for geographical profile maps.
  - Mathematics, physics, and chemistry. Honorable mention for wall plates with diagrams for physical apparatus.
- Bennett Furniture Company.

London:
- Philip—
  - Comparative anatomy. Honorable mention for life-size anatomical charts of the human body.

AUSTRIA-HUNGARY.

Vienna:
- Ed. Holzel—
  - Geography, history, and cosmography. First prize for a collection of historical charts.
- G. Freytag & Berndt—
  - Geography, history, and cosmography. First prize for geographical relief maps.
- Frederick Sperl.
- Carl Gerol's Son—
  - Vegetable kingdom. First prize for wall charts of natural history.
  - Comparative anatomy. Second prize for geological charts.
- A. Pichler's Widow & Son—
  - Teaching material. First prize for the collection of kindergarten material.
- Anton Shroll & Co.

UNITED STATES OF AMERICA.

Boston:
- Silver, Burdett & Co.

New York:
- E. Faber and the American Furniture Company—
  - Furniture. First prize for school desks.
  - Geography, history, and cosmography. First prize for spring map holders.
- American Book Company.
- Berlitz & Co.

Brattleboro:
- E. P. Carpenter Company.

Chicago:
- Central School Supply Company—
  - Comparative anatomy. First prize for graphical illustration of the human anatomy.
- Prang Educational Company.

DENMARK.

Copenhagen:
- N. C. Rom.
- Pedagogic Museum.
- Aksel Mikkelsen—
  - Manual training. First prize for benches and tools for manual training.
- Radiator Company.

SWITZERLAND.

H. Minot:
Mineral kingdom. First prize for the collection of minerals and fossils for use in the lyceum.
Geography, history, and cosmography. First prize for wall maps of Switzerland and relief and profile maps in chalk.
Geography, history, and cosmography. First prize for geological models.
Fotoglobe & Co.:
Geography, history, and cosmography. First prize for photochromo collection.
Payot & Co.
A. Mauchain.
Vouga & Co.
Berne:
Federal topographic office.
Neuchatel:
Department of public instruction.
Geneva:
Society for the Construction of Physical and Mechanical Instruments—
Mathematics, physics, and chemistry. First prize for their exhibit.
Department of public instruction.
Federal department of interior.
Lausanne:
Blind asylum.
Agricultural institute.
Department of public instruction.

MEXICO.

General direction of normal instruction:
Teaching material. First prize for their display.

BRAZIL.

Rio Janeiro:
Pedagogic institute—
Teaching material. First prize for their display.

FRANCE.

Paris:
Forest (French syndicate)—
Geography, history, and cosmography. Second prize for terrestrial and celestial globes.
Emilie Deyrolle Sons (French syndicate)—
Vegetable kingdom. First prize for wall charts.
Geography, history, and cosmography. Second prize for collection of insects and alcohol preparations.
Comparative anatomy. First prize for natural preparation of the human body.
Comparative anatomy. First prize for zoological plates.
Central Society of Chemical Products (French syndicate).
Radiguet & Massiot (French syndicate)—
Mathematics, physics, and chemistry. First prize for projection apparatus.
Monroeg Brothers (French syndicate).
Ch. Delagrave (French syndicate)—
Mathematics, physics, and chemistry. Second prize for a metric and scientific compendium.
Suzanne & Havez (French syndicate)—
Furniture. First prize for artificial slates and slated cloth.
Geography, history, and cosmography. Second prize for mute geographical maps.
A. Dubourguet (French syndicate).
Emile Chouanard (French syndicate).
Armand Colin Library.
Th. Bouret (widow).
Eugene L'Echevin.
French syndicate for teaching material—
Teaching material. First prize for their exhibit.
Ierohidraulic General Company—
School hygiene. First prize for "Salvator" apparatus for the sterilization of water.
Boniette & Manguin—
Vegetable kingdom. First prize for wall charts.
Nerick Maison—
Mathematics, physics, and chemistry. First prize for microscopes of the faculty of medicine.
Gouesnon & Co.

SPAIN.

Barcelona:
Antonio J. Bastinos.

ITALY.

La Spezia:
Juan Bautista de Pozzo.

ARGENTINA.

Buenos Ayres:
Leon Bugnot.

SWEDEN.

E. C. Ekstrand:
Gymnastics. First prize for apparatus for gymnastics and material for school sport.
Manual Training Society:
Manual training. First prize for furniture and apparatus for teaching weaving.
Inspection of primary instruction:
Furniture. First prize for drawing desks and wall charts apparatus.
Furniture. First prize for schoolroom letter file.
Vegetable kingdom. Second prize for wall charts of natural history.
Vegetable kingdom. Honorable mention for a scholastic herbarium.
Manual training. First prize for the Lundin method of instruction in sewing.
Manual training. First prize for manual-training furniture and appliances.

GERMANY.

Bonn:
Dr. F. Krantz—
Mineral kingdom. First prize for collection of minerals and rocks for the crystallographic and geological models, and for microscopical preparations.
Geography, history, and cosmography. First prize for geotectonics and geologic reliefs.
Carl Georgi.
Halle:
Wilhelm Schlücter—
Animal kingdom. First prize for his zootomical and biological exhibit.
Herman Gesenius.
Berlin:
Doctors Benninghoven & Sommer—
Comparative anatomy. Second prize for specimens of the human body.
C. P. Goerz.
Pein & Co.
Car & Chun (Inh. Bernh. Fahreg.)—
Geography, history, and cosmography. First prize for geographical maps.
Brendel—
Vegetable kingdom. First prize for specimens of various plants.
Natural History Institute—
Animal kingdom. First prize for alcohol preparations.
Dresden:
Unger & Hoffmann.
C. C. Meinhold Sons—
Comparative anatomy. Second prize for zoological charts.
J. Dreverhoff.
Markneukirchen:
G. & A. Klemm.
Wilhelm Schlosser.
Leipzig:
Adolph Henze.
F. E. Waechsmuth—
Vegetable kingdom. First prize for wall charts of cultivated plants.
Geography, history, and cosmography. Second prize for historical charts and portraits of celebrated men and women.
Comparative anatomy. First prize for zoological charts.
Wagner & Debes—
Geography, history, and cosmography. First prize for geographical wall maps and text-atlas of universal geography.
E. A. Seemann—
Geography, history, and cosmography. First prize for fine arts wall charts.
Steingräber Verlag.
F. A. Brockhaus.
F. E. Bilz.
Renger'sche Verlagshandlung.

München:
George D. W. Collwey.
Mey & Widmeyer.
Leutschau:
Julius Greschik.
Linden-Hanover:
Aug. Niederkron.
Danzig:
A. W. Kafemann.
Esslingen:
J. F. Schreiber—
Vegetable kingdom. First prize for natural history wall charts.
Comparative anatomy. Second prize for human anatomy charts.
M. Herbeger.
Frankfort:
Carl Jügel's Verlag.
Giessen:
Emil Both.
Heidelberg:
Julius Groos.
Altenberg:
H. A. Pierer.
Cassel:
Th. G. Fisher & Co.—
Mineral kingdom. First prize for paleontological flakes.
Geography, history, and cosmography. First prize for human race charts.
Comparative anatomy. First prize for anatomical charts.
Freiburg:
B. Herder.
Stuttgart:
C. Bopp.
H. Freitag.
Wilhelm Effenberger—
Teaching material. First prize for the collection of drawing models by various authors.
Julius Hoffmann.
Karlsruhe:
J. Bielefeld.
Darmstadt:
Frommann & Morian.
Hamburg:
J. Kagerah.
Connewitz:
Wilhelm Kleinn.
Hanover:
Günther Wagner.
Fred. Marx & Co.
Mainz:
B. Schott's Sons.
Frankfort-on-the-Main:
J. D. Sauerländer.
Kesselring Verlag.
Elberfeld:
Ed. Loewenstein.
Velhagen & Klasing.
Ravensburg:
Otfo Maier.

CHILE.

Santiago:
Mauricio Gleisner & Co.
German Library of Jose Ivens.
Cárlos Reiche
Institute National.
Internado National.
Thomas Trading Company.
Tlardy.
Eiener & Co.
Erasmos Arellano and J. Caupolican Pérez.
Berlitz School.

Santiago—Continued.
Juan de la C. Seguel.
Franz Schierwanger.
Okar Götz & Co.
Cárlos Brandt.
Guillermo Kupfer.
Roca and Cruz.
The American Company.
Santiago College.
Carlos R. Trarrazaval, Julio Molins, and Pedro Charpon.
Cárlos Monerry.
Miguel R. Machado.
Antonio Bazzani & Co.
Adolfo Schlack & Co.
Manuel Jesus Pérez B.
Jose Jesus Pérez M.
Avaristo Molino and José Jesus Pérez.
Holtzen Jorje.
Kindergarten Santiago.
Kindergarten Catholic.
Escuela de Asilo de Niños Suplementeros.
General Inspection of Primary Instruction.
German College.
José Guaché Bickel.
Tomas Mesias.
Joaquin Cahezas.
Hume & Co.
Fabricio Perea Pulido.
Francisco de Bèzé.
Marcelino Larrazábol W.
Daniel Aeta A.
Manuel Retamal Balboa.
Francisco Prŏchle and Mardaques Yañez.
Guillermo Martinez.
Isaias Venegas M.
Juan Zanzani Parisini.
Edleimira Cortez G.
Victoriano de Castro G.
Francisco Riveros Gamallo.
Guillermo Häassler.
Manuel A. Ponce.
Anibal Echeverriá Reyes.
National Conservatory of Music.
"Suplementeros" School.
Commercial Institute.
Fabrile Society of Protection.
Santiago Pedagogical Institute.
Lyceum Miguel Luis Amunátegue.
Fine Arts School.
Santiago Pedagogic Lyceum.
Male Teachers' Normal School.
Deaf and Dumb Institute.
Blind School.
Society of Primary Instruction with the following schools:
Francisco Olea.
Night School Luis Consiño.
Francisco Arriaran.
Arts and Trade School.
Female Teachers' Normal School.
Girls' Professional School.
Amelio Mari lo N. and Mario Rodrigues.
Girls' Lyceum No. 1.
Girls' Lyceum No. 2.
Girls' Lyceum No. 3.
Girls' Lyceum No. 4.
College of Carmen.
French College for Girls.

Santiago—Continued.
- American Lyceum for Girls.
- Artistic and Industrial Lyceum for Girls.
- Isabel De-Brun de P. Lyceum.
- La Ilustracion Lyceum.
- Santa Catalena Lyceum.
- Santa Ceresa Lyceum.
- Santa Margerita Lyceum.
- Military School.
- League for the Prevention of Tuberculosis.
- Workmen Protection Work Shops.
- National Fertilizer Committee.
- Proletante School.

PRIZE WINNERS: NATIONAL SECTION.

SCHOOL ARCHITECTURE.

First prize.—Architectural section of the public works department, for plans of school buildings.
First prize.—Primary Instruction Society of Santiago, for their building, "Francisco A. Olea School."
Second prize.—Primary Instruction Society of Valparaiso, for their buildings of primary schools.

CONSTRUCTION MATERIAL.

First prize.—Roca & Cruz, for their stone pavements.
First prize.—José Jesus Perez, for his parquetry of national timber.

SCHOOL FURNITURE AND TEACHING MATERIAL.

First prize.—General inspection of primary instruction, for their type of schoolroom of third degree.
First prize.—Military School, for their exhibit.
First prize.—Catholic Kindergarten, for their kindergarten furniture.
First prize.—Bazzani & Co., for their primary school folding benches.
First prize.—Temuco Lyceum, for an Araucanian ethnographic collection.
First prize.—Prof. Dr. J. M. Enrique Z., for his apparatus of high pressure.
First prize.—Alberto Bentell, for his apparatus for physics and chemistry.
First prize.—National Institute, for a collection of dissected Chilean birds.
First prize.—Otto Burger and Bernardino Quijada, for a collection of mollusks preserved in alcohol.
First prize.—Carlos Reiche, for an herbarium and botanical map and geography of Chile.
First prize.—Vicente A. Palacios, for his wall charts of Chilean plants.
First prize.—Gothold Izechabran, for a collection of Chilean timber.
First prize.—Adolfo Schlach & Co., for a school aquarium with plants and fishes of Chile.
First prize.—Gaspar Moll and G. Sanger, for models in plaster for drawing.
First prize.—Santiago League for the Prevention of Tuberculosis, for preparations against tuberculosis.
First prize.—Carlos Irarrazaval, Julio Molina, and Pedro Charpin, for relief map of San Bernardo.
First prize.—Carlos Monery, for a relief map of part of the Chilean territory.
Second prize.—Ancud Lyceum, for a collection of products of Chiloe Island for the demonstration of natural history.

Second prize of encouragement.—Absalom Onel, for an insect and Coleopterus collection.
Second prize.—Miss Elisie M. Stockton, for models for demonstration in the kindergarten.

MEN'S LYCEUM AND MILITARY SCHOOL.

First prize.—National Institute, for the work of scholars.
First prize.—Military School, for school work and the arrangement of their studies.
Second prizes.—Applicacion Lyceum, Valparaiso Lyceum, Curico Lyceum, Temuco Lyceum, "Miguel Luis Amanategui" Lyceum, Constitution Lyceum, La Serena Lyceum, Copiapo Lyceum, Santiago German College, for school work.
Honorable mention.—Rengo Lyceum, Iquique Lyceum, San Fernando Lyceum, Chillan Lyceum.

GIRLS' LYCEUM.

First prizes.—Santiago Girls' Lyceum No. 1, Santiago Girls' Lyceum No. 2, Santiago Girls' Lyceum No. 3, Valparaiso Girls' Lyceum.
Second prizes.—Iquique Girls' Institute, Cauquenes Girls' Lyceum, Santiago "La Ilustracion" College.
Honorable mention.—Talca Girls' Lyceum, Chillan American Lyceum, Santiago Mrs. Le Brun de Pinochet College, Santiago Girls' French College.

NORMAL SCHOOLS.

First prize.—Santiago Normal School for Female Teachers, for the collection of their work and for exhibition of hand work.
First prize.—Chillan Male Teachers' Normal School, for written work, drawings, and collection of models in plaster.
First prize.—Santiago Male Teachers' Normal School, for written work and material for teaching stereometry.

SPECIAL INSTRUCTION.

First prize.—Arts and Trades School, for their exhibit.
First prize.—Engineers' School, for their exhibit.
First prize.—Agricultural Institute, for teaching material and for their organization.
First prize.—Commercial Institute, for their exhibit.
First prize.—National Fertilizer Committee, for their agricultural teaching.
First prize.—Evaristo Molina A., for wall charts demonstrating bookkeeping.
First prize.—"Radiator" Society, for their apparatus and machines for the separation of cream.
Second prize.—School of Fishery, School of Pilots, School of Mines, for their exhibits.

PROFESSIONAL SCHOOLS.

Santiago Professional School.

First prize.—Shirt section, Artistic Embroidery section, White Embroidery section, Corset section, Weaving (machine or hand) section, Hat section, Flower section, Lace-work section. Bookkeeping and Arithmetic section, Drawing section, Methodology section.
Second prize.—Linen section, Tailoring section.
Honorable mention.—Painting and Pyroengraving section.

Valparaiso Girls' Professional School.

First prize.—Linen section, Artistic Embroidery section.
Second prize.—Fashion section, White Embroidery section.
Honorable mention.—Shirt section, Drawing section.
Conception Girls' Professional School.

Conception Girls' Professional School.

First prize.—Tailoring section.
Second prize.—Flower section.
Honorable mention.—Corset section.

Linares Girls' Professional School.

Honorable mention.—Linen section, Fashion section, Tailoring section.

San Fernando Girls' Professional School.

First prize.—Hand or machine weaving.
Honorable mention.—Fashion section, White Embroidery section, Tailoring section.

NIGHT SCHOOLS.

First prize.—"Luis Cousino" Night School of the Santiago Primary Instruction Society.
Second prize.—Night schools: Benjamin Franklin, Benjamin Davila, Manuel Rodrigues.

PRIMARY SCHOOLS.

First prize.—Santiago Girls' Superior School No. 1, for collective work and particularly for pasteboard work.
First prize.—Santiago Girls' Superior School No. 5, for pasteboard and flower work.
First prize.—Canete Girls' Superior School, for collective work.
First prize.—Santiago "Francisco Arriaran" School, for collective work.
First prize.—Valparaiso "Goyenecha School," for pasteboard work.
First prize.—Valparaiso "Federico Varela School," for collective work.
First prize.—Valparaiso Girls' Superior School No. 1, for pasteboard work.
First prize.—Valparaiso Girls' Superior School No. 3, for collective work.
First prize.—Caupolican Girls' Superior School, for collective work.
First prize.—Santiago Girls' Elementary School No. 33, for collective work.
First prize.—San Felipe Coeducational School No. 5, for collective work.
First prize.—Santiago Coeducational School No. 19, for collective work.
Encouragement prize.—Santiago "Suplementeros" School, for work of practical utility.
Encouragement prize.—"Proletariate" School, for work of practical utility.
First prize.—Santiago College, for kindergarten work.
First prize.—Catholic Kindergarten, for pupils' work.
First prize.—Santiago Young Men's Superior School No. 1, for herbarium and written work.
First prize.—Santiago Girls' Superior School No. 6, for collection of preservations in alcohol.
Encouragement prize.—Don Onofre Herrera, for pasteboard exercises, combined with binding.
First prize.—Don Luis Flores and Leopoldo Morales, for a series of twenty-five models for teaching pasteboard work.
Second prize.—Castro Girls' Superior School, for collective work.
Second prize.—Santiago Girls' Elementary School No. 34, for hand work.
Honorable mention.—Cárlos Barientosof, the Valdivia German School, for charts demonstrating history and geography.
Honorable mention.—Aurelio Murillo and Mario Rodriguez, for wall charts of Chilean history.
Honorable mention.—Santiago Elementary School No. 24, for collective work.
Honorable mention.—Santiago Elementary School No. 34, for collective work.
Honorable mention.—Los Anjeles Girls' Superior School, for collective work.
Honorable mention.—Temuco Coeducational School No. 1, for collective work.
Honorable mention.—Caupolican schools, for collective work.
Honorable mention.—Santiago Girls' Superior School No. 2, for linen cloth.
Honorable mention.—Santiago Girls' Superior School No. 9, for linen cloth.
Honorable mention.—Linares Girls' Superior School, for collection of insects.

MANUAL TRAINING.

First prize.—Night School of Drawing of the Fabril Protection Society; Santiago Young Men's Superior School No. 3; Santiago Young Men's Superior School No. 6; "Francisco A. Olea" School of the Santiago Primary Instruction Society; "Sarmiento School" of the Valparaiso Primary Instruction Society.
Second prize.—San Felipe Superior School.
Honorable mention.—Santiago Elementary School No. 11; Santiago "Suplementeros School."

GYMNASTICS.

Honorable mention.—Don Federico Reich & Sons, of Santiago.

V.—CLOSING REMARKS.

A careful perusal of the subjects discussed by the Educational Congress, the speeches delivered, and the papers read will give a clear insight into the status of education in the Republic of Chile. There is a spirit of criticism in some of the addresses, which is but due to a laudable desire to reach an ideal condition, and the observations are evidently made in that spirit. It would be impossible to meet the requirements of all, and with the progress of civilization and the constant development of new educational ideas no country can be expected to be immune from criticism or should be unreceptive to suggestions.

The information which appears in the first section on the subject of educational facilities in Chile is an irrefutable evidence that that country is well pro-

vided with the paraphernalia of instruction. No effort has been spared by the National Government to give the people the benefits of knowledge. It is a well-known fact that a degree from the University of Chile or from the famous Pedagogic Institute is accepted without question as a desirable qualification in any of the Latin-American countries. In 1901 the Government spent 8,000,000 Chilean pesos ($2,225,000) for public instuction, which, in proportion to the population, over 3,000,000 inhabitants, gives a fair per capita.

There is evidently a difference of opinion among Chilean educators concerning the importance of what they term "special, or practical, education." A division, the fourth, it will be noted, was devoted to this interesting theme, and a glance at the subject-matter discussed will show how fully the matter was ventilated. Dr. Manuel Barros Borgoño, the president of the congress, in his masterly paper, a work of genius, gives a lucid review of the situation, as far as it concerns higher education: while Señor Espejo Varas, the secretary of the congress, makes a clear analysis of the difference between general and special instruction. It is evident that the consensus of opinion, as gleaned from the debates of the congress, is that some steps should be taken to give the people, or proletariat, a more practical education. The complaint is made that the "sons of the people" receive a theoretic education, which, though it is the necessary basis to a higher education, does not give their brain that knowledge, or their hands the cunning, which they will require to earn their daily bread. The more radical advocate a separate system of schools. They believe that those aspiring to the letters, arts, or sciences may begin their mind training in the present channels, namely, by acquiring gradually and assimilating theoretic knowledge of priceless value later, and that the youth whose condition of life and circumstances have destined him for hard and unemotional work should be fitted for his task in a special manner, not by special courses later, but from the days of elementary lessons.

The Diario Ilustrado in its issue of December 27, 1902, during the sessions of the congress, treated the question of practical education in its editorial columns. It said in part:

> We can not agree to the idea that the sons of the people, who upon leaving school must handle the plow or use the chisel, should be taught as if they were to follow an ascending scale, which beginning with geography and ancient history ends in the study of oratory, the higher calculus, anatomy, and chemistry.

Another feature of this gathering relates to the part taken by several distinguished Chilean ladies in favor of a higher education for their sex. A pleasant reference was made thereto by Dr. Barros Borgoño in his remarks at the closing of the sessions. The remarks of Señora Maria Espíndola de Muñoz, quoted in this report, not only demonstrates the fact that in general women in Chile have not been the recipients of much thought, as far as higher education is concerned, but seem to show an inclination on their part, if Señora Espíndola really represents their views, of becoming more independent, and, if possible, self-supporting. It is curious and interesting to note this, especially in view of the reactionary tendency in the United States, and the somewhat well-founded belief that the lowering of wages in many occupations of life has been considerably occasioned and its equilibrium disturbed by the competition of women. No one will question the wisdom of the suggestions concerning higher education; for, to use Señora Espíndola's words:

> How different would woman's condition be if we gave as much to our daughters as we do to our sons. They would not be as to-day, with rare exceptions, subservient slaves and ardent defenders of prejudices which oppress the spirit and curtail the liberty, but, on the contrary, they would be as a bright light shedding the gleam of truth from the home to society, from society to the nation, and from the nation to humanity.

Doctor Berrenechea's treatment of the important subject of school hygiene received well-deserved attention. His observations were mostly of purely local character, but they are replete with wisdom and might be applied to other countries with equal justice. The all-important phase of the care of the eyesight and the danger of an improper position seem worthy of consideration.

Señor Cabezas will find ample support for his theory concerning physical culture if he investigates, as he no doubt has, the progress which the latter has made in the United States during the last ten years. He presented his subject in a very clear manner and his deductions are couched in the light of conviction.

It is sad to have to record the death of Dr. Barros Borgoño, which took place shortly after the congress adjourned. He was taken ill before the ending of the sessions, and was, in fact, unable to speak at the closing day of the scholastic exhibit. In him Chile not only loses the rector of its university, but a physician and surgeon of international fame and a great public man.

Doctor Barros had a long and distinguished career. As a young man he displayed such talents in his chosen vocation that the Government, pursuant to a wise policy, sent him abroad to study medicine. He returned a graduate of the Paris Medical College, and having perfected himself in the new and revolutionizing methods of surgical practice, then just introduced by Doctor Lister, was of great assistance to his country during the war against Peru and Bolivia by giving efficient medical assistance under the new antiseptic treatment and care. After the war he was placed in charge of the surgical clinic at the university and began a career full of distinction and success. In later years he devoted his entire attention to teaching, and was instrumental in raising the standard of instruction, especially instruction in medicine.

The educational congress of 1902 owed its existence to a small group of public-spirited educators, among whom the names of Señor Don Diego Barros Arana, Don Manuel Barros Borgoño, Don Luis Espejo Varas, Don José Abelardo Nuñez, Don Claudio Matte, and Don Joaquin Cabezas are in the foremost rank. To these gentlemen and to many others credit should be given for the success of the undertaking.

It is quite likely that, following the suggestion made by Señor Barros Arana in his closing remarks, there will be held another congress in 1905, as the belief is growing that there should be some sort of a congress held every year or two, in view of the great educational advantages proceeding therefrom.

In the last two sessions held the committee of the educational congress agreed to begin the publication of minutes, conclusions, speeches, and reports of the congress and of a complete description of the school exhibit. This work has been placed in the hands of Señores José Abelardo Nuñez, Joaquin Cabezas, and Domingo Villalóbos. Señor Cabezas will assist Señor Nuñez in preparing the matter referring to the exhibit, and Señor Villalóbos will have charge of the general work of the congress. The work is already in press and will soon be published with illustrations.

The Chilean educational congress was of great importance, not only to Chile but to other South American countries, and gave an excellent opportunity for the study of educational questions.

CHAPTER XXVIII.

NECROLOGY.

I.—United States. 1902.

Adams, Charles Kendall, died in Redlands, Cal., July 26. Born in Derby, Vt., January 24, 1835. Graduated at the University of Michigan in 1861; studied in France, Germany, and Italy; became assistant professor of history in the University of Michigan, and full professor when Doctor White retired to Cornell; in 1893 accepted the presidency of the University of Wisconsin; his eminence in historical subjects was recognized at Ann Arbor during his services at Cornell and the University of Wisconsin. He was president of the Ann Arbor Historical Society, and author of Democracy and Monarchy in France, Manual of Historical Literature, British Orations, and Christopher Columbus. He was editor of the second edition of Johnson's Cyclopædia.

Aiken, Miss Katherine, died July 17. Born in South Yarmouth, Mass.; conducted the Ladies' Seminary in Stamford, Conn., forty-one years, and was author of Mind Training.

Allen, Timothy Field, M. D., died in New York City in December. Born in Westminster, Vt., April 24, 1837; was a graduate of Amherst, 1858; received from Amherst the degrees of A. B., A. M., and LL. D., and from the Philadelphia Medical College the degree of M. D. He was also a Fellow of the Academy of Sciences; was dean of the New York Homeopathic College.

Archibald, Rev. George D., D. D., died in Covington, Ky., September 25. Born in Washington County, Pa.; was a graduate of Washington and Jefferson College, 1847. Had various pastorates. Was two years president of Hanover College; one year president at Wilson, Pa.; one year professor at Wooster, Ohio; thirteen years professor in Danville Theological Seminary.

Axtell, S. J., died in Kalamazoo, Mich. Graduate from Brown University. Was president of Leland University, New Orleans, from 1878 to 1882. Was president of Central College, Pella, Iowa, 1889 to 1890. For the past twelve years was professor of Greek in Kalamazoo College.

Baldwin, Rev. Stephen Livingston, died in Brooklyn, July 28. Born in Somerville, N. J., 1835. Early became a missionary and was noted as the first publisher of the Bible in the Chinese language.

Barrows, Rev. John Henry, D. D., died in Oberlin, Ohio, June 3. Born in Medina, Mich., July 11, 1847. Graduate of Oberlin College, 1867, and later at Yale, Union, and Andover Theological seminaries. For three years was engaged in missionary and pastoral work in Kansas; was five years pastor of Congregational Church in Lawrence, Mass., and fourteen years of the First Presbyterian Church in Chicago. He became a favorite public speaker. He accepted the lectureship of comparative religion in the University of Chicago. After a series of lectures abroad and at different places in this country he was elected president of Oberlin in November, 1878. He accepted the appointment and remained there until his death. He was the author of several works, among them The World's Parliament of Religions, which body he helped to organize and over which he presided.

BEARDSHEAR, WILLIAM MILLER, educator, died in Des Moines, Iowa, August 5. Born in Dayton, Ohio, November 7, 1850. Was for a time a soldier and studied at Oberlin, Ohio. In 1881 elected president of Western College, Toledo, Iowa, where he served until 1889, when he became superintendent of the public schools of the city of Des Moines. After two years he was elected president of the Iowa State College of Agriculture, where he remained until his death. His illness prevented his serving as president of the N. E. A. He was appointed one of the Indian commissioners.

BELL, CHARLES J., died in Somerville, Mass., June 3. Born in Somerville in 1855. Graduated from Harvard in 1876. For twelve years was professor of chemistry at Johns Hopkins and at the University of Pennsylvania.

BELL, DAVID CHARLES, died in Washington, D. C., October 28. Born in Scotland in 1817, and belonged to a family distinguished for their cultivation of the voice. His father, Alexander Bell, was the inventor of a method for removing impediments in speech. He was the author of well-known works on the improvement of the voice. He received his education mostly at the University of Edinburgh.

BIERSTADT, ALBERT, artist, died in New York February 18. Born in Germany January 7, 1830. Did much to familiarize Americans with interesting scenery.

BOCHER, FERDINAND, died in Cambridge, Mass., June 8. Born in New York August 29, 1832. Was of French descent. He had taught at Washington University, also at the Massachusetts Institute of Technology. Was professor of French at Harvard.

BOUQUILLON, Rev. THOMAS, died in Belgium. Born in Brussels. Was for a long time professor at American Catholic University.

BOURSAUD, Rev. EDWARD S., S. J., died in Frederick, Md. From 1884 to 1887 was president of Boston College.

BRANTLEY, JOHN J., died in Macon, Ga., June 12. Was for thirty-five years professor of languages in Mercer University, Georgia.

BRECKENRIDGE, W. A., died in Massachusetts, August —. Born in Palmer, Mass., May 12, 1831. He taught in several places and became principal at Newark, N. J., where he continued over thirty years and was greatly respected.

BROUN, Dr. WILLIAM LEROY, died in Auburn, Ala., January 22. Born in Virginia. Taught in several institutions at different times in Mississippi, Tennessee, and Georgia, and was elected president of the Alabama Polytechnic Institute.

BROWN, C. N., civil engineer, died March 6. Born in Brown County, Ohio, March 21, 1858. Graduated at the Ohio State University, 1830. He became professor of civil engineering.

BROWN, Miss SUSAN DOD, philanthropist, died in New York City October 10. Born in Mendham, N. J., February 1, 1812. Supported several missionaries. Gave to Princeton University Albert Dod Hall and David Brown Hall, costing, it is believed, $200,000. She also gave to Lincoln University the Mary Dod Chapel.

BRYANT, JOHN HOWARD, brother of the poet, died in Princeton, Ill., January 14. Born in Cummington, Mass., July 22, 1807. Was devoted to the education of the children of the neighborhood.

BUCK, ALFRED ELIAB, diplomatist, died in Tokyo, Japan, December 4. Born in Foxcroft, Me., February 7, 1832. Was a college graduate. Was principal of Lewiston, Me., high school and later superintendent of the public schools of Lewiston. Served throughout the war. Was elected to Congress in 1869. In 1897 was appointed minister to Japan by President McKinley, which position he held until his death.

BURT, Miss SARAH M., died October, in Springfield, Mass. For twenty-five years she taught in the public schools of Northampton. She then became principal of a girls' school in St. Augustine, Fla., where she remained six years, after which she went to Boston and was president of the Domestic Science work.

CARLETON, ISAAC NEWTON, Ph. D., died August 8, at Bradford, Mass. Born there June 10, 1832. Graduated from Dartmouth in 1859. Became teacher at Andover, principal of Peabody and Medford, and was principal of the State Normal School at New Britain, Conn.; later became principal of a private school and so continued until he died. Was twice president of the American Institute of Public Instruction and prominent in philanthropic and religious organizations.

CARLTON, CHARLES, educator, died in Bonham, Tex., February 13. Born in Eythorne, Kent, England, August 21, 1821. In 1854 went with his parents to Toronto, Canada. Was a seaman several years. Worked on a farm in Fredonia, N. Y. While farming studied for the ministry and graduated in 1849 at Bethany College, West Virginia. Was pastor of several churches, also taught. In 1867 he removed to Bonham, Tex., where he established the Bonham Seminary, a coeducational school, but which later, under the name of Carlton College, became an institution only for women. Was one of the leaders in the organization of the American Christian Missionary Society.

CLARK, EDWARD, architect, died in Washington, D. C., January 6. Born in Philadelphia in 1802. Was associated with Thomas U. Walters in the extension of the Capitol and, on the latter's resignation in 1865, succeeded him as architect of the Capitol, supervising the erection of the Washington Monument and the construction of the Library of Congress. Was one of a number to report, with Commissioner Eaton, on the sanitation of the schools and aided in giving plans for the schools in Alaska.

CLARK, EDWARD W. Was noted as the joint founder of the Chair of Assyriology at an expense of $100,000.

CLARK, HEMAN, died in New York September 7. Born in Ohio, 1839. He was educated at Hiram College and was a teacher.

CLARKE, WILLIAM, died in Portland, England. Born in Scotland in 1841. He was known for the manufacture of thread. He left a large number of bequests to American institutions, from $600 to $1,000 each.

COOLEY, EDWIN, died in Kansas City, Mo., August 31, aged 71. Born in Sunderland, Mass.; graduated from Amherst; member of the Sheffield Scientific School in Yale University; taught in Marion, Iowa, Leverett, and Amherst; superintendent of schools at Savannah, Ga., under the charge of the Freedmen's Bureau, 1865–66; principal of an academy at Gallipolis, Ohio, 1870–1873; established a scholarship in Knox College, Illinois, in memory of a daughter.

COREY, Mrs. FLORENCE E., died March 23, in New York. Born in Syracuse, N. Y. It is believed that she was the first woman in this country to devote herself to the designing of figures in carpets, and she became a practical designer for carpets, wall paper, woolens, and silks. In 1881 she taught in the Cooper Union and acted as president and treasurer for the school of Industrial Art and Technical Design for Women, New York.

CORRIGAN, Bishop MICHAEL AUGUSTINE, died in New York May 5. Born in Newark, N. J., August 13, 1839. Graduate of St. Mary's College, 1859. Was for a time professor of dogmatic theology at Seaton Hall and president until his consecration in 1876, when he resigned in favor of his brother.

CUSHING, JOSEPH MACKENZIE, A. M., died November 23, 1902, at Baltimore. Was born there December 15, 1835. Graduated at Harvard in 1855, and became a member of the book and publishing house in Baltimore established

by his grandfather in 1810. Was chairman of the committee on education of the State constitutional convention in 1864, and formulated the first general public school system of Maryland; joined in founding the Baltimore Association for the improvement of the colored people; was member of the State board of education; director of the State school for the blind; member of the State Board of Charity Organization Society, and was president of the Maryland Institute for the Promotion of the Mechanic Arts.

CUTLER, HENRY STEPHEN, died December 5. Born in Boston October 7, 1824. Prominent as a teacher of music. Choir master for Trinity Church. Made doctor of music by Columbia University.

DAME, LORIN L., died in East Medford, Mass., January. Born in Newmarket, N. H., March 12, 1838. Graduate of Tufts College in 1860. Taught one year in Braintree. Was trustee of Tufts College in 1870. Resigned from the high school in Nantucket to take charge of the Stoneham school until he was elected principal of the Medford High School,

DANIELS, DAVID H., teacher, died in Brooklyn, December. Born at East Medway, Mass., in 1827. Was forty years connected with the elementary schools of Brooklyn as teacher and superintendent.

DANIELS, F. W., native of Winchester, Mass. Well known for his interest in education and for his bequest of $32,500 to Dartmouth.

DARLING, E. R., died in Waterbury, Vt., May 5. Born in Corinth, Vt., July 4, 1851. Graduate of Dartmouth, 1878. Established a school for boys on Maplewood farm.

DAVIS, JOHN, died in Lowell, Mass., March 11. Born in Hubbardston March 4, 1831. Graduate of Dartmouth, 1859. Principal of high school at Quincy, Mass., 1860–61, and later a lawyer.

DAVIS, Mrs. SPENCER, died in Somers, Mass., July. Born October 28, 1816. Was daughter of Deacon David Cady. Was educated under Mary Lyon. Was successful as a teacher, and her interest in education never waned.

DEAN, JOHN WARD, librarian, died in Medford, Mass., January 22. Born in Wiscasset, Me., March 13, 1815. His great service was rendered in connection with the secretaryship of the Historical and Genealogical Society. Important historic publications were made under his supervision.

DEXTER, Dr. JAMES E., died in Washington, D. C., June 17. Born in New York. Taught for some time in Rochester and Palmyra. Was prominent as an army surgeon and appointed by Grant as commissioner to the Centennial.

DICKERMAN, LYSANDER, Egyptologist, died in Boston, Mass., December 13. Born in Bridgewater, Mass., in 1830. Graduated at Brown University in 1851 and at Andover Theological Seminary in 1856. Was ordained in Congregational Church and held pastorates in Massachusetts and New Hampshire until 1869, then studied two years in University of Berlin. Spent much time in travel and became well versed in Egyptology. Among his publications were The Egyptian Deities, The Hittites of the Bible. The Fayam, and Mariette Bey's Monument of Upper Egypt.

EASTMAN, JOSEPH, died June 8. Was one of the organizers and professor of Central College of Physicians and Surgeons, Indianapolis, Ind.

EGGLESTON, EDWARD, died in Joshuas Rock, Lake George, N. Y., September 3. Born in Vevay, Ind., December 10, 1837. Delicate health prevented his entering college, but by private study he acquired a liberal education. Became a Methodist minister; also circuit rider. Was general agent for the Bible Society, and pastor of several churches in Minnesota. Was for six years associate editor of The Little Corporal, a juvenile periodical, of which Miss Emily Huntington Miller was chief editor. Later he edited the Sunday School Teacher in Chicago. Was an organizer of Sunday school teachers' institutes.

Was contributor, under the name of "Penholder," to the New York Independent. In 1870 became literary editor of that paper. In 1871 was chief editor of Hearth and Home. His first book was The Hoosier Schoolmaster, published in 1871, which has been translated into several European languages, and has had a great sale in this country as well as abroad. He wrote many other books of fiction, which were well received, as well as histories of our own country. He edited Christ in Art and Christ in Literature. He received honorary degrees from several colleges.

ENGLISH, THOMAS DUNN, author, physician, lawyer, died in Newark, N. J., April 1. Born in Philadelphia, Pa., June 29, 1819. Graduated in medicine at Pennsylvania University in 1839, but began the study of law. Was editor of a paper and publisher of a literary magazine. He was author of the song Ben Bolt, which was set to music by Nelson Kneass. Was Democratic Congressman from New Jersey. Deeply interested in education.

FAIRCHILD, JAMES H., D. D., LL. D., died in Oberlin March 19. Born in Stockbridge, Mass., November 25, 1817. Graduate of Oberlin in 1838. Was twenty-three years president of Oberlin and succeeded Charles G. Finney. While president of Oberlin his brother Henry was president of Berea College, Kentucky, and his brother George T., of Kansas State Agricultural College. He was ordained to the ministry. Was tutor in Oberlin from that time until 1866. Held in turn chairs of languages, mathematics, moral philosophy and theology. In 1866 was elected president of the college. He had traveled much abroad and was a broad-minded, scholarly, and progressive man. He was the author of several books.

FEEHAN, Bishop PATRICK AUGUSTINE, died in Chicago July 12. Born in Tipperary, Ireland. He graduated at Maynooth College, and soon after came to the United States. Was appointed president of the Seminary of Carondelet, St. Louis. In 1865 was made bishop of Nashville. In 1880 was chosen archbishop of Chicago. During his administration he created nine new parishes in Chicago, founded a college of the Christian Brothers, a convent and refuge of the Sisters of the Good Shepherd, and two orphan asylums. He introduced into his diocese several sisterhoods, all of which he placed in charge of academies and parochial schools.

FENGER, CHRISTIAN, died in Illinois March 7. Born in Denmark November 30, 1840. He practiced medicine in Copenhagen, where he received the degree of M. D. He served in the Franco-Prussian war. Went to Egypt as a member of the sanitary council. Was appointed surgeon of the Kalifa quarter, Cairo. He came to this country and in 1880 became curator of the Rush Medical College Museum, and in 1884 professor of clinical surgery at the same college.

FERNALD, ORLANDO MARCELLUS, educator, born about 1835. Fitted for college at Phillips Exeter Academy, and was instructor there for several years. Graduated at Harvard in 1864. Was principal of Exeter High School for a time. Became classical master at Springfield, Mass., High School. In 1872 became professor of Greek at Williams College and so remained until his death.

FOSTER, Mrs. REBECCA S., benefactor, died in New York City February 21. Born about 1842. After the death of her husband, in 1890, she gave herself to work in the Tombs, the city prison of New York, where she was called "The Tombs's Angel." She was much esteemed by judges, lawyers, and all who had business in the criminal-courts building.

FOWLER, JOSEPH S., died in Washington, D. C., April 1. Born in Steubenville, Ohio, August 31, 1820. Graduate of Franklin College, 1843, and was four years professor of mathematics there. Was admitted to the bar in Kentucky and practiced there until the civil war, when he removed to Illinois. In 1862

he returned to Tennessee. Was made comptroller of the State and took an active part in its restoration to the Union, and was elected to the United States Senate in 1866 and was one of the seven who voted against the impeachment of Johnson; and from 1866 lived in Washington until his death.

FRÉMONT, JESSIE BENTON, author, died in Los Angeles, Cal., December 27. Born in Virginia, 1824. Was the daughter of Gen. Thomas H. Benton, of Missouri. Was educated at Georgetown Seminary. At 15 years of age married John Thomas Frémont, lieutenant in the Corps of Topographical Engineers. Removed to California a few years later and returned to Washington in 1850, when Mr. Frémont was elected to the United States Senate. She entered with great ability into the plans and purposes of his public career when he was United States Senator and when general in the Army as well as when he was candidate for the Presidency. After his death she was well known as writer for papers and magazines; was also author of The Story of the Guard, A Year of American Travel, Sketch of Senator Benton, and The Will and the Way Stories.

GALLATIN, ALBERT H., M. D., died in New York City, March 25. Born in New York, 1839. Graduate of New York University. Served in the civil war. Was professor of chemistry in New York.

GALLAUDET, THOMAS, clergyman, died in New York City, August 17. Born in Hartford, Conn., June 3, 1833. His father, Rev. Dr. Thomas H. Gallaudet, founded in Hartford, in 1817, the first school for deaf mutes in America, and Doctor Gallaudet of the National Deaf Mute College was his brother. He established the Gallaudet Home in New York City for aged and infirm deaf mutes, and devoted his life to these unfortunates.

GILMOUR, NEILL, died in Ballston, N. Y. For one term was superintendent of schools for the State of New York and later register of land office at Bismarck, Dak.

GOFF, EMMETT, died in Madison, Wis. Professor of horticulture in University of Wisconsin.

GOLD, Rev. WM. J., died January 11. Born in 1847. Was professor in Western Theological Seminary.

GOUCHER, Mrs. MARY C., philanthropist, died in Alto Dale, Md., December 19. Was interested in educational and church work and was a strong advocate of education for women. She married Rev. John F. Goucher, inherited $1,000,000, and used time and money with her husband in establishing the Woman's College of Baltimore, a well-known institution under the Methodist Church. She and her husband established nearly a hundred missions in India.

GRAY, HORACE, LL. D., died in Nahant, Mass., September 15. Born in Boston, March 24, 1828. Graduate of Harvard. In 1864 was appointed associate justice of the supreme court of Massachusetts. In 1873 became chief justice. In 1882 was appointed associate justice of the United States Supreme Court, from which position he resigned a few weeks before his death.

HALL, Mrs. CAROLINE M., died in July. She gave for the education of freedmen and Alaskans under the auspices of the missionary societies.

HAM, CHARLES H., died in Paterson, N. J., October 16. Born in Canterbury, N. H., January, 1831. Practiced law in Chicago. From 1871 to 1886 was appraiser of the port of Chicago, and was member of the Board of General Appraisers. Was interested in the School of Manual Training in Chicago, and labored for reform in public school education. Was author of books on manual training and Ten Minute Sketches.

HAYES, JOHN J., died in Milton, Mass., February 1. Born in Boston. Was educated at the Boston grammar schools and at Phillips Exeter Academy and Bridgewater Normal School. Was popular as a public reader. Was for two years

instructor in Cornell University in oratory and elocution, and later occupied a similar position at Harvard, where he remained eleven years, until stricken with paralysis.

HECKMAN, Rev. GEORGE C., D. D., LL. D., died in Reading, Pa., March 5. Born in Pennsylvania January 3, 1825. Graduate of Lafayette (1845) and Princeton Theological Seminary (1848). He held several pastorates. Was for a time president of Hanover College.

HELMUTH, WILLIAM TOD, died in New York City May 15. Born in Philadelphia, Pa., October 30, 1833. Graduate of the homeopathic college in Philadelphia, in 1853. In 1855 became professor of anatomy in same college. In 1859 organized the College of Homeopathic Physicians and Surgeons at St. Louis, and was made its dean and professor of surgery. In 1869 was president of American Institute of Homeopaths. In 1869 was made professor of surgery in the New York Homeopathic Medical College and Hospital. Was author of numerous medical works.

HERVEY, DWIGHT B., died in Mount Vernon, Ohio, January 21. Born in 1836. He was formerly president of Granville Female College at Martinsburg, and of Pennsylvania State Normal School.

HILLS, Mrs. ELIZABETH, died in South Framingham August 2. Was a large contributor to beneficent purposes. Among her gifts was $25,000 to the Hills Library.

HIRST, Rev. Dr. A. C., died in Omaha, Nebr., in July. Was president of the Methodist Pacific University.

HOADLEY, GEORGE, died in Watkins, N. Y., August 27. Born in New Haven, Conn. Graduated at Western Reserve College. Studied law and was admitted to the bar in 1847. In 1851 was elected judge of superior court of Cincinnati. In 1858 was judge of the new superior court. Was one of the counsel which successfully opposed compulsory reading of the Bible in public schools. Was professor in Cincinnati Law School, 1886–87, and governor of Ohio 1883–1885.

HOFFMAN, EUGENE AUGUSTUS, Episcopal clergyman, died near Plattsburg, N. Y., June 17. Born March 21, 1829. Was educated at Rutgers College and Harvard University and studied in the General Theological Seminary. Served various churches as rector from 1855 to 1879. In 1879 was appointed dean of the General Theological Seminary, which office he held until his death. His estate was valued at $15,000,000, and he was called the wealthiest clergyman in the United States. He was very liberal to the institution under his charge, and gave largely in other benefactions.

HOLBROOK, MARTIN LUTHER, hygienist, died in New York City August 12. Born in Mantua, Ohio, February 3, 1831. Was educated at Ohio University. Became interested in medicine and hygiene and went to Boston to study. Was associated with Dio Lewis in the introduction of hygiene and physical culture into the public schools. Assisted in the editing of medical books, and was the author of Hygiene of the Brain and Cure of Nervousness, and other works.

HOLDEN, LEONARD P., died in Boston May 4. Gave to the trustees of the Boston Public Library a fund to create a department for Emanuel Swedenborg's works, to be known as the "Holden Nazarene Fund."

HOLLAND, JOSEPH BASSETT, died in Galesburg, Ill., February. Born at Fayetteville, Vt., July 10, 1803. Graduate of Dartmouth, 1858. Was principal of the Westfield (Mass.) Academy, and demonstrator at Hanover and Harvard. Was the first American elected to the British Economic Association. He served during the civil war and later devoted himself to the work of publisher.

HOOPER, ———, died in New Philadelphia, Ohio, July 29. Graduate of Jefferson College, 1836. Founder of medical department of Arkansas State University.

HOWARD, FRANCIS E., died August 12. Was president of Howard Seminary, Bridgewater, Mass., which was founded by his father.

HUESMAN, GEORGE, pomologist, died in Napa, Cal., November 6. Born about 1827. Was for three years professor of pomology and forestry in the University of Missouri. He founded with Parker Eri the American Pomological Society. Was author of several books on viticulture and horticulture.

HUMPHREYS, WILLARD, educator, died in Princeton, N. J., September 26. Born in New York, 1867. Was educated at the Brooklyn Polytechnic Institute and at Berlin and Heidelberg and graduated at Columbia University in 1888. From 1892 to 1894 was professor of Latin at Princeton University, and later became head of the German department.

HUNNEWELL, HORATIO HOLLIS, philanthropist, died in Wellesley, Mass., May 20. Born in Watertown, Mass., July 27, 1810. Was educated in Watertown and Paris, France. He gave Wellesley its town hall, library, and wooded park.

HYATT, ALPHEUS, LL. D., naturalist, died in Cambridge, Mass., January 15. Born in Washington, D. C., April 5, 1838. Graduate of Lawrence Scientific School, Harvard, Mass., in 1862. Served in the civil war; became captain. Studied under Agassiz. In 1867 settled in Salem and became one of the curators of the Essex Institute and a founder of the Peabody Academy of Sciences. In 1870 was elected to the chair of zoology and paleontology in the Massachusetts Institute of Technology, which he held for many years. Also taught in the Boston University. Was manager of the Teachers' School of Science. Had charge of the laboratory of natural history at Annisquam, Mass. In 1881 became curator of the Boston Society of Natural History. Was one of the originators of the American Society of Naturalists and president of its first meeting. Was the author of numerous scientific works.

JAMESON, EPHRAIM ORCUTT, at Boston, November 9, aged 70. Born in Dunbarton, N. H. Graduated from Dartmouth, 1855. Supervisor of Emerson College of Oratory, 1894–1902.

JELKS, JAMES T., died in Hot Springs, Ark., June 24. Graduate of the University of Nashville, and was professor in Barnes Medical College, St. Louis, Mo.

JOHNSON, JOHN B., educator, died in Pier Cove, Lake Michigan, June 20. Born in Marlboro, Ohio, June 11, 1850. Graduate of the University of Michigan, 1879, with the degree of civil engineer. In 1883 became professor of civil engineering in Washington University. In 1898 was made dean of the college of mechanics and engineering in the University of Wisconsin. Secured for the university a building valued at $100,000 and engineering apparatus valued at $40,000. Conducted a large testing laboratory in St. Louis in which all United States tests were made. Superintended index department of Journal of the Association of Engineering Societies. Was author of works on surveying.

JOHNSON, JOHN H., died in Morristown May 20. Born at Littleton, Morris County, N. J., October 28, 1820. Studied in the College of New Jersey. Was principal of the academy at Upperville, Fauquier County, Va.; in Newark, N. J.; Blairstown Presbyterian Academy, New Jersey, and Morris Academy.

JONES, FRANK, died October 10, in Maplewood, near Portsmouth, N. H. Was possessed of considerable wealth and bequeathed $40,000 to public institutions.

JONES, J. LEWIS, died in Columbia, S. C. Born at Knoxville, Tenn. Was a clergyman, but was best known as an educator, serving for five years as president of the college at Columbia and in laboring generally for the cause of education.

KEDZIE, ROBERT C., chemist, died in Lansing, Mich., November 7. Born in Delhi, N. Y., January 23, 1823. Graduate of Oberlin, 1846, and at the med-

ical department of University of Michigan in 1851. Was for two years surgeon in the civil war. Resigned in 1863 to become professor of chemistry in Michigan Agricultural College, where he remained until 1901, when he was made professor emeritus. In 1867 was a member of the Michigan legislature. Was four years president of the State board of health. Was president of various health associations.

KENDRICK, ADIN A., educator, died in Alton, Ill., April 7. Born in Ticonderoga, N. Y., January 5, 1836. Was educated at Granville Academy and Middlebury College, Vermont. Was graduate of theological department of University of Rochester. Was president of Shurtleff College from 1872 to 1894. Was dean of the school of divinity from 1899 until his death.

KERNEY, CHARLES, died in Decatur, Ill., August 1. Was a deaf mute and teacher of deaf mutes.

LANE, Dr. LEVI COOPER, eminent surgeon, died February 19 at San Francisco. Born in 1833. Was the founder of the Cooper Medical College and the Lane Hospital.

LEE, JOHN STEBBINS, D. D., LL. D., at Canton, N. Y., September 18, aged 82. Born in Vernon, Vt. Graduated from Amherst. Principal of Mount Cæsar Seminary, Swanzey, N. H., for one year. Studied theology with Rev. Hosea Ballou. First president of Tufts College; principal of Melrose Academy, West Brattleboro, Vt., 1847–1849; assistant editor of the Christian Repository, 1851–1852; principal of Green Mountain Liberal Institute, South Woodstock, Vt., 1852–1857; principal of the college department of St. Lawrence University, Canton, N. Y., 1859–1868; professor of Latin and Greek, 1866–1868; professor of ecclesiastical history and biblical archæology in the theological department of the same; author of several books; received the degree of D. D. from Buchtel College and that of LL. D. from Tufts College.

LEEDS, ALBERT RIPLEY, chemist, died in Philadelphia, Pa , March 13. Born there June 27, 1843. Graduate of Harvard University, 1865. Was appointed professor of chemistry in Philadelphia High School, and in 1866 to the same chair in Franklin Institute, Philadelphia Dental College, and Haverford College. The arduous work required by the three professorships was too much for him. His health failed and he was forced to resign, and spent two years of travel in Europe. On his return he organized the department of chemistry at Stevens Institute of Technology. Was president of the American Chemical Society and secretary of the New York Academy of Sciences. He published 42 papers on chemistry.

LIPPMAN, MORRIS J., iron manufacturer, died April 24, 1902, in St. Louis, Mo., aged 77. Was member of the board of education of St. Louis for sixteen years.

LONG, Dr. A. L., died in Liverpool July 28. Born in Washington, Pa., in 1832. In 1855 graduated from Alleghany College, Meadville, and from the Theological Seminary in Concord in 1857. In the same year he was appointed missionary to Bulgaria. He settled in Shumla, where he began the study of the language. In 1859 he removed to Tirnova, where he opened a mission. In 1863 removed to Constantinople, where he was given the superintendency of the whole mission. It was here he became associated with Doctor Riggs in the translation of the Bulgarian New Testament, to be published by the British and Foreign Bible Society. In 1866 returned to New York to superintend the stereotyping of the New Testament in the Slavonian and Bulgarian languages. After two years in this country he returned to Constantinople, where he became professor of natural science at Roberts College. His influence over leading Bulgarians and young men of that country seeking an education was extraordinary.

LORING, CHARLES G., died in Prides Crossing, Mass., August 20. Born in Boston, 1828. Graduate of Harvard, 1848. Served in the civil war. Resigned July, 1865. Was brevetted major-general. Became trustee and curator of the American Museum of Fine Arts 1873, which office he held until his death.

LOTHROP, THOMAS, died in Buffalo, N. Y., August 7. Born in Provincetown, Mass., April 16, 1836. Graduated in medicine at the University of Michigan in 1858. Was at one time superintendent of schools in Buffalo, and at time of his death was president of the board of trustees of State Normal School.

LYON, WILLIAM HEATH, died in Brooklyn July 12. Born in New York October 18, 1819. Was devoted to the industrial education of the Indian and was appointed by General Grant to the Indian Commission.

MCKEE, Rev. JOHN LAPSLEY, D. D., died in Danville, Ky. Born in 1827. Graduate of Centre College, 1850. Was professor there and for a time its president. His daughter is president of Oxford College.

MANNING, ROBERT, died February 17 in Salem, Mass. Born there July 18, 1827. Librarian of the Massachusetts Historical Society.

MARQUAND, HENRY G., died in New York City February 26. Born there April 11, 1819. Was interested in architecture. Gave much time to the Metropolitan Museum of Art, and at one time was its president. He gave a chapel and, with Robert Bonner, a gymnasium to Princeton University, and founded and endowed the Free Public Library at Little Rock, Ark.

MAXWELL, HENRY W., philanthropist, died in Bay Shore, Long Island, N. Y., May 11. Born in Brooklyn December 7, 1850. President of Long Island College Hospital and the greatest benefactor of the institution. He equipped three industrial schools in Brooklyn, erected a dormitory for nurses, and established a clinic for the college.

MERRILL, MOSES, died in Boston, Mass., April 26. Born in Methuen, Mass., 1833. Graduate of Harvard, 1856. Taught two years in Cambridge, Mass. From 1858–1879 was master of Boston Latin School, and was the head master from 1879 to 1901.

MILLER, ALFRED BRASHEAR, educator, died in Waynesburg, Pa., January 30. Born in Brownsville, Pa., October 16, 1829. Graduate of Waynesburg College in 1853. Was professor of mathematics there 1853–1858; president 1858–1899. Was lecturer before teachers' institutes and summer schools.

MITCHELL, HENRY, engineer, died in Boston, Mass., December 11. Born in Nantucket, Mass., September 16, 1830. Was educated at the normal school, Bridgewater, Mass. In 1869 was professor in the Institute of Technology, and of the Agassiz School of Sciences in 1873. In 1851 entered the service of the Government as civil engineer. He filled several important offices.

MORGAN, THOMAS J., LL. D., died in Ossining, N. Y., July 13. Born in Franklin, Ind., August 17, 1839. Was educated at Franklin College. Was for a short time superintendent of schools in Atlanta, Ill. In 1862 he entered the service as first lieutenant of the Seventieth Indiana Volunteers, which was commanded by Benjamin Harrison, and served until the close of the war, leaving the Army as brevet brigadier-general. He organized three colored regiments and commanded the first colored brigade of the Army of the Cumberland. After the war he studied theology. Was pastor of a church in Brownville, Nebr., one year, and later was principal of the Nebraska State Normal School. From 1874 to 1881 was professor of homiletics and church history in Chicago Theological Seminary. In 1881–1883 was principal of the normal schools at Potsdam, N. Y., and at Providence, 1884–1889. Was appointed Commissioner of Indian Affairs by President Harrison and held the office until 1893, when he became corresponding secretary of the American Baptist Association, and so continued until his death.

MORTON, HENRY, Ph. D., LL. D., D. Sc., died in New York May 9. Born there May 11, 1836. Graduated at the University of Pennsylvania in 1857. Studied law, but soon gave it up to lecture on chemistry and physics in the Episcopal Academy of Philadelphia. In 1863 was professor of chemistry in Philadelphia Dental College. In 1867–68 was professor of physics and chemistry in the University of Pennsylvania, and in 1869 held the chair of chemistry there. In 1870 resigned his connection with Franklin Institute, where he had been resident secretary, and accepted the presidency of the Stevens Institute of Technology, then about to be organized in Hoboken, N. J., and held this office until his death. He gave of his own means over $150,000 to the institute, especially for the prosecution of studies of light and sound. The investigation of several eclipses was made under his direction. His eminence in science was recognized by several societies. He was the successor of Prof. Joseph Henry in the Light-House Board.

MUNDE, PAUL FORTUNATUS, died in New York City February 7. Born in Dresden, Saxony, September 7, 1846. Graduated from the Harvard Medical School in 1866 and went to Germany. Served in the Bavarian army as battalion surgeon and in the Franco-Prussian war. In 1872 returned to the United States, and was professor of gynecology at the New York Polyclinic and at Dartmouth College. Was president of the New York Obstetrical Society.

NEWTON, HORATIO DANFORTH, died in East Boston January 14. Born in Truro, Mass., February 12, 1853. He graduated from the Chatham High School in 1871 and from Bridgewater Normal School in 1876. He taught four years in the grammar school at Provincetown, Mass., four years in Taunton, Mass., and four years had charge of the Morse school, Somerville, Mass. Was submaster of the Emerson School, East Boston, from 1890 until 1900, when he became master of the Franklin School.

OSBORNE, VIRGINIA, died in New York City February 7. Founder of Bellevue Hospital Training School for Nurses. Was actively identified with charitable institutions in New York City, including the city mission and the cooking school.

OSMUN, THOMAS EMBLEY, died in New York October 26. Born in Montrose, Ohio, February 26, 1834. Graduated from Oberlin College, and later spent six years in Paris and Berlin studying medicine and languages. He returned to the United States in 1859. Was teacher of elocution and devoted his life to the teaching of pure English. He wrote several books on the subject: "The Orthoepist," "The Verbalist," and "Some Ill-Used Words."

PACKARD, JOSEPH, D. D., died in Alexandria, Va., May 3. Born in Wiscasset, Me., December 23, 1812. Graduate of Bowdoin College in 1831. Was professor at Bristol College 1834–1836. Was professor of sacred literature in the Episcopal Seminary of Virginia from 1837 to 1890. During that time dean for fifteen years. Was a member of the American Committee on the Revision of the Bible, 1872–1885.

PAINE, LEVI LEONARD, died in Bangor, Me., May 10. Born in Holbrook, Mass., October 10, 1832. Graduate of Yale, 1856, and at its theological seminary, 1861. Was dean of Bangor Theological Seminary from 1870 until his death. Was author of several books.

PALMER, Mrs. ALICE FREEMAN, Ph. D., L. H. D., LL. D., educator, died in Paris, France, December 6. Born in Colesville, N. Y., February 21, 1855. Graduated from the University of Michigan in 1876. Was appointed teacher of Greek, Latin, and mathematics at Lake Geneva, Wis., where she remained a year. In 1877 was principal of high school at East Saginaw, Mich. Was professor of history at Wellesley and president in 1882, and so continued until 1887, when she married George Herbert Palmer, professor of philosophy in Harvard University. From 1892 to 1895 was dean of the woman's department

of the University of Chicago and member of the Massachusetts State board of education until her death. (See Chapter 31.)

PALMER, BENJAMIN M., died in New Orleans, La., May 28. Born in Charleston, S. C., January 25, 1818. Graduate of the University of Georgia, 1838, and at Columbia Theological Seminary, 1841. Held pastorates in Savannah, Ga., Columbia, S. C., and New Orleans, La. Was professor of church history, 1853–1856. Was director of Tulane University and Columbia Theological Seminary.

PALMER, FRANCIS A., died in New York City November 1. Born there in 1812. He was president of the Broadway Savings Bank. He gave liberally of his wealth to educational and charitable purposes. To the Palmer Institute he gave $500,000; to the Starkey Seminary, Eddytown. N. Y., $500,000, and to Palmer College, La Grande, Iowa, $30,000.

PANGBORN, ZEBINA K., died in Hillburn, N. Y., November 1. Born in Peacham, Vt., July 31, 1829. Graduate of the University of Vermont, 1850. Taught school for a short time and later was principal of two academies in Vermont. Turned his attention to journalism and was successively elected editor of the Worcester Daily Transcript, Jersey City Evening Journal, and other papers.

PARKER, Col. FRANCIS WAYLAND, LL. D., died in Pass Christian, Miss., March 2, where he had gone for his health. Born in Bedford, N. H., October 9, 1837. At six years of age his father died and he was bound out. He attended the district school and Mount Vernon Academy. At 17 years of age he taught at Boscawen, N. H., for $15 per month, a school numbering 50 to 75 pupils. In the civil war he won his way to the rank of lieutenant-colonel. In 1868 resumed teaching, adopting from Mr. and Mrs. Avery of Cleveland some of their improved methods. In 1871 he went to Berlin to continue his education and became noted as the author of the Quincy Method of Teaching. He was then employed as supervisor in Boston, whence he was called to the position of normal school principal, where his reputation was greatly extended. Mrs. Emmons Blaine selected him to direct the plans for her benefactions to education. (See Chapter 4, Report of 1902.)

PATTERSON, CALVIN, died in Brooklyn, N. Y., January 27. Born in Clarendon, N. Y., July 2, 1847. Graduate of Albany Normal Institute in 1867 and later at Rochester University. Taught in Rochester and Buffalo. Was two years professor of mathematics in New York State Normal School. Was principal of a grammar school in Brooklyn. In 1888 was superintendent of public instruction in Brooklyn. From 1888 until his death was principal of the Girls' High School. He established the first evening sessions of the public schools of Brooklyn.

PERKINS, WILLIAM OSCAR, composer, died in Boston, Mass., January 13. Born in Stockbridge, Vt., May 23, 1831. Graduated at Kimball Union Academy, New Hampshire, 1853. Well known as instructor in music and composer. Taught in Boston. Organized there the first vocal quartette. His published works number 60 volumes.

PHILBRICK, Mrs. ANN P., died in Danvers, Mass., July 29, 1901. Born in Danvers August 4, 1818. Taught with much public approval before she married John D. Philbrick, in 1843, in whose educational work she deeply sympathized, and toward which she contributed very fully, and during the last part of his life did his writing.

PHILBRICK, JOHN DUDLEY, died March 24 at Dorchester, Mass. Born in Candia, N. H., August 11, 1861. Graduated at Dartmouth, 1885. Taught in the Bigelow School at Boston and in the Hart School, South Boston.

PIERCE, MILLER, died in Ocala, Fla., February 19. Born in Pennsylvania October 6, 1831. Graduate of Waterville Academy, now Colby University. Was

for thirteen years president of Rutgers Female College. With two others he organized the Army Ambulance Corps and directed its work during the campaign on the James under General McClellan.

PIPER, ALEXANDER, Lieut. Col., died in New York February 21. Born in Pennsylvania May 11, 1829. Brevetted in the war. Was for a time assistant instructor at West Point.

POLLOCK, Mrs. LOUISE, kindergartner, died in Skyland, Va., July 23. Born in Berlin, Germany. Dr. W. T. Harris, United States Commissioner of Education, speaking of her early life, said the word "evangel" was more appropriate than "pioneer." She taught for a time in Boston, but during the last years of her life in Washington, where she was well known.

PORTER, Miss SARAH, died in Farmington, Conn., February 23. Born there August 17, 1813. She was the daughter of Rev. Dr. Noah Porter and the sister of President Porter, of Yale. She will be remembered as the founder and long active head of the famous school for girls at Farmington, Conn.

POSTON, CHARLES D., died in Phoenix Ariz., January. Born in Harding, Ky., 1822. Was superintendent of Indian affairs, and gave the name Arizona to the Territory.

POWELL, Maj. JOHN W., Ph.D., LL.D., geologist, died in Haven, Me., December 23, where he had gone for a rest. Born in Mount Morris, N. Y., March 24, 1834. His early life was devoted to the study of minerals and fossils. Enlisted in the ranks in the civil war and reached the rank of lieutenant-colonel. Was appointed to the professorship of geology in the Wesleyan University, and later was professor in the Normal University. He investigated the Colorado Canyon and became Director of the United States Geological Survey, greatly increasing its efficiency and leading in those studies of the arid lands which resulted in Congressional appropriation. In 1892 the French Academy awarded him the Cuvier prize for the greatest scientific service of the year. In 1880 was elected to the Academy of Sciences. A meeting of the scientific men of Washington was held, at which they expressed their loss of "a loyal friend, a devoted public servant, a daring explorer, and an original contributor to the sum of human knowledge."

RAFFERTY, WILLIAM A., died in San Felipe, P. I., September 13. Born in New Jersey February 16, 1842. Graduate of West Point, 1865. Became colonel of the Fifth Cavalry. Was assistant instructor of cavalry tactics for a time at West Point.

RANDOLPH, JAMES CURRY, died in Louisville, Ky., November 1. Born near Harrodsburg, Ky., December 7, 1830. Graduate of Centre College, 1852, and was professor of mathematics there for nearly twenty years.

REED, THOMAS B., died in Washington, D. C., December 7. Born in Portland, Me., October 18, 1839. Graduate of Bowdoin, 1860. Taught the next four years while studying law. Practiced in Portland, 1876–1899. Was member of Congress and was Speaker of the House.

REED, WALTER, died in Washington. D. C. Born in Virginia in 1851. Graduate of the medical department University of Virginia. Was professor of bacteriology and pathology in the Columbian Medical College, of Washington. In 1893 was appointed curator of the Army Medical Museum in Washington.

RICHARDSON, Dr. GEORGE MANN, died in July. Was member of the faculty of Leland Stanford University, California.

RIDEOUT, REUBEN A., died in Boston February 23. Born in Garland, Me., November 30, 1834. Graduate of Bowdoin College, 1861. Taught in Maine, Monson, Mass., and for twenty years was principal of the High School in Everett, Mass. Was greatly respected.

ROBINSON, Dr. GILMAN P., died in Atlanta, Ga. Professor of diseases of children in the Atlanta College of Physicians and Surgeons.

ROGERS, Miss RHODA, died in Boston July 19. Left large bequests for education and charity.

ROOD, OGDEN N., died in New York November 12. Born in Danbury, Conn., February 3, 1831. Graduate of Princeton, 1852. Took a master's degree at Sheffield Scientific School. In 1854–1858 studied at the universities of Munich and Berlin. On returning to the United States was appointed to the chair of chemistry and physics in Troy University, where he remained until 1863, when he became professor in Columbia University, where he remained until his death.

ROUSS, CHARLES B., died in New York March 3. Born in Woodsboro, Md., February 11, 1836. Presented a physical laboratory to the University of Virginia and a bronze group by Bartholdi.

RUNKLE, JOHN D., died in Southwest Harbor, Me., July 8. Born in Root, N. Y., October 11, 1822. Graduate of Lawrence Scientific School, 1851. Was mathematical editor. Lectured widely, introducing the Russian idea of physical training. Was professor at the Boston Institute of Technology from the first, except when he was president.

RUTHRAUFF, J. M., died May 6. Was president of Wittenberg College.

SAMPSON, WILLIAM THOMAS, naval officer, died in Washington, D. C., May 6. Born in Palmyra, N. Y., February 9, 1840. He early showed fondness for books. As a boy earned money by odd jobs. Through the interest of W. H. Southwick, Congressman E. B. Morgan in 1857 appointed him to the Naval Academy. He devoted his attention to the regular studies and in his senior year was made adjutant of the battalion. In 1864 was appointed instructor. His life was saved when his ship was sunk in Charleston Harbor. Was appointed lieutenant-commander in 1866, and in 1869 assistant instructor in physics. In the autumn of 1874 was sent a third time to the Academy and given the position as the head of the department of physics. In 1878, under Prof. Simon Newcomb, was sent to observe the eclipse. In 1879 was appointed assistant superintendent of the Naval Observatory. In 1884 represented the United States in the council to establish a prime meridian and common system of time. In 1885–86 was superintendent of Newport Torpedo Station. In 1886 was member of the international marine conference and same year was made superintendent of the Naval Academy. In 1889 was made captain; then became commander of the *San Francisco*, which was two years on the Pacific coast. In 1892 was made superintendent of the Naval Gun Factory, and 1893–1897 was Chief of the Bureau of Ordnance. Every gun built for the Navy was built under his supervision. When he had completed his term in this last position was offered the position as Chief of the Bureau of Navigation, but refused it. Was made chief of the court of inquiry as to the destruction of the *Maine*. After Admiral Sicard had retired, Sampson was put in his place in command of the squadron with the rank of acting rear-admiral and selected the *New York* as his flagship, and under the Navy directed the operations of the squadron until the battle of Santiago was fought, on his plans as specifically detailed for the several commanders. Having had an appointment with General Shafter, commander of the army, when the appearance of the Spanish fleet was discovered, he reversed his vessel and took part in the battle, which was fought under his orders, and the country will always credit the victory to him.

SCHAEFFER, Rev. E. L., died in Portland, Oreg., May 19. For ten years was senior master of the Bishop Scott Academy, Portland, Oreg.

SCHMIDT, ERNEST L., Ph. D., died in Burlington, N. J., November 28. Born in Prussia October 8, 1819. Made teaching his profession.

SCOTT, GEORGE ROBERT WHITE, D. D., Ph. D., died in Berlin, Germany, September 13, aged 60. Born in Pittsburg, Pa.; graduated from Middlebury College, 1864, and Andover Theological Seminary, 1867; studied at Tübingen University; member of the New Hampshire board of education; trustee of the New Hampshire State normal school, of Dow Academy, New Hampshire, and of Jaffna College, Ceylon; member of the American Historical Association; director of the General Theological Library in Boston; a corporate member of the American Board of Home and Foreign Missions; received the degree of D. D. from Middlebury and Olivet College, 1883, and that of Ph. D. from Berlin University.

SCRIBNER, WILLIAM M., penman, died in Chicago, Ill. Born in Waterbury, Me., 1824. He lived many years in Boston. Took an active part in educational work in the West. Was widely known as author of a system of penmanship copy books which bear his name.

SCUDDER, HORACE E., died in Cambridge, Mass., January 11. Born in Boston, October 16, 1838. Graduate of Williams College, 1858. Taught in Brooklyn three years and then devoted his time to editorial work, writing much for young readers. His books fill a long list.

SEIBERT, GEORGE C., died at sea September 9. Born in Wetter, Hessia, Germany, February 25, 1828. Studied in Germany and became private instructor in Wiesbaden. Was two years professor at a gymnasium at Baken. Was teacher at Hagerstown, Md., and later professor of systematic theology at Bloomfield, N. J.

SEWARD, THEODORE F., died in Orange, N. J., August 30. Born in Florida, N. Y., January 25, 1835. Was devoted to music. Introduced the tonic-sol-fa system.

SKILLMAN, Dr. H. M., died in Lexington, Ky., March 21. Born in 1816. Formerly professor in Transylvania Medical College, and for fifty-seven years was practicing physician.

SKINNER, WILLIAM, manufacturer, died in Holyoke, Mass., February 28. Born in London, England, 1824. Built a gymnasium for the Moody Northfield school and was a frequent benefactor of Vassar, Smith, and Mount Holyoke colleges.

SMITH, A. L., died in Appleton, Wis., August 12. Born in Middletown, Conn., April 5, 1833. Graduated 1854 at Wesleyan University. For a time was professor in United States Naval Academy. Was for five years president of the university and for many years professor of mathematics there.

SPEARE, ALDEN, died in Pasadena, Cal. Born in Vermont October 26, 1825. His benefactions were large, including $100,000 to the Boston University and a library to Chelsea, Vt., his native town.

