NOV 23 1956

Compiled October 1956
Issued November 1956

ADVANCE ESTIMATES OF PUBLIC ELEMENTARY AND SECONDARY SCHOOLS FOR THE SCHOOL YEAR 1956-57

Prepared by
Research Division, National Education Association of the United States

This report shows the following significant changes in the nation's public schools for 1956-57 as compared with 1955-56:

- an increase of 1,197,000 in enrolments in public elementary and secondary schools
- an increase of 55,000 in instructional staff
- an increase of $731,300,000 in current expenditures
- an increase of $15 in the average current expenditure per pupil in average daily attendance
- an increase of 4.7 percent in the average salary of instructional staff (classroom teachers, principals, and supervisors)
- an increase of $317,400,000 in expenditures for capital outlay and interest

THIS SUMMARY is a series of estimates based upon information supplied by state and territorial departments of education and education associations. It is the fifteenth in a series of national estimates begun in 1942-43.

Most of the figures are estimates based upon facts of previous years, adjusted by expert opinion and preliminary state studies. A number of the states have not completed their statistical compilations for 1955-56 and only a few have systematic data for 1956-57.

On the basis of previous experience it is believed that the present summary presents a reasonably accurate picture of nationwide conditions as of October 1956. Adjustments for individual states may be expected from official studies in the next two years. In using these figures identify them as estimates, not as official statistics.

Most of the foregoing changes were not unexpected, but some of them, such as increasing enrolments, indicate a further piling up of the instructional, financial, personnel, and housing problems which have adversely affected schools during the past few years. In several respects the outlook for 1956-57 is clearly unfavorable:

- The enrolment in teacher-education institutions is not gaining rapidly enough to fill the need for qualified teachers.
- School systems are still employing about 80,000 teachers who are not fully qualified for standard certificates.
- The shortages of classrooms and qualified teachers continue to deprive 840,000 pupils of full-time schooling.
- The shortages of buildings and qualified teachers, especially critical in the elementary schools in recent years, are now producing serious problems at the secondary-school level, especially in urban school districts.

is an understatement of the shortage since the total includes two other conditions which are not readily measured: (a) the number of unfilled positions or vacancies and (b) the number of classroom teachers needed to reduce classes to reasonable size.

In 1939-40 there were relatively few classroom teachers who did not hold "regular" certificates for teaching in their respective states. By 1946-47, about 1 classroom in every 7 was being taught by a person holding a substandard certificate. Then the proportion declined steadily from year to year until it reached 1 in 15 in 1951-52 and 1952-53. The ratio was 1 in 14 in 1953-54, 1 in 13 in 1954-55, 1 in 14 in 1955-56, and is expected to be close to 1 in 15 in 1956-57.

Each year since 1953-54, approximately 80,000 emergency or substandard classroom teachers have been employed in the public schools. The "emergency teacher" situation, thought to be a condition which would disappear within 10 years after World War II, is still with us. On the other hand, in recent years the situation has become stabilized (Table 4).

Type and location of the teacher shortage--Details on this point are given in Table 12. A summarized comparison of reports for 1955-56 and 1956-57 (exclusive of the District of Columbia) is as follows:

Type of position	Number of states in which the shortage is					
	Very small		Considerable		Very large	
	1955-56	1956-57	1955-56	1956-57	1955-56	1956-57
Rural elementary teachers	1	2	32	31	15	15
Rural secondary teachers						
Regular	13	11	33	35	1	1
*Special	1	2	41	38	5	7
Urban elementary teachers	12	13	32	31	4	4
Urban secondary teachers						
Regular	28	27	20	21	0	0
*Special	12	11	32	31	4	6

(*The term "special" applies to such fields as industrial arts and physical education.)

The foregoing summary and detailed reports for other years since 1950-51 suggest an adverse trend in the supply situation. Conditions appear to be least satisfactory in rural elementary schools. In the early 1940's the shortage of teachers first became acute in rural schools because the urban places, with their higher salaries, were able to draw off teachers from the small towns and open country. It may be that history is repeating itself. Apparently the supply of urban elementary-school teachers has not improved in some states. The secondary level in urban schools is showing some evidence of the increasing weight of mounting enrolments.

Why teachers leave--Forty-two states (Table 5) have reported estimates of the number of teachers leaving the profession in their states in 1955-56 and in 1956-57. The total of about 97,000 in 1956-57 indicates a turnover of about 9.1 percent of the instructional staffs in those states. The "turnover" does not mean a complete loss to the profession since, on the average for the 36 states reporting reasons for leaving 19 percent left to go to other states where presumably a majority will continue in teaching. Therefore, it is estimated for the nation as a whole that the total turnover is about 114,000; of these, about 92,000 drop out of teaching.

School year	Number of states reporting current enrolments as		
	Much smaller than 1940-41	About the same as 1940-41	Much larger than 1940-41
1950-51	5	11	32
1951-52	3	19	26
1952-53	4	17	27
1953-54	6	18	24
1954-55	9	9	30
1955-56	4	6	38
1956-57	3	3	42

By 1950-51 enrolments in teacher education equaled or exceeded those of prewar 1940-41 in all except five states. From 1951-52 thru 1953-54 the trend was unfavorable because of the competition for manpower arising from expanding industries and governmental services and the heavy manpower demands of the military forces. In 1954-55 there was an upward turn in teacher education enrolments which continues thru 1956-57. Details for 1956-57 are shown in Table 12, column 8.

Respondents also were asked for opinions on how the 1956-57 enrolments in teacher education compare with the enrolments in 1955-56. One state reported that this year's enrolments are smaller; 18, that enrolments are about the same; and 29, that enrolments are much larger than in 1955-56 (Table 12, column 9).