STANTON, ELIZABETH CADY, died in New York City October 26. Born in Johnstown, N. Y., November 12, 1815. Finished her education at Miss Willard's Seminary, Troy, N. Y. Married in 1840. She began the woman-suffrage movement, and was known for her numerous addresses and articles in favor of woman suffrage.

STEELE, Rev. GEORGE MCKENDREE, died in Kenilworth, Ill., January 14. Born in Strafford, Vt., April 13, 1823. Graduate of Wesleyan University, Middletown, Conn., 1850. In 1863 was chosen president of Lawrence University, Appleton, Wis., where he remained until 1879, when he became principal of the Wesleyan Academy, Wilbraham, Mass. On account of poor health he left there in 1892. From 1892 to 1898 he resided in Auburndale, Mass., doing educational work in Lasell Seminary and in literary pursuits, publishing a number of books.

STEVENS, B. F., bibliographer, died in London, England, March 5. Born in Barnet, Vt., February 19, 1833. Was agent for the United States Bureau of Education in London. As purchasing agent he had great opportunity for gathering manuscript and data of great value.

STOCKBRIDGE, Rev. WINFIELD SCOTT, died in Glencarlyn, Va., October 15, aged 61. Born in Byron, Me.; graduated from Bates College, 1867, and from Bangor Theological Seminary, 1869; principal of Lapham Institute, Rhode Island, 1875–1880; taught at Woonsocket, R. I., 1880–1881; superintendent of the Industrial Home School, a government institution, Washington, D. C., 1881–1889.

STONE, ADMIRAL B., LL. D., died in Springfield, Mass., September 5. Born in Piermont, N. H., August 14, 1820. Took a partial course at Dartmouth. Was for a long time teacher in New Hampshire and Maine, and for fifteen years superintendent of the public schools of Springfield.

SWAN, ROBERT, principal of the Mayo boys' school and later of the Winthrop, Mass., school for girls, for over forty years. He led the way in introducing industry in the schools. Mrs. Hemmenway furnishing the means; and when, in 1880, Hon. Alpheus Hardy offered funds for teaching cooking, he was ready to supervise the work.

TENNEY, Rev. DAN, D. D., died in San Diego, Cal., October 24. Born in Chester, N. H., December 16, 1816. Took the classical course at Dartmouth and studied at Lane Seminary under Dr. Lyman Beecher. Was pastor at Oxford, Ohio; Lawrence and Boston, Mass. Was called back to Ohio to superintend Presbyterian home mission work. Founded Oxford College for Women, toward the endowment of which he raised over $70,000.

TERRETT, Rev. Dr. WILLIAM R., died in Clinton, N. Y., June 12. Born in New York City July 19, 1849. Graduate of Williams College in 1871, and from Princeton Theological Seminary in 1874. Was pastor of churches at America, Dalton, and at Saratoga Springs, N. Y. Since 1889 had been professor of American history and constitutional law at Hamilton. Was well known as preacher and lecturer.

THAYER, J. B., died in Cambridge, Mass. Born in 1822. Graduate of Harvard in 1852. Practiced law in Boston until 1873, when he was made Royall professor of law at Harvard. In 1884 was Weld professor.

THOMPSON, Bishop HUGH MILLER, died in Jackson, Miss., November 18. Born in County Londonderry, Ireland, June 5, 1830. Came to this country in 1836. Received a common school education in Caldwell, N. J., and graduated at Nashotah Theological Seminary 1852. Was rector of churches in Portage, Wis.; Milwaukee, Chicago, New York City, and New Orleans. From 1860 to 1870 was professor of church history at Nashotah Seminary. For seven years was editor of the Church Journal in New York. In 1887, on the death of Bishop Green, became bishop of Mississippi. Published a number of books.

TILDEN, Dr. J. NEWELL, a distinguished physician and educator, died at Peekskill, N. Y., July 10. Graduate of the Syracuse University and of Long Island College Hospital. Served as surgeon in the civil war. The last years of his life had charge of the Peekskill Military Academy.

TOON, Gen. THOMAS F., died in Raleigh, N. C., February 19. State superintendent of instruction of North Carolina since 1900.

TORREY, Rev. HENRY AUGUSTUS, LL. D., died in Beverly, Mass., September 20. Born there January 8, 1837. Graduated at the University of Vermont, 1838. Graduate of the Union Theological Seminary, 1864. Was pastor in Vergennes, Vt. In 1864 was made professor of intellectual and moral philosophy in the University of Vermont, where he remained thirty-four years. He was a fine English scholar and a graceful public speaker.

TOUSLEY, ORSON, died July 23. He bequeathed $70,000 to Williams College, Williamstown, Mass. Was once superintendent of Minneapolis schools.

TRUE, Rev. BENJAMIN O., D. D., died in Lakeport, N. H., July 18. Born at Plainfield, N. H., December 17, 1845. Prepared for college at Kimball Union Academy. Graduate from Rochester Seminary in 1870. From 1881 until his death was professor of church history at the same seminary.

TUCKERMAN, Rev. LOUIS BRYANT, M. D., M. A., died at Cleveland, March 5, aged 52. Born in Rome, Ohio; graduated from Amherst; received the degree of M. D. from Long Island Hospital College; appointed professor of physiology in the medical department of Wooster University in Cleveland, 1882.

URSO, CAMILLA, violinist, died in New York January 20. Born in Nantes, France. She began the study of the violin at 6 years of age, and a year later appeared in concert as soloist. Her success was great and she was called a prodigy. She studied three years at the Paris Conservatoire, practicing ten hours a day. At 11 years of age she left the Conservatoire and played in concerts in Paris before the Société Polytechnique and the association of musical artists, and her playing called forth the greatest admiration among musicians and critics. In 1852 she came to this country with the Germania Society, creating a great sensation in musical circles. The next season she played in six of Madame Alboni's concerts, and in December, 1853, became the violin soloist of Madame Sontag's concert company. Before she was 20 she married Frederic Luere, and for several years did not appear in public; but on playing at a concert in New York in 1863 she was greeted so enthusiastically that she decided to resume her professional career. She was considered the most wonderful woman violinist ever heard. At her funeral her famous violin was placed on her coffin.

VAN ALLEN, THEO. F. C., died in Albany, N. Y., October 28. Born in Albany County, N. Y., 1861. Graduated from Albany Medical College, 1883. Later was clinical professor in that institution.

VANBENSCHOTEN, JOHN C., LL. D., died January 17 at Middletown, Conn. Born December 15, 1827. Graduated from Hamilton College, 1856. Was for thirty-nine years head of the department of Greek at Wesleyan University.

VERTREES, WOODFORD, died in East Nashville, Tenn., October 22, aged 76. Was one of the founders of the medical department of the Tennessee University, and was for twenty-five years professor of materia medica.

VILLARD, HENRY, died in Dobbs Ferry, N. Y., in November. He left large bequests for educational and charitable purposes in this country and Germany.

WARREN, GEORGE WILLIAM, organist and composer, died in New York March 16. Born in Racine, Wis., in 1829. Was for many years professor of music at Columbia University, New York. In 1887 received the degree of doctor of music. Was for thirty years organist at St. Thomas Episcopal Church, New York City, and in 1900 retired as organist emeritus.

WATERHOUSE, Dr. SYLVESTER, died in St. Louis in February. Born in Barrington, N. H., September 15, 1830. Graduated at Harvard Law School, 1858. Taught at Antioch College and at Washington University.

WEBSTER, CLAUDIUS B., M. D., died in Concord September 7. Born in Hampton, N. H., December 10, 1815. Graduate of Dartmouth in 1836. Was principal of the Female Academy at Norwich, Conn., for fifteen years. Was surgeon in the Army during the civil war. Was appointed by General Grant consul to Sheffield, England, which position he held for sixteen years. He gave liberally of his means to education.

WEBSTER, Rev. HEZEKIAH, died in Rochester, N. Y., November 1. Born in Sennett, N. Y., March 31, 1849. Graduated at Hamilton College in 1873. Was one year at Auburn Theological Seminary, then taught three years in Roberts

College, Constantinople, Turkey, returning to this country in 1872 and graduating next year from Auburn Seminary. Was seven years at Fairview, Pa., as pastor.

WEBSTER, JAMES W., died in Malden, Mass., November 2, 1901. Born in Concord, N. H., 1832. From 1864 to 1870 was master of the Emerson School, Boston. From 1870 to 1883 master of the Hancock School. From 1883 until his death was teacher in the Bowdoin School, Boston.

WENCKEBACH, CARLA, educator, died in Boston, Mass., December 29. Born in Hildesheim, Germany, February 14, 1853. Studied in the universities of Zurich and Leipzig. Taught in England, Belgium, Russia, and New York, and in 1883 became professor of German in Wellesley College, where she remained until her death. With her sister, Helen W. Wenckebach, she was the author of several books on the German language and was editor of German literary works, including a collection of German songs. She was one of the most distinguished German instructors in the United States. She wrote a number of German books.

WESTGATE WILLIAM FRANCIS, died in Haverhill, N. H., April 23. Born at Enfield, N. H., July 5, 1852. Was superintendent of schools.

WETHERBEE, Dr. ISAAC J., died in Dorchester, Mass., June 24. Born in South Reading, Vt., March 19, 1817. Graduate of Baltimore Dental College in 1850. Studied for the ministry and held pastorates in Kittery, Me., and Charlestown, Mass., but on account of ill health gave up the ministry and studied dentistry. Was twenty-five years president of the Boston Dental College. Was professor there of operative dentistry for fifteen years.

WHEELER, DAVID H., died in July. Was two years superintendent of schools of Carroll County, Ill. Professor of Greek and literature at Cornell College, Iowa, for four years. Was five years United States consul at Genoa, Italy. Eight years professor of English literature in the Northwestern University, and for seven years editor of The Methodist. For nine years president of Alleghany College. Was author of a number of books.

WHITE, EMERSON E., A. M., LL. D., died October 21. Born in Mantua, Portage County, Ohio, January 10, 1829. Spent his boyhood on a farm and attended the district school—three months in winter and three in summer, and from 10 to 16 years of age only three months in winter. At 17 he taught a winter school in a neighboring district. Taught one year in Mount Union Academy. Doctor Mahan, in his effort to build Cleveland University, called to his aid Doctor White as instructor in mathematics. At first he took charge of one of the Cleveland grammar schools, when he was called to accept the position permanently. He entered the Cleveland University and soon took extra work as instructor in mathematics. Later was appointed principal of a new grammar school. Four years later was appointed principal of the Central High School, Cleveland. Was very successful as teacher. In 1856 was appointed superintendent of schools at Portsmouth, Ohio. Here he introduced reforms in teaching far in advance of the prevailing methods. Early in 1861 removed to Columbus to take charge of the Ohio Educational Monthly, which he conducted for fifteen years. In 1863 was appointed State commissioner of common schools of Ohio. In 1876 was called to the presidency of Purdue University, Lafayette, Ind. He resigned in 1883 and removed to Cincinnati to engage in literary work. Was five years superintendent of Cincinnati public schools. In 1863 was president of Ohio Teachers' Association; in 1872 president of National Educational Association; in 1884–85 president of the National Council of Education. His text-books were much used. It was said that his Elements of Pedagogy, issued in 1886, was the ablest treatise on the subject written by an American. His Art of Teaching, published in 1901, excelled

all others in the favor with which it was received. He was much in demand as a lecturer on educational subjects, being called by some "the Wendell Phillips" on the subject. In 1866 he read before the superintendents a paper advocating the establishment of a national bureau of education, and he was named chairman of the committee to memorialize Congress, with the result that the Bureau was established. (See Chapter 31.)

WHITEHEAD, WILLIAM R., died in Denver, Colo., October 13. Born in 1822. Graduated in medicine from the University of Pennsylvania in 1853. Was one of the founders of the medical school of the University of Colorado.

WILLIAMS, Rev. WILLIAM GEORGE, LL. D., died in February. Born in Chillicothe, Ohio, February 25, 1822. By dint of hard work he made his way through Old Woodward College, graduating with honor at 22 years of age. The same year was elected professor in San Augustine College, Texas, and principal of the academic department of Ohio Wesleyan University. Arriving in Delaware, Ohio, he, with only one professor and an assistant, formally opened the institution in the basement of the old Mansion House. In 1850 became full professor of Latin and Greek, which position he held for fourteen years. In 1864 he went out as chaplain of the One hundred and forty-fifth Ohio Volunteers. Returning from the Army he found his place filled, but was given the chair of Latin and literature. In 1872, by virtue of a bequest from the late Mrs. Eliza Chrisman, a new chair was created, and he was appointed acting professor of biblical literature, and to this was added in 1873 the chair of Greek. His scholarship was much respected.

WILSON, Rev. JOHN HENRY, died at Oden, Mich., August 15, aged 93. Born in Boston; graduated from Williams College, 1836; taught at Auburn, N. Y., four years; principal of Auburn Female Seminary; taught the classics and natural sciences in Munro Collegiate Institute, Elbridge, N. Y., and at, Farmers College, Cincinnati, Ohio.

WOLFE, Rev. A. R., died in Montclair, N. J.. October 6. Born at Mendham N. J., September 6, 1821. Graduate of Williams College in 1844 and from Union Theological Seminary in 1851. In 1859 opened the Hillside Seminary for Young Ladies, at Montclair, N. J., where he remained for thirteen years, until failing health compelled him to close it.

WOODS, GEORGE WORTH, medical director and rear-admiral United States Navy, died in San Francisco June 10, aged 64. Well known in Army and Navy circles, and frequent contributor to literature.

ZAKRZEWSKA, Dr. MARIE E., died in May. Born in Germany. Was the founder of the New England Hospital for Women and Children, Boston, Mass. Was devoted to her work.

II.—FOREIGN.

1902.

ARENDT, Dr. RUDOLF, died April 15 at Leipzig, aged 74. Professor of chemistry in university and very prolific writer on chemical subjects.

BACH, LEONHARD EMIL, died February 20 at London, aged 53. Professor of music and composer and musical director of note.

BARTELS, Dr. FRIEDRICH, died October 25 at Gera, aged 65. Principal of school at Gera. Author and compiler of very popular text-books.

BASEDOW, M. P. FRIEDRICH, died March 12 at Adelaide, Australia, aged 73. Teacher of German school and editor of a German paper in Australia.

KÖBERLIN, Dr. ALFRED, died February 6 at Neustadt, aged 40. Professor of history and author of History of Civilization.

KÖSTLIN, Dr. JULIUS, died May 13 at Halle, aged 76. Professor of theology; member of the consistory; prolific writer on theological subjects.

KRAUSE, Dr. ALBRECHT, died November 10 at Hamburg, aged 64. Rector of St. Catharine Church; author of books on philosophy; attempted a popular presentation of Kant's Critique of Pure Reason.

KREUTZER, LUDWIG, died April 11 at New Kralen, aged 69. Well-known teacher of rural schools and successful author of juvenile books.

KRONES, FRANZ XAVER, RITTER VON MASCHLAND, died October 17 at Graz, aged 77. University professor of history; author of Manuals of Austrian History.

KRUSE, Dr. HEINRICH, died January 12 at Bückeburg, aged 87. Professor in gymnasium at Minden; since 1855 editor of Cologne Gazette.

KÜGLER, Dr. MAX, died May 24 at Berlin, aged 70. Ministerial councilor in the department of education, chief of elementary school section. Highly honored for his administration of the Prussian schools.

KÜRSCHNER, JOSEPH, died July 29 at Gotha, aged 49. Author of a German yearbook similar to Who is Who in England or America? and numerous other compilations.

LANDESMANN, HEINRICH, died December 4 at Brünn, aged 81. Prolific writer of fiction. Nom de plume, "Hieronymus Lorm."

LAUSER, Dr. WILHELM, died November 11 at Berlin, aged 66. Editor North German Gazette; author of books of travel.

LEYENDECKER, ERNST, died February 6 at Cologne, aged 48. Founder of the first German commercial school for girls.

LIMPRICHT, GUSTAV, died October 20 at Breslau, aged 68. Teacher; noted botanist; wrote a Flora of Germany, Austria, and Switzerland.

LUCIUS, Dr. ERNST, died December 2 at Strassburg, aged 50. University professor of theology and prolific author.

LUTHARDT, Dr. CHRISTOPH ERNST, died September 21 at Leipzig, aged 79. University professor of theology and philosophy. Author of numerous works on philosophy, ethics, and theology.

MÄHLY, Dr. JACOB, died June 18 at Basel, aged 74. Professor of literature in university.

MAHRAUN, LUDWIG, died September 17 at Hamburg, aged 65. Director of city normal school; school superintendent.

MANDELKERN, Dr. SALOMON, died March 24 at Vienna, aged 56. Distinguished writer on Hebrew theology; author of Russian text-books.

MARIAN, HANS, died May 28 at Leipzig, aged 45. Author of Illustrated History of Music of the Nineteenth Century and other works.

OECHELHÄUSER, WILHELM, died September 25 at Dessau, aged 82. Founder of the German Shakespeare Society; author of books on Shakespeare's dramas.

OELSNER, Mrs. ELISE, died February 8 at Breslau, aged 66. Author of The God of the Nineteenth Century and The Efforts of Women in Science and Art.

PAWLOWSKI, J. N., died January 28 at Zoppat, aged 86. School principal and writer on subject of provincial history.

PFLEIDERER, Dr. EDMUND, died April 3 at Tübingen, aged 60. Professor of philosophy and very distinguished writer on philosophical subjects.

PINKEPANK, GEORGE, died October 20 at Hildesheim, aged 75. Teacher and editor of a daily paper.

PIUTTI, KARL, died June 17 at Leipzig, aged 56. Professor in conservatory of music; composer of sacred music.

POLLE, KONRAD FRIEDRICH, died March 6 at Dresden, aged 72. Professor in gymnasium, author of text-books of science.

PREISS-LAUDIEN, Mrs. HENRIETTE, died July 23 at Charlottenburg, aged 70. Author of popular juvenile books.

REBLING, GUSTAV, died January 9 at Magdeburg, aged 81. Professor of music and composer of sacred and secular music.

REHLING, RUDOLF, died January 28 at Vienna, aged 39. Teacher and editor of Freie Deutsche Schule.

RIBBECK, Dr. WALDEMAR, died June 4 at Berlin, aged 72. Principal of classical high school: editor of many classical text-books.

RÖNTGEN, JOHANN PAUL, died October 20 at Aix-la-Chapelle, aged 53. Teacher in deaf-mute asylum; author of books on the psychology of deaf-mutes.

RÖPKE, AUGUST, died August 4 at Brunswick, aged 74. Teacher in Hanover; noted botanist.

SACHSSE, JULIUS EDMUND, died October 15 at Borna, near Leipzig, aged 63. Teacher in normal school; musical director and composer of note.

SCHÄFER, Dr. JULIUS, died February 10 at Berlin, aged 79. Professor of music in University of Breslau; fertile composer, author, and critic.

SCHAARSCHMIDT, Dr. FRIEDRICH, died June 13 at Böblingen, aged 39. Professor in Düsseldorf Academy of Fine Arts: author of History of Art During the Nineteenth Century.

SCHEFFER-BOICHORST, Dr. PAUL, died January 17 at Berlin, aged 59. Professor of history in University of Giessen; noted writer on historical subjects.

SCHILLER, Dr. HERMANN, died June 11 at Leipzig, aged 63. Superior school councilor in Hesse, principal of gymnasium, author of text-books of history

SCHLIE, Dr. FRIEDRICH, died July 21 at Kissingen, aged 63. Authority on fine arts; director of art museum at Schwerin.

SCHMIDT, Miss AUGUSTE, died June 10 at Leipzig, aged 69. School principal, editor of a woman's journal, and president of the German National Association of Women.

SCHRÖDER, ERNST, died June 17 at Karlsruhe, aged 61. Professor of mathematics in polytechnicon; author of mathematical treatises.

SCHWANERT, HUGO, died October 18 at Greifswald, aged 74. University professor of chemistry; author of text-books for laboratory work.

SELENKA, EMIL, died January 21 at Munich, aged 60. Professor of zoology and biology; author of numerous books on biology, and editor of a biological journal.

SIGEL, Dr. ALBERT, died October 13 at Stuttgart, aged 62. Teacher of natural sciences, hygiene, and anthropology; director of children's hospital.

SIMAR, Dr. HUBERT THEOPHILUS, died May 24 at Cologne, aged 67. Archbishop of Cologne, formerly professor of dogmatics and apologetics at Bonn.

STEIN, KARL, died November 2 at Wittenberg, aged 76. Organist, teacher, and professor of church music; composer of note.

STORCK, JOSEPH, died March 27 at Vienna, aged 72. Founder of modern Austrian industrial art museums, editor of technical journal for industrial art.

SWOBODA, Dr. ADALBERT, died May 19 at Munich, aged 74. University professor, author of Forms of Faith, Critical History of Ideals, and several very popular works on art.

THIEME, OTTO, died September 6 at Krippen, aged 54. Principal of normal school at Dresden, State inspector of drawing; author of popular text-books of drawing.

TOLLIN, Dr. HENRY NATHANAEL, died May 11 at Magdeburg, aged 63. Author of historical works on the church reformers and the Huguenots.

TRAULEER, Dr. OSKAR, died March 14 at Tübingen, aged 55. Professor of history and author of historical essays.

TRAUTENBERGER, Dr. GUSTAV, died June 25 at Brünn, aged 66. Author of History of Protestantism in Austria.

VIRCHOW, Dr. RUDOLF, died September 5 at Berlin, aged 81. University professor, director of pathological institute, councilor of medicine, member of city council, and Reichstag, author of Liberty of Science in the Modern State, and many other epoch-making works; discoverer of cellular pathology.

VOIGHT, FR. A. ERNST, died December 5 at Berlin, aged 59. School superintendent in Berlin.

WALLENHAUER, GOTTHILF, died January 27 at Rudolstadt, aged 67. School principal, writer of text-books and song collections.

WEIDLING, FRIEDRICH, died February 22 at Berlin. Noted publisher.

WEIDNER, Dr. ANDREAS, died February 16 at Dortmund, aged 63. Principal of a classical high school, author of numerous Latin text-books and commentaries.

WESKE, R., died September 6 at Konigsberg, aged 83. Teacher, and for many years editor of a Prussian school journal.

WOLFF, HERMANN, died February 3 at Berlin, aged 57. Director of music and editor of Neue Berliner Musikzeitung.

WÜLLNER, Dr. FRANZ, died September 7 at Braunfels, aged 70. Chapel master in Berlin, leader of symphony concerts, author of books on choir music, composer, and successful teacher of music.

ZAHN, FRIEDRICH, died September 8 at Regensburg, aged 73. Bavarian school statistician and editor of a school journal.

ZANGEMEISTER, Dr. KARL FR. WILLIAM, died June 8 at Heidelberg, aged 65. Professor of history and author of historical works of note.

1903.

ARNOLD, WILHELM HEINRICH, died January 29 at Leipzig, aged 56. Was principal of a noted girls' school at Leipzig and associate editor of the Allgemeine deutsche Lehrerzeitung.

ASKENASY, Dr. EUGEN, died August 24 at Sulden (Tyrol, Austria), aged 58. Professor of botany in university, Heidelberg.

BEHRENS, Dr. WILHELM, died December 24 at Göttingen, aged 60. Authority in microscopic investigation methods; editor of a journal devoted to microscopic technology.

BELLERMANN, Dr. HEINRICH, died April 10 at Berlin, aged 71. Teacher in classical high school, composer of oratorial music; also author of books on musical subjects.

BERDROW, OTTO. died February 6 at Stralsund, aged 41. Teacher and copious writer on history of literature and biographies.

BERENDT, Dr. MARTIN, died January 31 at Berlin, aged 54. Author of philosophic works on Spinoza and on pessimism.

BIEDERMANN, Dr. WOLDEMAR Baron von, died February 6 at Dresden, aged 96. Privy school councilor in Saxony; author of works on Goethe.

BIENEMANN, Dr. FRIEDRICH, died September 22 at Freiburg i. B., aged 65. Writer on subjects from the time of the Reformation in the German Baltic provinces of Russia.

BLASER, Dr. JULIUS, died February 11 at Zofingen, Switzerland, aged 44. Teacher in secondary school; author of Methods of Composition.

BÖHL, Dr. EDUARD, died January 24 at Vienna, aged 67. Professor of theology in university and author of a general treatise of pedagogy.

BOUGIER, Dr. GUSTAV, died September 13 at Constance, aged 74. Pastor in Constance; writer on literature and religious observances.

BRÜCK, HEINRICH, died November 5 at Mayence, aged 72. Professor of theology in theological seminary at Bingen.

CARUS, Dr. JULIUS VICTOR, died March 10 at Leipzig, aged 80. University professor of zoology; translator of Charles Darwin's works.

CORNELIUS, Dr. KARL, died February 10 at Munich, aged 84. Professor in university; member of the German parliament at Frankfurt; author of numerous historical works.

CREMER, Dr. HERMANN, died October 4 at Greifswald, aged 69. Professor of theology in university.

CURTZE, Prof. MAXIMILIAN, died January 7 at Thorn, aged 66. Teacher in high school and editor of the new edition of Copernicus's works.

DALMER, Dr. L., died May 21 at Gudersleben, aged 42. Professor of theology at Greifswald.

DIECKERHOFF, Dr. WILHELM, died December 15 at Berlin, aged 68. Professor and veterinary surgeon; author of works on rinderpest and pathology for veterinary surgeons.

DIETERICI, FRIEDRICH, died August 17 at Berlin, aged 82. Professor of philosphy and logic in university; author of works on philosophy and religion.

DIETLEIN, HERMANN RUDOLF, died July 16 at Halle, aged 80. School principal at Schafstädt; author of the most popular schoolbooks used in Germany.

DUBOC, Dr. KARL JULIUS, died June 13 at Dresden, aged 74. Author on historical and ethical subjects, and advocate of woman's rights.

ENGELIEN, AUGUST, died June 21 at Berlin, aged 71. School principal in Berlin; author of popular text-books on grammar and composition.

FALB, RUDOLF, died September 30 at Berlin, aged 65. Editor of scientific journal Syrius: author of works on ethnography, geography, philology.

FRIEDLÄNDER, Dr. ERNST, died January 1 at Berlin, aged 62. He was privy state archivarius and a chronicler of universities.

GEBESCHUS, Miss IDA, died May 9 at Weimar, aged 55. Author of Musical Antologies, History of Music, Northern Sagas, etc.

GOSCH, AUGUST, died April 8 at Lichterfelde near Berlin, aged 70. Professor in art academy for over forty-five years; teacher of drawing in high schools of Berlin.

GRASBERGER, LAURENTIUS, died January 23 at Würzburg, aged 73. Was professor of pedagogy and classical philology in university: noted writer on education in antiquity.

GRIMM, Dr. JULIUS OTTO, died December 7 at Münster, aged 78. Teacher and composer.

GRIMMICH, Dr. VIRGIL, died August 14 at Prague, aged 42. Rector of German University at Prague; author of handbook of philosophy and education.

HAGEMANN, GEORG, died December 6 at Münster, aged 70. Professor of philosophy in university; author of works in which the Darwinian theory is controverted.

HAMBURGER, Dr. MEYER, died June 9 at Berlin, aged 65. Professor of mathematics in the technological university at Charlottenburg-Berlin.

HEEREMANN, Dr. CLEMENS A., Baron von, died March 23 at Berlin, aged 71. Ministerial councilor; writer on art subjects.

HEFNER-ALTENECK, JACOB HEINRICH, died May 19 at Munich, aged 92. Director of Bavarian National Museum; prolific author on art subjects.

HEIPFL, FERDINAND, died September 9 at Munich, aged 72. Attorney at law; writer on social and religious subjects.

KENDELL, ROBERT VON, died April 26 at Hohenlübichow, in Neumark, aged 79. Ambassador of Germany at Constantinople and Rome; historical writer of great note.

KEWITSCH, KARL THEODOR, died July 18 at Berlin, aged 69. Teacher in normal school at Berent; founder of German musical journal.

KIRCHNER, THEODOR, died September 18 at Hamburg, aged 79. Director of royal music school at Würzburg.

KLOPP, ONNO, died August 9 at Vienna, aged 81. High school teacher in Osnabrück: prolific writer on English historical subjects.

KRAUSE, ERNST (CARUS STERNE), died August 24 at Eberswalde, aged 64. Noted writer on evolution; editor of Kosmos.

LABITZKY, AUGUST, died August 21 at Reichenhall, Austria, aged 71. Teacher and musical composer.

LAHRSSEN, F., died October 21 at Hude, aged 82. Compiler of school laws and a school Bible.

LAZARUS, Dr. MORITZ, died April 10 at Meran, aged 79. University professor of philosophy at Berlin; author of numerous works on philosophy and history of literature and education.

LINNARTZ, W., died August 23 at Aachen (Aix la Chapelle), aged 71. Director of school for the deaf and dumb.

LIPP, ALBAN, died September 10 at Aibling, aged 37. Teacher and composer.

LIPSCHITZ, Dr. RUDOLF, died October 7 at Bonn, aged 71. Professor of mathematics in university.

LÖFFLER, J. H., died April 15 at Pössneck, aged 70. Author of historical romances and juvenile literature.

LOHMEYER, JULIUS, died May 24 at Charlottenburg-Berlin, aged 68. Editor of Deutsche Jugend. The most popular writer of juvenile literature in Germany of late years.

MARTIN, WILHELM, died May 6 at Cassel, aged 60. Teacher; president of Hessian Teachers' Pension Association.

MEINECKE, GUSTAV, died April 10 at Berlin, aged 49. Editor of German Colonial Gazette, catechism for emigrants; he suggested the establishment of a German colonial museum.

MÖHL, HEINRICH, died October 14 at Cassel, aged 71. Professor of mathematics in Cassel; surveyor and geologist.

MOMMSEN, THEODOR, died November 1 at Charlottenburg-Berlin, aged 86. Professor of history in University of Berlin; author of epoch-making works on Roman history; secretary of Royal Prussian Academy of Sciences.

MÖRLE, D., died May 9 at Gera, aged 75. Teacher and for over thirty years secretary of the German National Teachers' Association.

MOSER, GUSTAV VON, died October 23 at Görlitz. Army officer; adjutant of Prince Wilhelm; prolific writer of comedies, most of which went over the English and American stages.

MOTHES, Dr. OSKAR, died October 4 at Dresden, aged 75. Royal councilor of architecture; author of books on architecture of the Middle Ages.

MÜHLBACHER, Dr. ENGELBERT, died July 17 at Vienna, aged 60. Professor of history in university.

MUSIOL, ROBERT, died October 19 at Fraustadt, aged 57. Editor of Lexicon of Music.

NOKK, Dr. WILHELM, died February 13 at Karlsruhe, aged 71. Was minister of education, worship, and justice in Grand Duchy of Baden.

NOLOPP, WERNER, died August 12 at Magdeburg, aged 70. Teacher and musical composer.

OPPEL, Dr. KARL, died May 11 at Frankfort, aged 87. School principal at Frankfort; copious writer on educational and historical subjects.

PAPPERITZ, Dr. ROBERT BENJAMIN, died September 29 at Leipzig, aged 77. Teacher in high school and professor in conservatory of music at Leipzig.

PECHT, FRIEDRICH, died April 24 at Munich, aged 89. Writer on art subjects, history of art, art at the Chicago exposition.

PFLÜGER, Dr. ERNST, died September 30 at Berne, Switzerland, aged 57. Professor in university; inventor of charts to determine color-blindness.

RÜCKAUF, ANTON, died September 19 at Alt-Erlaa, aged 48. Composer; teacher of music at Vienna.

Ruland, Dr. Karl, died August 24 at Bonn, aged 65. City school inspector at München-Gladbach.

Saul, Dr. Daniel, died October 8 at Jugenheim, aged 49. Editor Frankfort Gazette; promoter of education of idiots.

Schaeffle, Albert E. Fr., died December 25 at Stuttgart, aged 72. Professor of political economy; also author of works on that subject.

Schasler, Dr. Max, died June 13 at Jena, aged 84. Author of philosophical works on art and æsthetics; editor of art journal.

Schiller, Karl, died July 3 at Aicha, aged 68. Teacher in model school at Prague; author of local historical works.

Schmid-Monnard, Dr. F., died November 10 at Halle, aged 46. Author of a work on school hygiene.

Schmidt, Dr. Alexis, died February 24 at Berlin, aged 85. Philosopher of note; author of Apology of Metaphysics, and other works.

Schmidt-Canabis, Richard Bogul., died November 11 at Berlin, aged 65. Author of numerous popular books of fiction.

Schneider, Dr. Oskar, died September 8 at Dresden, aged 62. Teacher in high school at Dresden; writer on ethnography, geography, and zoology.

Schulze, Hermann, died May 5 at Braunschweig, aged 60. School inspector; author of text-books and guides for teaching language.

Schultz, Dr. Hermann, died May 15 at Göttingen, aged 67. University professor of theology at Basel, Switzerland.

Schurtz, Dr. Heinrich, died May 4 at Bremen, aged 40. Custodian of museum in Bremen; author of Catechism of Ethnology.

Seyffarth, Dr. L. W., died October 26 at Liegnitz, aged 74. Pastor at Liegnitz; editor of Prussian Teachers' Gazette and editor of Pestalozzi's works.

Siegfried, Dr. Karl, died January 8 at Jena, aged 73. Rose from the gymnasium at Gubeu and Magdeburg to the professorship of theology at Jena. Great authority in Greek texts and copious writer on Old Testament subjects.

Sittard, Joseph, died November 24 at Hamburg, aged 57. Noted writer on art subjects, especially on music.

Sitto, Kamillo, died November 15 at Vienna, aged 60. Founder and editor of an architectural paper, Der Städtebau; famous architect.

Sommerbrodt, Dr. Jul. W. Ewald, died January 6 at Breslau, aged 90. Director of classical high schools in Silesia, later provincial school councilor in Sleswick.

Steinhäuser, C., died March 13 at Mühlhausen in Thuringia, aged 80. Teacher and music director, composer of popular airs, and author of methods for teaching geography.

Trost, Karl, died May 9 at Berlin, aged 64. Teacher; author of Socialism and Social Politics, Goethe and Protestantism, and many other works.

Waldmann, Dr. Franz, died May 14 at Schaffhausen, aged 56. Principal girls' school; author biographies of historical personages.

Weidemann, Dr. Albert, died May 24 at Meiningen, aged 97. Privy councilor and chief of the school system of the duchy of Saxe-Meiningen.

Wittstock, Albert, died January 16 at Leipzig, aged 66. Noted educational writer on subjects of philology and literature; was court councilor of Saxony.

Wolf, Hugo, died February 22 at Vienna, aged 43. Author of Italian and Spanish song books; composer of several operas and oratorios.

Zumpe, Hermann, died September 4 at Munich, aged 53. Teacher in Weigsdorf, pupil of Wagner, chapel master at Stuttgart, musical director at Munich, noted composer.

CHAPTER XXIX.

SKETCHES OF EDUCATIONAL BENEFACTORS AND LIVES DEVOTED TO EDUCATION.

By Hon. JOHN EATON, LL. D.,
Formerly United States Commissioner of Education.

Cecil Rhodes.

REV. SAMUEL WOOD.

Care of education was one of the characteristics of the New England clergy. Many of them who came to this country from England had received a training at Oxford or Cambridge. The New England clergyman in those days might be austere in his manner, but he was thoughtful and careful of the instruction imparted to the young. The clergy were members of school committees and became trustees of academies as they sprung up to furnish advanced instruction. In many instances they received students into their own families. The most noted of this type, perhaps, was the Rev. Samuel Wood, D. D., of Boscawen, N. H., who was the instructor of both Daniel Webster and his brother Ezekiel. His zeal for education was only excelled by his sacrifice for it. Doctor Wood left no definite record of his educational work during his long life. He was born in 1752, in Connecticut, graduated at Dartmouth, and died in Boscawen in 1836. His library was used by his students and others. It was his library in which Daniel Webster found books that he devoured. He led in the founding of Boscawen Academy. With his own hands, after the manner of the times, he shaved the shingles for it, and Ezekiel Webster gave it the bell. After his death great

effort was made to find the exact number that he had instructed in his house. One man believed it was 80 that he had fitted for college. Mr. Coffin, the historian of the town, had no definite data upon the subject, but after forty years of inquiry I found that Doctor Bouton, pastor of the church adjoining that of Doctor Wood, one of the most careful historians in the State, had said, in a discourse before the historical society some three years before Doctor Wood's death, that Doctor Wood had instructed personally in his own house 155 young men, of whom 105 entered college, 40 or 50 the ministry, 20 the law, and 7 or 8 medicine. This seems to me safe to put down as correct.

REV. MOSES HALLECK.

Another remarkable example of the educational work done by New England clergymen, in addition to their pulpit and pastoral labors, is found in the life of the Rev. Moses Halleck, of Plainfield, Mass., where he began to preach in 1790 and remained till he died, July 17, 1837.

Mr. Halleck was born in Brook Haven, in New York, February 16, 1760, served several months in the war of the Revolution, worked on his father's farm, and graduated from Yale in 1783, and studied theology. After his settlement, finding his salary too small, he began to take students into his family and had under his instruction in all 274 young men and 30 young women. Fifty of the young men became clergymen. John Brown and the poet Bryant often were counted as among his pupils. William Allen, also his pupil, became eminent in the American Tract Society work, editing the American Messenger, the Child's Paper, and its other publications. He also published a life of his father, of Harlem Page, and of Jonathan Edwards. He wrote several tracts, one of which reached a circulation of 380,000. Another pupil, Gerard, became a journalist, establishing the Telegraph in Boston in 1824, which was merged in the Boston Recorder. In 1827 he became part owner of the New York Observer. In 1828 he was associated with David Hale in publishing the Journal of Commerce. He and his partner in 1828 sent schooners down the bay to intercept European arrivals and obtain the earliest news, and for the same purpose, that of obtaining the Washington news, they ran, in 1833, a relay of horses from Philadelphia to New York, thus promoting the enterprise now so common in other ways of obtaining the earliest news.

PROMINENT PRINCIPALS OF ACADEMIES.

During the period of the development of the academy there were those who gave their lives to the work of directing this sphere of education. The generation is still on the stage of action that will recall such instances as that of Dr. S. H. Taylor, of Andover; of Dr. Cyrus S. Richards, of Kimball Union Academy, Meriden, N. H., where he was thirty-six years principal. It is believed that he fitted more young men for college than any other man of his period, yet the academy had only a small endowment, perhaps $40,000, from the family whose name it bore. It is of interest to know that Mrs. Kimball was originally Miss Chase, and was of the kindred of Chief Justice Chase, and heartily shared with her husband in the gift for the foundation of the academy.

Of a somewhat similar type was Dr. Hiram Orcutt. He was principal at different periods at Hebron, N. H., Thetford, Vt., North Granville and Glenwood, N. Y., and later at Lebanon, N. H., and West Brattleboro, Vt. At none of these academies did he have the benefit of an endowment. He not only inspired young people greatly to advanced studies, but he aided them pecuniarily. At Thetford he fitted more than one hundred young men for college. Dr. C. P. F. Bancroft, who has recently died, was one of those whose personal influence was eminently successful in drawing students to him and to this grade of instruction. He was a veritable Doctor Arnold in this sphere of educational work.

JOHN SWETT.

To John Swett the Pacific coast is specially indebted for the intelligence of its rising generation. He was born in Pittsfield, N. H., July 31, 1830, and educated in that State. He went to California in 1852 as a mariner. He carried with him an educational outfit, with a knowledge of sound principles and methods of instruction gained from William Russell, that noted instructor under whose tuition he had taken up the methods of instruction approved in his normal school. He became superintendent of instruction in California in 1863, and later assistant superintendent of schools in San Francisco, and teacher of the high school and normal school, and author of various works on education.

Doctor Swett may be credited with the giving of the compulsory form to the first school law of the State of California, which has done such remarkable service in various communities of the State, which would have lagged behind without the compulsory provision. This provision did not relate to personal attendance at school, but it provided for the local issue of the writ of mandamus in any community where the provisions of the law in the matter of election or other features were not obeyed. The call of a single citizen was sufficient to secure its effective operation.

REV. H. H. WILLEY.

In the early days in California a different type of effort is to be credited to Rev. H. H. Willey, D. D. A graduate of Dartmouth, he was deeply imbued with the conviction of the importance of a college, and in addition to his pastoral duties he began to agitate the subject and solicit private benefactions for a college on the coast. The rush for money-making prevailed around him: fortunes were small; collections were limited. The East, to which he looked, was only responsive to a limited degree. Among those who received his appeals with more or less indifference, but in whose minds his urgency may not have been considered in vain, there may be mentioned Messrs. Stanford and Clark, who were later themselves the founders of universities. Mr. Clark lived to see his millions furnishing the foundation of a successful university at Worcester, Mass. Leland Stanford and his wife consecrated a fortune of $30,000,000 to the establishment of a unversiity at Palo Alto, Cal., in the name of their son, Leland Stanford, jr.

REV. GEORGE H. ATKINSON.

Rev. George H. Atkinson, D. D., of Portland, Oreg., was of another type of these promoters. When called upon he was ready to draw up the earliest law, first for the Territory and second for the State, of Oregon. As the towns grew up he not only contributed to the form of local ordinances promotive of common school systems, but he was especially thoughtful of the academy, the high school, and the college, and was instrumental in securing money from the East for this purpose. The University of Forest Grove and Whitman College could hardly have existed without him. He conceived the idea of securing from proprietors, when they laid out their villages here and there in the Territory, lots assigned to churches and schools. Before the provision for State supervision he kept the Commissioner of Education at Washington advised, and in touch with him suggested administrative and legislative steps.

MRS. S. B. COOPER.

Mrs. S. B. Cooper, of San Francisco, Cal., a Christian lady of talent and culture, became for the Bureau of Education the reporter of local educational conditions. In her studies and reports she became interested in the kindergarten which had been established and was conducted by Mrs. Wiggin and Miss Smith. Mrs.

Cooper was a native of New York and formerly a teacher in a Georgia family, but otherwise was not experienced as a teacher save as the head of a Sabbath school class of 700 pupils. She was a lady of large views of the elevation of society and of appreciative philanthropic mind. She was enabled to see and present for herself and represent to others the function of the kindergarten and its proper place in our system of education. Her appeal was made to a group of wealthy and appreciative ladies. Among those who are best known are Mrs. Stanford and Mrs. Hearst. Her solicitations were successful in securing money for current expenses for a system of kindergartens, and, in addition, a permanent fund of $500,000 for their continued support.

The concurrence of circumstances which led to the establishment of kindergartens on the Pacific coast is suggestive. Miss Emma Marwedell, a German lady who had been well trained in normal kindergarten methods, both in theory and practice, offered her services to introduce kindergarten methods on the Pacific coast. The Commissioner of the Bureau of Education aided her in securing transportation and overcoming other difficulties. She enlisted worthy young ladies in her enterprise. Among the earliest to accept her training were Miss Smith and Mrs. Wiggin, the latter of whom became especially noted as the author of "Patsy" and other stories. Mrs. Cooper saw what they were accomplishing, and became convinced of the power of the kindergarten for the elevation of all classes in the community by the right training of early childhood, and especially gave herself to the exploitation of the Golden Gate Kindergarten. Her reports were circulated throughout the States and her advice was asked from Hawaii and other distant lands. She was in constant communication with the Commissioner of Education on educational methods. The expenses of the Golden Gate Kindergarten were met by private gifts, but in connection with Mrs. Cooper's efforts these kindergartens became especially helpful in securing for this form of instruction a legal recognition in a large number of our municipalities.

HON. ALEXANDER H. STEPHENS.

Few who knew the Hon. A. H. Stephens in the public positions of Vice-President of the Confederacy, Member of Congress, and governor of the State of Georgia are familiar with his special interest in promoting education. During one of his last years of service in the National House of Representatives, Mr. Stephens said to the writer that he had educated, or aided in educating, upward of 50 young men. Almost every year since he had been admitted to the bar he had one or more at college. He was for the education of the colored race to the extent of their ability. He had been opposed to the law which, before the abolition of slavery, prohibited their education. He held that we should fulfill the demands of the Divine ordinance with regard to these people. He recalled that the legislature of Georgia in 1859 came within one vote of allowing the negro to be educated in that State.

HON. J. O. WILSON.

During the period of transition from slavery the beneficent labors of various individuals were conspicuous for their wisdom. The citizens of the national capital, and, indeed, of the country at large, are especially indebted to the wise labors of J. Ormond Wilson, A. M., for the good results of the free schools of the District of Columbia. J. Ormond Wilson was born at Royalston, Mass., in 1825; graduated at Dartmouth in 1850; studied law and was admitted to the bar in Washington in 1853. He had a successful experience as a teacher and became prominent in the revival of education in 1861. The absence in those days of national legislation had left the schools to the indifferent action of the citizens of Washington and Georgetown and the county court of the District. To an out-

sider, this control would seem to be confusing. The University of Georgetown prospered, as well as various private institutions and schools of lower grade. The Columbian University entered upon its conspicuous career. The few teachers were prominent for their eminence. It is recalled that President Jefferson took special interest in the public schools; but little, however, can be said in commendation of their merits until the special revival of interest in 1861. Then, when Congress began to legislate for the white schools, those of Georgetown, those of Washington, and those of the county were each under a different management. The building at the corner of Fourteenth and G streets, erected for the President's stable when Jefferson occupied the White House, was afterwards transformed for the use of the schools and was one of the best schoolhouses in the District of Columbia. Legislation for colored schools after the act of emancipation constituted still another series of school organizations, or boards, for the direction of the education of colored children.

The absence of schoolhouses, the variety of boards in control of the schools, the prevalence of race prejudice, civil opposition, the transition from municipal to Congressional legislation, together with the activity of extreme sentiments for and against common schools, rendered the administration of school affairs a responsibility of extreme delicacy, demanding the greatest moderation and wisdom. These necessary characteristics Mr. Wilson possessed to a marked degree. He was wise in his opinions and principles and methods of education, and especially wise in leading the schools forward without a burst of opposition. Progress was rapid, and each subject was so justified that the public confidence agreed and gradually sustained each advance. The number of noble men who contributed to the cause increased, but all freely gave special credit to Mr. Wilson. There was little school legislation, municipal or Congressional, upon which he did not have shaping influence between the time at which he entered upon his responsibilities and when he retired. As early as 1875 normal classes were established in penmanship and drawing; in 1876 the Girls' High School was established, and two years later the Boys' High School. In 1879 books and magazines were provided for supplementary reading, and two years later sewing, cooking, and other features of industrial training were introduced into the county schools in spite of the fact that there was no provision of money for the extra expense. A library for each school was started. In 1861 there were in the schools 50 teachers and less than 4,000 pupils; in 1885, when Mr. Wilson resigned, there were 565 teachers and 32,000 pupils. The old and unfit schoolhouses had given place to new ones, well adapted to modern principles and methods. His school management made the schools of the city an honor to the nation.

In supplying funds for building schoolhouses and school expenses he came naturally to devise and carry through the plan of dividing all expenses of the District between the General Government and the District.

WILLIAM HENRY RUFFNER.

William Henry Ruffner, LL. D., was born in Lexington, Va., in the year 1824. His father was founder of Presbyterianism in his locality, and was president of Washington College (now Washington and Lee University), and was distinguished for his advocacy of the gradual abolition of slavery in Virginia. His son, a scholar of mark, especially in the direction of geology, became chaplain of the University of Virginia in 1849. For a time he devoted himself to the ministry and to geology in the field, the latter for his health. In 1870 he was elected superintendent of public instruction for the unformed system of education in Virginia. The difficulties to be encountered would have paralyzed a less able or less resolute man. Two unhomogeneous races were to be provided for, and public sentiment had been formed against public schools. He has been fitly designated the Horace Mann

of the southern school system. He wrote, he traveled, he lectured, he devised laws which were passed. He retired from his office in 1882, having planted a system of public schools firmly in the administration of his State. His character was of the highest order and everywhere he won respect. Many a young common school teacher, whose mental horizon had been narrowed by the limitations of that period of poverty and struggle, found new life and freedom from a course of lectures by Mr. Ruffner, and physical geography became to her, as well as to her pupils, a new subject, with fuller meanings and larger aims.

After retiring from the office he continued his investigations in geology, and added important contributions to his scientific reports.

He was especially helpful in founding the Agricultural College and the Miller Industrial School in Albemarle County.

From the beginning of his administration he had pleaded for the professional training of teachers, making the State and county institutes very effective, and always, when possible, giving them dignity and force by his presence and teaching, and exerting his influence in favor of the establishment of normal schools by the State. His efforts had their natural results. A State female normal school was first established at Farmville, and he was elected by acclamation first principal, and its organization left entirely in his hands. Under his wise, upright, and efficient management the success of the school was phenomenal, until he resigned and again took up scientific work in the department of geology.

GEN. S. C. ARMSTRONG.

Among the typical contributions to education in the South is that of Gen. Samuel C. Armstrong, who was born on the island of Maui, Hawaii, January 30, 1839. His father, a missionary, Rev. Richard Armstrong, was minister of public instruction for the Hawaiian Kingdom, and until he left the island for his education at Williams he was in close touch with all the features of his father's work as minister in elevating the natives. After his college course he joined the Army as captain and was mustered out of the service with the rank of brevet brigadier-general. Employed by Gen. O. O. Howard, of the Freedmen's Bureau, he was assigned to the care of "contrabands" gathering about Hampton, where General Butler had first treated these runaways as "contraband of war." General Armstrong began to apply the principles and methods with which he had become familiar with his father. He recognized the benefits of higher education and endeavored to join with it the training of the hand. He organized the Hampton Normal and Agricultural Institute, aiming, in his plan of training head, hand, and heart, to establish an institution for the education of colored teachers, in which the idea of self-help was fundamental. It has been said of him that he was an educational genius; that he had a rare combination of unaffected piety, practical philanthropy, and hard-headed business ability. He traveled widely and spoke much, educating the public mind to the great duty incumbent upon it. He did not shrink from the annual duty of soliciting and securing $60,000 to $70,000 for his institute; indeed, he was rather disposed to delay or put off the solicitation of permanent funds, willing to make the sacrifice of educating the public mind. Among the results of his efforts may be mentioned the establishment of the institution at Tuskegee, Ala., by Booker T. Washington.

ROBERT C. OGDEN.

Robert C. Ogden, a successful merchant, becoming president of the board of trustees of Hampton and seeing the educational situation, aided in setting in motion a large movement for the general improvement of education in the South, acting in person with a group of sympathetic men of eminence, every one of whom carries weight and influence wherever known. Mr. W. H. Baldwin, jr.,

president of the Long Island Railroad Company, is president of this organization. The last trip of Mr. Ogden, with his body of coadjutors, was to Athens University, Georgia, where they were received by the governor and other gentlemen with like minds. Mr. Rockefeller has joined them with a gift of $1,000,000, and, it is understood, others are ready to cooperate with their means. The result can not fail to be far-reaching with its benefits.

CATHERINE FAY EWING, ORIGINATOR OF CHILDREN'S HOMES.

Children's Homes throughout the country have attracted deserved attention as child-saving institutions. They not only save life; they educate to usefulness. The Ohio law is simple. It was enacted in 1866, and in 1871 thirty-seven homes were organized under it. They were established and conducted by counties and intrusted to the care of three trustees by the county commissioners. All neglected or destitute children, not insane, imbecile, or affected by contagious diseases, are received into them on proper certificate. The effort is to make the homes for them all that the word implies. From these homes they are committed to families. At first when the children were placed in families the officers did not follow them with care systematically. Now they inspect each child annually under an amendment to the law made in 1889.

These beneficent homes originated with Mrs. Catherine Fay Ewing. Mr. Fay, her father, in the early history of Marietta College, moved with his family from Westboro, Mass., where Mrs. Ewing was born. He came to the neighborhood both to aid the struggling college and to give his sons the benefit of its advantages.

Miss Catherine Fay became a teacher and after a time a missionary to the Indian Territory. She says that in the fall of 1853, while laboring as a missionary among the Choctaw Indians, a physician called upon her and asked her to visit a poor family where the mother, a New England woman of culture and refinement, had died leaving 5 small children. These little ones he had committed to his care, and he was trying to find homes for them, their drunken father having deserted them. He wished her to adopt a beautiful little girl 2 years old, and she longed to do it; but she was a poor teacher, hundreds of miles from home, and it seemed impracticable. The little one was taken by a man and his wife who soon after began to sell whisky to the Indians. One day there was a drunken fight, and the child was thrown down the steps of the house and killed. This affected Miss Fay so deeply that the determination was made in her mind to have a home of her own where she could care for such orphan and homeless children. After this time every effort was directed to that object: every dollar was laid away with care for this purpose. She taught two years in Kentucky, and with the money bought 15 acres of land about 10 miles from Marietta. There was a house of two small rooms on the land. About this time she received two legacies, from an uncle and aunt, and began at once to build a larger house. Her plan was to adopt poor children and support them herself. She went to the county infirmary and found 26 children associated constantly with older people, many of them of the vilest character.

This was more than she could bear. She wanted to take th m all, but she could not hope to support so many by her own efforts. She went to the directors of the infirmary and asked them to let her take them at $1 per week. The first few weeks were very hard ones, and the trustees of the district school refused to allow the children to attend school because they were paupers, and they were unwilling to have their own children associate with them, although after a lawsuit she obtained permission to send them to school, but the children were taunted and made unhappy by being treated as poorhouse children. After the war for the Union broke out many soldiers' children were added to the number in her care. At one time she had 35 of these, and she felt that they deserved

something better from their country than had been provided, and became exceedingly desirous that the effort might be entirely separated in name and in fact from the poorhouse, and have a distinct appropriation for its use. In 1864 she conferred with the commissioners about the expediency of applying to the legislature to bring this change about. The bill was presented that year, but failed. In 1865 it was again presented and rejected, but in 1866 it became a law; so the plan which she at first thought of only as a relief to her own Children's Home became in the course of Providence the means of planting homes in the different counties of the State.

J. H. THIRY—INSTRUCTION IN THRIFT.

Our education is sometimes indebted for important features to outside agencies. A recent contribution of this character has been the establishment of school savings banks by J. H. Thiry in Long Island City, N. Y. Coming to his new home with some personal familiarity with these institutions in Europe, in 1885 he began to interest his neighbors in the system. They gave him their approval of the principles and methods, which he explained. It was seen how instruction in methods of saving of even small amounts cultivated the habit, and, in many instances, would save from want and lead to the establishment of those habits of economy and thrift essential to the accumulation of competency.

NATHAN JACKSON MORRISON.

Among the promoters of education Nathan Jackson Morrison, D. D., LL. D., illustrates a type. He was born in Franklin, N. H., November 25, 1828, near the birthplace of Daniel Webster. His parents were of the same sturdy class as those of the great statesman. Idleness had no place in his early life. In the district school he pushed beyond the usual elementary studies and prepared for a course in Dartmouth College, where he graduated in 1853. He taught to pay his expenses while at Oberlin preparing for the ministry of the Congregational Church. For a time he taught Greek at Olivet Institute (or College), Michigan. At that time the college had no endowment and only a dormitory for young men and the beginning of a building for young ladies. His aptitude for management and the collection of funds was soon manifest. Buildings were erected and an endowment secured, and attendance increased until he resigned in 1872.

His attention was attracted to the educational situation in southwest Missouri, where he saw the need of a Christian college, and led to the establishment of Drury College. Mr. S. F. Drury furnishing a portion of the funds. He organized the college, and remained president until January, 1888, having supervised the erection of buildings, attended to the purchase of lands, secured professors, and obtained means for the college amounting to over $350,000 and a library numbering 20,000 volumes. The campus embraced 40 acres. The city and region of the country shared in this college prosperity, together with the public school system. After retiring he was for a time professor at Marietta College, where he raised the money for a new building.

Again called to college administration, he took charge of the college at Wichita, Kans., which he successfully brought forward in its educational work. He is one of a large type of promoters of education whose labors have been beset with many embarrassments, but who have been successful in planting colleges and academies on our frontier.

REV. A. D. MAYO.

The Ministry of Education, by Rev. A. D. Mayo, LL. D., is one of the most unique benefactions. It is his own work and that of those who, in the most informal way, cooperated with him. The Doctor did not come to it without

preparation. He was born on the 31st of January, 1823, in Warwick, Mass. He studied at Deerfield Academy and Amherst College, and in 1846 entered the Universalist and afterwards the Unitarian ministry. He was in charge of the Independent Christian Society at Gloucester, Mass., eight years. Then, from 1854, he was two years at Cleveland, Ohio, where he became especially interested in the improved methods of work when Hon. Andrew Freese was superintendent and E. E. White, LL. D., teacher. He lectured extensively upon educational subjects on the Western Reserve. From 1856 to 1863 he was pastor in Albany, N. Y. Here he had seven years' use of the State Library, aided by the suggestions of the librarian, Doctor Holmes. His interest in education was deepened and his observations extended as he became familiar with the work that Mr. Page did before his death in the State normal school and that of Doctor Stearns in the female academy.

His services were not only called for by those interested in education, but he spoke extensively and with great effect for the cause of the Union. His mind was alert on all the essential questions that agitated the public. In 1862–63 he became pastor in Cincinnati, Ohio, and was soon made a member of the school board, and by his able and brilliant advocacy of the Bible in public schools became known throughout the country. His close proximity to the seat of the civil war brought before him all the great questions involved in a manner to arouse him to the utmost effort for their solution. Whatever else might be attempted, he was most profoundly convinced of the supreme part that education must perform in establishing order, peace, and prosperity in the future. In 1872 he moved to Springfield, Mass., as pastor of the Church of the Unity; and until he resigned in 1880 his labors as an educator were in requisition as a member of the board of education of the city and as a lecturer throughout the State in the employ of the State board of education. His love of educational work, his profound belief in its beneficence to mankind in all personal duties and in all social, civil, and religious relations; the eloquence with which he presented its many phases, united to secure for his labors the most wide and hearty recognition. His readiness and effectiveness as a writer were also called into requisition. He had observed extensively and studied carefully the movements of American thought and activity. In the valley of the Ohio he met with multitudes of refugees from the colored and white population of the Southwest. Unable, from imperfect health, to join the ranks of the Union Army, his attention was all the more concentrated on the issue of the conflict and the long period of rehabilitation of southern society that followed changes so radical through so large a share of the area of the Union.

In all this experience and observation he confesses that an irresistible impression was forcing itself upon his mind that in some way a providential "call" might come to him for useful service in this stage of the great revolutionary epoch. It was not as a teacher or a representative of any ecclesiastical body or as a Government official that he desired to go to the southern people. It seemed to him that there was a place in this vast enterprise of educating the children and youth of those States for a friendly private citizen of the United States who might go on "a labor of love" to all the people of the South, and, with the exception of teaching, organizing schools, and becoming an "agent" of any kind, serving as a "man of all work" in a field so extensive and attractive. With these earnest hopes and fixed plans he visited Washington, consulted with the United States Commissioner of Education, with President Hayes and his estimable wife, and with the numerous statesmen from the North and South. The idea found unexpected reception. Friends on the one hand furnished means and on the other opened the way. He made his first visit South in 1880, the funds being raised in the main by Rev. E. E. Hale, D. D.

For six years, in addition to his speaking, he was the efficient editorial writer of

the New England Journal of Education. Of his publications largely circulated may be mentioned "The South at School;" "National Aid to Education;" "The City of Washington: A National University;" "Last Words from the South;" "The South, the North, and the Nation Keeping School;" "The New Education in the South;" "The Normal School in America;" "Governor Butler and the Schools of Massachusetts;" "The Common School and Common Morality;" "The Academy, Old and New;" "A Southern Graded School;" "American Brains in American Hands;" "The Educational Situation in the South;" "A New Version of the Children in the Wood;" "Southern Women in the Recent Educational Movement in the South."

The singleness of his aim to promote education, the fullness of his information upon the most advanced methods, and his happy manner of presenting all phases of his subject united to make him welcome to all classes. He had a message for all, and all heard him gladly—the dwellers amid all the advantages of libraries and institutions of learning in the cities and those shut out of these advantages in the country districts; also teachers, members of other learned professions, and those engaged in the various industrial pursuits—farmers, mechanics—together with children and youth in Sabbath schools and churches of every denomination, and youth in every grade of instruction from the kindergarten to the university. His visits have carried cheer and instruction to private and public schools, whether for the white or for the black. He has, by special request, visited nearly all of the institutions maintained by northern charity for colored youth in the South. His messages have had something for everyone, whether high or low, who sought an education. Institutions of all grades for whites have counted it a privilege to entertain him and gain wisdom from his addresses. Many places he has visited several times, with increasing welcome. He has done much to remove unfounded prejudices and to aid in the overcoming of the inherent difficulties of the situation and in lodging arguments where they will be repeated for generations. He has visited and labored in the cause of universal education in thirty-five States of the Union and in the District of Columbia.

An important feature of his work is the Sunday preaching, generally upon topics connected with education, in churches of every denomination which are open to the occupation of clergymen outside of their own body. In the South, with the exception of personal entertainment and to some extent of transportation, this ministry has been "a labor of love." In doing this work for nineteen years Doctor Mayo has traveled more than 75,000 miles; has delivered more than 4,000 public lectures; preached 800 times in churches in nearly all parts of the country, and has visited nearly all the leading colleges and great numbers of academies for both races in all the Southern States, with especial reference to the establishment of the common school system everywhere. The amount of writing done far exceeds that of the ordinary city clergyman connected with his professional ministry. More than 100 addresses have been printed, often reprinted, and with the aid of the daily press, as well as numerous pamphlet editions, have probably reached a circulation of 1,000,000 copies. Three "Circulars of Information," of the United States Bureau of Education, with other matter furnished, have reached a circulation of 100,000 copies. This ministry has been carried on during these years at an expense of not less than $60,000. For several years the American Unitarian Association furnished a portion of the yearly fund as a tribute to the common school work in the South, as the ministry has always been unsectarian, though thoroughly Christian in the broad American sense that the common school is at once a school of morality and practical religion. At least two-thirds of the entire fund has been collected yearly by the contributions of the friends of education, chiefly in the New England States, with the entire personal earnings of Doctor Mayo applied to

the same use. This appropriation is no longer made and the only support of this ministry is by the contributions of its friends and the earnings of Doctor Mayo from literary labors connected with education.

The work was never more promising than at present, and the interest of its supporters does not seem to abate. He has helped many in the South to see more clearly the theories and practice of the North in education. He has also done great service in conveying to the public mind of the North his varied and interesting views of the struggle for education in the South. His ministry is calculated to arouse the deepest sympathy and most hearty approval of all those engaged in uplifting that whole section of the country, and thus doing their utmost to unite the entire land in one effort to aid the children and perpetuate a united and happy nation.

DOROTHEA L. DIX.

Miss Dorothea L. Dix, born at Hampton, Me., April 4, 1802, was preeminent in educating the people of the United States in the care of the insane and in the supervision and direction of the nurses in the war for the Union. She early developed a strenuous character in caring for her family. In her experience as teacher of a Sunday school class for women in the East Cambridge House of Correction after the services she found a few insane persons confined in rooms which were not heated. In securing stoves for the rooms she was obliged to bring the case into court. She made such a report of overcrowding and filth and the nonseparation of the innocent, the guilty, and the insane, old and young, as, with the assistance of Doctor Howe and Charles Sumner, secured a correction of these abuses.

She traveled throughout the Union and led to the establishment of the several institutions for the insane in the different States. Her influence was felt the world over. Her labors for the Union and in the administration of the organization of nurses are hardly less important than her services for the insane. She died July 17, 1887.

JULIUS D. DREHER.

Roanoke College, Virginia, presents an illustration different but suggestive, from others more noted. The college is located in the old town of Salem and is under the auspices of the Lutheran Church. The founder had deep religious convictions for its necessity. It is one of the smaller colleges, but one of solid merit and of special interest. Its growth since the war shows the happy results of uniting resources, even if none of them are large. To this result no small contribution has been made, in the effort to establish a college which overcomes prejudice and takes large and just views of human affairs, by the labors of Julius D. Dreher, Ph. D., who is a native of South Carolina, where his home was located, in the track of Sherman's army. Returning from the war he earned the necessary money and graduated from Roanoke in 1871 and was at once called to teach there. He received the usual "A. M." three years later and the "Ph. D." from Williams in 1881. In 1878, when not quite 32 years of age, he was elected president of Roanoke. The college had inadequate buildings and a small attendance, a debt, and little or no endowment, but a history of heroic strength, especially under the twenty-three years of the presidency of the devoted and able Doctor Bittle. President Dreher at once set about, through the United States Bureau of Education, to become acquainted with the larger institutions of superior instruction in the country.

The location of the college was favorable on account of the moderate prices charged there. He therefore set about to make its advantages and necessities known in other communities and other States. Prices were kept down; students were increased; to the open welcome offered by the college, the Indian, the Japanese, and the Korean responded. Slowly, by the unremitting efforts of the

president, funds came mostly in moderate amounts from Virginia, New York, Philadelphia, and New England toward current expenses, for the erection of buildings, and for endowment. Men of national reputation responded to the spirit of the college. President Dreher has manifested hearty sympathy with all of the efforts for the advancement of education in his section, generally writing and speaking of the work going on among the blacks as well as the whites.

JOSEPH HENRY AND THE SMITHSONIAN INSTITUTION.

The great name of Joseph Henry and the Smithsonian Institution have been so long associated in the public mind that few stop to think that the whole vast influence which has brought the two into such close association is due to a benefaction to education. James Smithson was an Englishman who died in Genoa, Italy, the 27th of June, 1829. At his death it was found that his will read:

"I bequeath the whole of my property to the United States of America to found at Washington, under the name of the Smithsonian Institution, an establishment for the increase and diffusion of knowledge among men."

After due process there were turned over to the United States from the legacy in all $650,000. An act of Congress was passed establishing the Institution provided for, August 10, 1846. Joseph Henry was early elected the Secretary or administrative officer of the Board of Regents of the Institution. The officers of the Institution included the President of the United States, the Chief Justice, and specified members of the Senate and House of Representatives, to be elected in each case as provided. It was early announced to be the object of the Regents to assist men of science in making original researches, to publish them in a series of volumes, and to give a copy of each publication to every first-class library on the face of the earth.

In addition to a general work in aiding research, the "Smithsonian" has organized a great museum, both historical and scientific, which has become associated with the capital at Washington and is an object of universal attraction to visitors.

In addition to all other activities of the Smithsonian, it is also the medium of a system of exchanges between the Government of the United States and other Governments of the world. In this great function of the promotion of exchanges it has been reported that 1,175,000 packages have been already handled, including not less than 24,000 separate cases.

Joseph Henry, so closely associated with the Smithsonian, was born at Albany, N. Y., 17th of December, 1797. He was educated at the common school and at the free academy, where he early became professor. In 1832 he was elected professor at Princeton, from which place he came to the service of the Smithsonian.

ALEXANDER GRAHAM BELL.

The name of Bell has become specially associated with the opportunities for improved education among the deaf. Several generations of this name have aided to contribute to the results now so generally recognized, the most eminent of which before the public to-day is Alexander Graham Bell, LL. D., the inventor of the telephone. His grandfather, Alexander Bell, of Edinburgh, was a noted instructor in elocution and the author of several works on this subject. His son, Alexander Melville Bell, carried these studies in the management of the vocal organs still further, and in 1842 announced the formulation of a new theory of articulation and vocal expression. Slowly his theories received consideration. In 1868 he gave his first course of lectures in the United States before the Lowell Institute, Boston, Mass.

His son, Alexander Graham Bell, the inventor of the telephone, was born March

8, 1847, and gave himself specially to the development of the system of physical speech. He settled in the United States as a teacher of deaf mutes. In 1867 he specially began to study the problem of conveying articulate sound by electric currents, and after years of research and experiments completed the telephone in 1876. His studies and labors have greatly enlarged the education of the deaf and dumb. These people throughout the world are the beneficiaries of his efforts. Doctor Howe did wonders in developing the intelligence of Miss Bridgman. Mr. Bell has the satisfaction of seeing these remarkable instances increase in number. Helen Keller, deaf, dumb, and with but a single sense in full development, is proceeding with wonderful results in the acquisition of knowledge as a member of the regular class of her college.

FREDERICK J. CAMPBELL.

An international contribution to the promotion of education has occurred in the life of Dr. Frederick J. Campbell, a native of Tennessee and principal of the Normal College for the Blind, London. Dr. Frederick J. Campbell was born in Franklin County, Tenn., October 9, 1834. While at play a sharp acacia thorn pierced one eye. Inflammation and bad management resulted in total blindness of both eyes. By a curious but interesting struggle the lad went on persistently with his education, there being no institution for the instruction of the blind at the beginning in the State, and completed his preparation for life. He won recognition for his efforts in the State of Tennessee, the State of Wisconsin, and the State of Massachusetts, and by the aid of Charles Sumner and Dr. S. G. Howe went to Germany for the relief of his health and the advancement of his education, and on his return to the States stopped in London, where, by chance, as it were, he became acquainted with the condition of the London blind poor, who were dependent on the charity of others. Dr. T. R. Armitage, who had already done so much for the blind, awakened his interest in their welfare, and the result was the foundation of a normal college. Doctor Campbell succeeded in interesting the most eminent persons in the British Empire. The entire blind population of the realm are continuing to receive benefits from his labors. An enrollment of 160 in the school is now reported. Doctor Campbell gives weight to the declaration that a practical education is a blind man's capital. The blind of the world are his debtors.

EDWARD MINOR GALLAUDET.

The name of Edward Minor Gallaudet has become specially associated with benefactions to education, not by the gift of money or new processes, but by the conservation of well-known and well-established conditions and efforts. His father, Dr. Thomas Hopkins Gallaudet, who is accredited as the founder of deaf-mute instruction in America, was born in Philadelphia December 10, 1787, the son of Peter Wallace and Jane Hopkins Gallaudet. He went to Europe and brought thence to this country what was there known about the education of the deaf mute. His son, E. M. Gallaudet, Ph. D. and LL. D., by a wise course in conservation of the interest in this subject, has succeeded in establishing at Washington the only deaf-mute college in the world, and carrying it forward with the aid of the Congress of the United States to the present time, winning more and more the cordial support of the students of this subject. His contributions to literature have been well received and are effective for his purposes. At different times his testimony has been required in Europe in its bearing on this subject. It is not surprising that this silent class throughout the United States look up to him with gratitude for his effective labors. The Emperor of Brazil, like many other foreigners visiting our shores, became greatly impressed with this development of instruction.

COL. R. H. PRATT AND INDIAN EDUCATION.

The change of sentiment with reference to the education of the Indian has been brought about by a great variety of causes. When the movement was commenced by General Grant in this direction, the United States Treasury was appropriating for Indian education about $20,000 a year. The efforts of General Grant turned public attention in the direction of the wiser efforts of Washington. He advised kindly, honest treatment, and efforts for education. The result is Indian wars are disappearing. Industry in a variety of forms is making a large number of Indians self-supporting. Over $2,000,000 are paid out of the Treasury for Indian schools. The Indian is no longer feared as a savage, but begins to be a part of our Christian civilization. Toward this result the Indian Industrial School at Carlisle, under Col. R. H. Pratt (afterwards General), together with corresponding efforts at Hampton, led the way. The Colonel found the secrets of his lesson in the care of a hundred or so Indian murderers committed to his custody at St. Augustine, Fla. There, in their confinement, they began to have their eyes opened to the advantages of the ways of the white man, and sought to be taught further in his methods. These separate efforts wisely proclaimed the plan to be such as to prepare the way eventually for their own termination and the education of the Indian with the whites for the same citizenship by the same methods.

HON. SAMUEL J. TILDEN.

The question, "Shall I give my money that I have accumulated and intend for the good of my fellow-men while I am alive, or shall I leave it in my will to be so used after my death?" is a question that occasions many persons of wealth great anxiety. Bearing on this question, the facts connected with the will of Hon. Samuel J. Tilden are most instructive. He was a lawyer and an economist of great eminence. His life had been devoted to the study, consideration, and preparation of papers affecting property. No one was considered more astute in this direction. When he died, he desired to devote his property to a great public service for the benefit of the millions in the metropolis of his beloved country. His will was so prepared, but it did not stand the tests of the courts.

The following statement from Hon. John Bigelow gives the facts. Fortunately for Mr. Tilden's memory and for the public, a portion of his heirs have come to the rescue of his great purpose, which was apparently to be defeated.

ESTATE OF SAMUEL J. TILDEN,
New York, June 15, 1892.

Gen. JOHN EATON, *Washington, D. C.*

DEAR SIR: I have your favor of the 26th of February before me, together with your "Special inquiry No. 1," dated January 30. I have been hoping to be better able than I am now, even, to answer your questions, but have decided to send you such information as I have rather than delay further. Instead of filling out your printed "special report" I give the information herein, following, however, the order of your printed questions.

1. Institution, name, location: The Tilden Trust, city of New York.
2. Property: Estimated at about $2,000,000. Of this, about one-half is in railroad stocks and bonds, and something over $400,000 in iron mines—these investments being a portion of the property left by Hon. Samuel J. Tilden. Most of it yields an income. The income of the Tilden trust at present, prior to making any investment in library plant, may be stated approximately at $80,000 per annum.
3. Form of investment found safe and profitable: The trustees of the Tilden trust are content to hold high-class railroad securities. They also believe that bond and mortgage on real estate, when well secured, is a desirable form of investment.
4. Condition of gift and management: No supervision of property and funds required other than by the trustees.
5. Losses: None.
6. Sources of property: The property of the Tilden trust was formerly the property of Samuel J. Tilden. It was obtained by a compromise with Mrs. Laura P.

Hazard, who claimed (as legatee under the will of her grandmother, who was Mr. Tilden's sister) that Mr. Tilden died intestate as to the chief part of his estate, and that she was entitled to one-half of the property not disposed of according to law in his will. By this compromise, made some months prior to the final decision of the court of appeals, Mrs. Hazard received $975,000, and the Tilden trust became entitled to the remainder of any sum to which she might be adjudged to be entitled as heir at law of Mr. Tilden or legatee of her grandmother, Mrs. Mary B. Pelton. Touching "limitations" of gifts, the experience of the Tilden trust indicates the wisdom of making gifts, in this State at least, absolute, especially if it is a gift by will.

7. Losses in settlement of wills: The only experience the Tilden trust has thus far had is that indicated in the above statement. No settlement was reached by the Tilden trust with the other heirs at law. If the purpose of Mr. Tilden as set forth particularly in the thirty-fifth clause of his will had been upheld by the appellate court, the Tilden trust would have had for its library and educational work more than twice the sum it now has. Mr. Tilden's plan has, to that extent, been obstructed and crippled. The thirty-fifth clause of the will was declared void by four judges out of seven in the appellate court. The other three agreed in an opinion sustaining the will. Out of eleven judges who have passed on this question since Mr. Tilden's death in August, 1886, five have written or signed opinions in favor of sustaining the will and six have declared the will to be void as to the thirty-fifth clause, this being the clause directing the incorporation of the Tilden trust and providing for its endowment.

Yours, respectfully, JOHN BIGELOW.

STEPHEN GIRARD.

Stephen Girard was born in Bordeaux, France, May 20, 1750, and died December 20, 1831, at the great age of 82, in Philadelphia, with which city his charities will always associate his name. He was married June 6, 1797, to Miss Mary Lund, who, after contributing to his home life for eight years, became melancholy and, in time, hopelessly insane. His life went on absorbed in business with little outside aid to the best aspirations until its close, and then the city was surprised by finding that his gifts, by will and otherwise, amounted to $7,500,000. In addition to other special trusts for which he carefully provided he gave a fund for a college for orphans, which in 1891 amounted to $15,000,000. His gifts may be said to have given shape to the large gifts which followed in the benefactions of Wharton, Drexel, and Williamson, of the same city.

Mr. Girard rose early and worked late. He spent little on clothes and for his daily needs. He wrote a friend, "I do not value fortune; the love of labor is my highest ambition." Among his leading characteristics was a fondness for children, horses, dogs, and birds. His most noted gift is that which resulted in the college. He said in his will, "I have been for a long time impressed with the importance of educating the poor, and of placing them, by the early cultivation of their minds and the development of their moral principles, above the many temptations to which through poverty and ignorance they are exposed, and I am particularly desirous to obtain for such a number of poor, male, white orphan children as can be trained in one institution a better education as well as a more comfortable maintenance than they usually receive from the application of public funds."

One injunction connected with his will has often been supposed to indicate his opposition to religious instruction. This, it is claimed, was illegal and immoral, derogatory and hostile to the Christian religion, but on appeal to the supreme court of his State it was decided that there was nothing in the will inconsistent with the Christian religion or opposed to any known policy of the State. The will says: "I enjoin that no ecclesiastical missionary or minister of any sect whatever shall ever hold or exercise any station or duty whatever in said college, nor shall any such persons ever be admitted for any purpose or as pastor within the premises appropriated to the purposes of said college. * * * In making this restriction I do not mean to cast any reflection upon any sect or person whatsoever, but there is such a multitude of sects and such a diversity of opinions amongst them that I desire to keep the tender minds of orphans who are to derive advantages from this bequest free from excitement of clashing doctrines that sectarian controversies are so apt to produce. My desire is that all instructors and teachers in the college shall take pains to instill in the minds of the scholars the purest prin-

ciples of morality, so that on an entrance to active lives they may, from inclination and habit, evince benevolence to their fellow-creatures, and love of truth, sobriety, and industry."

DANIEL B. FAYERWEATHER.

There was not a little surprise in the public mind that the estate of Daniel B. Fayerweather was distributed in aid of a considerable number of institutions. Few had a conception of his possessions, and comparatively few apprehended what was in his mind to do with his funds. Daniel B. Fayerweather died in New York City November 15, 1890; was born in Connecticut in 1821. He served an apprenticeship with a farmer, and at its termination learned the shoemaker's trade at Bridgeport. He worked at this trade until prostrated with "shoemaker's colic," when he bought a tin-peddler's outfit and began tramping in Virginia. Where he could not sell for cash he took hides in payment. On the restoration of his health he resumed his trade in Bridgeport. He remained there until 1854, when he entered the employ of Hoyt Brothers, leather dealers. In 1870 he entered the firm under the title of J. B. Hoyt & Co. This firm was afterwards changed to Fayerweather & Ladew. Mr. Fayerweather was noted in financial circles for strict commercial rectitude; he was retiring and economical in habits, but always ready to assist deserving charities. Outside the circles of business acquaintances and personal friends he was but little known. The strategic distribution of his bequests is accounted for by the advice of the eminent Doctor Hitchcock, with whom Mr. Fayerweather is known to have consulted.

Legal questions that have been raised render any final statement of the distribution of his funds, until final action of the court may be considered, unsafe. The following bequests may be specified with some measure of safety: $25,000 to the Presbyterian Hospital; to St. Luke's Hospital, $25,000; $25,000 to the Eye and Ear Infirmary; $10,000 to the Woman's Hospital; $10,000 to the Mount Sinai Hospital, all in New York City, making a total of $95,000. He gave to Yale $200,000, and to the Scientific School $100,000; $200,000 to Columbia College; $200,000 to Cornell University; $100,000 to Williams College; $100,000 to Dartmouth College; $100,000 to Wesleyan University; $100,000 to Rochester University; $100,000 to Hamilton College; $100,000 to the University of Virginia; $100,000 to Lincoln University; $100,000 to Hampton Institute; $100,000 to Maryville College; and $50,000 each to the Union Theological Seminary and La Fayette College, Marietta College, Adelbert College, Wabash College, and Park College, a total of $2,100,000, or, including New York City, $2,195,000. The payments out of the residuary estate amounted, up to July, 1900, to the sum of $2,200,000, with an additional payment of $100,000 to the Northwestern University, making in all total payments to July 1, 1900, of $4,495,000.

The experience in the settlement of estates under wills has furnished many admonitory instances. The American public mind and the action of the courts represent a strong tendency to treat wills with consideration. Under the statutes the will becomes law. Everywhere there is a disposition to regard its terms most rigidly and to follow its directions most explicitly. The action of legislatures and of courts has followed a similar line of exactness with reference to trusts. There has been a determination to find out the significance of trusts and to follow its direction undeviatingly. The wholesome results in these directions are an honor to the country. They may be counted among the most beneficent judgments.

WILLIAM E. DODGE.

William E. Dodge was born September 4, 1805, at Hartford, Conn. In 1821 he became the subject of deep religious convictions and ever after took an active part in religious efforts. June 24, 1828, he married Miss Melissa Phelps, a daughter of Anson G. Phelps, of New York City, and they together constituted a home

consecrated to the best purposes and highest aims. Ever after the home and the church were the centers of his thought. His business ventures prospered. At the outset he became attentive to the wants of others, and was always active in philanthropic work which appealed to him. He shared his large operations. He was active in building and managing various railroads, but withdrew from those that were disposed to disregard the Sabbath. He took a prominent part in the management of missionary enterprises, especially in foreign countries, and became a trustee of the Oahu College, Honolulu, Hawaii, and of the Bible House, in Constantinople, Turkey. He was treasurer of the Protestant College, at Beirut, Syria, for twenty years. He was strenuous in the advocacy of temperance, and took active part in the great organizations promotive of the circulation of the Bible and the establishment of Sunday schools, and in the advancement of the great work of the Young Men's Christian Association. He was widely known by his aid to students preparing for the gospel ministry, and he left in his will $50,000 for the advancement of this work. He was especially zealous in his efforts for the colored people.

His gifts to colleges were widely distributed, and many college enterprises had reason to be thankful for his timely aid, as is well illustrated in the case of Lincoln University, Oxford, Pa., and Maryville College, Tennessee. No exact record was kept of his many gifts. They were said to have reached no less a sum than $100,000 in a year. It is said of him, appropriately, that his supreme and final reputation will be that of a philanthropist. A man of wider charity has been rarely known, or one who worked along so many lines and did so much, unaided and unseen. No form of human want or weakness, no possibility of benefit to others in soul or body, seemed alien to him. He served in the ranks, and was never weary of welldoing. Benefactions so diversified, so lavish, so incessant, and yet so graciously bestowed, his city has seldom, if ever, witnessed.

His sons, Hon. William E. Dodge and D. Stuart Dodge, D. D., responsive to the influences of the home which he established, are following his example, and, in cooperation with his widow, are emphasizing the great opportunities and the use of wealth as occasion offers, in accordance with the principles which guided his life.

WILLIAM THAW.

Of a somewhat similar type was William Thaw, of Pittsburg, Pa., who endeavored to acknowledge the obligation owed by those who have wealth to those who have not, and sought to advance the interests of all classes of society. Like Mr. Dodge he believed that his church had provided ways for service to his fellowmen, and gave largely in support of religious organizations, churches, and colleges, and was especially active in promoting the disposition to give on the part of other men of means. He was cut off in the midst of his usefulness, and there was found, after his death, a record of some of his benefactions, of which the following is a specimen:

Park College	$20,000	School of Design	$5,000
Berea College	7,400	Oberlin College	5,200
Yale College	6,000	Maryville, Tenn	25,000
Wabash College	2,000	Berea College	5,000
Worcester University	5,000	Maryville	5,000
Western University of Pennsylvania	175,000	Jamestown, N. Dak	1,000
Observatory, Allegheny	30,000	Western University of Pennsylvania	100,000
Biddle University	2,500		

His widow has manifested a purpose to use the fortune left her in the same discriminating way.

ALEXANDER STUART, R. L. STUART, AND MARY STUART.

The Stuart brothers and Mrs. R. L. Stuart were examples of those who give from deep religious conviction of duty. R. L. Stuart was born in New York July 21, 1806, and died December 12, 1882. He was married to Mary, daughter of Robert MacRae, who survived him, dying in 1891. Alexander was born December 22, 1810, never married, and died December 23, 1879, leaving his property to his surviving brother, who, unable to fully satisfy his mind upon the details of specific gifts, left his property to his widow. The result illustrates her meritorious disposition of the family property as well as that of the two brothers, who were in business together fifty-one years. All the parties in interest evidently acted together and in harmony. Remarkable adherence to sound principles in the distribution of wealth marks the gifts of the Stuarts from those first made, when the three were alive, until the last named in the last will and testament of Mrs. Stuart. The wisdom characteristic of the family giving when the two brothers were alive, shows no abatement in the distribution made after their death by Mrs. Stuart alone. They were earnest Presbyterians, but gave much outside of their own communion. It was said at the time of the death of Alexander Stuart that Mr. James Lennox and R. L. Stuart were the largest donors to the cause of Presbyterian missions. The paper on which the first Stuart gift was made was found and preserved. It was one of $500. Scarcely a deserving charity can be named to which they did not contribute, and to many of them their gifts were princely. As early as 1852 they gave nearly $14,000, and up to the death of Alexander had given $1,391,000, not one dollar of which inured to their personal advantage, however slightly. R. L. Stuart afterwards, during the years he survived, gave away $1,500,000. Mrs. Stuart also gave freely while she lived, and left what remained of the estate to be divided according to the directions of a carefully prepared will.

The example of the Stuarts should tell no less for good than the beneficence of their specific gifts. A study of their book of gifts would be most instructive. They gave small as well as large gifts. How earnestly they sought so to give as not to pauperize! How often their own workmen were remembered! Their giving as well as their gaining was regarded as a duty.

Their relation to Princeton was specially suggestive. They were not of its alumni, but they seemed to feel a special responsibility for supplying its funds. Were the need of a small addition of land, or a carpet for a room, or a light made known, the Stuarts were ready to be among the special friends to furnish the required funds.

A similar illustration is found in the history of the Green and Marquand families. The occupancy of the presidency by Doctor McCosh may be considered of importance, and in no small degree due to the Stuarts and to those who were connected with them.

A gentleman deeply interested in the grant to missions in Mrs. Stuart's will has made the following analysis of its provisions:

I. Bequests to institutions and societies in the United States:

2 colleges	$125,000
1 theological seminary	300,000
6 boards of societies of home missions, including city missions	630,000
1 board of education	80,000
1 board of church erection	300,000
1 board of publication	80,000
1 board of ministry relief and one minister	90,000
2 Bible societies	385,000
2 tract societies	160,000

I. Bequests to institutions and societies in the United States—Continued.	
11 hospitals and dispensaries	$680,000
1 industrial school	5,000
12 homes for the aged, sick, etc	960,000
1 society for the prevention of cruelty to children	80,000
1 society for the prevention of cruelty to animals	25,000
1 society for the suppression of vice	5,000
Total	$3,905,000
II. Bequests for work outside of United States, board of foreign missions, which carries on 7 colleges, 7 theological seminaries, 45 hospitals and dispensaries, 6 industrial schools, 12 boards of education, 12 boards of church erection, 12 boards of publication	$300,000

The Presbyterian Board of Foreign Missions has at least twelve countries where it operates. It is no figure of speech to say that it controls boards of education, church erection, and publication in each.

It may be justly added that each mission is a society for the prevention of cruelty to children and the suppression of vice. On the other hand, it is fair to allow that one-fourth of the funds of the American Tract Society and one-third of the funds of the American Bible Society are spent in foreign work.

LELAND STANFORD.

The Leland Stanford benefactions to education have a history apart by themselves. A gift was bestowed in part while the benefactors were living, and in part the bestowal was made by will. Mr. and Mrs. Stanford appear to have joined alike in the great benefaction which took form, as understood by the public, at the time of the death of their son, Leland Stanford, jr., for whom the university at San Jose, Cal., is named.

In 1848 Mr. Stanford married the daughter of Dyer Lathrop, sheriff of Albany County, N. Y., whose father was an officer in the war of the Revolution. In his youth Mr. Stanford shared the labors on his father's farm. At the age of 20 he began to study law. A fire destroyed his library and upset his plans, so that he joined his brothers in California, and in a branch business developed unexpected business ability. In 1860 he interested himself in politics. Prior to his service as governor, he had been chosen president of the newly organized Central Pacific Railroad and devoted himself with great energy to its construction. His investments and plans were successful. The story of his triumphs is well known.

When he and his family, in 1884, were in Florence, Italy, his son was taken ill with typhoid fever, and died in spite of the most tender and skillful care. The following incident greatly impressed Mr. Stanford: While he was watching by his boy's bedside, wearied out, asleep, he dreamed that his son said to him, "Father, do not say you have nothing to live for; you have a great deal to live for; live for humanity, father." While he was thus dreaming the child died. The consequences of his death to Mr. Stanford were greatly feared, but his mind turned strongly to this dream, and he and his wife joined their thoughts and purposes in consecrating their fortune to the establishment of the Leland Stanford Junior University.

Before doing this they had become distinguished for their collections in art and their gifts to education. Mrs. Stanford had given $100,000 to the Albany memorial in New York as a token of her affection for the place of her birth. They had given largely in various directions in aid of education. Mrs. Stanford was an especially strong supporter of the Golden Gate Kindergarten under Mrs. Sarah B. Cooper, giving at one time $100,000 to the fund. The joint consecration of their remaining fortune to the university has been steadily carried forward to the pres-

ent. Mr. Stanford was not controlled by the gratification of any ambition, or by the triumphs of politics; and his wife, with equal devotion to the university, has, for its benefit, ignored all luxuries and all other ambition. The president of the university, David Starr Jordan, LL. D., states that the amount bestowed by the family may be put down as $30,000,000.

In his address, opening the university, Mr. Stanford said:

Mr. President and faculty and students of the Leland Stanford Junior University, I desire to say that the few remarks I am about to speak are for Mrs. Stanford as well as for myself, for she has been my active and sympathetic coadjutor and is cograntor with me in the endowment and establishment of this university. In its behalf her prayers have gone forth that it may be a benefactor to humanity and a blessing. It is through education that the best future of men is to be ascertained and attained. The Creator has not given men rational wants without giving the means of supplying them. Men have only to apply their labor intelligently and learn to control the natural forces that surround them to have at their command all the comforts of life. Man's true happiness is to be attained not merely by satisfying his physical wants, but in the development of his intellectual, moral, and religious natures. It is through the development of these that the high standard which the Creator has made possible is to be reached, and when this standard is attained the result will be the establishment and general practice of the golden rule and the relation of greatest happiness. I hope, therefore, that you will keep before you the highest possible standard, that you will strive to attain it, and fully realize that its attainment is the object of education.

JOHN M'DONOGH.

John McDonogh was born in Baltimore, Md., in December, 1779. He received a fair education, and at the age of 17 became a clerk in the mercantile house of William Taylor, where he received a thorough business training. At the age of 21 he removed to New Orleans, where he always resided until he took up his residence at McDonoghville.

When Christ Church was organized in 1805 he was made one of the first vestrymen. He wrote his noted rules for his guidance March 2, 1804. In 1850 he said:

It will be permitted me to observe that I am and have long been convinced that the first, most imperative, and sacred duty which each and every government on the earth is bound to perform (and which rulers and legislators can not avoid the performance of, but are under the heaviest responsibility to Heaven to perform), is better provision by law for the education of every child within the limits of their respective governments. To that effect parents and guardians of youth should be made, under heavy penalties, to send their children to school, supported (under a system of general taxation on real estate) at the sole expense of the Government.

The benefits of his estate were divided between Baltimore and New Orleans. In New Orleans the fund has been devoted to the erection and equipment of schoolhouses. These houses number 28, and in them have attended over 70,500 pupils annually. There still remains some $200,000 of this fund. In Baltimore the money was expended for the erection of a reform school.

The magnificent results of Tulane University are due to the benefactions of a gentleman, who, born and reared elsewhere, gained his wealth in the city of New Orleans.

JOHN LOWELL, JR., AND THE LOWELL FREE LECTURES.

The system of the Lowell free lectures in Boston furnishes an illustration of an important benefaction to education. Mr. Lowell not only inherited wealth, but noble qualities. Death invaded his happy home; he found himself without a family, possessed with large wealth for the time, and gave about $250,000, or one-half of his property, "to found and sustain free lectures * * * for the promotion of the moral, intellectual, and physical instruction and education of the

citizens of Boston." Some male descendant of John Lowell, his grandfather, was to hold the office of trustee. Said Mr. Edward Everett:

> The idea of a foundation of this kind, on which, unconnected with any place of education, provision is made, in the midst of a large commercial population, for annual courses of instruction by public lectures, to be delivered gratuitously to all who choose to attend them, as far as it is practicable within our largest halls, is, I believe, original with Mr. Lowell. I am not aware that among all the munificent establishments of Europe there is anything of this description upon a large scale.

None of the fund was to be invested in buildings. The citizens of Boston rejoice in his beneficence to this day.

GEORGE PEABODY AND THE PEABODY EDUCATION FUND—BARNAS SEARS—J. L. M. CURRY.

The name of George Peabody is conspicuously and indissolubly associated with benefactions to education. His life may be said to have been devoted to business and to the distribution of his fortune. In the energetic application to the accumulation of his estate, his gifts were not such as to point to so large benefactions at the last. Indeed, the habit of giving extensively came late, but when he began to distribute his fortune he exercised all the skill and wisdom which he practiced in its accumulation.

George Peabody was born in Danvers, Mass., February, 1795, and died in London, November 4, 1869. He was apprenticed at the age of 11 to Sylvester Proctor, who kept a country store in Danvers. In 1811 he went to Newburyport and joined his older brother, David, in a dry-goods and draper shop. He went subsequently in the same year to Georgetown, D. C., where he became the commercial assistant of his uncle. He remained with him two years, and then became a partner of Elisha Riggs in a wholesale draper business. In 1815 the house was moved to Baltimore and branches were opened in Philadelphia and New York. In 1827 he went to London on business and soon after established himself there as a merchant and money broker in the firm of Peabody & Co. In the distribution of his wealth he was considerate of those related to him.

The great lines of benefaction which he originated are still proceeding with such efficiency that hardly a report at any date can be made that shall be fully adequate to the situation before some new development will require restatement.

In the midst of his many benefactions his gifts of homes for the London poor should not be overlooked. These homes are large four-story buildings covering an entire square and inclosing an open court which is used as a playground for the children and for gardens. The buildings are good, substantial edifices with all the up-to-date modern improvements for ventilation and cleanliness. The halls and corridors are well lighted and furnished with iron traps into which all dirt and rubbish is swept, and dropping to the ground floor is carted away, thus allowing no accumulation of filth. The top floor is used as a laundry and for baths. The building is divided off into apartments of from one to three rooms according to needs. Each is furnished with water free of charge, and gas can be obtained at the cost of the occupant. A nominal rent is charged in order to keep up the fund and pay necessary expenses. The plans are arranged so that not only will the buildings be kept up, but others added as circumstances warrant.

Much might be said of Mr. Peabody's gifts to education. Anyone contemplating bestowing money upon similar objects may well study the letters in which he presents his gifts. How these benefactions at interesting and important centers encourage research and reading, extend the boundaries of knowledge, and multiply its possessions, may be traced to the history of the institutions established and aided at Thetford, Danvers, Andover, Salem, Georgetown, Kenyon, Harvard,

Yale, and Baltimore. He gave nothing to pauperize. All his gifts take into mind the principles in which gifts to mankind do the most good. "Schools," he said, "could do but little good for the industrious poor of the English metropolis until they were better housed." His penetrating glance fastened at once upon the special need of the capital, and, in supplying the remedy, his head and heart united in doing the very best that could be done.

The lofty purpose which occupied his mind in his gift in aid of education in the South is indicated in his letter dated Washington, D. C., February 7, 1861, and addressed to Hon. Robert C. Winthrop, of Massachusetts; Hon. Hamilton Fish, of New York; Right Rev. Charles P. MacIlvaine, of Ohio; Gen. U. S. Grant, of the United States Army; Hon. William C. Reeves, of Virginia; Hon. C. Clifford, of Massachusetts; Hon. William Aiken, of South Carolina; William M. Evarts, esq., of New York; Charles Macalester, of Pennsylvania; Hon. William A. Graham, of North Carolina: George W. Riggs, esq., of Washington, D. C.; Samuel Wetmore, esq., of New York; Edward Bradford, esq., of Louisiana; George N. Eaton, esq., of Maryland, and George Peabody, esq., of Massachusetts. The name of Admiral Farragut was originally included, but was omitted from the printed list and afterwards inserted. His heart was moved to the educational needs of those portions of our beloved country that had suffered from the destructive ravages and no less disastrous consequences of the civil war. He says, "With my advancing years my attachment to my native land has but become more devoted." He believed in a glorious future, united and prosperous; but to make this prosperity more than superficial our moral and intellectual development should keep pace with our material growth. He says, "How difficult it will be for the almost impoverished people, for some years, without aid, to be able to effect such progress in education as every loyal citizen of his country must earnestly desire." He remarks, "I feel most deeply therefore that it is the duty and privilege of the more wealthy of our nation to assist those less fortunate." He speaks of his gifts as a discharge of his responsibilities in the matter. He gives the fund, the income of which, in the discretion of the board of trustees, is to be used for the promotion and encouragement of the moral and intellectual training of the more destitute portions of the South and southwestern States of our Union, adding, "My purpose is that the benefits shall be distributed among the entire population, without other distinction than their needs and the opportunities of usefulness to them." In making this gift he modestly says, "I am aware that the fund derived from its care can but aid the States which I have wished to benefit in their efforts to diffuse the blessings of education and morality." But who ever before, it may be remarked, had ever seen private individuals aiding States or who can comprehend the significance of this aid?

It was easy to see that a multiplicity of questions would confront the board. The situation was without parallel. There were no precedents to guide them. None of the States contemplated, had ever established, or conducted a vigorous system on improved lines for universal education of the whites. The very existence of negro slavery would be threatened by the instruction of slaves. Laws with severe penalties had been enacted against teaching persons of negro descent. The best work had been done in colleges and universities for the education of young men. In some sections special attention had been given also to the education of young women, but the war had generally closed these institutions for a considerable period and often destroyed their property and the funds of every character devoted to education. What a spectacle to contemplate! The situation was further complicated by questions growing out of the emancipation of the negro. Race prejudices were naturally excited. General instruction for whites had been previously given those families that could pay for it. Now the vast property in slaves had gone, and poverty reigned in place of affluence. Who could

pay as before? Should not this God-given aid go to those who most likely would prize it? Shall it not be limited to the whites? Shall it not be limited to the sons and daughters of gentlemen now impoverished? Had these limitations been adopted, although the results of the gift would have been beneficent and of great consequence, how far short they would have fallen of what has been accomplished! Mr. Peabody had favored the advancement of knowledge among all classes. He had said that his intention was that the benefit should be distributed among the entire population without distinction. Fortunately, there were in the board not only those who knew the situation in the South, but Mr. Winthrop and others who were familiar with the past work done in education in the entire country. The best sentiments before the war and after it were represented. All sought to find out the best way to secure the best results. Fortunately, Mr. Winthrop was in touch with the work of Dr. J. D. Philbrick, superintendent of the Boston schools, and Dr. Barnas Sears, secretary of the State board in Massachusetts and president of Brown University, and he sought their suggestions.

At the meeting of the Peabody board March 20, 1867, Doctor Sears was elected their agent. He was believed to have the best general collection of works on education to be found in this country. His familiarity with foreign systems of education and his consummate administrative wisdom were at once brought to the command of his board. In Massachusetts, in succeeding Horace Mann as secretary of the board of education, he had been enabled, with peculiar success, to put in operation the improved ideas of education which Mr. Horace Mann had in his eloquence and his writing advocated for the benefit of the people. Without Mr. Sears's skillful direction of affairs very much of Mr. Mann's advocacy would have evaporated. He realized the sublime responsibility to which he was called and gave himself wholly to the carrying out of the trust. He immediately began his studies and became acquainted with the wants of the States and the men who were trying to meet them. How often he was an angel of light! The children and youth were everywhere, money was wanting for their education, often the sentiment needful for the sacrifice required to secure it was missing. In how many cases the situation seemed hopeless until Doctor Sears arrived with his message and the Peabody money, and thus a clear way appeared to have schools and means to aid in paying teachers. Hopes sprung up; unexpected efforts were made; sacrifices followed. Sometimes common schools were unpopular, or the coeducation of boys and girls, or the instruction of the blacks, or the hours of attendance, or uniformity of text-books, and many other things that were essential to school work. There would be divisions and arguments.

It was early desired to limit gifts to centers of population—villages and cities—in the well-founded belief that if good schools were conducted in these centers the country districts would seek similar benefits according to their circumstances. Perhaps all of the force of Doctor Sears's logic and persuasion in public addresses and private appeals, together with the efforts of the best friends of education, would fail to secure the action in the village or city, but when the Doctor's offer of aid, as he so often declared it, of $100 to a village that would secure or raise $300 and establish free schools on the union graded or improved plan for the benefit of all children of school age, was made, all opposition or indifference would vanish. Hope would be created, action begun, and shortly the schools, perhaps imperfectly housed and furnished at first, would begin their work, gather and train children, make their own argument, convince the public, and set in motion a course of school administration to go on improving while our free institutions endure. Under the establishment of common schools, in how many southern cities and villages would this general disposition be substantially true? How much opposition was quieted. How much affirmative action, even to great personal sacrifice, was secured. In how many instances the highest essential character was imparted

by the young men and young women who became impoverished by the war and who became devoted and successful teachers.

In the distribution of aid from the fund every opportunity was seized to advance and improve the qualifications of the teachers. Money was given to aid in the establishment of normal schools and to secure attendance upon them. Institutes were promoted and aid given to secure for them the best instruction. At first they were held for days and then prolonged to a month, giving many a teacher a start in pedagogical acquisition, destined to go on as long as they remained in the profession. Year by year the school attendance increased, the qualifications of the teachers advanced, better houses were built, better text-books were introduced, better methods of instruction prevailed, the amount of money appropriated by the States was larger. The schools yielded their fruit in the improved character of the young, and public sentiment became better satisfied and more positive in demanding efficiency in educational work and the people were more cordial in bearing the taxation necessary. As the policy of towns and States became fixed in favor of the support of common schools the Peabody trustees began to consider the means of continuing their aid in the most effective way, and it was decided less and less to bestow upon towns and cities and more and more to concentrate upon the promotion of qualifications of teachers. This was done by offering to join with some State that would cooperate in establishing normal schools of high order, to gather young men and young women for examination and meet their expenses by appropriation from the Peabody fund. Tennessee accepted this offer, the buildings and property of the university at Nashville, guarded and saved from the ravages of war by the excellent chancellor, Rev. J. Berrien Lindsey, M. D., D. D., LL. D., were offered and accepted, the chancellor bearing no small part in bringing about the result.

Doctor Sears from the first had been indefatigable in his labors, travels, and addresses; he had written much also for the press to enlighten public sentiment. Every officer and teacher in the great revival of learning found in him a very appreciative friend and tower of strength; but his labors told upon his health, and he died at Saratoga Springs July 6, 1880, as the teachers of the country were gathering at their annual meetings. All felt that a great educator had fallen. The history of his life should be cherished by all friends of universal education. Born in Sandisfield, Mass., November 19, 1802; graduated at Brown University in 1825, from Newton Theological Seminary in 1829; he was pastor two years at Hartford, Conn.; then professor at Hamilton Literary and Theological Institution; afterwards at Madison, and later at Colgate, where he remained until he went to Germany, where he assisted in inaugurating Baptist churches. Returning to America he became professor at Newton Theological Seminary and later its president. In 1848 he was elected secretary of the board of education of Massachusetts, where he remained until 1855, when he became president of Brown University, doing there some of his best work as educator; from that position he resigned to accept the agency of the Peabody fund, as above.

Naturally at the outset of the work under the Peabody trust the question arose, Shall the aid be rendered to the impoverished families of culture possessed of wealth in time of peace, or shall the aid be bestowed for the benefit of the establishment of common school systems of education? The question was fundamental and most serious. The necessity in all directions was very great. Doctor Sears's view was clear and positive that the aid should be rendered in cooperation with the establishment of systems, State and local, and, as it eventuated, General Grant's vote determined the action in favor of school systems.

What could be done to fill Doctor Sears's place? Who was the man for it? The Peabody trustees felt their special responsibility, but they were relieved by the suggestion left by Doctor Sears. The situation was greatly changed. The prin-

ciple on which the trust was administered was accepted. In a sense the constitutions and laws of the South had adopted improved ideas of public education. In a general way the best principles in the organization of schools were sustained by the people and the best methods of instruction were favored by the teachers. Among the teachers and officers was a large body of people who had undertaken school teaching as a profession. General Lee had become president of a college. These teachers were everywhere seeking the best for the schools, but there were many perils to encounter. Questions of race and taxation embarrassed the administration. It was specially important that the agent should be in accord with what had been done, and thus familiar with the best plans in education, and at the same time be able, with the least distrust, to continue the policy of the trust and carry with him public sentiment in spite of any reactionary measures that might be broached here and there. All appeared to agree with Doctor Sears that the Hon. J. L. M. Curry, LL. D., of Richmond, was the man. He was born in Liberty County, Ga., June 5, 1825. His family removed to Talladega, Ala., in 1838. He graduated at the University of Georgia in 1843 and Harvard Law School in 1845. He was a private in the Texas Rangers in the Mexican war in 1846. He was elected in 1847 to the legislature of Alabama. In 1853, 1855, and 1856 he was a Democratic legislator. He had no opponent to his election to Congress in 1857, and was reelected, serving until 1861, when, with other Alabama Representatives, he resigned. He represented Alabama in the Provisional Confederate Congress and in the First Confederate Congress. In 1864–65 he served in the Confederate army as lieutenant-colonel of cavalry under Lieut. Gen. Joseph E. Johnston. When the war closed he was ordained and became a Baptist minister. In 1866 he became president of Howard College, in Alabama, and was professor of constitutional law, philosophy, and English literature in Richmond College in 1882–1885.

Since he assumed the Peabody agency no ground has been lost in the work of the fund. No one has thought that any other man could carry on the work so well. His support of the measures of peace have been as ardent as his support of the efforts to establish the Confederacy. The excellence of his character, his large and varied learning, his ability as a writer, his personal familiarity with the South, and the general public's confidence in him united to give the greatest effectiveness to his labors. No one has spoken so many times to the various Southern State legislatures as he has done; no one could find encouragement from him who has wanted to go back to the things that have been forever laid aside. He threw his efforts always in favor of the best things for the South. He could speak to all from a Southern standpoint with great plainness. He was appointed minister to Spain, and later he was commissioned by President Roosevelt to convey our sentiments to the inauguration of the new King of that country. Since President Haygood, of Georgia, retired from the agency of the Slater fund he has also been agent of that important trust, so thoroughly in accord with the Peabody plans and efforts. So wise has been the manner of administering the Peabody trust that had the amount expended been many times as great and the whole business bestowed on education without condition and without efforts, the results would have been far less than those which have been attained. Thus it will be said that the manner of administration has done more than the money itself.

The gifts of Mr. Peabody have been enumerated as follows:

To the State of Maryland, for negotiating the loan of $8,000	$60,000
To the Peabody Institute, Baltimore, Md., including accrued interest	1,500,000
To the Southern education fund	3,000,000
To Yale College	150,000
To Harvard College	150,000

To Peabody Academy, Massachusetts	$140,000
To Phillips Academy, Massachusetts	25,000
To Peabody Institute, at Peabody, Mass	250,000
To Kenyon College	25,000
To Memorial Church at Georgetown, Mass	100,000
To the Homes for the Poor in London	3,000,000
To libraries in Georgetown, Mass., and Center, Vt	10,000
To Kane's arctic expedition	10,000
To different sanitary enterprises	10,000
To unpaid moneys advanced to uphold the credit of the States	40,000
Total	8,470,000

In addition to the above, Mr. Peabody made a large number of donations for various public purposes, ranging from $25,000 to $100,000 and extending back as far as the year 1835. The amount of property left by him at his death is estimated at about $4,000,000 in value. With the exception of a few bequests in the will, this amount was directed to be distributed among his relatives, including one brother, one sister, and fourteen nieces and nephews. On his last visit to this country he divided among them $1,500,000, and the property left at his death was to be distributed in the same proportion as was awarded by him in that gift. In the selection of the objects of his bequests he consulted specially with his wisest friend; the scope of his views is to be noted, as well as the fact of the relation of the object selected to something in his experience. His life was divided between America and England, between the North and the South, and so was his fortune. He did not forget his kindred, nor did he expend his fortune on them. He took care of the management of it, sure that he was putting it in the right place. He did not tie his gifts up with embarrassing restrictions. He appeared to devote to the disposition of his fortune the same acumen as had characterized him during its accumulation.

DR. D. K. PEARSONS.

Conspicuous in the history of the private gifts to education is the name of Dr. D. K. Pearsons, of Chicago. He has been a worthy example of those giving with care. He has not given impulsively or inconsiderately. He has been obliged to negative many appeals. He has not only been considerate of the character of the men who have made appeals to him, but considerate of the conditions which they represent. He has acted on a principle of giving which is worthy of all commendation.

It is best, perhaps, that his story should be told in his own way and his own language.

Called upon somewhat unexpectedly to fill a gap in a conference, in answer to the question, "What to do with money; how to use it?" he made the following statement:

In order to illustrate my subject so that you may clearly understand it, I shall introduce several object lessons. I am going to take you on a long journey to see the places where we make use of money. I shall also bring in a little history, incident to the places we are to visit. I shall be under the necessity of frequently using the pronoun "I." An old man, approaching fourscore years, has the right to make himself the hero of every story he tells. I am going to tell you what I have done, for a particular object, not because I am proud of it or vain about it—neither do I pose as a benevolent man, remember that. I am a thrifty and frugal old man. I have labored nearly eighty years to make money, and I have made it, and honestly, too.

The statement may seem strange to you, that I do not pose as a benevolent man. I have no benevolence in me—not a particle. I am the most economical, close-

fisted man you ever put your eyes on. You can see it in my face—it is there. I do not think I ever foolishly spent but $20 in my life, and then I was ashamed of myself. I never went to a horse race, or a football game, or a baseball game, over which our students all over the country are making such consummate fools of themselves, and, by allowing which, the presidents and faculties are making idiots of themselves.

I am doing all that I am doing on business principles. After working hard and practicing rigid economy for seventy years to lay up money, I said to myself: "What am I going to do with this? I can not carry it out of the world in my dead hands. Coffins were not made to carry money in. I have got to leave it; that's the way to look at it. Now, what shall I do with it?"

I looked around Chicago and helped to build a hospital; helped two theological seminaries with $3,000 or $4,000; helped the Young Men's Christian Association and the city missionary society and other institutions. But that did not satisfy me. I wanted to help the poor boys and girls of our country. I wanted to lay up something for them to live on while getting an education. I had been deprived of a college education through poverty, and I wanted to fix it so that these boys and girls, the sons and daughters of wage-earners, could have the privilege of a college close to them—so that they could get a liberal education.

For this purpose I turned my attention to 16 different colleges. I did not start a single one, and I never will; we have enough of them. All we need to do is to build up what we have. There are about two places in America where they have need of a college to-day—one is Montana and the other is Oklahoma—and some time they will have them, too. We want to make the colleges we have better; give them endowment so that they can enlarge their curriculum, pay their teachers, and meet the exigencies of the time.

So I looked around, and traveled some, too. Mind you: this was business; no benevolence in it at all. What shall I do with that money—find places for it where it will elevate, where it will be used for God and humanity?

OLIVET COLLEGE.

Now I will take you on the journeys I have made. Let us begin right here in Michigan. I received a letter from President Sperry, of Olivet College. 12 pages long. Sperry is a good fellow. What did he say? That letter was a declaration in equity; it was a regular "leader." It ran about as follows:

"You came into Michigan a few days ago and bought 16,000 acres of timber land and paid for it. You took that magnificent pine timber out of Michigan and converted it into money and you left nothing behind but the bare, white, sand dunes, that will produce only such things as chokecherries. Timber will never grow there again. Now, in equity, return some of that money to Michigan."

I replied: "You raise $75,000 in Michigan—you can not go all over the world to raise it, but raise it here in Michigan—and I will give you $25,000," and he said, "It is a bargain."

He was in my office the other day and said he had it all except $20,000. Thus Olivet College is about to stand up $100.000 better off; and with this endowment the efficiency of the college will be greatly increased. Nothing will give me more pleasure than to make out that check for $25,000 for President Sperry.

BELOIT COLLEGE.

But before we start on our long journey, let me, by way of reminiscence, mention one incident from personal experience. In 1851 my wife and I took our first trip to the West. Our destination was Janesville, Wis. We passed through Michigan on a strap rail, and traveled to Elgin, Ill., which was the terminus of the railroad, and there we took a muck wagon to our destination, passing through Beloit. We traveled through cold and mud—rich mud, too—but on reaching Beloit there was a river. Our horses had to swim the river, and we had to stand on the seats to get over. We stopped at a little wooden tavern to rest. Beloit was but a small hamlet then. When we started on for Janesville one of those big, burly fellows who always get into a new country climbed into the wagon for a ride.

As we drove along we saw a brick building going up, and I asked the man, "What are they doing here?" "Why, they are some Yankee cranks building a college," he answered. That rather hit me. When they call me a Yankee I take off my hat and bow, and when they call me an old Puritan I make three bows. On the way to Janesville that man cursed everything that was good, and I stood

up for Christian education the best I knew how. When we got to Janesville I shook my fist in his face and said, "Old fellow, I am going West, and in a few years I am going to get rich, and when I do I am going to help lift up these colleges that these 'Yankee cranks' are building up." I had my eye on Beloit at that time.

Time went on and my 70 years rolled by, and nine years ago I began. The first proposition I made to Beloit College was this: "I will give you $100,000 if you will raise $100,000." (I make everybody work a little, and that is the right way to do.) In six weeks they raised that $100,000 and I had to draw my check. I was so well pleased, and the institution was such a grand character-building institution, that I went to work and built them a science hall, the finest in the West. It cost me $60,000 in cash. But I wasn't quite satisfied with that, so the next year, seeing that the boys had to pay from $3.50 to $4 for their board, I built them a dormitory costing $25,000. Now the boys can live on $1.50 a week. I wasn't quite satisfied with that, for they were good fellows, so I said, "Look here, you haven't got quite money enough; you want more endowment; you want better professors. Now, you raise $150,000 and I will give you another $50,000." So last commencement President Eaton stepped in and said: "Here is $150,000 in cash—not Kansas mortgages; no sand dunes, no swamp lands, but cash." So I gave him my check for $50,000, and that closed the deal.

They established coeducation, and that pleased me. They were going to have the girls come in, but they had no cage to put them in. I said, "Get to work and build the finest building you can for 75 girls, and be sure you get a good many Mary Lyons and Frances Willards among them." So I gave them $30,000 for a beautiful dormitory, and it is now occupied by 65 young ladies. That was a very pleasant thing to do and I am rather proud of it. You needn't tell me I am a good fellow—I know I am.

Nine years ago there were about 60 students in Beloit College and about 100 in the academy; now they have more than 80 in the freshman class and more than 200 each in the college and academy. That is the difference between the situation then and now.

DRURY COLLEGE.

Now, let us go down into Missouri. There is a college down there called Drury College, situated in Springfield, in the Ozark Mountains. Missouri was a slave State a few years ago, and they were not awake to the subject of education. They have waked up now. Drury College was started by a missionary named Drury, from Olivet. They struggled along for a few years in debt, begging, their teachers not paid, and all that. I said to them, "You raise $150,000 for endowment (I make all do something) and I will add $50,000 to that sum." They went to work and raised it quite readily. Now the college is full to overflowing. So I told them the other day, "You go to work now and put up a college building. Build a good one, with some rooms for the sciences separate from the others. Build it to cost $50,000. You put in $25,000 and I will cover it with another $25,000." The president is working on the proposition now.

COLORADO COLLEGE.

Now let us travel 1,000 miles to Colorado Springs. About thirty years ago I camped one summer with the Ute Indians, where there was nothing but a little hamlet. A missionary started an academy and college there, and he worked and dug and toiled, but they did not get along well. By and by there came along the right fellow, a bright, smart young fellow by the name of Slocum, and I had confidence in that young man. I believed that he could make the college worth something. I said to him: "Slocum, you raise $150,000, and I will pay you $50,000 down." He thought awhile and finally said he could not do it. There were rich men all around there—12 millionaires on one street in Colorado Springs. What are they saving their money for? Saving it to ruin their boys and girls and carry them to destruction. I said to them: "Work three years, if necessary, to raise $150,000."

They sent me a bound book, and in that book there were 1,000 names—the names of all the individuals who had contributed toward that $150,000. I have it now. I always require such a list. And then I required from the three best business men of Colorado Springs evidence that they had raised the $150,000 and had the money in hand. No getting around it. Everybody must come right up to the business mark. Now what have they? They have a crowd of students. They come 300 miles, with their packs on their backs, from the mountains and the plains, and they crowd in there, eager for an education—and they get it.

PACIFIC UNIVERSITY.

Now, let us go about 600 miles farther. Let us go to the Pacific coast, about 20 miles from Portland, to a place called Forest Grove, where George Atkinson, an old schoolmate of mine in Vermont, went fifty years ago. He traveled around by Cape Horn, and was six months in getting there. As soon as he was properly settled he started an academy and in a few years a college, and that has had the same trouble all the way through—in debt, teachers not paid, people sick of being begged for the college. I wrote President McClelland and said: "In memory of George Atkinson, my old schoolmate, and in memory of Mr. Marsh, who was president for many years and died there, I will give you $50,000 if you will raise $100,000." They undertook to erect a college building, and they got it about so far and then stopped. I said: "How much money will it take to complete that building?" They replied, "Fifteen thousand dollars." I sent them a check for $15,000, and they put that building in fine shape. They held a jubilee in July, and I have a detailed account of what took place there. They are about the happiest people on the face of the earth.

Now, is that not a good way to use money? If you can find any better I should like to have you tell me about it. But we must hasten on.

WHITMAN COLLEGE.

Let us go 300 miles east and we come to Walla Walla. What is the history of that college? Marcus Whitman, one of the greatest missionaries and one of the noblest men that ever walked the earth, went there in 1842 with his wife. Theirs was the first wagon that ever crossed the mountains. They settled there among the Indians. He had an Indian school and it was prosperous and flourishing. It was no man's land at that time. No one knew whether the British or the Americans owned it. There was a magnificent empire up there, comprising Washington, Oregon, and Idaho, and that shrewd and patriotic Marcus Whitman saw that it was a country of great value, with its mighty forests, its fertile plains, its lofty mountains, its mineral treasures.

In the dead of winter he, with his pack mule and guide, traveled 4,000 miles to Washington, D. C. When he got there his hands and face were frosted, but his head was all right. He went before President Tyler, and found that Webster was about trading the whole country off for some fisheries off the coast of Nova Scotia.

Whitman said: "I am not here for office: I am here to tell you that that is a magnificent country, and it belongs to the United States, and we must hold it."

"Oh," replied Webster, "it can never be settled; there is not even a wagon trail."

"I have taken a wagon over the mountains, and I took my wife along with me, and so I know what I am talking about. I came here for the purpose of saving that country," said Whitman.

The next spring he took more than 1,000 people from St. Louis, Mo., and Illinois, and 1,000 cattle with him over the mountains to settle in that beautiful country.

The enemies of civilization were jealous of that smart man, and they incited the Indians to kill him. They did kill him, but he left another missionary behind—a man by the name of Eels. The best monument to be erected to Marcus Whitman was to build a college in his name, and such a college was built, costing $16,000, a very ordinary building.

After struggling along for a few years they were completely stranded—mortgage for $15,000. I had written them that I would give them $50,000 if they would raise $150,000. They did not make a move. A man came into my office one day and said his name was Penrose, the president of Whitman College. He said they were $13,500 in debt, and that there was a mortgage on the building, and that he didn't see how it was possible for them to raise $150,000. "And," said he, "we can't live without it." I then sat down and wrote a check for $13,500. "Now," said I, "send that out and pay the teachers and clean it all up."

That was four years ago last June. They had then about 40 pupils. Now what are they doing? They have 10 capable young men who are professors. They have one young man, a professor of elocution and oratory, who eight years ago was a sheep herder on the plains of Utah. His father and mother were Mormons. He came to Illinois and educated himself and took the first prize in the interstate oratorical contest, a $100 prize.

You will also be glad to know that they have the $200,000 endowment and are getting 7 per cent for it there. They have gathered in about 250 young men and women, some from Idaho and some from Montana. Yet they are poor, they must be educated, and they must have a home where they can live very cheaply. I

believe students can live, with a good dormitory, on $1.50 a week, or about that amount. Yet they need more buildings. The good people of Washington built a monument of granite to Marcus Whitman on the ground where they buried him. Now I propose to build a monument. I shall put up a building 180 feet long and 60 feet wide and two stories high, with all the appliances and appurtenances of a first-class college, as a monument to Marcus Whitman. Now, do not suppose I am going to build that building without those rich fellows out there doing something. They have got to contribute. The condition is that they must build the dormitory for these poor boys who come in from the mountains and plains, where they can live cheaply, and they must do this before I begin the monument. And they will do it, for they have noble men and women in that fair State, and it is going to add 5 per cent of value to every acre of property to have that monument right there in the center of Walla Walla. Now, do you suppose I am going to let those rich fellows hug their money and let the poor boys and girls starve while acquiring an education? No; they must do their part and become the constituency of the college.

I would like to say a great deal more about Whitman College. I like it. I like it because it is educating a class of boys and girls who could not be educated without it. They could not get the money to go off to college; so they need it right there. These boys and girls are going to be the bone and sinew of America by and by.

If you would know more of this old Christian hero, Marcus Whitman, and the grand work he did for the cause of Christianity and patriotism, read Doctor Nixon's book, "How Marcus Whitman Saved Oregon." It will incite and encourage young Americans along the best lines of thought.

BEREA COLLEGE.

Now let us go down to Berea, Ky., among the foothills of the Cumberland Mountains. In this region of the South there are 5,000,000 or 6,000,000 mountain whites, of Scotch-Irish blood—grand, good blood—noble men and women, although ignorant, with large families of children growing up in ignorance and idleness. Berea College was started many years ago. I went down there to the commencement four years ago, and was never so much interested in all my life; I will guarantee that there were 3,000 horses hitched on the campus, and 5,000 people there from the mountains. They are mountain whites. I am a mountain white, and I was once as poor as they are, and as ignorant. I am from the mountains away up in Vermont, where they have to shovel snow about five months in the year.

When I announced that I would give them $50,000, if they would raise $150,000, I never saw anything like it. Those old mountaineers wept, they were so happy.

There is something to these hardy old mountaineers. Do you know that they turned the tide of battle in the civil war? They stood like a wall of adamant in the midst of the conflict between the North and the South, and all their sympathy and bravery were on the side of the North. Do you know that the men who planted the flag on Lookout Mountain were these very mountaineers? They were. They are brave people.

SCHOOLS IN THE SOUTH.

I took a trip last winter to Asheville, N. C., and looked over the educational situation in the South. I want to tell you something, and I would tell Mason if he were here. The colored people of the South to-day are better cared for in the matter of education than are the mountain whites. They have excellent schools, and they are making great progress. And now I will tell you one thing more, and that is that during the next twenty years you will hear appeals for the mountain whites of Kentucky and Virginia ringing out from the pulpit and the press. They deserve an education. They deserve much more from us for whom they have done so much. This is a subject that is going to be agitated for the next twenty years, and I am going to do all I can for those brave mountaineers.

But let us not lose sight of that endowment for Berea College. I got a letter from President Frost the other day, and he said, "I now have within $20,000 of the $150,000." He is going to get that, and I am going to give him a check for $50,000 about the 1st of January. He is going to get it, because those old anti-slavery men are not all dead, and they have money to put in that very institution that is equally for the mountain whites and the blacks together.

MOUNT HOLYOKE COLLEGE.

Let us now journey to the northeast 1,000 miles. I am only going to speak of one more of the 16 colleges in which I am personally interested. These are sam-

ples, and the rest are like them. We are to stop at a beautiful place, South Hadley, Mass. Here was founded the first female college ever erected in this country, one that has done more good and had a wider influence in the world than any other like institution under the sun. Holyoke has circled the globe with women's colleges.

About a hundred years ago Mary Lyon was born, in an obscure town in western Massachusetts, of poor parents. Most men and women of worth and influence come from poor parents—from wage-earners, from poverty. Poverty is a blessing in disguise. Standing here to-day, I am thankful that I was born in poverty and that I had to hustle, while the chilly winds of adversity blew around me.

Mary Lyon's parents died and she was left alone. She then did housework for her brother, who lived on a farm. She spun and wove and made coverlets and sold them, and got enough to go to Ashfield Academy. That girl had visions, but she was not visionary—not a bit of it. She saw through the mist and clouds that overhung the grandest country in the world and the noblest people in the world. The mist was that a female should not be educated. I knew Mary Lyon. I saw her at work laying the first foundation of her magnificent institution. I once asked an old man why he did not help Mary Lyon. "Why," said the old man, "it is of no use sending girls to college; it will spoil them for servants. They won't be worth a cent for servants if they go to school."

That darkness, that mist, hung over New England like a pall, and Mary Lyon was the heroine who could look through it and see the stars beyond. This century has not produced another woman like Mary Lyon. There have been a great many women, but Mary Lyon stood far above them all. What did she want? She wanted an institution where the daughters of poor men could get an education on a very small amount of money. She went to work. She begged the lumber and the brick. She went among the farmers. I was practicing medicine within 5 miles of her and I used to meet her in her travels around, and sometimes she was disheartened, and although I was poor as Job's turkey then, I said to myself, "If I ever get anything ahead in the world the first thing I take up will be such work as Mary Lyon is doing."

Mary Lyon was very kind to me. There were a good many Vermont girls at that school and I used to go up there to console the girls for their absence from their native mountains, and she used to let me in every time, and I prized her very highly.

Mary Lyon is dead, but the college she founded still lives. They were without any endowment four years ago, and I wrote them: "I will give you $50,000 if you will raise $150,000," and they went to work and got half of it. Two years ago last September that building that Mary Lyon built to accommodate 400 girls took fire and burned up, turning the girls into the street. Out of those 400 girls only 5 went home. The farmers and the people there said: "We will take care of you," and they did take care of them, and they kept the school intact.

That building was consumed, and while its embers were still red hot I telegraphed to Williston: "Fifty thousand dollars to build up Mount Holyoke." What a turn that was! They had sunk into despair and despondency, when all at once light flashed upon them. That was the old institution founded by Mary Lyon, and it has risen again. Now Holyoke has five of the finest dormitories in the country and the most magnificent administration building, as a memorial of Mary Lyon. I got a letter to-day from the treasurer, saying: "We are now going to have in addition, to the building, a new gymnasium." At the last commencement I sent my check, and they have now $200,000, thus completing the endowment. They are going to be the best and the grandest institution in this country.

I have tried to illustrate my subject, "What to do with money." I have given you a few pages of personal history to show you what one man of long experience believes is the right way to use money. I shall continue to prove my faith by my works. I hope many will do likewise. This is my text:

The lights of liberty, religion, and education are kindred fires, kindled at the same celestial altar, nurtured by the same ethereal aliment; together they were born and together they must expire. The sacrilegious hand that would extinguish the one must quench the more than Promethean heat of the other. Our fathers caught these blended lights from the skies. Long may it be our happy lot to walk in the beams of their effulgence, till the night of time shall settle upon the world, and the lights of liberty and religion and education are lost in the blaze of eternity.

SOME OF HIS GIFTS.

In ten years, between 1890 and 1900, Doctor Pearsons gave away $2,500,000 of his fortune. Some of his gifts are as follows:

Lake Forest University	$125,000	The Chicago Art Institute	$15,000
Beloit College	295,000	Berea College, in Kentucky	100,000
Knox College, at Galesburg	100,000	Marietta College	25,000
Chicago Theological Seminary	280,000	McKendree College	25,000
McCormick Theological Seminary	50,000	Grand Prairie Seminary, Onargo, Ill	20,000
The Presbyterian Hospital, of which Doctor Pearsons is president of the board of trustees	70,000	Whitman College	120,000
		Pacific University, in Oregon	60,000
		Pomona College, in California	50,000
		Bradford (Vt.) Public Library	2,000
		Presbyterian board of missions	20,000
The Chicago Young Men's Christian Association	40,000	First Presbyterian Church, Chicago	10,000
Drury College, Springfield, Mo	100,000	Olivet College, in Michigan	25,000
		Fairmont College, Kansas	50,000
Yankton College, South Dakota	100,000	Carleton College, Northfield, Minn	50,000
Colorado College, Colorado Springs	100,000	Chicago City Missionary Society	12,000
Fargo College, Fargo, N. Dak	50,000	Anatolia College, in Turkey	20,000
Mount Holyoke Seminary	150,000		

The balance of the $2,500,000 which Doctor Pearsons has given up to this time was in smaller amounts, many of them given so quietly that no one but the recipients know of them. At one time Doctor Pearsons had $150,000 loaned to needy students at 3 per cent.

ANDREW CARNEGIE.

This name has become familiar with all interested in benefactions to education, but its full significance will not be realized if his great and numerous gifts are separated from the story of his life. Fortunately this can be given in his own words, as published in the Youth's Companion. He said:

It is a great pleasure to try to tell the readers of the Youth's Companion "How I served my apprenticeship as a business man." But there seems to be a question preceding this: "Why did I become a business man?" I am sure that I should never have selected a business career if I had been permitted to choose.

The eldest son of parents who were themselves poor, I had, fortunately, to begin to perform some useful work in the world while still very young in order to earn an honest livelihood, and was thus shown even in early boyhood that my duty was to assist my parents, and, like them, become as soon as possible also a "bread-winner" in the family. What I could get to do, not what I desired, was the question.

When I was born my father was a well-to-do master weaver in Dunfermline, Scotland. He owned no less than four damask looms and employed apprentices. This was before the days of steam factories for the manufacture of linen. A few large merchants took orders and employed "master weavers," such as my father, to weave the cloth, the merchants supplying the materials.

As the factory system developed the hand-loom weaving naturally declined, and my father was one of the sufferers by the change. The first serious lesson of my life came to me one day when he had taken the last of his work to the merchant and returned to our little home greatly distressed because there was no more work for him to do. I was then just about 10 years of age, but the lesson burned into my heart, and I resolved then that "the wolf of poverty" would be driven from our door some day if I could do it.

BETTER FOR OUR BOYS.

The question of selling the old looms and starting for the United States came up in the family council from day to day. It was finally resolved to take the plunge and join relatives already in Pittsburg. I well remember that neither father nor mother thought the change would be otherwise than a great sacrifice for them, but that "it would be better for our two boys."

In after life, if you can look back as I do, and wonder at the complete surrender of their own desires which parents make for the good of their children, you must reverence their memories with feelings akin to worship.

Arriving in Allegheny City, four of us—father, mother, my younger brother, and myself—father entered a cotton factory. I soon followed and served as a "bobbin boy," and this is how I began my preparation for subsequent apprenticeship as a business man. I received $1.20 a week, and was then just about 12 years old.

WAGES $1.20 PER WEEK.

I can not tell you how proud I was when I received my first week's earnings. One dollar and twenty cents made by myself and given to me because I had been of some use in the world. No longer entirely dependent upon my parents, but at last admitted to the family partnership as a contributing member and able to help them. I think this makes a man out of a boy sooner than almost anything else, and a real man, too, if there be any germ of true manhood in him. It is everything to feel that you are useful.

I have had to deal with great sums. Many millions of dollars have passed through my hands. But the genuine satisfaction I had from that $1.20 outweighs any subsequent pleasure in money-getting. It was the direct reward of honest manual labor; it represented a week of very hard work—so hard that but for the aim and end which sanctified it slavery might not be much too strong a term to describe it.

For a lad of 12 to rise and breakfast every morning, except the blessed Sunday morning, and go into the streets and find his way to the factory and begin work while it was still dark outside, and not be released until after darkness came again in the evening, forty minutes' interval only being allowed at noon, was a terrible task.

HE DREAMS.

But I was young and had my dreams, and something within always told me that this would not, could not, should not last; I should some day get a better position. Besides this, I felt myself no longer a mere boy but quite "a little man," and this made me happy.

A change soon came, for a kind old Scotchman who knew some of our relatives made bobbins and took me in his factory before I was 13. But here for a time it was even worse than in the cotton factory, because I was set to fire a boiler in the cellar and actually to run the small steam engine which drove the machinery. The firing of the boiler was all right, for fortunately we did not use coal, but the refuse wooden chips, and I always liked to work in wood. But the responsibility of keeping the water right and of running the engine and the danger of my making a mistake and blowing the whole factory to pieces caused too great a strain, and I often awoke and found myself sitting up in bed through the night trying the steam gauges. But I never told them at home I was having a "hard tussle." No, no; everything must be bright to them.

This was a point of honor, for every member of the family was working hard except, of course, my little brother, who was then a child, and we were telling each other only all the bright things. Besides this, no man would whine and give up; he would die first.

There was no servant in our family, and several dollars per week were earned by "the mother" by binding shoes after her daily work was done. Father was also hard at work in the factory. And could I complain?

PROMOTION.

My kind employer, John Hay—peace to his ashes!—soon relieved me of the undue strain, for he needed some one to make out bills and keep his accounts, and, finding that I could write a plain schoolboy hand and could "cipher," I became his only clerk. But still I had to work hard upstairs in the factory, for the clerking took but little time.

THE BLESSING OF POVERTY.

You know how people moan about poverty as being a great evil, and it seems to be accepted that if people had only plenty of money and were rich, they would be happy and more useful, and get more out of life.

As a rule, there is more genuine satisfaction, a truer life, and more obtained from life in the humble cottages of the poor than in the palaces of the rich. I always pity the sons and daughters of rich men who are attended by servants, and have governesses at a later age, but am glad to remember that they do not know what they have missed.

They have kind fathers and mothers, too, and think that they enjoy the sweetness of these blessings to the fullest, but this they can not do, for the poor boy who has in father a constant companion, tutor, and model, and in his mother—the holy name—his nurse, teacher, guardian angel, saint, all in one, has a richer, more precious fortune in life than any rich man's son who is not so favored can possibly know, and compared with which all other fortunes count for little.

It is because I know how sweet and happy and pure the home of honest poverty is, how free from perplexing care, from social envies and emulations, how loving and how united its members may be in the common interest of supporting the family, that I sympathize with the rich man's boy and congratulate the poor man's boy; and it is for these reasons that from the ranks of the poor so many strong, eminent, self-reliant men have always sprung and always must spring.

If you will read the list of the "Immortals who were not born to die" you will find that most of them have been born to the precious heritage of poverty.

It seems nowadays a matter of universal desire that poverty should be abolished. We should be quite willing to abolish luxury, but to abolish honest, industrious, self-denying poverty would be to destroy the soil upon which mankind produces the virtues which enable our race to reach a still higher civilization than it now possesses.

HE BECOMES A MESSENGER BOY.

I come now to the third step in my apprenticeship, for I had already taken two, as you see, the "cotton factory" and then the "bobbin factory," and with the third—the third time is the chance, you know—deliverance came. I obtained a situation as messenger boy in the telegraph office of Pittsburg when I was 14. Here I entered a new world.

Amid books, newspapers, pencils, pen and ink, writing pads, a clean office, bright windows, and a literary atmosphere, I was the happiest boy alive.

My only dread was that I should some day be dismissed because I did not know the city; for it is necessary that a messenger boy should know all the firms and addresses of men who are in the habit of receiving telegrams. But I was a stranger in Pittsburg. However, I made up my mind that I would learn to repeat successively each business house in the principal streets, and was soon able to shut my eyes and begin at one side of Wood street and call every firm to the bottom. Before long I was able to do this with the business streets generally. My mind was then at rest upon that point.

HE LEARNS TO TELEGRAPH.

Of course every ambitious messenger boy wants to become an operator, and before the operators arrived in the early mornings the boys slipped up to the instruments and practiced. This I did, and was soon able to talk to the boys in the other offices along the line, who were also practicing.

One morning I heard Philadelphia calling Pittsburg and giving the signal "Death message." Great attention was then paid to "death messages," and I thought I ought to try to take this one. I answered and did so, and went off and delivered it before the operator came. After that the operators sometimes used to ask me to work for them.

Having a sensitive ear for sound, I soon learned to take messages by the ear, which was then very uncommon. I think only two persons in the United States could do it. Now every operator takes by ear, so easy it is to follow and do what any other boy can—if you only have to. This brought me into notice, and finally I became an operator and received the—to me—enormous recompense of $25 per month—$300 a year.

BEGINS FOR HIMSELF.

This was a fortune; the very sum that I had fixed when I was a factory worker as the fortune I wished to possess, because the family could live on $300 a year

and be almost or quite independent. Here it was at last. But I was soon to be in receipt of extra compensation for extra work.

The six newspapers of Pittsburg received telegraphic news in common. Six copies of each dispatch were made by a gentleman who received $6 per week for the work, and he offered me a gold dollar every week if I would do it, of which I was very glad indeed, because I always liked to work with news and scribble for newspapers.

The reporters came to a room every evening for the news which I had prepared, and this brought me into most pleasant intercourse with these clever fellows; and besides I got $1 a week as pocket money, for this was not considered family revenue by me.

I think this last step of doing something beyond one's task is fully entitled to be considered "business." The other revenue, you see, was just salary obtained for regular work, but here was a "little business operation" upon my own account, and I was very proud, indeed, of my gold dollar every week.

The Pennsylvania Railroad, shortly after this, was completed to Pittsburg, and that genius, Thomas A. Scott, was its superintendent. He came to the telegraph office to talk to his chief, the general superintendent, at Altoona, and I became known to him in this way.

OFFICIAL CLERK.

When that great railway system put up a wire of its own, he asked me to be his "clerk and operator." So I left the telegraph office—in which there is great danger that a young man may be permanently buried, as it were—and became connected with the railways.

The new appointment was accompanied by a—to me—tremendous increase of salary. It jumped from $25 to $35 per month. Mr. Scott was then receiving $125 per month, and I used to wonder what on earth he could do with so much money.

I remained for thirteen years in the service of the Pennsylvania Railroad Company, and was at last superintendent of the Pittsburg division of the road, successor to Mr. Scott, who had in the meantime risen to the office of vice-president of the company.

HIS FIRST BUSINESS INVESTMENT.

One day Mr. Scott, who was the kindest of men, and had taken a great fancy for me, asked if I had or could find $500 to invest.

Here the business instinct came into play. I felt that as the door was opened for a business investment with my chief, it would be willful flying in the face of Providence if I did not jump at it, so I answered promptly:

"Yes, sir; I think I can."

"Very well," he said, "get it. A man has just died who owns 10 shares in the Adams Express Company, which I want you to buy. It will cost you $60 per share, and I can help you with a little balance if you can not raise it all."

Here was a queer position. The available assets of the whole family were not $500. But there was one member of the family whose ability, pluck, and resource never failed us, and I felt sure the money could be raised somehow or other by my mother.

Indeed, had Mr. Scott known our position he would have advanced it himself; but the last thing in the world the proud Scot will do is to reveal his poverty and rely upon others. The family had managed by this time to purchase a small house and paid for it in order to save rent. My recollection is that it was worth $800.

The matter was laid before the council of three that night and the oracle spoke. "Must be done. Mortgage our house. I will take the steamer in the morning for Ohio and see uncle and ask him to arrange it. I am sure he can." This was done. Of course her visit was successful. Where did she ever fail?

The money was procured; paid over; 10 shares of Adams Express Company stock was mine, but no one knew our little home had been mortgaged "to give our boy a start."

Adams Express stock then paid monthly dividends of 1 per cent, and the first check for $10 arrived. I can see it now, and I well remember the signature of "J. C. Babcock, cashier," who wrote a big "John Hancock" hand.

The next day being Sunday, we boys—myself and ever-constant companions—took our usual Sunday afternoon stroll in the country, and sitting down in the woods I showed them this check, saying, "Eureka! We have found it."

HE BECOMES A CAPITALIST.

Here was something new to all of us, for none of us had ever received anything but from toil. A return from capital was something strange and new. How money could make money, how, without any attention from me, this mysterious golden visitor should come, led to much speculation upon the part of the young fellows, and I was for the first time hailed as a "capitalist."

You see I was beginning to serve my apprenticeship as a business man in a satisfactory manner.

A very important incident in my life occurred when, one day in a train, a nice, farmer-looking gentleman approached me, saying that the conductor had told him that I was connected with the Pennsylvania Railroad, and he should like to show me something. He pulled from a small green bag the model of the first sleeping car. This was Mr. Woodruff, the inventor.

Its value struck me like a flash. I asked him to come to Altoona the following week, and he did so.

Mr. Scott, with his usual quickness, grasped the idea. A contract was made with Mr. Woodruff to put two trial cars on the Pennsylvania Railroad. Before leaving Altoona Mr. Woodruff came and offered me an interest in the venture, which I promptly accepted. But how I was to make my payments rather troubled me, for the cars were to be paid for in monthly installments after delivery, and my first monthly payment was to be $217.50.

"YOU ARE ALL RIGHT."

I had not the money, and I did not see any way of getting it. But I finally decided to visit the local banker and ask him for a loan, pledging myself to repay at the rate of $15 per month. He promptly granted it. Never shall I forget his putting his arms over my shoulder, saying, "Oh, yes, Andy; you are all right."

I then and there signed my first note. Proud day this, and surely, now, no one will dispute that I was becoming a "business man." I had signed my first note, and, more important of all—for any fellow can sign a note—I had found a banker willing to take it as "good."

My subsequent payments were made by the receipts from the sleeping cars, and I really made my first considerable sum from the investment in the Woodruff Sleeping Car Company, which was afterwards absorbed by Mr. Pullman—a remarkable man who is now known all over the world.

Shortly after this I was appointed superintendent of the Pittsburg division, and returned to my dear home—smoky Pittsburg. Wooden bridges were then used exclusively upon the railways, and the Pennsylvania Railroad was experimenting with a bridge built of cast iron. I saw the wooden bridges would not do for the future and organized a company in Pittsburg to build iron bridges.

BEGINNING AS A MANUFACTURER.

Here again I had recourse to the bank, because my share of the capital was $1,250 and I had not the money; but the bank lent it to me, and we began the Keystone Bridge Works, which proved a great success. This company built the first great bridge over the Ohio River, 300 feet span, and has built many of the most important structures since.

This was my beginning in manufacturing, and from that start all our other works have grown, the profits of the one works building the other. My "apprenticeship" as a business man soon ended, for I resigned my position as an officer of the Pennsylvania Railroad Company to give exclusive attention to business.

I was no longer merely an official working for others upon a salary, but a full-fledged business man working upon my own account.

BE YOUR OWN MASTER.

I never was quite reconciled to working for other people. At the most, the railway officer has to look forward to the enjoyment of a stated salary, and he has a great many people to please. Even if he gets to be president he has sometimes a board of directors who can not know what is best to be done: and even if this board be satisfied, he has a board of stockholders to criticise him, and as the property is not his own he can not manage it as he pleases.

I always liked the idea of being my own master, of manufacturing something, and giving employment to many men. There is only one thing to think of, manufacturing, if you are a Pittsburger, for Pittsburg even then had asserted her

supremacy as the "Iron City," the leading iron and steel manufacturing city in America.

So my indispensable and clever partners, who had been my boy companions, I am delighted to say—some of the very boys who had met in the grove to wonder at the $10 check—began business and still continue extending it, to meet the ever-growing and ever-changing wants of our most progressive country year after year.

MUST CONTINUE TO GROW.

Always we are hoping that we need expand no further; yet ever we are finding that to stop expanding would be to fall behind, and even to-day the successive improvements and inventions follow each other so rapidly that we see just as much yet to be done as ever.

When the manufacturer of steel ceases to grow he begins to decay, so we must keep on extending. The result of all these developments is that 3 pounds of finished steel are now bought in Pittsburg for 2 cents, which is cheaper than anywhere else on the earth, and that our country has become the greatest producer of iron in the world.

And so ends the story of my apprenticeship and graduating as a business man, which it has given me great pleasure to tell the readers of the Youth's Companion. * * *

Good-by, my young friends.

Always yours, ANDREW CARNEGIE.

It is to be regretted that there is so great difficulty in making an accurate statement of the large amount of moneys he has given. According to an authorized list published in the spring of 1902, the total of his donations is $67,212,923. Mr. Carnegie has changed his method of giving. Instead of continuing to give away large sums to single cities, he has adopted the plan of giving away amounts much smaller in size and then increasing the number of recipients accordingly. In the history of Mr. Carnegie's gifts it will be found that he is careful of the conditions likely to assure the continuation of care and provision after generations pass away. The following is the recapitulation of Mr. Carnegie's gifts, according to the list referred to. In some cases Mr. Carnegie may not remember what was given, or makes no statement, because the entire amount of the gifts has not been decided:

Canada	$876,500
Cuba	252,000
England	420,000
Ireland	65,500
Scotland	13,078,750
United States	52,270,173
Miscellaneous gifts, Great Britain	250,000
Grand total	67,212,923

CARNEGIE INSTITUTION.

The Carnegie Institution has been recently formed as a result of the benefaction of $10,000,000 by Mr. Carnegie. To the trustees designated to receive and administer this benefaction Mr. Carnegie said, when they came together:

I beg to thank you deeply for so promptly, so cordially aiding me by acceptance of the trusteeship. A note from the President congratulates me upon the high character—indeed. I may say the extraordinary character—of the trustees. Such are his words. I believe his estimate has been generally approved throughout the wide boundaries of the United States. My thought was to fulfill the expressed wish of Washington by establishing a university here, but a study of the question forced me to the conclusion that under the present conditions were Washington still alive, with his finely balanced judgment, he would decide that, in our generation at least, such a use of wealth would not be the best. One of the most serious objections, and one which I could not overcome, was that another university might tend to weaken the existing universities. My desire was to cooperate with

all educational institutions and to establish what would be a source of strength and not of weakness to them, and the idea of a Washington university or anything of a memorial character was, therefore, abandoned.

The greatness of the gift, the high aims of its donor, and the eminent character of the trustees have served to create in the public mind the greatest expectations as a result of this gift. The board of trustees, organized in Washington under the general law of incorporation, has elected as president the eminent Daniel C. Gilman, LL. D., whose experience at Yale and Oakland, as well as his membership of important educational bodies, testifies to his efficiency, as does his long time of service as president of Johns Hopkins University. His service at Johns Hopkins in administering the great trust there confided in him enabled him not only to meet the public demand in furnishing college instruction, but to develop a postgraduate university which took rank among the first in the country.

JOHN D. ROCKEFELLER.