In anticipation of the next few years state officials are asked to estimate how well the teacher-education enrolments in 1956-57 would meet the probable demand for teachers in the next three years. The estimates for the 48 states are given in Table 12, columns 10 and 11. Comparisons with other years may be summarized as follows:

Type of teacher	Number of states expecting supply in the next three years								
	To be short			To be balanced			To be an oversupply		
	1954-55	1955-56	1956-57	1954-55	1955-56	1956-57	1954-55	1955-56	1956-57
Elementary ...	45	48	47	3	0	1	0	0	0
Secondary	30	40	43	16	8	5	2	0	0

From a review of the foregoing opinions with regard to teacher-education enrolments it can be seen that the outlook for an adequate supply is not favorable. All states expect the shortage of elementary-school teachers to continue into the next three years.

With regard to secondary-school teachers 43 states expect a shortage in the next three years. In 1953-54 the number in the "oversupply" column was 6; for 1954-55 the number is 2; for 1955-56 and for 1956-57, zero. In other words, the increasing enrolments, which struck the elementary schools in greater numbers about 1947, shows an increasing effect in secondary schools.

Teachers' salaries--The estimated average salary for all instructional personnel (classroom teachers, principals, and supervisors) in 1956-57 is $4330, an amount 4.7 percent higher than the $4135 estimated for 1955-56. Table 6 gives detailed figures.

The purchasing power of the average salary of the instructional staff is shown by two methods of calculation. In 1953 the U. S. Bureau of Labor Statistics issued a revised Consumers' Price Index, with the 1947-1949 dollar as the base of 100.0 instead of 1935-1939 as formerly. The average salary of $4330 in 1956-57 is worth as much in goods and services as $2211 was worth in 1935-1939. In 1947-1949 dollars, the average of $4330 is worth $3698. September 1956 prices are used in these estimates.

Year	Elementary3/	Secondary3/	Total
1950-51	19,900,000	5,806,000	25,706,000
1951-52	20,680,867	5,881,797	26,562,664
1952-53	21,572,000	6,167,000	27,739,000
1953-54	22,546,000	6,290,000	28,836,000
1954-55	24,091,500**	6,582,300**	30,673,800**
1955-56	24,588,000**	6,860,000**	31,448,000**
1956-57	25,478,000**	7,175,000**	32,653,000**

(**Figures for 1954-55 taken from press release issued September 8, 1955, by the U. S. Office of Education. Figures for 1955-56 and 1956-57 from similar release issued September 2, 1956.)

Children deprived of full-time schooling--The steadily increasing enrolments, combined with the shortage of qualified teachers and the lack of school buildings, have produced conditions in many communities whereby many children are deprived of full educational opportunities. The most obvious type of deprivation is in those communities where children must attend schools in shifts or for so-called half-day sessions.

Each year this series of advance estimates has attempted to present an estimate of the number of children who must attend school for less than a full day. It has been difficult to obtain complete and entirely reliable statistics on the problem. School systems have not always reported crowded conditions by October, and with the completion of new buildings during the school year, some of those on part-time sessions are restored to the regular school hours. On the basis, therefore, of incomplete reporting, estimates show that at least 840,000 children (that is, total enrolment multiplied by 2.6 percent, columns 7 and 8, Table 11) were on half-day or similar part-time arrangements in 1956-57.

The U. S. Office of Education has estimated that in 1955-56, communities built approximately 67,000 classrooms. Despite this annual construction, building is not keeping pace with classroom needs. An increase in enrolment of 1,200,000 and about 840,000 on part-time schedules suggests a need for at least 70,000 additional public-school classrooms in 1956-57. In addition, there is need for classrooms to replace the obsolete present buildings.

Another type of deprivation is to be found in the overcrowded classrooms where it is impossible for the teacher to give every child individual attention. An NEA Research Division study of urban communities estimates that 22.2 percent of all elementary-school pupils in these urban districts were in classes enrolling 35 or more children. If these classes were limited to 30 pupils, elementary schools in these school systems would need to have 30,488 additional classrooms and teachers.

SCHOOL INCOME AND EXPENDITURES

Income--In 1955-56 the total income of public elementary and secondary schools was $11,592,074,000; a total income of $12,556,452,000 is expected in 1956-57. This is a gain of nearly a billion dollars. School income is made up of revenue and non-revenue receipts.

3/ Elementary is defined as kindergarten thru Grade VIII; secondary as Grades IX thru XII.

Type of school	Number of states in which the building shortage is: Very small		Considerable		Very large	
	1955-56	1956-57	1955-56	1956-57	1955-56	1956-57
Rural						
Elementary	20	17	22	23	6	8
Secondary (omitting Rhode Island)	14	12	29	30	4	5
Urban						
Elementary	0	0	28	28	20	20
Secondary	4	3	31	32	13	13

The foregoing summary suggests that the building situation for the nation as a whole has definitely become worse and now affects both elementary and secondary schools in most states.

Additional classrooms needed--This year the survey asked states to estimate the number of additional classrooms needed to reduce class size and to replace obsolete and makeshift classrooms. Thirty-six states supplied estimates (see Table 13).

In 36 states, a total of 78,653 classrooms were reported as the number needed. If all states had supplied estimates it is probable that the total would have been about 120,000.

The Situation in the Territories and Outlying Areas

Some idea of the differences among the outlying areas and their status as compared with the states can be obtained from Table 14.

TABLE 2.--ESTIMATED NUMBER OF INSTRUCTIONAL STAFF MEMBERS IN PUBLIC ELEMENTARY AND SECONDARY SCHOOLS, 1955-56

State	Elementary-school classroom teachers			Secondary-school classroom teachers			Principals and supervisors	Other instructional staff	Total