John D. Rockefeller was born in Richford, Tioga County, N. Y., July 3, 1839. In 1853 his family moved to Cleveland, Ohio, where, at the age of 14, he united with the Erie Street Baptist Church. The family, the school, and the church were the centers in which his character was formed. In his home prudence and economy prevailed; the Christian virtues were cultivated. Time was not wasted. At 9 years of age he was raising turkeys and loaning the money at 7 per cent. The alertness of his life began to be developed. In the church he was careful to attend the services not only upon the Sabbath, but midweek also, and he sought to stimulate others to fulfill religious obligations, especially to pay off a church debt. In school he came under the influence of such teachers as Miss Chamberlain (afterwards Mrs. Lyon), Prof. E. White, Prof. Andrew Freese, teacher and superintendent. With these teachers the unfolding of his character became indicative of his future career. Finding that his circumstances demanded his leaving school before the high-school course was finished, he found difficulty in securing the employment desired, and so anxious was he to have an opportunity for work that he engaged with Messrs. Hewitt & Tuttle without the assurance of a definite amount of pay, but only that he had an opportunity to try. He accomplished the tasks assigned him so well that he received some $4 per week for the time employed. The next year he won a reward of $25 per month, and at the end of fifteen months was given the position of bookkeeper and cashier at $500 per year. Before he was 19 he had decided to undertake business for himself, and, with a few hundred dollars of his own, aided with $1,000 loaned by his father, for which he paid 10 per cent, he launched out, trusting to his industry, his energy, and Divine favor. He enjoyed no advantages but those afforded to like effort in the same community. Before he had begun to control capital largely he needed a small loan, which the banker, Mr. T. P. Handy, accorded him in his confidence of what he had already done and on the promise he gave. He met his obligations faithfully and adopted the habit of living within his income. Nothing was allowed to come within his observation which he did not question for some lesson for himself. He early found out that what he was to be must come out of his own ability and attainments and opportunities afforded him. His qualities were early manifested; he discriminated between the real and the false. He early became superintendent of his church Sunday school and remained in that responsibility thirty years. His fondness for children was very manifest. His own experience had taught him how it might be used.

It is unfortunate that there is no more in literature to indicate more of the growth of his mind and of his methods of business and principles which he has adopted. He early began to appreciate the efforts to secure cheap lighting—

illumination. Crude petroleum was offensive to the smell. He saw what was needed, and out of his school chemistry he was aided in devising methods of purifying the crude oil, saying to one of his teachers, "I think I can relieve this substance of its offensive smell." His efforts were successful. Whale oil was disappearing from the market; the new substance was soon widely demanded by the trade; fabulous results followed his efforts.

At the age of 25 Mr. Rockefeller married the daughter of H. B. and Maria Spelman. Miss Laura C. Spelman, with whom he had become acquainted in school as a girl of excellent sense and refinement and marked scholarship, with like home training as himself.

As his income increased he began to use it according to the fundamental principles upon which his character was based. At first his benefactions were limited to his church denomination, but later his gifts have been freely bestowed outside of his church limits in aid of worthy objects. His methods of giving may be said to be discriminating. In order to quicken the gifts of others, he often promised a half of what was called for if others would give the other half. In this way he has added greatly to the benefactions for different objects. No effort is made here to trace the variety of his gifts. There has been a natural recognition of relations. A worthy teacher who married a minister receives unannounced annual gifts together with a house for her residence. In a multitude of unseen ways like these has his aid been bestowed on worthy objects. Unostentatiously he pays the expenses of a reunion of his school associates. Mr. J. G. W. Coles, president of the chamber of commerce, when announcing Mr. Rockefeller's gift to the city of Cleveland, remarks: "His modesty is equal to his liberality, and he is not here to share with us this celebration. The streams of his benevolence flow largely in hidden channels, unseen and unknown to men, but when he founds a university in Chicago, or gives a beautiful park to Cleveland, with native forests and shady groves, rocky ravines, sloping hillsides and level valleys, cascades and running brooks and still pools of water, close by our homes, open and easy of access to all of our people, such things can not be hid. They belong to the public and history, and the gift itself is for the people and for posterity."

A considerable number of citizens afterwards called at the Rockefeller residence, and in response to their expressions of gratitude Mr. Rockefeller said: "This is our centennial year. The city of Cleveland has grown to great proportions and has prosperity far beyond any of our anticipations. What will be said by those who come after us when, one hundred years hence, this city celebrates its second anniversary and reference is made to you and to me? Will it be said that this or that man had accumulated great treasures? No; all that will be forgotten. The question will be, What did we do with our treasures? Did we or did we not use them to help our fellow-men? This will be forever remembered."

He has appeared to discover the possibilities of Chicago as a great center of civilization in need of a great university to lift its interests. He is said to have reached the amount of $15,000,000 in his gifts to that institution. Among other benefactions may be mentioned his gifts of $200,000 to medical research; at one time to Brown University, $500,000, besides smaller sums; Mount Holyoke College, $50,000 for a hall of residence and $2,000 for a skating rink; Granville University, $200,000; Vassar College, for general endowment, $25,000; for a building for recreation, $100,000; for Strong Hall, $35,000; for Davidson House, $110,000, besides several thousand dollars for sundry objects connected with the college; for Spelman Seminary, Atlanta, which bears the name of his wife's father, nearly $285,000, and during the last year a loan of over $94,000; Barnard College, $250,000; Columbia University, $100,000; Horace Mann School, $50,000; Tuskegee, $10,000; Rochester, $100,000; Newton Theological Seminary, $150,000; Des Moines, $50,000; Wellesley, $100,000; and in aid of education in the South recently, $1,000,000.

It is of interest that the training of the family is yielding results like those displayed in his own character. His son, a graduate of Brown University, is already walking in the ways of his father, and the whole house enlists in the plan of benefactions which he is working out and which is promising more than is already accomplished.

PETER COOPER.

Peter Cooper was born in the city of New York February 12, 1791. His checkered fortune is well worthy of study. His school privileges were limited, but every opportunity was carefully improved. Before his seventeenth year he had tried his hand at various pursuits, when he was able to attend school at half-day sessions for about a year. His investments in Baltimore began in 1830, when he built the locomotive engine called the "Tom Thumb," which was followed later by the construction of the "Best Friend," sometimes called the first built in the United States for actual service. He contributed especially to the laying of the Atlantic cable.

At an early period after his success in business was assured, Mr. Cooper conceived the idea which eventually gave to the world the Cooper Institute, destined "to be forever devoted to the advancement of science and art in their application to the varied and useful purposes of life." Under this general description there were developed rare opportunities for skillful instruction. The institution was a new departure in education.

CHARLES PRATT.

The Pratt Institute, Brooklyn, has won wide attention for furnishing an all-round education, giving instruction in letters and industry, both practical and theoretical. Its founder, Charles Pratt, was born at Watertown, Mass., October 2, 1830. His father, a native of Malden, a skilled and successful cabinetmaker and influential citizen, was unable to furnish his son more than an ordinary opportunity. From boyhood he won his way by skillful and faithful attention to his opportunities. His motto was, "Waste neither time nor money." Fortune favored his plans and investments, and he found many ways to be of service to others, who, like himself, were making their own fortunes. He put on the market the Astral oil and is said to have made good terms with the Rockefellers.

His deep interest in education was early manifested, and he became one of the trustees of the Adelphi Academy, and for a time president of its board. His gifts altogether to the Adelphi are put down at $200,000; existing institutions, however, did not answer to the immediate demand of his mind, and he began the studying out of opportunities which would satisfy his judgment. The Cooper Union seemed to be his model, but his studies included opportunities in Europe and in this country, and resulted in the institute, which is acknowledged to have adaptations specially meeting the public want, and furnishing a study well worthy of the attention of educators and those who are giving money for the establishment of institutions of their own.

Mr. Pratt arranged by law for the continuance of the administration in his own family, as well as for the support of its administration from his fortune.

CHRISTOPHER R. ROBERTS.

Christopher R. Roberts, a successful merchant in New York City, was conscientiously disposed to give a percentage of his income to beneficence. How many students he aided in the preparation for the ministry it was never possible to ascertain exactly; one young man is known to have been the one hundred and twenty-fifth of the group that received his aid. Mr. Roberts's efforts to establish

an institution in behalf of the South at Lookout Mountain did not succeed, but his effort in behalf of education in Turkey resulted in establishing Roberts College. This college is the controlling influence in shaping the new civilization at this gateway for the dissemination of instruction throughout Asia.

CECIL RHODES.

The will of Mr. Cecil Rhodes, an Englishman, a resident of South Africa, illustrates the possibilities of these benefactions. It is said to distribute $70,000,000. It is believed to insure from its conditions a great international result. It provides for scholarships at Oxford, England, for a residence of English-speaking students. It provides for American students $1,500 per year for three years. In the election of a student to one of these scholarships regard is had, first, to his literary and scholastic attainments; second, to his fondness for or success in many out-door sports, such as cricket, football, and the like; third, the qualifications of manhood, such as truth, courage, devotion to duty, sympathy for and protection of the weak, kindliness, unselfishness, and fellowship; fourth, his exhibition during school days of moral force of character and instincts to lead and take an interest in his schoolmates, for these latter attributes will likely in future life guide him to esteem the performance of public duties as his highest aim.

EDUCATION IN AMERICA.

[Inaugural address delivered August 1, 1903, by Hon. Joseph Choate, United States ambassador to the court of St. James, at the opening of the Oxford University course of summer lectures.]

In responding to the flattering invitation of the vice-chancellor to open this course of summer lectures by an inaugural address, it was with no presumption on my part that I could say anything that would instruct the instructors or educate the educators. He would be a vain man indeed who would dare to come to Oxford with any such idea as that. The only service that I can render is to open the way for those public-spirited and self-denying teachers who for the coming month will guide your studies by unfolding the rich stores of their ample learning.

In casting about for a subject—if I required a subject for this occasion—I appealed to the tried experience of the secretary, who kindly suggested that as the principal course of the season was to be upon the Middle Ages, I should take that vast subject for my theme. But America has no place in the Middle Ages. I see by the programme that the year 1485 is assigned as the terminus of that period of modified darkness, but surely there must be a mistake of seven years, for Columbus did not discover America till 1492. Then it was that there was a new creation—a new adjustment of the little world which we inhabit. Up to that time one-half of the earth was still waste and void. It had been lost since the beginning of time. It was buried in that darkness which was upon the face of the deep; but the spirit of God moved upon the face of the waters and opened the new hemisphere to the yearning eyes of the brave Genoese—and again He said, "Let there be light," and there was light.

But however you may bound the Middle Ages, America contributes nothing to the studies and discussions which await you. I have carefully examined your programme, and find not the remotest allusion to the Western Hemisphere. From ocean to ocean, from the North Pole to the South, it was—except for the barbaric civilization of Mexico and Peru—a trackless wilderness, whose wild inhabitants afforded no lessons for modern society, unless, indeed, it be for that very minute section of it on either side of the water, the mere sportsmen—who do nothing but sport—for they spent their whole lives through the entire Middle Ages in hunting, shooting, fishing, and canoeing. There never was such splendid sport, although nothing ever came of it but mere sport. They were indeed our leisure class, the only leisure class America ever had—dating back to an unknown

antiquity, certainly before the Conquest, perhaps before the flood. Possibly our Pilgrim and Puritan Fathers took warning from their example when they resolved to found a new civil society which should consist, like More's Utopia, of working classes only, and established the Commonwealth on the gospel of hard work, as it continues to this day. And so, perhaps, after all, America in the Middle Ages has contributed something to the sources of modern history.

I will therefore, if you will allow me, confine myself to the very modest endeavor to give you a mere glimpse of education, of universities, and university extension in America, which may suggest to you their relation to the same great things in this country without exposing me to the peril of commenting at all upon matters purely domestic here. A breeze from the West may sometimes be at least refreshing.

For one hundred and thirty years from the great discovery, while England was advancing by leaps and bounds, while Erasmus and Colet and More were doing their momentous work for the revival of learning in England, while Elizabeth's marvelous reign was perfecting the English language and literature, culminating in Shakespeare and Bacon—the whole Western Hemisphere remained undisturbed and undeveloped, except as the boundless enterprise and ambition of Spain invaded its tropical regions, and the energetic rivalry of Jacques Cartier and his successors led them to explore the St. Lawrence as the pioneers of New France.

The first great act of the English colonist after the landing of the Pilgrim Fathers at Plymouth in 1620, and the more important Puritan emigration under Endicott and Winthrop in 1628–29 was the first and a very signal example of university extension—the foundation of Harvard College as a nursery of godly ministers for the service of the colonies. The new college was the direct child of Cambridge; the leaders of the colony were Cambridge men, with a very little Oxford leaven, and John Harvard, born in Southwark and baptized in St. Saviour's Church, who gave his name, his library, and the half of his fortune to the new foundation, was a graduate of Emmanuel, the distinctly Puritan college at Cambridge. Its nurture and discipline were all drawn from Cambridge sources, and for the first few decades it was a small counterpart, but in extreme poverty and littleness, of one of the colleges of the ancient university from which it sprang.

While the colonies still formed an integral part of the British Empire, 8 more colleges were founded after the same type, of which Yale, Pennsylvania, Princeton, and Columbia still maintain their ascendancy. As their limited and very scanty endowments would permit, these all followed the English types exemplified in Oxford and Cambridge. They rendered great service to the colonies and the Empire by training men, according to the approved classical and scholastic model, for the learned professions and for public life, and adequately answered the very moderate demands of the community for higher education.

It was nearly two centuries from the foundation of Harvard, in 1636, before the inadequacy of the universities to supply the intellectual needs of the world and to lead its advancing movements was suspected, and another generation still before it was fully found out and exposed. So long as they were only expected to furnish for the service of the nation the necessary supply of lawyers, doctors, and ministers, of teachers, scholars, and public men, and to lead and promote the growth of its literature—the old routine, the old curriculum of the colleges and universities embracing Latin, Greek, and mathematics, with a little philosophy, metaphysics, and history, were supposed to constitute the essential elements of the higher education which had sufficed for many generations.

But a new era was at hand. Probably there never has been such a revolution in social and civil life as was produced by the application of steam and electricity to the practical use and service of man, which began in the lifetime of men standing here to-night, and ushered in an epoch of material development and progress

such as the world never witnessed before and which has by no means reached its culmination yet. The growth of the population of the United States from 10,000,000 to 80,000,000, the reduction of a virgin continent to their use, the creation of a vast system of transportation by railroads that occupied every corner and reached every town in the country, the adaptation of all the applied arts to the construction, equipment, and decoration of public and private buildings, the rapid advance of science, the multiplication of inventions, the unparalleled growth of manufactures, and the consequent extension of commerce and trade—all combined to create a new and enlarged civilization which had outgrown the old colleges and universities and threatened to leave them out, or at any rate far behind. This rapid and unbounded material and intellectual progress demanded and employed an amount and variety of education and brain power which neither their numbers, their resources, or their system of training enabled the old universities to furnish. Probably a very small proportion of this mighty work which characterized and marked the nineteenth century had been done or devised by the graduates of our old institutions of learning. While they had been filling the professions, the halls of legislation, the great public offices, the chairs of the teachers and men of letters, the nation had looked for and found a great army of men of brains and men of action to attend to its construction, its transportation, its manufactures, its commerce, and business of every kind.

It was found then that our higher education must be adapted to this startling and violent change in our national life, and that if our colleges and universities would hold their own they must greatly increase their numbers, change their methods, and assume new and closer relations with the people whom they still aspired to instruct and lead.

In the first place, their numbers were multiplied. At the beginning of the century there were only 26 colleges and universities in the whole territory of the United States, and many of these were in an infant and undeveloped state. They are now numbered literally by hundreds, bringing the higher education home to the people everywhere, many of them richly endowed, most of them furnishing to the youth of the surrounding community an adequate and varied training adapted to qualify them for business and for any public or private duty to which they may be called, although it may be far below the standard now set by Harvard or Columbia, Yale or Princeton.

These new colleges were not all on the same model, but afforded a wide choice of courses of study to suit the varied necessities of a greatly diversified community.

With the exception of a few of the older States which were already well provided with them by private means, each State in the Union has, by the use of public funds and lands, created a State university; and it has been the laudable ambition of several of our multimillionaires to create universities by the generous application of portions of their vast fortunes. It has been interesting to see how by this means powerful and most useful institutions of learning could be created all at once, as it were. I mean, of course, in a very few years. Of these, the University of Chicago, founded in 1892, endowed chiefly by the generosity of one man, now numbering over 3,000 students and with an equipment approximating to that of its oldest sisters, is the leading example and compares favorably with the best.

The origin and foundation of the Stanford University, which owes its entire endowment to the lavish generosity of Mr. and Mrs. Stanford, is full of pathetic interest. Traveling in Europe, they had the unspeakable misfortune to lose their only child, a youth of great promise, Leland Stanford, jr. Returning to America, they considered how they might best perpetuate his beloved memory, and conceived the noble idea of creating a great university that should bear his name to a distant posterity. They were not much versed in university traditions and had no special knowledge as to how to create an institution of learning. But they

cherished and fostered the happy idea that had come to them. They consulted the best experts that could be found. They visited Harvard and Yale and studied their history and methods, estimated the cost and value of their entire plants, and concluded that by an original investment of $5,000,000 and a further five millions for equipment and maintenance they might bring into existence a school of learning that should rank with the best, and worthy of their highly honorable purpose.

They put their noble design into immediate execution, and on a splendid estate in one of the most beautiful regions of California erected buildings that would be quite worthy of Oxford or of Cambridge, and in a very few years the Stanford University took its place among the valuable seats of learning in the United States, richly endowed and equipped, commanding the services of distinguished professors and instructors, and thronged with many hundreds of students. Not only has it received the liberal amounts originally designed, but Mrs. Stanford, surviving her husband, has actually devoted to it the whole of their vast fortune, and thus they have indeed created a university which will be a lasting monument not to their lost son only but to their own unstinted benevolence.

The Johns Hopkins University in Baltimore is another magnificent instance of private endowment and is unique in its character among American universities. It is mainly a post-graduate institution and embraces schools of law, medicine, science, and agriculture, and is a nursery of original research, publishing from time to time the results of researches of professors and students. It has well fulfilled the hopes expressed for it by Mr. Huxley in his splendid address at its opening in 1876.

By far the most signal advance in university extension yet made in America is the latest in date—the creation of the Carnegie Institute of Research at Washington, with an endowment of $10,000,000, to be devoted absolutely to original research. Whoever believes that there is no more truth to be found, no new law of nature to be discovered, may as well join the ranks of those deluded ones who believe that the end of the world is at hand. So long as ideas rule the world this institute will occupy a foremost place among institutions of learning and bring lasting fame to its generous founder.

I ought not to pass from this part of my subject without a reference to the source from which some of our oldest and most prominent universities, like Harvard and Yale and Columbia and Princeton, derive the means of their maintenance and development to enable them to meet their ever-increasing needs and the enlarged demands of the present day. They receive no aid from the public funds; they have been built up and sustained by private contributions, and their increased means of usefulness are chiefly due to the loyalty and gratitude and generous enthusiasm of their own graduates and their friends, which are found to be an unfailing support. It has come to be a common saying that no rich graduate can live or die without giving something to his university.

It goes without saying also that technical, professional, and trade schools of great importance and value and in considerable numbers hold a high place among our modern educational establishments.

The Massachusetts Institute of Technology stands at the head of the whole system of technical education in the United States. It is primarily a school of industrial science; at the same time it finds room for the humaner studies. Mr. Mark, whose essay on "Education and industry in the United States" has been published by the board of education, says of it:

> Over and above the engineering courses of various kinds there are courses in architecture, chemistry, biology, physics, geology; and there is a general course for those students who wish to secure an education based upon scientific study and experiment but including a larger amount of philosophical study in history, economics, language, and literature than would be consistent with the technical requirements of other courses.

Lord Bacon says that every man owes a debt to his profession, and many of these technical, commercial, and professional schools in America owe their high character, their great success, and their munificent endowment to the loyalty and zeal of men who, without such advantages, by sheer force of brains and character, have succeeded in their various callings. Every man is naturally proud of the profession, business, or art in which he has himself succeeded, and it is to the eternal honor of many of our captains of industry that they manifest their gratitude by thus smoothing the footsteps to success of those who would follow where they have led.

The Drexel Institute in Philadelphia, the Pratt Institute in Brooklyn, the Armour Institute in Chicago, are conspicuous examples of the generous sympathy of successful men with the struggles and necessities of those who come after them.

The founders, Mr. Drexel, Mr. Pratt, and Mr. Armour, were very active and prominent men of business. Magnificent success had crowned their own efforts, and each of them determined to leave a memorial that should bear his own name and spread through a wide circle the benefits of his great fortune. Nothing is more natural than that the founders of such institutions should desire to attach their own names to them, and so enjoy a certain earthly immortality—a privilege that can not fairly be denied to them. They cherished ideals and aspirations far nobler than the material success which had come to them. One couplet of the Psalm of Life had for them a practical meaning:

> Lives of great men all remind us
> We can make our lives sublime,
> *And departing leave behind us*
> *Footprints on the sands of time.*

There are no more enduring memorials than these "footprints on the sands of time." It was a "footprint on the sand" that, by the aid of the magic touch of De Foe's genius, has immortalized the name of a naked savage on a desert island; and geologists tell us that the surface of the earth is marked with "footprints on the sand" that have lasted for countless ages, and are to-day as distinct and clear as when they were first implanted. What better footprints, what nobler memorial can any man leave behind him to give his name to one of these new creations which shall carry the light of knowledge to the youth of distant generations?[a]

You will perfectly well understand that our older universities began as single colleges, devoted to a strictly academic course; but as time went on there grew up about them and under their government professional schools, each with its own and separate special faculty, of which the president of the university was the head. Taking Harvard only as an example, it has its schools of divinity, medicine, and law, each distinct from and independent of the old academic department, Harvard College proper. For admission to each of them something equivalent to a degree of bachelor of arts already obtained is in general required. So widespread is the repute of these schools that students resort to them from all parts of the country, bearing the diplomas of the most approved colleges, and we now hear that certain eminent English jurists are advising their sons to go over to the Harvard law school as the best foundation for legal studies.

---

[a] Since this address was delivered Columbia University in New York has announced the remarkable gift by Mr. Joseph Pulitzer of $1,000,000 to establish a school of journalism, with a promise of an additional million when its success has been tested and proved—a notable example of what I have said as to the sympathy of successful men with the profession or business by which they have risen. Mr. Pulitzer himself is a striking instance of a man, who, by sheer dint of his own personality, brains, and energy, has made his way, up from the very lowest round of the ladder to a very conspicuous place among journalists. His foundation is intended and is well calculated to raise the average standard of ability, morals, and manners in the profession from which his great fortune has come to him.

Harvard also maintains under the supervision of its faculty of arts and sciences a scientific school crowded with students, upon whom, after a full course of study, it confers the degree of bachelor of science. It also maintains under the same supervision a graduate school, which is yearly growing in strength and importance, and is already one of the most interesting departments of the university. It provides advanced courses of study for the graduates of Harvard and other approved colleges, and enables them to qualify for the higher degrees in arts, science, and philosophy.

Thus have we endeavored to accomplish the first and not the least important part of our university extension by increasing the number of our schools of learning and enlarging and varying the branches of knowledge and instruction to which they are generally or specially devoted.

No adequate idea can be formed of the importance and utility of this enlarged system of universities, colleges, and professional and technical schools without a knowledge of the broad and firm foundation on which they rest—the common schools of the United States, which from the beginning have been the peculiar care of the people.

It is not too much to say in this regard that education has been the chief industry of the nation. The constitution of the State of New York declares that the legislature must provide for the maintenance and support of a system of free common schools wherein all the children of the State may be educated. And this is but a single application of the general policy that each State owes to all of its children of both sexes, an education at the public expense up to the point at which they may be able to sustain themselves in the struggle of life. Without this it was deemed that our institutions, resting as they do upon universal suffrage, could not be safe or enduring. According as the condition in life of its parents permits, every child may, without expense to them, pass through the successive grades of primary, grammar, and high schools, and be prepared not merely for its narrow vocation in life, but also for the discharge of that public duty which the possession of the suffrage involves.

Of course only a small proportion of the children of the State can avail themselves of the full benefit of secondary education provided, and a much smaller percentage can advance to a university training; but, in the aggregate, education is so generally diffused among the people that the average laborer, mechanic, farmer, or clerk knows much more than enough to qualify him for his narrow and peculiar occupation, and can understand and act with some intelligence upon the public questions on which he is called upon to vote. Upon this broad and deep foundation our universities rest; out of it they have grown, and with it they form one entire and coordinated system upon which a government depending wholly upon the sum of public opinion of all its citizens may safely abide.

It is difficult to present the simplest statement of the magnitude of our common school system without seeming to be guilty of gross exaggeration. According to the latest available statistics, the whole number of pupils enrolled exceeds 16,000,000, of whom 15,500,000 are in the primary and grammar schools and 600,000 in the high schools and academies. It was to these common schools that the nation looked, when the universities failed, for the supply of that brain power, energy, and enterprise which the making of the nation demanded. From this great mass the accidents of birth, fortune, and circumstance select the few, about 120,000 in all, who can avail themselves of the college and university training. But the combined intellectual force of the country is in the common schools, and out of it by a process of natural selection have been eliminated the effective genius, talent, and faculty which the exigencies of the age required for the expansion of modern life. To these in chief measure we owe the engineers

the inventors, the mechanicians, the practical scientists, who have directed our material development.

In the same way those who have read that fascinating book, Smiles's Lives of British Engineers, must have been struck with the fact that men who did so much for the making of England for the most part enjoyed but little of the advantage of the higher education, but sprang from the people and seemed, by the mere force of natural faculty, to educate themselves for their great and responsible works. But, school or no school, college or no college, genius will work its way to the front.

A single word more about our common schools, to me always a fascinating subject. Of the teachers, whose numbers amount to about half a million, it is safe to say that much more than two-thirds are women, who here find a field of usefulness and honor which lies at the foundation of our national prosperity and distinction. By general consent the conscience, the sympathy, and the superior patience of women are deemed to qualify them in the highest degree for the wise and tactful instruction of the youth of both sexes. At any rate, with us their general employment as teachers has proved a complete success.

I freely acknowledge my great obligations to the accomplished and faithful women who taught in the common schools of Massachusetts which it was my good fortune to attend. But since that remote day the scientific training of women in the fine art of teaching has advanced in a sort of arithmetical progression in normal schools, in colleges for women which fairly rival in dignity and equipment the best colleges for men, and in such institutions as the College for the Training of Teachers in the city of New York. So that to-day great numbers of women, thoroughly qualified for the service of the State in the common schools and even in higher education, are to be found in all parts of the Union, and they exercise a widespread and powerful influence in elevating, refining, and humanizing the youth of the nation.

But however much we may multiply the number of our seats of learning, we can not adapt them to the demands and exigencies of modern life without a wide and radical departure from the ancient curriculum, which aimed only at qualifying youth to prepare for certain limited professions or to take part in the administration of public affairs. Whatever special calling a man is to follow after leaving the university he ought to start with a generous and liberal education, such as every gentleman should have. But if we want our universities to fill the full measure of their usefulness in the grand action of the world of to-day and to be responsible for the leaders in such great occupations as those of the engineer, the architect, the manufacturer, the merchant, the banker, the railroad president, the journalist, the man of science, and those who apply science to the useful arts on the grand scale upon which those callings are now pursued, can not some system be evolved on a broader scale than that which prevailed in all the universities before this tremendous expansion of modern life began? Can we not attain the desired object of a liberal education upon which we insist for them all without binding them all down to that system of training which once sufficed for candidates for the older professions, for public service, and for the cultivated life of the leisure class? Can not a scheme be devised which will enable every man who enters the university to get the most out of himself, to begin to prepare for the life occupation for which he is best fitted, and to serve the community by the best exercise of the faculties with which he is by nature endowed?

These questions have been answered in the United States by the adoption of the second form of university extension to which I have referred the broadening and expansion of the courses of instruction, and by the introduction of the open door of the human mind into the university curriculum. What is known as the elective system, which was practically unknown fifty years ago, has now, against

great opposition and in the face of inveterate prejudice, been steadily gaining ground, and promises to prevail in our principal seats of learning. President Eliot, who is well entitled to be called the author of this system in the United States, explains it thus:

The state of society at large under freedom is perfectly illustrated by the condition of things in a university where the choice of studies is free and every student is protected and encouraged in developing to the utmost his own gifts and powers. In Harvard University, for example, thousands of students enjoy an almost complete liberty in the selection of their studies, each man being encouraged to select those subjects in which he most easily excels and consequently finds most enjoyment and most profit.

It is not, however, to be supposed that because this wide liberty of choice is allowed to the individual student a less amount of work is required of him; on the contrary, a full and equivalent measure of study is prescribed and exacted as under the old system, and the same degree is given for both.

I would not undertake to judge how far such a system could be adopted with wisdom or success under the totally different social conditions which prevail here, but a glance at the programme of this eleventh summer meeting, prepared by the delegacy for the extension of teaching, would seem to show that it has already made considerable progress, and I believe that at Oxford there is practical freedom of choice for each student, without regard, of course, to degrees or honors.

You must not suspect for one moment that Harvard or any of the other American universities which have adopted the elective system are being converted into technical schools or commercial colleges. Far distant be the day when the first step in that direction shall be taken. On the contrary, they adhere rigidly in their academical course to the orthodox theory that special study for professional or business life should be postponed till a broad and general education has developed the faculties and character, and that only upon such a foundation can education in specialties safely rest. But many men have many gifts and different faculties. They are not all run in one mold or all capable of making the most of themselves by studying the same things. The old classical course is still always open to all who desire to follow it, and is maintained in a high degree of excellence. No preferential tariff is imposed on the humaner courses; an equal amount of duty and performance is exacted from the others, and the modern languages, natural history, science, and the many other studies that have been added to the curriculum are accepted only as equivalents and substitutes for the more ancient requirements.

You are too familiar with the other forms of the university extension, in which the United States have faithfully followed the lead of Oxford and Cambridge, to require me to enlarge upon them.

Chautauqua, with its 10,000 students; the fourth quarter, or the summer term, at the University of Chicago, where academic work goes right on throughout the year (forty-eight weeks) like any other business, drawing students and professors from nearly all the other American universities; the Harvard and Columbia summer schools, each gathering hundreds of students from all parts of the United States and from foreign lands; the splendid and effective work done by the Extension Society, of Philadelphia, are but examples and illustrations of what is going on for the promotion of higher education in many parts of the country.

Among them all the Chautauqua summer assemblage has done more than any other to stimulate and satisfy the desire for knowledge and an earnest purpose to acquire something like a university education among those to whom fortune denied a regular college training. You should read Mr. Herbert B. Adams's account, of which I can only give you an abstract. It is really a university itself in session for the summer months, with schools of English language and literature, of modern languages, of classical languages, of mathematics and science, of

pedagogy, of religious teaching, of music and the fine arts, of expression, of physical education, of domestic science, and of practical arts, instructed by learned professors and by volunteers from the educated men and women of the land, and attended by thousands from every State and from foreign parts. It is really the pioneer of summer schools, having held its regular sessions for nearly thirty years, and has constantly increased in the extent and power of its influence. It lays out courses of home study and reading for four years. "Work begun under competent direction at Chautauqua may be continued at home, by correspondence with the head of the 'school' throughout the year." In very rare cases, after very searching tests and examinations, such work may be rewarded by the degree of bachelor of arts or bachelor of science, which the regents of the University, the highest educational authority of the State of New York, are empowered to confer. The number of local reading circles in all parts of the country inspired and guided from Chautauqua in the last twenty years has been about 10,000, and its total enrollment of readers in that time has been about a quarter of a million. This is really bringing higher education home to the people in earnest. Chautauqua stands for hard study and high thinking, and its votaries are almost entirely the people of plain living. It is hard to measure its influence and power for good. President Roosevelt, who has long been known as a historical lecturer and writer, visited the assemblage in 1899, when he was governor of New York. Welcomed by 10,000 people in the great amphitheater, he said that he came to preach the gospel of intelligent work, that this Chautauqua did not come by chance, that it was the result of years of hard work, and that now there is no institution more fraught with good to the nation than this.

The regents of the University of the State of New York have had great success in promoting extension lectures in connection with the State library at Albany, with the combined aid of traveling libraries, traveling pictures, extension lectures, and State examiners, all working harmoniously and efficiently together under one central guidance at Albany. The library is the great foundation of extension work in New York. To bring books to the people, to teach them what books to read and how to read them, and to bring the best books within their reach, in connection with the living voice of the lecturer, is the cardinal object and means of stimulating the love of study and the thirst for knowledge.

In some of the States, notably in Massachusetts, traveling libraries are hardly needed, and not even a Carnegie library is to be found. In that State, which consists of 350 townships, all but five had, at last accounts, established each for itself a free public library open to the use of all citizens, and maintained at the public expense; but even in such States, what to read and how to read it are still very serious questions, upon which great light ought to be shed by the summer lectures.

Emerson, whose name has been on all tongues lately in connection with the centennial of his birth, and who was one of the greatest readers of his time, and got more out of his reading than almost any other man, laid down some cardinal rules for his own selection of books.

> Be sure [he says] to read no mean books. Shun the spawn of the press on the gossip of the hour. Do not read what you shall learn without asking in the street and the train. The scholar knows that the famed books contain first and last the best thoughts and facts. In the best circles is the best information.

"The three practical rules," he says, "which I have to offer are: 1. Never read any book which is not a year old. 2. Never read any but famed books. 3. Never read any but what you like." Thus out of tens of thousands of books that issue from the press every year, he would let the world first winnow for him the chaff from the wheat, and from the hundreds of good books that were so eliminated he would have each student select for himself what his own necessities and his own

taste required. At all events, one of the greatest services which your lecturers can render is to guide you in the choice of the books in your selected course.

But enough of our American methods. By substantially the same means the two countries are pursuing the same end of popularizing the higher education, of bringing it home to the people, and securing its benefits not only to those whom fortune or circumstance enables to spend four years at the university, but to that vastly greater number whose thirst for knowledge and desire to make their working lives more useful and more happy lead them to seek and avail themselves of the great privileges which the various methods of the university extension supply. To continue in after life the delights and profit of those studies which the great majority of university men leave behind them when they take their degrees, to extend them in generous measure to the less fortunate, who have had to enter upon the struggle of life without them, and to apply the systematic methods of college training to many general and popular subjects, for which no place is found in the established curriculum, are the three great objects which these and other summer courses of lectures and reading have successfully attained.

To come for these high purposes to Oxford, this most ancient seat of education known to the English race, about whose venerable halls and libraries, quadrangles and walks, cluster all the history, traditions, and memories of many centuries of learning and study, whose very air is redolent of knowledge and wisdom, seems to me to be the highest reward and privilege of the earnest seeker after truth.

One supreme advantage you enjoy, which will make the month you spend here more rich and profitable than a whole year to the ordinary university student. He who comes here because he is sent, because it is the fashion to come, because his parents know not what else to do with him in the four years which separate youth and manhood, carries away, I fear, very little to show for his time. But you who are in dead earnest, who come because you can not stay away, and with the firm resolve to make the most of the opportunity, will go home bearing your sheaves with you and fruits of study which will enrich and gladden all your days.

Upon one thing I must especially congratulate you—the presence of women on an absolutely equal footing in attendance upon all the courses that are offered here. Here in conservative Oxford, and in the summer school of Harvard, which on other occasions equally ignores the idea of coeducation, these men and women, earnest and ardent seekers after truth, sit on the same benches, hear the same lectures, pursue the same studies, and live the same lives while this ideal month lasts. The young daughter of Somerville or Girton, of Radcliffe or Barnard, who is in search of more light and the higher life, finds here her full and equal opportunity.

And this brings me to the last point I wish to make, that these summer meetings are not only an opening of the doors of the university to those who have been shut out, not merely an exchange of learning between different universities and colleges and schools, but they constitute a real international exchange of knowledge and opportunity. I see in this audience visitors from all the continental nations, all bound on the same glorious errand, and, what I rejoice in still more, men and women from my own country who, having acquired what our own universities had to give, have crossed the seas for the sole purpose of spending a month in this congenial company, in these sympathetic and inspiring surroundings, in this Oxford, the historic and perpetual home of the scholar.

It is such intercourse as this—the exchange of ideas, of sentiments, of hopes and aspirations—that will be of priceless benefit to both countries. Cecil Rhodes, that great Englishman—"great empire builder," as the Times calls him: great citizen of the world, as I prefer to call him, for so his will attests him—with the most comprehensive and exalted view of the unity of the race to which he belonged, has provided that henceforth forever there shall at all times be at Oxford 100 American youth, selected from all the States, here to receive and

enjoy and to carry home the best fruits of her nurture and instruction which this ancient nursery of scholars and wise men has to bestow. We shall try to give you our very best—picked men on whom no opportunity will be wasted, men who will be ambitious to win your highest honors and rewards—and I am sure they will carry home with them what is of more value than all that—a better knowledge of our own country and of yours, a better understanding of the relations which should exist between them, a more generous sympathy of race with all who speak the English tongue.

And now will not some rich American—there are plenty of them who could do it without feeling it; I could name scores of them—will not some broad-minded and patriotic American respond to Mr. Rhodes's challenge, and in his lifetime, now, straightway, make a similar and equal provision for 100 young Britons—English, Scotch, and Irish—to be maintained at all times at such universities in the United States as they may select, the best men you can give us, who would study England from the American point of view, while they are studying America from the English point of view, and learn that the two peoples, in spite of their different methods and usages, are very much alike and in pursuit of the same ends and objects?

I know both peoples pretty well now, but I do not know which country or which set of young men would be the greater gainer by the exchange. I am sure that it would put an end forever to that provincial spirit which still lingers on both sides, and especially among the young men of both sides, and would establish an endless chain of intercourse and sympathy which it would be to the perpetual interest of both countries to preserve.

What I mean by the provincial spirit which still exists among the young men of both countries is that national prejudice born of intense love of country which refuses to see or believe that anything can be done quite as well abroad as it is at home, and which looks with condescension and patronage upon the best efforts and achievements of other nations. This prejudice, though traceable to a very noble motive, does certainly stand in the way of the highest national development, and I know of no cure for it so effectual as would be the constant interchange of students in large numbers between the great universities of the two nations, and if the movement lately inaugurated for a more intimate relation and interchange of ideas and students between the universities of English-speaking countries is to proceed in earnest, the universities of the United States must not be left out.

In a matter so vital and far-reaching as education, on which the supreme interests of both nations so absolutely depend, England and the United States can not stand apart. They must each study the methods, motives, and results of the systems pursued by the other, and in a spirit of generous rivalry strive each to promote the moral, intellectual, and spiritual welfare of its own people, being sure that in so doing they will best advance the cause of civilization and cooperate for the general welfare of mankind. I know of no more notable compliment ever paid by one to the other than when your board of education published last year, for the information of the British public, in its special reports on educational subjects, those two great volumes upon education in the United States—so expressive of the sympathy and interest of this kindred people in all our experiments, mistakes, and successes—and you may be sure that all the friends of education in America, including every intelligent and public-spirited citizen, are watching with equal sympathy and attention the great work which is being done here in the same direction.

If the moral courage and intellectual achievements of the English race the world over are to keep in advance, or even to keep pace with its material and industrial progress, it can only be done by maintaining at its highest level the standard of education on both sides of the water, and especially by extending the higher education as broadly as possible among the men and women of both countries. And

so I say, let us stand together and learn from each other and help each other all that we can.

As Mr. Lowell well said: "The measure of a nation's true success is the amount it has contributed to the thought, the moral energy, the intellectual happiness, the spiritual hope, and consolation of mankind."

The more strenuously we contend for that success the stronger and warmer will be our friendship, our sympathy, and our mutual confidence and respect.

A GOOD URBAN SCHOOL ORGANIZATION.

[The following article by Charles W. Eliot, LL. D., President of Harvard University, was originally delivered as an address before the Public Education Association of Philadelphia in January, 1904. It was revised by President Eliot for publication in Volume LVI, No. 2882, of the Independent, from which it is here reprinted.—EDITOR.]

The subject assigned to me is the most important educational subject now under discussion before the American people; because the people are coming to live in cities, and the urban schools will henceforth educate a large proportion of American children. The problem is how to manage well the public schools of a great city. In what I have to say I shall confine myself to things which have actually been done in our country. I propose to report how a good urban school system might be planned, organized, and carried on, because experience already shows what the elements of a good system are, and how they may be successfully combined and carried into practice. I propose to stick close to facts already established.

The fundamental question is the constitution of the school board. How should a board of education be constituted? In general, the school committee or board of education in American cities to-day is the outgrowth of conditions which existed when the cities were small towns. The small-town method, of course, fails to work well, as is perfectly natural.

Let us then start with the question of how many persons should the board of education consist? In the first place, it should unquestionably be a small number. To my thinking the perfect number is 7. Let me use an actual case in illustration, for I want to deal with facts—with things achieved. I have belonged for thirty-five years to the oldest educational board in this country, the prime governing board of Harvard University. It is called "The President and Fellows of Harvard College." It consists of 7 men; and I believe I am justified in saying that its achievements commend it as a safe example to follow. It has had more than two hundred and fifty years of successful experience, and the results of its labors are in plain sight. It is better to have an odd number of members, because, as a rule, the deciding number is larger by one when the number of members is odd. A satisfactory board can undoubtedly be made up of 7, 9, or 11 men; because we already see good boards organized with those numbers. Seven is ideal, because 7 men can sit around a small table and talk business in a conversational manner. They can talk together in a quick, simple, direct way, with absolutely no oratory, and no talking to the gallery or to reporters—just plain business talk, with specific proposals in view, and under the guidance of a chairman who knows the business and urges it on.

How should this small board be selected? There may be cities in which appointment would be safer than election, because the method of election has long been used with bad results; but I should say that, in general, slow replacement by election at large had proved to be the safest and most acceptable method. We have had various experiences on this subject in our country; but out of them all has emerged this best way—election at large, one member at a time or two at a time,

and each member reeligible once, but not more. If we imagine a board of 7 men in a city where municipal elections take place every year, one member will be chosen every year, and each man will serve seven years and be reeligible for another term of seven years, making fourteen years of continuous service. Then should come a break in the member's service. The break is expedient, however much the city wishes to reelect a man whose services have been very valuable. The majority of the members every year should be men of experience in the business of the board; and that result will be secured by the long term of service. It may be desirable to reelect a man for a third term; but there should be a break of at least one year before he is so reelected.

What sort of men should be members of this board? There should be no salary. The time and labor of the members are to be given freely to the children and the city. Clearly then only men of public spirit should be chosen. Public spirit is the very first qualification for membership in a board of education; and the next qualification is judgment, or good sense. How can this quality be secured? It can be secured by selecting only men who have been distinctly successful each in his own walk of life. Success in whatever honorable business a man has undertaken is evidence that there is good quality in the man. Next he must have some appreciation of the importance of the office to which he has been elected, some conception of the magnitude of the task, and of the far-reaching effects of the service he can render. This ordinarily means—there will, of course, be exceptions—that he must have children or grandchildren of his own and a love for children, and that he must have some vision of the splendor of the work. That is the kind of a man the school board needs. His quality is obvious. What chance has a city of getting one or two such men a year by election at large? That will depend on the good sense and good feeling of the voters, and on the existence of some disinterested nominating body.

There is a possible alternate to the method of election at large—namely, appointment by the mayor or by the judges; but election at large is preferable to appointment, because the mayor would probably appoint political partisans, and the judges ought not to have such a function imposed on them. There is a school board, organized on the principles I have described, which has been in successful operation for several years—the St. Louis board of education. It is larger than one would wish. It numbers 12 men, elected biennially, four at a time. I believe it to be the best board of education in the United States. It has demonstrated its high quality, and has worked well in practice. I therefore feel that the method of election at large in small groups has borne the test of experience.

The next question in regard to the urban school system is that of resources—how much money shall it have, and on what plan shall its money be raised? Next to the quality of the school board that is the most important question of all. There is a best way—namely, to appropriate by law to the use of the board a certain percentage of the city's total valuation for purposes of taxation. In some of our cities taxes are levied on real and personal property, in others only on real property; in either case the legislature must fix the percentage. How adequate the results will be will of course depend on the discretion of the legislature. In the State of Missouri the legislature lately raised the amount of school money for St. Louis from 4 mills on each dollar of valuation to 6 mills at a single blow—that is, they added 50 per cent to the income of the school board of St. Louis by a single act. Now, that is a remarkable performance on the part of a State legislature, and an extraordinary proof of the confidence of the legislature in the efficiency and honesty of the board. The act was passed because the board had demonstrated its ability to use the additional funds judiciously. It had proved its worth. The school board of St. Louis in the first year made use of only 1 of the 2 additional mills.

Now, what are the advantages of this method? The board knows that the valuation of the city increases from year to year, and that the annual increase can be predicted with a good deal of exactness. They can look ahead and say "Next year we shall have so much, the year after so much, and so on." They can predict their own resources. It is indispensable that the annual resources of the schools should grow with the growth of the city and of its valuation. When in one of our great cities 60,000 children were unable to find room in the schools one September, except to attend partial sessions at abnormal hours, the board could only say "We did not know how much money would be at our disposal. We could make no plans in advance." In this respect St. Louis has given us an admirable example. Knowing the number of children they would have to accommodate in the schools, and knowing the districts which population was leaving and the districts which were filling up, they set about buying schoolhouse sites in the suburban parts of the city while land was cheap. They said, just as a private individual says, "There is a cheap bit of land fit for our uses. We will buy it now, because we know we shall need it later." They are always on the alert. This shifting of population is characteristic of American cities. They are all liable to lose population at the center, while suburban districts are becoming more thickly populated all the time; therefore, school sites should be bought outside of the city, directly in the path of the outflowing population, and should be bought before the price of land has risen. Centers of habitation change, but the schools do not move with them. Yet these phenomena can be predicted, and our school boards should be able to act with this sort of foresight. If the school board were not dependent on councils, but had its own financial department and its own resources, it could anticipate its own needs. Whatever form of school board be set up in an American city, it will not be able to do its work well unless it can predict its income. Knowing its income, a board can say, "It costs so much to maintain the schools we have; next year there will be so many more children, and so much more money at our disposal. We can build two manual training high schools within two years, and three new grade schools a year in the suburbs." There will always be growing funds to meet growing needs.

The next question about a school board is, what its functions or duties should be—what it should undertake to do. The ideal board of 7 men should, in the first place, decline all executive service. Nothing executive should be within their functions. It should be their work to determine the general policy of the school system. They should create and fill their own executive offices, direct expenditures, and settle questions that arise in the carrying out of their policy. I know by experience that these occupations would be quite enough for any board of education. They would take as much time and thought as an unpaid board should be expected to give to the city. This limitation of function would be a new departure for most American cities. Most school committees attempt to perform executive functions through subcommittees on high schools, books, supplies, teachers, janitors, etc. Thus, Boston has a school committee of 24 members, which divides itself into numerous subcommittees, all of which attempt executive functions. This is the traditional method. Now, it is obvious that even a well-chosen, fortunately constituted school committee will probably contain no experts on these difficult matters. Let us take the average subcommittee on books as an example. The subcommittee on books ought to know what books are used in the schools, what better books are needed and why, and what books are on the market. They ought to be able to understand the wishes and needs of the teachers in regard to the books they are forced to use. I should think a city unusually fortunate whose subcommittee on schoolbooks consisted of a banker's clerk, a blacksmith, and a wholesale grocer, none of which estimable callings can be said to fit a man for the difficult function of selecting text-books for schools. It would be

as rational for a city to confide to such a committee the building of a bridge, or the laying out of a park, or the superintending of its hospital. In these days all executive work should be in the hands of experts. The man who ought to direct the purchasing of books for a city's schools is the man who comes in contact with teachers, school children, and schoolbooks every day of his life.

The first duty of the new school board is to appoint its chief executive officers. How many should they be? St. Louis has shown the way. There should be four executive officers—first, a superintendent of instruction; secondly, a superintendent of buildings; next, a superintendent of supply, and, lastly, a superintendent of finance and accounts. Each of these officers should report to the board at frequent intervals, and should prepare an annual report of his work, to be printed and distributed to the public with the annual report of the board itself. I need not say that every man should be an expert who understands thoroughly the particular business he is going to do. In regard to this organization St. Louis has shown the way. They have had several years' experience of this system, and its good results are conspicuously in evidence.

Let us first examine the functions of the superintendent of instruction. The organizing of the twelve grades of instruction is an exceedingly complex piece of business; it requires thousands of teachers, who should be selected, promoted, and dismissed by the superintendent. Of course, the superintendent should follow some public method of selection and promotion that can be clearly described and explained. He will naturally appoint examiners of new teachers and inspectors of teachers at their work. Local means should be provided for training young teachers for service in the city's schools. There should also be a well-understood method of consulting principals about appointments and promotions, and there should be long probationary periods for young teachers. To maintain a large corps of teachers in alert and vigorous condition a system of retiring allowances is essential. The American pension system for soldiers and sailors has been so exaggerated and wasteful that many people distrust the pension method in civil employments; yet the value of the pension system has been demonstrated in city fire and police departments, in railroad systems, in the judiciary, and in the best universities of the country. A pension system not only promotes efficiency; it is more economical than the prevailing method of keeping disabled teachers in service at full pay.

The construction of programmes of study for all grades of a school system is another function of the superintendent of instruction, a function which calls for a broad knowledge of the whole field, an intimate acquaintance with many details, and a rare mixture of ingenuity and good judgment. A good superintendent will know how to secure the loyal cooperation of his teachers, for the best programme may be defeated by indiscretion or bad faith in executing it. Finally, the superintendent should be responsible for the tone or temper of the school discipline in all grades—for its gentleness, firmness, elasticity, and steadiness. To find a man fitted by natural gifts and appropriate experience to discharge these functions will be the most difficult task of the board.

The next executive officer should be a superintendent of buildings, new and old. This officer should give his whole time to the service of the board, and should have been an engineer or architect by profession. Although all the American cities and large towns have been building schoolhouses with great activity during the past thirty years, the common stock of knowledge on the subject seems still to be small. There is much yet to be learned about fireproof and slow-burning construction, and the best means of heating and ventilating a building divided into numerous rooms of moderate size. Large schoolhouses are still built with halls and stairways which are far from fireproof, and gross overheating is very common. The officer who should have general direction of the repairs and improve-

ments of schoolhouses and of the construction of new schoolhouses would have his hands full. Great improvements have, of course, been made within fifty years. When I was a boy at a Boston public school ventilation was hardly thought of as a thing desirable for a schoolroom, but to-day satisfactory apparatus for heating and ventilating a large building divided into small rooms can hardly be said to exist. I know that Harvard University has not solved the great problem of heating and ventilating. Urgent complaints have come to me this month from the professors who occupy two of our principal buildings; yet the university has spent within two years more than $50,000 on the heating and ventilating apparatus for those two buildings, a full third of this expenditure having been absolutely thrown away. I cite this experience to illustrate the fact that the superintendent of buildings of a large urban school system would have a very serious charge, requiring experience, habits of observation, and the disposition to attack vigorously new problems. A building contractor would not answer the purpose; neither would a man trained to any other business than engineering or architecture. This is emphatically the place for a broad-minded expert.

The superintendent of supplies would be the next executive head of a large department. For a well-conducted urban school system a great variety of supplies is now indispensable, such as books, writing books, drawing books, maps, models, prints, photographs, lanterns and lantern slides, and stationery of all sorts. If school gardens form a part of the city's equipment, a special sort of supplies will be needed for them. If manual training has been properly developed in all the schools, the peculiar apparatus needed for teaching that subject will be always in need of repair and replacement. If the city supports mechanic arts or trades high schools, the mechanical equipment of those schools will be exceptional and difficult to maintain in full efficiency. If the schoolhouses are used, as they should be, for evening schools and as centers of social improvement and pleasure, these extensions of the schoolhouses' serviceableness will demand considerable supplies of various sorts. There should be a lantern and a considerable collection of lantern slides in every schoolhouse, and in every school a teacher who is capable of using the lantern. The selection of the books to be used in a city's schools is in itself a very important and difficult function; for it is the custom to provide teachers and pupils with books in large number and variety, both for use in the school libraries and for the daily use of the pupils at school and at home.

The superintendent of supplies will need in all his work the direct advice of the teachers in the schools. Without such consultation it would be impossible for the most skillful man to do his work to the best advantage. This leads me to say that, in general, the teachers should be much more consulted by the executive officers of the school system than is now commonly the case. I know that my own functions as president of Harvard University could not be properly performed without constant consultation with the professors and other teachers, and frequent intercourse with the promising young men who year after year enter the university faculties. Every school principal ought to have a faculty of his own with which he statedly consults. In such a school faculty there would naturally be subdivisions by departments of instruction. Thus, all the teachers of history would naturally associate themselves together in consultation over the needs of their department, and the opinion of each department about the books to be used and the supplies needed would deserve careful consideration.

The superintendent of supplies would have charge of the service of all the schools. He would be responsible for the purchase of fuel, and he should therefore control the engineers and janitors who spend the fuel. Here, again, he would need to keep in touch with the teachers, because their health and comfort depend very much on the intelligence and success with which the work of the engineers and janitors is done.

I have now spoken of three executive departments—instruction, buildings, and supplies. The subject of medical inspection of school children touches every one of these departments. The bodily condition of the children affects deeply the discipline of the schools, the regularity of the children's attendance, and the rate of promotion; and these things belong to the department of the superintendent of instruction. A child may be pronounced stupid when he is really suffering from some chronic physical evil, which a competent school inspector could detect and possibly remedy. Thus, a child may have astigmatic eyes, and, in consequence, suffer greatly from headache, and be quite unable to keep up with his mates; or he may be suffering from adenoid growths in his throat or nose, which make him appear dull and inattentive, or actually make him deaf, and so apparently heedless. By thorough medical examination of each and every pupil, many children can be rescued from these sufferings and made capable of normal school activity. By frequent medical examination the children may be saved from preventable maladies and from being unjustly blamed. Frequent inspection may also prevent the spread of infectious disorders. The health of the school children is all important to the success of the teachers' work, and is, therefore, emphatically the business of the superintendent of instruction.

The superintendent of buildings has also a strong interest in the health of the children. He is responsible for the air they breathe and for the temperature in which they work; and he can be greatly aided to do his own work well by medical inspectors, who report the temperature of the schoolrooms and the condition of the air therein. Again, the superintendent of supplies has a similar interest in the frequent medical inspection of the schoolhouses. He, too, can get from the medical inspectors much important information about the results of his own work and about the health precautions which should be taken in the interests of the children. Thus the disinfecting of the books which are transmitted year by year from one set of children to another is a matter on which medical advice is valuable. Again, if meals are supplied in the schoolhouses medical opinion should be obtained as to the selection and quality of the provisions. Luncheon in schools has more importance now that one long session instead of two short sessions has been so generally adopted in the higher grades of the public school system. The care of the eyes of school children is a matter that should be much more insisted on than it is. If the eyes of a considerable portion of the school children suffer damage during their school life, the industries of the entire people will be inevitably impaired, for good eyesight is well nigh indispensable in the principal trades and occupations. Medical inspection throughout a city school system is therefore to be advocated on economical grounds as well as for philanthropic considerations.

The fourth expert executive officer to be employed by the board will be the superintendent of finance and accounting. He would have charge of collecting all the receipts of the school system and of paying the bills for all its expenditures. In some cities endowments have been provided for the benefit of the public schools, and the income of these invested funds makes part of the resources of the school system; but the great resource would be the taxes, determined by the laws under which the school system is carried on. To estimate, collect, and keep account of these resources would be part of the function of this fourth executive officer. He would also pass upon and pay all salaries, wages, building accounts, and bills for supplies. Every outgo for the schools would pass through his hands. It is obvious that a highly competent officer would be needed for these duties.

The terms of all four of these expert executive officers should be long. The American likes a long term, and his moral quality is favorably affected by long-continued service. The American community also pays more consideration to a long-term official than to one who has but a short tenure. Thus in those States

which elect their judges it has been found expedient to elect for long terms because the serviceableness of the judges was thereby greatly increased. Moreover, in the four offices which I have been describing conscientious and able men would become more and more useful to the community as years went on. They would gain both knowledge and influence by continued experience in their several offices. The first appointments to these offices might well be for a short term of years, but after satisfactory probation the tenure should be during adequate performance of duty.

I have now described the best organization of an urban school system for our country. The principles on which this organization is based are simple, and they rest on human nature itself. They seek to apply for the benefit of schools well-known mental and moral qualities of rational, conscientious men and women. The conditions for a favorable solution of the city school problem are by no means unattainable; indeed, they have actually been attained in good measure. Relatively to our hopes and our aspirations the public school system in the United States is a disappointment; but absolutely the public school systems of our great cities have done a great work, and by comparison with other branches of the public service are the most successful of our American institutions.

I have lately been making a limited inquiry into the success of the public schools compared with that of the endowed schools and the private schools, the investigation being entirely confined to results obtained in Harvard College. This is a limited field, but a representative one; for Harvard College is recruited annually from about 200 schools and colleges scattered all over the land. About 30 per cent of the young men who enter Harvard College year by year come from public schools. Now, the public school boys, on the whole, pass better examinations at admission than the boys from the endowed and private schools. And how is it at graduation three or four years later? Do the public school boys hold their own in college down to the period of graduation? I find that at Harvard University the students who come from public schools graduate with somewhat higher standing than those who come from endowed and private schools. The honors are still with the public schools. I believe that similar results would be obtained from like inquiries at other American universities.

What we are aiming at, then, is the improvement of an invaluable public service. We are planning to make better the organization of the most serviceable of all American institutions.

THE EXPENDITURE FOR POPULAR EDUCATION JUSTIFIED BY ITS RESULTS.[a]

By CHARLES W. ELIOT, *President of Harvard University.*

In the first place, as I look back on the progress of American education since the civil war I think I see that education is the one agency for promoting intelligence and righteousness which has unquestionably gained power in the United States during the last half century—the one agency which has not only retained its hold on the democratic masses, but has distinctly gained more and more public confidence and received from the democracy greater and greater moral and material support. The democracy has believed more and more in the efficiency of schools and colleges, and schools and colleges have more and more taught and acted out democracy. This is only saying, on the one hand, that the popular masses perceive that it is in large part the schools and colleges which implant in successive generations democratic ideals and make them fit to be free; and, on the

other, that the schools and colleges believe in the democratic ideals, and fervently desire to promote brotherhood, unity, and the practical acceptance of the Pauline doctrine, "Every one members one of another." Can we say of any other of the organized inspiriting and moralizing forces in American society that it has gained strength and increased its influence during the past fifty years? The efficiency of legislatures and the respect in which they are held have unquestionably declined since the civil war. American legislative assemblies—municipal, State, and national—have repeatedly shown themselves unable to solve, or even begin to solve, the new problems which have arisen in rapid succession out of the incredible changes in industry, commerce, and transportation. In other words, legislatures have not been able to keep up with American progress in other fields. Some of them have ceased in large measure to be deliberative assemblies and habitually transact important parts of their business in secret committee meetings. Others have proved to be in the hands of one man, himself not a public official, so that legislation is adopted or rejected at that one man's will—sometimes a purchasable will. Congress has repeatedly disappointed the people in respect both to its intelligence and to its magnanimity, and with a rather piteous recognition of its own incapacity it has repeatedly taken refuge in the discretion of the Executive.

Most persons will also agree that the courts of our country are as a whole less efficient and less respected to-day than they were a generation or two generations ago. Their decline is painfully apparent in criminal matters and is plainly visible in civil matters also. The efficacy of the death penalty has been well-nigh destroyed by the delays ordered or permitted by courts. The courts often seem embarrassed by conflicting precedents or contradictory decisions and paralyzed by multiplying technicalities and ingenuities of counsel. Moreover, they not infrequently give uncertain sounds. Hence reverence for law is not maintained at its old level, and lawless violence against suspected criminals claims justification in the delays and uncertainties of legal processes.

The church and its ministers can not be said to have risen in public estimation since the civil war. Its control over education has distinctly diminished. In some of its branches it seems to cling to archaic metaphysics and morbid poetic imaginings; in others it apparently inclines to take refuge in decorums, pomps, costumes, and observances. On the whole it has not been able to keep up with the progress of either science or democracy—those Atalantas of the nineteenth century that never stop for golden apples dropped in their path—and it has shown little readiness to rely on the intense reality of the universal sentiments to which Jesus appealed or to go back to the simple preaching of the gospel of brotherhood and unity—of love to God and love to man. So the church as a whole has to-day no influence whatever on many millions of our fellow-countrymen, called Jews or Christians, Protestants or Catholics though they be. We still believe that the voluntary church is the best of churches, because a religion which is accepted under compulsion is really no religion at all for the individual soul, though it may be a social embellishment or a prop for the state. Yet, believing thus, we have to admit that the voluntary church in the United States has no hold on a large and increasing part of the population.

By no positive fault of their own, but by a sort of negative incapacity, legislature, court, and church seem to be passing through some transition which temporarily impairs their power; but the schools and colleges in the United States, while changing and developing rapidly, have suffered no impairment of vigor or influence. On the contrary, education as an uplifting agency was never so effective with the democracy as it is to-day. To redeem and vivify legislatures, courts, and churches, what agency is so promising as education? Next to steady, productive labor, education is the prime factor in social and industrial progress. This primacy of education among various factors affords the strongest possible induce-

ment to spend every dollar on popular education which can be spent advantageously. It also gives an answer, drawn from experience, to the question, Is the present expenditure worth making? A reasonable foresight supplies another answer. We should ask ourselves, What better remedy than wise popular education, what other thorough remedy, can be imagined for the new evils which threaten society because of the new facilities for making huge combinations of producers or middlemen, of farmers or miners or manufacturers, of rich or poor, of laborers or capitalists? Masses of men are much more excitable than average individuals, and will do in gregarious passion things which the individuals who compose the masses would not do. A crowd is dangerously liable to sudden rage or—what is worse—sudden terror, and either emotion may overpower the sense of responsibility and annihilate for the moment both prudence and mercy. There never was a time when common sentiments and desires could be so quickly massed; never a time when the force of multitudes could be so effectively concentrated at a selected point for a common purpose. Against this formidable danger there is only one trustworthy defense. The masses of the people must be taught to use their reason, to seek the truth, and to love justice and mercy. There is no safety for democratic society in truth held or justice loved by the few. The millions must mean to do justly, love mercy, and walk humbly with their God. The millions must be taught to discuss, not fight; to trust publicity, not secrecy, and to take timely public precautions against every kind of selfish oppression. To give this instruction steadily and universally society possesses no organized agency which compares in present efficiency and future promise with the schools. Therefore the present expenditure on schools is fully justified and increased expenditure urgently demanded. I can almost hear the objection: This expectation of popular schools is extravagant; they are only for teaching reading, writing, and ciphering. Not so, I reply. The common schools should impart the elements of physical, mental, and moral training, and in morals the elements are by far the most valuable part.

Secondly, let me deal briefly with our skeptic's demand for a test of the results of popular education. I think there must be some sure-working practical tests of the efficiency of popular education. Can they be stated? Concerning an educated individual, we may fairly ask, Can he see straight; can he recognize the fact? Next, Can he draw a just inference from established facts? Thirdly, Has he self-control, or do his passions run away with him or untoward events daunt him? These are fair tests of his mental and moral capacity. One other test we may fairly apply to an educated individual—Does he continue to grow in power and in wisdom throughout his life? His body ceases to grow at twenty-five or thirty years of age, does his soul continue to grow? It is obvious that these tests are difficult of application to a nation; but we are not wholly without means of applying them to our own people as a mass. The people live by agriculture, mining, and manufacturing; and these great concerns can not be successfully managed unless multitudes of men recognize essential facts and draw the right inferences from the truths they embody.

The success with which the American people get their livelihood shows that there is much soundness in their mental training. Millions of them must be able to observe accurately and to infer justly. One of the most difficult tasks for a man who thinks imperfectly is to get over a delusion. Whenever the American people, through the reasoning power of millions, get over a delusion they shed light on the efficiency of their own education. We have had a recent piece of evidence of this sort in the recovery of our people from the widespread silver delusion. Do their passions run away with the people? They did not after the civil war, the forbearance of the Confederates being as remarkable as that of the Unionists. They did not at the close of the fighting with the poor Spaniards in

Cuba. Never were terms of surrender more generous, or, I may add, more ingenious. The same self-control was manifested in the intelligent withdrawal of our soldiers from China. Do untoward events daunt the people? No. As a rule, our population bears calamities and losses with constancy and calmness. The country lately lost its singularly beloved Chief Magistrate, and lost him in an intensely mortifying way; but our Government never staggered, even for a moment, and the whole work and life of the people went on without a halt, or even a quiver, except for the momentary thrill of horror and humiliation. In the recent coal strike, which doubled the price of a necessary of life and caused widespread injuries and anxieties, the attitude of the much-enduring public was calm and discreet. The public took sides with neither party, looked on quietly at the irrational strife, accepted no bad advice, tried no unconstitutional remedies—just bore the losses and waited five months for the combatants to accept that method of inquiry, discussion, and mutual consideration which ought to have been adopted when the conflict first arose. The strike has furnished a good illustration of popular self-control under very irritating conditions. Such are some of the indications that American education has not wholly failed of its high object.

Can we apply to the education of the nation the ultimate test which we finally apply to the education of an individual? As the national life grows broad and rich does the national soul or spirit grow with it? Does mental and spiritual progress keep pace with material? God only knows; but mortals may discern some facts which make toward the conclusion we should all like to establish. Thus, in regard to the mental powers of the population, whenever new machines, be they reapers, looms, cranes, crucibles, guns, or electric motors, have required more intelligent men behind them the nation has invariably supplied on demand the needed men. This evidence is furnished incessantly on an immense scale, and it signifies that the people rise to their higher work. When a quiet villager, who has been just caring for his farm and his sawmill, is made school agent or chairman of the board of health, and is forced to think of all the children in the town or of all the sick in it, if he does his work well, grasps ideas novel to him, and by energetic and judicious action spreads them through the town, we say that he has grown to his enlarging work. On a higher plane that is just what we do say of Benjamin Franklin and Abraham Lincoln. In like manner the American people has grown to its expanding and novel industries, arts, and commerce, and has clearly done its daily work better than the competing nations. Hence, the total training of its youth, an important part of which has been given by the schools and colleges, must have been measurably successful.

The extraordinary sale of dictionaries and encyclopedias in the United States demonstrates the existence in innumerable households of the habit of looking up the meaning of words and the facts about unfamiliar topics encountered in conversation or in reading. This habit implies a lifelong desire to learn. The reading habits of the people prolong mental activity and growth, widen interests, and quicken sympathies, for the great mass of the people's reading matter is pure and instructive, in spite of the mortifying fact that parts of most daily newspapers are given over to Cloacina and the Furies.

But all this refers to the national mind applied to things material, or to the ordinary plane of commonplace life. How about things spiritual, the great moral movements, and the refinements and adornments of life? Is there any better test of unselfish and gentle feeling in a multitudinous people than their habitual treatment of women and children? Now, on the whole, Americans of all classes treat their women in large things and small better than any other people treat theirs. American men are laughed at by foreigners for making their wives and daughters extravagant and self-indulgent. On farms women do not work in the fields, as all foreign peasant women do. For factories we have in many States protective leg-

ment to spend every dollar on popular education which can be spent advantageously. It also gives an answer, drawn from experience, to the question, Is the present expenditure worth making? A reasonable foresight supplies another answer. We should ask ourselves, What better remedy than wise popular education, what other thorough remedy, can be imagined for the new evils which threaten society because of the new facilities for making huge combinations of producers or middlemen, of farmers or miners or manufacturers, of rich or poor, of laborers or capitalists? Masses of men are much more excitable than average individuals, and will do in gregarious passion things which the individuals who compose the masses would not do. A crowd is dangerously liable to sudden rage or—what is worse—sudden terror, and either emotion may overpower the sense of responsibility and annihilate for the moment both prudence and mercy. There never was a time when common sentiments and desires could be so quickly massed; never a time when the force of multitudes could be so effectively concentrated at a selected point for a common purpose. Against this formidable danger there is only one trustworthy defense. The masses of the people must be taught to use their reason, to seek the truth, and to love justice and mercy. There is no safety for democratic society in truth held or justice loved by the few. The millions must mean to do justly, love mercy, and walk humbly with their God. The millions must be taught to discuss, not fight; to trust publicity, not secrecy, and to take timely public precautions against every kind of selfish oppression. To give this instruction steadily and universally society possesses no organized agency which compares in present efficiency and future promise with the schools. Therefore the present expenditure on schools is fully justified and increased expenditure urgently demanded. I can almost hear the objection: This expectation of popular schools is extravagant; they are only for teaching reading, writing, and ciphering. Not so, I reply. The common schools should impart the elements of physical, mental, and moral training, and in morals the elements are by far the most valuable part.

Secondly, let me deal briefly with our skeptic's demand for a test of the results of popular education. I think there must be some sure-working practical tests of the efficiency of popular education. Can they be stated? Concerning an educated individual, we may fairly ask, Can he see straight: can he recognize the fact? Next, Can he draw a just inference from established facts? Thirdly, Has he self-control, or do his passions run away with him or untoward events daunt him? These are fair tests of his mental and moral capacity. One other test we may fairly apply to an educated individual—Does he continue to grow in power and in wisdom throughout his life? His body ceases to grow at twenty-five or thirty years of age, does his soul continue to grow? The success with which the American people get their livelihood shows that there is much soundness in their mental training. Millions of them must be able to observe accurately and to infer justly. One of the most difficult tasks for a man who thinks imperfectly is to get over a delusion. Whenever the American people, through the reasoning power of millions, get over a delusion they shed light on the efficiency of their own education. We have had a recent piece of evidence of this sort in the recovery of our people from the widespread silver delusion. Do their passions run away with the people? They did not after the civil war, the forbearance of the Confederates being as remarkable as that of the Unionists. They did not at the close of the fighting with the poor Spaniards in

Cuba. Never were terms of surrender more generous, or, I may add, more ingenious. The same self-control was manifested in the intelligent withdrawal of our soldiers from China. Do untoward events daunt the people? No. As a rule, our population bears calamities and losses with constancy and calmness. The country lately lost its singularly beloved Chief Magistrate, and lost him in an intensely mortifying way; but our Government never staggered, even for a moment, and the whole work and life of the people went on without a halt, or even a quiver, except for the momentary thrill of horror and humiliation. In the recent coal strike, which doubled the price of a necessary of life and caused widespread injuries and anxieties, the attitude of the much-enduring public was calm and discreet. The public took sides with neither party, looked on quietly at the irrational strife, accepted no bad advice, tried no unconstitutional remedies—just bore the losses and waited five months for the combatants to accept that method of inquiry, discussion, and mutual consideration which ought to have been adopted when the conflict first arose. The strike has furnished a good illustration of popular self-control under very irritating conditions. Such are some of the indications that American education has not wholly failed of its high object.

Can we apply to the education of the nation the ultimate test which we finally apply to the education of an individual? As the national life grows broad and rich does the national soul or spirit grow with it? Does mental and spiritual progress keep pace with material? God only knows; but mortals may discern some facts which make toward the conclusion we should all like to establish. Thus, in regard to the mental powers of the population, whenever new machines, be they reapers, looms, cranes, crucibles, guns, or electric motors, have required more intelligent men behind them the nation has invariably supplied on demand the needed men. This evidence is furnished incessantly on an immense scale, and it signifies that the people rise to their higher work. When a quiet villager, who has been just caring for his farm and his sawmill, is made school agent or chairman of the board of health, and is forced to think of all the children in the town or of all the sick in it, if he does his work well, grasps ideas novel to him, and by energetic and judicious action spreads them through the town, we say that he has grown to his enlarging work. On a higher plane that is just what we do say of Benjamin Franklin and Abraham Lincoln. In like manner the American people has grown to its expanding and novel industries, arts, and commerce, and has clearly done its daily work better than the competing nations. Hence, the total training of its youth, an important part of which has been given by the schools and colleges, must have been measurably successful.

The extraordinary sale of dictionaries and encyclopedias in the United States demonstrates the existence in innumerable households of the habit of looking up the meaning of words and the facts about unfamiliar topics encountered in conversation or in reading. This habit implies a lifelong desire to learn. The reading habits of the people prolong mental activity and growth, widen interests, and quicken sympathies, for the great mass of the people's reading matter is pure and instructive, in spite of the mortifying fact that parts of most daily newspapers are given over to Cloacina and the Furies.

But all this refers to the national mind applied to things material, or to the ordinary plane of commonplace life. How about things spiritual, the great moral movements, and the refinements and adornments of life? Is there any better test of unselfish and gentle feeling in a multitudinous people than their habitual treatment of women and children? Now, on the whole, Americans of all classes treat their women in large things and small better than any other people treat theirs. American men are laughed at by foreigners for making their wives and daughters extravagant and self-indulgent. On farms women do not work in the fields, as all foreign peasant women do. For factories we have in many States protective leg-

islation in regard to the employment of women and children. There is a very significant difference between the expectation on the part of the American people of personal purity and domestic honor in their public men and the expectation in those regards on the part of any European people concerning their kings, princes, and high officials. The politician who disappoints the American people in that respect is lost, be he ever so serviceable a person. As to the treatment of children, it is certain that the discipline in American families and schools is gentler and more considerate than in other countries. Moreover, there has been a great advance in this respect within thirty years, an advance which has made the whole people happier and better. This is a widespread gain, made in millions of homes and schools, and it not only tells on the present moral condition of our people, but is of the highest promise for the future. Somehow slavery is gone and intemperance has been checked and made disgraceful. The results testify to the moral forces which produce them.

If one would estimate the progress of a people in the fine arts and in science, one must go to the works of the few men who best illustrate the national art and science. In the whole history of sculpture can any one point to a more informing, inspiring, and touching military monument than the Shaw monument on Boston Common? There are bigger and costlier, but none more expressive, juster, or more uplifting. Look through the whole list of astronomical observatories since such establishments existed and you will not find one which, in proportion to its resources, has produced so much routine work and made so many new discoveries as the Harvard College observatory under its present director. In the prompt and general application of scientific discovery to the service of humanity Americans certainly excel other nations. It is enough to mention anesthesia, the telegraph, the telephone, and the innumerable inventions of labor-saving machinery. The use made of riches is another test of the moral condition and standards of a people. Now, the stream of gifts from private persons to schools, colleges, universities, libraries, art galleries, museums, and laboratories in the United States flows in a volume which has never been approached in the history of the world. It is said that there are only six towns in all Massachusetts the inhabitants of which have no access to free books. It is not only the few very rich men who provide educational endowments. Every year thousands of Americans take part in this most intelligent beneficence, wiser than any endowment of hospitals, asylums, or infirmaries, because a work of construction instead of palliation. Truly there are some encouraging evidences that the soul of the people keeps growing.

So, in good heart and hope, learning from failures what not to do and from successes what next to attempt, we may all press on together toward our national goal—the perfecting of an intelligent individual citizenship in a Christian democracy.

ADDRESS OF THE COMMISSIONER OF EDUCATION AT THE DEDICATION OF THE McKINLEY MANUAL TRAINING SCHOOL.

[At the dedication of the McKinley Manual Training School in the city of Washington, January 29, 1903, W. T. Harris made the following remarks.]

The establishment of this manual training high school in Washington belongs to a new movement, but it is not the first step in this movement here in Washington, for this city placed itself in the front long years ago by introducing the forge, the carpenter's bench, cooking, and sewing for its elementary schools. St. Louis was the pioneer in the establishment of the manual training school proper. Professor C. M. Woodward of that city had given his mind to founding such

a school as should fit the youth for an age of machinery. He had taken hints from the Russian exhibit at our Centennial Exposition in Philadelphia. The Russians had made a school shop in order to train in the quickest way Russian youth for its mechanical trades. St. Louis was the first city that possessed a manual training school; Professor Woodward obtained an endowment for the school, and established it in connection with the Washington University; Chicago had the second one, and from those two schools, which began about thirty years ago, the entire number has risen to 153 manual training schools, with 48,028 pupils and an annual expenditure of over $800,000. The branches taught in some of these schools number 30, and the simplest curriculum includes woodwork, ironwork, cookery, and sewing.

Very many cities have introduced manual training to a greater or less extent for the pupils of the district schools. In 1890 there were 37 of these cities; four years later there were 95; in 1896 there were 121, and this number has continually risen from year to year until last year there were 236 cities in the United States that had manual training taught in their elementary schools.

When the movement first began its enthusiastic advocates claimed that manual training was a substitute for other branches. Later experience has not substantiated this claim, but manual training has been found a good thing in its place and indispensable in a course of study in the schools. If manual training is not a substitute for mathematics, nor for letters and literature, nor for natural science, yet neither one of these branches is a substitute for manual training. There are two divisions to the course of study in the common schools. One leads to letters and literature, history, and science; the other division leads to the conquest of nature, to the use of matter and force in productive industry. Pure mathematics comes first in this second division, as it formulates the laws of existence in time and space. Then come physics and chemistry, the application of mathematics to matter and to the natural forces of heat, light, electricity, gravitation, and the chemical constitution of bodies.

The conquest of nature by means of science and useful inventions has increased the productive capacity of man enormously. A hundred years ago the total productions of the United States amounted to about 10 cents a day for each man, woman, and child. The introduction of the steam engine had produced a great increase during the period from 1830 to 1850, and the productions of the United States increased to about 30 cents a day for each inhabitant. Our rate of production in 1900 is about 55 cents a day for each inhabitant. It is five times as great as it was in the year 1800, and this increase of power is due to the harnessing of natural forces in the service of man. This manual training school is the symbol of the conquest of nature, and on this day, which celebrates the birth of one of the greatest of our line of Presidents, it is fitting that this building should be dedicated and made to bear his illustrious name.

Inasmuch as man doubles and trebles his power by the aid of machinery—and this is an age of the general introduction of machines, not only into the shop, but into the household—all children (boys and girls) should learn something about the construction and direction of machines. The manual training school is especially calculated to give to the pupil this knowledge. It does not train his hand to what is called hand labor so much as it gives him the power to understand and direct machinery. The skillful hand may do many times the work of the unskilled hand, but the one who can direct a machine may do ten or a hundred times as much as the person who works merely with his hand.

I congratulate the people of Washington upon the completion of this building, so admirable in its construction and so well fitted for its purposes of giving the youth of Washington directive power over machinery.

if she have the training, in a class room in a principal's cottage. Such a plan would result in changing the business of teaching rural schools from a mere makeshift to a life profession.

The agricultural high school must necessarily be large so as to afford a large equipment of apparatus, machinery, crops, live stock, special instructors, etc. Such schools can not be so near the home farms that the students can live at home. By cooperating several counties can have one large, well-equipped agricultural high school, and this would seem to be the better plan. The Minnesota agricultural high school has demonstrated that a very good proportion of studies for such a course is one-third general high school studies, one-third sciences related to agriculture, and one-third technical studies in agriculture; or, for ladies, studies in household economics and agriculture. While the consolidated rural school gives pupils the advantage of a thorough township acquaintance, the large agricultural high school enables farm youths to have a wide acquaintance over several counties, or throughout the entire State.

The college course in agriculture in the university or in a State college to which graduates come from the agricultural high school course can well be made up of one-third the so-called "humanities," one-third sciences related to agriculture, and one-third agriculture or household economics with, as in the Minnesota College course, much liberty in choosing from numerous electives.

Several elements in this scheme are of special value. During the ten years the boys and girls are in the consolidated rural school they are constantly receiving in addition to their school education an industrial training on the farm and in the home, and the children live at home until they have passed the most critical stage. During the two years while attending the agricultural high school, which in Minnesota is and should be in session only during the six winter months, the students spend half of their time on the farm or in the farm home receiving much industrial education. They do not lose their industrial position, responsibility, nor future opportunity by going away from home for too long a period. They are not educated away from the farm into city life, as is too often the case with students in other high schools, academies, and colleges. They learn to have a pride in farm life, faith in farm business, and an ambition to excel in the management of a farm and a farm home.

The agricultural collegiate course will do well if it have a respectable fraction of 1 per cent of all students interested in agriculture. Its purposes are to produce specialists to teach, experiment, and write in agricultural lines, as well as to give special preparation to those farmers who can afford a college course. Here it is both important and possible to continue practical work, somewhat similar to that kept up at the home throughout the rural school and the agricultural high school courses. The agricultural college man needs to still further protect himself in the nicer manual arts of agriculture and in chosen specialties. He must be trained in laboratories, in the feeding barns, among the plants on the farm, and in plans of farm management; also in agricultural pedagogics and agricultural experimentation. The agricultural college woman, likewise, must master the technique of the food laboratory, of the textile arts, and perfect herself in other specialties concerning the home, the care of children, the entertainment of friends, etc.

You begin to wonder what all this has to do with teaching agriculture in the high school. Students who wish to go from city life into farming should seek the regular avenues: First, farm experience, and, second, the agricultural school. Farm experience is to agricultural school work what the three Rs are to advanced studies in the common school. To put formal studies in agriculture in city schools for the city youth is putting the "cart before the horse," getting theory before practice, study of facts before a study of forms. Putting studies in agricul-

tural specialties into city schools for country youth is not only getting in the way of a needed system of well-equipped special agricultural high schools, but it is trying to do a thing out of its proper environment. The very atmosphere of the city school is against the proposition. The facilities are not at hand, and, for the most part, the instruction would be given to students who are destined to work in city vocations. It will be trying to do in a small and disjointed way what can be most efficiently done in a large way in a properly articulated system of consolidated rural schools, large agricultural high schools, and a State agricultural college. Most phases of agricultural education do not lend themselves well to the mere class-room or library methods of instruction. Trying to condense an agricultural college course into one small class manual has naturally met with failure, and is as impossible as to condense an entire mathematical education into one book to be taught in the primary or high school.

But much may be done with agriculture in our city schools. Supplementary readers devoted to agricultural topics, more agriculture in geographies, zoologies, botanies, chemistries, physics, and arithmetics, essays reviewing subjects read, and talks given by teachers will help to give much agricultural information and broaden out city pupils' minds concerning this greatest industrial interest of the country in which they live. Incidental instruction thus given on this most complicated subject would not carry the idea to the pupil that he had taken a course in agriculture, as without practical experience such knowledge can only be incidental. Much of the material being successfully introduced into rural schools is so prepared as to be sandwiched in by the teacher. No doubt this material will accumulate in some quantity and be of such interesting character that city teachers can use it sandwiched in between the common studies. Practical exercises in agriculture, supplementary agricultural readers, more agriculture in basic readers and in geographies, are prominent forms of this material already forming.

Rural school gardens beside our city high schools have been proven practical. Several experiments by the State experiment station led to the belief that rural school gardens by the separate rural schools are not practicable, and, as the whole countryside is an available garden about the school, formal gardens are not necessary. In two experiments in city graded schools the gardens have proven successful and very useful.

Instead of getting excited over teaching farming our city high schools should earnestly take up the city industries. Their funds are all too short to introduce nature study, sloyd, and industrial work, and to develop mechanic arts, and to pursue elective studies in household economics, to be devoting much funds and energies to courses in agriculture. You will find that agricultural high school teachers all believe in industrial studies in city high schools. Every time we develop a new study along practical lines in our various agricultural courses the stronger becomes our faith in industrial education. The educational value, the disciplinary training, the humanizing tendency, and the broadening effect of studies in agricultural and home-making lines have been wonderfully underestimated. When the pedagogics of industrial subjects have been developed they will crowd old line educational subjects hard, and care to avoid going to the extreme will be necessary. Should they ever gain too large a share of the time we may trust the good sense of the people to swing the pendulum back to the center. Let us not value language, history, and mathematics less, but science, industrial, and artistic subjects more in our courses of study.

Agricultural education has suddenly become successful. Large efforts are needed to prepare teachers properly educated to supply the coming demands in the three classes of schools—consolidated rural schools, agricultural high schools,

and agricultural colleges—which, articulated into a system, would be rivaled only by our general educational system. There would be no serious trouble in students transferring from one of these two systems to the other. Students finishing the consolidated rural school would go to the junior class in the city high school, and students having completed the sophomore year in the city high school could enter the agricultural high school and there graduate in two years. The boy or girl in the city high school who expects to live on a farm should take the junior and senior high school years in an agricultural high school where there are numerous specialists and a large equipment for teaching agriculture and household economies.

EMERSON ELBRIDGE WHITE.

By E. W. Coy.

Emerson Elbridge White was one of a notable group of Ohio men who in their day were a recognized power in the educational affairs of their State and of the nation. Among them may be mentioned Andrew J. Rickoff, John Hancock, Eli T. Tappan, Israel W. Andrews, W. D. Henkle, and B. A. Hinsdale. He was contemporary with these men, labored with them in the cause of education, and lived to see them all pass off the stage of action.

Doctor White was born in the little town of Mantua, in northeastern Ohio, January 10, 1829, and died, after a few weeks' illness, at his home in Columbus, Ohio, October 21, 1902, in his seventy-fourth year. He was present at the meeting of this association last summer in Minneapolis and took an active part, as usual, in the proceedings. In the memorial exercises before this council he paid his tribute to Colonel Parker and Dr. C. C. Rounds, deceased during the year, with even more than his customary feeling and eloquence. He spent the summer, as had been his wont for several years, in lecturing before teachers' institutes, and returned to his home in September with a feeling of exhaustion from his labors. Rest failed to bring relief, and his ailment soon developed into the malady that terminated fatally.

Doctor White's early education was obtained in a country school, in Twinsburg Academy, not far from his home—a famous school in those days—and in what was then known as Cleveland University. A part of the time he was both student and teacher in the same school. After serving for a time as principal of Mount Union Academy he was appointed to take charge of one of the Cleveland grammar schools. He showed such efficiency here that he was promoted to the principalship of the Central High School of that city. In 1856, at the age of 27, he resigned this position to accept the superintendency of the schools of Portsmouth, Ohio. He remained here five years, and in 1861 he moved to Columbus and purchased the Ohio Educational Monthly, of which he was editor and proprietor for more than thirteen years. It was in this period that he served for three years as State school commissioner. While holding this important office he was instrumental in securing many modifications and improvements in the school laws of the State.

Just after the close of the civil war he was a candidate for Congress, on the Republican ticket, for the Columbus district, but was defeated by a small majority.

In 1876 he was chosen president of Purdue University, Lafayette, Ind., an institution for mechanical and technical training, where he rendered efficient service for the following seven years, when he resigned and took up his residence in Cincinnati. During the few years in which he held no public office he was engaged in lecturing, in general literary work, and especially in the preparation of his series of text-books.

In 1887 he was called to the superintendency of the Cincinnati schools, which position he held for a term of three years. This was a field of labor for which he was eminently fitted, and he came to the office admirably equipped for its duties. He rendered most valuable service to the schools of the city, winning the friendship and esteem of the teachers in an unusual degree and the respect of all with whom he came in contact. He was a thoughtful and sympathetic counselor, always generous and just in his judgment of those under his supervision. Under his administration the morale of the teaching force was improved and the methods of the schoolroom rendered more rational. His retirement from the superintendency was deeply regretted by all who had at heart the best interests of the schools of Cincinnati.

Soon after the close of his term of service as superintendent of the Cincinnati schools he removed to Columbus, where he continued to reside until the time of his death. Though occupying no public position, he abated not a jot his interest in everything relating to education. While he still spent a part of every year in lecturing to teachers, the greater part of his time was occupied in preparing for the press his educational publications. It was during these years that the following volumes of his works appeared: Elements of Pedagogy, School Management, Elements of Geometry, and The Art of Teaching.

His active life covered a period of more than fifty-five years—years filled with efficient service as teacher, city superintendent, State superintendent, college president, editor, lecturer, and author. In whatever position he held he bore himself with a dignity, a courtesy, and a straightforward honesty of purpose that commanded respect and admiration. His life was a busy one. He was a man of profound convictions that did not allow him to rest. But he had no disposition to be the leader of an educational crusade. He was little fitted by nature for such a task. He was not a fanatical, root-and-branch reformer, so called, nor a stolid, immovable conservative. He chose, rather, that middle course which, while less picturesque, is not only the safest but the surest to lead to wholesome and abiding results. He was wise enough to see that some of the revolutionary ideas in education which in the last twenty-five years of his life found so many zealous advocates were visionary and ephemeral. His works on education, however, furnish evidence that he was wisely progressive and was always ready to accept whatever innovation commended itself to sound judgment.

His writings are characterized by clearness, force, and directness—qualities that have commended them to the members of the teaching profession. They have been widely read, and have exerted a healthful influence wherever they are known.

As a public speaker Doctor White had few superiors in the profession. His tall, erect figure, his dignified demeanor, and his graceful manner lent added force and attractiveness to his message. He spoke because he had something to say, and he said it in a way that was calculated to carry conviction. He was a welcome speaker at educational gatherings, and probably no man in the country ever met and addressed as many teachers as did Doctor White.

In the associations of teachers, State and national, he was a conspicuous figure. He was regular in his attendance at these meetings and took a prominent part in

their deliberations. He received due recognition from them in the honors that were conferred upon him. He served as president of the Ohio State Association, of the National Educational Association, of the superintendent's section, and of this council. He was one of the founders of the National Council of Education and was one of the earliest and foremost advocates of the establishment of the Bureau of Education. He drafted the bill for its organization and was influential in securing its passage through Congress.

He received the honorary degree of A. M. from Western Reserve University and the degree of LL. D. from Marietta College and from Miami University.

Doctor White came from pure Puritan stock, his ancestry running back to the early settlement of New England. It is said that one of his ancestors was a member of the Long Parliament. From his Puritan antecedents he inherited some of his most striking characteristics—his high sense of duty, his moral earnestness, his fidelity to conscience, and his religious convictions. In religious faith he was a Presbyterian. For many years he was a ruling elder in that church and a member of the board of trustees of Lane Seminary, a theological school of that denomination in Cincinnati. At the time of his death he was president of that board.

Doctor White was married in 1853 to Mary Ann Sabin, who died one year and three months before him. There were born to them five children. Of the three who survived him, one is at the present time governor of the State of West Virginia and another holds an important official position in the United States Revenue Service. In his domestic relations Doctor White was true and tender and gentle. On this subject I can not do better than quote from a letter from Governor White found in Education for January, 1903. "My father," he says, "was the truest, kindest, and gentlest of husbands and fathers. I never knew him to do an unkind or an unjust act or to permit anger to master him. His ideals were high, and his thoughts pure, and his influence uplifting. He exemplified in his daily life those Christian graces and virtues which adorn and are the fruitage of a noble nature. If his public life was uplifting and inspiring, his private life was even more so. He used the Bible daily in his home life, and the family devotions were never omitted. His greatest pleasure was in doing something for others."

Those who knew him slightly and saw him but seldom sometimes thought him cold and distant, but those who enjoyed his intimate acquaintance knew that he had a warm heart and a quick sympathy. He was ever ready to speak a word of encouragement or to extend a helping hand.

He will long be missed by this council and by the general association, where for so many years he bore a conspicuous part and in the work of which he always felt so lively an interest. We shall remember him as a dignified, courtly, Christian gentleman—one whose motives were pure, whose path was straight, and who did the work given him to do with earnestness, fidelity, and singleness of purpose. The world is better that such men have lived. They can not wholly die. Their life, their character, and their work still survive and serve as an inspiration and a benediction to all of us who remain.

ALICE FREEMAN PALMER: A MEMORIAL SKETCH.

[From the publications of the Association of Collegiate Alumnæ, Series 3, No. 7.]

Alice Freeman Palmer, the eldest of the four children of James W. and Elizabeth Higley Freeman, was born in Colesville, a small town near Windsor, N. Y., February 21, 1855. She died in Paris December 6, 1902.

The mother's ancestors came to the State of New York from the hill country of western Massachusetts, near Stockbridge, and her father was a descendant of the orignal Scotch owners of large land grants in the beautiful Susquehanna Valley.

Her father was first a farmer, as were his fathers before him, but after his marriage he was enabled, with the help of his young wife of 17, to realize his youthful ambition, and ten years after the birth of their first child he obtained the degree of M. D.

Alice E. Freeman came into an excellent inheritance of body and brain. The example of her parents in mental application during her younger years early inspired a passion for study. Of this time she was accustomed to say at a later period, "I grew up with my mother." She was 10 years of age when her parents left the farm and took up their residence in Windsor. There she spent seven years in study at the academy, and it was there also that she joined the Presbyterian Church. It was said of her that "she was an eager, ambitious student, determined by the very forces of her nature toward the getting of knowledge and the building up of a symmetrical character."

At Windsor Academy she was prepared for college. In those days the requirements for women's colleges were not so rigorous as for men's, and that desire which was to be hers in all her educational work for girls later was hers then. She wished to fit herself to meet the world, compelling equality of respect as regards woman's part in it. Thus the comparisons, on the part of her classmates at Windsor, of the varying standards of requirements spurred her to choose the institution where she could be assured that these were the highest. Her choice was Michigan University, which only a few years before had offered to women equal privileges with men.

Entering the university in 1872, with so many conditions that it was a grave question whether she should be admitted, she had by the beginning of her sophomore year removed them all and established her leadership in her class. She was graduated among the very first in a class of seventy-six, twelve of whom were women. The subject of her commencement oration was, "The conflict between science and poetry." She was not only scholarly; she was a leader in social activities, and in those pioneer days of coeducation, inspired respect for woman's capacity, whether as a member in the college debating club, where, even then, she showed rare powers of persuasion, or as an active officer of the Students' Christian Association.

In December, 1874, there were floods on the Susquehanna River. A letter came from her father telling of his reverses and saying that she must return home. Her reply came not from the university, but from Ottawa, Ill., where, with the prompt help of professors, she had found an opportunity to teach in the high school. There she taught Latin and Greek from January to June, still keeping her college study uninterrupted as a member of the junior class. From that time she was self-supporting. After graduation she taught in Geneva, Wis., for a time, in a private school for girls. From 1877 to 1879 she was principal of the high school at East Saginaw, Mich.

At this time she received a call to a professorship of mathematics at Wellesley College; but her youngest sister—the idol of the family—was making a brave fight for life against consumption, and she would not consider it. In the death of this sister at 18 her deep and abounding devotion to girls had its veritable consecration. Then in 1879 she was called to a professorship of history at Wellesley, and accepted the position. Two years later she became acting president, and in 1882, when she was 26 years of age, she accepted the presidency.

Widely trained—trained by the knowledge and enthusiasm of college professors, trained by work as a teacher in public and private schools, trained by the devotions and sorrows of a peculiarly intimate home life and religious life—she brought to the presidency of Wellesley College a wealth of experience that made her tact infinite, her executive ability masterly, and her intelligence keen and clear. To all this was added a wonderful capacity not only to remember names, but to indi-

vidualize students, parents, and friends; a power that must be counted a special gift. It was not strange that she was known to those who loved her most as "The Princess," and that her work in the college for six years during the time of its most rapid and creative development should forever seem incomparably well done. It was accomplished with a courage that is an inspiration, for it was in those years that, because of weak lungs, she was told she had but six months to live, and was advised to spend them in the south of France.

Her marriage in 1887 to George Herbert Palmer, professor of philosophy at Harvard University, took her from the presidency of a particular institution and made her a trustee of many institutions and a leader in the solution of many educational problems. It was the beginning for her of a still larger service.

In 1892 she accepted with much hesitation the position of dean of the graduate schools and colleges in the University of Chicago, to be in residence during one-third of the academic year. The office had just been created, as had the university, and it was her task as much to establish the social conditions and relations of the students within the university as to plan their courses of study. The initial impulse in the life of a university is always the enduring impulse, and so it was as a creator of traditions that she worked for Chicago University. In 1895 she resigned, convinced that the many problems incident to the founding of this great university needed her personal help less than other work that called her.

During these years her generous service and eager desire for larger helpfulness in all matters of education were widely recognized. Honorary degrees were conferred upon her by several colleges—Ph. D., by Michigan, in 1882; L. H. D., by Columbia, in 1887, and in 1895 and 1896, LL. D., by Wisconsin and Union. Her work was varied, but her purpose was clear. She labored earnestly in many paths to increase opportunities of service for college women, and in every field to choose for advancement those with capacity for leadership and scholarship, who should themselves become creators of new and larger opportunities for others. In her public addresses she showed always an eager sincerity, a knowledge of her subject, and a kindliness in expressing conviction that disarmed hostility and won others to share her enthusiasms. President of the Woman's Education Association of Boston from 1891 to 1901, twice president, and finally general secretary, of the Association of Collegiate Alumnæ, one of the chief executive officers of the Association for Promoting Scientific Research by Women, president of the International Institute for Girls in Spain, member of the Massachusetts State board of education from 1889, until, in 1902, she became by a third appointment the senior member, also identified in many different capacities with organizations of influence, she everywhere sought to win support in all wise endeavors for better education. Among college women she was a pioneer and leader; with and for all women she was a confident optimist and worker. Her life story, when written, must epitomize the victorious struggle of her sex for larger intellectual freedom in the last quarter of a century. Always with forward look, she labored—whether as one of those most responsible for the children of Massachusetts, or for the organized interests of the women of her country, or for their higher education here or abroad—and her work found her just at the beginning of a new term with greater influence as well as greater problems.

Lavish of self in every relation for good, yet forgetful of self she stood in all her inner life and its crises, isolated, and for this greatness of personal reserve she received most respect from those nearest.

No one can describe her personality. Exceptionally sensitive to beauties of form and color, intimately at home with living creatures, she was yet more intimately and simply at home in the heart of a child. With a child she was boundlessly in love. For the children of larger growth, her work was among men as

well as among women, and in it all she was always and everywhere capable of a great sincerity. Hers was convincing sympathy and earnest foresight, which made her judgment so true that to her many owe not merely their success, but the right choosing of a life work. Hers was the capacity to give to others at innumerable moments courage and gladness. Hers was a self-effacement that raised fellow-workers and friends to the level of achievement and then to them gave the credit of victory.

FRANK A. HILL.

[Read before the Massachusetts Schoolmasters' Club.]

Frank A. Hill, Litt. D., the secretary of the Massachusetts board of education, died September 12, 1903, at the residence of his eldest son, in Brookline.

He was born October 12, 1841, in Biddeford, Me., a son of Joseph S. and Nancy (Hill) Hill, and a lineal descendant of the Peter Hill who in 1633 came from Plymouth in England to settle on Cape Elizabeth, near Portland. Both father and mother had been teachers; the son early showed aptitude for scholarly pursuits. Graduating from the Biddeford High School at 15, he entered Bowdoin College at 16, and graduated at 20, receiving election to the Phi Beta Kappa, and delivering an oration at commencement. His interests in college were broader than books alone, for we find him playing first base on the college nine, a disputant in the debating club, editor of the Bowdoin Bugle, curator of the natural history society, and the prophet on class day.

In paying his way through college he had used the long vacations in teaching. After graduation he turned again to this work, first as principal of the Limington Academy for a term, and then as the head of the Biddeford High School, in which only six years before he had been a pupil. In 1864 and 1865 he turned aside to study law, and while a law student was selected by the Biddeford city government to pronounce the eulogy upon Abraham Lincoln in the local memorial service held after the assassination. But the school bell again called him; he wisely obeyed, and education became his life work. For five years he was principal of the Milford High School in this State, and for sixteen years more occupied the same position at Chelsea. In both places his service won high commendation and laid the foundation for lifelong friendships. In the latter position he had for a pupil the present governor of the Commonwealth, Hon. John L. Bates. In 1886 he was chosen head master of the new English High School at Cambridge, which city has ever since been his home. He organized the school with 350 pupils and saw the number grow to 700 in the seven years of his stay. He left it domiciled in a fine building, erected in 1891, whose interior arrangements, largely of his planning, have been widely imitated. For some years he was associated with the late Harry Ellis in the organization and development of the Rindge Manual Training School, founded by private gift for the benefit of the boys of the English High School. Very naturally, therefore, in 1893 he was chosen the first head master of the Mechanic Arts High School of Boston, and organized its earlier work. Within a year, however, in May, 1894, he entered upon the dignified position which he held at the time of his decease, that of secretary of the State board of education.

For many years Doctor Hill has been active in general educational effort, both literary and executive. He has been president of the Worcester County Teachers' Association, of the Massachusetts Teachers' Association, and of the Massachusetts Classical and High School Teachers' Association, serving always with rare dignity. As a writer for the press, a public lecturer, and a speaker before educational bodies he has been much in demand. Some work also he has done on school text-books, particularly in editing the revised Holmes Series of Readers,

and in adapting for use in schools the Civil Government and the United States History written by the late John Fiske.

Secretary Hill was ex officio one of the two commissioners of the Massachusetts school fund (the treasurer of the Commonwealth being the other), a trustee of the Boston Museum of Fine Arts, and a trustee of the State Agricultural College. His membership in the corporation of the Massachusetts Institute of Technology was both ex officio and by election. In 1893 he was one of the schools examination board appointed by Harvard University. Bowdoin College gave him the degree of Litt. D. in 1894. For two years Doctor Hill was president of the Schoolmasters' Club and for one year president of the Cambridge Club, an association of one hundred of the leading citizens of Cambridge for the promotion of civic health and beauty as well as of social enjoyment.

Doctor Hill was a versatile man, readily adapting himself to new demands, and conscientious in his attention to the details of his duties. It was his habit to recognize the best there was in pupils and people and to manifest an even courtesy of spirit under all conditions. In his educational work he inclined toward constructive rather than destructive criticism and effort, and combined an earnest progressiveness of thought with a profound sympathy for teachers, growing out of a clear recognition of the limitations under which they work. As a teacher he was uniformly successful, commanding the respect and loyalty of pupils and fellow-teachers alike. As an executive officer he gave energy and prosperous impulse to every enterprise intrusted to him. His nine reports as secretary of the State board of education are for breadth and intensiveness unsurpassed among the educational documents of the period, and will long be consulted with interest. They exhibit in great clearness not only his scholarly spirit, but also his capacity for patient investigation and for sagacious inference. He also in his quiet way brought much to pass. Since his entrance upon the duties of secretary, in 1894, some thirty-two educational measures have become law. Of these the most important, perhaps, are the provisions for placing a high school education within the reach of every child in the State, those for basing the requirements for admission to the normal schools upon the completion of a high school course, those which extended expert supervision to every school in the Commonwealth, and those which inaugurated a system of State certificates for teachers.

Mr. Hill's private life was happy and beautiful, full of self-sacrifice for his family and of answering affection and comfort. He was married in 1866 to Margaretta S. Brackett, of Biddeford, who survives him, as do also three sons grown to manhood.

CHARLES AMMI CUTTER: A MEMORIAL SKETCH.

By William E. Foster, *Public Library, Providence, R. I.*

[From the Library Journal, October, 1903.]

There have been few greater losses to American library interests in recent years than in Mr. Cutter's death, at Walpole, N. H., on the 6th of September, 1903.

Charles Ammi Cutter, the son of Caleb Champney Cutter and Hannah (Biglow) Cutter, was born in Boston March 14, 1837. His boyhood was passed in Charlestown (then a separate municipality) and in Cambridge, and in 1851 he entered Harvard College, graduating in 1855. His name occurs on the commencement day programme July 18, 1855, with an oration on the "Character of the satire of Thackeray." He was a member of the Phi Beta Kappa Society, and stood near the head of his class (third, or in one sense second, since two men were "first"). It may be doubted whether among any equally large collections of young men, elsewhere than at Cambridge, during the years 1851 to 1855, there was a larger

representation of those who were destined to affect profoundly the library interests of this country than Mr. Cutter and his college contemporaries. The list of these men is a striking one, including Stephen B. Noyes (1853), Francis W. Vaughan (1853), Justin Winsor (1853), Charles A. Cutter (1855), James K. Hosmer (1855), and Samuel S. Green (1858). All six of these were librarians of distinction, and four of them have been presidents of the American Library Association. To these should be added the names of the following, though not librarians: President Eliot (1853), Charles Francis Adams (1856), and also Henry S. Nourse (1853), the latter since 1890 a member of the Massachusetts library commission.

Mr. Cutter remained in Cambridge after his graduation from college, busy with study and in preparing two pupils for college. In September, 1856, he entered the Divinity School at Cambridge, graduating in 1859. During the year 1857 he wrote a Bowdoin prize dissertation on "Persecutions for religion's sake during the colonial period of New England." His first taste of library work seems to date from the year 1858, when he became librarian of the Divinity School library.

The taste for library work which was thus acquired proved to be a permanent one, and, with but trifling interruptions, this is the interest which engaged his attention throughout the remainder of his life. Of this valuable Divinity School Library (consisting of about 12,000 volumes) he remained in charge until his graduation from the school, in 1859, and in the last two years he rearranged it and reclassified it for greater convenience. In conjunction with Rev. Charles Noyes, of the Harvard class of 1856, he prepared a new manuscript catalogue. On graduating from the school, July 19, 1859, he delivered a dissertation on "Faith and criticism." There appears to have been an interval of one year when he wavered between theology and bibliography, and the latter proved to be the stronger inclination. Much as the Unitarian ministry undoubtedly lost, we may well feel grateful that he decided as he did. On May 11, 1860, he became an assistant in the Harvard College Library, where he was was more directly associated with Dr. Ezra Abbot (a man whose influence on his life and career was deep and lasting) in "cataloguing and arranging the books." This was during the earlier years of the librarianship of the late John Langdon Sibley. He was closely associated with Doctor Abbot in his great bibliographical undertaking, "The literature of the doctrine of a future life," published in 1862 as an appendix to Alger's Critical History of this doctrine; and he is singled out by Doctor Abbot for a special tribute when making his acknowledgments in his "Preface." Mr. Cutter later continued his bibliographical memoranda, on a subject closely allied to this, namely, "Demonology and witchcraft," but never completed his notes for publication. Mr. Cutter's connection with the Harvard College Library lasted for about eight years. In one of his winter vacations (January, 1865) Mr. Cutter began an engagement of several years at the Boston Public Library as a "special" assistant, in the course of which he made a final revision for the press (1866 and 1867) of the Prince Library catalogue in its final form (a work whose complicated bibliographical record, including the very inadequate catalogue of 1846, is fully elucidated in Mr. Winsor's "Introduction" to the catalogue in 1870).

In 1868 Mr. William Frederick Poole, who had been in charge of the Boston Athenæum since 1856, resigned, becoming in 1869 the librarian of the Cincinnati Public Library. On December 14, 1868, Mr. Cutter was elected his successor at the Athenæum, taking charge on January 1, 1869. Three significant events marked the nearly twenty-five years of his service at this important library, at which he had already done some fragmentary work. The first of these was the publication of the Boston Athenæum catalogue, a work which in 1874 stood almost alone among American bibliographical undertakings so far as magnitude and thoroughness were concerned. This work was published in five successive installments, respectively in 1874, 1876, 1878, 1880, and 1882. The number of

volumes in the library in 1871 was more than 87,000. The total number of lines in these 3,402 double-columned pages is estimated at upward of 544,000. From this some conception of the magnitude of the work of proof reading, extending through more than ten years, may be obtained. Not even by these figures is the enormous labor which was involved in carrying the work successfully to completion adequately shown, since a large part of Mr. Cutter's work consisted in the rectification of mistakes already made. The catalogue had gone through several hands before Mr. Cutter began work on it; and this confusion did not add to the improvement of the situation by any means. The four pages of explanatory matter at the end of the final volume contain abundant evidence of the magnitude of his task in bringing order out of chaos. Not until the appearance of Mr. Noyes's Brooklyn Library catalogue (in 1877, 1878, and 1880), and later Dr. Billings's great work, was there anything even remotely to be compared to the Athenæum catalogue in serviceableness to libraries generally; and it stands, therefore, as one of the earliest impulses toward the recognition of cooperative relations among libraries. A little manual showing "how to get books" was issued on the completion of the catalogue in 1882.

The second of these events was the publication of the original edition of Cutter's Rules for a Dictionary Catalogue, prepared in 1875. There is perhaps a closer relation between this work and the great work just mentioned above than would appear at first sight, since it was out of the dire necessity for system, impressed on the cataloguer who should undertake the chaotic task, that this admirably systematic body of rules grew, and grew naturally. While such work as this was originally chiefly useful for his own guidance and for the guidance of those associated with him in the preparation of the Boston Athenæum catalogue, its wider usefulness was recognized by the United States Bureau of Education, and it appeared in print in 1876 as Part II of the Special Report on Public Libraries, issued by that Bureau, making a pamphlet of about 90 pages (including an index). A second edition was published in 1889, "with corrections and additions," and a third edition in 1891. In the winter of 1902–3 he was still revising it. In the "Prefatory note" prefixed to the first edition Mr. Cutter remarks: "There are plenty of treatises on classification. * * * But for a dictionary catalogue as a whole, and for most of its parts, there is no manual whatever." Like all of Mr. Cutter's statements, the above sentences are carefully modified by the citation of such instances as most nearly approached this type of work. This is the publication in which he shares with the originators of Poole's Index and the "Dewey classification" the felicity of having his name unalterably linked with the thing itself—universally mentioned as it is under the name of Cutter's Rules.

The third of the enterprises growing out of Mr. Cutter's work at the Boston Athenæum was the "Expansive classification." This notable undertaking, involving a classification of all knowledge, was little more than begun when he left Boston for Northampton, and, unfortunately for the library world, it remains unfinished at his death, and not in such final form as he had hoped to give it. In some form, however, it is already widely in use among libraries. In two of the smaller public libraries—those at Winchester, Mass., and Lexington, Mass.—Mr. Cutter himself has been directly interested in observing the working of it. Few minds can be conceived of as better fitted by nature and by training for this work than that of Mr. Cutter. His was preeminently the "mind of the classifier." Part I of this classification appeared in the years 1891–1893, and other parts have appeared at intervals since then. This has been well characterized, in brief, as "a codification of the field of human knowledge more minute than the Dewey Decimal Classification, and intended to be equally applicable, by expansion or condensation, to large or small collection."

In connection with the "expansive classification" should be mentioned the preparation of a succession of alphabetical "tables" for ready and convenient use. These tables, which he designated "alphabetical-order tables," were at first limited to two-figure numbers, and comprised two parts, namely, "the consonants, except S," and "the vowels and S." Gradually, in using these tables in his own library, he began adding a third figure in exceptional instances as the need arose (in such cases as fiction or biography). Later, from 1899 to 1901, he began systematically expanding this into a three-figure table. Meanwhile Miss Kate E. Sanborn (now Mrs. Gardner M. Jones, of Salem, Mass.) had also been preparing a set of tables carried to the third figure. This work appeared in two parts also, the vowel table first, in 1892, and later the consonant table, in 1895. The third edition of this work (1899) bears the title "C. A. Cutter's Alfabetic-Order Table, * * * altered and fitted with three figures by Miss Kate E. Sanborn." This work was, as indicated by the word "altered," quite distinct from Mr. Cutter's "three-figure" table above mentioned, since Miss Sanborn had not used Mr. Cutter's two-figure table as the basis for this work, but had made a new one.

Mr. Cutter's connection with the Boston Atheneum ended in 1893, but before passing to a consideration of his work at Northampton it is necessary to touch upon two other forms of his activity during the years 1876 to 1893. In fact, while these activities were undertaken by Mr. Cutter as a librarian in the narrower field of a proprietary library, they plainly had much to do with bringing about that attitude of mind which led him to enter with so much zest during his later years into the wider work of the "popular library."

The year 1876 marks the beginning both of the American Library Association and of the Library Journal, and of these Mr. Cutter, if his innate modesty had not made such a thing clearly impossible, could have accurately written "quorum pars magna fui." The organization of the American Library Association took place at the meeting held at Philadelphia October 4 to October 6, 1876. At this meeting, attended by about one hundred librarians, Mr. Cutter not only read a paper on "The preservation of pamphlets," but also participated in the discussion throughout in a most practical way. For two years Mr. Cutter served as president of the American Library Association, presiding at the Catskills meeting in 1888 and at the St. Louis meeting in 1889. The characteristic "sanity" of his mind is illustrated in his address as president in 1889 on "Common sense in libraries." He was present at both of the "International" library conferences in London, respectively in 1877 and 1897, serving as honorary vice-president of the latter. From 1889 to 1902 he served as a member of the council of the American Library Association. At his death he had been present at more annual meetings than any other member, but, as is well known, a most influential share of the valuable work of the association has been accomplished through committees, such as the cooperation committee, the publishing section, etc., and it is here, where the really hard work and unremitting expenditure of time, thought, and labor count for most, that Mr. Cutter's most valuable services to the association were rendered. Of the cooperation committee, appointed within six months from the foundation of the association, he was a member from the first, and also chairman, and for a series of years it may be said that he "toiled terribly" in bringing about its noteworthy results.

The first number of the Library Journal bore the date "September 30, 1876," and the admirable quality of its contents was prophetic of the long, honorable, and extraordinarily serviceable career which was to follow. There was one and another young librarian in 1876 who was able to return to the narrow field of his own labors from the American Library Association meeting at Philadelphia bearing with him sources of inspiration, such as his impressions of the conference,

the Government report on public libraries, and the first number of the Library Journal, and who may well have echoed Wordsworth's words:

> Bliss was it in that dawn to be alive,
> But to be young was very heaven.

And of all the inspiration which the pages of the Library Journal from that day to this have ever continued to supply to the young librarian, ambitious to make his resources count for the most possible in his own community, a very large share may be traced to Mr. Cutter. To run one's eye over the entries under Mr. Cutter's name in the Library Journal indexes will serve to show how deeply identified he was with its best work, as well as to show how inextricably he was identified also with the best work of the American Library Association and its committees, yet even this does not tell the whole story. From the first number each monthly issue has contained a department headed "Bibliography," in the earlier volumes much more fully elaborated than afterwards, and of this department Mr. Cutter was from the first in sole charge. From 1881 to 1893 Mr. Cutter served as editor of the Library Journal as a whole—in some years with an associate, but not always. Anyone who glances through the pages of the "Bibliography" in its earlier years will wonder that Mr. Cutter could have found time to do this work while "tied to a printing office" in carrying the volumes of the Boston Atheneum catalogue through the press.

A vote of the trustees of the Boston Atheneum, passed February 20, 1893, records "that the trustees, in receiving from Mr. Cutter the announcement that he is not a candidate for reelection as librarian, desire to express their sense of his long and valuable services to the Atheneum, and of the service he has rendered to other libraries and to all students by his admirable catalogue." Mr. Cutter remained at the Atheneum until his successor, Mr. William C. Lane, took charge, in April, 1893, and soon after made a short visit to Europe. A longer stay in Europe in 1893 and 1894 was largely in the interests of the new public library at Northampton, Mass., founded under the name of the Forbes Library, of which he was chosen librarian August 1, 1894. The preliminary work rendered necessary in organizing this entirely new institution occupied many months. It was dedicated October 23, 1894, but not opened fully for use until later.

Here the remainder of his extraordinarily useful life was passed, and it is easy to see how a post like this should have appealed strongly—as it plainly did appeal—to Mr. Cutter. It enabled him to plan every slightest detail of library administration de novo, embodying everywhere his own individual ideas. It relieved him of the increasingly burdensome demands of the conduct of a large library like the Boston Atheneum, and it offered more of a scope for the development of his "expansive classification." Moreover, although he himself may not at the time have laid so much stress on this side of the subject, it offered the best possible field for the unfolding of that very significant tendency of his later career, namely, the wider "popularizing" of the benefits of the library movement. So far was he, indeed, from occupying a narrow or unsympathetic point of view in the whole matter of library regulations that he may be said to have held the advance ground among American librarians as regards such details as the number of books to be issued to a reader, the length of time for which they can be kept, etc. Nowhere have his enlightened and thoroughly liberal ideals been more comprehensively embodied than in his article in the Library Journal for February, 1903, on "Library discipline; rules affecting the public."

Mr. Cutter's policy, so far as it related to his own Northampton community, might well be described as "aggressive" in the commendable sense of the word. A writer in the Springfield Republican has effectively expressed it thus: "He may be said to have had designs upon every lurking place of ignorance and upon every person whom there was a chance to benefit through good literature and the beau-

tiful in art." The library aimed not only at meeting the needs of the public for general reading, but also "of Smith College for a reference library." His beneficial and comprehensive plans were constantly hampered by very inadequate funds, yet, such as these funds were, they were made to count for the most effective work possible. He aimed constantly at "cultivating literary and artistic taste in the young, and this led to convenient arrangements for supplying teachers and pupils in the public schools with books for reference and study and with copies of famous works of art. He was devoted to the library-extension movement in its general phases and as locally applied, and had established a system of library exchange in the outlying districts of Northampton." When the last library year closed (November 30, 1902) the Forbes Library had not only more than 91,000 volumes, but 2,910 musical scores, and 15,555 photographs, its pictures of all kinds amounting to nearly 50,000.

He served as the first president of the Massachusetts Library Club (1890–91), and was also deeply interested in the organization of the Western Massachusetts Library Club, of which he was also the first president (1898–99). The "missionary" side of the library movement has seldom been so much in evidence as in connection with this last-named body; and with these enterprises Mr. Cutter was in the most thorough sympathy. Mr. Cutter may be said to have possessed the instinct and the predisposition of a teacher—not, indeed, of large groups of students, but of small groups of thoroughly interested persons. While at the Boston Athenæum he was usually engaged in training some one in whom he had taken an interest; and to have had the benefit of an "apprenticeship" under Mr. Cutter was, in the days before the library schools, universally recognized as a recommendation of the highest character. At Northampton also he almost invariably had with him a number of "pupil assistants." With the movements which led to the establishment of systematically organized library schools Mr. Cutter was in full sympathy, and was repeatedly a speaker and lecturer before their classes. There is no year since the organization of the New York State Library School when he has not been on the list of "lecturers" at the school, though in later years visiting it on the alternate years only.

Mr. Cutter's literary labors were not absolutely confined to library subjects, though even in this field he may be said to have been primarily a librarian and secondarily a writer on general subjects. "For twenty years or more," to quote the language of the Nation's very appreciative note upon his death, "the Nation relied mainly upon him for its yearly reports of the American Library Association meetings. But, on one subject and another, he "was a voluminous contributor (in the mass)" to the Nation, "for thirty-five years, with slight interruption." His contributions, says Mr. Garrison, were "very varied and always pithy." During Mr. Cutter's prolonged absence in Europe, in 1893–94, he sent a series of most charming letters to the Nation (signed "C. R."). Some of his most acutely written book reviews are to be found in the North American Review in the sixties, when it was under the editorship of Mr. Lowell and Charles Eliot Norton (as well as two notable articles on the Harvard College Library and its catalogue).

But in Mr. Cutter's case, as so often happens, "the man was greater than his work." It is in his qualities of mind and heart that he will live in the memories of those who knew him. Even in respect to "mere intellect," as it is sometimes denominated, Mr. Cutter's personality was a noteworthy one. By inheritance from successive generations of characteristically New England families, he entered on life with a predisposition to the traditional keenness of intellect which has been exemplified in men like Benjamin Franklin or Jonathan Edwards or Ralph Waldo Emerson. There was, however, superadded a quality almost French in its exceptional development, which may be described as lucidity, both in his verbal expression and in his written style. He wrote clearly because he thought clearly; and

the operations of his mind evidenced an almost feminine delicacy, a marked sense of proportion, and an unusual judicial balance. From all the training that his early schools and Harvard College could give he of course profited greatly, and it is, moreover, significant that he was studying in the Divinity School at a time when the new impulse toward a "critical" method was very apparent. How indispensable a factor in the work and methods of a bibliographer this critical habit of mind is is now generally recognized, and seldom has it been better exemplified than in Mr. Cutter.

The bent of mind through many years toward industry and application became in Mr. Cutter almost "second nature." His passion for scholarly work made it impossible for him to dismiss any subject of research as "finished" without probing to the bottom of it. It also made it easy for him to become so absorbed in his work as not infrequently to be oblivious to the passage of time.

Of his self-forgetfulness, as manifested in his thoughtful courtesies to others, more will be said further on; but it was apparently of a piece with his utter absorption in his work. This sometimes led his friends to exercise that care that he should pause for the necessary intervals of eating and sleeping which he himself would neglect to take. And yet perhaps in no other way than at this high pressure would the great enterprises already mentioned above, so wide in their scope and so exhaustive in their details, have been carried through. And certainly the world does not love a man the less for this unselfish devotion. Perhaps Robert Louis Stevenson has summed this up as well as anyone, in his essay on "Crabbed age and youth," where he complains that most of our "proverbs" in regard to human conduct are from a prudential and "mediocre" point of view. According to these, he contemptuously remarks, "Never to forget your umbrella through a long life would seem a higher and wiser flight of achievement than to go smiling to the stake." "And yet, after all," he adds, "those characters in history who have most notoriously flown in the face of such precepts are spoken of in hyperbolical terms of praise and honored with monuments in the streets of our commercial centers."

It was a logical consequence that a man with Mr. Cutter's natural traits and with his training, and with his indomitable—almost incorrigible—industry, should become in the highest sense of the word a learned man. Opportunities for comparison are now perhaps more difficult; but during the first twenty years of the American Library Association it may be safely said that there were few among its members who surpassed him in his erudition, so far as it was concerned with bibliography and with knowledge of languages. To the somewhat brief list of languages included in the curriculum of his day (Greek and Latin, Hebrew and Arabic; the latter in the Divinity School) he added various other languages, one by one, in which he became completely at home, while, like every other cataloguer, he had a "bowing acquaintance," at least, with many others. In the Bibliographical Conference of 1897, at Brussels, he took part verbally, speaking in French; and during a stay of four months in Europe in 1901, with his wife, he spent a considerable time in France, visiting the French relatives of Mrs. Cutter and becoming familiar with their home life, differing as it does from ours in most interesting ways.

With a mind predisposed, as his was, to system and to methods of synthesis, such knowledge as he had accumulated was by no means a confused mass of unrelated facts, but was reduced, almost involuntarily, to a scientific system. His mind seemed never satisfied unless when constructing a system where none had previously existed. It was this trait of his which made him a way-finder, for the library world in general, in such fields as those of his Rules for a Dictionary Catalogue, and his Expansive Classification. Such a piece of work was undertaken, at the outset, to satisfy the implacable demands of his own systematic

mind, but, owing to the immediate recognition of its great value, was inevitably placed at the command of a wider circle.

That Mr. Cutter was a man of exceptionally accurate scholarship could hardly fail to result from his wide knowledge, already noted above, from his insatiable desire for truth, from his systematic mind, and, particularly, from his rigidly critical method. To the five senses common to men in general he seemed almost to add a sixth sense—that of accuracy. Naturally the contact of such a mind with inaccuracies of any kind was a source of annoyance, and almost of pain; and the critical reviews which he occasionally contributed very plainly reproduced this attitude of mind. * * *

WILLIAM E. DODGE.

[From the Proceedings of the Trustees of the John F. Slater Fund.]

At the annual meeting of the trustees of the John F. Slater fund, held in New York, October 7, 1903, the president of the board announced the death of Mr. William E. Dodge, who died at his summer residence in Bar Harbor, August 9, 1903, in the seventy-second year of his age.

Whereupon the following minute was adopted, and it was ordered that it should be entered upon the permanent records of the board:

The trustees of the John F. Slater fund are deeply bereaved by the death of Mr. William E. Dodge, who was both a valued colleague and a personal friend of all the members of the board. He became associated in the management of this trust upon the death of his father in 1883, and during the next twenty years he was rarely if ever absent from our meetings. As a member of the finance committee his services were especially important, and he gave to the educational and administrative aspects of the trust the inestimable benefits of his wisdom and sympathy and of his wide acquaintance with the conditions of every part of the country. In the midst of the business cares which devolved upon him he delighted to spend his leisure hours in the encouragement of religious, educational, scientific, and philanthropic work at home and abroad.

Unwilling to accept political offices, it was his aim as a private citizen to advance the welfare of society, and, as his patriotism knew no limitations of race or region, his love of mankind made him the steadfast advocate of arbitration in international differences, the promoter of knowledge, peace, justice, temperance, and every Christian virtue.

The secretary of the John F. Slater trustees was instructed to add to the minute which was adopted by the board a copy of the following letter concerning the late Mr. Dodge, written by his life-long friend the treasurer of the fund, Mr. Morris K. Jesup:

To the Editor of the Evening Post.

SIR: The late William E. Dodge was a man beloved and honored by all classes. He was by nature gentle and kind, yet with a positive conviction of what was right, honorable, and true. He was born and brought up under influences moral and religious and imbibed early the saintly qualities of mind and heart of a noble father and mother.

* * * * * * *

Mr. Dodge was honest in his convictions and honorable to a degree in his social and business life; he gave himself for others' good and walked with God in company.

Full notice has recently been given of his early business life, training, and success. He had sound judgment and good sense. His counsel was sought by many, and his advice was wise, because when he gave it it was from convictions of right, free from personal ambition or self-interest. It is just to say of Mr. Dodge that in accordance with his means he was one of, if not the most, generous of New York's citizens; he gave wisely and from conviction.

He was the real, successful founder of the Young Men's Christian Association in this country, which had root in his strong personality, and which has now become one of the most influential factors for good among young men that exists

in the world. His long leadership of the United States branch of the Evangelical Alliance is proof of his Christian statesmanship and broad catholicity. He was a promoter of peace in all disputes and quarrels among nations and individuals, and strongly urged arbitration as the best means of settlement. He was a lover of the beautiful in nature and art, as his association with the great museums of the city will testify, as well as the true friend of the botanical and zoological gardens.

He was a lover and promoter of science, as his gifts for research and investigation prove, and as his selection by Mr. Carnegie as one of his trustees of the great Carnegie Institute of Washington bears testimony. Mr. Dodge's private life was blameless. He was a loving husband, father, and friend, and a good citizen. His home was the resting place from strife, discord, and selfishness; it was a type of heaven's abode, and all dwelling beneath its roof, as well as visitors and friends who had knowledge of it, felt the holier and better because of its influence. When such a man is called out of the world it leaves it bereaved and saddened. We can not afford to lose such in the times in which we live, and our prayer is that God will prepare others to imitate Mr. Dodge's example, that his place may be filled by those who will bear testimony, as he has done, through a long life of unselfishness, devotion to duty, high standard of living, and faithful service to the city, society, and religion.

> We live in deeds, not years; in thoughts, not breaths;
> In feelings, not in figures on a dial.
> We should count time by heart throbs. He most lives
> Who thinks most, feels the noblest, acts the best.

M. K. J.

BAR HARBOR, ME., *August 16*.

JOSIAH WILLARD GIBBS.

[From the Yale Alumni Weekly, May 6, 1903.]

Josiah Willard Gibbs was the son of Josiah Willard Gibbs, the distinguished professor of sacred literature in the university from 1822 to 1861, and of Mary Anna (Van Cleve) Gibbs. He was born in New Haven, Conn., on February 11, 1839, and died on April 28, 1903. He was prepared for college at the Hopkins Grammar School, New Haven, and entered the class July 24, 1854. In his college course he won the Berkeley premium for Latin composition; 1857, Bristed scholarship; third prize Latin examination, second term junior year; Berkeley premium for Latin composition; 1858, first De Forest mathematical prize; Clark scholarship; Latin oration.

He occupied the first five years after graduation in 1858 in mathematical and other studies in New Haven. In the autumn of 1863 he became tutor in Yale, and was engaged with the duties of that position until August, 1866, when he went to Europe.

The winter of 1866–67 he spent in Paris, and the winter of 1867–68 and the following summer in Berlin, studying especially physics, but devoting a part of his time to mathematics. The winter of 1868–69 he passed in Heidelberg, and the next spring in France, reaching home in June, 1869. In July, 1871, he was elected professor of mathematical physics in Yale.

The following is the record of his principal publications:

1873. Graphical methods in the thermodynamics of fluids. Trans. Conn. Acad., vol. 2, pp. 309–342.

A method of geometrical representation of the thermodynamic properties of substances by means of surfaces. Ibid., pp. 382–404.

1875–1878. On the equilibrium of heterogeneous substances. Ibid, vol. 3, pp. 108–248, 343–524. Abstract: Amer. Jour. Sci. (3), vol. 16, pp. 442–458.

(A German translation of the three preceding papers by Professor Ostwald has been published under the title "Thermodynamische Studien," Leipzig, 1892.)

1879. On the fundamental formulæ of dynamics. Amer. Jour. Math., vol. 2, pp. 49–64.

On the vapor densities of peroxide of nitrogen, formic acid, acetic acid, and perchloride of phosphorus Amer. Jour. Sci. (3), vol. 18, pp. 277–293, 371–387.

1881 and 1884. Elements of Vector Analysis Arranged for the use of Students in Physics. New Haven. 8°. pp. 1-36 in 1881, and pp. 37-83 in 1884.

1882-83. Notes on the electromagnetic theory of light. I.—On double refraction and the dispersion of colors in perfectly transparent media. Amer. Jour. Sci. (3), vol. 23, pp. 262-275. II.—On double refraction in perfectly transparent media which exhibit the phenomena of circular polarization. Ibid., pp. 460-476. III.—On the general equations of mono-chromatic light in media of every degree of transparency. Ibid., vol. 25, pp. 107-118.

1886. On multiple algebra. (Vice-president's address before the section of mathematics and astronomy of the American Association for the Advancement of Science.) Proc. Amer. Ass. Adv. Sci., vol. 33, pp. 37-66.

1887 and 1889. Electro-chemical thermodynamics. (Letters to the secretary of the electrolysis committee of the British Association.) Rept. Brit. Ass. Adv. Sci. for 1886, pp. 388-389, and for 1888, pp. 343-346.

1888. A comparison of the elastic and the electrical theories of light, with respect to the law of double refraction and the dispersion of colors. Amer. Jour. Sci. (3), vol. 35, pp. 467-475.

1889. A comparison of the electrical theory of light, with Sir William Thomson's theory of a quasi-labile ether. Ibid., vol. 37, pp. 123-144. Reprint, Phil. Mag. (5), vol. 27, pp. 238-253.

On the determination of the elliptic orbits from three complete observations. Mem. Nat Acad. Sci., vol. 4, pp. 79-104.

Rudolf Julius Emanuel Clausius. Proc. Amer. Acad., new series, vol. 16, pp. 458-465.

1891. On the rôle of quaternions in the algebra of vectors. Nature, vol. 43, pp. 511-514.

Quaternions and the Ausdehnungslehre. Ibid., vol. 44, pp. 79-82.

1893. Quaternions and vector analysis. Nature, vol. 48, pp. 364-367.

1897. Hubert Anson Newton. Am. Jour. of Sci. (4), vol. 3, pp. 359-378.

1901. Vector Analysis, Founded on Professor Gibbs's lectures, by E. B. Wilson. Yale Bicentennial Series. C. Scribner's Sons.

1902. Elementary Principles of Statistical Mechanics. Yale Bicentennial Publications. C. Scribner's Sons.

The work by which Professor Gibbs was most widely known was in thermodynamics, and in all the standard treatises on this subject at the present time constant reference is made to his contributions. No one ever showed greater originality or gave to the world a larger number of new principles in this subject. His paper on "Graphical methods in the thermodynamics of fluids" was his first contribution to the mechanical theory of heat, and showed great power of generalization. His second paper, "A method of geometrical representation of the thermodynamic properties of substances by means of surfaces," attracted the world-wide attention of physicists. Maxwell, in his Treatises on Heat, pays a high tribute to this paper; he also constructed a model of this surface, which he presented to Professor Gibbs.

The celebrated paper "On the equilibrium of heterogeneous substances" was published in two parts in 1876 and 1878, and in it the principles of thermodynamics were applied to the conditions of equilibrium between substances differing in chemical nature as well as in physical state. This region of investigation has since become the realm of the young and vigorous science of physical chemistry, which has for the past twenty years been one of the most fertile, and is at present one of the most promising, of the physical sciences. When this paper appeared, the science did not exist; and, without exaggeration, it may be said that, in the almost complete absence of experimental facts, and by a most wonderful exercise of scientific imagination and logical power, Professor Gibbs predicted the greater part of the science of physical chemistry as it is known to-day. Such an achievement finds few if any parallels in the history of science. The earlier experimental and theoretical discoveries in physical chemistry were made independently and without knowledge of Professor Gibbs's work; but, ever since the general recognition of its great importance, it has served as a chart and guidebook for investigators in this subject. The following extracts are from the preface to a German translation of these papers, made in 1892 by Professor Ostwald, of Leipzig, one of the most distinguished of physical chemists:

The importance of the thermodynamic papers of Willard Gibbs can be best indicated by the fact that in them is contained—partly explicitly, partly implicitly—

a large part of the discoveries which have since been made by various investigators in the domain of chemical and physical equilibrium, and which have led to so notable a development in this field. * * *

The contents of this work are to-day of immediate importance and the interest it arouses is by no means merely historical. For of the almost boundless wealth of results which it contains or to which it points out the way only a small part has, up to the present time, been made fruitful. Untouched treasures in the greatest variety and of the greatest importance to the theoretical as well as to the experimental investigator still lie within its pages.

The remarkable powers of the mind of Professor Gibbs were illustrated by the fact that after he had accomplished in thermodynamics enough to secure his lasting fame he was able to turn his attention with equal success to an entirely different field in the domain of pure mathematics. His interest in this was greatest along the lines of multiple algebra originating in the study of the works of Grassman, Peirce, Cayley, Sylvester, and Hamilton. From all these sources he drew his inspiration for his own creation of the vector analysis. The interest aroused in America in the study of general mathematics by Sylvester was greatly intensified in the field of multiple algebra by Professor Gibbs's vice-presidential address on that subject at the meeting of the American Association for the Advancement of Science in 1886. In particular his exposition of the abstruse methods of Grassman was remarkable for its simplicity and lucidity. His complete mastery of the works of the above writers showed itself in the adoption of fundamental ideas from all of them in his vector analysis.

In the latter part of 1878 he first made public the elementary principles of this subject, and this was shortly followed by the more advanced principles and in turn by applications to the computation of orbits of planets and comets, to Maxwell's electromagnetic theory of light, to crystallography, to the theory of perturbations, and to the theory of bivectors and their use in the representation of harmonic motion. From these earlier ideas he soon developed most elegant and powerful methods of treating all these subjects. In astronomy he replaced the older methods of calculating orbits by one more powerful and direct and susceptible of generalization to a very high degree of accuracy. The separation of the artificial and essential in the calculation is always evident, and the facility with which the computation can be carried out is admirable. His method, with the illustrative examples, has been translated into German and incorporated into the latest edition of Klinkerfues's Theoretische Astronomie.

Between the years 1882 and 1889 four papers on the electromagnetic theory of light were published by Professor Gibbs, which gave strong support to this theory and had a powerful influence in securing its general adoption by physicists. For the first time an adequate explanation on the electromagnetic theory of the dispersion of colors was given independent of any special molecular hypothesis. He also showed that upon this theory the refraction of light in crystalline media should conform to Fresnel's construction, even when one carried the calculations to a higher degree of approximation than had ever been attempted before. This result was afterwards confirmed by experiments of special accuracy. His later contributions showed in a remarkable way the relations of this theory of light to the older theories.

His last work, entitled "The elementary principles of statistical mechanics," published in the Yale Bicentennial series, is a masterly exposition of methods which must be used in the investigation of dynamical systems of a great number of degrees of freedom. The principal application of such studies hitherto has been to the reduction of the principles of thermodynamics to mechanics. This work applies these principles to this purpose, but, what is of vastly more importance, it opens up to the investigators in mathematical physics a new field of wonderful promise.

At the time of his death he had consented to prepare for a collected edition of his papers on thermodynamics additional chapters to his Equilibrium of Heterogeneous Substances, but probably nothing was left in a state complete enough for publication.

One great characteristic of all the work of Professor Gibbs was the reduction of the number of hypotheses to the fewest possible, one in which it resembled that of the ancient Greek geometers and the Principia of Newton. From the present point of view this seems to be the surest guaranty of the permanency of his work. Future investigation may add details, but it seems as unlikely that they should supersede it as that the works to which it has been compared should ever become obsolete. His genius, in all his investigations, was shown in his power to select those ideas which were capable of the most fruitful development.

As a teacher his great originality and extraordinary powers of intuition made his lectures most inspiring to the advanced student. The diversity of his points of view of a subject, and the wonderful swiftness with which he drew conclusions, impressed all with whom he came in contact.

In 1877 he founded the Yale Mathematical Club, which has ever since maintained a vigorous existence. All of his investigations after that time were communicated first to this club, whose members were thus privileged to see the development of his genius and powers. In January of the present year, on the occasion of the celebration of the twenty-fifth anniversary of the founding of the club, he delivered a remarkable address on "Values," which gave those present the opportunity to hear his idea of what should constitute the ideals of the scientific investigator.

Among his activities outside of his investigations and the duties of his professorship may be mentioned the fact that he was for twenty-two years a trustee of the Hopkins Grammar School—the school where he fitted for college—and for seventeen years its secretary and treasurer. His services in these capacities were marked by what characterized all of his activities—the most conscientious and painstaking devotion to the duties he had assumed. The impression made upon all who knew him was that of the ideal scholar. The regularity and persistency with which he prosecuted his studies, his extremely modest and unassuming bearing, his cordial helpfulness and kindliness to all who consulted him, his entirely unselfish nature, and the absolute purity of his life and motives were characteristics which marked his whole career. The university will hold him in affectionate remembrance, not only for his achievements, which added the greatest luster to her fame, but also for his example, which was a continual inspiration to his students and his colleagues. Those who were privileged to enjoy his confidence and intimacy have lost one of the truest and noblest of friends.

THE PRESIDENT'S ESTIMATE.

Mr. Gibbs was one of the very few Americans who had made discoveries of the first rank in scientific theory—discoveries which attract less attention at home than those of applied science, but which deservedly bring to him who makes them a higher rank among experts and a better reputation abroad. In these last respects there was probably no living American who surpassed Professor Gibbs.

Perhaps the most marked characteristic of his scientific work was its directness. The subjects which he dealt with were so difficult that it was not easy for those outside to appreciate the simplicity with which he handled them. But he always went right to the heart of the matter. His treatment of vector analysis furnished a marked instance in point. Where Hamilton and even Tait had tried to give metaphysical reasons for explaining why a certain function was a product, Mr. Gibbs was content with saying: "We find it convenient to call it a product." This was all there was to it. And this plain way of seeing straight where other people's preconceived ideas compelled them to see crooked was characteristic of the man and his work from beginning to end.

ARTHUR T. HADLEY.

CHAPTER XXXII.

STATISTICS OF CITY SCHOOL SYSTEMS.

This chapter contains 17 tables presenting statistics of the various classes of schools maintained in incorporated cities and towns having a population of 4,000 or over. The first nine tables relate to day schools in cities of a population of 8,000 or over; the two tables following to evening schools in the same class of cities; the next three to day schools in cities and towns having a population between 4,000 and 8,000; and the three tables remaining to public and private kindergartens in all cities having a population of 4,000 or more. It will be noted that there are 587 cities of the first class and 589 of the second, and that these had a combined population according to the Twelfth Census of 28,124,407, or 37.3 per cent of the entire population.

It will be noted that the number of cities having a population of 8,000 or more has been increased by 7, and the cities and towns having a population between 4,000 and 8,000 by 130, since the last report. These additions were made on the strength of conservative estimates of population, based on the known school population. It may be remarked that the fact that a small number of cities may be accorded a rank in population on the basis of inter-census estimates which a decennial census proves to be inexact does not essentially affect the value of the school statistics presented.

The following is a general summary of the statistics of cities of 8,000 and over, in which the absolute increase as well as the percentage of increase over the previous year is given. It will be seen that all the items show substantial gains except the average length of the school term in days. Reference to Table 5 shows that there has been a decline of 4.2 days since 1891–92 in this particular. The number recorded for the present year is 187.3, which represents, after the deduction of Saturdays and Sundays and the holidays of general recognition, about 72 per cent of the remaining days of the year.

Summary of statistics of cities containing over 8,000 inhabitants, showing increase from previous year.

	1901-2.	1902-3.	Increase.	Per cent of increase.
Number of city school systems	580	587	7	1.20
Enrollment	4,174,812	4,274,071	99,259	2.38
Aggregate number of days' attendance	591,719,445	609,200,167	17,480,722	2.95
Average daily attendance	3,159,441	3,252,257	92,816	2.94
Average length of the school term, in days	187.3	187.3	0	
Enrollment in private and parochial schools	877,210	968,002	90,792	10.35
Male supervising officers	2,492	2,663	171	6.86
Female supervising officers	2,533	2,716	183	7.22
Whole number of supervising officers	5,025	5,379	354	7.04
Number of male teachers	6,969	7,280	311	4.46
Number of female teachers	83,775	86,856	3,081	3.68
Whole number of teachers	90,744	94,136	3,392	3.74
Number of buildings	9,512	9,853	341	3.58
Number of seats	3,938,001	4,095,447	157,446	4.00
Value of school property	$356,986,076	$380,437,679	$23,451,603	6.57
Expenditure for tuition	$66,561,505	$70,252,274	$3,690,769	5.39
Total expenditure	$111,159,665	$122,353,007	$11,193,342	10.07

In Tables 1 and 2 is given the usual summary, by geographical divisions and by States, of the items of school statistics which are deemed to have the highest value. These summaries are made from the detailed statistics given in Tables 6 to 9, inclusive. The figures given in Table 3 are derived from the two preceding tables.

Table 4 gives the summarized statistics of cities of the first class for the last thirteen years. An examination of the item of enrollment for the years named shows an average yearly increase of 4.5 per cent. The increase for the year 1903 over 1902 is 2.38 per cent. The various items, "aggregate number of days' attendance of all pupils," "average daily attendance," etc., show a normal increase in each case.

The number of supervising officers was increased during the last year by 354. The relative increase in the number of women was greater than that of men, the former being 7.22 per cent, the latter 6.86 per cent. Male teachers, on the other hand, are shown to have increased 4.46 per cent, against an increase in the number of women of 3.68 per cent since the last report. It is interesting to note that the Western division shows the largest increase in the whole number of teachers, the same being 12.5 per cent, while the South Central division ranks next with an increase of 4.4 per cent. The smallest increase is observed in the North Central division. The Western division also shows the largest relative increase in the number of male teachers, the figure being 39.9 per cent, against an increase of 10.7 per cent in the number of women. The North Atlantic division ranks next in magnitude of increase in the number of male teachers, while the South Atlantic division shows a decrease of 2.6 per cent in this particular. It may be noted that a very slight change in the proportion of male teachers to the whole number of teachers has taken place in the thirteen years under consideration. In 1891 7.3 per cent of the whole number of teachers were males, and 1903 shows the change to 7.7 per cent.

In column 10 is indicated an increase of 341 in the number of buildings, and on the supposition that the greatest part of the increase in value of public property used for school purposes was employed in the purchase of sites, erection of buildings, and equipment of the same, the average value of these complete buildings added was $68,773. This figure is probably in excess of the actual value of buildings added, owing to the fact that no fair estimate can be made of the amount spent for improvements, additions, etc. The average value of the whole number of buildings is $38,611. The same item for 1891 is $28,483, a comparison of which with the former shows conclusively the improvement in the character of school buildings. The increase in value of school property over the previous year is 6.5 per cent. This is a little less than the average yearly increase for the ten years for which statistics are given, the latter being 8.1 per cent. The highest ratio of increase is observable in the South Atlantic division, being 14.3 per cent over the previous year, while the smallest ratio is noted in the North Atlantic division, an increase of 5.8 per cent being shown. The other divisions do not make very marked departures from the rate of increase for the United States. Expenditure for supervision and teaching shows an increase of 5.5 per cent, while expenditure for all purposes is increased by 10.6 per cent.

A comparison of columns 3 and 15 of this table serves to show that the relative increase in enrollment in private schools exceeds that in public. It must be borne in mind, however, that statistics of private schools have to be accepted with a certain degree of caution, inasmuch as the returns are more irregular than those of public schools, and estimates based on previous returns are necessary in many cases to supply deficiencies of those schools which are known to exist but fail to report.

Table 5 exhibits several interesting items derived in the main from the statistics given in Table 4. The ratio of private school enrollment to total enrollment is seen to be somewhat larger than for any year since 1900, a fact to be expected from the marked increase of over 10 per cent in enrollment over the previous year, noted in the preceding table. The statement made in the preceding paragraph respecting private schools should be taken into account in connection with all discussions of private school statistics. Notwithstanding the admitted fact of incompleteness in returns from private schools of all classes, the fact seems to be well established that the ratio of enrollment in private schools to enrollment in all schools, public and private, has on the whole decreased since 1892, the first date used in the comparative table.

Column 6 indicates a steady decrease in the number of pupils to a teacher, and column 7 a reduction in the number of teachers to a supervising officer, both facts making for greater efficiency and thoroughness in school work.

Column 11 shows an almost uninterrupted increase from year to year in the amount spent on education per pupil in average attendance, a fact which indicates a disposition toward greater liberality in school expenditures. Disregarding the number of sittings provided by additions to buildings already standing or enlargements of the same, the average number of sittings to each of the 341 buildings added during 1903 was 461. The average number of sittings for each building of the whole number is 416, against 371 in 1891.

Tables 10 and 11 deal with evening school statistics, the former giving the summary and the latter the detailed statistics of the various cities maintaining evening schools. No statistics of this class of schools appeared in the Report for 1902. By comparison with corresponding items reported in 1901 it will be seen that during two years the number of pupils increased 26,213, although the number of teachers increased very slightly. The average daily attendance was only 40.9 per cent of the total enrollment; but when the fact is considered that attendance in these schools is drawn mainly from those persons employed during the day and whose time is subject to the exigencies of business, it is hardly to be expected that the ratio of attendance to enrollment would closely approximate that for day schools. A considerable number of pupils attend both day and evening schools, the table showing that 21.97 per cent of the total enrollment belonged to this class.

Tables 12, 13, and 14 are devoted to statistics of cities and villages having a population between 4,000 and 8,000. There are 589 of this class, having a ratio of average attendance to enrollment of 75.47 per cent; number of pupils in average attendance to each teacher, 33; number of teachers to each supervising officer, 13.4; number of days attended by each pupil enrolled, 136.1; ratio of male teachers to whole number of teachers, 11.8 per cent; average length of school term, in days, 179.8. From Table 13 it is learned that the average value of the 2,917 buildings reported is $14,677. The relative cost of teachers and supervision was not so large as in the cities, being $15.67 for each pupil in average attendance.

Tables 15, 16, and 17 are devoted to the kindergarten statistics of all cities and villages having a population of 4,000 or over. The first table gives the result of the Bureau's inquiries for the current year. It is shown that 309 out of the 1,176 cities and villages maintain public kindergartens, 2,717 schools being reported in all. This is an increase of 20 in the number of cities maintaining kindergartens and 515 in the number of schools over the previous year. The number of teachers is greater by 262 and the number of pupils by 25,460 than in 1902. Table 16 repeats summary of statistics of private schools collected for the year 1902.

COMPARATIVE EXPENDITURES.

The two tables following give the comparative expenditures for various purposes in the 100 cities of highest rank in population. These include all cities of an estimated population (1902) greater than 40,000. Certain of the data from which these tables were computed were taken from Bulletin No. 42 of the Department of Labor, issued September, 1902. Table XIX of that bulletin gives the basis of assessment and the assessed valuation of property. Inasmuch as the legal basis of assessment and the basis allowed by custom are not always the same, the latter was used in the calculation of the true value of property from the assessed value. The first of the tables exhibits the true value, the amount expended for all purposes per $1,000 of true value, and the amount expended for schools on the same basis. It was found that the average expenditure for schools for the cities named was $3.83 per $1,000 of wealth. The variations from this mean will be seen to be considerable. Equally wide differences occur in the total expenditures.

The information contained in the second of these tables was computed from data given in Table XXII of the above-named bulletin. It shows the expenditure for each of the various departments of municipal control in terms of school expenditure—that is, for each dollar of school expenditure the amount expended for each of the other objects is shown. It will be readily seen that the reduction of all these items to the same terms makes a very convenient table for comparison.

Value of property and comparative expenditures in certain cities.

	Cities.	True value of real and personal property based on assessment for taxation.	Total amount expended for maintenance and operation of all departments for every $1,000 of property.	Amount expended for maintenance and operation of schools for every $1,000 of property.
1	New York City, N. Y	$5,175,590,127	$19.89	$3.81

TABLE 3.—*Comparative statistics of cities containing over 8,000 inhabitants, summarized by States, etc., 1902–3.*

Cities of—	Ratio of private school enrollment to enrollment in all schools, public and private.	Ratio of average attendance to enrollment (public schools).	Average number of days' attendance of each pupil enrolled.	Average length of school term.	Average number of pupils in attendance to each teacher.	Average number of teachers to each supervising officer.	Average number of seats to each 100 pupils in attendance.	Average number of seats to a building.	Value of school property per capita of pupils in average attendance.	Cost of teaching and supervision per capita of pupils in average attendance.	Total cost of schools per capita of pupils in average attendance.	Average cost per day of tuition for one pupil.	Average daily expenditure per pupil for all purposes.

TABLE 5.—*Comparative statistics of cities containing over 8,000 inhabitants, summarized by States, etc., 1891–1903.*

Cities of—	Ratio of private school enrollment to enrollment in all schools, public and private.	Ratio of average attendance to enrollment (public schools).	Average number of days' attendance of each pupil enrolled.	Average length of school term.	Average number of pupils in attendance to each teacher.	Average number of teachers to each supervising officer.	Average number of seats to each 100 pupils in attendance.	Average number of seats to a building.	Value of school property per capita of pupils in average attendance.	Cost of teaching and supervision per capita of pupils in average attendance.	Total cost of schools per capita of pupils in average attendance.	Average cost per day of tuition for one pupil.	Average daily expenditure per pupil for all purposes.

TABLE 6.—*Statistics of population, school enrollment, and attendance in cities of over 8,000 inhabitants, 1902–3.*

	City.	Total population, census of 1900.	Population, 1903 (Census Office estimate).	School population.		Pupils in private and parochial schools (largely estimated).	Different pupils enrolled in public day schools.			Number of days the schools were actually in session.	Aggregate number of days' attendance of all pupils in public day schools.	Average daily attendance in public day schools.
				School census age.	Children of school census age.		Male.	Female.	Total.

* Statistics of 1901-2.
[a] Estimated.
[b] Estimated population of the district.
[c] Population of town of Danbury.
[d] Population of town of Manchester.
[e] Population of town of Meriden.
[f] Includes Rockville.
[g] Includes Willimantic.
[h] Colored schools were in session 120 days, and Italian schools 140 days.

TABLE 6.—*Statistics of population, school enrollment, and attendance in cities of over 8,000 inhabitants, 1902–3*—Continued.

	City.	Total population, census of 1900.	Population, 1903 (Census Office estimate).	School population.		Pupils in private and parochial schools (largely estimated).	Different pupils enrolled in public day schools.			Number of days the schools were actually in session.	Aggregate number of days' attendance of all pupils in public day schools.	Average daily attendance in public day schools.
				School census age.	Children of school census age.		Male.	Female.	Total.

*Statistics of 1901-2.

a The high school was in session 180 days.

b The high school was in session 190 days.

TABLE 6.—*Statistics of population, school enrollment, and attendance in cities of over 8,000 inhabitants, 1902-3*—Continued.

	City.	Total population, census of 1900.	Population, 1903 (Census Office estimate).	School population.		Pupils in private and parochial schools (largely estimated).	Different pupils enrolled in public day schools.			Number of days the schools were actually in session.	Aggregate number of days' attendance of all pupils in public day schools.	Average daily attendance in public day schools.
				School census age.	Children of school census age.		Male.	Female.	Total.

*Statistics of 1901–2.

a Between the ages of 5 and 18.

b Does not include kindergarten pupils.

TABLE 6.—*Statistics of population, school enrollment, and attendance in cities of over 8,000 inhabitants, 1902–3*—Continued.

	City.	Total population, census of 1900.	Population, 1903 (Census Office estimate).	School population.		Pupils in private and parochial schools (largely estimated).	Different pupils enrolled in public day schools.			Number of days the schools were actually in session.	Aggregate number of days' attendance of all pupils in public day schools.	Average daily attendance in public day schools.
				School census age.	Children of school census age.		Male.	Female.	Total.

* Statistics of 1901-2.
[a] Some schools were in session 190 days.
[b] White school statistics.
[c] Includes both races.
[d] Expended for teaching and supervision in schools of both races.

TABLE 14.—*School statistics of cities and villages containing between 4,000 and 8,000 inhabitants, 1902–3*—Continued.

	City.	Population, census of 1900.	School population.		Pupils in private and parochial schools.	Different pupils enrolled in public day schools.			Number of days the schools were actually in session.	Aggregate number of days attendance of all pupils.	Average daily attendance.	Supervising officers.	Regular teachers.			Buildings used for school purposes.	Seats or sittings for study in all public schools.	Value of public property used for school purposes.	Salaries of teachers and supervising officers.	Total expenditure.
			School census age.	Children of school census age.		Male.	Female.	Total.					Male.	Female.	Total.

CHAPTER XXXIII.

UNIVERSITIES, COLLEGES, AND TECHNOLOGICAL SCHOOLS.

Contents: Number of institutions—Courses of study—Students—Summer schools—Degrees—Property—Income—Benefactions—Statistical tables.

The total number of institutions included in the tables in this chapter is 627, of which number 129 admit women only. Of the 455 universities and colleges included in Table 30, men only are admitted to the undergraduate departments of 132 institutions, while 323 are open to both men and women. Of the 43 schools of technology included in Table 37, women are reported in the undergraduate departments of 26 institutions.

The following-named institutions have been discontinued: Pacific Methodist College, Santa Rosa, Cal.; Central Christian College, Albany, Mo.; Asheville College for Young Women, Asheville, N. C.; and Black Hills College, Hot Springs, S. Dak. Lane University, Lecompton, Kans., and Campbell University, Holton, Kans., have been consolidated under the name of Campbell College, with location at Holton, Kans.

COURSES OF STUDY.

Nearly all of the institutions included in this chapter offer courses of study in the liberal arts, or what may be called general culture courses. The range of instruction offered by the several institutions is being extended year by year by the addition of new courses of study, so that the instruction now offered by some of the institutions is very varied. This is true in the line of general culture studies, but is especially the case in technical lines. Thus it is found that of the institutions of college rank, courses of study in agriculture are offered by 58; architecture, 19; civil engineering, 102; chemical engineering, 27; electrical engineering, 88; irrigation engineering, 2; mechanical engineering, 87; metallurgical engineering, 10; mining engineering, 46; marine engineering, 4; sanitary engineering, 11; naval architecture, 6; forestry, 7; horticulture, 11; textile engineering, 5; railway engineering, 6; ceramics, 4. The names of the institutions offering the several technical courses are given in Table 29 of this chapter.

The effect of the establishment of technical courses is generally to increase the productive industries of a State. The textile school in connection with the Mississippi Agricultural and Mechanical College was opened for instruction in 1901. In 1903, two years after its opening, the president of the institution reported that since the school was established more cotton mills had been built in the State than in the entire previous history of the State.[a] A great increase in the number of creameries

[a] Biennial Report of State Superintendent of Education of Mississippi, 1901–1903, p. 58.

and cheese factories and in the amount and value of their output followed the establishment, a number of years ago, by the agricultural colleges of systematic instruction in dairying, designed especially for workers in those lines.

STUDENTS.

The total number of undergraduate and resident graduate students in universities and colleges for men and for both sexes, colleges for women (Division A), and in schools of technology for the year 1902–3 is reported as 114,130, an increase of 6,739 students over the number for the preceding year. The number of such students for each year from 1889–90 to 1902–3 is as follows:

Number of undergraduate and resident graduate students in universities, colleges, and schools of technology from 1889–90 to 1902–3.

Year.	Universities and colleges for men and for both sexes.		Colleges for women. Division A.	Schools of technology.		Total number.	
	Men.	Women.	Women.	Men.	Women.	Men.	Women.
1889–90	38,056	8,075	1,979	6,870	707	44,926	10,761
1890–91	40,089	9,439	2,265	6,131	481	46,220	12,185
1891–92	45,032	10,390	2,636	6,131	481	51,163	13,507
1892–93	46,689	11,489	3,198	8,616	843	55,305	15,530
1893–94	50,297	13,144	3,578	9,517	1,376	59,814	18,098
1894–95	52,583	14,298	3,667	9,467	1,106	62,053	19,071
1895–96	56,556	16,746	3,910	8,587	1,065	65,143	21,721
1896–97	55,755	16,536	3,913	8,907	1,094	64,662	21,543
1897–98	58,407	17,765	4,416	8,611	1,289	67,018	23,470
1898–99	58,467	18,948	4,593	9,038	1,339	67,505	24,880
1899–1900	61,812	20,452	4,872	10,347	1,440	72,159	26,764
1900–1901	65,069	21,468	5,260	10,403	1,151	75,472	27,879
1901–2	66,325	22,507	5,549	11,808	1,202	78,133	29,258
1902–3	69,178	24,863	5,749	13,216	1,124	82,394	31,736

The number of undergraduate students pursuing the various courses of study, so far as reported, is as follows:

Classical courses (including unclassified students in liberal courses)	51,152
Other general culture courses	13,605
General science courses	7,397
Commerce	1,100
Agriculture	3,306
Mechanical engineering	6,800
Civil engineering	5,278
Electrical engineering	3,652
Chemical engineering	725
Mining engineering	2,244
Textile engineering	133
Sanitary engineering	27
Architecture	558
Household economy	742

SUMMER SCHOOLS.

The number of universities and colleges maintaining summer schools is increasing gradually. This feature of work has been undertaken usually by a number of the professors of an institution as a private venture and adopted afterwards as a part of the regular work of such institution. By means of the summer sessions the valuable equipment of a number of the largest universities is rendered available for educational

purposes for several weeks during the long vacation period. That the opportunities thus presented are appreciated is shown by the large number of persons, especially teachers, enrolled at the summer schools. Here are found the names of teachers of graded schools, superintendents of city schools, principals and teachers of secondary and normal schools, professors and instructors in colleges, as well as those of students in college, and of persons preparing for college.

The reports from the several institutions show that 11,036 students were enrolled in the summer schools of 51 universities and colleges. The number enrolled at each institution was as follows:

Students in summer schools of universities and colleges.

Institution.	Men.	Women.
University of California	398	432

The degree of doctor of philosophy was conferred on examination by 37 institutions on 272 men, by 11 institutions on 32 women, and as an honorary degree on 22 persons by 12 institutions. The number of different institutions conferring the degree during the year was 50, and of this number 38 conferred it on examination only, and 12 conferred it as an honorary degree only. The institutions granting the degree are as follows:

Institutions conferring Ph. D. degree in 1902–3.

PROPERTY.

The total value of property possessed by the institutions for higher education amounts to $432,236,725, a gain of $15,031,491 over the amount for the preceding year. The endowment funds amount to $190,766,721, and the remainder represents the value of the material equipment. The average amount of endowment held by the institutions of the several classes is as follows: Universities and colleges for men and for both sexes, $369,484; colleges for women, Division A, $474,414; colleges for women, Division B, $9,231; schools of technology, $347,626. The number of universities and colleges for men and for both sexes having endowment funds of various amounts is given in Table 5.

The purpose and cost of new buildings erected during the year, so far as reported, are as follows:

Purpose and cost of new buildings.

Institution.	Purpose.	Cost.
Judson College (Alabama)	Dormitory	$30,000
	Music	
University of Arizona	Gymnasium	6,575
University of Arkansas	Engineering	20,000
University of California	Greek theater	40,000

Ripon (Wis.) College	Dormitory	25,000
Northwestern University (Wisconsin)	Residences (2)	6,354
University of Wyoming	Armory and gymnasium	15,000

INCOME.

The total income from all sources, excluding benefactions, amounted to $38,270,502. The proportion derived from the various sources by the several classes of institutions was as follows:

	Tuition fees.	Endowment.	State or municipal aid.	Federal aid.	Other sources.
	Per cent.	*Per cent.*	*Per cent.*	*Per cent.*	*Per cent.*
All institutions	34.94	23.07	20.79	10.58	10.62
Universities and colleges for men and for both sexes	35.25	28.02	22.43	3.67	10.63
Colleges for women, Division A	51.72	19.56	0	0	28.72
Colleges for women, Division B	82.62	1.91	2.94	0	12.53
Schools of technology	11.26	9.99	25.99	47.99	4.77

The average income of the institutions of the several classes was as follows: Universities and colleges for men and for both sexes, $61,208; colleges for women, Division A, $127,693; colleges for women, Division B, $20,206; schools of technology, $146,734.

The State and municipal aid to higher education during the year amounted to $7,955,053, of which sum $5,172,179 was granted for current expenses and $2,782,874 for buildings or other special purposes. The amounts granted by the several geographical divisions are as follows:

North Atlantic Division	$1,101,354
South Atlantic Division	950,456
South Central Division	698,961
North Central Division	3,945,613
Western Division	1,258,669

BENEFACTIONS.

The total value of all gifts and bequests reported by the several institutions included in this chapter as having been received during the year amounted to $14,750,501. Of this amount, $10,665,283 was received by the following-named 25 institutions reporting gifts amounting to $100,000 and over:

University of Denver	$107,000
Yale University	646,954
University of Chicago	2,437,663
Illinois College	200,000
Drake University	100,000
Johns Hopkins University	113,358
Amherst College	100,000
Harvard University	1,756,418
Williams College	113,233
Wellesley College	343,509
William Jewell College	100,000
Stevens Institute of Technology	130,000
Adelphi College	137,012
Cornell University	262,544
Barnard College	1,128,236
Columbia University	369,777
Syracuse University	169,944
Western Reserve University	298,992
Ohio Wesleyan University	240,000
Oberlin College	403,433
University of Wooster	246,860
Haverford College	150,000
University of Pennsylvania	765,899
Swarthmore College	140,120
Brown University	204,331

The institutions in the North Atlantic and North Central divisions continue to receive the greater portion of benefactions, over 90 per cent of the total amount being reported by them for the year under consideration. The proportion received by the institutions in the several divisions is as follows: North Atlantic Division, 51.8 per cent; South Atlantic Division, 4.8 per cent; South Central Division, 2.1 per cent; North Central Division, 38.3 per cent; Western Division, 3 per cent. Of the institutions reporting benefactions amounting to $100,000 and over, 15 are located in the North Atlantic Division, 8 in the North Central Division, 1 in the South Atlantic Division, and 1 in the Western Division. The colleges for women reported benefactions amounting to $1,913,259.

CHAPTER XXXIV.

AGRICULTURAL AND MECHANICAL COLLEGES.

[The institutions commonly known as "agricultural and mechanical colleges" are brought together in this chapter and made the subject of special treatment, but in addition to being considered here, they are included in the general tables of the different classes of schools in other parts of this Report, the dominating character of each institution determining whether it shall be classed among the universities and colleges or as a technological, normal, or secondary school; those for colored students appear still a third time, in the tables of colored schools.]

CONTENTS.—General statement—Students—Property—Land grant of 1862—Income—Endowment of August 30, 1890—Additions to equipment—Farmers' institutes—Changes in admission requirements—Changes in courses of study—New buildings—Summary of legislation in 1903—Courses of study offered—Statistics.

GENERAL STATEMENT.

The work of these institutions is developing very rapidly and becoming more and more specialized. A comparison of the number of teachers in purely technical lines employed at the present time with the number employed in 1890 shows a remarkable increase during the past thirteen years. One reason for the greater number of teachers in such lines is undoubtedly the increase in the annual income of the institutions provided under the act of Congress approved August 30, 1890, which was followed in many cases by more liberal appropriations by the State legislatures. The four-year courses in agriculture are becoming more specialized, by being divided into a number of courses. At the Iowa College of Agriculture and Mechanic Arts, the course in agriculture has been divided into four distinct courses—agronomy, dairying, animal husbandry, and horticulture. The extension and specialization of the instruction in agriculture has of course made necessary a large increase in the number of teachers. In 1890 the University of Illinois had four professors in what may be called agricultural subjects, while in 1903 there were 22 instructors in similar subjects. In 1890 there was one professor of agriculture while in 1903 the purely agricultural instruction was given by 16 different persons.

Similar expansion has taken place in engineering lines. In 1890 the University of Illinois had 9 teachers in engineering subjects, which number in 1903 had increased to 27. In these subjects also there has been remarkable development and specialization. Excluding the institutions for colored students and counting the Missouri School of Mines and Metallurgy as part of the University of Missouri, there are 49 agricultural and mechanical land-grant colleges endowed by Congress. Of this number 6 now offer courses of study in architecture, 37 in civil engineering, 7 in chemical engineering, 38 in electrical engineering, 44 in mechanical engineering, 21 in mining engineering, 7 in sanitary engineering, 4 in railway engineering, 2 in irrigation engineering, 4 in metallurgical engineering, 4 in textile engineering, 3 in ceramics, and 4 in forestry. A course in agriculture is of course offered in each State and Territory,

although there are several instances where there are no students enrolled in a four-year course in agriculture. The courses of study that are most largely attended by those who desire to return to the farm or engage in creamery work are the short courses which have been established so numerously during the past few years. These range from ten days to two years and are devoted largely to practical work.

STUDENTS.

The total number of students in all departments of the institutions endowed by the acts of Congress approved July 2, 1862, and August 30, 1890, was 50,799, of which number 6,080 were enrolled in institutions for colored students. Excluding the latter there were in the college departments of agriculture and the mechanic arts 18,147 students, and in short or special courses 4,894 students. The preparatory departments enrolled but a comparatively small number, 4,452.

In the institutions for colored students the great majority, 4,603 students, were enrolled in preparatory departments, only 463 being reported in collegiate departments, and 592 in short or special courses.

The classification of students by courses of study is a somewhat difficult matter, as in some cases the first or freshman year studies are the same for all courses, and the selection of courses is not made until the sophomore year. It thus happens that in a few instances it has been necessary to omit the first-year students from the classication. An attempt has been made, however, to separate the short or special course students from those taking a regular four-year course. Excluding the institutions for colored students there were enrolled in four-year college courses as follows: Agriculture, 2,337; horticulture, 68; forestry, 66; mechanical engineering, 3,869; civil engineering, 2,371; electrical engineering, 2,314; mining engineering, 954; chemical engineering, 154; railway engineering, 6; sanitary engineering, 20; textile engineering, 119; general engineering, including a number of unclassified first-year engineering students, 534; architecture, 194; household economy, 637; chemistry, 570; general science, 1,310.

Short-course students were as follows: Agriculture, 2,982; horticulture, 125; dairying, 755; mechanic arts, 1,434; household economy, 470; mining, 30; forestry, 84.

There were graduated in 1903 from the college courses 2,465 men and 813 women, at the average age of 22 years and 4 months.

The work of the institutions for colored students is largely normal and industrial, thus preparing students to teach in the colored schools or to enter upon some trade. It differs, therefore, very widely from the work of the institutions primarily for white students, and for this reason a separate classification of the students is made. Very little instruction is given in engineering lines, the time being devoted very largely to trade courses. The number of students in the practical courses was as follows: Agriculture or farm work, 1,680; carpentry, 720; machine-shop work, 178; blacksmithing, 388; shoemaking, 112; broommaking, 8; wheelwrighting, 122; bricklaying, 190; painting, 133; printing, 104; harnessmaking, 9; tailoring, 161; plastering, 139; sewing, 1,693; cooking, 444; laundering, 624; nursing, 25; millinery, 99. There were graduated at the close of the year 222 men and 200 women, with an average age of 20 years and 11 months.

PROPERTY.

The total property of all the institutions amounts to $71,854,796, divided as follows:

Land-grant fund of 1862	$11,213,593
Other land-grant funds	2,063,375
Other permanent funds	15,819,651
Unsold land grant of 1862	4,504,486

Farms and grounds	$5,560,762
Buildings	22,865,455
Apparatus	1,743,316
Machinery	1,651,091
Libraries	2,194,804
Live stock	252,491
Miscellaneous equipment	3,985,772
Total	71,854,796

Of the total amount of property the institutions for colored students report $3,657,659.

LAND GRANT OF 1862.

The sum of $11,213,593 given above represents the amount of invested funds derived from the sale of the lands granted under the act of Congress approved July 2, 1862. An examination of Table 1 shows that of the 10,320,843 acres granted, 914,186 acres remained unsold at the close of the year ended June 30, 1903, showing that a little more than 20,000 acres were sold during the year. The increase in the funds for the year amounts to $87,059, so that the lands sold during the year were disposed of at an average price of about $4.22 per acre. Of the entire fund realized from the grant of 1862 the sum of $402,556, or a little more than 3.5 per cent, is held for the benefit of the separate institutions for colored students. In but four States—Kentucky, Mississippi, South Carolina, and Virginia—do the institutions for colored students share in this fund.

INCOME.

The various sources of the income of each institution for the year are given in Table 7. The total income, excluding the United States appropriation for experiment stations, amounts to $9,555,951, an increase of $388,892 over the amount for the preceding year. The total amount derived from each of the several sources is as follows:

From States and Territories:		
From endowment funds granted by States	$117,166	
Appropriations or tax for current expenses	2,717,371	
Appropriations for buildings or other special purposes	1,720,075	
Total State and Territorial aid		$4,554,612
From the Federal Government:		
Land grant of 1862	688,861	
Other land grants	129,609	
Endowment act of August 30, 1890	1,200,000	
Total Federal aid		2,018,470
From endowments from other than Federal or State sources		603,853
Tuition fees		958,751
Incidental fees		287,039
Miscellaneous		1,133,226
Total income		9,555,951
Received from Federal Government for experiment stations		681,000

The amount to be received annually from the general Government will not vary much from year to year. While there remains unsold a considerable portion of the lands granted to some of the institutions, such lands as a rule are leased and bring in a considerable revenue, which will probably not be greatly increased when the lands are sold. The increase in income which will naturally be rendered necessary to

meet the expenses of these rapidly-growing institutions must therefore be provided by the several States and Territories. This is due to the fact that with very few exceptions large gifts by individuals are not made to State institutions. As stated above the increase in the income for the year was $388,892, of which increase more than $300,000 was furnished by the States and Territories.

ENDOWMENT OF AUGUST 30, 1890.

In Table 8 are given the amounts of the funds received under the act of Congress approved August 30, 1890, that were expended by each institution for instruction in the several branches of study mentioned in the said act, as shown by the reports of the treasurers of such institutions. Of the total amount expended during the year the proportion expended for instruction in the several subjects was as follows: Agriculture, 16.1 per cent; mechanic arts, 27.9 per cent; English language, 12.3 per cent; mathematical science, 12.9 per cent; natural and physical sciences, 24.7 per cent; economic science, 6.1 per cent. The reports of the treasurers show also that of the funds received under the act of August 30, 1890, that were expended during the year, the sum of $1,112,418.79, or 91.8 per cent of the total amount, was expended for salaries. In 25 institutions the total amount expended during the year was for the payment of salaries.

It will be noticed that a comparatively small proportion of these funds was expended for instruction in agriculture. This is due undoubtedly to the fact that in the great majority of cases the instructors in agricultural subjects are employed also in the experiment stations, and thus draw only a part of their salaries from college funds. Again, in a number of cases special provision has been made by State legislatures toward the support of the agricultural departments. The average amount of these funds expended during the year for instruction in agriculture by each of the 49 institutions for white students was $3,558, 10 of the institutions expending less than $1,000 each for such purpose. The 16 institutions for colored students expended from these funds for instruction in agriculture an average amount of $1,277, 2 institutions reporting no expenditure for such purpose.

For instruction in mechanic arts there was expended by the institutions for white students an average amount of $6,110, and by the institutions for colored students an average amount of $2,453.

ADDITIONS TO EQUIPMENT.

In Table 9 is given the value of additions made during the year to the equipment of the several institutions, so far as reported to this office. The total as reported amounts to $2,844,183, 3 institutions not reporting on this subject. The largest items are $1,456,469 for buildings and $626,917 for endowment funds.

FARMERS' INSTITUTES.

Table 10 contains statistics concerning farmers' institutes conducted under the auspices or with the assistance of the agricultural and mechanical colleges. In some States the management of the institutes is committed to these institutions, while in others it is placed under the direction of the commissioner of agriculture, board of agriculture, or some similar officer or officers, while in some others special boards have been created for the purpose. No attempt has been made to collect statistics from sources other than the colleges. The reports show that about 509,000 people attended the institutes reported by the colleges.

CHANGES IN ADMISSION REQUIREMENTS.

Purdue University (Indiana).—The standard of admission to the freshman class has been raised to include plane geometry.

Iowa College of Agriculture and Mechanic Arts.—The requirements for admission to the engineering courses now include one year of German.

Kansas State Agricultural College.—Admission requirements have been raised one term.

Changes in Courses of Study.

1. Agriculture.

Alabama Polytechnic Institute.—The regular and special courses in agriculture were made more technical, additional work being given in agriculture, botany, horticulture (theoretical and applied).

Connecticut Agricultural College.—Established a two-year course in agriculture for students 17 years old or older. No entrance examinations are required for this course.

Iowa College of Agriculture and Mechanic Arts.—The course in agriculture has been divided into four distinct courses: (*a*) Agronomy; (*b*) dairying; (*c*) animal husbandry; (*d*) horticulture. By these changes the courses have been materially strengthened.

Louisiana State University.—Established a two-year course in agriculture.

Massachusetts Agricultural College.—The time for the commencement of elective courses has been shifted from senior year to the beginning of junior year, to allow students greater choice of subjects and a longer time for pursuing them. A course is now offered in agricultural physics; and connected courses in landscape gardening, horticulture, floriculture, and in the care and management of greenhouses have been opened.

University of Minnesota.—The college course has been divided into three courses—agriculture, forestry, and home economics. Technical courses have been added from time to time, and in several of these special books have been prepared.

Cornell University (New York).—The work of the college of agriculture has been reorganized and three new professors appointed—one in agronomy, one in horticulture, and one in animal industry. There have been purchased two additional farms aggregating 153 acres.

North Carolina College of Agriculture and Mechanic Arts.—There have been established normal courses of study, as follows: For rural teachers, a two-year course, a one-year course, and a summer course; for city teachers, a two-year course, a one-year course, and a summer course. The courses for rural teachers are devoted largely to agriculture and nature study; the courses for city teachers, to drawing and manual training, with the privilege of electing considerable work in nature study. The industrial training given is both practical and theoretical.

North Dakota Agricultural College.—The two full years short course in agriculture has been changed to three years of five and one-half months each, beginning the middle of October each year. Short winter lecture courses of 10 weeks begin after the holidays. There is maintained also a ten-day stock and grain judging course during December.

Oklahoma Agricultural and Mechanical College.—There has been established a school of agriculture and domestic economy extending through two years of 20 weeks each. Applicants must be at least 14 years of age and fairly well advanced in the common branches.

Rhode Island College of Agriculture and Mechanic Arts.—Established an agricultural high school with a course extending through two years. It offers to the student fitted to enter a high school an opportunity to take much of the regular work of a high school course, combined with work in agriculture which will be of direct practical value on the farm. Class-room instruction goes hand in hand with laboratory practice. There is offered also a special course in farm mechanics, beginning in January and extending through the 12 weeks of the winter term. It is wholly a practical

course and includes instruction in carpentry, mechanical drawing, piping for steam and gas, and blacksmithing.

Princess Anne Academy (Maryland).—The home garden course has been organized and is now a regular feature of the school.

2. ENGINEERING.

University of Arkansas.—Added a course in mining engineering.

University of Idaho.—A complete course of four years in electrical and mechanical engineering has been established.

Purdue University (Indiana).—A department of telephone engineering has been established in the school of electrical engineering. Courses of instruction are given in the theory and practice of telephone design, construction, and operation.

Louisiana State University.—Established a four-year course in electrical engineering.

Massachusetts Institute of Technology.—A graduate school of engineering research established. Courses are offered by the departments of civil, mechanical, mining, electrical, chemical, and sanitary engineering, and naval architecture. Candidates for admission are expected to have such training as is represented by the B. S. degree of this and other institutions of corresponding grade. The degree of Doctor of Engineering will be conferred for satisfactory resident work occupying not less than two years.

University of Missouri.—The four-year course in mechanic arts has been abolished and the studies now taught in the department are those required for the regular engineering course and industrial work for the department of education, together with a few electives which do not count for a degree.

Rutgers Scientific School (New Jersey).—Established a four-year course of study in clay working and ceramics leading to the B. S. degree. Two students were graduated from this course in 1903. There was established also a short two-year course in ceramics for which a certificate is given.

Pennsylvania State College.—The course in electrical engineering has been extended to offer electives leading to proficiency in different fields, viz, the regular course, which furnishes a training for the electrical engineering profession; a modification of the regular course leaning toward the application of electrical energy to manufacturing establishments; special preparation for electric-railway engineering, and special preparation for electro-chemical engineering.

Rhode Island College of Agriculture and Mechanic Arts.—Established industrial courses extending through two years in the following lines: Carpentry, drafting, machine shop, and steam engineering. These courses are suited to students fitted to enter the preparatory department.

Agricultural and Mechanical College of Texas.—Established a four-year course in textile engineering leading to the B. S. degree; also a two-year practical course in the same subject. Provision has also been made for a course in electrical engineering.

3. DOMESTIC SCIENCE.

University of Idaho.—A two year course has been established and is required of all young ladies in the first two years of their college course.

Iowa College of Agriculture and Mechanic Arts.—The course has been made more technical by introducing in the freshman and sophomore years such scientific work as will give distinct preparation for the advanced work of the course.

Oklahoma Agricultural and Mechanical College.—Established a course extending through two years of 20 weeks each.

Washington Agricultural College and School of Science.—Established a department of domestic economy.

4. OTHER COURSES.

University of California.—Established a department of architecture, a four-year course in sugar technology, and a research department of physiology.

New Mexico College of Agriculture and Mechanic Arts.—Added a department of military science and tactics.

Oklahoma Agricultural and Mechanical College.—The preparatory department has been discontinued, and all regular collegiate courses extend through five years.

Pennsylvania State College.—Established a four-year course in industrial chemistry leading to the B. S. degree. It is intended to prepare students to be chemists, fitted to enter upon all varieties of chemical positions, but with some training in engineering subjects.

Agricultural and Mechanical College of Texas.—All courses have been revised and enriched and the standard has been raised one year.

NEW BUILDINGS.

1. AGRICULTURE.

Colorado Agricultural College.—A new horse barn (cost $6,000) and a hog barn (cost $1,200).

University of Idaho.—A barn for the horticultural department has been erected on the grounds at a cost of $205.

Iowa College of Agriculture and Mechanic Arts.—Addition to agricultural hall, 60 by 100 feet, two and a half stories high; addition to greenhouses, 30 by 82 feet; new stock and corn judging pavilion, two stories high. Cost, $15,000.

University of Minnesota.—A building for agricultural chemistry has been erected at a cost of $25,000. The legislature of 1903 appropriated $250,000 for the erection and equipment of farm buildings.

Mississippi Agricultural and Mechanical College.—The scientific building (cost $45,000) provides accommodations for the department of agriculture, horticulture, veterinary surgery, biology, and civil and rural engineering.

New Hampshire College of Agriculture and Mechanic Arts.—The new agricultural building has been erected at a cost of $45,000. It is 60 by 110 feet, two stories, with attic and basement, and is built of brick with granite trimmings.

Clemson Agricultural College (South Carolina).—A new cow barn, cost $3,090.

Agricultural and Mechanical College of Texas.—The chemical and veterinary laboratory building is of classical design, 138 by 130 feet. It is built of brick, contains two stories and a basement, and cost $31,000. It furnishes accommodations for the chemical and veterinary departments.

Agricultural and Mechanical College for Negroes (Alabama).—Added a barn, costing $800.

Princess Anne Academy (Maryland).—A large stock barn, a piggery, and a chickery have been built. The expense for building and repairs amounted to about $6,000.

2. ENGINEERING.

University of Arkansas.—A building for the civil, electrical, and mechanical engineering departments, cost $20,000.

University of California.—A new granite building for mining engineering, to cost $500,000, the gift of Mrs. Phoebe Hearst, is under construction.

Colorado Agricultural College.—A two-story building of gray sandstone for the electrical engineering department and containing a central heating plant; cost, $9,000.

Purdue University (Indiana).—A heating and power plant, to cost $75,000, was begun on May 21, 1903.

Iowa College of Agriculture and Mechanic Arts.—Fireproof engineering building, cost $220,000. It has about 45,000 square feet of floor space in four stories. The exterior is Bedford stone and plate glass, the interior side walls are pressed and enameled brick.

Louisiana State University.—An electric power house for heating and lighting purposes, cost $6,000.

The new mechanical workshop is a two-story brick building, 200 by 80 feet. The first floor is devoted to the mechanic arts and contains shop for joinery, wood turning and pattern making, forging, foundry work, and machine work. Each shop is adjacent to a special tool room and combined locker and toilet room. The second floor contains a department library and reading room, a lecture room, two large drawing rooms, a dark room, an exhibition room for the display of the full course of work, an office, a toilet room, two cloak rooms, and a room for the janitor.

The new physics and civil engineering building is a two-story brick structure, 112 by 57 feet. The first floor is occupied by the department of physics and electricity, and provides an office, a lecture room with 120 seats, four laboratory rooms, an apparatus room, and a dark room. The department of civil engineering occupies the second floor, which is divided into an office, a lecture room with 60 seats, three large drawing rooms, an instrument room, and a dark room for blueprint work. The cost of the last two buildings is about $57,000.

Massachusetts Institute of Technology.—Laboratory of electrical engineering, cost $65,000.

University of Missouri.—The engineering laboratory, costing $17,000, is a two-story building, containing laboratories for the departments of civil, electrical, and mechanical engineering.

Rutgers Scientific School (*New Jersey*).—The ceramics building, for which the State appropriated $12,000, is of the colonial style, executed in buff brick. It contains a workshop, wet closet, kiln, library room, a room for collections of ceramic ware, and a director's room for instruction and for investigation.

Agricultural and Mechanical College for Negroes (*Alabama*).—A new brick mechanic arts building, costing $1,500.

Alcorn Agricultural and Mechanical College (*Mississippi*).—A new industrial building, cost $8,500.

3. OTHER.

University of Arizona.—A brick building, 48 by 98 feet, known as Herring Hall, and used as a gymnasium; cost, $6,575.

University of California.—A new open-air Greek theater, seating 8,000, cost $40,000, given by William R. Hearst.

A temporary physiological laboratory, cost $25,000, given by Rudolph Spreckles.

Colorado Agricultural College.—A new lavatory, built of pressed brick and tiled floors, cost $4,700; a new auditorium, cost $12,000.

University of Florida.—A new gymnasium, cost $20,000, the gift of H. M. Flagler.

Purdue University (*Indiana*).—A stone and brick assembly hall, cost $70,000, the gift of Mrs. Eliza H. Fowler. It contains also the administration offices of the university and rooms for the meetings of the faculty and trustees.

Kansas State Agricultural College.—Addition to library, costing $10,000. It includes a large reading room, with class room and laboratory for bacteriology and class room for preparatory department.

Agricultural and Mechanical College of Kentucky.—A new building for the board and lodging of young women, cost $60,000. It provides accommodations for 120 persons.

Louisiana State University.—The Hill Memorial Library Building, cost $33,000, was donated by Mr. John Hill, of West Baton Rouge, La. It is 92 feet wide and 107 feet deep. The central rotunda is flanked by two reading rooms. Behind the rotunda

there is working space for the library staff, and behind this the stack room for 100,000 volumes. The basement provides rooms for various purposes.

Maryland Agricultural College.—Administration Building, cost $26,000. It contains administration offices, a drill hall and armory, assembly hall, and affords additional dormitory accommodations.

Massachusetts Agricultural College.—A dining hall, capable of accommodating 400 students and furnishing lodging for 15 to 20 female students, cost $40,000. Also a heating and lighting plant, costing $46,505.

Mississippi Agricultural and Mechanical College.—The infirmary, costing $15,000, contains 2 large wards with 22 beds in each, 4 private wards, surgeon's office, reception room for trained nurse, 2 dining rooms, kitchen, closets, and bath rooms. It is heated with steam and furnished with electric lights.

Rutgers Scientific School (*New Jersey*).—The new library building, costing about $60,000, is the gift of Mr. Ralph Voorhees. It is designed to accommodate more than 100,000 volumes and to furnish ample reading, study, stock, archive, and lecture rooms. The outer walls are constructed of Long Meadow stone.

North Carolina College of Agriculture and Mechanic Arts.—A new brick auditorium costing $35,000.

Pennsylvania State College.—Erected a new auditorium at a cost of about $150,000, contributed by Mr. and Mrs. C. M. Schwab.

Virginia Agricultural and Mechanical College and Polytechnic Institute.—The new dormitory is a four-story brick building, containing 60 rooms, with accommodations for 120 students. Three houses for members of the faculty and staff have been built, and one house and 5 acres of land purchased for a residence for a member of the faculty.

University of Wyoming.—The new armory and gymnasium, costing $15,000, is a brick building with stone trimmings, having a clear floor space of 45 by 90 feet.

State College for Colored Students (*Delaware*).—A new chapel, with seating capacity of 300, costing $1,000 for materials. The work was performed by teachers and students.

SUMMARY OF LEGISLATION, 1903.

Beyond appropriating funds for the maintenance of the institutions there was comparatively little legislation enacted in their behalf at the 1903 sessions of the legislatures. The points that may be noted particularly are as follows: Indiana raised the tax levy to 1 cent on each $100 of the taxable property, and New Mexico to forty one-hundredths of a mill on the dollar. Oregon provided for a tax levy to raise $25,000 annually, and Wisconsin for a levy to raise $48,500 annually in addition to an annual levy of $289,000 heretofore provided for. Temporary tax levies for various purposes have been provided by several States. Among the notable appropriations for buildings may be mentioned $250,000 by California; $100,000 for an agricultural building, to cost ultimately $250,000, by Pennsylvania, and $250,000 for buildings and equipment for the agricultural department of the University of Minnesota. A brief statement of the legislation in favor of each institution follows:

Alabama Polytechnic Institute.—Amends section 398 of the Code and grants to the institute one-third of the net proceeds arising from the sale of fertilizer tags. (February 26, 1903.)

Makes the professor of horticulture State horticulturist. (March 5, 1903.)

Requires the board of trustees to test illuminating oils and allows them one-fourth of the moneys received from the sale of oil tags for defraying the expenses. (March 4, 1903.)

Appropriates $5,000 annually for four years out of the funds derived from the sale of illuminating oil tags for the erection of necessary buildings. (October 1, 1903.)

University of Arizona.—Appropriates $5,000 to furnish library building; $2,000 to finish and equip gymnasium; $1,400 for purchase of land. (March 18, 1903.)

Territorial bond issue of $11,000 authorized for following purposes: $8,300 for buildings and equipment of agricultural experiment station; $2,700 for the establishment of farmers' institutes and short courses of instruction throughout the Territory. (March 19, 1903.)

University of Arkansas.—Appropriations for two years ending March 31, 1905: Engineering building and maintenance of mechanic arts department, $25,000; insurance, $2,000; night watchman, $730; traveling expenses for veterinarian, $1,000; art equipment, $700. Maintenance of departments: Agriculture, $2,000; horticulture, $2,000; physics and chemistry, $2,000; electrical engineering, $5,205; civil engineering, $2,808; geology and mineralogy, $750; museum, $1,000; biology, $961.11; philosophy and pedagogy, $300; economics and sociology, $200; history, $300; ancient language, $150; English and modern language, $150; mathematics and astronomy, $200; military, $600; library, $1,000; heating plant, $6,000; fuel, $4,000; fireman, $315; mining engineering, $1,000; student labor (including janitor service), $9,000; campus, $400; repairs, $3,000; infirmary, $350; plumbing, $500; stationery and printing, $1,500; postage, $500; trustees' expenses, $1,200; water, $1,200; secretary to president, $960; elocution and physical culture, $1,500; salaries, $40,000; preparatory department, $629; student publication, $200; salary of matron and repairs, $1,000; water mains, $600. The act provides that "no person related by affinity or consanguinity within the fourth degree to any member of the board of trustees shall be employed in the university in any capacity; provided, that this shall not apply to any student doing work at the university;" also, "no salary shall be paid to teachers in the university for the time they are absent, except from sickness, and when on lawful business of the university." (May 7, 1903.)

Branch Normal College (Arkansas).—Appropriations for two years ending March 31, 1905: Salaries, $8,500; fuel, $500; repairs, $600; student labor, $1,000; insurance, $300; furniture, $250; apparatus, $100; contingent expenses, $500. (May 23, 1903.)

University of California.—Appropriates $250,000 for a building "for the use and accommodation of the students in the university." (March 13, 1903.)

The California Poultry Experiment Station is established in Sonoma County, to be under the supervision of the director of the agricultural experiment stations of the State of California. The funds appropriated ($2,500 per annum for two years), are placed under the control of the regents of the University of California. (March 13, 1903.)

The holding of farmers' institutes is placed under the direction of the regents of the University of California and an appropriation of $6,000 per annum for two years is made. (March 18, 1903.)

Appropriations for printing: $5,000, March 13, 1903; $12,000, March 26, 1903.

Appropriates $3,000 for the protection of the viticultural interests of the State. (March 26, 1903.)

Appropriates $100,000 per annum for two years for support and maintenance. (March 26, 1903.)

Colorado Agricultural College.—Appropriates $40,000 for the erection and equipment of a building for the department of civil and irrigation engineering. (April 13, 1903.)

Connecticut Agricultural College.—Appropriates $40,000 for general running expenses. (May 22, 1903.)

Appropriates for food investigation, $3,600; for agricultural experiment station, $20,000. (June 3, 1903.)

Delaware College.—Appropriates $15,000 for an addition to the mechanical building, for a building for the experiment station, and for alterations and repairs to buildings. (March 16, 1903.)

State College for Colored Students (Delaware).—Appropriates $4,000 for buildings. (March 16, 1903.)

University of Florida.—The Florida Agricultural College as at present defined by law is hereby changed to and shall be known as the University of Florida. (April 30, 1903.)

Appropriates annually the sum of $2,716 to cover the deficit in interest on the funds derived from the land-grant act of July 2, 1862, the State bonds in which said funds are invested bearing interest at only 3 per cent per annum. (June 3, 1903.)

Appropriates $2,500 for the furnishing and equipment of the gymnasium. (May 14, 1903.)

University of Idaho.—Provides for a bond issue of $43,000, the principal and interest to be paid out of the interest on the proceeds of the sale of all the lands, or of timber growing thereon, granted to the State by the United States for the support and maintenance of a State university and for the support and maintenance of the agricultural college. Of this amount $25,000 is for the erection and equipment of an armory and gymnasium, and $18,000 for the equipment of the department of mechanical and electrical engineering, the equipment of the department of domestic science, and for the provision of a water supply. (March 16, 1903.)

University of Illinois.—Appropriates $50,000 annually for the years 1903 and 1904 to the college of agriculture. (May 15, 1903.) A similar amount for the same purposes and for the same period is carried in an act approved May 18, 1903.

Appropriates annually as follows: Salaries and ordinary expenses, $250,000; materials for shop practice, $3,000; scientific cabinets and collections, $2,000; library, $20,000; apparatus and appliances, $3,000; fire protection, $1,500; pavements and walks, $5,000; vaccine laboratory, $1,500; engineering equipment, $75,000; repairs, etc., $5,000; water analysis, $4,000; draining, fencing, etc., $5,000; department of social and political science and industrial economics, $7,200; school of music, $3,000; college of agriculture, $6,000. Appropriates: Equipment of chemical laboratory, $10,000; water station, $2,000; telephone system, $3,000; equipment of law building, $2,500; floor in armory, $2,500; woman's building, $80,000. (May 16, 1903.)

Provides for the examination and certification of public accountants by the university. (May 15, 1903.)

Purdue University (Indiana).—Provides for an annual tax levy of 1 cent on every $100 of taxable property. (March 3, 1903.)

Appropriates $75,000 for power and heating plants; building and equipment for department of physics, $60,000; street improvement, $8,974; maintenance of agricultural school for year ending October 31, 1904, $6,000. (March 9, 1903.)

Provides "that in order to promote home study and reading in subjects relating to rural life and the principles of agriculture, the trustees and faculty of Purdue University shall encourage and direct farmers' reading courses and publish and distribute circulars and pamphlets of information on the above subjects as may seem profitable in promoting the agricultural interests of the State." (March 10, 1903.)

Kansas State Agricultural College.—Appropriates: For water plant, $10,000; chapel and equipment, $40,000; creamery building and equipment, $15,000; purchase of land, $10,500; water supply, $1,500; shops, $5,000. Appropriates annually for two years: Contingent fund, $1,000; repairs, $5,000; farmers' institutes, $2,000; books and periodicals, $1,500; freight and drayage (coal), $3,500; State veterinarian, $2,000; rent of president's house, $330; loan commissioner, $300; heat and power department, $3,000; agriculture, $2,000; animal husbandry, $5,000; mechanical department, $2,000; physics, $2,000; chemistry, $2,000; domestic science, $1,000; horticulture, $1,500. For current expenses: $40,000 for 1904; $50,000 for 1905. (March 11, 1903.)

Appropriates $2,000 annually for two years for continuing the experiments in destroying prairie dogs and gophers. (March 11, 1903.)

Appropriates $1,750 for each of two years for per diem and expenses of the board of regents. (March 12, 1903.)

University of Maine.—Permits the trustees to abate the tuition fee to students pursuing the courses in agriculture. (March 4, 1903.)

Allows the trustees to guarantee loans for the construction on the university grounds of society houses to serve as student dormitories, provided that the State shall not be held liable for the principal or interest of such loans. (March 28, 1903.)

Appropriates $35,000 for shops and laboratories for the department of mechanical and electrical engineering. (March 28, 1903.)

Massachusetts Agricultural College.—Appropriates for experiment station, $11,200. (January 31, 1903.)

Appropriates $10,000 for 80 free scholarships; $5,000 for labor fund; $13,000 for current expenses; $500 for expenses of trustees; $1,000 for maintenance of veterinary laboratory. (January 31, 1903.)

Appropriates $3,300 for equipment of dining hall; $1,800 for completing dining hall; $11,505 for heating and lighting plant; $1,115 for deficit in income of 1862 land-grant fund; $1,600 for rooms for agriculture; $500 for walks; $500 annually for heating and lighting plant; $500 annually for dining hall. (February 28, 1903.)

Massachusetts Institute of Technology.—Appropriates $29,000. (January 31, 1903.)

University of Minnesota.—Provides for a tax levy to produce $250,000, to be used in further equipping the department of agriculture. (April 18, 1903.)

Authorizes the board of regents to accept any gift, grant, bequest, or devise of property. (April 8, 1903.)

University of Missouri.—Appropriates, out of collateral inheritance tax, $2,500 for each of two years for the support of State cadets. (April 13, 1903.)

Appropriates, for support and maintenance for 1903 and 1904: For the departments at Columbia, $148,700; school of mines and metallurgy, $32,000. Also, out of collateral inheritance tax for support and maintenance, for 1903 and 1904: For the departments at Columbia, $52,927.66; school of mines and metallurgy, $2,406.91. Out of collateral inheritance tax for 1903 and 1904, for the departments at Columbia: Maintenance and support, $53,622.34; summer school, $12,000; sewerage, $850.20; libraries, $25,000; law library, $5,000; libraries of history, economics, public law, and sociology, $5,000; laboratories, $25,000; athletics and sanitation, $7,500; contingent fund, $5,000; heat, water, light, and power plant, $3,500; hospital, $12,300; Read hall and employees, $8,000; repairs to clubhouse, $4,000; student labor, $5,000; fellowships, $4,000; academic department, $12,500; law department, $1,466; education department, $7,500; medical department, $12,000; engineering department, $14,300; college of agriculture and experiment station, $47,600; walks and grading, $8,000; publications and advertising, $5,000; gymnasium and equipment, $69,200; physics building and equipment, $75,000; veterinary hospital and equipment, $15,000; chemical laboratory, $25,000; instruction in homœopathy, $3,000. For the school of mines and metallurgy: Maintenance, $5,593.09; library and laboratory apparatus, $16,500; equipping new buildings, $25,500; machinery and engine, $15,000; miscellaneous, $51,000. (April 11, 1903.)

Lincoln Institute (Missouri).—Appropriates $18,500 for academic and normal training departments; $9,500 for industrial department; $2,000 for agriculture; $3,500 for janitor, matrons, and student help; $5,000 for contingent expenses; $10,000 for heating plant; repairs, $3,350: dormitory, $1,500; library, $1,000. (April 11, 1903.)

Montana College of Agriculture and Mechanic Arts.—Appropriates for maintenance annually for two years, $15,000; for experiment station, $5,000 per annum for two years. (March 6, 1903.)

Appropriates $8,500 for seed barn and boiler house; $13,000 for cattle barn. (March 5, 1903.)

Nevada State University.—Appropriates for support for two years $42,500, of which amount $10,000 is to come from the 1862 land-grant income and $32,500 from the contingent university fund. (March 16, 1903.)

New Hampshire College of Agriculture and Mechanic Arts.—Appropriates $13,000 for completing and furnishing the agricultural building; $5,000 for a new boiler and for heat, light, and water connections with the agricultural building; $7,000 for a greenhouse, and $7,500 annually for two years, to be expended as the trustees shall direct. (March 31, 1903.)

Rutgers Scientific School (New Jersey).—Appropriates $2,500 for ceramics; $50 for expenses of board of visitors; $90 for advertising; $23,500 for experiment station. (April 20, 1903.)

Appropriates $80,000 for free scholarships from September 1, 1890, to July 1, 1902. (April 17, 1903.)

New Mexico College of Agriculture and Mechanic Arts.—Provides an annual tax levy of forty one-hundredths of a mill on the dollar. Also appropriates $25,000 for buildings and other specified purposes, which is to be repaid out of the proceeds of the sale of lands belonging to the institution. (March 19, 1903.)

Cornell University (New York).—Appropriates $25,000 for State Veterinary College; $35,000 for promotion of agricultural knowledge throughout the State. (May 14, 1903.)

North Carolina College of Agriculture and Mechanic Arts.—Continues the annual appropriation of $10,000 and provides for an additional appropriation of $10,000 for one year; at the expiration of the one year an additional sum of $10,000 annually for three years is to be paid out of the fertilizer tax; also out of the fertilizer tax $12,000 for the completion of buildings; out of the State treasury $68,786 to pay indebtedness of the institution. (March 9, 1903.)

Directs the State board of agriculture to appropriate out of its funds $50,000 for the purchase of land and the erection and equipment of an agricultural building. (March 9, 1903.)

Agricultural and Mechanical College for the Colored Race (North Carolina).—Appropriates $7,500 annually and revokes all other appropriations heretofore made. (March 9, 1903.)

North Dakota Agricultural College.—Requires the experiment station to make analyses of food products and beverages and appropriates $1,500 annually for the purpose. (March 2, 1903.)

Provides for the issue of bonds to the amount of $135,000 for buildings and other improvements, to be paid out of income from lands granted to the college. (March 13, 1903.)

Oklahoma Agricultural and Mechanical College.—Provides for a tax levy to raise $12,000 for each of the years 1903 and 1904. (March 16, 1903.)

Colored Agricultural and Normal University (Oklahoma).—Provides for a tax levy to raise $10,000 for each of the years 1903 and 1904. (March 16, 1903.)

Appropriates $5,000 for steam heating systems in two buildings. (March 14, 1903.)

Oregon Agricultural College—Appropriates $20,000 for the Eastern Oregon Experiment Station, to be expended under the authority of the board of regents of the State Agricultural College. (February 21, 1903.)

Appropriates $15,000 for deficiencies in maintenance funds, for new buildings, etc., and makes the regents personally liable for any expenditures in excess of the sum appropriated. (February 24, 1903.)

Provides for an annual tax levy to include $25,000 for the State Agricultural College. (February 24, 1903.)

Pennsylvania State College.—Appropriates for two years: $500 for furnishings of class rooms and laboratories; $28,000 for fuel, heating, lighting, and power; $18,470.05 for deficiency in fuel; $8,000 for repairs; $4,000 for electric light and water supply; $1,000 for walks, roads, and fences; $1,000 for steam plant; $5,750.50 for insurance; $2,000 for chemistry; $14,000 for mining; $10,000 for electrical engineering; $7,000 for mechanical engineering; $2,500 for civil engineering; $2,000 for physics; $1,000 for biological laboratory; $1,000 for botanical and horticultural laboratories; $1,000 for military department; $2,250 for library; $1,000 for chemical laboratories; $10,000 for additional equipment; $14,560 for enlargement of power plant; $3,835 for additional space for foundry, electrical laboratory, and carpenter shop; $12,000 for department of agriculture; $100,000 for agricultural building to cost not to exceed $250,000. (May 15, 1903.)

Clemson Agricultural College (South Carolina).—Provides that the State board of entomology shall consist of three members of the board of trustees of Clemson Agricultural College designated by the said board of trustees. The expenses of the board of entomology are to be paid out of the funds of the college. (February 23, 1903.)

Colored Normal, Industrial, Agricultural, and Mechanical College (South Carolina).—Appropriates $6,500. (February 20, 1903.)

South Dakota Agricultural College.—Appropriates for each of the years 1903 and 1904, $10,000 for salaries; $17,500 for maintenance, fuel, lights, water, and repairs; $1,000 for substation at Highmore; $3,000 for purchase of pure-bred stock and farm expenses. Appropriates also $7,500 for equipment of mechanical laboratory and $5,000 for remodeling old mechanical building. (March 12, 1903.)

Appropriates $12,000 for barn and $20,000 for heating plant. (Laws of 1903, chapter 28.)

University of Tennessee.—Appropriates $10,000 for purchase of lands for the experiment station. (April 16, 1903.)

Agricultural and Mechanical College of Texas.—Establishes a school of textile industry and appropriates $50,000 for the purpose. (Laws of 1903, chapter 54.)

Appropriates for each of the years ending August 31, 1904, and August 31, 1905: $39,965 for salaries; $20,035 for other current expenses; $5,000 for student labor; $3,000 for Beeville experiment station, and $3,000 for Troupe experiment station. Also the following sums to be expended in two years:

$28,500 for equipment; $10,000 for barns and fences; $10,000 for cottages; $10,000 for repairs to buildings; $5,000 for roads and grounds; $2,500 for sanitary arrangements; $2,000 for sewerage arrangements. (May 15, 1903.)

Prairie View State Normal and Industrial College (Texas.)—Appropriates for each of the two years ending August 31, 1904, and August 31, 1905: Maintenance of State students, $17,500; agricultural and mechanical department, $2,500; female industrial department, $800; college course, $1,800; library, $500; stationery, postage, and printing, $300; grounds and roads, $300; repairs and painting, $2,000; science equipment, $1,000; mechanical department, $800. Special appropriations: Cow barn, $1,000; infirmary, $1,500; infirmary equipment, $1,000; electric-light plant, $1,500. (May 15, 1903.)

Agricultural College of Utah.—Provides for the establishment of five experimental farms on arid lands and appropriates $12,500 for the purpose. (March 6, 1903.)

Appropriates for the two years ending June 30, 1905: General maintenance, $65,300; general equipment, $28,675; buildings and improvements, $17,000. (March 16, 1903.)

Virginia Agricultural and Mechanical College and Polytechnic Institute.—Increases the annual appropriation from $25,000 to $40,000. (May 20, 1903.)

Increases the number of students who may attend the college free of charge to four times the number of members of the house of delegates. (May 20, 1903.)

Washington Agricultural College and School of Science.—Appropriates for the two years ending March 31, 1905: Maintenance, $110,000; creamery, $4,000; land, $3,500; heat, light, and power plant, $6,000; hospital, $1,500; live-stock pavilion, $1,000; miscellaneous repairs, etc., $3,000. (February 24, 1903.)

Appropriates $16,000 for deficiency in year ending March 31, 1903. (February 4, 1903.)

Appropriates $13,000 for completing and equipping chemistry building. (March 16, 1903.)

West Virginia University.—Appropriates for each of the years ending September 30, 1903, and September 30, 1904: Salaries of teachers, $50,000; current and contingent expenses, $4,000; cadet books, $2,000; regents' expenses, $1,500; cadet uniforms, $3,500; repairs to buildings, $2,000; stone wall, $2,000; land, $3,500; stationery and printing, $2,500; station printing, $2,000; school of music, $2,500; gymnasium, $500; art department, $2,500; college of agriculture, $5,000; fire protection, $250; gardener, $600; night watchman, $1,000; janitors, $2,000; library, $2,500; fence, $200; roads, $2,000; lighting grounds, $1,500; repairs, $1,500; armory, $3,982.72; library building, $10,904.70; mechanical hall, $2,340.63; summer quarters of 1898–1900, $6,799.96; salary fund, $6,250. Also for the year ending September 30, 1903: Advertising, $1,000; grading drill grounds, $500; library furniture, $5,000; blackboards, desks, etc., $1,000; apparatus, $2,000; central heating plant, $10,000. (March 4, 1903.)

Permits the appointment of 250 cadets, to be appointed by the members of the senate and of the house of delegates and by the regents of the university. (Laws of 1903, chapter 30.)

Repeals the provision of the laws of 1901 abolishing the preparatory department. (Laws of 1903, chapter 52.)

West Virginia Colored Institute.—Appropriates for each of the years ending September 30, 1903, and September 30, 1904: Current expenses, $1,600; regents' expenses, $700; janitor, $400; fuel, $1,200; school and dormitory furniture, $250; teachers' salaries, $10,000; engineer, $600; kitchen and dining room equipment, $150; cadet uniforms, $900; night watchman, $400; agricultural department, $500; domestic science, $500; cadet books and stationery, $500; printing department, $250; library, $150; carpets, rugs, etc., $250; band instructor, $250; fencing, $250; barn, $75; repairs to tank and pump, $50; boiler and engine, $700; student labor, $300; iron safe, $75. Also for year ending September 30, 1903: Grading grounds, $500; repairs, $500; trades building, $2,000; sewer connection, $75. For year ending September 30, 1904: Trades building, $8,000; sewer connection, $100. (March 4, 1903.)

University of Wisconsin.—Appropriates $10,000 for purchase of live stock for experiment and instruction. (May 6, 1903.)

Provides for an additional annual State tax of $48,500 to be used as follows: $7,500 for college of agriculture, $7,500 for engineering, $4,000 for school of commerce, $5,000 for premedical course, $7,500 for domestic science and allied subjects, and $17,000 for other uses of the college of letters and science. Also for the period of two years an additional annual State tax of $7,500 for the purchase of books for the university library. Appropriates out of the general fund annually for the period of two years the sum of $100,000 for the following purposes, not exceeding the amount specified for each purpose and so arranged as not to exceed in the aggregate the sum of $100,000 for each of two years: Equipment of agricultural hall, $25,000; apparatus, $30,000; chemical laboratory building, $100,000; repairs to science hall, $10,000; building for instruction in agricultural mechanics, $15,000; extension and equipment of shops, $15,000; purchase of land, $18,000. Appropriates annually for the period of two years: $2,500 for investigations of the cranberry industry, $1,500 for investigations in the growth and curing of tobacco, and $1,500 for the establishment and maintenance of a hygienic laboratory. (May 20, 1903.)

University of Wyoming.—Appropriates $16,000 for heating plant. (January 20, 1903.)

Authorizes the erection of an armory and gymnasium building at a cost not exceeding $15,000 and provides for a tax levy of one-eighth of a mill on each dollar of the assessed valuation of the taxable property of the State for the year 1903 and annually thereafter until the amount shall be raised. (February 20, 1903.)

Courses of Study.

The title "agricultural and mechanical colleges," by which these institutions are popularly designated, is very misleading, as from it the impression is frequently obtained that the institutions give instruction in agriculture and the mechanic arts only. The act of Congress of July 2, 1862, establishing the institutions is very liberal in its terms. While it provides that the leading object shall be to teach such branches of learning as are related to agriculture and the mechanic arts, and including military tactics, these subjects are to be taught without excluding other scientific and classical studies, in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions of life. The manner in which the instruction shall be given is left by the act to the several State legislatures.

Under these liberal terms it is but natural that the scope of the instruction offered differs widely in the several States. In some of the States the instruction is limited very strictly to agriculture and engineering and the subjects related thereto, while in others, as in some of the State universities, the courses of study are very diverse. New courses are being added constantly, and generous provision for instruction in short agricultural courses has been made for persons who are not able to spend four years in college, and for men who are engaged in actual farm and dairy work and who are able to spare only a few weeks from their work for study and practical work at the institutions during the winter months. These courses have proved of great benefit and the number is being rapidly increased.

The courses of study offered by the several institutions are as follows:

ALABAMA POLYTECHNIC INSTITUTE.

Undergraduate courses of four years (*B. S.*).—Chemistry and agriculture; civil engineering; electrical and mechanical engineering; mining engineering; general course; pharmacy; chemistry and metallurgy.

Short course.—Agriculture (1 year); agriculture (2 years); mechanic arts (2 years); pharmacy (2 or 3 years).

Other courses.—Graduate.

AGRICULTURAL AND MECHANICAL COLLEGE FOR NEGROES (ALABAMA).

English primary course (3 years); preparatory (3 years); normal (4 years); agriculture (B. A. S., 4 years); mechanical (B. M. S., 4 years); scientific-literary (B. S., 4 years).

Industrial courses.—Carpentry (3 years); agriculture (3 years); ironworking (3 years); shoemaking (3 years); broom making (1 year); chair bottoming (1 year); nurse training (2 years); sewing (3 years); millinery (1 year); cooking (2 years); laundry (2 years); printing (3 years); machine shop (4 years); shorthand (1 year).

UNIVERSITY OF ARIZONA.

Undergraduate courses of four years.—Literary (Ph. B.); scientific (B. S.); engineering (B. S.); mining (B. S.); agriculture (B. S.); chemistry (B. S.).

Short course.—Assaying (2 years).

Other courses.—Graduate; preparatory (4 years).

UNIVERSITY OF ARKANSAS.

Undergraduate courses of four years.—Liberal culture courses (A. B. or B. S.); mechanical engineering (B. M. E.); civil engineering (B. C. E.); electrical engineering (B. E. E.); mining engineering; agriculture (B. S.); horticulture (B. S.).

Short courses.—Mechanic arts (2 or 3 years); electrical engineering (2 years).

Other courses.—Normal (2 years, L. I.); graduate; preparatory (2 years); music; art; law; medicine.

BRANCH NORMAL COLLEGE (ARKANSAS)

Preparatory course (3 years); normal (4 years, L. I.); classical (6 years, A. B.); mechanic arts (4 years); manual training (4 years); sewing; typewriting and stenography.

UNIVERSITY OF CALIFORNIA.

Undergraduate courses of four years.—Letters (A. B.); social science (B. L.); natural sciences (B. S.); commerce (B. S.); agriculture (B. S.); mechanical engineering (B. S.); electrical engineering (B. S.); mining engineering (B. S.); railroad engineering (B. S.); sanitary engineering (B. S.); irrigation engineering (B. S.); chemistry (B. S.); sugar technology (B. S.); architecture (B. S.).
Short courses.—Agriculture (2 years); agriculture and horticulture (10 weeks); dairying (10 weeks).
Other courses.—Pharmacy (2 years, Ph. G.); graduate; law; medicine; postgraduate medicine; dental; Lick astronomical department; Mark Hopkins Institute of Art.

COLORADO AGRICULTURAL COLLEGE.

Undergraduate courses of four years (B. S.).—Agriculture; mechanical engineering; civil and irrigation engineering; electrical engineering; general and domestic science; architecture; veterinary science.
Other courses.—Commercial (2 years); subfreshman (2 years).

CONNECTICUT AGRICULTURAL COLLEGE.

Undergraduate courses of four years (B. S.).—Agriculture; general science; domestic science.
Four-year courses (secondary).—Agriculture; domestic science.
Short courses.—Agriculture (2 years for graduates of high schools); agriculture (2 years for men 20 years of age or over who have not had a high school education); mechanic arts, surveying, or drafting (2 years); domestic science (2 years); business (2 years); farm dairy (12 weeks); creamery (12 weeks); pomology (12 weeks); poultry (6 weeks); forestry (12 weeks); business (12 weeks); also 33 ten-day courses arranged in groups, beginning in January and ending in March.

DELAWARE COLLEGE.

Undergraduate courses of four years.—Classical (A. B.); Latin-scientific (A. B.); agriculture (B. S.); general science (B. S.); civil engineering (B. C. E.); mechanical engineering (B. M. E.); electrical engineering (B. E. E.).
Short courses.—Agriculture (2 years); agriculture (winter term).
Other courses.—Graduate.

STATE COLLEGE FOR COLORED STUDENTS (DELAWARE).

Undergraduate courses of four years.—Classical (A. B.); scientific (B. S.); agriculture (B. Agr.); engineering (B. E.).
Industrial courses (2 years).—Woodworking; ironworking; blacksmithing; masonry; printing; cooking; sewing; dressmaking.
Other courses.—Normal (3 years); preparatory (2 years).

UNIVERSITY OF FLORIDA.

Undergraduate courses of four years.—Classical (A. B.); agriculture (B. S.); chemistry (B. S.); civil engineering (B. S.); mechanical engineering (B. S.); Latin-scientific (B. S.); general science (B. S.).
Short courses.—Mechanic arts (2 years); agriculture (10 weeks); horticulture (10 weeks).
Other courses.—Commercial (1 year); preparatory (2 years).

FLORIDA STATE NORMAL AND INDUSTRIAL SCHOOL FOR COLORED STUDENTS.

Preparatory (2 years); normal (4 years); music.
Industrial courses.—Agriculture; dairying; sewing; cooking; laundry; millinery; nursing; printing; carpentry; painting; blacksmithing and wheelwrighting; tailoring.

GEORGIA STATE COLLEGE OF AGRICULTURE AND MECHANIC ARTS.

Undergraduate courses of four years (*B. S.*).—General science; agriculture; civil engineering; electrical engineering.
Short courses.—Agriculture (1 year); agriculture (12 weeks).
Other courses.—Graduate.

GEORGIA STATE INDUSTRIAL COLLEGE FOR COLORED YOUTHS.

Preparatory (3 years); normal (3 years); collegiate (4 years, A. B.).
Industrial courses (*three years each*).—Agriculture; carpentry; blacksmithing; masonry; painting; tailoring; shoemaking; sewing.
Short course.—Dairying (2 months).

UNIVERSITY OF IDAHO.

Undergraduate courses of four years.—Classical (A. B.); scientific (B. S.); agriculture and horticulture (B. S.); mechanical and electrical engineering (B. E. E.); civil engineering (B. C. E.); mining engineering (B. E. M.).
Short courses.—Agriculture and horticulture (3 years); farm dairying and horticulture (4 to 6 weeks, winter).
Other courses.—Preparatory (3 years); music (4 years, B. M.).

UNIVERSITY OF ILLINOIS.

Undergraduate courses of four years.—General courses allowing a wide range of electives (A. B.); classical (A. B.); English (A. B.); German and Romanic languages (A. B.); Latin and modern languages (A. B.); philosophy (A. B.); political science (A. B.); commerce and industry (A. B.); architecture (B. S.); architectural engineering (B. S.); civil engineering (B. S.); electrical engineering (B. S.); mechanical engineering (B. S.); railway engineering (B. S.); municipal and sanitary engineering (B. S.); chemistry (B. S.); chemical engineering (B. S.); physics (B. S.); general science (B. S.); household science (B. S.); mathematics (B. S.); premedical (B. S.); agriculture (B. S.); library science (B. L. S.).
Other courses.—Preparatory; graduate; music; law; medicine; dentistry; pharmacy.

PURDUE UNIVERSITY (INDIANA).

Undergraduate courses of four years (*B. S.*).—Mechanical engineering; civil engineering; sanitary engineering; electrical engineering; telephonic engineering; agriculture; general science; biology; chemistry; physics; industrial art; sanitary science; premedical; pharmacy.
Short courses.—Agriculture (2 years); agriculture (10 weeks); horticulture (10 weeks); dairying (10 weeks); animal husbandry (10 weeks); pharmacy (2 years of 27 weeks each, Ph. G.).
Other courses.—Graduate.

IOWA COLLEGE OF AGRICULTURE AND MECHANIC ARTS.

Undergraduate courses of four years.—Agronomy (B. S. A.); dairying (B. S. A.); animal husbandry (B. S. A.); horticulture (B. S. A.); mechanical engineering (B. M. E.); civil engineering (B. C. E.); electrical engineering (B. S.); mining engineering (B. S.); science as related to industries (B. S.); general and domestic science (B. S.).
Short courses.—Dairying (1 year); dairying (16 weeks, January); dairying (2 weeks, January); corn judging (2 weeks, January); stock judging (2 weeks, January); mining engineering (2 years); ceramics (2 years); domestic science (2 years).
Other courses.—Graduate; veterinary medicine (4 years, D. V. M.).

KANSAS STATE AGRICULTURAL COLLEGE.

Undergraduate courses of four years (*B. S.*).—General science; agriculture; domestic science; mechanical engineering; electrical engineering.

Short courses.—Farm dairying (12 weeks, winter); dairying (12 weeks, winter); farmers' (2 years of 12 weeks each, winter); domestic science (2 years of 12 weeks each, fall). Apprentice courses: Machine shop; blacksmith shop; carpenter shop; foundry; boiler and engine room; printing.
Other courses.—Graduate; preparatory.

AGRICULTURAL AND MECHANICAL COLLEGE OF KENTUCKY.

Undergraduate courses of four years.—Letters (A. B.); science (B. S.); pedagogy (B. Ped.); mechanical and electrical engineering (B. M. E.); mining engineering (B. E. M.); civil engineering (B. C. E.); agriculture (B. Agr.).
Short courses.—Agriculture (2 years); agriculture (10 weeks, winter).
Other courses.—Graduate; preparatory (2 years).

KENTUCKY NORMAL AND INDUSTRIAL INSTITUTE FOR COLORED PERSONS.

Normal (3 years); normal (4 years of 2 terms each); preparatory (3 years); agriculture (3 years); mechanical (3 years); printing (3 years); domestic science (3 years); sewing (3 years).

LOUISIANA STATE UNIVERSITY.

Undergraduate courses of four years.—Agriculture (B. S.); mechanical engineering (B. S.); civil engineering (B. S.); electrical engineering (B. S.); general science (B. S.); commerce (A. B.); Latin-scientific (A. B.); literary (A. B.).
Short course.—Agriculture (2 years).
Other courses.—Sugar (5 years, B. S.); preparatory (1 year).

SOUTHERN UNIVERSITY (LOUISIANA).

Classical (4 years); scientific (4 years); normal (3 years); high school (4 years); grammar school (3 years); agriculture (4 years); manual training (3 years); tinsmithing (3 years); printing (4 years); bookkeeping (2 years); typewriting (1 year); sewing (4 years; music (5 years).

UNIVERSITY OF MAINE.

Undergraduate courses of four years.—Classical (A. B.); Latin-scientific (Ph. B.); scientific (B. S.); chemical (B. S.); agriculture (B. S.); horticulture (B. S.); civil engineering (B. S.); mechanical engineering (B. S.); electrical engineering (B. S.); mining engineering (B. S.); pharmacy (B. S.).
Short courses.—Agriculture (1 year); agriculture (2 years); general agriculture and dairying (6 weeks, winter); horticulture (3 weeks, spring); poultry management (3 weeks); pharmacy (2 years, Ph. C.).
Other courses.—Graduate; law.

MARYLAND AGRICULTURAL COLLEGE.

Undergraduate courses of four years.—Agriculture (B. S.); mechanical engineering (B. M. E.); classical (A. B.); scientific (B. S.).
Short courses.—Agriculture (10 weeks, winter); agriculture (2 years); creamery.
Other course.—Preparatory.

MASSACHUSETTS AGRICULTURAL COLLEGE.

Undergraduate courses of four years (B. S.).—Agriculture; horticulture; biology; chemistry; mathematics; landscape gardening.
Short courses.—Dairy farming (10 weeks); horticulture (10 weeks); bee culture (10 weeks); agriculture for women (2 years).
Other courses.—Graduate.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY.

Undergraduate courses of four years (B. S.).—Civil engineering; mechanical engineering; mining engineering and metallurgy; architecture; architectural engineer-

ing; landscape architecture; chemistry; electrical engineering; biology; physics; electro-chemistry; chemical engineering; sanitary engineering; geology; naval architecture.

Other courses.—Graduate.

MICHIGAN AGRICULTURAL COLLEGE.

Undergraduate courses of four years (*B. S.*).—Agriculture; mechanical engineering; forestry; women's course.

Short courses.—Beet-sugar production (20 weeks); cheese making (4 weeks); dairy husbandry (6 weeks); creamery management (6 weeks); live-stock husbandry (6 weeks); fruit culture (6 weeks).

Other courses.—Graduate.

UNIVERSITY OF MINNESOTA.

Undergraduate courses of four years.—General culture courses (A. B.); chemistry (B. S.); civil engineering (C. E.); municipal engineering (C. E.); mechanical engineering (M. E.); electrical engineering (E. E.); science and technology (B. S., and at end of fifth year professional degree); mining engineering (E. M.); metallurgy (Met. E.); agriculture (B. Agr.); forestry (B. Agr.); home economics (B. S.)

Short courses.—Agriculture (secondary, 3 years); agriculture (8 weeks); dairying (4 weeks, winter).

Other courses.—Graduate; law; medicine and surgery; homeopathic medicine and surgery; dentistry; pharmacy.

MISSISSIPPI AGRICULTURAL AND MECHANICAL COLLEGE.

Undergraduate courses of four years (*B. S.*).—Agriculture; horticulture; dairying, veterinary science; chemistry; mechanical engineering; electrical engineering; civil and rural engineering; mining engineering; textile.

Short courses.—Agriculture (2 years of 10 weeks each, winter); practical working boy's course in agriculture (1 year); textile (2 years); mechanical engineering (2 years); electrical engineering (2 years).

Other courses.—Preparatory; graduate.

ALCORN AGRICULTURAL AND MECHANICAL COLLEGE (MISSISSIPPI).

Undergraduate course of four years (*B. S.*).—Scientific.

Industrial courses.—Shoemaking (3 years); agriculture (7 years); agriculture (3 years); carpentry (3 years); blacksmithing (3 years); painting (3 years); nursing (3 years); sewing (4 years); domestic science (4 years); laundry.

UNIVERSITY OF THE STATE OF MISSOURI.[a]

Undergraduate courses of four years.—General culture courses (A. B.); agriculture (B. S.); household economics; civil engineering (B. S.); electrical engineering (B. S.); mechanical engineering (B. S.); sanitary engineering (B. S.); chemical engineering (B. S.); hydraulic engineering (B. S.).

Short courses.—Plant production (8 weeks, winter); dairying (8 weeks, winter); horticulture (8 weeks, winter); animal husbandry; agriculture and horticulture (summer); domestic science, general course (1 year).

Other courses.—Graduate; law; medicine; pedagogy, elementary and advanced courses.

MISSOURI SCHOOL OF MINES AND METALLURGY.

Undergraduate courses of four years (*B. S.*).—Mining engineering; civil engineering; chemistry and metallurgy; general science.

Short courses.—Chemistry and assaying (2 years); mining (2 years); electricity (2 years); surveying (2 years).

---

[a] Not including Missouri School of Mines and Metallurgy.

LINCOLN INSTITUTE (MISSOURI).

College course (4 years, A. B.); preparatory (3 years); normal (4 years); subnormal (2 years); model and training department.

Industrial courses.—Carpentry (3 years); blacksmithing (3 years); machinery (3 years); sewing (3 years); cooking (1 year); laundry (1 year); printing; typewriting; agriculture.

MONTANA COLLEGE OF AGRICULTURE AND MECHANIC ARTS.

Undergraduate courses of four years.—General science (B. S.); agriculture (B. S. A.); biology (B. S.); analytical and applied chemistry (B. A. C.); domestic science (B. S.); mechanical engineering (B. M. E.); electrical engineering (B. E. E.); civil engineering (B. C. E.).

Short courses.—Secondary course (3 years) in agriculture or domestic science; domestic science (1 year); agriculture (2 years of 18 weeks each, winter); engineering (18 weeks, winter).

Other courses.—Graduate; preparatory (3 years); business (1 year); music; art.

UNIVERSITY OF NEBRASKA.

Undergraduate courses of four years.—General culture (A. B.); general science (B. S.); premedical (B. S.); general agricultural (B. S.); forestry (B. S.); agriculture and chemistry (B. S.); botany and agriculture (B. S.); botany and zoology (B. S.); chemistry and physics (B. S.); horticulture and botany (B. S.); mathematics and physics (B. S.); zoology and philosophy (B. S.); chemistry and domestic science (B. S.); technical agriculture or horticulture (B. S.); civil engineering (B. S); electrical engineering (B. S.); mechanical engineering (B. S.).

Short courses.—Agriculture (secondary course, 3 years of 24 weeks each); agriculture (9 weeks, winter); dairying (9 weeks, winter); stock and grain judging (1 week); domestic science (2 years); mechanic arts (2 years); physical education (2 years).

Other courses.—Graduate; preparatory; law; medicine; music; art.

NEVADA STATE UNIVERSITY.

Undergraduate courses of four years.—Agriculture (B. S.); domestic arts and science (B. D. S.); liberal arts (A. B.); general science (B. S.); mining and metallurgy (B. S.); civil engineering (B. S.); mechanical engineering (B. S.).

Short courses (January and February).—Agriculture; dairying; domestic arts and science.

Other courses.—Preparatory (3 years); normal.

NEW HAMPSHIRE COLLEGE OF AGRICULTURE AND MECHANIC ARTS.

Undergraduate courses of four years (B. S.).—Agriculture; mechanical engineering; electrical engineering; technical chemistry; general course.

Short courses.—Agriculture (2 years); agriculture (10 weeks, winter); dairying (10 weeks, winter).

RUTGERS SCIENTIFIC SCHOOL (NEW JERSEY).

Undergraduate courses of four years (B. S.).—Agriculture; civil engineering and mechanics; chemistry; electricity; biology; clay working and ceramics.

Short course.—Clay working and ceramics (2 years).

NEW MEXICO COLLEGE OF AGRICULTURE AND MECHANIC ARTS.

Undergraduate courses of four years (B. S.).—General course; agriculture; mechanical engineering; domestic science.

Short courses.—Agriculture (2 years); agriculture and horticulture (12 weeks given in each term of the college year); practical mechanics (2 years).

Other courses.—Graduate; preparatory (5 years); stenography and typewriting (1 year).

CORNELL UNIVERSITY (NEW YORK).

Undergraduate courses of four years.—General culture courses (A. B.); agriculture (B. S. A.); architecture (B. Arch.); civil engineering (C. E.); mechanical engineer-

ing (M. E.); electrical engineering (M. E.); marine engineering (M. E.); naval architecture (M. E.); railway mechanical engineering (M. E.).
Short courses.—Agriculture (11 weeks, winter); dairying (11 weeks, winter); architecture (2 years).
Other courses.—Graduate; law; medicine; veterinary.

NORTH CAROLINA COLLEGE OF AGRICULTURE AND MECHANIC ARTS.

Undergraduate courses of four years.—Agriculture (B. Agr.); civil engineering (B. E.); mechanical engineering (B. E.); electrical engineering (B. E.); mining engineering (B. E.); industrial chemistry (B. S.); textile industry (B. E.).
Short courses.—Agriculture (2 years); agriculture and dairying (10 weeks, winter); building and contracting (2 years); road building (January to May); mechanic arts (2 years); textile industry (2 years); courses for rural teachers (2 years; 1 year; summer); courses for city teachers (2 years; 1 year; summer).
Other courses.—Graduate.

AGRICULTURAL AND MECHANICAL COLLEGE FOR THE COLORED RACE (NORTH CAROLINA).

Industrial course of 4 years for men.
Short course.—Dairying (6 weeks, winter).

NORTH DAKOTA AGRICULTURAL COLLEGE.

Undergraduate courses of four years (*B. S.*).—General science; agriculture; mechanical; pharmaceutical chemistry.
Short courses.—Agriculture (3 years of 5½ months each); agriculture (three courses of 10 weeks each); stock and grain judging (10 days); steam engineering (2 years); farm school (3 months, winter); pharmacy (2 years); domestic science (2 years); teachers' nature study (2 years).

OHIO STATE UNIVERSITY.

Undergraduate courses of four years.—Agriculture (B. S.); horticulture and forestry (B. S.); domestic science (B. S.); general culture (A. B.); civil engineering (C. E.); mining engineering (E. M.); mechanical engineering (M. E.); electrical engineering (M. E.); ceramics (E. M.); manual training (B. S.); industrial arts (B. S.); chemical engineering (B. S.); architecture (C. E.); pharmacy (B. S.).
Short courses.—Agriculture (2 years); dairying (12 weeks, winter); domestic science (2 years); mining (2 years); clay working and ceramics (2 years); industrial arts (2 years); pharmacy (2 years).
Other courses.—Graduate; law; veterinary.

OKLAHOMA AGRICULTURAL AND MECHANICAL COLLEGE.

Undergraduate courses of five years (*B. S.*).—General science; agriculture; mechanical engineering.
Short courses.—Agriculture or domestic economy (2 years of 20 weeks each); agriculture, horticulture, and mechanic arts (8 weeks, winter); printing.
Other course.—Business (1 year).

COLORED AGRICULTURAL AND NORMAL UNIVERSITY (OKLAHOMA).

Undergraduate courses of four years.—Classical (A. B.); scientific (B. S.); normal (B. S. D.); civil architecture (M. E.); electrical and mechanical engineering (M. E.); agriculture (B. S. A.).
Other courses.—Elementary (4 years); preparatory (3 years).

OREGON STATE AGRICULTURAL COLLEGE.

Undergraduate courses of four years (*B. S.*).—Agriculture; household science; mechanical engineering; electrical engineering; pharmacy; mining engineering; literary commerce.
Short courses.—Mining (2 years); agriculture (10 days, winter); dairying (8 weeks, winter).
Other courses.—Preparatory (1 year); business (2 years); music; commerce (2 years).

PENNSYLVANIA STATE COLLEGE.

Undergraduate courses of four years.—General science (B. S.); classical (A. B.); Latin-scientific (B. S.); philosophy (B. S.); agriculture (B. S.); biology (B. S.); chemical (B. S.); industrial chemistry (B. S.); civil engineering (B. S.); electrical engineering (B. S.); mathematics (B. S.); mechanical engineering (B. S.); mining engineering (B. S.); physics (B. S.).

Short courses.—Agriculture (12 weeks, winter); creamery (8 weeks, winter); chemistry (2 years); mechanic arts (2 years); mining (2 years).

Other courses.—Preparatory (1 year); graduate.

RHODE ISLAND COLLEGE OF AGRICULTURE AND MECHANIC ARTS.

Undergraduate courses of four years (B. S.).—General science; agriculture; mechanical engineering; electrical engineering; chemistry; biology.

Short courses.—Agricultural high school (2 years); farm mechanics (12 weeks, winter); farm practice (6 weeks); poultry (6 weeks). Industrial courses of 2 years: Carpentry; drafting; machine shop; steam engineering.

Other course.—Preparatory (2 years).

CLEMSON AGRICULTURAL COLLEGE (SOUTH CAROLINA).

Undergraduate courses of four years (B. S.).—Agriculture; biology; mechanical and electrical engineering; civil engineering; metallurgy; textile.

Short courses.—Dairying (10 weeks, winter); textile (2 years).

Other course.—Preparatory (1 year).

COLORED NORMAL, INDUSTRIAL, AGRICULTURAL, AND MECHANICAL COLLEGE (SOUTH CAROLINA).

Undergraduate courses of four years.—General college course (A. B.); agriculture (B. Agr.); mechanical (B. S.).

Industrial courses.—Sewing; cooking; carpentry and woodwork; bricklaying and plastering; architecture; mechanical drawing and painting; ironworking and machinery; housekeeping; farming; upholstering and cabinetmaking; saddlery; harness making and shoemaking; sawmilling and manufacture of hard and soft lumber; typewriting; tailoring.

Other courses.—Preparatory and normal (5 years); model school (5 grades); art; music.

SOUTH DAKOTA AGRICULTURAL COLLEGE.

Undergraduate courses of four years.—Agriculture (B. S. A.); scientific agriculture (B. S.); scientific horticulture (B. S.); domestic science (B. S.); mechanical engineering (B. S.); electrical engineering (B. S.); agricultural engineering (B. S.); pharmacy (B. S.).

Short courses.—Agriculture (6 weeks, winter); butter making (12 weeks); domestic dairying (12 weeks); cheese making (12 weeks, spring); horticulture (12 weeks, winter); steam engineering (24 weeks); domestic science (12 weeks); pharmacy (2 years, Ph. G.).

Other courses.—Preparatory; music; art; business (1 year); amanuensis (1 year).

UNIVERSITY OF TENNESSEE.

Undergraduate courses of four years.—Agriculture (B. S.); civil engineering (B. S.); mechanical engineering (B. S.); electrical engineering (B. S.); chemistry and metallurgy (B. S.); pharmacy (B. S.); literary (A. B.).

Short courses.—Agriculture, animal husbandry, dairying, and horticulture (10 weeks, winter); pharmacy (2 years, Ph. C.).

Industrial department for colored students.—Agriculture; carpentry; printing; sewing; cooking; electricity; brickmaking; baking; mechanical.

Other courses.—Graduate; law; medicine; dentistry.

AGRICULTURAL AND MECHANICAL COLLEGE OF TEXAS.

Undergraduate courses of four years (B. S.).—Agriculture; horticulture; mechanical engineering; civil engineering; textile engineering; electrical engineering.

Short courses.—Stock farming (10 weeks, winter); dairying (10 weeks, winter); horticulture (10 weeks, winter); textile (2 years); manual training (8 weeks).

Other courses.—Graduate.

PRAIRIE VIEW STATE NORMAL AND INDUSTRIAL COLLEGE (TEXAS).

College course (6 years, A. B.) with instruction in practical industries: Agriculture; dairy husbandry; horticulture; broom making; butchering; woodworking; ironwork; shoemaking; tailoring; sewing; millinery; cooking; laundry; music.

AGRICULTURAL COLLEGE OF UTAH.

Undergraduate courses of four years (*B. S.*).—Agriculture; mechanical engineering; civil engineering; electrical engineering; mining engineering; domestic science; commerce; general science.

Short courses.—Agriculture (3 years); domestic science (3 years); commerce (3 years); agriculture (4 weeks, winter); domestic arts (12 weeks, winter); manual training in domestic arts (3 years); mechanic arts (12 weeks).

Other courses.—Preparatory (2 years); manual training in mechanic arts (4 years); engineering preparatory (2 years).

UNIVERSITY OF VERMONT AND STATE AGRICULTURAL COLLEGE.

Undergraduate courses of four years.—Classical (A. B.); literary-scientific (Ph. B.); civil engineering (B. S.); mechanical engineering (B. S.); electrical engineering (B. S.); chemistry (B. S.); agriculture (B. S.); commerce and economics (A. B. or Ph. B.).

Short courses.—Agriculture (1 or 2 years); dairying (4 weeks, winter).

Other course.—Medicine.

VIRGINIA AGRICULTURAL AND MECHANICAL COLLEGE AND POLYTECHNIC INSTITUTE.

Undergraduate courses of four years (*B. S.*).—Agriculture; horticulture; applied chemistry; general science; civil engineering; mechanical engineering; electrical engineering.

Short courses.—Practical agriculture (2 years); practical mechanics (2 years).

Other courses.—Graduate.

HAMPTON NORMAL AND AGRICULTURAL INSTITUTE (VIRGINIA).

Academic course (3 years); normal (2 years); physics (3 years); agriculture (3 years); agriculture (1 year); horticulture (1 year); dairying (1 year); business (1 year).

Trade courses (*three years*).—Carpentry; painting; bricklaying and plastering; house building; wheelwrighting; blacksmithing; machinist; steam engineering; harness making and carriage trimming; shoemaking; tailoring; cabinetmaking; tinsmithing; printing; upholstering.

WASHINGTON AGRICULTURAL COLLEGE AND SCHOOL OF SCIENCE.

Undergraduate courses of four years.—Mathematics and civil engineering; chemistry; botany; zoology; agriculture; horticulture; English language and literature; economic science and history; mechanical engineering; electrical engineering; modern languages; mining engineering.

Short courses.—Agriculture (3 years, secondary); dairying (8 weeks); horticulture (4 weeks, winter); artisans (1 year).

Other courses.—Pharmacy (2 years, Ph. G.); veterinary (3 years, D. V. S.); business (2 years); stenography (1 year); typewriting (1 year); preparatory (3 years); music; art.

WEST VIRGINIA UNIVERSITY.

Undergraduate courses of four years.—General culture (A. B.); pharmacy (B. S.); civil and mining engineering (B. S.); mechanical engineering (B. S.); electrical engineering (B. S.); agriculture (B. S.).

Short courses.—Agriculture (2 years, B. Agr.); agriculture (1 year); agriculture (12 weeks, winter); animal industry (12 weeks, winter); horticulture (12 weeks, winter); poultry industry (12 weeks); dairying (12 weeks); manual training; mechanic arts.

Other courses.—Graduate; law; medicine; fine arts; music; business (2 years); preparatory (4 years).

WEST VIRGINIA COLORED INSTITUTE.

Preparatory (1 year); normal (4 years); agriculture (4 years).

Industrial courses.—Carpentry (4 years); machinery woodworking (4 years); blacksmithing (4 years); brickmasonry and plastering (3 years); wheelwrighting (4 years); steamfitting and plumbing; sewing (3 years); dressmaking (2 years); millinery (2 years); cooking (3 years); printing (4 years); music.

UNIVERSITY OF WISCONSIN.

Undergraduate courses of four years.—Ancient classical (A. B.); modern classical (B. L.); civic historical (B. L.); English (B. L.); general science (B. S.); premedical (B. S.); pre-engineering (B. S.); commerce (B. C. S.); pharmacy (B. S.); civil engineering (B. S.); sanitary engineering (B. S.); mechanical engineering (B. S.); electrical engineering (B. S.); applied electro-chemistry (B. S.); general engineering (B. S.); pre-mining engineering (B. S.); agriculture (B. S.).

Short courses.—Agriculture (2 years of 14 weeks each, winter); dairying (12 weeks, winter); dairying (summer); pharmacy (2 or 3 years, Ph. G.); philosophical course for normal school graduates (2 years, Ph. B.).

Other courses.—Graduate; law; music.

UNIVERSITY OF WYOMING.

Undergraduate courses of four years.—Classical (A. B.); literary (A. B.); scientific (A. B. or B. S.); agriculture (B. S.); mechanical engineering (B. S.); mining engineering (B. S.); normal (B. Ped.).

Short courses.—Agriculture (2 years); agriculture (1 year); mining (6 weeks, winter).

Other courses.—Preparatory (3 years); graduate; business (2 years); stenography (2 years); music.

TABLE 1.—*Statistics of colleges of agriculture and the mechanic arts endowed by acts of Congress approved July 2, 1862, and August 30, 1890.*

	Institution.	President.	Date of opening of institution.	Acres of land allotted to State under act of July 2, 1862.	Acres of land grant of 1862 still unsold.	Acres in farm and grounds.	Acres under cultivation.	Acres used for experiments.	Library.

CHAPTER XXXV.

PROFESSIONAL INSTRUCTION.

WITH AN APPENDIX GIVING A SYNOPSIS OF THE LAWS GOVERNING THE PRACTICE OF MEDICINE AND DENTISTRY IN THE UNITED STATES.

Contents.—General statistical survey—Notes on institutions—The college course and professional schools—Dental education in America and Europe—The study of medicine in Great Britain—Results of the first examination by the State law examiners of Pennsylvania—The proper age for studying law—Miscellaneous notes—Statistical tables, with summaries—Appendix.

GENERAL STATISTICAL SURVEY.

In the 153 theological schools and departments there were 7,372 students, 29 more than in the previous year. The number completing the course was 1,545.

In the 99 law schools there were 14,057 students, an increase of 145 over the previous year. The number of graduates was 3,432.

The whole number of medical students was 27,062, or 241 more than in 1902. The number of students in "regular" schools (so called in order to distinguish them from homeopathic and eclectic) was 24,847, an increase of 400 in number. Homeopathic students numbered 1,462, a decrease of 89; while eclectics were 753, a decrease of 70. While consolidation of medical schools still diminishes their number somewhat, the establishment of a new school is occasionally announced. Gate City Medical College, at Texarkana, Tex., and the medical school of the University of North Carolina, at Raleigh, were two of the latest established.

In the 54 dental schools were enrolled 8,298 students, a loss of 122 from the previous year.

The 61 schools of pharmacy enrolled 4,411 students, or 16 less than in 1902.

The number of veterinary students grew from 576 in 1902 to 671 in 1903, an increase of 95 in number.

TABLE 1.—*General summary of statistics of professional schools, for 1902–3.*

Class.	Schools.	Instructors.	Students.	Increase (+) or decrease (−).	Graduated in 1903.	Per cent graduated.	Students having literary degree.[a]
Theological	153	1,031	[b] 7,372	+ 29	1,545	21	2,094

NOTES ON INSTITUTIONS.

Yale Medical School.—The university clinic was erected and equipped by the university at a cost of about $100,000, and was occupied for instruction at the opening of the present academic year.

Columbian University, Washington, D. C.—The new building for the department of medicine, completed and occupied October, 1902, has a frontage of 50 feet and a depth of 144 feet, giving a total floor area of 36,000 square feet, more than four-fifths of an acre, and is 5 stories in height. It has 4 large lecture halls, seating from 200 to 350 students. A large and thoroughly appointed new hospital has also been erected.

Rush Medical College, Chicago, Ill.—Senn Hall, now completed, through the munificence of Professor Senn and other members of the faculty, adjoins the clinical building on the east. It covers a ground space of 40 by 90 feet, is 7 stories in height (including the basement), and of absolutely fireproof construction.

Central College of Physicians and Surgeons, Indianapolis, Ind.—The new college building, three stories and basement, has been occupied during the last session.

New medical building for University of Michigan.—A new laboratory building, consisting of high basement and three stories, was completed during the year 1902–3. In this building are accommodated the departments of hygiene, bacteriology, physiological chemistry, pathology, anatomy, histology, and embryology. It contains, further, two large amphitheaters and two recitation rooms, a faculty room, and the offices of the dean and secretary.

Hahnemann Medical College and Hospital, Philadelphia.—Three new buildings are being constructed, at a cost of $300,000, including an entirely new clinical amphitheater, to be ready for use in the fall of 1904.

Jefferson Medical College, Philadelphia.—There is now in course of erection a new hospital for the college upon the site of the old college buildings, extended by demolishing a number of neighboring structures. The cost will aggregate $850,000.

Medico-Chirurgical College, Philadelphia, Pa.—The new dispensary and laboratory building, just completed, at the corner of Seventeenth and Cherry streets, is a magnificent five-story edifice, modern in style, finish, and arrangements, and has a total area of over 40,000 square feet of floor space.

Gifts to Harvard Medical School.—At the commencement exercises of Harvard University in 1903 President Eliot said: "This year our treasurer reports that the cash addition to the property of the college is $1,300,000. Of that sum, $500,000 consists of contributions to the great undertaking of the medical school. And that leads me to speak of this particular direction of the beneficence of the friends of the university—for medicine. More than $2,000,000 have been attracted to the medical-school undertaking. The money comes easier there than anywhere else. What is the reason? It is directed in this way by the profound sense of gratitude of many men and many women for the service which medicine has rendered to them, to their children, to those dear to them. It is directed in this way by the conviction that many more discoveries and unimagined blessings are coming out of medical study into the service of the world. This very day there have been added to the fund provided for the medical-school undertaking $285,000. And both gifts—there are two—come charged with the most sacred purpose to do good in the world."

New medical laboratories for University of Pennsylvania.[a]—The opening and dedication of the new medical laboratories of the University of Pennsylvania were held June 11, 1904. The exercises were attended by physicians from all parts of the country, and many prominent European physicians were present. A special train conveyed a large contingent of members of the American Medical Association from Atlantic City. The address of presentation was delivered by J. Vaughan Merrick, member of the board of trustees, and formal addresses were made in the laboratory of pathological histology by Dr. Henry P. Bowditch, professor of physiology, Harvard University; Prof. R. H. Chittenden, director of the Sheffield Scientific School, Yale University; Dr. George Dock, professor of medicine, University of Michigan, and Dr. Horatio C. Wood, professor of materia medica, pharmacy, and therapeutics, University of Pennsylvania. The erection of the laboratories has occupied four years, and has cost, exclusive of ground and equipment, $700,000.

Tulane University.—By a decision of the supreme court of Louisiana in April, 1904, the validity of the will of the late Mr. A. C. Hutchinson was sustained, and the medical department of Tulane University receives a large sum.

Medical Department of National University, Washington, D. C.—Merged with Columbian University after the session of 1902–3.

John Marshall Law School, Chicago, Ill.—Organized a day class for women in 1902–3.

GIFTS AND BEQUESTS TO THEOLOGICAL SCHOOLS.

Hartford Theological Seminary.—From the estate of John S. Welles, $120,000.

Yale Divinity School.—From estate of John S. Welles, $12,000.

Austin (Tex.) Presbyterian Theological Seminary.—Mrs. Sarah C. Ball, of Fort Worth, gave $87,000.

THE COLLEGE COURSE AND PROFESSIONAL SCHOOLS.

[Pres. Nicholas Murray Butler, of Columbia University, N. Y., in his annual report, November, 1903, says:]

The last annual report discussed at some length the questions involved (1) in fixing the proper standards of professional study in a university, and (2) in endeavoring to preserve the American college from the forces which now threaten its destruction through the substitution of the twofold organization of secondary school and university which prevails on the continent of Europe for the threefold organization of secondary school, college, and university, which prevails in the United States. Arguments were adduced to make it plain (*a*) that the stage of advancement measured by graduation from a secondary school is not sufficiently high to serve as the basis for the best type of professional study or to enable a university to train really well-educated professional students, and (*b*) that the stage of advancement measured by graduation from a four-year college course, the requirements for admission to which are those now established for admission to the freshman class of Columbia college, is so high as to delay unduly the young man's entrance upon the active practice of his profession, whether it be law, medicine, engineering, architecture, or teaching, and to prolong unwisely the period during which the student remains under tutelage. Such a policy, continued indefinitely, would tend to bring about habits of intellectual and moral weakness and dependence rather than those of strength and independent self-reliance. It was also pointed out that if the choice in fixing the terms of admission to a university professional school must be made between graduation from a four-year college course (or its equivalent) and no college course at all, it would, in a majority of cases, be the latter, and that, in consequence, the weight of the influence and authority of the university professional schools would be thrown against a college education instead of in its favor. The effect of this would be to hasten the elimination of the college from our American scheme of education—a most unfortunate and possibly a disastrous outcome.

As a method of solving this problem, which would both protect and support the college and also put the professional schools upon a wiser and more serviceable foundation than that measured either by graduation from a four-year college course or by graduation from a secondary school only, it was suggested that in addition to the four-year course now existing in Columbia College, a two-year course should be established there, and that its satisfactory completion or equivalent scholarship, tested by examination, should be required for admission to the technical and professional schools of the university in the case of all candidates for degrees. During the year this proposal has been somewhat fully discussed both within and without the university, with the result of strengthening my conviction that it is the wisest course for Columbia University, and for American universities generally, to pursue.[a]

DENTAL EDUCATION IN AMERICA AND EUROPE.

By W. C. Barrett, M. D., D. D. S., LL. D., Buffalo, N. Y.[a] Excerpts from paper read at the seventh annual session, Northeastern Dental Association, Springfield, Mass., October 31, 1901.[b]

Before the founding of the first school of dentistry, in 1839, whatever was done for the relief of oral disease or deformity either constituted a part of medical practice, as among the Egyptians and other remote nations, or was mere empiricism without system or recognized method. Unlike the organization of a recognized and established medical practice, which is the result of two thousand years of steady growth and comparatively uninterrupted advancement, dentistry as a systematized practice sprang into an organized existence suddenly through the divorcing of as much as had been incorporated into medical practice and wedding it to a methodized system of applied mechanics. This was the great work accomplished by Chapin A. Harris and his compeers during the third and fourth decades of the last century.

Through the refusal of medicine to cooperate in this form of organization of dentistry, those who conducted the movement were thrown upon their own resources, and separate schools for the teaching in both the medical and the mechanical departments were perforce established. From this act sprang two results which mark the distinctive and characteristic features of the American system of dental professional education. The first, the establishing of a separate and distinctive degree, and the other of segregated and independent schools, having no State or professional responsibility, but organized as mere business ventures and likely to be conducted with an eye single to pecuniary profits.

This method of organization of the profession and the establishment of a definite curriculum of study through the formation of separate and independent schools permits the teaching of all the branches of dentistry, didactic and clinical, theoretical, practical, and mechanical, in the same course and by a faculty that is a unit, thus giving to each branch its proper proportion of time and attention. Prosthesis (insertion of artificial teeth, e. g.) is made a definite part of the curriculum, its study is pursued with other branches and thus their mutual interdependence is provided for. The student is so instructed that he will not practice either to the exclusion of the other, but will be conservative instead of radical.

Our independent schools have necessarily had nothing upon which to depend for maintenance save the fees of students. In the past this has at times resulted in the admission of men who were deficient in preliminary education, and the graduation of some who were disgracefully illiterate. But almost universally they were possessed of great mechanical ingenuity and constructive ability. Some of those who have attained to eminence as operators were lamentably deficient in literary acquirements. The dentists of America have devoted themselves mainly to the practical side of their profession and there has not always been the universal respect for erudition that is desirable.

Within the past few years there has been a great advance in the general educational attainments of our students. This has been exclusively through the action of the schools themselves. Whereas but a few years ago there was no compulsory standard of preliminary knowledge, the colleges have of their own volition established one which is being raised year by year as fast as is practicable or wise. But in accomplishing this, great obstacles, inherent to our form of government, have been encountered. Each of our nearly fifty separate States is autonomous in everything pertaining to the regulation of its schools. The standards in no two of them are identical, and too often they are contradictory. No line of equivalents could be

---

[a] Dr. Barrett died in Nauheim, Germany, August 22, 1903.

[b] From Dental Cosmos, March, 1902.

drawn, because there was none that was common to all the States. But something that was as nearly universal as possible must be established, even though it might at first be ridiculously insufficient, and that of the completion of a common or grammar school course was primarily enacted. An attempt to introduce a modification of the system established by law in the State of New York was made. A high school or academic test was made the standard, one year of such work being established as the minimum. A year ago another advance was made, and beginning with the next course, two years of high school work will be demanded for matriculation. This is the equivalent for the English standard which the regents of the State of New York rates as equal to two years of New York high school work.

The time is easily within the recollection of middle-aged dentists when the college course, even nominally, covered but two years of five months each. Students were permitted to enter late and to leave early, while five years of practice or preceptorship was accepted as the equivalent for one of these years, so that a very large proportion of those who graduated previous to 1885 did so after about four months of real college work. With the organization of the National Association of Dental Faculties a new era was opened. First the term was extended to six months, and each college was made responsible to all the others for its every act. Then the course was extended to three years, and but twenty days were allowed after the date of opening in which to join the classes. After a brief respite, to enable the schools to adapt themselves to the new conditions, the time of each course was extended to seven months, and but ten days allowed in which to join the classes. At the same time the regulations permitting the abridging of the course under various pretexts were so changed as to forbid the giving of advanced standing for anything but graduation from an accepted medical college. Another brief interval and the course was extended to four full years of not less than seven months each.[a]

Coincident with this lengthening of the course has been the broadening of the curriculum, until it covers all the studies embraced in a thorough scientific course. Independently of the greatly extended instruction in anatomy, chemistry, physiology, materia medica, and operative and prosthetic dentistry, there have been added courses in pathology, bacteriology, histology, biology, comparative anatomy, hygiene, orthodontia, embryology, metallurgy, operative and prosthetic technics, crown and bridge work, porcelain work, oral surgery, jurisprudence, ethics, and many other allied branches, and the assistance of teachers trained for their work has become essential.

Americans have always been a practical, ingenious people, who have usually sought the shortest route to the end desired. With the dawning of an organized profession there sprang up a class of men who soon became the most skillful operators or fillers of teeth that the world had ever seen. But they were too often lacking in the mental discipline which is obtained chiefly from an extended scholastic course. Dental professional schools were first established in America, and the building up of a proper curriculum of study was naturally influenced by the peculiar conditions in existence. It was experimental, for there were no old traditions to serve as landmarks.

The situation was far different in Europe. There old precedents held undisputed sway, and when twenty years after the first American dental college was founded there was established the first dental hospital of London, which afterwards grew into a dental school, it was to be expected that it would be organized in accordance with the crystallized theories of the Old World. Instead of at least partially divorcing dental teaching from that of medicine, it was sought to make it an integral part of it. As in England, medicine was taught in so-called "hospitals," dental instruction

[a] The dental schools have since returned to a three years' course.—Ed.

must be given according to the same system, so the clinical part preceded the didactic, while with us the order is reversed, the "infirmary" or "clinic" being organized as an adjunct to the school, instead of making the college an outgrowth of the clinic. Dental practice was subjected to that of medicine, the licensing power being vested in a medical board. There is not and never has been a distinctive degree or doctorate. After pursuing the required course of study the dental student is examined in the "Royal College of Surgeons," which is a federation and not a teaching institution, and if he is successful he receives from this medical board a license to practice and become an L. D. S. (licentiate of dental surgery). He is responsible to this medical council, and his name may by their action be stricken from the roll of registered or licensed dentists at any time. It naturally follows from this method of organization that nothing save dental medicine and surgery can form a part of the medically recognized practice. Separate dental schools for teaching all the branches of dental practice could not receive the approbation of the medical council, which was the sole recognizing body. In the newly organized dental hospitals nothing save that recognized by medicine could be placed in the curriculum. A system of apprenticeship was devised by which the student was bound out to any practitioner who would receive him, and thus his training in one of the most important branches of our practice was intrusted to irresponsible, perhaps totally unqualified, men, over whom no jurisdiction could be exercised by the teaching staff of the regular school, while prosthesis was practically divorced from a recognized practice. This, it appears to us, is a fatal defect in a system which has some admirable peculiarities. The nature of dental practice is such that no clear line of demarcation can be drawn between the medico-surgical and the mechanico-practical, analogous to that between ophthalmology and optics. Although under the English system this portion of instruction is relegated to a mere mechanic, the time spent by the student as his servant is included in the dental course, which is thus apparently extended beyond that which is covered by regular instruction. The same methods prevail in most countries of Europe. It is but fair, however, to say that the better portion of the English profession have recognized this anomaly, and in some of the schools mechanical laboratories have been instituted. The course is not, I believe, yet made obligatory in any of the 22 dental teaching institutions of Great Britain. The instruction in practical operative work is not conducted as in America. While a certain number of fillings are required, their character is somewhat different, and more plastics are used. Extraction is made a much more prominent feature, and the "surgery" is to an American sometimes a very repulsive place. The whole scholastic English course can now be covered in two years, which was the point to which our own colleges had developed previous to the organization of our modern curricula. A dental license can be procured from a general or medical hospital after taking but one course of lectures in anatomy, physiology, surgery, and medicine, while the requirements in chemistry and physics may be obtained entirely outside the qualifying course. The obligatory hours are also less than in most American colleges. The instruction is, however, fairly thorough in the branches taught.

The chief points of divergence, then, of the English system of professional instruction lie in the fact that prosthesis really forms no part of obligatory college study, but may be intrusted to a mere mechanic, not necessarily having any professional status or fitness for the responsibility, while with us it forms an integral part of the college course. Also, there is no qualifying degree which crowns the course of study. The student, after finishing with the schools, takes an examination at the hand of a medical board which knows little of dental practice or necessities, and which is not in close sympathy with it.

The preliminary requirements in England are considerably less than those of the better American standards. The highest compulsory English requirements are rated

by the regents of the State of New York as the equivalent for two years of high school work. The law of that State contemplates four years of high school work as a preliminary; so that the English standard is just half that of New York.

Upon the continent of Europe the same general system prevails, save that dental education in most countries is conducted in the universities, forming a part of the medical course. France, however, has distinct dental schools, which are not engrafted upon so-called hospitals, as in England, and which in some respects approach the American colleges in methods. Like nearly or quite all schools outside America, however, they are more thorough in the theoretical than in the practical work done. There are in France five dental schools at present, three of them being in Paris, and of these preeminence should probably be given to the Ecole Dentaire de Paris and the Ecole Odontotechnique. As in England, dentistry is considered as a branch of medicine, and the qualification for matriculation is obtained by examination at the Sorbonne, University of Paris. No foreign equivalent is accepted in lieu of this. There are two examinations, the one written and the other oral. The written is to determine the possession of a thorough knowledge of the French language, and consists in translating into French the writings of some standard author from the Latin, German, English, Italian, or Spanish languages.

The oral examination [in France] embraces the following subjects: French literature and grammar, and the elements of arithmetic, algebra, geometry, physics, chemistry, geology, zoology, and botany. The course in the dental schools is nominally three years of nine months each. About two hours of each day are spent in practical work, and dissections are in addition. The schools have infirmaries to furnish operative practice, but the charges are usually so high that they are but poorly patronized, and students have few operations to do. Examinations are optional, as the schools grant no degree, and their diploma is honorary, carrying with it no legal rights whatever. Admission to practice [in France] is granted upon passing the examination of the faculty of medicine, which gives a Government diploma. Foreigners are only admitted to this under certain restrictions. This examination is almost entirely theoretical, no practical qualification being demanded, and any one who passes it has the legal right to practice dentistry. Hence, doctors of medicine are competent dental practitioners, whether or not they may have pursued any dental studies. The dental schools are thus very much hampered, as there is absolutely no legal encouragement to the establishment of a thorough course in practical dentistry, it being treated as a part of medicine, the mechanical branches, as in England, being ignored by the governing authorities. There are no technic laboratories, and such branches as bridge work are taught outside the schools. All this tends to make French graduates very thoroughly versed in the medical while they know comparatively little of the practical part of dentistry. The preliminary educational requirements in France are about one year in advance of those in England, or an equivalent of three years of high-school work of the State of New York.

In Germany there are two classes of practitioners—the zahnarzt and the zahntechniker. The latter are dental mechanics or prosthetic practitioners, and practice as such. They pass no examinations and are required to take no course of study, although they may perform any kind of dental operation. The whole distinction would appear to be in the name, a zahntechniker not being permitted to call himself zahnarzt, or tooth doctor, but simply tooth worker or tooth artisan.

For admission to the examination as zahnarzt or tooth physician the student must be in possession of a certificate showing that he has passed the grade of "upper secunda" (prima reife) of a German gymnasium or "realschule," which the regents of the University of the State of New York rate as the equivalent of about three years of high-school work. He must also have had at least one year of pupilage with a German zahnarzt, or qualified dentist, or in a dental college, and a course

of study covering at least four semesters of four or five months each (two years) in a German university. The college course, therefore, is but two years of obligatory study.

The admission to practice is upon the passing of an examination before a Government board of examiners, and it is divided into four parts:

Part I. The candidate examines a patient in the presence of the board, diagnoses any oral ailment, gives the prognosis and treatment, and writes a brief thesis upon it.

Part II. Written examination in (*a*) Anatomy; (*b*) General pathology, therapeutics, materia medica, and toxicology; (*c*) Oral surgery and surgical pathology. In each of these subjects the student must answer two questions, which he draws from a receptacle containing about forty each.

Part III. An examination in operative and prosthetic dentistry, which is fairly thorough.

Part IV. An oral examination in dental practice before a board of examiners, one of whom must be a graduate zahnarzt.

Passing all these, the candidate receives his diploma—not from the dental school, but from the minister of education and religion (kultus ministerium) of Germany. It will be seen that this examination presents some positive advantage over that of either England or France, in that it is, in part at least, strictly dental and is conducted by boards in which dentists hold membership.

There are about sixteen dental schools in Germany, each being a department in a German university. The instruction is given in the medical classes entirely, save that from about three dental chairs. In the Dental Institute of the University of Berlin, for instance, there are three dental professorships, as follows: Oral surgery, dental anatomy and pathology (Prof. Dr. Busch); operative dentistry and bacteriology (Prof. Dr. Miller); prosthetic dentistry (Prof. Dr. Warnekros). Each of these professors has one or more assistants. The organization of the staffs of the dental departments of the other universities is about the same. Regular attendance upon lectures is not obligatory, and there is no record of it save the "anmeldebuch," issued at the opening of the term, to which the professor adds his name at the close, in token of the student having been a member of the class. No specified number of terms are necessary; it is only required that the candidate pass the examination of the Government board. The clinical advantages are fairly good, there being both infirmary and laboratory practice.

To an American the principal weakness of the German course is that it is too exclusively medical in its instruction and that there is an absence of the diploma or degree, which makes an exhaustive examination at the close absolutely necessary. The fact, also, that a course in the dental school is not essential to practice, but that anyone may perform any dental operations as a zahntechniker so long as he does not claim the title of zahnarzt, seems a fatal defect. In this country we believe the dental-college training the first and great requisite.

The dental educational system of Austria is analogous to that of Germany. It differs, however, in having a higher preliminary educational requirement, it being the equivalent of four years of the New York State high schools, or one year more than that of Germany. It also requires that the dental student shall have previously taken the full medical course, the dental studies being postgraduate to that. As in Germany, the number holding the full dental qualifications forms but a comparatively small part of those in actual dental practice.

In Russia about the same preliminary educational requirement for dental practice as in Germany is required, or the equivalent of a three years' high school course of the State of New York. No dental schools exist aside from the medical schools, all the college instruction provided being a few special lectures in certain of the universities. None in practical work is given, but for a license to practice three years'

apprenticeship with a qualified practitioner is demanded, after which the candidate is permitted to take an examination before a medical board, as in medical practice, passing which he receives a license to practice.

The dental schools of most of the other countries of Europe in which they have an existence are founded upon the system of Germany, with of course certain definite modifications. With possibly a few exceptions they are inferior in character, so far as dental instruction goes. In Switzerland, which is a Republic somewhat analogous to our own, there is a cantonal and a Federal qualification. The latter is obtained by an examination conducted by a national board, and it represents a fair standard of theoretical work. But, as in England and France, the practical part is ignored by the medical boards, and therefore the qualification is deficient as compared with our own.

In Sweden there is an excellent dental department of the Caroline Medico-Chirurical Institute of Stockholm, but there appear to an American the same defects which mar the other European dental schools—there is too much of general medicine and too little of dentistry to allow close comparison with our own. It is believed there are no other countries in Europe possessing dental schools whose courses are equal to those already named.

With the possible exception of Melbourne, in Australia, we know of no dental school in any city of Asia or Australasia which deserves consideration. The one in Melbourne has an American dentist as its dean, but not enough is known concerning it to give it any special rating. It has been in existence but a short time.

There are no known dental schools in either North or South America outside the United States whose courses can be accepted as an equivalent for even one year of the recognized American schools, save the Royal College of Dental Surgeons of Ontario, Canada.

A few years ago the American Association of Dental Faculties appointed a committee to have jurisdiction over American educational interests in foreign countries, to determine what preliminary qualifications should be demanded of foreign matriculants in American dental schools, and what consideration should be given to their graduates who wished to obtain the American degree. That committee was given authority to appoint advisory boards in each of the foreign countries, preferably those holding the American degree, who were at the same time qualified dentists in the country which they were to represent.

Such boards have been named, and it has been made a part of their duty to report upon the condition of dentistry and the system of dental education in their respective countries. Based upon these reports the foreign relations committee has prepared and presented to the National Association of Colleges a schedule of equivalents to be allowed the graduates of foreign schools in our colleges. They have been unable to accept more than one year in any case, and that only in certain schools of Great Britain, France, Germany, and Sweden. That is, those holding certificates of having completed the courses in those colleges who desire to enter American schools of dentistry can be given one year's advanced standing, and be permitted to enter the present junior classes.

At the last International Dental Congress, held in Paris during the summer of the year 1900, a temporary organization of the dental teachers of the world was effected, and the first meeting was held in London and Cambridge, England, during the past summer, at which seventeen nationalities were represented. Nearly every one which pretends to have a complete system of dental organization sent delegates—England, in which the meeting was held, being the only one which could be said to decline active cooperation. The Commission of Education of the International Dental Federation is made up of those interested in dental education. An American, Prof. T. W. Brophy, of Chicago, is its president.

THE STUDY OF MEDICINE IN GREAT BRITAIN.

[The Cornhill Magazine, London, June, 1903, under the heading, "Prospects in the professions," gives a statement of the medical student's course in Great Britain that is of interest in America for comparison. It is as follows:]

The profession of medicine offers many attractions to men of active minds, kindly dispositions, modest aspirations, and moderate means. It is a profession access to which is not overexpensive, particularly in the provinces and the sister kingdoms; it is one in which it is always possible to secure at least a subsistence, even from the outset; and it is one in which, perhaps more than any other, a man is the architect of his own fortune. A fair start in it may be obtained with but little capital, or even with none at all, and success is only in a small degree conditioned by private or social influence.

On the other hand, the great prizes in medicine are few and less in value than those to be found in the church, the law, engineering, or the army; the work of the profession is for the most part arduous and incessant, and there are practically no "armchairs" in the shape of snug-salaried positions for the medical man to drop into who is wearied of the open market. Having entered on the struggle he must make up his mind to pursue it to the end.

The control of legal admission to the profession is shared between the twelve universities and the nine professional corporations of England, Scotland, and Ireland, and a "general medical council," which is mainly constituted of their representatives. To obtain admission to the Medical Register, or roll of the profession, which is kept by the general medical council—that is to say, to become a legally qualified medical practitioner—it is necessary to obtain a degree or diploma, or a combination of several, implying proficiency in the three branches of medicine, surgery, and midwifery. Degrees in medicine and surgery can only be obtained from the universities; diplomas, possessing equal legal validity, are granted by the corporations, which are partly linked in each division of the Kingdom for the purpose of granting qualifications in complete form. The entire system of examination for degrees and diplomas is under the inspection of, and subject to an ill-defined control by, the general medical council, and the results are more uniform than might have been expected from such a loose and cumbersome piece of public machinery.

In all cases the aspirant to a legal qualification must have spent a minimum period of five years in professional study; but as professional study is held to include not only anatomy and physiology, but the introductory sciences of physics, chemistry, zoology, and botany, candidates for certain diplomas are at liberty to count one year out of the five while still at school, provided that the school be one recognized for the purpose and the curriculum include these subjects. The five years, it must be remembered, is but a minimum; scarcely the majority of candidates, for English diplomas at least, qualify within that period; for the degree of an English university it is safe to reckon six or seven years, and with the exception of the introductory stage above mentioned the entire curriculum has to be followed in a recognized medical school.

In all cases, before entering on the curriculum at all, the candidate has to give evidence of adequate previous education by passing some one of a large number of "matriculation," university, "local," or other examinations recognized for this purpose by the general medical council. The standard required is such as an average fifth-form boy might be expected to reach. If study in London is contemplated, every parent should take care that his son is put through the matriculation examination of the London University, as otherwise his avenue to a university degree is barred at the outset.

The selection of a medical school out of the five and thirty existing in the three Kingdoms is too large and too delicate a subject to enter on in this place. The medical curriculum proper embraces two well-defined parts, the first couple of years being given to anatomy and physiology, the remainder to the scientific and practical study of disease and its treatment. Many students take one part in one place and the second in another. A large number take the first part at Oxford or Cambridge, proceeding to London or some other populous center for the remainder; and this is unquestionably the most advantageous course for those who can afford it, for both the degrees and the associations of the old universities are of great value to a professional man. The university colleges which have sprung up all over the country during the last half century are now absorbing an increasing proportion of students, many of whom complete their education in the hospitals of the great towns in which the colleges are seated, though some still resort to the capitals in their later years of study. In London each of the great general hospitals supports a complete medical school of its own, though vigorous efforts are being made to concentrate the teaching of anatomy and physiology and the preliminary sciences under the University of London. In Scotland and Ireland the universities have from the first kept their hands on medical study more effectually than in England, and the Scotch or Irish candidate generally commences, as a matter of course, by matriculating in a university.

The popular mind is still so far under the influence of the masterpieces of early Victorian literature that it may not be useless to say that a medical school in the present day, whether conducted by a university, a college, or a metropolitan hospital, is a very serious and highly organized academic institution, spending vast sums on its museums, laboratories, and class rooms, and carrying on its work by the help of a large staff of lecturers, demonstrators, tutors, and clerical teachers. The modern student, if he wishes to qualify at all, is one of the hardest worked young men to be found. From lectures to practical observation in the laboratory, from the laboratory to clinical study in the wards and out-patient rooms, thence to class examinations, and home to master his text-books, his days are spent in a ceaseless round of duties and his vacations are cut shorter and shorter as he goes on. Mr. Robert Sawyer, it may be once for all understood, is as much like a contemporary "Guy's man" as the "Saracen's Head" is like the Great Central Hotel. A modern medical school is no place for an idler, and idlers are sooner or later requested by the authorities to "move on."

After five or six years of such work, then, the aspirant gains his legally recognized diploma or degree and enters his name on the register. Before we follow him into practice, let us understand what his legal position really is. A qualification is sometimes described as a license to practice; but no license to practice is needed by English law; anyone who pleases may both practice medicine and take fees for doing so. An unqualified practitioner, however, is in an awkward position if his patient dies; for his certificate can not be received as evidence of the cause of death, and the coroner may have to be appealed to. He is in a more awkward position if charged with having caused either death or injury by his treatment, for the onus rests upon him of proving that he acted with the adequate degree of knowledge that a legal qualification is taken to imply. He is in addition prohibited from assuming any style or title such as "doctor" or "surgeon," which might be held to signify that he was a duly qualified man. Admission to the register, therefore, though not a license to practice, is a necessary recognition by the law of the admissee's competence to do so. Only licensed practitioners, it is needless to add, are eligible for public appointments.

The popular notion still lingers in places that a legal qualification implies some sort of standard of "orthodoxy" in medical opinion, or an obligation to treat

patients according to certain generally accepted methods. This is entirely erroneous; the qualifying bodies are categorically forbidden by law to exact any test of opinion from their candidates; and every medical man is at liberty to form any opinion, use any remedy, or adopt any theory or system of practice that tradition, reason, or faith may lead him to, so long as his practice is guided by good faith, conducted with due care, and informed by a reasonable degree of knowledge of the matters he is dealing with. Liberty of conscience in medical matters is otherwise recognized in its fullest extent.

The cost of a medical education falls under three heads—school fees, examination fees, and incidental expenses. The last may be briefly dismissed; the necessary text-books and the few pieces of apparatus the student has to buy are easily covered by £25. Examination fees vary from £15 to 40 guineas, the latter being the fees for the conjoined diplomas of the London colleges, the highest of all. School fees also vary considerably. At the best London schools the curriculum for the college diplomas costs about £160, that for the London University degree about £190. In Scotland and Ireland and in the provincial schools the charges are less. In one case the complete curriculum can be had for as little as 80 guineas. The expenses of a medical student at Oxford or Cambridge are practically those of any other undergraduate.

RESULTS OF THE FIRST EXAMINATION BY THE STATE BOARD OF LAW EXAMINERS OF PENNSYLVANIA.[a]

The new rules for admission to practice in the supreme court of the State of Pennsylvania went into effect on January 1, 1903. These rules require that all persons who desire to practice in the supreme court of the State shall take a final or law examination before a committee of lawyers appointed by the supreme court, and known as the State board of law examiners. In April the board announced that they would give an examination on the 22d of June. Forty-seven members of the graduating class, desiring to practise in Pennsylvania, presented themselves for examination. The examination was written. The names of the students were not known to those reading the papers. Ninety-six persons took the examination, including the 47 graduates of this department. I have been informed that slightly more than one-fourth the total number of those who took the examination failed, but that 46 of the 47 graduates of the law school were successful. In other words, of those who were not graduates of the department more than 50 per cent failed, while of those who were graduates, only 1 out of 47 failed. This result justifies the assertion made by members of the faculty of the committee of the bar which prepared the new rules for admission, that the graduates of the department were prepared on graduation without any special preparation to take and pass any examination which would be given by a board of examiners in law.

It is probable that our registration will be, in the immediate future, somewhat affected by the new rules for admission to the supreme court of Pennsylvania. These rules require that every person must take a preliminary examination before entering on the study of law, preparatory to admission to practice before the State supreme court. Though this examination is, on the whole, of an elementary character, a considerable knowledge of Latin is required. All who register, college or high school graduates alike, must take the examination. As a considerable proportion of college graduates, and a much larger proportion of high school graduates have

[a] From report of Wm. Draper Lewis, dean of law, University of Pennsylvania, in Report of the Provost, Aug. 31, 1903, p. 98.

never studied Latin, many would-be students of law must for the time being delay entering on their legal studies. As stated, this condition will for some time tend to a probable decrease in our registration. The members of the faculty of this department are, however, in hearty accord with the efforts of the State board of law examiners to elevate the standard of legal education throughout Pennsylvania, and we all believe that the ultimate effect of the new rules will more than compensate for any temporary loss in numbers.

Age and prior education.—The average age of the entering class was 21 years and 4 months, which is exactly the same as the average age of the entering class in the fall of 1901. There has been for some time no change in the average age of those taking up the study of law.

PROPER AGE FOR STUDYING LAW.

[Extract from article by Simeon E. Baldwin, LL. D., professor of law in Yale University.]

What is the age at which a student who has decided upon what is to be the occupation of his life should enter upon the special preparation for it?

It is clear that such a decision can not reasonably be made or recognized until he has at least neared the stage of manhood. Nor should the door of professional education be opened to anyone who has not received so much of secondary education as is necessary to equip him for the common duties of an American citizen. The man must be shaped before the lawyer.

Most law teachers will probably agree that the study of law is best begun by the ordinary man at the age of 20 or 21. If he undertakes it earlier he is apt to be found lacking in mental discipline and general information. If he undertakes it later he is apt to feel it irksome to learn the elements and grammar of a new science, which is also an art, and to give undue emphasis to that part of it which most resembles whatever may belong to the studies he has last pursued.

This is the age of the junior in the larger of our American colleges; of the senior in our smaller ones. He is thenceforward admitted to a large freedom of choice between the courses of study that may be open to him. His choice will or should express his own conviction as to what will help him most in doing his life work. It will or should be founded on some serious consideration of what that life work will be. He is now of an age to elect that. He must elect it if he would make his remaining time at college worth the most.

Nature might seem to point to an age yet earlier than 20; for physiologists tell us that the brain of the average man at 19 has attained a weight which is never afterwards increased.[a] But any choice involves a comparison, and in making that, experience is a large factor in the capacity to judge.

A man must begin his legal education at 20 if he would complete it by 23 or 24, and to compel him against his will to defer beyond that his entry upon the practice of his profession is to wrong both him and the community. He has been denied the freedom that belongs to manhood. He has been forced to exchange a year of practical experience at the bar for a year of theoretical instruction in studies for which he did not care. The community also has lost a year of service from an educated citizen.

---

[a] This is the result announced as to men, after a comparison of nearly 1,200 cases, by Professor Marchand, of the University of Marburg, in his Ueber das Hirngewicht des Menschen, 1902. Women, he says, attain their maximum brain weight (about 9 per cent less than that in the case of men) at 16.

The time has come when we must confess that our American university system has attempted the impossible. It has aimed at adding to the education furnished at the English university the education furnished at the German university, and at requiring both from all. The American people have been strangely patient under this strain. They are patient no longer. They are glad that those whose life is to be that of the scholar should have these ample opportunities for culture. They are determined that those of their sons who are to live less among books and boys than among men, should begin their life work in time to reap some of its rewards before the flush and joy of youth are past. There should be some chance for a man of 25, although he be devoted to a learned profession, to have a wife and home. One of our leading medical journals[a] has recently declared that the existing state of things is right, and that young men who enter the professions must recognize the fact that they can not, in many cases, afford to be both educated and married. No educational system which justifies such views can stand. No country which holds them, however great and powerful it may be, can long preserve the strength and purity of its institutions.

The main direction of American government has always been, must always be, in the hands of the lawyers.

They will naturally and inevitably give both form and character to most legislation. If others devise new laws, they must draft them. All laws, new and old, must be administered by the use of courts, and there the lawyer has practically an exclusive field. In the highest executive offices, also, our national history teaches us that the lawyer is more often found than those of any other class in the community.

He is, then, an important factor in our public life. He ought to come to it guarded by the good influences of home and family—of a home and family of his own.

MISCELLANEOUS NOTES.

Relation of general to professional education.—Dr. Arthur T. Hadley, president of Yale University, in an address to the Medical Society of the State of New York said that in the professional school there was a greater intensity of application, but this was attained at a sacrifice of some breadth of view. The sooner a man's brain began to turn to his life work the better, but the later a man's horizon became narrowed to the sphere of his special activities the better also. The true system of education should help men to broaden their mental and moral horizon even while they were concentrating their vision on their specially chosen work. It should not be necessary to shorten the college course, but this should be made to include within it all of the scientific studies that it was practicable to embrace.[b]

Period of preparation for medicine.[c]—The preparation for a medical career is long and expensive, and during that period of preparation almost no opportunities are offered for earning money. The average time required for this preparation can not be far short of five years, when one includes the hospital career, and perhaps for a few a trip to Europe. The average cost can not be much less than $500 per year; in our better institutions it is much more, and for a man to fit himself in what nowadays is regarded as a thorough manner, not much less than seven years can be needed—four in the medical school, two in the hospital, and one abroad.

[c] Phil. Med. Jour., June 6, 1903.

Then the remuneration of the young medical man is poor. He can expect to wait three or four years at least before he begins to earn expenses. It can fairly be said that he is well on toward middle age before a fair competence begins to come to him.

Cost of a medical college course.—Comparative statement of medical students' expenses for the academic year, October to June:

[Based on students' statements, Columbia University, New York.[a]]

	Low.	Average.	Liberal.
Matriculation fee (first year)	$5	$5	$5
Tuition fee	[b]200	200	200
Gymnasium fee	7	7	7
Books	18	30	40+
College incidentals	7	15	33+
Room (37 weeks)	77	112	160+
Board (37 weeks)	139	174	213+
Clothes and washing	46	75	125+
All other expenses	24	48	100+
Total	523	666	883+

[a] Columbia Univ. Bulletin, Dec., 1903. [b] Since raised to $250.

Taking the above estimates for one year, the course of four years will be seen to involve an expenditure varying from $2,100 to $3,500.

Hospital appointments for medical graduates.—The report of the provost of the University of Pennsylvania, August 31, 1903, says: "Of the class of 1903 more than 80 per cent received hospital appointments within a month of their graduation. To this may be added that during the past four months it has been impossible to find candidates for the many positions which we have been asked to fill.

"We lay particular stress upon this record, because we regard a term of service as resident physician to be invaluable in preparation for the practice of medicine. We urge upon every graduate the importance of such training, as it has come to be recognized everywhere as an almost essential part of the medical curriculum."

The announcement of the Jefferson Medical College for 1904–5 says: "Members of the graduating class of 1903 secured 114 such positions."

Interchange of dental licenses.—The National Association of Dental Examiners, at its meeting in Asheville, N. C., August, 1903, passed the following resolution:

"*Resolved*, That an interchange of licenses to practice dentistry be, and is hereby, recommended to be granted by the various State boards on the following specific conditions:

"Any dentist who has been in legal practice for five years or more, and is a reputable dentist of good moral character, and who is desirous of making a change of residence into another State, may apply to the examining board of the State in which he resides for a new certificate, which shall attest to his moral character and professional attainments, and said certificate, if granted, shall be deposited with the examining board of the State in which he proposes to reside, and the said board, in exchange therefor, may grant him a license to practice dentistry."

Dental schools return to a three years' course.[a]—At the last annual meeting of the National Association of Dental Faculties, held in Washington, D. C., June 9–11, 1904, a rule was adopted making the standard course of dental instruction four annual sessions of six months each. This ruling was made after a debate characterized by much earnestness upon the part of those who held conflicting views as to the expediency of maintaining the four years' course. The ruling creating a standard curriculum of

[a] From The Dental Cosmos, August, 1904.

four annual sessions of seven months each, adopted at the Asheville meeting in 1903, had been in effect since that time, and, its results from a financial standpoint having been found unsatisfactory by many of the colleges, opposition to its continuance strongly developed and a determined effort to return to the three years' standard was therefore made at the Washington meeting in June last. This attempt was unsuccessful, and a four years' curriculum with annual sessions of six months each prevailed.

This inharmonious state of feeling quickly expressed itself after the Washington meeting in practical and formal terms by the resignation of a considerable number of institutions from the faculties association and their announcement of a return to the three years' course.

Fearing the consequences of a sudden disintegration of the faculties association, the *ad interim* committee, acting with the president, called a special meeting to be held in St. Louis on July 16 for the purpose of deciding upon a course of action. In response to this call 27 colleges were represented by their delegates.

After earnest, thoughtful consideration of all the factors of the situation, the following was adopted, with two dissenting votes:

Resolved, That the minimum time for dental teaching required by this association to qualify students for examination for graduation shall be thirty weeks of six days each in each of three separate academic years, exclusive of holidays; this resolution to take effect at once.

Dental licenses in the District of Columbia.—An amendment to the law regulating the practice of dentistry in the District of Columbia, framed according to the recommendations of the National Association of Dental Examiners, was passed by Congress and approved February 5, 1904, as follows:

"The board of dental examiners may issue a license to practice to any dentist who shall have been in legal practice for a period of five years or more, upon the certificate of the board of dental examiners of the State or Territory in which he practiced, certifying his competency and moral character, and upon the payment of the certification fee, without examination as to his qualifications."

Importance of veterinary education.[a]—The thought has been expressed that with the threatened displacement of the horse by mechanical motors there will soon be less need for veterinarians. Those who hold this view fail to recognize the fact that while the horse has been "displaced" in turn by the railroad, the electric car, the bicycle, and the automobile, the number and value of horses have continued to grow until now both are greater than ever before. The official Government reports show that in 1902 there were in the United States 19,285,461 horses and mules, valued at $1,228,459,286; but if there were no horses or mules in the country the value and importance of the food-producing domestic animals are great enough to justify not only all the provision for veterinary education that has been made in this country, but vastly more. The numbers of cattle, sheep, and swine in the United States are 61,764,433, 63,964,876, and 46,922,624, respectively, and their combined value is $1,874,056,254. As great as these figures are their full import is not apparent until it is considered that this enormous total is not an ordinary investment, but more than half of it is annually converted into money, and by the increase of the remaining portion the total is being enlarged from year to year.

The losses from diseases of animals have amounted to as much as $18,000,000 in a single year in a single State. If the money losses from preventable diseases that fall upon the live-stock industry could be avoided and their amount saved there would result a fund more than large enough to equip and endow all of the universities in America.

---

[a] From report of Leonard Pearson, dean of the veterinary department, University of Pennsylvania, in the Report of the Provost, August 31, 1903, p. 125.

Yale graduates admitted to second year of theological course.[a]—By an arrangement recently made with the academical department of Yale University it is now possible for seniors to elect as part of their work for the B. A. degree the courses in Hebrew, the Greek Testament, and philosophy of religion of the junior year in the divinity school, thereby preparing themselves to enter the middle class on graduation and thus to complete their theological course in two years.

a Approximately.

APPENDIX.[a]

A.—Synopsis of Laws Governing the Practice of Medicine in the United States.

No note is made in this compilation of the usual requirement that the applicant for a license shall be 21 years of age and of good moral character.

The name of the secretary of a State medical board in each State is given, to whom application should be made by intending applicants for licenses, as the requirements are frequently changed by the legislatures.

It should not be inferred that the certificates of other States are always accepted in those States where the law provides for reciprocity of licensure, for frequently the medical boards have not made satisfactory arrangements for such interchange of licenses.

As chief source of information, reference was made direct to the statutes of the different States and Territories contained in this Office and in the Library of Congress, but acknowledgment should be made of assistance from Polk's Medical Register, 1904, and a résumé of medical practice laws by Dr. R. J. E. Scott, of New York, in the New York Medical Record, May 28, 1904.

Alabama.—An examination is required before the State board of medical examiners or an examination and a recognized diploma before one of the county boards (fee, $10). "When applicant states in writing that he has neither studied nor proposes to practice major surgery, said applicant shall be exempt from examination in said branch of major surgery." (Law as amended February 26, 1903.) Chairman of State board of medical examiners, Dr. W. H. Sanders, Montgomery, Ala.

Alaska.—There is no requirement in Alaska except the payment of a license fee by itinerant physicians.

Arizona.—The board of medical examiners consists of five members (three regular, one homeopathic, and one eclectic), each to serve five years. The requirements for a license are (1) a diploma of a lawfully organized medical college, (2) an examination, and (3) residence in Arizona. Examination fee, $10, in addition to $2 at time of making application. Penalty for practicing without a license, fine of $100 to $1,000, or imprisonment three to twelve months, or both fine and imprisonment. No provision for reciprocity of licensure. Licenses may be revoked for cause. (Session Laws, 1903.) Secretary of the Territorial board of examiners, Dr. Ancil Martin, Phoenix, Ariz.

Arkansas.—There are three boards of medical examiners (regular, homeopathic, eclectic), each consisting of seven members appointed by the governor, each member to serve four years. The only requirement for an applicant 21 years of age is an examination (fee, $10). Penalty for violation, fine of $25 to $500, or imprisonment ten to ninety days, or both fine and imprisonment, each day of practice being a separate offense. No provision for recognition of certificates of other States. (Acts, 1903.) Secretary of the Arkansas Society Medical Board, Dr. J. P. Runyon, Little Rock, Ark.

---

[a] The matter of this appendix has been revised in the case of nearly every State to the close of 1903 and in a few instances to include the year 1904.

California.—The board of medical examiners consists of nine members (five regular, two homeopathic, and two eclectic, elected by the respective State societies). An examination is required for a license, and in addition the applicant must have graduated from a medical college having requirements equal to those prescribed by the Association of American Medical Colleges. Provision is made for recognizing the certificates of other States and Territories having equal standards. The fee for a license is $20. Penalty for practicing without a license, fine of $100 to $500, or imprisonment sixty to one hundred and eighty days, or both fine and imprisonment. (Act of February 27, 1901.) Secretary of State board of medical examiners, Dr. George G. Gere, 825 Market street, San Francisco, Cal.

Colorado.—Board of medical examiners consists of nine members. The requirement for a license to practice is an examination (fee, $10) or a diploma of a recognized medical college (fee, $5). Applicants graduating after January 1, 1900, must have attended four courses in four separate years. Only residents of Colorado are registered. Secretary of board of medical examiners, Dr. S. D. Van Meter, 1723 Fremont street, Denver, Colo.

Connecticut.—The State board of health appoints three examining committees—regular, homeopathic, and eclectic. The requirements for a license are an examination and a diploma of a legally incorporated college (fee, $15). "The secretary of each of said medical societies shall file with the secretary of the State board of health a list of medical colleges or institutions recognized as legal and reputable by his society; or all of such secretaries may agree upon a single list." Reciprocity of licensure is authorized. Penalty for violation of law, fine of $100 to $300 for the first offense, and for each subsequent offense $200 to $500, or imprisonment thirty to ninety days, or both. (General Statutes, revision of 1902 and act of 1903.) Secretary of State board of health, Dr. C. A. Tuttle, New Haven, Conn.

Delaware.—The medical council of Delaware, consisting of the chief justice of the State and the presidents of the two State boards of medical examiners, issues certificates of license to practice medicine and surgery. The two boards of medical examiners (regular and homeopathic) have five members each, appointed by the governor, each member to serve two years. An applicant for a license must have a competent common school education and a diploma from a medical college, must have studied medicine four years and taken three regular courses of lectures prior to graduation, and must pass an examination. The fee is $10, which shall be returned in case of failure to pass the examination. Applicants examined and licensed by, or who have been members of, State examining and licensing boards of other States with equal standards may be licensed without examination upon payment of $50 to the treasurer of the medical council of Delaware. Penalty for practicing without a license, fine of $100 to $500, or imprisonment not more than one year. (Acts of April 18, 1895, and March 16, 1899.) Secretary of State medical council, Dr. P. W. Tomlinson, Wilmington, Del.

District of Columbia.—The board of medical supervisors consists of three physicians and two laymen. The three physicians are members by reason of being the presidents of the three examining boards (regular, homeopathic, and eclectic). The two laymen, one of whom must be a lawyer, are appointed by the Commissioners of the District of Columbia, as are also the three examining boards, each board having five members. The requirements for a license are an examination (fee, $10) and a medical diploma after study of medicine for three years if the diploma was granted prior to June 30, 1898, or four years if granted after that date. The law provides for reciprocity of licensure. Penalty for practicing without a license, fine of $50 to $500, or imprisonment ten to ninety days, or both fine and imprisonment. (Act of June 3, 1896.) Secretary of board of medical supervisors, Dr. W. C. Woodward.

Florida.—There are nine boards of medical examiners, one representing each of the seven judicial districts, one the homeopathic physicians, and one the eclectic.

Each board consists of three members, and each member is to serve three years. The requirements to practice medicine are an examination and a diploma of a recognized medical college (examination fee, $10, not returnable in case of failure to pass). No provision for reciprocity of licensure. (Revised Statutes of 1892 and acts of May 17, 1895, and May 4, 1899.) Secretary of board of medical examiners (first district), Dr. J. B. McKinnon, Pensacola, Fla.

Georgia.—The governor appoints three separate boards of medical examiners of five members each (regular, homeopathic, eclectic), each member to serve three years, but no member can belong to the faculty of any medical college. A certificate is granted to any graduate of a medical college requiring not less than three full courses of study of six months each who shall pass a satisfactory examination (fee, $10), but not more than two courses shall be required of anyone who graduated prior to April 1, 1895. A recent amendment provides for the recognition of licenses of other States having equal standards. (Act approved December 12, 1894.) Secretary, Dr. I. H. Goss, Athens, Ga.

Hawaii.—A board of medical examiners consisting of three physicians, each to serve three years, is appointed by the governor. Licenses are granted after examination (fee, $10). Penalty, fine of not more than $250. Chairman of board of medical examiners, Dr. C. B. Wood, Honolulu, Hawaii.

Idaho.—State board of medical examiners consists of six physicians appointed by the governor to serve six years each, a majority not to be from any school or system of medicine, and not less than three schools of medicine shall be represented at all times.

The requirements for a license are a diploma from a college of medicine in good standing and an examination before the State board (fee, $25; not returnable). For practicing without a license the fine is $50 to $300, or imprisonment from ten days to six months, or both fine and imprisonment, together with costs of prosecution. (Act approved March 3, 1899.) Secretary of State board of examiners, Dr. R. L. Nourse, Hailey, Idaho.

Illinois.—The State board of health grants certificates to practice medicine to all who pass a satisfactory examination and in addition hold diplomas of recognized medical colleges. A fee of $10 is charged for examination and $5 for a certificate, if issued. Certificates of other States are recognized under certain conditions. Penalty for practicing without a license, fine of $100 for the first offense and $200 for each subsequent offense, or in case of nonpayment of fine and costs the defendant shall be committed to the county jail thirty days for the first offense and ninety days for each subsequent offense. (Revised Statutes, 1899.) Secretary of State board of health, Dr. J. A. Egan, Springfield, Ill.

Indian Territory.—"The United States judge of each district in the Indian Territory shall appoint for his district a board of medical examiners, consisting of three persons" who are "graduates of some reputable medical college recognized by either of the American medical college associations," each member to serve four years.

The requirement for a certificate to practice is an examination (fee, $10) or a diploma which has received the approval of the board (fee, $1), but no diploma issued after July 1, 1904, shall be approved unless issued by a medical college requiring for admission an examination in all the common branches and the higher mathematics, and requiring attendance on four courses of at least six months each in separate calendar years. No provision for reciprocity of licensure. Penalty, fine of $25 to $100. (Act of Congress approved April 23, 1904.) Secretary of board of medical examiners of the central district, Dr. B. W. Caldwell, Hugo, Ind. T.

Indiana.—State board of medical registration and examination consists of five members appointed by the governor for terms of four years, no member to belong to the faculty of any medical college, and each of the four systems of medicine to have at least one representative.

The requirements for a license are a diploma of a reputable medical college and an examination (fee, $25). Anyone who matriculated in a recognized medical college in Indiana prior to January 1, 1901, and who, with a diploma from such school, makes application for a license prior to January 1, 1905, shall be granted a certificate without examination. The law provides for reciprocity of licensure with other States. Secretary of State board of medical registration and examination, Dr. W. T. Gott, Crawfordsville, Ind.

Iowa.—The State board of examiners consists of the physicians of the State board of health. The requirements for a certificate are an examination (fee, $10) and a diploma of a medical college recognized by the board and requiring attendance upon four full courses of study of at least twenty-six weeks each. Law provides for recognition of certificates of other States (fee, $50). Penalty for violation, fine of $300 to $500 and costs, and imprisonment until it is paid. (Annotated supplement to the code, 1902, chapter 17; amendment of March 15, 1904.) Secretary of State board of examiners, Dr. J. F. Kennedy, Des Moines, Iowa.

Kansas.—The State board of medical registration and examination consists of seven members appointed by the governor for terms of four years each. Applicants who have studied medicine four periods of six months each may be licensed after an examination (fee, $15), or on a diploma of a reputable medical college (fee, $10). Licenses may also be granted to medical graduates who hold certificates from other State or foreign boards having equal standards (fee, $10). Penalty for violation, fine of $50 to $200. (Act of March 22, 1901.) Under date of March 20, 1903, the State board published a circular letter stating, "No registration will be made on diplomas or certificates from other State boards." Secretary of State board of medical registration and examination, Dr. G. F. Johnston, Lakin, Kans.

Kentucky.—The State board of health grants certificate to any graduate of a reputable medical college who passes an examination (fee, $10), but "all students who are matriculated in any medical or osteopathic college in this Commonwealth on or before February 1, 1904, and shall have graduated prior to September 1, 1907, and make application to the board prior to January 1, 1908, shall receive certificates without examination." Certificates may be revoked for cause. Penalty for violation, fine of $50, and for each subsequent conviction fine of $100 or imprisonment thirty days, or both. (Carroll's Statutes, 1903, chapter 85, article 1, and amendment of 1904.) Secretary of State board of health, Dr. J. N. McCormack, Bowling Green, Ky.

Louisiana.—There are two boards of medical examiners (regular and homeopathic), each having five members appointed by the governor for terms of six years. The requirements for a license are (1) "a fair elementary education," (2) a diploma of a recognized medical college, and (3) an examination. The fee for examination is $10, one-half to be returned if no certificate is granted, and there is an additional fee of $1 for a certificate. No provision for recognizing licenses of other States. Penalty for violation, an injunction from any competent court forbidding further practice, and the board "may sue for and demand of the defendant a penalty not to exceed $100, and in addition thereto attorney's fees not to exceed $50, besides the costs of court." (Acts of July 13, 1894, and July 2, 1896.) Secretary of board of medical examiners representing the Louisiana State Medical Society, Dr. F. A. Larue, 624 Gravier street, New Orleans, La.

Maine.—The governor, with the advice and consent of the council, appoints a board of registration in medicine, consisting of six practicing physicians, each member to serve six years. The requirements for a license are an examination (fee, $10) and graduation from a medical college recognized by the board. The law provides for the recognition of certificates of other State boards. Penalty, fine of $100 to $500, or imprisonment three months, or both. (Revised Statutes, 1903.) Secretary of board of registration in medicine, Dr. A. K. P. Meserve, Portland, Me.

Maryland.—There are two boards of medical examiners, each consisting of eight members, elected by the Medical and Chirurgical Faculty of the State of Maryland and the Maryland State Homeopathic Medical Society, respectively, each member serving four years. No member of any medical college or university can serve. A written examination before one of the boards is required (fee, $20). To be eligible to examination the applicant must have "a competent common-school education," and have either received a diploma from some legally incorporated medical college in the United States requiring a four years' course or a diploma or license conferring the full right to practice in some foreign country. The law permits reciprocity of licensure with other States and the District of Columbia. Medical students, at the end of their second year of study, may be examined on anatomy, physiology, medical chemistry, and materia medica. Penalty for violation of law, fine of $20 to $500, or imprisonment thirty days to one year, or both fine and imprisonment. (Act approved April 11, 1902.) Secretary of medical board of examiners of Medical and Chirurgical Faculty, Dr. J. M. Scott, Hagerstown, Md.

Massachusetts.—Board of registration in medicine consists of seven practicing physicians appointed by the governor, with the advice and consent of the council, for terms of seven years each, no member to belong to the faculty of any medical college. Applicants for licenses must pass an examination (fee, $20). No provision for recognizing licenses of other State boards. The certificate of a physician may be revoked for felony or crime in the practice of his profession. Penalty, fine of $100 to $500, or imprisonment for three months, or both. (Revised laws, January 1, 1902.) Secretary of board of registration in medicine, Dr. E. B. Harvey, State House, Boston, Mass.

Michigan.—The governor appoints a board of registration in medicine of ten physicians (five regular, two homeopathic, two eclectic, and one physiomedical), no member to belong to the faculty of any medical college. The applicant for a certificate shall (1) have "a diploma from a recognized and reputable high school, academy, college, or university having a classical course," or shall pass a preliminary examination; and (2) he shall be a graduate of a recognized medical college having at least a four years' course of seven months each; and (3) he shall pass an examination. Certificates of other States or countries may be accepted. Fee for examination or for recognition of certificate of another State or country is $25, but graduates of an approved medical school in Michigan pay an examination fee of $10 only. Penalty, fine of not more than $100, or imprisonment not more than ninety days, or both. (Act approved June 9, 1903.) Secretary of State board of registration in medicine, Dr. B. D. Harison, Sault Ste. Marie, Mich.

Minnesota.—State board of medical examiners consists of nine members appointed by the governor for terms of three years each. The requirements for a license are an examination (fee $10, not returnable) and attendance at a recognized medical college four full courses of at least twenty-six weeks each, no two courses in the same year. No provision for the endorsement of other State licenses. Certificates may be revoked for cause. Penalty for violation, fine of $50 to $100, or imprisonment ten to ninety days, or both. (Act of April 22, 1895.) Secretary of State board of medical examiners, Dr. C. J. Ringnell, Minneapolis, Minn.

Mississippi.—The State board of health examines all applicants for license to practice medicine (fee, $10.25). Penalty for practicing without a license, fine of $20 to $200, or imprisonment not exceeding thirty days. (Acts of 1892 and 1898.) Secretary of State board of health, Dr. J. F. Hunter, Jackson, Miss.

Missouri.—The State board of health grants certificates to all applicants who (1) possess satisfactory preliminary qualifications and (2) pass the examination (fee, $15). No provision for recognizing certificates of other States. Penalty for violation of law, fine of $50 to $500, or imprisonment for thirty days to one year, or both fine and imprisonment. (Act approved March 12, 1901.) But students matriculated

prior to March 12, 1901, shall be granted a license on presentation of a diploma of any medical college of Missouri (fee, $15). (Law as amended March 21, 1903.) Secretary of State board of health, Dr. W. F. Morrow, Kansas City, Mo.

Montana.—The board of medical examiners consists of seven members. The requirements for a certificate to practice are an examination (fee, $15) and a diploma of a recognized medical college, and, if graduated since July 1, 1898, attendance upon four courses of at least six months each. Certificates may be revoked for unprofessional, dishonorable, or immoral conduct. Secretary of board of medical examiners, Dr. Wm. C. Riddell, Helena, Mont.

Nebraska.—The State board of health appoints four secretaries, who shall be graduated physicians (two regular, one homeopathic, one eclectic) of at least seven years' consecutive practice, to assist and advise the board of health in its duties. The requirements for a license are an examination and diploma of a medical school in good standing which requires a preliminary examination for admission and attendance on four courses of study of six months each, but the requirement of four years shall not apply to those who graduated prior to August, 1898. Fee for a license, to graduates of medical colleges in Nebraska, $10, to all others $25. Certificates may be revoked for cause. Penalty for violation, fine of $50 to $300, and costs, and stand committed until payment is made. (Cobbey's Annotated Statutes, 1903, sections 9416–9433.) Secretary of State board of health, Dr. George H. Brash, Beatrice, Nebr.

Nevada.—State board of medical examiners consists of five practicing physicians (three regular, one homeopathic, one eclectic) appointed by the governor for terms of five years each. Certificates are granted to graduates of recognized medical colleges in the United States; also to graduates of recognized medical colleges without the United States who pass a satisfactory examination. Fee for certificate, $25. Penalty, fine of not less than $100 or imprisonment fifty to one hundred and eighty days, or both. (Act approved March 15, 1899.) Secretary of State board of medical examiners, Dr. S. L. Lee, Carson City, Nev.

New Hampshire.—The governor and council appoint three separate State boards of medical examiners (regular, homeopathic, eclectic), of five members each, each member to serve five years. The superintendent of public instruction is ex officio regent of the State board of medical examiners. License to practice medicine is granted after an examination to any candidate who submits satisfactory evidence that he (1) is more than 21 years of age; (2) is of good moral character; (3) has a preliminary education equal to a registered academy or high school; (4) has studied medicine four years of nine months each, including four satisfactory courses of at least six months each in four calendar years in a registered medical college; but "the regent shall accept as the equivalent for any part of the third and fourth requirements evidence of five or more years' reputable practice, provided that such substitution be specified in the license; and as the equivalent of the first year of the fourth requirement, evidence of graduation from a registered college course, providing that such college course shall have included not less than the minimum requirements for such admission to the second year of a medical school registered as maintaining at the time a satisfactory standard;" (5) has graduated from a registered medical college, or has a license to practice in some foreign country (fee, $10). Applicants examined and licensed by other State examining boards having equal standards may be licensed without examination (fee, $5). Penalty, fine of not more than $100 or imprisonment three months for first offense, or fine of not more than $250 or imprisonment not less than six months for a subsequent offense, or both fine and imprisonment. (Act of 1897, as amended April 2, 1903.) Secretary of State board of medical examiners for New Hampshire Medical Society, Dr. J. T. Greeley, Nashua, N. H.

New Jersey.—A State board of medical examiners, consisting of nine members, is appointed by the governor, each member to serve three years. An applicant for a

license must (1) have received a certificate or diploma issued after four years of study in a normal, manual training, or high school of the first grade in New Jersey, or have an equivalent academic education, and (2) he must have graduated from a reputable medical college recognized by the board, or he must hold a diploma or license conferring full right to practice in some foreign country, and (3) prior to receiving his medical degree he must have studied medicine four years of nine months each and have attended four courses of at least seven months each, and (4) he must pass a medical examination (fee, $25). Candidates who graduated prior to July 4, 1903, and have been in continuous practice five years may be admitted to examination after attendance on three courses, or after two courses if graduated prior to July 4, 1894. Applicants examined and licensed by or who have been members of State examining boards of other States with substantially equal requirements may be licensed without examination on payment of a fee of $50. Penalty for first offense, fine of not less than $100 or imprisonment not less than thirty days, or both. For each subsequent offense the penalty shall be double the preceding. (Acts of 1894 and 1903.) Secretary of State board of medical examiners, Dr. E. L. B. Godfrey, Camden, N. J.

New Mexico.—The Territorial board of health grants licenses to graduates of medical colleges in good standing (fee, $25). A medical college in good standing "is declared to be one of at least ten years' continuous existence, one which now requires a high school certificate, or its equivalent, for admission to it, and one which now or hereafter requires an attendance on, and gives four full courses in four separate years, and one which has ample clinical facilities such as are furnished in large cities." The law provides for reciprocity with other States and Territories.

Certificates may be revoked for cause. Penalty for practicing without a license, fine of not more than $100 or imprisonment not over ninety days, or both. (Act of March 12, 1903.) Secretary of New Mexico board of health, Dr. D. B. Black, Las Vegas, N. Mex.

New York.—The regents of the University of the State of New York appoint three boards of medical examiners (regular, homeopathic, eclectic) of seven members each. The applicant for a license must (1) have the general education required, (2) have studied four years of nine months each and have attended four courses of at least six months each, (3) have graduated from a registered medical college or hold a license to practice in some foreign country, and (4) must pass an examination (fee $25). Five years' practice of medicine may be accepted in place of the general education and attendance required. Students of registered medical colleges, who are 19 years of age, may be examined in anatomy, physiology and hygiene, and chemistry at the end of their second year's course. The law provides for reciprocity of licensure. Penalty, fine of not more than $250, or imprisonment six months, for first offense; for a subsequent offense a fine of not over $500 or imprisonment not less than one year, or both fine and imprisonment. (Act as amended March 23, 1902.) Executive officer of the regents, Andrew S. Draper, Albany, N. Y.

North Carolina.—The board of medical examiners, consisting of seven members, is appointed by the State medical society. An applicant for a license must (1) exhibit a diploma of an approved medical college or a license to practice in some other State, and (2) must pass an examination. Each applicant receiving a license must pay a fee of $10. Penalty for practicing without a license, fine of $25 to $100, or imprisonment in the discretion of the court. (Act of 1899.) Secretary of State board of medical examiners, Dr. G. W. Pressly, Charlotte, N. C.

North Dakota.—The State board of medical examiners consists of nine members (eight of whom shall be practicing physicians), appointed by the governor. Licenses are granted after examination (fee, $20) to persons who have attended three courses of lectures of at least six months each. No provision for reciprocity of licensure.

Secretary of State board of medical examiners, Dr. H. M. Wheeler, Grand Forks, N. Dak.

Ohio.—State board of medical registration and examination consists of seven members, appointed by the governor; each member to serve seven years; the different systems of medicine to be represented. The requirements for a certificate are a high school education, graduation from a recognized medical college or foreign license, and an examination (fee, $25). The law provides for recognition of the certificates of other States (fee, $50). (Bates' Annotated Statutes, 1903.) Secretary of State board of medical registration and examination, Dr. Frank Winders, Columbus, Ohio.

Oklahoma.—Territorial board of health consists of three practicing physicians, appointed by the governor for two years. Applicants for license to practice medicine must (1) present "proof of ten years' continuous practice, or proof of graduation from a reputable medical college," and (2) pass an examination (fee, $5). Penalty, fine of $50 to $100, or imprisonment thirty days to six months, or both fine and imprisonment. (Act of March 12, 1903.) Secretary of Territorial board of health, Dr. E. E. Cowdrick, Enid, Okla.

Oregon.—State board of medical examiners consists of five members (three regular, one homeopathic, one eclectic), appointed by the governor. Applicants for license must pass an examination (fee $10), but applicants who have been licensed in other States after an examination may be excused from examination. (Act approved February 17, 1903.) Secretary of State board of medical examiners, Dr. Byron E. Miller, Portland, Oreg.

Pennsylvania.—The medical council has supervision of the examinations, which are conducted by the three boards of medical examiners (regular, homeopathic, and eclectic), consisting of seven members each, appointed by the governor, each member to serve three years. The requirements for a license are (1) a competent common school education, (2) medical diploma (if granted after July 1, 1895, holder must have studied medicine four years and attended three courses of lectures) or license to practice in some foreign country, (3) an examination (fee, $25). Applicants examined and licensed by other State examining boards having equal standards of requirements may be licensed without examination (fee, $15). Act of May 18, 1893. Secretary of medical council of Pennsylvania, I. B. Brown, Harrisburg, Pa.

Philippine Islands.—The board of medical examiners consists of three physicians, each to serve three years. Every one desiring to practice medicine must submit to an examination and must present a diploma of a medical college recognized as reputable by the board of health for the Philippines (fee, $15). Penalty for practicing without a license, fine of not more than $150, or imprisonment not more than ninety days, or both. (Act of December 4, 1901.) Secretary of board of medical examiners, R. E. L. Newberne, Manila, P. I.

Porto Rico.—The board of health, on the recommendation of the examining committee, grants licenses to graduates of recognized medical colleges who pass a satisfactory examination (fee, $25). Graduates of reputable medical schools who have been licensed by State boards after examination may be licensed without examination upon payment of the fee of $25. Secretary of the board of examiners, Dr. Quevedo Baez, San Juan, P. R.

Rhode Island.—State board of health grants certificate "to any reputable physician" who passes a satisfactory examination (fee for the examination, $10, "and not more than $2 shall be charged for a certificate"). Penalty, fine of $50 for first offense, and for each subsequent offense a fine of $100 and imprisonment thirty days, either or both. (Chapter 165 of the General Laws, as amended November, 1901.) Secretary of State board of health, Dr. G. T. Swarts, Providence, R. I.

South Carolina.—State board of medical examiners consists of eight members, appointed by the governor to serve two years each. The governor also appoints three homeopathic physicians as a State board of homeopathic examiners. All

applicants for certificates must pass an examination (fee, $5), and to be eligible to examination the applicant must have a preliminary education equivalent to the possession of a teacher's first-grade certificate and must have graduated from a medical college after an attendance of four years of twenty-six weeks each. Fee for each certificate issued, $5. Penalty for violation, fine of $50 to $300, or imprisonment of thirty to ninety days, or both. (Act of February 27, 1904.) Secretary of State board of medical examiners, Dr. W. M. Lester, Columbia, S. C.)

South Dakota.—Board of medical examiners, consisting of seven physicians (four regular, two homeopathic, one eclectic), is appointed by the governor for terms of three years. An applicant for a license must present a diploma from a recognized medical college which requires four full courses of lectures of six months each, and must pass an examination (fee, $20). Provision is made for reciprocity of licensure with other States and Territories. Penalty for violation, fine of $500 to $800, or imprisonment thirty to ninety days, or both. (Act approved March 5, 1903.) Secretary of board of medical examiners, Dr. H. E. McNutt, Aberdeen, S. Dak.

Tennessee.—State board of medical examiners consists of six physicians (four regular, one eclectic, one homeopathic), not connected with any medical college, who are appointed by the governor for terms of four years. Every applicant for a certificate to practice must pass an examination (fee, $10, and $5 additional for the certificate, if granted). No provision for recognizing certificates of other States. Penalty, fine of $10 to $25 for every offense. (Act approved April 22, 1901.) Secretary of board of medical examiners, Dr. T. J. Happel, Trenton, Tenn.

Texas.—Three boards of medical examiners (regular, homeopathic, eclectic), of nine members each, are appointed by the governor for terms of two years. All persons desiring to practice medicine must pass an examination (fee, $15), but anyone licensed in another State or Territory with an equal standard of requirements may be licensed without an examination upon payment of the regular fee of $15. Penalty for violation, fine of $50 to $500, or both fine and imprisonment not exceeding six months. (Act approved February 22, 1901.) Secretary of board of medical examiners for the State of Texas, Dr. M. M. Smith, Austin, Tex.

Utah.—A State board of medical examiners, consisting of seven members, is appointed by the governor at each regular session of the legislature by and with the consent of the Senate. A certificate is issued to any graduate of a medical school in good standing who passes a satisfactory examination (fee, $15). (Acts of 1892 and 1894.) Secretary of State board of medical examiners, Dr. R. W. Fisher, Salt Lake City, Utah.

Vermont.—Each board of censors (homeopathic, eclectic, regular) shall issue certificates to persons who present a medical diploma and pass a satisfactory examination, and to physicians licensed in other States which have equivalent requirements in the opinion of the board (fee, $5). (Act approved November 11, 1902.) Secretary of board of censors, Dr. S. W. Hammond, Rutland, Vt.

Virginia.—The State board of medical examiners, appointed by the governor, consists of three members from each Congressional district, two from the State at large, and five homeopathic physicians. The requirements for a license are an examination (fee, $10) and a medical diploma. The board may, in its discretion, accept in lieu of an examination a medical diploma and a certificate granted after examination in some other State or Territory. Medical students may be admitted to a partial examination at the end of the second year's course. Penalty for practicing without a license, fine of $50 to $500. (Acts of April 23 and December 17, 1903.) Secretary of State board of medical examiners, Dr. R. S. Martin, Stuart, Va.

Washington.—State medical examining board consists of nine members, appointed by the governor. An applicant for a license must pass an examination (fee, $10) and must have graduated from a "medical college now having at least a three years' graded course." A license granted after examination in another State may be

accepted in lieu of an examination, in the discretion of the board. Penalty for practicing without a license, fine of $50 to $100, or imprisonment ten to ninety days, or both. (Act of February 18, 1901.) Secretary of State board of medical examiners, Dr. T. B. Swearingen, Tacoma, Wash.

West Virginia.—The State board of health grants certificates to practice medicine to all persons who pass a satisfactory examination (fee, $10). Secretary of State board of health, Dr. Hugh A. Barbee, Point Pleasant, W. Va.

Wisconsin.—The Wisconsin State board of medical examiners consists of eight members (three allopathic, two homeopathic, two eclectic, one osteopathic), appointed by the governor for terms of four years each. To secure a license to practice medicine and surgery the applicant must pass an examination and must be a graduate of a reputable medical college requiring at least four courses of seven months each in separate calendar years, and "a preliminary education equivalent to that necessary for entrance to the junior class of an accredited high school, including a one year's course in Latin, and that shall after the year 1906 require for admission to such school a preliminary education equivalent to graduation from an accredited high school of this State." The examination fee shall not exceed $15, with $5 additional for the license issued. Any person licensed by another State board requiring an equal standard and holding a diploma from a reputable medical college may be licensed without examination on payment of a fee not exceeding $25. Penalty for violation, fine of $50 to $100, or imprisonment not exceeding six months, or both. (Act approved May 22, 1903.) Secretary of State board of medical examiners, Dr. F. R. Forsbeck, Milwaukee, Wis.

Wyoming.—State board of medical examiners, consisting of three persons, is appointed by the governor. A certificate is granted on the diploma of a recognized medical college (fee, $5) or on examination (fee, $25). No provision for reciprocity of licensure. Penalty, fine not exceeding $100, or imprisonment not more than thirty days, or both fine and imprisonment. (Act approved February 14, 1899.) Secretary of State board of medical examiners, Dr. G. P. Johnston, Cheyenne, Wyo.

B.—Laws Governing the Practice of Dentistry in the Various States and Territories.

Alabama—Board of dental examiners consists of five members, each to serve five years, elected by the Alabama Dental Association. Licenses to practice dentistry are granted after examination (fee, $10). Penalty for practicing without a license, fine of $50 to $300. (Acts of 1894, as amended March 4, 1901.) Secretary of board of dental examiners, Dr. T. P. Whitby, Selma, Ala.

Alaska.—No regulation.

Arizona.—The board of examiners consists of five resident practicing dentists, appointed by the governor for a term of four years. The requirements for licensure are an examination (fee, $25, not returnable), and that the applicant shall (1) furnish satisfactory evidence of having graduated from a reputable dental college of the United States, which must be a member of the National Association of Dental College Faculties, and recognized by the board of dental examiners; or (2), shall have graduated from a high school or similar institution of learning in Arizona, or some other State or Territory of the United States requiring a four years' course of study, and have completed an apprenticeship of three years, of twelve months each, with a licensed practitioner of dentistry; or (3), furnish a certificate from the State board of dental examiners, or similar body of some other State or Territory of the United States, showing that he or she has been a licensed practitioner of dentistry in that State or Territory for at least five years. The penalty for violation is a fine of $100 to $200, or imprisonment three to six months, or both fine and imprisonment, for

each and every offense. (Act of March 17, 1903.) Secretary of board of dental examiners, Dr. J. L. Hamilton, Phoenix, Ariz.

Arkansas.—Board of dental examiners consists of five dentists appointed by the governor for two years. To secure a license to practice the applicant must pass an examination (fee, $5), but if a diploma of a reputable dental college is presented to the board it may, in its discretion, excuse the applicant from an examination. No provision for recognizing licenses of other States. Penalty for practicing without a license, fine of $5 to $25 for each day. (Act of May 23, 1901.) Secretary of board of dental examiners, Dr. A. T. McMillen, Little Rock, Ark.

California.—The board of dental examiners consists of seven reputable practicing dentists, appointed by the governor for terms of four years. No member of the board shall be a member of the faculty of any dental college, or shall have any financial interest in such college. A license to practice dentistry is granted only after an examination (fee, $25, not returnable). No person shall be eligible for examination who is not a graduate of a reputable dental college indorsed by the board of dental examiners, or who shall not have graduated from a high school or similar institution of learning in California or some other State of the United States requiring a three years' course of study, and who can not furnish satisfactory evidence that he or she has completed an apprenticeship of four years of twelve months each with a licensed practitioner of dentistry in California, or who can not furnish a certificate from the State dental board of some other State in the United States showing that he or she has been a licensed practitioner of dentistry in that State for at least five years. Penalty for violation, fine of $50 to $500, or imprisonment five days to six months, or both fine and imprisonment. (Statutes, 1903.) Secretary of State board of dental examiners, Dr. H. G. Baird, 502 Sutter street, San Francisco, Cal.

Colorado.—State board of dental examiners consists of five practitioners of dentistry, appointed by the governor for a term of two years. To secure a license an examination is required (fee, $10), the prerequisite being a diploma of graduation from some reputable dental college. Penalty for violation of law, fine of $100 to $300, each day of illegal practice being regarded as a separate offense. (Act of April 17, 1897.) Secretary of State board of dental examiners, Dr. M. S. Fraser, 407 Mack Building, Denver, Colo.

Connecticut.—Board of dental commissioners consists of five practicing dentists of not less than ten years' experience in practice of dentistry, appointed by the governor for terms of two years. The requirements for a license are (1) an examination (fee, $25, but $20 shall be returned in case of failure to pass the examination); and (2) a diploma or other sufficient certificate of graduation from some reputable dental college duly recognized by the laws of the State in which it is situated, or three years of instruction under some reputable dentist, or three years' continuous practice of dentistry. The penalty for violation of the law is a fine not exceeding $50 for each offense, each week of unlawful practice being considered a separate offense. No provision for recognizing certificates of other States. (General statutes, 1902.) Secretary of board of dental commissioners, Dr. J. T. Barker, Wallingford, Conn.

Delaware.—Board of dental examiners consists of five reputable practicing dentists, appointed by the governor for terms of four years each. An examination is required in order to secure a certificate (examination fee $10, and $1 for a certificate, if granted). The by-laws of the board of examiners require the applicant to be a graduate of a recognized dental college. Penalty for practicing without a license, fine of $50 to $300, or imprisonment not more than six months. (Act of March 31, 1885, as amended March 23,1899.) Secretary of board of dental examiners, Dr. C. R. Jefferis, Wilmington, Del.

District of Columbia.—Board of dental examiners consists of five reputable dentists, appointed by the Commissioners of the District of Columbia, to serve terms of five

years each. A certificate is granted to anyone who passes a satisfactory examination, or to anyone who is a graduate of a dental college requiring a three years' course of study. Fee for examination, $10; for certificate, $1. Penalty for practicing without a certificate, fine of $50 to $200, or in default of payment imprisonment thirty to ninety days. Provision is made for reciprocity of licensure. (Act of June 6, 1892, and amendment of 1904.) Secretary of board of dental examiners, Dr. Mark F. Finley, 1928 I street NW., Washington, D. C.

Florida.—Board of dental examiners consists of five dentists, appointed by the governor for terms of two years. A diploma of a reputable dental college and an examination by the board are required in order to practice dentistry (fee $10). Penalty for violation, fine of not more than $500, or imprisonment not more than six months, or both. (Revised Statutes of 1892, secs. 828 and 829; act of June 3, 1899.) Secretary of board of dental examiners, Dr. F. B. Hanna, Umatilla, Fla.

Georgia.—Board of dental examiners consists of five members, appointed by the governor from ten names submitted by the Georgia State Dental Society, each member to serve five years. The requirements for a license are (1) an examination, and (2) a diploma from a dental school having a curriculum equal to those of the majority of dental schools in the United States, or a license from another State board (fee, $10, not returnable). Penalty for practicing without a license, fine not exceeding $1,000 or imprisonment not over six months, or work on the chain gang. (Supplement to the code, 1901.) Secretary of board of dental examiners, Dr. D. D. Atkinson, Brunswick, Ga.

Hawaii.—Board of dental examiners consists of three practicing dentists, appointed by the governor, each to serve three years. A certificate is granted to any graduate of a reputable dental college who passes a successful examination (fee, $20, not returnable). Certificates may be revoked for cause. Penalty for practicing without a certificate, fine of not more than $200. (Act approved April 25, 1903.) Secretary of board of dental examiners, Dr. M. E. Grossman, Honolulu, Hawaii.

Idaho.—Board of dental examiners, consisting of five practicing dentists, is appointed by the governor, for terms of three years each. An examination is required to secure a license (fee, $25, not returnable), and in addition the applicant must have had three years' experience in a dental office, or must have a dental diploma or a certificate from some other State board. Penalty for violation of law, fine of $50 to $200. (Act of February 16, 1899.) Secretary of board of dental examiners, Dr. W. W. Paley, Mackey, Idaho.

Illinois.—Board of examiners consists of five practicing dentists, appointed by the governor, each to serve five years. The requirement for a license is an examination (fee, $10), or a diploma of a reputable dental college (fee, $5). Penalty for practicing without a license, fine of $25 to $100. (Act of May 30, 1881, as amended April 15, 1899.) Secretary of State board of dental examiners, Dr. J. G. Reid, 67 Wabash avenue, Chicago, Ill.

Indian Territory.—No information of any regulation as to practice of dentistry.

Indiana.—The State board of dental examiners consists of five practicing dentists, one appointed by the governor, one by the State board of health, and three by the State Dental Association, to serve two years. The requirements are (1) an examination (fee, $20), and (2) a diploma of a dental college recognized by the National Association of Dental Faculties, or affidavits "that the applicant has been an assistant in the dental office of a reputable licensed dentist or dentists of this State for a period of time not less than five years." Penalty for violation, fine of $25 to $200. Provision is made for the recognition of certificates of other States. (Acts 1899 and 1903.) Secretary of State board of dental examiners, Dr. D. L. Stine, Indianapolis, Ind.

Iowa.—Board of dental examiners consists of five practicing dentists, appointed by the governor for terms of five years each. The requirements for a license are an

examination (fee, $20), and graduation from a reputable dental college recognized by the board. Penalty, fine of not more than $200, or imprisonment not more than forty days, or both. (Act of April 16, 1900.) Secretary of board of dental examiners, Dr. C. S. Searles, Dubuque, Iowa.

Kansas.—State board of dental examiners consists of three practicing dentists, appointed by the governor, each to serve four years. The requirement for a certificate is an examination (fee, $10), or a diploma from a reputable dental college recognized by the board (fee, $5). "Residents of this State only shall be eligible for registration." Penalty for violation, fine of $25 to $100. (Act approved February 24, 1903.) Secretary of State board of dental examiners, Dr. M. I. Hults, Hutchinson, Kans.

Kentucky.—The board of examiners in dentistry consists of five dentists appointed by the governor. An examination and a dental diploma are required to obtain a certificate (fee, $20). Penalty for violation, fine of $50 to $200. (Act approved March 17, 1904.) Secretary of board of examiners in dentistry, Dr. Henry Pirtle, 116 West Chestnut street, Louisville, Ky.

Louisiana.—State board of dentistry consists of five dentists, appointed by the governor for terms of seven years. The applicant for a certificate, according to the board's "Rules for conducting dental examinations," must be a graduate of a recognized dental school and must pass an examination (fee, $25). Penalty for practicing without a certificate, fine not exceeding $100, or imprisonment not exceeding three months, or both. (Act of July 3, 1900, as amended in 1902.) Secretary of State board of dentistry, Dr. L. A. Hubert, 137 Carondelet street, New Orleans, La.

Maine.—Board of dental examiners consists of five dentists, appointed by the governor, with the advice of the council, for terms of three years. An examination is required for a license (fee $20, not returnable). Penalty for violation, fine of $25 to $100 for each offense. (Revised Statutes, 1903.) Secretary of board of dental examiners, Dr. D. W. Fellows, Portland, Me.

Maryland.—State board of dental examiners consists of six practicing dentists, appointed by the governor out of a list of nine names proposed by the Maryland State Dental Association, each member to serve six years. Any graduate of a dental school in the United States may be examined, and if found qualified shall be given a certificate, but any graduate of a regular dental college may be registered without examination, in the discretion of the board. A fee of $10 shall be paid by every applicant for examination and registration. Penalty for practicing without a certificate, fine of $50 to $300, or imprisonment not more than six months. (Act approved April 4, 1896.) Secretary of State board of dental examiners, Dr. F. F. Drew, 701 North Howard street, Baltimore, Md.

Massachusetts.—Board of registration in dentistry consists of five members appointed by the governor, with the advice and consent of the council, for terms of three years each. An examination is required to secure a certificate (fee, $20). Penalty for violation, fine of $50 to $100, or imprisonment three months. No provision for recognizing certificates of other State boards. (Revised laws of Massachusetts, 1902, ch. 76, secs. 24, 26, 28.) Secretary of board of registration in dentistry, Dr. G. E. Mitchell, Haverhill, Mass.

Michigan.—The board of examiners consists of three practical dentists appointed by the governor, to serve three years each. A certificate is granted after examination (fee, $10), or to anyone holding a diploma from a reputable dental college having a course of instruction and practice equal to that of the college of dentistry of the University of Michigan (fee, $3). Penalty for practicing without a certificate, fine of $25 to $100, or imprisonment not more than ninety days, or both fine and imprisonment. Secretary of board of dental examiners, Dr. W. C. McKinney, Saginaw, Mich.

Minnesota.—Board of dental examiners consists of five resident practicing dentists, appointed by the governor for terms of three years. The requirements for a license

are an examination by the State board (fee, $10; not returnable) and a diploma of an approved dental college. Penalty for practicing without a license, fine of $20 to $100 or imprisonment one to three months, or both. No provision for recognition of licenses of other examining boards. (Laws of 1889, ch. 19.) Secretary of board of dental examiners, Dr. C. H. Robinson, Wabasha, Minn.

Mississippi.—Board of dental examiners consists of five practicing dentists, appointed by the governor for terms expiring with that of the governor appointing them. A high-school education and an examination are required for a license (fee, $10). Penalty for violation, fine of not over $500 and imprisonment in the county jail not more than six months, or either. (Annotated Code of 1892, secs. 1454, 1528–1531; amendment of March 16, 1904.) Secretary of board of dental examiners, Dr. W. R. Wright, Jackson, Miss.

Missouri.—Board of dental examiners consists of five reputable dentists, appointed by the governor for terms of five years each. "No professor, director, owner or stockholder of any dental college or school shall be appointed a member of said board." A certificate is granted to any graduate of a reputable dental college requiring an attendance on not less than three courses of six months each (fee, $2), or a certificate may be issued after an examination by the board to anyone who has studied dentistry in Missouri for three years or who holds a license from the dental board of another State (fee, $10). Penalty, fine of $50 to $200, or imprisonment twenty to sixty days, or both. (Revised Statutes of 1899, secs. 8526, 8528, 8529, 8534.) Secretary of State board of dental examiners, Dr. S. C. A. Rubey, Clinton, Mo.

Montana.—The governor appoints a board of dental examiners consisting of five members, each to serve five years. An examination before this board is required in order to secure a license to practice dentistry. "To be eligible for such examination the applicant shall give satisfactory evidence of having practiced dentistry five years, or having been a bona fide student five years, under immediate supervision of a licensed dentist, or shall present a diploma from some reputable dental college." Fee, $25, not returnable. (Act approved February 25, 1901.) Penalty for violation, fine of $50 to $200, or imprisonment one to three months, or both fine and imprisonment. Secretary of board of dental examiners, Dr. D. J. Wait, Helena, Mont.

Nebraska.—The State board of health appoints three secretaries, for terms of three years, from a list furnished by the State dental society. An examination by the secretaries (fee, $10) or a diploma from a reputable dental college (fee in this case, $2) is required to secure a license. Penalty for violation, fine of $25 to $50 and costs for each offense, and offender to stand committed until such fine and costs are paid. (Compiled statutes, 1903, chap. 55, Art. II.) Secretary of board of dental secretaries, W. N. Dorward, Omaha, Nebr.

Nevada.—Board of examiners consists of five practicing dentists, appointed by the governor for terms of four years each from a list of ten names furnished him by the Nevada State Dental Society. A certificate is granted to any one passing a satisfactory examination or to any graduate of a reputable dental college when the board is satisfied as to the character of such institution. The "board of examiners may charge each person applying to or appearing before them for examination for a certificate of qualification a fee of $10, which fee shall in no case be returned." Penalty for violation, fine of $50 to $200, or imprisonment six months. (Act approved March 16, 1895.) Secretary of board of examiners, Dr. C. A. Coffin, Reno, Nev.

New Hampshire.—State board of registration in dentistry consists of three practicing dentists, appointed by the governor with the advice of the council, to serve three years. An examination by the board is required to obtain a certificate (fee, $10). Penalty for violation, fine not exceeding $100 for each offense. (Statutes and laws of 1901, chap. 134.) Secretary of board of registration in dentistry, Dr. A. J. Sawyer, Manchester, N. H.

New Jersey.—Board of registration and examination in dentistry consists of five members, appointed by the governor for terms of five years upon recommendation of the State dental society. An examination by the board is required for a license. No person shall be examined by said board unless he has received a good common school education and a diploma from a dental school recognized by the board, or shall present the written recommendation of at least five licensed dentists of this State of five years' standing, certifying that he is qualified for such examination, or shall hold a diploma or license to practice in some foreign country and granted by some authority recognized by the board. The board may license without examination any applicant who has been duly licensed after examination in any other State, provided his professional education shall not be less than that required in this State. Penalty, fine of not less than $50 for first offense; for subsequent offenses, not less than $100, or imprisonment not less than two months, or both. (Act approved March 17, 1898, as amended March 22, 1901.) Secretary of board of registration and examination in dentistry, Dr. Charles A. Meeker, Newark, N. J.

New Mexico.—Board of dental examiners consists of five practicing dentists appointed by the governor for terms of four years. A certificate to practice is granted to any person passing a satisfactory examination (fee, $25) or to any holder of a diploma from a college recognized as reputable by the National Association of Dental Examiners (fee, $5). Penalty for practicing without a license, fine of $20 to $100, or imprisonment one to three months, or both. (Act approved February 23, 1893.) Secretary of board of dental examiners, Dr. D. W. Manley, Santa Fe, N. Mex.

New York.—The State board of dental examiners is appointed by the board of regents from nominations by the State dental society. The requirements for licensure are an examination by the board (fee, $25), the prerequisites being (1) an education equivalent to that of a four-year high-school course, and (2) a diploma from a registered dental school or a license to practice in some foreign country. Penalty for violation, for the first offense, fine of not less than $50, and for a second offense, not less than $100 or imprisonment not less than two months, or both fine and imprisonment. (Dental law of March 28, 1901, as amended March 25, 1902.) Executive officer of the board of regents of the University of New York, Andrew S. Draper, Albany, N. Y.

North Carolina.—Board of dental examiners consists of six members elected by the North Carolina Dental Society. An examination is required for a license (fee, $10). Penalty for practicing without a certificate, fine of $25 to $50. (Acts of 1879, ch. 139; 1887, ch. 178; 1889, ch. 228; 1891, ch. 251.) Secretary of board of dental examiners, Dr. J. S. Betts, Greensboro.

North Dakota.—State board of dental examiners consists of five members appointed by the governor, to serve five years each. A license to practice may be granted to anyone holding a diploma of a reputable dental college or to anyone passing a satisfactory examination who has been practicing or studying dentistry under a licensed dentist for three years immediately preceding. Examination fee, $10, and a further sum of $5 for a certificate. Penalty, fine not exceeding $300 or imprisonment not more than sixty days, or both. (Revised Code of North Dakota, 1895.) Secretary of State board of dental examiners, Dr. H. L. Starling, Fargo, N. Dak.

Ohio.—State board of dental examiners consists of five practicing dentists, not members of dental colleges, appointed by the governor for terms of three years. Applicants for license must present a diploma from a legally chartered dental college and pass an examination (fee, $20; not returnable in case of failure). The board shall excuse from examination graduates of Ohio dental colleges up to and including the June, 1905, session of the board. Upon unanimous vote of the board, applicants holding a license from another State requiring a diploma and examination may be excused from examination. Penalty for violation of law, fine of $50 to $100 or imprisonment ten days to one month, or both. (Acts of April 29 and May 10, 1902.)

Secretary of board of dental examiners, Dr. H. C. Brown, 185 East State street, Columbus, Ohio.

Oklahoma.—Board of dental examiners consists of five practicing dentists appointed by the governor. The requirements for a license are an examination by the board or a diploma; fee for license, $10. Penalty for practicing without a license, fine of $25 to $200 or imprisonment not more than six months, or both. (Revised Statutes of Oklahoma, 1903.) Secretary of board of dental examiners, Dr. A. C. Hixon, Guthrie, Okla.

Oregon.—State board of dental examiners consists of five members appointed by the governor for three years from a list furnished him by the State dental association. An applicant for a license must present a diploma from some reputable dental college and must pass an examination (fee, $10). "All dental colleges which are members of the National Association of Dental Faculties shall be deemed reputable and in good standing." Penalty for practicing without a license, fine of $50 to $200 or imprisonment not more than six months. (Act approved February 20, 1899.) Secretary of State board of dental examiners, Dr. O. D. Ireland, Dekum Building, Portland, Oreg.

Pennsylvania.—The dental council of Pennsylvania consists of the superintendent of public instruction, the president of the State board of health and vital statistics, and the president, for the time being, of the Pennsylvania Dental Society. It supervises the examinations conducted by the State board of dental examiners and issues the licenses to practice dentistry. The board of dental examiners consists of six dentists of good standing appointed by the governor for a term of three years each. The requirements for a license are (1) a competent common school education, (2) a diploma of a recognized dental school or a license to practice in some foreign country, and (3) an examination (fee, $15). Applicants examined and licensed by other State examining boards having substantially the same standard of requirements may be licensed without an examination on payment of $10. Penalty for violation, fine of $50 to $200. (Act of July 9, 1897.) Secretary of dental council, C. N. Schaeffer, Harrisburg, Pa.

Philippine Islands.—A board of dental examiners, consisting of three reputable dentists appointed for three years each by the commissioner of public health with the advice and consent of the board of health, grants certificates to practice dentistry to all candidates who have received dental diplomas and who in addition pass a satisfactory examination (fee, $10). Penalty, fine of not more than $100 or imprisonment not more than ninety days. (Enacted January 10, 1903.) Secretary of board of dental examiners, Dr. W. G. Skidmore, Manila, P. I.

Porto Rico.—The superior board of health grants licenses to applicants who possess a fair common school education, a diploma from a reputable dental college, and who pass an examination (fee, $25). Dr. Manuel V. de Valle, San Juan, Bayamon, P. R., member of dental examining board.

Rhode Island.—Board of registration in dentistry consists of five practicing dentists, appointed by the governor for three years each. Licenses are granted after examination by the board (fee, $20). Penalty for practicing without a license, fine of $50 to $100. (Chap. 155, General Laws of 1896, as amended by acts of 1897 and 1901.) Secretary of board of registration in dentistry, Dr. P. J. Heffern, Pawtucket, R. I.

South Carolina.—State board of dental examiners consists of five members elected by the State dental association for terms of five years. An examination is required for a license (fee, $15). Penalty for practicing without a license, fine of $50 to $300 or service at hard labor on chain gang from one to twelve months. (Code of South Carolina, 1902.) Secretary of State board of dental examiners, Dr. E. J. Etheredge, Leesville, S. C.

South Dakota.—State board of dental examiners consists of five practicing dentists appointed by the governor for terms of five years from names furnished by the South

Dakota State Dental Society, twice as many names being submitted as there are appointments to be made. An applicant for a license must (1) have been in active practice of dentistry for three years or must have pursued the study of dentistry for three years under a regular practicing dentist, and (2) must pass an examination. A graduate of a reputable dental college may be licensed without examination, in the discretion of the board, according to the law, but the board requires all to pass an examination. The fee for examination is $10 (not returnable), and for a license a further sum of $5. Penalty for violation, fine of not more than $100 or imprisonment not exceeding thirty days, or both. (Acts of March 7, 1901, and March 11, 1903.) Secretary of State board of dental examiners, Dr. G. W. Collins, Vermilion, S. Dak.

Tennessee.—Board of dental examiners consists of six practicing dentists, appointed by the governor for terms of three years. The requirement for a license is an acceptable diploma or an examination before the board. Fee for each certificate issued, $5. No provision for recognizing certificates of other States. Penalty for violation, fine of $25 to $300. (Code of 1896, secs. 2627, 2628, 2631, 2634.) Secretary of board of dental examiners, Dr. F. A. Shotwell, Rogersville, Tenn.

Texas.—State board of dental examiners consists of six practical dentists, appointed by the governor for terms of two years each. Certificates are granted to the graduates of reputable dental colleges and to all who pass a satisfactory examination. Fee for each certificate, $10. Penalty for practicing without a license, fine of $25 to $300. (Chapter 97, Laws of 1897.) Secretary of State board of dental examiners, Dr. C. C. Weaver, Hillsboro, Tex.

Utah.—Board of dental examiners consists of five members, appointed by the governor for terms of four years. Anyone desiring to practice dentistry must pass an examination. To be eligible for examination the applicant must have practiced dentistry two years or studied dentistry three years under a licensed dentist, or have a diploma from a reputable dental college recognized by the National Association of Dental Examiners. Fee for examination, $25, of which $20 shall be returned in case of failure to pass the examination. Penalty for violation, fine not exceeding $300 or imprisonment for six months, or both. (Revised Statutes, 1898, as amended March 12, 1903.) Secretary of board of dental examiners, Dr. H. W. Davis, Salt Lake City, Utah.

Vermont.—The board of dental examiners consists of five dentists, appointed by the governor to serve two years. A license is granted on examination (fee, $10). Penalty for violation, fine of $25 to $100. (Act approved November 8, 1898.) Secretary of board of dental examiners, Dr. G. F. Cheney, St. Johnsbury, Vt.

Virginia.—State board of dental examiners consists of six dentists, appointed by the governor to serve three years each. Certificates to practice are granted after examination only, fee $10. No provision for recognizing certificates of other State examining boards. Penalty for practicing without a license, fine of $50 to $200. (Acts of 1890, 1894, and 1903.) Secretary of State board of dental examiners, Dr. R. H. Walker, Norfolk, Va.

Washington.—Board of dental examiners consists of five practicing dentists, appointed by the governor for terms of two years. An examination is required for a license, and applicant must be a graduate of a recognized dental college. Examination fee, $25. Penalty, fine of $50 to $200 or imprisonment not exceeding six months. (Act of 1897 as amended March 18, 1901.) Secretary of board of dental examiners, Dr. W. E. Burkhart, Tacoma, Wash.

West Virginia.—The State board of dental examiners consists of five practicing dentists, appointed by the governor for terms of four years each. The only requirement for a license is a satisfactory examination (fee, $10). Penalty for violation, fine of $50 to $200 or imprisonment one to three months, or both fine and imprisonment.

No provision for reciprocity of licensure. (Act of February 20, 1897.) Secretary of State board of dental examiners, Dr. H. M. Van Voorhis, Morgantown, W. Va.

Wisconsin.—State board of dental examiners consists of five practicing dentists, appointed by the governor for the term of five years, from names recommended to him by the Wisconsin State Dental Society. Licenses are granted after examination, but the State board may, in its discretion, license without examination any graduate of a reputable dental college recognized by the board which requires four full courses of lectures of at least seven months each, and which requires for admission thereto a preliminary education equivalent to that required for entrance to the junior class of an accredited high school. An applicant for examination must have graduated from a reputable dental college, or must have practiced dentistry for four years immediately preceding, or must have served as an apprentice to a reputable dentist for five years. The fee for each license granted, whether on examination or not, is $10, in no case returnable. Penalty for violation, fine of $10 to $100. (Wisconsin Statutes, 1898, as amended May 21, 1903.) Secretary of State board of dental examiners, Dr. J. J. Wright, 1218 Wells Building, Milwaukee, Wis.

Wyoming.—It is unlawful to practice dentistry in Wyoming without having received a diploma from a reputable dental college, recognized as such by the National Association of Dental Examiners. Penalty, fine of $50 to $200 or sixty days in jail, or both. (Revised Statutes, 1899, secs. 2207–1212.) No dental board provided for.

CHAPTER XXXVI.

STATISTICS OF NORMAL SCHOOLS.

The number of students pursuing teachers' training courses in the several classes of institutions for the year 1902-3 was 88,003. This was a decrease of 6,143 from the number reported for the preceding year, although there was an increase of 23 in the number of institutions reporting. In all public institutions there were 58,837 normal students, 49,175 of these being in public normal schools. In all private institutions there were 29,166 normal students, 14,939 of these being in private normal schools. Private universities and colleges alone show an increase in the enrollment of normal students over the preceding year. The following table shows the number and classes of institutions offering professional instruction to teachers and the number of normal students in each class for the last four years:

Normal students reported for four years.

Classes of institutions.	1899-1900.		1900-1901.		1901-2.		1902-3.	
	Institutions.	Students.	Institutions.	Students.	Institutions.	Students.	Institutions.	Students.
Public normal schools	172	47,421	170	43,372	173	49,403	177	49,175
Private normal schools	134	22,172	118	20,030	109	15,665	109	14,939
Public universities and colleges	26	2,004	34	3,019	39	3,003	37	2,997
Private universities and colleges	221	7,520	213	7,453	195	7,687	204	8,340
Public high schools	506	10,703	528	11,298	368	10,483	458	6,665
Private high schools	417	8,522	393	8,985	357	7,892	279	5,887
Grand total	1,476	98,342	1,461	94,157	1,241	94,133	1,264	88,003
In all public institutions	704	60,128	732	57,689	580	62,889	672	58,837
In all private institutions	772	38,214	729	36,468	661	31,244	592	29,166

Tables 19 and 20 show the distribution of normal students, by States, according to the classification in the above table for the scholastic year 1902-3. Table 21 gives a list of universities and colleges offering normal instruction to teachers.

This chapter is devoted more particularly to the statistics of the 286 public and private normal schools reporting to this Office in 1903. For the year there were enrolled in the regular training courses for teachers in these schools 64,114 students, as compared with 65,068 the preceding year. There were 9,927 graduates as compared with 10,005 the preceding year. The public normal schools showed an increase of 198 in the number of graduates.

There has been a constant growth in public normal schools since 1890, while the private normal schools have had many fluctuations in their progress in the same period. The following table compares the statistics of 1890 and 1903:

	1889-90.				1902-3.			
	Schools.	Instructors.	Normal students.	Normal graduates.	Schools.	Instructors.	Normal students.	Normal graduates.
Public normal schools	135	1,182	26,917	4,413	177	2,597	49,175	8,782
Private normal schools	43	274	7,897	824	109	790	14,939	1,145
Total	178	1,456	34,814	5,237	286	3,387	64,114	9,927

Of the 64,114 students in public and private normal schools there were 9,927 graduates in 1903, or 15.48 per cent of the total enrollment of normal students. If the 23,889 normal students in other institutions had a proportionate number of graduates, the total number of normal graduates for the year must have been about 13,625. This is a very small number of recruits for the ranks of the army of nearly 459,099 teachers in the public schools alone, which army is increasing nearly 10,000 a year. Taking into account the vacancies caused by death and resignation there must be thousands of places to be filled by half trained and untrained teachers.

PUBLIC NORMAL SCHOOLS.

With three exceptions all the States and Territories have public normal schools supported from State funds. In these three provision is made for the education of teachers in the State colleges.

The best illustration of the steady growth of public normal schools is a record of the increase in public appropriations for their support from year to year. The aggregate of such appropriations for public normal schools for the year 1902–3 was $3,582,168 for running expenses and $1,268,742 for buildings. This was an increase over the preceding year of $354,078 for support and $362,441 for permanent improvements. The following table gives a synopsis of appropriations for public normal schools, year by year, since 1890:

Public appropriations to public normal schools for fourteen years.

Year.	For support.	For buildings.	Year.	For support.	For buildings.
1889–90	$1,312,419	$900,533	1896–97	$2,426,185	$743,333
1890–91	1,285,700	409,916	1897–98	2,566,132	417,866
1891–92	1,567,082	394,635	1898–99	2,510,934	560,896
1892–93	1,452,914	816,826	1899–1900	2,769,003	718,507
1893–94	1,996,271	1,583,399	1900–1901	3,068,485	709,217
1894–95	1,917,375	1,003,933	1901–2	3,228,090	906,301
1895–96	2,187,875	1,124,834	1902–3	3,582,168	1,268,742

The statistics of the 177 public normal schools will be found summarized in tables 1 to 11, while tables 22 and 23 give in detail the information concerning these schools.

The public normal schools had 2,597 teachers for the instruction of normal students, the number of men being 1,088 and women 1,509. There were 834 teachers wholly in other departments, making the total number of teachers in these public institutions 3,431.

As shown in Table 2, there were 49,175 students in the normal departments, 11,613 males and 37,562 females. There were 840 students in business courses and 6,044 in other courses of secondary grade. In the elementary grades there were 29,940 pupils. The aggregate enrollment was 85,999, as shown in Table 3. The same table shows that there were 2,489 negro normal students, most of them receiving instruction in public normal schools provided for the colored race in the South. Table 3 also shows that there were 44,752 children in the model schools connected with the public normal schools.

Table 4 shows that for the year ending June, 1903, there were 8,782 graduates from public normal schools, 1,354 men and 7,428 women. There were 247 graduates from business courses and 424 graduates from other courses.

It was not possible to secure complete financial statistics from all the 177 public normal schools. Table 5 shows that 139 of these schools received for the year $3,582,168 from public appropriations for support, 108 received $566,499 from

tuition and other fees, 11 received $88,978 from productive funds, while 39 received $334,870 from sources not classified. The aggregate income of 142 schools was $4,572,515.

The aggregate value of property possessed by 137 public normal schools was reported as $24,156,470, as shown in Table 6. The number of volumes in the libraries of 157 schools was 808,975. The amount of funds appropriated for buildings and improvements for 53 schools was $1,268,742. Four schools received bequests to the amount of $118,712 for permanent endowment.

The aggregate annual appropriations for the support of public normal schools for the past six years are reviewed in Table 7. Table 8 shows for the same period appropriations for buildings and improvements.

BRANCHES OF INSTRUCTION.

The number of students in each of the nine leading subjects embraced in the courses offered by most of the public normal schools will be given in Tables 9, 10, and 11. A synopsis of these tables is given below, showing the number and per cent of the 49,175 students in each branch.

Number and per cent of public normal students pursuing certain studies.

	Number of normal students.	Per cent of total number of normal students.	Male normal students.	Per cent of male normal students.	Female normal students.	Per cent of female normal students.

PRIVATE NORMAL SCHOOLS.

Tables 12 to 17 inclusive give summaries of the statistics of the 109 private normal schools reporting to this Office. These tables may be compared with tables 1 to 6, which summarize similar items for public normal schools.

Table 18 compares certain items of statistics for public and private normal schools. In public normal schools less than 24 per cent of the students are males, while they comprise more than 46 per cent in private normal schools. In the former the graduates were nearly 18 per cent of the enrollment as compared with less than 8 per cent in the private normal school enrollment.

In the public normal schools 49,175 of a total enrollment of 85,999 were pursuing professional courses for teachers. This was 57 per cent of the total. In the private normal schools where the total enrollment was 38,746, the number in normal courses was 14,939, or 38 per cent of the total.

Table 24 gives in detail the statistics of the 109 private normal schools.

CHAPTER XXXVII.

STATISTICS OF SECONDARY SCHOOLS.

The aggregate enrollment in the schools and colleges of the United States for the scholastic year ending June, 1903, was 17,539,478. In the elementary schools, public and private, the enrollment was 16,511,024. Of this number the public common schools had 15,417,148, while the estimated number in private elementary schools was 1,093,876. The first eight grades of the common school course in most of the States are known as the elementary grades and the grades in private schools generally correspond to these. The grades from 9 to 12, inclusive, in most of the State school systems are known as the secondary, or high school grades. Private high schools, academies, seminaries, and college preparatory schools maintain practically the same grades. The total enrollment in the secondary or high school grades for the year mentioned was 776,635, or 4.43 per cent of the aggregate 17,539,478. Public high schools and the preparatory departments of public colleges and the nonprofessional departments of public normal schools had 608,412 of the secondary students, while private high schools and academies and the preparatory departments of private colleges, private manual training schools, and the nonprofessional departments of private normal schools had the remaining 168,223 secondary students.

The 776,635 secondary students were distributed among the eight above-mentioned classes of institutions, as follows:

Institutions.	Male.	Female.	Total.
Public high schools	245,771	346,442	592,213
Public normal schools	1,672	4,372	6,044
Public universities and colleges	7,552	2,603	10,155
Private high schools	50,424	51,413	101,847
Private normal schools	4,683	3,268	7,951
Private universities and colleges	29,749	13,890	43,639
Private colleges for women		5,809	5,809
Manual training schools	4,037	4,940	8,977
Total	343,898	432,737	776,635

There was a gain of 41,875 in the enrollment of secondary students over the preceding year. The gain in public high schools was 41,602; in the preparatory departments of public colleges, 937; in private colleges, 2,524; in private normal schools, 834; in colleges for women, 104. The decrease in secondary enrollment in private high schools was 2,843; in public normal schools, 251; in private manual training schools, 1,032. The net increase in secondary enrollment was nearly 6 per cent. The percentage of increase in the number of public secondary students was 7.47, while the percentage of decrease in the number of private secondary students was 0.24. The enrollment of secondary students in public and private institutions

is given by geographical divisions for the two years mentioned in the following table, the percentage of increase or decrease being indicated:

Students receiving secondary instruction in public and private high schools and academies and in preparatory departments of colleges and other institutions.

	1901-2.			1902-3.			Per cent of increase or decrease.		
	Public.	Private.	Total.	Public.	Private.	Total.	Public.	Private.	Total.

a Decrease.

Since 1890 the rate of increase in the number of secondary students from year to year has been greater than the rate of increase in population. The number of secondary students in both public and private institutions in 1890 was 367,003, or about 5,900 to the million of population; in 1895 the number had increased to 539,712, or 7,900 to the million; in 1900 the number was 719,241, or 9,500 to the million; while for the year 1903 the number of secondary students aggregated 776,635, or about 9,700 to the million population, or almost 1 per cent. The enrollment of secondary students in private institutions has scarcely kept pace with the increase in population, while the enrollment in public institutions has increased more rapidly. In 1890 public secondary students constituted 0.36 of 1 per cent of the population, while in 1903 the proportion was 0.76 of 1 per cent. These facts are shown in the following table:

Secondary students and per cent of population.

Year.	In public institutions.		In private institutions.		In both classes.	
	Secondary students.	Per cent of population.	Secondary students.	Per cent of population.	Secondary students.	Per cent of population.
1889-90	221,522	0.36	145,481	0.23	367,003	0.59

1902-3	608,412	.76	168,223	.21	776,635	.97

This chapter is devoted to a presentation of the statistics of the 8,490 public and private high schools and academies reporting to this Office for the year 1902–3. It has been found impracticable to collect complete statistics of the preparatory departments of colleges and other institutions, but the number of secondary students is reported. While the collection of statistics in detail from 8,490 public and private high schools presents many difficulties, the results are measurably satisfactory. The following table shows the progress of public and private high schools since 1890:

Public and private high schools since 1889–90.

Year reported.	Public.			Private.			Total.		
	Schools.	Teachers.	Students.	Schools.	Teachers.	Students.	Schools.	Teachers.	Students.
1889–90	2,526	9,120	202,963	1,632	7,209	94,931	4,158	16,329	297,894

1899–1900	6,005	20,372	519,251	1,978	10,117	110,797	7,983	30,489	630,048
1900–1901	6,318	21,778	541,730	1,892	9,775	108,221	8,210	31,553	649,951
1901–2	6,292	22,415	550,611	1,835	9,903	104,690	8,127	32,318	655,301
1902–3	6,800	24,349	592,213	1,690	9,446	101,847	8,490	33,795	694,060

The above table exhibits the remarkable growth of public high schools in thirteen years. In 1890 there were 2,526 public high schools, with 202,963 students, while in 1903 the number of schools had increased to 6,800, with 592,213 students. This was an increase of 169 per cent in the number of schools and 191 per cent in the number of public high school students. There was an increase in the number of private high schools and their enrollment up to 1895, when the number of schools reporting was 2,180, with 118,347 students. Since that date there has been a decrease, the number of schools reporting in 1903 being 1,690, with 101,847 students. The relative progress of public and private high schools since 1890 may be learned from the following table:

Relative progress of public and private high schools in thirteen years.

Year reported.	Per cent of number of schools.		Per cent of number of teachers.		Per cent of number of students.	
	Public.	Private.	Public.	Private.	Public.	Private.

1901–2	77.42	22.58	69.36	30.64	84.02	15.98
1902–3	80.04	19.96	72.05	27.95	85.33	14.67

In 1890 about 68 per cent of the secondary students were in public high schools, and in 1903 over 85 per cent.

PUBLIC HIGH SCHOOLS.

Table 43 of this chapter gives in detail the statistics of the 6,800 public high schools reporting to this Office, the more important items being summarized in tables 1 to 15.

The number of teachers instructing secondary students in the public high schools in 1902–3 was 24,349, as shown in Table 1. This teaching force included 11,806 men and 12,543 women, an increase of 848 in the number of male teachers and 1,086 in the number of female teachers over the preceding year. There was a total of 592,213 secondary students—245,771 boys and 346,442 girls. The num-

ber of male students increased 18,757 and the female students 22,745 in one year. In elementary grades connected with many of the high schools there were 116,327 pupils, a decrease of 1,535.

As shown in Table 2, there were 30,860 public high school students preparing for the college classical course, and 27,280 preparing for college scientific courses. The number of graduates for the year ending June, 1903, was 69,991, an increase of 3,729 over the preceding year. Of the total number of graduates, 22,887 were college preparatory students, an increase of 1,869. Of the total number of secondary students, 9,771 had military drill.

The number of students in each State in each of the leading high school studies is shown in tables 3 to 11, inclusive. A synopsis from these tables is given below, preceded by items relating to the number of students preparing for college and the number of graduates.

Students in certain courses and studies in public high schools.

Courses, studies, etc.	Number of students.	Per cent of total number.	Male students.	Per cent of total number of male students.	Female students.	Per cent of total number of female students.

[a] Per cent of total number of graduates.

There was a small decrease in the number of students preparing for college, the number being 58,140, as against 58,691 the preceding year, the percentage falling from 10.66 to 9.82. The total number of graduates was 69,991, or 11.82 per cent of the total enrollment. Of the graduates, 22,887, or nearly 33 per cent, had been preparing for college.

Careful estimates have shown that about 43 per cent of the aggregate high school enrollment will be found in the first-year studies, 26 per cent in the second year, 18 per cent in the third year, and 13 per cent in the fourth-year studies. If the 592,213 public high school students were divided thus, there would be 254,652 in the first year, 153,975 in the second, 106,598 in the third, and 76,988 in the fourth year.

In the synopsis given above it is shown that 297,925, or more than half the students, were studying Latin. There were 12,033 studying Greek, or about 2 per cent of the whole number.

In 1893 the "Committee of ten" on secondary school studies, appointed by the

National Educational Association, recommended four years of Latin and two years of Greek in the classical course and four years of Latin in the scientific and English courses, respectively. For ten years the high school courses of study have been approaching the standard recommended by the committee, but the time given to Greek seldom exceeds one year in the schools where it is offered at all. It is certain that nearly all the 12,033 students in Greek in 1903 belonged to the 22,887 college preparatory students in the graduating class of that year. Of the 6,800 public high schools, 5,940 reported students in Latin, while only 877 reported students in Greek. Of this number, 569 schools were in the North Atlantic Division, with 8,401 students in Greek, 142 in the North Central Division, with 1,831 students in Greek. In nine States Greek was not studied in the public schools. The per cent of students in Greek fell from 2.50 in 1902 to 2.03 in 1903, and the actual number was reduced by 1,747, notwithstanding the large increase in general enrollment. There was a decrease of 81 in the number of schools reporting students in Greek.

It is somewhat misleading to make a comparison between the 297,925 students in Latin (50.31 per cent of the total enrollment) and the 12,033 students in Greek (only 2.03 per cent of total enrollment). Supposing that all the high schools offered four years of Latin and one of Greek, then all the 592,213 enrolled in 1902–3 could have had the opportunity of studying Latin, while only the 76,988 students of the fourth year could have had the opportunity of studying Greek. In fact the schools actually had 50 per cent of the possible number of students in Latin and nearly 16 per cent of the possible number in Greek.

The per cent of students in each of the leading high school studies reported annually for the past eleven years is given in the table which follows:

Per cent of total number of secondary students in public high schools in certain courses and studies, etc.

Students and studies.	1892–93	1893–94	1894–95	1895–96	1896–97	1897–98	1898–99	1899–1900	1900–1901	1901–2	1902–3

[a] Per cent of total number of graduates.

Tables 12, 13, and 14 compare the statistics of public high schools in cities of 8,000 population and over with public high schools outside of such cities. In the 587 cities of the class indicated there were 782 public high schools, with 9,683 instructors and 278,296 secondary students. Outside of these cities there were 6,018 public high schools, with 14,666 instructors and 313,937 secondary students. In the cities the high schools had an average of 356 students to a school and 29 students to a teacher. Outside of the cities there was an average of 52 students to a school and 21 students to a teacher.

Table 14 shows that 4,774 high schools answered the inquiry as to date of establishment and that 2,636 of these had been established prior to 1891.

An exhibit of the equipment and income of public high schools in each State will be found in Table 15, so far as the items could be obtained. Of the 6,800 schools, 6,164 reported libraries aggregating 3,733,914 volumes, and 6,142 had grounds, buildings, and scientific apparatus, etc., valued at $138,625,557. Only 2,119 of the high schools could give a statement of their income. These received for the year ending June, 1903, an aggregate of $7,290,733. In most cases the accounts of high schools are not separated from the accounts of public school systems, and for this reason no satisfactory aggregate can be obtained or estimated as to the income of all the public high schools.

PRIVATE HIGH SCHOOLS AND ACADEMIES.

Tables 16 to 29 summarize the statistics of private high schools, academies, and seminaries. Tables 16 to 26, inclusive, are similar to Tables 1 to 11 relating to public high schools, and the two series may be compared. Tables 27 and 15 may also be compared. Table 30 is a comparison of certain averages computed for public and private high schools.

There were 1,690 private secondary schools reporting to this Office for the scholastic year 1902–3. These schools had 9,446 teachers of secondary students and 101,847 secondary students, 50,434 males and 51,413 females. In the elementary departments of these schools there were 124,921 pupils. Of the secondary students, 24,253 were preparing for college, 13,006 for the classical course, and 11,247 for scientific courses. There were 11,561 graduates for the year, 5,350 of whom had prepared for college. There were 9,049 students in military drill.

The number of students in each of the leading high school studies in each State will be found by consulting Tables 18 to 23. The percentages of students in each course and study are given in Tables 24 to 26. The following table is a synopsis of the number and per cent of students, by sex, in college preparatory courses, the number and per cent of graduates, and the number and per cent in each of the high-school studies in private secondary schools for the scholastic year ending June, 1903:

Students in certain courses and studies in private high schools and academies.

Courses, studies, etc.	Number of students.	Per cent of total number.	Male students.	Per cent of total number of male students.	Female students.	Per cent of total number of female students.
Students preparing for college:

Civics	17,397	17.08	7,668	15.20	9,729	18.92

The above table shows that over 24 per cent of the students in private secondary schools were preparing for college. A similar table on a preceding page shows that less than 10 per cent of public high-school students were making such preparation. The per cent studying Latin was about 44 as compared with 50 per cent in the public high schools, while the percentage in Greek was 6.79, as compared with 2.03 in the public high schools. The per cent in algebra was 48.15, as compared with 57.55 in the public high schools.

The progress made by private secondary schools in the last ten years is indicated in the increased percentages of students in certain courses and studies, as shown in the following table:

Per cent of total number secondary students in private high schools and academies in certain courses and studies.

[a] Per cent of number of graduates.

The value of equipment, income, benefactions, endowments, etc., of private high schools, academies, and seminaries will be found exhibited by States in Table 27. The number of volumes in the libraries of 1,266 schools was 1,918,708. The value of property of 1,126 schools was $119,304,448. Tuition fees aggregating $7,512,216 were received by 992 schools, and 173 schools received $107,677 from public funds. The amount of $653,110 was received by 257 schools from productive funds, while 416 schools received $2,021,544 from sources not specified. The aggregate income of 1,041 schools was $10,294,547. Benefactions were received during the year by 170 schools, amounting to $1,153,177. The total money value of endowment reported by 212 schools was $26,714,807.

Of the 1,690 private high schools 867 are controlled by religious denominations. In Table 44, which gives in detail the statistics of these schools, the name of the denomination controlling each is given in column 4. Tables 28 and 29 show the number of schools in each State controlled by each leading denomination. The following synopsis is made from these tables:

Religious denomination and nonsectarian.	Schools.	Instructors.	Students.
Nonsectarian	823	4,601	48,941
Roman Catholic	362	1,972	17,007
Baptist	84	435	6,619
Methodist	68	449	6,297
Episcopal	88	664	5,138
Presbyterian	72	305	3,912
Friends	47	256	2,933
Methodist Episcopal, South	30	115	2,322
Congregational	40	190	2,272
Lutheran	28	147	1,912
Other denominations	48	312	4,494
Total	1,690	9,446	101,847

COMBINED STATISTICS.

Tables 31 to 38 give the combined statistics of public and private secondary schools. Certain statistics are compared in Table 30. In the public high schools there were 87 students to a school and 24 students to a teacher, while in the private high schools there were 60 students to a school and 11 to a teacher. The latter item indicates that the teachers in private secondary schools must devote a large portion of their time to the instruction of elementary pupils.

The number of public and private secondary schools reporting to this Office for the year 1902–3 was 8,490, with 33,795 teachers and 694,060 secondary students, as shown in Table 31. Of the aggregate enrollment, 397,855, or 57.32 per cent, were girls and 296,205, or 42.68 per cent, boys. The number of students reported as preparing for college was 82,393, or nearly 12 per cent of the total number of secondary students. The graduates for 1903 numbered 81,552—something less than 12 per cent of the enrollment for the year. The number of graduates who had prepared for college was 28,237, or nearly 35 per cent of the total number of graduates.

Tables 33 to 38 give the number and per cent of students in each of the leading high school studies in the public and private secondary schools in each State for 1902–3. From these tables is condensed the following synopsis for the United States:

Students in certain courses and studies in public and private high schools and academies.

Courses, studies, etc.	Number of students.	Per cent of total number of secondary students.	Male students.	Per cent of total number of male students.	Female students.	Per cent of total number of female students.
Students preparing for college:						
Classical course	43,866	6.32	23,194	7.83	20,672	5.20

[a] Per cent of total number of graduates.

The progress made in ten years by the secondary schools of the country in the increased enrollment year by year in certain leading studies is exhibited in the synopsis below. In 1889–90 there were 100,152 students in public and private secondary schools studying Latin. This was 33.62 per cent of the total enrollment of secondary students in these schools for that year. In 1902–3 the number had increased to 342,988, or almost 50 per cent of the total number of high school students. Since 1890 the per cent of secondary students in algebra has increased from 42.77 per cent to 56.17 per cent in 1902–3. Percentages for other studies for eleven years are shown in the following table:

Per cent of the total number of secondary students in public and private high schools and academies in certain courses and studies, etc.

Students and studies.	1892-93	1893-94	1894-95	1895-96	1896-97	1897-98	1898-99	1899-1900	1900-1901	1901-2	1902-3

[a] Per cent of total number of graduates.

Of the 694,060 secondary students in public and private high schools in 1902–3, about 43 per cent. or 298,446, were first-year students; 26 per cent, or 180,455, were in the second year; 18 per cent, or 124,931, were in the third year, and 13 per cent, or 90,227, were enrolled in the fourth-year class. Assuming that all the schools offered a four-year course in Latin, it may then be said that all the secondary students in these schools in 1902–3 had the opportunity of studying this language. As a matter of fact 49.42 per cent did study Latin. The per cent of students in Greek was only 2.73, but as this study, where offered at all, is generally limited to the fourth year, it may be said that only 90,227 students had the opportunity of studying Greek. The actual number reported in this study was 18,951, or 21 per cent of the number of students in the highest class. In the courses of study recommended by the "Committee of ten," algebra is provided for in the first and third years. As there were 423,377 students in these two classes, we might expect to find this number in algebra. The number actually reported in algebra was 389,865, or nearly 93 per cent of the first and third year students. Physics is a second-year study, and it might be expected that most of the 180,445 students in the second-year class would be reported as studying physics. The number actually reported in this study was 113,550, or about 63 per cent of the number to whom opportunity was offered.

In the table which follows is given in condensed form the four courses of study for high schools recommended by the Committee of Ten on Secondary School Studies at the meeting of the National Educational Association in 1893. The figure 1 indicates that the study is to be pursued a whole year, and the one-half limits the study to half a year. The notes explain the provisions for optional studies.

Secondary school studies recommended by the Committee of Ten (1893), showing time devoted to each study.

(d) Botany or zoology.
(e) Trigonometry and higher algebra, or history.

DISTRIBUTION OF SECONDARY STUDENTS.

Tables 39 and 40 show by States and divisions the distribution of the 776,635 secondary students in the eight classes of institutions mentioned on the first page of this chapter.

Table 41 compares the number of students in secondary education with the total population. The number of secondary students to each 1,000 of population in 1903 was 9.72. The number of students in institutions of learning above the high school was 251,819, or 3.15 to the 1,000 population. This number includes all students who in 1902–3 were receiving higher instruction in universities and colleges, all professional students, including those in theology, law, medicine, dentistry, pharmacy, and veterinary medicine, and all in training courses for teachers in normal schools. Students in nurse-training schools, business schools, and in schools for the defective classes are not here included as in either secondary or higher education.

Of the public high schools of the country there were 36 for boys only and 20 for girls only, all the others being coeducational. Of the private high schools there were 325 for boys only, 527 for girls only, and 838 coeducational. These comparisons are made by States in table 42. Tables 43 and 44 give in detail the statistics of public and private secondary schools.

TABLE 1.—*Public high schools—Number of schools, secondary instructors, secondary students, and elementary pupils in 1902–3.*
